A NEW YEAR PROBLEM FOR THE JUTE INDUSTRY

NEED FOR SELF-SUFFICIENCY IN RAW MATERIAL SUPPLY

THE old year has not closed without anxieties for the future of at least one large industry in eastern India. Jute goods have not had too bad a time in the past twelve months. Prices now are buoyant; so much so in fact that serious doubts are arising about the continued rate of offtake. The chief reason is, of course, the Suez crisis. It cannot, therefore, be expected to last very long. But without some fortuitous prop to demand, the jute industry would have been in great difficulty during 1956. Even with the recent excellent quotations for goods, many of the best mills are unable to cover their costs of production. When the fear of war has subsided and the Canal is cleared some time during the coming months, these units will, presumably, lose even more money, because neither of the two above contingencies promises to do much to help tackle the cause of all the trouble—the raw-jute situation. Only the efforts of the growers and those whose job it is to encourage them to increase their output, can do this. A meeting was held in Delhi on 30th December, 1956, under the chairmanship of the Union Minister for Agriculture, Dr. P. S. Deshmukh, to consider the problem. Another, between the Secretaries of State agricultural departments and Development Commissioners, is scheduled for 12th January. The industry has great hopes for the successful outcome of these meetings. But they are not the first to have considered the question, and the extent of the difficulties involved are by now as well known as their possible solutions. What has been lacking so far is a determined effort to get on with the job.

One fact which has served to underline the problem lately has been the enormously high premium now being asked for Pakistani jute. This presents a disheartening prospect for the New Year, and it is one which is due solely to the industry's continued reliance on a foreign source of supply for its marginal needs. The aim of self-sufficiency in raw jute is one about which much is heard. And there is no doubting the progress which has been made towards it. During 1955-56 production reached 4,140,000 bales compared with 2,930,000 bales in 1954-55. But the industry's consumption, at present capacity, is in the neighbourhood of six million bales a year, and the difference can only be made up from Pakistan. After the experience the industry has had this year of importing jute across the border, there must be few representatives of it who regard a permanent continuation of this need with anything but the utmost trepidation. If the aim of the East Bengal Government is not deliberately to disrupt the working of India's jute mills by a rigid control of shipments and by placing almost every conceivable obstacle in the way of their securing raw material supplies, it is certainly to extract the last anna from Pakistani exports to this country. The coming months hold little prospect of improvement in that attitude. The only solution to it is self-sufficiency for India. When this is the aim in so many other fields, it is strange that where raw jute is concerned, the efforts towards it should up to now have been so half-hearted.

★

The revised target for jute production in the second plan period is placed at 5,540,000 bales by the Indian Central Jute Committee. This compares with the figures already mentioned of 4,140,000 bales for the 1955-56 crop and about six million bales for probable consumption. The target, therefore, does not represent self-sufficiency and even this limited aim will only be achieved, apparently, by increasing the acreage under jute cultivation in Assam and West Bengal. It seems to have been based on a yield of 2.62 bales of raw jute from each acre, as quoted by the president of the Committee, Dr. M. S. Randhawa, for the year 1955-56. But there is no real reason why, with more modern methods of cultivation, the yield should not be raised to

three bales an acre, an improvement of about 12 percent over the present performance. Already production has increased from 2.36 bales an acre in 1954-55. If this could be done, an annual consumption in the region of six million bales would be met entirely from home production, and from the same acreage that will be required for the target of 5,540,000 bales. This increase in yield could be achieved in the space of one season if the better methods already suggested by the Committee of Experts, among others, were to be implemented. The estimate of jute production (including bimli and mesta) for the Indian Union in 1956-57, at current yields, is about 5,200,000 bales. An improvement in performance of the size mentioned would, therefore, close the gap between production and consumption by 50 percent. This is an attractive possibility for an industry which has had such unfortunate experience with its raw material in the past year.

★

Provided it is really the Central Government's intention that the country should become self-sufficient in raw jute, and given the fullest co-operation of the various producing States, it should not be difficult to bring about a substantial improvement in a comparatively short time. As the past year has proved, this is what the industry is most in need of. The methods are well known. Briefly, they involve providing fertilisers to growers, either free of cost or on a loan basis, making available to them such agricultural implements as have already proved effective, teaching advanced methods of sowing and encouraging the use of better seeds. The question of fertilisers has been under discussion for some time, and considerable progress can be reported. It was stated at the recent meeting in New Delhi that the entire area under jute cultivation will have been served by the end of the plan period. One of the decisions made was to undertake the top-dressing of jute with ammonium sulphate. The provision of agricultural implements, such as seed drills and wheel hoes, might best be accomplished on a communal basis, although satisfactory methods of getting these tools into the hands of the cultivator have still to be devised. The multiplication of seeds is already being tackled at the Central Jute Committee's nucleus jute seed multiplication farms at Nilganj and at the newly-acquired Panagarh plots, the land for which was secured last May. Up to now, an area of only 78 acres has been sown at this latter centre, but it should be possible to do considerably more in the coming season. The

Committee itself foresees a development period of two years. But even at the end of that time, it will not be possible to cover the entire jute-growing area unless, in the words of Dr. Randhawa, "steps are taken to multiply seed in the fields of growers in National Extension Service blocks".

This statement gives an important clue to how a rapid increase in jute yield might be expedited. There is no doubt that the unorganised nature of the cultivation process has stood in the way of improvement on the scale required. It might also account for the obvious reluctance which has often been shown by State Governments towards tackling the job. The provision of fertilisers and agricultural implements would be facilitated if done through such organisations as the Community Projects and National Extension Services. The increase in the number of such institutions during the second plan could mean that a considerable proportion of the growing area will soon be covered. Where it is not, the importance of increased jute production might be used as an excuse for seeing that it is brought under one or other of the schemes without delay. At the Delhi meeting, it was stated that the co-operation and assistance of the workers in the various projects would be enlisted in the jute-growing States. This is a development which, if pursued with the necessary vigour, holds considerable promise for the future. The outcome of the Committee's efforts to spread the finding of its researches are impressive, but as the president himself pointed out, they are inadequate unless a "closer liaison with the National Extension Service" can be secured. Clearly, much is going to depend on these organisations and on the Community Projects for achieving self-sufficiency.

The chief necessity for reaching this aim now appears to be some method of overcoming the difficulties of the State Governments. It is at this level where most of the industry's hopes have so far been frustrated. It is true that much of the trouble can be traced to a reluctance to do anything at all. The industry is often wrongly regarded as being rich enough to pay almost any price for its raw jute however outrageous. But those who make this mistake would do well to remember that as things are, a good deal of the money unnecessarily spent is going to East Pakistan; it is not being pocketed by the Indian producer. The fear that the grower will inevitably suffer if the output of jute is improved, need not be entertained for one moment. There is plenty of scope (to the full extent of the supplies from across the border) for the Indian crop to be increased before prices begin to be pushed downwards. It is true that a target of self-sufficiency will involve an increase in acreage, and that it might mean a loss of land to rice cultivation. This is a genuine fear. But it has already been faced when fixing the second plan target of 5,540,000 bales, and anyway it is probably better to buy rice from abroad, given present world prices, than it is to import raw jute. The health of the jute goods industry is of supreme national importance. It is at the same time the first earner of foreign exchange in the country and one of the largest employers of labour. For the sake of an improvement in the home-grown crop of 20 percent above current output, its existence and prosperity are not something which can be cheerfully risked.

WORKERS AS MANAGERS

MUCH has been said and heard in the past year or so about the proposal that workers should participate in the management of industry. The inaugural address of the Central Labour Minister, Mr. Khandubhai Desai, at the State Labour Ministers' conference in New Delhi last Thursday indicates that matters are now at the stage where concrete steps to implement the proposal might soon be framed. The virtues of such a move are not to be denied—in theory. But how it will work out in practice is quite another matter. The Planning Commission has gone on record as saying that closer labour-management association will promote increased productivity for the general benefit of the enterprise, the employees and the community; it will give employees a better understanding of their rôle in the working of industry and of the process of production; and it will help satisfy the workers' urge for self-expression, "thus leading to industrial peace, better relations and increased co-operation." Mr. Desai has talked of it as one aspect of the evolving "industrial democracy", adding: "We have to see that the workers feel

the sensation of participation in the management and also that they are not only wage-earners but are part and parcel of the industrial production and they are as important in stature and status as management itself."

★

The whole concept of workers' participation in management in India is, in inspiration, mainly political. It springs from the fundamental assumption in official circles that entrepreneurs are too powerful, that most of them are merely unprogressive exploiters with an authority that must be curbed in favour of a working class whose numerical superiority at the polls is too evident to be ignored. Practically all the labour legislation in this country enacted during the last few years has been based on this assumption, in so far as it has tended to readjust not only the monetary rewards but also the rights and obligation of industrial employment. The trend is in line with the new social values of the age. But in India, a fundamental weakness has been the heavy preoccupation with the rights of labour without a balancing em-

phasis on its obligations. The composition of the trade unions being what it is, this has left an open field for irresponsibility among demagogues who have an interest in the well-being neither of industry nor of its workers. The growth of this irresponsibility over the years could prove to be one of the major handicaps in making a success of schemes to associate workers more closely with management. This success will depend primarily on attitudes and approaches, but the mental conditioning which has been given workers by political interests competing for their votes can hardly be a happy augury.

Mr. Desai gave a too gentle hint of the handicap when he said: "If we want the workers to participate in the management and take up responsibility of looking to the production side, etcetera, they must be trained in two ways: they must be trained in the trade union organisation as well as by giving them some basic knowledge about the industry in which they are working." For this purpose, he added, a provision of Rs. 50 lakhs had been made in the second plan; many, however, will be inclined to await further details of the sort of training it is proposed to give before they have the reassurance that it will succeed in making trade union practices less subject to purely political pressures. Such efforts as the Government may have made in that direction in recent years have been dismal failures. The most prominent of these failures in the past few months has been seen in the I.N.T.U.C. claim, suitably timed for the elections, for a 25 per cent increase in wages in certain major industries. Even the I.N.T.U.C. should have learnt from its Congress Party mentors that the granting of the claim would damage irreparably not only the industries concerned, but the five year plan and the economy as well, with whose success the longer political future of the parent Party is closely interlinked.

There are already a few industrial companies in this country which have established regular facilities for management-labour consultation on work, methods and techniques. Their example could be more widely emulated. In their own way, perhaps, most concerns with a regard for efficiency offer scope for such consultation, whether formal or informal, between managers and employees. But to extend the practice from consultation to active participation of workers in the management would increase the field for disputes and allow unnecessary interference with what are properly the functions and responsibilities of the managers. The hope that a greater co-operative spirit will prevail if labour is given more say in managerial decisions is idealistic and fanciful. The Labour Ministry must often wonder how it would work in its own administration—for instance, if its peons and chauffeurs were to have a voice in deciding whether delegations should wander through Europe studying "industrial democracy." Apparently, to it, what's sauce for the goose need not always be sauce for the gander.

THE PREFERENCE SYSTEM ON TRIAL

U.K. LOOKS TOWARDS LARGER EUROPEAN MARKET

NEGOTIATIONS for a tariff-free (or nearly so) West-European market stand out as the most significant economic development of 1956, for many countries besides Britain. This is not yet, however, an achievement, and years must elapse before the plan—assuming that it is adopted in some form—can materially affect international trade. In the meantime, we need fresh thinking on a related subject, imperial preference. The British Government refused to associate itself with the European plan without assurance that the system of preference could be maintained intact. It is, however, questioned whether the system, as now operating, brings sufficient benefit to any party to it to justify its implied acceptance as the foundation of British policy in overseas trade. The system has a fairly long history. It was first adopted by Canada, in 1897, and other Commonwealth countries followed her example in the early years of the present century. But preferential tariffs were not incorporated in the fiscal system of the United Kingdom until 1919, and they had little significance even then, as the U.K. was a low-tariff country. Imperial preference was not co-ordinated and consolidated in the Commonwealth as a whole until the Imperial Economic Conference at Ottawa in 1932.

Over this whole period of 60 years, and even—indeed, mainly—in the shorter time since 1932, profound changes have occurred in the Commonwealth's industry and trade. The preferences have become less relevant, and also, because the rise in prices has reduced the real value of specific duties, less effective. Some Commonwealth countries are concerned more with protecting their industries against any competition (including British) than with importing British goods rather than foreign. Britain, on the other hand, is concerned as much with the absolute rates of duty

as with the relatively favourable rates applied to her exports. The preferences themselves presuppose a protective system of tariffs; and over the main period of imperial preference Britain has been, indeed, a well-protected country. She does not, however, impose import duties on such produce as wheat and wool, and she has therefore been unable to grant preferential rates to Australia on exports which represent, normally, about half of Australia's sales to Britain. Australia is the principal market for British exports; yet Australia is the Commonwealth country that has found imperial preference least satisfactory. It is significant that the recent trade agreement between the two countries had to provide other means to assure to Australia a reasonable outlet for her goods in Britain. Equally significant, Australia could not assure British exporters of the favourable rates of preference they had enjoyed in the past.

India presents a different problem, with her large-scale export of manufactured goods, principally cotton cloth, which she did not have in large quantities when the preference system was formulated, and against which, therefore, Britain has no protective tariffs. At the Ottawa Conference it was not foreseen that other Commonwealth countries would export manufactured goods that would seriously compete with British goods in their home market. Nor were the implications of the Commonwealth countries' industrialisation, involving protective duties on British as well as foreign manufactures, fully understood. Nor was the colonies' independence clearly envisaged. The Commonwealth's modern industries are still young; those of western Europe are mature. The Commonwealth is not yet in a position where it can form a free-trade area. Western Europe, broadly speaking, is in such a position. Hence the strong

appeal of the European plan to British exporters—and to Britain as, essentially, an exporting nation.

It is evident, however, that the system of preferences, involving discrimination against foreign goods, must limit the range of such a free-trade plan—though it is not, admittedly, the only limiting factor. Exponents of free-trade in Britain do not accept the idea that this disadvantage of imperial preference is counter-balanced by adequate advantages. Thus, *The Economist*, discussing the subject last June, said bluntly: "The main value of Imperial Preference to an expanding Britain is that it gives us an advantage over America in Canadian markets; for the rest, Imperial Preference is very largely a system whereby we buy some relatively dear Commonwealth products in return for their buying the products of certain declining British industries."

There is, anyway, an interesting alternative to the existing system of Commonwealth preferences—a very interesting alternative from the viewpoint of the dominions and colonies, though Britain may not view it with much enthusiasm. The west-European community, so that the Commonwealth countries would receive preferential treatment of their exports in the European market, granting in exchange similar preferential treatment to west-European goods, with no special arrangement in favour of Britain. Such an arrangement, if liberally conceived, could represent a huge extension of the area of relatively free American blessing, for America would be the principal country against which the preferential discrimination would operate. There are, however, so many American firms manufacturing in Europe excluded from the benefits of such a plan. Europe's dependence on the dollar area would be eased; disappear. Then the other form of discrimination against American goods, due to the lack of dollars, could be withdrawn. Britain has no good reason to withhold her support for such a plan. She would lose her privileged trading position, but she would gain many financial benefits from the extension of the use of sterling that would develop almost automatically within the broader framework.

CURRENT COIN

Promising Outlook for Aluminium.—Only a few years ago, the aluminium industry in this country was troubled by poor demand. The steady recovery since then owes much to general economic expansion as well as to the industry's enterprise in evolving new uses for the metal. Mr. Lakshmi Singhania told the annual general meeting of the Aluminium Corporation of India Ltd. in his presidential address last Thursday (a fuller version of the speech appears on a later page) that aluminium was formerly used in the main for utensil manufacture. But now its industrial uses are becoming important, and their growth promises a rapid increase in consumption. It is necessary to install plant for the manufacture of such finished products as alloy sheets, pressure castings, extrusions, A.C.S.R. cables and foils for packing. Mr. Singhania quoted statistics to suggest that world production of aluminium has been rising faster than for steel, while its price has risen more slowly than that of copper. On this basis, he argued, with some exaggeration perhaps, that "aluminium is the only metal which is still continuing to be comparatively economical." He was, however, right in offering this as an argument for developing the industry rapidly in India. The Government was criticised by Mr. Singhania for its import policy. He was glad that it had accepted the Tariff Commission's recommendation to continue the *ad valorem* duty on imports until the end of 1958; but he regretted that the duty of 25 per cent *ad valorem* imposed on aluminium scrap 13 months ago had been withdrawn last July. The result, he feared, may be that increasing quantities of scrap will be imported instead of virgin metal, their quality must be doubtful and scrap prices abroad will rise. The Aluminium Corporation is planning a three-fold increase in its present capacity, but Mr. Singhania indicated that the location of new plant might be affected by the D.V.C.'s charges for power supplies. The present plant is situated in the D.V.C. area, and it is hoped that it will be able to get power at economic rates when the planned sources come into being. But the rates now being demanded are "very high", according to Mr. Singhania. "We have been left, therefore, no other option than either to put up a plant in a new area where power is available at a suitable rate, or to put up our own plant to generate the necessary power."

Structural Engineering.—Mr. A. D. Shroff, chairman, told the annual general meeting of the Structural Engineering Works Ltd. on Monday that the working results for the year ended last June had been satisfactory, and the works in both Sewri and Mulund remained fully occupied. The demand for structural fabrication has been growing, so the directors are thinking of increasing the company's capacity from 350 tons to 750 tons a month. The Mulund works are engaged in completing the Vaitarna-cum-Tansa pipeline scheme. A contract has been negotiated with the Bombay municipality for the fabrication and laying of pipes for the third stage of about 1½ miles. Similar substantial contract are being negotiated with other municipal authorities. Some shareholders have been disappointed with the proposed dividend of Rs. 15 a share, but Mr. Shroff stated that it was necessary to plough back a substantial portion of the profits for expansion and other projects. Furthermore, "it is the general experience of all industries in recent months that the availability of funds, both in the shape of new capital and working capital from banks, is definitely diminishing, and I shall be very unhappy if, for lack of finances, this company is precluded from completing the various projects." Mr. Shroff pointed to two aspects of the Government's taxation policy which are unfair to companies like Structural Engineering. Firstly, in the case of Section 23A companies, he felt it was necessary to differentiate the smaller medium-scale industries from those companies which had been formed essentially to avoid large payments of direct taxes. Secondly, the super-tax on dividends was "illogical and unscientific" as it completely ignored the average return earned by shareholders over a period of years.

Assam Railways and Trading.—The chief worry of Colonel C. F. Binney, chairman of the Assam Railways and Trading Co. Ltd., seems to centre on his concern's coal interests. In a statement to shareholders, an extract from which appears on a later page, he points out that profits from the plywood factory and the brick works have increased. But the increase has been offset by the drop in profits from the collieries and by the reduced dividends on the company's investments. The deterioration in the case of coal is accounted for partly by an underground fire and explosion at the Tipong colliery early in 1956; and partly by the fact that the cost of production has continued to rise while an adequate increase in the controlled selling price has not been given. The Tipong workings, which were affected by the fire

and explosion, have been closed for some months. Steps are being taken to reopen them, but have met with only limited success so far. An area producing about 4,000 tons a month is still inaccessible, and it is not practicable at short notice to replace the whole of this output by extraction from other areas. Referring to plywood production, Colonel Binney says that it has increased by 25 per cent. This, together with an increase in sales of tea chests, has raised the profits from the plywood factory, saw mill, etcetera. Profits from the timber department and the brick works were again affected by Government orders; the company had to use coal from outside sources, which was inferior in quality and had to be purchased at a much higher price than its own coal. An award of the Assam Labour Tribunal also had an adverse effect. The sale of bricks continues to improve, as does that of tea chests. In Colonel Binney's opinion, the prospects of getting good revenue from the company's investments in tea are "reasonably satisfactory".

Too Little for Agriculture.—Professor D. G. Karve's presidential address to the seventeenth annual conference of the Indian Society of Agricultural Economics, held recently in Cuttack, contained a comprehensive analysis of India's agrarian problems, and discussed the relationship economic research should bear to practical policy. Agriculture, which provides most of the employment and almost half the national income, suffers from a condition of chronic under-investment. Professor Karve estimated investment in it at 30 per cent of the country's total investment. This suggests a serious imbalance in the use of capital resources. The importance of agriculture as one of the principal sources of an investible surplus for development is all the greater now that rapid industrialisation is proposed. He said that the provision of Rs. 25 crores as long-term credit and Rs. 50 crores as medium-term credit to agriculturists during the second five year plan would be inadequate. The planners had been unrealistic in providing for agriculture an even smaller proportion of the capital outlay in the second plan than they did in the first. It seemed that they had been "lulled into complacency by the favourable results of two or three monsoons". Referring to the programme to extend the national extension movement to the entire countryside, Professor Karve said that a similar complacency was evident there too. A rapid increase "in the formal setting up of agricultural extension organisations without adequate technical and financial strengthening", or "setting up targets of agricultural production without corresponding programmes of agricultural extension and institutional finance," would be fatal to the plan. The weakness was deep-seated, so "large-scale and sustained efforts" were required to "lay the foundation for a major plan of economic transformation." These efforts should not be exclusively centred on physical output alone, but should bear a close relation to social values. In terms of practical politics, these values would involve a thorough-going programme of land and tenurial reform, and other measures of social justice which would vest the ownership of land in the genuine tiller of the soil. He regretted that the pace of land reform was being slowed down. Professor Karve recognised that the redistribution of land would create the problem of economic holdings as the man-land ratio was already precarious, so he suggested joint farming under a co-operative system as the best solution. The national extension movement could promote this aim, and it should do so with the assistance of research on such questions as the determination of economic optima under varying conditions of cultivation.

Economy in Production.—In his convocation address to the members of the Institute of Cost and Works Accountants recently, Mr. A. K. Chanda, Comptroller and Auditor-General of India, stressed that in the context of India's industrial growth, greater attention should be paid to economy in production. The need for it was especially great in State-owned undertakings, which in some cases were monopolies, because, unlike the managers of private concerns, officers in charge of public enterprises had no personal financial stake and the prospects of their service were quite unaffected by the degree of efficiency or economy they maintained. This, he said, would safeguard the interests of the taxpayers, and would also make for a more rational use of the economy's scarce resources. In this connection, Mr. Chanda pointed out that while the financial deficiencies of the second plan were being over-stressed, too little attention was being paid to the organisational and manpower deficiencies. "It would be stating the obvious," he said, "to say that only by competent planning and careful and economic execution could the available resources be made to go a longer way towards the materialisation of the plans and programmes." Mr. Chanda deplored a tendency to belittle the rôle of accountants and auditors. In the U.K., where the administration was universally acclaimed for its high standard of integrity and efficiency, the Secretary of an administrative

Ministry was also appointed separately as the Accounting Officer of the Treasury. It was considered a distinction to be so designated. But in India the administrative services had developed a complex, "frequently breeding even an attitude of arrogance towards accounting functions." India was on the threshold of an industrial revolution, so it could not afford to have uneconomic and wasteful methods in the establishment or operation of manufacturing units. They should not be indefinitely insulated from the impact of world competition. Efficiency of production has to be maintained and this can be done by a strictly economic use of productive resources. Cost accountancy is the only means of ensuring maximum efficiency and economy in production, and Mr. Chanda gave the example of the Chittaranjan Locomotive Works, the operational success of which was in no small measure due to the employment of a fully-trained account's officer. There is the need for specialisation in different lines of industry, and a cost accountant trained in the affairs of the cement industry cannot be profitably employed by a steel works. Mr. Chanda suggested that the Institute, which was fulfilling a vital need by turning out trained cost accountants, should arrange for "complementary specialised training in different industries" for its students.

CURRENCY AND REAL WEALTH

"WHAT I think of Bimetallism" is the title of an attractive paper by Mr. Labouchere, just published by the "Gold Standard Defence Association". Mr. Labouchere treats the subject in a plain, commonsense manner, and he appeals more particularly to wage-earners to take the trouble to understand the question, because bimetallism, if adopted, would greatly reduce their ability to provide decently for themselves and families. The following passage is worth reproducing: "There are men amongst us who honestly and conscientiously believe that bimetallism would be an advantage to us. This may appear surprising, but everywhere and in every age there have been persons who lose their heads over some theory, and then are unable to perceive its practical folly. In the middle ages, there were many chemists who passed their lives trying to transmute silver into gold; and there is much similarity between those chemists and the bimetallists of our day. Increase the world's coin, they say, and you will increase its wealth. This is almost as absurd as it would be to suppose that the climate of this planet would be bettered were there more barometers. The wealth of a country has nothing to do with the volume of its currency, because currency is nothing more than a measure of value for everything else. Nothing indeed is more remarkable than the very small amount of currency that suffices for the world's requirements. All the buying and selling that takes place involves a very small movement of what we call money, whether the transaction be between country and country, or between the inhabitants of any country. A country imports and exports. If the exports exceed the imports, very little of this is paid in money, the margin of loss is liquidated in bonds and other such securities, whilst the transactions themselves are arranged for by bills of exchange. A domestic trader buys with cheques, and sells for cheques. Beyond a comparatively small amount of coin for his daily turnover, and for the payment of wages, he does not require coin, from year's end to year's end. Of course, if there is a large amount of gold existing in a country, which can be brought into marketable form for less than the actual cost of mining, etc., the particular country is the richer for it, but the sum total of the world's wealth is only augmented, as it would be by an impetus being given to any other industry."

SOUTH EASTERN RAILWAY

SALE OF 90 CONDEMNED WAGONS

The General Manager invites tenders for the sale of 90 condemned wagons stabled at Mathurakati Scrap Yard, South Eastern Railway, Kharagpur. Tender No. 84/S/3/6 in this connection is obtainable from the Office of the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23 on production of Cash Receipt for Rupees five only from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta-23 by local firms and on remittance of Rupees five only by Money Order to the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23 by outside parties. The cost of Tender Forms is not refundable. The wagons may be inspected on any working day before the closing date of the tender. Tender will be received up to 11 hours on 22-1-1957 and opened in the Office of the Deputy General Manager at 12 hours on the same day.

GENERAL MANAGER

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

RISE OF NUCLEAR COMPANIES

THE announcement of the award of two further contracts in connection with the U.K.'s atomic energy programme, one for the largest atomic power station in the world so far, has been the topic of outstanding industrial interest during the past few weeks. Moreover, another contract is due for announcement shortly, and the expenditure contemplated on all three contracts cannot be less than between £160 million and £180 million. This is a vast sum for what is still only a beginning of nuclear energy developments, and it is evident that great changes in the industrial organisation of the U.K. as a whole are in store, and, in fact, are already in process of initiation. As has been mentioned before, firms tendering for atomic power station contracts work together in groups, which practice has introduced a new and more powerful kind of industrial co-operation, among engineering firms in particular. There are now five such groups, consisting of some 30 companies in all, the companies being in a number of instances subsidiaries or associates of other concerns. There is thus a considerable amount of interlinking within the groups, but as yet the groups themselves have remained self-contained. It is, however, not difficult to conceive of atomic construction problems arising on such a scale as to necessitate the combined operations of several groups, and of course many more groups are likely to be formed than those which exist at present.

It is of interest to note that the shares of the group companies are in strong demand and that, at current prices, yield no more than an average of 3½ percent. There has been a disposition in some quarters to criticise the prices of the shares as being too high. But it has to be noted that a large proportion of the total shares involved is held by insurance companies, financial trusts and other powerful financial institutions which observe very conservative principles of investment. These concerns have not hesitated to add substantially to their holdings when reactions occur in the share prices by reason of political uncertainties. The advantages of investments in shares of companies having substantial contracts over long periods are not far to seek. It is true that the building of atomic power stations means the diversion of labour and materials which otherwise might be

employed in ordinary industry and which, up to a point, could represent a lessening elsewhere of activity by the contracting parties. Against this is the consideration that companies having home contracts assured on a great scale are put in a favoured position to tender for export contracts, if they wish to do so.

Long-term Expansion

A still more important fact from the point of view of the long-term expansion of the nuclear companies is that they are the first to enter an entirely new field capable of literally tremendous development in one direction or another. These companies are, so to speak, acquiring fresh techniques which will open up new avenues for them, while they are able to earn revenue from already established sources. Further, although in a strictly official sense the obtaining of "priorities" after the manner of the war and postwar days no longer exists, privileges do come the way of companies falling within the "strategic" class whether the strategy be of the armament or the economic variety. It is, therefore, not really surprising that those concerned with institutional investment so persistently acquire shares of these companies, among which some of the most famous names in British industry are already to be found. Large additional amounts of capital will have to be found by the companies. Here again general strategic planning by the State ensures that whatever Government is in power, every official facility will be granted for this purpose. It cannot be otherwise; for the whole economic future of Britain is being based upon the reduction of production costs, which it is believed can be brought about through the provision of atomic power for industry, and by the nation being ahead of others in that respect. This may seem rather over-ambitious, at least so far as comparison with the United States is concerned. But the United States is not among the trade competitors most to be feared; even if it were so, the value to a modern Government in having an indicated goal or "target" round which to centre the national effort is estimable.

Atomic Ideal

Indeed, there are plenty of signs that the Government well appreciates the importance of having an atomic ideal to keep before the public, especially as ideals having practical bearing are notoriously in short supply at the moment. So there is seldom a lack of atomic news. It has to

be added, however, that most of the news about the work on hand is couched in fairly wide terms and lays stress on what may be expected later. Three years is a favourite period. Thus, the announcement of a research station for discovering uses for atomic waste products keeps to this formula, stating that fruits from this type of research may be expected at the end of three years. The research station for this purpose is to be linked with the main Atomic Energy Research Establishment in Harwell. Little has yet been indicated of the probable uses of atomic waste in industry. Literature is increasing upon the likely value of atomic waste to agriculture, notably for influencing plant growth and for the development of new strains. The Atomic Energy Authority has announced that it is setting up a commercial department to handle sales and to fix prices for the radio-active materials, uranium, plutonium, thorium and graphite. So far it has not been possible to buy these materials. They could be obtained only under a leasing arrangement, with guarantee of return of the materials to the Authority. Apparently, the sales now contemplated are to the Central Electricity Authority. An additional announcement must be awaited before the bearings of the selling arrangement upon industry can be ascertained. Although leasing is to be forgone, it is evident that some stipulation of the return of the materials to the Atomic Energy Authority must be continued, or, at any rate, some provision must be made for close accountability.

Future of Cotton Textile Industry

What are known as the Emsley Lectures were inaugurated by the Textile Institute, Manchester, in 1953 as a means of commemorating the memory of John Emsley, the first Fellow of the Institute. The sixth of these lectures was delivered by Dr. F. C. Toy, formerly Director of the British Cotton Industry Research Association, who took for his subject "The Impact of New Ideas on an Old Craft Industry." The old craft industry thus indicated is the British Cotton Textile Industry, of which the latter designation is no longer wholly appropriate, since one-third of the machinery of that industry is now processing man-made fibres. Dr. Toy, speaking, it might be hazarded, from much painful experience, remarked that getting the industry to take science seriously had been a difficult task, and credit for realising its importance within a reasonable time had to be given to only a few. However, more alertness had been shown in recent years. The cotton industry had not been short of new ideas during the last 37 years. Over that period the British Cotton Research Association alone had transmitted to the industry the results of 2,000 researches, "something new, on the average, once every week". The position has now been reached that the scientific basis of all the main processes have been worked out; the causes of all the main defects in yarns and cloth with cotton and man-made fibres have been discovered; scientific control of raw materials and of quality at every stage, from opening to finishing, have been established. There are also many new types of machinery for those who have the will and the means to use them.

Dr. Toy's views on the future of the cotton textile industry were especially interesting, coming as they did from one who had been in close contact with it for many years, and who, being now retired from an official post, could speak more frankly than would have been diplomatic before. He estimated that the first-class firms might represent one-third or one-quarter of the capacity of the industry today. There appeared to him to be no prospect of the industry continuing indefinitely with its present size and constitution. Nearly 300 mills had closed during the last four and a half years—rather less than 10 percent of total capacity. There would, in Dr. Toy's opinion, be a further period of overall contraction "which would be a healthy thing in the long run." He foresaw, as have other close students of the factors involved, that the chief hope for the British cotton industry is to maintain at the highest possible quality the goods it produces. Investigations showed that fully three quarters of the firms which had gone into voluntary liquidation since 1951 had been indifferent to research. Firms which at present survived, but were also indifferent to research, would certainly disappear as the years passed.

Lukewarm Approach

A very considerable number of firms exist which are not wholly indifferent to research, but which display no marked enthusiasm. The fate of these is in the balance; for Dr. Toy is convinced that there can be no lasting place in the future for those whose approach to science is merely lukewarm. Firms coming within that group would have to appreciate much more the value of scientific management—the measurement of performance, efficiency, etcetera—as a basis for executive action. What is needed above all else is greater efficiency (through productivity), more originality (through research), and more scientific management to ensure both. I see this old craft, said Dr. Toy in conclusion, as subject to the impact of two great forces, one detrimental, the other beneficial. One force is competition from developing countries abroad; and there is little or nothing we can do about this beyond temporary palliative measures. The other force is science, including management and all that appertains thereto, and to whose possibilities Lancashire has not responded sufficiently. Wholehearted application of all that science can give and by a much greater proportion of the British cotton industry is essential to survival in a substantial sense and for the maintenance of its health.

A DITCHER'S DIARY

evidence to suggest that Mr. Nehru's visit to America has been a successful one—both for India and for the United States. If there is now greater appreciation in Washington of India's economic needs and potentialities in the context of the second five year plan, then that will be gain enough. But it also seems likely, especially after the reported invitation to Marshal Tito for a visit to America, that Washington no longer sees neutralism as wholly evil. Yet it may still be an error to imagine that the whole world has finally been converted to India's view of the nature of the times we live in—and may have to die in. In his address to the United Nations Mr. Nehru spoke of the influence world opinion appears to have wielded on affairs in recent months. From the tone of his speech, a moving one, it was not clear whether Mr. Nehru was speaking of a state of affairs already in existence or of one we would all like to obtain. The restraint on Russian behaviour brought about by world opinion has, obviously, not been fully appreciated by the Hungarians. Egypt? None of us knows just what led to a sudden termination of fighting there, but it may not have been the result only of world opinion, itself an ill-defined phrase. What made the U.N. appear effective on the recent occasion was the support given it for different reasons, by America and Russia, the two greatest powers in the world today. What we would like to see is the U.N. being effective for the justice of its collective stand. There is a difference between the two, and power as the prime determinant of world affairs still awaits abolition.

Along with many others, the international events of the past two months have left me wondering why Britain's action in Egypt should have brought Asian opinion about her ears while the Russian subjugation of Hungary has been opposed by only a few independent voices. There is the fear of colonialism, of course. But that was out of date ten years ago and, anyway, it does not explain the comparative indifference to one of the most shameful examples of modern imperialist aggression as perpetrated by the Soviet Union. In fact, a fair question would seem to be: Whom does Asia consider the better democrat, Sir Anthony Eden or Mr. Krushchev? The explanation may be that Asia, and much of the rest of the world too for that matter, simply does not know what Britain stands for. If that is true, then Britain has only herself to blame. A clue to the mystery arrived on my desk the other day in the form of a pamphlet entitled *Britain's Voice Abroad*. It owes its existence, and its readable style, to the journalists of the *Daily Mirror* and if all that it says is true, Britain should overhaul its propaganda services at once or simply give up trying to be a first-class power. Personally, I have always regarded the infamous Dr. Goebbels as the political prophet of the twentieth century. He proved conclusively that people will readily believe black is white provided they are told often enough. How much easier should it be simply to prove that white is white? But that is something Britain has clearly not been able to do; and the reasons are, according to the pamphlet, the traditional reticence of the race, the interplay of internal politics and the pathetic belief that skimmed resources and a horde of amateurs can do all that is needed. Few of those who have had any dealings with British information services will disagree on that verdict. About the first point, only experiences such as Suez can bring about a more realistic attitude. With the second, I can recommend one of the pamphlet's suggestions that the overseas publicity services be put above

politics right away. On the third, well, the best way out is obviously to appreciate the one fact that a few extra pounds spent now may save the whole future of what a nation stands for later on. And if any proof is wanted of that fact, then Britain need look no further than her present declining prestige in Asia, in spite of her rôle as the guardian of freedom, democracy and progressive thought throughout the world. After all, realities amount to very little if nobody knows about them. The Soviet Union has been prepared to pay a high price for indifference over Hungary; the pamphlet puts it at the equivalent of £1,300 million a year. Britain spends less than £12 million; apparently, preferring to pay the rest in terms of lost prestige and misunderstanding.

As one whose desk is burdened with a dozen Russian propaganda hand-outs and four or five American, for every one British, the findings of this report do not come as a surprise. On turning to the section dealing with the department responsible, the Commonwealth Relations Office, I read of it that: "It would be hard to conceive of a more ineffectual information service". The reasons—"sloth" and "a woeful lack of funds". Last year the C.R.O. received less than half a million pounds for its entire information activities, and £70,000 was for the B.I.S. in India. The Russian figure is not given, but if it is not at least five hundred times as large I would be surprised. There are only seven United Kingdom-based information officers in the whole of this country and much of the material they distribute is of no specific interest to India. For the largest nation in the Commonwealth, the hope of democracy and freedom in Asia and the second largest country in the world, this is nothing short of insulting. Perhaps it accounts for the fact that although Mr. Nehru accuses Britain of being downright aggressive, he is still one of the best friends she can hope for in India. What can Britain expect when, according to the pamphlet, an important New Delhi society once asked the British Council to supply a lecturer on George Bernard Shaw. "We have no speaker available" was the reply. The society then asked the Soviet Embassy for help and the Russians promptly sent along their cultural attaché who made a brilliant speech on Shaw and his place in the British theatre. Much the same story is told about the other organs of British propaganda. And the trouble is not reserved to the political field; those who saw Britain's effort at the 1955 Delhi Industries Fair were not left wondering why imports from Russia, Czechoslovakia, East and West Germany, and Poland are increasing so much faster than those from Britain. In 1955-56, the British Government spent only £60,000 on international trade fairs. If it all went on the Delhi exhibition, it was money wasted because it only served to make Britain look ridiculous in the eyes of a generation of Indian industrialists which has the freedom to place orders where it likes. My advice to those who begrudge the money needed to "sell" Britain is to come and have a look at a certain plastic-covered pavilion which blazes with light every evening on Calcutta's Maidan and reflect on how it is selling Czechoslovakia. It is time Britain got herself out of the habit of believing that propaganda is not a gentlemanly way of influencing people—for that matter, neither is a gunboat. Hurt feelings about being misunderstood are no use either, nor is blaming the man on the spot provided he has been carefully chosen for his professional qualifications in the first place. The answer is more money and a greater effort. Britain is lucky, what she has to "sell" is worth taking. Dr. Goebbels was never so fortunately placed.

MR. LAKSHMIPAT SINGHANIA'S REVIEW

WORKS · HOWRAH 145

Gentlemen, before I close I would like to express again great appreciation of the patient and conscientious working of our Indian technicians who have made this Corporation a success by doing pioneer work for this industry against heavy odds, and I can say that the technical technicians of your Corporation have performed a great duty in development of this industry. But for their co-operation this Corporation would not have turned the corner and established itself for the future.

THE ASSAM RAILWAYS AND TRADING COMPANY, LIMITED

EXPECTATIONS PARTLY FULFILLED

The 76th annual general meeting of The Assam Railways and Trading Company, Limited was held on 28th December, 1956 in London, Col. C. F. Birney, D.S.O. (the chairman), presiding.

The following is an extract from his circulated statement.—

The reasonably satisfactory expectations indicated in my remarks last year have been fulfilled in part only this year. Increased profits from the Company's plywood factory and brickworks have been counterbalanced by a fall in profits from the collieries. There have also been some reductions in the dividends received from the Company's investments. Our two associated tea companies continued to do well, though profits did not reach the exceptional figures of the previous year. The net profit for the Company as a whole, after taxation, amounted to £79,337 as compared with £87,569 for 1954-55.

We continue to be well up to date with payments on account of taxation. Indian tax is payable in advance, and the amount so paid has been included as such under current assets, whilst on the left-hand side of the balance sheet, £5,000 has been set aside for United Kingdom tax on the profits to date.

As will be seen from the report, your Board recommended a dividend of 10 per cent. on the "B" Stock, 8 per cent. having been paid on the "A" Stock. It is also recommended that £10,000 be placed to Reserve for Development and Replacement of Fixed Assets and £20,000 to General Reserve.

Review of Activities

The coal position has deteriorated still further. The output from the Company's collieries (which represents a substantial contribution to the economy of Assam) increased slightly over the previous year, but was seriously interfered with by an underground fire and explosion which occurred at Tipong Colliery early in 1956. The workings affected have been completely closed for some months, but steps have now been taken in co-operation with the Mines Department to re-open them, hitherto with limited success. A small increase in the controlled selling price was authorised during the year, but this was barely sufficient to compensate for the increased contributions to the Coal Mines Provident Fund which it was intended to cover, and the cost of production continued to rise without any adequate increase in the selling price.

Production of plywood increased by 25 per cent. and this, together with an increase in the sales of our tea chests, resulted in improved profits on the Company's plywood factory, sawmill, etc. Our tea chests continue to enjoy a high reputation, both amongst consumers of tea chests and also with the Government departments which are concerned in maintaining the quality of tea chests.

There was a further increase in the profit earned by the Company's brickworks at Ledo, which continues to show improved results.

Profits from the timber department and from the brickworks were again affected by Government orders, requiring us to use coal from outside sources, inferior in quality to and purchased at a price much higher than our own coal. These profits were also adversely affected by the award of the Assam Labour Tribunal.

No definite information has yet become available as to the Government of India's intentions in regard to the future of the Coal Industry. An increase in the selling price of coal has been authorised, but it is doubtful whether this increase will even cover the increased labour costs resulting from awards made by the All India Industrial Tribunal. As has been indicated previously on a number of occasions, the controlled selling price of our coal is more than ever inadequate to cover the costs of production, the expenditure necessary to maintain the productivity of the mines, and to allow of a reasonable profit on their working.

The profit continues to be seriously affected by the closure of Tipong Colliery, owing to the underground explosion, an area producing something like 4,000 tons a month being still inaccessible. It is not practicable at short notice to replace the whole of this by extraction from other areas. The sale of tea chests and bricks continues to improve. The prospects of a good revenue from the Company's investments in tea are reasonably satisfactory.

It is with the greatest regret that I have to refer to the death in August of Mr. W. R. Gawthrop, your Managing Director, so soon after taking up that position. We had looked forward to obtaining the benefit of his mature wisdom and great knowledge of Assam and the Company's affairs for many years. Those who have known him and who have had the privilege of working with him realise how much his advice and energetic application to the forwarding of the Company's interests will be missed. I am sure that you will wish to be associated with an expression of our great sense of loss and of our deepest sympathy with Mrs. Gawthrop.

In conclusion, our thanks are due to the staff in Assam for their continued application to the Company's affairs. The increasing strain on those who are responsible for maintenance and improvement is a factor which must not be lost sight of. More especially are we grateful to Mr. G. E. D. Walker, our General Manager, for his energy and leadership and for the way in which he has shouldered the ever growing responsibilities of his office.

Addressing the Meeting the Chairman said:—

In addition, I should like to give Shareholders some more up-to-date information than was available when my Report was written. The latest figures from Net Revenue from your collieries has been falling steadily for the last 3 years. In 1952-53 it was over 10 lakhs of rupees—in 3 years it had dropped to something under 1 lakh, and it seems certain that the cur-

rent year will show a substantial loss. This loss is, of course, aggravated by the explosion and fire at Tipong, to which reference has been made, but the regular downward trend is evident.

The present controlled selling price of coal was sanctioned 8 years ago. Since then there has been a steady rise in the cost of materials and a fall in the output per man-shift. Year after year we have drawn the attention of Government to the position, and, apart from a small increase recently sanctioned to cover specific increases granted to labour by the Tribunal, no relief has been obtained.

The Collieries, which, on the merits of their coal and with readily available markets, could have built up a strong financial position with adequate resources to finance expansion, have now reached a position at which they are actually being run at a loss. And this is at a time when recent pronouncements regarding the renewal of leases throw some doubt on our future security of tenure—security which is essential to justify long-term planning.

Your Board feel this position cannot be accepted, and they propose to make further urgent representations to Government. With this in view, Sir Frederick Bourne, who will succeed me as Chairman in a few days' time, is proceeding to India shortly and will report Delhi for consultation at a high level.

The visit was adopted.

STRUCTURAL ENGINEERING WORKS LTD.

CHAIRMAN MR. A. D. SHROFF'S

REVIEW

Speech of the Chairman Mr. A. D. Shroff at the Annual General Meeting of Structural Engineering Works Ltd. on 31st December, 1956.

The Directors' Report and Audited Accounts for the year ended 30th June, 1956 have been in your hands for some time and I am sure you will find the results satisfactory.

As pointed out in the Directors' Report, both the Works at Sewri and Mulund continued to be fully occupied. As a matter of fact, the demand for structural fabrication capacity in the country has been insistent and your Directors are seriously considering increasing the capacity from 350 to 750 tons per month. The Mulund Works are busily occupied with the completion of the Vaitarna-cum-Tansa Pipeline Scheme. I am glad to inform you that the Company has been able to secure by direct and independent negotiations with the Bombay Municipality the work relating to the fabrication and laying of pipes for the third stage for about 15½ miles. It is a matter of considerable gratification that the authorities concerned have been fully satisfied with the type and quality of work executed on this pipeline scheme. Besides, the Company is negotiating with other municipal authorities in the country for substantial contracts of a similar nature, some of which are likely to fructify before the end of this official year.

The Company has now completed its thirteenth year and it would not be inappropriate if I refer to some of the salient features in its operations during this period. I am confident that the shareholders of this Company will look with pride upon the success of this Company as an achievement of free enterprise in the medium-scale industry. It must, however, be put on record that this achievement is very largely, if not entirely, due to the enterprise, pioneering spirit and faith of Mr. N. B. Bhagat, the founder of this Company. Starting with very modest means and with the assistance of the late Mr. M. C. Ghia and the Investment Corporation of India, he embarked on this industry in 1943 when, being unknown to the investing public, he could not gather sufficient capital. But his faith in the ultimate success of the Company and the persistence with which he fought the difficulties in the initial stage have fortunately brought this Company to its present stage of strength and prosperity. Perhaps it may not be generally known that in undertaking the Tansa Pipeline Project, he mortgaged his personal properties to raise additional finance supplementary to banking facilities to cope with the increasing funds required for the execution of the contract. Men of Mr. Bhagat's courage and faith in the industrial development of the country are contributing towards raising the status of India as an industrial country.

Dividends

Your Directors are recommending the payment of a dividend of Rs. 15/- per ordinary share, which is fully justified by the results of the last year. As a matter of fact, some shareholders have complained that the dividend recommended is disproportionately low and I have full sympathy with them realising that since the inception of the Company the average dividend distributed to shareholders only comes to 4.61%. I, however, want the shareholders to appreciate that in view of the number of projects, both expansion and new, the Directors are compelled to plough back a substantial amount of the profits to enable the Company to successfully implement them. It is the general experience of all industries in the recent months that the availability of funds, both in the shape of new capital and working capital from Banks, is definitely diminishing and I shall be very unhappy if, for lack of finances, this Company is precluded from completing the various projects under the consideration of your Directors.

From other platforms I have earnestly pleaded with the Finance Minister for examination of the position of Companies like these which come under the mischief of Section 23-A of the Indian Income-Tax Act. There are good and sound reasons rooted in the historical background of a number of smaller medium-scale industries which justify a differential treatment from those companies which have been essentially formed to avoid a large payment of direct taxes. Similarly, the history of this Company confirms my plea that the penal super-tax on dividends is both illogical and unscientific as it completely ignores the average return earned by shareholders over a period of years.

I am glad to say that our relations with our workers have been very happy and satisfactory throughout the year.

I wish to take this opportunity of expressing our gratitude to all those who have rendered such devoted and loyal services to achieve the results of the last year and I am sure the shareholders will join me in paying this tribute to our entire staff.

Note: This is not a report of the proceedings at the above Annual Meeting.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

STRONG DEMAND FOR INTERBANK FUNDS

Wednesday, 2nd January.

THE seasonal demand for funds has continued to increase during the holiday period. The leading source of offtake is now the sugar industry, where the crushing is in full swing. The requirements on account of cotton stocks have been maintained, and accommodation against grain storage has now made its appearance. There has been rather less enquiry from the jute mills in the past two weeks, but it is considered that this is a temporary feature because the long-term trend of jute advances continues upwards. There is every sign that this year will be a bumper one so far as demand for seasonal advances is concerned. The interbank market has been exceptionally tight during the last few days on account of year-end requirements. The call rate is quoted at 4½ per cent, with borrowers over.

It has been a poor week for export bills. The few documents which have passed have been equally divided between tea and gunny. Remittance has been good, as might be expected at this time of year. Sterling continues to strengthen. A considerable bear position is apparently still being maintained, but covering has been going on at a brisk pace. The pound is quoted higher against both the dollar and the Continental currencies.

Silver was steady on fresh support and the price advanced from the previous week's level of Rs. 172 to Rs. 173, quoted today. The rate for ready delivery was Rs. 173-4. The London and New York prices were almost unchanged.

In spite of the rise in silver, gold was easier. The price declined from Rs. 106 to Rs. 105-12. The sovereign at Rs. 69-4 showed a loss of 4 annas.

During the week ended 21st December, 1956 Government of India Treasury bills for Rs. 4,05,00,000 were sold in favour of the Reserve Bank.

During the week ended 28th December, 1956, Government of India Treasury bills for Rs. 3,87,00,000 were sold in favour of the Reserve Bank.

Increases of Rs. 57 lakhs and Rs. 35 lakhs in active notes and in the total note issue to Rs. 1,466,07 crores and Rs. 1,475,21 crores, respectively, were the outstanding features of the return of the Reserve Bank of India for the week ended 28th December, 1956. Notes held in the Banking Department declined by Rs. 22 lakhs to Rs. 9.14 crores. Deposits of the Government of India rose by Rs. 1.68 crores to Rs. 57.24 crores, while other Government accounts declined from Rs. 9.45 crores to Rs. 8 crores. Balances of commercial banks, at Rs. 58.09 crores, showed an increase of Rs. 5.76 crores. Balances held abroad were Rs. 3.96 crores lower at Rs. 86.57 crores, but investments increased by Rs. 46 lakhs to Rs. 61.82 crores. Other loans and advances improved from Rs. 93.81 crores to Rs. 106.04 crores, of which advances to scheduled banks against usance bills increased from Rs. 49.49 crores to Rs. 57.20 crores. Such advances totalled Rs. 425.68 crores since 1st January, 1956. Ways and means advances stood at Rs. 7.27 crores (Rs. 7.41 crores).

The statement of the position of scheduled banks for the week ended 21st December, 1956, shows Demand and Time liabilities at Rs. 646.72 crores (Rs. 9.43 crores on account of borrowings from banks) and Rs. 459.86 crores (Rs. 2.86 crores), compared with Rs. 655.66 crores (Rs. 11.21 crores) and Rs. 459.71 crores (Rs. 2.90 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 89 lakhs and Rs. 10 lakhs to Rs. 35.29 crores and Rs. 50.78 crores, respectively. There is a drop of Rs. 50 lakhs in investments to Rs. 364.83 crores. Advances and bills discounted, at Rs. 783.81 crores, show a rise of Rs. 6.61 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.8 percent and 70.8 percent, against 7.8 percent and 69.7 percent.

The return of the State Bank of India for the week ended 21st December, 1956, shows a rise of Rs. 1.77 crores in total deposits to Rs. 239.03 crores. Investments in Government securities are up by Rs. 1 lakh at Rs. 95.49 crores, while other authorised investments are down by Rs. 20 lakhs at Rs. 11.21 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have increased by Rs. 3.09 crores to Rs. 137.09 crores. Cash and balances are, in consequence, shown at Rs. 16.46 crores, or Rs. 95 lakhs less.

LONDON FINANCIAL LETTER

RESTORING THE STRENGTH OF

STERLING

By Air Mail.

THE City of London has to admit that the International Monetary Fund, which it has so often criticised as nearly useless, is now performing a most important function. When the sterling area's published reserves had fallen alarmingly below \$2,000 million, the Fund added \$1,300 million in the space of a few days. With nearly \$1,000 million of dollar securities available as collateral for an American loan, the additional resources that could be used, if necessary transformed the whole appearance of the reserves supporting sterling. It was immediately evident that the risk of devaluation with a few months was negligible, and pressure against the currency was immediately relaxed. There remain, however, some very unsatisfactory elements in the position and some questions not satisfactorily answered. Mobilisation of reserves in an emergency is sensible and necessary, but it does nothing to correct the underlying problems. It has been said that the Chancellor of the Exchequer, Mr. Harold Macmillan, reacted tardily to the crisis, but that his belated actions were bold and comprehensive. Insofar as sterling's problem was psychological—the fear (or hope) that the reserves could not support its present value for long—the Chancellor tackled it effectively. Mobilising reserves is not, however, the same thing as remedial action. The "approximate balance" in the current account with the outside world envisaged in the year to June next represents a deterioration of nearly £300 million from the annual rate of surplus established in the preceding half-year—and by the end of June the seasonal pressure on sterling will be about to begin. Yet the Chancellor does not, apparently, feel that any drastic action is needed to prevent the deterioration. He prefers, it seems, the old helpless expedient of a dollar loan.

The main unanswered question is where the sterling that caused the loss of some £100 million worth of gold and dollars in November originated. It is known that there were no large quantities of "American" or of "transferable" sterling available to sell, and it seems that much of the foreign capital that could conveniently leave London had done so before November. The question arises, therefore, whether "native" sterling has been leaking freely from the sterling system. Such leaking could well occur through those sterling countries whose controls are less stringent, or less efficient, than Britain's—and to those countries capital can flow unrestricted from sterling countries whose exchange control is stricter. While confidence in the currency is sustained it may seem that this inequity on the gold loss is academic. But unless the authorities can get to grips with the underlying problems not even the formidable reserves protecting sterling can sustain that confidence indefinitely. And, while there are limits to the amount of foreign-held sterling that can be offered, the sterling held within the sterling area is inexhaustible.

Financing Russian Policy

A not inconsiderable factor in the recovery of sterling—specifically, "transferable" sterling—was the selling of substantial quantities of Russian gold. The phenomenon has been much discussed here, for sales of Russian gold in international markets (in this case they were focussed on Switzerland) had not previously been seen for many months. It is axiomatic that the Russian authorities sell gold to acquire foreign currency. The question is why they wanted sterling at that time. They did not seem to be short of it for ordinary commercial purposes, for they had been offering credit to importers. It was suggested that they wanted it for Egypt; but when China assisted Egypt in the earlier phase of the Suez Canal crisis, she sold "transferable" sterling to provide Egypt with other currencies.

Russian officials are often keen business men, and they would not be reluctant to take advantage of the favourable rates for buying "transferable" sterling that were established in November. But there are reasons to believe that this demand for sterling will be repeated after that temporary advantage has disappeared. For the whole rouble system seems to be undergoing profound modifications. The pool of sterling and other foreign currencies is not, apparently, functioning any longer; so a surplus earned by one country in the Soviet bloc is not necessarily available to offset a deficit of another. In present circumstances, Soviet Russia must evidently assist the deficit countries. At the same time, the demands of consumers throughout the bloc—including Russia itself—may involve an appreciable increase in imports of consumer goods; and wherever they may ultimately be distributed, it will presumably be necessary for the Russians to pay for them in the first place. If this interpretation is correct, considerable quantities of Russian gold may be exchanged for sterling in the future; for the Russian authorities use sterling widely in their transactions with non-sterling countries as well as with the sterling area. Other precious metals may be similarly sold, as in the past. But it is possible that in the more distant future an increasing proportion of Russian imports will be financed by sales of diamonds, if the vast discoveries reported by a prospecting expedition in Yakutsk, Siberia, are substantiated.

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to November, 1956. Compared with October, the November indices for Government securities and preference shares show drops of 0.4 points and 1.3 points, respectively.

There were decreases in cottons 1.2 points, jutes 7.9 points, minings and oils 20.6 points, cements 13.4 points, engineering 0.3 points, papers 45.7 points and miscellaneous 4.6 points, while increases occurred in coals 8.2 points, teas 20.8 points and

sugars 4.5 points.

Correlating all the factors, the Capital variable yield securities index shows that the index for stock prices in these classes of shares declined by 5.9 points during November, 1956.

Weights	Index of Govt. Securities	Index of Preference Shares	Variable-Yield Securities											Combined Index

Stocks and Shares

MARKET FACES THE NEW YEAR IN DEPRESSED MOOD

MORE SHOCKS AWAITED FROM INDORE CONGRESS SESSION

Wednesday Evening.

THE stock market has begun the New Year on a subdued note. There has been little change on today's opening quotation of Rs. 28-5 for Indian Irons. During business hours prices tended to sink lower while in the evening they showed some buoyancy and climbed to Rs. 28-10. During the slack holiday period a new low level for Irons was reached at Rs. 27-12. The general undertone is one of extreme caution. This week's Indore meeting of the Congress Party is expected to bring fresh bad news for the market and operators are not inclined to take chances. Other speculative shares have ruled quiet in sympathy with Irons, although Indian Coppers are steady.

Investment counters have shown little sign of life and turnover has been small. The coming elections and the various taxation ideas have contributed to a general feeling of uncertainty and even first-class investment shares are unable to find buyers in spite of the favourable prices at which they are now quoted.

Details of the recent trading follow.

The Government security market continued to rule quiet and prices, where changed, were marked down. Three percent Conversion Loan was unchanged at around Rs. 73, and Non-terminable Paper was quoted at the same rate. In short-dated loans, 3% 1957 was taken at Rs. 99-12, 3% 1958 was marked at around Rs. 99-9, 2½% 1961 was quoted lower at Rs. 93-5, 3½% 1961 was easier at around Rs. 99-3, 2½% 1960 had sellers at Rs. 96-6 and 3% 1959-61 was weak at Rs. 97-12. In the medium-dated group, 3% 1963-65 was quoted at Rs. 94-3, and 3% 1964 was marked at the same rate. In National Plan issues, 3½% 1964 was unchanged at Rs. 98-3, but 3½% 1965 eased further to Rs. 98-5. In long-dated loans, 3% 1966-68 was traded at Rs. 92-4. Three percent 1970-75 continued on offer at Rs. 87-14 while 3½% 1974 was marked at around Rs. 98-8. Sellers continued to predominate the market for State loans, but prices were unchanged.

Among preference shares, Associated Hotels were crossed at Rs. 55-12 and Bharat Collieries were marked at Rs. 50-8. British India Corporation were done at Rs. 119 and Calcutta Electric were crossed at Rs. 10-4. Dalmia Cement Rs. 100 paid-up were marked at Rs. 91 and a small lot of the Rs. 40 paid-up shares changed hands at Rs. 36. Indian Aluminium were taken at Rs. 78 and there were buyers of Indian Iron & Steel at Rs. 100. In jute, a solitary transaction was reported in Gouapore at Rs. 80 and in Kamarhaty at the same rate.

Business in bank shares was on a much reduced scale with only three shares changing hands, namely Hind Bank at Rs. 35, a small lot of Punjab National at Rs. 49-12 and United Bank of India "D" shares at Rs. 4-8.

In railways, a small lot of Bankura Damoodar was transacted at Rs. 56-12 and Katakhal-Lala Bazar at Rs. 69. Dehri Rohtas were slightly better at Rs. 13-6.

In cotton, Jayshree were reported at Rs. 5-13 and Kesoram were marked down from Rs. 15-4 to Rs. 14-15. New Victoria were shaded at Rs. 1-13 and Swadeshi Cotton Preferred-Ordinary were reported at Rs. 11-6. Elgin were marked down today from Rs. 25-12 to Rs. 25.

Business in coal shares was of a retail nature and price movements were narrow. Bengal fluctuated around Rs. 443 and Burrakur, after being done up to Rs. 21-14, were easier at the close at Rs. 21-4. Bharat Collieries were unchanged at Rs. 6-12. Central India Collieries were marked back from Rs. 6-8 to Rs. 6-3 while Western Bengal were better at Rs. 5-15. East Indian eased from Rs. 27-8 to Rs. 27 as did Equitable from Rs. 25-4 to Rs. 24-10. Katras Jheriah were unchanged at Rs. 56-8.

Jute shares continued their downward trend and buyers were conspicuous by their absence. Here is a chart showing representative price movements:

	Opening 20-12-56	Closing 2-1-57
Anglo-India	142	135
Birla	14 14	14 10
Caledonian	160	139
Delta	128	127
Howrah	19 12	19
India	121	120
National	20	18 12

In electrics, Calcutta were unchanged at Rs. 13-1 and Cuttack were reported at Rs. 8-8.

In sugar, Cawnpore improved from Rs. 16-8 to Rs. 17-8 and Champaran jumped from Rs. 21-8 to Rs. 24-8 (after Rs. 26-4) on rumours of a bonus issue. Durbhanga improved from Rs. 20 to Rs. 21-8 while Ramnugger were easier at Rs. 23-4. Carew were depressed at Rs. 7-8. Dyer Meakin Breweries changed hands at Rs. 5-12.

In the engineering section, Indian Iron & Steel shares were weak and at one time during the holidays were marked down to Rs. 27-12 in the evening against an opening quotation of Rs. 29-7; tonight's closing quotation is Rs. 28-3. Braithwaite were unchanged at Rs. 26 as were Burn & Co., at Rs. 318. Jessop & Co., after being sold down to Rs. 28-12, recovered to Rs. 29 as did Richardson & Cruddas from Rs. 21-10 to Rs. 22-12. Textile Machinery receded steadily from Rs. 20-9 to Rs. 19-11.

In paper, Orient were marked down from Rs. 32-8 to Rs. 31-7 and India Paper Pulp were unchanged at Rs. 22-8. Titagur Paper were quiet at Rs. 36.

In cement, Assam Bengal were unchanged at Rs. 6-14 and Dalmia were easier at Rs. 12-4. Sone Valley were marked down from Rs. 8-4 to Rs. 8.

In insurance, the only share dealt in was Concord of India at Rs. 11-2.

In shipping, Calcutta Landing were Rs. 1-8 lower at Rs. 14 while India Steamship were fairly steady at Rs. 9-5. India General Navigation recovered from Rs. 69 to Rs. 71 while Port Shipping receded from Rs. 14-12 to Rs. 14-10.

In the miscellaneous group, Aluminium Corporation recovered from Rs. 10-4 to Rs. 10-8 and Balmer Lawrie were better at Rs. 150. Britannia Biscuits met with small enquiry at Rs. 15 while Clive Row were depressed at Rs. 10. Great Pyramid Insurance were offered at Rs. 2-8 and Hindustan Motors were marked back further to Rs. 7-12.

"...and a bonus of goodwill to the management — for installing the 'Tushar' WATER COOLER!"

With the TUSHAR you get

- A continuous supply of instantly-cooled water at the touch of a button — no unhygienic refilling or storing.
- A choice of two handsome models.
- Ease of installation.
- Economical to run.

'Tushar'
WATER COOLERS

A modern must for factories, offices, schools, hotels, hospitals and colleges

FRESH BUOYANCY IN STOCK MARKETS

INDUSTRIALS AND GILT-EDGED RISE

London, 2nd January.

BUSINESS in the stock exchange remained at a very low level immediately after the Christmas holidays but expanded sharply after the week-end to end the year on a buoyant note. Substantial gains were scored in the main sections on the last day of 1956, and a very firm tone was maintained into the New Year, although the advance later slowed down and became more selective. Sentiment was aided by a more hopeful view of the Middle East situation, coupled with the growing belief that money will become cheaper. Gilt-edged securities were prominent in the advance. The fall in the Treasury bill rate for the third week in succession stimulated the general hope of a fall in interest rates, which brought in fresh buyers of Funds. Foreign bonds were subdued throughout, but the Chinese issues were weaker. Dollar stocks eased, reflecting the tone of Wall Street. The industrial market recorded extensive gains, with virtually all groups participating in the advance. The best features were provided by atomic power and textile shares. Gold shares met with selective support, and several appreciable gains were scored. Coppers went ahead, but reacted later on profit-taking while other base metals moved similarly. Cils responded strongly to the Middle East developments and were substantially higher, although they closed below the best levels. Only limited business was transacted in rubber and tea shares, but the tone was satisfactory and prices were generally steady to firm.

The Money Market

With only three full working days and the year-end activities in full swing, conditions in the money market during the past week have been very difficult. Discount houses had large commitments for Treasury bill payments, but available funds were very meagre and with their need for money to tide them over the old year, they had to

borrow a large amount from the Bank of England on the Bank rate term of 5½ percent. In open market operations, day-to-day money rates ranged between 4½ percent and 5 percent, with the latter rate conceded for over the turn of the year and for a week. There was a fair offtake of Treasury bills with March maturities and "hots" sold at 4-13/16 percent, and under duress at a higher rate. This week, with the arrival of the new year, conditions are expected to be easier and the supply position is likely to be helped by a large number of excess bill maturities. Applications for £270 million worth of 91-day treasury bills totalled £372,465,000, of which £270 million were allotted at the average rate of 97½-1316 percent, against 98½-143d percent in the previous week. This week £270 million worth of 91-day bills are on offer. The Bank of England return for the week ended 26th December showed that notes in circulation were £1 million higher at £1,997 million, while bankers' deposits were £3 million higher at £203 million.

Activity on Wall Street

Foreign bonds featured on Wall Street with increased activity and firmness in Serbs, which gained a couple of points. Polish were also in demand and higher by one point or so. German Nationals were easy, with Italians easing after fractional gains. Greeks were mixed. Norwegians unchanged and Danish occasionally lower. Japanese were mostly higher and few Brazilians showed wide price movements either way on small volume. Chile 3 percents finished with a small decline. U.S. Government securities were highlighted by the slump in long-termers, where record lows were touched. This was attributed, in part, to liquidation in order to obtain funds for the purchase of higher yielding corporates scheduled to reach the market. The market recovered at mid-week, only to slip back again. Investment quality corporates lost some ground, but eventually developed a firmer trend.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 18th December shows that gold stocks rose by \$22 million to \$21,931 million. Foreign deposits fell by \$17 million to \$405 million, while foreign investments rose by \$46 million to \$3,653 million. The Federal Reserve bought \$54 million worth of bills and \$186 million of government securities under repurchase agreements. Total discounts and advances increased by \$213 million to \$772 million,

while aggregate of excess reserves of member banks rose by \$254 million to \$613 million. Daily average excess reserves of member banks fell by \$1 million to \$578 million, while their daily average borrowings declined by \$172 million to \$527 million. Business loans of New York city banks rose by \$218 million to \$11,477 million, compared with a rise of \$70 million to \$9,131 million a year ago.

Hongkong Gold Improves

The declining trend of the Hongkong gold market was arrested over the past week as sterling again depreciated in New York. After fluctuating somewhat, the market closed above the opening level. The official offtake was 2,060 taels and the unofficial 15,200 taels. Carry-over charges were 259 cents a ten taels in favour of sellers. Arrivals totalled 25,000 ounces. Forward contracts were done at \$(U.S.)37.73.

Paris Gold Quiet

Very quiet conditions prevailed during the past week on the Paris gold market. There was a weaker tone at first prompted by reports of increased Russian gold deliveries to western Europe, and also because the U.S. Senate had waived the tax on gold trading. The supply of gold through smugglers dried up considerably because of the petrol crisis. A large part of the gold arriving on the Paris market has been carried by car. However, fine gold continued to weaken compared with the previous week's levels in a very narrow market due to a lack of demand. Coins were relatively steadier, and the level of prices at the end of the week was about the same as at the beginning.

West German Gold Reserves

Western Germany's gold reserves in the past week exceeded Dm6,000 million for the first time, the Bank Deutscher Laender said. The Bank in its weekly report added that gold reserves rose by about Dm426 million to Dm6,220 million in the week ended 13th December. Total gold and currency reserves reached about Dm18,000 million by 15th December, compared with Dm12,900 million at the beginning of 1956. Note and coin circulation totalled about Dm16,000 million on 7th December, 1956.

Aluminium Surcharge Withdrawn

The Aluminium Union Limited has announced that from 1st January, 1957, the surcharge of 30 a ton on supplies of virgin aluminium will be discontinued. Thus, from 1st January the rate is £197. The Aluminium Union Limited has acted as the agent of the U.K. aluminium industry for importing and distributing higher cost American metal, and by agreement, has applied the surcharge to all supplies of virgin aluminium since 1st July, 1956.

Vegetable Oils Unchanged

With the New Year holidays a restrictive factor, generally quiet conditions ensued in most oils and seeds. Prices varied little from the previous week's levels. Straits coconut oil ruled steadier, with small business passing at hardening rates, but Ceylonese oil was neglected, with re-sellers talking of £104 c.i.f., but open to bids around £2 less. Linseed oil was neglected, with sellers reluctant to quote lower due to a shortage of near oil. Edible oils lacked attention, usually at unchanged rates, the early closing of the American markets precluding late offers. Rumours circulated that shipments of Indian castor oil were extended to the end of January, but confirmation was lacking and buyers here remained unmoved. British East African castorseed softened slightly, but again the response was poor. Groundnuts were rarely mentioned with any certainty, and in the absence of constructive demand, the recent rates were generally repeated, except for Nigerian which was difficult to trace under £95 c.i.f.

Limited Activity in Rubber

The intervention of the Christmas holiday precluded the development of large-scale activity in the London rubber market during the past week. Prior to the closing for the holiday, the market failed to hold a full response to a sharp advance in eastern values, but the quietness was relieved by a little squaring of accounts and switching from near to distant positions. A further sharp advance in Singapore prices put values up by 1d a lb. on the resumption of business after the recess, with the higher level attributed to disturbing Indonesian political events. Business was mainly of a speculative character, and factory interest was negligible. Selling orders in the late stages reduced the advance by ½d a lb. and values closed the week about 3d higher on balance. Traders reported a moderate increase in available supplies of sole crepe as a result of the arrival of vessels in the port of London, but although the holidays restricted business, 50d was still required for good quality ½ inch smooth No. 1 on the spot.

Tea Research in East Africa

Sir Engel Dow, Professor of Agriculture, Cambridge University, told the recent annual conference of the Tea Research Institute of East Africa in Kericho that there is a good chance of developing a high level of tea-growing in East Africa if the growers support increased research. He said that botanical experiments must be combined with careful study of soil, temperature and water content.

U.K. Textile Delegation to India

The U.K. cotton industry delegation under the leadership of Sir Cuthbert Clegg is leaving by air for India on 9th January for discussions with representatives of the Indian cotton industry, it was officially announced. Lancashire cotton circles, although relieved of many anxieties by the current boom on the home market and by the fact that Lancashire cotton textiles are now more competitive with Indian textiles—are still pressing for talks with India for the restriction of Indian cotton textile exports to the U.K.

New Delhi

THE FALL IN FOREIGN EXCHANGE RESERVES

PROPOSALS TO INCREASE EXPORT EARNINGS

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government is determined to ensure the stability of the Indian rupee. In the postwar period, the currency has acquired a status of its own. The unphased implementation of the second five year plan is largely responsible for the rapid depletion of sterling resources during the last few months. The sterling balances stood at Rs. 538 crores on 7th December, 1956. The minimum requirements are placed at Rs. 440 crores—Rs. 400 crores as a paper currency reserve and Rs. 40 crores as working balances. This leaves a balance of Rs. 98 crores, as on 7th December. There has been a weekly deficit of Rs. 6 crores. In other words, on 7th December, India had enough foreign exchange to meet her present commitments for 16 more weeks. This is on the assumption that no fresh additions are made to the sterling reserves. As already reported, proposals are being considered to step up exports. A small quantity of sugar (50,000 tons) and groundnut oil may be exported to earn foreign exchange.

There is no intention at present to draw on the paper currency reserve of Rs. 400 crores of sterling balances kept in London. There will be no need to do so, it is explained here. India can draw \$100 million from the International Monetary Fund to tide over any emergency. By the end of March, it is expected, negotiations for some loans which are now in progress with the World Bank may be finalised.

Tourism in Reverse

The problem of foreign exchange is considered only temporary. Many points of leakage are being closed. They include "tourism in reverse," or the practice of "seeing the world at India's expense." In 1955, for example, 1,000 persons went out of India and cost Rs. 50 million in foreign exchange. The 1956 record cannot have been less disappointing. In addition to the large cultural missions which toured various countries, two missions from the Agricultural Ministry and the Planning Commission visited China; the Minister for Agriculture, with a small team, visited Russia; the Deputy Minister for Transport, with some officials, visited Europe; and so did the Deputy Minister for Production and the Minister for Information and Broadcasting. The Minister for Natural Resources visited the U.S.A. and Europe, and the Minister for Communications visited South America. The list is by no means exhaustive. It merely gives some idea of how foreign exchange resources were used.

The Finance Minister, at least for the time being, has put a stop to such trips abroad. But this is the pre-election period, and how far his policy will succeed after the elections depends largely on the co-operation he gets from his colleagues in the Cabinet, particularly the Prime Minister.

Effect on Industrial Expansion

The import of cement has also been stopped, although existing commitments will, of course, be honoured. The import of steel in 1957 will be staggered. A new pattern of industrial development is proposed. Licences for new units, or for the expansion of existing units, involving a large outlay of foreign exchange are being granted on the condition that the licensee raises the foreign exchange himself, either through a loan or long-term credit facilities. Generally speaking, the expansion of production is aimed at through existing units or through machinery and equipment available or manufactured in India.

Raw Film Project

India is often blamed for accepting Communist aid in industrialisation. The fact, however, is that she is sometimes driven to accept such aid. The raw film industry illustrates the point. India is the second largest consumer of raw films. She has been wanting to develop a raw film industry of her own. The only offer of help so far has come from Eastern Germany. Even now, India is open to offers. As things stand, she may be driven to accept the aid offered by the East Germans.

Expansion in Chemicals

The setting up of a Development Wing is a principal item in the progressive plan of Imperial Chemical Industries. It is proposed to bring to India fully qualified men to study the various avenues of production, plan their development, undertake designing, and, above all, train the Indian personnel to replace them within a reasonable period. The company has submitted plans to the Government for the manufacture of water-treatment chemicals in India. Permission has also been sought to expand the manufacturing capacity for caustic soda and chlorine. The manufacture of "safety fuses" is being undertaken. It is estimated that when in full production, this unit will meet 60 percent of the demand, leaving the remainder to the existing units.

Industrial Production Rises

There has been an all-round increase in industrial production during 1956. With 1951, the beginning of the first Plan, as base, the general index of industrial production averaged 134.7 during the first nine months of 1956, as against 122.1 for the

year 1955. The increase in production was shared by almost all the important industries. The general index of industrial production for different months of 1956 was as follows: January 122.9; February 134.2; March 128.6; April 134.7; May 151; June 199.6; July 152.6; August 132.7; and September 145.8.

The following statement shows the production of various industries:

Name of Industry	Unit	Production		Production	Estimated
		1954	1955	during 1956 Jan-August	Production during 1956
<i>Engineering Industries :</i>					
Fluorescent Lamps	.. Nos.	214,800	721,200	591,900	887,850
Power Transformers	.. KVA	398,224	564,713	544,800	817,200

New Items

New items developed in India in 1954 included fuel injection equipment, roller bearings, geared head lathes of 10-inch and 12½-inch centres, motorised bench grinders, steel tubes, sheet glass of 10 to 12 oz. gauge, chloromycetin, clacial acetic acid and acetic anhydride.

Among the new items developed in 1955 were alternators, cycle dynamo lighting sets, complete typewriters, self-doffing jute sliver spinning frames, tea dryers, clincker coolers and clincker breakers, delivery valves and pump elements for fuel injection equipment, vertical multi-cylinder diesel engines, certain sizes of drilling machines, all geared-head bench lathes, hypodermic needles, penicillin, ammonium chloride, bismuth salts and plastic emulsion paints for building and aircraft finishes.

New items developed in 1956 include drum closures; crushing, tearing and curling machines, capstan lathes of 1½-inch capacity, portable electric drills, shock absorbers, radiators, brake linings, clutch discs, injection nozzles, tractamound road roller chassis, cadmium sheets and strips, deoxidised copper sheets, silicon brass sheets and strips and leaded brass for clocks, D. D. T., salicylic acid, sulphadimidine, naphthols, vat jade greens, vat dark blue (BO), vat black (BB), and optical bleaching agents.

Labour Ministers Meet

The Labour Ministers' conference held a two-day session in New Delhi last week. It accepted the proposal to set up wage boards for seven industries—plantations, cotton textiles, jute, electrical, mechanical and general engineering, cement, sugar and steel. These boards will be set up by an executive order of the Central Government. They will include one independent chairman (a retired High Court judge), three members each representing employers and workers, and three independent members. The three independent members, it is explained, "will balance the sectional interests, keep in view the general public interest, and in particular the recommendations made in the second five year plan."

The plan outlines the following principles:

1. A wage policy which aims at a structure with rising real wages requires to be evolved. The financial position of average units in a centre should be made the basis of wage fixation.
2. Steps such as better lay-out of plants, improvement in working conditions and training of workers should be taken to increase productivity. The principle of payment by results should be followed, subject to prior consultation with, and adequate safeguards for, workers, the main guarantees being a minimum (fall-back) wage and protection against fatigue and undue speed-up.
3. Workers should be assured of their adequate share in increased productivity.
4. Studies should be undertaken to see whether there is any scope for a wage increase even at the present level of productivity.

5. The principle of equal pay for equal work needs to be more vigorously implemented.

Balancing Sectional Interests

Why three persons are needed to balance the sectional interests is not explained. And how will this balancing of interests operate if the so-called independent members are pledged to implement the plan objective of raising wages even at the present level of productivity. The domestic consumer can be compelled to pay higher prices for his essential requirements. But the foreigner is under no such compulsion. Jute goods, tea and cotton textiles are commodities which earn foreign exchange and thus help the implementation of the second plan. The device of wage boards may help win the elections, but any tilting of the competitive advantage against India by alterations in the prices of export commodities could affect the plan itself.

The Union Labour Minister made a special reference to wage boards in his inaugural speech which is worth quoting. He said: "It is no use

going in for industrial disturbances or agitations or playing into the hands of those interests which are out to jeopardise our plan. It is with that end in view that wage boards have been suggested." It was for precisely these reasons that the Bank Award was modified in favour of bank employees. This raises a fundamental issue: who would implement the decisions of the wage boards if they do not satisfy the workers, or if the interests "out to jeopardise our plan" prevailed upon labour to reject those decisions? Will those decisions be implemented on the model of the Bank Award?

Provident Fund Contributions

A Press communiqué adds that "the opinion of the conference was that provident fund contributions should be increased from 6½ percent to 8-1.3 percent." According to the latest information, the average annual collections of provident fund contributions from the six industries at the existing rate of 6½ percent are: cement Rs. 26 lakhs; cigarettes Rs. 22 lakhs; engineering industries Rs. 1.98 crores; iron and steel Rs. 1.44 crores; paper Rs. 25 lakhs; and textiles Rs. 13.95 crores. The total is thus Rs. 18.10 crores. By September, 1956, the scheme was extended to 17 more factory industries.

The Union Labour Ministry is considering proposals to extend the scheme to employees of still more industries—tea, coffee, rubber, cardamom, pepper, mica, manganese, gold, limestone and iron ore, and to commercial establishments such as banks, insurance, transport, etcetera. The total annual collections of provident fund contributions at the rate of 6½ percent in all these industries are placed at Rs. 14.2 crores. If the rates are increased from 6½ percent to 8½ percent, the total provident fund collections from six industries at present covered by the Act would be about Rs. 120 crores during the whole of the second plan period. The extension of the Act to additional industries would at the higher rate of contribution bring in about Rs. 94.65 crores. There would thus be an increase in the provident fund collections of about Rs. 53.65 crores annually during the current plan period.

New Import Policy

Against the advice of Indian and foreign financial experts, deficit financing was launched. Meanwhile, foreign exchange resources have been depleted, and the Indian consumer has now been called upon either to forgo some things he needs or to pay higher prices for them. The new import policy announced last week reflected the foreign exchange crisis. The sterling balances stood at Rs. 742 crores in January, 1956. They were reduced to Rs. 539 crores in November, 1956—a fall of Rs. 203 crores. It is claimed that the worst is over, as the balances have steadied around Rs. 536 crores, and stood at that figure on 21st December. It is also claimed that exports have been as good as a year before. They totalled Rs. 600 crores in 1955-56, and Rs. 648 crores for the eight months ended November 1956. But imports for the eight months ended November amounted to Rs. 736 crores, as against Rs. 648 crores for the 12 months of 1955. For six months ended September, 1956, the

CAPITAL

Founded in 1888, is India's oldest and most widely read financial newspaper. It gives its readers in all parts of the world the most up-to-date service in Indian economic intelligence and information of any newspaper in the daily or weekly field, and includes a complete list of all shares and securities dealt in on the Calcutta Stock Exchange, together with full details of latest balance sheets.

The Research & Statistical Department undertakes research into industrial and financial problems and numbers among its clients, Government departments, railway administrations, chambers of commerce and industrial associations.

balance of payments was Rs. 119 crores. During January to October, 1956, imports of machinery and equipment were Rs. 40 crores more than in 1955, the actual figure being Rs. 124 crores. Imports of metals during January to October, 1956, were Rs. 131 crores, as against Rs. 58 crores in 1955.

The new import policy aims at reducing the drain on the sterling balances. In six months, the cut in imports should save Rs. 30 crores of foreign exchange. The full impact of this policy, however, will be felt during the July-December, 1957, period, because licences already issued and commitments made will have to be provided for during the next six months. Quotas have been reduced for 509 items, the more important of which are fruits, certain spices, betelnuts, tallow, liquor, cigars and cigarettes, toilet requisites, lead pencils, paper items, woollen, cotton and art silk fabrics, cutlery, sheet and plate glass, cycles, patent and proprietary medicines, coal-tar dyes and certain machinery items. The discrimination between hard currency and soft currency areas has been further reduced by giving importers the facility to utilise at least 50 percent of their licences on hard currency, if they so desire. To foster exports, additional items have been included in the export promotion scheme list and an attempt has been made to link the export of indigenous art silk fabrics to the licensing of art silk yarn and fabrics. The quotas for a few essential items like ball bearings, certain small tools and certain chemicals have been slightly liberalised.

Double Taxation Avoidance

A draft of a double taxation avoidance agreement has been sent by the West German Govern-

ment to the Government of India, it is learned. The traditional double taxation avoidance agreement is based on the principle that the country whose residents make the profits keeps the tax on those profits. This suits commercially advanced countries. India has been working on the principle that the country where profits are earned should keep the tax on those profits. Meanwhile, the principle of unilateral relief has been adopted by more than one country, including the U.K. Under this, a country gives relief to its own nationals trading in another country by refunding tax to them, subject to a fixed ceiling.

Project for Optical Glass Factory

A Russian mission is here at present preparing a project report for an optical glass factory in India. Enquiries show that the Germans have not taken much interest in the project, while the British quotations were regarded as on the high side.

Manufacture of Coal-Mining Machinery

Indications are not wanting here that there will be a separate unit for the manufacture of coal-mining machinery. A decision, however, will only be taken after the reports from the British and Russian missions on heavy industry have been received.

Steel Imports

A million tons of steel imports are expected in 1957. At least 500,000 tons are expected to arrive in India out of the 1956 purchases. India has entered into an agreement with Russia for the supply of 350,000 tons of steel, which may arrive in 1957. In addition, 80,000 tons of steel from Germany and

50,000 tons from Japan are expected in 1957. Not more than 500,000 tons can be subsidised from the Steel Equalisation Fund, the remainder being paid for at the imported prices.

EMPLOYMENT OF INDIANS IN FOREIGN COMPANIES

On 4th November, 1955, the Government issued a Press Note reviewing the position of employment of Indians and non-Indians in foreign owned or controlled industrial and commercial concerns in India since 1947. The analysis of the position as on 1st January, 1954, and 1st January, 1955, showed that employment in the two lower pay groups of Rs. 300-499 and Rs. 500-999 had been almost entirely Indianised, and it was, therefore, decided to call for information in future about Indians and non-Indians drawing salaries of Rs. 1,000 and above only. In order to bring the information up-to-date, a public notice was issued requesting all industrial and commercial concerns in the country to furnish particulars of employment as on 1st January, 1956. An analysis of these returns shows that the level of total employment in these concerns on salaries of Rs. 1,000 and above has further increased. The position of Indians and non-Indians in these pay groups is shown below:

Year	Number of Indians	Number of foreigners	Total
1947	504	5,844	6,348
1948	742	6,360	7,102
1949	1,085	6,709	7,794
1950	1,406	6,871	8,277
1951	1,784	6,953	8,737
1952	2,290	7,104	9,394
1954	3,346	7,008	10,354
1955	3,995	6,810	10,805
1956	4,685	6,566	11,251

The analysis of returns as on 1st January, 1956, shows that the proportion of foreigners has registered a decline over 1955 in almost all categories of companies. The break-up of the salary groups of Rs. 1,000 and above shows that in the salary group of Rs. 1,000-1,500 Indians occupy slightly more than two-thirds of the posts, as against 54.9 percent in 1954 and 61.5 percent in 1955. In the next salary group of Rs. 1,501-3,000, one-third of the posts are filled by Indians, as against only 23.0 percent in 1954 and 27.4 percent in 1955. In the highest salary group, about one-tenth of the posts are held by Indians, as against about 6.5 percent in 1954 and 7.9 percent in 1955. Of the total of 6,566 foreigners employed in foreign companies on salaries of Rs. 1,000 or more, 87.6 percent are British. Americans constitute 3.9 percent, their number having increased from 227 in both 1954 and 1955 to 259 in 1956. One hundred and eight Swiss nationals were employed in 1956, as compared with 121 in the preceding year. Americans, Norwegians, Canadians, Afghans, Australians and Ceylonese have recorded small increases in their numbers. The decline in the total number of foreigners from 6,810 in 1955 to 6,566 in 1956 was due mainly to a decrease of 216 in managerial posts. There was a decline of 28 on the technical side.

NEW END-OF-YEAR PRICE RISE IN STEEL

U.S. EXPORT-IMPORT BANK LOAN TO U.K.

(FROM OUR LONDON CORRESPONDENT)

THE last despatch of the year is always a difficult one to compile for it covers a fortnight that usually produces little news on the economic front, with Parliament in recess (until 22nd January) and all markets either closed for the holiday period or virtually dormant as a result of the holiday feeling. It would be wrong, however, to state that the past fortnight has been uneventful, for it started off with the announcement of a rise in steel prices by an average of 6 percent, with plated and heavy sections carrying the bulk of the burden and most products in general use for consumer goods products an almost insignificant increase. This should not affect the cost of living, though the trade unions have not been slow to contend it will.

Another important announcement has been the conclusion of the negotiations for a \$500 million line of credit with the U.S. Export-Import Bank against the British Government's holdings of dollar securities. With the \$1,300 million already made available to this country by the International Monetary Fund, this new line of credit raises the new reserves now mobilised behind the pound to \$1,800 million. This almost doubles Britain's gold and other reserves from the level of \$1,960 million to which they had been reduced by the end of November. Speculators who have sold sterling short now get a warning that Britain is determined to defend the present parity with the U.S. dollar, and has ample resources at her disposal. Confidence in sterling has continued to grow, but it is a slow process. Inflationary trends are still prominent, the full effects of the Middle East situation have yet to show, and labour seems very disinclined to accept the 3 percent wage increase justified by the figures and is in a militant mood, which may result in strike action in the New Year. In the circumstances, Mr. Harold Macmillan's rebuttal of rumours that he intended resigning the Chancellorship of the Exchequer can be taken as an encouraging factor so far as the future outlook is concerned. His confidence in his policies apparently remains unshaken.

Trade Pattern Distorted

Meantime, it is instructive to examine the latest economic statistics over as wide a field as possible to form some idea of what is in store, and there is ample scope for this in a spate of releases from official sources. For instance, from the full figures of overseas trade in November, it is clear that the sharp fall in imports, which was the biggest factor in the narrowing of the visible gap by nearly £34 million to £12.9 million, was largely caused by the Middle East emergency. Oil imports from the Persian Gulf (including Iraq and Iran) dropped from £21½ million in October to £10½ million in November. Although imports from the U.S. and Venezuela rose by £2 million, arrivals from the West Indies fell by the same amount. Total imports of petroleum were £11 million, or nearly one-third, lower than in October. On the export side, the closure of the Suez Canal, which severely distorted the area pattern of imports, had little or no effect. Shipments to Egypt were again very small, as they have been since September, but exports to other Middle East markets were well maintained. Record re-exports at £14.8 million were strongly effected by heavy shipments of rubber (nearly £3½ million), most of which were to the Soviet Union. The latest upsurge of exports this autumn is shown to have been largely attributed to substantial increases in shipments of steel and non-ferrous metals, a wide range of miscellaneous non-engineering manufactured goods, coal and petroleum products, food and beverages, with the demand from West Germany, France, Italy and Sweden particularly high.

Adverse Terms of Trade

The full effects of the distortion will not become apparent awhile and the December and January returns will serve as better indicators. It is unfortunate to find, therefore, that for the second month in succession the terms of trade, reflecting the ratio of import to export prices, moved against Britain in November. With the export price index again unchanged at 107 and import prices up another point to 107, the terms of trade (1954=100) rose a point to 100. Higher wool prices contributed to a 2 point rise to 109 in the index for imported basic materials. The index for import prices of food, beverages and tobacco rose one point to 104. On the other hand, the index for manufactured goods import prices, mainly influenced by lower quotations for unwrought copper, dropped 2 points to 106.

Equally important is that we should hold our position in total world trade, and that we have not been doing lately. Provisional figures issued by the Board of Trade show that Britain's share of world exports of manufactures in the first nine months of the year was 19.3 percent compared with 20 percent in the corresponding period of 1955. The value of world exports for the period is estimated at \$28.118 billion, a rise of 15 percent on the previous year. Britain's exports of manufactures, which were adversely affected by shipping difficulties in the third quarter, increased by 11 percent. There is not yet any clear sign, says the Board of Trade, of a substantial change in the rate at which our share of world trade in manufactures has been

falling since 1953. Then it was 21.2 percent. When allowances are made for the effects of dock strikes in the 1954 and 1955 figures, the decline in 1956 has been a little less than in 1955. West Germany's share has risen in the nine-month period from 15.2 percent to 16.1 percent and the U.S.'s share from 24.8 to 25.4 percent.

Bank Loans Going Down

After their unexpected rise to just over £2,000 million in August, the new quarterly figures relating to bank overdrafts, prepared by the British Bankers' Association, are again down to £1,930,490,000—the lowest since May, 1954, when they stood at £1,890,420,000. This makes overdrafts £285 million below their peak of £2,215 million in August, 1955. Detailed figures suggest that the banks are guiding their money into the best National-interest channels and that the main brunt of the credit squeeze is being borne by personal overdrafts. Engineering loans are again up. So are wool, and chemicals, all of which are doing a good export trade. Hire-purchase finance companies have had another cut to £23.3 million, a decline of £13 million since a year earlier. The peak was just over £45 million. There was a drop of nearly £14 million in the "personal and professional" group, which now stands at £315.3 million. In November, 1955, personal and professional loans amounted to £363.8 million. Over the past year, loans in this category have dropped by £48.4 million, which accounts for nearly all of the £50.2 million reduction in total bank advances during this period. The banks have also clipped their loans to builders and contractors. These advances are down by £3.2 million to £64.7 million in the latest quarter. A year ago they stood at £70.7 million.

Capital Programmes

Neither the credit squeeze nor other restricting influences have had the effect of restraining capital expenditure in British industry, the latest figures of which are published in the *Board of Trade Journal*. Manufacturers expect to spend 1 percent more on building, plant and equipment in 1957, according to a September survey. An earlier survey in July indicated that 1957 expenditure plans were 1 percent down on 1956. Spending on building is expected to be 7 percent less, but shipping companies now plan to spend 13 percent more this year against a 5 percent rise at first indicated. It is hard to resist the conclusion that the increase in shipbuilding programmes now foreshadowed is due mainly to the stimulus provided by the Suez crisis. Owners have evidently become more and more convinced that the future pattern of trade routes will lay increasing emphasis on the long haul round the Cape.

Manufacturing industry's 1957 capital budget is almost the same as it was three months ago, a remarkable reflection of the general situation. Its total expenditure is put at 1 percent above the 1956 level. In September it was 1 percent lower. The industries which expect to spend more in 1957 than in 1956 are chemicals (plus 23 percent), iron and steel (plus 15 percent) and "treatment of non-metal mining products" (plus 9 percent). On the other hand, a drop in capital expenditure is expected next year by the metal-using industries other than vehicles (minus 8 percent), motor vehicles (minus 5 percent), textiles and clothing (minus 12 percent), paper and printing (minus 4 percent) and miscellaneous industries (minus 8 percent).

Indian Sterling Balances

Although there is no concern evident among London officials, India's steady withdrawal of her sterling balances at a rate of almost £4 million a week is adding to the problems which are facing the Treasury at present. Since April nearly £150 million has been used and the balance is now down to only £100 million above the minimum currency reserve of £300 million. Unless the drain can be halted, or at least slowed down, the decision of the Government of India to pay cash for the Rourkela steel plant, being constructed by a German group headed by Krupp—a decision believed to be due to the inability of the group to grant a credit on anything but prohibitive terms—will require a large withdrawal of anything up to £50 million in the near future as it is intended that the plant should be in production by 1959, and that would unbalance the whole programme of sterling withdrawals to cover the second five year plan. The Treasury's problem is that if the total amount is paid in sterling and cleared through E.P.U., we will have to pay out 75 percent of it in gold or dollars. At a time when other strains are being met the prospect of an additional one is hardly welcome, but the official reaction so far is that the deposits are meant to be used and that a rapid withdrawal is "one of the hazards of life in running an international currency."

H. P. Progress Report

The Industrial Bankers' Association, formed in April to regulate the activities of hire-purchase finance houses, has issued its first report. The Association has been having talks with the Inland Revenue about the vexed question whether income tax should be deducted from the deposit interest at source. It has also protested to the banks against their decision to charge 1s. for every credit received over their counters from hirers paying their instalments. These are useful activities, but the main interest of the report lies in its remarks on the questions of membership and legislation. When the Association was set up, it was hoped to attract many more companies than actually joined. It would seem that the rules were too strict to be attractive, especially the "liquidity ratio" of 10 percent (in cash and bills). But now it appears that the Government is to introduce legislation, which will make such standards mandatory anyway and the report comments, "it may well be that if the

Association had received greater support at the outset... the Government would not have found it necessary to introduce legislation." It seems that a chance was missed.

Export Credits

The Export Credits Guarantee Department has converted a £610,976 deficit on its cumulative account for commercial business into a credit balance of £4,781,371. This is revealed in the accounts for 1955-56 and it was this improvement that made possible the cut in premiums announced last April. Guarantees issued on commercial account in the year to 31st March last amounted to about £486 million, against £544 million the previous year. The total for the first half of the current year amounted to about £305 million, a rise of 50 percent on the previous year's corresponding figure. Premium income last year was £3,614,494, against £2,895,576 the year before, and operating expenses £882,532, against £763,153. Claims paid amounted to £2,300,003—less than half the previous year's total. It is expected that about three-quarters of the claims paid will eventually be recovered. Recoveries during the year amounted to £4,655,940, compared with £5,355,361 on the year before.

Brevities

A team of London Transport advisers, headed by Mr. L. C. Hawkins, leave London on 6th January for Ceylon, where they will help reorganise the bus services. Mr. Hawkins goes on to Singapore on 22nd January to advise the Government on reorganising transport services there.

The P. & O. and Orient lines have decided to continue using the Cape route for at least five or six months. After the sailing of the *Chusan* on 29th December, there are no further outward calls at Bombay by the P. & O. Company at present scheduled. The *Chusan* will call there on 21st January. Three homeward calls at Bombay will be made in March and April. Passengers for India are still being catered for by P. & O. passenger ships calling at Colombo on the Far East service.

I. C. I. is to increase production of "Terylene" polyester fibre to 30,000,000 lbs. a year by extending sections of the "Terylene" plant at Wilson in North Yorkshire, whose present capacity is 22,000,000 lbs. a year. Work will begin in the spring of 1957, and additional quantities of "Terylene" will become available early in 1959.

For the first time, synthetic rubber of a general-purpose type is being produced in this country on a reasonable scale. This is being done by the Dunlop Rubber Co. Ltd., at Fort Dunlop, near Birmingham, and a plant has just been set in operation which is capable of producing 1,500 tons a year.

A number of Tory and Labour M.P.s have decided to form an Anglo-Pakistan Parliamentary group "to ensure that the just interests of Pakistan should receive due recognition and support." The committee of the new group consists of five Tories, Mr. Frederick Bennett, Mr. Beresford Craddock, Mr. Bernard Braine, Mr. J. D. R. T. Tilney and Mr. William Aitken, and five Labour members, Mr. Charles Hobson, Mr. Frank Tomney, Mr. Fred Peart, Mr. Denis Howell and Mr. William Clayton. In a statement, the committee says that other members with similar interests will be invited to join the group in the New Year and that the response so far has been most encouraging.

TEA BOARD

EXPORT QUOTA 1957-1958.

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 23(1) of the Tea Rules 1954, Tea Estates desiring to be allotted an export quota for the year 1st April, 1957 to 31st March, 1958 are required to submit an application therefor, which must be filed with the Tea Board not later than the 1st February, 1957. No export quota will be allotted unless an application under this rule is duly filed. Application forms have already been issued to all registered estates, but the Tea Board will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaries who have not received the application forms are requested to apply for these, in the case of estates situated in North India, to the Controller of Licensing, Tea Board, 27 & 29, Brabourne Road, Calcutta-1, and, in the case of estates situated in South India, to the Joint Controller of Licensing, Tea Board, Church Road, Fort Cochin, Cochin-1, South India.

Sd/- P. V. Govindan,
Controller of Licensing.

Escape?

Impossible!

Liquids, steam and gases cannot escape from stuffing boxes, glands and cocks if they are sealed with Turner's "Firefly" asbestos packing. Use it and your worries about leakages are over.

By arrangement with Turner Brothers Asbestos Co. Ltd., England, we make "Firefly" Packings. We spin asbestos fibre into yarns, and then plait these yarns into packings which provide the perfect seal, unaffected by the temperatures and pressures normally encountered in industry.

Turner's "Firefly" Packings are just one of the many technical asbestos products that we at AM & FM make to meet the needs of India's industry. The increasing use of Asbestos is an index to India's industrial progress.

Where There's Industry There's Asbestos

A SATISFACTORY YEAR FOR T.E.L.C.O. EXPANDING LOCOMOTIVE AND TRUCK OUTPUT

(FROM OUR BOMBAY CORRESPONDENT)

THE Tata Locomotive and Engineering Co. Ltd. has had a very satisfactory year. Speaking at the annual general meeting held recently, Mr. J. R. D. Tata, chairman, said: "One of the most encouraging elements in the situation from the shareholders' point of view is the fact that the company has been able throughout to make full provision for depreciation, so that there is no burden of arrears of depreciation to come in the way of a fair and a steady return on the shareholders' investment." This is indeed a major achievement for an industry which has had to overcome several difficulties not normally met by other large-scale enterprises. Apart from the peculiar nature of its products and the high degree of specialised skill and equipment required to manufacture them, the company has had to face a number of uncertainties, not least among them being the question of prices for locomotives and boilers. Despite the present healthy outlook, Mr. Tata warned that it would be "necessary to be realistic in any assessment of dividend potentialities in the immediate future." He pointed out that the report and accounts for the last financial year include the entire profits and a measure of overheads of the Locomotive Division of the company over a period of two years.

Expansion Programme

The other factor affecting dividends is the company's expansion programme. The capacity of the Locomotive Division is to be expanded to 100 complete units a year. Work on this has been in progress for some time and is likely to be completed a few months ahead of schedule. In addition to increasing output, this development will result in economies which will automatically reduce production costs and increase the earning capacity of the unit. Closely allied to this is the setting up of a steel foundry which is a major project in its own right. The melting furnaces have already started producing steel ingots and the entire scheme, it is expected, will be completed by the middle of 1957; it will reduce the company's dependence on imported steel castings. The foundry will turn out large and intricate castings. The Automobile Division, which has made satisfactory progress, is to be expanded. The production of Tata-Mercedes trucks has steadily risen and the target of 6,000 units a year has already been exceeded. But demand continues to increase and it is now planned to increase output. These activities require an exceptionally heavy

capital outlay and the company will require considerable additional funds over the next five years. Mr. Tata said: "While a major portion of the requirements will be found from allocations to depreciation and other reserves and, in respect of working capital, from borrowings, some addition to the company's share capital seems inevitable in due course."

Speaking of future technical developments, he said: "India today is one of the few countries left in the world still dependent mainly on steam traction. In most parts of the world, steam locomotives have given way to diesel locomotives with either electric or hydraulic transmission. It seems inevitable that a similar changeover will in due course take place in India, although the process may be spread over many years. With the versatility built into our plant and the human skills and experience we have developed over the years, our company will be specially well fitted to play an important rôle in the 'dieselisation' of the country's railroad system and I hope, when the time comes, we shall be given an opportunity to do so."

Relations with Government

Relations between the company and the Government have been satisfactory. A dispute had arisen on the question of locomotive and boiler costs and prices. The dispute was ultimately referred to the Tariff Commission which gave its award. Mr. Tata said: "With the assistance of an expert adviser, the Commission made a thorough and detailed investigation. We are grateful to them for their impartial and constructive approach to the problem placed before them and for the sound and practical recommendations they have made. The enquiry has served a valuable purpose not merely in bringing about a settlement between the Railway Board and the company in the matter of prices for locomotives and boilers, but also in clarifying a number of points about which considerable misunderstanding had prevailed in the past in some quarters and in setting at rest, once and for all, doubts about the company's progress and efficiency. In these days, when the Government has almost unlimited powers with which to enforce its will, it is gratifying and reassuring to note that in an industry in which the Government is itself a competitor as well as the sole customer, it decided to refer a dispute about costs and prices to an impartial statutory enquiry and abided fully by the resulting recommendations even though they went, to some extent, against its views."

In the present case, on the Tariff Commission's recommendation the Government has accepted certain prices for locomotives and boilers not only in relation to the previous two periods on which the Railway Board and the company failed to reach agreement, but also for the subsequent two years ending 31st March, 1958. These prices have been fixed after making allowance for a rise in output and productivity, as well as for the advantage of longer orders for locomotives to be placed on the company.

Madras

CONGRESS ELECTIONEERING AND TAXATION

FALL IN STOCK EXCHANGE PRICES CONTINUES

(FROM OUR MADRAS CORRESPONDENT)

THE Finance Minister, during his recent visit to the city, made it plain that the private sector would have to conform to directions under planned development. Chambers of Commerce, complaining about restraints and handicaps, were given little comfort about taxes, credit facilities or the controls they fear under the plan. It is clear that the Government is now interested only in getting the maximum revenue for its own programmes, and the promise to set up new financial institutions to help industrial expansion is of less significance than the hint that public expenditure will continue to rise and concessions to the vast body of under-privileged will increase steadily at the expense of the well-to-do. Electioneering of a subtle kind is associated with the pledge to promote equality. The Congress leaders are concentrating on telling the public that the forthcoming Indore session will be a signpost to socialism and the direction of the economy is now entirely the concern of the State.

The Madras Legislature, in its final session, passed the Budget quickly. The vote on account was soon available, as no new taxes had been proposed. The adjustment of sales tax on bullion is considered of little consequence compared with the single-point sales tax on eight articles, including coffee and tea. Following the example of Andhra, Madras has decided to levy a higher sales tax on certain articles to get more revenue and secure easier administration. The higher rates applicable to jaggery, kerosene, etcetera, suggest that the levy on mill cloth and sugar will be followed by a higher tax on tea and coffee. The idea of an excise duty to supplement other union duties will be put into effect and the levy on the basis of the decimal coinage is likely to increase the revenue. The Taxation Enquiry Commission has suggested a single-point levy on selected articles.

Stock Exchange Decline

On the stock exchange, the year ended disappointingly. Selling pressure in plantings was not arrested by the stay order. Textiles were affected by the shake-out in Bombay, and the fear that higher dividends for 1956 will be ruled out by the new tax on profits. B. and C. fell to Rs. 176-3 and Madura was on offer at Rs. 46-10. Travancore Rayon fell below Rs. 14 and heavy mill shares were marked down. Calcutta's recent form has unnerved investors here and during December, all industrials were lower. Only Aluminium Industries recovered to Rs. 19-4 and Textol to Rs. 27-2. The New Year may not produce surprises, but the withdrawal of buyers foreshadows greater gloom among investors who feel that even a revision of the Plantation Award will not help much. It is noted that preference shares and bank shares, too, have come down in December and the chances of recovery even in selected shares are dim as the elections will soon be held.

Railway Users Meet

The conference of railway users in Rameswaram led to a promise for a road-bridge across the Pamban Channel. Mr. Alagesan said little about accidents on the railways and pointed to the improvement in services. One point made on behalf of the public was that tracks should be strengthened and safety ensured before extra amenities are added. In view of the hearings before the inquiry committee on the Aryalur disaster, this is timely and logical.

Growth of Madras City

The Madras City Corporation Engineer announced the preparation of a plan that deals with the civic problems in relation to urban growth. He indicated three problems the city has to get over. One is the Cooum which has to be flushed regularly; another is the creation of a green belt outside which industries must in future be located so that the residential area does not suffer; and the third is the solution of traffic problems. The engineers feel that motor traffic on the main roads in the city is often held up as thoroughfares are not wide enough. Madras city has grown even after 1953 and its lay-out is now a more pressing issue than its slums. Water supply is still difficult. The full reservoirs do not provide ample or regular supply to some parts of the city. The Corporation needs money for improvements and a revision of property tax seems to hold the key to civic progress, especially as the addition to the area in the last decade has strained services considerably.

Co-operative Reorganisation

The remodelling of the Co-operative Department to extend credit facilities and improve administrative control has been undertaken after the report of the committee which looked into the question. The committee has referred to the high rate of interest on loans to cultivators. The burden of rural debt has been put at Rs. 71 crores.

Reaction to Import Policy

Comments here on the new import restrictions point to the scarcity and the rise in prices which they are likely to cause. It is, however, realised that saving of foreign exchange can be effected only by cutting non-essential imports. A revival of hoarding and profiteering is apprehended by those who feel that inflationary pressures will increase. A stimulus to the export trade may come through a rise in production and lower costs in the future, while local substitutes for foreign imports are likely to find favour, especially when their prices have been raised by the Suez crisis and higher import duties.

Jute

EAST PAKISTAN PROPOSALS FOR OFFICIAL JUTE MARKETING BODIES

KARACHI MAY URGE NEED FOR CAUTION

SOME interesting items of news affecting the jute trade have come from Pakistan recently. The first of these concerns the marketing of raw jute. The Government of East Bengal proposes to set up two new organisations, one of which will deal with the purchase and sale of jute in the internal market while the other will control the export trade. The former is to be called the Jute Marketing Corporation and will have an authorised capital of Rs. 8 crores. Rs. 4 crores of which it is proposed to raise now. Half this amount will be provided by the Government while the remainder is to come from the public. Individual subscriptions are to be limited to Rs. 500 each and those of firms, companies and co-operative societies, to Rs. 1,000 each. It is intended to set up about 200 buying agencies in the principal jute markets. The Corporation will also operate through growers' co-operative societies which will collect jute from the cultivator and sell it to the Corporation. The Corporation itself will be given the monopoly of buying jute in the border areas so as to prevent the smuggling of jute across the border into India. Growers in these areas will have to account to the Corporation for the disposal of their crop.

The other body will be a Jute Marketing Board to control the export trade. It will replace the present Jute Board and is to act as a clearing house. One report states that exporters will have to make all their offers through it. It is also stated that the Board will appoint agents in all the principal consuming centres and that exporters will not be allowed to act in liaison with their agents overseas. The Board's agents abroad will receive offers for the purchase of jute and refer them to the Board. The whole scheme seems to be in a somewhat nebulous state at present and some of the statements about it by officials and ministers have been contradictory. One of the objects of the Board is said to be to prevent foreign buyers from purchasing at minimum prices and holding their purchases until they can sell at a profit. This would seem to be an interference with legitimate trade, for surely it is the object of every merchant to buy with a view to earning a profit. Moreover, it must be an advantage to Pakistan to have people willing to buy at minimum prices, so supporting the market and providing holding power. Another object of the scheme is, it is said, to prevent the evasion of exchange control. The question of foreign trade is, of course, a matter for the Government at the Centre. This proposal of the East Bengal Government will have to get Central approval. And matters concerning foreign trade and exchange are probably better understood in Karachi than they are in East Bengal.

The Faraka Barrage

Although it has not been possible to obtain information in India about the present state of the project to build a barrage across the Ganga at Faraka, and so divert water into the Bhagirathi, Pakistan seems to be better informed than we are. A report from East Bengal states that Pakistan has decided to protest to India against the project on the ground that the diversion of water will endanger the jute and rice-growing areas irrigated by the Ganga after the river enters Pakistani territory and that Pakistan will invoke the aid of the international authority concerned with these matters.

Crop Statistics

According to the State Bank of Pakistan, the supply of raw jute available in that country during 1955-56 was 6,895,000 bales, which, presumably, includes the carry-over at the end of the season 1954-55. Exports in 1955-56 are put at 5,682,000 bales and internal consumption at one million bales. These figures are much nearer the trade estimates than those put out from time to time by the East Bengal Government, which, on one occasion, put its crop forecast for 1955 at as low as 2,800,000 bales. Nobody, of course, believed that figure, but it shows how incorrect estimates can be when those making them are influenced by political considerations.

THE JUTE MARKETS

Apart from steady buying by mills throughout the period, the dominant feature of the markets in the past two weeks has been the firmness of hessian for near delivery. A shortage of goods for December shipment and bear covering brought about a rise in prices similar to that at the end of November. Before the market closed for the New Year holidays, hessians for December delivery were standing at a premium of Rs. 2 a 100 yards above the prices for January-March. During the holidays, prices eased off on the completion of end-of-the-month covering. It is not possible to say how long this position at the end of each month will continue. That depends on overseas demand and how much has been sold bear for the coming months. We are now approaching a period when foreign demand is normally below the monthly average, but it is reported that there is a considerable bear account because speculators sold when they knew mills were switching machinery from sacking to hessian. Their forecasts imported,

this respect were, however, upset by the American demand stimulated by the Suez crisis and increased consumption in the U. S. A.

The strength of the raw jute market lies in the current shortage of supplies. Normally this is a period when imports into upcountry centres are small but, in former times, mills were usually able to keep out of the market, having built up stocks in July-October. Stocks are now rather attenuated and most of the mills cannot remain long out of the market, so there is sufficient business almost daily to maintain steadiness. On the other hand, most sellers are now long in jute and, as their holding power has been much reduced in recent years, any drop in the gunny fatka quotation creates nervousness. The supply position is, however, abnormally tight because, apart from the fact that growers in many districts are still busy with paddy harvesting, it is believed that jute is being held back in expectation of higher prices later in the season. In fact it is reported that growers, *beparis*, *farius* and dealers are all holding stocks for this reason.

Manufactured Goods: There was a sharp drop in the prices of heavy goods last week-end, attributed chiefly to large-scale bear selling in the B Twill fatka. From Rs. 124-4 prices fell, with minor intermediate recoveries, to Rs. 119-14. Hessians were a steadier feature due to bear-covering for December. Mills took advantage of the steadiness in the hessian market to sell fair quantities for deliveries up to June, but had to accept prices which showed considerable discounts from those quoted for early deliveries. Demand from abroad has not been active, but there has been a good deal of covering by shippers.

The market opened quiet after the New Year holidays. B Twills in the fatka were quoted at Rs. 119-12, after having been down to Rs. 118-12 during the holidays. Quotations on Wednesday morning were as follows:

	Ready Rs.	Jan. Rs.	Jan-Mar. Rs.	Apr.-June. Rs.
40in. 5oz.	37	36-8	36	35-8
40in. 10oz.	46-6	45-8	45	44-4
B Twill	119-12	120-19	120-14	120-12
Heavy Coes (Plain)	120-4	120-3	120-9	120-3
A Twills	144	144-8	144-12	144
Liverpools	134-8	135-8	136	135
Cornacks	121-4	121-8	122	121-8

Raw Jute: There has been steady buying by mills throughout the past fortnight. No large transactions have been reported. That has been partly due to smallness of offerings by sellers on account of scarcity of imports into upcountry markets and partly because mills have been reluctant to pay the prices asked. Business was done in Murshidabad tossa at Rs. 32-8 to Rs. 32-12 basis Bottoms. Northern Bengal, Assam and Agartala jute at Rs. 31-8 to Rs. 32-8 basis Bottoms. Daissee Mesta at Rs. 28-8 to Rs. 29 and Bimli FAQ at Rs. 28. Mesta Tops sold at Rs. 33 and free from samla tossa Middles at Rs. 37-8. Jungli jute has been in better supply than most other kinds and good business was done in Middles alone at Rs. 30-8 to Rs. 31-8. There has been good demand for Daissee, but sellers are reserved and the quantities on offer have been small. Even at mill jetties, offerings have been below normal. Pakistani N.C.'s were bought at Rs. 137 for January-February shipment, but were done later at Rs. 133, at which price there are buyers at the time of writing.

Quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a md basis	Bottoms.	Shipment.
Upper Assam	32		Jan.-Feb.
Lower Assam	32		"
Northern	32		"
Murshidabad Tossa	32-8		January
Daissee	33-8		"
Daissee Mesta	28-8		Jan. Feb.
Purnea Mesta	28		January
Jungli Mesta	27-8		Jan.-Feb.
Northern ex Calcutta	31-8		Shipment.
Bimli	28		Jan.-Feb.
Pakistani Jute:	Rs. a md.		
Jat	37-8		Shipment.
District	37		Jan.-Feb.
Northern	36-8		"
Pucca:	Rs. a bale.		Shipment.
Export Firsts	255		Jan.-Feb.
Export Lightnings	235		"
Cuttings	135		"

Arrivals in Cossipore for the ten days ended 18th December were 717 wagons, which is well below the recent daily average. Most of the imports were jungli jute and mesta and met with good demand at prices higher than the parity of jute bought by mills on contract in the same period.

Mofussil: Imports are very small in North Bengal and are reported to be negligible in Assam. Even in Purnea and western Bihar, where they have been plentiful up to now, a decrease is reported.

TRENDS IN PAKISTANI JUTE MARKETS

POOR SEASON FOR BALERS

(FROM A CORRESPONDENT)

THE calendar year does not coincide with the jute year but the pause created by the holidays is often an important turning point in the season's operations in Pakistan. The current season has not been a very happy one for the Pakistani jute baler, and although buyers have bought their jute at low prices, for various reasons they have not done as well as the growers and *beparis*.

With reports of a bumper crop, many shippers expected a rush of early arrivals at low prices and sold short. The crop, as expected, began to come in early, but unfortunately, before even the lowland crop was harvested, early floods caused a good deal of damage and restricted imports considerably. Added to this was the fact that, contrary to most people's expectations, prices showed no signs of falling. Balers continued with their bearish views, thus increasing from day to day their short positions. The market continued to rise and it became more and more apparent that it was a sellers' market, but it was not until too late that the balers realised that there was no chance of a drop in prices. When dealing in a commodity like raw jute without any fatka hedge, it is difficult to change from a bear to a bull position. Rising prices and heavy sales in a short position together with congestion at the ports and shortage of inland water transport caused a very tight position in the money market.

Eventually this brought about a pause in buying and a temporary reduction in prices. Heavy shipments, however, gave balers more money to play with and once again the market rose to alarming heights, until by the end of November prices as high as £118 a ton c.i.f. Continent were being quoted for Export Firsts. A strike in the greater part of Narayanganj caused a temporary lull and a reduction of prices as most presses were out of action. The end of the strike brought increased imports and heavy buying, which only eased off over the Christmas holidays. The present position is that most shippers are now square or long. Pucca bale prices and kutcha bale prices have come down and there are few buyers, but efforts to reduce loose jute prices are not meeting with the success one would expect.

Holding Power of Cultivators

A salient feature of the past half-year has been the remarkable holding power of the cultivators. This is probably due to the good prices which they obtained a year ago and probably also to the fact that they made more money this season by selling their rice crops at greatly inflated prices during the near famine conditions which prevailed. With few exceptions, until the Suez crisis practically every shipper was showing serious losses through having expected the market to come down and having sold short. Within a very short period, most shippers had reached the limit of their overdrafts, and although the nominal value of their stocks increased, the money which they obtained through sales brought them smaller and smaller quantities of new purchases.

Normally the banks would have helped out by temporarily increasing limits, but this was not possible, firstly, because the limits were reached before money from the cotton and tea crops came in, and secondly, because the banks no longer had the "float" of unremitted tea profits which they are reported to have been using for some years. Until recently, these had been lying with the banks, but this year the State Bank granted permission for the remittance of tea profits and even sanctioned remittances of recent tea profits. The position is reported to have been so serious that some of the foreign banks in Pakistan were obliged to borrow in London and lend locally at a nominal loss.

Large Moisture Content

Another unfortunate feature this season has been the moisture in jute. As prices went up, growers became more and more greedy and deliberately watered their jute before bringing it to the main baling centres. This practice even spread to upcountry centres. Among the early arrivals were large quantities of hard-centred jute, with the result that Export Firsts and Mill Firsts became scarce. The scarcity of Mill Firsts remains, but with the highland jute coming in the position has changed and the majority of the jute available now is suitable for Export Firsts. The Tossa crop suffered no damage and has been remarkably good, with the possible exception of Jat Tossa. Low qualities such as Outport assortment, have been, very scarce, so high premiums have been paid for these standards. The hard district marks have been exceptionally good. On the whole, however, Tossa, and to a greater degree White standards packed by balers, have been lower this season than a year ago. As Tossa has been of such good quality and light rooted, there has been a scarcity of Tossa Cuttings, which are now at a premium over N.C., quite the opposite of what is usual.

Congestion at Ports

There have been serious complaints from both balers and buyers about congestion at the ports. While this is true, it should be noted that shipments during the past two or three months have been much higher than last year. It is interesting to note that the gap between E.P.C. registrations and shipments is smaller than it has been the same time. On the other hand, there is no denying that, particularly in Chittagong, the congestion

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.

P.O. Box 14, Calcutta, or 5, Mission Row, Calcutta, India.

and confusion in the port has been serious. It has been suggested that pooling would be the answer, but the real solution would be more efficient control of the railways, which not only supply this port to a great extent but which also control the port facilities. Goods despatched to Chittagong by barge have enjoyed a fairly healthy turn-around. This cannot be said of Chalna, where all despatches are made by barge, and where the congestion has been so severe that at times there have been 150,000 bales afloat for shipment. This represents more than half a month's shipments from Chalna and is responsible for complaints from steamer agents, shippers and I.W.T. companies.

The big question about this season which is still hotly contested is the size of the crop. Early estimates varied from 7 to 8 million bales, and accounted for the bearishness at the beginning of this season. Slow arrivals and reports of damage have made people change their minds and now we have estimates of a crop as small as 5 million bales. There are also reports that large-scale smuggling to India has taken place and the reason given for this assumption is that India has only bought 500,000 bales so far. It is probable, however, that India has a much larger crop than usual and that she has kept herself going in the early days by smuggling on a small scale.

On the whole, the present season has been a bad one for most balers but some of them managed to recoup their losses when the market rose after the Suez crisis. Balers who had jute afloat at the time obtained very good premia but even these are disappearing. We are now at a point where there is a healthy contest of views as to the future. The question is whether the present lull and easing in prices is merely due to the holidays, or whether it is the beginning of a drop. Hopes of a fall in prices are to be found in the shortage of shipping, which will show in January and February 1957 and which normally would bring prices down. It is also likely that there will be heavy sowings in March and such reports invariably bring prices down even when jute is scarce. However, the Chinese have only bought 40,000 bales, and if they come into the market openly there is likely to be an improvement.

SOUTH EASTERN RAILWAY TENDERS

The General Manager, Garden Reach, Calcutta-23 invites tender No. GM25/56/728CS (56) for supply of 8,000 galls. of Paint Outside White R/m to specn. G/P-307/208, 4,250 gallons of Paint Red Oxide R/m to specn. IS: 123-1950 & ISC 446, 4,450 gallons of Paint Aluminium to specn. G/P-307/212, 700 gallons of Paint light Purple Brown R/m to specn. IS: 123-1950 & ISC 449 and 95 gallons of Paint Black Japan to specn. G/P-307/261. Tender forms are obtainable from the Controller of Stores, Garden Reach, Calcutta-23 on remittance of Rs. 5/- per copy (not refundable) by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, Garden Reach by local firms. Closing date is 10.1.1957 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

GUNNY SHIPMENTS DURING NOVEMBER

The following are the total net figures of manufactured jute goods shipped from Calcutta during the month of November, 1956, after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross Short Shipped November, 1956 (Net)	5,591.5	44,360.0	49,951.5
October, 1956 (Net)	161.1	2,397.5	2,558.6
September, 1956 (Net)	5,430.4	41,962.5	47,392.9
Gross Short Shipped November, 1956 (Net)	4,697.4	30,420.9	35,118.3
October, 1956 (Net)	2,219.2	29,109.3	31,328.5
September, 1956 (Net)	45,041.4	1,718.2	46,759.6
Gross Short Shipped November, 1956 (Net)	3,224.2	Nil	3,224.2
October, 1956 (Net)	41,817.2	1,718.2	43,535.4
September, 1956 (Net)	38,848.6	1,265.6	40,114.2
Gross Short Shipped November, 1956 (Net)	26,388.8	1,500.6	27,889.4

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 20th December, 1956	3,212.2	22,654.5	25,566.7
1st to 20th November, 1956	3,767.5	22,973.6	26,741.1
1st to 20th October, 1956	3,463.4	19,605.0	23,071.4
1st to 20th December, 1956	17,964.3	1,474.0	19,438.3
1st to 20th November, 1956	26,297.7	1,116.3	27,414.0
1st to 20th October, 1956	24,947.8	958.9	25,906.7

THE FOREIGN JUTE MARKETS

DOWNWARD TREND IN PRICES

(FROM OUR DUNDEE CORRESPONDENT)

HOLIDAYS interrupted business last week, but this does not appear to be the real reason for the weakness in prices for raw jute. When prices for jute yarns and cloth were altered here from 11th December, values of the fibre were very firm and showing signs of further strength. Indeed, they advanced another £2 to £4 a ton, according to grade. During the past week, however, most of this has been lost and in some cases even lower terms are now quoted. Offers are more freely made now than for some time past, with Mill Firsts quoted at from £126 to £130 and Mill Lightnings from £113, Mill Hearts from £108 and grade Hearts from £103, business having been done at these rates for the Hearts, for January-February shipment, c.i.f. U.K. Dark jute has also gone softer, but not to the same extent. Good marks of Daisies-3 are offered at from £113 and grade at £109, with grade Tossa-3 at from £120 and fours from £113, and fairly decent quality available at these limits. Spinners have bought a good few thousand bales since last report. Mr. H. B. Pirie, chairman of the Jute Importers Association, stated at the A.G.M. the other day that Pakistan planning of the jute crop should not only be made on estimates of demand, but also take into account risks of damage by weather. Formerly, it was always considered reasonable to have a carry-over from one crop to another, but there was no longer such a reserve. Mr. Pirie stressed that it is as much in their interests as it is in the interests of Pakistan that she should earn as much foreign exchange as possible from her jute crop. If, through shortages, Pakistan earns in any one year an increase at a high uneconomic level, then he feared for her future as well as that of the whole world jute trade.

Demand for jute yarns has died down considerably with the easy tendency in raw jute, but there is no change in prices. Common 8lb. cops are very firm at 17.08d a lb. and 8lb. spools at 17.66d, with 3ply 8lb. twist at 19.35d a lb. The cloth end of the trade is slow but manufacturers are well sold to the end of March, and the trade is entering the New Year with confidence. Prices are firm at 14.36d for 40in. 10oz. hessians and 11.73d for 8oz. Calcutta goods have declined lately hessians falling to 69s 6d for 40in. 10oz. and 51s 6d for 71oz., January. 68s 9d and 51s February and 68s 6d and 50s 9d March, with B Twills down to 181s 9d for January-February-March, all f.o.b. Calcutta.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption continued relatively high in November 1956. Although it was 5 million yards lower than the good performance in October, it was 11 million yards more than for November 1955. As consumption in November 1956, would reflect very little, if any, of the stepped-up buying which occurred as a result of the Middle East situation, it would seem reasonable

to expect that consumption last month will continue at a relatively high level. If so, total U.S. consumption in 1956 could be about 8 percent better than during 1955. U.S. burlap stocks continue to increase. At an estimated 263 million yards at the end of November 1956, 123 million yards were spots and 145 million yards were afloats. Appearing below are two tables which include the November figures (1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

MORE BUYING IN U.S. BURLAP MARKET

Activity in the U.S. burlap market was at a high level during November, reports the *Jute Bulletin* of the Indian Central Jute Committee. The month brought brisk demand from all users of burlap, undoubtedly induced by the flare-up in west Asia and the prospect of a lengthy closure of the Suez Canal. Prices ruled very firm in sympathy with the rising primary market in Calcutta. Although U.S. burlap stocks, spot and afloat, were adequate for more than three months' consumption, importers made a number of large purchases in India to be able to maintain a steady flow of supplies during the months that would be taken for the clearance of blockships in the Suez Canal. The returnable burlap bag programme continued to gain popularity. The programme seems to have been the most effective means of emphasising the ultimate savings made in the use of burlap. The pick-up in the industrial use of burlap also gained new momentum. Observers were, however, perturbed over the possibility of the burlap promotion campaign receiving a setback as a result of the higher prices that would follow from the long haul round the Cape.

EGYPTIAN PURCHASES OF JUTE FABRICS FROM INDIA

India was the sole supplier of jute fabrics to Egypt during the first half of 1956 and also the chief source for the supply of sacks, according to the *Jute Bulletin* of the Indian Central Jute Committee. Of the total Egyptian imports of jute sacks and bags estimated at 10.5 million kilograms of the value of £E 1.2 million during the first half of 1956, 8 million kilograms were of Indian origin and 1.5 million kilograms were French. During the same period of 1955, total imports were 9.8 million kilograms (£E 1.1 million) of which 8.3 million kilograms came from India and 6 million kilograms from France. Jute fabric imports totalled 2.2 million kilograms (£E 2 million) during the first six months of 1956. The entire quantity was imported from India, compared with the total of 3.1 million kilograms (£E 3 million) during the comparable 1955 period, when 2.9 million kilograms were imported from India.

FINNISH IMPORTS OF INDIAN JUTE CLOTH

Finland imported 79,056 kilos of jute cloth of the value of Fmk 7.9 million in 1955, compared with 54,000 kilos of the value of Fmk 5.2 million in 1954. The main difficulty in the field of promoting increased Indian exports to Finland is the apparent ignorance among Finnish importers about Indian products. Another feature of Indian trade is the absence of large-scale direct trade between the two countries. A substantial quantity of India's products is being exported through neighbouring countries.

Plantation Topics

PEPPER EXPORTS INCREASE

PROSPECTS FOR TEA CROP IN SOUTH INDIA

(FROM A SOUTH INDIAN CORRESPONDENT)

INDIA exported 13,223 tons of pepper during the season ended October, 1956, which was 2,037 tons more than in the previous season. The increase was largely on account of a bigger offtake by communist countries which imported 4,227 tons, or roughly 32 percent of the total. The United States is still the largest consumer, taking more than 50 percent of the exports during the period under review. Russia bought 22.31 percent and Italy 7.12 percent. As usual, Cochin handled the largest share of exports, the actual figure being 10,692 tons, compared with Bombay's 332 tons.

With new arrivals increasing, pepper prices are falling, the latest quotation from Cochin being Rs. 550 a candy of 6 cwts. Foreign demand is too low for this time of year. New York, it is reported, is hanging back, expecting further concessions from the growers. Buyers remain selective; in recent weeks, they have bought only near shipments, and that, too, at the reduced rate of 26 cents a lb. If New York sticks to its present conservative buying policy, it is feared in trade circles that Malabar pepper will have to be sold for still lower prices due to an increasing accumulation of stocks.

Picking is in progress in central Travancore, where the largest proportion of Malabar's pepper is grown. Judging from the rate of harvest there and from the reports received from other centres, it appears that the current season's crop will be higher than last season's. But the growers are depressed over the low prices now ruling, and they do not seem to entertain the hope that their produce can be sold for an attractive price this season. Pepper output has gone up considerably in recent years, especially in Sarawak and Indonesia, but consumption has not increased correspondingly. This over-supply is responsible for bringing prices down to their present level. It is considered in trade circles that in order to compete with Sarawak in the world market, India may have to reduce her prices substantially. However, as Mr. W. E. Northey, chairman of the Cochin Chamber of Commerce, has pointed out, lower prices, combined with the higher standard of living, have led to a substantial increase in the consumption of pepper within India itself. According to one estimate, 9,500 tons were sold for internal consumption last season, and a further increase is considered possible.

Second Plan Target

The Mussoorie conference of Central and State Agricultural Ministers has recommended that the production of pepper be stepped up to 36,000 tons by the end of the second plan period. If production is increased to that extent, growers in India will have to face the risk of over-production unless the home market is expanded by that time to absorb a substantial share of the increased output. Mr. H. S. Pollack, an American spice dealer, who visited Cochin during the last part of November, pleaded that the Indian pepper trade participate in a joint publicity campaign in the U.S. market.

South Indian Tea Output

South India produced 12,600,000 lbs. of tea in October, against 9,600,000 lbs. in September and 14,100,000 lbs. in October, 1955. With this, the total for the first ten months of 1956 amounts to 103,800,000 lbs., which fell short of the 1955 figure by 6,500,000 lbs. The November, 1956, crop is unofficially estimated at 12 million lbs., or roughly 2 million lbs. in excess of the output in the same month of 1955. Most of the estates report a bumper crop for December. Trade sources estimate the 1956 production at over 130 million lbs., compared with 129 million lbs. in 1955.

Problems of Coir Industry

Mr. Duncan Ridler of the F.A.O. had a discussion with Coir Board officials on the problems confronting the coir industry, with special reference to exports. Mr. Ridler advised the Coir Board to approach the F.A.O. through the Government of India for including coir in its programme for a marketing study of hard fibres. The working party of the F.A.O. on coconut and coconut products is meeting in Colombo from 8th to 18th January, 1957, and Mr. Ridler suggested that the Coir Board try to get coir included in the agenda of this meeting.

For the last two or three months, coir factories along the west coast have been busy with seasonal orders. The demand for coir and coir goods remains steady. A significant development is that there has been a steady flow of orders from abroad instead of the usual bulk purchases by foreign buyers. This should be considered a healthy development because a steady flow of orders will avoid wide fluctuations in prices. It may be taken as a sign of the foreign buyer's growing confidence in India's ability to supply the goods all through the year. With the formation of the Coir Board and the growing interest the Government is showing in the affairs of the coir industry, much of the irregularities in coir trade is disappearing and stability appears to be getting established in the coir market.

Cashew Dispute Deadlock

The cashew agitation has been in the lime-light again with the starting of satyagraha in front of the Secretariat in Trivandrum by a

section of Quilen cashew workers. The new Governor, Dr. B. Ramakrishna Rao, received the delegations, one sponsored by the Communists and the Revolutionary Socialist Party, and the other by the Congress. The Administrator's regime had failed to settle the cashew dispute in spite of its intervention and its declaring the cashew industry as non-seasonal, the setting up of the Cashew Board and the threat to the management that the industry will be handed over to workers' co-operatives. Instead of resolving the crisis, Government interference has aggravated it. The processors did not yield to the Government's threat. The Co-operative Department of the State Government, after a thorough investigation, has reported to the Government that it is impossible under the present circumstances to bring the workers under a co-operative and entrust the management of the industry to them. On account of the delay in the arrival of raw nuts from Africa, factories could not resume work at the usual time and the reopening of the factories will be delayed at least up to the end of January, if not till the beginning of February. So the situation remains essentially the same as it was four months ago when the crisis started. A complete reversal of the decision taken by the previous Administration will be inevitable if a solution to the present deadlock is to be found.

Sales Tax on Coffee

Coffee dealers in south India, who met in Coimbatore, passed a resolution requesting the Governments of Madras and Kerala to levy sales tax on coffee at a single point as is being done by the Mysore Government. The Madras Government is in favour of a single-point levy, but the rate it wants to introduce is higher at 9.6 pies (5 Naye paise) a rupee. The introduction of single-point sales tax will be advantageous to buyers if the sales are confined to one State, but coffee is a commodity which is sold by the Board in Madras, Mysore and Kerala; often merchants from other States participate in the sales conducted in one State. The tendency will be there for the Government to raise the tax if it is levied only at one point and in case of inter-State trade, the merchants stand to lose. The solution for the problem is for both the Coffee Board and the merchants to move the Central Government for collecting the sales tax at the Board-point in the shape of a surcharge and distribute the proceeds among the State Governments on a mutually agreed basis. The Plantation Enquiry Commission, in its report on coffee, has recommended this.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN NOVEMBER

Indian rubber output in November was 2,800 tons, according to the Rubber Board of India. Imports totalled 61 tons and exports were 15 tons and 1,020 lbs. Consumption by manufacturers was 2,547 tons, including 607 tons imported. Stocks with manufacturers at the end of the month were 3,257 tons. Stocks with estates and dealers on the last day of the month amounted to 4,576 tons including 369 tons in transit. Manufacturers used 318 tons of reclaimed rubber, the month-end stock

being 596 tons, and consumed 232 tons of synthetic rubber of which they held a total stock of 982 tons on 30th November.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market review published by the Colombo Brokers' Association:

	Closing prices on 21-12-56 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.41	1.41
No. 2	1.38	1.38
No. 3	1.35	1.35
No. 4	1.11	1.11
No. 5	1.06	1.06
Sheet cuttings 1. do 2.	1.08 1.03	
Crepe:		
Water white	—	1.41
R.M.A. No. 1X	1.35/36	1.37
R.M.A. No. 1	1.30/34	1.33
Crepe No. 2 do. No. 3	.84/94 .76/80	1.28 1.22
Scrap Crepes:

Sc. Crepe No. 2	.98/1.02	1.02
Sc. Crepe No. 3	.84/94	.91 1/2
Flat Bark	.76/80	.80
	Sc. Crepe 3X	.96 1/2

To arrive at f.o.b. Colombo prices, add 53.45 cents a lb. for crepe other than scrap crepe and 31.45 cents for scrap crepe to the above market prices.

NO CHANGE IN TEA EXPORT DUTY

The Government of India has decided that the export duty on tea during the month of January, 1957 should remain at the same level as in force in December, 1956, namely, 8 annas a lb.

TEA EXPORT QUOTA FOR CURRENT SEASON

The Government of India has declared the export allotment of tea for the year 1956-57 at 443.3 million lbs. This represents 62 percent of the crop basis for the year.

INCREASED PRODUCTION OF SUGAR

Production and despatches of sugar from indigenous factories amounted to 265,000 and 218,000 tons up to 15th December, 1956, in the current season, as against 191,000 and 187,000 tons respectively in the corresponding period of last season. The stocks with factories on 15th December, 1956, stood at 574,000 tons, compared with 415,000 tons.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business in the best ORIENTAL tradition, ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

Head Office: Oriental Building, BOMBAY-1.

This story begins in 1888...

The world still awaits the adventure of Wireless... it's the age of the horse-drawn carriage. And people who talk of flying aren't airmen as yet; they're poets.

Calcutta is India's capital, and at one of its busy wharves, there's a picturesque mailboat from England, self-conscious in its new power of Steam. Look away for a moment to something else that is new. There! In those crates... the first few cakes of a new soap: *Sunlight*. The crates say: 'Made in England by Lever Brothers.'

Bobbing away on porters' heads, the cakes go off to some obscure bazaar of old Calcutta and from there... on to journey's end: the homes for which Levers have made the soap.

That's how it was one summer day of 1888. Lever Brothers (then, a three-year old British enterprise) thought the world of *Sunlight*. Soon, thousands of bazaars were stocking 'the tablet that foamed'—and families became converts for good.

Little by little, the motor car arrived (the model with the turkey-croak hooter); then the telephone began to jangle in Indian homes. And in those homes, time wasn't standing still either. People were asking for new and varied products to meet their changing needs. So, Levers—developing in step with them—produced for the home such things as *Lifebuoy*... *Vim*... and *Lux Toilet Soap*. This is becoming a story of familiar names, isn't it?

In 1922, Levers started making soaps in Calcutta—encouraged as they were by the increasing demand for their products. In 1934, a second factory went up in Bombay.

In 1926 came Dalda Vanaspati from Holland. And, with it, there started a revolution in India's nutrition—the use of a hardened vegetable oil for cooking. To manufacture *Dalda* in India, a new Lever Company was born in 1932: 'HVM'—the Hindustan Vanaspati Manufacturing Company Limited.

And still the Indian home called for newer and 'different' products. And so there came to India *Pears Soap*, *Erasmic* and *Gibbs* products, *Himalaya Bouquet* toiletries, *Rexona Soap*—familiar members of the Lever family. Marketing of these products led to the formation of yet another Lever Company in 1935: 'UTL'—United Traders Limited.

Now, you can't separate the tale of these products from the tale unfolding within Levers. The people in their factories and offices were changing, for one thing. Foreign experts were joined by the young men of India and today over four-fifths of Levers' executives are Indians.

Meanwhile, Levers were buying all the raw materials that India could offer. These purchases grew as manufacture expanded—till, in 1955, about 88 percent of the oils and fats that Levers needed was supplied by India's fields and coconut groves.

An international partnership—that's what soon grew up in Levers. Foreign technical and marketing experience linked up with the talents and resources of India. Result? The Indian housewife today is supplied with products that are among the world's best.

Today, we are sixty-nine years from the crate of soap that, almost unnoticed, started Levers in India. Today, a new chapter in our story has opened with the association of Indian and foreign capital in Levers. Indian and British Directors work together on the Board, too. Here's a joint venture that serves the nation and advances with it.

Yes, the future arrives with each tick of the clock. And Levers face that future with a new name: 'HINDUSTAN LEVER LIMITED.' So the stories of HVM and UTL end, in a sense—because they've merged with 'Lever Brothers' to form Hindustan Lever.

But the Lever story goes on. For India's story goes on, and Levers have grown with India's needs and progress. As it has done for sixty-nine years, Hindustan Lever will continue to serve the Indian home.

BRITISH TEXTILE REVIEW

THE COMMONWEALTH AND EUROPE

IT is said that Australia's insistence on whittling down imperial preference, as revealed in the Anglo-Australian trade agreement, was a major cause of the British Government's change of policy towards trade with Europe. The agreement was a hard blow to British exporters. In textiles, Australia is easily first on the list of Britain's overseas markets for cotton yarns and still a major, though not an easy, market for her woollen and worsted fabrics. It must be assumed that other suppliers, especially European, will take an appreciable slice of the market hitherto enjoyed by the British. But if the British textile industries aspire to compete freely with their continental rivals in Europe they ought to be able to trade in Australia on more level terms than in the past. When the textile industries, with others, were invited to express their views on the plan to remove most of western Europe's internal tariffs their reaction—before they knew that a major customer in the Commonwealth was surprisingly favourable. The Federation of British Industries sent a questionnaire to 128 trade associations of all kinds, and of that total only 18 were unconditionally opposed to the plan. None of those 18 represented a major textile group (though it did include the jute industry). On the other hand, of 10 regional councils, the only one opposed, the North Midlands, is one extensively interested in hosiery and laces, among other consumer goods.

Informal intimations indicate that in the opinion of the Board of Trade the European plan, if implemented, would have seriously adverse effects on the cotton industry and decidedly beneficial effects on the wool industry. Private discussions show that, broadly, these opinions prevail within the industries themselves. Lancashire—but the rayon even more than the cotton interests—is insisting on all manner of safeguards, while Yorkshire is more liberal-minded. Lancashire, struggling against cheap Asian goods, is reluctant to fight on the European front as well—and the Continent, incidentally, is not convinced that those Asian goods can be prevented from spreading over its area, though Britain. At present, rather more than one-quarter of imports of cotton yarns and fabrics come from the European countries of the plan, as much as two-thirds from the Commonwealth and Japan; but the European countries supply more than two-thirds of the U.K.'s imports of man-made fibre yarns and fabrics. About four-fifths of woollen and man-made fibre and fabrics, come from those sources; whereas less than one-eighth of Yorkshire's exports of fabrics are sold there. In this line, the dollar markets are, at present, of supreme importance; but the European group takes fully one-third of Yorkshire's exports of yarns. If the European plan materialises—and the more so if Scandinavia, Switzerland and Austria (not included in the proportions mentioned) are associated with it—both the dependence and the pressure of Yorkshire on the dollar markets will certainly diminish.

Dearer Materials

Most textile firms in Lancashire and Yorkshire are content to observe their lengthening order books, but there is an undercurrent of apprehension. Raw materials of suitable quality are not readily available, and the consequent increases in price are not altogether healthy. The rise in merino wools to a level about one-third higher than a year ago is outstanding. Crossbreds are affected less, because consignments from New Zealand use the Panama rather than the Suez Canal, but even their recent increases are appreciable. Egyptian-type cottons reflect the stoppage of supplies from Egypt, American-type cottons the interruption of deliveries caused by the long-shoremen's strike. The increases reflect a strong demand as well as a shortage of supply. Some of the buying, admittedly, has been precautionary, but there is also a genuine increase in consumption. But it is not forgotten that the easing of the prices of wool and, later, cotton was an important factor in the increase in trade, after confidence in values had been restored. None of the textile industries can any longer rely on a continuing strong demand with little regard to price, and cautious observers see the recent movements as a weakening factor in the trade. Not everyone, of course, takes the long view. When new orders are flowing freely it is easy to forget the pessimism that prevailed in Lancashire until not many weeks ago. But the latest figures of stocks of finished textiles, though not recent enough to give a clear picture of the trend, give reason to pause and consider. The Wholesale Textile Association's index of stocks, which until March was considerably lower than the figure of a year earlier, rose in September (when wholesale trade is reaching its seasonal peak) to the highest September level since 1951. Production cannot be maintained indefinitely if this tendency persists.

Man-made Textiles Steady

An increase in the output of man-made fibres from 35.5 million lbs in September to 40.2 million lbs. in October is attributable mainly to staple fibre. Offtake of rayon staple is still on an upward trend, as British prices have resisted the upward trend of natural fibres. Indeed, the recent developments are strengthening the position of the man-made fibres, and of firms using them extensively, for the basic materials concerned are either

produced at home or imported mostly from near countries. Some observers believe that the chairman of the British Man-Made Fibres Federation, Sir William Palmer, was too pessimistic when he suggested at the Federation's annual meeting that no marked change in the trade was to be expected in the near future. He contrasted the mild recession of 1954-55 with the severe recession of 1951-52 and pointed to a reasonable level of stocks, which would enable a moderate increase in demand to be satisfied without disturbance or a moderate decrease in demand to be suffered without near-panic. Sir William had to acknowledge, however, that it was the home market that sustained the trade in a relatively healthy state. Exports in 1955 were about 10 percent less in value than those of 1954, and Sir William expected a further decline of some 12 percent in 1956. "We must adapt ourselves to our public" was the conclusion of Sir William's address. At an exhibition in Bradford the Federation has demonstrated the quality, as well as the variety, of materials that can be produced with man-made fibres, either in blends or alone, on the machinery of the traditional wool textile firms. Yet the "cotton" industry is by far the largest outlet for man-made staple fibres. The existence of these fibres, at relatively steady prices, must exercise a restraining influence on the prices of cotton and wool.

WOOL PRODUCTION AND TRADE

REMARKABLE INCREASE SINCE THE WAR

FOR the eighth successive season, world wool production showed an increase during 1955-56, according to estimates given in a report issued by the Commonwealth Economic Committee. It points out that production in the free world reached 4,000 million lbs, greasy basis, which was 3 percent higher than in the previous season and exceeded the postwar low point recorded in 1947-48 by about one-fifth. In the latest season, Commonwealth production totalled 2,400 million lbs, or 60 percent of the free world total; output in Commonwealth countries has risen by over a third since before the war, due mainly to the remarkable expansion which has occurred in Australia, New Zealand and, to a lesser extent, South Africa. World trade in raw wool has also been rising in recent years, and in 1955 it was about 18 percent higher than the prewar average. The chief countries to record increased imports were the U.K., the United States, Western Germany and Japan—the two last-named showing a particularly sharp rise. Wool prices were on balance lower in 1955-56 than in the two previous seasons; a marked fall occurred at the opening sales, but thereafter the tendency was upward. Demand for merinos became particularly strong during the final quarter of the season and quotations rose by nearly 25 percent compared with the opening levels; crossbred prices, in contrast, moved more narrowly though the season closed on a firm note.

Sheep Numbers

Sheep numbers in the free world achieved an all-time record in 1954-55, when they amounted to over 690 million. This was 17 percent more than the 1946-47 low point of 590 million, and nearly 10 percent above the prewar average. The rise in numbers has been particularly marked in Australasia, with smaller increases in South America, Asia and Africa; by contrast, flocks in Europe and North America are still below their prewar level. The rise in wool prices at the time of the Korean war greatly increased the interest in sheep production and brought about a marked expansion in numbers. But recently there appears to have been some slowing down in the rate of increase, the gain during the latest season being only about 10 million head compared with 20 million in 1952-53.

World wool production set up a new record in the 1955-56 season, with Australia accounting for the major part of the increase. That country, New Zealand and Uruguay have been responsible for the greater part of the rise which has occurred in free world production during the past 20 years, while in the United States production has declined sharply. Compared with the immediate prewar years there has been an improvement of at least one-fifth in wool production, although the total sheep population has grown by only about 10 percent. The marked rise in yield per sheep over the past 20 years is ascribed to heavier fleece weights resulting from improved conditions of breeding, pasture and general sheep husbandry.

Trade Trends

In 1955, world exports of raw wool amounted to some 2,500 million lbs, actual weight, or one-eighth more than in 1954. Nearly 90 percent of world exports came from the five chief producing countries of the southern hemisphere: Australia, New Zealand, South Africa, Argentina and Uruguay. The increase was due partly to the rise in wool production in the three Dominions and partly to the release of stocks previously held up in South America. Among Commonwealth producers, exports from Australia increased by 17 percent in 1955 compared with 1954, and amounted to nearly 1,150 million lbs, while New Zealand and South African shipments rose by 6 percent and 11 percent, respectively.

On the importing side, some 88 percent of the world total went in 1955 to seven leading consuming countries: the U.K., United States, France, Western Germany, Japan, Belgium and Italy. For

the fourth year running, the U.K. remained the world's largest net importer, taking 650 million lbs, or 8 percent more than in 1954. U.S. imports, at 355 million lbs, were nearly one-fifth higher than the previous year's exceptionally low total, although with that exception they were still well below the figures for any other postwar year. There was a 22 percent rise in net imports into Western Germany, while for Japan the increase was as much as 35 percent and that country replaced Italy as the world's fifth largest importer. French and Belgian imports were only moderately higher than in 1954, while Italy showed a reduction for the second successive year.

Consumption Rises

Activity in the wool textile industries of the free world was rather greater in 1955 than in the previous year. Their aggregate consumption of raw wool rose to about 2,125 million lbs, clean basis, which was 3 percent more than in 1954, though still some 7 percent below the record set up in 1950. Consumption moved up sharply in the fourth quarter of the year, following the fall in wool prices at the opening sales of the new season's auctions. The most marked improvements took place in Western Germany, Japan and the United States, where usage in each case rose by about 10 percent. In 1955, for the second year in succession, the U.K. remained the world's largest individual consumer of wool, a position which had been held by the United States in every postwar year up to 1953; total United Kingdom usage in 1955 amounted to over 475 million lbs, or a 3 percent improvement on 1954. In France and Italy, in contrast, there were reductions.

Prices Improve

The 1955-56 wool selling season opened at the end of August, 1955, with merino prices at their lowest level for six years. At the Australian auctions in that month, quotations averaged about 15 percent cheaper than at the close of the previous season, but once established on their new basis any tendency to move was in an upward direction. After the Easter recess, the continued improvement in world wool consumption and the intensification of Japanese demand brought about a sharp rise in prices, so that the season ended with merino quotations nearly 25 percent higher than at the opening.

Crossbred prices at first moved in rather similar fashion. When the main New Zealand selling season opened in October, prices showed a 12½ percent fall on the 1954-55 close, but thereafter a slight hardening occurred and crossbreds 50s, for example, reached their peak for the season in January, 1956, when quotations were nearly 10 percent higher than at the opening. From then on a divergence appeared between the crossbred and merino price patterns and in the second half of the selling season crossbreds tended to weaken slightly. Accordingly, when the season closed, quotations for crossbreds 50s were only about 5 percent above the opening levels.

On a longer term basis the report shows that over the postwar period a greater proportionate increase has occurred in crossbred wool prices than in those of merino wools. During the 1955-56 season, for example, average prices of merino 64s were only about 25 percent above the 1947-48 level, while crossbred 50s showed an increase of nearly 120 percent. Ever since the 1952-53 season, the price relationship between merino and crossbred wools narrowed steadily until January, 1956, when they were probably closer than at any time in the present century. The reason for this trend is ascribed in part to a greater proportionate increase in merino wool production when compared with that of other qualities, and in part to changes on the demand side which have favoured the use of less expensive raw materials. A reversal in trend, however, occurred during the latter part of last season, as already mentioned, since when merino quotations have risen sharply and an appreciable widening of the price differential has taken place.

SUBSTANTIAL INCREASE IN PRODUCTION AND ACREAGE OF SUGARCANE

According to the Directorate of Economics and Statistics, Union Ministry of Agriculture, the all-India second estimate of sugarcane, 1956-57, puts the current year's area and production at 4,532,000 acres and 58,914,000 tons of cane, as against 3,945,000 acres and 50,455,000 tons of cane for 1955-56. This shows an increase of 587,000 acres or 14.9 percent in area and 8,459,000 tons or 16.8 percent in production over last year. The area under sugarcane at the second estimate stage during the current year is the highest on record. The overall increase in acreage and production during the current year has been reported by almost all the sugarcane growing States, specially U.P., Bihar, Mysore, Hyderabad, Madhya Bharat and Bombay and has been attributed to timely rain, better irrigation facilities and favourable weather conditions both at the sowing and growing period of the crop. This estimate covers the period generally up to the middle of October, 1956. Till then, the condition of the crop was reported to be, on the whole, satisfactory, except in parts of U.P., Bombay and Bihar. In U.P., the crop was slightly affected by water logging in the flood-affected areas. Attack of rot, top-borers and pyrrilla was also reported in certain parts of eastern U.P. districts. In parts of Bombay the crop was slightly affected by heavy rains and sporadic attack of smut, stem and top-shoot-borer. This estimate does not include the entire area sown to sugarcane crop 1956-57. Past experience has shown that

at the second estimate stage forms roughly 95 percent of the area of the crop finally reported. The information given in this estimate relates to the period before 1st November, 1956.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced by 0.2 percent to 430.2 during the week ended 15th December, 1956, compared with 429.2 (revised) for the previous week. The index was lower by 0.1 percent when compared with the corresponding week of the last month, but was higher by 17.2 percent than that of a year ago. The index for Food Articles declined by 0.2 percent to 417.7 compared with 418.4 (revised) for the previous week due to lower prices of gur (-7%), wheat in Jabalpur, bajra and tea for exports (-3% each), dal arhar (-2%) and rice in Calcutta (-1%) in spite of an advance in the prices of tea for internal consumption (+19%), salt (+7%) and wheat in Amritsar (+4%) and in Hapur (+2%). Higher prices of gingellyseed (+8%), groundnuts (+6%), manganese ore (average export price) (+4%), raw jute (+2%), raw silk in Bangalore, castorseed in Madras and copra (+2% each) and raw cotton and linseed (+1% each) raised the index for Industrial Raw Materials by 1.3 percent to 519.3; the prices of iron ore (-5%), castorseed in Bombay and lac (-2% each) exhibited declines. The index for Semi-Manufactures moved down by 0.3 percent to 417.4 (estimated) as a result of a fall in the prices of gingellycake (-5%), copra cake (-4%), zinc (-3%), mustard oil in Kanpur (-2%), and coconut oil in Calcutta, cotton yarn and copper (-1% each) in spite of an advance in the prices of gingelly oil (+8%), castor oil in Calcutta and groundnut oil (+4% each), mustard oil in Calcutta and coconut oil in Cochin (+2% each) and linseed oil and coir yarn (+1% each). A rise of 0.1 percent to 366.6 in the index for Manufactures was caused by an increase in the price of jute manufactures (+1%);

the price of glass (1%) was, however, marked down. Lower prices of betelnuts in Calcutta (-4%), black pepper (3%) and cashewnuts (-2%) brought down the index for the Miscellaneous group by 0.4 percent to 589.2, although the price of chillies in Patna (+1%) showed an advance.

Calcutta Markets

FAIR GENERAL DEMAND AT TEA EXPORT SALE

SUPPORT FOR QUALITY GRADES

AT Sale No. 27, held on 2nd January, offerings at the Export auction, consisted of 63,500 packages for which there was a fair general demand, but at easier rates. Tea for price and clean black Fannings and bright liquoring teas from the Doars and Assam, however, were very well supported and were fully firm and occasionally dearer, while non-wither Doars were also a strong feature of the Sale. There were more C.T.C. teas on offer and these were often up to 3 annas easier and a number of lines were withdrawn. Darjeelings were generally 4 annas easier and the remaining common and medium offerings sold at about 2 annas below last rates.

Quotations	1957	1956
Clean Black Pekoe	2 5 6	2 1 0 to 2 2 0
Plain B.P.	2 4 0	1 8 0
Medium Assam B.P.	2 5 6	1 10 0 to 1 11 0
Best C.T.C. Assam B.P.	2 13 0	2 14 0 to 2 1 0

FREIGHT MARKETS QUIET

THE holidays have kept the markets quiet. The latest news of the prospects of the clearing of the Suez Canal will prompt operators to restrict business to their minimum requirements for the first quarter of the year because of an anticipated reduction in freight rates. This reduction, however, is only likely to be to the high levels prevailing before the Suez incident, and as the markets were then rising, the full extent of any reduction is difficult to assess at present. Various ore fixtures from India show slight declines from the previous fixtures. Calcutta, completing one East Coast Port-Hamburg, paid 215s; East Coast-Poland 219s; Vizagapatam-U.S.N.H. \$(U.S.) 27.50 for January and \$(U.S.) 26 for April and Koilthottam-U.S.N.H. \$(U.S.) 24.50. A number of grain cargoes were arranged from Australia to India on the basis of 172s 6d West Australian loading, and later, this rate was cut by 10s for a February loader. The *Shahzada*, it is reported has been fixed for six to nine months' time charter at the good rate of 52s 6d on 8,323 d.w. and a *Liberty* took the lower rate of \$(U.S.) 5.75 for two years' trading.

HIDES AND SKINS FIRM

The market in skins was firm and prices showed an upward tendency. Stocks were less than in the previous fortnight.

Bazaar Sales

(Between 18th December and 31st December, 1956)
Cowhides: Wet salted (Ord) 26,000 pcs. on the basis of Rs. 6-12 to Rs. 9; Wet salted (Slaughtered) 27,600 pcs. on the basis of Rs. 12-8 to Rs. 21.

Goatskins: Wet salted (Daissee, Killed) 11,59,000 pcs. on the basis of Rs. 270 to 290 and Rs. 290 to Rs. 315; Assam-Dinajpur 83,200 pcs. on the basis of Rs. 255 to Rs. 325; Purneah-Kissenganj 78,000 pcs. on the basis of Rs. 275 to Rs. 300; Pakur-Patna (Ord) 29,600 pcs. on the basis of Rs. 250 to Rs. 270; Muzafferpore-Patna 1,99,300 pcs. on the basis of Rs. 285 to Rs. 325.

Bazaar Stocks

(31st December, 1956)

Cowhides: Wet salted 1,94,600 pcs.

Goatskins: Wet salted (Daissee, Killed) 31,000 pcs.; Assam-Dinajpur-Jalpaiguri-Murshidabad 63,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 1,33,500 pcs.

SHELLAC MARKET STEADY

During the period between 19th December and 28th December, the market was dull at the beginning, and steady at the end. The range of quotations was as follows:

Pure Buttonlac	Rs. 125, 120 value; 120 buyers.
Lemon No. 1 Shellac	Rs. 125, 123 buyers, 122 value, 125 done and buyers.
Lemon No. 2 Shellac	Rs. 119, 116 done, 115 to 118 buyers.
F.O. Std. 1 Shellac	Rs. 115-8, 110, 112-8 buyers.
Pure TN Shellac	Rs. 111, 106, 108 basis done and buyers.
4% I.T.N. Shellac	Rs. 103, 98, 101-8 buyers.
No. 1 Kusmi Seedlac	Rs. 113-8 to 109 value, 108 to 112 buyers.
No. 2 Kusmi Seedlac	Rs. 109-8 to 105 value, 103 to 106 buyers.
Fine Bysaky Seedlac (Manbhumi)	Rs. 100, 96, 101-8 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 98 value, 92-8 to 98-8 buyers.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs. 88 value, 86 to 85 buyers, 83-8 value, 85 to 87 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 83, 78 value, 78 to 81-8 buyers.
Kireelac	Rs. 36 to 35 buyers.

Shipments during December until the 26th were 29,247 packages comprising shellac 21,149 packages, seedlac 4,097 packages, buttonlac 876 packages and others 3,125 packages.

COMPANY AND PUBLIC NOTICES

THE BENGAL FLOUR MILLS CO., LTD.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the above-named Company will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday, the 14th day of January, 1957, at 11-30 o'clock in the forenoon to consider and, if thought fit, to pass, with or without modification, the following resolutions, namely:—

1 (a) (As an Ordinary Resolution)—“That as from the first day of April One thousand nine hundred and fifty-six Balmer Lawrie & Company Limited, the Managing Agents of the Company, shall hold such office upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof, the terms of which said draft Agreement have been approved by the Central Government in conformity with the provisions of Section 329 of the Companies Act, 1956.”

1 (b) (As an Ordinary Resolution)—“That as on and from the fifteenth day of January One thousand nine hundred and fifty-seven, subject to the approval of the Central Government under the provisions of Section 326 of the Companies Act, 1956, Balmer Lawrie & Company Limited be and are hereby re-appointed the Managing Agents of the Company for a fresh term of ten years upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof; and that the Directors be and are hereby authorised to alter or vary the said terms to such extent and for such purposes only as may be necessary to embody or give effect to the requirements of the Central Government as a condition of granting its approval as aforesaid.”

1 (c) (As an Ordinary Resolution)—“That the Directors be and are hereby authorised to enter into an Agreement in writing between the Company of the one part and Balmer Lawrie & Company Limited of the other part in the terms of the draft Agreement referred to in resolutions numbers 1(a) and 1(b) in the Notice convening this Meeting such Agreement to incorporate the alterations and variations (if any) referred to in the said resolution number 1(b).”

2. (As a Special Resolution)—“That Articles 3, 4 and 5 of the Articles of Association of the Company be deleted and the following new Article 3 substituted therefor:—

“Balmer Lawrie & Company Limited are the Managing Agents of the Company and they shall continue to be the Managing Agents of the Company up to and including the fourteenth day of January One thousand nine hundred and sixty-seven upon the terms and subject to the conditions as to remuneration and otherwise as are embodied in an Agreement a draft whereof has, for the purpose of identification, been subscribed by Mr. A. T. Montgomery, Chairman of the Company, to be executed with all convenient despatch and the Board of Directors shall carry the said Agreement into effect. Subject to the provisions of Sections 198 and 348 of the Companies Act, 1956, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2 (17) of the Companies Act, 1956) commencing on or after the 1st day of April, 1956, or in respect of any part of such a financial year:—

(a) A sum of, or, in respect of any period of less than a year, calculated at the rate of Rs. 50,000/- per annum, and

(b) Such further sum, if any, as together with the said sum of Rs. 50,000/- shall make up an amount equal to 10 per cent. of the net profits of the Company for such financial year or part thereof determined in accordance with the provisions of Sections 349 and 350 of the Companies Act, 1956.

The said sum of Rs. 50,000/- payable under (a) above shall be paid by the Company by eleven monthly instalments of Rs. 4,000/- each and a final monthly instalment of Rs. 6,000/- payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year then to the extent that the amount paid to the Managing Agents under (a) above together with the remuneration paid to the Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rs. 50,000/- the remuneration payable under (a) above shall abate and be repayable to the Company.

The further sum, if any, payable under (b) above shall be paid by the Company im-

mediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in General Meeting.

In respect of the Company's financial year ending on the 31st day of December, 1956, the Managing Agents shall, subject to the provisions of Sections 198 and 354 of the Companies Act, 1956, if applicable, receive remuneration calculated in the manner provided in the Agreement dated the 8th day of January One thousand nine hundred and thirty-seven and made between the Company of the one part and the Managing Agents of the other part save that the Managing Agents shall only be entitled to receive the office allowance payable to them thereunder up to and including the 31st March, 1956.

The remuneration payable under this Article shall not be regarded as in any manner or to any extent intended to reimburse the Managing Agents in respect of any expenses incurred or to be incurred by them on behalf of the Company and the Managing Agents, in addition to receiving such remuneration, shall be entitled to be reimbursed by the Company in respect of any expenses incurred by them on behalf of the Company and such proportion of expenses that may be incurred by them partly on behalf of the Company and partly on behalf of themselves and/or some other Company, concern or person as the Directors of the Company shall determine to be or to have been incurred on behalf of the Company. Without prejudice to the generality of the foregoing, the Managing Agents shall be entitled to recover from the Company the remuneration (whether by way of salary, commission, bonus, gratuity, compensation, allowance or otherwise) provident and superannuation fund contributions and expenses payable to or in respect of all persons employed by them solely in connection with the Company's business and such proportion of the remuneration, contributions and expenses, if any, of any persons employed by the Managing Agents partly in connection with the Company's business and partly in connection with any other business as the Directors of the Company may from time to time likewise determine. Provided always that neither the Company nor the Managing Agents shall without the previous sanction of the Central Government (and then only subject to the provisions of Sections 198, 387 and 388 of the Companies Act, 1956) be entitled to appoint or employ any individual as a Manager of the Company within the meaning of the Companies Act, 1956.”

3. (As an Ordinary Resolution)—“That pursuant to Clause 9 of the said draft Agreement referred to in Article 3 of the Articles of Association of the Company, Balmer Lawrie & Company Limited and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries and Treasurers, Manager, Agent, Secretary or Selling or Buying Agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.”

4. (As a Special Resolution)—“That pursuant to Clause 12 of the said draft Agreement referred to in Article 3 of the Articles of Association of the Company, Balmer Lawrie & Company Limited be and they are hereby authorised to provide the Company with suitable furnished office accommodation at the registered or principal office for the time being of Balmer Lawrie & Company Limited in Calcutta and also, if so required by the Company, at any other place or places in which Balmer Lawrie & Company Limited may be able to provide such accommodation and the Company shall pay to Balmer Lawrie & Company Limited such rent and portion of the outgoings payable by Balmer Lawrie & Company Limited as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided.”

5. (As a Special Resolution)—“That Article 42 of the Articles of Association of the Company be deleted and the following new Article 42 be substituted therefor:—“Each Director shall be paid out of the funds of the Company by way of remuneration for his services in attending meetings of the Board of Directors the sum of Rs. 250/- for each meeting attended by him.”

By Order of the Board.

PALMER LAWRIE & CO., LTD.,

D. MANSON,

Secretary,

Managing Agents.

Calcutta, 21st December, 1956.

Notes:—(1) A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not be a member of the Company.

(2) A copy of the draft Agreement referred to in the proposed Resolution and an explanatory statement are annexed to this Notice.

BRIDGE & ROOF COMPANY (INDIA) LTD.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the above-named Company will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday, the 14th day of January, 1957, at 11-50 o'clock in the forenoon to consider and, if thought fit, to pass, with or without modification, the following resolutions, namely:—

1 (a) (As an Ordinary Resolution)—“That as from the first day of April One thousand nine hundred and fifty-six Balmer Lawrie & Company Limited, the Managing Agents of the Company, shall hold such office upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof, the terms of which said draft Agreement have been approved by the Central Government in conformity with the provisions of Section 329 of the Companies Act, 1956.”

1 (b) (As an Ordinary Resolution)—“That as on and from the fifteenth day of January One thousand nine hundred and fifty-seven, subject to the approval of the Central Government under the provisions of Section 326 of the Companies Act, 1956, Balmer Lawrie & Company Limited be and are hereby re-appointed the Managing Agents of the Company for a fresh term of ten years upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof; and that the Directors be and are hereby authorised to alter or vary the said terms to such extent and for such purposes only as may be necessary to embody or give effect to the requirements of the Central Government as a condition of granting its approval as aforesaid.”

1 (c) (As an Ordinary Resolution)—“That the Directors be and are hereby authorised to enter into an Agreement in writing between the Company of the one part and Balmer Lawrie & Company Limited of the other part in the terms of the draft Agreement referred to in resolutions numbers 1(a) and 1(b) in the Notice convening this Meeting such Agreement to incorporate the alterations and variations (if any) referred to in the said resolution number 1(b).”

2. (As a Special Resolution)—“That Articles 106, 107, 108, 109, 110 and 111 of the Articles of Association of the Company be deleted and the following new Article 106 substituted therefor:—“Balmer Lawrie & Company Limited are the Managing Agents of the Company, and they shall continue to be the Managing Agents of the Company up to and including the fourteenth day of January One thousand nine hundred and sixty-seven upon the terms and subject to the conditions as to remuneration and otherwise as are embodied in an Agreement a draft whereof has, for the purpose of identification, been subscribed by Mr. O. T. Jenkins, Chairman of the Company, to be executed with all convenient despatch and the Board of Directors shall carry the said Agreement into effect. Subject to the provisions of Sections 198 and 348 of the Companies Act, 1956, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2 (17) of the Companies Act, 1956) commencing on or after the 1st day of April, 1956, or in respect of any part of such a financial year:—

(a) A sum of, or, in respect of any period of less than a year, calculated at the rate of Rs. 50,000/- per annum, and

(b) Such further sum, if any, as together with the said sum of Rs. 50,000/- shall make up an amount equal to 10 per cent. of the net profits of the Company for such financial year or part thereof determined in accordance with the provisions of Sections 349 and 350 of the Companies Act, 1956.

The said sum of Rs. 50,000/- payable under (a) above shall be paid by the Company by eleven monthly instalments of

Structural

(MPC-36)

Rs. 4,000/- each and a final monthly instalment of Rs. 6,000/- payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year then to the extent that the amount paid to the Managing Agents under (a) above together with the remuneration paid to the Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rs. 50,000/- the remuneration payable under (a) above shall abate and be repayable to the Company.

The further sum, if any, payable under (b) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in General Meeting.

In respect of the Company's financial year ending on the 31st day of December, 1956, the Managing Agents shall, subject to the provisions of Sections 198 and 354 of the Companies Act, 1956, if applicable, receive remuneration calculated in the manner provided in the Agreement dated the 14th day of April One thousand nine hundred and twenty-five and made between the Company of the one part and the Managing Agents of the other part save that the Managing Agents shall only be entitled to receive the office allowance payable to them thereunder up to and including the 31st March, 1956.

The remuneration payable under this Article shall not be regarded as in any manner or to any extent intended to reimburse the Managing Agents in respect of any expenses incurred or to be incurred by them on behalf of the Company and the Managing Agents, in addition to receiving such remuneration, shall be entitled to be reimbursed by the Company in respect of any expenses incurred by them on behalf of the Company and such proportion of expenses that may be incurred by them partly on behalf of the Company and partly on behalf of themselves and/or some other Company, concern or person as the Directors of the Company shall determine to be or to have been incurred on behalf of the Company. Without prejudice to the generality of the foregoing, the Managing Agents shall be entitled to recover from the Company the remuneration (whether by way of salary, commission, bonus, gratuity, compensation, allowance or otherwise) provident and superannuation fund contributions and expenses payable to or in respect of all persons employed by them solely in connection with the Company's business and such proportion of the remuneration, contributions and expenses, if any, of any persons employed by the Managing Agents partly in connection with the Company's business and partly in connection with any other business as the Directors of the Company may from time to time likewise determine. Provided always that neither the Company nor the Managing Agents shall without the previous sanction of the Central Government (and then only subject to the provisions of Sections 198, 387 and 388 of the Companies Act, 1956) be entitled to appoint or employ any individual as a Manager of the Company within the meaning of the Companies Act, 1956."

3. (As an Ordinary Resolution)—"That pursuant to Clause 9 of the said draft Agreement referred to in Article 106 of the Articles of Association of the Company, Balmer Lawrie & Company Limited and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries and Treasurers, Manager, Agent, Secretary or Selling or Buying Agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

4. (As a Special Resolution)—"That pursuant to Clause 12 of the said draft Agreement referred to in Article 106 of the Articles of Association of the Company, Balmer Lawrie & Company Limited be and they are hereby authorised to provide the Company with suitable furnished office accommodation at the registered or principal office for the time being of Balmer Lawrie & Company Limited in Calcutta and also, if so required by the Company, at any other place or places in which Balmer Lawrie & Company Limited may be able to provide such accommodation and the Company shall pay to Balmer Lawrie & Company Limited such rent and portion

of the outgoings payable by Balmer Lawrie & Company Limited as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided."

5. (As a Special Resolution)—"That Article 85 of the Articles of Association of the Company be deleted and the following new Article 85 be substituted therefor:

"Each Director shall be paid out of the funds of the Company by way of remuneration for his services in attending meetings of the Board of Directors the sum of Rs. 250/- for each meeting attended by him."

By Order of the Board,

BALMER LAWRIE & CO., LTD.,

D. MANSON,

Secretary,

Managing Agents.

Calcutta, 21st December, 1956.

Notes.—(1) A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not be a member of the Company.

(2) A copy of the draft Agreement referred to in the proposed Resolution and an explanatory statement are annexed to this Notice.

BRITISH INDIA ELECTRIC CONSTRUCTION COMPANY LIMITED

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the above-named Company will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday, the 14th day of January, 1957, at 12-30 o'clock in the afternoon to consider and, if thought fit, to pass, with or without modification the following resolutions, namely:—

1 (a) (As an Ordinary Resolution)—"That as from the first day of April One thousand nine hundred and fifty-six Balmer Lawrie & Company Limited, the Managing Agents of the Company, shall hold such office upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof, the terms of which said draft Agreement have been approved by the Central Government in conformity with the provisions of Section 329 of the Companies Act, 1956."

1 (b) (As an Ordinary Resolution)—"That as on and from the fifteenth day of January One thousand nine hundred and fifty-seven, subject to the approval of the Central Government under the provisions of Section 326 of the Companies Act, 1956, Balmer Lawrie & Company Limited be and are hereby re-appointed the Managing Agents of the Company for a fresh term of ten years upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof: and that the Directors be and are hereby authorised to alter or vary the said terms to such extent and for such purposes only as may be necessary to embody or give effect to the requirements of the Central Government as a condition of granting its approval as aforesaid."

1 (c) (As an Ordinary Resolution)—"That the Directors be and are hereby authorised to enter into an Agreement in writing between the Company of the one part and Balmer Lawrie & Company Limited of the other part in the terms of the draft Agreement referred to in resolutions numbers 1(a) and 1(b) in the Notice convening this Meeting such Agreement to incorporate the alterations and variations (if any) referred to in the said resolution number 1(b)."

2. (As a Special Resolution)—"That Articles 106, 107, 108, 109, 110 and 111 of the Articles of Association of the Company be deleted and the following new Article 106 substituted therefor:

"Balmer Lawrie & Company Limited are the Managing Agents of the Company and they shall continue and be the Managing Agents of the Company up to and including the fourteenth day of January One thousand nine hundred and sixty-seven upon the terms and subject to the conditions as to remuneration and otherwise as are embodied in an Agreement a draft whereof has, for the purpose of identification, been subscribed by Mr. H. G. Sinclair, Chairman of the Company, to be executed with all convenient despatch and the Board of Directors shall carry the said Agreement into effect. Subject to the provisions of Sections 198 and 348 of the Companies Act, 1956, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2 (17) of the Companies Act, 1956) commencing on or after the 1st day of April, 1956, or in respect of any part of such a financial year:

(a) A sum of, or, in respect of any period of less than a year, calculated at the rate of Rs. 50,000/- per annum, and

(b) Such further sum, if any, as together with the said sum of Rs. 50,000/- shall make up an amount equal to 10 per cent. of the net profits of the Company for such financial year or part thereof determined in accordance with the provisions of Sections 349 and 350 of the Companies Act, 1956.

The said sum of Rs. 50,000/- payable under (a) above shall be paid by the Company by eleven monthly instalments of Rs. 4,000/- each and a final monthly instalment of Rs. 6,000/- payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year then to the extent that the amount paid to the Managing Agents under (a) above together with the remuneration paid to the Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rs. 50,000/- the remuneration payable under (a) above shall abate and be repayable to the Company.

The further sum, if any, payable under (b) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in General Meeting.

In respect of the Company's financial year ending on the 31st day of December, 1956, the Managing Agents shall, subject to the provisions of Sections 198 and 354 of the Companies Act, 1956, if applicable, receive remuneration calculated in the manner provided in the Agreement dated the 27th day of January One thousand nine hundred and twenty-five and made between the Company of the one part and the Managing Agents of the other part save that the Managing Agents shall only be entitled to receive the office allowance payable to them thereunder up to and including the 31st March, 1956.

The remuneration payable under this Article shall not be regarded as in any manner or to any extent intended to reimburse the Managing Agents in respect of any expenses incurred or to be incurred by them on behalf of the Company and the Managing Agents, in addition to receiving such remuneration, shall be entitled to be reimbursed by the Company in respect of any expenses incurred by them on behalf of the Company and such proportion of expenses that may be incurred by them partly on behalf of the Company and partly on behalf of themselves and/or some other Company, concern or person as the Directors of the Company shall determine to be or to have been incurred on behalf of the Company. Without prejudice to the generality of the foregoing, the Managing Agents shall be entitled to recover from the Company the remuneration (whether by way of salary, commission, bonus, gratuity, compensation, allowance or otherwise) provident and superannuation fund contributions and expenses payable to or in respect of all persons employed by them solely in connection with the Company's business and such proportion of the remuneration, contributions and expenses, if any, of any persons employed by the Managing Agents partly in connection with the Company's business and partly in connection with any other business as the Directors of the Company may from time to time likewise determine. Provided always that neither the Company nor the Managing Agents shall without the previous sanction of the Central Government (and then only subject to the provisions of Sections 198, 387 and 388 of the Companies Act, 1956) be entitled to appoint or employ any individual as a Manager of the Company within the meaning of the Companies Act, 1956."

3. (As an Ordinary Resolution)—"That pursuant to Clause 9 of the said draft Agreement referred to in Article 106 of the Articles of Association of the Company, Balmer Lawrie & Company Limited and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries and Treasurers, Manager, Agent, Secretary or Selling or Buying Agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

4. (As a Special Resolution)—"That pursuant to Clause 12 of the said draft Agreement referred to in Article 106 of the Articles of Association of the Company, Balmer Lawrie & Company Limited be and they are hereby authorised to provide the Company with suitable furnished office accommodation at the registered or principal office for the time being of Balmer Lawrie & Company Limited in Calcutta and also, if so required by the Company, at any other place or places in which Balmer Lawrie & Company Limited may be able to provide such accommodation and the Company shall pay to Balmer Lawrie & Company Limited such rent and portion

referred to in Article 106 of the Articles of Association of the Company, Balmer Lawrie & Company Limited be and they are hereby authorised to provide the Company with suitable furnished office accommodation at the registered or principal office for the time being of Balmer Lawrie & Company Limited in Calcutta and also, if so required by the Company, at any other place or places in which Balmer Lawrie & Company Limited may be able to provide such accommodation and the Company shall pay to Balmer Lawrie & Company Limited such rent and portion of the outgoings payable by Balmer Lawrie & Company Limited as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided."

5. (As a Special Resolution)—"That Article 85 of the Articles of Association of the Company be deleted and the following new Article 85 be substituted therefor:

"Each Director shall be paid out of the funds of the Company by way of remuneration for his services in attending meetings of the Board of Directors the sum of Rs. 150/- for each meeting attended by him."

By Order of the Board,

BALMER LAWRIE & CO., LTD.,

D. MANSON,

Secretary,

Managing Agents.

Calcutta, 21st December, 1956.

Notes.—(1) A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not be a member of the Company.

(2) A copy of the draft Agreement referred to in the proposed Resolutions and an explanatory statement are annexed to this Notice.

THE INDIAN GALVANIZING CO. (1926) LTD.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the above-named Company will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday, the 14th day of January, 1957, at 12-10 o'clock in the afternoon to consider and, if thought fit, to pass, with or without modification the following resolutions, namely:—

1 (a) (As an Ordinary Resolution)—"That as from the first day of April One thousand nine hundred and fifty-six Balmer Lawrie & Company Limited, the Managing Agents of the Company, shall hold such office upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof, the terms of which said draft Agreement have been approved by the Central Government in conformity with the provisions of Section 329 of the Companies Act, 1956."

1 (b) (As an Ordinary Resolution)—"That as on and from the fifteenth day of January One thousand nine hundred and fifty-seven, subject to the approval of the Central Government under the provisions of Section 326 of the Companies Act, 1956, Balmer Lawrie & Company Limited be and are hereby re-appointed the Managing Agents of the Company for a fresh term of ten years upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof: and that the Directors be and are hereby authorised to alter or vary the said terms to such extent and for such purposes only as may be necessary to embody or give effect to the requirements of the Central Government as a condition of granting its approval as aforesaid."

1 (c) (As an Ordinary Resolution)—"That the Directors be and are hereby authorised to enter into an Agreement in writing between the Company of the one part and Balmer Lawrie & Company Limited of the other part in the terms of the draft Agreement referred to in resolutions numbers 1(a) and 1(b) in the Notice convening this Meeting such Agreement to incorporate the alterations and variations (if any) referred to in the said resolution number 1(b)."

2. (As a Special Resolution)—"That Articles 85, 86, 87, 88, 89, 90 and 91 of the Articles of Association of the Company be deleted and the following new Article 85 substituted therefor:

"Balmer Lawrie & Company Limited are the Managing Agents of the Company and they shall continue and be the Managing Agents of the Company up to and including the fourteenth day of January One thousand nine hundred and sixty-seven upon the terms and subject to the conditions as to remuneration and otherwise as are embodied in an Agreement a draft whereof has, for the purpose of identification, been subscribed by Mr. H. G. Sinclair, Chairman of the Company, to be executed with all convenient despatch and the Board of Directors shall

carry the said Agreement into effect. Subject to the provisions of Sections 198 and 348 of the Companies Act, 1956, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2 (17) of the Companies Act, 1956) commencing on or after the 1st day of April, 1956, or in respect of any part of such a financial year:

(a) A sum of, or, in respect of any period of less than a year, calculated at the rate of Rs. 50,000/- per annum, and

(b) Such further sum, if any, as together with the said sum of Rs. 50,000/- shall make up an amount equal to 10 per cent. of the net profits of the Company for such financial year or part thereof determined in accordance with the provisions of Sections 349 and 350 of the Companies Act, 1956.

The said sum of Rs. 50,000/- payable under (a) above shall be paid by the Company by eleven monthly instalments of Rs. 4,000/- each and a final monthly instalment of Rs. 6,000/- payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year then to the extent that the amount paid to the Managing Agents under (a) above together with the remuneration paid to the Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rs. 50,000/- the remuneration payable under (a) above shall abate and be repayable to the Company.

The further sum, if any, payable under (b) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in General Meeting.

In respect of the Company's financial year ending on the 31st day of December, 1956, the Managing Agents shall, subject to the provisions of Sections 198 and 354 of the Companies Act, 1956, if applicable, receive remuneration calculated in the manner provided in the Agreement dated the 8th day of December One thousand nine hundred and twenty-six and made between the Company of the one part and the Managing Agents of the other part save that the Managing Agents shall only be entitled to receive the office allowance payable to them thereunder up to and including the 31st March, 1956.

The remuneration payable under this Article shall not be regarded as in any manner or to any extent intended to reimburse the Managing Agents in respect of any expenses incurred or to be incurred by them on behalf of the Company and the Managing Agents, in addition to receiving such remuneration, shall be entitled to be reimbursed by the Company in respect of any expenses incurred by them on behalf of the Company and such proportion of expenses that may be incurred by them partly on behalf of the Company and partly on behalf of themselves and/or some other Company, concern or person as the Directors of the Company shall determine to be or to have been incurred on behalf of the Company. Without prejudice to the generality of the foregoing, the Managing Agents shall be entitled to recover from the Company the remuneration (whether by way of salary, commission, bonus, gratuity, compensation, allowance or otherwise) provident and superannuation fund contributions and expenses payable to or in respect of all persons employed by them solely in connection with the Company's business and such proportion of the remuneration, contributions and expenses, if any, of any persons employed by the Managing Agents partly in connection with the Company's business and partly in connection with any other business as the Directors of the Company may from time to time likewise determine. Provided always that neither the Company nor the Managing Agents shall without the previous sanction of the Central Government (and then only subject to the provisions of Sections 198, 387 and 388 of the Companies Act, 1956) be entitled to appoint or employ any individual as a Manager of the Company within the meaning of the Companies Act, 1956."

3. (As an Ordinary Resolution)—"That pursuant to Clause 9 of the said draft Agreement referred to in Article 85 of the Articles of Association of the Company, Balmer Lawrie & Company Limited and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries and Treasurers, Manager, Agent, Secretary or Selling or Buying Agent of any firm, body corporate or other concern in respect of any goods, power,

freight, repairs or other services, including insurance, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

4. (As a Special Resolution)—"That pursuant to Clause 12 of the said draft Agreement referred to in Article 85 of the Articles of Association of the Company, Balmer Lawrie & Company Limited be and they are hereby authorised to provide the Company with suitable furnished office accommodation at the registered or principal office for the time being of Balmer Lawrie & Company Limited in Calcutta and also, if so required by the Company, at any other place or places in which Balmer Lawrie & Company Limited may be able to provide such accommodation and the Company shall pay to Balmer Lawrie & Company Limited such rent and portion of the outgoings payable by Balmer Lawrie & Company Limited as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided."

5. (As a Special Resolution)—"That Article 96 of the Articles of Association of the Company be deleted and the following new Article 96 be substituted therefor:

"Each Director shall be paid out of the funds of the Company by way of remuneration for his services in attending meetings of the Board of Directors the sum of Rs. 250/- for each meeting attended by him."

By Order of the Board,

BALMER LAWRIE & CO., LTD.,

D. MANSON,

Secretary,

Managing Agents.

Calcutta, 21st December, 1956.

Notes.—(1) A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not be a member of the Company.

(2) A copy of the draft Agreement referred to in the proposed Resolutions and an explanatory statement are annexed to this Notice.

SHREE GOPAL PAPER MILLS LIMITED**NOTICE**

NOTICE is hereby given that the next Ordinary General Meeting of the Shareholders of the Company will be held at its registered office at 5, India Exchange Place, Calcutta, on 19th January, 1957, at 12-30 P.M. Your presence at the Meeting is requested. The following business will be transacted:—

AGENDA:

- (1) To receive the Directors' Report and pass the audited Accounts of the Company for the half-year ending 30th June, 1956.
- (2) To declare dividends.
- (3) Special business:

- (a) To pass the following Resolution with or without modification as a Special Resolution:

"RESOLVED—That pursuant to section 360 of the Companies Act, 1956, the Company hereby consents as from 1st April, 1956, to the continuance of the existing arrangements with M/s. Modern Agencies Ltd., for purchase and supply of stores, chemicals, etc. to the Company on a remuneration of 5% on all purchases and supplies made through and received from them, subject, of course, to section 361 of the Companies Act, 1956."

- (b) To pass the following Resolution with or without modification as an Ordinary Resolution as required under section 293 (1) (e) of the Companies Act, 1956:—

"RESOLVED—That with effect from the date of commencement of the Companies Act, 1956, consent of the Company be and is hereby accorded to the Board of Directors of the Company to contribute and/or subscribe to any national, political, charitable, benevolent, public or general funds or trusts (not directly relating to the business of the Company or the welfare of its employees) from time to time such amounts as may be considered proper by them, in excess of the limits laid down in section 293 (1) (e) of the Companies Act, 1956."

- (c) To pass the following Resolution with or without modification as an ordinary Resolution as required under section 293 (1) (d) of the Companies Act, 1956:—

"RESOLVED—That sanction be and is hereby accorded to the Board of Directors of the Company borrowing (excluding temporary loans from time to time obtained by the Company from its Bankers in ordinary course of business) in excess of the aggregate of the paid up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purposes, as the Board may from time to time deem necessary for the purposes of the Company."

- (4) To consider any other business that may be brought forward with the permission of the Chairman.

NOTE: The Share Transfer Books of the Company will be closed from 10th January, 1957 to 19th January, 1957, both days inclusive.

NOTICE:—

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy, who need not be a member, to attend and vote instead of himself.

ROOPACHERRA TEA COMPANY, LIMITED.

NOTICE is hereby given that the 48th Annual General Meeting of the Shareholders of Roopacherra Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 31st January, 1957, at 4 P.M., for the following purposes:—

1. To consider the Profit and Loss Account for the year ended 31st December, 1956, and the Balance Sheet as at that date, and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. G. T. Routledge, the retiring Director.

And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr. G. T. Routledge be and is hereby re-appointed a Director of the Company."

Special Notice dated 10th December, 1956, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge is a Director of Amulckie Tea Co., Ltd., and Tyroon Tea Co. Ltd., subsidiaries of McLeod & Co. Ltd., the Managing Agents to the Companies and he is, therefore, an associate of the Managing Agents within the definition in Section 2(3) (c) (1) of the Companies Act, 1956.

4. To appoint Auditors for the year ending 31st December, 1956, and to fix their remuneration.

AS SPECIAL BUSINESS:

5. To consider and if thought fit, to pass the following resolution:—

"That the Board of Directors be and is hereby permitted with effect from the

Commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 17th January, 1957 to 31st January, 1957 both days inclusive.

By Order of the Board,

McLEOD & CO., LTD.,

A. T. DOIG,

Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 24th December, 1956.

NOTE:—

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared, will be made on or after 7th February, 1957, only to those members whose names are registered in the Books of the Company on the 31st January, 1957, or to their Mandatories.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT.

The Resolution being Item No. 5 of the above Notice is intended to provide the Board of Directors with authority to enable them to borrow moneys from time to time for the Company's business in excess of the statutory limit being the paid-up capital of the Company and its free reserves, pursuant to Section 293 (1) (d) of the Companies Act, 1956.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

UNCERTAINTIES IN THE INVESTMENT OUTLOOK

YEAR OF DIMINISHED INCENTIVES FOR THE PRIVATE SAVER

THE Government of India has done more damage to the confidence of the stock markets during the past year than in any other twelve-monthly period since independence. The economy is on the threshold of a vast new expansion: production, demand and profits have been rising; the benefits of the increased prosperity have spread to agriculture and industry alike; ambitious new plans are being framed to increase capacity and output; and the inflationary possibilities of a hopeful five year plan have been evident. Yet the equity market today languishes in a state of uncertainty, which is only incompletely reflected by the decline of 15 points in the variable dividend industrial securities index (base year 1949-50 equals 100) to 115.2 during the past year. As the barometer of the investment outlook, its condition gives serious cause for concern to private entrepreneurs who are expected to raise no less than Rs. 2,400 crores by 1961 to fulfil the targets they have been set under the second plan. That the first year of the plan should be nearing its close with an actual tendency towards disinvestment, is a matter which neither the planners nor the Government should regard with equanimity. It is important that its causes be carefully analysed and official policies reorientated so as not to hamper what still remain the mainspring of economic progress.

The most important source of the assault on investment confidence during the past year has been the increasingly arbitrary and unpredictable nature of the Government's actions. The fair success of the first five year plan has fostered the conceit of infallibility—the idea that New Delhi is the fount of economic knowledge, of social justice and of electoral sensibilities. From this feeling arises the tendency to assume far-reaching powers to subdue the stresses and strains of an over-ambitious second five year plan. The chief of the domestic strains centres on the need to mobilise resources for development. It was with this in mind that the Government nationalised life insurance, and it is with this in mind that it has recently imposed taxes not necessarily where they would fall most equitably but where they would win the greatest demagogic approval. The Finance Minister's assumption of powers to experiment with excise duties, and to frame a multiplicity of supplementary budgets when convenient, reflects the same nervous urgency which has earlier fostered omnibus measures of company law reform, stock exchange regulation, and control over industrial working. In almost implicit admission of its arbitrariness, the Government has frequently pleaded that these far-reaching powers will not be used except when necessary—forgetting that the assurance is meaningless when the sole judge of necessity is no one but itself. It is this parallel development, where the growth of official power has been matched only by the growth of official unpredictability, that has done most harm to stock market confidence and to entrepreneurial leadership in recent years. Nearly as harmful has been the "socialist" variety of thinking, which is often nothing more than a jealousy directed against the rich—or those who are supposed to be rich. In this suspect category are included those who own ten shares as well as those who own ten thousand; those who have had the boldness to invest in industry rather than in gold, who have patronised business rather than the safe deposit vaults, and who have saved for economic progress rather than spent for passing pleasure. This class of people is now being penalised in the interests of demagogues who have never stopped to understand the importance of security and incentives to industrial expansion.

The Government's policies on investment, as exemplified by the taxation and other measures of the past year, seem to be based on a number of fundamentally weak assumptions. One of these is the idea that when people invest in concerns, they do so only for the pleasure of seeing them grow

bigger and bigger, without themselves expecting returns commensurate with expansion. The dividend supertaxes and bonus share levies in general, and the clogging down of steel company distributions in particular, are symptoms of this thinking. So is the capital gains tax, whose first effect has been to present shareholders with capital losses that are large enough to ensure that the yield from the impost will be quite negligible for the time being. The whole new scheme of fiscal levies, and of control over company reserves, misses the point that the country's main need today is not for a reshuffling of the old investment, but for the mobilisation of the new. The curious idea prevails that when money is paid out in dividends, it is frittered away in conspicuous consumption or devoted to other undesirable pursuits. The idea is mistaken, for few types of income have a surer chance of encouraging investment than dividend income. Evidence in favour of this assertion is to be found in the fact that savings, whether through rights issues or otherwise, are given most readily to companies which have been liberal in their distribution policies. By putting a restraint upon dividends, the Government may ensure that companies retain a few lakhs of rupees extra to spend on expansion. But it forgets that many more lakhs of rupees would be offered those companies if the dividends were as full and fair as their working justified. Auto-financing might have some merit if there was little hope of bringing life into the new issues market; that it should have come to be advertised just when this market seemed set for a vigorous recovery is likely to prove one of the major errors of India's economic policy. Its encouragement at a time when it is proposed to set up a host of new enterprises makes it the more inadvisable. In an economy which is diversifying and expanding, there is a vital need for greater mobility of investment between enterprises and industries, to which auto-financing is hardly conducive.

Not a few of the stock markets' difficulties in recent months have been due to the acute monetary stringency. The primary reason for this stringency has been the superimposition of "busy season" demands on the already inflated credit needs of an economy which has been expanding and industrialising. The stringency might not have arisen, or at any rate would have been much less acute, had popular patronage of the banking system kept pace with the rise in money supply. It has not kept pace, and the result is that the level of deposits is nowhere near enough to support the level of advances needed for the genuine needs of trade and industry. Mr. T. T. Krishnamachari, who says that he has been eagerly looking for solutions to the problem of stringency but has found bankers devoid of ideas, has perhaps missed the point that this is a problem where simple expedients are limited in their usefulness. The solution lies deeper—in encouraging people to make greater use of

banks. That is intimately connected with the Government's own policies, of which the most helpful aspect has certainly not been the recent move giving the Reserve Bank powers to scrutinise the appointment of banks' managerial personnel. It is the reflection in the banking world of exactly the same malady as now affects the stock markets—a lack of confidence in anything over which the Government can exert its influence.

Another important reason for depression in the share markets is that the Government is planning to assume extensive new powers to control and regulate their working. The Securities Contracts (Regulation) Act, under which these powers are being taken, opens scope for dictatorial and arbitrary actions of the sort that have often been seen in other spheres of economic life. Its main aim seems to be to restrict severely the possibilities of speculation. Although few would deny that manipulation and overtrading sometimes feature the Indian stock markets, it is necessary to ensure that speculative activity is not too stringently curbed. If it is, the marketability of shares will suffer, and the main value of the stock markets as the indicators of investor thinking will to that extent be undermined. A point to bear in mind here is that much of the speculation in the stock markets springs from ministerial verbosity. Often the same worthies who one day say that free enterprise is no good are reported a few days later as saying that it is a fine institution. Blame for the results of the contradiction and irresponsibility implicit in such statements cannot be laid wholly upon the bulls and the bears who operate on Lyons Range or Dalal Street.

Only the future can show to what extent investors will accept the psychological adjustments demanded of them by the Government's new economic policies. For the time being, there is little evidence of such adjustments having been made. This may be partly because the general elections are approaching, and with them the time when it is customary for the river of verbosity to overflow into a deluge of demagoguery. The electoral complications seem unlikely to allow an early change in official policies, but once they are out of the way the time will come for fresh thinking on measures intended to soak the supposedly rich. It may then be realised that the huge burden of public investment in the second plan cannot be laid upon those who are already supporting private industry. The net of Government revenues will have to be cast far wider, to encompass those who have so far returned nothing of their new prosperity for reinvestment in economic expansion. That may also be the time when the real savers qualify for relief, and are thereby enabled to give private enterprise the support which has recently been noticeably lacking. If the Government feels that there is need for a measure of compulsion in saving, its attention has so far largely been directed to the wrong section of the people—to the voluntary savers. In following this policy, all it has achieved is to divert into its own coffers money which was likely in any case to have been conserved and given to private business. The administrative difficulties of taxing the classes who now consume all they earn are not nearly as great as is sometimes assumed. The true aim of fiscal policy in a developing economy should be to oblige those who do not save, to save something; and to encourage those who do, to save still more.

New Delhi is hardly fair when it claims that since share offers by first-class concerns have met with a good response in the recent past, the equity market is still healthy. The fact is that in some cases the issue prices of these shares have been well below their intrinsic value, so investors have switched into them. A number of other first-rate companies which were proposing to make capital issues are now having second thoughts, seeing the general condition of the markets. These capital issues are intended to finance expansion in vital sectors of the economy, and if they cannot attract an adequate response, the country will be so much the poorer for it. The gap cannot be filled by Governmental agencies; the Life Insurance Corporation, as among the most affluent of them, appears from Calcutta to have passed into a slumber which becomes the deeper when the question of investing on Lyons Range is raised. If India is to combine freedom with economic progress, the mainstay of her industries will still be the private investor. The way to encourage him in the New Year is not to make up in kicks what he has made to lose in money.

UNCERTAINTIES IN THE INVESTMENT OUTLOOK

YEAR OF DIMINISHED INCENTIVES FOR THE PRIVATE SAVER

THE Government of India has done more damage to the confidence of the stock markets during the past year than in any other twelve-monthly period since independence. The economy is on the threshold of a vast new expansion; production, demand and profits have been rising; the benefits of the increased prosperity have spread to agriculture and industry alike; ambitious new plans are being framed to increase capacity and output; and the inflationary possibilities of a hopeful five year plan have been evident. Yet the equity market today languishes in a state of uncertainty, which is only incompletely reflected by the decline of 15 points in the variable dividend industrial securities index (base year 1949-50 equals 100) to 115.2 during the past year. As the barometer of the investment outlook, its condition gives serious cause for concern to private entrepreneurs who are expected to raise no less than Rs. 2,400 crores by 1961 to fulfil the targets they have been set under the second plan. That the first year of the plan should be nearing its close with an actual tendency towards disinvestment, is a matter which neither the planners nor the Government should regard with equanimity. It is important that its causes be carefully analysed and official policies reoriented so as not to hamper what still remain the mainspring of economic progress.

The most important source of the assault on investment confidence during the past year has been the increasingly arbitrary and unpredictable nature of the Government's actions. The fair success of the first five year plan has fathered the conceit of infallibility—the idea that New Delhi is the fount of economic knowledge, of social justice and of electoral sensibilities. From this feeling arises the tendency to assume far-reaching powers to subdue the stresses and strains of an over-ambitious second five year plan. The chief of the domestic strains centres on the need to mobilise resources for development. It was with this in mind that the Government nationalised life insurance, and it is with this in mind that it has recently imposed taxes not necessarily where they would fall most equitably but where they would win the greatest demagogic approval. The Finance Minister's assumption of powers to experiment with excise duties, and to frame a multiplicity of supplementary budgets when convenient, reflects the same nervous urgency which has earlier fathered omnibus measures of company law reform, stock exchange regulation, and control over industrial working. In almost implicit admission of its arbitrariness, the Government has frequently pleaded that these far-reaching powers will not be used except when necessary—forgetting that the assurance is meaningless when the sole judge of necessity is no one but itself. It is this parallel development, where the growth of official power has been matched only by the growth of official unpredictability, that has done most harm to stock market confidence and to entrepreneurial leadership in recent years. Nearly as harmful has been the “socialist” variety of thinking, which is often nothing more than a jealousy directed against the rich—or those who are supposed to be rich. In this suspect category are included those who own ten shares as well as those who own ten thousand; those who have had the boldness to invest in industry rather than in gold, who have patronised business rather than the safe deposit vaults, and who have saved for economic progress rather than spent for passing pleasures. This class of people is now being penalised in the interests of demagogues who have never stopped to understand the importance of security and incentives to industrial expansion.

The Government's policies on investment, as exemplified by the taxation and other measures of the past year, seem to be based on a number of fundamentally weak assumptions. One of these is the idea that when people invest in concerns, they do so only for the pleasure of seeing them grow

bigger and bigger, without themselves expecting returns commensurate with expansion. The dividend supertaxes and bonus share levies in general, and the corking down of steel company distributions in particular, are symptoms of this thinking. So is the capital gains tax, whose first effect has been to present shareholders with capital losses that are large enough to ensure that the yield from the impost will be quite negligible for the time being. The whole new scheme of fiscal levies, and of control over company reserves, misses the point that the country's main need today is not for a reshuffling of the old investment, but for the mobilisation of the new. The curious idea prevails that when money is paid out in dividends, it is frittered away in conspicuous consumption or devoted to other undesirable pursuits. The idea is mistaken. For many types of income have a surer chance of encouraging investment than dividend income. Evidence in favour of this assertion is to be found in the fact that savings, whether through rights issues or otherwise, are given most readily to companies which have been liberal in their distribution policies. By putting a restraint upon dividends, the Government may ensure that companies retain a few lakhs of rupees extra to spend on expansion. But it forgets that many more lakhs of rupees would be offered those companies if the dividends were as full and fair as their working justified. Auto-financing might have some merit if there was little hope of bringing life into the new issues market : that it should have come to be advertised just when this market seemed set for a vigorous recovery is likely to prove one of the major errors of India's economic policy. Its encouragement at a time when it is proposed to set up a host of new enterprises makes it the more inadvisable. In an economy which is diversifying and expanding, there is a vital need for greater mobility of investment between enterprises and industries, to which auto-financing is hardly conducive.

Not a few of the stock markets' difficulties in recent months have been due to the acute monetary stringency. The primary reason for this stringency has been the superimposition of "busy season" demands on the already inflated credit needs of an economy which has been expanding and industrialising. The stringency might not have arisen, or at any rate would have been much less acute, had popular patronage of the banking system kept pace with the rise in money supply. It has not kept pace, and the result is that the level of deposits is nowhere near enough to support the level of advances needed for the genuine needs of trade and industry. Mr. T. T. Krishnamachari, who says that he has been eagerly looking for solutions to the problem of stringency but has found bankers devoid of ideas, has perhaps missed the point that this is a problem where simple expedients are limited in their usefulness. The solution lies deeper—in encouraging people to make greater use of

banks. That is intimately connected with the Government's own policies, of which the most helpful aspect has certainly not been the recent move giving the Reserve Bank powers to scrutinise the appointment of banks' managerial personnel. It is the reflection in the banking world of exactly the same malady as now affects the stock markets—a lack of confidence in anything over which the Government can exert its influence.

Another important reason for depression in the share markets is that the Government is planning to assume extensive new powers to control and regulate their working. The Securities Contracts (Regulation) Act, under which these powers are being taken, opens scope for dictatorial and arbitrary actions of the sort that have often been seen in other spheres of economic life. Its main aim seems to be to restrict severely the possibilities of speculation. Although few would deny that manipulation and overtrading sometimes feature the Indian stock markets, it is necessary to ensure that speculative activity is not too stringently curbed. If it is, the marketability of shares will suffer, and the main value of the stock markets as the indicators of investor thinking will to that extent be undermined. A point to bear in mind here is that much of the speculation in the stock markets springs from ministerial verbosity. Often the same worthies who one day say that free enterprise is no good are reported a few days later as saying that it is a fine institution. Blame for the results of the contradiction and irresponsibility implicit in such statements cannot be laid wholly upon the bu's and the bears who operate on Lyons Range or Dalal Street.

Only the future can show to what extent investors will accept the psychological adjustments demanded of them by the Government's new economic policies. For the time being, there is little evidence of such adjustments having been made. This may be partly because the general elections are approaching, and with them the time when it is customary for the river of verbosity to overflow into a deluge of demagoguery. The electoral complications seem unlikely to allow an early change in official policies, but once they are out of the way the time will come for fresh thinking on measures intended to soak the supposedly rich. It may then be realised that the huge burden of public investment in the second plan cannot be laid upon those who are already supporting private industry. The net of Government revenues will have to be cast far wider, to encompass those who have so far returned nothing of their new prosperity for re-investment in economic expansion. That may also be the time when the real savers qualify for relief, and are thereby enabled to give private enterprise the support which has recently been noticeably lacking. If the Government feels that there is need for a measure of compulsion in saving, its attention has so far largely been directed to the wrong section of the people—to the voluntary savers. In following this policy, all it has achieved is to divert into its own coffers money which was likely in any case to have been conserved and given to private business. The administrative difficulties of taxing the classes who now consume all they earn are not nearly as great as is sometimes assumed. The true aim of fiscal policy in a developing economy should be to oblige those who do not save, to save something; **and to encourage those who do, to save still more.**

New Delhi is hardly fair when it claims that since share offers by first-class concerns have met with a good response in the recent past, the equity market is still healthy. The fact is that in some cases the issue prices of these shares have been well below their intrinsic value, so investors have switched into them. A number of other first-rate companies which were proposing to make capital issues are now having second thoughts, seeing the general condition of the markets. These capital issues are intended to finance expansion in vital sectors of the economy, and if they cannot attract an adequate response, the country will be so much the poorer for it. The gap cannot be filled by Governmental agencies; the Life Insurance Corporation, as among the most affluent of them, appears from Calcutta to have passed into a slump, a number which becomes the deeper when the question of investing on Lyons Range is raised. If India is to combine freedom with economic progress, the mainstay of her industries will still be the private investor. The way to encourage him in the New Year is not to make up in kicks what he has made to lose in money.

SAVING FOREIGN EXCHANGE THE HARD WAY

INDIA'S NEED FOR TWO-WAY TOURISM

NOT all the measures taken to conserve foreign exchange have been well advised. The decision to withdraw completely the £750-a-year travel allowance gives every sign of having been made before the consequences for the individual tourist and for the country have been carefully thought out. It will save foreign exchange, but the amount involved, and the losses in both cash and kind which will have to be taken into consideration before any gain is calculated, combine to make this a step of dubious value. There is no doubt the former allowance has been abused. By the standards at present prevailing in the sterling area, the figure was perhaps unnecessarily high. But to halve it, or even to substitute one of £500 over two years, as suggested by some members of the Travel Agents Association, would seem a better alternative than abolishing it altogether. India is still a democracy, and her people are entitled to reasonable freedom of movement. But the complete banning of all foreign exchange for private travellers is, so far as can be gathered, a measure without parallel outside the communist world. Britain resorted to it for a short time, off-season, during one of that country's periodic crises, but had to reverse the decision within a short time due to public pressure. Such influence might not be as readily forthcoming in India, and it is therefore unsafe to argue that this is a temporary expedient. Under socialism, freedoms are easier to lose than to gain or preserve.

If there is any doubt that it is in the national interest that Indian nationals should be able to travel overseas unencumbered by an official purpose or failing health, a few moments' consideration will be enough to dispel it. One of the ways a country is understood abroad is the contact its tourists can make with other races and creeds. Its own people are frequently a nation's best ambassadors and certainly its cheapest and most effective commercial advertisement. At a time when India is beginning to play a rôle in world affairs commensurate with her size and the firmness of her views, it is disappointing that her representation should be reserved to preoccupied business men, querulous invalids or suspect officials. There is a case for permitting Indians to travel abroad if only so that this country be understood the better, and the democracy of her socialism be appreciated in practice. There is no reason either why Indian life should not be allowed to benefit from its contact with other cultures and ways of thinking. Much of the dangerous self-satisfaction which exists in public affairs in this country at the moment is due to insularity. Only communist nations have so far found it expedient to keep all their citizens at home lest they like what they see elsewhere. There are great dangers in restricting completely all private journeys abroad, dangers which are not to be measured by the paltry saving gained. In our New Delhi letter a few weeks ago, the number of people leaving India in 1955 was put at 1,000. If each of these took his entire allowance of £750, the drain would only amount to the ridiculously low figure of Rs. 97.5 lakhs. This is a small price to pay for the benefits this country has gained from the traffic. It must, in fact, represent one of the best investments India has ever made.

It is important to realise that tourism is an industry which cannot thrive on one-way traffic alone. People visit a country because they have friends there; or they have heard personal reports about it; or they have seen and liked its nationals abroad and are interested in meeting them at home. It is seldom a question of paying a visit because there is nowhere left to go anyway; or it is necessary to impress not-so-well-travelled friends; or because of the seductive powers of modern poster advertising. When a country has as little to offer the visitor in amenities and amusement as India has, the personal contact can be all-important. There is little doubt that if the outgoing stream of tourists dries up completely, the incoming one will dwindle too. This will have its repercussions on India's hotel industry, the tourist agencies, those darlings of the public sector, Air India International and Indian Airlines and, of course, all the other travel facilities which touch this country. Not only will the growth of these services be impeded, but their existing facilities may have to be curtailed also, and with serious damage to the nation's interest and influence. Last year, tourism earned this country about Rs. 10 crores. If only one-tenth of this is lost, it will more than wipe out the saving from abolishing the allowance. When the losses in national prestige, in employment and in future sales of Indian goods are added to the total, it is easy to see that this might turn out to be an expensive way indeed of saving foreign exchange.

The imposition of the ban has caused a good deal of unnecessary inconvenience to both Indians

and foreign residents in this country. Many Indian nationals had already planned trips abroad and made their arrangements accordingly. Apart from the disappointment, there is also the trouble of cancelling booked passages and rejecting accommodation which may have been paid for. All this does not amount to distress, but when it is so obviously avoidable, such considerations as, for instance, that these people may be numbered among what are these days called the "rich", should not stand in the way of justice being done. For the foreign national, the new regulations have many complications. Not only were they announced before the authorities concerned had been properly briefed on procedure—thus causing much unnecessary anxiety and pestering of banks and travel agencies—but they do not yet appear to have been finally decided upon. In this week's New Delhi letter, it is pointed out that the matter is still under consideration. This is to be welcomed if it means that the Government remains open to suggestions, but certainly not if it involves officials in further prolonged prevarication, and in references to higher authority, or the foreign nationals concerned in delays and expense. One point which certainly cries out for rectification is the position of a foreigner resident in India who wishes to spend part of his leave in a country other than his own. Stop-over facilities in Europe appear to be ruled out by the new regulations. For a British national, that means waiting until arrival in the United Kingdom before being able to claim any foreign exchange at all. If an allowance is given, presumably it will amount to the same as that permitted any other outgoing British tourist. But the average British resident in India is able to go home only once in three years, or once in two at the most, whereas, if he had remained in his own country, he would have been able to get this same foreign exchange allowance every year. This is quite plainly unjust, although not necessarily entirely India's fault. It stands in need of urgent rectification; it would be unfortunate if it were to be added to the many other reasons why a British national is often well advised these days to stay at home and not take a job in India.

MOVEMENT OF THE STERLING BALANCES

"BLOCKING" TO END SOON

THE sterling balances in London have been under scrutiny again. India's withdrawals, at a rate of some £4 million a week over three-quarters of a year, were a constant reminder of the balances in 1956. Then in the last days of the year, representatives of the Malayan Government discussed their country's balances during their discussions in London on the broader problem of financial assistance from the United Kingdom. The contrast between the attitudes of the two countries is interesting. Whereas the Indian authorities decided to pay cash for one of their biggest projects, the German steelworks at Rourkela, involving substantial additional drafts on the sterling balances, the Malayan authorities insisted that to finance their country's development a loan from Britain would be preferable to using the sterling balances. Neither India nor Malaya likes to be committed to sterling loans at rates of interest around 6 percent, but at least it could be argued that the London rate was only about half that proposed by the Germans when they had withdrawn their offer to take up shares in the steelworks. The Malaysians did not like the idea of a loan because they did not wish to approach independence (beginning in August 1957) with depleted reserves. The Malayan reserves are of the order of £300 million, but the young country's prospective expenditure is large.

It is unfortunate that India's surprisingly rapid withdrawals have coincided with other pressures on sterling, but the British authorities have not been seriously perturbed by this development. It is clearly recognised in London that sterling balances in excess of basic currency reserves are intended to be used sooner or later—and it is India's rather than Britain's problem if India approaches her minimum reserve of £310 million in the early stages of the five year plan. To withdraw money that is earning, say, 5 percent in order to avoid borrowing at, say, 12½ percent (the difference is a measure of the gap between British and German industrial interest-rates) is obviously sound business. It must be recognised, however, that if the payment for the German steelworks (assumed to be of the order of £50 million) is cleared through the European Payments Union, it will involve a considerable loss of gold from the sterling area's reserve, since 75 percent of any deficit in accounts with the Union is payable in gold. These are practical considerations. The Malayan problem involves more matters of principle, equally relevant to other colonies that are gaining independence. A colony such as Malaya is a major contributor to the sterling area's reserve of gold and dollars, and it is vitally important to the area that such countries remain firmly linked in the sterling system. It is arguable that the rapid depletion of India's balances has weakened

this country's links, and that a corresponding depletion of Malaya's balances would be contrary to the British Government's interests.

However, like India, the colonies will eventually want to use their surplus balances, and when they begin to use them on a substantial scale the composition and the total of the sterling balances will change rapidly. For it is the growth of the colonies' balances that has concealed, in the totals, the extent of the withdrawals by other countries. The latest half-year figure, for mid-1956, showed the total of sterling balances at £4,022 million. The highest end-period figure was reached 18 months earlier: £4,175 million at end-1954. For normal purposes one can deduct from these totals the non-territorial holdings, which are mainly those of the International Monetary Fund and Bank. They were, anyway, little changed: £476 million at end-1954, £472 million at mid-1956. Thus the total territorial holdings declined from £669 million at the earlier date to £3,550 million at the later. The biggest changes within the totals were in the colonial and other sterling-area holdings. An increase of £80 million in the colonies' balances, to £1,301 million, substantially offset a decrease of £103 million in the other sterling countries' balances, to £1,600 million. But non-sterling countries' balances also generally declined; particularly those of countries outside of the western hemisphere—by £62 million to £364 million. Proportionally, however, the biggest decline was in the sterling reserves of the dollar countries, by £59 million to £38 million.

The balances attributable to countries outside the sterling area are thus mainly the reserves of the transferable-account area. So far as western Europe is concerned they seem to have been stabilised rather above £220 million. However, the balances of the countries of the Middle East and of the Soviet bloc (included in the important "other non-sterling" category) have evidently been drawn down in the past half-year, and these drawings, together with India's, may reduce considerably the next-published total, for end-1956. The British authorities view these movements with mixed feelings. In so far as the figures represent the working balances of countries that use sterling to transact their international business a large total reflects extensive use of sterling, present or prospective. But in so far as the balances can be rapidly spent they represent a threat to the stability for sterling, actual (as in the Middle East crisis of 1956) or potential. After the war, when the balances were not very much less in monetary terms and appreciably more in real terms than they are now, a series of agreements effectively controlled their use, so that the huge debts had not in fact the threatening implications (for a weak economy) that they appeared to have on paper. Now (when the economy is stronger) this support is being withdrawn. Apart from basic currency reserves of specified amounts, not to be used without prior consultation with the British authorities, the system of blocked balances will cease to operate for the sterling countries in mid-1957, when the only substantial blocked balance on non-sterling account will be Egypt's £110 million. Faith must, therefore, be firm.

CURRENT COIN

Family Planning in India.—Population control is a recognised economic necessity in this country, but official efforts so far have unfortunately been tardy and half-hearted. Some non-official organisations, such as the Family Planning Association of India, have been doing excellent work. But the social and economic conditions are such that they cannot do much by themselves without active Government backing, although the problem is one which, in principle, is better tackled by popular organisations. As Lady Dhanvanthi Rama Rau pointed out in her presidential address to the third All-India Conference on Family Planning in Calcutta, the basic institutions for conducting such work are lacking, with the result that less than half the Rs 65 lakhs sanctioned during the first five year plan could be utilised during that period. No central institute for clinical work, training of personnel, research with contraceptives and on the questions of fertility and sub-fertility, she said, had materialised under Government auspices. No special course in family planning had been made compulsory in medical colleges, nursing institutes or social work schools. Few facilities had been given to voluntary bodies for carrying out, in however small a measure, the educational training programmes they had endeavoured to undertake. The programme had limped along at an uneven pace so far. The second plan has given greater importance to the question and a sum of Rs. 5 crores has been allocated for the purpose. Dr. J. C. Ghosh, Member of the Planning Commission, who inaugurated the Conference, struck a more hopeful note. With the inauguration of the Central Family Planning Board, of which the Union Health Minister is president, and the bigger financial grant, work can be conducted on more systematic lines. The Board has already approved the setting up of

300 urban and 2,000 rural clinics for family planning and several measures are being taken to enlist public support. One of these is the employment of part-time doctors in family-planning clinics in co-operation with the Indian Medical Association. Dr. Ghosh said that a favourable factor was the general attitude of the country's womenfolk towards family planning. Even rural women, as sample surveys in various areas showed, wanted to limit the number of their children, and an expert had proved that "the birth-control movement in India is less hampered by misplaced prudery." The real agencies for promoting better health and better life in the countryside would be the community projects and the N.E.S. blocks which, it is planned, will cover the entire country by 1961.

Industrial Development in Andhra.—The Andhra Pradesh Government is making some notable efforts to promote industrial expansion. Its Minister for Industries, Mr. V. B. Raju, has announced that it will take full advantage of a proposal put forward by the Central Government to establish a newsprint factory and a sugar factory in Bhodan, in the Nizamabad district of Telengana. Bhodan, which is also called Shakarnagar, is situated in a cane-growing area, and already has two sugar factories. The expansion of the cane-growing area served by the Nizamsagar irrigation dam has greatly increased production and justifies the setting up of a new sugar factory. This factory will be run on a co-operative basis, and the State Government has asked the Deputy Registrar of Co-operative Societies to collect from cane-growers their share of capital for the factory. The rest of the capital is to be provided by the Centre and the State Government. The proposed newsprint factory will be the second of its kind in the State. The Sirpur Paper Factory, in Adilabad district, has been operating for some years under the managing agency of Birla Brothers. The new newsprint factory in Bhodan will use bagasse as raw material. A further economy will be effected in sugar production by substituting coal for bagasse, which is now being used as fuel. The factory is to be set up under the aegis of the National Industrial Development Corporation and is estimated to cost roughly Rs. 6 crores. Experts are now examining the possibilities for organising a steady supply of bagasse. Andhra Pradesh has also ratified the decision of the former Hyderabad Government by accepting the Central Government's proposal to participate in the working capital of the Praga Tools Corporation, which is situated in the suburbs of Hyderabad city. This Corporation has for some years been manufacturing precision machine tools. The Andhra Pradesh Government intends to retain its share-holding rights in the Corporation, as well as rights of managing agency vested in the State's Industrial Trust Fund. It is understood that the Centre proposes to improve the productive capacity of the Corporation, and also to equip it to manufacture heavy machine tools. According to the Chief Minister of Andhra Pradesh, Mr. N. Sanjiva Reddy, the State Government has decided to constitute shortly a State Electricity Board as contemplated under the Central Electricity Supply Act.

Outlook for Tin Supplies.—The commodity markets are always more sensitive than others to international events, as has been demonstrated throughout the recent developments in the Middle East. Price fluctuations on the London exchanges ever since the closing of the Suez Canal have reflected hopes and fears of the outcome even more accurately, perhaps, than the announcements of events themselves. This has been the case more especially with tin, and in view of the important rôle this metal plays in industry, it is useful at this stage to have a detailed analysis from A. Strauss and Co. showing the actual effects of recent events so far as European consumption is concerned. Excluding Russia and China, about 14,000 tons of tin-ore are mined monthly throughout the world. Of this, about 9,500 tons originate east of Suez. The voyage from Malaya to London normally took 4½ weeks, but the additional distance round the Cape has added about ten days. When the Canal was closed there occurred a gap in the pipeline equivalent to about the average amount previously shipped through the Canal every ten days—or around 1,500 tons. As the metal is now beginning to arrive in London regularly again, it makes relatively little difference how long the Canal is blocked. Fears that tin shipments may be held up not only by the closure of the Canal but also by a shortage of ships should be dispelled by the fact that, because of its weight-for-bulk, tin is such a good ballast that it is keenly sought by shipping lines. A. Strauss and Co. recalls that tin has frequently been carried from the East to Europe for nothing. Ignoring the consequences of the Canal closure, it has been estimated that over the whole of 1957 a surplus of 8,000 tons should arise. If there is no significant change in mine output and if commercial consumption rises at the same rate as in the past four years,

supply and demand should be running in balance by the end of 1957. Against this must be set any possible effect of the oil shortage on industrial activity in Europe. This is likely to check the growth of tin consumption or may even cause a fall. If so, the actual surplus in 1957 may be above 8,000 tons. It would seem that in the absence of any serious deterioration in the Middle East, European tin consumers should be able to get supplies with increasing ease for some time ahead.

Basic Difficulties of Lancashire.—With textile production in the U.K. showing a slight improvement lately, it was refreshing to find imports of cheap cloth not being held solely responsible for the troubles which afflict Lancashire's cotton industry. Instead, Mr. John Lindley, in his speech as retiring president at the annual meeting of the Manchester Cotton Association, referred to two other recurrent difficulties, which are probably even more serious in their long-term effects. The first of these is the violent short-term fluctuations which the industry has experienced in recent years, with slump and boom conditions alternating. The industry, he pointed out, needed large-scale capital investment, long-term planning and a highly trained labour force; these could only be secured by stabilisation at a level which would permit continuous operation. If this was achieved, it would be reasonable to hope that re-equipment would proceed confidently, that workers would be attracted to the mills, and that trade unions would co-operate in approaching problems free from the persisting fear of a return to widespread unemployment. The second difficulty with which Mr. Lindley dealt was the frequent surplus of raw cotton supplies. With the great American cotton crop under Government control, there could never be a real "world cotton price." Confidence might be restored for a time, but it did not long remain firmly established, and there was continual uncertainty about the next step which would be taken to bolster up prices or to dispose of accumulated stocks. This situation was detrimental to the steady, planned development of cotton growing in the Commonwealth and elsewhere in the world. If American policy thwarted the economic development of the colonies in Africa, the Lancashire industry would suffer, both as an importer and as an exporter. The biggest trouble is that the second of these difficulties frequently causes the first. There have been many recent periods when lack of confidence in raw cotton prices has brought a reduction in the demand for cotton textiles, with a consequent fall in mill activity and profits. Similarly, there have been occasions when uncertainty about the raw material has subsided and buying of yarn and cloth has increased to a volume which the industry could not readily produce after losses of machinery and workers incurred when trade was slack. It seems doubtful whether Lancashire can avoid sharp vicissitudes in its fortunes unless the production and prices of raw cotton are left to find their own levels.

"CAPITAL" CHRISTMAS TOY FUND

We acknowledge with thanks the receipt of the following donation:

Rs. 100

E. C. Benthall Charitable Trust

Previously acknowledged Rs. 3,903-11-3.

Grand Total Rs. 4,003-11-3.

ELECTRICITY IN CALCUTTA

A DAILY contemporary announces that the Lieutenant-Governor of Bengal has granted to Messrs. Kilburn and Co., acting on behalf of the Indian Electric Co., a licence to supply electricity within the area of Calcutta and adds that this means, of course, that Messrs. Kilburn and Co. are now entitled to proceed with their scheme whether the Corporation agrees to it or not, and that from this point of view the earnestness with which the Commissioners seem to be still debating the question is infinitely amusing. There is a considerable confusion of ideas here, which seems to us much more amusing than to our contemporary. No one objects to electricity being introduced into Calcutta; indeed, section 7 of the Calcutta Tramways Act of 1880 enacts that the cars and carriages on the lines of the Tramways shall be worked with such power, animal or mechanical, as the grantees may think suitable; provided that no steam carriages shall be used without the consent of the Corporation. It follows from this that the Tramways Company or anybody who may be working the Tramways are entitled to propel their carriages by electricity if they think fit.

THE WORKING OF SMALL-SCALE INDUSTRIES

NEED FOR GREATER EMPHASIS ON ECONOMY AND EFFICIENCY

(BY A CORRESPONDENT)

EXPENDITURE incurred on the development of small-scale industries during the first five year plan has been about Rs. 5.2 crores. In the second plan, a provision of Rs. 55 crores has been made. This sum is in addition to working capital requirements. The Village and Small-scale Industries Committee (commonly known as the Karve Committee) had suggested Rs. 65 crores for the development of small-scale industries. In making its proposals, the committee had three principal objects in view. These objects were: (1) to avoid further technological unemployment; (2) to provide increased employment; and (3) to provide the basis for the structure of an essentially decentralised economy. The central idea seems to be the evolution of a pattern of industrial activity in which a group of villages converging on their natural, industrial and urban centre form a unit or, to use the Committee's expression, "a pyramid of industry broad-based on a progressive rural economy."

Small-scale industries, their characteristics, and their contribution in relation to large-scale industries are questions of vital interest to the trade, the consumer and the State. The Small-scale Industries Board brings within the scope of the term "small-scale industries" all units or establishments having a capital investment of less than Rs. 5 lakhs and employing less than 50 persons

In the remaining 18 industries covered by the Census, the small-scale units are less than 50 percent of the total number of registered factories. The data relating to the above industries, in relation to other industries, are summarised in Table II below.

The data presented in the table indicate certain striking features of small-scale industries, both in themselves and in relation to large-scale industries. These may be summarised as follows:

1. Within the same industry small-scale units in gur, followed by those in rice milling, contribute the highest percentage share of capital, employment and value added.

2. As between different industries, the largest share of capital employment and value added is contributed by small-scale units in the general engineering and electrical engineering industry, followed by those in rice milling and vegetable oils. In these industries, small-scale units show a measure of development and profitability.

3. As we go to the mechanised and capital-intensive industries, like bicycles and iron and steel, we find a decline in the small-scale units' relative share of capital, employment and value added by manufacture.

4. The small-scale units in the selected industries represent 80.2 percent of the capital employed by such units in all industries, 88.5 percent of employment and 88.4 percent of the value added.

5. In the remaining 18 industries, however, such units (numbering 423) represent 19.8 percent of the capital, 11.5 percent of employment and 15.2 percent of the value added.

TABLE II: CAPITAL, EMPLOYMENT AND VALUE ADDED BY MANUFACTURE IN SELECTED INDUSTRIES, 1953.

Industry	Capital (Rs. in '000)			Employment (Number)			Value added (Rs. in '000)		
	Small-scale units*	Large-scale units	Total	Small-scale units*	Large-scale units	Total	Small-scale units*	Large-scale units	Total
1. Gur	67.26	28.30	95.56	50.97	1,466	6,563	19.77	7.04	26.81
2. Rice milling	7,93.84	6,20.31	14,14.15	23,732	25,340	49,072	1,54.44	1,40.72	2,95.16
3. Biscuit making	67.73	3,27.77	3,95.50	1,711	3,905	5,616	20.05	1,07.70	1,27.75
4. Vegetable Oils	10,47.3	12,37.37	22,84.72	15,358	25,111	40,469	15.31	2,40.19	3,53.50
5. Gen. Eng. and Elec. Eng.	12,64.57	51,54.98	64,19.55	29,841	107,794	137,635	35.15	20,26.96	25,61.04
6. Soap	50.88	6,68.88	7,19.76	737	4,893	5,630	12.62	3,74.86	3,87.48
7. Aluminium, Copper, and Brass	1,44.10	17,50.34	18,94.44	1,311	17,488	21,132	36.33	3,62.68	3,99.01
8. Fruit and Vegetable Processing	32.11	1,02.17	1,34.28	424	1,155	1,579	15.72	2,23.58	3,17.4
9. Bicycles	21.09	3,80.49	4,02.48	521	4,643	5,164	7.95	1,34.13	1,42.08
10. Iron and Steel	1,08.18	61,43.69	62,51.87	1,820	75,234	77,054	13.41	34,59.96	34,73.37
11. Paints and Varnishes	62.43	3,55.26	4,17.69	672	4,308	4,980	15.72	2,23.58	2,39.30
Selected Industries Total	36,50.44	167,69.56	204,30.00	83,557	271,337	354,894	79.51	72,42.73	80,37.24
Other Industries Total	9,01.15	515,34.29	524,35.44	10,809	1,262,154	1,272,963	1,42.34	252,45.73	253,88.07
All Industries Grand Total	45,51.59	683,03.85	728,55.44	94,366	1,533,491	1,627,857	93.85	324,88.46	334,25.31
Selected Industries as percentage of all industries	80.2	24.6	28.0	88.5	17.7	21.8	84.8	22.3	24.0

* Figures within brackets in this column denote the percentage of small-scale units to the total for the industry.

when using power. On this definition, we can separate from the huge mass of industrial data contained in the report on the Census of Indian Manufactures, certain essential factual information pertaining to the small-scale industries and study their characteristics. The Census, on the present basis, it should be noted, covers (1) only 29 of the 63 groups into which the entire field of manufacturing industry has been classified for the purpose; and (2) only those factories, in these 29 industries, which use power and employ 20 or more workers. Of the 6,399 factories submitting returns under the Census of Manufacturing Industries Rules, 1945, for the year 1953, as many as 3,831 (i.e., 60 percent) occur in the group of small-scale units as denoted by the size of their employment.

Percentage of Small Units

It is useful to analyse certain small-scale industries in further detail. The industries in which the number of small-scale units is more than 50 percent of the total number of factories are shown below. They are arranged in order of the predominance of small-scale units.

Industry	Number of Small-Scale Units	As Percentage of Total Number of Registered Factories
1. Gur	208	92
2. Rice milling	1,032	75
3. Biscuit making	63	72
4. Vegetable Oils	633	71
5. General Engineering and Electrical Engineering	1,184	69
6. Soap	29	64
7. Aluminium, Copper and Brass	132	61
8. Fruit and Vegetable Processing	15	60
9. Bicycles	25	60
10. Iron and Steel	63	56
11. Paints and Varnishes	24	52
Selected Industries Total	3,408	71.2
Other Industries Total	423	26.2
All Industries Total	3,831	60

Value added by manufacture is regarded as the most satisfactory measure of the importance of a given industry. Expressed as percentage of capital employed or value of gross-output or per person employed, it can be used to compare the level and/or as between the industries themselves. The employment, the higher the productivity; and a higher ratio of value added to the value of gross output implies a proportionately lower value of unit cost of production, the greater is the profitability. In Table III below, value added has accordingly been shown (1) as percentage of (a) capital employed and (b) gross output and (2) per person employed. It will be seen from this table that the

ratio of value added is generally lower in small-scale industries. But there are a few instances where it is higher. More precisely, value added as a percentage of capital employed is higher in the small-scale units of the aluminium, copper and brass and bicycle industries. Again, value added as percentage of gross output is higher in small-scale units of the gur, rice milling and bicycle industries. Finally, value added a person employed is slightly higher in the small-scale units of the rice milling industry.

Paints and Varnishes

In another table below are shown capital, employment and value added by manufacture a factory in each of the selected small-scale industries. It will be seen that the highest capital employed a factory (Rs. 2,600,000) and the highest value added by manufacture (Rs. 65,000) occur in the paints and varnishes industry, the highest employment a factory (29) occurring in the iron and steel industry. Capital as well as value added a factory is lowest in gur. Employment a factory ranges from 23 in rice milling to 29 in iron and steel. The value added a factory, in proportion to the capital employed a factory, is highest in the bicycle industry followed by general engineering and electrical engineering and biscuit making. In the selected small-scale industries, a factory, on an average, employs 24 persons; has capital worth Rs. 1,07,000; and contributes Rs. 27,000 to the value added. The small-scale units in the "Other Industries" group has twice the capital employed a factory in the "Selected Industries" group, but employs practically the same number and contributes only slightly more to the value added. Taking all small-scale industries together, a factory shows, on an average, slightly more capital and value added than its counterpart in the "Selected Industries" group, but substantially lower than its compeer in the "Other Industries" group. It shows no change in employment. The proportion of value added to capital employed is lowest in iron and steel and vegetable oils. This may be due to the presence of certain uneconomic units in those industries.

TABLE IV: SELECTED SMALL-SCALE INDUSTRIES: CAPITAL EMPLOYMENT AND VALUE ADDED BY MANUFACTURE A FACTORY.

Industry	Capital (Rs. in '000)	Employment (Number)	Value added (Rs. in '000)
1. Gur	32	25	9
2. Rice milling	77	23	15
3. Biscuit making	107	27	42
4. Vegetable Oils	165	24	18
5. General Engineering and Electrical Engineering	107	25	33
6. Soap	175	25	43
7. Aluminium, Copper and Brass	109	27	27
8. Fruit and Vegetable Processing	214	25	38
9. Bicycles	88	21	32
10. Iron and Steel	171	29	21
11. Paints and Varnishes	260	28	65
Selected Industries	107	24	23
Other Industries	213	25	33
All Industries	119	25	24

If we can locate the imbalance in small-scale units and eliminate or reorganise uneconomic ones, such industries would be useful to the economy. Even in the U.S.A., a highly developed country, there are a large number of industries of various sizes where smaller establishments have lower unit costs than bigger ones. This is partly because the results of organisational and technical research are constantly being sought by them. In Japan, it has been estimated that 60 to 70 percent of her total exports between the two world wars came from small industries. Over the same period, they provided more than 50 percent of the employment to her industrial workers. The State in both countries has in various ways helped the development of small-scale industries. In India, it could do the same, provided the primary emphasis is on economy and efficiency.

TABLE III: VALUE ADDED, 1953

Industry	Value added as percentage of capital employed			Value added as percentage of gross output			Value added a person employed		
	Small-scale units	Large-scale units	Total	Small-scale units	Large-scale units	Total	Small-scale units	Large-scale units	Total
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
1. Gur	29.4	24.0	28.1	18.5	18.4	18.5	0.4	0.5	0.4
2. Rice milling	19.5	22.7	20.9	5.4	5.0	5.2	0.7	0.6	0.6
3. Biscuit making	29.6	32.9	32.3	16.1	26.1	23.8	1.2	2.8	2.3
4. Vegetable Oils	10.8	19.4	15.5	3.9	4.3	4.2	0.7	1.0	0.9
5. General Engineering and Electrical Engineering	31.2	42.0	39.9	32.4	40.9	39.3	1.3	1.9	1.9

A DITCHER'S DIARY

It too, to all those who are interested in publicising private enterprise here in India.

My copy of the 1955-56 *Bedside Guardian* (Collins) arrived just before Christmas, in time to contribute to the pleasures of the season. I have already thumbed it well and have no hesitation in saying that it shows the same characteristics that made its predecessors so welcome. The chief attraction of the *Manchester Guardian*, which this tabloid seeks to epitomise, is not merely that in its columns the serious and the amusing are to be found side by side. Nor is it, indeed, the well-known "*Guardian temper*" which frowns on excesses—except, I regret to say, over matters affecting the Suez Canal—and fosters coolness and detachment, virtues which, apparently, come more easily to newspapers functioning outside the din and excitement of the world's great capitals. It is rather, as Mr. Ivor Brown points out in his excellent foreword, the shaping power of this great provincial newspaper, which mysteriously succeeds in evoking in all of its varied team of talents, a kind of "family" outlook. Every writer, of course, has his individuality and independence, but these have to subserve the recognised character of the paper. There is a good deal in the volume to interest readers in this country, but I think the article entitled "Causing to Read", may well make the ears of many Calcutta educationists burn with shame. Mr. Michael Lane, the writer, was, it appears, attached as a lecturer to a Calcutta college and he provides a gloomy picture indeed of the city's "college educational system, so tangled in the problems of poverty and over-population". I do not know whether to be sorry or surprised, that, as a recent Press report told us, despite the scarcity of well-paid jobs, West Bengal cannot find enough man-power to run certain departments of its educational factories. The utility of "causing to read" is probably beginning to break some hearts.

Back in 1947, I remember, one of the British Labour Party's main propaganda points for the kind of socialism it had in mind was the case of Sweden. That country, with a dissimilar background and facing different problems, was extolled as an example of what could be done under a controlled economy. I have not heard the claim lately, and that might be because, in the last few years, as with Britain, it has been Sweden's difficulties rather than her achievements which can be traced to socialism. In fact, if one accepts the theme of an excellently-produced pamphlet which has recently arrived on my desk, by far the greater part of this progress, and the increase in the country's standard of living, is due to private enterprise. Private industry in Sweden has made great strides since 1945. Although the country was not devastated by war, as were so many in western Europe, an increase in industrial output of 87 percent compares more than favourably with the average for the region of only 60 percent. Industrial productivity in Sweden has increased by 20 percent, and thanks to mechanisation, that of agriculture by 30 percent. Perhaps the main point to grasp is that this has been done by private enterprise in a country which is avowedly socialist. There is a parallel here with conditions in India; and there is no reason why the results should not be similar too. Sweden has permitted her private sector to develop on its own lines and is now reaping the benefits of her wisdom. I recommend this pamphlet—it is called *Product of Private Enterprise*, and is published by the Stockholm Chamber of Commerce in the interest, as it puts it, "of private enterprise in Sweden and elsewhere"—to all who think the only way to progress under socialism is to strangle the private sector. And I can recommend

It would not be altogether fair to denounce President Nasser as an enemy of modern art; he has enough to answer for without that. But he must take a large share of the blame for displacing the French post-impressionist paintings from their position as the year's best currency hedge. According to the January issue of *Pick's World Currency Report*, in 1956 the honour passed to tankers. Thanks to Egypt's ruler, anybody who bought a tanker at the beginning of that year was able to sell it at the end for three times as much—or even more. That is, if he cared to sell it at all, because there seems to be every promise of good profits for a few months yet. It might be interesting to ponder at what rate Mr. Onassis's fortune has been multiplying lately. Not that works of art lost their value, far from it. After tankers, they were still the best buy of the year—if you knew enough about art to be sure of what you were getting. Their value increased by round about one and one-third. That is not so bad considering they more than doubled in price the year before. They were still better investments than diamonds, gold, or government bonds. And they were certainly not to be compared with even the best blue-chips on the Calcutta stock exchange. One of the features of the world's currency markets last year was that even experts got their fingers burned. It turned out to be an even trickier game than usual, and many of the old favourites—steel products for instance—actually fell in value. But as usual, those who lost on the largest scale were the ordinary people of this world who know little or nothing about money except that it buys their food and clothing. The Hungarians were the worst hit.

Their currency lost two-thirds of its value. That sort of thing does not hit the headlines. But it can be far more effective in bringing a brave people to its knees than all the tanks Russia can muster.

The Finance Minister, Mr. T. T. Krishnamachari, is fast gaining the reputation in India which Sir Stafford Cripps had in the United Kingdom—of being the man who looks for luxuries, then taxes them. It is not my intention to cry with Oscar Wilde "Oh, give me the luxuries of life and I shall do without the necessities." So let me at once concede that the classification of commodities under two heads is a reasonable one, bearing in mind differences in custom, climate, conventional standards and many other points beside. Nevertheless, this has not stopped me from having doubts about, among other things, the wisdom of the recent increased excise duty on watches. Their import too has been halved, so I suppose we must consider Mr. Morarji Desai also as a thief of time although never, of course, a procrastinator. I wonder whether it is safe to regard a watch as a luxury these days, especially in India, any more than it is to put medicines and bicycles in that category. So far as I am aware, large numbers of factory workers in this country like to sport a watch, and although the chief reason may be "conspicuous consumption", the incidental effects have been almost wholly good. If, as a result of these latest moves, the habit of punctuality, such as it is in India, is damaged, the production lost is likely far to outweigh the foreign exchange saved. While India has no watch industry of her own, or any sign of getting one, anything which will discourage "time consciousness" among workers is certainly a blow to progress. And I do not think it will be at all convincing for either Minister to argue that people often waste time just trying to be punctual, or that if workers have no time-pieces to consult, it will help reduce "clock-watching".

It is not only would-be tourists who will be dismayed at the prospect of no foreign exchange allowance. There are other people too whose aims are every bit as much in the national interest as, say, the business man, but whose reasons are unlikely to carry as much weight with officialdom. Among them are those who want to travel abroad simply to extend their professional or intellectual horizons. Obliging as the Reserve Bank can sometimes be, it is not likely to swallow that one. That is why I foresee a rush for this year's Harvard International Seminar to be held from 1st July to 21st August. Of all the opportunities for foreign travel with full expenses paid, it is one of the few which does not involve a detailed and specialised course of instruction, or indoctrination either for that matter. It is designed for, to quote its own words "... individuals who are achieving eminence in some field of endeavour ...". (I hope I shall not be accused of linguistic imperialism for changing the spelling of that last word) and who wish "to broaden themselves through contact with colleagues from other countries". The qualifications are, as usual, that an applicant should be between twenty-six and forty years of age and should have a good command of the English language. There is a formal academic programme, so no candidate need feel he is wasting his professional time. But the emphasis is on discussion, and against the background of current affairs and the American way of life. The main trouble with the scheme so far as Asian countries are concerned is that it is limited to about twenty participants from the whole of this vast continent. The last date for application is 15th March.

INCREASED TURNOVER IN STOCK MARKETS

PRICES IMPROVE ON HOPES OF CHEAPER MONEY

London, 9th January.

THE New Year got off to a good start in the stock markets. Business recorded a marked expansion and prices went ahead on a broad front to score widespread and often appreciable gains. The pace of the advance was not maintained as the demand became more selective and a certain amount of irregularity developed, but by and large the tone remained very satisfactory. The fall in the Treasury Bill rate for the fourth successive week encouraged hopes of cheaper money, while the strength of sterling in foreign exchange markets also helped sentiment. The outstanding feature was the strength of gilt-edged, which continued their advance on growing hopes of a general fall in interest rates. Industrials advanced on a broad front and recorded extensive gains, although a reaction brought prices back from their best levels. Textiles, particularly woollens and stores, provided the best features. Foreign bonds and rails were higher, with Japanese and Baltic issues supported.

Dollar stocks moved erratically in sympathy with Wall Street. Gold shares generally lost ground, but diamonds, coppers and other base metals tended upwards. Oils reacted sharply after moving to higher levels. Tea shares advanced on favourable comment, with a shortage of stocks contributing to the rise. Rubbers were subdued, but the undertone was satisfactory.

The Money Market

With the year-end intervening in the early part of the past week, short loan conditions were rather uncertain and showed no definite trend in the money market. The last day of the old year brought the unusual experience of very easy monetary conditions, there being a flood of money which the market was unable to use in view of the previous week's preparations. The first day of the New Year was again very easy, but subsequently the supply of money contracted. With the market indebted to the Bank of England for a large amount in the main tax season, starting conditions were less comfortable. Considering the talk of cheaper money, it was not surprising to see a further drop in the Treasury bill rate. The Bank of England return for the week ended 2nd January showed that notes in circulation were £29 million lower at £1,968 million, while bankers' deposits were £9 million higher at £212 million. Applications for £270 million worth of 91-day Treasury bills totalled £406,685,000. Only £260 million were allotted at the average rate of 95s 9.11d, compared with 97s 1.81d in the previous week. This

week £260 million worth of 91-day bills are offered. Fine trade bills remained unchanged.

Stock Market Prospects

The *Investor's Chronicle* market newsletter writes: London gilts are moving towards their end-August and mid-October resistance levels. A further moderate advance in industrials would indicate a continuance of the rally. Oils could continue to strengthen. Wall Street's immediate outlook is unpredictable as the sharp rally in industrials is unconfirmed by rails and domestic bonds. At least the early months of 1957 are likely to be difficult for British investors. The Middle East situation remains unfavourable. The Government is determined to protect sterling but the bears still doubt whether the rising costs will enable its strength to be maintained. When the currency reserve agreements with India, Ceylon and Pakistan end next June, there will be no blocked balances remaining within the sterling area. Bear positions are being renewed for shorter periods, implying that foreigners are not sure that Britain's economy will weather the storm, but that the outlook will become clearer shortly. Sterling should improve over the next few months, but the stock exchange will then have Budget uncertainties. One must hope for a new dynamic approach to encourage production and capital investment. The Treasury Bill rate has already fallen and the credit squeeze should ease later in the year. Gilt-edged should improve, subject to sterling being maintained. Industrials are more obscure. From their peak in July 1955 to their low at the end of November, they fell by 28 percent, compared with 26.5 percent and 29 percent in the two previous bear markets (which were at end of June 1952 and in autumn 1949 respectively). Some industries, such as shipbuilding and shipping, will continue to do well, but others will have a trying year. The cost structure of British industry will hardly improve in relation to foreign competitors. Probably towards the end of the year, prices will really go ahead, but meanwhile many stocks may be temporarily overvalued.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 2nd January, show that gold stocks were unchanged at \$21,949 million. Foreign deposits fell by \$91 million to \$291 million, while foreign investments fell by \$92 million to \$3,854 million. The Federal Reserve sold \$121 million worth of Government securities formerly held under repurchase agreements. Total discounts and advances fell by \$28 million to \$370 million, while the aggregate of excess reserves of member banks rose by \$155 million to \$239 million. The daily average excess reserves of member banks rose by \$98 million to \$761 million, while their daily average borrowings rose by \$259 million to \$900 million. Business loans of New York City banks fell by \$211 million to \$11,261 million, compared with a fall of \$115 million to \$9,092 million in the same week a year ago.

Gold in Retrospect

Messrs. Mocatta and Goldsmids annual bullion circular writes: The first half of 1956 marked the nadir of public interest in the gold market. Central banks with E.P.U. deficits were substantial buyers at below \$35. Suez developments galvanised the market, but the dollar price fell sharply during November when European central banks were selling gold to pay for dollar oil. If Europe's demand for dollars gets out of hand in coming months, gold shipments to the United States will be necessary as no other market can absorb the large amounts which central banks might have to sell. Such arbitrage to the United States would require a lower world price. London's prewar shipping parity to Washington was about \$34.76. Silver supplies from Australia, Burma, Singapore, South Africa and, early last year, from Saudi Arabia met British industrial needs of about 124 million ounces. It is doubtful whether the amounts shown as exported from Britain to Kuwait and some other parts of the sterling area ever arrived at those destinations. There has been virtually no silver coinage in Europe, except in Sweden, which took 320,000 ounces from Britain in December.

Firm Tone in Quicksilver

The recent firmer tone in the quicksilver market persists, traders say. They now generally indicate a price of £84 a flask, ex-warehouse London, compared with £84 previously. Spot supplies are reported to be by no means plentiful. It is understood that not much metal will be arriving in Britain, because of good sales in the international market by both Spain and Italy, especially on Far Eastern account. These are believed to have been transacted on the basis of £236 a flask, f.o.b. It is pointed out that the London spot price is not quite in line with the Spanish and Italian origin price, in that £236 is equivalent to about £84 5s 3d a flask and should make the London price about £85.

Sugar Terminal Market

The London sugar terminal market reopened for business on 2nd January after a lapse of 17 years. Operators began business in a rather uncertain manner, but towards the final stages of the first call sellers emerged and turnover totalled 500 tons with ten lots traded. There was an order from America, which was regarded as an encouraging sign. One of the major objectives of the market is to attract international trade. The Bank of England has announced that no objection will be raised to non-residents operating in it, and participants' bankers will be authorised to approve the payment of differences due from their customers to such non-residents. The differences due to and from non-residents must be paid to and from the appropriate type of non-resident sterling account.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

DULL WEEK FOR BILLS

Wednesday, 9th January.

THE upward trend in both advances and deposits continued last week. All the chief sources of demand increased their offtake. The requirements of the cotton and sugar industries are both running at a high level. An increasing quantity of funds is being required against grain and seeds storage in upcountry areas. The jute industry has also increased its offtake. The interbank market continues fairly tight, although the call rate is now quoted slightly lower at 4 percent. There are borrowers over at this level.

It has been a very quiet week for export bills. Few documents of any kind have been offered. Remittance has been moderate. Sterling continues to improve against all currencies. The reason is still reported to be short-covering after the psychological improvement which followed the negotiation of the dollar loan from the I.M.F. Bear operators must also have been impressed by the fact that the U.K.'s overall balance of trade showed a small surplus during 1956 and that this means devaluation is highly unlikely.

Bullion was quiet in the absence of interest. Silver moved within narrow limits and advanced from the previous week's level of Rs. 173 to Rs. 173.4, quoted for forward. The rate for ready was quoted at Rs. 173.8. The London and New York prices were unchanged.

Gold has been quiet in sympathy with silver and the price has declined from Rs. 105.12 to Rs. 105.8. The sovereign at Rs. 69 showed a loss of 4 annas.

During the week ended 4th January, Government of India Treasury Bills for Rs. 75,40,75,000 were sold in favour of the Reserve Bank of India.

Increases of Rs. 15.45 crores and Rs. 13.87 crores in active notes and the total note issue to Rs. 1,481.52 crores and Rs. 1,489.08 crores were outstanding features of the return of the Reserve Bank of India for the week ended 4th January 1957. The currency expansion was covered by raising rupee securities by Rs. 14.90 crores to Rs. 800.25 crores. Deposits of the Government of India declined by Rs. 2.90 crores to Rs. 54.34 crores but other Government accounts were Rs. 5.93 crores higher at Rs. 13.93 crores. Balances of commercial banks decreased by Rs. 9.75 crores to Rs. 48.34 crores. Balances held abroad dropped by Rs. 1.54 crores to Rs. 81.07 crores, while investments rose by Rs. 71 lakhs to Rs. 61.82 crores. Other loans and advances declined from Rs. 106.04 crores to Rs. 99.96 crores, of which advances to scheduled banks against usance bills amounted to Rs. 52.82 crores against Rs. 57.20 crores. These advances totalled Rs. 3.58 crores since 1st January 1957. Ways and means advances stood at Rs. 7.75 crores (Rs. 7.27 crores).

The return of the State Bank of India for the week ended 28th December, shows a rise of Rs. 2.99 lakhs in total deposits to Rs. 242.02 crores. Investments in Government securities and other authorised investments are up by Rs. 1 lakh and Rs. 18 lakhs to Rs. 95.50 crores and Rs. 11.39 crores, respectively. Advances, including cash credits and overdrafts, and bills discounted and purchased, have increased by Rs. 3.03 crores to Rs. 140.12 crores. Cash and balances are, in consequence, shown at Rs. 19.67 crores, or Rs. 3.21 crores higher.

The statement of the position of scheduled banks for the week ended 28th December, 1956, discloses Demand and Time Liabilities at Rs. 654.19 crores (Rs. 9.45 crores on account of borrowings from banks) and Rs. 459.50 crores (Rs. 2.49 crores), compared with Rs. 646.72 crores (Rs. 9.43 crores) and Rs. 459.86 crores (Rs. 2.86 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 3.04 crores and Rs. 1.88 crores to Rs. 38.33 crores and Rs. 52.66 crores, respectively. There is a drop of Rs. 8 lakhs in investments to Rs. 364.75 crores. Advances and bills discounted, at Rs. 788.46 crores, show a rise of Rs. 4.65 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.2 percent and 70.8 percent, against 7.8 percent and 70.8 percent.

The profit of the BANK OF INDIA LTD. has amounted to Rs. 1,05,29,924-7-2 for the year ended 31st December, 1956, including Rs. 13,26,630-3-5 brought in. Taxation absorbs Rs. 28,00,000, and interim dividend at 6 percent absorbed Rs. 15,00,000. The directors propose to pay a final dividend at 10 percent to absorb Rs. 25,00,000. Reserve fund gets Rs. 8,00,000, leaving a carry-forward (subject to the payment of a bonus to the staff) of Rs. 29,29,925.

The following is a statement of the cash balances of the Central Government on the last day of September, 1956:

(1) At the Reserve Bank of India	Rs.
in India	70,39,55,000
(2) At treasuries in India	2,01,07,000
(3) In England (Sterling converted at 18d the rupee)	1,47,19,000
Total	73,87,81,000

LONDON INSURANCE LETTER

EXPANSION RATE SLACKENS

By Air Mail.

It is much too soon to get a clear impression of British insurance in 1956; although preliminary figures are issued promptly, detailed analyses appear months later. It must be said, however, that the first impressions are not quite as good as earlier expectations. It appears that the gradual deflationary trend of the economy, though not actually reflected in new life assurance business, is reflected in the rate of increase in that business—that the rate of expansion has slackened. It appears that in the particular field of "self-employed annuities", which should have been very actively negotiated after the Chancellor of the Exchequer granted tax concessions, the development of business has been somewhat disappointing. If the full results for the year confirm these first impressions there will still be no semblance of gloom in the profession. Although insurance is an accepted part of the national life, the nation is still underinsured by North American standards, and the long-term trend is still, undoubtedly, expansive. The essential characteristic of life policies, as of other forms of insurance, is their adaptability to changing conditions and needs. But the public does not immediately become aware of the facilities available, and it would not be surprising if the new facilities for retirement affected results much more in 1957 than in 1956. For the longer term, the provision of with-profit policies seems to ensure further expansion; for the public is not yet convinced that the value of money is stable and is now accustomed to the idea that a flexible arrangement is desirable.

U.K. and U.S.A. Compared

The above remark concerning the U.K.'s relative underinsurance requires some qualification. Some weeks ago two statistical investigators, Mr. J. Johnston and Mr. G. W. Murphy, presented before the Manchester Statistical Society a paper comparing life assurance in the U.K. and the

U.S.A. It showed some similarities as well as some marked differences. The study showed that, taking ordinary and industrial life premiums together, life assurance premium incomes were in approximately the same relative position in the U.K. as in the U.S.A. and Canada, representing some 3 percent of total personal incomes. It showed also, however, that the sum assured a unit of premium income was approximately twice as large in the U.S.A. as in the U.K. The essential difference appears to be in the types of policy demanded. In the U.K. almost 60 percent of ordinary life assurance is in the form of endowment policies; in the U.S.A. they make up only 12 percent of the total. The authors of the paper noted a "marked aversion" to combining saving with insurance, through endowment policies, in the U.S.A., and they showed that even in non-endowment policies the great majority—more than 98 percent—represented regular term and credit policies. Between 1950 and 1954, term, credit, life and family income policies, which show very high sums assured a unit of premium, increased more than twice as fast as ordinary business.

Adjustments to the War Risk

At the beginning of 1957, the Institute of London Underwriters announced that the surcharge of 10s a £100 imposed at the end of October last on voyages insured via the Suez Canal and/or to, from, or transhipping at, ports in Egypt, Israel, Jordan, the Lebanon, and Syria, was withdrawn. But it announced that the basic rates for such cover were increased. The new rate of 5s a £100 compares with 1s 6d to 2s a £100 before the nationalisation of the Canal in July; but while the surcharge was in effect, the rates were 11s 6d to 12s a £100. To the anxieties arising from the nationalisation must be attributed the reversal of the downward trend of business reported until recently by the Export Credits Guarantee Department. The accounts of this body, published lately by the Controller and Auditor-General, show an increase of more than 50 percent, to £305 million, in the value of guarantees issued on commercial account in the six months to end-September last, compared with the same period of 1955. In the preceding financial year, to March last, the value of guarantees, at £486 million, was £58 million less than in the financial year 1954-55. There is no reason to suppose that the rate of transactions increased before the upheaval of July, and it can, therefore, be assumed that, quite suddenly, the risk of war persuaded traders of the value of export-credit insurance. A special interest in the latest accounts is the segregation of ordinary commercial business from that undertaken as a matter of policy. Though in principle the department operates on commercial lines, in practice sometimes it sets aside the commercial criterion in favour of economic or political expediency. Credits to Persia in anticipation of oil royalties are a case in point; another is the financing of export-promotion in the dollar area. As it happened, these "uneconomic" activities turned out profitably in the period covered by the accounts.

Insuring Dock Strike Risks

Against a background of renewed labour trouble in the docks, the Shipowners Mutual Strike Insurance Association has now been formed to cover shipowners' risks of loss suffered by detention, due to strike or lock-out, in the docks. The cost of this insurance will be based, eventually, on experience; at present it is estimated to average, annually, a ship, one and a half day's running costs, plus a fee of 6d in the £ of daily running costs. Insurance of this risk is certainly needed, and on the European continent it is already provided. But it has not been approved by the underwriting community in Britain, because the risk is not effectively spread: a dispute affecting a number of ports would release a flood of claims. The ordinary market will not, therefore, accept this kind of business, but a mutual association can undertake it.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced by 0.1 percent to 431.0 during the week ended 22nd December, 1956, compared with 430.4 (revised) for the previous week. The index was lower by 0.7 percent compared with that of a month ago, but was higher by 16.3 percent than that of the corresponding week of the previous year. Lower prices of rice in Patna (-6%), gram (-4%) and wheat in Amritsar (-2%) brought down the index for Food Articles by 0.2 percent to 417.7, compared with 318.5 (revised) for the earlier week, although the prices of tea, and gur in Muzaffarnagar (+3% each), wheat in Jabalpur (+2%), dal arhar and coffee, plantation P. B. (+1% each) exhibited advances. The index for Industrial Raw Materials moved up by 0.3 percent to 521.1 compared with 519.5 (revised) for the previous week as a result of an increase in the prices of raw silk in Bangalore (+9%), raw jute and groundnuts (+3% each), linseed in Bombay (+2%), castorseed, gingellyseed in Jhansi and pure buttonlac (+1% each); prices of manganese ore (average export price), (-12%), copra (-3%), raw cotton (-2%), linseed in Calcutta, rapeseed and pure T. N. shellac (-1% each) were marked down. The index for Semi-Manufactures remained stationary at the previous week's level of 416.4 (revised). Items which showed variations were: sheepskins (+9%), kerosene oil, coconut oil in Calcutta and zinc (+3% each), cowhides, buffalo hides, groundnut oil in Calcutta and copra cake (+2% each), coconut oil in Bombay and mustard oil in Kanpur (+1% each), groundnut cake (-6%), gingelly oil (-4%), groundnut oil in Bombay and copper (-3% each), coconut oil in Calcutta, mustard oil in Calcutta and coir yarn (-2% each) and linseed oil (-1%). The Manufacturers group index rose by 0.5 percent to 388.6 reflecting an increase in the prices of jute manufactures (+4%) and a nominal rise in the prices of cotton manufactures. A rise of 0.2 percent to 590.6, against 489.3 (revised) for the previous week in the index for the Miscellaneous group was caused by an increase in the prices of chillies in Patna (+15%) and cashewnuts in Mangalore (+12%) in spite of a decline in the prices of chillies in Calcutta (-6%) and black pepper in Cochin (-3%).

BRAZILIAN MANGANESE ORE FOR U.S.A.

It is reported from New York that Bethlehem Steel will next month start taking manganese ore from its new mines in Brazil after five years of development and exploration. Using nearly \$50 million under an Export-Import Bank loan, Bethlehem Steel has built a port and 120 miles of railroad to carry manganese ore to the sea. The estimated production of the new mine will be 600,000 tons of ore annually. Of this, about 200,000 tons will be available for the American industry. The remainder will go to the U.S. Government stockpile.

INCREASED OUTPUT OF IRON ORE IN INDIA

The estimated total output of iron ore in India increased to 380,186 tons in October, 1956, from 334,605 tons in September, 1956, according to official statistics released by the Chief Inspector of Mines. Returns received from 114 mines for October, 1956, show despatches totalling 204,792 tons to the iron and steel plants and 97,226 tons to the export market. The reported stocks at the end of the month amounted to 1,363,578 tons.

Stocks and Shares

ANOTHER LISTLESS WEEK IN THE STOCK MARKET

COPPER INTERIM DISAPPOINTS OPERATORS

Wednesday Evening.

THE share market has continued in a moribund state throughout the past week. After a brief flicker of life in Indian Irons last week-end, speculative shares have drifted lower. The price of Irons at today's clearing was Rs. 27-15, compared with that at the last clearing of Rs. 29. Indian Coppers fell today after the announcement of an interim dividend on the old and the new capital combined of 6½ percent. This gives a return in terms of the old capital of 10 percent, the equivalent of that declared last year. The only scrip which has shown any sign of buoyancy has been Burrakur, which has benefited from more interest in buying. The undertone of the market is now distinctly subdued and the general feeling is that it will stay that way until after the elections in March.

Investment shares have remained quiet. Some life has appeared in the sugar and breweries section following the cut in imported liquor. Coal, jute and tea shares have all been neglected, while fractional price falls have been recorded in many engineering and miscellaneous issues. There are reports in the market that the Life Insurance Corporation has been showing some interest in selected debentures and a few preference and ordinary shares.

Details of the week's trading follow.

Government securities were quiet and the volume of business mediocre. Three percent Conversion Loan had buyers at around Rs. 73 and Non-terminable Paper was nominally quoted at the same rate. In short-dated loans, 3% 1957 was unchanged at Rs. 99-12 and 3% 1958 was traded at around Rs. 99-9; 2½% 1961 had buyers at Rs. 93-5 and 3½% 1961 was slightly better at Rs. 99-4. In the medium-dated group, 3% 1959-61 eased further to Rs. 97-11 and 3% 1963-65 continued on offer at Rs. 94-3. Among National Plan issues, 3½% 1964 continued under pressure at Rs. 98-3 and 3½% 1965 shed three annas at Rs. 98-2. However, 3½% 1967 was steady at Rs. 98-6 but the enquiry was mainly due to the approach of the interest payment date (15th instant). In long-dateds, 3% 1966-68 was unchanged at Rs. 92-4 and 3% 1970-75 had sellers at Rs. 86-14. State loans were quotably unchanged but sellers continued to predominate in the market.

Business in preference shares was on a very small scale although prices showed little variation. In the miscellaneous section, Associated Hotels were marked at Rs. 66 and Banarhat Tea were crossed at Rs. 121-8. Bharat Collieries were reported at Rs. 51 and Calcutta Electric changed hands at Rs. 10-8. Dalmia Cement Rs. 40 paid-up preference shares were dealt in at Rs. 38 and there were sellers of India General Navigation at about Rs. 66. Indian Iron & Steel were wanted at Rs. 101 and Indian Standard Wagon were bought on investment account at Rs. 124. Indian Aluminium were taken at Rs. 77-8. Indo-Burma Petroleum were crossed at Rs. 101 and a small lot of Jardine Henderson at Rs. 61. Kesoram Cotton were enquired for at Rs. 114 and Martin Burn were crossed at Rs. 100. A few transactions were reported in New Victoria Cotton at around Rs. 4-8, National Tobacco 1st were done at Rs. 68-10 and the 2nd were crossed at Rs. 62-10. Rohtas Industries "B" preference were marked at Rs. 64-8, Ryam Sugar at Rs. 9-4 and Tezpur Tea at Rs. 12-4. In jute, a solitary transaction was reported in Gourepore at Rs. 82.

In the banking section, Punjab National met with enquiry and improved from Rs. 49 to Rs. 51-4. United Commercial Bank were better at Rs. 53-3 while Hind Bank were easier at Rs. 35. United Bank of India "B" shares changed hands after a long interval at Rs. 9-15.

Among railways, Bukhtiarpur-Bihar were reported at Rs. 8-15 and a small lot of Katakhal-Lala Bazar at Rs. 73.

Textile shares were depressed with Bengal Nagpur being marked down from Rs. 8-12 to Rs. 8, Cawnpore Textiles from Rs. 8-4 to Rs. 8 and Elgin Mills from Rs. 24-8 to Rs. 24. Kesoram were easier at Rs. 14-5.

The general depression in the market during the period under review also affected coal shares and prices showed a downward trend as will be seen from the following table:

	Opening 3-1-57 Rs.	Closing 9-1-57 Rs.
Bengal Coal	455 0	443 0
East Indian Coal	27 0	26 8
Katras Jherriah Coal	56 8	53 0
New Beerbhoom Coal	16 0	14 8

Burrakur, in contrast recovered from Rs. 20-14 to Rs. 21-6.

Conditions in the jute section went from bad to worse and prices continued to move to lower levels as will be seen from the following table:

	Opening 3-1-57 Rs.	Closing 9-1-57 Rs.
Agarpara	9 12	9 4
Anglo-India	135 0	125 0
Auckland	90 0	87 0
Bally	154 0	148 0
Caledonian	139 0	125 0
Delta	128 0	125 0
Howrah	18 6	18 0
Megna	68 0	65 0
New Central	13 4	13 0
Northbrook	21 0	20 8
Orient	120 0	105 0

In the electric supply section, United Provinces met with some enquiry and improved from Rs. 114 to Rs. 148 ex-dividend. Calcutta Electric fluctuated around Rs. 13 and Patna were quoted at Rs. 11-4 ex-dividend.

In the sugar and brewery section, following the recent cut in the imports of liquors and increased excise duties, there was a good enquiry for Dyer Meakin at the higher rate of Rs. 6 and Carew & Co. at about Rs. 7-6. Belsund eased from Rs. 10-6 to Rs. 10 while Champaran were marked back from Rs. 24 to Rs. 23. Durbhanga were steady at Rs. 22 and Ramnugger were unchanged at Rs. 23-4.

In the engineering section, Indian Iron & Steel shares touched a new low of Rs. 27-8, but bear covering at the close caused a recovery to Rs. 27-15. Good business was reported in Guest, Keen, Williams at around Rs. 23-2. Jessop & Co. were marked back from Rs. 28-8 to Rs. 27-8 and Richardson & Cruddas from Rs. 22-8 to Rs. 21-10. Indian Standard Wagon eased from Rs. 195 to Rs. 190. Textile Machinery were extremely depressed at around Rs. 19. Burn & Co., were Rs. 5 lower at

Pages 64; Managing Editor—M. R. Pandya.

Wanted Advertising Managers and Selling Agents in all principal towns in India and abroad.

Overseas Publishing House,

240, Hornby Road,

BOMBAY-1.

Rs. 313 and Braithwaite reacted from Rs. 26.5 to Rs. 26. Marshall's were neglected at Rs. 5.

In paper, India Paper Pulp were easier at Rs. 22 and Orient Paper were marked back from Rs. 31.6 to Rs. 30. Shree Gopal were quoted at Rs. 16.2 ex-dividend while Titagur were steady at around Rs. 36.3.

In cement, Assam Bengal were unchanged at Rs. 6.12 as were Dalmia at Rs. 12. Sone Valley were easier at Rs. 7.13.

In insurance, Concord of India were placed at Rs. 10.12 and New Asiatic were easier at Rs. 3.14. General Assurance were crossed at Rs. 25.

In shipping, Calcutta Landing were crossed at Rs. 12.8, but were later quoted at Rs. 13.8. India General Navigation dropped Rs. 2 to Rs. 69, but India Steamship were comparatively steady at Rs. 9.4. Port Shipping were unchanged at Rs. 15.

Among miscellaneous industrials, Alkali & Chemical were unchanged at Rs. 18.12 while Anglo Brothers met with enquiry and recovered from Rs. 18.12 to Rs. 20.8. Balmer Lawrie were slightly better at Rs. 152 and Britannia Biscuits were marked at Rs. 12.12 ex-dividend. Calcutta Tramways improved to Rs. 15.14 and Dunlop Rubber were unchanged at Rs. 26. Hindustan Motors were depressed at Rs. 7.8 while Imperial Tobacco recovered from Rs. 13.14 to Rs. 14.4. Indian Aluminium were marked back from Rs. 14.12 to Rs. 14. Indian Cables were marked down to Rs. 30.4 while Indian Rubber improved further from Rs. 20.8 to Rs. 22.4. Indo Burma Petroleum eased from Rs. 36.8 to Rs. 34 and Indian Wood Products dropped Re. 1 to Rs. 42.8 ex-dividend. Jardine Henderson were marked down from Rs. 83 to Rs. 80. National Carbon were fairly steady at around Rs. 25.14 as were Rohtas Industries at Rs. 19.5. Rallis were easier at Rs. 37.8 as were National Tobacco at Rs. 9.8.

In the mining group, Indian Copper Corporation, after being taken up to Rs. 3.12, closed easier at Rs. 3.10 as operators were disappointed with the interim dividend announcement today of 6½%. Burma Mines were unchanged at Rs. 2.15 as were Karanpura Development at Rs. 14.8 and Metal Corporation at Rs. 8.4.

Tea shares were extremely dull. Bishnauth changed hands at Rs. 19, Brahmaputra at Rs. 7.8 and Brooke Bond at Rs. 19.2. Dhelakhat came to hand at Rs. 20.8 and East India, Methoni and Sapoi had sellers at Rs. 21.12, Rs. 19 and Rs. 25 respectively. Rajgarh were slightly better at Rs. 39.8 and Tezpor were marked at Rs. 20.14. Belgachi were slightly better at Rs. 60 but Jayshree were sold down to Rs. 10. Hantapara met with selective enquiry at the lower rate of Rs. 181 while Hasimara and New Doars were easier at Rs. 27.14 and Rs. 315 respectively.

We publish below the results of the ANDREW YULE GROUP OF JUTE MILLS Co. Ltd. for the half-year ended last May. After providing Rs. 50,000 for depreciation, there is a loss of Rs. 1,03,140 for the ORIENT JUTE MILLS Co. Ltd. A sum of Rs. 1,82,196 has had to be provided against the anticipated loss on raw jute stock, work-in-progress and jute contracted for, on the basis of the estimated realisable value as at 31st May, 1956. Bringing in Rs. 5,783 from the previous half-year, there is a balance of Rs. 2,79,553 at the debit of the profit and loss account, against which the directors have transferred Rs. 2,80,000 from general reserve. They have also transferred Rs. 25,000 from dividend equalisation reserve and recommended the payment of a dividend on ordinary shares of Re. 1 a share. A credit balance of Rs. 537 is carried forward.

Providing Rs. 50,000 for depreciation, the CHEVIOT JUTE MILLS Co. Ltd. has incurred a loss of Rs. 1,81,112. A sum of Rs. 2,45,116 has had to be provided against the anticipated loss on raw jute stock, work-in-progress and jute contracted for, on the basis of the estimated realisable value as at 31st May, 1956. Bringing in Rs. 2,615, there is a balance of Rs. 4,23,613 at the debit of the profit and loss account, against which the directors have transferred Rs. 4,25,000 from general reserve. They have also transferred Rs. 35,000 from dividend equalisation reserve, being the amount required to pay the dividend on the preference shares. A credit balance of Rs. 1,387 is carried forward.

Transferring Rs. 1,80,000 to depreciation, the CALEDONIAN JUTE MILLS Co. Ltd. has shown a loss of Rs. 1,93,238. An amount of Rs. 2,55,518 has had to be provided against the anticipated loss on raw jute stock, work-in-progress and jute contracted for, on the basis of estimated realisable value as at 31st May, 1956. A similar provision for raw jute stock and work-in-progress, amounting to Rs. 78,836, made during the previous half-year has been written back to the credit of the profit and loss account. Bringing in Rs. 6,248, there is a balance of Rs. 3,63,672 at the debit of the profit and loss account. The directors have transferred Rs. 4,00,000 from general reserve and recommended the payment of the dividend on the preference shares. A credit of Rs. 1,323 is carried forward.

Providing Rs. 30,000 for depreciation, there is a loss of Rs. 1,38,873 of the DELTA JUTE MILLS Co. Ltd. A sum of Rs. 3,68,225 has had to be provided against the anticipated loss on raw jute stock, work-in-progress and jute contracted for, on the basis of estimated realisable value as at 31st May, 1956. A similar provision for jute contracted for, amounting to Rs. 5,750, made during the previous half-year and excess provision for taxation of Rs. 38,000 have been written back to the credit of the profit and loss account. Bringing in Rs. 15,912, there is a balance of Rs. 3,87,436 at the debit of the profit and loss account, against which the directors have transferred Rs. 3,90,000 from general reserve. They have also transferred Rs. 12,500 from dividend

lisation reserve, being the amount required to pay the dividend on the preference shares. A credit of Rs. 2,564 is carried forward.

Providing Rs. 77,000 for depreciation, the BELVEDERE JUTE MILLS Co. Ltd. has made a loss of Rs. 2,18,867. An amount of Rs. 2,62,170 has had to be provided against the anticipated loss on raw jute stock, work-in-progress and jute contracted for, on the basis of the estimated realisable value as at 30th June, 1956. A similar provision for raw jute stock and work-in-progress, amounting to Rs. 77,558, made during the previous half-year has been written back to the credit of the profit and loss account. Bringing in Rs. 1,004, there is a balance of Rs. 4,02,475 at the debit of the profit and loss account, against which the directors have transferred Rs. 4,05,000 from general reserve. They have also transferred Rs. 24,500 from dividend equalisation reserve, being the amount required to pay the dividend on the preference shares. A credit balance of Rs. 2,525 is carried forward.

The gross profit of the ALUMINIUM CORPORATION OF INDIA increased from Rs. 12.82 lakhs to Rs. 25.21 lakhs for the year ended last March. The company has declared a maiden ordinary dividend of 5 percent. General reserve is allocated Rs. 2 lakhs against nil. The carry-forward is Rs. 1,16,199, against Rs. 32,583 brought in.

Bombay Market

SPECULATIVES TOUCH NEW LOWS

GOOD CORPORATE NEWS LEAVES GLOOM UNDISPELLED

Wednesday Evening.

TRADING on the Bombay stock market during the past week has been disappointing, and equity values were brought down to new lows on bull liquidation induced by reports of payments difficulties. There was a general inclination to lighten commitments as a large number of uncertainties have adversely affected the economic outlook. The final outcome of the Congress economic policy, which has been discussed at the Indore session, is anxiously awaited. Considering that the Government will require increased revenue from taxes, it is unlikely that any worthwhile change in sentiment will take place until the general elections are over. Meanwhile, good corporate news seems to have had little effect on activity.

Tata Steel declined to Rs. 170.12, as did Indian Iron to Rs. 27.14 without much buying support in evidence, although closing levels were fractionally higher on short-covering. Alcock Ashdown were offered at Rs. 257.8, as were Premier Construction at Rs. 176. There was no interest in automobile shares, with Hindustan Motors declining to Rs. 7.9 and sellers predominating. Tata Locomotive fell to Rs. 153 x.r.

The mill group was dotted with substantial losses all round. In spite of a bonus issue, Dawn Mills were quoted around Rs. 162.8. Bombay Dyeing were transacted at Rs. 548.12 and Century came to hand at Rs. 485.8. Simplex were done at Rs. 180 and Svadeshi realised Rs. 220.8. India United Ordinary declined to Rs. 11.4, with sellers over.

Miscellaneous shares were depressed in line with the general trend. Associated Cement were available at Rs. 181.4 and Digvijay Cement declined to Rs. 151. Belapur Sugar were relatively steady around Rs. 244 on the better outlook for the industry. Walchandnagar Industries were done at Rs. 253.12. Bombay-Burmah slumped to Rs. 645, as did Tata Chemicals to Rs. 16.4. National Rayon were lowered to Rs. 234.8. Steamship shares were depressed, with Scindia coming down to Rs. 18.3 and India Steamship quoted lower at Rs. 9.4.

Interest was subdued in banking shares despite reports of increased profits for the past year. Bank of India were quoted lower at Rs. 137.8 and Central Bank were available at Rs. 51.8. Insurance shares were freely offered without attracting support. New India were sold at Rs. 43.12 and Oriental were placed around Rs. 3,655.

Turnover in electricity supply undertakings was restricted and prices were notably unchanged. Ahmedabad Electricity were done at Rs. 93.12 and Tata Hydro realised Rs. 123.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago, the last named being shown in parenthesis and will not be given where such a quotation is not available).

GOVERNMENT SECURITIES

2½% Loan (1902)—Rs. 93.15—93.15—93.15—93.15.
3% Govt. Paper—Rs. 72.12—72.14—72.9—72.14.
3% Loan (1906)—Rs. 73.2—73.6—72.14—73.1.
3% " (1958)—Rs. 99.8—99.8—99.8—99.8.
3% " (1963-65)—Rs. 94.3—94.4—94.3—94.4.
3% " (1970-75)—Rs. 86.13—83.13—83.13—83.13.
3% " (1964)—Rs. 98—98—98—98.
3% " (1974)—Rs. 99.2—98.2—98.2—98.2.
3% " (1965)—Rs. 98—98—98—98.
4% West Bengal (1967)—Rs. 98.2—98.2—98.2—98.2.
4% West Bengal (1968)—Rs. 99.1—99.1—99.1—99.1.
4% Loan (1967-70)—Rs. 100.8—100.8—100.8—100.8.
4% U.P. (1968)—Rs. 97.14—97.14—97.14—97.14.

BANKS

Hind—Rs. 35—35—35—35—(36).

Punjab National—Rs. 51—51.4—51—51.4.
United Commercial—Rs. 53—54.4—53—54.4—(52.8).
United Bk. of India ("B" Shares)—Rs. 9.15—9.15—9.15—9.15.

RAILWAYS

Bukhtiarpur Bihar—Rs. 8.14—8.15—8.14—8.15.
Dehri Rohtas—Rs. 13.3—13.3—13.3—13.3.

COTTONS

Boxvraah—Rs. 145—145—145—(385).
Dunbar—Rs. 190—203—190—199—(305).
Elgin—Rs. 23.12—24.4—23.11—24.4—(26-10).
Jayshree—Rs. 5.14—5.15—5.13—5.14.
Jyajeeraj (Pref.)—Rs. 97—97—97—97.
Kesoram—Rs. 14.8—14.11—14.4—14.8—(18.3).
Do. (Pref.)—Rs. 113.8—114.8—113.8—114.8—(133).
New Victoria—Rs. 1.12—1.13—1.12—1.13—(Rs. 2.1).
Do. (Pref.)—Rs. 4.9—4.10—4.8—4.8—(3.12).
Swadeshi (P.O.)—Rs. 11.3—11.5—11.3—11.5.
Sree Radheshyam—As. 6—6—6—6.

COALS

Bharat—Rs. 6.6—6.10—6.4—6.10—(8.1).
Do. (Pref.)—Rs. 51—51—51—51.
Burrakur—Rs. 21.6—21.8—20.15—21.6—(16.14).
Bengal—Rs. 442—442—442—442.
Central India—Rs. 6.2—6.2—5.15—6.2—(8.5).
Dhemo Main—Rs. 6.1—6.1—5.13—6—(9.10).
Equitable—Rs. 25.8—25.8—24.6—24.12—(35.12).
East Indian—Rs. 27—27—27—27—(35.10).
Jogta—Rs. 1.2—1.2—1.2—1.2—(3.10).
Kuardi—Rs. 2.7—2.7—2.7—2.7.
Katras Jheriah—Rs. 53.8—53.8—53.8—53.8.
New Beerbhoom—Rs. 14.7—14.7—14.7—14.7.
Raneegunge—Rs. 9.12—9.12—9.5—9.6 x.d.—(12.5).
Shree Mahakali—Rs. 3.12 S.T.—3.12—3.12—3.12.
Singaran ("B" Shares)—As. 6—6—6—6.
South Karanpura—Rs. 8.14—8.14—8.14—8.14.
Western Bengal—Rs. 6—6—5.13—5.15—(7.10).

JUTES

Anglo-India—Rs. 136—136—124—124.
Do. (Pref.)—Rs. 101—101—101—101.
Auckland—Rs. 87—87—87—87.
Bally—Rs. 154—156—154—156—(185).
Birla—Rs. 14.9—14.9—14.9—14.9—(18.7).
Bengal—Rs. 16.8—16.8—13.8—13.8—(19.12).
Budge Budge—Rs. 105—105—105—105—(186).
Cheviot—Rs. 142—144—142—144—(236).
Chandpady—Rs. 127.8—127.8—126.8—127.8—(182).
Chitavalsah—Rs. 11.9—11.15—11.9—11.15—(15.4).
Clive—Rs. 12.6—12.6—12.6—12.6—(253).
Delta—Rs. 126—129—126—127—(19.8).
Fort William—Rs. 19.3—19.3—19.3—19.3—(19.8).

Bateli—Rs. 27.4—2

Engineering and Transport

RISE IN U.K. AIRCRAFT EXPORTS

RESULTS OF RESEARCH AND
SALES PROMOTION

THE British aircraft industry's policy and technical excellence in recent years have been vindicated by its achievements during 1956. The record export trade—the final figure will be published within the next three weeks—is the result of orders placed during the last year or two while contracts signed during 1956 give cause for quiet optimism for the future. Nor, as the president of the Society said, "can we disassociate the S.B.A.C. flying display and exhibition from the notable expansion of our export trade."

Viscount orders during the year numbered more than 100—or two a week. Some 23 Britannias—five to the United States—were sold and 14 Comet IVs ordered by an American operator. Sea Hawks were ordered by Holland, Gnats by India and Finland, Pembroke by Denmark, Herons by a number of countries, Hunter Trainers by Holland and more than 200 aircraft of varying types by Western Germany. These and many other orders for aircraft, engines and components placed during the year lead to lucrative business and profits, the major part of which, as Sir Thomas Sopwith, chairman of the Hawker Siddeley Group, emphasised last January, must be ploughed back for development and research. This has been done to a large extent. For example, Hawker Siddeley formed a nuclear power company, Short Brothers invested more than £1 million in additional productive capacity and a new wind tunnel, Avro allotted £100,000 for a supersonic wind tunnel, Rolls-Royce spent millions of pounds on an engine testing plant and atomic power plant research and equipment, and the industry's £1½ millions co-operative wind tunnel was opened by the Duke of Edinburgh in Bedford in May.

New Inventions

In January, the N. 113 made its first flight and an aircraft to Cyprus spotlighted the R.A.F.'s shortage of modern transport aircraft. This, and the need to build up a sizable home market for large airliners, was again emphasised during the year by Lord Brabazon, Sir Geoffrey de Havilland, Sir Frederick Handley Page, Wilfred Nixon, and others. Harwell announced that the U.K.'s first atomic reactor was small enough to be carried in an aeroplane. In February, this country's first guided missile that can carry an atomic warhead was announced, the Eland-Convair first flew, and the Minister of Supply announced that aircraft production in this country had more than doubled during the past five years. In March, the FD. 2 at 1,132 m.p.h. (1,822 k.m.p.h.) became the first aircraft to achieve more than 1,000 m.p.h. (1,609 k.m.p.h.) under record conditions and Fairley also announced the Fireflash guided weapon. "A new concept of flight" was how the president of Capital Airlines described the Viscount in April. A Seaweed went on a sales tour of Europe and the March export figure, at more than £14 million, an all-time monthly record, was made known. The first contract was signed in May for American jet airliners fitted with Rolls-Royce Cougars. The Minister of Supply affirmed that "Britain was getting very good value for money and manpower invested" in the aircraft industry. In June, it was announced that yet more Hunters were to be built in Belgium under licence, while in July the Napier Scorpion rocket motor was revealed to the public, the Rolls-Royce Tyne first flew, the Twin Pioneer completed an European sales tour, and exports for the first six months of the year were 82 percent up on the 1955 half-yearly figure. Figures showed that more than half the gas-turbine airliners on order in the free world were British. The highlight of August was the Britannia's spectacular sales tour of the United States and Canada. September started with the Society's flying display and exhibition, the Aeroplans described it. The 16,000 lb. (7,256 kg.) Olympus, the most powerful engine to be announced in the world, was made public and August's export total brought the 1957 figure so far to a record £73 million. In October, the Minister of Supply said the aircraft industry's record was "magnificent" and that it exported more in a fortnight than any continental country does in a year. It was announced that there are two and a half times as many British turboprop airliners on order in the free world as there are foreign and that half the number of these aircraft on order in the United States are British. It became known that Hawker were working on a private venture supersonic fighter. That more than half the world's orders for civil jet engines are held by Rolls-Royce was announced in November and the first series 800 Northeast Airlines of the U.S. ordered Britannias, the Short SC-1 vertical take-off aircraft was revealed, and a new record employment figure for the industry—257,600 in October—attained. The year ended with an announcement that the aircraft industry's exports had increased 91 percent in the past two years.

November Exports

Britain's aircraft industry export figures for November highlight the fact that the industry's annual rate is running at over £100 million. The November figure is £7,961,692, and the total for the first 11 months of 1956 is £97,314,399. A breakdown of the figures for the 11 months shows that the United States bought aircraft and parts worth £15,400,000, and was the U. K.'s best customer in this field.

EXPANDING MACHINE TOOL
MANUFACTUREMAIN RECOMMENDATIONS OF
COMMITTEE ACCEPTED

IN January 1956, the Government of India appointed a Committee with Professor M. S. Thacker, Director of Scientific and Industrial Research, as chairman, to make recommendations on the future development of the machine tool industry. The Committee consisted of representatives of the Union Ministries concerned and the Association of Machine Tool Manufacturers. It submitted its report in September. It has recommended a programme of manufacture for the existing machine tool manufacturing units in both the public and the private sectors. It has also drawn attention to the need for the creation of additional capacity, particularly for the manufacture of heavy machine tools as well as special purpose machine tools, sheet metal machinery and wood-working machinery. Finally, it has emphasised the importance of setting up a body to keep a constant watch on the development of this industry and has recommended the creation of a machine tool Board for the purpose.

The Government has decided to accept the main recommendations of the Committee. Machine tools are the basic instruments of production for the engineering industry as a whole. Although domestic production has been increasing imports have been rising at a much faster pace. Recent trends in licensing indicate that the demand might well exceed the estimates framed by the Committee. However, the Government considers that for the purposes of immediate working, the programme of production and the estimate of demand recommended by the Committee should be adopted. The programme has been discussed with the main manufacturers of machine tools, and they are already preparing to carry out the programme recommended by the Committee. The programme of the National Industrial Development Corporation for the development of heavy machinery manufacture in the country includes heavy machine tools. Final decisions on this subject will be taken after the report of the Heavy Engineering Mission from the U.K. has been received.

As for the creation of a Standing Body, the Government feels that a Development Council should be set up for the machine tool industry on the lines of similar Councils for other industries which have been set up under the Industries (Development and Regulation) Act. It will be one of its functions to review from time to time the programme of production recommended by the Committee and also the estimates of demand framed by it.

VERTICAL TAKE-OFF AIRCRAFT

The Short SC-1, a jet-powered research aircraft designed for "VTOL" (vertical take-off and landing) and able to change from hovering to forward flight, made its first taxiing trials in Belfast just before Christmas. "VTOL" and "STOL" (slow take-off and landing) aircraft are receiving increased attention from many designers nowadays, since runway lengths are reaching fantastic—even ridiculous—proportions. The prospect of the next generation of transatlantic pure-jet aircraft speeding down 10,000 feet (3,048 metres) runways at 150 m.p.h. (241 k.m.p.h.) with, perhaps, 150 passengers on board is not viewed with equanimity by everyone. Two years ago Rolls-Royce revealed their engine test-rig—promptly named the "Flying Bedstead". This was a device designed to test not only the engines in a new role, but the system of stability and control. Air bled from the two engine's compressors was ducted outboard and used, in ad hoc squirts, to maintain equilibrium. Mr. T. Brooke-Smith, Short's test pilot who will be in charge of testing the new SC-1, underwent a brief course on the "Bedstead." He said it was like learning to ride a bicycle—a knack.

Autogiros—wingless aircraft with a conventional engine and airscrew and a "windmilling" rotor—have been superseded by the helicopter, the most usual example of "VTOL" aircraft. Recently, flying platforms have been evolved, notably in the United States, powered either by a jet or ducted fan motor. "Tail-sitters," aircraft which rest on their tails when on the ground but which gradually assume horizontal flight after take-off, have also made their appearance. Other projected designs, some of which have been realised in research aircraft, include comparatively conventional-looking aircraft with swivelling powerplants to give downward thrust on take-off and landing, but forward thrust for normal flight; a variation of this in which the whole wing moves with the engines thus providing, in effect, a horizontal-fuse-lage version of the "tail-sitter"; helicopters with small fixed wing and horizontal propellers (the Fairley Rotodyne for example); finally an aircraft fitted with advanced boundary-layer control and jet-flap which, strictly speaking, comes under the category of "STOL." The new Short aircraft does not conform precisely to any of these categories.

High Thrust for Low Weight

In November last year, the U.K. Minister of Supply announced that a contract had been placed for an aircraft designated PD. 11. It is this aeroplane which, bearing its company's designation SC-1, is now engaged in its taxiing trials. The one photograph and sparse details that have been published reveal that it has a delta wing, a tri-cycle undercarriage and five new Rolls-Royce

RB-108 engines housed in the fuselage—powerplants which give a high thrust for low weight. This rather unusual number of engines indicates that perhaps four of them are used to provide vertical lift and the fifth forward propulsion. Stability air jets for use at slow speeds—similar in principle to the Bedstead's—appear to be installed at the nose, tail and wingtips. As flight speed is increased, control is transferred to more conventional controls—rudder and elevons. Initially, tethered hovering flights will be made followed by forward flight tests using normal take-off technique. Then, step-by-step, the two will be combined until the aircraft takes off and lands vertically and transition from hovering to forward flight is effected.

INDIAN PRODUCTION OF BICYCLES
INCREASES

The production of bicycles in India in 1956 is estimated at over 615,000 as against 491,000 in 1955, and 372,000 in 1954. These figures do not include the production of the small-scale sector. Considerable progress has been made in the last six years in the bicycle industry which is one of the youngest industries in the country. In 1951, there were only two units engaged in the manufacture of bicycles with a rated capacity of 120,000 and an actual production of 101,000 bicycles a year. There are now 63 large and small factories producing bicycles in the country. Of these 16 are in the Punjab, 13 in Delhi, nine in Bombay, seven in U.P., six in West Bengal, five in Madhya Pradesh, four in Rajasthan, two in Madras and one in Bihar. The average daily employment in the large-scale sector of the industry was 8,158 in 1956, against 6,493 in 1955 and 3,077 in 1954. It is estimated that about 6,500 persons are employed in the small-scale sector. A number of steps have been taken by the Government to encourage production of cycle parts by small-scale units. The more important among them are the establishment of a finishing and testing centre in Ludhiana, the heart of the component manufacturing industry, provision for expert technical advice, introduction of a quality certificate scheme, financial assistance and help in the import of raw materials.

With the increase in home production, there has been a progressive decline in imports. Protection has been granted to the bicycle industry. Imports are allowed on a restricted basis. All types of bicycle components are being produced in the country. Some of the raw materials used in the manufacture of bicycles in India are obtained indigenously while some others are imported.

Export of Bicycles

A scheme for the grant of drawbacks of import duties paid on imported raw materials and components used in the manufacture of bicycles exported has been finalised. In order to make the prices of bicycles competitive in the foreign markets, the Government has decided that the tube manufacturing industry should be developed in India as early as possible. Two additional licences have been given for the manufacture of tubes in India. The Engineering Export Promotion Council has carried out extensive market surveys in Burma, Ceylon, Thailand, Egypt, and East Africa. Bicycles have also been exhibited at many international exhibitions in which India has participated since 1954-55. Bicycles are also displayed in India's showrooms in Colombo, Teheran, Karachi and Manila.

B.O.A.C. TO INTRODUCE BRITANNIAS

Propeller-jet Britannia aircraft will replace the present Constellations on B.O.A.C. routes through India to Australia at the beginning of March. The first Britannia service will leave London for Calcutta and Sydney on 2nd March. In the reverse direction, the first Britannia will leave Sydney on 5th March. The service will be thrice-weekly in each direction. The introduction of the Britannias will have the effect of reducing the time of transit between London and Sydney by about 28 hours. This reduction will be effected not only by the higher speed of the aircraft compared with the Constellations; it will be also due to the fact that the higher speed combined with the vibrationless comfort of the Britannia makes it feasible to cut out the present night stop in Singapore without inconveniencing passengers. These changes will mean that the Britannia will bring Sydney within a day's flight from Calcutta, a considerable improvement on the fastest schedules of today. Of the three services a week, one flight will be a luxury service fitted with 39 "slumberette" chairs of the greatest comfort. The other two Britannia services will be two-class services with 19 slumberette seats and 42 tourist seats. Later in the year, Britannia are expected to replace the B.O.A.C. Constellations on services calling at Delhi and Bombay. The Britannia is a large aircraft with a wing span of 142 feet, a length of 114 feet and an all-up weight of 80 tons. Its four Proteus propeller turbine engines, each producing 3,900 equivalent horse-power, give it a cruising speed of 375 miles an hour.

B.I. LINER TO HAVE GAS-TURBINE ENGINE

The British India (B.I.) line is to have one of its ships fitted with a gas-turbine engine, it is announced in Glasgow. The noted Clyde-side shipbuilders, Alexander Stephen and Sons, report that they have been commissioned to re-engine the B.I. vessel Ormara, of 5,417 tons gross. The Ormara is to be fitted with a free-piston gas generator turbine of 4,000 h.p., in place of the orthodox 3,600-h.p. triple expansion engine at present supplying the vessel's motive power.

New Delhi

FOREIGN EXCHANGE FOR NON-INDIANS GOING
ON HOME LEAVE

NO INTENTION OF STOPPING BUSINESS

VISITS ABROAD

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government is inviting suggestions on meeting the reasonable foreign exchange requirements of non-Indians working in India and going home on leave during the year. It recently cancelled the basic two-year quota of £750 which had been allowed unconditionally to persons going abroad. This step was taken to conserve foreign exchange. Instead of every person automatically getting the basic quota of £750, each case will be decided on its merits, and people will have to explain the reasons for their intended foreign tour. There is, however, no intention of preventing, say, business men going abroad in the course of their business, or non-Indians going home on leave, for which purpose special exemption from tax has been given by the Government. For non-Indians going home on leave, one suggestion received here is that their employers could remit their salaries every month through the Reserve Bank, subject to the ceiling that the total remittances do not exceed the foreign exchange which was permissible before the ban was imposed. It is further suggested that initially such an employee may be given one month's salary in advance, to be taken by him in foreign exchange when leaving India. The Government's decision will be announced shortly.

Exemption from Tax

Indicating the conditions for exemption from tax of the value of free or concessional passages to employees of foreign nationality proceeding on home leave, the Government says in a circular: "Though these conditions are not by themselves unreasonable and relaxations in cases of hardship have been generally liberal, it has been represented to the Government that they operate somewhat harshly in some instances and the formalities for getting relaxation from the Government on each occasion create a certain amount of inconvenience and uncertainty in the minds of the employees concerned. To obviate this hardship, the Government has decided to adopt a new procedure under which references to it in individual cases can be minimised."

"Under the new scheme, exemption under Section 4(3)(vi) (a) will be available to the employee concerned if the home leave and passage concessions granted to him by the employer are in accordance with the specific rules made by the employer and if those rules are approved by the Government. Once the rules are approved by the Government, all that the employee will have to do to secure exemption from tax is to furnish to the Income-tax Officer concerned, at any time before the assessment of the relevant year is completed, a certificate from his employer stating: (i) that the amount for which exemption is claimed represents only the free or concessional passages for the relevant home leave and does not include any other expense or provision; (ii) that the rules made by the employer, in accordance with which free or concessional passages for home leave are provided, had the approval of the Central Government on the date the journey from India was performed by the employee and/or his wife or children; and (iii) that since the receipt of approval of the Central Government, no modification in the rules, with reference to home leave or free or concessional passages, has been made without the prior approval of the Central Government."

Details to be Given

"In order that the rules made by the employer in this regard should receive and retain the approval of the Central Government, the rules should provide specifically for the following matters, namely: (i) the names or categories of employees who are entitled to home leave and free or concessional passages; (ii) minimum period of service after which only an employee becomes entitled to home leave and passage concessions; (iii) the maximum duration of the home leave admissible on each entitlement; (iv) normal interval between two successive home leaves and the specific circumstances in which the normal interval may be lengthened or shortened in any instance; (v) the nature of the passage to be provided and how they are to be determined for each employee; (vi) the maximum number of passages allowable to an employee and his family—in particular, for children—on each occasion of home leave; (vii) the nature and extent of any concession, other than the cost of passage to and fro, admissible to the employee on his home leave; and (viii) any other matters relevant thereto."

"The Government may, before according approval, require modification of any provision contained in the rules submitted to it for approval as it may consider necessary. In approving the rules, the Government will see generally whether the provisions in the rules are reasonable, having regard to the different categories of employees, the nature and circumstances of the businesses, the practice of the employer before the existing conditions were imposed, and the normal practice in similar under-

takings, etcetera. All applications for approval should be addressed and sent direct to the Deputy Secretary to the Government, Ministry of Finance, Department of Revenue, New Delhi. The applications should be accompanied by three copies of the rules made by the employer. In most cases of old employers, the existing rules would have been in operation from before 1st April, 1955. Where, however, some changes affecting home leave or free or concessional passages have been made after that date, a copy of the rules operative on 31st March, 1955, should also be submitted along with the application."

Leave Provision in Contracts

"The approval of the Central Government to the rules will take effect from such date as the Government may decide. It is possible that, in some cases, home leave or free or concessional passages may be regulated not under the general service rules or under rules specifically made therefor, but under provisions incorporated as specific terms in the contracts of employment, or in any separate written agreements. In such cases, the persons concerned wanting to avail themselves of the new scheme will have to submit the contracts or written agreements to the Central Government for approval and the procedure outlined above in regard to rules made by the employer will apply *mutatis mutandis* to such cases also. The original conditions dated 21st November, 1955, will continue to apply in all cases to which the new scheme is not applicable."

Mr. Nehru on Socialism

New Delhi has not yet recovered from the Christmas and New Year holidays, because in their wake came the general exodus to Indore for the annual session of the Congress. Things get slack when the Prime Minister is away from the capital. Last week, almost all the Ministers were out of New Delhi. The Prime Minister's speech in Indore clarifies the Congress conception of socialism. This is what Mr. Nehru said: "Socialism should grow in India in a way suited to the Indian climate, the Indian soil and the Indian people. In establishing the firm roots of Socialism in Indian soil, one could not get away from our 10,000-year-old past. We do not believe in pulling down the few who may be better off for the moment. Socialism means that we take all the people forward and not pull anyone down. I do not like a big gap between the high and the low. But I will not take any step which might result in the pulling down of a few but which would interfere with the larger objective of taking all the people forward. At the same time, one has to guard against the bullock cart mentality, which amazingly still persists even among those people who have no wish to go about in bullock carts. This bullock cart mentality is a dangerous thing, as it could create many obstacles in the march to progress of poverty-stricken people in India."

The Prime Minister's statement may or may not do much to restore confidence, which has been badly shaken by statements such as in the second five year plan, which says: "The basic criterion for determining the lines of advance must not be private profit but social gain, and the pattern of development and the structure of socio-economic relations should be so planned that they result not only in an appreciable increase in national income and employment (or taking all the people forward) but in greater equality in income and wealth."

Describing the second plan as a "gamble", Mr. Nehru said that the gamble could only be won by hard and sustained work. "It is through perspiration and even blood that we have to achieve the great targets outlined in the plan." But Congress Governments have often undermined the basis for hard and sustained work. It may be a paradox that the men in almost all Government undertakings worked harder and more efficiently in the past than they do now. The Finance Minister recently cited a case in Parliament of a Government official working at the rate of one hour a day. In the nationalised Life Insurance Corporation, business completed in a month is generally less than one-third of the business proposed.

Obligations of Workers

In its latest book, called *Twentieth Century Socialism*, the British Union of Socialists says: "Today most socialists would agree that the day is past when workers could talk only of their rights; they know that obligations must be accepted as well. All the pressures for higher productivity, all the propaganda that a rising standard of living depends on increased production, have hammered home the point."

"Only two questions are relevant to economic life—'How much is produced?' and 'How is it distributed?' These are in fact the questions on which socialists have concentrated. But.....two further

questions immediately call for a reply—'What is produced?' and 'How is it produced?'. Their neglect accounts for the topsy-turvydom in our production priorities. It accounts, too, for bad relations in industry, for the failure of many workers to find an interest in their work, for their indifference and cynicism. Talk of freedom and fellowship is fine on Sundays, but what has it to do with the weekly chores of earning a living." As the debate in Parliament on railway disasters show, the Government has been sadly neglecting this aspect of the problem, what is produced and how is it produced? There is much talk of discipline. There is also much talk of hard and sustained work. Yet no attempt has been made to enforce discipline or to make people work."

Bertrand Russell, who can hardly be accused

of the "police State" mentality, says: "I have come to realise that freedom is a principle to which there are very important limitations, of which those in education are in a certain sense typical. What people will do in given circumstances depends enormously upon their habits, and good habits are not acquired without discipline. Most of us go through life without stealing, but many centuries of police discipline have gone into producing this abstinence which now seems natural." As long as discipline is not enforced, the slogan of hard and sustained work will remain merely a slogan.

Heavy Engineering Works near Durgapur

It was recently reported that the A.C.C.-Vickers-Babcock Private Ltd. would build a heavy engineering works in the vicinity of Durgapur to manufacture cement-making machinery, mining machinery, large pumps, heavy gears, steam generating plant of all types, pressure vessels, cranes and mechanical handling equipment. The following are some of the items the new company proposes to make. The general mining manufacture programme includes jaw, hammer and road crushers, vibrating and rotary screens, rubber belt, shaking, screw, and vibrating conveyors, rotary and stationary dryers, blowers, dust collecting fans, grinding mills, including ball mill compartment tube mills, cyclones and air separators. The large range of cement-making machinery will include the mechanical portions of windens up to a diameter of 18 feet, the capacity being eight windens a year; cags and skips of medium size, hawlers, particularly direct and endless rope hawlers, idlers and end pulleys, and drain pumps.

It is also proposed to manufacture coal-cutting machinery, boiler plant, low head, large capacity water pumps for irrigation, pressure vessels for the oil, paper, sugar, pulp and chemical industries, miscellaneous machinery, particularly that required for the sugar and chemical industries, industrial kilns of special design, and a foundry for grey iron. The new undertaking will be equipped with plant which can handle boiler plates of up to three inches thickness, with a correspondence to boiler pressure of 600/1,000 lbs. a square inch. Boilers below this pressure are already being manufactured by an Indian company in collaboration with the International Combustion Company of the U.S.A.

Dyestuffs Industry

The development of the dyestuffs industry was discussed here by representatives of the Ministry of Heavy Industries, and dyestuffs manufacturers. The manufacturing programme submitted by each firm was first discussed separately with representatives of the unit. Thereafter there was a joint meeting of all the manufacturers. They have agreed to submit their final proposals to the Government in the light of these discussions. It is expected that licences under the Industries Act will be issued to them after the next meeting of the Licensing Committee on 23rd January, 1957.

It has been agreed that special emphasis should be laid on the manufacture of the intermediates required for the production of dyestuffs. Some of the more important intermediates will be produced by a central factory which the National Industrial Development Corporation will set up, while others will be included in the manufacturing programme of the makers of dyestuffs themselves. Further discussions on technical and economic questions will take place later this month to finalise the programme of the National Industrial Development Corporation project.

In October, 1956, the Government of India decided that the National Industrial Development Corporation should undertake the manufacture of primary intermediates. It asked firms in the private sector to indicate the kind of development they would undertake for the production of late intermediates. The meeting discussed the targets for the annual consumption of dyes by 1965 on the basis of the reports submitted to the Government by the expert teams from abroad. The general consensus of opinion was that these targets should be as follows:

Azob	3,000 tons a year
Basics	750 tons a year
Naphthols	1,250 tons a year
Fast Bases	1,250 tons a year
Vats	1,200 (Absolute)
Sulphur Black	2,150 (Absolute)
Other Sulphurs	225 (Absolute)

The attention of the industry was also drawn to the importance of keeping prices reasonable in spite of the cuts in imports which had been imposed to save foreign exchange. It was also informed that firms holding import licences for finished dyestuffs would be given facilities to utilise the same foreign exchange for the import of interme-

diates so that the total supply of dyestuffs could be increased.

Agricultural Targets

The Deputy Chairman of the Planning Commission, Mr. V. T. Krishnamachari, last year suggested that the target for agricultural production should be raised without an additional allotment of funds and prices of agricultural products then brought down. A conference of Agricultural Ministers, held in Mussoorie in the summer, felt that additional allocation of finance and price incentives were essential for increased production. This course was unacceptable to the Planning Commission and to the Government of India. The Planning Commission thereafter held a series of conferences with representatives of States in order to adjust the allocation of funds so as to raise production by 15 percent above the targets originally fixed. These conferences were an improvement over the Mussoorie conference in that the participants did not demand additional funds. They did, however, keep up the Mussoorie slogan of price incentives. The fixation was demanded not of higher prices but of minimum prices. In other words, it was an attempt to reverse Mr. V. T. Krishnamachari's plan, for if minimum prices were fixed there could be no reduction below the minimum. Fixation of minimum prices at levels lower than those prevailing now would lead to a reduction in the acreage of the particular foodgrains concerned.

An important aspect of the food problem is often ignored. Large quantities of foodgrains are lost through bad storage, being eaten by rats, birds, monkeys, etcetera. An all-India campaign is likely to raise the supply by almost 15 percent.

Developing Small-scale Industries

The Central Board of Small-scale Industries will hold a three-day session in Madras from 11th January. The Commerce Secretary, Mr. S. Ranganathan, will preside. The plan to use the organisation of the community projects for developing and expanding small-scale industries is the main item on the agenda. It is proposed to start such industries in every State, and for this purpose Rs. 2 lakhs to Rs. 3 lakhs may be allocated.

Visit of American Industrialists

A high-powered team of American industrialists, headed by the President of the American Steel Corporation, Mr. Benjamin Fairless, will arrive here on a three-day visit on 22nd January. Its members are expected to meet the Finance and Commerce Ministers. The Ford Foundation is arranging for a labour group consisting of three Americans, one Briton and two Swedes to visit India this month and assist the Central Labour Ministry in its plan for educating workers.

London

DRAIN ON GOLD AND DOLLAR RESERVES STOPPED

LATEST FIGURES LOWER THAN EXPECTED

(FROM OUR LONDON CORRESPONDENT)

MR. Macmillan's "evasive action" against the drain on the sterling area's gold and dollar reserves was taken just in time, for the year-end figures just released by the Treasury, though they show that in December the reserves rose by \$168 million to stand at \$2,133 million or slightly higher than a year earlier, are rather worse than had been expected. The actual position in December was that the reserves gained \$561 million from the International Monetary Fund and \$6 million of U.S. defence aid, and against this we paid out \$189 million in respect of the U.S. and Canadian debt service, \$49 million in gold to the European Payments Union in respect of the November deficit and a further \$3 million under the bilateral settlement with E.P.U. creditors. Allowing for these adjustments, there was a net loss on current account in December of \$158 million, which compares with November's net loss of \$253 million and the total gold loss was as much as \$279 million.

Fortunately, there are some redeeming features. According to Treasury officials the bulk of the loss occurred before 11th December, when the I.M.F. drawing was approved, the "acute speculative pressure" ceased soon afterwards, and although the movement of money has not yet been reversed the outward drain has been virtually stopped. A big improvement has also taken place in our E.P.U. account and December's deficit of £8 million was only one-third that of November. Finally, the reserves in January may well gain reinforcement to the extent of \$104 million, the interest on the American loans, for which we have asked a waiver.

Balance of Payments Outlook

What about the outlook? Whitehall officials point out that the trade position remains good. The whole of the gold and dollar drain in 1956 has been due to capital movements. The balance of payments on current account has been in surplus not only in the first half-year but in the third quarter as well, and the favourable trade figures for October and November indicate that the surplus continued up to the end of the year. The true loss of \$725 million from the reserves in the year 1956 was, in fact, more than offset by repayments of both

sterling and dollar debt. By no means all this was due to a flight from the pound. For instance, India spent some £150 million (equal to \$420 million or more than half the total gold loss) on imports under her development plan. China reduced her large sterling holdings quite heavily in order to make advances to Egypt. On the other hand, Middle East sterling balances have probably been withdrawn mainly in order to get out of sterling. These were probably the largest elements in the repayment of sterling liabilities, though details will not be known until the balance of payments figures for the second half of 1956 are published. Well over \$100 million of dollar debt was also repaid in 1956. The reserves are still slightly higher than they were a year ago, and there are large reinforcements at hand. First, the "line of credit" of \$500 million which the Export-Import Bank in Washington has agreed to put at the British Government's disposal for the purchase of dollar oil and other commodities. Secondly, the International Monetary Fund has put up a stand-by credit of \$739 million which could be used to support sterling if necessary. And meantime sterling continues strong on the exchange market.

Production Index Steady

The rate of industrial output hardly changed in November, according to the latest Treasury estimates. The index of production for the month is provisionally put at 144.145, against 142 in October and 147 in November, 1955, while the seasonally adjusted figure (which allows for holidays) is 136.137, almost exactly the same as the average for the first eleven months of 1956. Although total output was little changed there were sharp differences in particular industries. The output of motor-cars was 22 percent lower than in 1955 and that of commercial vehicles was 26 percent down. Production of sulphuric acid was 9 percent up, which is in line with the high rate of output in the chemical industry as a whole in 1956. The latest index figures available for particular industries are for October and show a marked rise in utilities (gas, water and electricity).

While total output remains steady there are signs that the proportion devoted to investment may be falling. According to the Board of Trade's provisional figures, the total area of new factories approved in the last quarter of 1956 came to 15.1 million square feet. This compares with 17.2 million square feet approved in the same period of 1955. The latest figure is subject to revision as some of the schemes which have been included are only rough estimates. But the downward trend is confirmed by the annual figures which (in million square feet) are as follows: 71.1 in 1956, 91.6 in 1955, 71.0 in 1954 and 39.0 in 1953. It seems we are past the peak.

Budget Problems

This is the background against which Mr. Macmillan is now considering his budget problems. The Government's ordinary expenditure in the first three quarters of the current Budget year was £3,776 million. This exceeds by £585 million the total revenue to date. A year ago expenditure was £3,411 million, and the deficit £371 million. Higher expenditure is partly due to the Suez crisis, which Ministers said in November would cost £35-£50 million. The national debt charge is up £65 million to £570 million, reflecting the rise in interest rates. The shortfall "below the line", where the main items are loans to State boards and local authorities, is down from £434 million to £341 million. Loans to nationalised industries, other than the Coal Board, under this year's Finance Act, have reached £154 million. The estimate for the full year was £350 million.

Government departments are now in the final stages of preparing their estimates for 1957-58, on which the next Budget will be based. They are under instructions from the Treasury to exercise the most stringent economy. The departments have been advised that the Government's economic policy continues to be founded on reducing excessive claims by home demands on national resources. Ministers must, therefore, set an example by making all possible savings in the public expenditure for which they are themselves responsible. Present forecasts suggest that the Government's total expenditure for 1957-58 will rise substantially above the current year's estimate, which was £4,737,685,000. This increase will arise largely on services, particularly the social services. On these it is impracticable to avoid annual increases in cost without major changes in policy. The supplementary estimates will probably offset to a large extent the saving of £93,250,000 on the Budget figures as published, which Mr. Macmillan has so far announced towards his "target" of £100 million.

Wage Claims and Prices

The Government's biggest headache, however, continues to be the danger of inflation and the wage-prices spiral. Recent increases in the prices of food, including bread, sugar and tea, have intensified trade union feelings that wage demands must be pressed if living standards are to be maintained. And these price increases have weakened the influence of the moderates, who see the best hope of maintaining living standards in trying to fight down inflation. Most trade unionists accept that it is the purchasing value of wages rather than their nominal value that matters to the wage-earner. But, for a time at least, each group that can succeed in getting more money for itself is in fact better off. The pre-requisite of a period of wage-stabilisation is confidence in the Government's general ability to hold down prices. At the moment this confidence does not exist, and no trade union wants to be left behind in the scramble for whatever can be had before things get worse. Petrol rationing has added to feelings of insecurity by making a good many people fear for their jobs.

and the sharp increase in the price of petrol has added to fears that prices may go on rising.

In the face of this, the official effort to explain away the probable effects of the Suez crisis can hardly expect a suitable response. Examining the prospects for early 1957, the Treasury's Bulletin for Industry states that it is hard to assess what effects the Suez emergency will have on the retail price index, but estimates that there will be a total increase of up to three-quarters of a point. A number of price increases due to other causes are also foreseen, among them certain seasonal rises, the removal of the milk subsidy and the new prescription charges. The general prospect was that the index was likely to rise slightly more than seasonally early in 1957. The Bulletin states: "The main cause, however, is the purely temporary increase in the petrol and oil duty, and it is therefore of the utmost importance that any small rise in the index is not presented as justification for increases in wages and profit margins, which in themselves would tend permanently to raise the price level."

Orders for Machine Tools

The value of new orders for machine tools placed during September showed another fall. According to figures issued by the Machine Tools Trade Association, home orders were worth £4.36 million and export orders £1.88 million. The figures for both home orders and the total are the lowest for at least two years, while that for export is the average for 1956 but slightly higher than the average for 1955. On the other hand, deliveries have begun to rise so that the total order-book of the industry has fallen to £102.9 million (or a little under sixteen months' work). This is the lowest figure since January, 1956, when it stood at £101.4 million. It looks as though the peak demand is past and that the order-book will continue to decline in 1957.

Shipping Insurance Changes

Lloyd's underwriters and London marine insurance companies have agreed to reduce the scale of premium rates for passenger vessels under construction in the U.K. and abroad. The reductions vary between 20 percent and 35 percent, and are believed to arise from the feeling among insurers that higher ship values and longer building periods have led to an undue increase in the premium rates. The scale had not been revised since 1947 and underwriters decided that this type of insurance could not be covered more cheaply, and no doubt lead to additional business. At the same time, a special concession of 20 percent for passenger vessels equipped with fire sprinklers has been withdrawn because so many other methods are now being applied—such as the use of non-inflammable materials—that it seemed unfair to single out one device for a premium concession. The Institute of London Underwriters has also announced the withdrawal of a surcharge of 10s. a £100 imposed on 31st October, 1956, on all voyages via the Suez Canal, to from or transshipping at ports in Egypt, Israel, Jordan, Lebanon and Syria. At the same time, the Institute announced increases in the basic rates for these voyages. The new rate is 5s. a £100, compared with a range of 1s. 6d. to 2s. a £100 before the nationalisation of the Canal in July. It also announced amended rates for voyages to, from or between ports on the China coast.

Car H.P. Sales Drop

Petrol rationing is reflected in a sharp fall last month in the total of hire-purchase contracts for motor vehicles. According to Hire Purchase Information, the December total was 30,515, compared with 50,352 in November and 46,369 in December, 1955. Business in new cars dropped to 2,432 from 5,310 in November, and in used cars to 14,105 from 24,460. Total transactions for new commercial vehicles was 1,941, against 3,501, and for used vehicles 2,510 against 3,931.

New Capital Issues

New capital issues in 1956, as compiled by the Midland Bank, amounted to £296 million, the lowest total since 1951 and comparing with the record total in 1955 of £567 million. As a result of the decision to finance the capital expenditure of the main nationalised undertakings directly from the Exchequer, no new money was raised last year by public boards in contrast with more than £200 million raised by public boards in each of the four previous years, the figure for 1955 being £297 million. Local authorities, however, raised in the market £54 million last year against £9 million in 1955, chiefly because of the Government's decision to require local authorities to attempt to borrow on their own credit in the market before having recourse to the Local Loans Fund. The 1956 total excludes the sums being raised by Imperial Chemical Industries and London and Overseas Freighters as the first subscriptions to these are not payable until the new year. Issues for home production were maintained almost at the high level of the previous year—£158.5 million against £163.5 million.

I.C.I. Stock Offer Over-subscribed

Applications for £40 million of 51 percent convertible unsecured loan stock in Imperial Chemical Industries resulted in a subscription of six times that amount through nearly 70,000 separate applications. The loan, maturing in 1977-79, was offered at 96 percent.

RAYON YARN IMPORT CUT CRITICISED

GROWTH OF INDUSTRY LIKELY TO BE HAMPERED

(FROM OUR BOMBAY CORRESPONDENT)

THE decision to cut imports of rayon yarn has been criticised here. Apart from reducing the supply of a vital raw material for a growing industry, the local yarn market has already reacted and prices have risen by about two annas a lb. since the import policy was announced. Actually, the price level had shown signs of rising over the last few weeks in anticipation of the import policy. The poor offtake recently of rayon piecegoods has exerted a restraining influence, but it seems likely that with an improvement in cloth sales, the prices of yarn will increase still further. The decision to link the issue of import licences with the export of piecegoods is likely to remain ineffectual. The Indian industry is poorly equipped to compete in export markets, and it is highly unlikely that foreign sales will amount to much. The position will be aggravated with the restricted supplies of yarn.

The rayon piecegoods industry, which is given much importance in other countries, has been neglected here. It suffers from several disabilities, the most important of which relates to the supply of yarn. Even in normal times, imports were restricted to an overall ceiling. The position is complicated by the fact that licences have been issued to the industry as well as to the trade. This has led to speculative activity and the trade has often held the industry to ransom in times of scarcity. Price fluctuations in the Bombay market have been wide and some say that the trade is partly responsible for the slow and painful growth of the industry. No industry can flourish unless it is assured of regular raw material supplies at a reasonable cost. The solution, of course, is the development of the yarn industry within the country. A start has already been made in this direction, but a great deal more remains to be accomplished before domestic production bears any relation to the demand. The industry attempted to take the initiative and opened negotiations with an Italian firm to set up a yarn-producing plant as a joint venture, but finance proved to be a stumbling block. The main difficulty is that most of the mills are small units which find it difficult to contribute their quota of the Rs. 6 crores of investment envisaged for such a project. The biggest unit controls 600 looms and the smallest has 25 looms. Their approximate annual turnover amounts to a little over Rs. 1 crore and Rs. 6 lakhs respectively. Their difficulty in incurring a large outlay is therefore understandable.

Yarn-Producing Unit

It is said that a strong case exists for Government aid. Such aid could be made available through one of the State-sponsored financial institutions. The object would be to set up a yarn-producing unit which would be run as a co-operative venture with the mills participating through the Silk and Art Silk Mills Association. As long as the industry depends on foreign yarn, it is necessary to ease the circumstances of import. This involves a liberal licensing policy with preferential treatment for the industry. Another aspect which needs immediate attention is the import duty on yarn. At present, a duty of 36½ percent *ad valorem* is levied, which is the highest rate of duty for such a commodity in the world. The position is further complicated by the import duty in Bombay port not being calculated on the invoiced value, but on the market price prevailing in the city at the time of arrival of the consignment. This is an extraordinary procedure. It means that if the market price is particularly high because of speculative activity or temporary scarcity, the mills have to pay exorbitant duty which is far in excess of the statutory 36½ percent. It is on record that mills have had to pay duty which works out to 50 percent to 60 percent of the invoiced value. Moreover, the market value is subject to fluctuations within wide limits and it is impossible to forecast what it will be on the day a particular consignment arrives. This means that the mills are unable to compute their production costs in advance and therefore unable to enter into forward commitments with any degree of safety.

Obsolete Equipment

All these factors have impeded the growth of the industry, and it has been unable to rehabilitate its plant since it was first installed as far back as 1937. It appears that the industry is now out-of-date by approximately 20 years, perhaps more, because the plant, when installed in 1937, was even then not new. In these circumstances, it is difficult to compete in foreign markets and export targets become mere hopes. Furthermore, the uneconomic working of the industry is paid for by the domestic consumer.

The rayon industry today threatens the supremacy of cotton textiles and the demand for synthetic fabrics is steadily growing. Man-made fibres earn vast sums of foreign exchange for the main producing countries and it would be unwise to underestimate their importance. It is to be hoped that the Government will give its attention to this industry and help it to its feet.

Better Demand in Cloth Market

There seems to have been a mild revival in the cotton textile market. Bigger enquiries have been

received from upcountry centres, mainly Delhi, Kanpur and Calcutta. These refer principally to the coarse and medium varieties, while fine and superfine qualities remain neglected. Actual transactions, however, have been few. It is known that stocks in upcountry centres are low, but actual purchases have not been made so far because of the stringency in the credit market. Business for forward delivery has been placed with only a few selected mills, while other units are faced with mounting stocks as are most of Bombay's wholesale dealers. It is believed, however, that demand will broaden in the next few weeks.

Meanwhile, mills are reluctant to increase their stocks of foreign cotton pending the disposal of accumulated stocks of fine and superfine cloth. Fresh business in foreign cottons transacted over the last ten days does not exceed 1,000 bales. There is also a general tendency to await the import policy for Egyptian and sterling area cottons for the January-June, 1957, shipping period. It is reported, however, that the Government will allow an import quota of 100,000 bales of East African cotton. It is feared that supplies may not be available to this extent from East Africa, because most of the crop in that country has already been sold. The position of domestic cottons is causing concern to growers. Arrivals in consuming centres have been heavy and prices have shown a downward trend. The Saurashtra crop has still to be marketed and growers there are hoping that the Government will announce an export quota to relieve the easy supply position in this country. The qualities involved are Dhollera, Kala Gin and Wagad. But even if an export quota is announced, it is doubtful if substantial exports will materialise as foreign enquiries have been somewhat restricted of late.

Uttar Pradesh

PROTESTS ABOUT FOODGRAINS PROFITEERING

DECLINE IN AGRICULTURAL YIELDS

(FROM OUR LUCKNOW CORRESPONDENT)

LARGE-SCALE maldistribution of foodgrains is reported in Uttar Pradesh. The State Government has been selling on an average about 1,000 tons of foodgrains through fair price shops, which should meet 75 percent of the wheat requirements of the entire population in about 40 towns and cities. In actual fact, however, the bulk of the purchases have been made by fake consumers, and the grain re-sold in the open market at exorbitant profits. The situation has led to widespread protests, particularly since the price of coarse grains has also shot up. In the urban areas, gram, bajra and other subsidiary grains are selling at almost the same price as wheat—about 2½ seers to the rupee. The immediate reason for the rise in coarse grain prices is said to be the purchases made by certain starch mills outside the State.

Meanwhile, doubts have been expressed whether investments in agriculture have not started to yield diminishing returns. U.P., as is well known, is primarily an agricultural State and the emphasis in the first plan was wholly on agriculture. But the fact remains that it has not been possible so far to raise the yield an acre to what it was even 50 years ago. The per acre wheat yield was 10.90 maunds in 1911-12 at the end of 1954-55, the latest year for which figures are available, it was only

9.64 maunds. The fall in the rice yield has been more marked. From 9.28 maunds an acre in 1911-12, it came down to 6.12 maunds in 1954-55. Similarly, the yield of barley fell from 12.8 maunds to 9.61 maunds. The only exception is sugarcane, whose yield has increased from 216.3 maunds in 1914 to 335 maunds in 1954. Paradoxically, there has at the same time been a sharp decline in the sugar production. The question which is worrying the agriculture Ministry is why in spite of a 10 percent increase in the total acreage under cultivation and another 10 percent rise in the net irrigated area, there has been no corresponding increase in the production of cereals. Officials are inclined to explain away the failure by the existence of a large number of uneconomic and sub-economic holdings in the State whose owners do not have either the resources or the incentive to make further investments in agriculture.

Enquiry into Middle Class Expenditure

According to an enquiry conducted by the State Department of Economics and Statistics, the per capita expenditure on education in middle class families is less than on other items. The expenditure on food is about 48 percent, on clothing and footwear 16 percent, on fuel and light 4.7 percent, on housing 5 percent and on education 4 percent. The enquiry covers urban middle class families belonging to the professions of teaching, law, medicine and journalism. It was conducted among about 5,000 families, but the results relate to only 1,100 families, as the rest dropped out in the course of the inquiry. The families whose returns were ultimately utilised by the Department came to about 35 percent in the case of teachers, 32 percent journalists, 19 percent doctors and 10 percent lawyers. Fifteen towns were covered.

Narayani Irrigation Scheme

The Rs. 25-crore irrigation and hydel scheme on the Narayani, in Nepalese territory north of Deoria district, has been approved by the Government of India and the survey staff has already left for the site. Bihar had been insisting that the scheme be undertaken immediately since the canal system of the Narayani is the only source of irrigation in Saran and Chhapra districts. The canal, however, has to pass through 40 miles of U.P. territory, where the subsoil water is very near the surface. The U.P. Government has, therefore, laid down certain conditions. One of these is that the canal should be pucca in Deoria district, to avoid seepage and consequent disturbance to the subsoil water level. The barrage is also to be under the administrative control of U.P. since it is to be located in the territory of the State. The expenses, however, are to be met by Bihar so far as the canal is concerned, as Bihar stands to benefit most from it. The cost of the hydel project will be met by U.P.

Labour Disputes in State Undertakings

U.P.'s Labour Minister, Acharya Jugul Kishore, has announced that the Government will shortly set up consultative and conciliation machinery for the settlement of labour disputes in State-owned undertakings. In the undertakings, there will be bipartite machinery, consisting of labour representatives and officers of the concern. There will also be a permanent conciliation board, which will function like other conciliation boards for the settlement of disputes in the private sector.

Election Prospects

No serious electoral threat to the Congress Party is expected from the various opposition parties in the State, but in the Congress Parliamentary Board itself an open rift has developed. The minority group in the party, led by Mr. Charan Singh and Mr. Mohanlal Gautam, has had several of its candidates turned down, while the majority group led by Mr. C. B. Gupta has succeeded in getting all its candidates accepted. It is too early to say whether the disappointed group will go the extent of openly opposing the official Congress candidates as in Bihar, but even if it does, the Congress is expected to win by a comfortable majority. Efforts for a straight fight against the ruling party have not been successful because the People's Progressive United Front, which is taking the lead, has not been able to secure the support of the three leading opposition parties, namely the P.S.P., the Jan Sangh and the Socialist Party. The demoralisation of the opposition generally is reflected in the Socialist Party's concentration on satyagraha after the elections in preference to fighting the elections. Satyagraha centres have already been established by the Party in many villages and volunteers are being enrolled. The Socialist campaign is particularly directed towards the sugarcane growers who are being told that sugar, according to the Tariff Board formula, should sell at Rs. 27 a maund if cane is purchased at Rs. 1-12. The Congress Government, according to the Socialists, is helping the millowners both ways, by fixing the sugar price at Rs. 30 and lowering the cane price to Rs. 1-7.

Consolidation of holdings is another subject on which opposition propaganda continues. The villagers, attached to their small holdings, have not taken kindly to the Government's consolidation measures. When persuasion failed, compulsion was decided upon, and compulsory consolidation is being carried out in certain districts. Both the P.S.P. and the Socialist Party have alleged extensive corruption in the Consolidation Department. There are many Congressmen also who do not reject the complaint outright. About 34.8 million voters will go to the polls between 25th February and 12th March in U.P. The polling is being spread over six days. The location of 45,000 polling stations and lists of election personnel are being finalised. There are 341 constituencies, which will return 430 members to the State Legislative Assembly and 86 members to the Lok Sabha.

Jute

EASIER TREND IN GUNNY MARKETS

DOUBTS ABOUT RAW JUTE SUPPLIES

CONTINUE

AS had been expected, the market for manufactured goods eased as soon as end-of-the-month covering was completed in December and January opened on a hesitant note. The news that several mills had been promoted from the C group to the A-B groups brought about a fall in the speculative market for hessian, because there will now be a greater quantity available for delivery in the fatka. It seems unlikely, therefore, that there will be the same tightness at the end of January as has been experienced recently. The upgrading of these mills applies, of course, only to hessian, but the fatka quotation for B Twills has declined in sympathy, although not to the same extent.

Another factor which appears likely to influence the market is the news that progress is being made with the clearing of the Suez Canal. The closure of the Canal brought a spate of buying as a provision against shipping delays and shortage of shipping space, because of the longer voyages ships have to make during the period the Canal remains closed. A lot of buying has thus been done ahead of the normal time. As the opportunity for reopening the Canal approaches, there is bound to be a fall in demand until spot and float stocks are back to normal. Added to that is the fact that we are now entering a period when demand ordinarily eases, so there must be some doubt whether the present prices for manufactured goods can be maintained much longer. Thoughts along these lines may be responsible for the bull unloading which is reported to have taken place in the past few days. Normally the reduction in mills' stocks of manufactured goods at the end of December should have kept the market firm, but the fact that it did not do so seems to indicate that the speculative element is taking a longer view. That may also be the case with the mills, for some selling pressure from them has been reported.

There is, however, a factor which may tend to counteract a reduction in the demand for manufactures. That is the question of raw jute supplies. It is generally felt that supplies of fibre, including bimli and mesta, available from Indian sources are not sufficient to carry on with until the 1957 crop is available, and that the high cost of Pakistani jute is likely to prevent any serious fall in the price of Indian jute. Supplies of Indian fibre coming at present, except for mesta, are meagre even for this time of year, but even if one accepts the view generally held that this is because jute is being kept back and not because the crop is less than estimated, it is not a satisfactory position for the mills. Reports from the districts indicate that those engaged in the jute business at all stages are holding stocks in the expectation of obtaining higher prices later, but there is some doubt whether they will continue to hold if the prices of manufactures drop. Except for the growers, whose position is better than it has ever been, the holding power of those in the trade has been much reduced by losses in the past two or three seasons. Evidence of their weakness has been seen even in recent weeks, when a temporary drop in the fatka quotations for manufactures has brought out nervous holders willing to unload. Next month, if the weather is suitable, ploughing for the new crop should begin in the early districts, and if, at the same time, there is a recession in the demand for manufactured goods, lower prices for raw jute might be seen in spite of the present beliefs.

I.J.M.A. Stocks of Manufactures

Stocks of manufactured goods held by mills reporting to the I.J.M.A. declined in December by 5,100 tons. The reduction in hessian stocks was 4,700 tons, bringing them down to 20,000 tons, the lowest figure for many years and just a little above two weeks' output. This indicates a strong position for hessian, but that is offset to some extent by the fact that stocks in the U.S.A. have been increasing over the past few months and now stand at a higher figure than normal. Some expected that stocks of sacking would increase as shipping orders had not been very good; it is reported that the fall of 2,000 tons is largely due to despatches for internal consumption. Stocks of other manufactures increased by 1,600 tons and are more than double what they were at the end of December, 1955.

THE JUTE MARKETS

Manufactured Goods: Not much enquiry from overseas has been reported during the past week. In sacking, some local covering business in cornsacks and B Twills was reported. In hessian, there was some American enquiry. The announcement that a number of mills had been promoted to the A-B groups brought about a fall in the hessian fatka quotation, as it meant that more hessian will be available for delivery in that market, where 40in. 10oz. A-B group hessian is the gambling counter. The influence of this regrouping may be seen in the fact that it was sufficient to offset the bullish effects of the drop in hessian stocks.

Quotations on Wednesday morning were as follows:

	January	Jan.-March	April-June
	Rs.	Rs.	Rs.
40in. 8oz.	36-8	35-14	35-6
40in. 10oz.	45-2	44-11	44-8
B Twills	119	119-4	118-14
Heavy Ceers (Plain)	119	119	119
A Twills	143-8	143-12	143
Liverpools	136-8	135-8	134-8
Cornsacks	121-4	121-4	120

Raw Jute: Mills continued to buy more or less daily throughout the week. The principal demand was for Northern jute and Murshidabad Tossa ex agencies. A fair amount of business was done at Rs. 31-12 for Assam, Rs. 31-8 for Northern White jute and Rs. 32-8 for Murshidabad Tossa. Mesta, bimli and jungli all came in for attention and prices remained steady until Tuesday afternoon, when there was some easing in sympathy with a drop in the gunny fatka quotations. This was particularly so in the case of mesta, the price of which fell by eight annas on Tuesday, while Assam and Northern showed little change. Large quantities of mesta are being offered for sale at present, but offers of Assam, Northern and Daissee jute are rather scanty.

Quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis	Shipment.
	Bottoms.	
Upper Assam	31-12	Jan.-Feb.
Lower Assam	32	"
Northern	31-8	"
Murshidabad Tossa	32-8	"
Daissee	33-8	One month
Daissee Mesta	27-12	"
Purnea Mesta	27-4	Jan.-Feb.
Jungli Mesta	26-12	"
Northern ex Calcutta	31-8	One month
Bimli	27-12 F.A.Q.	Jan.-Feb.

Arrivals in Cossipore during the week ended 8th January were 673 wagons, mostly jute and mesta, of which the condition was not satisfactory. Buyers on behalf of mills were very active throughout.

Mofussil: It is reported from all districts that good supplies of mesta are coming forward. On the other hand, imports of jute and tossa in the Northern districts are said to be below normal for the time of year, and in Purnea they are reported to be falling off. In most districts, the condition of imports is bad and stations in Northern Murshidabad district are said to be the worst. Rain has fallen in some places in central Bengal and, though it is too early for ploughing for the jute crop, it will help keep the soil in condition for the time when ploughing is due to start.

THE PAKISTANI JUTE MARKETS

BUSINESS RESTRICTED BUT PRICES FAIRLY STEADY

(FROM A CORRESPONDENT)

THE holiday period has naturally curtailed business and as a result prices have eased. Over this period, imports of loose jute into Narayanjanj have accumulated. Although they are still small for the time of year, there is more jute for sale than has been available for some time. In spite of this, and probably because of the strong holding power of the growers, the end of the holidays saw an attempt by loose jute sellers to increase their prices. So far, this has not been successful, but there has certainly been no reduction. The prices being paid for loose jute transactions on a reduced scale are Rs. 38 for Bottoms, Rs. 34 for B Bottoms, Rs. 32 for C Bottoms and Rs. 29 for X Bottoms, with some buyers paying up to 8 annas more. Kutchha bales are available from the mofussil areas at slightly higher prices, and business is reported in pucca

I.J.M.A. STOCK FIGURES FOR DECEMBER

The Indian Jute Mills Association reports that total stocks of jute goods held by mills at the end of December, 1956 were as follows:

Description	31st December, 1956	30th November, 1956	Increase over (+) or decrease from (-) last month	31st December, 1955
	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons
Hessian Cloth and Bags	7.02	20.0	8.83	24.7
Sacking Cloth and Bags	15.51	65.1	16.98	67.1
Others		11.5	9.9	
Grand Total (000 Tons only)		96.6	101.7	
			-5.1	

N.B.—These figures are based on replies received and represent all members of the Association and Ganga with estimates for three non-member mills.

bales at slightly better rates at the end of the week. Export Firsts have been done at Rs. 215, f.o.b. Narayanjanj, and Export Lightnings at Rs. 200 to Rs. 202. Export Hearts are quoted at Rs. 190 and Cuttings at Rs. 109. The pucca bale market for white jute shows a stronger tendency, with few sellers. In Tossa there is not very much interest. Quotations are Rs. 225 to Rs. 228 for Dundee Tossa 2/3 and Rs. 210 for Dundee Tossa 4. Output 2/3s and Output 4s are scarce and remain at a premium of Rs. 205 and Rs. 195. T. Cuttings are quoted higher than N. C. at Rs. 111.

Since overseas buyers are quoting very low prices, it might at first appear that the Pakistani shippers are in a difficult position. Export Firsts in pucca bales at Rs. 215 work out to about £119 c.i.f. Continent, whereas quotations there are about £115, with no buyers. On the other hand, as most people are square or even long, it is quite possible that business will be done for export at prices below the local parities. Reports from up-country areas indicate a scarcity of jute in mofussil agencies, which, if true, will be felt in Narayanjanj in a week or so. On the other hand, it is pleasant to note that the amount of moisture in loose jute has been reduced to reasonable proportions. This is generally a sign of a weaker market. Reports on the size of the crop still vary considerably but your correspondent is inclined to believe that there will be an overall crop of 6.5 million bales, which will in itself be barely sufficient, but due to the white crop having been very heavily rooted, there will be an excess of N. C. and a squeeze in white long jute.

The I. W. T. companies have altered their scheme of freight bookings so the turn-round of their barges has improved considerably. This, together with a better shipping programme for January than was expected, should help this market. Reports from overseas indicate that the gilt has disappeared from the afloat market, which now stands at as little as £1 above shipment prices. This probably refers mainly to Dundee where a considerable amount of afloat unsold jute was shipped during November and December, 1956.

The Pakistani jute mills continue to compete on a reduced scale with India for sales abroad and most of them appear to be fairly well sold up to the end of March in sacking. Hessian sales have not been so heavy, but most mills are reluctant to offer. In the local market, of course, where they have a monopoly, good profits continue. This market depends solely on the supply and demand balance in Karachi, which itself is controlled by the rather erratic coastal shipping position. Quotations are B Twills at Rs. 130, 45in 11oz at Rs. 57, 50in 71 oz/40in at Rs. 43. These rates are ex-mill, and to them must be added the 10 percent sales tax. The prices of goods from different mills can vary by as much as Rs. 5 since the local market shows a definite preference for different constructions from different mills. Pakistan's other profitable market—South Africa—has been buying mainly hessian, but it is expected that the Controller will be in the market again shortly. Premiums in South Africa for Pakistani sacking have been reduced, but they remain above the Calcutta market. The general feeling in Pakistan in jute and jute goods is bullish.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian	Cloth	Total
	Bags (Tons)	(Tons)	(Tons)
1st to 31st December 1956	4,373.0	35,245.8	39,618.8
1st to 30th November 1956	5,591.1	44,360.2	49,951.3
1st to 31st October 1956	4,782.7	31,516.7	36,299.4
1st to 31st December 1956	32,236.2	1,855.3	34,091.5
1st to 30th November 1956	45,041.3	1,717.9	46,759.2
1st to 31st October 1956	41,911.2	1,265.5	43,176.7

PLANS FOR INCREASING INDIAN RAW JUTE PRODUCTION

Dr. P. S. Deshmukh, Union Minister for Agriculture presiding over a meeting held recently in Delhi of the representatives of the Commerce, Community Development, Finance and Agriculture Ministries and the chairman of the India Jute Mills Association, said that in order to raise raw jute production to 5,540,000 bales, it was decided to increase the acreage under jute cultivation.

in the States of Assam and West Bengal. A concerted drive would be made to enlist the co-operation and assistance of the community projects and N.E.S. workers also in these jute-growing States. It was emphasised at the meeting that free or cheaper supply of seeds, fertilisers and agricultural equipments would also be necessary. The value of using fertilisers was stressed and it was decided to undertake top-dressing of jute with ammonium sulphate; the entire area under jute cultivation will be fertilised by end of the second plan period. The problems of the State Governments and those relating to the plan for production will be further discussed at a conference of the Secretaries of the State Agriculture Departments and Development Commissioners to be convened in Delhi soon.

THE FOREIGN JUTE MARKETS

GOOD PROSPECTS FOR NEW YEAR

(FROM OUR DUNDEE CORRESPONDENT)

THE year just commenced will be a good one for the Dundee jute industry, if present conditions continue. Seldom have both spinners and manufacturers entered a year with their order books for yarns and cloth in a more satisfactory state. The greatest difficulty with which the industry here has to contend is the labour situation. There is a definite scarcity to keep all the mills and factories employed fully. Some of the Hungarian refugees have been jute workers in their own country and there are a few of them being taken on, while others are willing to learn. Several firms in Dundee have extended their establishments and one or two extra mills and factories have been built and equipped with the latest machinery. The improvements in labour-saving devices over the past few years have virtually reorganised the industry. Weavers are now able to attend up to six or even eight looms, while at the spinning end the worker has little more to do than watch the machine doing the work in the case of most processes. The raw jute market has been a bit irregular, with Mill Firsts offered at from £126 to £130 and Mill Lightnings from £113 to £116. Mill Hearts are from £107 to £110 and grade Hearts from £102 to £104. January-February shipment, c.i.f. U.K. Dark jute is in little demand at £113 lowest for good marks of Daissee-2/3 and £103 for grade, while grade Tossa-2/3 is quoted at from £120 and grade fours from £112, all c.i.f. U.K. January-February. A quietly steady trade has been passing, spinners being mostly interested in near-at-hand afloat parcels to replace the jute that has not yet come to hand and which should have arrived weeks ago.

Calcutta goods have continued to weaken with some cheap sellers knocking prices down to 68s 3d for 40in. 10oz. hessians and 51s for 72oz. January, 68s and 50s 9d. February and 67s 6d and 50s 9d March, with B Twills lowest at 182s, 183s and 184s for the respective positions of shipment, all f.o.b. Calcutta. The general quotations are about 1s higher for hessians and 2s to 3s for heavy goods. The earliest delivery obtainable for hessian yarns is April, though some spinners say it may be June. Prices are very firm for all descriptions and the same applies to cloth and bags.

DRAFT STANDARDS FOR MUSCOVITE MICA

The Indian Standards Institution has circulated three draft standards relating to muscovite mica for eliciting comments. The standards are for definitions of mica terms, methods of grading and classification of muscovite mica blocks, thins and condenser films, and methods of grading and classification of muscovite mica splittings. These draft standards are the draft revisions of the two Indian standards published in 1949, namely IS: 13-1949, giving the tentative Indian standard methods for grading processed mica, and IS: 14-1949, giving the tentative Indian standard classification of processed muscovite mica. These have now been split up into three. The draft revisions incorporate several decisions of the International Committee on Mica of the International Organisation for Standardisation (I.S.O.). The principal mica producing and consuming countries of the world are participating in the work of this Committee. It has its secretariat in India, and aims at establishing uniform specifications for use in international trade. The I.S.I. is developing international standards of mica, which is an important dollar-earning mineral. Present exports are worth over Rs. 9 crores annually.

Ship, Marine, General Engineering and Foundry work of all descriptions is undertaken at competitive rates at the RAJABAGAN DOCKYARD

RECORD EXPORTS OF DRY GINGER

INCREASED DEMAND FROM MIDDLE EAST

(FROM A SOUTH INDIAN CORRESPONDENT)

A RECORD quantity of about 5,375 tons of dry ginger was exported from India during the season ended October 1956, as against 2,316 tons in the previous season. This was largely on account of increased demand from the Middle East. A country-wise analysis shows that Aden is still the largest importer of Indian ginger. During the season under review, it took 1,903 tons, representing over 35 percent of the total. Saudi Arabia came next, with an offtake of 1,225 tons, or roughly 23 percent of the total exports. The United States was the third largest importer, having bought 520 tons. More than 50 percent of the exports went from Bombay. Exports from Cochin amounted to 1,585 tons, from Alleppey 700 tons and from Kozhikode 370 tons. Ginger has enjoyed a price boom during the past four years and has often sold at a premium over pepper. This has largely been because of continued crop failures in other ginger-growing countries. High prices have given the Indian grower the incentive to produce more, and last season's crop was considerably in excess of what was produced five years ago. The new crop has started to move in substantial quantities, and is now being absorbed at the price of Rs. 375 to Rs. 400 a candy, compared with Rs. 350 a year ago. Foreign demand is far from satisfactory.

Pepper Arrivals

There was a substantial increase in pepper arrivals in the terminal markets of Kerala during November, the actual quantity being estimated at 1,100 tons, compared with 400 tons in October. But shipments increased only slightly, by 50 tons to 750 tons. U.S. offtake was about 300 tons. Reports that Russia had bought 1,500 tons from the new crop and spot covering by local interests were the main features of the market during November.

Lemongrass Oil Steady

Lemongrass oil shipments during November amounted to 120 tons, as against 125 tons in October. Arrivals were fairly good. The season is almost closed in Kerala, and the total output is estimated at the record figure of 1,200 to 1,400 tons. Prices remain fairly steady at about Rs. 93 a dozen bottles of 16 ozs each.

LONDON TEA SALES

AT last week's London tea sales the 42,954 packages on offer realised an average price of 6s 0.73d a lb., against 6s 1.63d in the previous week and 4s 4.96d a year ago. Plain broken pekoe was quoted at 5s 4.3d a lb., against 5s 6.1d in the previous week. Prices obtained by some of the companies are given below:

	No. of packages	Average a lb.
Amalgamated ...	714	5/10 1/2
Amgoorie ...	708	6/0 1/2
Anglo-American ...	1,572	6/4 1/2

United Planters ...	384	7/1
	206	6/6 1/2

U.K. stocks of tea on 28th December amounted to 90.3 million lbs., against 124.6 million lbs. a year ago (converted at 110 lbs. a package).

COCHIN TEA SALES

At Sale No. 1, 3 1/2 million lbs. of tea were on offer. The market opened quietly and strengthened half-way, but eased again later. There was a fair general demand, but prices were irregularly four annas lower for low medium and medium sorts, with fannings often neglected. Better liquoring sorts sometimes were eight annas below valuations. The best feature were whole leaf grades, which were irregularly two annas easier.

COAL CARBONISATION IN U.K.

FUEL FACTORIES OF THE FUTURE

THE U.K.'s production of coal last year, about 223 million tons, was slightly more than in 1955, and output in future years should reflect the big expenditure on development undertaken in recent years. However, the most interesting changes in the industry relate not to increasing production but to the utilisation of the product. These changes are potentially more significant than the effort to get more coal. When the chairman of the National Coal Board, Mr. James Bowman, attended the inauguration of the Avenue Carbonisation and Chemical Plant, in Derbyshire, last October, he said with feeling: "For not far short of 10 years now we have lived with the idea of Avenue; we have eaten with it; we have slept with it. And now it is here and working." He was expressing in homely words not only pride in the most modern plant of its kind in Europe, but also the experts' sense of the importance of carbonising coal, to make smokeless fuels without waste.

Air pollution has become so damaging to health and property in the U.K. that the Government has at last legislated against the nuisance. The coal industry itself is in the forefront of the campaign for cleaner air; but it has also another interest in smoke-abatement. It knows, better than most of its customers, the chemistry of coal, and of the smoke that comes from coal. It knows that valuable substances go up in smoke, that coal that discharges smoke is not being efficiently burned. Sulphur-free coal completely burned would yield only harmless carbon-dioxide gas. The products of incomplete combustion are, besides actual particles of solid coal, also such viscous liquids as tar and oil, with a complex of associated chemicals. These substances are volatile; when coal is heated sufficiently and for long enough they disperse. To make solid fuel smokeless the volatiles must be removed. To get full value from the coal the volatiles must be not merely made harmless but captured, treated, and used.

Volatile Matter

However, the percentage of volatile matter in coal varies considerably. A moderate proportion of output consists of anthracite and dry steam-coal, which are naturally smokeless. Of coking coal, that will agglomerate when heated, Britain has not enough, some coal-producing countries have none at all. Some carbonising coals (which are coals that go plastic and form coke when the volatile matter is driven off by heat) have the unfortunate characteristic of swelling into a useless mass when heated; others with the right characteristics are too high in ash or sulphur-content for carbonising. Moreover, coals suitable for carbonising include large coal such as is required for railways and for the inefficient open fires still preferred in British homes. To carbonise more of the varieties that are already scarce, however it might improve health and hygiene, could solve no problems of scarcity; indeed, to divert coking coal from metallurgical use to boilers and other appliances would only make these problems worse. Plans for carbonisation must be based on the fact that an increasing proportion of total output consists of non-caking, or weakly-caking, high-volatile coals (with more than 20 percent volatile matter), and on the fact that mechanisation of mining increases the proportion of fine coal dust in the total (because machines act more harshly than men). British research has been concerned in recent years with producing smokeless fuels and chemicals from these plentiful inferior coals.

One of the most promising developments is the application to coal of a process used in other industries, fluidisation. It is based on the principle that a solid can be made to assume the essential characteristics of a liquid, mobility, if it is finally granulated and gases are blown through it. The mixture of solid and gas can be pumped like liquid through narrow pipes and from one vessel into another. A special advantage of fluidisation, as applied to coal, is that, as the stream of hot gas acts on each individual particle, it extracts the volatile matter very efficiently; it acts quickly; and it does not break down the coal nearly so much as do other carbonising processes. Not being so disintegrated, the volatile matter should yield more useful by-products. The fine particles must be formed into briquettes, which need a binding material, such as pitch. The binder is smoky; so a second carbonisation is necessary to make the briquettes smokeless. Another method, hot-sand carbonisation, has been evolved for this purpose. In this system the hot carbonising element is red-hot sand instead of gas. However, the binder adds nothing to the intrinsic value of the product. There is special interest, therefore, in a new mechanical method of consolidating the small particles without any binder—and without the elaborate equipment operating at very high pressures that has been developed for brown coal in Germany.

Whatever the refinements, it has been established in principle that high-volatile, broken-down, coal can be manufactured into lumps, with a wide range of uses. Ultimately, the fluidisation process may be applicable even to making coke—a development that would be profoundly significant to metallurgy. The whole problem of insufficiency of coal—a specific scarcity of certain kinds, not of coal in general—may be transformed. The Avenue plant, aforementioned, does not embody these latest processes. It does, however, carry a stage further the tendency of the carbonising industry to use lower ranks of coal, which are more plentiful; and it is an important producer of chemicals and fuels—including pitch/creosote fuel, which is much in demand now as an alternative to fuel-oil.

Calcutta Markets

GOOD GENERAL DEMAND IN TEA EXPORT SALE

BLACK LEAFY DUSTS STRONG

AT Sale No. 28, held on 7th, 8th and 9th January, offerings in the Export auction consisted of 72,928 packages. There was a strong and general demand for most kinds. Doonars and Assams with bright liquors were keenly competed for at 1 to 2 annas above the last rates, but medium Assam BOP's and O. Fgs. were generally 2 annas easier, while the remainder were 1 anna easier. C.T.C. teas were in good demand at 1 to 2 annas below valuations, while clean and well twisted whole leaf grades met with keen competition and were up to 2 annas dearer. Stylish BPS were fully firm, and there was more demand for Darjeelings, which sold well.

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2 6 0	2 0 0 to 2 2 1
Plain B.P.	2 4 0	1 7 6
Medium Assam B.P.	2 5 0 to 2 6 0	1 10 0
Best C.T.C. Assam B.P.	2 12 0	2 1 0 to 2 3 0

At the Internal Sale, Dust offerings consisted of 26,674 chests, for which there was a good general demand. The better quality black leafy Dusts were again a strong feature and were selling up to 2 annas above valuations, while orthodox Dusts from all districts were well supported and were generally firm and sometimes 1 to 1 anna dearer. Bright Assams were sold well and were up to 2 annas and sometimes 3 annas dearer, while those with ordinary liquors received less support and were 2 annas easier.

	1957 Rs.	1956 Rs.
Medium Doonars Dust	2 1 0	2 1 0
Medium Assam Grainy Dust	2 2 0	2 2 0
Medium Assam C.T.C. Dust	2 3 0	2 3 0
Best Assam C.T.C. Dust	2 9 0	2 9 0 to 2 11 0

The Leaf offerings consisted of 2,502 packages, for which there was a strong demand. All kinds, particularly Fannings, were generally up to 2 annas dearer, but the few lines of green tea on offer received only fair support.

At the Internal tea Sale No. 27, held on 3rd January, Dust offerings consisted of 18,562 chests for which there was a good general demand. The for which there was a good general demand for export clean black leafy descriptions suitable for the Sale, were a particularly strong feature of the Sale, being 1 while Commons and Doonars sold well, being 1 anna and occasionally 2 annas dearer. Orthodox Assams were from 1/2 to 1 anna dearer, especially the powdery types and the exportable types from this district were keenly competed for at 2 annas to 3 annas above last rates. C.T.C. Assams were the weakest feature of the Sale and were generally 2 annas easier.

	1957 Rs.	1956 Rs.
Medium Doonars Dust	2 0 0 to 2 0 6	1 5 6 to 1 6 0
Medium Assam Grainy Dust	2 1 0 to 2 1 6	1 7 6 to 1 8 0
Medium Assam C.T.C. Dust	2 5 0 to 2 6 0	
Best Assam C.T.C. Dust	2 9 0	2 2 0 to 2 4 0

There was a total of 3,334 chests of leaf on offer for which there was a fairly good general demand, which strengthened as the Sale progressed. Clean leaf teas were sometimes up to 2 annas dearer, while the residual descriptions closed at firm or dearer rates.

FREIGHT MARKETS QUIET

THE freight markets remained quiet on the resumption of trading after the holidays and it is felt that little business is likely to be done until charterers arrange their 1957 programmes, which, of course, will be strongly influenced by hopes of an early clearance of the Suez Canal. The American coal rate to the Continent has now slumped to 98s. Four years' consecutive voyages are being offered at 63s to 65s. In the Indian ore trades, East Coast-Poland repeated 219s. Mormugao-west Italy paid 195s via the Cape, and 145s via Suez. Wheat was arranged from north Pacific-Bombay at \$29 and flour from U.S. Gulf to Jeddah at \$39.75. In the time charter section, a 10,200-ton motorship was fixed at 68s delivery Antwerp, re-delivery Malaya, and a Liberty secured \$6.15 for 12 months' trading, showing a decline of 85 cents from the rate paid three weeks ago.

POOR DEMAND FOR SUGAR

During the week ended 9th January, demand in the sugar market was poor and prices declined by one or two annas a maund. Sales averaged 4,100 bags a day, while arrivals amounted to 4,500 bags a day. Stocks totalled 90,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 33 for ordinary grain and Rs. 31-12 for big grain.

HIDES AND SKINS STEADY

The market in skins ruled steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 1st January and 7th January, 1957)

Cowhides: Wet salted (Ord.) 23,400 pcs. on the basis of Rs. 7 to Rs. 16; wet salted (Slaughtered) 17,000 pcs. on the basis of Rs. 12-8 and Rs. 22.

Goatskins: Wet salted (Daissee, Killed) 83,400 pcs. on the basis of Rs. 270 to Rs. 280, Rs. 290 to Rs. 320 and Rs. 370; Assam-Dinajpur-Murshidabad

20,600 pcs. on the basis of Rs. 260 to Rs. 300; Purneah-Kishanganj 6,000 pcs. on the basis of Rs. 280 to Rs. 300; Pakur-Patna (Ord.) 17,000 pcs. on the basis of Rs. 255 to Rs. 275; Muzafferpore-Patna 16,300 pcs. on the basis of Rs. 280 to Rs. 320; Muzafferpore 1,700 pcs. on the basis of Rs. 360.

Bazaar Stocks

(7th January, 1957)

Cowhides: Wet salted 20,800 pcs.
Goatskins: Wet salted (Daissee, Killed) 11,500 pcs.; Assam-Dinajpur-Murshidabad-Jalpaiguri 71,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kishanganj 1,04,000 pcs.

SHELLAC CLOSES STEADY

During the week ended 8th January, the shellac market was quiet at the beginning and steady at the close. The range of quotations was as follows:

Pure Buttonlac	Rs. 120 buyers, 120, 118 value, 118 buyers.
Lemon No. 1 Shellac	Rs. 124 done and buyers, 123, 118-8 value, 118 done and buyers.
Lemon No. 2 Shellac	Rs. 118 to 112 done and buyers, 117-8 to 114-8 value, 112 buyers.
F. O. Std. 1 Shellac	Rs. 111 done and buyers, 108 to 107 buyers, 108 buyers.
Pure TN Shellac	Rs. 106-8 to 102 basis done and buyers, 104 to 100-8 buyers, 100 basis buyers.
4% I.T.N. Shellac	Rs. 100, 94-8, 95-8 buyers.
No. 1 Kusmi Seedlac	Rs. 110 to 108 buyers, 110-8 to 108 value.
No. 2 Kusmi Seedlac	Rs. 105-8 buyers, 106-8 to 104-8 value.
Fine Bysaky Seedlac (Manbhuy)	Rs. 100 to 98-8, 95-8, 97 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 95-8 to 88, 90 buyers.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs. 87 done buyers, 85 to 82, 83-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 79-8 to 75, 76 buyers.
Kireelac	Rs. 35 to 32 buyers.

Shipments during January until the 3rd were 4,354 packages consisting of 3,334 packages of shellac, 855 packages of seedlac, and 165 packages of others.

TURNING A NEW ROLL

We have turned a new roll; and it has cost us three and a half crores of rupees.

To what purpose, pray?

At the end of the rolling, we get coils of flat, steel strip—skelp, as the steel man calls it. The skelp is passed on to the Indian Tube Company, which welds it into tubes.

So what?

Merely that steel tubes pipe up water from deep inside the earth to parched fields, helping to grow a rich harvest. In the cities, countless homes receive a protected supply of water through these pipes.

Soon, a new plant will turn out the kind of steel tubes that go into the making of bicycles. Remember also that the locomotive speeding along the track is kept going by steel tubes which hold the steam.

Tata Steel's new Skelp Mill, the first of its kind in India, has a capacity of 200,000 tons. When there is enough steel, this mill will roll all the skelp and strip the country needs.

TATA STEEL
SERVES THE NATION

COMPANY AND PUBLIC NOTICES

KORNAFULI ASSOCIATION LTD.

NOTICE is hereby given that the Seventy-sixth Annual General Meeting of the Shareholders will be held at No. 2, Fairlie Place, Calcutta, on Tuesday the 29th January, 1957 at 12-25 p.m.

AGENDA

- (1) To receive and approve the Report of the Directors and the Company's audited accounts for the year ended 31st December 1955.
- (2) To elect a Director.
- (3) To appoint Auditors and fix their remuneration for the current year.

(4) As Special Business:

To consider and, if thought fit to pass, with or without amendment the following Resolution

(As an Ordinary Resolution)

"RESOLVED that the Board of Directors be and is hereby authorised with effect from the commencement of the Companies Act 1956 to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 22nd January to 29th January, 1957, both days inclusive.

By Order of the Board,

KILBURN & CO. PRIVATE LTD.,

R. J. L. OAKLEY,

Managing Director,

Managing Agents.

Calcutta, 4th January, 1957.

Note: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

Explanatory Statement

Item No. 4 By the provisions of Sections 293 (1) (d) of the Companies Act 1956 the Directors without the consent of the Company in General Meeting cannot borrow monies in excess of the aggregate of the paid-up capital of the Company and its free reserves. An authority is therefore required for your Directors to borrow for the purposes of the Company in excess of this statutory limit. The Resolution is intended to provide that authority and to restore the position which prevailed under Article 65 prior to 1st April, 1956.

THE BISHNAUTH TEA CO. LTD.

NOTICE is hereby given that a Dividend of 20% for Season 1955 has been declared payable on or after 28th December, 1956.

TYROON TEA COMPANY, LIMITED.

NOTICE is hereby given that the 66th Annual General Meeting of the Shareholders of Tyroon Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 31st January, 1957, at 4-10 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended 31st December, 1955, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of a Director who retires by rotation.

And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr. D. N. Mukerji be and is hereby re-appointed a Director of the Company."

Special Notice dated 15th December, 1956, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261 (i) (f) (2) and (3) of the Companies Act, 1956, for the reason that Mr. D. N. Mukerji is presently a Director of the Company, which is a subsidiary of McLeod & Co., Ltd., the Managing Agents to the Company, and he is an associate of the Managing Agents within the definition in Section 2 (3) (c) (i) of the Companies Act, 1956, who may only be appointed or re-appointed a Director by a Special Resolution, of which Special Notice has been given to the Company.

4. To appoint Auditors for the year ended 31st December, 1956, and to fix their remuneration.
5. To consider and, if thought fit, to pass the following resolution:—

AS SPECIAL BUSINESS.

"That the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 21st January 1957 to 31st January 1957, both days inclusive.

By Order of the Board,

McLEOD & CO. LTD.,

A. T. DOIG,

Managing Director,

Managing Agents.

3, Netaji Subhas Road,
Calcutta, 3rd January, 1957.

NOTE:

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.
2. Payment of the proposed Dividend, if declared, will be made on or after 7th February 1957, only to those members whose names are registered in the Books of the Company on the 31st January, 1957, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT.

The Resolution being Item No. 5 of the above Notice is intended to provide the Board of Directors with authority to enable them to borrow moneys from time to time for the Company's business in excess of the statutory limit being the paid-up capital of the Company and its free reserves pursuant to Section 293 (1) (d) of the Companies Act, 1956.

NEW TERAI ASSOCIATION LTD.

NOTICE is hereby given that the Fortieth Annual General Meeting of the Shareholders will be held at No. 2, Fairlie Place, Calcutta, on Tuesday the 29th January, 1957 at 11-35 a.m.

AGENDA

- (1) To receive and approve the Report of the Directors and the Company's audited accounts for the year ended 31st December, 1955.
- (2) To elect a Director.
- (3) To appoint Auditors and fix their remuneration for the current year.
- (4) As Special Business:

To consider and, if thought fit to pass, with or without amendment the following Resolution

(As an Ordinary Resolution)

"RESOLVED that the Board of Directors be and is hereby authorised with effect from the commencement of the Companies Act 1956 to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 22nd January to 29th January, 1957, both days inclusive.

By Order of the Board,

KILBURN & CO. PRIVATE LTD.,

R. J. L. OAKLEY,

Managing Director,

Managing Agents.

Calcutta, 4th January, 1957.

Note: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

Explanatory Statement

Item No. 4 By the provisions of Sections 293 (1) (d) of the Companies Act 1956 the Directors without the consent of the Company in General Meeting cannot borrow monies in excess of the aggregate of the paid-up capital of the Company and its free reserves. An authority is therefore required for your Directors to borrow for the purposes of the Company in excess of this statutory limit. The resolution is intended to provide that authority and to restore the position which prevailed under Article 66 prior to 1st April, 1956.

LOWER VAGAVURAI TEA ESTATE.

(including Upper Vagavurrai Division)

Upon instructions of The Kanan Devan Hills Produce Co., Ltd.

FIGGIS PRIVATE LIMITED

will offer for sale by public auction (unless previously disposed of by private treaty) at the Joint Sale Room 4/147, Ballard Road, Cochin, on the 11th JANUARY, 1957 at 11 o'clock in the forenoon, the abovenamed Tea Estate forming part of the area known as Kanan Devan Concession in the Kanan Devan Hills Pakuthy, Kerala State, with all buildings, plant and machinery.

The area of the land to be sold is 2,437.90 acres, approximately, to which will be added further land, mainly grass but including some jungle sholas, lying outside the estate boundary and containing 24,562.10 acres, approximately, provided such further land should be declared to be available at the time of auction.

The Tea Estate will be sold as a going concern as on and from the 1st December, 1956. Certain assets will be excluded from the sale, either absolutely or subject to payment therefor at valuation or by agreement, as prescribed by the printed Notification, Particulars and Conditions of Sale whose terms will govern the transaction in all respects, notwithstanding anything in this notice inconsistent therewith.

Prints of the Notification, Particulars and Conditions of Sale may be obtained from Figgis Private Ltd., or Forbes, Ewart & Figgis Private Ltd., at Cochin or D6, Clive Buildings, Calcutta or Messrs. James Finlay & Co., Ltd., 2, Netaji Subhas Road, Calcutta 1, or the General Manager, Kanan Devan Hills Produce Co., Ltd., Munnar, Kerala State.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

THE POST-SUEZ POSITION OF STERLING

A REASONABLE PROSPECT FOR THE CURRENT YEAR

STERLING has begun the New Year in reasonably good shape. The heavy run which took place during the first few weeks of the attack on Egypt was halted by the news of Britain's borrowing from the International Monetary Fund. It has not yet been reversed, although substantial short-covering has been going on throughout the past few weeks following the improvement in the United Kingdom's economic prospects. At the moment, the pressure on the pound appears to have disappeared completely. But it has left behind the suspicion that the movement of the past couple of years towards greater convertibility may have gone too far for safety in this troubled world. The all-important forward position of sterling is still improving steadily and the latest trading figures for the United Kingdom have helped the tendency. These show that the loss to the gold and dollar reserves during 1956 was due entirely to capital movements. Britain's overall balance of payments was actually in surplus. The drain went to the payment of both sterling and dollar debts, not to the financing of imports into the United Kingdom. Out of a total loss of \$725 million, India's drawings accounted for \$420 million, or more than half the total. The amount represented by the "flight from the pound" cannot be accurately estimated. But it may have been smaller than suggested by the actual effect on the world's confidence in sterling, and anyway, a good deal of it must have been in the form of deferred payments which have since had to be met in full.

All this suggests that sterling now has an intrinsic strength which it did not have at the beginning of 1956. This is no doubt the result of more than a year of "credit squeeze", which does seem to have benefited the currency even if it has also succeeded in halting the growth of industrial production in the process. One point on which the speculators must now be completely convinced is that there are no prospects of devaluation. This idea was widely canvassed when the economic effects of the Suez Canal closure became apparent. But little has been heard of it since, and a few moments consideration of the facts will reveal why. The United Kingdom's difficulties are the result, at the moment, of having to buy dollar oil to replace supplies from the Middle East. Britain has borrowed more than enough dollars to meet her needs for the next year or so—ample time to see the Canal open and working again. If there is going to be a shortage of oil with which to sustain the United Kingdom economy's export capacity, then it will be due to the physical shortage of tankers, and devaluation will be no solution for it. With the short-term dollar position secure and the internal economy healthier than it has been for a number of years, there seems no reason why confidence in sterling should not continue to grow. Much will depend on the ability of the new Conservative Government under Mr. Harold Macmillan to hold the present wage level. At the moment, with unemployment mounting, there seems reasonable hope of its being able to do so.

Another encouraging feature of the end-year figures for the gold and dollar movements was the reduction in disbursements to the European Payments Union. Britain's weakness as a European trader has become all too obvious in the past few years, and this is a position which the new willingness to join the proposed free-market area promises to correct. It is only now being realised just how radical a change in thinking this represents. Only 200 million people, and the threat of what might happen should Britain remain outside, could hope to persuade the United Kingdom to modify its old three-cornered trading pattern. European trade has been considerably more rewarding in the past few years for those who, like West Germany, have been largely restricted to it, than have the usual

markets on which Britain traditionally concentrated. There are big gains to be had by serving a rich market of these dimensions, even if there were not also important political advantages. The penalties for staying outside include the possibility of being excluded from European markets altogether in future by the tariff barriers the new organisation is bound to build around itself. Britain appears to have decided to join as a necessity for survival. The choice is the right one, although the present efforts to get the best of both Britain's trading worlds may have to be modified before full participation becomes a reality. But then, the changes which are at present taking place in the normal course of sterling area evolution are helping that process.

and if the inflationary effects of import cuts were feared then, there is no less reason to fear them now.

The Central Finance Minister, Mr. T. T. Krishnamachari, is reported as having said in Madras on Sunday that the country has now reached a position where if imports have to be restricted, or even stopped, there will not be any serious inflation. The truth of the assertion hinges on the point as to what sort of inflation can be considered "serious". Recent ministerial statements tend to suggest that the situation of seriousness does not arise until the basic necessities, such as food and cloth, become dearer. Even on this definition, the Finance Minister's assertion seems somewhat exaggerated. India is short enough of food to need all she can get under the long-term loan from the United States, plus more. The substantial fall in the latest wholesale price index (base: year ended August, 1939, equals 100) from 430.7 to 421.9 during the week ended 29th December, reflects mainly a decline in the food index. But its significance may be largely temporary, for this is the time of year when supplies increase as harvests arrive in the markets. As for cloth, Mr. Krishnamachari is well aware that very little has been done to allow an increase in production. In Madras, it is reported, he said, not perhaps with the strictest accuracy, that there has been an increase in production all round with the exception of the textile industry. If, however, he intended to emphasise that cloth production has lagged far behind the possibilities for increasing it, he was, of course, quite right.

Why it has lagged behind, deserves closer examination, because, a little surprisingly, Mr. Krishnamachari in the same speech asserted that the private sector would not have achieved all it has done if the State had not intervened in economic affairs. In the cotton textile industry, the result of State intervention has merely been stagnation. There may be other industries in which protective tariffs, import restrictions and monetary or other assistance have promoted development. But in the last few years, the textile industry has not been among those which can claim to have benefited from Government measures. In the Finance Minister's scheme of things, however, it is among the most important, not only for countering domestic inflation but also for earning foreign exchange. If private enterprise had been allowed greater freedom, there is every reason to believe that cloth production would have increased, that the Reserve Bank would have been able to print a few more currency notes, and that the country would have been able to import a little more machinery and equipment than it can now. But the ideological thinking which is vaguely associated with socialism did not allow this freedom. The result is that the consumer pays more for his cloth, development outlay has to be cut, and foreign spending has to be reduced to such an extent that important projects are shelved or forgotten.

Cotton textiles is not the only example of an industry which has suffered the effects of Government intervention and "socialist" thinking. Another, steel, the importance of which Mr. Krishnamachari emphasises rightly and often, is in an almost similar category. The Industrial Policy Resolution of April, 1948, under which the starting of new steel plants was reserved for the public sector, was a product of the type of socialist thinking which considers that basic industries must be State-owned. Its effect was that the State forgot all about establishing new steel plants until many years later; private initiative in this field was discouraged; and when a private effort did almost reach fruition in the shape of a Birla project for Durgapur, it was consigned to the dust-bin. The effect today is that industrial development is being retarded by the lack of steel, and not enough can be imported because there is too little foreign exchange.

Specific examples such as these can be multiplied, but the strongest general criticism of the Government's intervention in economic affairs is that it has steadily raised industrial costs. Not a few of Mr. Krishnamachari's present difficulties with foreign exchange can be traced to this single fact—that exports are stagnating around their former levels because the inelasticity of Indian industry's cost structure does not allow it to compete in an increasingly price-conscious world. This is a point which will also have to be borne in mind when suggestions are heard that prices of food and cloth are all that matter, while those of other commodities do not. Admittedly, necessities such as the former two have the greatest effect on the domestic wholesale price index, but this index is not the sole indicator of the country's economic health. Prices of other commodities matter too, and when there is a foreign exchange shortage, those of the export commodities matter greatly. Almost no food and relatively little cloth can be exported (unless production is greatly increased), so the foreign exchange has to be earned by jute goods, tea, oils, light engineering products and the host of other things with which India is still struggling in markets overseas. If these commodities get caught up

in the inflationary whirlwind which may have been skilfully steered away from food and cloth, economic development will be retarded and lopsided. It will not be possible then to remedy the situation with open or disguised export subsidies, which invariably bring strong retaliation; nor with export credits, which India can only beg, not offer; nor with export promotion councils, the most impressive of whose campaigns could not argue away price differences.

The Finance Minister is also reported to have said in Madras that if the Government were not to intervene and private enterprise were allowed a free hand, development would be unregulated: there would be more textile mills, more sugar factories and more cement industries in places where raw materials were not available. There is no denying that private entrepreneurs are often fallible. Some start the right industries in the wrong places, some the wrong industries in the right places, and some the wrong industries in the wrong places. But they do at least try to start the right industries in the right places, because if they do not, they lose their money. This is as much as the Government can claim for itself; that it tries its best to make the right decisions, although often in the process it makes wrong ones. It has yet to demonstrate that its wisdom in the location of industry is superior to that of a private entrepreneur. An important difference between the two is that in one case the wisdom is allied to a personal stake, in the other it is not. The private entrepreneur who starts to make fifty million drawing pins in the Naga Hills knows he will lose all his money: the Government Secretary who does the same will probably at least still get his old salary. In any case, after the recent controversy over the location of the refinery to process oil from Assam, New Delhi can hardly claim that efficiency and economy are its sole criteria in siting industries. Political considerations play no small part, although politics do not refine oil or produce goods. The claim has even less validity when an important Central Ministry is thinking of equalising railway freights

NOTICE

Owing to an exceptionally heavy demand, copies of *Capital's Annual Review of Commerce, Trade and Industry*, published on 20th December, 1956, were completely sold out by the first week of January. It is regretted, therefore, that further orders for copies of this publication cannot be accepted.

for basic materials such as coal and steel—a move which seems to be based on the curious logic that a major engineering works deserves the same encouragement to locate itself in Cape Comorin as it would to locate itself near Jamshedpur or Bhilai. If, in implicitly criticising the siting of the sugar industry, Mr. Krishnamachari had in mind the surplus capacity of mills in Uttar Pradesh and Bihar, it may be remembered that this surplus capacity exists because the two State Governments have been misusing their cane cess collections. If the cess had been used for the purpose for which it was intended—for cane development programmes—the capacity would not have been surplus. What is more, there would have been rather more sugar to export, at prices foreign consumers might have been willing to pay.

While attention centres on the foreign exchange shortage, it would be unfortunate if the emphasis were on cutting imports rather than on increasing exports. The urgency of the situation is such that India has to cut imports, and then to hope that foreign aid arrives more quickly. But it is also great enough to emphasise the need to encourage industries which have an immediate export potential—among which cotton textiles is perhaps at present the most handicapped. While projects involving a large outlay of foreign exchange are being trimmed or postponed, it is necessary to take bold and immediate steps to promote projects which will earn foreign exchange. Ultimately, India must pay her way in international markets, and with her reserves nearing the minimum necessary, the time to recognise the fact is now.

CURRENT COIN

Merger Plans of Accountants.—A scheme has been put forward in Britain to integrate the Institute of Chartered Accountants with the Society of Incorporated Accountants. This is important to the profession, as the existence of two major bodies laying down standards and awarding "letters" to people who passed their examinations has caused jealousy among accountants and confusion among the public. If the merger succeeds, the Institute will still not have a monopoly but it will dominate the scene. The idea of bringing the Institute and the Society together was mooted only a few years after the two bodies were founded (in

1880 and 1885, respectively). The reason why it has at last come to fruition is that both now desire to merge. The Institute fears that the Society, if left on its own, may eventually lower its standards by allowing commercial training in factories as well as professional training in accountants' offices to count in its examinations. The Society, on its side, no longer has a function to fulfil in offering a cheap way into the profession. Being articulated as a clerk (to become a chartered accountant) used to cost a premium to start with and one was either unpaid or lowly paid during training. Most of the Society's members paid no premium and got a wage during training by being accountancy clerks, or "bye-law candidates", as they were called. Now articulated clerks are paid a wage and have to put down no premium. So the way to a merger seems clear, and would be logical. But the matter will have to be put to the vote of both bodies and it remains to be seen whether it is accepted when the poll is held in the spring, for it will have to be approved by two-thirds of the Institute's members and three-quarters of those of the Society. If it is, most incorporated accountants will eventually become chartered accountants. Those who are not practising as public accountants or who, for certain other reasons, are not eligible to join the Institute as full members, will become "incorporated" members. But it is estimated that of the 10,945 Society members, all but 2,065 will be eligible for full membership. It seems unlikely that, in fact, the move will produce any marked cleavage between the accountants in public practice and those serving in industry and commerce. The co-operation between the statutorily recognised organisations is too close to make that a material risk.

Expanding Singareni Collieries.—Under a proposal now before the Andhra Pradesh Government, the Central Government seeks to become a senior partner in the 70-year-old Singareni Collieries, and the company's capital structure is to be enlarged. The proposal was made when the former Hyderabad Government approached the Centre for a loan of Rs. 3 crores in order to enable it to step up production by 1½ million tons a year. The Collieries, which were allotted Rs. 252.19 lakhs under the first five year plan, increased output from 1,162,000 tons in 1950 to 1,596,632 tons in 1955. The Centre's proposal brings to mind the chequered history of the Singareni Collieries, which supply a large part of the coal requirements of south India. Coal was first discovered in the State by Dr. W. King, of the Geological Survey of India, in Yellandu (Singareni) in 1871 and the chief coal seam there was named after him the "King Seam". The Singareni coal-mining lease was granted to the Hyderabad Deccan Company (Messrs. W. C. Watson and J. Stewart) in 1886, and the mines began to yield coal from 1889. The Hyderabad Deccan Company extended its mining operations to various areas around Singareni, and subsequently transferred its rights to the Singareni Collieries Co. Ltd., the managing agents of which were Best and Company, Madras. In 1920, the Singareni Collieries Co. Ltd., was incorporated and registered under the laws of Hyderabad State, but 88½ percent of its shares were still held by the Hyderabad Deccan Company, with its head offices in London. The prospects of the latter were closely linked with the prospects of the Singareni Collieries Company, which retained all its available profits (Rs. 4,49,192) for 1941 for a development programme without declaring any dividend. It declared a dividend of only 2½ percent in 1942, retaining the balance to meet the probable claim for Indian income-tax. These factors brought down the price of the Collieries' shares to Rs. 8.13 in 1942. To increase coal production for war and postwar needs, the Hyderabad Government acquired a controlling interest in the Singareni Collieries Company in 1944. The Hyderabad Deccan Company sold its entire holdings. The plant, machinery, buildings, etcetera, were valued at over Rs. 11 lakhs, against which there was a depreciation reserve of Rs. 67.5 lakhs. The State Government purchased 556,625 ordinary shares of the Singareni Collieries Company, held by the Hyderabad Deccan Company. London, of the face value of Rs. 10 each at Rs. 17 each; and 10,000 6 percent debentures of Rs. 100 each, inclusive of the accruing interest, for £76,500. The Hyderabad Deccan Company also surrendered for a consideration of £37,500 its mining rights and concessions to the State Government.

Rising Readjustment in U.S.A.—The closing weeks of 1956 have brought new all-time peaks in most measures of overall business activity, reports the monthly newsletter of the First National City Bank of New York. The gains over the figures of a year ago, which were the highest on record up to that time, are not large in physical terms, but they are satisfying in view of the readjustment that some important industries have gone through. New highs in dollar measures of economic activity, such as gross national product and national income, are subject to the qualification that 1956 was a year of rising prices and living costs. Inflation of dollar values in itself

adds nothing to real living standards and creates only an illusory prosperity. However, gains have also been made in real terms. The figures of recent weeks include new highs in industrial production, employment, and retail sales. Christmas business disappointed many merchants at the start, but final reports show that the season's sales as a whole made satisfactory gains over 1955. As a result of the record outpouring of goods and services, American consumers are enjoying the highest living standards in history. At the same time business and governmental bodies are adding substantially to national wealth and future productive capacity through capital investment and public works. Increases in personal consumption and in real saving—which is the source of future consumption gains—are the twin objectives of balanced economic growth. By either criterion, the country is prospering. It is also entering 1957 under good momentum. In the aggregate, demands on the economy are as large as can be satisfied, and in some key areas they exceed capacity. The year just ended was one of contrasts. Most of the comprehensive measures proclaim it a year of new records—\$412,000 million in goods and services produced, personal income totalling \$325,000 million, a peak of 67 million employed (nearly 70 million including the armed forces), and factory wages exceeding \$2 an hour. Not all business and individuals, however, shared this prosperity in full. Laid-off auto workers, home builders, steel workers called out on strike, and business men whose profits were pinched by rising costs were among those for whom 1956 fell short of hopes. At this time a year ago, few observers would have believed that business could withstand a drop of one-fourth in automobile production, a 15 percent cut in the number of homes started, and a five-week steel strike without more serious repercussions. Adjustments were also needed or under way in agriculture and in the textile, farm machinery, and other industries. Yet the combined drag of these important sectors of the economy was more than offset without resorting to easy money or to Government stimuli. The strength of consumer demand for non-durable goods and services, the heavy backlog of local Government projects, and business investment needs kept the economy steady and headed upward. Not only was a general recession avoided, but gross national product—the nation's aggregate output of goods and services—rose quarter by quarter, and at the year's end had reached the record annual rate of about \$422,000 million, \$20,000 million or 5 percent greater than a year earlier. Perhaps, following this demonstration of the economy's ability to absorb substantial shifts in demand without interrupting overall progress, the expression "rolling readjustment" needs to be laid aside, so far as 1956 is concerned, in favour of "rising readjustment."

Expanding the Oilseeds Industry.—A bright future for the Indian oilseeds industry has been forecast by Dr. R. Sankaran, Secretary, Indian Central Oilseeds Committee. Addressing a Press conference in Hyderabad last week, Dr. Sankaran said that this would be assured by the proposed establishment of 17 composite Regional Research Stations in various parts of India. This scheme could help India, before a large exporter of oilseeds, and increase her dollar earnings. Dr. Sankaran said that the proposed research stations, some of which would deal with cotton and millets besides oilseeds, would be financed jointly by the Central Cotton Committee, the Indian Central Oilseeds Committee, and the Indian Council of Agricultural Research. Details of the new scheme are to be discussed and finalised at the 10th annual general meeting of the Central Oilseeds Committee, to be held in Hyderabad from 25th January. This meeting would be presided over by Dr. M. S. Raghaw, Vice-President, Indian Council of Agricultural Research, and Additional Secretary, Central Ministry of Agriculture. Discussing the scope and prospects of the expansion scheme, Dr. Sankaran said that the internal demand for oils had increased enormously, thanks to the setting up of various industries under the second plan. The demand could also be ascribed to the expansion of the soaps and paints industry. He told newsmen that the Committee is now devoting much of its attention to research work to discover new oil-yielding plants. Describing the functions of the Central Oilseeds Research Committee, Dr. Sankaran pointed out that it was engaged in the study of advanced methods of growing and utilising oilseeds, and popularising new methods among the cultivators. The Committee is spending Rs. 17 lakhs a year on research and propaganda work. He revealed that Rs. 50 lakhs had been allotted for extensive research and development work under the second plan. Referring to the Committee's future programme, Dr. Sankaran said that it would examine technical programmes, progress reports and extension proposals regarding various research and development schemes, as well as the schemes received from a number of State Governments and research institutes throughout the country. He further stated that on the agricultural side nine new schemes, including one for research in sesame in the States of Madras and Kerala, would be

considered. Apart from this, there were schemes for crop competitions in oilseeds in West Bengal and Rajasthan. There was also a plan for investigating diseases of oilseed crops and their eradication. Dr. Sankaran said that the Committee had under consideration ways and means for raising the present production of 5,595,000 tons of oilseeds to 7,600,000 tons by the end of the second plan period.

Sterling Trade of Japan.—Advices from official circles in London suggest that the trade and payments talks which have been going on there with the Japanese for over three months may end fairly soon now, and it is expected that a new agreement will be signed before the end of January. The progress of the talks has been shrouded in mystery, but as usual it may be assumed that there has been some stiff bargaining. Japan's sterling balances fell sharply during 1956 (from £100 million in February to £40 million at the beginning of October), and as much of her overseas trade is conducted in sterling, she will clearly want opportunities of earning more in the sterling area. On the other hand—and this is the argument against raising the quotas for Japanese imports—sterling can be earned in third countries as well as in the sterling area itself. However, it looks as though the new Japanese Government is prepared to utilise its reported leaning towards trade with Communist China and other Communist countries as a talking point to influence the opening of more outlets for her goods in the Western democracies. Although the London talks have gone on for so long, U.K. trade with Japan has not been adversely affected. The last trade agreement expired on 30th September. Since then, the payments arrangements (which provide for sterling settlements) have been renewed each month. Virtually all the quotas for import licences had been used up by the end of September, but imports under "open general licence" have continued from time to time. Special individual licences have been given as well; an example was the large shipment of mandarin oranges made to Britain for Christmas.

Taxation of Mining Ventures.—The President of the British Overseas Mining Association has once again drawn attention to the disabilities under which U.K. companies have to compete in operating or controlling mining ventures abroad. The Chancellor has promised some relief in the coming Finance Bill on the lines of the recommendations of the Royal Commission. This would presumably define "overseas trade corporations" which would be liable to U.K. taxation only for distributed profits. Mr. S. E. Taylor, in his presidential address, pointed out that this concession might relieve only one section of this valuable business. There are companies which operate in overseas mining fields and are managed and controlled from the U.K. There are also holding companies with substantial investments in mining companies managed and controlled overseas. Then there are mining finance houses which explore, develop and finance, setting up operating companies overseas to exploit successful mines. The second and third classes, Mr. Taylor maintains, should be recognised as falling within the group of overseas trade corporations and be eligible for the proposed tax relief. Given a tax system that would enable it to compete on more equal terms with foreign interests, the industry could expand its operations to the great benefit of both Britain and the Commonwealth. It would also be able to attract all the financial support, from foreign as well as domestic sources, required for such expansion.

RAILWAY STRIKES

FOLLOWING closely on the heels of a thoughtful article in the *Pioneer* on "Indian Railway Strikes," with special reference to the one that has just occurred on the G.I.P. Railway, comes the news of a frightful accident on the B.B. and C.I. line with considerable loss of life. It is, of course, very desirable to keep down working expenses, but there is such a thing as true and false economy. We are not advocates of extravagance, and do not believe in any company keeping more servants than are required for the efficient administration of its work; but there is no doubt that of late years there has been a craze among certain railway officials to reduce expenses at any cost. The result is that the staff are both short-handed and over-worked; a miserable saving is effected, and a collision, such as occurred on Saturday, will sweep away the savings of many years and bring the company into disrepute. There is no doubt that a feeling of mistrust and insecurity does exist on our railways, which can only be characterised as one of thorough demoralisation. This feeling is caused because the men have no confidence in the security of the position; and we feel sure that it would be the truest economy for the railway companies to pay their men well and make them feel that their situations were worth having.

Without Prejudice

SOME CASES IN THE ENGLISH COURTS

CLAIM FOR PATENT RIGHTS: TRIPPING OVER OTHER PEOPLE'S DOGS

(FROM OUR LEGAL CORRESPONDENT)

THIS annual survey of English cases, in which the principles involved are of interest to residents in India, will be rather more lengthy than usual, as we have gone beyond the scope of the actual decisions themselves in favour of a certain amount of irrelevant anecdote, for which we are indebted to the always lively columns of the famous English monthly, *Law Notes*.

In October was reported an important decision about the rights of employers and employees respectively in inventions by employees while in the exclusive employment of their employers and patented or sought to be patented by the employees as the alleged proprietors of the inventions concerned. Now, disputes of this kind occur not infrequently and they often involve potentially very large sums of money. They should not, and need not, in the case of a competent employer, ever occur. If you are going to employ a skilled man of an inventive turn of mind whose duties will include, say, the supervision of and advising on machinery in which he is an expert, nothing is more easy, and in accordance with commonsense, than to instruct your solicitor to prepare and insert in the expert's contract of service a special clause providing fairly, as between master and servant, for the ownership of patent rights to inventions of the servant while engaged on a whole-time basis in the master's service. A simple precaution which is sometimes neglected.

Personally, the writer finds the latest English decision on the subject a surprising one and respectfully doubts whether it will be followed in India. The defendant, a Mr. Homewood, while employed by the plaintiffs, the British Syphon Co. Ltd. as technical adviser, invented a new form of

soda water syphon. He was not asked by the plaintiffs to advise on a problem to which this invention was specifically referred to, but, nevertheless, the invention related to and concerned the business of the plaintiffs. The plaintiffs applied in the Chancery Division for an order that Mr. Homewood should assign to them his interest in an application for a patent relating to the invention. The employer's application succeeded. Roxburgh J. held that it was not consistent with "good faith" as between master and servant that the servant could retain and dispose of, as he thought fit, an invention relating to part of the employer's business. To do so might well give the servant, as technical adviser, personal reasons for not giving the best possible advice if, for example, he had sold the invention to a rival.

The words "good faith" above are italicised because in 1945 the Master of the Rolls in the Court of Appeal had some tough language to use about them, when used as *somehow* entitling employers to claim ownership of employees' inventions, the suggestion being that quite outside the contract there exists some equitable obligation of "good faith" in an employee in such a situation. "I have always understood," said the Master of the Rolls, "and I believe it to be right, that when you find, in litigation concerning relationships such as Master and Servant, references in judgments to obligations of 'good faith', all they mean is that that on the true construction of the contract... there is a contractual obligation on the part of the servant to exercise good faith. . . . (But) the introduction of equitable principles, apart from contract. . . . should be in general repudiated. The contract is there and it is sufficient to define. . . . what the obligations of the parties are." "The contract". That is the crux of the matter. Wherefore the contract should not be silent on such an important issue but should specifically provide for it.

Typing of legal documents, perhaps above all others, should be exact and accurate. But this presupposes an obligation on the superior who writes the draft from which the typing is to be done, to do so clearly. *Law Notes* vouches for the veracity of the following. A lady typist in a solicitor's office described the occupation of a vendor,

a surgeon, as a "Virgin". When asked to explain this unfortunate mis-description, she replied austere-ly that she did not consider that virginity was an unusual occupation.

What's in a name? "Nothing" says the immortal bard in effect; but he was alluding to a rose and not to a catfish. Catfish is a perfectly good edible and palatable fish with an unfortunate name which puts buyers off. People think it is for cats and it is so repulsive looking that it has always to be filleted before being put on sale. So the National Federation of Fishmongers have decided to do something about it. The Federation and the White Fish Authority have tried for many years, but without agreement, to find a suitable alternative name. Until quite recently, the name appears to have been left to the fishmonger. He will not call it "catfish" and certainly not by its only other lawful name which is "wolf-fish". So he styles it—running considerable risk of a criminal prosecution by so doing—"Scotch Halibut", "Scotch fillet", and "rock-fish". And the public buys what under its true name it would disgustingly reject. Now comes the inevitable test case which the Federation and the White Fish Authority desired. In September in Nottingham, the court decided that to sell catfish under the name "mock-nahibut fillet" was not breaking the law.

Andrews v Pattullo, reported briefly in *The Times* and not in *extenso* in the *Law Reports*, may at any time become of practical interest to householders in India who keep dogs. The reader will be aware that he must not so utilise his house or flat as to make it constitute an unusual or hidden danger to his visitors. What about a recumbent dog lying in a dark part of the hall of a house or flat? Does he constitute an unusual danger of which the occupier knew or ought to have known? Apparently the answer is doubtful, with a leaning towards liability on the occupier if he owned the dog. "Though it may be very usual to have dogs in private houses or flats, Lord Justice Morris was not prepared to say that a dog in these circumstances could not be regarded as an unusual danger." But in this particular case the guest who fell over the dog when leaving and broke a thigh did not recover damages. The dog belonged to the occupier's daughter who frequently visited him, invariably bringing the dog with her, and the occupier did not know where the dog was when the guest left, and there was no reason to assume that it would be in any particular place. This really dodges the question, for the occupier did not own the recumbent dog. What if he had owned it? Personally, one thinks, he would have been liable. *Sed quaere*.

There were two interesting shipping collision cases during the year. In the first—*The Soja* 1956 2 All E.R. 393—a ship under charter-party was detained in port for 20 days to repair collision damages, but fulfilled her charter-party and earned a net profit at the daily rate of £144 3s 10d on a voyage from London to Bombay. Subsequently she earned profits on voyages in the Far East at daily rates of over £800 per diem. Is the measure of the collision to be assessed at the average daily rate for the voyage from London to Bombay, or at the much higher rate earned on the voyage in the Far East? It was held by the Court of Appeal (Lord Evershed, M.A.; Jenkins and Hodson L.J.J.) that the measure of damages for the period of detention was to be based on the daily rate of profit (£144 3s 10d) earned by the ship on the voyage from London to Bombay. The enhanced rate could not be taken into account as it was purely a matter of speculation what profits at the high rate prevailing in the Far East had been lost.

In the second case, as the result of an accident between Ships A and B, caused by the negligence of both, Ship A was holed. Ship B then offered to tow Ship A to where she could be beached but the captain of Ship A refused this offer, preferring to await the arrival of tugs for which he had asked over the wireless. The tugs arrived some time later and took Ship A in tow, but the ship sank a very short distance before she could have been beached. In a claim for the loss of Ship A against the owners of Ship B, the latter pleaded that the damage was too remote in that had Ship A accepted the offer of a tow from Ship B, she might have been saved. The refusal of this tow by the master of Ship A was, it was contended a *novus actus interveniens*, making the loss of Ship A too remote. It was held by Lord Merriman, P. that in the circumstances the captain of Ship A had acted reasonably in refusing the offer. Therefore, there was no break in the chain of causation because, as the captain of the ship had acted reasonably, his judgment, even if mistaken, was a natural consequence for which Ship B was responsible—applying a dictum of Lord Haldane in *The Metagama* (1928) S.C. (H.L.) 21. Further, it was held that the onus was on the owners of Ship A to show that the refusal was reasonable and not on the owners of Ship B to show that it was unreasonable.

A DITCHER'S DIARY

were summed up by the anonymous bystander who, when the crowd outside No. 10 shouted "Good luck," added "You'll need it".

I see the radio singers are at loggerheads with the local station of All India Radio. I am, of course, incapable of entering into the merits of such complaints and can say no more than that if they are genuine, then they should be removed as quickly as possible. I am more directly interested in listeners' grievances, though here too. I must admit my own experience is limited. I never like a radio set better than when it is silent, but like most people I occasionally have to put up with one in full voice. The broadcasts of Western music seem not unsatisfactory, but these are mostly based on popular records of notable singers and instrumentalists anyway. It is the programmes of vernacular music that are disappointing. I have heard—and I entirely agree—that Tagore songs are usually well managed, as are Kirtans and other folk songs. But the "light" or "modern" music section is a genuine source of grumbles. From what I have heard, it appears to be largely given over to incompetence, although most knowledgeable critics concede that it is not the fault of the singers alone. Modern Bengali poets and song-writers, I understand, contribute not a little. These custodians of the art simply leave the field of song-making to the amateurs, who know no better than to wallow in the sentimental moon-and-swoon and heart-and-dart stuff.

I read that the New Year's honours list is under fire because Stanley Matthews—the wizard of the dribble—did not get a knighthood. Which leaves me wondering why, in this world of strife and turmoil, the British people have nothing more important to think about. I have nothing against Mr. Matthews. He has represented his country probably more than any other living professional footballer. His prowess at the game is certainly outstanding, and his unfailing modesty an example to all who are fortunate enough to excel at anything. But why that should entitle him to so much public support when he is not knighted beats me. I suppose that now the precedent has been established of honouring prominent professional sportsmen, and while horse racing and cricket have already had their share, something should be done for soccer, the sport of the masses. That seems fair enough, and those who press this point can count on my moral support. But if it is injustice which is being pleaded, then I can think of a much more flagrant instance in this year's list—that of Donald Campbell, the world's water speed record holder. If any man deserves his country's honours, he does. As the son of a famous speed-king father, he has carried on a fine tradition at the risk of his own life, into an age when individual enterprise of this kind is all too often left to rich Americans or power-conscious Governments. His achievements cannot help but have reflected favourably on the reputation and prestige of his country. Yet his worth is apparently assessed at a mere C.B.E.—the same as that of society photographer Cecil Beaton. I can sympathise with soccer fans and the unassuming Mr. Matthews. But I can see no reason why anybody should get hot under the collar about this petty example of injustice when there is a greater one right under his nose.

I am surprised that so renowned a thinker as Professor Arnold Toynbee should hold the view that "an entirely new element" facing mankind will "induce it to abolish wars". The element concern-

ed is, apparently, the advent of atomic weapons. But surely, as an historian, Professor Toynbee does not seriously believe that an institution which is as old as man himself will disappear completely just because there has been one more change in the character of the weapons with which it is carried on? Wars are likely to be abandoned only when man finds an alternative and satisfactory way of solving his problem. Conflict can be avoided between nations, or so it seems to me, in much the same way as it is between individuals—by establishing a legal mechanism for the settlement of disputes and making sure that the parties concerned accept its decisions. It is nationalism which causes modern war, and I can see no hope of much improvement until communities of nations can be persuaded to act like communities of individuals and obey the directions of a duly-elected international Government. The advent of "annihilation" weapons might hasten this process; personally I doubt it. There are so many ways of waging war these days without getting to the point of throwing atomic bombs: the history of the post-war years has proved that. While there is such a fear of atomic and hydrogen weapons, a world war will certainly remain a question of accident rather than design. But it will need more than simply fear to prevent nations taking risks. War has always shown itself to be an adaptable institution, that can change with the times while remaining essentially the same as a method by which one country can impose pressure on another. My guess is that far from being abolished, war will become more continual, more widespread and more an everyday feature of modern living. I wish I could agree with Professor Toynbee, but his solution, to this age-old scourge of mankind is altogether too simple a one for my tastes.

The way events are shaping, the only thing available in Calcutta's restaurants soon will be spiritual uplift—and who is going to pay good money for that? Already, they by no means smother their patrons with amenities. Their food is generally poor, their drinks are sometimes not to be identified by the labels on the bottles and the service they give cares more for its *bakshesh* than it does for its patrons' convenience. In fact, the only thing about this city's public eating places which is still healthy, virile and bang up-to-date is that irritating institution—the bill. Now I learn that liquor is soon to be in short supply, or may even vanish altogether. Foreign cabaret artistes are to go, too, which might be a good thing for the clubs, but is likely to mean the shutters for most of the restaurants. I have met people who are grimly determined to adapt themselves to what they call "the coming thing", meaning thereby a health-giving glass of tomato juice and a dull evening. But for most of us it will be simply a question of doing what we have been promising ourselves for years, namely staying at home and saving our money. There is a good deal the restaurants can do, of course. Why are they, for instance, still serving austerity meals twelve years after the original justification for them has ended? They could improve the quality and the cooking of the meagre dishes they are serving; after all, French names do not necessarily make food toothsome. There may even be something to be gained from using local talent to replace foreign artistes, if it is properly trained. But this is a question of time and by then the restaurant habit will probably be stone dead in Calcutta. Until then, I suppose one must be thankful for small mercies. India is passing through a phase of acute puritanism of which the next step might well be to force patrons to listen to a moral text on planning over a glass of lukewarm lemonade.

GILT-EDGED LEAD RISE IN STOCK MARKETS

RUMOURS OF LOWER U.K. BANK RATE

London, 16th January.

THE immediate reaction in the stock markets to the news of Sir Anthony Eden's resignation was to mark down prices as a precautionary measure in virtually all sections. But little or no selling developed and after Mr. Macmillan's appointment, rates soon recovered under the lead of gilt-edged securities. The marked strength of funds was the feature, and substantial gains were recorded. The main impetus to the advance was given by renewed talk of a lower Bank rate. The new Government appointments over the week-end were well received in the markets. German and Japanese issues were firm among foreign bonds, and rails improved in places. But dollar stocks moved irregularly and mostly to lower levels under Wall Street's influence. Industrials fluctuated irregularly, and although prices responded to the appointment of Mr. Macmillan, there was not a great deal of change on balance. The feature was the commencement of dealings in Imperial Chemical's new loan stock, in which very large business was done. A substantial premium was established. Gold shares attracted a selective demand, but conditions generally were uncertain and prices were slightly easier on balance. Coppers and other base metals were firm. Diamonds responded to the increase in the price of stones. Oils moved erratically, but the underlying trend was towards lower

levels. Teas were modestly supported from time to time, but rubbers were subdued and occasionally easier.

The Money Market

The money market was quiet during the past week, and funds, although not too plentiful, were ample for needs, with the volume of credit inflated by Government department disbursements. Rates for day-to-day loans fluctuated between 4½ percent and 3½ percent. Very heavy tax payments, which are now made on Thursday, did not disturb the credit situation much this week, as the large sums of money which flowed away from the banking system to the revenue authorities were cushioned by heavy Bill maturities. The money market made no change in its bid for the offer of Treasury Bills and higher bids came from outside competitors. Applications for £260 million of 91-day Treasury Bills totalled £401,410,000, of which £240 million were allotted at an average rate of 95s 5.30d, against 95s 9.11d in the previous week. This week, £240 million of 91-day Bills are being offered. The Bank of England return for the week ended 9th January showed that notes in circulation were £40 million lower at £1,928 million, while bankers' deposits were £7 million higher at £299 million.

Stock Market Prospects

The *Investor's Chronicle* market newsletter writes: In London, gilt-edged have surpassed their end-August resistance point and should now consolidate for a further advance. Industrials have reached the best levels since September and should pause before testing the July-August highs. The undertone remains surprisingly good, but the market is still very susceptible to current news. Selected golds and uranums are being accumulated. The minor activity in oils should enable them to consolidate. Railroads have at last taken over the running of Wall Street. The broadening business of the London stock exchange mainly reflects hopes of lower interest rates. Substantial falls in the Treasury Bill rate in four consecutive weeks, making a total fall of a full 4 percent, have strengthened the belief that the authorities desire lower short-term rates to reduce the heavy interest charges on the Budget and to help the Treasury's maturities of £401 million in June. The resultant strength of gilt-edged has helped industrials, but their widespread advance is suspected as the industry faces many difficulties.

U.S. Bond Market

In the U.S. bond market, Greeks and Serbs were firm on increased turnover, with gains of a couple of points. German Nationals were mostly higher by fractions in a small volume of trading, while among Italians the Republic 3 percents of 1977 added one point. Polish issues continued to move ahead, with the 4½ percents of 1968 advancing over two points to \$20½ for a new 1956-57 high. Australians, Danmarks and Norwegians showed only minor variations either way. Japanese issues were mixed and Union of South Africa 4½ percents were steady at \$95. A number of Brazilians and Uruguayan were strong. Chile 3 percents, which rose over a point to \$46, eventually gave up a part of the advance.

Hongkong Gold Closes Easier

The Hongkong gold market closely followed sterling movements in New York. Values hardened on Sir Anthony Eden's resignation, as some traders feared that this would be followed by the resignation of the Government. However, with the announcement that Mr. Macmillan had been appointed Prime Minister, values eased. Carry-over charges were 162 cents a 10 taels in favour of sellers. The official offtake was 6,600 taels and the unofficial offtake 11,900 taels. Arrivals from Macao totalled 40,000 ounces.

Quicksilver Strengthens

Quicksilver dealers report a continuing upward pressure in the price of the metal, and for ex-warehouse supplies a range of £84½ to £84¾ a flask is now generally indicated, compared with 84½ previously. The new level is slightly nearer the Spanish and Italian origin price of \$236 a flask, f.o.b., or £84 5s 9d. Spot supplies are tighter, according to dealers, and prospects of their easing are not considered bright at present. Both Spain and Italy are well committed in the international market. In the case of the former, it is understood, she is unable to offer before April. Good sales have been made to the Far East, with Japan and India believed to be buying for use in caustic soda plants. Demand in Britain has also picked up somewhat.

World Sugar Prospects

Mr. Laurence A. Crosby, President of the Violette Sugar Company, told stockholders at the company's annual meeting that no one knows where the top will be in the current boom in world sugar. Prices are at their highest levels since the Korean war. The increase in world demand has reduced Cuba's surplus stocks, which amounted to about 2 million tons at the end of 1956, to an estimated 700,000 tons at the end of 1956. International tension, coupled with drought conditions in Cuba, which have affected part of the current cane supply, have contributed to the rise in world prices.

Tate and Lyle Sugar Prices

Tate and Lyle has announced an increase of 1s 7½d in its prices of domestic refined sugar. The basis price now stands at 79s 1½d for granulated sugar in 2 cwt bags. The export price is 62s 7½d a cwt, ex-refinery.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

ADVANCES STILL RISING

Wednesday, 16th January.

BOTH advances and deposits have continued to increase throughout the past week. The cotton and sugar industries have maintained their requirements and there has been a renewed call for accommodation against grain and seed storage. The jute industry has once more increased its offtake which is now at its highest level for the past three years. This is probably due to the fact that the mills' own resources are at present heavily engaged in financing modernisation. The inter-bank market continues fairly tight and the call rate is unchanged at 4 percent.

It has been another quiet week for export bills. The few documents which have passed have been chiefly on account of tea. Remittance has been moderate. The upward trend of sterling still persists with higher quotations against both dollar and Continental currencies. It is reported there has been a good deal of buying of sterling in New York during the past few days.

Bullion was firm on short-covering and strong buying. Silver advanced from the previous week's level of Rs. 173-4 to Rs. 180-12, quoted today. The rate for ready was quoted at Rs. 181. The London price advanced to 80½. The price of foreign silver in New York remained the same at 91½ cents.

In sympathy with silver, gold increased from Rs. 105-8 to Rs. 107-8. The sovereign at Rs. 69-9 showed a rise of 9 annas.

During the week ended 11th January, Government of India Treasury Bills for Rs. 77,42,50,000 were sold in favour of the Reserve Bank.

Increases of Rs. 19.30 crores to Rs. 1,508.38 crores in the total note issue, and of Rs. 13.69 crores to Rs. 1,495.21 crores in active notes, were the notable features of the return of the Reserve Bank of India for the week ended 11th January, 1957. The currency expansion was covered by increasing rupee securities by Rs. 20 crores to Rs. 820.25 crores. Deposits of the Government of India and other Government accounts declined by Rs. 34 lakhs and Rs. 8.97 crores to Rs. 54.34 crores and Rs. 4.94 crores, respectively. Balances of commercial banks at Rs. 56.25 crores were Rs. 7.91 crores higher. Investments dropped by Rs. 13.05 crores to Rs. 49.48 crores, and balances held abroad were Rs. 77 lakhs lower at Rs. 80.30 crores. Other loans and advances increased from Rs. 99.96 crores to Rs. 106.60 crores, of which advances to scheduled banks against usance bills amounted to Rs. 60.86 crores (Rs. 52.92 crores). These advances totalled Rs. 23.36 crores since 1st January, 1957. Ways and means advances stood at Rs. 8.60 crores (Rs. 7.75 crores).

The return of the State Bank of India for the week ended 4th January, 1957, shows a fall of Rs. 1.43 crores in total deposits to Rs. 240.59 crores. Investments in Government securities and other authorised investments are up by Rs. 9 lakhs and Rs. 7 lakhs to Rs. 95.59 crores and Rs. 11.46 crores, respectively. Advances including loans, cash credits and overdrafts and bills discounted and purchased, have increased by Rs. 6.29 crores to Rs. 146.41 crores. Cash and balances are, in consequence, shown at Rs. 11.59 crores, or Rs. 9.08 crores less.

The HONGKONG AND SHANGHAI BANKING CORPORATION has made a profit of \$ (H.K.) 20,635,421 for the year ended last December, after providing for taxation. It is proposed to write off \$ (H.K.) 4,000,000 for bank premises and to pay a final dividend of £3 a share, leaving a balance of \$ (H.K.) 11,039,578 to be carried forward.

The working of the UNITED COMMERCIAL BANK LTD. for the year ended last December, has produced good results. The profit has increased by Rs. 19.55 lakhs to Rs. 56.24 lakhs. Including Rs. 27,761 brought in, the available balance amounts to Rs. 56,51,659. The dividend has been raised from Rs. 2-12 to Rs. 3-5 share. The reserve fund allocation is Rs. 11½ lakhs higher at Rs. 20 lakhs. The allocation to taxation reserve has been increased by Rs. 2 lakhs to Rs. 16 lakhs. The provision for bonus to staff is Rs. 4½ lakhs higher at Rs. 6½ lakhs. The carry-forward is Rs. 29,920.

The net profit of the DEVKARAN NANJEE BANKING Co. Ltd. for the year ended 31st December, 1956, after providing Rs. 1,50,000 for bonus to staff and including Rs. 1,76,285-8-1 brought in, amounts to Rs. 16,63,141-4-6. Out of this, the directors have made the following appropriations: an interim dividend of 2½ percent absorbs Rs. 1,25,000, reserve fund is allocated Rs. 3,00,000, investment reserve Rs. 50,000 and provision for taxation Rs. 8,00,000. It is proposed to pay a final dividend of 3½ percent, making 6 percent for the year. The carry-forward is Rs. 2,13,141-4-6.

The profit of the BANK OF BARODA LTD. for the year 1956, subject to audit, including the sum of Rs. 3,35,546-1-9 brought in, amounts to Rs. 43,25,752-5-6. An interim dividend of 6 percent absorbed Rs. 6,00,000. Provision for taxation is allocated Rs. 15,75,000 and bonus to staff Rs. 8,75,000. The directors propose to pay a final dividend of

Rs. 4 a share, making 14 percent for the year. The carry-forward is Rs. 4,75,752-5-6.

The net profit of the INDIAN OVERSEAS BANK LTD., subject to audit, for the year ended 31st December, 1956, after providing for contingencies and expenses, amounts to Rs. 30,93,306-6-6, including Rs. 2,28,299-3-11 brought in. Provision for taxation absorbs Rs. 14,00,000, reserve fund Rs. 6,00,000 and provision for bonus to staff Rs. 3,50,000. The directors propose to recommend a dividend of 10 percent. There is a carry-forward of Rs. 2,52,286-6-6.

Provisional figures of foreign sea and airborne trade of India on private and Government accounts during November, 1956, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding transit trade of Pakistan, but including that of other land frontier countries: Exports Rs. 5,488 lakhs, re-exports Rs. 57 lakhs (transit trade Rs. 3 lakhs); imports Rs. 6,813 lakhs (transit trade Rs. 4 lakhs); total trade Rs. 12,358 lakhs. *Treasure*: Exports of currency notes Rs. 64 lakhs, others nil. Imports of gold Rs. 3 lakhs, currency notes Rs. 77 lakhs, others negligible. *Balance of Trade*: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver fell short of imports by Rs. 1,270 lakhs.

According to the landborne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures for the total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during November, 1956, are as follows: *Merchandise*: exports to Eastern Pakistan Rs. 28 lakhs; exports to Western Pakistan Rs. 14 lakhs; exports to other countries Rs. 6 lakhs. Re-exports, nil. Imports: imports from Eastern Pakistan Rs. 148 lakhs; imports from Western Pakistan Rs. 9 lakhs; imports from other countries Rs. 26 lakhs. Total trade: Rs. 221 lakhs. *Trade in treasure*, negligible. *Balance of trade*: The total value of exports, including re-exports, fell short of imports by Rs. 135 lakhs.

The Government of India has appointed Mr. K. G. Ambegaokar, a Deputy Governor of the Reserve Bank of India, as Governor of the Reserve Bank with effect from the afternoon of 14th January 1957, until further orders. Mr. B. Rama Rau, the present Governor, has tendered his resignation and it has been accepted by the Government.

With effect from 15th January, the Central Government has nominated the following persons to be directors on the central board of the Reserve Bank of India: Mr. Kasturba Lalbhai, Ahmedabad, from the Local Board for the Western Area; Mr. B. M. Birla, Calcutta, from the Local Board for the Eastern Area; Mr. Shri Ram, New Delhi, from the Local Board for the Northern Area; and Mr. C. R. Srinivasan, Madras, from the Local Board for the Southern Area. The Central Government has also appointed, with effect from 15th January, the following members to constitute the Local Boards for the four areas: Western Area—Mr. Kasturba Lalbhai, Ahmedabad, Mr. Mathuradas Mangaldas Parekh, Ahmedabad, Mr. D. V. Potdar, Poona; Mr. Mohan Lal Tannan, Bombay, and Mr. K. C. Mahindra, Bombay. Eastern Area—Mr. B. M. Birla, Calcutta, Dr. Bimala Churn Law, Calcutta, Mr. O. T. Jenkins, Calcutta, Mr. D. N. Mitra, Calcutta, and Mr. B. P. Singh Roy, Calcutta. Northern Area—Mr. S. Gurdial Singh Uppal, Amritsar, and Mr. mani, Amritsar, Mr. Sahu Jagdish Prasad, Pilibhit, Mr. S. Gurdial Singh Uppal, Amritsar, and Mr. Rishi Marain Shastri, Banaras. Southern Area—Mr. C. R. Srinivasan, Madras; Mr. M. Ramani-menon, Trivandrum, Mr. R. Ramanathan Chettiar, Madras, Mr. P. Suryanarayana, Madras, and Mr. S. Anantharamakrishnan, Madras.

The Call To Save

As citizens of India, you are called upon "to work wholeheartedly for the full and timely realisation of the tasks, targets and aims of the Second Five Year Plan."

The Plan has been embarked upon. Its success depends upon your providing capital for its working. In this effort no amount is too small—the man who saves a rupee and the man who saves hundreds—both are rendering national service.

Save as much as you can and entrust your savings to the nearest office of your Bank. In doing so you will help to build a new India and also create a valuable estate for yourself and your family.

The State Bank's local head office at Calcutta, one of the more than five hundred offices waiting to take care of your savings throughout India.

Stocks and Shares

BRIGHTER WEEK IN THE STOCK MARKET

INVESTMENT SHARE PRICES REFLECT ENQUIRY FROM LIFE INSURANCE CORPORATION

Wednesday Evening.

THERE has been a better feeling in the share market this week. Since the last clearing, the prices of most speculative shares have risen and although quieter conditions prevailed today, they are still generally above last week's closing levels. The improvement in sentiment was due chiefly to better advice from Bombay following satisfactory technical adjustments and to the Life Insurance Corporation's interest in selected preference and equity shares on the Calcutta market. Today's quieter mood was the result of anxiety over what Mr. Nehru was likely to say at the Congress meeting here and a reappearance of the old Bank rate rumour. Values have since recovered slightly but the undertone remains hesitant. Indian Irons touched Rs. 29.3 last week-end, but eased to Rs. 28.4 today. The share is quoted after hours this evening at Rs. 28.11. Other speculatives have moved in sympathy with Irons, although the two counters in the Birla group of companies have been most lively.

Investment shares have also enjoyed a better week. Coals are showing marginal improvement, with the exception of Burrakurs which are quoted slightly lower ex-dividend. There has been some enquiry for jute shares at the present low levels, while both engineering and miscellaneous counters showed more life. Tea shares remained dull and neglected. Government securities shared the improved demand conditions and a number of price rises were recorded.

Details of the week's trading follow.

The Government securities market ruled slightly better and prices improved, but the enquiry was confined to selected short and medium-dated issues. Three percent Conversion Loan 1986 improved further and was quoted at Rs. 73.2 buyers at the close. Three percent Non-terminable Paper however, was unchanged at Rs. 73. In short-dated issues 3% 1957 and 1958 were unchanged at Rs. 99.12 and Rs. 99.9, 2½% 1961 had buyers at Rs. 93.5 and 3½% 1961 was fairly steady at Rs. 99.4. Three percent 1959-61, after easing to Rs. 97.10, closed better at Rs. 97.11, while 2½% 1960 was marked at Rs. 96.6 cum-voucher and later at Rs. 96.5 ex-voucher. Among medium-dated loans and 3½% 1963-65 changed hands at about Rs. 94.3. Three percent 1964 also had sellers at about Rs. 94.3, while 3½% 1964 turned buyers at Rs. 98.3 and 3½% 1965 was weak at Rs. 98.2 with sellers over; 3½% 1967 continued in strong demand at Rs. 98.7 cum-voucher to close at Rs. 98.6 ex-voucher. In long-dated loans, 3% 1966-68 was offered at Rs. 92.4 but 3% 1970-75 had buyers at Rs. 86.14; 3½% 1974 improved to Rs. 98.9 cum-voucher and was later marked at Rs. 98.8 ex-voucher. There was little business in State Loans and prices were notably unchanged.

Business in preference shares continued to be on a restricted scale. In the miscellaneous group, Aluminium Corporation 5% were reported at Rs. 75 and the 6% at Rs. 97. Associated Hotels were marked at Rs. 68 and Bharat Collieries at Rs. 50. Carew & Co. were crossed at Rs. 99.8 and Chrestien Mica Industries were done at Rs. 51.8. Calcutta Electric were fairly steady at Rs. 10.8 and Dunlop Rubber were crossed at Rs. 119. There were ready buyers of Indian Iron & Steel at around Rs. 102 and there was a small enquiry for Jardine Henderson at Rs. 61.8. Kesoram Cotton were placed at Rs. 113.8 and New Victoria at Rs. 4.14. Purtapore Sugar were crossed at Rs. 14.4. Shaw Wallace were crossed at Rs. 67 ex-dividend and Titagur Paper 2nd Preference at Rs. 90.8. A solitary transaction was reported in the jute section in Clive Mills 6% at Rs. 78.

Better working results were responsible for the enquiry in selected bank shares. Punjab National spurted from Rs. 52 to Rs. 55 and United Commercial from Rs. 56 to Rs. 59. Hind Bank rose from Rs. 35 to Rs. 36 while United Bank of India were unchanged at Rs. 4.8.

Coal shares were slightly better as will be seen from the following table:

	Opening 10-1-57	Closing 16-1-57
Bengal	443 0	445 0
Central India	6 2	6 4
East Indian	26 8	26 10
New Beerbhoom	14 8	15 0
South Karanpura	9 0	9 4
Western Bengal	5 13	5 15

In contrast Burrakurs were easier on balance at Rs. 21.2 ex-dividend and Karanpura Collieries dropped today from Rs. 105 to Rs. 100.

The outstanding feature in the Cotton section was Elgin Mills which, on interested buying, rose sharply from Rs. 24 to Rs. 28.12; profit-taking at the close, however, brought the price down to Rs. 27. Kesoram recovered from Rs. 14.5 to Rs. 15.4 while Cawnpore Textiles and New Victoria were unchanged at Rs. 8 and Rs. 1.14. Muir Mills slumped today from Rs. 93 to Rs. 75.

In electrics, Calcutta were quiet at Rs. 12.15 while other shares like Benares, Jubbulpore and

Patna were unchanged at Rs. 18, Rs. 14.4 and Rs. 11.4. United Provinces closed Re. 1 easier at Rs. 147 but Agra improved from Rs. 146 to Rs. 147.

Mild bull support took up the price of Indian Iron & Steel shares from Rs. 28.2 to Rs. 29, but with the reappearance of sellers today the shares reacted at the close to Rs. 28.4. Bhartia Steel were better at Rs. 16 as were Burn & Co. at Rs. 314 and Kumardhubi Engineering at Rs. 9. Interested buying yesterday brought a recovery in Jessop & Co. and Richardson & Cruddas to Rs. 28.8 and Rs. 22.4 from Rs. 27.10 and Rs. 21.8 respectively. Sellers, however, again appeared today and prices were marked back to Rs. 27.12 and Rs. 21.12 respectively. Textile Machinery met with some support and improved from Rs. 19.5 to Rs. 20, but the price fell back again today to Rs. 19.9. Guest, Keen, Williams met with keen enquiry at the higher rate of Rs. 23.12.

Although there was no great enquiry for jute shares, the downward trend appeared to have been arrested and prices in some cases were slightly better at the close. Here is a chart showing representative price movements:

	Opening 10-1-57	Closing 16-1-57
Anglo-India	130 0	136 0
Bally	140 0	145 0
Birla	14 6	14 10
Caledonian	110 0	118 0
Fort Gloster	300 0	320 0
National	18 2	18 11
Reliance	8 4	9 0

Contrary to the general trend, Gondalpara met with some selling pressure and the price was marked down from Rs. 808 to Rs. 775.

The outstanding feature in the Sugar section was Cawnpore which spurted from Rs. 17.8 to Rs. 20.8. Shares which were steady included Champarun at Rs. 23.12 and Durbhanga at Rs. 22. Balmore were shaded at Rs. 6 as were United Provinces at Rs. 17.6. Shree Krishna Gyanoday met with some enquiry and improved from Rs. 11 to

How banking serves the COIR INDUSTRY

INDIA is the world's chief producer of coir and coir products, her yearly output being around 130,000 tons. More than half this output is exported, earning about ten crores of rupees in foreign exchange. The coir industry, which is exclusively South Indian, is concentrated in Malabar and Travancore-Cochin, and employs over six lakhs of workers.

Banking has greatly helped in the rapid growth of this industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the coir industry.

We at Palai are proud that so many leading coir goods manufacturers of South India employ the complete banking service we offer.

Current Accounts — Demand Drafts —
Telegraphic Transfers — Investments —
Letters of Credit — Bill Collection —
Deposits — Loans and Overdrafts —
Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office: PALAI, TRAVANCORE-COCHIN
Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppy, Mangalore, Bangalore, etc. Also at: Delhi and New Delhi.

A LEADING BANK IN SOUTH INDIA

Engineering and Transport

DETAILS OF U.S.-AFGHAN AIR DEAL

GROWING IMPORTANCE OF KANDAHAR

(FROM OUR NEW DELHI CORRESPONDENT)

MORE details of the U.S.-Afghan air deal are now available. The U.S.A. will contribute a total of \$14.56 million, of which \$5 million will come from the Export-Import Bank. About \$3.2 million will be used for buying and re-conditioning Aryana's aircraft; \$1.8 million for building the international airport in Kandahar; \$2.2 million for developing six all-weather airports; \$500,000 for the Afghan Department of Civil Aviation; and \$2.1 million for technical assistance, training, etcetera. Pan American will pay \$200,000 to buy a 49 percent share in Aryana Airlines. Actually, this 49 percent represents the share of the Indamir Corporation, Bombay, in Aryana. Indamir is owned by a U.S. citizen, Mr. Peter Baldwin. The Afghan Government intends to increase the capital of Aryana to \$1 million and Pan American will have the first lien on the new shares. Under the Pan American-Afghan agreement, three Dakotas, which are at present owned by Aryana, will be refitted with more powerful engines, and the company will buy three additional Convair 340s.

Change in Routes

The development of Kandahar might radically change the traditional Europe-Asia air route. Its new airport will be 2,800 miles from Bangkok and 3,900 miles from Paris, and will have 12,000 feet of concrete runway, which will be big enough for any jet aircraft. I.C.A. aviation experts have made it clear that the traditional routes will continue through Beirut, Karachi, Calcutta and Bangkok. But they stress that they plan to build Kandahar for an express route—planes from Paris, London and Frankfurt flying to Istanbul, Teheran, Kandahar and Bangkok. DC6s using this route will save 2½ hours of flying time. Jet planes on the Paris to Kandahar route will save five hours. Moreover, the I.C.A. experts say that by flying from Bangkok to Kandahar direct, planes will be able to take less fuel, and thereby increase their passenger seat-miles substantially. It will suit the growing number of through passengers going from Asia to Europe, who have no reason to or desire to make stops in India, where the number of landing restrictions is increasing.

Aryana itself will be expanded into an international airline. It now makes occasional flights between Beirut and Teheran. In three years' time, it will fly a total of 1,800 domestic air miles. This is not much more than the present Aryana mileage, but the actual flights will be at least tripled and regular schedules maintained. Because of bad weather, Aryana now flies only 55 percent of the scheduled flights. It will reduce the time for journeys to major Afghan cities, which are now covered in six to 15 days, to flying times of 1½ to three hours.

Afghanistan at present does not have a single mile of railroad track. The proposed international routes for Aryana will increase its total mileage to 6,000. Aryana will fly to Delhi, Karachi, Teheran and twice weekly to Beirut, once via Teheran, once via Bahrain. Strangely enough, Kabul airport, which is the centre of Aryana's operations, will be improved by the Russians, who want use it for the route from Moscow to Delhi.

Replacement for Dakotas

India has been wanting a replacement for her Dakotas, and has been fiddling with a proposal to buy the Russian *Ilyushin*. The Fokker F. 27 *Friendship* is probably most like the *Dakota*. The *Friendship* has the performance and size of a transport aircraft. Its handling characteristics are pleasant and straightforward, and simplicity of operation allows a much lighter executive staff. Its economical cruising speed is 275 m.p.h.

Long-Range Britannias

The world's largest airliner—the first of the long-range versions of the Bristol *Britannia* turbo-prop

—has made its maiden flight in Filton, Bristol. This is a version of the "whispering giant" which has been ordered by B.O.A.C. and is designed for the world's longest air routes, such as the regular year-round non-stop operations across the north Atlantic and the non-stop services between Europe and the north American west coast over the Polar regions. The airliner will carry up to 133 passengers. Out of a total of 45 *Britannias* on order, 26 are of this long-range type, known as the *Series 310*. (B.O.A.C. aircraft in this series are designated 312). The fuselage of the *Britannia 310* is 10ft 3in longer than that of the *Britannia 100*, which has already been delivered to B.O.A.C. It will cruise faster (at 490 m.p.h.); and has additional fuel tankage in the wings, giving a range of 6,000 miles. The first of the aircraft will be delivered to B.O.A.C. for operation on the Atlantic routes after completion of the tests. Flight trials for a certificate of airworthiness for this series of the *Britannia* have already begun with the prototype *Britannia 301*, which is virtually identical to the *Series 310*, except for additional tankage.

Finland to Build Gnats

India's decision to buy Folland *Gnat* light-weight supersonic fighter planes and to build them under licence from the British designers has now been followed by a similar move in Finland. The Finnish Government, which has already decided to equip its air force with Folland *Gnat* fighters, has now signed a licence agreement for the manufacture of these planes in Finland. It is announced in London. The agreement is on the same lines as that reached by the Indian Government, under which the *Gnat* will eventually be built entirely in Bangalore. Finnish engineers, like Indian engineers, will be given special training in the Folland factory near Southampton, England. Folland technicians will train local craftsmen so that no time is lost in fabricating the aircraft in India and Finland. It is explained that, besides the advantages of light weight and cheapness of manufacture and operation, a special virtue of the midjet supersonic Folland *Gnat* for manufacture under licence is that it does not require much highly skilled labour.

Flight Trials of New Viscount

Flight trials of the new Vickers *Viscount 800* are now in their final phase. The test programme has been going on since 27th July, when the first *Viscount 800* made a 55-minute maiden flight. The second *Viscount 800* has been flying since 29th September and the third one flew on 7th November, by which date the number of test flights was 127, totalling 150 hours. These three aircraft—all production type *Viscount 802s* for B.E.A.—comprise a "test fleet" which operates daily from Wisley airfield, Surrey. Of the remaining 21 *Viscount 802s* ordered by B.E.A., six have already reached the final assembly line in the newly completed erecting shops in Weybridge. The *Viscount 800* has a longer fuselage than the 700 series now in operation. This enables it to carry up to 70 passengers, but a complex programme of tests is required before the new aircraft receives a certificate of airworthiness. The final part of the certification programme in which pilots of the Air Registration Board take part has now begun. The new *Viscount's* handling characteristics have been fully assessed under all flight conditions and performance measurements have been completed. B.E.A. plans to introduce the *Viscount 800* on passenger services soon. In the standard B.E.A. form, it will be a 58-seater plane, though provision has been made for carrying freight in the main cabin. *Viscount 800s* are also on order for Aer Lingus, K.L.M., the New Zealand National Airways and Transair.

Foreign Exchange Allowance

The abolition of the basic quota of foreign exchange for travel abroad has had serious repercussions on the travel industry. A meeting of representatives of the international airlines, travel agents, hotels, shipping companies and exchange banks was held here last week. Meanwhile, as a follow-up to the abolition of the basic quota, the Government is examining a proposal under which no ticket can be issued to passengers by air or shipping companies unless they first get the foreign exchange.

BIG DOLLAR ORDER FOR BRITISH AIRCRAFT

The U.K. landed its biggest single postwar commercial dollar order recently. Trans-Canada Air Lines (T.C.A.) announced that it has ordered 20 Vickers *Vanguard* turboprop airliners at a cost of \$67,100,000 (about £24 million). In addition, it has taken an option on four more, costing \$11,700,000 (bringing the order up to a total value of about £8 million); all values include spares. The *Vanguard* is a successor to the Vickers *Viscount*, which has already broken records for the number sold overseas. T.C.A. has previously placed orders for 38 *Viscounts*, to the value of \$38,600,000. The airline's total orders for *Vanguards* and *Viscounts* now stand at over \$105,000,000, making it the U.K.'s biggest dollar customer. Delivery of the *Vanguards* will begin in the early autumn of 1960 and will be completed by the middle of 1961. Trans-Canada's "decision to purchase *Vanguards*", said the president of the line, Mr. Gordon McGregor, "came after a most exhaustive equipment analysis undertaken by the company. Evaluation was made over a period of two years, during which six other competing aircraft were also examined". All types of American and British pure-jets and turbo-props were analysed. Various combinations of U.K. engines and U.S. airframes were examined, but

finally the company decided on British airframes and British engines (four Rolls-Royce Tyne propeller-turbines).

The *Vanguard* is a double-deck airliner. The prototype is due to fly in the autumn of next year. Power is being developed in stages to give a speed of 400 m.p.h. in 1959, increasing progressively to 440 m.p.h. in 1963. Accommodation for about 80 first-class passengers, or over 100 tourist-class, is provided in the layout, with four washrooms and two galleys, and large cargo capacity. The *Vanguard* is designed to offer fast, economical services on routes of up to 2,600 miles. The first 20 *Vanguards* to be built have been sold to British European Airways, and the next 20 are going to Trans-Canada. Total dollar orders for all Vickers-built airliners now stand at \$229.50 million.

DEVELOPMENT COUNCIL FOR NON-FERROUS METALS SET UP

A Development Council for Non-Ferrous Metals has been constituted by the Government of India under the Industries (Development and Regulation) Act, 1951. This is the 11th Development Council set up so far. The Council will recommend to the Government targets for production of non-ferrous metals, co-ordinate production programmes and review the progress of the industry from time to time. It will also suggest norms of efficiency with a view to eliminating waste, obtaining the maximum production, improving quality and reducing costs. The Development Council will recommend measures for securing the fuller utilisation of the installed capacity and for improving the working of the industry, particularly of the less efficient units. Among its other functions will be the promotion of standardisation of the products of the industry. It will also promote measures for increasing the productivity of labour and for general labour welfare.

Dr. D. P. Antia, Director of the National Carbon Company (India) Ltd., Calcutta, will be chairman of the Development Council. Dr. Antia and Dr. E. G. Ramchandran, Assistant Director, National Metallurgical Laboratory, Jamshedpur, have been nominated as persons having special knowledge of the technical and other aspects of the non-ferrous metal industry. The following have been nominated as members of the Council to represent the interest of owners of industrial undertakings: Mr. K. K. Bhasin, Calcutta; Mr. B. K. Nevatia, Bombay; Mr. J. G. Berry, Ghatsila (Bihar); Mr. G. D. Binani, Calcutta; Mr. A. C. Dutta, Calcutta; Mr. Bhawanidas Binani, Bombay; Mr. E. S. Greenwood, Calcutta; Mr. H. R. Kamani, Bombay; and Mr. R. N. Parikh, Bombay. Mr. K. P. Tripathi and Mr. Bhagwat Jha Azad, M.P.s, will represent the interests of labour employed in the industry. The following have been nominated to represent the interests of consumers of non-ferrous metals: Mr. E. D. Johnson, Calcutta; Mr. B. V. D. Menon, Udyogamandal (Kerala); Mr. H. M. Chatterjee, Joint Director, Railway Board, New Delhi; and Mr. C. M. Patel, Superintendent, Ordnance Factory, Ambarnath. The ten Development Councils already in existence are for Heavy Chemicals (Acids and Fertilisers) and Heavy Chemicals (Alkalies), Sugar, Bicycles, Art Silk, Woollen Textiles, Internal Combustion Engines and Power-driven Pumps, Pharmaceuticals and Drugs, Heavy Electrical Industries and Light Electrical Industries.

EXECUTIVE OF U.K. ENGINEERING FIRM TO VISIT INDIA

A noted executive of a British firm of heavy-engineering electrical-equipment manufacturers is visiting India this month. He is Mr. George P. Tinker, managing director of Birlec Ltd., electric-furnace producers, of Birmingham. The object of Mr. Tinker's visit is to establish an agency for Birlec interests in India, since the market for electric melting furnaces is rapidly increasing, particularly for use in steel production. During November 1955, a five-ton Birlec mains frequency coreless induction holding furnace was shipped from England to the Tata Locomotive and Engineering works in Jamshedpur. Designed for installation at the company's mechanised alloy-iron foundry, the furnace completes a large consignment including two Birlec three-ton furnaces and two seven-ton arc furnaces, together with two laboratory-size furnaces. Since 1946, Birlec Ltd. has been commissioned by various Indian companies to build a total of 22 arc melting-furnaces in a wide range of capacities. One of these, recently ordered, is for a second four-ton furnace for the Indian Iron and Steel Co. Ltd. This furnace gives an output of approximately two tons an hour, and the furnace has a shell diameter of eight feet. Mr. Tinker is a Fellow of the Institute of Metals and of the Institute of Directors. He has been managing director of Birlec Ltd. since 1950, having first been appointed director in 1946.

COMMONWEALTH TELEX LINKS EXPANDING

Commonwealth communications are to be improved as a result of an announcement by the British Post Office that the Telex service is to be widely expanded. Telex is the 24-hour Post Office teleprinter service which, it is claimed, is cheaper than, yet as fast as, the telephone and carries the authority of the printed word. At present Canada, South Africa, and the Federation of Rhodesia and Nyasaland are linked with London by Telex. Further extensions are planned in 1957 and 1958 to India, Pakistan, Hongkong, Singapore, Australia, and east and west Africa. There are more than 3,000 Telex subscribers in the U.K. today.

New Delhi

CEILING FIXED ON FOREIGN EXCHANGE EXPENDITURE FOR JANUARY-JUNE

LESS STEEL AND NO CEMENT TO BE IMPORTED

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India has fixed a ceiling on the foreign expenditure for January-June this year. It has also totally banned the incurring of new foreign exchange commitments or outlay on all uncommitted projects in both the public and the private sector, within or without the five year plan. The January-June foreign exchange ceiling for the Transport Ministry, for example, has been reduced to Rs. 50 lakhs, and that for the railways to Rs. 28 crores. Imports of cement will not exceed Rs. 20 crores, as compared with Rs. 130 crores worth of foreign steel obtained in 1956. The fertiliser plant project which was to be located in Rourkela has been postponed to better days, because no commitment has yet been made for it. The heavy electrical equipment project might also join the "waiting list." As far as industries in the private sector are concerned, no further commitments will be made, and applicants who came up for the approval of their projects last month were told that the Government's consent was subject to the availability of foreign exchange. They were advised to secure Indian-made goods or get long-term credits. There is, however, every intention of honouring the commitments made until November, 1956. India's exports average Rs. 50 crores a month. The present intention is not only to live within these earnings, but also save something to replenish the depleted reserves. Under the present plan, total imports in January-June should not exceed Rs. 250 crores, inclusive of the old commitments.

India may have turned the corner as far as the foreign exchange reserves are concerned. In recent months, her drawings from the reserves have averaged about Rs. 6 crores a week. The reserves stood at Rs. 533 crores on 21st December, as against Rs. 541 crores on 23rd November—representing a deficit of Rs. 8 crores in four weeks. The deficit in the week ended 11th January was Rs. 40 lakhs.

Foreign Exchange for Non-Indians

The Government's decision on the foreign exchange quota for non-Indians going on home leave is now available. Under an international convention, foreigners are permitted to remit their savings every month to their homes. It is on this principle that remittances of Indian nationals are received in India under the category of "invisibles" shown in balance of payments statements. These "invisibles" brought India foreign exchange amounting to Rs. 44.7 crores during the six months, April to September, 1956. In the previous half-year, October 1955 to March 1956, they amounted to Rs. 53.4 crores. A foreigner's whole salary will be considered his saving during the period of his leave from India, and he will be permitted to receive it in foreign exchange. The first month's salary will be converted into the currency of his country, and can be taken with him when going from India on leave. His employers will be permitted to remit his salary, converted into the currency of his country, every month thereafter.

Reserve Bank Governor

The present chairman of the State Bank of India, Mr. H. V. R. Iengar, has been named here Governor of the Reserve Bank in place of Sir B. Rama Rau, whose resignation has been accepted. The Deputy Governor of the Reserve Bank, Mr. K. G. Ambegaokar has been appointed Governor of the Reserve Bank until Mr. Iengar is able to take up his new assignment. There is to be a slight change in the board of directors of the Reserve Bank, as Mr. Kasturbhai Lalbhai has been nominated to replace Sir Purnsotandas Thakurdas. Mr. P. C. Bhattacharyya, at present a Secretary in the Ministry of Finance, is named to succeed Mr. H. V. R. Iengar as Chairman of the State Bank.

Mr. Bhattacharyya's new appointment might give the Finance Minister an opportunity to reorganise his Ministry. The management of foreign exchange has assumed great importance under the second five year plan. According to reports, a tacit understanding has been reached for a long-term loan of \$600 million to \$700 million from the U.S.A. to cover the exchange deficit of the plan. It is suggested that there should be a full Secretary in charge of foreign exchange. If this suggestion is accepted, the Department of Economic Affairs may be bifurcated into a Department of External Finance and a Department of Internal Finance. The Finance Ministry would then have five Secretaries—for Revenue, Expenditure, External Finance, Internal Finance and the Company Law Department.

It is felt that the Secretary of the Department for Economic Affairs, Mr. H. M. Patel, is burdened with too many responsibilities at present. Under the existing set-up, he is also the Secretary responsible for co-ordination, not only of the affairs of his own Ministry but of the affairs of other Ministries with his own as well. It is suggested that the post of Principal Secretary in the Finance Ministry should be revived. The Principal Secretary will not be burdened with departmental work but will be responsible for the co-ordination and formulation of policies. Such is the pattern of reorganisation which would enable the Finance

Ministry to fulfil its ever-increasing responsibilities.

New Automobile Policy

The Finance Act No. 2 has perhaps indicated the pattern of the new policy for the automobile industry, following the report by the Tariff Commission. It levies an excise duty of Rs. 3,000 each on motor-cars including taxi-cabs, which have a carrying capacity for not more than nine persons; but it excludes four-cylinder motor-cars of not more than 20 horse-power and six-cylinder motor-cars of not more than 16 horse-power. In other words, the Government's new policy is to give added incentives for the manufacture of smaller cars and of commercial vehicles. It is hoped that the various Indian manufacturers will be able to put on the market cheaper baby cars, thereby increasing sales and stabilising the position of their undertakings. It is not intended to increase internal competition by adding to the existing number of licensees manufacturing automobiles. In other words, Fords, if they wish to re-enter the Indian market, will have to arrange a tie-up with one of the existing units.

Oil Experts from Western Germany

Three West German oil experts, Dr. Hans Closs, Dr. Wolfgang Schott and Dr. Gerhard Richter-Bernburg, are arriving in New Delhi this week. They will discuss matters relating to oil exploration in this country with the Oil and Natural Gas Commission. They will then visit various sites where prospecting is going on.

Export of Sugar

The Government has accepted the recommendation of a sub-committee of the Development Council for the Sugar Industry, and decided to allow the export of up to 50,000 tons of sugar for the present. The prospects for sugar production this year are good, and it is expected to total 2.25 million tons. Total production during the 1955-56 season

was 1,862 million tons, exceeding the target by over 50,000 tons.

Talks on Dyestuffs Project

Following the discussions which the Secretary for Heavy Industries, Mr. L. K. Jha had with dyestuff manufacturers recently, Dr. A. Schmitz, a representative of the German firm of Bayer, has arrived here for negotiations with the Government on German collaboration in the project. The other company concerned, I.C.I. also has been having similar discussions.

Aid from Ford Foundation

The chairman of the Rockefeller Trust, Mr. Dean Rusk, and the chairman of the Ford Foundation, Mr. Rowan Gaither, have arrived here on a short visit. In the past five years, the Ford Foundation has given the Government financial aid for a broad range of programmes, nearly all of which are part of, or closely related to, the five year plans. The following is a summary of the Indian programmes for rural development which have received Ford Foundation support.

1. Fifteen pilot extension projects, were launched, which were valuable forerunners of the present community projects. They tested village extension methods and are now merged with the National Extension Service. The grant for them was \$963,770.

2. Forty-three training centres for village extension workers were established to train the village workers needed in the rural development programmes. The total number trained to date is 16,816. The grant amounted to \$1,873,485.

Public Health

3. Three rural public health training centres were started to train public health workers, with a grant of \$353,105.

4. For public health education and environmental sanitation, there was a research-cum-action programme to develop methods and materials for improving village sanitation and health practices. The grant for this was \$295,000.

5. There were five social education training centres to train specialists to assist village workers in methods of securing interest and participation in improvement, and in adult literacy programmes. The amount of the grant was \$375,363.

6. Twenty-five centres to train women for village extension work were organised under an all-India programme for home extension training. The grant was \$618,000.

7. Twenty centres for training village artisans were started to train village blacksmiths to repair

"...and a bonus of goodwill to the management
—for installing the
'Tushar'
WATER COOLER!"

QUICK DIVIDENDS in improved staff relations—and greater efficiency! That's what investment in a TUSHAR Water Cooler brings you.

The TUSHAR provides a constant supply of cool, hygienic drinking water for your staff and clients. It's easy to operate and most economical to run. Why not get in touch with Voltas Limited, and order a TUSHAR now?

With the TUSHAR you get

- A continuous supply of instantly-cooled water at the touch of a button—no unhygienic refilling or storing.
- A choice of two handsome models.
- Ease of installation.
- Economical to run.

Write or call:

SECUNDERABAD - INDORE - JAIPUR - NAGPUR - COIMBATORE

and make improved types of farm implements, and to train village carpenters in making improved types of housing materials. The grant was \$407,575.

8. The training of project executives and officers, was undertaken in three centres, with a grant of \$241,895.

9. To start an organised in-service training programme for Central and State project staff, and for village leaders, a grant of \$545,850 was given.

10. To provide staff and leadership at the Centre and in the States for a village youth programme, there was a grant of \$189,500.

11. Two films on village development were produced. One was a documentary on village extension training, and the other a semi-documentary on a village family under the community programme. The grant was \$122,000.

12. Extension departments in five agricultural colleges were organised to provide undergraduate and graduate training and short courses in extension. The grant was \$420,000.

13. To strengthen the teaching and research programme of the Allahabad Agricultural Institute, a privately-run body, it was decided to organise a programme in village home economics and extension and to erect model buildings. The amount of the grant was \$940,000.

Agricultural Information

14. A conference for planning an integrated agricultural information programme received a grant of \$4,500.

15. For the publication of a monthly journal, Dharti-ke-Lal (Sons of the Soil), for village farmers, a grant of \$25,050 was given.

16. For a study tour of the United States and Japan of 24 Indian extension directors, who were to study U.S. and Japanese extension methods which might be adapted to Indian needs, there was a grant of \$117,430.

17. Under an international farm youth exchange programme, 88 Indian farm youths spent six months on farms in the United States, and 30 American farm boys spent three months on Indian farms. This year, Indian and American farm girls are included. The grant is \$358,000.

18. An Evaluation Organisation was set up in the Planning Commission in 1952 to evaluate the methods and effectiveness of the rural programme as a guide to future planning. The grant for it was \$461,500.

19. To support a series of orientation training camps for village teachers and village leaders, designed to strengthen the rôle of the village teacher in rural development areas and more effectively to integrate the village school into community development plans, there was a grant of \$800,000.

20. For study tours for India's policy leaders in community project and development areas, there was a grant of \$284,000.

The sub-total of the schemes for rural development was \$9,396,023.

Development of Small Industries

In 1953, the Indian Government began to make intensive efforts to develop and strengthen small industries, so as to increase employment and production. The second five year plan places greater emphasis on these industries. The Ford Foundation has assisted these efforts as follows:

1. In late 1953, the Foundation sponsored an international study and planning team, invited by the Government, to help outline a systematic scheme for the development of small industries. The grant for it was \$76,178.

2. To provide equipment, training in India and abroad of staff and technicians, and employment of short-term foreign technical staff for four regional Small Industries Service Institutes and for the overall small industries programme, there was a grant of \$1,555,000.

3. For rural and urban market surveys a grant of \$15,000 was given.

4. To get factual data which would help foreign private investors in gauging investment opportunities in India, there was a grant of \$30,000.

5. To assist the Government in establishing a Manpower Directorate in the Ministry of Commerce and Industry to classify, place and help plan

the training of students from secondary schools and colleges, a grant of \$34,000 was offered.

6. To support a programme of assistance in establishing four extension service centres for the Small Industries Service Institutes and a training centre for the shoe industry, there was a grant of \$465,000.

7. For the purchase of books and films on Indian textile designs for distribution in India for the purpose of improving these designs, the grant was \$2,700.

8. A grant of \$500,000 was given for the National Council of Applied Economic Research. This was to provide initial support, over a five-year period, for the Council's programme of economic research, done on contract for business and Government organisations.

The sub-total for small industries was thus \$2,677,878.

Educational Projects

The Indian Government has many proposals for reorganising education. The Ford Foundation has given financial assistance to enable the Education Ministry to carry out the following studies and programmes:

1. A secondary education study team of Indian and foreign experts studied secondary schools and teacher training institutions in the United States, Britain, Denmark and India. It got a grant of \$102,500.

2. Twenty seminars for secondary school headmasters, to bring together the leaders essential for effecting reforms in secondary education, got a grant of \$146,800.

3. For a study tour of Indian rural educationalists, who examined the Danish folk high school movement for possible application to India, there were grants of \$26,000.

4. An international study team on rural higher education in India which was to prepare a survey and inventory of experiments in rural higher education, used a grant of \$22,525.

5. Four workshops to provide training in methods of writing simply and interestingly for new literates received a grant of \$12,630.

6. For the field service staff of the All-India Council for Secondary Education, who enabled the Council to keep in touch with working educationalists and their developing programmes, the grant was \$225,000.

7. Extension services in 24 secondary teacher training colleges: for the preparation and staffing of special extension courses, with teacher-trainee participation, within a 50-mile radius of each college. The grant was \$500,000.

8. Education for rural areas: (a) to strengthen and spread *vidyapaths* (rural universities) in Mysore and other States; and (b) to strengthen a number of existing rural institutions. The grant was \$1,720,000.

9. Student apprenticeships in village development: to enrol a cross-section of college students as apprentices to "village level workers" in community projects, acquainting them with the country's major social problems and encouraging them to take a further part in rural programmes. Begun in one university, it was extended to 32 universities in 1956. The grant was \$313,200.

10. Training of responsible personnel: For special study tours in India and abroad, by persons who have given promise of contributing to the educational development programmes. The grant was \$25,000.

11. For the establishment of a Chair of American Civilisation, and scholarships: the Institute of International Studies, University of Delhi, got a grant of \$200,000.

Economic and Social Research

12. Economic and social science research: to assist six of India's universities to improve training in research methodology, as well as to engage in problem-oriented research in the social sciences, grants were given as follows: Bombay University \$73,000, Delhi University \$123,800, Gokhale Institute \$40,000, Punjab University \$52,000, Madras University \$52,000, Utkal University \$52,300; the total being \$393,600.

13. Seminars on American civilisation: to cover the travel and maintenance of college teachers at

these seminars, organised by the U.S. Educational Foundation in India to acquaint young Indian teachers with America and American teaching methods. The grant was \$9,500.

14. The Southern Languages Book Trust was formed by the Vice-Chancellors of south Indian universities, with the following objective: to sponsor the publication and distribution of high-quality, low-priced books in large numbers in the four south Indian regional languages—Tamil, Telegu, Malayalam and Kannada. The grant was \$400,000.

15. Experimental syllabi for inter-disciplinary courses in Indian universities: to finance the visit of a group of Indian educationalists to Britain and the United States, for the purpose of developing experimental syllabi for inter-disciplinary courses in Indian universities, the grant was \$39,000.

16. To support a programme of study camps and special seminars on the teaching and administration of secondary education in India, the grant was \$63,000.

17. Strengthening teachers of science in Indian secondary schools: to support a programme of fellowships in Canada, Britain and the United States for Indian teachers in teacher training colleges and Indian teachers of natural science in secondary schools, there was a grant of \$164,000.

The education sub-total thus came to \$4,362,755.

Public Administration

To strengthen its administrative services, the Government in March 1954 established an Institute of Public Administration, with the Prime Minister as president. The Ford Foundation has offered funds to help finance the Institute's programme, including the training and foreign study of administrative persons selected by the Government, and the establishment of a school of Public Administration. The amount of the grant is \$350,000.

To support a planning project for a pilot programme of community development for the urban areas of India, there is a grant of \$25,000.

The public administration sub-total was thus \$375,000.

Other Projects

1. Gandhi Memorial Centre: A model community centre for the Harijan Colony in Delhi, where Mahatma Gandhi frequently lived, got a grant of \$98,000.

2. The Delhi Orientation and Training Centre for Foreign Technicians was established in October, 1954, by the Delhi School of Economics, with U.S. Technical Co-operation Mission and Ford Foundation funds, for foreign technicians and their families. The grant it got was \$144,177.

3. Cultural inter-change: An American art exhibition for India, study tours for selected delegates to special conferences (i.e. International Conference of Social Work), work-study tours in India of U.S. college students. The grant was \$217,673.

Aid for Small Industries

The Central Government's programme of assistance for the development of small industries was announced last week. By the end of the next financial year, there will be one major institute for small industries in each State in India. The status of the branch institutes in Bangalore, Indore, Cuttack, Gauhati and Agra will be raised, and they will become major institutes during the next financial year. One major institute will be set up in Rajasthan and another in Jammu and Kashmir. The Central Government has also decided to start four subsidiary corporations in Delhi, Madras, Bombay and Calcutta to deal expeditiously with applications for machinery on a hire-purchase basis and to provide marketing services for small industries in each region. The provision of an industrial extension service through institutes for small-scale industries, branches and extension centres has been a major item of the Central Government's programme. Besides the Regional Institutes in Delhi, Bombay, Calcutta and Madras, the Government started during the current year five major institutes, one each in Hyderabad, Trivandrum, Rajkot, Patna and Ludhiana, and seven branch institutes, one each in Bangalore, Hubli, Indore, Cuttack, Gauhati, Agra and Allahabad. The Government has also approved the starting of 48 extension centres during the current year.

A new programme of activity which the institutes have undertaken is the provision of a Business Management Service to small industrial unit. Steps have been taken to appoint qualified staff in each regional institute and major institutes for providing business management advice to small industrialists. Evening classes have been started in the regional institute in Delhi to educate small industrialists in proper business management methods. The response has been very encouraging, so it has been decided to organise similar classes in the regional institutes in Bombay, Calcutta and Madras immediately.

Machinery on Hire-Purchase Basis

The supply of machinery on a hire-purchase basis, undertaken by the National Small Industries Corporation, has made good headway since the Board last met. The Corporation has so far delivered machinery valued at Rs. 6.69 lakhs to small industrialists. Machinery worth Rs. 4.85 lakhs, it is expected, will be delivered this month. Besides, the Corporation has placed firm orders so far for the supply of machinery worth Rs. 53.28 lakhs.

The experiment of mobile sales vans, which was being conducted in the Delhi region, has been extended to Calcutta, Bombay and Madras. The vans carry a large range of small industries products for ready sale to consumers. The main object of

the marketing van service is to collect the necessary data on items like quality, price, consumer taste, etcetera, and to convey this information to the industries.

Exploration of Ground Water Resources

Sixteen promising areas in India are at present being investigated under the project for the exploration of ground water resources. Under this project, 410 exploratory tube-wells are to be sunk in various States in order to collect information about the quantities of irrigation water available underground, the depth at which it is available and its chemical contents, the aim being to determine its irrigation potential. Work has so far been completed in the Narbada basin (Jabalpur and Bhopal districts) of the new Madhya Pradesh State, where 30 borings were undertaken. Sixteen of them were found successful and developed into regular tube-wells. Ten exploratory wells have been bored in the Khandesh (Bhusaval) area of Bombay State. It is intended to construct 20 such wells in this area. As soon as the remaining ten bores are completed, the unit working in this area will move to the Purnea valley, in Okhala district, Bombay.

Seven exploratory wells have so far been bored in the Madras area, but the total programme is for the drilling of 50 exploratory bores in all. The unit working there will shortly move to the Vridhachalam area, in the Jhalawar area of the former State of Saurashtra, it is intended to have 15 bores, of which two have been completed so far. The operations are expected to be over by the end of April, after which the unit will move to the Kutch area of Bombay State. In the Jaisalmer area of Rajasthan, two out of the 10 bores proposed have been completed. The work is expected to be over by the end of March, after which the unit will move to south of Punjab.

The programme is being implemented by the Union Ministry of Agriculture through an Exploratory Tube-well Organisation set up with the assistance of the Geological Survey of India and foreign technical personnel offered by an American firm of consultants. For it, 15 heavy rigs and allied equipment imported from the U.S.A. under the Indo-U.S. Technical Assistance Programme have been divided into four units which are now operating in the Jaisalmer area of Rajasthan; the Jhalawar area of the former Saurashtra State; the Khandesh area of Bombay State; and the Madras area of Madras State. The training of Indian personnel constitutes an important part of the project for the exploration of ground water resources. The data collected will be helpful in preparing programmes for the large-scale construction of tube-wells in other parts of the country under the second and third five year plans, as was done in U.P., Bihar, Punjab and P.E.P.S.U. under the first plan. This exploratory project, including the equipment, is expected to cost about Rs. 475 lakhs, out of which Rs. 208 lakhs will be contributed by the U.S. Government in dollars under the Indo-U.S. Technical Assistance Programme.

Import of Woollen Materials

The policy of a progressive reduction in import quotas, which is reflected in the import policy for the current half-year, has affected most categories of woollen materials. The import of blankets and rugs has been stopped completely. Licences for woollen hosiery have been cut from 50 percent to 10 percent, and those for hand-knitting wool from 75 percent to 25 percent, the import of woollen yarn has been halved, from 10 percent to 5 percent. The following table illustrates the actual extent of the cuts effected by the policy for the January-June, 1957, period:

	Licensing period July-Decem-ber, 1956	Licensing period January-June, 1957
1. Blankets and rugs (other than floor rugs), excluding blankets and rugs made wholly or mainly from artificial silk	25 percent	Nil
2. Woollen carpets, floor rugs, ruffe cloth, shawls and lohis	5 percent	Nil
3. Manufactures of wool, not otherwise specified (including felt) but excluding those specified in serial No. 2	20 percent	5 percent
4. Hand-knitting wool	75 percent (c.i.f. value Rs. 75,000)	25 percent (c.i.f. value Rs. 50,000)
5. Woollen hosiery and woollen knitted apparel (containing not less than 15 percent of wool by weight)	50 percent	10 percent (Woollen socks and stockings excluded)
6. Khaki and other woollen fabrics (not otherwise specified) containing more than 90 percent of wool	25 percent	10 percent
7. Khaki and other fabrics, not otherwise specified, containing 10 percent to 90 percent of wool	25 percent	10 percent
8. Woollen yarn, not otherwise specified	10 percent	5 percent
9. Wool, raw (merino and crossbreds only), tops, shoddy and noils.	O.G.L.	O.G.L.

CODE OF CONDUCT FOR FREE ENTERPRISE

I

This Code of Conduct for Free Enterprise has been prepared by the Forum of Free Enterprise and is now placed before industrialists, business men and those belonging to different professions and vocations in India in the belief that they will find it worthy of acceptance and of application in their daily activities. The Forum pledges itself to do all it can to create a widespread awareness in the ranks of Free Enterprise of the obligations that are contained in this Code. We feel that Free Enterprise, which has been tested and proved by time and experience of all democratic societies, should maintain its reputation by insisting on high standards of integrity which are dictated by social purpose. Honesty, hard work, courtesy and continuous initiative are the foundations on which the edifice of Free Enterprise rests.

II

Producers and distributors owe it to the consumers of their products that they shall always be of the highest quality and available at reasonable cost. They shall maintain fair measure and guard against adulteration. Customers are entitled to courtesy, promptness and good service, and every endeavour shall be made to see that they receive them.

III

Employers owe it to labour to recognise that welfare is not conceived in terms of philanthropy, but as a social obligation. Men and women engaged in production shall do so with dignity, honour and a sense of security. Fair wages should be paid for work done. Working conditions shall be as pleasant as possible. Opportunities should be made available for the worker to gain technical skills and better his economic prospects and social status. Procedures should be instituted for the removal of legitimate grievances so that the employee is satisfied that he gets a fair deal. The employers should welcome the existence of stable and democratic trade unions. They should recognise that in the sphere of employee-management relations, as in other spheres, checks and balances are essential for the working out of rational and democratic solutions. They should accept the rôle of labour as one of creative co-operation and recognise the need for providing increasing opportunities for consultation of employees and their progressive association with management to help in the promotion of increased productivity from which all will benefit.

IV

Management owes it to those who invest in their enterprise that they receive a fair return on their investments commensurate with the risk they take. At the same time, reserves must be created for expansion and modernisation of the plant and machinery and in their utilisation the Management remains accountable to the investor. Money must also be provided for research. The earning by the shareholder of a fair return or profit by the entrepreneur under competitive conditions and after payment of fair wages must be regarded as a legitimate reward for the risk and the work of promotion and development which the community urgently needs. Certain mal-practices have erept into the system of company management. They are to be condemned and should be removed. Hoarding, black-marketing and profiteering are anti-social and evil. Honest business practices can be promoted and encouraged by an honest and efficient administration in a democratic State.

V

Those who practise a profession, such as that of a lawyer, teacher, doctor, auditor or writer owe it to those who avail themselves of their services to maintain the highest standards and traditions. They should discharge their duties truly and faithfully, and should always subordinate considerations of personal gain to the larger objective of service.

VI

We all owe it to the community that we accept our obligations as good citizens. We shall bear our share of taxation honestly. We condemn unequivocally any attempt at tax evasion. We shall actively participate in the promotion of social, cultural and civic improvements. Wealth or power shall not be a justification for vainglory or ostentatious display, but an opportunity for rendering service to the community.

SIR ANTHONY PUTS COUNTRY BEFORE SELF

MR. MACMILLAN'S CHOICE AS PREMIER WELL RECEIVED

(FROM OUR LONDON CORRESPONDENT)

DESPITE all that is being said to the contrary by the anti-Edenites, it is difficult not to feel that Sir Anthony himself had no intention of resigning the Premiership until he received the report of his doctors on 8th January and realised that it was inevitable if his health was to be restored. In view of his past record, however, that fact probably weighed less with him in reaching his decision than that the country, in its present difficult circumstances, would certainly need the full-time services of a fit Prime Minister. The decision was a secret until the Queen interrupted her holiday at Sandringham to return to London, for Sir Anthony's visit to Her Majesty there was regarded as being no more than a routine audience to report on international developments. The surprise of Sir Anthony's resignation was matched by the selection of Mr. Harold Macmillan as his successor instead of his stand-in while he was resting in Jamaica, Mr. R. A. Butler. Political correspondents have had heaps of material for speculation and have made the most of the opportunity, for Lord Salisbury and Sir Winston Churchill were called to Buckingham Palace for consultation before the decision was reached. Mr. Macmillan's appointment has been well received in the City, where his business experience and understanding of financial matters together with the appointment of Mr. Peter Thorneycroft as the new Chancellor of the Exchequer are regarded as being likely to create greater confidence in the Government's future policies. It is not forgotten, moreover, that in the variety of offices which Mr. Macmillan has held in earlier Governments, he has always proved surprisingly successful when least expected. It will be particularly interesting to see to what extent his team of Ministers meets current expectations for on that, it is being claimed, will depend the support he can expect from the rank and file of the Conservative Party to eliminate the rifts which have been disclosed by recent events.

In some respects the new Chancellor will start off well, thanks to Mr. Macmillan's recent measures in support of the pound. New Year tax payments resulted in a surplus of £36 million the week before last to reduce the current deficit to £549 million, though that is still £260 million higher than at the same time last year. On the other hand, National Savings made a handsome recovery in 1956 from the setback in 1955, with a net increase of £127 million, which is the best result since 1948. Preliminary trade figures for December just released by the Board of Trade show that exports for 1956 topped £3,000 million for the first time at £3,173 million, or £267 million higher than in 1955, whereas imports were hardly changed at £3,890 million. Allowing for re-exports, the trade gap for the year was cut by £288 million to £571 million. What is more, exports to the vital dollar markets set up new records. The biggest problem is the uncertainty on the labour front, which far from being clarified grows more complex from week to week. Unemployment and short-time working is on the increase, but wage claims are still being pressed.

Budget Advice

A warning that an increase in income-tax would be "a serious confession of weakness in dealing with expenditure" and a number of suggestions involving a loss of revenue of less than 2 percent

on the present tax basis are the features of a 2,000-word letter from the Association of British Chambers of Commerce in giving its customary advice to the Chancellor of the Exchequer on the next Budget. The letter makes the following points: (1) The investment allowance should be restored in order to provide a permanent incentive to industrial modernisation, made all the more important by the proposal to bring about free trade with Europe, (2) Expenditure of the Government (including local government), which now takes about 37 percent of the national income, should be reduced, (3) Overseas business and shipping should be encouraged by tax exemptions for overseas trade corporations, (4) Purchase tax should be removed from goods used up in business, such as stationery, and the tax on petrol and oils should be reduced when the time comes to remove the present emergency tax, (5) Earned income relief should be raised and the personal and earned income allowance should be made effective for surtax payers. The starting-point for surtax should be raised to £3,000, (6) Profits tax should be converted into a flat-rate tax, (7) The Government is advised to be content with a "very much lower surplus" in the Budget for 1957-58.

Coal and Steel Production

It is not surprising that great interest is displayed in coal and steel output figures, seeing the important part these two industries play in the British economy. The National Union of Mine-workers has just decided to press a new wage claim for an increase of 19s. 6d. a week, and would be assured of more public support if the miners, for instance, gave us more evidence spread over the whole year, of the output they can achieve in a "bull" week when it is in their interest to set up records. No one denies that the miners are doing a difficult job and, on the whole, doing it well, but as the aristocrats of the labour force they are also being paid well and should realise that to get more they should try to give more in the interests of the country as a whole. Revised figures for the 52 weeks of 1956 show that coal production for that year totalled 222,024,300 tons—472,900 tons higher than the figure for 1955. The total of imports for the year was 5,244,000 tons, against 11,486,200 tons for 1955. The improvement is there, but it is hardly impressive when the contributions of mechanisation and open-cast working are taken into consideration. By contrast, the denationalised steel industry is very much more impressive. Announcing details of steel production in 1956, which totalled 20.66 million tons—the highest yet achieved and 4.4 percent up on 1955—the British Iron and Steel Board states that an anticipated production of 21.3 million tons was prevented mainly by the craftsmen's ban on overtime. "Despite the reduction in oil supplies," states the Board, production in December, which included the Christmas holiday, averaged 395,900 tons a week—14,000 tons more than the weekly average in December, 1955. Pig iron production in 1956 reached 13.17 million tons, an increase of 5.6 percent over the 1955 production of 12.47 million tons. Imports of scrap and pig iron in 1956 were 427,000 tons lower than in 1955, and imports of ingots and semi-finished steel were lower by about 100,000 tons. Although slightly more finished steel was imported over the year as a whole, imports had been falling since May.

Monopolies Commission Reports

The Monopolies and Restrictive Practices Commission has issued three reports recently after long periods of investigation into the activities of concerns supplying oxygen, metal windows and tea. In the case of the first of these commodities, the Commission found that the British Oxygen Company and its subsidiaries accounted for 98 percent of oxygen and dissolved acetylene supplied, and although a reasonable standard of efficiency was maintained it had pursued a policy of suppressing

and restricting competition against the public interest. Safeguards empowering Board of Trade reviews of the industry are recommended, and two Labour members go further and suggest that public ownership of the industry should be considered. The second report, on metal windows, although it finds that Crittalls are responsible for something like half the supply, is a lot less severe. Indeed, it is generally satisfied with the industry's activities save that it recommends one or two restrictive practices which call for revision. The third report has the widest interest and is probably the most surprising. It completely exonerates the tea trade from all the criticisms which have been levied against it. Far from being a monopoly, the trade is "keenly competitive" and the sharp fluctuations in prices since decontrol are not due to monopoly conditions or restrictive practices.

The Commission examined a number of the trade's practices and a summary of its views will be of interest to Indian readers. In the international field, no restriction was in force at the time it was making its inquiries. The International Tea Agreement which provided for the agreement of export quotas lapsed in March, 1955, and has not yet been replaced by another agreement. The Commission refused to speculate on whether, if producing countries succeeded in negotiating another agreement, it would operate against the public interest here. As regards the trade in this country, the Commission examined the way in which sales are regulated in the London market, and found that these were justified by the conditions. Tea arrives during seven or eight months of the year, but the demand is spread over the whole year. The Commission accepted the trade's view that "programming designed to even out sales over the year without limiting the total amount coming forward over the year as a whole and to prevent excessive amounts of tea from being offered at certain periods" was justified. In the absence of such arrangements it thought the fluctuations in price would be larger. On the other hand, there was no discernible effect on the average level of prices over a long period. The way in which tea is sold in the market here, subject to conditions of sale which all are compelled to observe, was considered by the Commission to be reasonable and not against the public interest. The trade's claim that it would be impossible to sell a commodity like tea by auction without laying down uniform conditions was not disputed. On the whole these tend to work in favour of the small buyer. As for the distributors, the Commission also found nothing to complain about. Four small suppliers of tea apparently used to operate resale price maintenance (which is now illegal). But no fines were ever imposed and no collective stop list was used. Brooke Bond and J. Lyons tell each other when they are about to change their prices, but this is because of the length of time needed to change the price labels on packets. In all other respects the two companies are extremely competitive.

Aiding Productivity in Small Firms

Wider facilities to help manufacturers introduce modern production and accounting methods are to be provided by the National Union of Manufacturers. It is hoped to aid smaller firms in particular. The Union announced a few days ago that it was expanding its Industrial Advisory Service, started three years ago. A non-profit-making company, the National Union of Manufacturers' Advisory Service Ltd., has been set up. The chairman is Mr. Gilbert Salter, a Midland industrialist. Mr. G. L. Page, Managing Director of the company, said at a Press conference in London last week that firms which asked for advice would have the help of a mobile force of specialists in work study and cost accounting. They would recommend how new methods should be introduced and staff trained. The company will charge no fees for initial consultation, but appropriate charges will be made for subsequent services.

Chargola Tea Scheme

Following the defeat of the board's scheme in November, holders of Chargola Tea Association £81,007 7 percent Preference stock are now offered 23s. 6d. a £1 unit by the British Trusts Association and associates. Ordinary holders are to receive 14s. 3d. with 10s. payable before the end of next month and a further 5s. 9d. if contingent liabilities do not materialise. These proposals have been approved by holders representing about 25 percent of the Ordinary and are being placed before members by the directors. The new scheme seems a fair compromise between the two classes. While the Ordinary holders are asked to give up 9d.—by the directors. The new scheme seems a quick 10s. repayment. Preference holders will receive a more just distribution than the 20s. repayment under the directors' scheme.

Brevities

Trading profits of Jute Industries for the year ended 30th September rose from £1,172,078 to £1,408,225, and after deducting £367,677 (£220,000) for depreciation and £563,215 (£489,279) for tax, the net profit was up from £462,799 to £477,333. With a final of 15 percent, the total Ordinary dividend is again brought up to 20 percent.

Courtaulds, Ltd. announces that in spite of increases in costs of production the prices of its staple fibres and its yarns for industrial use remain unchanged. The prices of viscose and acetate continuous filament textile yarns, which have remained unchanged since 1951, are being advanced by approximately 10 percent for all new business.

Bombay

BOMBAY HIGH COURT APPROVES T.I.S.C.O. PETITION

POLITICAL CONTRIBUTIONS NOT AGAINST PUBLIC POLICY

(FROM OUR BOMBAY CORRESPONDENT)

THE Bombay High Court has admitted a petition filed by the Tata Iron and Steel Company which seek permission to contribute funds to political parties which, in the company's view, would serve its interests and the interests of industry in general. In delivering judgement, Mr. Justice Tendolkar held that contributing to political parties in the manner envisaged by the company would not be against public policy. But His Lordship drew a clear distinction between supporting a party or a candidate in agreement with the company's policy and supporting candidates who would pursue the company's objects for a financial consideration. The latter, His Lordship held, would amount to political corruption and would, therefore, be contrary to the public interest. Citing section 293 of the Companies Act, Mr. Justice Tendolkar said it was open to the directors of the company to contribute Rs. 25,000 or 5 percent of the average net profits of the three previous years without a previous reference to the shareholders or to contribute a larger amount with the sanction of the company. In the present case, the average net profit amounts to Rs. 3 crores a year and under the law T.I.S.C.O. directors are empowered to contribute Rs. 15 lakhs a year without the permission of the shareholders. While conceding that an unusually large donation would tend to arouse suspicion in the public mind, His Lordship pointed out that there was no reason to hold that such a donation would, in fact, lead to political corruption. Safeguards exist which would check the misuse of funds. It is open to any shareholder to seek a court injunction restraining the disbursement of funds if reasonable grounds exist that such a disbursement would be contrary to public policy. In the present case, a further safeguard has been provided by the company itself. It has undertaken to show in its annual profit and loss account the amount of donations and contributions made by it to every political party directly or indirectly each year. A voluntary undertaking of such a nature should dispel all doubts in regard to the intentions of the company.

Both the petition and the judgement on it come at a particularly appropriate time when the country is preparing to go to the polls. It is obvious that the T.I.S.C.O. petition is linked with the increasing concern felt in private industry circles for their future. Recent developments have strengthened the view that further limitations are likely to be placed on the private sector. Apart from nationalisation, there is the question of taxation and other financial measures which are of intimate concern to private enterprise. There is a danger that the case for free enterprise will go by default if it is not adequately represented in parliament to explain its achievements and its hopes for the future. It is precisely to obtain such representation that companies like T.I.S.C.O. seek permission to contribute funds to political parties and candidates who are in sympathy with their aspirations. This is as it should be.

Record of Free Enterprise

The case for free enterprise is a simple one and yet it seems to generate unnecessary tension when it is stated. Fundamentally, the gap between those who accept the Government's present policy as it stands and those who advocate a greater degree of liberalism is not an unbridgeable one. The urgent need for State enterprise and State control has never been in dispute. What is in dispute is that the present tendency is to gloss over the achievements of free enterprise. The steel industry is a case in point. The contribution of T.I.S.C.O. to the national economy is a great tribute to those who manage it. The fact that the Jamshedpur plant is the biggest integrated steel unit in the Commonwealth is no mean achievement. Similarly, ample statistical evidence is available to spotlight the accomplishments of the cement industry. The heavy chemicals industry, which is the basis of all industrial development, owes its origin under adverse circumstances to private enterprise. There are many such instances which prove beyond doubt that the country owes much to individual effort. There is no reason to believe that free enterprise will not continue to make such contributions in the future if it is permitted to do so. This is not to say that the record of free enterprise is entirely clean. But by the same token is there any reason to believe that malpractices will not creep into an administration run by the State?

The second point for consideration is whether it is really necessary to adopt conventional socialist methods to achieve a welfare State. With a broad-based franchise and an extension of the popular vote, many of the Marxist assumptions lose their validity. A fully elected legislature which represents a wide cross-section of opinion is entirely competent to supervise the greater interest of the nation. Legislation can do much to protect labour, for instance, and eliminate the evils of the industrial revolution. It is necessary to supervise free enterprise, but it is doubtful if anything is to be gained by destroying it. Apart from purely economic considerations, there is the overall consideration of human liberties. There is the danger that the concentration of economic power in the hands of a bureaucracy will lead to a corresponding concentration of political power which will tend to make it a dictatorship.

Madras

DEVELOPMENT SCHEMES BEING REVIEWED

CUT IN OUTLAYS LIKELY

(FROM OUR MADRAS CORRESPONDENT)

THE development schemes of the Madras Government are being reviewed. Outlays might be cut and the next Budget is likely to reflect the need for economy emphasised by the Planning Commission. A total expenditure of Rs. 32 crores to Rs. 34 crores in 1957-58 is considered possible since the Commission has framed a new schedule of priorities. The shortage of foreign exchange, as well as of cement, steel and staff, might mean fewer programmes, especially since the State depends on Central aid to a large extent. Public expenditure has risen more than revenue, so that if Madras is called upon to find 40 percent of the development outlay itself, it can scarcely avoid cutting its plans. The less essential items might be dropped, especially as it is felt that the Finance Commission will not recommend much more money for the State.

Kerala, with a planned outlay of Rs. 85 crores over five years, might not be called upon to reduce its schemes drastically; the expansion of employment and of State-owned industry is a strong consideration there at present with the elections approaching. Congress prospects have been improved not only by the failure of the talks with the Muslim League but also by the differences between the Communists and other parties in that State. The likelihood of a Congress Ministry is considered remote, but the party could have much influence in a coalition. The lawyers' satyagraha for keeping the High Court division in Trivandrum will not affect the electioneering, but the location of the capital will be settled by the Assembly only after the elections. The tactics of non-cooperation in Trivandrum suggest that the Tamil Nad Congress's moves three years ago have left an abiding impression, and that the lawyers, instead of accepting assurances, intend to force a decision.

The selection of Congress candidates for Parliament and the State Assembly has brought few surprises. Mr. Nadar has chosen to stand from Sattur in his home district. The lack of women candidates has been explained by saying that few are suitable, although 11 have been picked for the Madras Assembly. Actually, the high cost of electioneering for the Assembly may be one reason; another may be the existence of a Council to which entry can be gained easily. The choice of about a dozen women candidates by the Pradesh Congress may reassure some. For the central parliamentary seats, few sitting M.P.s have shown a desire to return to State politics. Canvassing is difficult and costly, and the two City seats have been assigned to strong and experienced candidates. Compromises with minor communal parties in the State might help the Congress to make a better showing than in 1952. How the labour vote will go is the main issue in several constituencies. At the Secre-

tarlat last week, Opposition representatives were asked to help during the five days of polling fixed in securing free and fair elections. Avoidance of petitions after the results of the elections are out is one object; another is a maximum poll reflecting the political education of the electorate. Posts and Telegraphs facilities will be amplified and holidays curtailed for the sake of the elections.

Corporation Income and Expenditure

The City Corporation expects a total income of Rs. 3.14 crores in 1957-58. The Commissioner has pointed out that expenditure is still rising and the capital outlay cannot be financed wholly from loans. Much sympathy is felt for the City administration, since only 16.5 percent of the population contributes to the municipal revenues. There is no proposal to restore the cycle tax or raise the profession tax to the maximum allowed. An encouraging feature is the buoyancy of the revenues; another is the greater efficiency in collection. Arrears are mainly due to difficulties in assessing Government properties in the City. The Corporation hopes to raise loans and the Commissioner suggests that by providing regularly for a debt service of up to Rs. 42 lakhs a year, it has acquired a better status and can try to borrow independently at 4½ percent. Much trouble has arisen because the Government does not accept the plea that expenditure on roads in the City should be met by it since it runs the buses. A grant of Rs. 5 lakhs is inadequate when the Corporation has to provide Rs. 41.89 lakhs in a year for road maintenance and repairs. The argument that district boards are relieved of the cost of keeping up major highways has been repeated by the new Commissioner, who has made it clear that his functions under the Council are those of an executive agency, not of a City manager on the American model.

Small-Scale Industries

There is a widely held belief that small-scale industries will increase income and reduce unemployment. But their proper organisation is first necessary, and, as the Minister for Industries said on 11th January, an extension service and a financing agency are not enough to develop such industries. There is a new chamber devoted to small industries which are still urban in character. The changing economic climate provides opportunities, and a new technical library has been added for the Board in charge of small industries. There is a mobile service unit to repair tools and appliances, and the footwear centre is being extended. The Central Government is helping and the placing of Government contracts with small industries has been approved. However, the chief small industry, handloom-weaving, is in trouble. The textile trade is concerned about competition, and exporters are being asked to learn more from their rivals in foreign markets. The need is not for an export credit guarantee scheme, but for steps to make consignments conform to samples. The textile exporter can expect free licensing to continue, but designs have to be improved and few mills appear ready to encourage young commercial artists to produce new textile designs.

CALCUTTA TEA AUCTIONS IN DECEMBER

GOOD SUPPORT FOR WHOLE LEAF GRADES

AS a result of the increase of two annas in the export duty, most kinds in Sale No. 24 were cheaper to buy but prices at times were very irregular, say Carritt Moran and Co. Private Ltd. in their review of the Calcutta tea market during December. All teas of black leaf appearance were in particular demand in the export auctions and often sold at firm to dearer rates. There was a better demand in Sale No. 25 though the more expensive medium Assam B. O. Ps and O. Fs were up to two annas lower, while the plainer sorts were about one anna lower. Stylish whole leaf grades and well made B. P. Ss were in strong demand. In Sale No. 26 there was a good general demand. Fanning grades were a very strong feature. Clean black sorts often being up to three annas dearer. Whole leaf grades and improved Darjeelings were also well supported at dearer rates. Low mediums, clean Commons and plainest kinds were up to two annas dearer. Medium Assam B. O. Ps and O. Fs were in good demand but tended easier, while the lower grades in this category were one to two annas dearer. There was a more general enquiry for the best liquoring C. T. C. teas, though the majority of the offerings were generally one anna easier.

Darjeeling leaf appearance continued to be of a satisfactory standard. Cup quality showed a distinct seasonal improvement and a number of invoices with attractive autumnal flavour were on offer. Most of the C. T. C. offerings from Assam were rather brown, stalky and fibrous, but the appearance of the teas of orthodox manufacture was well maintained. Cup quality showed a slight seasonal improvement, particularly in the last sale of the month. Doors leaf appearance showed a slight decline, although a number of well made black leaf teas were again available. Cup quality showed a little improvement, a few invoices having early cold weather character. Cachar leaf appearance was again much above average, the out-turn from nearly all estates being black and free from stalk and fibre. With a few exceptions, cup quality generally was rather plain in character.

Quotations	1956-57	1955-56
Sale No. 24 Plain B.P.	Rs. 2 3 0	Rs. 1 13 0
Sale No. 25 Plain B.P.	2 4 0	1 12 3
Sale No. 26 Plain B.P.	2 5 6	1 9 0

Internal Market

At the Internal Sales, a total of approximately 7,300 chests of leaf were offered. There was a fairly good general demand for the slightly greater number of chests on offer. There were only a limited number of clean leaf teas, and prices for these followed the trend of the previous day's Export sale. The residual teas received fair support at irregular rates. There was fairly good general demand for the 74,787 chests of Dusts on offer, although this weakened slightly in the second sale. Clean black leafy Middle Eastern types from all districts were well supported, and with the exception of the second sale, usually sold at a premium of two to three annas. C. T. C. Assams saw rather less enquiry, and apart from the few lines of the very best, the remainder were about two annas lower. Commons, Doors and orthodox Assams shared in the general decline in the second sale, but recovered in the following sale when prices were about 1½ annas dearer.

Quotations	1956-57	1955-56
Sale No. 24 Clean Common Dust	Rs. 1 15 6	Rs. 1 9 0
Sale No. 25 Clean Common Dust	1 13 6	1 7 3
Sale No. 26 Clean Common Dust	1 15 3	1 6 3

Export sales up to No. 26 totalled 1,240,509 chests at an average price of Rs. 2-8-9 against 1,150,620 chests at an average price of Rs. 2-5-5 in the corresponding period of the 1955-56 season. Internal sales at 28,746 chests of Leaf and 407,390 chests of Dust (Rs. 1-10-2 and Rs. 2-3-10) go against 55,421 chests and 342,216 chests (Rs. 1-5-8 and Rs. 2-2-8) in the same period of 1955-56.

In the first three weeks of the month, the price of the export quota declined, with some fluctuations, from 93 pies to 72 pies a lb. On 23rd December, an allotment of 12 percent was announced and prices dropped further, business being transacted at 38 pies a lb. at the close.

The estimated North Indian crop to the end of November, 1956, was 533,754,098 lbs., as compared with 521,137,978 lbs. in the previous year. The average figure for three years, 1953-55, was 498,731,919 lbs.

The Government has decided that the export duty on tea during January, 1957, should be at the same level as in December, 1956, that is 8 annas a lb.

Arrivals (in chests) during the period 24th November to 23rd December, 1956, with the corresponding figures of the previous year in parentheses, were: by steamer 235,335 (372,189), by rail 173,311 (161,705) and by air 21,884 (17,414), making a total of 430,530 (551,307) chests. From the beginning of the season, 1st April, 1956, to 23rd December, 1956, arrivals have been: by steamer 2,470,524

(2,644,113), by rail 865,497 (710,358) and by air 132,291 (161,107) chests, making a total of 3,468,312 (3,515,578) chests.

BOARD PROPOSALS ON RUBBER IMPORTS

REVIEW OF MINIMUM WAGES ON ESTATES RECOMMENDED

(FROM A SOUTH INDIAN CORRESPONDENT)

PRODUCTION of raw rubber in India during 1957 is estimated by the Rubber Board at about 27,000 tons. The manufacturers' requirements are stated to be 40,000 tons. These figures seem to suggest that there is a gap of 13,000 tons between indigenous output and demand. But in 1956, the shortage was less than 7,000 tons so there is a feeling that the figures relating to consumption might be a little too high. The Board perhaps gave some credit to this view when it decided at its meeting on 4th and 5th January not to make any specific recommendation about the quantum of imports. It decided to place the facts about production and consumption before the Government and then to ask the Government to draw its own conclusions about the quantity of rubber to be imported. The Board estimates that the total availability of natural and synthetic rubber is 39,713 tons, and that of reclaimed rubber 782 tons. The consumption and carry-forward of natural and synthetic rubber together are estimated at 53,444 tons and those of reclaimed rubber at 6,640 tons. These figures will be put before the Government.

The Board recommends that whatever the quantity of natural and synthetic rubber for which import licences are issued by the Government it may be divided between the first and second half of 1957 in the ratio of 65 to 35, and manufacturers may be allowed to import on the *pro rata* basis of their consumption during 1956. The Board favours the policy of importing against D.R.C. of exported goods. It urges the Government to retain the condition that manufacturers should pay the difference between the landed cost of imported natural rubber and that of indigenous rubber to the Rubber Board; the condition could apply while granting import licences for meeting the overall shortage in 1957. The Board has got over Rs. 2 lakhs on this account since the scheme was introduced in the latter half of 1956. This is considered a contribution from the manufacturers for the uplift of the small grower.

More Liberal Policy

A slight liberalisation of the import policy would help check the hoarding of indigenous rubber. Lately, there have been complaints that manufacturers are not getting enough, despite the increase in output, and that certain growers and dealers are demanding a premium over the indigenous price for their stocks. The Rubber Board adopted a liberal policy in the last quarter of 1956, and this had a healthy effect on the local market.

Another important decision of the Board relates to the revision of minimum wages for rubber estate workers. The resolution on this question says the Board thinks that since their minimum wages have been in force for nearly five years, the time has come to re-examine the position. An amount of Rs. 1 lakh is provided in the Board's current budget for labour welfare. This will be utilised for such measures as the reservation of beds in hospitals, provision of ambulances, giving of scholarships to deserving children of workers, and reservation of seats in technical institutions. It will be used only for capital expenditure. It has also been resolved to register in India a patent for the preparation of yield stimulants with 2, 4, 5-T hormone in the name of the Rubber Research Institute. A licence will be issued to a reputable firm for the bulk manufacture and sale of the stimulant under such conditions as are imposed by the Board.

New Planting Scheme

In another resolution, the Board asks the Government quickly to sanction the new planting scheme submitted some time ago. The scheme for the subsidised replanting of 70,000 acres within ten years is getting a very good response from growers. The Board has already received applications for the subsidised replanting of 8,500 acres in 1957, against the target of 7,000 acres. But the new planting scheme, for which loans are expected to come from the Government, is not likely to get as good a response if the experience of the coffee Board can be taken as a guide. The Coffee Board's development scheme is attracting very little interest among growers, so much so that it is now considering the liberalisation of terms for giving loans.

Mr. A. V. George has again been elected vice-president of the Board for 1957. The Import-Export Committee has been re-constituted with Mr. N. Sankara Menon as chairman, and Messrs. P. N. Haksar, Lalit Mohan Jamma Das, K. Srinivasan, M. C. Chanday and P. C. Abraham as members. The Labour Welfare Committee, which has also been re-constituted, gets ten members, including all the labour representatives on the Board and the chairman and vice-chairman. The terms of these two committees expire on 1st August, 1958. Mr. Lalit Mohan Jamma Das has been elected to represent the Rubber Board on the Rubber Flooring Sub-Committee of the Indian Standards Institution.

Synthetic Rubber Plant

Even Rubber Board officials look favourably on the idea of establishing a synthetic rubber pro-

ducing plant in India. In their opinion, there is sufficient scope for the expansion of both natural and synthetic rubber. Natural rubber will not be affected by the production of special-purpose rubber. There has been a rapid expansion of rubber cultivation during the past two or three years, but in many cases the growers have not been careful in selecting either proper seedlings or suitable land. There is no provision in the present Rubber Act to enable the Rubber Board to check the indiscriminate expansion of rubber cultivation. Unless proper materials are used in new areas, they will become a drag on the industry in the future and all efforts to reduce costs of production will be defeated. The cost of production of natural rubber will have to be reduced if it is to compete successfully with man-made rubber.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for December 1956:

Upper Assam: Weather reasonable, with useful rain in Dibrugarh and frequent dull days with occasional light rain in Pantola; rainfall has been excessive in north Lakhimpur; cold weather has set in and the season is closed.

Central Assam: Cold weather conditions continue; very slight rain; near-drought conditions exist in Jorhat, with pruning ahead of normal, and rain badly needed; satisfactory rain has fallen in Moran.

Lower Assam: Weather conditions in most districts are normal for the time of year and the season has closed.

North Cachar: Weather reasonable; despatch delayed by rivers drying up and the season has closed.

South Cachar: The cold weather has set in; the season has closed; blister blight severe in some districts; despatch delayed by rivers drying up; outturn to date is slightly over 1955 in Chargola.

Eastern Doonars: Weather favourable with some rain; no blight reported; the season has closed; outturn to date is slightly under 1955 in Jaintia.

Central Doonars: Weather reasonable; blister blight prevalent in some districts.

Western Doonars: Weather favourable; blister blight severe in some areas; season has practically closed.

Darjeeling: Weather reasonable.

Terai: No report.

LONDON TEA SALES

AT last week's London tea sales the 57,543 packages on offer realised an average price of 6s 0.33d a lb. against 6s 0.73d at the previous sale and 4s 5.31d a year ago. Plain broken pekoe was quoted at 5s 3.3d a lb. against 5s 4.1d at the previous sale. Prices obtained by some of the companies are given below:

	No. of packages	Average a lb.
Amalgamated	624	5/11
Angoorie	552	6/3
Anglo-American	1,164	5/11½
Assam Cons.	456	5/11½
Assam Docars	607	5/11
Budla Bets	216	6/3
Buxa Doonars	756	5/10½
Central Provinces	786	6/1¼
Chubwa	666	6/2
Chulsa	401	5/10½
Consolidated Estates	396	6/6
Cons. Tea and Lands	3,197	5/8½
Dekhari	690	6/5
Doom Dooma	954	6/4½
Eastern Assam	612	6/2½
Eastern Produce	696	6/7½
Imperial	1,651	5/10½
Jetinga Valley	420	5/5½
Jhanzie	371	5/11½
Jokai	894	6/1½
Jorehaut	558	6/4½
Kanan Devan	2,226	5/11½
Lanka Plants	441	6/5½
Lungla	540	5/6
Lunuvu	894	6/3½
Malayalam	342	5/6½
Rajawella	1,134	6/5½
Scottish Ceylon	438	5/11½
Scottish Tea and Lands	634	6/7
Standard	528	6/8½
Tea Corporation	352	6/2½
Upper Assam	627	6/1½

U.K. stocks of tea on 4th January amounted to 102.0 million lbs. against 122.2 million lbs a year ago (converted at 110 lbs a package).

COCHIN TEA SALES

At Sale No. 1, the 41,000 lbs. of tea on offer met with a very poor demand. The market was generally three to four annas easier for all types.

At Dust Sale B, the 650,000 lbs on offer met with a good general demand. Prices were fully firm to dearer for everything except the best liquoring types, which were occasionally easier.

FORWARD TRADING IN PEPPER IN COCHIN

On the advice of the Forward Markets Commission, Bombay, the Government of India has granted recognition to the India Pepper and Spice Trade Association, Cochin, for conducting forward trading in garbled Malabar black pepper for a period of three years. Trading was expected to start this week. Mr. W. R. Natu, Chairman of the Forward Markets Commission, is visiting Alleppey and Trivandrum for discussions on establishing a forward market in coconut oil in Alleppey and Cochin.

Jute

MEASURES TO INCREASE INDIAN JUTE OUTPUT

NEED FOR EFFECTIVE PROPAGANDA AMONG GROWERS

ACCORDING to Holy Writ, "of the making of books there is no end"; in India today, of the holding of conferences there appears to be no end. In less than two months, we have had three conferences to plan ways of increasing the jute crop, so if mere conferences were to produce bigger harvests, we are assured of them. But there is more to it than that. It is, however, satisfactory that, although there may have been some overlapping, there is, at last, a greater realisation of the urgency of making India independent of foreign supplies of raw material for the jute industry. It is hoped that all this discussion will be followed by energetic action, for no amount of talk at the higher levels will do any good unless it is translated into action in the jute fields.

Apart from organising the distribution of fertilisers and improving implements and methods, there is the problem of educating the growers. That is probably the biggest obstacle to be overcome. Reports from those who have been engaged in propaganda to get the peasants to adopt the Japanese method of cultivating rice state that it is very difficult to get them to do so, even when the results have demonstrated the benefits. Here we are up against the conservatism which prevails among the peasantry in nearly all countries and which will be especially difficult to overcome in this country. For example, even where it has been demonstrated that double-cropping can be done, it is difficult to get the peasants to undertake it. The reason for this is not clear. Possibly, it is due to a lack of ambition to improve their low standard of living or to a lack of energy resulting from climatic conditions. Gandhiji frequently spoke of the need to shake the ryots out of their pathetic state of inaction, and that is what is needed now. They have to be shown that it is not only to the country's advantage to adopt new methods but also to their own.

We have not been told how propaganda to increase jute crops is to be carried into the villages or how it is to be financed. The States might recognise that it is to their advantage to secure this increase. If they do not have the money for doing propaganda in the villages with sufficient intensity, the Centre could give financial assistance, since it is the Centre which would benefit most from the increased prosperity of the jute industry and its importance as an earner of foreign exchange. Some time is approaching, and there is no time to lose. The field personnel for propaganda has to be increased and given the necessary training to enable them to undertake the work efficiently.

I.J.M.A. Production

In December, the production of mills reporting to the I.J.M.A. was 84,900 tons, of which 37,700 tons was hessian and 47,200 tons sacking. The proportion of hessian was 44.4 percent compared with 43.9 percent in November, while that of sacking was 48.6 percent against 49.9 percent. The switch from sacking to hessian is thus still continuing. In December, 1955, the percentage of hessian was 34.9 and that of sacking 58.2. Last month, the hours worked were 206, compared with 209 in November, but the increase in production was due to the resumption of work in mills where there had been stoppages in the previous month. The total production in July-December, 1956, was 517,300 tons, compared with 519,500 tons in the corresponding six months of 1955.

Consumption of Raw Jute

In December, 1956, mills reporting to the I.J.M.A., it was estimated, consumed 495,000 bales of raw jute, bringing the total consumption for July-December to 3,016,000 bales. In December 1955, the mills consumed 566,000 bales, and the total for July-December, 1955, was 3,027,000 bales.

THE JUTE MARKETS

Manufactured Goods: Enquiries from abroad were very poor and local influences predominated in the market during the past week. On Thursday, the speculative market recovered to some extent from the weakness which followed the promotion of stocks of hessian held by the A and B groups. The low effect. The reported placing of an extra steamer for West Africa brought a spurt of business in heavy goods, but there was some selling pressure in the speculative market to offset that. Later, again pushed up, although there was no business from abroad or in the local market to justify the rise. At one time, the B Twill fatka rate was up to Rs. 120-6, but later it fell back again.

On Wednesday morning quotations were as follows:

	January	Jan.-March	April-June
40in. 8oz.	Rs. 37-4	Rs. 36-8	Rs. 35-12
40in. 10oz.	45-2	44-10	44-10
8 Twills	46	45-2	44-10
Heavy Cees (Plain)	120-8	121-4	121-4
A Twills	120-12	121-4	121-4
Liverpools	144-8	145-4	144-8
Cornacks	139	137-12	136-4
	122-12	122-12	122-4

Raw Jute: During the past week, mills were continuously in the market. Buying was not on

a large scale, but the quantity on offer was small. This caused a rise in prices, which moved up by a full Re. 1 a maund. Buyers were interested mainly in Northern and Assam qualities and in Daissee. But offerings of these were very restricted because of the poor imports into mofussil markets and the high prices prevailing there. There was a good turnover in mesta; there is more of this than of any other class of fibre. On Monday and Tuesday, less interest was shown by buyers and, with the weakening of the gunny fatka on Tuesday afternoon, the price of mesta dropped by four or eight annas. Business was reported in Northern and Assam jute at Rs. 32 to Rs. 33. Tossa at Rs. 32-8 to Rs. 33-8. Daissee Mesta at Rs. 27-8 to Rs. 28. Daissee Jute at Rs. 33 to Rs. 34. Jungli ex Cossipore at Rs. 30-8 and Pakistani District Cuttings at Rs. 130.

Quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis	Bottoms.	Shipment.
Northern	33-8		Jan.-Feb.
Assam	33-8		"
Murshidabad Tossa	33-8		"
Daissee Jute	34		One month
Daissee Mesta	28		"
Western Mesta	27-8		Jan.-Feb.
Local Packing	31		One month
Northern ex Calcutta	33		"
Bimli	28 F.A.Q.		Jan.-Feb.

Arrivals of jute in Cossipore decreased to 562 wagons last week, compared with 673 wagons the week before. Mill buyers have been very active, and all the imports have found a ready market. There is hardly any jute coming in, except for jungli qualities and mesta. Stocks are declining, and are now reported to be less than 600,000 maunds.

Mofussil: Imports of jute are scanty everywhere, but good supplies of mesta are coming forward. Prices are reported to be above the parity of Calcutta, but there is good demand for everything reaching the markets. Rain has been widespread.

THE PAKISTANI JUTE MARKETS

QUIETLY STEADY CONDITIONS IN FIBRE

(FROM A CORRESPONDENT)

THE past week has seen dull trading conditions in the Narayanangal market. There was a slight rise in prices but later they returned to the original levels, with loose jute at Rs. 32 a maund for Export Lightnings quality and Rs. 34 a maund for Export Firsts quality. Most of the jute coming in continues to be Export Firsts in White and Dundee District 2/3s and 4s in Tossa. It is still wet, and arrivals have been very small. The slight recession in prices is due almost entirely to the lack of interest from overseas. It should be pointed out, however, that the recession is merely a return to the prices ruling at the end of the previous week and the *beparis* show no signs of weakening. On the contrary, they are resisting attempts to lower prices and imports, which had improved somewhat, have now fallen off considerably.

There are reports of a very large afloat unsold position overseas in Antwerp, Germany and Dundee. Furthermore, there are sellers of afloat jute at approximately the same prices as shipment jute, which, of course, has weakened the market considerably. At the time of writing, there are sellers for shipment at £111 for Export Firsts, £108 for Export Lightnings, £120 for Dundee Tossa 2/3 and £109 for Dundee Tossa 4, with no buyers. Cuttings have fallen to £65, but very little interest has been shown. As might well be expected, reports from overseas buyers are very bearish, and even among Narayanangal sellers there is a fear of lower prices. At present, there are free sellers for Export Firsts at Rs. 212 a bale, f.o.b. Narayanangal, and Rs. 200 for Export Lightnings, but no buyers. A small element in the market continues to feel that this recession is only temporary and that the afloat unsold position, although larger than it has been for some time, is not overwhelming, so that the strong holding power of the growers will eventually make itself felt. Pakistani gunny quotations remain unchanged in sacking, with hessian a little easier. After sitting out of the market and waiting for higher goods prices, mills are showing more interest in selling for the April position onwards. As they expected a fall in fibre prices, they do not in general have big stocks of loose jute. Sentiment is now less bullish.

GUNNY SHIPMENT STATISTICS

The figures below include coastal shipments and relate to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented

	Hessian	Cloth	Total
	(Tons)	(Tons)	(Tons)
1st to			
10th January, 1957	3,536.6	19,662.9	22,619.5
1st to			
10th December, 1956	1,821.5	17,586.4	19,407.9
1st to			
10th November, 1956	3,222.6	18,485.0	21,807.6
	Sacking		
1st to			
10th January, 1957	13,120.9	700.5	13,821.4
1st to			
10th December, 1956	12,199.4	948.2	13,147.6
1st to			
10th November, 1956	21,061.8	810.8	21,872.6

I.J.M.A. PRODUCTION FIGURES FOR DECEMBER

The Indian Jute Mills Association reports that the production of jute goods during December, 1956, was as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	3,358 tons
(b) Sacking	95.6 lakh yds.
2. Gunny Cloth	
(a) Hessian	40,439 tons
(b) Sacking	932.8 lakh yds.
3. Other manufactures	34,383 tons
4. Total production (above figures combined)	13,314 lakh yds.
(a) All kinds	84,985 tons
(b) Hessian (both bags & cloth)	14,27.4 lakh yds.
(c) Sacking (both bags & cloth)	9,55.5 lakh yds.

Summary					
(00,000 Yds.)			(000 Tons)		
	Dec. 1956	Nov. 1956	Dec. 1955	Dec. 1956	Nov. 1955
Hessian	14.27	13.88	12.91	37.7	36.8
Sacking	9.56	9.66	13.60	41.3	41.8
Others				5.9	5.2
Grand Total			84.9	93.8	97.7
Hours worked			206.0	209.0	214.5

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

THE FOREIGN JUTE MARKETS

STABLE PRICE TRENDS

(FROM OUR DUNDEE CORRESPONDENT)

STEADIER conditions prevailing in the raw jute market have upset the calculations of those who have been expecting a revision of prices for jute yarns and cloth again. A little further decline and there would have been a reduction in values of productions. These were last altered here from 11th December, since when there has been an increase in fibre prices, followed by the steady fall. The latter has brought them down generally by £3 to £4 a ton below what they were on 10th December, with the exception of Mill Firsts, which are more freely offered now at £122, against the rate of that date of £130 a ton, for shipment. c.i.f. Prices for jute are considered to be too dear yet at nearly £40 a ton above the fixed minimum rates in Pakistan. Spinners declare that the prices allowed for yarns and cloth are still well below the equivalent for the raw material and there are always one or two small snags arising by which the costs of production are increased, with an increase in freight and delivery rates. Mill Lightnings have dropped in value to £111 and Mill Hearts to £106 10s, while grade Hearts are offered at £100, good marks of Daissee-4 from £111 and grade from £106, with grade Tossa-4 from £118 and grade Tossa-4 from £111, all c.i.f. U.K., January-February. Spinners here have been showing little or no interest, not even in parcels afloat, offered at the same or, in some cases, at slightly lower terms than the rates ruling for

NEW ESTIMATE OF RANIGANJ AREA COAL RESERVES LIKELY TO LAST CENTURIES

THE Raniganj coalfields in India contain estimated reserves of nearly 13,000 million tons, or nearly twice the amount estimated in 1928, according to a recent re-survey conducted by the Geological Survey of India. The reserves, assuming the present rate of consumption, should last a few centuries. The re-survey was undertaken by Mr. D. R. S. Mehta of the Geological Survey during 1951-52.

The results of the survey, which form part of the memoirs of the Geological Survey of India, indicate that the coal seams of the Raniganj and Barakar measures of the Raniganj coalfield fall into two distinct groups, which may be termed "high volatile" and "low volatile". They also show that the Sanctoria and Dishegarh of the Raniganj measures in the coalfields are caking coals, while the better quality of coals of the Barakar measures have a tendency to form hard coke. None of the coal seams of the Raniganj measures in the eastern part of the coalfield is known to be caking coal, while the Barakar seams are generally of inferior quality in the Gaurangdi-Churulia and Trans-Ajay Kasta areas.

New Correlation

Of almost equal importance to the revised mapping of faults and coal seams and the revised estimates of reserves is the correlation of some of the seams that the survey has re-established. This has mainly taken place in the key area in the east central part of the coalfield in the Raniganj coal measures. The re-survey has discovered the Taltor seam outcrop south of the village Taltor and east of the Nandi fault. The seam previously designated as the Ponati seam in the area has now been correlated with the Koithi seam to the west of the Nandi fault.

Further to the south-east, in the Satgram-Tapasia area, the Satgram seam has now been found to be the continuation westwards of the Jote Janaki seam. An outcrop of coal seam mapped previously as the Satgram seam to the east of the Jamuria-Raniganj fault has now been found to correspond to the Shripur seam, and this has been found to continue further to the east as the Toposi seam. The outcrop of another seam located on both sides of the Jamuria-Raniganj fault, some distance to the north of the Satgram seam outcrop, appears to be the Dhasul-Chichuria seam of the eastern part of the coalfield. The Dhasul-Chichuria seam is thus more likely to be the equivalent of the Dishegarh seam in the eastern part of the coalfield than the Chowkidanga-Jote Janaki seam.

The survey has also shown that the dip direction in the area south of the Damodar river, near

Raniganj, is actually the strike direction of the seams, and that the Ghusick, Raniganj and Naram-kuri seam outcrops swing southwards across the river in a general N.E.-S.W. direction. This part of the coalfield was much neglected in the past, due perhaps to the confusion about the identity of the seams cropping out along the north and south banks of the Damodar river. It is hoped, adds the report, that additional areas will now be opened up to the south of the Damodar river and be necessary bore hole data will become available in due course to enable more detailed mapping of the coal seams in that part of the coalfield. Many outcrops and faults have been stipulated with the help of the additional bore hole data now available.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939-100) fell by 2 percent to 421.9 during the week ended 29th December, 1956, from 430.7 (revised) in the previous week. The index was 2.3 percent lower than a month previously but 13.0 percent higher than in the corresponding week of the previous year. The average for December, 1956, was 428.9, compared with 427.7 (revised) for November, 1956, and 368.2 for December, 1955. The calendar year average for 1956 worked out to 403.2, compared with 355.4 for 1955. Lower prices of rice in Vijayawada (-19%), and in Calcutta (-11%) (both new crops), gur (-11%), gram in Hapur (-3%), salt in Calcutta and dal arhar (-2%) each, and wheat (-1%) brought down the index for Food Articles by 5.8 percent to 392.0, compared with 416.1 (revised) for the earlier week. Gram (+8%) and rice (+3%), both in Patna, rose. Prices of castorseed in Madras (-9%), groundnuts in Cuddalore, linseed in Bombay and rapeseed (-6% each), gingellyseed in Jhansi and lac (-4% each) and copra (-2%) declined, while those of manganese ore (average export price) (+18%), raw silk in Bangalore (+4%) and castorseed and groundnuts in Bombay and raw cotton (+1% each) were marked up. So the index for Industrial Raw Materials decline by 0.4 percent to 520.2 compared with 522.3 (revised) for the previous week. The index for Semi-Manufactures worked out to 415.9, compared with 416.3 (revised) for the previous week. Items which showed noticeable changes were groundnut cake (-6%), mustard oil and linseed oil (-2% each), coconut oil, groundnut oil, coriander and cotton yarn (-1% each), copper in Bombay (+8%), gingelly cake and castor oil (+5% each), zinc (+3%) and copra cake (+2%). A fall of 0.4 percent to 397.1 in the index for Manufactures was caused by a decline in the price of jute manufactures (-3%); the price of glass (+1%) increased. The index for Miscellaneous receded by 0.2 percent to 589.3 because of a decrease in the prices of chillies in Patna (-10%) and black pepper in Cochin and cashewnuts in Mangalore (-2% each); the price of chillies in Calcutta (+6%) rose.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

Groups and Sub-Groups	29-12-56	22-12-56	1-12-56	31-12-55

BRITISH EXPERT TO SURVEY INDIA AS NYLON MARKET

A British expert in the use of nylon yarns and staple fibres is to visit India shortly to make a first-hand examination of nylon marketing possibilities, and to advise Indian manufacturers on technical matters. The expert is Mr. J. M. Page, who is a development and sales executive of British Nylon Spinners Ltd., Pontypool, Monmouthshire. The firm is Europe's biggest producer of nylon yarns. Mr. Page, who is due to reach Bombay on 22nd January, expects to be in India for about a month. The primary purpose of his visit is to make an up-to-date appraisal of India as a market for nylon, but at the same time he will be prepared to discuss technical aspects with Indian manufacturers who are already making use of nylon. Mr. Page knows India well. From 1948 to 1955, he was with the leading British chemical company. Apart from spending a considerable time in Bombay, Calcutta and Delhi, he travelled extensively all over the sub-continent. His background is technical as well as commercial.

Calcutta Markets

EASIER TREND DEVELOPS IN TEA EXPORT SALE

GOOD GENERAL DEMAND FOR DUSTS

AT Sale No. 29, held on 14th and 16th January, offerings in the Export auction consisted of 73,000 packages. The market opened with a good general demand, but as the sale progressed an easier tendency was noticed. Any teas with bright liquors are keenly competed for at slightly dearer rates, while the few tippy teas on offer also received useful support. Medium Assam C.T.C. teas were in good demand, but the more expensive kinds were 1 or 2 annas easier. The majority of the common and medium teas on offer were 1 or 2 annas lower, but teas for price received good support and were generally firm to dearer. Whole leaf grades were slightly dearer but there was much less demand for the more stylish B.P.S. grades. With the exception of a few selected lines, Darjeelings were generally easier.

Quotations	1957	1956
Clean Black Pekoe	2 6	2 1
Plain B.P.	2 3	1 8 to 1 8 6
Medium Assam B.P.	2 4 6 to 2 5	1 10 to 1 11
Best C.T.C. Assam B.P.	2 12 (Nom.)	2 3

At the Internal Sale, the Dust offerings consisted of 26,298 packages, for which there was a good general demand. But except for the best liquoring C.T.C. Assams and the blacker leafed exportable kinds, which were firm, the majority of the offerings were generally easier. Orthodox Assams with the exception of the Middle East types were up to 1½ annas easier, while Commons and Downers were about firm. The very best liquoring C.T.C. Assams sold well, but the remaining offerings in this category were often up to 2 annas easier.

Quotations	1957	1956
Medium Downers Dust	2 1 0	1 7 6 to 1 8 0
Medium Assam Grainy Dust	2 1 0 to 2 2 0	1 8 6 to 1 9 6
Medium Assam C.T.C. Dust	2 4 6	
Best Assam C.T.C. Dust	2 9 0 to 2 11 0	2 4 0 to 2 6 0

Offerings of other grades amounted to a total of 2,852 chests, for which there was a good general demand and the cleaner leaf teas of orthodox manufacture sold well. C.T.C. Assams were generally dearer and residual kinds of all descriptions were strongly supported. The few lines of green tea on offer received fair support.

FREIGHT MARKETS QUIET

THE freight markets were generally quiet during the past week, with a fair miscellaneous enquiry. Grain was fixed from the U.S. Gulf to Bombay at 245s and a number of single voyages for coal, Hampton Roads-Continent, were arranged at 102s. The time charters included a 12,600-tonner at 70s, delivery Clyde re-delivery Persian Gulf, a Liberty for 7 or 8 months' general trading at \$ (U.S.) 7.10, another for two years at \$5.70, and two for 17 months' trading at \$6. Rice from Burma to Colombo was done at 73s 9d and a number of ore fixtures from India included the payment of \$27.75 Visakhapatnam-Northern Range, 195s Mormugao-Genoa, 118s Kakinada-Japan and 119s Calcutta-Japan.

POOR DEMAND FOR SUGAR

During the past week, demand in the sugar market remained poor. The price of the ordinary variety fell by 2 annas or 4 annas. Sales averaged 3,000 bags a day, while arrivals were 2,000 bags a day. Stocks amounted to 100,000 bags. The rate for ready sugar ex-Kantapur delivery was Rs. 31 for ordinary grain and Rs. 33 for big grain.

LINSEED STEADY

Following better enquiries from buyers during the past week, prices advanced somewhat and the undertone of the linseed market was steady. Arrivals were poor and sellers were rather reserved. Turnover was fairly small. The oil section was active, with shippers buying for near positions due to the good demand from U.K. buyers. Latest quotations were as follows: January Rs. 25-12 a maund and April-May Rs. 22-8 a maund.

HIDES AND SKINS QUIET

The market in hides ruled quiet. Stocks were higher than in the previous week.

Bazaar Sales

(Between 8th January and 14th January, 1957)

Cowhides: Wet salted (Ord.) 6,000 pcs. on the basis of Rs. 8-4 to Rs. 8-14; Wet salted (Slaughtered) 14,800 pcs. on the basis of Rs. 12 to Rs. 22.

Goatskins: Wet salted (Daissee, Killed) 27,900 pcs. on the basis of Rs. 280 to Rs. 300 and Rs. 320 to Rs. 360; Assam-Dinajpur 20,000 pcs. on the basis of Rs. 305; Purneah-Kissanganj 1,000 pcs. on the basis of Rs. 300; Pakur-Patna 2,000 pcs. on the basis of Rs. 265; Patna 2,200 pcs. on the basis of Rs. 295.

Bazaar Stocks

(14th January, 1957)

Cowhides: Wet salted 2,34,500 pcs.

Goatskins: Wet salted (Daissee, Killed) 97,000 pcs.; Dinajpur-Assam-Murshidabad 1,10,000 pcs.

Muzzafferpore - Patna-Pakur - Purneah - Kissanganj 1,67,000 pcs.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O Po F and Dd indicate Ordinary Preferred Ordinary Founders' and Deferred shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE AIMS OF INTERNATIONAL ECONOMIC CO-OPERATION

PROGRESS IN THE COLOMBO PLAN AREA

FEW schemes for international economic co-operation in postwar years have made the smooth, unobtrusive and yet real progress that can be claimed by the Colombo Plan for economic development in south and south-east Asia. Today, five and a half years after its inception, the countries participating in it can look back with pride and hope on what they have achieved, on the goodwill that characterises their exchanges, and on the spirit of self-help that has been born of their great co-operative endeavour. The value of these achievements has been amply confirmed in the decision made 15 months ago that the Plan, originally scheduled to complete its six-year span in June this year, should be extended to the middle of 1961. Critics have argued that it is too small in size and scope to meet adequately the needs of a still poverty-stricken region; that the rise in living standards has been too slow in the majority of Asian countries; and that greater boldness, imagination and generosity are necessary if they are not to remain bogged in the mire of economic backwardness. But these criticisms miss the point that the main aim of the Plan has never been freely to dole out wealth to the Orient's poor and hungry millions; rather, the aim has been to provide them with a framework through which they may supplement their own efforts for betterment with assistance from outside—whether that assistance comes in the form of money, equipment, commodities or technical knowledge. The emphasis on self-help has undoubtedly been among the most encouraging features of the Plan. As postwar experience has often shown—notoriously so in the case of the Chiang Kai-shek regime—even lavish foreign aid, by itself, is not enough. The urge for economic advance has to come from within a people, and only then can outside aid and international co-operation yield the best dividends. It is in this context that the achievements and the prospects of the Colombo Plan deserve to be judged.

That the urge has strengthened in the greater part of south and south-east Asia over the past few years, few will deny. The fifth annual report of the Plan's Consultative Committee, presented at the Wellington meeting recently, points out that "these countries are endeavouring to attain higher rates of economic growth, while preserving the economic and social stability required to make that growth continuous and its fruits enduring." Mistakes have been made and wrong emphasis given in the framing of economic projects, but the scope for errors will be decreasing as experience grows and help and advice from the more advanced nations becomes more freely available. Some countries in the Colombo Plan area are still recovering from the effects of the last world war. Others, which have made substantial progress in providing the basic social services, essential facilities and an adequate food supply, are now building a new industrial structure on which further increases in production and investment can be based. The process has been assisted by the growing prosperity of the rest of the world. The rise in world production and trade has been of major importance for the Colombo Plan countries, since many of them have economies that are narrowly based and depend heavily on exports of a limited range of primary products.

In a narrow, relative sense it may be said that the progress made so far has been limited. The Consultative Committee's report points out that "though precise measurement is not feasible, a review of economic indicators suggests that national income continued to rise at a rate slightly in excess of the rate of population growth. Much effort went into this achievement, modest though it may appear in relation to the need for further advance." The fact pinpoints one of the major problems in Asia's development—that its national economies have had to keep running in order to stand still. Too little attention has been paid to the need to check population increases. More

goods are being produced but there are nearly as many more mouths to feed, so the rise in individual standards of living has been greatly restricted. As populations have almost kept pace with increases in production, distortions have arisen in social and economic policies. They have often led to the adoption of labour-intensive methods of production which are conducive neither to efficiency nor competition. Indeed, it has sometimes seemed contradictory that while economic development programmes have had a mainly long-term bias, a large part of the resources have been devoted to schemes which are no more than short-term palliatives for unemployment. If such distortions in policy are to be mitigated or avoided, much more determined action will be necessary to restrain the population pressures which could easily become a source of stagnation and frustration in the future. This is a field in which India, although she is moving forward only experimentally herself, could offer and receive valuable advice from the other countries of the region. Certain common elements in the social attitudes of south and south-east Asians might facilitate the formulation of programmes for smaller and happier new generations.

The need for flexibility in development plans has been increasingly recognised by the Colombo Plan countries during the past year or so, according to the Consultative Committee. This is to the good. Some plans have been too ambitious, and, as in India, have produced strains and stresses not only internally, but also in external economic dealings. Other plans have not been soundly conceived, either because the statistical data has been lacking or because the fact has been ignored that there are limits to the diversification and expansion of economic activity in each country. In general, there has been a tendency for declared hopes to outrun practical ability. Sometimes resources have not been available at the right time, in the right place and in the right combination. Sometimes they have not been available because of crop failures, foreign exchange stringencies and unforeseen shortages of equipment and skilled personnel. Constant vigilance is, therefore, necessary to ensure that stability is not jeopardised by adhering too strictly to blue-prints and theoretical assessments which lose their validity when reality

WESTERN EDUCATION IN INDIA

THE universities of Calcutta, Bombay and Madras, all founded in 1857, commenced their centenary celebrations last week. It is, therefore, an appropriate occasion to consider, in brief, the history of western education in this country and its impact on India's culture. Properly speaking, it begins, as many will recall, with Lord Macaulay's famous, or rather notorious Minute on Education, in which one does not know whether to admire the

though, the "Anglicists," and the "Orientalists". It became urgent to decide whether the Company should build upon the foundation of indigenous culture as expressed in the country's languages, science, philosophy and craftsmanship, or whether it should begin with a clean slate, and give Indians a European-type education. Men like Raja Ram Mohan Roy had, of course, with remarkable foresight, already been striving to create a climate favourable for the acceptance of this type of education. In 1822 he had founded at his own expense an institution imparting a knowledge of English, called the Anglo-Hindu English School near what is now called the Azad Hind Bagh, in north Calcutta. Five years before, the Hindu College, which later played such a revolutionary rôle in the history of Bengal, had been established in the same part of the city. The Christian missionaries, too, were commendably active in the field of education in the first quarter of the 19th century. But it remained for Macaulay, with the authority of the Government to strengthen his hand, to tip the scale finally in favour of the "Anglicists".

Within a decade, the Council of Education was set up by the Government as a "controlling authority" over education in Bengal, and in 1845 it submitted a plan for the establishment of a university in Calcutta. In Leadenhall Street, the headquarters of the Company, this scheme was, of course, duly cold-shouldered. But when in 1852 a further extension of its charter was being discussed, the proposal was revived, under the auspices of some of the leading citizens of Calcutta, including Raja Radhakanto Deb, in an enlarged form incorporating plans for a university in each of the Presidencies. The President of the Council of Education, C. H. Cameron, along with J. C. Marshman and Alexander Duff, pleaded strongly for the proposal. In 1854, Sir Charles Wood, President of the Board of Control, sent his famous despatch, embodying proposals for three universities in Calcutta, Bombay and Madras, which came into being three years later. The Christian missionaries were disappointed to find that the Company's Directors had decided on an "exclusively secular" education. Nevertheless, they continued their educational activities with unabated zeal, and western education was thus launched upon its fast-expanding career.

During the last hundred years, this system of education has, of course, been subjected to much criticism, and not all of it is flimsy. Its unsuitability to Indian conditions has become the staple of convocation speeches and academic discussions, especially since Independence. And, as is well known, along with the system, the medium of instruction, English, has come under a good deal of fire. Perhaps the most serious charge against the former is that it has all along been too literary in character and too little based on the practical arts of life, with the result that year after year hundreds and thousands of students pour down the educational assembly lines with next to no equipment for the struggle for existence. During the fight for independence, this provided a good handle for critics, who argued with more facility than plausibility that an alien system had been imposed on this country with the mere object of creating enough clerks and toadies to man the lower ranks of administration, and perpetuate the imperialistic order. Although this charge will not bear scrutiny, it is not so easy to dismiss the other one, that this system has turned out to be the great divide separating the western educated in a remarkable degree from the rest of the population. Between the modern university product and the old-type Pandit picking his way delicately through the labyrinth of Sanskrit grammar and for ever looking over his shoulder to an unrecapitulated past, or a Moulvi tirelessly citing the authority of the Koran, it has fixed a gulf and its consequences have been socially disintegrative.

The whole subject of the results of western education in India is of inexhaustible interest and is capable of being viewed from various angles. It may, therefore, be useful to bring out a few points which were apt to suffer from under-emphasis during the stressful years of the pre-Independence era, and which the past few years filled with controversy, have done little to highlight. Education, in its broad sense, is an enlightened attitude of mind, and it is important to recall that in the 18th century and the first half of the 19th, before the new universities had come into being and formally launched western education in this country, a succession of notable British administrators, many of them scholars of great erudition, came to India and lived to develop a profound admiration for her ancient past. They pioneered a wide range of research work comprising Indian history, literature, geography, sociology and commerce, and this at a time when the country's old liberal arts and cultural apparatus were in decay and the means of re-discovering its past seemingly irretrievably lost. Sir William Jones, a judge of the Calcutta High Court, founded in 1784 the Asiatic Society of Bengal, the first institution dedicated to Indology and Oriental studies. Through his translation of the *Sakuntala* and the *Institutes of Manu*, Europe became acquainted with India's

ancient literary wealth for the first time. Next year, Wilkins published his translation of the *Bhagavadgita* and, two years later, opened that treasury of fables, the *Hitopadesha*, to English readers. It was he who, with his own hand, cut the first Devanagari and Bengali types, thus inaugurating a new era in the literary history of India. Under Wilkins, again, the study of Indian epigraphy was initiated. Another resounding name in the field of Sanskrit scholarship and Indology is that of H. T. Colebrooke. Prinsep Street in Calcutta keeps alive the memory of James Prinsep, an official of the Calcutta Mint, "by character the most charming of men, by genius the founder of Indian archaeology." His work was continued by his friend and disciple, Cunningham, a junior officer of the Royal Engineers, who translated a private hobby into an important Government department, his study of old monuments leading to the creation of the Archaeological Survey of India, with himself as its first Director-General. In 1845, James Fergusson, an indigo planter, published an account of the rock-temples of India, culminating through a series, in the *History of Indian and Eastern Architecture*, a remarkable book whose conclusions remain valid after more than three-quarters of a century of its publication.

This excellent tradition of research, re-discovery and reevaluation continued right up to the end of the British régime in India. Sir John Marshall, it will be recalled, excavated site after key site, revealing to an astonished world the architectural glories of Sanchi, Taxila, Sarnath and, finally, of Mohenjo Daro and Harappa. History often plays strange antics, and of this Lord Curzon's case serves as an example. He is chiefly remembered in this country as the hated author of the partition of Bengal in the first decade of this century, but comparatively few know of his enlightened anxiety and labour for the preservation of Indian antiquities. Early in the 19th century Dr. Buchanan had made an agricultural survey of Mysore and a statistical survey of Bengal, and in 1825 the first practical map of India was published by Kingsbury, Parbury and Allen. Forbes Watson's magnificent volumes on the textile products of India were followed by Birdwood's *Industrial Arts of India* in 1880.

All these considerable and continued activities made a great impression and Indians, especially the Hindus who subsequently led the nationalist struggle, became aware after many centuries of "the glory that was Ind." This contributed no small measure of spiritual nourishment to the political urge for freedom. Indeed, the cross-fertilisation of Indian culture with the western laid the foundation for modern India. Despite everything that has been said against western education, it is an undisputed fact that almost every single one of the leaders of the independence movement has been deeply versed in western culture, and that the smoothness with which the political change-over was effected was largely due to the fact that India possessed the "steel frame" of the I.C.S. cadre, which stood up admirably to the test without suffering any metal fatigue.

It is not too much to claim that the standard of efficiency set by generations of British administrators has helped their present-day Indian successors a good deal to hold the vast fabric of Indian administration together. Historians like Messrs. Thompson and Garra have lamented that, among other things, there has been remarkably little Indo-Anglican literature of good quality as a result of Indo-British contact. This is perhaps true. Whereas there has been a large crop of English writers on India, there have only been a few Indian writers, using the English language, writing on British or Indian themes. But this is hardly the correct test to apply, for the question is not whether English literature has been enriched. It is rather whether the Indian languages have benefited, and here the contribution of English has been considerable. Bengali, Tamil, Maharashtrian and Gujarati, that is, all the major vernaculars of India, bear significant marks of the impact of English upon them. Not only many verse forms, but also many varieties of fiction and belles-lettres which were previously unknown to these vernaculars, have flourished during the last hundred years under the beneficent influence of English. Historiography which, under the Moghuls, took the common form of royal or imperial panegyrics has undergone a revolutionary change and is now one of the most important sources of enrichment of the vernaculars. Over the modern movement in Indian painting presided men like E. B. Havell and Percy Brown, and it is no longer true, as Mr. Garratt once bewailed, that it is only "one-man deep". The generation of Dr. Abanindranath Tagore, Mr. Nandalal Bose and Mr. Asit Kumar Haldar has been followed by a more numerous one working with striking results in various styles and media. In science, there is an impressive beauroil of names led by Sir J. C. Bose, Sir P. C. Roy and Sir C. V. Raman, and if Dr. H. C. Bhabha has completed the installation of the Trombay atomic reactor well before the scheduled time, there must be few who would deny that part of the credit is due to the system of education of which he is such a brilliant product.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, Capital's Index of Indian Industrial Activity shows a decline of 1.2 points during August, 1956. Mainly contributing to the decrease were jute manufactures, steel ingots, pig iron, cement and paper. Notes in circulation and cheque clearances declined.

Indo-Pakistani Trade.—The three-year trade agreement signed by India and Pakistan in New Delhi last Tuesday reflects an urge for greater commercial co-operation between the two countries. But the reality of the urge, as distinct from its formal expression, is something which time alone can show. Both signatories have agreed to accord each other "most favoured nation" treatment; both have agreed to help alleviate the unfortunate consequences of partition, which separated Pakistan's relatively undeveloped eastern wing from its western, and which badly dismembered India's communications with Tripura. India, for instance, is to import 50,000 tons of cement from West Pakistan and export an equivalent quantity to East Pakistan, thereby relieving the pressure on transport facilities for this commodity. Pakistan, in return, will facilitate the through transit of essential commodities going from West Bengal to Tripura via East Bengal. The real test of the agreement's value, however, lies less in the way these provisions are implemented than in what it does to ease the trade in jute and coal. These are among the most important of the goods exchanged by the two countries, and the trade in them in recent years has been far from satisfactory. The agreement stipulates that each month India will send 30,000 tons of coal by rail to West Pakistan, 55,000 tons by rail and river to East Pakistan, and 15,000 tons by sea to either wing. In previous years, the export of coal to Pakistan has fallen much below expectations, mainly because of the shortage of transport; it is hoped that this handicap will not continue to prevent the fulfilling of the new commitments. There seems to be some ambiguity on the question of raw jute supplies from Pakistan. According to newspaper reports, no quantity has been specified in the agreement, but India will tell Pakistan by September each year how much she needs so that the crop in East Bengal can be planned accordingly. The worth of this provision will lie in the spirit in which it is implemented. So far, a rational approach to the question has been conspicuously lacking across the border. But India is planning for a substantial increase in her jute crops, while East Bengal continues to regulate the size of hers. More determined efforts towards self-sufficiency in this country could yield early dividends by ensuring that the intentions of the trade agreement are properly fulfilled.

Commonwealth Trade.—The Commonwealth's share in the value of world trade in 1955 was slightly higher than in the previous year, with imports at 31 percent against 30 percent and exports remaining unchanged at 27 percent of the total, according to a recent memorandum prepared by the Commonwealth Economic Committee. As world trade during the year reached a record level, this implies a proportionate expansion in Commonwealth trade as well. The increase in total imports was largely on account of the U.K., Canada, New Zealand and India. The respective import volume indices of these countries rose in 1955, with the figures for the preceding year in the respective value indices were 103 (100), 111 (110), 94 (93), and 94 (91). The import volume index of Australia declined from 185 to 175 due to her restrictive policies, but the value index went up from 396 to 407. Ceylon, which also had a lower volume index, paid more for her imports, the value index having risen by one point to 101. The export volume indices of the U.K., Canada, Australia, New Zealand, Ceylon and the colonies increased; the value indices of all member countries, except Australia and India, also rose. The Australian export value index declined rather sharply to 414 from 450, due chiefly to the substantial price falls in wool and wheat. Indian export earnings fell (the index declined from 100 to 93) because of lower prices for tea and raw cotton. Pakistan was able to increase her exports by as much as 25 percent due to the impetus given by the devaluation of her currency in August, 1955. The trade balances of Commonwealth countries, sums up the Committee, reacted in different ways. A sharp deterioration for the U.K. due primarily to much heavier imports, resulted from a deficit in merchandise trade which was previously exceeded only in 1951. The same factor was largely responsible for the adverse trend in Canada and New Zealand. The reduction of Australia's deficit by nearly half, compared with the previous year, was mainly due to smaller imports. In India, the decline in export prices and the expansion of imports more than offset the rise in export volume. The exceptionally large surplus earned by Ceylon (the highest ever recorded) derived from more favourable terms of trade in conjunction with heavier exports and smaller imports; in Pakistan also, the recovery in exports yielded a large surplus. A much higher level of export prices was the governing factor in the case of Rhodesia

and Nyasaland, where a marked improvement was recorded. South Africa's deficit on merchandise trade (excluding gold) was somewhat higher: but taking account of her gold exports, the balance was favourable.

Reforms in the Co-operatives.—The progress of the co-operative movement in this country so far has not been very satisfactory. A committee appointed by the Reserve Bank of India last year said that proper control and management were lacking. With these criticisms in mind, Mr. D. Sanjivayya, Minister for Co-operation in Andhra Pradesh, declared last week that it had been decided to amalgamate all small co-operative societies into larger ones which could function as credit and banking agencies. Many of these societies were started with the object of providing credit for agriculturists, and later they evolved into marketing agencies. Unfortunately, the societies are today able to meet only three percent of the credit needs of agriculturists. The Central and State Governments have, therefore, formulated a method by which at least 20 percent of the credit needs of agriculturists might be met by co-operative societies. Referring to societies with non-credit functions, Mr. Sanjivayya said that after decontrol there had been a decrease in their number as very few people patronised them. This was why, in the former Andhra State, the Government had converted them all into marketing societies. At present, the Government had plans for doing away with middlemen by entrusting the distribution of fertilisers, as well as of the cement, iron and steel needed for agriculture, to co-operative societies. The co-operative movement in Andhra Pradesh has done good work in certain spheres, but there have been some cases of embezzlement, temporary misappropriation and other misdemeanours. If members understand their responsibilities and choose trustworthy representatives, these defects can to a large extent be removed.

Coal Production in November.—The output of coal in India during November, 1956, registered an increase of 145,521 tons over the figure for the previous month. The output for October and November, 1956, according to official statistics released by the Chief Inspector of Mines, was 3,177,706 tons and 3,323,227 tons respectively. Despatches of coal amounted to 3,025,063 tons in November, 1956, as against 2,940,022 tons in the preceding month. Coal stocks at pitheads amounted to 2,664,206 tons at the close of the month, as against 2,565,782 tons at the beginning. During the month under review 838 collieries were reported to be working with an average daily employment of 332,155 workers. The output per man-shift was estimated at 1.18 tons for miners and loaders as against 1.15 tons during the previous month. The output for all workers underground and in open workings was 0.62 ton and 0.40 ton for all persons employed, including surface workers. The percentage of absenteeism was of the order of 13.76. Nine coke plants at collieries and elsewhere produced 346,790 tons of hard, soft and other kinds of coke during the month and despatched 176,991 tons.

Nuclear Fuel Sales.—Civilian users of atomic power will henceforth buy their fuel and other nuclear materials from a special department of the British Atomic Energy Authority, which recently announced that it had set up a commercial department in Risley to handle sales and to fix prices for uranium, plutonium, thorium and graphite. These materials will be needed in the atomic power stations to be built for the Central Electricity Authority. This innovation is significant because it is the first sign that the A.E.A. is prepared to part with any of its stocks on anything but a leasehold basis. A spokesman of the Central Electricity Authority has said that his Authority will actually buy uranium from the A.E.A., and that there is an agreement under which the second Authority will buy back spent uranium for re-processing after it has been used in power stations. The new arrangement will also make it easier for the A.E.A. to arrange for providing fuel for foreign buyers of British atomic power stations. The new department will be able, through its conduct of affairs, to exert a considerable influence on the economics of nuclear power production. The price at which the A.E.A. buys back spent fuel elements is by no means small—it is, in fact, the so-called "plutonium credit." The cost of a unit of electricity from the new atomic power stations can vary from 0.45d to 0.8d a unit if the plutonium credit is varied over its whole possible range.

Industrial Disputes in November.—The time-loss due to industrial disputes during November, 1956 decreased as compared with the previous month, according to the Labour Bureau, Government of India. The total time-loss during the month was 425,000 man-days, which was lower by about 47.5 percent than the figure recorded during October. This was also lower than the monthly

average time-loss during 1955 by about 9.0 percent. Following the re-organisation of States with effect from 1st November, 1956, the statistics of industrial disputes for this month relate to the reconstituted States. The number of fresh disputes arising during November, 1956 was 77 and these involved 27,862 workers. The corresponding figures during the previous month were 76 and 49,007 respectively. One hundred and four disputes were current at any time during the month. These involved about 46,000 workers. In the previous month the number of disputes was 145 and these involved about 112,000 workers. The average duration of disputes current at any time during the month was 9.4 days as against 7.4 days during the previous month. Fourteen of the disputes resulted in lock-outs. These involved about 16,000 workers and accounted for a time-loss of nearly 350,000 man-days. The number of lock-outs was highest in West Bengal, namely 11. Uttar Pradesh and Madras came next with two and one lock-out respectively. The index of industrial relations (Base 1939=100) for the Manufacturing Industry group for November, 1956 was 149.8 compared with 143.3 (revised) for the previous month and 417.1 for the corresponding month of the previous year.

Classification for Indian Coal.—An Indian standard general classification of coal (tentative) has just been published by the Indian Standards Institution. This work provides a revised scientific classification of coal based upon calorific value, ash content, moisture and coking property. It aims at fixing the types and grades suited for various purposes. It is intended to rationalise the utilisation of coal in the country. In preparing the standard, three conditions have been prominently kept in view. First, the classification should make it possible to place a coal, after testing, in the right group in the classification table, that is, to state the correct type and subdivision in terms of basic or inherent properties. Secondly, when there is a question of using coals for a given purpose, such as steam raising, the manufacture of metallurgical coke, etcetera, it should be possible to specify the categories of coal which are suitable or unsuitable, or suitable only under certain conditions, and thirdly, the classification should not be so detailed as to be cumbersome and complicated. To serve these purposes, the terminology is at first explained at considerable length. The classification proper is given in a tabular form with two graphical illustrations. There is also an informative appendix which indicates the kind of coal recommended for different uses. Copies of the standard are now available for sale at the Indian Standards Institution, 19, University Road, Delhi-8, and its branch offices at P-11, Mission Row Extension, Calcutta, and 40/40A, Cowasji Patel Street, Fort, Bombay.

MONEY MARKET PROSPECTS

THE prospects of the money market are causing some anxiety, both as regards the immediate future and in view of possible conditions if a new loan is issued and the Government continues to decline coining new rupees. As regards the immediate future, high rates of interest are due more to immovable stocks of goods than to the short supply of rupees in circulation. Were the offtake of goods in the Presidency towns to improve, the finance to pay for such goods would quickly lower the rates of interest. Such improvement may commence as people get relieved from famine, but we must expect the price movements to be slow. Were the mints open, the finance needed to pay for exports would be provided by imports of silver, and the strain on the money market relieved. The relief would not be due to a larger supply of rupees but to facility of finance. We assume that before the mints were closed, a large amount of rupees were coined during the busy export seasons in excess of circulation requirements, but that this excess was reduced almost to the same extent during the other seasons of the year by melting and hoarding, chiefly the former. Trade and money in the Presidency towns are affected more by facilities of finance than by the supply of rupees. There is a nice distinction between the supply of rupees and the facilities of finance. We think it, however, easy to foresee that if in July-August, just as jute and tea are coming into full swing, the Government seeks to borrow Rs. 4 crores, and continues as now to shut down the only means of rapid finance beyond such as Council Bills may supply, either the Government or the jute and tea merchants must seek elsewhere. Seeking elsewhere on the part of the Government means raising more sterling loans. It means also reducing the amount of 1958 annuities over £20 million of Council Bills. Such a policy may be described as four penny wise and rupee foolish. Surely a return to open mints could not possibly be so disastrous to the country as a system which seems only destined if persisted in, to land Indian trade and finance in a hopeless mess.

Without Prejudice

SOME CASES IN THE ENGLISH COURTS

NIZAM OF HYDERABAD'S MONEY

(FROM OUR LEGAL CORRESPONDENT)

ONE of the most interesting cases of the past year in the English courts was *The Nizam of Hyderabad v Jung and Others* given, as to the original hearing before Upjohn J., in Vol. 100 of *Solicitors Journal Reports* on page 651. As for the inevitable appeal, this has not yet been covered in the *Law Reports*, and we are indebted to a correspondent in the U.K. for a newspaper account of what transpired before the Master of the Rolls (Lord Evershed) and his colleagues. Both the original judgment and the appellate one must be read with reserve as, leave having been granted to appeal to the House of Lords, more will doubtless be heard on the important points of international and constitutional law involved. It was a claim by I.E.H. the Nizam and his then Government for certain money amounting to well over £1 million in the Westminster Bank in London. The account was in the name of Mr. Habib Ibrahim Rahimtoola, formerly High Commissioner for Pakistan in London. The money was transferred to him by the Bank, in which it had been standing to the credit of the Nizam, at the request of one of the persons entitled to operate the account for the Nizam. The Westminster Bank had refused to hand the funds over to the Nizam because claims had been made by both Pakistan and India. The Nizam issued a writ in the English courts and the matter came before Upjohn J. in the Chancery Division, on a successful motion by Mr. Rahimtoola to set aside the writ. The

judge held that ownership had to be decided by inter-Governmental negotiations. Pakistan as a sovereign State, his lordship said, was entitled to decline to submit to an investigation in the English courts, which, therefore, had no jurisdiction to decide who was entitled to this sum of £1,000,940. The Court of Appeal (Lord Evershed M.R., Birkett and Romer L.J.J.) reversed this decision. In his judgment, Lord Evershed said that Pakistan had not established a scintilla of title to control the fund and, since the hearing before Upjohn J., the Nizam had sworn an affidavit that the transfer to Mr. Rahimtoola was without his authority. Mr. Rahimtoola was not the agent of Pakistan for this purpose, but held the fund on trust for the Nizam. The Nizam's appeal was allowed and the Court of Appeal ruled that the stay on his action should be removed. As stated, the case may go to the House of Lords, so this note, depending as it does on a newspaper report on the Court of Appeal decision, must not be regarded as in any way commenting on the final merits.

Here is a macabre problem which the year 1956 saw decided, and which one is surprised had not been decided centuries ago considering the innumerable killings that have occurred with the element of money hovering in the background. In view of the temporary virtual abolition of capital punishment in favour of imprisonment for some 15 years or so, the question assumes considerable importance. A lady, by her will, left her whole estate to her daughter. She had other issue, a son to whom she bequeathed nothing. The lady died. She had been feloniously killed and slain by the said daughter. What happens to the estate? There are several possibilities. One thing is certain. Under the will, the daughter is definitely "out". She killed her mother, the testatrix, and there is an age-long rule of law that in such a case the criminal cannot receive a bequest under the will of the deceased. That being so, in this case the will, *qua* will, falls to the ground, since there was no other bequest in it, the daughter being

sole legatee and devisee. So, although there is actually a will, there is virtually an intestacy. What then? Under an intestacy apart from the manner of death, the daughter and the son, the latter of whom the mother did not, as under her will, intend to benefit at all, would share the estate equally. Under an intestacy, the daughter, being the killer, is still "out". She is, as such, ineligible to receive anything. Both the Crown and the son are agreed upon that. "So I take all," says the son. "Not at all," says the Crown, in effect, intervening in the Chancery Divisions. "You take your half share as one of the two next of kin, but your sister, though she is disqualified by her felony from taking under the will or the resulting intestacy, nevertheless did actually survive the deceased and is a sort of conduit pipe from her dead mother to the Crown. What would have been her share passes to the Crown as *bona vacantia*. In fact, the Crown put its case even higher and it was suggested that the whole estate passed forfeit to the Crown, a hardy contention which one can hardly believe was seriously pressed. "The son is entitled to the whole estate," said Vaisey J. The daughter was not to be counted as issue at all, so that the son was the only qualified issue. The reader will note that we have not used the expression "murder" in connection with this particular case. We know nothing of the actual facts; and *Law Notes*, in its pithy summarised report, refers to "felonious killing". What happens, then, if X, being drunk in charge of his car but with no intention to injure anyone, drives with such utter recklessness that his wife, a passenger, is killed in a resulting accident and he, convicted of manslaughter, is the sole beneficiary under her will? This deponent knoweth not.

And talking of reckless driving, something more drastic in the way of punishment may have to be devised in England than is provided for by the Road Traffic Act, 1930. The figures for 1956 have not yet been published, but one notes that the Christmas holidays for 1955 beat almost all records for road casualties. It has been officially stated that during the seven days from Thursday, 22nd December to Wednesday, 28th December, road casualties in Britain totalled 6,096, which was 987 more than in the same period of 1954. Deaths numbered 177—an increase of 26. On one day alone, Friday, 23rd December, 1,505 persons were injured, 53 fatally. One curious fact emerges from the statistics. An analysis of the figures for the first 11 months of the year shows that 173,004 casualties were involved in accidents on roads subject to a speed limit, and 68,839 on roads not subject to a speed limit, a point not likely to be overlooked by those who favour no speed limits. Readers who, like the writer, take in their local British daily newspaper will have noticed that hardly ever do provincial benches of magistrates, other than stipendiaries in the big cities, send a reckless or even a drunken driver to jail. The authorities might take a lesson from the newly constituted Government of Poland in dealing with alcoholic drivers. Poland has adopted a novel punishment. It does not involve the disgrace and civil disabilities of a criminal conviction and jail sentence; but it is far more effective as a deterrent, and the number of drunken offenders, it is stated, has decreased rapidly since the enactment. It is called "corrective labour," and the alcoholic is put to work on street cleaning. The punishment, often carried out in the full view of friends, is not popular with offenders, many of whom would prefer a heavy fine or to go to jail. It might be useful, too, as a corrective to those young thugs in England euphemistically described as "Teddy Boys". But that is by the way. Turning again to road casualties, one fact strikes the writer as ironic. More fuss is made by benevolent do-gooders interested in the abolition of capital punishment about four or five murderers, including, say, a cold-blooded poisoner executed after fair trial in one year, than about 53 innocent persons "capitally punished" in road accidents in one single day.

Here is an odd case on the question of an employer's liability for damage caused by the negligence of his servant while engaged in the latter's employment. A lorry driver employed by the defendant company stopped in the course of his journey to obtain refreshment at a café on the other side of the road. It was the practice for the company's drivers to stop for this purpose; the company knew of the practice and impliedly sanctioned it. While crossing the road for the above purpose, the driver collided with a motorcycle ridden by the plaintiff, both parties being partly to blame. Is the company liable for the driver's negligence? "No," said Pilcher J. Though employed at the time on his master's business and permitted by his master to do what he did in crossing the road to get refreshment, the driver was a stranger to his master from the moment he left the lorry. "While an employer is no doubt vicariously responsible for the negligent acts of his servants committed in the course of their employment, he is not, in my view, necessarily responsible for the consequences of acts committed by his servants during the period of their employment, unless the particular act which is negligently performed was an act which the servant was employed to perform."

Can your car make a split-second stop?

As a responsible motorist you know that it should be able to. An emergency may arise any moment... it comes unannounced. So play safe. Among other things, see that you have a really reliable braking system.

Wise motorists all over the world have their brakes tested regularly and have them fitted with FERODO—the brake linings that make motoring safe. FERODO Brake Linings are made with asbestos because they have a tough job to do. In an emergency, their unfailing efficiency can prevent disaster.

There are FERODO Brake and Clutch Linings for every type of vehicle in the country—but these are only a part of the wide range of technical asbestos products which we make at AM & FM to meet the needs of Indian industry. The increasing use of asbestos is an index to India's industrial progress.

Where There's Industry There's Asbestos

AM & FM

We supply:
 • FERODO BRAKE AND CLUTCH LININGS
 • FIREFLEX ASBESTOS PRODUCTS
 • SPRAYED LIMPET ASBESTOS
 • NEWALLS' INSULATION MATERIALS
 • PATTINSON'S BRAND
 • MAGNESIA CHEMICALS
 • SINDANYO ELECTRICAL INSULATING BOARDS

A DITCHER'S DIARY

standards where such matters are concerned. Nobody is going to under-rate the difficulties. But after all, the municipal taxes are high enough.

One thing I have never been able to reconcile myself to is the perpetual complaint of leaders and educationists in this country that students have an incorrigible tendency towards higher studies and university degrees. I agree that both time and energy are wasted thereby. And it is a regrettable fact that the satisfaction of being able to append to one's name a string of capital letters is often followed by disappointment in the employment market. But what I find so unreasonable is that it is the students and their guardians who are always blamed. In a country where there is so little provision for vocational training and where unemployment is a major social epidemic, there can only be two alternatives before young people: either they go ahead for academic education in the hope of at least some chance of getting work, or they stop at the matriculation stage and despair of any kind of job at all. When the employment market is so keenly competitive, it is only natural students should decide that the higher their standard of education, the better the chance of finding work. This is certainly one of the main reasons why such an artificial premium has come to be placed on mere academic distinctions. A student who gets a scholarship or a first-class honours is lionised in the newspapers; and he can rarely go abroad in pursuit of an Oxford or Cambridge degree without the world being appraised of the fact by prolific pictorial write-ups. All this may be ridiculous, but it cannot just be lectured away. I am glad to see that Mrs. Hansa Mehta, President of the Inter-University Board, a body which met in Calcutta early this week, agrees with what I have said so often before, namely, that the real solution is not to close the universities, reduce their number, or restrict admission to them; but to increase the scope for more vocational training.

That old unrelenting cold-weather visitor, the smallpox, is back with us this year I see, and in an even more boisterous mood than usual. The doctors have blamed the unseasonal weather. I agree that it had much to answer for this Christmas—thirsts seemed so much greater than usual—but it is no answer to the question why in the year 1957 so many people should have lost their lives, or may yet lose them, just because the temperature was a little high for the time of year. I see that the World Health Organisation reports a steady fall in the incidence of smallpox throughout the world, except, apparently, in Asia. The total number of cases in four continents (Australia has always been free of quarantinable diseases) was 178,000 between 1951 and 1955. This was 15,000 less than the figure for the previous five years. But Asia's contribution rose by 5,000 to 144,000, and now represents 81 percent of the total. That is Asia excluding the U.S.S.R. and China, both of whose interpretation of their international responsibilities appears to debar them from co-operation in these surveys. What is even more disappointing is that 58 percent of all cases in the past five years were reported from India and Pakistan. And much the same is true of cholera. That disease can almost be classed as a resident here now, because, if China is excluded due to lack of information, it is now reserved almost exclusively to the Ganges and Brahmaputra delta areas. Here too it is dwindling. But there is still a long way to go before it disappears altogether. Inoculation is one answer, but as with smallpox, the main thing is hygiene. Perhaps there is more of that here these days than there used to be. But one has to look carefully to find it. The larger part of this city, for instance, is still far below modern

It is usually a good idea to have some principles to live by. I read those proposed for private enterprise in India, as published in last week's issue of *Capital*, with considerable interest. They are, of course, a counsel of perfection and the suspicion did arise whether it is really safe to formulate so strict a code of conduct by which one may eventually be judged. I am all for sound business morals, but the perfectly-behaved company is like the saintly individual, just the least bit difficult to come by. A case based on comparisons of efficiency between public and private undertakings both in India and elsewhere, might, for instance, have been easier to recommend. I suppose, given the present state of woolly thinking about free enterprise in this country, that it is necessary to emphasise the social angle. As long as there is no mistake about the essential fact that the purpose of a business is to make money and not to turn itself into a social welfare organisation, there is probably no great harm in this. But it seems to me to be losing the most important point about modern ideas on labour efficiency to suggest that welfare is a social obligation. It may well be in India, but in fact it should be nothing of the kind. The best justification a business man has for looking after his workers is that they work better that way. Reasonable welfare expenditure pays for itself, and I cannot understand why anybody should be afraid of saying so. If it does not, then the consumer of the product has to stand the bill and that applies to any form of business, private or otherwise. Such re-

servations apart, it is good to see that free enterprise is becoming aware of its collective identity. To formulate a code of discipline is an excellent first step towards creating a body which is prepared to stand up for its own interests. After all, evangelism may well have its uses in business circles. But perhaps I will be forgiven if I accompany my congratulations to the Forum on these brave precepts with the respectful reminder that where private enterprise is concerned, comparisons need not always be odious, and might, on occasions, be safer.

The Yeti, *alias* the Abominable Snowman, has given us far too much trouble already. Not that it has ever done any positive mischief; far from it. Had somebody's arm been clawed off or, say, his crops ruined, it might have been understandable. But the Yeti has done nothing so vicious. Instead—and here is the sum total of its offence—it has tempted party after party of explorers, with hope in their hearts and hob-nails on their feet, up and across the snowy wastes of the Himalayas only to leave them disappointed, poorer and looking rather foolish. Abominable conduct, no doubt. For all this, however, the craze has not died down. Only last week-end, apparently, a *Statesman* reporter chased a Yeti through Kathmandu or, to be precise, a Yeti carcass, presumably on the basis of "bring it back dead or alive". But, unluckily man, he found only a somewhat mutilated "Rin Sen," *alias* "Sen Sen" *alias* "Jen Sen", said to be a curious mummified creature no more than eight inches long; and with about as much hair on its head as there is on an egg. For all I can guess, his annoyance may have been as intense as that of Miss Betsy Trotwood in *David Copperfield*, who had fondly expected a niece but got a nephew instead. Of course, I feel a little sorry for the enterprising newshound, but, after all our past experiences, am rather inclined to think that one will sooner catch a shooting star, land a mermaid, or meet a Minister who can maintain public silence for longer than a week, than find a Yeti.

The subject of oil is about the most contentious in the world today. We may even see a war being fought over it before long. Which is as good a reason as any for studying a few facts, when they come to hand. I have just finished reading *The Background to Burmah-Shell* which, apart from being an excellent piece of public relations for the company, gives a good deal of important information about oil in a most attractive form. A useful clue to what all the bother is about, for instance, can be gleaned from the fact that the consumption of petroleum has increased almost sevenfold since 1920. It has moved from one-seventh to over half the world's effective fuel requirements. In the same time, coal declined from five-sixths to much less than half global energy needs. Oil these days is very big business indeed. In fact, it has already become identified as capitalism *par excellence*, which, of course it is, although, as this pamphlet shows, that is not necessarily something to be ashamed of. Most aspects of the oil business are best handled on a large scale, although the kind of enterprise required demands that it should never be inflexible. I can recommend this account to anybody who is interested in what oil companies are doing throughout the world in general and what Burmah-Shell is doing in India in particular. It will also repay study by any other private concern which is in the process of deciding to give its activities more publicity.

THE ECONOMIC OUTLOOK FOR EUROPE

REPERCUSSIONS OF RECENT DEVELOPMENTS IN HUNGARY AND THE MIDDLE EAST

EVEN if more or less normal economic activity is resumed as quickly as possible, recent events in Europe and the Middle East are bound to have important effects on the economies of European countries. In assessing these, one must consider, firstly, the direct losses arising from the insurrection and the subsequent heavy fighting in Hungary, and secondly, the far-reaching changes in economic policies which are under way, both in Poland and in Hungary, especially for agriculture. It is obviously impossible as yet even to estimate the full effects of the Hungarian uprising, but in addition to the losses in human lives, a most severe and dangerous drop in standards of living, with serious consequences for health, must be among the immediate results, and these seem bound to persist unless adequate relief measures are taken. It is no easier to assess the full effects on the economies of the western European countries of the blocking of the Suez Canal and the damage to oil pipelines, or of the general heightening of political tensions as a result of the recent disturbances to peace in the Middle East. A shortage of tanker capacity seems likely to be the main factor limiting western Europe's oil supplies and, if the Suez Canal remains blocked for long, the longer hauls from the Persian Gulf round the Cape or across the Atlantic seem certain to reduce western Europe's total oil supplies as well as to raise their delivered cost. The countries most dependent on oil for their fuel requirements are Sweden and Denmark, which import most of their supplies from refineries in other western European countries. The countries which normally have a considerable export trade in petroleum products with the rest of western Europe (the U.K., France, Netherlands and Italy) could doubtless minimise the adverse effects on their own industries of a reduction in total supplies to the area by reducing or eliminating exports, but this could be disastrous for the importing countries. If an overall shortage should persist for any considerable length of time, measures to allocate supplies as between countries, and within countries as between industries, will undoubtedly become necessary.

Scope for American Aid

Faced with these far from cheerful prospects, the Secretariat of the Economic Commission of Europe (E.C.E.) has done well to compile a report surveying the whole situation, which is included as part of an article in the latest quarterly *Economic Bulletin for Europe*, Vol. 8, No. 3. This merits careful study, for in addition to outlining the developments it goes further and makes some constructive suggestions. For instance, in dealing with the oil shortage problem, it considers the possibility of minimising the effects by stepping up imports of coal from the United States, now running at a rate of about 50 million tons a year. There is uncertainty whether or not loading facilities in U.S. ports would become an obstacle to a very substantial rise in the rate of shipment of coal to Europe, but it is felt that some increase would be possible. This might well require further releases of ships from the U.S. reserve fleet, but the report points out that dry cargo tonnage in the reserve fleet is far more plentiful than tankers and probably need not prove a serious limitation. Nevertheless, the possibility cannot be excluded that a decrease in the supply of fuel oil will entail a certain reduction of industrial output in western Europe below the level that could otherwise have been attained. It should be possible, however, within limits, to concentrate reductions in fuel supplies in each country on those industries where there is least danger that a fall in production will start a chain reaction spreading throughout the economy.

The Secretariat points out that any prolonged diversion of oil purchase to western hemisphere sources or any rapid growth of coal imports will add to western Europe's import bill in trade with dollar countries. It considers that Government would probably be justified in taking steps to neutralise the impact on domestic price levels of higher freight rates, at least until long-term tendencies can be more easily foreseen. Considering the possibility of a slowing down of the growth of output and, on the other hand, some fall in consumer demand as a result of restrictions on private motoring, it is suggested that there may be some small net inflationary effect. Moreover, any substantial increase in defence outlays in western Europe would restrict still further the resources available for civilian investment and consumption and make more difficult the task of maintaining internal and external economic stability. Adverse economic repercussions could also be expected in eastern Europe should recent developments lead to any significant increase in military expenditures in this area. The risks are illustrated by recent policy discussions in Poland and Hungary, from which it emerges that, at the time of the Korean conflict, the extra military outlays which were placed on top of an already ambitious investment programme contributed substantially to the subsequent decline in living standards and to other economic difficulties which, in turn, have played a rôle in the disturbances of recent months. It has not been possible, in the later sections of the review, to take full account of all the implications of the developments in Egypt and in eastern Europe, and the Secretariat stresses that it is describing essen-

tially the trends up to mid-October, which since then could have undergone considerable change.

Western European Exports

In the early stages of the boom, the western European countries were able rapidly to expand supplies of food, fuel, materials and equipment so that the needs generated by growing industrial output and rising incomes could be satisfied without a disproportionate increase in imports from the outside world. Now, however, imports from outside western Europe are rising faster than output and also faster than exports to the outside world. This speeding up of the rise in imports in relation to production is attributable partly to the general pressure of demand on western Europe's resources and partly to special factors, such as the failure of coal production to expand and the consequent rise in western Europe's imports of American coal from 24 million tons in 1955 to an annual rate of 50 million tons in 1956. Oil imports have also risen fast. Among individual countries, the rise in imports has been especially rapid in three of the countries where the pressure of demand on resources has recently become most intense—France, Finland and the Netherlands. All the major industrial exporters except France have increased the volume of their exports in 1956 as compared with the same period of 1955, but the increases have not invariably kept pace with the rise in imports.

The Secretariat considers that in France the lower exportable surplus of cereals, as well as the pull of rapidly growing home demand for raw materials and many manufactured goods, has helped to depress exports. Looking at the experience of the U.K. and Denmark, where total home demand has been deliberately depressed by Government action in the interests of balance of payments stability, it points out that in Denmark the rate of increase of exports of industrial goods, although high, has not increased in 1956. In the U.K., the movement of labour and other resources from sectors of slack demand towards those where demand is strong is proceeding rather slowly. The present rate of growth of total exports does not seem to be significantly faster than that registered between 1954 and 1955, and an examination of trends in a particular sector, such as the engineering, shipbuilding and electrical industries, shows that in the first half of 1956 falling demand for defence materials and consumer goods was not fully offset by rising exports, and total production fell. The conclusion drawn from the experience of these two countries is that a policy of restraint of home demand may not have a rapid effect on the rate of growth of exports unless either it is concentrated on those sectors of production for which export demand is already strong, or it is accompanied by measures to stimulate investment in industries which can readily find export markets.

Two tables in this section of the review illustrate the more rapid growth of West German than of British or French exports in each major category of manufactured goods and towards each main market area. The Secretariat sees little likelihood of any rapid change in these trends, but quotes some interesting estimates of changes in wages, productivity and export prices in the three countries. These suggest that such advantage in labour costs and the rate of increase of export prices as Western Germany may have enjoyed in the past are now being reduced. The figures suggest that rapidly growing productivity throughout the last two years has prevented any significant rise in wage costs in France, but concealed unemployment and under-employment in the U.K., and the resulting failure of output a man-hour to increase over the 1955 level, may have caused labour costs to rise during recent months noticeably faster than before, since the rate of increase of earnings has not changed during the period under review. In Western Germany, there seems to have been a marked decline recently in the rates of growth of productivity, and wages have been rising considerably faster than in earlier years.

Changes in Balances of Payments

In considering recent changes in the balances of payments of western European countries, the Secretariat expresses the view that where reserves have been reduced in recent months, this has, in most cases, represented little more than a loss of some of the gains of 1955. The rate, or persistence, of the drain on reserves has become serious only in France, the Netherlands and Ireland, and in the Netherlands the level of reserves in relation to imports is still reasonably satisfactory. Steps have been taken in all these countries to help arrest the decline, but there are some doubts whether the drain on French reserves can soon be checked. The recent negotiation of a stand-by credit for \$263 million from the International Monetary Fund has provided some reinforcement for the French reserves, but there is no sign of any relaxation of the pressure of demand on resources and it is doubtful whether any improvement in the competitiveness of French exports in the near future can be on such a scale as would produce a significant improvement in the underlying trade and payments relations. In contrast with the French position, which may now be worsened by the effects of the Anglo-French intervention in Egypt, the

E.C.E. Secretariat sees no prospect of any rapid change in the West German balance of payments surplus and suggests that the signs of a slowing down of the growth of domestic demand in Western Germany which have recently appeared may tend to increase the surplus still further. The Secretariat suggests, nevertheless, that so long as western Europe's overall balance of payments with the outside world—and in particular the balance with the dollar area—remains satisfactory, the risks that divergencies in the balances of individual countries may lead to general deflation is greatly reduced. Figures are quoted illustrating the overall balance of payments position of western Europe as a whole, and the effects of U.S. trade and payments on world dollar supplies, which are characterised as providing "a fairly satisfactory background for further economic expansion in western Europe" if it were not for the new dangers introduced by recent events in the Middle East.

Further Industrial Expansion

Turning to the prospects for further industrial expansion in western Europe, the report notes the apparent levelling off of overall industrial production in July and August, but suggests that indices of output in these months—even though seasonally adjusted—may not be a good guide to underlying trends. The forces of expansion now appear strongest in France, Belgium and Switzerland, while Denmark and the U.K. remain at the other extreme with output still running at levels no higher than in 1955. The capacity for further expansion—except as it may be limited by the oil shortage—appears to be considerable in most countries despite complaints of labour shortage in those where demand is strongest. The reduced pressure of home demand in Western Germany is particularly significant. In general, the earliest investment boom seems to have been checked and consumption and exports are becoming relatively more important factors in the continuing expansion of output than they were during 1955 and the early months of 1956. The flow of home market orders to the capital goods industries fell below the corresponding 1955 level in August, and the latest I.F.O. tests show a decreasing proportion of firms throughout industry reporting relatively high stocks of orders, and a rising proportion reporting that orders on hand are unsatisfactorily low. Looking to the future, the Secretariat suggests that the recent imposition of restrictions on private motoring in a number of countries, and the possibility of a petroleum shortage lasting at least for some months, seem likely to have a discouraging effect on the European market for private motor cars in the immediate future. But it sees little reason otherwise to expect a change in the general upward trend of consumption.

Future Prospects

The E.C.E. Secretariat sums up its views of the future prospects for industrial expansion in western Europe in this way. The present trends of demand for consumption and investment in most of the countries of western Europe, and the continuing growth of exports, suggests that little change in the rate of overall expansion is to be expected in the near future unless a further easing of investment demand in Western Germany or the beginning of a positive decline in investment in the U.K. brings about some further fall in the rate of growth of total output in those countries. Present indications suggest that such a fall may occur during 1957, however, unless either changing Government policies or other events affecting business men's expectations of future conditions provide a new stimulus. But, in addition, the possible effects of recent events in the Middle East now constitute an additional source of uncertainty about the future. Some production difficulties in the short run seem inevitable, although the existing stocks of oil and the measures already taken by Governments to enforce economies on consumption should limit the damage. Looking further ahead, it seems likely that the fuel shortage may become a limitation affecting the future rate of production if the Suez Canal should remain closed for long, since sufficient shipping may not be available immediately to transport all the oil available from the Persian Gulf or the western hemisphere. The report notes that Government policies in most countries are now concentrated on attempts to check price inflation. It quotes figures showing that in most countries wages and prices have risen as fast as or faster during 1956 than during the previous 12 months. There is now a new danger, stemming from events in the Middle East, that rising freight rates, which are already approaching the peak levels reached during the Korean war, may be forced still higher by the increased expense of longer voyages and by the intensification of the already acute shortage of shipping. As long as there is a chance that increases in costs of this kind may later be reversed, it would be reasonable for most Governments, in present circumstances, to take steps to offset their effects on the general levels of domestic prices rather than to risk the danger of a new stimulus being given to the cumulative process of price-wage inflation.

Trends in Agriculture

This section concludes with a discussion of current trends in agriculture. The general upward drift of farm prices is noted and the report suggests that in many of the western European countries Governments are faced with increasingly difficult problems in the field of agricultural policy. Social and political considerations, as well as a desire in some cases to limit their countries' dependence on food imports, dictate a policy of maintaining farm incomes or indeed raising them more or less in line with the growth of incomes in other sectors of the economy. Increases in wages of farm workers in many countries and other increases in farming costs or in general price levels, produced during 1956 widespread demands for higher prices

for farm products. To accede to these demands in present conditions frequently involves either a higher tariff or tighter import restrictions (within the limits set by the international obligations of the various countries in these fields) or, alternatively, an increase in the subsidy bill. But any of these solutions is liable to lead to further difficulties—either a new upward pressure on the general price level, subsequent wage increases and a strengthening of any existing tendencies towards a cumulative cost inflation, or an increased burden on the budget and possibly a need for offsetting economies in other expenditures, or for tax increases. To some extent, the difficulties facing most western European Governments in carrying out a policy of income parity for the agricultural sector are linked with the farming structure in these countries. In many cases a large part of the agricultural population is occupied on small farms where the possibilities of increasing productivity are limited, or which may be capable of being operated economically only in certain specialised lines of production. In fixing prices which are designed to give a "parity" rate of growth of income to most, even if not all, producers, Governments are therefore precluded from taking fully into account the average increases in productivity of the whole sector, from which only a minority of producers may have received substantial benefit. They may also have difficulty—as has already been noted in connection with the recent trends of milk production and prices—in securing the most economic pattern of prices and output.

Increases in the general level of farm prices do not in themselves provide any incentive to increase productivity, and the atmosphere of protection may in fact discourage efforts in this direction. However, some Governments are apparently becoming increasingly discriminating in the measures used to support the real income of the agricultural sector, with the aim of encouraging greater efficiency and a more selective expansion of output. The Secretariat suggests, however, that the most energetic pursuit of such policies can as yet offer little prospect of any immediate change in the general upward drift of food prices, and claims by farmers' organisations for new price increases in the 1955-57 season have already been made or can be foreseen with some certainty in Western Germany, the Netherlands, Switzerland and the U.K.

Eastern European Changes

Even more interesting, perhaps, is the fact that the E.C.E. report deals almost as comprehensively with the situation in eastern Europe, despite the difficulty of getting reliable statistics from behind the Iron Curtain. Reporting on harvest results in Russia and eastern Europe, the Secretariat says that an excellent grain harvest is indicated in the Soviet Union and Czechoslovakia, and about average results in Poland and Eastern Germany. In Hungary, however, the harvest was distinctly below average, as it was in Bulgaria. The good results in the Soviet Union reflect the successful harvests in the virgin lands in Kazakhstan and Siberia, and total State grain procurements in 1956 will be well over double the amount regarded as normal before the virgin lands campaign. The Secretariat also reports a startling rise in milk production in the Soviet Union, where deliveries by collective farms rose by 38 percent during the eleven months from 1st October, 1955 to 31st August, 1956. It quotes figures for the Ukraine which show that after a period of several years, during which yields had climbed only slowly from an extremely low level while the number of cows increased at a remarkable rate, milk yields suddenly rose by 40 percent between the years October-September 1954-55 and 1955-56. This changeover to a rapid increase in yields is to be explained by the fact that the inordinate increase in the number of milk cows has now been stopped. In other words, the recent increase suggests that during the last few years not only far smaller than they might have been if cow numbers had been kept at lower levels. The recent increase in Soviet milk yields, it is suggested, thus seems to reflect the belated beginning of an adjustment of cow numbers to fodder availabilities so as to avoid under-feeding.

The Secretariat suggests that some eastern European countries are in a similar position, having herds of cows which are too big in the sense that an increase of herds without a more than proportionate increase in fodder supplies is not to be recommended. The report quotes figures of prewar and postwar milk yields in both eastern and western European countries which show a rise in yields in the western European countries and falls in several eastern European countries. The Secretariat reports a continuing drive for collectivisation in Hungary, Bulgaria and Czechoslovakia during the late summer, but also a tendency towards more flexibility in determining the structure of the co-operative farms and the functioning of agricultural markets. In Poland, a lively public discussion developed on the aims and methods of agricultural policy in general, and co-operative farming in particular, and the most recent developments in Poland seem to inaugurate important changes in agricultural structures. All the recent measures in Rumania, Hungary, Eastern Germany and Albania are to some extent similar in that they seek to take account of farmers' reluctance to join co-operatives of an advanced type by providing facilities for more modest forms of co-operation. The present trend is somewhat different in Bulgaria, where the policy is to bring all land under co-operative farms, and in Czechoslovakia, where there continues to be a strong official desire for the creation of new co-operative farms. The Secretariat suggests that there may be a danger that the very harsh criticism now levelled against the Polish col-

lectivisation policy creates a somewhat exaggerated impression of the importance of the purely institutional factors as a cause of the bad performance of Polish agriculture during the last ten years. It points out that only one-tenth of the area is under co-operative farming, and that regardless of any unfairness in distribution of supplies between collectives and other farms, the total supply of fertilisers, building materials, machinery and other means of production for agriculture was far too small.

Investment

In discussing investment in eastern Europe and the Soviet Union, the Secretariat points out that, after some relaxation of the drive for higher investment in 1954 and 1955, the plans for 1956 again laid down very ambitious programmes for the overall volume of investments in all the countries, with the exception of Bulgaria. Bulgaria was the only one among the eastern European countries in which there had been no levelling-off or decline in investment in the immediately preceding years. The actual results for the first part of 1956 show very considerable increases over the corresponding period of 1955 in investment in the Soviet Union, Czechoslovakia, Eastern Germany and Hungary, but these increases, though impressive in themselves, fell short of the rates planned for the year as a whole, and for Eastern Germany and Czechoslovakia the discrepancy between plan and performance is so wide that the fulfilment of the plan for the year as a whole seems to be unlikely. No quantitative information is available for Bulgaria, Poland and Rumania, but it has been announced in each of these countries that the plan was not fulfilled in the first half of 1956. The shortfall is attributable partly to administrative difficulties and labour shortage (in Eastern Germany and Czechoslovakia) but, above all, to shortage of building materials.

Fuel Problem

As in western Europe, there is a fuel problem in eastern Europe. The report suggests that production of coal seems to have reached a ceiling where no significant further increases can be achieved without considerable investment. The increase in production through higher labour input, whether by new recruitment or by longer hours and work on Sundays and holidays, is scarcely possible. The necessity for larger investment in coal mining is generally recognised and the plans provide for considerable increases. But the extension of mining capacity is a process which gives results, at best, after several months. The most important single factor in the eastern European fuel problem is Polish coal mining, the performance of which affects not only Poland itself, but also Eastern Germany and Hungary, which are dependent on imports of fuel. The Secretariat reports that coal output in Poland in 1956 is expected to amount 95 million tons, which is one million tons less than planned for the year and only 1.5 million tons more than in 1955. This increase is no more than what is required to cover additional allocations of coal for domestic fuel. At the same time, allocations for industry and transport have had to be increased. As a result, exports of hard coal have been reduced to a level almost 4 million tons below that 1955. Even so, the supply situation in Poland remains precarious and the Government has issued an appeal for economy in the use of fuel and created a special commission to deal with the energy problem. The difficulties in coal production in the main producing countries had serious effects on the fuel situation also in Hungary, the more so because the delays in deliveries of Czech and Polish coal and coke coincided with the decline in oil output due to the flooding of the Nagylengyel oilfields early in 1956. The deficit may be put at about 500,000 tons of hard coal equivalent. On 1st October, total stocks equalled only 18 days consumption and these stocks were very unevenly distributed. The railways had fuel for only six days and some industrial concerns even less. Up to that date, practi-

cally no deliveries to households for this winter had taken place.

Employment and Wages

The review of employment and wages in eastern Europe and the Soviet Union notes that apart from coal mining, where the problem of labour shortage is worldwide, and the largely seasonal difficulties in agriculture and building, the overall manpower situation in eastern Europe, with the notable exception of Eastern Germany and Czechoslovakia, shows signs of over-saturation rather than of insufficient supply. There may well have been similar instances of insufficient utilisation of labour in previous years but the measures recently taken in Poland and Bulgaria suggest that this kind of employment problem has now become more widespread and important. The Bulgarian Government has already taken a number of measures designed to create additional employment outlets, such as the renewed efforts to step up production, the expansion of the staff of various State institutions, the replacing of prisoners by free workers in the mines, the release from urban enterprises of workers and employees who were formerly employed in agriculture, and the introduction of shorter working hours in some enterprises and institutions. The main causes of unemployment, according to the report, are the tightening up of management and administration and consequent release of workers from these branches, the large numbers of women seeking work to supplement the family income, irregularity in supplies of raw materials—which produces intermittent unemployment—and the special problems of small towns which have been deprived of their small industries and handicrafts, and also have lost their rôle as trading centres for the surrounding countryside. The new policies of decentralisation of economic development and of encouragement to artisans and small private enterprises are meant not only to improve the lot of that hitherto neglected sector of consumers but also to provide productive employment for the redundant or under-employed town inhabitants and to overcome the "crisis of small towns".

Foreign Trade

The review notes that plans for foreign trade in the eastern European countries in 1956 forecast considerable increases in total turnover. The data for actual trade, in current prices, in the first half of 1956 show, on the whole, a considerable increase, even in Poland, where foreign trade had been planned to remain at about the 1955 level. A particular effort was made to develop trade in Czechoslovakia, and turnover increased by as much as 20 percent compared with a year earlier. This increase is remarkable in itself, though Czechoslovakia's foreign trade has hitherto been extraordinarily low in relation to its high degree of industrial development. The Secretariat considers that the second half of the year cannot show an equally high degree of plan fulfilment in foreign trade. Export availabilities have been reduced by bad harvests in Bulgaria and probably Rumania, by the shortfalls, coupled with a rise in home demand, in Polish coal production, and even before the recent events, by reduced export availabilities of mineral oil in Hungary. More recently, the insurrection must have had disastrous effects on production and the normal flow of trade. In some of the countries, among them Eastern Germany, these adverse factors may be partly offset by an increase in Soviet orders for industrial products and by deliveries under recently granted Soviet loans. The strain which thus arose in the payments position of many eastern European countries, especially in the Soviet Union, was reflected, the Secretariat reports, in frequent Government statements to the effect that the new long-term plans could be successfully carried out only on the assumption that additional external resources would become available. Eventually a series of new long-term loans were negotiated with the Soviet Union, and it may be expected that in the near future, as these credits are drawn upon, the trade surpluses of eastern European countries will diminish or even turn into deficits. By the same token, the share of the Soviet Union in the total trade of the eastern European countries may be expected again to increase.

BUOYANT CONDITIONS IN STOCK MARKETS HOPES OF EARLY BANK RATE REDUCTION

London, 23rd January.

VERY active and buoyant conditions have prevailed in the domestic sections of the London Stock Exchange during the past week. Business has been at a very high level with the turnover in the gilt-edged very large. The Funds have scored a further substantial advance. Industrial equities have also moved to higher levels in sympathy with the Funds, but elsewhere conditions have been generally irregular. The Government appointments were well received in the market, while the subsequent speeches by Mr. Macmillan and the Chancellor of the Exchequer also made a favourable impression. The main driving force in the market, however, was the rising expectation, reinforced by the further fall in the Treasury bill rate on Friday, that a reduction in Bank rate will not be long delayed. Other favourable factors included the cuts in defence expenditure and the strength of sterling in foreign exchanges. In industrials, atomic power shares have advanced prominently in anticipation of an early Government statement on plans to expand the atomic power programme. The premium in the Imperial Chemicals loan stock has increased to over £8. Foreign bonds and rails have generally held steady. Dollar stocks have lost ground in sympathy with the decline on Wall Street—a factor that had little effect on the markets generally. Gold shares have drifted lower in the absence of interest and recorded widespread falls. Coppers have moved irregularly and other base metals have been mixed. Leading oils have receded and other oils have reacted after earlier firmness. Rubbers and teas have been quiet.

The Money Market

Credit conditions were comfortable in the money market during the past week. Several factors were involved, the chief of which was the small number of bills which the market obtained in the previous week's tender due to an unchanged bid. There were also large government disbursements on the account of the education authorities and the nationalised industries, added to which, there were large excess bill maturities. As a result of these factors, heavy tax payments passing to the revenue department were countered easily and a good supply of credit was available to meet the market needs. The cost of money cheapened and there was an easier trend in bill rates. It was not unexpected, therefore, that under the influence of an easy cash position, the strength of sterling and British funds, the money market would adjust its ideas sharply to the week's offer of Treasury bills and bring a drop of approximately 1 percent in the Treasury bill rate.

Stock Market Prospects

The *Investor's Chronicle* market newsletter writes: After penetrating their September resistance level, the London gilts have continued upward to the best levels for over eight months. Industrials are still consolidating and some irregularity may be expected. Wall Street is testing

the recent resistance levels influenced mainly by international and domestic affairs and second-quarter prospects. The doubts about the recent widespread advance in London industrials have been justified as some irregularity has appeared. Buoyant gilts carried industrials up with them, but industry faces a difficult time during the coming months. The smooth restoration of political stability following Sir Anthony Eden's resignation has encouraged gilts, but the biggest influence was the growing hopes of an early cut in Bank rate. Gilts are likely to continue firm, but industrials are irregular. On Monday of last week, which was the London Stock Exchange's busiest day since July, 1955, the industrials actually eased.

Activity on Wall Street

In a slow-moving market for foreigners, German nationals and Italians generally showed only minor changes, while among German industrials, United Steel Works added a point or more. Danish were unchanged to a shade higher. Japanese issues were mostly lower. Chile 3 percents added a minor fraction with several Brazilians higher by a point. The recent upsurge in long-dated U.S. Government securities temporarily halted early in the week in response to reports that the U.S. Federal Reserve Board was considering new steps to restrict credit, including a possible further increase in selling prices and the market developed renewed firmness with prices moving up about a point in fairly active dealings. Investment quality corporates also moved higher after a spell of softness.

Hongkong Gold Quietly Steady

The Hongkong gold market has been quietly steady throughout the past week, but the trading volume has tended to decrease due to the approaching holidays and the lack of incentives in the way of political news from abroad. Opening the period at \$(H)268, values at one stage reached \$(H)270½, but reacted to close finally at \$(H)268½. With the market closing from 29th January for almost a week, bullion traders anticipate only very small changes except on sharp fluctuations in sterling. The official offtake was 5,230 tael and the unofficial 13,100 taels. Arrivals in Macao were estimated at around 40,000 ounces. Forward contracts were quoted at \$(U.S.)37.73. Carry-over charges were 10 cents a ten tael in sellers' favour.

Price Reduction in U.S. Platinum

Two leading U.S. refiners last week reduced their officially published prices for platinum by \$5 an ounce to \$98 an ounce in bulk quantities, and \$4 to \$101 for retail lots. This compares with the former range of \$103 to \$105, and reflects lower rates which are prevailing for some time on the outside market for smaller amounts of the metal. The decline stems from increased imports and higher offerings to the United States from overseas, which it is believed originate largely in Russia.

U.K. Iron and Steel Exports

The U.K. Board of Trade announced that licences for future export to be required for export to all destinations of all types of iron, steel, rails and alloy and non-alloy steel sections, bars and rods. This decision follows the recommendations by the Iron and Steel Board to safeguard the supplies of steel for the U.K. engineering and shipbuilding industries.

Books and Publications

CO-OPERATIVE BANKING PROBLEMS

Co-operative Banking in India. By G. M. Laud. (Published by the Co-operators' Book Depot, Bombay. Price Rs. 27-8).

The literature on co-operative banking in this country is meagre, and Mr. Laud's 718-page work fills an important need well. His discussion of the aims and methods of co-operative banking is characterised by a welcome sobriety. It does not pretend that the problem of small-scale industrialists and agriculturists can be magically solved by setting up a whole lot of co-operative banks, surfeiting them with money, and then allowing them to meet their clients' needs lavishly without regard for purpose or security. It is pointed out that a progressive policy requires that the expansion of co-operative credit keep pace with the growth of economic activity. Members of co-operatives have to develop a capacity to accept calculated risks, modernise their functions and build a structure which may enable them to operate economically without jeopardising the safety of the funds in their custody. Mr. Laud emphasises that no short cut in the development of co-operatives is to be found by resorting to political expediency or deviating from sound banking practices. The importance of sound policies and techniques is especially great at a time when there is likely to be a rapid increase in the resources of co-operative banks, and in the opportunities for using those resources. On the whole, Mr. Laud is optimistic about the future growth of the co-operative banking system, although, as one who has been closely associated with it, he recognises the limitations under which it has to work at present. His book will be valuable not only for those whose interest in co-operation is mainly academic, but also for others whose involvement in its problems is more practical.

GANDHIAN TRADE UNIONISM

Gandhian Technique and Tradition. By R. N. Bose. (All-India Institute of Social Welfare and Business Management, Calcutta. Pages 228. Price Rs. 5.)

This book is a comprehensive and able exposition of the Gandhian technique in trade unionism. As those acquainted with the Mahatma's labour welfare activities know, this technique draws its strength from the Bible, Ruskin and the cardinal Buddhist doctrine of ahimsa. He, of course, proved through his own work in this sphere that, if correctly applied, the technique could produce happy results. The Ahmedabad Union, built by him, was a resounding success. But it is well to remember that he worked at a time when the Marxist theory of the class struggle had not yet gained a foothold in this country. After all these years, although one may feel sorry about it, one cannot get away from the fact that the Marxist poison has so infected the air that the Gandhian view of capitalists as the trustees of the welfare of workers is already looking a little too idealistic and out-moded for practical application. All recent labour welfare legislation shows that the "trustees" themselves are not trusted to do their bit by labour any more, they are being coerced to provide benefits, and this on a scale that threatens the future of industry. But this is not to argue that the Gandhian technique has lost its validity, for it can always be employed to induce a climate of conciliation and, in fact, the law-makers can make better use of it by giving managements the rights that the Mahatma would not have denied them. Perhaps the time has come to emphasise this aspect of the Gandhian technique and tradition.

THEORY OF CAPITAL

Capital and its Structure. By L. M. Lachmann. (Published by the London School of Economics, London. Agents Orient Longmans, Calcutta. Pages 130. Price 15s.)

This book deals with the pure theory of economics, and is based on the process analysis method worked out by the continental economists, Lindahl and Lundberg. When classical economists spoke of the stock of capital, they conceived it to be homogeneous and measurable, like any other stock. But they, as well as the neo-classical school, were mainly concerned with income distribution; the theory of capital has relatively been neglected. Professor Lachmann's conception of capital is that it is a complex structure which is functionally differentiated since the various capital resources of which it is composed have different functions. The allocation of these functions and the changes which they undergo in a dynamic system is the main theme of this book. In the first chapter, the method of enquiry is presented, while in the second systematic generalisations about expectations are made. The third chapter shows how entrepreneurs react to unexpected changes in forming and dissolving capital combinations in the light of experience. The fourth studies capital under conditions of dynamic change. All these chapters constitute the theoretical nucleus of the book. In the next three chapters, the ideas set forth in the earlier part are applied to a variety of capital problems. There is an able and critical examination of various trade cycle theories. It is shown that if capital formation entails changes in the composition of the capital stock, it also entails certain consequences for the course of the trade cycle which is the result of inter-sectional maladjustments.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

A DULL WEEK FOR BILLS

Tuesday, 22nd January.

THERE has been no appreciable change in the upward trend of both bank advances and deposits during the past week. The various sources of demand have maintained their offtake of funds. Money appears to be rather easier to come by and banks are generally able to meet the calls upon them. The interbank market has eased considerably. The call rate is down to 3½ percent and business is reported to have been done at levels as low as 3¼ percent.

It has been a slack week for bills. For the third week running, activity in the exchange market has been down to a minimum; only a few tea documents have come to hand. Remittance has been moderate and below the usual seasonal level. Sterling continues firm. There has been a further increase in the forward quotation during the past few days.

Bullion was firm on sustained support. Silver advanced from the previous week's level of Rs. 180-12 to Rs. 181-4, quoted today. The rate for ready metal was quoted at Rs. 181-8. The London price has remained the same at 80½d. The price of foreign silver in New York was unchanged at 91½ cents.

Gold was steady in sympathy with silver and rose from Rs. 107-4 to Rs. 107-8. The sovereign at Rs. 69-15 showed a gain of 6 annas.

During the week ended 18th January, Government of India Treasury bills for Rs. 46,72,25,000 were sold in favour of the Reserve Bank.

A decline of Rs. 4.32 crores to Rs. 1,495.21 crores in active notes featured the return of the Reserve Bank of India for the week ended 18th January, 1957. The total note issue increased by Rs. 17 lakhs to Rs. 1,508.55 crores. A decline of Rs. 4.97 crores to Rs. 442.33 crores in foreign securities was offset by an equivalent increase in rupee securities to Rs. 825.22 crores. Deposits of the Government of India declined by Rs. 3.29 crores to Rs. 50.71 crores, while other Government accounts increased by Rs. 2.09 crores to Rs. 7.03 crores. Balances of commercial banks, at Rs. 52.98 crores, were Rs. 3.27 crores lower. Balances held abroad increased by Rs. 94 lakhs to Rs. 81.24 crores, presumably by a transfer from the Banking Department. Investments were Rs. 22 lakhs higher at Rs. 49.70 crores. Other loans and advances declined from Rs. 106.60 crores to Rs. 102.61 crores, of which advances to scheduled banks against usance bills amounted to Rs. 60.70 crores against Rs. 60.86 crores. Such advances totalled Rs. 34.41 crores since 1st January, 1957. Ways and means advances stood at Rs. 8.42 crores (Rs. 8.60 crores).

The return of the State Bank of India for the week ended 11th January, 1957, shows a rise of Rs. 7.17 crores in total deposits to Rs. 247.76 crores. Investments in Government securities are down by Rs. 2 lakhs to Rs. 95.57 crores, while other authorised investments remain unchanged at Rs. 11.46 crores. Advances including loans, cash credits and overdrafts, and bills discounted and purchased, have increased by Rs. 5 crores to Rs. 151.41 crores. Cash and balances are, in consequence, shown at Rs. 18.59 crores, or Rs. 7 crores higher.

The statement of the position of scheduled banks for the week ended 11th January, 1957, shows Demand and Time liabilities at Rs. 653.16 crores (Rs. 4.57 crores on account of borrowings from banks) and Rs. 456.84 crores (Rs. 2.07 crores), compared with Rs. 646.80 crores (Rs. 6.93 crores) and Rs. 457.79 crores (Rs. 2.34 crores), respectively, in the previous week. Cash has declined by Rs. 2.31 crores to Rs. 10.52 crores, while other balances with the Reserve Bank have advanced by Rs. 2.46 crores to stand at Rs. 50.72 crores. There is a drop of Rs. 2.04 crores in investments to Rs. 362.42 crores. Advances and bills discounted at Rs. 808.43 crores show an increase of Rs. 6.69 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 77.7 percent and 72.8 percent, against 7.8 percent and 72.6 percent.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in the Indian Union during November, 1956, amounted to Rs. 1,529 lakhs, compared with Rs. 1,380 lakhs in the corresponding month of the previous year. The comparison in the following should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, Rs. 1,078 lakhs, export duties for Rs. 267 lakhs against Rs. 276 lakhs and land customs and miscellaneous for Rs. 33 lakhs against Rs. 26 lakhs. The total gross collection of Union excise duties amounted to Rs. 1,623 lakhs, compared with Rs. 1,167 lakhs. During the eight months, April to November, 1956, the grand total of gross Customs and Union revenue realised was Rs. 22,903 lakhs, compared with Rs. 20,365 lakhs, during the corresponding period of the preceding year. Of this amount, Rs. 1,109 lakhs, export duties for Rs. 1,828 lakhs, against Rs. 2,447 lakhs, land customs and miscell-

aneous for Rs. 233 lakhs against Rs. 117 lakhs and Union excise duties for Rs. 11,796 lakhs against Rs. 9,692 lakhs.

LONDON FINANCIAL LETTER

NEW OPPORTUNITIES

By Air Mail.

IN the City of London, the apprehensions arising from Sir Anthony Eden's resignation lasted only a few hours. Attention was then directed to the opportunities presented to, and provided by, a reorganised administration; and the Stock Exchange responded with vigour. The anxieties of recent months were almost forgotten when it was realised that the risk of an untimely general election had been removed and that the Conservative Government had still three years in which to regain its popularity before appealing to the country. What is awaited now is evidence of new policies. It is assumed that Mr. Harold Macmillan will assert his total authority as premier, and it is certain that his experience at the Treasury will be a useful basis for his policymaking. While Chancellor of the Exchequer he indulged in a "pipe-dream" in which he imagined the economy breathing freely again with its military burden halved. Mr. Harold Wincott (editor of *The Investor's Chronicle*) has lately commented (in *The Financial Times*) that the "pipe-dream" is the idea that we can go on supporting a military burden of some £1,500 million a year. With the lessons learned at the Treasury in mind, Mr. Macmillan may make positive moves to reduce this burden, thus enabling the new Chancellor to take full advantage of the easing of inflationary pressure.

The recent trend of financial policy has not been encouraging. In an economy that is obviously over-taxed, Mr. Macmillan (as Chancellor) has sharply raised duties on oil products (although supplies are rationed) and hinted at the possibility of raising income-tax next April. The reorganisation of the Government provides an opportunity to abandon such ideas and to restore economic health at a reduced level of taxes and prices. Mr. Macmillan's price-stabilisation policy has been sadly bungled, and the huge aggregate of wage-claims lately settled or still under negotiation or outstanding is mainly a reflection of recent increases in the cost of living. It is noted, however, that these claims are not being put forward so ag-

gressively as such claims have been in recent years. The labour market is perceptibly weakening and if this development proceeds it will play an important part in shaping policies. Mr. Macmillan, as Chancellor, was rather less reluctant than his predecessors to risk the effects of deflation, but he would certainly not, as Premier, view complacently the prospect of serious unemployment—and there are now, for the first time in nearly three years, more unemployed workers than vacant jobs. Production, moreover, has been running in recent months at a slightly lower level than a year previously. The task of maintaining full employment of resources (of physical resources considerably expanded by the capital investment of recent years), while relieving inflationary pressures on sterling, will require careful and flexible policies.

No Inflation of Bank Money

There is a widespread feeling that interest-rates in this country will soon be reduced. For instance, all of 25 economists who were asked to forecast the economic trends of 1957 expected that Bank rate would be reduced during the year; and most believed that the reduction would begin in the first half-year. Such ideas have been fortified by the reduction of the West German Bank rate this month. There is clear evidence that the Treasury, by maintaining comfortable conditions in the money market and so pressing down the discount on Treasury bills, is trying to effect an appreciable saving in the cost of the national debt and, particularly, in disbursements on overseas sterling balances invested in London. The Treasury bill rate fell rapidly between mid-December and mid-January, and its hesitation at the

latter point does not imply that the authorities are yet satisfied with the saving achieved. But there is a limit to the decline in the bill rate within the structure of deposit and loan rates fixed by Bank rate. The authorities would certainly prefer a lower Bank rate if it does not weaken sterling.

The question arises whether a reduction of Bank rate, and of other rates with it, would unduly stimulate demand for credit, and whether the discipline imposed on, and by, the banks would be sufficient protection against excessive borrowing. The latest quarterly analysis of bank advances, showing the position at mid-November last, provided further evidence that the credit-squeeze was working. Compared with a year earlier, personal and professional advances had been reduced 13 percent, advances to hire-purchase companies 38 percent, while iron and steel, engineering, chemicals, together took 26 percent more. The banks' resources have been diverted from inessential domestic purposes to essential export industries. And at the present stage, when even essential industries are reviewing their investment plans more cautiously, selective stimulation of borrowing would not necessarily be harmful. Superficially, the turnover of the Bankers' Clearing House in 1956 suggests that the credit-squeeze has been to some extent evaded by more rapid circulation of money. Closer inspection reveals, however, that about three-quarters of the year's increase of £8,300 million to £160,900 million in clearings of cheques, bills etcetera, occurred in the first half-year. In preceding years the turnover of the second half had been considerably more than that of the first half, but in 1956 it was considerably less. The velocity of circulation of money is evidently slowing down.

A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

Stocks and Shares

SHARE MARKET IN MORE CHEERFUL MOOD

INVESTMENT BUYING AT LOWER LEVELS: IMPROVED TECHNICAL POSITION

IT has been a short week in the share market; two holidays have interfered with normal trading routine. But it has still contrived to be the best one for business since the November interim Budget. Prices have risen in most sections and the speculative Indian Irons show an improvement of more than Rs. 1-8 on last Wednesday's quotation. The reason for the improvement seems to have been the wave of replacement buying which started in Bombay after the Life Insurance Corporation began to take an interest in selected investment scrip. This was helped by the buying of one large bull operator in Calcutta and the subsequent rise in the price of Indian Irons. Other speculative counters which have benefited from this buying are Orient Paper and Texmaco, both in the Birla group of companies. Burrakur and Indian Copper have remained fairly steady. The undertone of the market is now distinctly better. But the feeling seems largely based on the fact that equity values had already sunk lower than their prospects, or in the case of jute shares, their break-up values, warranted. Some consolation also appears, oddly enough, to have been taken from Mr. Krishnamachari's statement that most of the taxing required for the second plan will be introduced before February 1958. There is no more evidence of a return of long-term confidence in equities as investment assets than there was last week, or has been for the past six months.

Among the investment sections, engineering and miscellaneous appear to have benefited most from the recent revival. Selected shares in both these groups have enjoyed fair support, although prices are probably still well below intrinsic worth. Jute shares have been in surprisingly good demand in the past week, probably due to the bargain prices at which most of them are now standing. Teas have been quiet, while coal shares have changed little in price, although some enquiry has been reported. Government securities have improved.

Details of the week's trading follow.

The improvement reported in gilt-edged prices last week continued with 3% Conversion Loan 1986 improving further to Rs. 73-7 on replacement buying. Three percent Non-terminable Paper was also slightly better at Rs. 73-2. In short-dated issues, 3 percents 1957 and 1958 were unchanged at Rs. 99-12 and Rs. 99-9 while there were buyers for both 2½% 1960 and 2½% 1961 at Rs. 96-5 and Rs. 93-5 respectively. There was good inquiry for 3½% 1961 with the price improving from Rs. 99-4 to Rs. 99-6; 2½% 1962 was supported at Rs. 93-15. Among medium-dated loans 3% 1963-65 was better at Rs. 94-4, while both 3½% 1964 and 1965 were steady at Rs. 98-5 and Rs. 98-3 respectively. Three percent 1964 was unchanged at Rs. 94-3. In long-dated issues 3% 1966-68 was reported at the previous rate of Rs. 92-4 while there was a good inquiry towards the close for 3% 1970-75 with the price improving to Rs. 86-15; 3½% 1974 was unchanged at Rs. 98-8.

In Provincials, 4% West Bengal 1968 was placed at Rs. 99 as was 4% U.P. 1968 at Rs. 97-14-6. Four percent Madras 1967 improved by one anna to Rs. 98-3.

Among miscellaneous preference shares, Allahabad Bank were crossed at Rs. 114 and Aluminium Corporation 5% and 6% were done at Rs. 74 and Rs. 97 respectively. Associated Hotels met with interested support and rose sharply from Rs. 63 to Rs. 74, but at the close there were sellers at Rs. 65. Dalmia Cement Rs. 100 paid-up were marked at Rs. 94 and Calcutta Electric were done at Rs. 10-6 cum-dividend. British Ceylon Corporation were reported at Rs. 8-2 and British India & Steel changed hands at Rs. 118. Indian Iron Industries "B" at Rs. 64-8. A small lot of Shaw Wallace was crossed at Rs. 67. No business was reported in preference shares of jute companies.

Bank shares continued to meet with good support with Punjab National improving further from Rs. 53 to Rs. 56 and Hind Bank from Rs. 36 to Rs. 37. United Commercial were well maintained at around Rs. 59. United Bank of India "D" class shares were unchanged at around Rs. 4-8.

No business was reported in railway shares. In Cottons, Elgins reacted from Rs. 28-8 to Rs. 15-8. Muir Mills were marked down sharply from Rs. 93 to Rs. 76. Cawnpore Textiles were shaded at Rs. 7-13 while Bowreah and Dunbar were both unchanged at Rs. 127 and Rs. 202 respectively.

In the coal section, Amalgamated were marked down from Rs. 20 to Rs. 19 while Bengal were shaded at the higher rate of Rs. 449. Borra tained at around Rs. 21-4. East Indian were crossed at Rs. 26-8 and were later quoted at Rs. 27. Ranapura Collieries were offered at Rs. 100. Kat-

ras Jherriah, on the announcement of a rights issue, improved sharply from Rs. 53-8 to Rs. 57. New Beerbloom were better at Rs. 15-8 while Pench Valley, despite the publication of a disappointing report, were unchanged at Rs. 19-8. South Karanpura were enquired for and improved from Rs. 9-4 to Rs. 10-4.

The improvement in jute shares reported last week continued, as will be seen from the following table:—

	Opening 17-1-57	Closing 22-1-57
Anglo-India	136	140
Auckland	87	94
Birla	15 12	16
Caledonian	118	125
Cheviot	142	150
Delta	133	—
Ganges	52	55
Howrah	18	20
Kelvin	180	200
Kinnison	126	132
Megha	68	75
National	18 15	20

Electric supply shares were subdued with Agra being marked down from Rs. 148 to Rs. 145. Calcutta Electric were depressed at Rs. 13 and Jubulpore were crossed at Rs. 14-5. U.P. were shaded at Rs. 147.

In the sugar section, Balrampur were marked back from Rs. 6-4 to Rs. 5-12 while Cawnpore improved from Rs. 17-8 to Rs. 19-12. Champaran were unchanged at Rs. 23-12 as were Durbhanga at Rs. 22 and Carew at Rs. 7-4. Ramnugger improved by Re. 1 to Rs. 24 while U.P. dropped from Rs. 17-8 to Rs. 16-8.

Engineering shares, under the leadership of Indian Iron & Steel, recorded some improvement.

steel brings you the news

Yes, that paper you are reading owes its existence to steel. It is steel that helped to manufacture the paper, did the printing and even helped to collect the news that it carries. There is hardly any facet of life where steel does not play a part in one way or another.

TATA STEEL

SERVES THE NATION

Steel, today, is very much to the fore in the nation's thinking. India's steel-making capacity is being rapidly enlarged to provide a sure and solid basis for the country's advancement.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to August, 1956. Compared with the preceding month, there were decreases in jute manufactures 4.4 points, steel ingots 6.1 points, pig iron 3.6 points, cements

3.8 points and papers 9.3 points, while increases occurred in cotton consumption 7.5 points, coals 7.8 points, wagons loaded 6.4 points and electricity 1.6 points.

The indices for cheque clearances and notes in

circulation also dropped by 6.7 points and 9.2 points, respectively.

Correlating all the factors, the Capital Index of Indian Industrial Activity declined by 1.2 points during August, 1956.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY (1935)

New Delhi

REACTION TO FIXING OF CEILINGS ON FOREIGN EXCHANGE EXPENDITURE

MEASURES EXPECTED TO BE TEMPORARY

(FROM OUR NEW DELHI CORRESPONDENT)

THE decision of the Finance Minister, Mr. T. T. Krishnamachari, to fix a ceiling for the foreign exchange expenditure of each Ministry and for projects in the private sector has generally been well received here. It has indicated the Government's determination to put its own house in order. According to some, the Finance Minister's action will retard development. But, as a French saying quoted by Andre Gide puts it, "even the handsomest woman cannot give more than she has." Nor can a Finance Minister. He can only allocate foreign exchange from the amount that is available. Incidentally, people who have for ideological reasons been hampering exports and thus restricting foreign exchange earnings should not complain if ceilings have been placed on their expenditure of foreign exchange.

The ceilings are expected to be of a temporary character. It is hoped that by July, 1957, the position will have greatly improved. For one thing, the impact of the new import policy will be felt by then and it will reduce the expenditure of foreign exchange. For another, the negotiations with the World Bank which are now in progress might be finalised by the end of May, bringing a loan for the railways. The allocation of Rs. 28 crores of foreign exchange made to the railways should then be available for other development projects. One reason for the present crisis is that, although imports of capital goods have risen according to plan, the expected rise in exports has not materialised. The case of cotton textiles indicates why.

Cotton Textile Exports

In a recent study of cotton textile exports, the Federation of the Indian Chambers of Commerce and Industry says: "In recent years, our exports of cotton textiles have been showing a downward trend and both quantity as well as value have been declining. While in the financial year, 1954-55, exports of mill-made and handloom cloth amounted to 819 million yards valued at Rs. 63.2 crores, in 1955-56 exports declined to 740 million yards valued at Rs. 66.6 crores. In the current year, the rate of exports has further dwindled and during the period, April-September, 1956, we were able to export only 349 million yards valued at Rs. 26.3 crores. But in the present conditions of world markets it is not an easy job to increase exports. International trade in cotton textiles is declining and competition among the countries is becoming keener and keener. New textile mills are being established in a number of raw cotton producing countries which formerly imported the bulk of their requirements, and imports are being replaced by home production. Consumption of rayon and artificial silk goods is increasing, and is affecting the offtake of cotton textiles. Moreover, new countries, particularly from the Communist group, are entering the field of export trade and business is being done on a barter basis. The only hopeful aspect of the problem is that it is likely that with an improvement in the economic condition of the underdeveloped countries, consumption of cloth may increase.

"Another difficulty which the Indian industry has to face arises from the policy of the Government on the licensing of new looms. Since 1955, practically no additional looms were permitted to be installed in the mills in the interest of the handloom industry. It was only last month that the Government of India decided to allot 10,512 automatic looms to cotton textile mills for the production of 350 million yards of cloth for export. This step may to some extent help the industry, though in course of time only, in increasing exports of cotton textiles. It may be noted that a considerable proportion of the machinery installed in the Japanese textile mills in the post-war period is new and automatic. Indian machinery, on the other hand, is quite old. Moreover, it is mostly designed to produce cloth for internal requirements, such as dhoties and sarees, etcetera, and is not suitable for manufacturing standard cloth of the required breadth and length for meeting the needs of external markets. If India is to be in a position to capture the leading position in the export markets, it is necessary that the mill industry should be given the freedom to install the latest machinery of its choice.

Large Internal Demand

"Another factor which hinders our exports of cotton textiles is the lack of export consciousness on the part of the industry. This is due to the large internal demand for the products of the U.S.A. In this respect, India is more akin to the industries of Japan and the U.K. While the demand for their earnings to a large extent on which have the largest textile industries in the world, the export market is only of subsidiary importance. The Indian industry has so far taken little pains to study the requirements and the changing tastes and likes of overseas customers. In fact, Indian mills do not cater to the individual

requirements of colours and designs among overseas buyers and also do not entertain small orders. The position is the reverse in the case of Japan, our main competitor.

"Some of the complaints received against Indian goods are that they lack standardisation, packing is not satisfactory, finishing is not as attractive as of the goods of other countries, and orders are not executed with promptness. In this connection, it has to be pointed out that Indian exporters sometimes have to face difficulties in obtaining shipping space. In the case of exports to some countries, there is no direct shipping service and higher freight rates have to be paid. Another fact to which attention has to be invited is that the bulk of our exports consist of grey (unbleached) piecegoods which are processed by the importing countries and exported to other destinations.

Lucky Ministries

There is some weight in the criticism that the ceiling for foreign exchange expenditure mainly affects development projects, but hardly applies to the External Affairs and Education Ministries. Here are some instances. According to an official hand-out issued on 15th January, "the third batch of 20 teachers selected by the Ministry of Education under its scheme for improving the teaching of science in secondary schools and training colleges is leaving for the U.S.A. on 17th January. Under the scheme, 40 teachers are to be sent to the U.K., the U.S.A. and Canada. Twelve teachers are at present under training in the U.K. and eight in Canada." It would be interesting if the Government published a statement giving details of the foreign exchange spent by the Ministry of Education since 15th August, 1947. The Ministry invited U.N.E.S.C.O. to hold its session in New Delhi last year. It was discovered that New Delhi had neither a conference hall nor adequate residential accommodation. Two hotels and a conference hall were built, costing the tax-payer over Rs. 3 crores. A fair proportion of the foreign exchange outlay in 1956 could be attributed to the

construction and furnishing of these three buildings.

While the shortage of cement and steel hampers railway development, building operations on a large scale are going on in New Delhi. At the same time, property worth hundreds of crores of rupees in Simla, Nagpur, Rajasthan and elsewhere is being wasted. While the price of property in the capital city of Nagpur has been slumping, a new capital in Bhopal has been ordered and a loan of Rs. 1 crore sanctioned for it. This will involve the use of more cement and more steel. Building operations were generally launched to relieve distress in lean years. But higher employment figures are needed now, particularly since the elections are approaching. Perhaps this is one explanation for the waste of public resources. The employment figures show that the total number of civilian personnel employed by the Government of India, excluding the railways, in September, 1956, was 663,485, compared with 590,632 in December, 1951—or an increase of 73,853 in five years. The number of clerks employed in September, 1956, was 211,607, compared with 142,850 in December, 1951—or an increase of 68,757. The number of skilled and unskilled employees has remained almost stationary during this period.

Determining Priorities

The Planning Commission has made a clear distinction between development and non-development expenditure. As far as the State is concerned, the idea is to discourage non-development expenditure. But it seems that the Planning Commission has no similar control over the expenditure of the Union Government. It will be an unpleasant task for the Finance Minister if he has to fix a ceiling on the total expenditure of each Central Ministry, including the Ministries of External Affairs and Education. Since planning implies the determination of priorities, the fixing of ceilings for foreign exchange expenditure is a part of planning. It means giving priority to

cluding the Cabinet Secretary, last week. He emphasised the need to transfer more and more of the administrative responsibility for expenditure to the Secretaries of the administrative Ministries, and to give them a certain amount of latitude provided the expenditure has already been budgeted for. The main features of the scheme to reorganise the present system of expenditure control which he is introducing in the Finance Ministry were explained. Broadly, the scheme is to post an Attached Financial Adviser in each Ministry (who may be an Under-Secretary or a Deputy Secretary); he will assist the Ministry from the very inception of a proposal. He will be available for advice on the financial aspects, and should be fully utilised by the administrative Ministry. He will also exercise functional control over the budget cell in each Ministry, particularly in the preparation of the budget, in receiving and reviewing reports on expenditure and in ensuring that expenditure does not outrun the allotments.

Apart from the Attached Financial Advisers, there will be two or three senior Joint Secretaries of the Finance Ministry to deal with major items of expenditure such as multi-purpose projects, public enterprises, important negotiations, etcetera. The representatives of the Finance Ministry in the Government's industrial undertakings will be so nominated as to ensure that they are officers who have experience of allied activities. In view of the shortage of administrators and the rapid expansion in Government activities, a senior Joint Secretary has been put in charge of personnel matters, including rules and regulations, scales of pay, the creation and manning of senior posts, etcetera.

Industrial Projects

Six major development projects are now being finalised. They relate to newsprint, raw film, dyestuffs-intermediates, an aluminium plant, synthetic rubber and carbon black. Project reports on all of them have been carefully drawn up by foreign experts and are being examined here. A West German firm is responsible for the project report on newsprint, an East German firm for the report on raw film and an American firm for the report on carbon black. Well-known Italian, West German and British companies have submitted reports on dyestuffs-intermediates. As far as foreign exchange is concerned, the initial requirements for these projects will arise after June 1957, by when the situation is expected to improve. Methods of obtaining long-term credits to finance the foreign exchange portion of the projects are being explored.

Iron Ore for Japan

A Japanese mission will be arriving here this week to finalise an agreement, talks on which

were initiated by the Deputy Secretary to the Commerce Ministry, Mr. B. K. Kochar, during his recent visit to Japan. The negotiations related to long-term arrangements for the supply of one million tons of iron ore a year to Japan. The coming talks will also cover the question of transport facilities. The development of Karwar, to facilitate the export of iron ore from the western region, is to be considered.

Foreign Companies in India

In all, 39 joint-stock companies incorporated outside India have opened branches in this country during the period from 1st April, 1955 to 31st August, 1956. Of these, as many as 18 companies are incorporated in the U.K. Fourteen companies have started branches in Bombay and ten each in Delhi and West Bengal. The following are some of the important ones:

State in which principal office is situated	Name	Nature of business in country of origin	Original country of incorporation
Delhi	A Brunnschweiler and Co.	Wholesale import and export trade.	U.K.
Delhi	Preussische - Bergwerk-Und Hutten-Aktiengesellschaft	Miners and smelters	Germany
Delhi	Bohr-Und-Ban Gesellschaft Mit Beschraekter Hasting Wietze Kr Celle	Drilling operators and builders	Germany
Delhi	Associated Electrical Industries	To acquire or hold shares, stocks, debenture stocks, bonds, etcetera, in any other company.	U.K.
Andhra	Lumus Company	Petroleum and petroleum products	U.S.A.
Bombay	Chase Manhattan Bank	Banking	U.S.A.
Bombay	Mitsui Bank	Banking	Japan
Bombay	Foster Wheeler Corporation	Manufacturers of machinery	U.S.A.
Bombay	Coultfield	Manufacturing of electrical appliances	U.K.
West Bengal	Holland	Carbonising coal, tar and benzol distillers	U.K.
West Bengal	Simon Carves	Iron founders, smelters and mechanical engineers	U.K.
West Bengal	Powell Duffryn Coppee	Iron and brass founders and mechanical engineers	U.K.
West Bengal	Torrance and Sons		

Revision of Indo-Nepalese Treaty

The Government of India, it is gathered, has accepted the Nepalese Government's suggestions for revising the Indo-Nepalese treaty of trade and commerce of 1950. The Nepalese Government has lately taken the view that clause 5 of the treaty should be deleted. It obliges the Nepalese Government to levy customs duties on imports

from and exports to countries outside India at rates not lower than those leviable for the time being in India. Under the clause, the Nepalese Government has also agreed to levy, on goods produced or manufactured in Nepal which are exported to India, export duty at rates sufficient to prevent their sale in India at prices more favourable than those of goods produced or manufactured in India which are subject to Central excise duty. The Nepalese Government apparently feels that the provision prevents it from giving the poor people of its country the benefit of lower customs and excise tariffs, and obliges it to keep the prices of imported and manufactured goods at a higher level than they can afford to pay. In the new treaty, it is expected that this provision will be replaced by one leaving the imposition of customs duties on Nepalese exports and imports to her unrestricted discretion. Another likely result of the

State in which principal office is situated	Name	Nature of business in country of origin	Original country of incorporation
Delhi	A Brunnschweiler and Co.	Wholesale import and export trade.	U.K.
Delhi	Preussische - Bergwerk-Und Hutten-Aktiengesellschaft	Miners and smelters	Germany
Delhi	Bohr-Und-Ban Gesellschaft Mit Beschraekter Hasting Wietze Kr Celle	Drilling operators and builders	Germany
Delhi	Associated Electrical Industries	To acquire or hold shares, stocks, debenture stocks, bonds, etcetera, in any other company.	U.K.
Andhra	Lumus Company	Petroleum and petroleum products	U.S.A.
Bombay	Chase Manhattan Bank	Banking	U.S.A.
Bombay	Mitsui Bank	Banking	Japan
Bombay	Foster Wheeler Corporation	Manufacturers of machinery	U.S.A.
Bombay	Coultfield	Manufacturing of electrical appliances	U.K.
West Bengal	Holland	Carbonising coal, tar and benzol distillers	U.K.
West Bengal	Simon Carves	Iron founders, smelters and mechanical engineers	U.K.
West Bengal	Powell Duffryn Coppee	Iron and brass founders and mechanical engineers	U.K.
West Bengal	Torrance and Sons		

revision is that Nepal's foreign exchange will come under her exclusive control. Under the 1950 treaty, it was controlled by India, although Nepal was allowed to draw freely from it.

Bayers Proposals on Dyestuffs Plant

Representatives of Bayers have arrived here from Western Germany and have submitted proposals for setting up a dyestuffs intermediates plant to the Government. German collaboration would include a financial contribution covering the foreign exchange part of the project. The proposals have been well received here.

Intentions of Finance Acts

Some comments have been made here on reports which are said to exaggerate the Finance Minister's intentions, as expressed in the two Finance Bills passed by the Lok Sabha recently. One report is about giving the Government power to increase excise duties without Parliament's prior approval, and the other relates to giving it a very tight control over banking companies. As far as the banking Bill is concerned, it is stated that it contains an old idea which was suggested by the Reserve Bank and the original provisions of which were far more stringent. It is claimed that they have been greatly modified by the Finance Minister. The Bill concerning excise duties is believed to be a creature of the peculiar circumstances prevailing in an election year. The elections will not be over before March and the new Parliament can be assembled before April. There will be only a very brief session of Parliament, some time in February, to vote money on account so that the Government can function beyond 31st March, 1957, when Parliamentary sanction to raise money by taxation expires. Through Parliament, the country has accepted the principle of raising money from excise duties. What the Government has done is to take the power to change the excise duties if it becomes necessary. The enabling Bill, moreover, is of a temporary nature and is intended to meet a particular situation, it is claimed here.

Pass Books for Deposited Reserves

Under the deposit scheme incorporated in the Finance Act passed during the recent session of Parliament, a suggestion to give a pass book to each depositor is being examined here.

Increasing Functions of Reserve Bank

Proposals are being examined here to increase the scope of the Reserve Bank's functions. The new functions might include advising the Government on the entire field of its economic policy. The Bank might also be asked to make an independent appraisal of some of the Government's achievements. An early announcement of the Government's decision is expected.

Expansion Programme of Tata Steel

The Tata Iron and Steel Company's programme to expand its steel production to two million tons is proceeding according to schedule, it is learned. But transport is a major anxiety, and it might cause some delay. The Suez crisis has had its repercussions, and in addition, internal transport bottlenecks are hampering the movement of plant and equipment from Calcutta to Jamshedpur.

Indian Tube Company

The Indian Tube Company has gone into production. It is expected to manufacture 2.5 million tubes within the next two months. This should make the Indian bicycle industry self-sufficient.

London

MR. MACMILLAN MAKES A GOOD START

SKILFUL REDISTRIBUTION OF PORTFOLIOS

(FROM OUR LONDON CORRESPONDENT)

THE new Prime Minister has had a busy week, but at the end of it can look back upon a job well done. He started off rather unfortunately in arousing the ire of the Sunday Observance Society by finalising his Cabinet list for approval by the Queen on a Sunday, and at least some of the political correspondents and other speculators by making hay of their "intelligent anticipations" as to how the various offices were to be distributed, and not least of all by his failure to relieve Mr. Selwyn Lloyd of the Foreign Secretaryship. The great majority of people, however, seem to feel that Mr. Macmillan has got together an excellent team and that under his leadership it will give a good account of itself. He has made a more thorough reconstruction than is generally appreciated without too much pruning, with the result that eight Ministers in addition to Mr. Macmillan himself have taken on new jobs. Sir Percy Mills, chairman of W. T. Avery and Mr. Macmillan's right-hand man when as Minister of Housing he was called upon to fulfil the Conservative pledge of building 300,000 houses in a year, has been brought in, and only eight Ministers carry on as before. There has also been some reassessment of the importance of different departments to fit in with the revised priorities, which it is apparently the Prime Minister's intention to emphasise in his re-vamping of the Party's policy.

On Thursday last Mr. Macmillan took advantage of a party political talk session on television to address the nation for the first time as Prime Minister. He made no policy forecast, but he went a long way to revive confidence in the Government's purpose and in the country's future, more especially by emphasising the rôle he visualises for Britain as a partner of Europe and the Commonwealth to attain with America on the one hand and with Russia in the international sphere on the other. On the home front also there is to be some revision of emphasis, with atomic and other power and education taking higher places to ensure our economic revival and its maintenance at the expense of spending on armaments.

Record Year for Exports

Last year Britain sold more goods overseas than in any previous year, the total value at £3,173 million being £267 million or 9 percent more than in 1955, the previous record year. The value of imports was £3,890 million, only £6.6 million higher than in 1955. Thus with re-exports £27 million higher at £146 million, last year's visible trade gap was reduced by £288 million to £571 million. Exports to North America for the year amounted to £338 million, an increase of 23 percent on 1955. This excludes the £22.4 million silver bullion repayments to the United States. Including these repayments, exports to the United States were £360.2 million higher at £243.1 million. Those to Canada rose by £366.9 million to £1,777.7 million. The trade position in 1956 was certainly most encouraging, for after allowing for all special factors it appears that the real increase in export values works out at 10 percent, of which about 6 percent represented an increase in the volume of shipments and about 4 percent an increase in prices. Import prices also rose by about 2 percent, so their volume actually fell slightly. Re-exports rose by as much as 23 percent. The Board of Trade figures issued just before last week's despatch was posted, to which only brief reference was possible, reveal that Britain's trade gap, as measured by the excess of imports over exports, widened last month to £42.9 million. This was £30 million up on November, but £5 million less than the average for the first 11 months of the year. December's exports at £253.7 million were £38.2 million below the previous month. But last month contained only 24 working days, against 26 in November. Re-exports were £3.6 million lower at £11.2 million. Imports in the early part of last month were again reduced by delays in the arrival of shipping diverted round the Cape. At £307.8 million, the second lowest figure for the year, they show a drop of £11.8 million on November.

Cost of Living Held

Despite the price rises occasioned by the Suez crisis, in petrol, bread, tea and medicines, reduction elsewhere had the effect of holding the index of retail prices on 11th December at 103, the same as in November, and at the same figure when Mr. Macmillan made his "plateau of stability" speech in the spring. That gives a 3 percent rise for the year, whereas it is expected that the index of wage rates will show an increase over the same period of nearly 6 percent. Not surprisingly, Whitehall and the employers are relieved at the outcome as an argument against the large number of wage claims awaiting settlement, for those which have been adjudicated upon recently have been based on the 3 percent rise, which is less than the trade unions had expected. Nevertheless, the claims are being vigorously pressed, and there are still some uncertainties ahead on the labour front. The first of these is that prices are expected to rise a little more than they usually do at this time of the year, and last year the index rose by two points between January and April. Secondly, there is the effect on produc-

tion of fuel rationing, especially if it has to be prolonged or made more stringent for one reason or another, which might well lead to greater unemployment and over a wider area. For the first time since early 1954, the 10th December figures of the Ministry of Labour disclose that there were more people unemployed than there were vacancies to be filled. The situation is not serious as yet, and indeed might be a healthy sign from the point of view of inflation, but it poses for the Government, and especially the new Chancellor of the Exchequer, the need for keeping a sharp eye on developments and to have available an economic policy which will counteract, and that without too much of a time lag, such possibilities as too rapid deflation, loss of business confidence and cancellation of investment orders, a serious fall in productivity and, most difficult of all, reactions abroad.

The Government's present confidence is not unjustified, but our "invisible" earnings must have dropped a great deal as a result of the Suez crisis. Mr. Thorneycroft, addressing the American Chamber of Commerce in his maiden speech as Chancellor of the Exchequer, claimed that our position "is one of fundamental economic strength" as for the twelve months to next June we will break even on our balance of payments, and went on to affirm that since 1943 the rate of increase of production in the U.K. had been as great as in the U.S.A., while since 1938 our increase in productivity had been the biggest in Europe—and much bigger than Germany's. His intention to make British industry competitive was evident in his comments on restrictive ring arrangements and the European free trade area, on which he had discussions with M. Spaak last week. He acknowledged the assistance from America in improving the strength of sterling. "That is help we expect to repay fairly soon," he concluded. "The Fund and the Export-Import Bank have invested in a growing concern. They have made a good investment." Mr. Thorneycroft is not lacking for advice as to his future policy. The Bank chairmen have emphasised again the need for reductions in Government expenditure. Sir Harold Bibby of Martins Bank, Sir Thomas Barlow of the District and Mr. Tuke of Barclays all plead for tax reductions. The National Union of Manufacturers has advised along similar lines, and it is interesting to find more or less general acceptance of participation in the European free trade area.

Steel Exports Licensed

The Board of Trade has decided to license exports of a wide range of iron and steel products. Licences will be required for the export to any destination of pig iron, steel rails and alloy and non-alloy sections, bars and rods. The objective is to safeguard supplies of steel for domestic constructional engineering and shipbuilding industries. Hitherto, these interests have been safeguarded by a mixture of official export control and voluntary restraint on the part of the industry, but the latter has been under considerable strain because of the difference between home and export prices of steel products, it being more profitable to sell abroad than on the home market, where prices are controlled by the Iron and Steel Board. As a result there has been a shortage of certain kinds of steel in Britain, felt particularly by heavy constructional industries and shipbuilders. The Government has attempted to deal with this problem in a variety of ways. Last July, import duties on foreign iron and steel products were suspended. Import licensing restrictions were eased in November, and in December the maximum permissible selling prices in the home market were raised by an average of 6 percent. They are still, however, appreciably below export prices, and this appears to be the reason for the decision to start export licensing.

World Tanker Fleets

During the past six months Liberia, one of the main "flag of convenience" countries, has increased its oil tanker fleet by 1,051,000 tons deadweight. This is almost 3½ times the increase achieved by the British tanker fleet in the same period. With a total of 8,516,904 tons deadweight, Britain still has the largest fleet of tankers, followed by Norway with 7,066,507 tons and Liberia with 6,323,565 tons. Panama now has 3,446,105 tons, so these two tax-free "flags" have between them a tanker fleet which exceeds Britain's by more than one million tons. These facts are disclosed in the latest half-yearly analysis of world tanker tonnage by Davies and Newman, the London shipbrokers. They estimate that if its current rate of growth is maintained the Liberian fleet could be the world's largest by about 1960. Britain has tankers aggregating 4,794,500 tons deadweight on order, of which 3,470,000 tons will be delivered from yards in this country. With contracts for 4,466,603 tons in hand, Japan still has the largest order book for tankers. Britain is second with 4,323,000 tons and Germany a close third with 4,289,000 tons. The analysis brings out the growing importance of supertankers. Out of the world total of 875 tankers for which contracts have been placed, 190 are of 40,000 tons deadweight and over, compared with 79 six months ago.

Brevities

Gold sovereigns to the value of over £1,000,000, of which only a few will be issued for the national collections and the rest will be retained in the nation's gold reserves, are to be minted shortly to give experience to the Royal Mint's workmen. This was last done in the winter of 1951-52, and apart from 3,500,000 minted in 1925 few have been minted since general circulation was ended in 1917.

Bombay

TEXTILE MARKET IMPROVES

BETTER EXPORT AND DOMESTIC DEMAND

(FROM OUR BOMBAY CORRESPONDENT)

THE Bombay textile market showed some signs of activity after a long dull period. Moderate enquiries were received from upcountry centres including Calcutta, Delhi and Kanpur. These were mainly for dhoties, sarees, mulis and dories in medium counts. There was also some demand for shirting and longcloth, but at lower prices. An encouraging feature was that superfine cloth, mostly bleached and dyed voile, was once again in demand. These qualities have been neglected for some time. It is believed that stocks in consuming centres are running low and further enquiries are expected in the near future. The price level, therefore, tended to remain steady. The export situation also seems to be hopeful. Moderate business was transacted with Indonesian importers in grey sheetings and drills. Thailand enquired for bleached longcloth and the cheaper varieties of poplins. Business with the Sudan has been somewhat limited, but a greater turnover is expected with that country in the near future. Ethiopia has purchased small quantities of grey sheetings and khaki mulis; business with Aden—one of India's traditional markets—has been dull.

The brightest factor is Burma. Mill circles believe that it will be possible to maintain regular shipments to that country averaging 3 million yards a month at least until the end of June. This optimism is based on the present cloth scarcity in Burma and reports that the Burmese Government intends to issue import licences for a total value of Rs 2 crores during the first half of this year. It is reported here that India has been able to bid successfully for a substantial quantity in the Burmese tender for grey cloth. This is not surprising considering that India is a supplier of long standing to Burma. But this lucrative market will one day have to be given up as lost. Burma is to install four cotton textile mills of her own in collaboration with Japanese interests. Each mill will have 40,000 spindles and 200 powerlooms and each will cost Rs 2 crores. These four mills, two in Rangoon, one in Mandalay and the other in Myit-yar, are expected to be completed by 1960. The financial arrangements seem to be particularly favourable from the Burmese point of view. Bo Khin Maung, the Burmese Minister for Industries, who led the Burmese economic mission to Japan, said that the Japanese had made two proposals for financing the venture.

Aid to Burma

Under the first proposal, the Burmese Government will invest 90 percent of the capital and 10 percent will be subscribed by Japanese firms. The latter will provide technicians and managerial personnel. The Japanese will be entitled to 10 percent of the profits in addition to management and service fees. Of the Burmese Government's 90 percent investment, 30 percent will be in local currency. The remaining 60 percent will be advanced by the Japanese Government in terms of the Economic Co-operation Agreement signed between the two countries on 5th November, 1954. Thirty percent will be furnished in the form of long-term loans and 30 percent in the form of credit for the purchase of machinery. The second proposal envisages an investment of 92 percent by the Burma Government, the remainder being subscribed by Japanese interests. Under this arrangement, the Japanese will not levy service charges but will take 40 percent of the net profits. Of the Burmese Government's 92 percent investment, only 10 percent will be in kyats and the remaining 80 percent—40 percent loan and 40 percent credit purchases—will be advanced by the Japanese Government.

It is now for the Burma Government to choose between the two proposals, but whichever alternative is accepted, it is clear that Burma will have a textile industry of her own which will reduce, or perhaps wipe out altogether, the country's need to import. It is also possible that Burma might even make a bid for markets in the neighbouring countries. On the other hand, Japan offers a distinct possibility. Annual imports into that country are estimated at 20 million yards of which the Indian share so far has been 3,200,000 yards. But Japan, Syria and Yugoslavia offer stiff competition while the communist countries, in addition to the U.K., are also keenly interested in this market. There is some demand for Indian grey sheetings and certain qualities of bleached fabrics, but Indian exporters will have to watch fabrics, but Indian exporters will have to watch

their prices very closely and give greater attention to packing and piece-lengths.

Economic Diplomacy of Japan

These tendencies underline the urgent necessity of modernising India's cotton industry. The Japanese deal with Burma is perhaps the first of several contemplated by the Tokyo Government. It is reported that the Japanese Government is now planning a new era of "economic diplomacy in which diplomats, in addition to propelling political niceties," will actively seek promising fields for capital investment, and the export of technical knowledge, from among the underdeveloped areas of the world. The Japanese Foreign Office is to be assisted in this task by the Ministry of International Trade and Industry and the Finance Ministry. These three departments are to work together in briefing Japanese diplomatic missions abroad. This search for fresh fields can refer primarily to south-east Asia—a traditional market for India. Since cloth is a basic requirement and these countries spend large amounts of foreign exchange each year, which they can ill afford, in importing it, it is reasonable to assume that many of them will think in terms of setting up their own mills. Furthermore, if the present United States aid policy continues, and there is no reason to believe that it will not, then raw cotton will present no problem to these countries in terms of United States Public Law No. 480. Clearly, a possible threat to the Indian industry exists and if the challenge is to be met, then action must be taken now. It is not in south-east Asia alone that this potential threat exists. West Asia and Africa, the other main markets for India, are equally threatened by competition from Pakistan and the communist countries. It would be a great pity if India, which now occupies a high position in the textile trade, should lose her place when domestic raw cotton resources are abundantly available to help her maintain her competitive strength.

Uttar Pradesh

PLAN TARGETS FOR COMING YEAR TO BE TRIMMED

ALLOCATION FOR FINANCIAL AID TO PRIVATE COMPANIES

(FROM OUR LUCKNOW CORRESPONDENT)

THE targets for the second year of U.P.'s current five year plan are likely to be trimmed by another 10 per cent as a result of the talks which a six-man team from the Planning Commission has had with the State Government in Lucknow. The programme, when pruned, will cost Rs. 53 crores, of which the Centre will contribute 56 per cent. Departmental ceilings have been fixed, and each department will adjust its plan accordingly. The conference decided on a number of priorities, such as the execution of continuing projects taken up under the first plan; projects which do not require foreign exchange; increasing agricultural production; and training scientific and technical personnel. The State's quotas for agricultural production has been raised to 2.4 million tons from the 2.2 million tons fixed earlier.

Meanwhile, the U.P. Government has earmarked Rs. 25 crores for loans to private companies, or for subscription to their shares, during the second plan period. The Government hopes that the Rs. 100-crore programme of investment will be made possible by the encashment of zamindari abolition bonds worth Rs. 130 crores and by funds from official institutional credit agencies. The Legislature's Standing Committee for Industries, which met in Mussoorie last week, it is reported, expressed the view that although the mechanism of financial control is in the hands of the Union Government, the State can take steps on its own

to attract private enterprise. The modernisation and expansion of existing industries has been hampered because their earnings have been declining and the ploughing back of profits has not been possible. The rate of increase in the employment of productive capital in 28 industries for which figures are available is the lowest in this State. The productive capital employed has increased from Rs. 63.61 crores in 1948 to Rs. 76.93 crores in 1952. This compares with an increase from Rs. 157.68 crores to Rs. 237.83 crores in Bombay, from Rs. 128.20 crores to Rs. 157.55 crores in West Bengal, from Rs. 48 crores to Rs. 93.26 crores in Bihar, and from Rs. 47.97 crores to Rs. 73.55 crores in Madras.

Settling Industrial Disputes

The rules for a new system of settling industrial disputes will be finalised within a month. At present, the State has combined conciliation-cum-adjudication machinery for less important disputes which, it is claimed, keeps the cost of adjudication low. In future, there will be separate adjudication machinery for all disputes. Left to itself, it is stated, the State Government would not have disturbed the existing machinery, but the passage of the Central Act has forced its hands. The State Industrial Tribunal in Allahabad will disappear, but the conciliation officers for the eight industrial regions will stay. They have proved their usefulness during 1954 and 1955 by bringing about compromises in 1,855 out of a total of 7,397 cases.

The experiment in co-operative farming which is being carried on by about 220 societies in the State is reported to be in a bad way. According to an official report on their working, "the co-operative farming societies are not able to obtain taccari loans in their corporate capacity and experience difficulty in securing long and medium term loans for their development. Priorities in irrigation, as envisaged under the Zamindari Abolition and Land Reforms Act, have also not been made available to the co-operative societies." The agricultural income-tax regulations of the State discriminate against co-operative farming societies. The tax is levied on an individual income of Rs. 4,200 or more a year. For the purposes of assessment, a co-operative society is treated as an individual person. The result is that the members of the society, who would not have been liable to tax individually, become subject to it when they team up and form a co-operative society. The co-operative department has been pressing the State Government to exempt societies from the tax, but so far there have been no indications that the Government will do so. It is believed that some Ministers are opposed to co-operative farming. Newspapers have strongly criticised a booklet attacking it which was printed at the Government press.

Administrative Reorganisation

The State Government has embarked on a large-scale reorganisation of the administration in the districts. The Reorganisation Commissioner, Mr. K. K. Das, in a comprehensive survey of the existing procedure, says that a letter normally has to move 41 distinct steps before it is disposed of. Papers move for 30 years before they are destroyed. His main recommendation aims at re-establishing the pre-eminence of the collector. "There is not, and there never has been," says the report, "an official quite like the collector anywhere else. He is a regional officer representing the Government in a district which, on an average, covers an area of 2,225 square miles and has a population of 1½ million." In the public eye, the collector's importance has considerably dwindled because of Ministerial interventions, not to mention pressures from local M.L.A.s. This, according to Mr. Das, must stop. The collector's work has greatly increased and in order to revitalise his frayed nerves, Mr. Das recommends a revival of clubs, games, shikar and compulsory holidays. He says: "Modern business firms which have had a close study of efficiency compel their executives to go away on fully paid vacations. The Royal Commission on the U.K. Civil Service, 1954-55, has also observed that the strain on the civil servant should be relieved before irreparable damage is done." The main problem of administration, Mr. Das says, is to communicate to the collector the Government instructions in a manner which would ensure compliance. But no compliance is possible when over 115 authorities of the State Government, besides various other Government agencies, daily issue instructions to the collector. In 1955, the Lucknow collectorate alone received 20,000 written orders, excluding instructions conveyed verbally or over the telephones.

Those Who Matter

The J. K. Institute of Sociology and Human Relations Lucknow University, has conducted an interesting survey of persons who matter in U.P. According to the survey, these men come from all levels and strata of society. About 98 per cent of the elite are males. Caste hegemony is very much in evidence as 75 per cent of the elite are from the ranks of the upper caste Hindus. The majority are university graduates, only 10 per cent being matriculates. Except for 10 per cent of them read English newspapers. About one-third have no radio receiving sets. Forty per cent of them consider the state of affairs in the country as less than satisfactory, but 8 per cent are very satisfied. Fathers are still the most widely consulted persons, even on such matters as whether the Government's policy in general is right or whether a report in the newspapers is correct. This reflects the traditional hold of the joint family system on society. The average income of the men covered by the survey is less than Rs. 500 a month. One-third of them have an income of less than Rs. 300 and only about 12 per cent have incomes of more than Rs. 1,000 a month.

Jute

THE PROSPECTS FOR RAW JUTE SUPPLIES

SUDDEN CHANGE IN GUNNY MARKET SENTIMENT

DURING December, 1956, 751,700 bales of raw jute arrived at mills by river, rail and road. Of these, 691,600 bales were from India and 60,100 bales from Pakistan. In December, 1955, the total was 777,600 bales, of which 628,900 bales were Indian and 148,700 bales were Pakistani. Total arrivals in the six months July-December, 1956, were 3,308,100 bales, against 3,168,500 bales in the corresponding period of 1955. Arrivals of Indian jute in July-December, 1956, were 2,936,800 bales, compared with 2,393,900 bales in July-December, 1955—an increase of 542,900 bales. In the same period of 1956, only 371,300 bales came from Pakistan against 774,500 bales in July-December, 1955—a decrease of 403,200 bales.

In each of the first three months of the season, arrivals fell short of consumption. But after the re-sealing of looms by the I.J.M.A. and with increased arrivals in October-December, they exceeded it. Over July-December, they exceeded consumption by 291,800 bales. There has, therefore, been a small increase in jute stocks in mills' godowns. While this is to the good, it must be observed that the surplus over consumption is entirely due to heavier arrivals of Indian jute, which suggests that the Indian crop will be exhausted sooner. If there were a prospect of increased imports from Pakistan, there would be no cause for anxiety. But the outlook for that is not reassuring. It may also be noted that during the last three months, when arrivals of Indian jute have increased sharply, reports from uncultivated areas have persistently complained of small imports in the mofussil centres. From the figures, as they now appear, it seems the problem is not so much that imports have been small as that they have fallen short of the increased demand.

The Mesta Crop

The second all-India estimate of the mesta crop says that the outturn will be 1,430,000 bales, against 1,101,000 bales mentioned in the first estimate. The new estimate thus shows an increase of 329,000 bales. It is stated that there has been an increase in all the mesta-growing States due to favourable climatic conditions during the sowing and growing periods, especially in West Bengal, Bihar, Bombay and Mysore. We are not in a position to make any comment on conditions outside West Bengal, but there is general agreement that although the seeds were sown in favourable weather in this State, they suffered badly later from excessive rain. The effects are showing now in the poor quality coming in from West Bengal districts. The area sown is, of course, bigger than in the previous year but that has been at the expense of jute, the area of which is less than in 1955. The present estimate does not include some districts where, because of weather conditions, sowings do not take place until later, when they get rain from the north-east monsoon.

The increase in the expected outturn of mesta necessitates a reappraisal of the outlook for supplies of raw material to mills. If the outturn of jute is taken as 4.15 million bales and that of mesta as 1.45 million bales, the apparent supply of fibre from Indian sources is 5.6 million bales. About 375,000 bales had arrived from Pakistan by the end of December. So it seems that there is a supply for 1956-57 of, roughly, 6 million bales, without taking into account future arrivals from Pakistan, which, it may be assumed, will be small unless there is a big drop in prices there. As the estimated consumption of the mills in 1956-57 is about 5.8 million, or 5.9 million bales, these figures appear to show that their requirements will be covered by the quantities now available in India. It must also be borne in mind that the mills started the season with about 1.1 million bales in their godowns. There are, however, certain factors which make the position less easy than would appear. The first is that all the mesta crop does not come to Calcutta. Some of the areas in which it is grown are very far from this city, so most of what is grown there is also a considerable domestic consumption of jute as well as of mesta, while the amount of mesta which the mills can take is regulated to some extent by the quantity of jute with which it must be mixed to produce good yarns. Lastly, it may be pointed out that a large proportion of the jute already imported from Pakistan consists of cuttings, and the switch-hessian has reduced the quantity of cuttings which can be consumed. Although the position now looks somewhat easier than it did some time ago, the possibility of scarcity developing later is not, therefore, entirely absent.

THE JUTE MARKETS

During the past week, there has been a definite change in the mood of the market. Although foreign enquiry for manufactures has been meagre since the beginning of the year, there was an unexpected turn of confidence that manufactured goods would be sustained by the firmness and scarcity of raw jute. In fact, it seemed that raw jute was the prop on which the goods market rested. Now that prop has been knocked away by the changed

outlook for fibre. Jute dealers were confident that the supplies available to mills would bring a squeeze before the end of the season unless the fall in the price of Pakistani jute was large enough to enable mills to buy it. Now this confidence has disappeared, but it is not very apparent what has caused the sudden change. Admittedly, almost all jute dealers are holding stocks, and those engaged in the trade in the mofussil areas are believed to be in the same position, while the growers are said to be feeding the markets slowly. That, of course, has made the position vulnerable as has been clear from the nervous selling which has always taken place after falls in the gunny fatka market. Nevertheless, it is difficult to specify any single factor as accounting for the sudden reversal which has now taken place. One thing that may have influenced stockholders is that heavy arrivals of Indian jute in the past three months have coincided with the reduced consumption of mills since the re-sealing of looms. Another may have been the increase in the estimated outturn of the mesta crop. Perhaps it is the realisation that, with sowing time approaching, given favourable weather conditions, growers will be more willing to part with their stocks.

Manufactured Goods: The past week has been a dull one for manufactured goods. Enquiries from abroad have been few and far between, and it looks as if the expected reaction to the heavy buying of October-December has set in. There has not even been the flurry of local covering which sometimes enlivens an otherwise dull market. The main activity has been in the speculative market, where bulls have been unloading and, more recently, jute merchants have been bear-selling as a hedge against their stocks of raw jute. For a time, the R Twill fatka rate hovered round Rs. 119, but on Tuesday, under bear pressure, it dropped as low as Rs. 116-12.

Prices at the close of business on Tuesday were:

	January	February	March
40in. 8oz.	36-4	36-2	36
40in. 10oz.	44-4	44	43-14
B Twills	117-2	117-12	118-2
Heavy Cees (Plain)	118-4	118	
A Twills	142-8	143	
Liverpools	137	136-8	
Cornsacks	118-12	119-4	

Raw Jute: Moderate business was done until Saturday at about the prices which had been prevailing for some time. But on Monday mills practically withdrew from the market and no business was reported until late in the afternoon, when small transactions were done at prices about 8 annas below those of Saturday. On Tuesday, there was heavy selling pressure by big stockholders but no business of importance was reported. Business was reported in Assam jute at Rs. 33 to Rs. 32-8, with ready bills of lading at Rs. 12-8 basis Bottoms. Assam and Agartala Tossa were done at Rs. 33-8 basis Bottoms. Daissee mesta at Rs. 28 and Western Mesta at Rs. 27-8 basis Bottoms. There were transactions in Juneli Middlees at Rs. 31-12 to Rs. 31-8, Daissee jute at Rs. 35 basis Bottoms, and Kalimpong Tossa at Rs. 34 basis Bottoms.

Quotations at the close of business on Tuesday were as follows:

Indian Jute:	Landed at Mills	Rs. a md. basis	Shipment.
	Bottoms.		
Northern	32		Jan.-Feb.
Assam	32		"
Murshidabad Jute	30-8		"
Murshidabad Tossa	33		"
Daissee Jute	34-8		One month
Daissee Mesta	27-8		"
Western Mesta	142-8		Jan.-Feb.
Local Packing	30		"
Northern ex Calcutta	31-8		"
Bimil	27-8 F.A.Q.		"

Mill buyers have been less active in the Cossipore market and prices have eased. There has been some increase in stocks.

Mofussil: Some stations have reported an increase in imports and a slight lowering of prices. Others report that prices are unchanged but imports are in a better condition. Generally there is not much change, except in the bigger places affected by the fatka quotations in Calcutta.

THE PAKISTANI JUTE MARKETS

ARRIVALS OF LOOSE FIBRE STILL SMALL

(FROM A CORRESPONDENT)

LOOSE jute arrivals in Narayanganj are still very small and as wet as ever. Prices have increased to about Rs. 35 for B Bottoms 100 per cent Export Firsts, Rs. 33 for C Bottoms and Rs. 31 for X Bottoms, with Tossa also slightly steadier and equally wet. This rise has taken place in spite of the fact that overseas prices are unchanged, or if anything, a little lower, with little or no interest showing. Although there has been some increase in arrivals of kutcha bales from upcountry

agencies, the strength of the loose jute market is surprising. It will be some time before it weakens, and there is some doubt as to whether overseas buyers can exist on their allotted jute position for very long. It only requires evidence of Russian and Chinese buying for both local and overseas prices to rise again. There has been very little inter-baler trading in pura bales. This is partly because demand is poor, except for the lower grades, such as Outport Tossa and Export Hearts. There is also some demand for Jat Tossa.

It is reported that the Export Corporation might begin operating on a trial basis next season under Government auspices in competition with London agents, rather than to the exclusion of the latter, as was originally suggested. A German jute delegation is at present in East Pakistan, visiting the ports and baling centres. It has complained about Clause 3 of the London Jute Association's contract, which allows for continual extensions subject to delay certificates, or else cancellation. It says that in a rising market, the cancellation of a contract is as unprofitable as deliveries coming five or six months later. Since this is the London Jute Association's contract, there is very little the local authorities can discuss with the Germans. Discussions with them show that their views are very bearish and they look for a respectable carry-over into next season.

Because of better arrivals of freight in Karachi ex East Pakistan, the local gunny market has eased somewhat. Quotations ex mill, to which must be added 10 per cent sales tax, are Rs. 128 for B Twills and Rs. 57 for 45in. 10oz. Some think that prices will rise shortly as very little freight is available for Karachi in the near future. There is some reluctance among Pakistani mills to offer sacking, partly due to the fact that the Controller in South Africa is expected to buy shortly.

GUNNY SHIPMENT STATISTICS

The figures below include coastal shipments and relate to manufactured jute goods for shipment from the port of Calcutta. They are gross figures based on shipping bills presented.

	Hessian	Cloth	Total
	(Tons)	(Tons)	(Tons)
1st to 15th January,	3,667.0	19,884.5	23,551.5
1st to 15th December	1,949.1	19,839.4	21,788.5
1st to 15th November	3,658.5	21,802.1	25,460.6
	Sacking		
1st to 15th January	16,259.4	1,145.7	17,405.1
1st to 15th December	13,974.8	1,399.4	15,374.2
1st to 15th November	24,336.9	1,023.3	25,360.2

THE FOREIGN JUTE MARKETS

LITTLE FORWARD BUYING

(FROM OUR DUNDEE CORRESPONDENT)

THE aftermath of the activity in the jute markets during the last quarter of last year is now being felt. Consumers of yarns and cloth bought large quantities for delivery some months ahead, and now that there is more likelihood of prices going down than up, buyers are not prepared to purchase for forward despatch. Raw jute has been much quieter lately and shippers have not been able to do business with spinners. In some cases, offers are being made for forward shipment at a discount of £2. Grade Tossa-2/3, for instance, is quoted at £118 for February-March and four at £111, but for March-April sellers are willing to accept £116 and £109 respectively, c.i.f. U.K. Mill Firsts have been sold at the lower rate of £121, that being accepted in counter of a bid of £120 for a good mark, while Mill Lightnings are offered at from £111, Mill Hearts from £106 and grade Hearts from £100, with good marks of Daissee-2/3 from £111 and grade from £108, c.i.f. U.K., February-March. The impression is gaining ground that values of raw jute will become steadily cheaper as the season progresses. Looking back, one finds that prices for the fibre at the beginning of each of the past three seasons, in July, have not been far away from the fixed minima. These are £91 for Mill Firsts, £81 for Mill Lightnings and £71 for Mill Hearts. The last-named have been dearer because of the sustained demand for light-coloured hessian yarns. If the new crop prospects are good, then we may see a recurrence of the past few seasons, with a substantial fall to bring the level down to minima by July.

Calcutta goods have again been somewhat irregular, with a wide margin between sellers' quotations. The lowest for 40in. 10oz. hessians has been 68s 6d and for 7½ oz. 52s January, 68s and 51s 9d February and 68s and 51s 6d March, with B Twills quoted from 181s 3d, January and 180s 6d February and March all f.o.b. Calcutta. Jute yarns are really dull so far as new business is concerned, but spinners are very busy and unable to enter fresh orders for delivery before mid-April. Prices rule firm on the basis of 17.08d for Common 8lb. cone and 17.66d for 8lb. spools. Cloth is also virtually idle but prices are firm at 14.36d for 40in. 10oz. hessian and 11.73 for 8oz.

THE NATIONAL COUNCIL FOR ECONOMIC AFFAIRS

Announces The Release Of Its First Publication

"FIVE YEAR PLAN—A CRITICAL SURVEY"

Being an objective study of over 50 Major Industries in India.

Printed on Art Paper; Pages 500; Price Rs. 25/-

Editor-in-Chief: Dr. P. D. Saggi

PUBLICATIONS UNDER PREPARATION:

1) INDUSTRIAL SCOPE IN INDIAN STATES:-

Being a re-assessment of Industries in the re-aligned states in India with emphasis on the scope and development of new industries in India. Illustrated with Maps & Charts.

Printed on Art Paper; Pages 500; Price Rs. 25/-

2) INDO-INTERNATIONAL TRADE 1947-1957:-

Being a survey of India's foreign trade since Independence with a bird's eye view of its scope and targets for the future. Containing exhaustive data on the Trade Agreements with foreign countries.

Printed on Art Paper; Pages 500; Price Rs. 25/-

3) INDIA GOES AHEAD:-

A quarterly dealing with Art, Music, Dance, Scientific Research, Health, Foreign Exchange and Banking, Tourism, Indian Foreign Policy, etc.

Pages 64; Managing Editor—M. R. Pandya.

Wanted Advertising Managers and Selling Agents in all principal towns in India and abroad.

Overseas Publishing House,

240, Hornby Road,

BOMBAY-1.

Plantation Topics

COFFEE CROP LIKELY TO EXCEED ESTIMATES

SELLING PROGRAMME FOR JANUARY

THE Indian Coffee Board has just started to review coffee affairs in a monthly newsletter. The first issue, for January, 1957, says that the picking of Arabica coffee, which started in November, will be practically over by the end of this month. Robusta picking, which commenced in December, will be completed in March. According to present reports, the pre-harvest estimate of the current crop at 36,000 tons is likely to be bettered. However, a more accurate estimate will be available next month. The new season's coffee has been arriving in the collecting depots and curing works over the past two months. Arrivals up to the end of December were 4,333 tons—4,120 tons of Plantation, 193 tons of Arabica Cherry and 30 tons of Robusta. But it will be another six to eight weeks before sufficient quantities of this season's coffee are cured and ready for sale in the internal market. Meanwhile, home requirements will be met out of the stock of 6,956 tons of last season's crop carried over from December 1956.

Pool Releases

At the pool sales to be held this month in Coimbatore, Kozhikode and Mysore, 2,050 tons of coffee are to be offered—850 tons of Plantation, 450 tons of Arabica Cherry and 750 tons of Robusta. The total quantity of coffee released in the internal market during the calendar year 1956 was just under 23,600 tons. The first export sale of the new season's crop was held on 22nd January in

Mangalore, the quantity offered being 591 tons of Plantation. On the same day, 279 tons of Arabica Cherry coffee from the 1955-56 crop were also offered. Recently, 275 tons of Arabica Cherry from the 1955-56 was sold to Russia. The total quantity released for export out of the 1955-56 crop, including this quantity, would be 7,475 tons.

Coffee Development Scheme

Investigation of applications received from growers up to 15th December, 1956, for the grant of loans under the development plan is going on apace. The Board's Regional Officers expect to complete the investigations and submit their reports not later than 15th February, 1957. Applications received after 15th December, 1956, will be considered for the grant of loans next year. Arrangements are being finalised for offering small coffee growers their requirements of fertilisers and pesticides from Government or other depots nearest to them. A further announcement on this subject will be made shortly.

LONDON TEA SALES

AT last week's London tea sales, the 60,654 packages on offer realised an average price of 5s 9.64d a lb., against 6s 0.33d in the previous sale and 4s 5.36d a year ago. Plain broken pekoe was quoted at 5s 2d a lb., against 5s 3d in the previous sale. Prices obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	534	5/5 1/2
Amgoorie	552	6/4 1/2
Anglo-American	1,032	5/8 1/2
Assam Doonars	678	5/7
Assam Frontier	1,234	5/11 1/2
Borhat	467	5/7 1/2
Budha Beta	654	6/

Buxa Doonars	625	5/6
Central Province	534	6/0 1/2
Chubwa	1,062	5/6 1/2
Chulsa	374	5/6 1/2
Consolidated Estates	403	6/1
Cons. Tea and Lands	2,238	5/6 1/2
Doom Doonars	928	6/3
Eastern Assam	689	6/0 1/2
Eastern Produce	552	6/5 1/2
Imperial	1,313	5/8 1/2
Jetinga Valley	210	5/5 1/2
Jhanzie	523	5/10
Jokai	1,475	5/9 1/2
Jorchaut	1,396	6/0 1/2
Kanan Doonars	2,236	5/10
Lungla	756	5/4 1/2
Malayalam	2,962	5/8 1/2
Namdang	330	6/2
Pabbajan	516	6/4 1/2
Rajawella	774	6/3 1/2
Scottish Ceylon	474	5/11 1/2
Standard	390	6/7 1/2
Travancore	1,277	5/8 1/2
United Planters	336	6/4
Upper Assam	408	5/10 1/2

U.K. Tea Stocks

U.K. stocks of tea on 11th January amounted to 112.2 million lbs against 115.5 million lbs a year ago (converted at 110 lbs a package).

COCHIN TEA SALES

At Sale No. 2, some 2,200,000 lbs of tea were on offer. There was a good general demand from exporters, but internal buyers were very quiet. Low and Low Medium types declined irregularly 2 annas. Mediums were 1 anna to 2 annas lower and the better sorts were 4 annas to 6 annas softer. Whole Leafs were generally 2 annas to 3 annas down.

Indian Airlines carry over 500,000 passengers every year

India's highway in the sky... —and it belongs to you!

Servant of modern India, her national airline covers over 20 million miles a year, operates 132 flights each day

EMPLOYING over 9,000 trained personnel, flying over 20 million miles every year and operating 132 daily flights — Indian Airlines Corporation is the largest internal airline in the East — and it belongs to the people of India!

Indian Airlines Corporation is a mighty organisation, doing a mighty job — and it is proud of its role in transporting goods and mails, conquering vast distances, bringing the peoples of India ever closer together.

Engineering and Transport

SKILLED PERSONNEL FOR STATE STEEL WORKS

TRAINING AND RECRUITMENT

SCHEME OF UNION MINISTRY

(FROM OUR NEW DELHI CORRESPONDENT)

UNDER the scheme now brought into force by the Ministry of Iron and Steel, over 21,000 men, skilled, semi-skilled and unskilled, will be employed in lucrative jobs by 1961. The manpower section in the Ministry has worked out the plan in great detail. The manpower requirements of the projected three one-million ton steel plants have been assessed according to 27 categories, such as sintering plant, coke ovens, blast furnace, steel melting shop, etcetera, and thereafter the requirements in each category have been carefully worked out. According to this plan, the three steel plants will need 120 highly qualified personnel for top-ranking places, 2,100 men for the officer grades, and about 16,000 skilled and 36,000 unskilled workers. The exact requirements of each plant will be as follows:

Highly qualified specialists	40
Officer class of technicians	739
Skilled workers	5,321
Unskilled workers	1,200
Total	7,300

Having assessed the requirements of the three plants, the next job is to get the personnel and arrange for their training. In the nature of things, the top-ranking specialists will have to be recruited from the existing steel or engineering works in the country. The Government has no intention to start a race with the private sector and by offering better terms lure away its trained personnel. Apart from other considerations, it will defeat the Government's own objective of all-round planned development. But as a matter of policy, recruitment from the private sector will be made with the consent of the employers. Engineering graduates will be trained as technicians and 3,500 applicants will have to be interviewed by the Union Public Service Commission before they are sent for training. There has so far been no difficulty in finding suitable people in India. As a matter of fact, 500 engineering graduates have already been recruited through the proper channels.

Foreign Help

Where they are to be trained is the next question. The U.K. has offered training facilities for 300 Indian engineering graduates at its own cost. The U.S.A., through the Ford Foundation, is providing facilities for 900 Indians free of cost. There is reason to hope that the men so trained will be kept in employment in the U. S. A. until they are called back to India for employment in the steel works. Russia has provided training facilities for 686 Indians and the U.N. is to meet training expenses. Eighty Indians are already under training there, 480 will be sent in 1957 and the remainder in 1958. Eighty-nine Indians are under training in Germany. Twenty-four trainees will be sent to Canada and an equal number to Australia under the Colombo Plan.

Surplus D.V.C. Workers

The Ministry has thus been able to get the entire training scheme financed by friendly outside agencies. Each trainee, before he is accepted, has to sign a bond that he will serve the Government of India for a minimum period of five years after he has completed his training. The skilled workers will be largely recruited from the existing training institutions in India and given 18 months' intensive training in engineering works. The necessary facilities have been secured. Each trainee will be given Rs. 100 a month during his training period. Skilled workers are also being recruited from the surplus personnel of the D.V.C. and the ordnance factories. About 350, including 150 from ordnance factories, have already been recruited. Each steel plant will need a number of metallurgists for whom training facilities have been arranged in Banaras, Bangalore, Kharagpur and Poona.

EXPANSION OF CALTEX TANKER FLEET

Fifteen tankers totalling 485,100 deadweight tons were either delivered to or placed on order by the Caltex group of companies in 1956. The vessels, turned out in the shipyards of the U.K., Holland, Belgium, Scotland, and Japan will increase the size of Caltex fleets to more than 100 owned and chartered ships. In January, 1956, Caltex Trading and Transport Company Limited of London, placed an order with the Cockerill-Ougree yard, Hoboken, Belgium for two 32,000 deadweight-ton tankers to be delivered in 1958 and 1959. Later in the same month the 32,000 deadweight-ton Caltex Rotterdam was launched at the Wilton-Fijenoord yard, Schiedam, Holland. This increased the Caltex fleet under the Dutch flag to seven owned tankers totalling more than 127,000 deadweight tons. Also in January, four more 32,000 deadweight-ton ships were ordered for the Caltex Dutch fleet: one from the Mitsubishi yard in Kobe, Japan, one from the Hitachi yard in Inosshima, scheduled for delivery in 1957 and 1958, and two from Wilton-Fijenoord scheduled for 1960 delivery. In March, an order was placed with Ateliers et Chantiers de la Seine Maritime, Le Trait, France, for an 18,000-ton ship for Outremer de Navigation Petroliers S.A.F., a Caltex affiliated company. Delivery is expected in 1959. In August, the 32,000 deadweight-ton Nikko Tokyo Tanker Company Limited, a Japanese firm, associated with the Caltex group. The ship was

constructed in the Nagasaki yard of Mitsubishi Shipbuilding and Engineering Company and is now engaged in transporting crude oil from the Persian Gulf and Sumatra to refineries in Yokohama, Kudamatsu, and Iwakuni. Meanwhile, in July, the 18,000 deadweight-ton Caltex Edinburgh, built by Scots' Shipyard and Engineering Company Ltd., Greenock, Scotland completed her maiden voyage. The keel of her sister ship, the Caltex Newcastle was laid in September at the Hawthorne-Leslie yard in Newcastle. This vessel is scheduled for completion early in 1958. Also in September, two tankers, one of 39,100 tons, the other 46,000 tons were ordered for Tokyo Tanker Company. The first is to be built by Kawasaki Dockyard, Limited, Kobe and completed in 1959; the second, contracted to Mitsubishi Shipbuilding, will be delivered in 1960. In September Netherlands Pacific Tankvaart Mij., an affiliate of the Caltex group placed an order with Cockerill-Ougree for two 45,000 dead-weight ton tankers, the largest ever to be built in Belgium and the largest to fly the Dutch flag. These ships, scheduled for delivery in 1960-61, will have an overall length of 735 feet, 36 feet 5 1/2 inches draft and cruising speed of 17 knots. These additions to Caltex fleets are in line with the postwar expansion of the Group, which now consists of 94 companies doing business in 87 countries of the eastern hemisphere.

SCIENTISTS INVESTIGATE ATOMIC RADIATION EFFECTS

Investigation into the effects of atomic radiation on all forms of living and inanimate matter is at present being carried out in Britain by a group of scientists of the Atomic Energy Authority. The scientists concerned have been formed into a technological radiation group. One of the objects of this research is to speed up known chemical processes and to use nuclear radiations to rearrange links between groups of atoms, thus making new reactions possible. Tests have already been started to sterilise potatoes, meat, and other foods by irradiation. Lengthy tests will thus be introduced by feeding this food to animals and noting the reactions. A number of experiments have already been carried out on flowers. By using irradiation, scientists have produced stemless daffodils. Irradiation is believed to contain the promise of important developments for industry, and several leading firms in the U.K. are conducting independent research in this field.

T.W.A. TO EXTEND INTERNATIONAL ROUTE

T. W. A. has been granted the licence to operate its service to Bangkok and Manila by the United

States Civil Aeronautics Board, with the approval of President Eisenhower. The extension of its present international route beyond Bombay and Colombo creates a round-the-world service that T.W.A. and North West Airlines will now be able to provide by the connection in Manila. Announcing this in Bombay recently, Mr. Jules C. Gindraux, T.W.A.'s Sales Manager in India, said that the action of the C.A.B. in providing a second round-the-world air service offered an enormous potential in future travel. In 1952, only about 6,000 persons travelled round the world. Currently that number has grown to nearly 15,000 a year. By 1960, the volume of such travel should be doubled, for travel round the world is the ultimate goal of all tourists. The present extension adds 2,900 miles to T.W.A.'s current routes totalling 12,150 miles from San Francisco to Colombo.

NEW BRITISH AIRCRAFT TO VISIT INDIA

The unique capabilities of a new British aircraft, the Scottish *Twin Pioneer*, are to be demonstrated to countries in the Middle and Far East, including India and Pakistan, in the near future as part of an 18,000-mile flight to Australia. The first plane designed and built in Scotland (by Scottish Aviation Ltd.) to undertake a trip of such magnitude, its route will cover Europe, the Middle East, south and south-east Asia, and Australia. Another *Twin Pioneer* is being prepared for the North Atlantic crossing. Although the aircraft will have to fly over some mountainous country on its way to Australia, it is not expected that this will present any problems, for it can climb to a height of 21,000 feet. On the other hand, the aircraft requires only the minimum length of runway for take-off, and can use the smallest of airfields. After visiting centres in France and Italy, the *Twin Pioneer* will show its paces in Athens, Ankara, Baghdad, Teheran and Kuwait, and then fly on to Karachi, New Delhi, Rangoon, Bangkok, Kuala Lumpur, Singapore, Sarawak, North Borneo, Manila, New Guinea, Brisbane, Sydney, Melbourne and Adelaide. The whole journey is expected to take two or three months. The *Twin Pioneer* is a fixed-wing monoplane with two British Leonides engines. It can carry a crew of two and 16 passengers, and sufficient fuel to fly 500 miles out of a field less than 150 yards long; it can land at only 50 miles an hour in an equally small space. As an alternative to passenger accommodation, the *Twin Pioneer* can be equipped to carry cargo.

"Where now the city stands,
there was once naught but the city's site." OVID

Madras street scene — 18th Century

Madras

February 1640. Sailing along the Eastern coast of India Francis Day reached a tiny village of a few scattered huts. In a short time human hands raised a small town of palm-thatched mud houses. In the course of the centuries on this very site has arisen a modern city with well laid-out roads, palatial buildings, a busy port and harbour, and flourishing industries. Thousands of tons of STEEL have helped to bring this great city into being.

PLANS TO INCREASE PAPER PRODUCTION
SCOPE FOR MORE NEWSPRINT FACTORIES

THE Union Minister for Heavy Industries, Mr. Manubhai Shah, said in New Delhi last Friday that the Government of India had given permission for setting up 22 new paper mills in the country. This, together with a substantial expansion in the existing 21 paper factories, would raise the present capacity for the production of paper and paper boards from 210,000 tons a year to 540,000 tons a year by the end of the second plan. The Minister, who was inaugurating the first meeting of the Panel for Paper and Pulp Industries set up by the Government, said that schemes for increasing the capacity further by 140,000 tons a year were being considered. With newsprint, he stated, consider-

able progress was being made. In addition to the Nepa factory in Madhya Pradesh, another newsprint factory was being established in the public sector by the National Industrial Development Corporation in Shakarnagar, near Hyderabad, with a capacity of 30,000 tons a year. There was still scope for two more newsprint factories with a capacity of 30,000 tons each so as to reach the country's requirements of 120,000 tons by the end of the second plan. "We should endeavour to establish the required capacity", he declared.

The Government had approved the scheme for an industrial concern for setting up a plant in Assam to manufacture chemical pulp, required for paper, at the rate of 100 tons a day, i.e., 30,000 tons a year. In addition, two proposals for the establishment of rayon grade pulp plants, with a total capacity of 50,000 tons a year, were being considered. If both these projects materialised, the requirements of rayon grade pulp for the next five years would be satisfactorily provided for. As the country had already gone ahead in the manufacture of rayon silk, to cope with the capacity of 100 million lbs of rayon a year, about 50,000 tons

of rayon grade pulp would be required. There was a great need for rapid increase in the production of all varieties of paper and paper boards, newsprint and pulp, for both the paper and the rayon industries.

Rising Consumption

The per capita consumption of paper in India was among the lowest in the world, averaging about 2 lbs. a year, compared with over 400 lbs. in the United States, about 100 to 200 lbs. in almost all European countries, and over 50 lbs. in Japan. Mr. Shah said that the consumption of paper and paper products, including newsprint, was about 269,000 tons in 1950-51, and had gone up to 317,000 tons in 1955-56. The production had risen from 114,000 tons in 1950-51 to 202,000 tons in 1955-56—a rise of about 80 percent. But although production had almost doubled, in view of the growing demand the country was still importing 49,000 tons of paper, 80,000 tons of newsprint and 12,000 tons of rayon grade pulp, valued at about Rs. 15 crores, annually.

The consumption of paper, paper boards, newsprint and rayon grade pulp would increase considerably in the second plan period. According to the present estimates, by 1960-61 it would rise to 350,000 tons of paper, 120,000 tons of newsprint and 50,000 tons of rayon grade pulp a year. This would mean that, in terms of value, as against a total consumption of about Rs. 29 crores worth of these products at present, the annual consumption by 1960-61 would be around Rs. 69 crores a year. Thus, the increased annual production of paper, newsprint and pulp to be aimed at in the next five years would be of the value of Rs. 40 crores a year. The Minister stressed the need for reorienting the paper industry by the establishment of more pulp plants, so that bamboo, sabai grass and other cellulosic raw materials could be converted into pulp near the site of raw materials. The pulp could be conveniently utilised by paper factories at their location, and this would considerably save haulage and the transport of bulky raw materials for paper manufacture. He, therefore, emphasised the need for the industry and the Panel to look into the question of establishing a large number of pulp units in the country.

Referring to the raw material position, Mr. Shah stated that an *ad hoc* committee under the chairmanship of the Inspector-General of Forests, Government of India, had already been appointed to examine cellulosic raw material resources such as bamboo, fir, spruce, bagasse, sabai grass and other grasses. It was hoped that the findings of the *ad hoc* committee would be soon available. The present consumption of bamboo by the paper industry was estimated at 300,000 tons a year. It was likely to go up to 600,000 tons in the second plan period. The Minister, therefore, emphasised the need for intensive efforts to develop the cultivation of bamboo, eucalyptus, wattle and other woods. The development of forests had to be considered from this angle also. Broadly speaking, the present resources of bamboo could be safely estimated to be of the order of 18 million tons on the basis of a felling cycle of four years. This had to be more than doubled as early as possible.

Paper from Bagasse

Stressing the need for utilising bagasse for the manufacture of paper, Mr. Shah stated that the existing 143 sugar factories with their expansion programmes and the 57 new sugar mills would produce about 3.75 million tons of bagasse on a dry basis. This bagasse could easily yield 1 to 2 million tons of paper. It should not be difficult to organise the replacement of bagasse by coal as fuel. It would be wrong to burn away as fuel an important cellulosic raw material like bagasse, when it was far more profitable and suitable to convert it into paper and boards.

Pointing to the need for small one-ton to five-ton factories for paper manufacture, particularly for the inferior grades of paper, the Minister said that at present over 50 percent of imports were of cheap wrapping papers which could easily be manufactured by small-scale plants dispersed throughout the country. They could utilise the small quantities of cellulosic raw materials available in different regions. Such plant would only cost Rs. 5 lakhs to Rs. 15 lakhs, and would be as economical as big plants in cost of production. The machinery for them could also be manufactured more conveniently in the country itself. The Panel should, therefore, draw up programmes for setting up such small and medium sized plants for the utilisation of local raw materials, to be converted to cheap wrapping and other qualities of paper.

Referring to the manufacture of paper plant machinery in India, the Minister stated that the present position was very unsatisfactory. Total requirements of machinery for paper, newsprint and pulp plants during the second five year plan period were expected to be about Rs. 30 crores to Rs. 40 crores. At the moment, there was practically no capacity in the country for manufacturing machinery and equipment required by the paper industry. Therefore, the target for 1960-61 for the indigenous production of machinery was placed at Rs. 4 crores a year. Engineering firms and industries running paper plant should come forward to establish units for the manufacture of machinery and equipment for the paper industry. Although paper machinery was complicated, it should not be difficult to establish plant for its manufacture. This was the most vital need as far as the paper industry was concerned.

CHANGING TRENDS IN COTTON TEXTILE TRADE
INFLUENCE OF RAYON PIECEGOODS

COTTON yarn production in those countries for which regular figures are available, including all the principal non-Communist exporters of cotton textiles, was seasonally less in the third quarter of 1956 than in the second quarter, according to the Cotton Board's Quarterly Statistical Review for December, 1956. Compared with output in the corresponding period of 1955, yarn output in the third quarter showed an increase of about 2 percent, as against increases of 1½ and 3½ percent in the first and second quarters, respectively. Once again it was in Japan that the greatest expansion in comparison with a year ago occurred, but the figures also reveal increases in the rate of activity of the cotton industries of Hongkong, France, Western Germany, Italy and, to some extent, the Netherlands and Belgium. On the other hand, third quarter cotton yarn output in both U.K. and the United States was appreciably less in 1956 than in 1955.

There was a further sharp, probably more than seasonal, decline in world trade in cotton piecegoods in the third quarter of 1956. Indian and West German exports in particular were well below the second quarter level, and there were moderate decreases in the volume of exports from the U.K., the United States, France, the Netherlands and Portugal. Japanese exports remained more or less unchanged at the comparatively low second quarter level, as did also exports from Belgium and Italy. Hongkong was the only country to record an appreciable expansion in exports in the third quarter. In the first nine months of 1956, total world trade in cotton piecegoods was about 5 percent less than in the same period of 1955, which suggests that the total for the year will not be appreciably greater than that for the depression years 1952 and 1953. Japanese exports in the first nine months of the year were about 13 percent greater than in the corresponding months of 1955, the only other important non-Communist exporting countries to record an increase in shipments are the Netherlands, Belgium and Switzerland.

There is little doubt that the massive increase in international trade in rayon piecegoods—principally Japanese—in the last few years has contributed to the shrinkage of world trade in cotton cloth. Exports of fabrics of man-made fibres from almost all the main trading countries were less in the third quarter than in the second, but during the first nine months of 1956 total world trade in these fabrics was about 12 percent greater than in the same period of 1955. Japan has made by far the greatest contribution to this increase, but Austria, Belgium and, to a lesser extent, Italy and the Netherlands have also shared in the expansion, while the U.K., France and Germany have lost ground.

Shortage of Labour

Since about the beginning of August, and particularly in the last two months, a remarkable change has taken place in the state of the cotton trade in the U.K. Spinners and manufacturers have booked orders in such volume that order books have been lengthened by many weeks, and many mills now appear to be acutely short of labour. Many factors have contributed to bring about this state of affairs. In the first place, the running down of stocks and the shortening of commitments could by a reverse movement as soon as confidence in the raw cotton price level was restored. This reversal seems to have occurred some time during the summer. Secondly, the stabilisation of American-type raw cotton prices was achieved at a level which substantially eliminated the price advantage enjoyed by Indian mills; hence Lancashire cloth became more competitive vis-à-vis Indian cloth. The fear of hostilities spreading induced a desire to secure supplies of cloth; the diversion of shipping round the Cape led to an expectation of rising prices, and possibly interrupted supplies, of Egyptian far more likely that prices would rise rather than the production and distribution chain to place orders well in excess of immediate requirements. The effect on mill activity has been limited by the labour situation. August was the lowest point of the recession as regards both yarn and cloth production; the subsequent recovery has so far been more pronounced in the case of spinning than of weaving, principally because of happenings in the man-made fibre field. Yarn output in November was at the highest level since May, 1955, the improvement in cotton yarn production being reinforced by an expansion in the output of spun rayon yarns, particularly coarse yarns for the tufted carpet trade. Cloth output in October was still appreciably below the level reached in earlier months since about July in the production of all types of rayon fabrics with the exception of the long-staple spun rayon woven in Northern Ireland.

Exports of cotton piecegoods declined in July-September, 1956, for the fourth quarter in succession. There was little change in the quantities shipped to individual markets, British and French West Africa taking a little more, South African and New Zealand a little less, and Australia about the same as in the preceding quarter. Some improvement in the rate of shipment is expected in the near future; indeed, the October figure of 43 million square yards compares well with the monthly average of 37 million square yards in the

third quarter. This decline was spread over most of the main markets, including Australia, New Zealand, Rhodesia and Nyasaland, and the Irish Republic. Trade with South Africa was well maintained, however, and the rapid increase in exports to Indonesia is worth noting. There was a moderate decrease in imports of cotton piecegoods during the first quarter; imports from India declined appreciably, but imports from Hongkong continued to increase and Pakistan has become a growing source of supply for both cotton yarns and piecegoods. Imports of piecegoods in October totalled 31 million square yards, well above the monthly average of 26 million square yards for the first nine months of the year. Imports of towels were maintained at a high level in the third quarter, but there was a substantial fall in the number of shirts entering the country.

U.S. Recession

From the beginning of 1956 until the autumn, the U.S. cotton industry experienced a marked recession in demand. New orders booked were the lowest for several years, stocks of finished products increased and prices sagged. The recession is not reflected in the cotton cloth production figures for the second quarter, which show an increase of about 6 percent compared with a year earlier, but output of fabrics of man-made fibres declined by 12 percent, the decrease being almost entirely in spun rayon and in nylon fabrics and tyre fabric production showed a drop of about 16 percent. On the spinning side cotton consumption in the third quarter was 5 percent less than in the corresponding period of 1955, and consumption of rayon and nylon staple was 14 percent less. More recent reports speak of a revival of business and a tendency for prices to rise. Cotton consumption in October was not far short of the October, 1955, level. Exports of fabrics of both cotton and man-made fibres from the United States tend to be low in the third quarter and, judging by the figures for July and August, 1956 was no exception. Compared with 1955, the reduction in shipments of cotton piecegoods to the Philippines seems to be the most significant change. Since the beginning of August, the Government has been paying a subsidy on exports of cotton products; this is designed to compensate American manufacturers for the higher price they have to pay for American cotton as compared with foreign manufacturers. Subsidy payments have increased sharply since August, which seems to suggest that there has been a marked expansion in the level of shipments of cotton products. Imports of cotton piecegoods into the United States have fallen markedly since the early months of 1956 as a result of the export restrictions operated by the Japanese. It is reported that the Japanese have now agreed to continue these restrictions indefinitely, to extend them to cover other categories of made-up goods, to impose subsidiary "ceilings" on individual products, and to ensure that the goods are shipped at a uniform rate throughout the year. Nevertheless, American manufacturers have asked for increased tariff protection on velveteens and ginghams, two of the items most severely affected by Japanese competition.

Japan's Record Production

The removal of the restrictions on cotton yarn output in Japan from July resulted in a new post-war record level of production being established in the third quarter. Cotton cloth output was fractionally less than in the second quarter, but the rapid increase in the production of spun rayon yarns and fabrics continued. The number of spindles installed has increased very rapidly since about June, at the end of October, there were 900,000 more operable spindles than 12 months previously. Apparently there was a rush to have spindles installed before the official registration day, 20th October.

At 258 million square yards, Japanese exports of cotton piecegoods in the third quarter were virtually unchanged at the relatively low second quarter level. The October figure of 122 million square yards suggests, however, that there has since been a recovery to something like the record first quarter level. There was a big increase in shipments in the third quarter to Indo-China, largely as a result of American aid. This was the second largest overseas market during the quarter after Indonesia, which also took larger quantities of Japanese cloth. Increased shipments were recorded to Siam, the Philippines and Ceylon. In contrast, exports to Hongkong again declined heavily on account of the drying up of the re-export trade, and shipments to the U.S.A. were again reduced voluntarily. Britain, British West Africa and Burma also took less Japanese cloth than in the second quarter. Exports of rayon cloth in the third quarter were slightly less than the record second quarter total. At 281 million square yards, however, they exceeded cotton cloth shipments for the second quarter in succession, and it is reported that figures for October and November indicate a resumption of the upward trend. Markets which expanded in the third quarter include Indonesia, in particular, and also British West and East Africa, Western Germany and Indo-China. On the other hand, shipments to Singapore, Hongkong, Iraq and the Philippines contracted.

Indian Cloth Production Up

During the third quarter of 1956, cotton yarn production in India was about the same as in the corresponding period of 1955, whereas mill production of cotton cloth registered a considerable increase. The Government has attempted to limit by regulation the volume of stocks held by mills and merchants, and has encouraged mills to increase their output quickly, presumably by extension of shift-working, by reducing the excise duty on any increased production. However, it is reported that domestic demand has been slack, and mill stocks

have been increasing. Exports of cotton piecegoods by sea from India suffered a sharp contraction in the third quarter, the drastic narrowing of the gap between the Indian and the world price of raw cotton must have seriously impaired the competitive position of the Indian mills vis-à-vis their Japanese counterparts. Shipments to almost all the main markets were at a reduced rate in July and August, the only exception being British West Africa and, to a lesser extent, Indonesia and Ceylon.

West European Recovery

Those European countries principally affected by the 1955 textile recession, France, Italy and Belgium, appear to have recovered more swiftly than the U.K. Thus in the third quarter of 1956 the rate of output in almost all the countries of western Europe was greater than in the corresponding period of 1955, probably the lowest point of the recession, in contrast with the position in the U.K. Cotton yarn output in western Europe as a whole in the third quarter was perhaps about 5 percent greater than a year earlier, although less than in the corresponding period of 1954. There appears to have been some expansion at last in the output of the cotton sector of the Italian industry, matching the previous improvement on the rayon side; the reason appears to have been an increase in domestic sales occasioned by stock rebuilding. The French recovery has continued, the expansion of output in Western Germany has been maintained, and the Dutch and Belgian industries are still operating at levels somewhat higher than in 1955. Western European exports of cotton piecegoods normally fall off in the third quarter but in 1956 the drop was unusually great, principally because of a sharp contraction in deliveries from Western Germany. In the first nine months of the year, exports of cotton piecegoods from western Europe as a whole were about 7 percent less than in the same period of 1955. The main reason for the decline in West German exports has been the disappearance of the large improvement trade with Turkey.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) declined by 1.0 percent to 417.6 during the week ended 5th January, 1957, compared with 421.9 for the previous week. The index was 2.2 percent lower than in the corresponding week of the previous month, but 11.2 percent higher than a year ago. The index for Food Articles moved down by 2.4 percent to 382.4, because of a decline in the prices of *gur* in Ahmednagar (—9%), rice in Patna (—3%), coffee (—2%) and *jowar* (new crop) in Amravati, despite a rise in the prices of *gur* in Muzaffarnagar and *bajra* (+% each), rice in Vijayawada (+3%) and in Calcutta (+1%) and wheat and gram (+1% each). Lower prices of manganese ore (average export price) (—26%), rapeseed in Kanpur (—6%), castor-seed in Madras, linseed and gingelly seed (—3% each) and raw cotton (—1%) brought down the index for Industrial Raw Materials by 0.5 percent to 517.6, although prices of rapeseed in Calcutta and copra (+5% each), castorseed in Bombay and groundnuts (+4% each) and raw silk (+3%) were marked up. The index for Semi-Manufactures declined by 1.1 percent to 411.2, compared with 415.8 (revised) for the previous week. Items which showed significant variations were groundnut cake (—9%), cow hides (—6%), gingelly cake (—5%), gingelly oil (—4%), buffalo hides, castor oil and copra cake (—3% each), linseed oil in Calcutta (—2%), sheep skins (—3%) and coconut oil (+2%). The index for Manufactures stood at 386.9, compared with 387.1 for the earlier week; the price of rayon and silk manufactures rose by 2 percent while cotton manufactures were slightly lower. An increase in the prices of betelnuts (+9%), black pepper (+4%), and chillies in Patna (+1%) raised the index for the Miscellaneous group by 0.8 percent to 594.1. The price of chillies in Calcutta (—6%), however, fell.

Calcutta Markets

FAIR DEMAND AT TEA EXPORT SALE

PRICE FALLS IN MOST GRADES

AT Sale No. 30, held on 21st January, offerings at the Export auction consisted of 76,000 packages for which there was fair demand, but the market for the majority of the offerings was 2 annas to 3 annas weaker. Once again the few bright liquoring teas were well supported and were firm to occasionally dearer, while tippy teas were also in strong demand. All other kinds were an irregular 2 annas to 3 annas easier, although Fannings grades were in better demand than Broken. Whole Leaf grades were the weakest feature of the Sale and were a full 3 annas lower, while Darjeelings with very few exceptions also sold at easier rates. The number of withdrawals was greater than in recent weeks.

	1956	1955
Clean Black Pekoe	2 3 0	2 0 0 to 2 1 0

FREIGHT RATES STEADY

A FAIR miscellaneous enquiry was handled last week with rates fairly steady. Ore fixtures from India included 220s to Poland, 210s to Yugoslavia, 210s to Genoa and \$(U.S.)23 to the U.S.A. Mormugao-Genoa, on the other hand, was done at 185s the difference being accounted for by the crippling tax on freight earnings in this country. American coal paid 104s 6d for a single voyage to the Continent and there were numerous enquiries for long-term contracts. Renewed interest has been shown in Indian coals and several cargoes have been arranged to Japan at around 118s. How the transport system will react to increased export demands is uncertain since considerable delays are already being experienced at the present rate of export. Shippers say that demurrage is likely to accrue. Various time charters were arranged at rates ranging from \$(U.S.) 7 for a Liberty for five to seven months to \$(U.S.) 4.30 for a similar ship for four years.

SUGAR MARKET UNCHANGED

During the week ended 22nd January, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 3,000 bags and stocks totalled 85,000 bags. Rates for ready sugar, ex-Kantapur delivery, were Rs. 31.2 for ordinary grain and Rs. 33.4 for big grain. The market was unchanged.

LINSEED SOFTER

Prices have declined slightly during the past week due to a slackening in demand; ready stocks have been scarce as sellers have been fairly reserved. Trading has been poor. In the oil section, shippers have been rather less active because of a small decline in overseas prices; sellers have, however, been pausing in expectation of a further rise in prices. Latest quotations were as follows: January Rs. 25.4 a maund; April-May Rs. 22.6 a maund.

HIDES AND SKINS EASIER

The market ruled easier and prices showed a downward tendency. Stocks were higher than in the previous week.

Bazaar Sales

(Between 15th January and 21st January, 1957)
Cowhides: Wet salted (Ord.) 400,000 pcs. on the basis of Rs. 7-12 to Rs. 8-14; Wet salted (Slaughtered) 18,500 pcs. on the basis of Rs. 12-8 to Rs. 22.

Goatskins: Wet salted (Daissee, Killed) 72,570 pcs. on the basis of Rs. 260 to Rs. 270. Rs. 280 to Rs. 320 and Rs. 365 to Rs. 375; Assam-Dinajpur 5,000 pcs. on the basis of Rs. 280 to Rs. 305; Muzafferpore-Patna 30,800 pcs. on the basis of Rs. 290 to Rs. 310.

Bazaar Stocks

(21st January, 1957)
Cowhides: Wet salted 2,49,000 pcs.
Goatskins: Wet salted (Daissee, Killed) 26,000 pcs.; Assam-Dinajpur-Murshidabad 108,000 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissen-ganj 219,500 pcs.

SHELLAC MARKET QUIET

During the week ended 21st January, the market was steady at the beginning, and quiet at the end. The range of quotations was as follows:

Pure Buttonlac	Rs. 118 buyers; 118 value.
Lemon No. 1 Shellac	Rs. 118, 116-8 buyers.
Lemon No. 2 Shellac	Rs. 113-8, 114, 112 buyers.
F.O. Std. 1 Shellac	Rs. 108-8, 110, 107-8 buyers.
Pure TN Shellac	Rs. 103, 105 basis done buyers; 102 buyers.

4% I.T.N. Shellac	Rs. 98, 99, 95 buyers.
No. 1 Kusmi Seedlac	Rs. 110, 111-8, 111 buyers.
No. 2 Kusmi Seedlac	Rs. 105, 107, 106 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 98, 100, 99 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 93, 94-8, 94 buyers.

Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 85, 86-8, 86 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 80, 81-8, 81 buyers.
Kireelac	Rs. 32-8 to 33-8 buyers.

Shipments during January until the 14th were 16,438 packages.

THE RENAISSANCE OF CAPITALISM IN EUROPE

AN "OUTDATED" SYSTEM THAT WORKS BETTER THAN SOCIALISM

ONE of the difficulties of all ventures in contemporary economic history is that in this field men are less concerned with the facts than with using selected ones to prove something. In other words, it is hard to know what is happening in the capitalist, socialist and communist economies of our world because most of the information is being collected and presented by people who want to prove that capitalism, socialism or communism do or do not "work". The vice is common to politicians, financial journalists and professional economists. Thus, West Germany is exempted from rearmament and achieves a favourable trade balance—and this is advertised as a victory for "liberal capitalism"; or China has a bad rice crop because of floods—and this is given out as the failure of communist agriculture. Worse, a condemnation of Conservative economics, and every fall in the sterling area reserves is reputed to be a semi-planning. Now plainly, in order to avoid this sort of nonsense, our judgments on contemporary economic systems have to be based on fairly long periods of development, but if they are to be too long, we do not have to wait two millennia to be able to say that slavery in ancient Rome was uneconomic; and we can already say that from the post-war achievements of communism in eastern Europe must now be subtracted all the immense cost of the Hungarian revolution which followed directly from it.

Moreover, if we are to use the facts of current economic history to prove anything about the rival systems of capitalism, socialism and communism, we need to be sure that there is some connection between the achievements in question and the supposed system. Closer enquiry will often show that many of the economic achievements have been obtained by old-fashioned private enterprise, as in India where socialist planners (but are careful to put the blame on private enterprise) are blamed for the results of inflationary monetary policies. Similarly, many of the supposed achievements of modern capitalism are precisely the consequence of the fact that capitalism is no longer what it was: managed currencies, protectionism and the nationalisation of basic industries nowadays provide the context for many of the achievements of "private enterprise", even in the United States.

So nothing of what will be said below about the renaissance of capitalism in western Europe can be used as propaganda in favour of that old-style liberal capitalism which still numbers a few supporters in India (more especially on the occasion of annual general meetings and chairmen's speeches). Nor can it even be used as a stick to beat the planners and regulators of New Delhi, because the sort of successful neo-capitalism we are talking about bears as many resemblances to liberalism. But the successes of this European neo-capitalism are too substantial, and far superior to the sadly mixed results of socialist planning, to permit any further declamations about capitalism. One has only to listen to a few Congress speakers, from Mr. Nehru down, to see that the conviction that capitalism and all its works belong entirely to the past, is a powerful influence in the making of current policy. Capitalism is dead, so the field is free for all the fancies and quirks of the first socialist planner that comes along.

On the contrary, the fact is that capitalism has had a face-lift, it has become a lot more public

and a lot less private—but it is still very much alive and is indeed the most vigorous economic system at work in the world today. We will leave aside here the case of the United States and the British Dominions. It would be just too easy to prove our point on that evidence. We shall take instead the harder case of the economies of western Europe, because the political eclipse of these former imperialist powers is so often taken, in Asia, as proving that they must be suffering economic degradation also. The reality is that this group of countries, where capitalism was so deeply discredited in the 1930's, where moral and material war damage was so severe and whose colonies have been lost and are still being lost—in this group of countries wealth per head is greater than ever before in history and all of them are engaged on doubling their living standards in periods varying from ten to twenty years. And all of them live under an economic regime that is considerably "to the Right" (i.e. freer) than India's, a regime which is in fact capitalism in its new form.

We could adduce as evidence of the economic progress of western Europe a mass of figures for production indices prices and investments. But statistics are seldom read in this country and never remembered; besides, all the relevant ones are readily available in the periodical publications of such organisations as E.C.E. or O.E.E.C. Nobody denies the facts about the economic progress of neo-capitalist Europe; they are just conveniently forgotten when the forged death certificate of capitalism is produced to support socialism's claims to the inheritance. The figures can be summarised in the assertion that between 1952 and 1956 the economies of West Germany, France, Italy, Benelux and Scandinavia all expanded at a higher rate than any of the communist or Asian economies, and some of them at a higher rate than

is simple blindness to frame India's economic future in the middle-1950's on the same assumption when the only prosperous peoples in the world from Denmark to New Zealand are following a policy that would be regarded as "outdated" by New Delhi. Private enterprise and the private taxpayer (the private tourist also, we might add) get a better deal today in western Europe than they do in India or anywhere else in Asia, and we are entitled to connect this fact with another: that the gap between the developed and under-developed countries, which planning is supposed to fill, is not being filled but is widening every year.

CHANGES IN INDIA'S BALANCE OF PAYMENTS

FOREIGN EXCHANGE STRINGENCY INCREASES

LATEST figures indicate that India's foreign exchange reserves are now down to about Rs. 521 crores. The rapid decline which began some months ago seems to have slowed down recently, but there is as yet no reason for complacency. The cuts in consumer as well as capital purchases abroad which have become necessary imply that the second five year plan will have to be implemented at a slower pace. In the circumstances, it is paradoxical to recall that a mere couple of months ago the proposed outlay for the plan, on paper, was actually increased. A detailed and valuable survey of India's balance of payments position between 1948-49 and 1955-56, issued by the Reserve Bank of India this week, suggests that the relative comfort which this country enjoyed in its foreign exchange dealings during the first five year plan is now probably over. In a terse, if incomplete, summing up of the situation, it is stated that "the need for export promotion can hardly be over-emphasised. At least for the few years ahead, economic development will necessitate a continuing high level of imports, thus emphasising the urgency for an adequate increase in exports." The summing up is incomplete because even export promotion by itself will not be enough, given the competitive conditions of international trade today. It will have to be supplemented by vigorous efforts to attract foreign investment, which the Reserve Bank survey does not stress, but which is nonetheless one of the major conclusions to be drawn from its findings.

The survey offers a fairly detailed and more up-to-date picture of what happened to India's foreign exchange reserves during the first plan. Between 1951 and 1956, it is pointed out, the expectation was that there would be a total current deficit of Rs. 667-727 crores on the basis of the 1948-49 terms of trade. During the last three years of the plan, the terms of trade worsened by about 7 percent, compared with the 1948-49 level, so the deficit should have been even bigger. In fact, it turned out to be much smaller—at Rs. 125 crores. This was because much less food and machinery was purchased from abroad, not because exports showed an unexpected increase. Total food imports amounted to 3 million tons, against an estimate of 9 million tons, as a result of which more than Rs. 300 crores of foreign exchange were saved. Projects for the manufacture of iron and steel, and heavy electrical equipment, also made poor progress; so less machinery was purchased abroad. Finally, the level of actual investment under the plan remained below expectations, so its full impact on the balance of payments was not felt. Official donations and official loans amounted to the substantial sum of Rs. 196 crores, but the capital deficit was no less than Rs. 106 crores.

The survey points out that during the second plan, exports are expected to run at the slightly lower level of Rs. 593 crores a year, on an average. This is largely because of the lower estimates for vegetable oils, raw cotton and jute manufactures. Imports, however, are expected to reach the very much higher level of Rs. 868 crores annually; more machinery, vehicles, iron, steel and other metals will be needed since there is a greater emphasis on heavy industries and railway transport in the current plan. There is likely, therefore, to be an annual average trade deficit of Rs. 275 crores, as against the actual one of Rs. 103 crores during the first plan. Meanwhile, receipts from net invisibles are also expected to be lower at Rs. 51 crores annually, on an average, as against the actual figure of Rs. 77.5 crores during the first plan. (This, it is thought, will be due to a fall in investment income resulting from a reduction in official holdings of foreign assets, together with an increase in interest and dividend payments resulting from the rise in private foreign investment and official borrowings). The annual average current deficit, excluding official donations, during the second plan is, therefore, estimated at Rs. 224 crores, as against the modest deficit of Rs. 25 crores during the first plan.

The comparison between the estimates for the second plan and the actuals for the first, such as the Reserve Bank's survey makes, gives only a

brief glimpse of the difficulties which lie ahead. An important aspect which it is now seen had been neglected by the planners is the phasing of foreign earnings and expenditure. The Rs. 200 crores out of the exchange reserves which it was intended to spend over five years have vanished in less than nine months. Adequate foreign assistance is still to come and exports have hardly increased. In spite of domestic stability and international economic prosperity in recent years, the payments position is prone to wide fluctuations, as may be found when the impact of the Suez crisis on India's trade is more accurately gauged. The statistics in the Reserve Bank's survey show that since 1949-50 the balance of payments on current account (excluding official donations) has annually fluctuated between a deficit of Rs. 168 crores and a surplus of Rs. 49 crores. With a heavy import programme promising even greater adverse trade balances, the need for vigorous action to maintain the reserves is clear.

A NEW CHARTER FOR THE AUTOMOBILE INDUSTRY

HIGHER PRICES AND FEWER CARS

THE Government's decision on the recommendations made by the Tariff Commission for the motor-car industry must mean, inevitably, higher prices to the consumer. The introduction of a more flexible system appears, on the face of it, unlikely to encourage competition between the various manufacturers; which is not, of course, its object. The impression gained from the announcement of the new system is simply that the Government has given up all hope of being able to keep prices down by restrictive order, and is now willing that the manufacturers should charge what they like provided they can make out a reasonable case for doing so. This is a disappointing outcome indeed from four years of import restrictions, half-hearted attempts to encourage the use of motor vehicles by keeping their prices down and glowing promises about the future on wheels. Now, apparently, all pretence at promoting the use of passenger cars is to be abandoned. That side of the industry is to be neglected in favour of commercial-vehicle output and the companies are to get further protection by the exclusion of all other makers from the country. It is odd how, when the goal of socialism is accepted, the rejection of modern aids to higher productivity and a better life presents so little difficulty, especially when they can be identified as largely the possessions of the better-to-do.

The new policy towards passenger-car manufacture has followed logically from the early decisions about import restrictions and the progressive narrowing of the market through taxation and high prices. India cannot, for the time being, support an indigenous motor-car manufacturing industry operating at economic levels of price and output, no matter how strong the protective wall. If foreign cars must be excluded to save valuable exchange, the only way the market can be expanded is through years of subsidy to an uneconomic industry. No doubt this is impossible for political reasons, but the alternative is that the market in India will have to grow at a snail's pace and this country must reconcile itself to falling behind the standards of the rest of the world, and, incidentally, abandon all hope of ever establishing an export market in passenger cars. The present policy of high prices and scarce motor-cars is inseparable from socialism. But it is not one which need be expected to do the country any good, or attract the thanks of the people and firms—not all of them rich—who might have been persuaded to buy a car if prices had been lower and quality higher. The Government might reflect before it relapses into complacency about its current attitude towards the possession of a motor-car, that to attempt to build a modern economy without this indispensable item of transport is to plan for Hamlet without the Prince.

The problem of commercial vehicles is rather simpler. The market can be expected to expand during the next few years in direct proportion to the failure of the railways to achieve their targets for the second plan. At almost any price, the transport of goods by road will be profitable and necessary. The limit to the number of vehicles is likely to be set by the policies of the State Governments on the one hand, and the capacity of the manufacturers on the other, rather than by the economics of road haulage in India. Certainly in this field, the makers can look forward to a steadily expanding off-take of their products and, given the present state of demand for passenger cars, they would be foolish not to concentrate on it. It is in this field of manufacture that the flexible price system will have to be watched most carefully if its abuse is not to increase the costs of the economy and put windfall gains into the pockets of manufacturers. One loophole in the Government's present methods of regulating the industry immediately suggests itself. It is that of quality. There is no denying that with a few notable exceptions, the standards

to which India's commercial vehicle manufacturers work are as low as those obtaining for the production of motor-cars. And that is very low indeed. Without a comprehensive system of Government inspection, it is difficult to see how manufacturers can be discouraged from diluting quality to run up costs or increase profits. The new system of review for these two items still gives ample scope for the unscrupulous or lazy manufacturer to manoeuvre. The unfortunate fact is that, considering the likely demand for commercial vehicles in the next few years, competition is unlikely to impose any checks of its own.

CURRENT COIN

Higher Wages for Mine Workers.—A special Bench of the Labour Appellate Tribunal has announced its decision on the 14 appeals lodged against the provisions of the award of the Majumdar Tribunal in May last year. The chairman of the Tribunal is Mr. F. Jeejeebhoy and the two members are Mr. A. Das Gupta and Mr. Salim M. Merchant. Copies of the judgment are not yet available, but a number of its features are now known to the coal industry. It appears at first sight that the judgment provides for a substantial increase in the wages of most categories of workers, and, although no accurate computation has yet been made, an average of about 15 percent over and above the 40 percent increase granted by the Majumdar Tribunal, may not be far short of the mark. Some of the main points about the judgment may be enumerated as follows: (1) The new award will be retrospective from 26th May, 1956; (2) there will be no disparity of wages between male and female workers in the same category; (3) free housing to those already enjoying the facility and fixed house rent to be shared among the occupants; (4) for piece-rated workers in Bengal and Bihar, the work-load has been fixed at: pick miners 1 tub of 36 cft; C.P. miners reduced to 1½ tubs from 1½ tubs; and machine miners and loaders reduced to 2 tubs from 2½ tubs; (5) basic wages of wagon loaders increased from annas 4 to Rs. 0-4-6 a ton; (6) monthly-rated trammers placed in category IV; (7) piece-rated trammers placed in category V; (8) clerical staff in market collieries brought more into the line with similar category in State collieries; (9) some advance in the pay of mining staff; and (10) overtime rates fixed at the usual wages plus 1½ times usual wages. The cost of the appeals, estimated at Rs. 4,500, has been awarded in favour of the labour unions, of which the I.M.A.'s share will be Rs. 2,250. The balance will be shared equally between the I.M.F. and I.C.O.A.

Indian Aluminium Stock.—An attractive investment opportunity offers itself next week when the Indian Aluminium Co. Ltd. puts on the market Rs. 56 lakhs worth of 5 percent Convertible Loan Stock, 1971-81, at the par value of Rs. 200 each. (Details appear on a later page). This offer is part of an issue of Rs. 2.68-crores worth of Loan Stock which is intended to finance large development plans. The company's existing shareholders, directors and their friends have subscribed to Rs. 212 lakhs, so the remainder is now being offered to the public. (Aluminium Ltd., which is Indian Aluminium's majority shareholder, has already subscribed to 50 percent of the whole Loan Stock issue). The terms are that each unit of the Stock can be converted into 15 ordinary shares up to 15th December, 1957; into 14 ordinary shares between 1st January, 1958, and 30th June, 1960; or into 12 ordinary shares between 1st July, 1960 and 15th December, 1970. After the last of these dates, the company can redeem at par part or the whole of the outstanding Stock, according to a specified procedure. Any Stock which remains outstanding on 2nd January, 1981, will be redeemed at par. Investors' interest in the issue is likely to centre on two points. Firstly, those who like a fair and steady return of 5 percent can assure themselves of it by not converting into ordinary shares. Secondly, subscribers have the opportunity to jump on the band-wagon of the equity promise at any time during the next 13 years. Indian Aluminium is an expanding company and the prospects for the metal are good, so there may be an early inclination to participate in the equity structure. The ordinary shares have recently been moving around Rs. 14-6; if a Loan Stock of Rs. 200 is converted into 15 ordinary shares, the price of each of the latter would work out to Rs. 13-4.

State Trading in Cement.—Mr. Dharamsey M. Khatau's speech from the chair at the annual general meeting of the Associated Cement Companies Ltd. (extracts from which are published elsewhere in this issue) contained a strong protest on behalf of free enterprise against what he called a "serious infringement of the right of freedom of trade in a democratic society." The "onward march of State capitalism", he said, had been continually suppressing free enterprise and of this the nationalisation of life insurance and the resort to State trading in cement were "the two most outstanding examples." These two industries, he declared, had made notable contri-

butions to India's economy over the past 20 years. Yet life insurance was nationalised on grounds which did not "bear dispassionate scrutiny" even at that time, and now the result was one of "an alarming drop in the volume of new business since nationalisation." Mr. Khatau's efforts to discover the real reason for the extension of State trading to cement have apparently not yet proved successful. It remained, he said, "to this day a mystery." If the purpose was to ensure the distribution of cement at an equalised price to the consumer, then he found no reason why the A.C.C. scheme submitted to the Government should not have been accepted in full. Mr. Khatau disclosed that, anticipating the "cement gap" long before the Government did, the industry offered to import foreign cement and to sell it to the consumer at cost. "We suggested that price equalisation should be done without profit, by raising the price of Indian cement by just so much as would be necessary to meet losses on the sale of imported cement at a common delivered price applicable to both," he said. A.C.C. had further suggested that this could be done either through an enhanced excise duty, or by imposing "a price equalisation pool," or with a "trust fund" which could be either voluntary or statutory. It had also offered to work out a pattern of distribution which would involve only the minimum rail movement. "But the disappointing outcome of all this," he said, "was that while the Government accepted our main proposals, they rejected all the alternative price equalisation mechanism we had suggested." As a result of State trading, the Corporation acquires all the indigenous cement to pool with its imports, and sells it at the new equalised price of Rs. 102-8 a ton f.o.r. destination, inclusive of duty and handling charges, against Rs. 90 a ton f.o.r. destination charged by the industry before State trading was enforced. Mr. Khatau said that the issue affected the very principles of a democratic Constitution, and implied a repudiation by the Government of the Industrial Policy Statement issued last year.

Prosperity in Canada.—The rate of Canada's economic expansion remains high. In 1956, the gross national product surpassed the \$(C)29,500 million mark and was 11 percent higher than in the previous year. Making allowance for the price increases which occurred in 1956, the rise in income amounted to 7 percent, which was more than in any postwar year except 1955. A remarkable feature was that while the economy devoted a very high proportion of its income to capital development, consumption standards increased appreciably. Also, the per capita real income went up by 5 percent. Canadians, on an average, continued to buy 15 percent more goods and services than they did five years ago. The explanation for this is to be found in the fact that the flow of foreign capital into the economy continued on a substantial scale. Official statistics show that in spite of a big deficit in the country's balance of payments, the Canadian dollar actually sold at a premium of 4 percent over the U.S. dollar. This was because the capital inflow in 1956 was at such a high rate that it actually exceeded the deficit on current account during the year's latter half. Obviously, investment in Canada is very attractive to the foreigner, particularly the U.S. investor. The high rate of investment was fully reflected in the country's production—industrial mainly, and to a certain extent agricultural. All major segments of industry contributed during the year to the increase in the national product. Grain crops and dairy products exceeded the previous year's very high level. The strong demand of a fast expanding economy resulted in a record output of most of the country's mineral, forest and chemical products, including petroleum, nickel, copper, iron ore, cement and newsprint. Steel mills increased their output by about one-fifth during the first nine months, bringing the annual rate of production to 5.2 million tons. Yet the steel scarcity persisted. Some of the sharpest rises were in electrical, industrial and office equipment production. Employment during the year increased by 4 percent, or 200,000 in absolute terms—and unemployment declined to the lowest level since the summer of 1953.

Research in Oilseeds.—The Technological Research Sub-Committee of the Indian Oilseeds Committee, which held a meeting on 22nd January in Hyderabad, recommended nine new schemes for consideration by the full Committee. The schemes include pilot plant studies on optimum conditions for groundnut milling at the Oil Technological Institute, Anantapur; the preparation of useful chemicals from castor oil at the National Chemical Laboratory, Poona; research for proper storage of seed and cake of groundnuts in the Madras State; preparation of activated carbon for bleaching purposes from waste materials and shells of neem and mowha at the Technological Institute, Kanpur; the manufacture of edible proteins from carefully prepared commercial oilcakes, such as groundnut and sesamum at the Central Food Technological Research Institute, Mysore; and the study of new anti-oxidants related to plant pigments at the Chemistry Department, Delhi University. The meet-

ing of the Sub-Committee, which was presided over by Dr. M. S. Randhawa, Additional Secretary, Union Ministry of Agriculture and Vice-President, Indian Council of Agricultural Research, examined the various recommendations made by the Oilseeds Crushing Industry Inquiry Committee.

Cloth Exports to Britain.—An understanding is reported to have been arrived at between the leaders of India's textile industry and the British textile delegation led by Sir Cuthbert Clegg, on the export of Indian textiles to Britain. No details are to be released until the British team completes its visit to Hong Kong. This agreement may remove much of the misunderstanding that exists about the import of Indian cloth into Britain. The future outlook for the Lancashire industry depends on the success or otherwise of the anti-dumping measures which have been taken, and also whether Sir Cuthbert Clegg's delegation to India and Hong Kong will achieve any reduction in the exports of cloth from these countries to Britain. But certain sections of the Lancashire trade, especially the finishing and merchandising sections, appear to doubt whether any agreed reduction in India's cloth exports to Britain would, in fact, be of any material benefit to Lancashire. These interests point out that cloth which is not exported to Britain will most certainly be shipped into other markets, where the two countries will have to face more severe competition. Do these doubts suggest that by Britain allowing India to send its maximum quantities of selected varieties of goods that the processing industry in Britain needs, the Indian industry might not immediately care to look for more new markets abroad, at least for so much of its export allotment, allowing Britain to be free from Indian competition elsewhere? Again, Indian grey cloth is an essential raw material for the processing and printing industry in Lancashire. That is probably why some interests in India doubt whether the Indian textile industry will agree voluntarily to restrict cloth exports to Britain without obtaining an assurance from the U.K. that its place will not be taken by duty-free goods from other sources. If a curb on shipments from India will enable Lancashire to sell more of its own production within Britain, then the Indian industry will only be happy at the sacrifice. But if, instead, Hong Kong is to take the place of India as a major supplier of duty-free grey cloth to Britain, the Indian industry and even Britain may have cause for regret.

Insurance for Radio-Activity.—An insurance policy can now be taken out at Lloyd's against liabilities arising out of atomic energy operations. A technical committee of underwriters has drawn up a special form of policy which was circulated to underwriters at Lloyd's recently. It is understood that there has been a demand from certain industries for insurance cover against claims that might arise out of the use of radio-isotopes. The policy that has now been drawn up will indemnify the insured person or firm on any claims arising from "nuclear fission, nuclear fusion, or radioactive contamination." The policy does not apply to claims arising from the operations of any nuclear reactor. Negotiation of a suitable premium has been left to the underwriters.

MINERALS OF BENGAL

WE have obtained a copy of Mr. J. A. Phillips' well-known "Treatise on Ore Deposits", enlarged and re-written by H. Louis, M.A., A.R.S.M., etc. We were not interested therein, until we lighted on the chapter devoted to India. Even this failed to attract; we read the record of success of Wynaad and Mysore, and in our heart bewailed the fate of Chota Nagpore in the matter of gold. On page 574 it states: "It is rumoured in 1896 that a payable reef has been found in Chota Nagpore." How often we heard similar rumours in 1890!!! We were no further roused at silver and lead at "Mahabag." Was it not the *Indian Daily News*' special correspondent who "busted" Mr. Archer's scheme in 1880-81, but not until that enterprising gentleman had gone off with some of the shareholders' cash to start a swindle in the west of England with a Cornish tin mine? We were interested, finally, in Baraganda; two paragraphs on pages 582 and 583 describe all that is known to the authors about that place, and the second paragraph sums up in five lines the history of Baraganda from 1882 to 1892!! Yet this mine turned out 1,100 tons of copper, which was sold in India, and many a pious Hindoo quaffs cooling water, or eats deftly-prepared Kedgeree from vessels made therefrom. Baraganda is a real place that failed from bad management. The notice of tin is the Narungo deposit. We disagree with the description of the rock. It is a "greisen" friendly to tin. The Bengal Iron and Steel Company, Limited, is ignored altogether, but a concern called the Bengal Iron Company, Limited, is said to have closed its existence in 1879. We have considered the metals of Bengal in a small compass, and bar copper and iron—and maybe tin—what else is there valuable in Bengal in the metal line?

SOME CASES IN THE ENGLISH COURTS

DIVORCE AND DESERTION
(FROM OUR LEGAL CORRESPONDENT)

CONTINUING this short series of comments on English cases and other matters legal during the year just completed, we now come to the thorny subject of divorce. A hundred years ago, almost to the month, was passed the Matrimonial Causes Act of 1857; and it may be said that in that year started the conflict carried on ever since between Church and State over the remarriage of divorced persons, both former spouses being still living. Parliament is, of course, and has always been, above the law in this respect, and even prior to 1857 could, by a Bill of the Legislature and the Royal Assent, annul a marriage completely. But except in the cases of a few, a mere handful in fact, great nobles, such as Lord de Roos in 1669 and—strange in regard to the head of the Roman Catholic laity—the Duke of Norfolk in 1692, the jurisdiction of Parliament to grant absolute divorces had in 1857 been exercised since the Reformation, one believes, less than a dozen times. Separation, yes; the Ecclesiastical Courts would grant that in Canterbury and York at enormous expense. Divorce *a mensa et thoro*, it was called. But never in any circumstances whatsoever would the church grant divorce *a vinculo matrimonii*. The fetters must remain on high and low alike. No remarriage if the original spouse was still alive, whether in jail for life on a commuted sentence for murder, or transported beyond the seas, or a violent lunatic in an asylum. The Act of 1857 was a timid but momentous step forward; or backward, if you chance to have strong religious convictions on the subject. It allowed a civil remarriage, but left the spouse whose partner was in jail or incurably insane still in chains; likewise it left in bonds him or her who had been permanently deserted or whose opposite number was an habitual drunkard, or a wife-beater or refused to maintain her. For, to obtain an absolute divorce, proof of adultery was a *sine qua non*, otherwise no remarriage.

Looking back to pre-1925 days, it seems marvellous with what pathetic submission the public

put up for some 70 years with this state of things, and even, as to a large and influential minority, stoutly and successfully resisted any change in the law. "Hard cases make bad law", the latter would say blandly oblivious to the fact that it was the law itself which was bad. It could not last, and in 1909 a Royal Commission on Divorce got to work, and three years later produced a report recommending vast additional grounds for divorce constituting virtually those which now exist. But there was a strong minority report signed by people held in great respect such as Dr. Lang (Archbishop of York), that great constitutional lawyer, Sir William Anson, and the Judge of the Court of Arches, Sir Lewis Dibdin, and the well organised and implacable opposition was able to hold things up for another 15 years or so. Then in 1925 came the adoption of the majority report by the Act of 1925 with its immense extensions in the grounds for complete divorce. And that brings us to the report of the latest Royal Commission published last year, which recommends further extensions in the grounds for divorce, such as sodomy and bestiality, and makes important suggestions for legislation with the object of putting husband and wife on terms of absolute equality in matrimonial disputes. A husband, at present, can claim damages from his wife's paramour, but a wife has no such equivalent right to claim damages against an adulteress. The 1956 proposal is that this right should be conferred on the wife. At present, a husband suing an allegedly guilty wife for divorce has to lodge security for his wife's costs of defending the proceedings; but, in reverse, the wife suing is under no such obligation. Now it is proposed that this liability on the husband should no longer exist. A High Court or County Court Judge is to have powers in relation to the matrimonial home and its contents where either the husband or wife has left the other in possession of them.

Now the wheel has gone full circle and divorces, especially undefended ones, are turned out with monotonous regularity as from a penny in the slot machine. Anyone can get a divorce for almost anything. The opposition has been completely routed with the paradoxical result that some of us who heartily supported and welcomed the 1925 Act are beginning to wonder whether the opposition was not, after all, right and we wrong; especially when one considers the hordes of knife-

slashing young hoodlums and *demi-mondaines* their teens, the products of homes broken up by divorce and consequently deprived of all parental control and discipline.

Nevertheless, it is not, it is submitted, the Divorce Act which is at fault, but—writing with great and sincere respect—the modern view taken by the judiciary of its intention and interpretation. It was not the object of the 1925 Act to make divorce easier in particular cases. The object of the Act was to recognise that grounds may exist quite apart from adultery, such as to render the continuance of the marriage tie, its duties and obligations impossible, and to afford relief accordingly by divorce; to end, in short, an unbearable state of things. But the judges of the 'thirties in mind that marriage is, in law, a life contract and they examined with care the actual words of the statute under which they were empowered, that contract aside. They interpreted meaning their ordinary, everyday, colloquial meaning of the succession of later judges have imposed on it of today what one submits are forced and unnatural meanings to plain words with the result that the intention of making divorce easy if not the intention of making divorce easy. Let us take an illustration or two from the cases. A divorce can be granted nowadays on a ground of cruelty. What do you understand by that last word? To be on the safe side, the writer has consulted a dictionary. To be cruel means to be "merciless, fierce, hard-hearted, unrelenting and cruelty is defined as 'inhumanity', 'savagery'. The earlier divorce judges adopted the same interpretation, though, in more detail, "Cruelty" was defined as "conduct of such character as to have caused danger to life, limb, health or so as to give rise to a reasonable apprehension of such danger." Up to the 'thirties, a degree of savagery, fierceness, hardness of heart had to be proved as an essential element in cruelty.

It is not so now. The Times reported a case last year in which the grounds on which a husband sought a divorce were his wife's cruelty to him. The cruelty alleged was the wife's failure to perform her household duties. Lord Strachan, said the High Court of Sessions, Edinburgh, said though he granted the decree with some hesitations he was satisfied on the evidence that the wife's conduct in failing to do her household duties in fact, injure the husband's health both mentally and physically. That conduct was held to be cruelty. Law Notes guardedly comments on the writer, amazing interpretation of the meaning of a simple word as follows. "Neither the troubled state of our matrimonial law nor the subtleties of the 'aimed at' doctrine embolden to express an opinion whether Lord Strachan's marks are in harmony with the decisions, or any of the decisions, of our courts." Personally, the writer feels "emboldened to express an opinion" that a lady was divorced for laziness and not for cruelty and laziness is not yet a ground for divorce.

Consider another word completely distorted to its original meaning so as to make divorce easier—"desertion". Under the 1925 Act, desertion for three years is in itself a ground for divorce. What do you understand to be the meaning of the verb "to desert"? It means to leave, to abandon, to run away from, to give up, does it not? If a husband desires to divorce his wife on the ground that she has deserted him, surely that must mean that he has left A, not that A has left B. A may be perfectly justified in leaving B in the matrimonial home, but if she does, one would have thought that she cannot be heard to say that it is B who has left her. Well, this is the latest case.

A wife left her husband because of his association with another woman. The husband then admitted adultery and asked his wife to turn back. This she did and the husband ceased his adulterous association. His attitude towards his wife was one of indifference and taciturnity. He ceased to have intercourse with her and stayed out late. His wife thereupon left him. Did the husband's conduct amount to desertion of his wife by him? "Yes," said Divisional Court (Merriman P. and Collingwood J.). The original adultery was revived, the wife's departure was justified and the husband had constructively deserted her. Under the new dispensation, a clumsy fellow with no manners should not maintain at all as he may find himself divorced for his humanity in not possessing them.

In this case, *Waters v Waters*, a husband's conduct, alleged by his wife to be cruelty and constructive desertion, amounted to boorishness and indifference to its effect on his wife's health and the protests she made. The magistrates found that the husband had no case to answer and that he had no intention to injure his wife. His conduct resulted from his natural disposition which he could not help. They dismissed the case. The High Court, on appeal by the wife, remitted the case back to the justices for reconsideration holding that there had been insufficient grounds for their dismissing the case. If the husband was holding that a continuance of his course of conduct would have an injurious effect on his wife's health, that would be sufficient for a change of constructive desertion and cruelty, which would maintain, not understanding the same, we pass to the reader without comment.

A DITCHER'S DIARY

In a way, I suppose, national celebrations may be accepted as a reflection of a people's tastes in enjoyment. The uninhibited way in which the French commemorate their *Quatorze Juillet* is after all no more than a faithful extension of the habit prevalent among even the more philosophical of them of flinging wine-glasses at the end of an inconclusive discussion on the Meaning of Meaning. The Americans, escaping from their cities and always in a hurry, are probably relieving a suppressed wanderlust that used to be described as pioneering enterprise. The Siamese, I am told, make national festivals the excuse for prolonged slumber—from dawn to dusk. In India, the scale of the Republic Day celebrations this year seems to have been more appropriate to the occasion. By all accounts, the pageantry was more impressive than on previous anniversaries, and the homilies of the defence services are given such a prominent rôle in pacifist India. Perhaps the sight of marching uniforms gives an object lesson in discipline and harmony; perhaps it is simply that parades traditionally have a popular appeal, and if they have to be held at all, it is necessary to rely on soldiers and sailors. Thinking of alternatives, it occurred to me that Mr. Ajoy Ghosh's minions have long experience in a slightly similar line. New Delhi's idea of having a cultural pageant is, possibly, a good one, although I am still old-fashioned enough to believe that the essence of real culture is its modesty and exclusiveness. Those who witnessed last year's ceremonies there were most impressed, and I am sure that Saturday's will prove just as memorable. One wishes something of the same sort could be done in the State capitals as well. There is a sufficient diversity of visual art forms, in dress, dancing and for the composition of tableaux, to offer interesting possibilities. If, in addition, the annual doses of sermonising were cut, instead of being merely diluted, the spectacle might be more rewarding in terms of popular satisfaction, participation and enjoyment.

To the layman, the proposal for absorbing the Society of Incorporated Accountants with the Institute of Chartered Accountants seems to have much to recommend it. There is tidiness for one thing. There is less confusion for another. And few will deny that in these days of free articles, or even salaried ones, the old distinctions are out of date. But I cannot help feeling this amalgamation has its dangers. For example, it is going to consolidate the private-practice side of the profession just when a firmer emphasis on the importance of industrial and modern management accounting is most needed. I have always had the greatest respect for the "wizard with figures" buried in his dusty office behind a brass plate and sheet of frosted glass. But it seems to me that the up-and-coming side of the profession is really the one employed in industry, especially where it deals with costing. If this aspect is now to be differentiated even more sharply from the "traditional" practice of what is, after all, the same profession no matter what the conditions of entry and qualification, then industrial progress will be the loser. There is no inescapable reason why this should happen. But the enlarged Institute will have to show rather more imagination and tolerance than is usual in bodies of its kind, if it is not to. No doubt I will shock the purists among the custodians of professional standards, but it seems to me that the time has arrived for a more general set of qualifications, of a certain recognised standard, for all candidates to the profession, whether intended for industry or private practice. Specialisation in the various aspects of modern accounting would be possible from that point. The whole system of training might, with advantage, be redrafted on lines already adopted for such professions as medicine, and there seems to be no reason why universities should not treat it as a suitable subject for conferring a general degree. For those who cannot afford full-time university attendance, there would always be a way up through external studies or night-classes. I can see many a sage accounting head being wagged over this idea, and for all I know it may not even be original. But if the profession is not to be split into two irreconcilable halves by this merger, something of the sort may have to be devised.

I wonder how many democracies have announced an election, only to find all political parties save one confidently asserting that they are going to lose it. Yet this is the substance of what the Communists, the Praja Socialists, and the Jan Sanghis have been doing. The fact might help to rehabilitate one's faith in their realism and foresight, except that those qualities seem to vanish when their other pronouncements are made. The Communists have not had a leg to stand on since the Bulganin-Khrushchev duet tour-

ed the country shouting "Hindi Russi Bhai Bhai"—and then rushed back to murder a few thousand Hungarians. The Praja Socialists still seem to be lost in the cloud-cuckoo land where wealth need only be distributed, not produced, and where the soul-searing issue of the day is a choice between Mr. Jaya Prakash Narain and Dr. Ram Manohar Lohia. While the Jan Sanghis are merely the admiring anthropologists of an imaginary civilisation upon which Mahatma Gandhi has, one hopes, firmly and finally persuaded India to turn her back. I agree with Mr. J. P. Narain, when he says that what this country needs is a strong parliamentary Opposition. But the exhortations which Mr. Narain and his anti-Congress compatriots make from time to time should, I feel, be directed not outwards to the people, but inwards to themselves. The failure is with the leaders, not with the led. Although the example is as yet hardly worth emulating, Pakistan has shown that this sub-continent's electorate possess the political maturity to judge the precise moment when national endeavour turns into private bickering, policy into pocket-lining, and outworn shibboleths into a substitute for intellectual vigour. It is charming, for instance, to tell an industrialising economy, as Mr. Narain does, that the real power should lie in village *panchayats*. But the modern voter is sober enough to realise that political parties cannot be allowed to win elections purely on their output of poetic fantasy.

Apart from the price of liquor, the main subject for cocktail-party gossip nowadays seems to be the foreign exchange travel allowance. My Indian friends are still trying to swallow their disappointment, while cherishing the hope that something will be done for them soon. They might be lucky, although why they should consider the elections have any significance in all this, beats me. Among the European community there seems to be some confusion about the facts. The general feeling is "Well this is not aimed at us, so there must be some way out". But is there? I know that many of my British friends who are planning their leaves are banking on getting the £100 allowance to which everybody in the U.K. is entitled. And that is a pity, because they are not going to get it. Last week, the Bank of England issued a notice stating that no basic allowance would be granted to British nationals on leave in the U.K. without the consent of their "local Control". For British residents in India, that means the Reserve Bank. As things stand at the moment, the ban on foreign exchange for "travel abroad for pleasure or personal convenience", applies to foreigners as well. So those who are planning a holiday on the Continent when they go on leave this year had better forget it. They can still have their salary remitted to the U.K., but it will have to be spent there and nowhere else. The inference would seem to be, "Work in India and forfeit your right to travel abroad". It is to be hoped something is done about this soon. A British national in India is surely entitled to foreign exchange privileges at least as generous as those he would enjoy at home, otherwise it will not be long before he finds the monotony of India-U.K.-India just the least bit intolerable. There is not even the consolation of extra petrol while on leave this year. At the moment, if one is unable to flourish the almighty dollar, one must buy a new car for subsequent export to get a bigger ration. Thanks to the recent ban on the import of motor-cars as personal baggage into India, that is out of the question too. May I wish my British readers a very happy leave.

LOAN CAPITAL

AUTHORISED

Rs. 2,68,13,200	5% Convertible Loan Stock
-----------------	---------------------------

NOW BEING ISSUED

Rs. 2,68,13,200

Out of this issue, the existing Ordinary shareholders of the Company, Directors and friends have subscribed to Rs. 212 lakhs Convertible Loan Stock. (Aluminium Limited, the Company's majority shareholder, has subscribed to 50% of the issue and in order to permit increased Indian participation, has renounced, with the approbation of the Government of India its right to subscribe in excess of 50%.) The remaining Rs. 56 lakhs Convertible Loan Stock is available for allotment to the public.

AVAILABLE FOR PUBLIC SUBSCRIPTION

Rs. 56 LAKHS

5% CONVERTIBLE LOAN STOCK 1971-81 AT PAR

PAYABLE IN FULL ON APPLICATION

Applications must be for multiples of Rs. 200 with a minimum of Rs. 200.

The Convertible Loan Stock now offered for subscription was created by a Resolution passed at an Extraordinary General Meeting of Shareholders held on the twelfth day of November 1956 and is constituted by a Deed Poll as an unsecured obligation of the Company. Interest at the rate of 5% per annum (less tax) will be payable on the 1st January each year for the year ending on the preceding 31st December, except that the first payment to be made on the 1st January, 1958, shall be nine rupees and four annas (less tax) for each unit of Stock of Rs. 200 outstanding on 31st December, 1957.

The following is a summary of the principal terms and conditions upon and subject to which the Rs. 2,68,13,200 Convertible Loan Stock is being issued:

CONVERSION RIGHTS:

Stockholders will be entitled on the terms and conditions mentioned in the Deed Poll, by giving written notice to the Company, to convert every Rs. 200 nominal amount of Stock held by them into fifteen fully paid Ordinary Shares of the Company up to 15th December, 1957, and into fourteen such Ordinary Shares during the period from 1st January, 1958, to 30th June, 1960, inclusive, and into twelve such Ordinary Shares during the period from 1st July, 1960, to 15th December, 1970, inclusive, after which date the conversion rights shall cease to be exercisable. After the 15th December, 1970, the Stockholders will be subject to and entitled to the benefit of all the conditions endorsed on the Stock Certificates except the option to convert. The Ordinary Shares into which the Stock is converted will rank "pari passu" in all respects with the then existing Ordinary Shares of the Company and will be entitled to participate in any dividend that may be declared after receipt by the Company of notice of intention to convert.

REDEMPTION:

On the 2nd January, 1971, and on the same date in each succeeding year the Company will redeem at par Stock amounting to Rs. 25,00,000 until all the Stock has been redeemed. The Stock to be redeemed will be selected by drawings. In addition, the Company may redeem at par all or any of the Stock outstanding at any time after 31st December, 1970, upon giving three months' notice in writing and if the Company elects to redeem part only of the Stock, the part to be redeemed will be selected by drawings. The Company will redeem at par any Stock which remains outstanding on the 2nd January, 1981.

DIRECTORS

KAILASH CHANDRA MAHINDRA,
"Mont Blanc," Dadyseth Hill, Bombay, 26.
Industrialist and Chairman of the Company.

ERIK SPENCER GREENWOOD,
7, Mayfair Road, Calcutta. Managing Director of the Company.

LAWSON GREENE BASH,
Apt. 19D, Hotel Ten Park Avenue, New York, 16, U.S.A. Merchant.

JAKOB BOETSCH, Alternate for Mr. Bash,
9, Dover Park, Calcutta. Merchant.

JAMES WILLIAM CAMERON,
146, Easton Avenue, Montreal West, P.Q. Canada. Engineer.

MUTHIAH ANNAMALAI CHIDAMBARAM,
Chettinad House, Raja Annamalaiapuram, Madras, 28. Industrialist.

JAMES ATWOOD DULLEA,
Dogwood Lane, Westport, Connecticut, U.S.A. Senior Vice-President, Aluminium Limited, Canada.

HISTORY AND BUSINESS:

The Company was incorporated in Bengal on the 17th December, 1938, under the name Aluminium Production Company of India Limited as a private limited company. On the 21st June, 1944, the name of the Company was changed to Indian Aluminium Company, Limited, and on the 28th March, 1945, the Company was converted into a public limited company.

The Company undertook the construction of a rolling mill at Belur, Calcutta, in 1939 for the fabrication of aluminium and its alloys and operations commenced mid-1941 with an initial capacity of 2,500 tons per annum which has since been increased to 7,000 tons per annum. This rolling mill was at first entirely dependent upon the importation of aluminium ingot. However, by 1943, an aluminium smelter was constructed and completed at Alupuram, near Alwaye, Travancore. When this smelter commenced operations in 1943 it was dependent on imported alumina but by 1946 the Company was operating its own bauxite mines at Lohardaga, Bihar, and producing alumina at Muri also in

Bihar and about 80 miles from the bauxite mines. The capacity of these mining, alumina and aluminium smelting facilities was subsequently increased to produce 5,000 tons of aluminium ingot per annum at which level the smelter is now operating. However, due to recent improvements in operating techniques and the installation of additional furnaces pots, it is expected that the smelter will operate at approximately 5,600 tons per annum commencing 1957.

In addition to the above smelting and fabrication facilities, in 1951 an aluminium powder and paste plant was completed at Kalwa, near Bombay, with an annual capacity to produce 600 tons of aluminium powder and 250 tons of aluminium paste, in respect of which India was formerly dependent upon imported supplies. During 1955 the Company completed the installation of a modern extrusion press capable of producing 1,000 tons of extrusions per annum. This extrusion press is located adjacent to the smelter at Alupuram, Travancore.

DEVELOPMENT PLANS:

With the evidence that India is becoming increasingly dependent upon the importation of aluminium ingot, and since technological developments in the industry are creating greater demands for aluminium, the Company has decided to construct at the Hirakud power project site an aluminium smelter with an initial capacity to produce 10,000 tons of aluminium ingot capable of easy expansion to 20,000 tons or more per annum in the future. The necessary licence has been granted by the Government of India under the Industries (Development & Regulation) Act of 1951.

Simultaneous with the construction of the new smelter at Hirakud, the Company's bauxite mines and alumina producing facilities will be suitably expanded and subsequent further expansion will provide sufficient bauxite and alumina for all the Company's expanded smelting operations. Completion of the necessary bauxite and alumina producing facilities, arrangements are being

REFINING CRUDE OIL FROM ASSAM

WEAKNESSES IN PROPOSED SCHEME

(FROM OUR NEW DELHI CORRESPONDENT)

OIL in general and oil refining in particular have for some time been in the limelight. But messages published during the past week indicate that there will be a further delay in reaching a decision on the location of the proposed refinery for the Assam Oil Company's new oil find in Nahorkatiya. The background to this controversy is as follows. Assam's requirements can be adequately met by the small refinery in Digboi. So the new oil has to be sent outside the State. A committee with foreign experts was set up to recommend the location of the proposed refinery. This committee has already made its report, but that is still "confidential", although some of the contents have leaked out. According to these unauthorised disclosures, the committee's first preference goes to Calcutta and the second preference to a town in Bihar by the name of Barauni, near Mokameh Ghat. It may, however, be added that while the committee was still formulating its findings, some Congress leaders gave assurances to Assam that the proposed refinery would be located in that State. This supported the old theory that the committee was a mere substitute for action.

Meanwhile, the proposal for a refinery in Assam is taking shape. Crude oil from Nahorkatiya will have to be carried to the refinery, and inland water transport will have to play an important part.

It is suggested that crude oil be carried by specially-constructed flat-bottom steel barges. Some of the inland steamer companies were approached. They have given their "blueprint." River training authorities, such as the Central Water and Power Commission, were also approached. According to reports, the Commission might take about seven years to train the river. Meanwhile, the scheme for carrying crude oil in steel barges, it is believed, has been favoured. According to these reports, the refinery will be located somewhere on the banks of the river Brahmaputra. There will be a 50-mile pipeline over the dry bed of a small river on the banks of which Nahorkatiya is situated in order to take crude oil to a place on the Brahmaputra to be pumped into flat-bottom steel barges. The oil so refined will be carried by railway to Calcutta for which purpose special railway wagons will have to be manufactured. This refinery, it is proposed, will be of 1 million tons capacity, while the anticipated output of crude oil from Nahorkatiya is 2.5 million tons. In other words, either another refinery will have to be put up in Calcutta to refine the remainder of Nahorkatiya's output, or the surplus crude oil will have to be exported, or it will go to one of the other refineries in India. In any case, some method of transporting crude oil to the second refinery near Calcutta or to the port of Calcutta for export outside the Assam-Bengal region will have to be worked out. A pipeline is the most economical method of transport, it is suggested.

Public Sector Refineries

According to some Union Ministers, no new refinery will be allowed in the private sector. The first issue is, why has this scheme for pipelines, river barges and railways been drawn up? One

explanation might be that the Government, on the eve of the elections, wants to show a "get-on-with-the-job" attitude. The scarcity of foreign exchange could be another reason. It would be interesting to know how much foreign exchange would have been saved if a final decision had been reached on the formation of the Nahorkatiya oil company. It is almost four years since the Assam Oil Company struck oil in Nahorkatiya. Since then, negotiations have been dragging on, with the directors of the Assam Oil Company moving back and forth between New Delhi and London.

Foreign Exchange

Secondly, the construction of barges, special oil wagons and a 50-mile pipeline will create the need for steel and, therefore, foreign exchange. Additional foreign exchange will also be needed if there are to be two refineries instead of one. Thirdly, is the carrying capacity of the Assam link railway adequate to carry this additional load of oil, refined and crude, to Calcutta? According to reports, it is not. Fourthly, has the economic aspect of the proposed refinery been properly examined in a non-political atmosphere? According to New Delhi reports, the Assam oil refinery will be as economical as the Government's housing factory in New Delhi. Lastly, why is a refinery being located in Assam, if a second one is to be set up in Calcutta?

The State-owned character of the refinery or refineries might be one explanation for these oddities. The advantage of a unit in the public sector is that it can be operated at a recurring loss. Its main function is not to balance its budget, but to provide employment. In the case of a refinery, the target of employment is 1,200.

INDIAN ALUMINIUM COMPANY, LIMITED—Cont'd.

made, with Government approval, to import alumina to ensure full use of the new smelter.

Negotiations with the Government of Orissa for the supply from the Hirakud Power Project of sufficient electric power to enable the new smelter to produce 10,000 tons of aluminium ingot per annum and for a lease of the necessary land at Hirakud for the establishment of the smelter have reached an advanced stage and it is expected that such negotiations will be successfully concluded in the very near future.

MARKET POSSIBILITIES:

The Tariff Commission enquiry into the aluminium industry held in 1955 determined that the then prevailing demand for aluminium was about 20,000 tons per annum and it was expected to increase at the rate of approximately 5,000 tons per annum so that by the end of 1958 it would reach about 35,000 tons as follows: utensils 10,000 tons; electrical conductors 14,000 tons; transportation 5,000 tons; foil, canning and packaging 3,000 tons; engineering, building construction and other uses 3,000 tons.

However, consumption of aluminium in India in 1955 was about 27,000 tons of which approximately 10,000 tons of semi-fabricated products and 4,100 tons of ingot were imported. Since India's present capacity to produce primary aluminium ingot only approximates 7,200 tons there is an obvious and urgent need to expand ingot producing facilities and when the proposed new smelter is in operation it is expected that the new production will be promptly absorbed. Furthermore, since the Tariff Commission estimates that the demand for aluminium will increase at the rate of 5,000 tons per annum to those now planned facilities in addition envisaged that the capacity of the proposed Hirakud smelter may eventually be doubled from 10,000 to 20,000 tons per annum.

TECHNICAL AND RESEARCH FACILITIES:

The highly complicated operations of smelting and fabricating aluminium in this relatively new industry, must necessarily be supported by extensive and unceasing efforts in exploration, engineering and research. Fortunately, due to close affiliation with its principal Shareholder, Aluminium Limited, Montreal, Canada, this Company is, by agreement able to use and benefit from the research and technical facilities of Aluminium Laboratories Limited, which is a fully owned subsidiary of Aluminium Limited, and is thereby provided with technical information, engineering services and advice regarding all developments in the aluminium industry and guidance on operational problems and the development of new products.

The research facilities of Aluminium Laboratories Limited are located in Canada and the United Kingdom, and are probably the most extensive of their kind. Aluminium Laboratories Limited's annual budget for research and development exceeds \$4 million dollars.

FINANCING:

The amount required for the expansion programme and for additional working capital is estimated to be Rs. 8.65 crores, part of which will be financed by the proceeds of the recent new and fully subscribed issue of 4,11,000 Ordinary Shares and this issue of Convertible Loan Stock; the balance will be financed by bank loans, depreciation reserves and undistributed earnings. Part of the proceeds of this issue will be utilised for the

purpose of repaying the sum of Rs. 50 lakhs which the Company has borrowed from Aluminium Limited.

The financial information included herein reflects the effect of the increased aluminium ingot capacity which commenced in the second quarter of 1955 when the capacity of the Alupuram smelter was increased from 2,500 tons to 5,000 tons per annum. The increased ingot production was most rewarding and it will be noted that profits of Rs. 20,44,011 in 1955 and Rs. 23,57,567 for the nine months ended 30th September, 1956, were recorded, compared with Rs. 2,69,243 in 1954.

The new ingot capacity of 10,000 tons per annum now envisaged by this Company together with India's existing capacity of approximately 7,200 tons per annum is, as previously indicated, substantially below the Tariff Commission's estimate of an overall demand of 35,000 tons per annum by 1958. Consequently, it is expected that production from the new smelter will be marketed at profitable levels and will provide a reasonable return on the new capital invested as well as sufficient funds to service and repay loans which will become necessary during the construction period.

FINANCIAL INFORMATION:

The following is a condensation of the accounts of the Company which have been audited by the Company's Auditors, Price, Waterhouse, Peat & Co.

THE ASSOCIATED CEMENT COMPANIES LIMITED

MR. DHARAMSEY M. KHATAU'S REVIEW

The following is an abstract of the speech delivered by Mr. Dharamsey M. Khatau at the Twentieth Annual General Meeting of The Associated Cement Companies Limited held in Bombay on 25th January, 1957:—

"Following upon drastic amendments to the Constitution enabling outright nationalisation, or the assumption by Government of complete managerial control over private property upon such terms as to compensation as the Government of the day might think proper, there have been enacted a series of laws of the most far reaching character. Taken together with the previously existing restrictive laws and the voluminous labour legislation already on the statute book, they furnish such a complete range of weapons in the Government's armoury that it seems pointless to talk any longer of freedom for the private sector. The issue must be joined hereafter on the broader base of preservation of freedom and democratic institutions, because what is now in danger of being smothered is not just the private sector in the industrial field, but Free Enterprise generally."

State Capitalism

Mr. Khatau mentioned the nationalisation of Life Insurance and the resort to State Trading in cement as the two most outstanding recent examples of the suppression of Free Enterprise and the onward march of State Capitalism. He referred to the notable contribution of these two industries and their achievements over the last twenty years and observed that in the case of Life Insurance, the grounds on which that vast and growing industry was nationalised, did not bear dispassionate scrutiny. Nor had the results been conspicuously successful or demonstrably in the larger public interest. In fact there had been an alarming drop in the volume of new business since nationalisation.

State Trading in Cement

"As for State Trading in Cement," the Chairman continued, "the Government's reasons for resorting to this remain a mystery to this day. The Government's decision is all the more inexplicable because the conditions obtaining in the cement industry did not warrant any such measure. The cement industry had on the basis of its performance and record, honourably justified its stewardship."

Referring to the 'cement gap' which existed in the country despite the industry's impressive production efforts and performance, Mr. Khatau pointed out that the ACC was the first to foresee the gap which was likely to develop due to the requirements of the Second Five Year Plan. The ACC brought this to the notice of the Government as far back as September, 1955, and offered to import cement and to distribute it to the consuming public without profit. "After taking little or no notice of this suggestion for some months," the Chairman continued, "the Government seemed suddenly to feel the urgency to resort to State Trading in cement and sought to justify this step on the following grounds:—

- The need to import substantial quantities of foreign cement to meet the current 'cement gap'
- The need to sell both indigenous cement and imported cement (which would cost about Rs. 40 to Rs. 45 per ton more than indigenous cement) at an equalised price
- The need to rationalise all railborne cement movements so as to impose the minimum strain on the transport system in the country.

The Chairman met these points by stating: "We had already the existence of the 'cement gap' and had offered to import foreign cement and to sell it to the consumer at cost. We suggested that price equalisation should be done without profit by raising the price of Indian cement by just so much as would be necessary to meet losses on the sale of imported cement at a common delivered price applicable to both. We suggested that this could be done either through the medium of enhanced excise duty, or by imposing a 'price equalization pool' or 'trust funds', either voluntary or statutory. We also offered to evolve a pattern of distribution which would involve only the minimum rail movement. But the disappointing outcome of all this was that while the Government accepted our main proposals they rejected all the alternative price equalisation mechanism we had suggested. And so the country was launched upon State Trading in cement."

The Chairman then examined the mechanism of State Trading in cement. The entire production is sold to the State Trading Corporation of India and the Corporation pays to the producers of cement the old ex-works price which in the case of the ACC is Rs. 54/8 per ton for naked cement, plus packing charges (varying from Rs. 13/8 to Rs. 14/8 per ton) to be determined by Government each quarter. "But the State Trading Corporation in turn sells the cement to the public at the new equalised price of Rs. 102/8 per ton F.O.R. destination, inclusive of excise duty, selling expenses, freight and other handling charges, all of which are borne by the Corporation. As against this, our selling price F.O.R. destination before the advent of State Trading was approximately Rs. 90/- per ton. The purchase and sale of cement is arranged by the State Trading Corporation through the existing selling agencies of the cement manufacturers, who were appointed as Agents of the State Trading Corporation for this purpose. The Agents' remuneration for their services comes out of the ex-factory prices originally fixed for the manufac-

turers. The Cement Marketing Co. of India Private Ltd. is accordingly the agent of the State Trading Corporation since 1st July, 1956 for the sale and distribution of A.C.C. cement at a commission of Rs. 1-8-0 per ton."

Free Enterprise and the Freedom to Trade

Stating that the cement industry's objection to State Trading was fundamental, the Chairman stated: "We believe that all forms of State Trading constitute a serious infringement of the right of freedom of trade in a democratic society. The mere fact that State Trading can resolve a given problem in terms of agreed objectives is not, by itself, a sufficient justification for its adoption if other solutions of equal, or superior or even slightly inferior validity, are available, which do not involve state interference. Moreover, State Trading lops off the essential sales function from a basic productive industry—a function laboriously built over the years by Free Enterprise, thereby causing grave injury to it. I would also emphasise that State Trading in cement runs counter to the declared policies of Government itself as enunciated in the Industrial Policy Resolution early last year and in which an attempt was made to strike an admirable balance between State and Free Enterprise. The continual maintenance of such a balance is of the very essence of a socialistic pattern of society, if it is to be built on the foundations of a democratic constitution."

"In this context, the recent assurances of the Prime Minister in respect of the urgent need for India's adherence to democratic processes in Planning and of evolving a balanced approach between State and Free Enterprise are indeed welcome. Experience has shown that the concentration of economic power in the hands of Government, backed by monolithic majorities in the legislatures and operated through a well organised bureaucracy must, in course of time, result in whittling down both individual freedom and liberty. It is with this larger objective in view that one must repeatedly warn the Government against adopting a doctrinaire and unrealistic approach to problems of planning and in the techniques for achieving industrial development. Issues like Nationalisation and State Trading should be conceived only as the means to an end, and not as ends in themselves."

"Enlightened Free Enterprise working within the framework of planned development is an indispensable part of the democratic set-up, for there is a close inter-relationship between socially regulated Free Enterprise and Democracy. Free Enterprise should therefore be positively encouraged to thrive by appropriate incentives and reliefs whenever needed, because it had a legitimate and vital function to perform in national planning and development so long as democracy is the foundation upon which our Constitution rests."

Production and Sales

Turning to the affairs of the Company, the Chairman reported another year of successful working for the ACC. Both production and sales of cement were satisfactory. Yet the results were less profitable than for the preceding year, due to repeated increases in freight rates, the price of coal, imported stores and spares, royalty on limestone, etc. The Chairman felt that this trend of rising costs was likely to continue, and that the Company would have to face up to a substantially higher cost of production in the future. This would be further aggravated by the irresponsible demands for wage increases which were being sponsored by the INTUC, and the threat of hasty legislation to enhance the rates of Provident Fund contribution which was being pressed for by Government.

Plant Rehabilitation and Expansion

Reviewing the Company's programme of modernisation and expansion, Mr. Khatau reported that it was progressing according to schedule and that the Company had formulated plans to expand its installed capacity over the next five years to a total of 5.2 million tons per annum as its contribution to the national target of 12.5 million tons of cement under the Second Five-Year Plan. During the year the modernisation and expansion of the Company's Bhupendra, Kishta, Chalbasa and Kymore factories continued satisfactorily. The Chairman also announced the Company's intention to install a third unit at the Sindri Works, "provided that a satisfactory price for the additional raw material (calcium carbonate sludge from the Sindri Fertilizer Factory) required can be negotiated with the Fertilizer Factory."

New Projects

The Chairman stated that satisfactory progress had been made in the construction of the Company's new cement factories at Manicheral and at Portbandar and that work on the construction of a new plant at Drug would be started in the near future. All these three factories would operate the dry process, instead of the wet process employed at other ACC factories. The Company's newly constructed refractory plant at Katni was functioning satisfactorily and its output would steadily be stepped up to its rated capacity.

Finance for Expansion Projects

Speaking about the very heavy capital outlay entailed by the expansion programme, Mr. Khatau stated that the projects would be financed partly out of the proceeds of the recent issue of new shares and partly by borrowing against the Company's cash-

credit arrangements with the State Bank of India up to the full limit of Rs. 4 crores. He continued: "Despite this, however, substantial additional funds will obviously be needed. By far the largest portion of this extra finance will have to come out of the internal resources of the Company consisting of depreciation allocation and undistributed profits retained to the credit of various reserves. This process of ploughing back as large a portion of the profits as was possible is in serious danger of being prejudiced in the years to come by recent trends in bonus awards and in the taxation policies of Government. As for the former, there appears to exist no appreciation whatsoever of the need to plough back into industry an adequate volume of profits not merely for rehabilitation and modernisation of existing plant but also for expansion of capacity; with the result that these needs are virtually ignored and a substantial portion, if not the whole, of the so-called 'surplus' is cheerfully awarded as Bonus. The time has come for some realistic thinking in this matter with a view to evolving a fair and workable formula for the award of bonus so that industry may not be deprived of that steady volume of annual accretions to internal resources so essential to the financing of expansion and modernisation. If there must be a curb on industrial dividends, then there must also be one on bonus to industrial workers."

Dealing next with the effects of the recent Finance Act upon industrial development, the Chairman observed: "The Act directly impinges upon industrial development in two ways. In the first place there can be no doubt that with the existing confiscatory level of personal taxation, the Capital Gains Tax and the heavy additional Corporation Tax on dividends in excess of 6% can only act as decisive disincentives to new investment and to ploughing back profits into industry. On the other hand, the deposit scheme for canalising in approved directions the utilisation of corporate funds represented by undistributed profits and the tax saved on depreciation allowances are, not in itself, give cause for anxiety. But the effect of the whole scheme will depend entirely upon the flexibility and consideration with which it is operated in practice. In particular, Companies such as ours which may have already used their funds for approved purposes should not be required to make any deposits, and 'approved purposes' should include not merely the full range of Fixed Capital and Working Capital requirements of a Company, but also the repayment of moneys borrowed and utilised for those purposes. There is every reason to hope that the Rules which are now being framed will fulfil these expectations. And if the deposit scheme is so operated, it need cause no undue concern; but otherwise, it may precipitate a major crisis in the money market and bring all significant industrial development to a grinding halt."

The ACC-Vickers-Babcock & Wilcox Project

The Chairman reported that satisfactory progress had been made in the Company's negotiations with Messrs. Vickers Ltd. and Messrs. Babcock & Wilcox Ltd. for the establishment of an up-to-date heavy engineering plant, which within a few years, would make India largely self-sufficient in the whole range of cement-making machinery. The new project would also provide a substantial proportion of the country's requirements of water tube boilers and mining machinery.

Pakistan

The Chairman stated that the ACC's two factories in Pakistan were operating satisfactorily. As anticipated, prices of coal, stores and other materials had risen sharply in that country, with the devaluation of the Pakistan rupee. But the price increase granted by the Government of Pakistan covered only a portion of the actual increase in costs, and unless production costs declined, Mr. Khatau felt that the Company would have to approach the Government there for an upward revision again. Mr. Khatau also reported that as a result of the representation by the Company the Pakistan Government had since rescinded certain restrictive clauses in the Cement Control Order which were not warranted in view of the supply position there.

Labour-Management Relations

Turning to labour-management relations the Chairman observed: "I am very glad to report that the present year has been one of distinct improvement in our relations with our employees. I am heartened to think that the enlightened and progressive policy which your Company has always followed in promoting the welfare and well-being of its employees is not without its due response from them. And I would like to congratulate my labour friends and officials of the trade unions at the various factories for the generally realistic attitude which they have adopted in solving problems of common interest and for showing an increasing awareness of their responsibilities in our common endeavour. Unlike in past years, there was no strike or stoppage of work to mar the growing accord and understanding based on good faith and goodwill."

"In my report last year I had referred to the unanimous decision of the Industrial Committee on Cement to abolish the contract system wherever possible in the normal working of our factories. With the co-operation of the Unions we were able to implement this decision during the year under review. This provides an excellent example of the Company's workmen and management striving together with singleness of purpose to achieve satisfactory results in solving important issues."

Bonus and Appreciation

The Chairman announced that the Board had recommended this year the payment of a bonus equivalent to three months basic earnings to all employees at the Head Office, the Works and Branch Offices, including those employed in the Cement Marketing Company, and concluded by recording the Company's warm appreciation of the unstinted co-operation and unremitting hard work put in by all members of the Company's staff during the year.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting which will be sent separately to Shareholders.

LLOYDS BANK LIMITED

INCESSANT DEMAND FOR ACCOMMODATION

SIR OLIVER FRANKS'S STATEMENT

The annual general meeting of Lloyds Bank Limited will be held on 15th February, 1957 in London.

The following are extracts from the statement by the Chairman, The Rt. Hon. Sir Oliver Franks, G.C.M.G., K.C.B., C.B.E., circulated with the report and accounts for the year 1956:—

The profit for the year, at £2,541,793, is £219,354 higher than last year and in conformity with the intention announced in the circular letter to shareholders dealing with the subject of capital reorganisation, since carried into effect, we propose a dividend of 13% per annum, an increase of 1% compared with 1955. Our business in general continues to expand year by year, as evidenced, for example, by the growth in the number of accounts.

The Credit Squeeze

Throughout the year, our lending operations have been governed by the principle of the so-called "credit squeeze" initiated by the Chancellor's appeal for credit restraint originally made in July 1955 and reaffirmed, among other occasions, as recently as November last.

We continue to give effect to the Chancellor's wishes. In June 1955 our normal advances to domestic customers, falling within the purview of the Chancellor's directives, amounted to £298.5 millions. By December last, their total had been reduced to £278.4 millions. This contraction masks a substantial increase in our lendings to customers in a group of industries—engineering, iron and steel, shipping and chemicals, whose contribution to exports and to the strength of the economy in general has justified larger borrowings from the banking system.

These figures, of course, relate only to part of our total business. At each of the dates mentioned, the aggregate figure of loans and overdrafts appearing in our published statements was about £50 millions higher than those I have just quoted.

The margin of £50 millions was made up of three special categories of lendings falling outside the scope of the directives. One of these is advances to the nationalised industries. As is well known, finance for these industries is being provided as a temporary measure by the Treasury. Our own lendings have thus fallen substantially, and in November last amounted only to about £10 millions. For the rest, the margin is accounted for by two other categories of lending, both of which have been expanding during the period of the squeeze.

Eastern Branches

First, it happens that alone among the clearing banks we have a number of branches in three overseas countries, whose figures are included among our balance sheet totals. These are our twenty offices in India, Pakistan and Burma. The lendings of these Eastern branches naturally fall outside the ambit of the United Kingdom credit squeeze, since these are rupee advances made against rupee deposits. In India especially, with an economy expanding so rapidly, there is an incessant demand for bank accommodation which, owing to tightness of funds, banks do not always find easy to meet to the full. This demand is reflected in our own advances, which show material expansion.

The increasing business is being handled in a most satisfactory manner by our staff in the East, both European and Asian, and to them I would express our appreciation of their good work.

The second special category of lendings consists of a relatively new form of accommodation, namely medium-term credits extended to overseas buyers to enable them to purchase capital equipment manufactured in this country.

We have made facilities available in this form to assist the export of capital equipment for such projects as power stations, railways, steelworks and hydro-electric schemes overseas, and in some cases this has enabled British manufacturers to secure valuable contracts that would otherwise have gone elsewhere. Among the more important transactions of the kind have been medium-term credits to finance the export of large numbers of civilian jet air-liners to dollar markets.

Approach to Monetary Stability

The "credit squeeze" is, of course, only one strand in a far wider programme of disinflationary measures. Prior to the crisis in the Middle East, these seemed steadily to be achieving their aim. Indeed, in one most important respect they had already brought satisfactory results, namely in swinging our balance of payments back from a deficit of £107 millions in the second half of 1955 to a surplus of £144 millions in the first half of 1956.

This movement is one more convincing demonstration of the truth that our recurring overseas crises since the war had their origin in an excess of demand at home. The favourable turn in the balance of payments could not have come about but for the disinflationary measures.

The New Phase

It is clear that the events in the Middle East have opened a completely new phase in our economic affairs. Our long-term problems are unchanged; we still have to maintain the value of sterling and to speed up the rate of accumulation. What has gone is the prospect of a smooth transition to a state of monetary equilibrium in the course of the next few months.

A new chapter has been opened. At best, we must reckon with an interruption of some months in the advance towards our long-term objectives. Fortunately, American co-operation has been forthcoming in the measures taken to avert some of the more serious possibilities that were at one time feared. We can now count upon a sizeable flow of oil across the Atlantic and also upon dollar facilities to help in paying for it. Moreover, the danger to sterling

SOUTH EASTERN RAILWAY

TENDERS

The General Manager, Garden Reach, Calcutta-23 invites tenders for supply of the following items:—

1. Tender No. GM1/57/64CS(57) for supply of 45,000 gallons of Paint Black ready mixed quick hard drying for wagons to the Railway's Specn : in 40/45 gallons sound S/H non-returnable drums.

2. Tender No. GM2/57/CE(C)/WP/8/B(57) for supply of 7 Air-cooled Diesel Engine Driven Air-compressor, Free Air delivery—250 CFM, Piston displacement 310 CFM, normal working pressure 100 lbs. per sq. inch. Maximum pressure 125 lbs. per sq. inch mounted on a trailer with 4 pneumatic tyres similar to Atlas Copco type "Monobloc" complete with spares, instruction book, tools in box etc.

3. Tender No. GM3/57/65CS(57) for supply of 1416 T.W. Chairs, 804 T.W. Tables and 486 T.W. Stool oval to the Railway's drawings.

Tender forms are obtainable from the Controller of Stores, Garden Reach, Calcutta-23 (I. B. Section) on remittance of Rs. 5/- per copy per tender (not refundable) by Money Order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, Garden Reach, Calcutta-23 by local firms. Earnest money against the tenders is Rs. 2500/-, Rs. 2000/- and Rs. 1000/- respectively. Closing date of all tenders is 26-2-57 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid income tax clearance certificate and the earnest money receipt along with the tenders.

what the eye doesn't see...

There are some things you don't see disappearing. You don't see the loss of heat from a badly-insulated steam pipe—but you see the bills, because heat costs money. So it is well worth having your steam systems properly insulated. The best insulating medium for this purpose is undoubtedly Newalls 85% Magnesia, produced by our associates Newalls Insulation Co. Ltd. But it's not just a good product we have to offer... we can offer free technical advice on any insulation problem. Heat or cold insulation is a science. Our highly trained staff can advise you exactly on the thickness to which insulation material should be applied. Too little or too much insulation means less economy—and it is our job to save you money. Practically every industry uses asbestos in one form or another. In our new factory at Chhatkopar, we make a wide range of technical asbestos goods to satisfy the varying needs of India's economy. The increasing use of Asbestos is an index to India's industrial progress.

TAXATION REFORM IN INDIA COPING WITH REVENUE NEEDS FOR PLANNED DEVELOPMENT

By P. C. Jain

THE Taxation Enquiry Commission, Dr. Nicholas Kaldor and the Finance Ministry have suggested a number of reforms in the Indian tax system. Some of these "reforms" have already been introduced in the last two Budgets of Mr. Chintaman Deshmukh and in the supplementary Budget of Mr. T. T. Krishnamachari. It has been indicated that the remaining ones will be introduced by March 1958. The important question is whether the proposed reforms will make the Indian tax system more balanced and equitable, and whether the present time is opportune for introducing them. The Taxation Enquiry Commission has recommended a widening and deepening of the tax structure in India. Although it suggested an increase in some direct taxes, its main emphasis was on increasing revenue through indirect taxes. The Commission was definite in its recommendation that the maximum rate of taxation on incomes above Rs. 12 lakhs should not be allowed to exceed the then prevailing rate of 13½ annas in the rupee. Against this, the main emphasis of the Kaldor report was on raising more revenue through direct taxation by taxing capital gains, personal expenditure, gifts and the net wealth of certain categories of people. The Kaldor report also emphasised the need to reduce the maximum rate of income tax while introducing the expenditure tax. The object of both these expert enquiries was, firstly, to make the Indian tax system more equitable and progressive, secondly, to reduce tax evasion, and, thirdly, to increase the revenues of the Government.

What has actually happened so far is that the Government has implemented some of the suggestions of the Taxation Enquiry Commission but ignored others. It has introduced the capital gains tax on the recommendation of Dr. Kaldor and is thinking of levying the other taxes he suggested without at the same time reducing the maximum rate of income tax. In the Central Budgets for 1955-56 and 1956-57, the income tax rates were made steeper on certain income groups and a number of indirect taxes such as import, excise and other duties, were imposed as recommended by the Taxation Enquiry Commission. But the maximum rate of taxation on incomes, contrary to the recommendations of the Commission, was raised to 14 annas in the rupee; this, with a 5 percent surcharge, exceeds 14 annas 8 pies in the rupee and is only slightly less than the penal rate of 15½ annas in the rupee in the Liaquat Ali Khan Budget of 1947-48, which produced very harmful results. There was a certain amount of balance in the Commission's recommendations, but it has been lost by accepting some parts and rejecting others. The net result is that the reforms so far introduced have merely increased Government revenues without making the system more equitable and without reducing tax evasion.

Taxable Capacity

The first question which has to be examined is whether an increase in taxation is really needed for implementing the second five year plan, and whether the Indian people are in a position to bear it. In raising taxation during the past two years and in contemplating a further increase soon, the Government has considered the facts that: (a) in India, as found by the Taxation Enquiry Commission, the total revenue (including tax and non-tax revenue) of all the Governments together constitutes only 8½ percent of the national income, which is much lower than in most advanced countries of the world; and (b) with an increase in the national income every year as a result of the first and second plans, the taxable capacity of the people is increasing. This means that there was already an unutilised taxable capacity in India, that it has increased with a rise in the national income, and that the Government is, therefore, fully justified in imposing heavier taxation. This reasoning is based on a wrong understanding of the concept of taxable capacity. Taxable capacity is not a matter of averages. It depends to a large extent on the distribution of wealth. In India, a vast majority of the people have had much too low an income to have any taxable capacity at all. This is not the case in advanced countries, where the total revenue of the Government often exceeds say, 16 or 18 percent of the national income. In a backward country like India, total revenue, at 8½ percent of the national income, is a much greater burden than the 16 or 18 percent in advanced countries, where even the poorest have a fairly high income judging by Indian standards.

This leads to the point that taxable capacity does not depend only on a person's income, but on his income taken along with his basic minimum requirements of food, clothing, etcetera, which are vital for his health and efficiency. It depends, to a large extent, on the price level, and decrease if prices rise faster than incomes. This has actually been the case in India with the index number of wholesale prices at 431 for the week ended 22nd December, against 360.3 in 1955-56 and 377.5 in 1954-55. It is unfortunate that sufficient statistical information is not available to estimate correctly the people's taxable capacity. But the high level of unemployment, a declining standard of living among a large number of the people, and a fall in the rate of savings of the lower and middle classes, suggest that the limit of taxable capacity has been exceeded. In such conditions, further in-

crease in taxation would drastically reduce capital formation and undermine initiative and enterprise. India cannot afford this if the objectives of the second plan are to be achieved.

The Alternative

But the Government need more revenue to finance the plan, and if additional taxation is not imposed how is it to get the money? Some have argued that it is better to demand additional sacrifices from the people, even if they are not, perhaps in a position to bear them, rather than to endanger the plan by the lack of funds. Actually, it is possible to make a substantial plan succeed without increasing taxation. For one thing, the present plan is too big and it would be much less dangerous if the desired rate of progress is obtained in, say, eight years instead of five. Until recently, the difficulty has been that no one has planned deliberately to fill gaps in India's economic development, so she has remained a backward country. But now, since efforts are being made in this direction, the process of development is bound to be accelerated. If the total outlay under the plan is curtailed, it would save the unduly heavy sacrifice which is involved in increasing taxation beyond the people's capacity to bear it. It is quite reasonable to expect that at the 1956-57 level of taxation, the surplus from current revenues would amount to Rs. 400 crores in five years, instead of Rs. 350 crores in the second plan. The plan visualises deficit financing of Rs. 1,200 crores in five years. This is too high a level but deficit financing of Rs. 100 crores a year, or Rs. 500 crores in the plan period might be safe. If to this is added Rs. 1,200 crores from borrowings, Rs. 400 crores from "other Budgetary sources" and Rs. 800 crores from external sources as mentioned in the plan, the total developmental outlay would be Rs. 3,300 crores instead of Rs. 4,800 crores. In meeting it, the Government need not impose new taxes of any kind. In this way, the plan would be financed without having to tax the people at penal rates. It may be emphasised here that it should be possible to increase the developmental outlay to the extent to which the commercial services, State corporations, etcetera, yield more revenue, and to the extent to which more foreign aid is available.

The Government has found it necessary to increase taxation to finance the plan because it made the initial mistake of reducing the share of the private sector. In the first plan, the private and public sectors had an equal share of investment; in the second plan, the public sector has two-thirds and private enterprise only one-third. If the share of the private sector in the second plan is increased, it will not be necessary to increase taxation, while at the same time a suitable rate of economic progress will be achieved. Private enterprise in India has done well so far as is shown by the increase in the paid-up capital of joint-stock undertakings, the increase in production and the high rate of investment which it has been able to maintain during the first five year plan. It would be a pity if for purely ideological reasons in favour of State enterprise, which are of doubtful validity, the people are called upon to pay taxes beyond their capacity.

(To be continued)

AUSTRALIAN TRADE MISSION TO INDIA AND CEYLON

The Australian Government is sponsoring a trade mission to India and Ceylon. It is expected to arrive in Calcutta on 23rd March, spend five weeks in India and leave for Colombo on 30th April. The mission will consist mainly of manufacturers, exporters and representatives of Australian banks. They will visit Calcutta, Madras, Bombay, Delhi and such other places as may be of special interest to particular members. Australian exports to India, valued at £A11,966,204 in 1955-56, were made up of nearly 300 separate categories, including foodstuffs, wheat, wool and manufactured goods. The Australian Government is hoping to increase the volume of trade with India. An additional Australian trade representative will be appointed in India when a Commercial Counsellor takes up duty at the Australian High Commission, New Delhi, in a few months' time.

ELECTRICITY OUTPUT INCREASES

In September, 1956, 737 electricity undertakings in India produced 311.1 million kWh of power, of which 666.4 million kWh were sold to ultimate consumers. Power output during August, 1956, was 792.1 million kWh. Six diesel generating undertakings and two purchasing undertakings were the new additions during the month. The generating undertakings are in Dhubri in Assam, Pusa in Bihar, Umerkot in Pipariya in Madhya Pradesh, Bhadrak in Orissa and Mundra in Kutch. The purchasing undertakings are in Barnala and in Rajpur township in Punjab. The output and sale of power stood at 717.6 million kWh and 587.1 million kWh in September, 1955, and 209.1 million kWh and 175.9 million kWh in September, 1956, respectively.

Mr. H. S. Malik, lately Indian Ambassador to France, has been appointed Special Director (India) of Simon-Carves Ltd., who have important interests in India and maintain a permanent staff here. Mr. Malik will be resident in Delhi.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

DEPOSITS RISING

Wednesday, 30th January.

BANK advances have continued to rise during the past week led by the requirements of the sugar industry, which has now taken first place from the cotton industry in demand for funds. The money position has, however, not deteriorated too appreciably because there has been an accompanying increase in the volume of bank deposits. This is probably due to recent cuts in imports and to subsequent depletion of stocks, especially those of steel. The demand for funds from the jute industry has continued at a high level. The interbank market has continued easier during the past week and the call rate is unchanged at 3½ percent, although business has been reported at 3½ percent.

There has been some life in the market for export documents this week, with fair-sized tea bills passing and a number of small gunny bills coming to hand. Remittance has improved slightly. The rate for sterling has been fully maintained during the past week against both Continental currencies and the dollar.

Bullion was firm on strong bull support followed by frantic bear-covering. Silver soared to Rs. 182-4 and gold increased to Rs. 108-5.

During the week ended 25th January, Government of India Treasury Bills for Rs. 50,64,50,000 were sold in favour of the Reserve Bank.

A decline of Rs. 5.37 crores to Rs. 1,485.52 crores in active notes was the notable feature of the return of the Reserve Bank of India for the week ended 25th January. The total note issue was Rs. 46 lakhs lower at Rs. 1,509.08 crores. A decline of Rs. 14.90 crores to Rs. 427.43 crores in foreign securities was offset by an equivalent increase of Rs. 840.13 crores in rupee securities. An increase of Rs. 1.94 crores to Rs. 83.18 crores in balances held abroad was presumably made by a transfer of securities from the issue department. Deposits of the Government of India and other Government accounts increased by Rs. 75 lakhs and Rs. 6.30 crores to Rs. 51.46 crores and Rs. 13.33 crores, respectively. Balances of commercial banks at Rs. 51.76 crores, showed a decline of Rs. 1.22 crores. Investments dropped by Rs. 3 lakhs to Rs. 49.62 crores. Other loans and advances declined from Rs. 102.61 crores to Rs. 102.19 crores, of which advances to scheduled banks against usance bills amounted to Rs. 59.31 crores against Rs. 60.70 crores. These advances totalled Rs. 45.62 crores since 1st January, 1957. Ways and means advances stood at Rs. 7.48 crores (Rs. 8.42 crores).

The statement of the position of scheduled banks for the week ended 18th January, 1957, shows Demand and Time liabilities at Rs. 666.38 crores (Rs. 608 crores on account of borrowings from banks) and Rs. 458.91 crores (Rs. 246 crores), compared with Rs. 653.16 crores (Rs. 457 crores) and the previous week. Cash has increased by Rs. 1.27 crores to Rs. 36.48 crores, while balances with the Reserve Bank have decreased by Rs. 2.40 crores to Rs. 48.32 crores. There is a drop of Rs. 30 lakhs in investments to Rs. 362.12 crores. Advances and bills discounted, at Rs. 815.87 crores, show an increase of Rs. 7.44 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 7.5 percent and 72.5 percent, against 7.7 percent and 72.8 percent.

The return of the State Bank of India for the week ended 18th January, 1957, shows a drop of Rs. 2 crores in total deposits to Rs. 245.76 crores. Rs. 3 lakhs in Government securities are up by Rs. 95.60 crores, while other authorised investments remain unchanged at Rs. 11.46 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have increased by Rs. 3.36 crores to Rs. 154.77 crores. Cash and balances are, in consequence, shown at Rs. 180.28 crores, or Rs. 55 lakhs less.

The enhanced rates of stamp duty on Bills of Exchange prescribed in the Indian Finance (2) Act 1957, will come into effect on 1st February. The effective rates, however, are being reduced by executive notification to half the rates prescribed in the Finance (2) Act.

The profit of the HIND BANK LTD., for the year 1956, subject to audit, including Rs. 1,06,000 brought in, has amounted to Rs. 13,77,000. Taxation provision absorbs Rs. 4½ lakhs, reserve fund Rs. 3.75 lakhs and bonus to staff Rs. 90,000. The dividend has been declared at Rs. 3 a share, leaving a carry-forward of Rs. 1,62,000.

Grip on Power... wherever electricity is generated, transmitted or distributed NICCO Cables and Wires are held in overwhelming preference for their utmost reliability in carrying this vital energy. NICCO products are India's own and have proved just the right materials for the tropical climate.

FUNCTIONS OF REINSURANCE CORPORATION

CONFORMING TO STRICT BUSINESS PRINCIPLES

By A. C. Guha Ray

THE supposedly large amount of reinsurance business available overseas has been offered as the main reason for floating the Reinsurance Corporation of India. It has been formed after an evaluation of the revenue accounts in the export and import of insurance. The findings of the "gains and drains sub-committee" of the Executive Committee of the General Insurance Council have, it is reported, led to the view that insurance remains essentially an import. It is to be hoped that the body took all factors into consideration before arriving at this view; in insurance, unlike in most other materials of export and import, the final profit is the correct measure of the inflow and outflow of insurance, but statistical material on that basis, as far as can be gathered, has never been compiled. Whether, therefore, the reported findings of the sub-committee are in fact correct, is not yet certain. The Reinsurance Corporation is considered as fulfilling an economic necessity, although the promoters obviously cannot be sure, in the absence of correct statistical data, whether on the whole the basis of its formation is correct. It is one thing to treat the Corporation as an aspect of export promotion, and quite another to make of it a truly professional reinsurer.

Professional Reinsurer

A professional reinsurer, in conception, is different from a body of the character of the Reinsurance Corporation. The trading ethics of a pro-

fessional reinsurer build into a tradition which is universally accepted. It trades on the service it provides, without compulsion of any kind. Its international character is its security, and its service its best justification. The Indian Reinsurance Corporation has started trading with a subsidy given in the form of compulsory cessions. Such procedure is basically in conflict with the trading ethics of a professional reinsurer. The latter solicits business under the stimulus of competition by rendering the best possible service. The company making cessions thus has freedom of choice, and it can sell to the best advantage. Since it is also the privilege of the reinsurer to exercise a choice in selecting accounts, this automatically acts as a corrective to the ceding companies in building the direct portfolio. An unsatisfactory account will not sell, and if it does, will not do so at an advantage.

Compulsory cessions and acceptances do not act as a corrective to bad underwriting. On the contrary, they are likely to load the Corporation with many accounts which, if freely examined, might not have been accepted. The articles of association of the Corporation have been so drafted that it can hardly adopt the normal trading ethics of a professional reinsurer. Its hide-bound constitution is a disadvantage. Its norms of trading have been outlined in such a way that although it will get a certain amount of business from the Indian market, it will be labouring under a major disability. A number of companies might heave a sigh of relief at the opportunity of unloading on to the Corporation a part of their unsatisfactory accounts. They will then get reciprocity for their cessions up to at least 50 percent, composed of a mixture of good and bad business. This reciprocity could not have been obtained with a professional reinsurer, since international reciprocity is a sensitive instrument, and is very evenly weighed. It is too early to

assess the value of the Corporation's reciprocity, but the subsidy in the form of reciprocity composed of better accounts representing India's general experience to the failures is not good. Nor is it good for the Corporation to be bound under its own terms to accept anything that may be offered by members.

Prospects Overseas

A Corporation with such norms of trading can hardly hope to expand sufficiently abroad. In the first place, Indian insurance as a trade is suspected in many places overseas. The drastic act of nationalising life insurance has damaged confidence in the Indian market. The political climate and ideological trends are, in many ways, at variance with those in the west. There is likely to be, in some form or other, a psychological hostility to a venture of this kind among foreign operators, particularly so because the Indian Reinsurance Corporation represents a country which has barred trading in life insurance in India for foreign companies and also because the Indian Corporation itself has commenced trading with unfair advantage by soliciting off compulsorily part of the business available to reinsurers. It would have been welcome as a trader competing fairly for business, but it is welcome when it has a subsidy to back it. Also, it will not be able to make a competitive sale of its own surplus, for it can hardly vouch for its accounts. It will not be able to put forward the normal argument that it has selected its accounts with great diligence and care.

A reinsurance company thrives on the averages achieved by participation in numerous selected accounts in many parts of the globe. The law of averages enables the reinsurer to produce balanced results by ensuring that bad results in one territory are offset by good results in another. A reinsurer trades on averages and is therefore very anxious to widen the ramifications of its business to all parts of the globe. Experienced salesmen are sent to far-flung areas. The result is a pool of experience, which has inestimable value for the management. By making correct choices and negotiations, a spread is obtained where the law of averages has the fullest scope for operation, thus ensuring balanced results without extreme fluctuations.

Fire Business

Can the Indian Reinsurance Corporation hope to penetrate foreign markets? Perhaps, in time, it could do so in Asian countries. But for many years the instability of these countries will make them a doubtful underwriting area. The Corporation's progress in the western hemisphere would have been easier if it had not started with a subsidy and with the threat of nationalisation hanging over Indian general insurance. Many foreign accounts, of course, be offered to the Corporation, particularly in fire, for Indian fire business has generally been satisfactory. But the same accounts could have been offered, or have already been offered, to the companies. In the case of the latter, acceptance is made by direct sale and purchase, based upon experience and on the value of the accounts. For the Reinsurance Corporation, there can hardly be a direct account. All it can have are retrocessions from the market of retrocessions overseas. As an account, retrocessions are hardly sufficient, just as retrocessions to companies from the Corporation can hardly be of the level generally expected.

Lack of Experience

The management of a reinsurer should inspire international confidence. In India, for a first venture of this kind, there is no pool of experience to fall back upon. The board, composed of eminent men, must be technically advised. No emotional bias based on nationalist sentiments should stand in the way of obtaining experience from overseas. In the long run, the investment will pay for itself. Membership of the Corporation is limited to general insurers, with an agreement limiting shareholding and the exercise of voting power. The latter limitation has been devised so as to ensure that no general insurer or group can control the policy of the Corporation. It has, however, been so qualified that by a notification the whole agreement can be abrogated. The complex and long-winded agreement may thus prove largely theoretical in nature. It is unwise to have too close an intermingling of financial interests between the direct writing company and the reinsurer. The aims of the two are not the same; they are distinct and separate wings of insurance. Should a group of direct underwriters be able in some way to control the policy of the Corporation, the development will so undermine its value that it might become worthwhile for other underwriters to re-examine their attitude towards it.

GIFT OF U.K. EQUIPMENT FOR INDIAN FOOD INSTITUTE

Orders have been placed in the United Kingdom for £14,500 worth of equipment which the British Government is giving to India for use at the Central Food Technological Research Institute in Mysore. The equipment is being supplied under the Technical Co-operation Scheme of the Institute Plan, in response to a request from the Institute. Included in the equipment is laboratory apparatus, testing equipment, and a farm tractor with plough, cultivator and other attachments. Last year, the British Government supplied over 50 books and technical journals to the Institute in Mysore.

Stocks and Shares

QUIETER TREND IN THE STOCK MARKET

OPERATORS DISAPPOINTED OVER INDIAN IRON RIGHTS ISSUE

Wednesday Evening.

LAST week's hectic rise in share prices has not been maintained. Selling pressure developed before the week-end and by yesterday the Indian Iron quotation had fallen to Rs. 28-12. Other speculators have been weaker in sympathy and most investment counters are now below the levels they attained last week. The reason for the setback is the disappointment over the Indian Iron rights issue, although prices had begun to move back before yesterday's announcement. Why the news should have come as a surprise to the market is difficult to understand, because the facts were known as far back as last November. The main cause for disappointment seems to have been the news that the rights shares will not qualify for the dividend earned in the year ended March 1957. Two prices are being quoted in unofficial dealings: Rs. 20-8 for the new shares and Rs. 21-8 for the old. The undertone of the market is now distinctly quieter, although Irons have been quoted unofficially at Rs. 29-3 this evening.

There has been little life in investment counters during the past few days. Engineering scrip are generally quieter in sympathy with the lower trend of Indian Irons, while miscellaneous shares are largely unchanged. There has been scarcely any movement in coals in spite of the Appellate Tribunal's judgement announced yesterday. Burakurs have moved back to Rs. 21-3, but it is reported the price is only nominal. Tea shares have improved slightly, but the turnover has been limited. Government securities are quietly steady.

Details of the week's trading follow.

The Government securities market continued steady, with 3% Conversion Loan 1946-86 being marked up further to Rs. 73-9; in sympathy, 3% Non-Terminal Paper rose to Rs. 73-7. In short-dated loans, 3% 1957 was unchanged at Rs. 99-12, as was 3% 1958 at Rs. 99-9; 2½% Loan 1960 and 2½% 1961 were unchanged at Rs. 96-5 and Rs. 93-5 respectively. The enquiry for 3½% 1961 continued and the price improved further to Rs. 99-7 with buyers over, while 2½% 1962 was quoted at Rs. 93-15. There was a keen enquiry for 4% 1960-70 at Rs. 100-12 with no sellers to meet the market. Among medium-dated issues, 3% 1963-65 had buyers at Rs. 94-4 and 3½% 1964 and 1965 were marked up to Rs. 98-8 and Rs. 98-5 respectively. Three percent 1964 was one anna better at Rs. 94-4. In long-dated loans, 3% 1966-68 was unchanged at Rs. 92-4 and there was again a good enquiry for 3% 1970-75 which improved to Rs. 87-1 owing to shortage of scrip; 3½% 1974 was quoted at Rs. 98-8.

In provincials, 4% Rajasthan 1968 was officially supported at Rs. 97-14 and 4% West Bengal 1968 and U.P. 1968 were done at Rs. 99 and Rs. 97-15 respectively. Four percent U.P. 1963 had sellers at Rs. 99 without attracting buyers.

Business in preference shares was on a much reduced scale. In the miscellaneous group, Bathgate & Co., reported business after a long interval at Rs. 42 and Bengal Chemical 2nd Preference were marked at Rs. 82. Burrakur 1st changed hands at Rs. 114-8 and Burn & Co. 6% were done at Rs. 110. Brooke Bond changed hands at Rs. 83 and there were small buyers of British India Corporation at Rs. 119-8. Calcutta Electric were marked at par and Dalmia Cement Rs. 100 paid-up at Rs. 90. Gil-Aluminium at Rs. 77. Indian Iron & Steel were better at Rs. 105-8. Jardine Henderson were reported at Rs. 60-8 and Karanpura Collieries at Rs. 59. Box at Rs. 92-8. National Tobacco 2nd Preference came to hand at Rs. 62-4 and Richardson & Cruddas were offered at Rs. 75. In jute, Bengal were done at Rs. 77 and Belvedere at Rs. 105. Budge Budge were sold at Rs. 100 and Hastings at Rs. 90.

In the banking section, Punjab National turned sellers at Rs. 65-8 and United Commercial at Rs. 56-4 against opening quotations of Rs. 56 and Rs. 57 respectively. Hind Bank were unchanged at Rs. 37.

In the railway section, a small lot of Arrah-Sasaram changed hands at Rs. 50 and Dehri Rohtas were marked at Rs. 13-13.

Cotton textile shares showed little variation. Among the few transactions reported were Basanti Elgin Mills were done at Rs. 26-10 and Jayshree at Rs. 15-11. Kesoram were quietly steady.

With the exception of Katras Jherriah, which closed Rs. 3 higher at Rs. 63, there was little or no change in the prices of coal shares. Bengal were Boree were unchanged at Rs. 20-12. Burrakur at Rs. 21-3. Central India and Western Bengal came to hand at Rs. 6-11 and Rs. 6-3 and there were a few sellers of East Indian at Rs. 27-4. After a long lapse, Searsole were reported at Rs. 5, Samla Collieries were marked at Rs. 12-5 and Talcher at Rs. 2-8. Standard were unchanged at Rs. 20-14.

Except for a few selected jute shares whose prices were maintained, and in some cases were improved upon, the general trend was towards lower levels. Here is a chart showing representative price movements.

	Opening 24-1-57 Rs.	Closing 29-1-57 Rs.
Alexandra	180 0	160 0
Anglo-India	140 0	138 0
Barnagore	103 0	101 8
Cheviot	150 0	145 0
Birla	16 0	16 0
Budge Budge	110 0	110 0
Fort Gloster	320 0	310 0
Kelvin	200 0	202 0
Megna	78 0	78 0
Naskarpara	12 8	14 4
National	20 2	19 10

Prices of electric supply shares were unchanged. Bareilly were reported at Rs. 14-12 and Calcutta at Rs. 13-2.

In sugar, only two transactions were reported namely in Carew at Rs. 7-6 and U.P. at Rs. 15; the quotation of the latter share a week ago was Rs. 16-8.

The details of the Indian Iron & Steel rights issue (ordinary shares), one for one at a premium of Rs. 3-8 announced by the Board of Directors of the Indian Iron & Steel Co. at yesterday's meeting, were received with disappointment, although the terms were known in advance. Operators were particularly disappointed when it was confirmed that the new shares would not participate in the dividend for the year ended 31st March, 1957. From an opening price of Rs. 29-15 the shares were marked

Bridging the Future...

Rs. 25 crores are to be spent during the next five years on bridges alone. For these reinforced concrete and structural steel bridges, thousands of cast steel roller and rocker bearings will be needed. These cast bearings form an integral part of bridge construction because they allow for free movement of the bridge caused by temperature variations.

We, at Mukand, have a large expansion programme under way. Production capacity at the Mukand foundries is being stepped up to supply India's construction and engineering companies with the cast steel roller and rocker bearings which they will need. We are proud of our role in India's industrial progress.

R. V. BRIGGS & CO. PRIVATE LTD.
16, Old Court House Street,
(West End Watch Co., Top Floor);

The sustained activity of the wool textile trade has made big demands on the industry's finances, and the cost of borrowed money has been for a year past abnormally high. As the nation's premier dollar-earner, the industry can obviously obtain the advances to it from the banks as "in the national interest" and in the period of the credit squeeze (the relevant directive to the banks took effect 18 months ago) the banks have certainly not starved it of money. In the last November issue (the classified analysis is quarterly) we noted that the banks' total advances diminished somewhat, advances to the wool industry increased from £26 million to £30.7 million—from 1.3 percent to 1.6 percent of the total. (Over the same period, advances to the cotton industry remained at 1 percent of the total.) But borrowing on such a scale, it rates that were raised overnight in February 1956 from 5 percent to 6 percent for top-rank companies and from 5½-6½ percent to 6½-7½ percent

The production and despatches of sugar from indigenous factories amounted to 620,000 and 382,000 tons up to 15th January, 1957 in the current season, against 528,000 and 303,000 tons respectively in the corresponding period of last year. The stocks with the factories on 15th January, 1957 stood at 765,000 tons, compared with 637,000 tons last year.

Our City Cable

FURTHER ADVANCE IN STOCK PRICES

GILT-EDGED AND INDUSTRIALS BETTER

A FURTHER advance was recorded in very active conditions in the London Stock Exchange during the past week, but business contracted towards the end, and some irregularity developed on profit-taking. Interest was confined largely to gilt-edged and industrials. The general expectation of a reduction in Bank rate in the not-too-distant future continued to be the main influence, but there were a number of other favourable factors also. These included hopes that plans to cut defence expenditure would enable the Chancellor of the Exchequer to present a better Budget than had been anticipated earlier; and the strength of sterling. The sustained strength of gilt-edged was the outstanding feature and a very large turnover was reported. Although the buying eased off after the week-end, a further broad advance was recorded on balance, and gains extended to around a point. Foreign bonds and rails were generally out of the picture, while dollar stocks showed a lower trend in sympathy with the decline on Wall Street—a factor which had little effect on the markets generally. Extensive, and in some cases, substantial gains were recorded in industrials, although end-of-account profit-taking and some contraction in buying was responsible for irregularity on Tuesday. Virtually all groups participated in the advance, with atomic power, steel, shipping and engineering shares prominent. Gold shares reacted after early firmness to show little change on balance. Platinum shares fell back on the decline in the metal prices, while coppers lost ground and other base metal shares were irregular. Oils re-

ceded under the influence of Middle East uncertainties. Ceylon tea shares were marked down sharply on the news of plans to nationalise foreign-owned estates and other tea shares were dull in sympathy. Rubbers were quiet.

The Money Market

Monetary conditions in the London money market during the past week have been less comfortable than in the preceding one. The heavy Government disbursements of the previous week have not been available, while at the same time, discount houses have had to pay more for bills which brought money into keener demand. However, although there were occasional shortages, the overall supply of funds was sufficient to keep the market from running into difficulties, while the authorities were in the background ready to provide assistance when needed. As a result, money maintained its recent easier level of around 4½ percent. This week conditions should improve as the money market has secured only a small number of the reduced amount of Treasury bills offered during the past week. The market had tendered higher, but apparently not high enough. However, the Treasury was able to obtain its funds at 2s percent less than in the previous week, bringing the average rate for Treasury bills down to 9½ 0.81d percent.

Activity on Wall Street

U.S. Government obligations remained a feature in bond dealings on Wall Street. Long-dated Federals advanced reflecting increased buying by institutional investors, attributed in part to expectations of easier money conditions and also to favourable yields following sharp declines a few weeks ago. The demand, however, eventually tapered off and prices were shaded slightly from the 1957 recovery highs, with the market turning quiet. Investment quality corporates also forged ahead in active dealings, but the uptrend later slackened and prices finished below the best. Foreign dollar bonds were quiet and mixed. German Nationals and Italians generally showed only minor variations either way. Norwegians

were a shade higher. The Union of South Africa 4½ percents were lower, while Japanese Government bonds added small fractions.

U.S. Federal Reserve Return

During the week ended 23rd January, U.S. Federal Reserve gold stocks rose by \$1 million to \$21,951 million. Foreign deposits fell by \$8 million to \$318 million, while foreign investments fell by \$26 million to \$3,765 million. The Federal Reserve sold \$571 million worth of bills. Total discounts and advances rose by \$94 million to \$358 million, while aggregate excess reserves of member banks fell by \$93 million to \$388 million. Daily average excess reserves of member banks rose by \$34 million to \$559 million, while their daily average borrowings fell by \$1 million to \$322 million. Business loans of the New York city banks fell by \$58 million to \$11,030 million, compared with a fall of \$4 million to \$8,985 million in the corresponding week a year ago.

Strength of Sterling

Last week's advance in sterling (to above par with the dollar for the first time since June) follows the firm trend in America. There is substantial commercial demand and also some bear covering in transferable sterling and against the Continental currencies. The undertone is firm. Experts are optimistic about sterling. They feel that maturing bears will be covered and extended, now that there is no reasonable chance of devaluation in any foreseeable future. The wonder is only that the bears were so slow to cover after 4th December and 11th December when it became obvious that the devaluation for which they were operating was not going to occur. Much bear-covering may still be made. It has been calculated that with the full swing of the pendulum, leads and lags alone can amount to £400 million which is not unreasonable considering that the world annual turnover in sterling must be at least £20,000 million. Middle Eastern demand for gold has revived but on a small scale. As there is little private demand on the Continent at present, continued, though modest, Russian offers have gradually depressed the price to about \$(U.S.) 34.85/86.

U.K. Platinum Price Easier

The U.K. open market price of platinum is now at £34½ to £35½ a troy ounce, compared with £35 to £35½ previously. Some business, it is reported, has matured at £34½ and £35 on export account. As far as can be ascertained, Russian metal is not being offered competitively at the moment.

Vegetable Oils Dull

Generally dull conditions prevailed in most sections of the vegetable oil market with consumer demand negligible. However, Straits coconut oil was steadier reflecting better enquiry largely attributed to covering against recent business to Eastern Germany. Buyers of Straits 3½ percent bulk oil claimed around £53½ c.i.f., basis net freight or £1 a ton over the recent low level. Copra was neglected with buyers about \$2 below selling ideas. Linseed oil was at a standstill and prices were inclined to sag. U.S. groundnut oil continued to decline with March-April shipment obtainable at the parity of around £145½ c.i.f., while an afloat parcel of the Argentine oil was vainly offered in the region of £150 c.i.f., both a metric ton. Nigerian groundnut oil was less freely offered, but the indicated prices were lower reflecting the pressure of the American rate. Other oils were generally featureless with prices mostly repeated. Groundnuts were lacking support, but British East African castorseed was relatively steady with March-April shipments reportedly sold to Marseilles at £75½ c.i.f.

Downward Trend in Rubber

Rubber prices continued to move irregularly downward during the early part of the week ended 24th January, with trading dull for the most part and featured by short selling. A quick rally resulted from covering on local and Dutch account, but the recovery was lost following a sharp and unexpected fall in Singapore. Offerings were well absorbed, however, and a recovery movement ensued aided by renewed covering which was stimulated by the reports of expected resumption of Chinese buying in Singapore. Finally, quotations were ½d lower for near positions and ½d lower for distant. The decline in prices of sole crepe continued and the recently augmented supplies were slow to move. Smooth No. 1, ½ inch on the spot was offered freely at 45d a lb.

International Sugar Council Meets

The International Sugar Council met in London on 29th January, with Mr. G. Bishop of the British Ministry of Agriculture, Fisheries and Food, who is chairman for 1957, in the chair. This is the first meeting of the Council since the amendment by protocol of the 1953 International Sugar Agreement. The protocol came into force on 1st January and the Council will have to make arrangements for the running of the amended agreement. The protocol states that if the spot price of sugar is above 4 cents a lb. for 17 market days, the export quotas will automatically be removed.

Australian Freight Rates

The Australian Overseas Transport Association on 25th January ratified agreements with the U.K. and Continental shipowners increasing the shipping freight rates on most of Australia's exports to the U.K. and Europe by 14 percent from 1st February. The Association president announced this, saying that the commodities covered by the agreement included wool, general cargo, refrigerated cargo, meat, dairy produce, apples and pears. Exporters said that the freight increase would add about £A5 million to the cost of sending goods to overseas markets. Wool sources said that during a meeting wool buyers voted against wool growers who were against ratifying the freight agreements.

New Delhi

BUSINESS MEN TOLD OF PRIORITIES FOR CAPITAL GOODS IMPORTS

MAINTENANCE OF PRESENT LEVEL OF ACTIVITY EMPHASISED

(FROM OUR NEW DELHI CORRESPONDENT)

IN a letter to Indian and British chambers of commerce, Mr. L. K. Jha, Secretary to the Union Ministry of Heavy Industries, has outlined the principles and procedure for the allocation of foreign exchange to import capital goods during the six months to 30th June. After that date, the position will be reviewed afresh. He says: "When curtailment of overseas expenditure is necessary, priority must be given to those items whose import is essential for maintaining the economy at its present level of activity and schemes for new development, however important and desirable in themselves, must in general take second place. Having regard to the volume of outstanding licences for capital goods which constitute a first charge on the foreign exchange resources, the amount which has now been allocated for the import of capital goods for new schemes has been fixed at a very low figure. Import licences for capital goods will, therefore, be issued only in cases where the Government is satisfied that there will be no appreciable increase in foreign exchange payments for some considerable time to come."

Mr. Jha's letter emphasises that applicants for import licences should explore ways and means of reducing their immediate foreign exchange requirements. Three ways of doing this are suggested. The first is that entrepreneurs should secure foreign capital investment in their undertakings to the extent at least of the value of the plant and machinery which is to be imported. Secondly, they may negotiate for long-term credit from overseas suppliers of machinery and other similar sources. It is pointed out in this connection that to be acceptable to the Government, the period of deferred payment should be long. Ordinarily, the Government would expect that payment before the arrival of the machinery does not exceed 20 percent of its value; the balance should be payable in not less than seven years after arrival. Alternatively, when the product which is to be manufactured is essential and is now imported, the period of repayment may correspond to the period in which an equal amount of foreign exchange will be saved by the proposed plant going into production. In such cases, no payment should be made before the plant is actually in production. The third method suggested is that applicants should try to secure credit in the appropriate foreign currency from lending institutions which have been set up for this purpose in different countries.

Applications which do not fall into these categories can only be considered if the Government is satisfied that the expenditure of foreign exchange will bring an immediate improvement in the country's foreign exchange position. For example, the equipment needs of industries which are already exporting will be given special consideration where it is clear that the extra production will soon increase export earnings. Similarly, if foreign exchange for any project has already been released to the extent of about 90 percent, the balance of 10 percent may well be released so that what has already been spent may not be rendered infructuous.

The letter mentions two other points relevant to applications for the import of capital goods. The first is whether the raw materials needed by the project on completion will be available from indigenous sources, or whether they will have to be imported, necessitating further foreign exchange expenditure. The second is how soon the project can be completed so that it may start earning or saving foreign exchange.

Decision on Bonus Shares

The Government's decision on bonus shares will not be available until May next, it is learned here. Applications for bonus issues, if made meanwhile, will be kept pending. The intention is to announce a fool-proof decision which needs careful planning; hence the delay.

Ordinance on Unworked Coal Areas

The Government, according to reports, is planning to take over unworked coal-bearing areas in the private sector by an ordinance. A Bill for this purpose was being prepared, but it was crowded out during the last session of Parliament. The issue of an ordinance implies urgency. The Government will have to show, at least to Parliament, that there has been an emergency which has necessitated the ordinance. Law-making by ordinance is an old but regrettable habit. Its principal snag is the rigidity it introduces. The Government is always opposed to modifications of the provisions of a Bill which seeks to enact an ordinance into law. In other words, the opportunity for Parliament to modify a Governmental measure is curtailed. As far as the coal ordinance is concerned, it involves an important issue of constitutional morality. Before the Constitution was amended, the question of compensation was

determinable by the law courts. The amendment transferred this power to the legislature. In other words, as the Constitution stands today, compensation for acquiring coalfields from the public sector is determinable by Parliament. This power is being further vitiated by the tendency to leave the determination of the quantum of compensation to the executive, as would be the case under an ordinance.

There is also some talk of an ordinance to regulate mineral rights. The Petroleum Concession Rules are being revised further. A draft of the new Rules is being discussed here.

National Minimum Wage

A national minimum wage of Rs. 75 a month is included in the post-election plans of the Finance Minister, Mr. T. T. Krishnamachari. Those specially mentioned for it are policemen, teachers and other low-paid employees of the Central and State Governments. The Finance Minister's plan proposes a subsidy from the Centre which would gradually decrease. Another item in the plan relates to slum clearance in the urban areas, for which a Central subsidy on a performance basis is being considered. Subsidising the salaries of low-paid State employees was discussed at the last meeting of the National Development Council.

Carbon Black and Dyestuffs Projects

Mr. Cobbot, representing an American company, was here last week discussing details of the carbon black project. He has gone back to the U.S.A. with the Indian proposals. An Italian, a West German and a British company have submitted reports on dyestuffs intermediates; as matters stand at present, the German firm of Bayer has the best chance of securing this work.

Aluminium Expansion Plans

The Minister for Heavy Industries, Mr. M. M. Shah, speaking at the inaugural meeting of the Development Council for Non-ferrous Metals, said: "Out of the family of non-ferrous metals comprising aluminium, copper, lead, tin, zinc, etcetera, aluminium is the only metal of which we have extensive ore deposits in the country. Our total known reserves of bauxite ores are estimated at 250 million tons of all grades. Out of these, it is estimated that about 27 million tons are of high grade, very suitable for the manufacture of aluminium metal. In due course, with the aid of modern technological processes involving pressure digestion, etcetera, the other deposits of bauxites can also be used for the manufacture of alumina and aluminium. These known estimates of 250 million tons of bauxite would thus enable a production of about 40 to 50 million tons of virgin aluminium metal. These bauxite deposits, besides being large and of high grade, are fairly evenly distributed all over the country. Looking to the geological strata in different parts of the country, there is a great possibility of more bauxite deposits being found and proved. Thus, the raw material position of aluminium ores is highly satisfactory."

"There are two concerns which are producing aluminium in the country and their present combined installed capacity is about 7,500 tons a year. Up to the beginning of the second half of 1954, our total installed capacity was only 5,000 tons and by the expansion of these two units, the installed capacity is now 7,500 tons. Besides having facilities for the manufacture of virgin metal, both the units are also equipped for fabricating the metal into various types of semi-manufactures. As against the total installed capacity of 7,500 tons, our quantum of demand for aluminium in all forms has been steadily rising, which is borne out by the following figures for imports of aluminium:

	Imports Tons	Production Tons	Total Consumption Tons
1951-52	9,284	3,904	13,188
1952-53	6,069	3,620	9,689
1953-54	5,455	3,647	9,102
1954-55	12,380	5,476	17,856
1955-56	15,805	7,333	23,138

"Our current requirement of aluminium in various forms is estimated at about 25,000 tons a year, and by the end of the second plan period, the aluminium demand will be 35,000 to 45,000 tons. From these figures, it would be observed that there is a large gap between the installed capacity and the demand and, therefore, as you are already aware, a target of production of 30,000 tons has been fixed for the second plan period. I would, however, mention that this is the minimum and may be suitably revised in the light of increasing demand which may develop during these years. To achieve the production capacity of 30,000 tons a year, two licences have already been issued, one for the installation of a new unit of 10,000 tons in Hirakud and another for the expansion of an

existing unit to 5,000 tons per annum. This will bring the capacity to 20,000 tons.

"Further, in order to establish on modern scientific lines the balance of the target, a committee of experts for the aluminium industry was constituted for advising the Government *inter alia* on the suitable site or sites of new aluminium smelters and the minimum size of such smelters. The committee has recommended that two smelters of 10,000 tons capacity each should be established at suitable sites, provided with facilities for expansion to 20,000 tons in due course, and have indicated that the Mettur and Rihand Dam areas appear to be very suitable sites. It is expected that one of the 10,000 smelters will come into operation during the second plan period while the other might come into production during the early stages of the third plan period."

Synthetic Rubber Plant

It is proposed to manufacture 20,000 tons a year of GR-S synthetic rubber. A plant with this production capacity is considered an economic unit, particularly in the conditions prevailing in India. For the production of 20,000 tons of GR-S, about 15,000 tons of butadiene and 5,000 tons of styrene are required. As there is still no production of these two chemicals in India, it will be necessary to arrange for their manufacture as an integral part of the synthetic rubber project.

Butadiene can be manufactured either from petroleum refinery gases or from alcohol. The choice of the particular raw material for use in this process is determined by various factors which differ from country to country. In the prevailing conditions in India, alcohol appears to be a more suitable raw material than refinery gases. The plant set up for the manufacture of butadiene from refinery gases has to be very elaborate and the heavy investment required for it is justified only when the large-scale manufacture of various other products from refinery gases is undertaken, in addition to butadiene. For the manufacture of butadiene alone, it appears to be more economical, from the point of view of both capital costs and costs of production, to use the alcohol process in this country at present. Even in the United States, where adequate supplies of refinery gases are available, four butadiene plants using alcohol as a raw material have been in operation for several years.

About 10.8 million gallons of alcohol are required for the manufacture of 15,000 tons of butadiene. Alcohol production in the whole of India, by 1960, is placed at 30 million gallons a year, of which nearly half is expected from Uttar Pradesh. As alcohol production in the other States is inadequate to supply the requirements of the butadiene plant, this plant will have to be located in Uttar Pradesh. The Bareilly area, which is centrally situated in relation to the various alcohol distilleries, has been suggested. The capital cost of a butadiene plant with an annual production capacity of 15,000 tons is placed at Rs. 55 crores.

Styrene Supplies

About 5,000 tons of styrene are required for the manufacture of 20,000 tons of GR-S. The minimum production capacity of a styrene plant of an economic size is about 8,000 tons a year. A plant of this size can be put up if, in addition to supplying the styrene requirements (5,000 tons) of the GR-S plant, it also supplies the styrene requirements (3,000 tons) of the polystyrene plant which is being started in Bombay by Polychem Ltd. The aggregate styrene requirements in that case will be 8,000 tons a year. Taking into consideration the likely increase in demand for styrene and polystyrene in the near future, it is proposed that a plant with an annual production capacity of 9,000 tons of styrene may be put up.

Styrene is manufactured from benzene and ethylene. For the production of 9,000 tons of styrene, about 2 million gallons of benzene and about 108 million cubic feet of ethylene gas are required. Benzene is obtained from coke oven by-product recovery plants, while ethylene can be obtained from: (i) refinery gases; (ii) coke oven gases; or (iii) alcohol. Estimates indicate that the cost of production will be the lowest when ethylene is obtained from coke-oven gases, at a place where hydrogen is separated from them, by fractionation for the manufacture of synthetic ammonia.

According to present indications, there are only two places in the country where it may be possible to adopt this process for manufacturing ethylene—Sindri and Rourkela. Rourkela offers more attractive prospects for the location of the proposed styrene plant, since it has recently been decided to put up a fertiliser plant as an adjunct to the steel plant there. Another advantage of setting up the styrene plant in Rourkela is that the required quantities of nitrogen for it will be available from the "waste" nitrogen gases which come from the tonnage oxygen plant of the L.D. process. Considering these points, it is proposed that a styrene plant with a production capacity of 9,000 tons a year may be put up in conjunction with the new steel and fertiliser plant in Rourkela. Its capital cost is estimated at approximately Rs. 2.4 crores, and the reasonable selling price of styrene at about 8 annas a lb.

The GR-S plant has to be located at the same site as the butadiene plant, for the following reasons: (a) For every ton of GR-S, 0.75 ton of butadiene is required; furthermore, butadiene is a gas which cannot be conveniently transported in the required quantities to distant places. (b) Styrene requirements are only 0.25 ton a ton of GR-S, and styrene, being a liquid, can be conveniently transported in tank cars. On this basis,

Completely at ease in one of Pan American's Super Stratocruisers to the U.S.A.

RELAX—you're on the World's Most Experienced Airline

Enjoy yourself. You're surrounded by comforts and services unmatched anywhere in the air. Luxuries that are solidly backed by an unequalled record of air pioneering and accomplishment.

You're flying with the only airline that has made over 60,000 Atlantic crossings, over 40,000 Pacific crossings and over 2,700 Round-the-World flights.

Pan American has carried 13 million passengers overseas in dependable speed and comfort—has flown over one billion miles overseas—and has 1200 pilots who have flown over one million miles each, 100 who have flown over three million miles.

This record is unmatched by any airline anywhere. So next time, choose Pan American—the only airline that gives you the priceless advantage of Round-the-World experience on every Tourist and First-class flight.

Let your Travel Agent arrange your trip—his services are free. Or call Pan American in:

PAN AMERICAN

The Government of India has decided to set up a Central Wage Board for the cotton textile industry. The decision has been taken on the recommendation of the second five year plan relating to the establishment of tripartite wage boards for individual industries. After some experience has been gained with the working of the Board, the principle will be extended to any other industry for which such a board may be considered necessary. The Wage Board for the cotton textile industry will have, besides an independent chairman, six members—two each representing the employers and the workers connected with the industry and two independent members.

Bombay

INDIAN COTTON TEXTILE OUTPUT
IN PAST YEARMILL PRODUCTION INCREASES
BUT EXPORTS BELOW TARGET

(FROM A CORRESPONDENT IN BOMBAY)

PRODUCTION of cloth by the mill industry in India during 1956 reached the high record of 5,282 million yards, against 5,094 million yards in 1955. Yarn output has likewise risen to 1,652 million lbs. from 1,630 million lbs. in 1955. This performance of the mill sector, in the face of the restrictive Government policy, is commendable, considering that this has been achieved with out-moded equipment and frequent labour troubles. Production by the mill industry has been rising steadily year after year since 1950, when it declined to a low level of 3,465 million yards and 1,166 million lbs. of yarn.

Although activity in the textile export trade has picked up during the past few months after the marked decline in July and August, the total exports in 1956, tentatively estimated at 734,430,000 yards, obviously are far below the annual target of 1,000 million yards. Exports in 1956 comprised 191,220,000 yards of coarse cloth (against 176 million yards in 1955) and 505,380,000 yards of medium cloth (against 592,270,000 yards in 1955). But exporters continue to feel that better days are in store for the cloth trade if mills could assist in stepping down export prices to be in parity with those quoted by other competing countries, and some more care is exercised in adhering to quality standards and delivery periods.

Higher African Imports

There has of late been a distinct improvement in the off-take of Indian cloth by the African countries. November exports of Indian textiles are put at 70,670,000 yards, against 57,690,000 yards shipped in October, and African countries alone lifted 31,020,000 yards of the November shipments, against 21,090,000 yards in the previous month. Exports to Asian zones also rose slightly to 3,460,000 yards to 24,930,000 yards, and those to European destinations were higher by 1,560,000 yards at 8,530,000 yards. But exports to the United States have recorded a sharp fall of about 50 percent, having declined by 1,550,000 yards to 1,780,000 yards. Exports to Oceanic countries also declined during November by 440,000 yards to 4,360,000 yards.

Recently, enquiries from Hongkong have been very little. No business is reported with Iraq, although other Persian Gulf countries have lifted small quantities of bleached cloth, black dyed mulls and other usual styles. Ceylon and Thailand have been buying moderate quantities of their usual varieties, like Singapore, and Burma was able to buy only small quantities recently, that too against unutilised parts of the earlier import licences. Business from East Africa has been restricted to bookings by Dar-es-Salaam for early shipment. The Sudan has bought fair quantities of grey sheetings, voiles, sarees, dhoties and gadagat, while Ethiopia lifted some grey sheetings, khaki and mulls.

Possibilities in Jordan

The Indian Commercial Representative in Jordan says in a recent report that there is a promising market for Indian textiles in that area if Indian mills and exporters could pay more attention to packing, finishing of processed goods and delivery time. Jordan now imports about 19 million yards of cloth, and this quantity is supplied by as many as 18 countries. Despite the keen competition prevalent in that country, India shipped 3,129,000 yards to this destination in 1955 and this comprised glazed, grey, bleached, dyed and printed materials. Japan's contribution was higher at 3,330,000 yards, and other major suppliers to Jordan in 1955 were Yugoslavia (2,200,000 yards) and Syria (2,150,000 yards). In grey sheets, India has to compete with Syria, and China will be another competitor to India very soon. The U.K., Japan and Yugoslavia are competing in this market with India. Indian glazed fabrics appear to be wanting in "finish" and because of this, Jordan buys most of its requirements from the U.K., Belgium, Japan, Egypt, Russia and Yugoslavia.

Madras

PROSPECTS FOR CONGRESS IN
MADRASA RIFT WITHIN AND A CHALLENGE
FROM OUTSIDE

(FROM OUR MADRAS CORRESPONDENT)

IN spite of a long week-end, electoral candidates were eager to file their nomination papers. The outstanding feature of the election activity is not the rift in the Congress ranks, but the advent of the Dravida Munnetra Kazhagam. The leadership is new although a former Minister, Mr. P. T. Rajan, is standing against the Congress nominee in his home constituency as the sole member of the Justice Party, which was dissolved two years ago. The Dravida Kazhagam, from which the D.M.K. broke away, is in favour of Mr. Nadar's continuance in office though it is opposed to the Congress as a whole. The D.M.K. hopes to get a fair number of Assembly seats and in districts like Tiruch, the Congress is unable to secure candidates, even as in Raminad against Mr. Sethupathi, to take the field against the D.M.K. which has exploited agrarian discontent.

In the city, only five D.M.K. candidates are running, but one belongs to a scheduled caste. There is also a Muslim from Nagore with the D.M.K. label, to contradict the impression that the D.M.K. counts only on non-Brahmins to back its candidates. The D.M.K. is raising funds by dramatic performances and many stage and screen stars have been extending their support. Labour support is also counted upon, as the Socialist and Communist candidates are not numerous. A Tamil daily has been launched to help non-Congress candidates in the city, but if past experience is any guide, it may go the way of new papers with small capital and propaganda aims. The triangular contest in the southern parts of the city may give the Finance Minister an edge over his opponents and the Assembly candidates on the Congress ticket may assist him. The rift in the Congress party may affect the chances of Mr. Alagesan, the Union Deputy Railway Minister, as a dissident Congressman with vast influence is standing against him as an Independent who has been picked by the Congress Reform Committee. It may all help Dr. A. Krishnaswami whose parliamentary record in Opposition may also favour him.

Evidence Before Law Commission

The Law Commission was here busy taking the views of lawyers and judges, past and present, on the administration of law. A change-over to Hindi as the language of law appears remote, but the publication of unofficial law reports has been deprecated widely. The creation of a judicial service with provision for transfer from one State to another is not favoured by many. Dr. C. P. Ramaswami Ayyar made known his disapproval of any abrupt departure from the British Indian system and objected to judicial panichayats. He urged that lawyers should promptly accept judicial posts if offered and favoured the appointment of Supreme Court judges also from the Bar. The U.S.A. does not rely on promotion but on the legal profession so that notable judges such as Jackson and Frankfurter could be brought to the Supreme Court without previous experience. The age of retirement for judges should be raised to 70: that is the view upheld by many judges. The Law Commission complimented the Madras Bar which in recent years has undergone a great change with the former concentration of appellate work having disappeared and the lawyers having new tasks to perform. The right of audience before all tribunals has been claimed for the Bar by Mr. M. C. Setalvad. Greater opportunity and more scope in public life is expected, though the dominance of lawyers in politics has gone with the coming of adult suffrage in India. The absence of a legal profession in China is proof of the Party-State there according to Dr. C. P. Ramaswami Iyer. He referred to the lay tribunals in which both sexes were represented.

Indo-British Enterprise

In Nellikkuppam, there is a new factory of W. J. Bush and Company of London to produce essences and flavouring cordials. The sugar mill of E.I.D.

and S.F. run by Parry of Madras, long the agents of Bush and Company, explains the choice of site which is 90 miles from Madras. Extracts from ginger and essential oils for medicinal purposes will also be produced there. Indian capital will participate in the venture after five years. Mr. Noel-Tod pointed out that the factory would look for the aerated water factories which need not look for imports when local production started. Described as a fine example of Indo-British co-operation, the Parry's factory clearly needs no push as Parry would remain its selling agents. The growing of lavender in the lower slopes of the Nilgiris and the cultivation of cloves in the Nelliampathy hills are considered possible by Mrs. Chandrasekar, Union Deputy Minister of Health, who thinks that citrus oil and rose essences can also be prepared in south India. The cultivation of vanilla in Coimbatore has been successfully experienced. Mr. McIntyre, representing Bush and Company, held out the hope that the factory would keep in touch with research. Dealers in aerated waters in the south praised the enterprise of Bush in starting manufacture locally and there is even now a possibility of export since Parry's confectionery, an associated enterprise, has already acquired a valuable connection abroad.

Bad Years for Kips

For the tanning industry, the opening of the Central Leather Institute here has not proved a great help. The trade view is that diploma-holders are not keen on producing kips as a commodity for export. Though tanning in Madras started in 1880, and an export trade developed by 1880, the E. I. kip industry in the postwar period has been in a lull. The kip industry is not expected to produce a great change. Refresher courses for practical tanners rather than demonstrations by experts using new methods appear necessary in the average exporter's view. The Institute has been successful in producing suede and imitation crocodile. Dyeing and printing of leather has been carried far, but the Institute has not attained the Tangra standard. The tanning of reptile skins has been taken up and at the handicrafts exhibition, open to the public for over a week, there was a display of iguana skins. A distinct novelty is the conversion of tanned cobra skins into neckties which will stand out even more than handpainted silk ties. At the same exhibition, the traditional skill of image makers from pilgrim centres like Swamimalai was on view along with ivory-work from Kanyakumari. The manufacture of garlands with silver lace is peculiar to Tanjore, where the Maratha princes nourished luxury trades for long and princely dilettantism fostered a *papier mache* doll industry.

State of Sago Industry

The manufacture of sago from tapioca, imported from Travancore, is a protected industry, largely concentrated in Salem. The advisory board meeting before the Tariff Commission enquired about the Food Laboratory official describe the need for modernising the industry by using sawtoothed rasps to shred tapioca so as to get more starch out. Improvement in processing to avoid fermentation is also necessary. The colouring of sago to imitate the genuine Malayan product is undertaken, but appears undesirable. It is argued that only in Bengal is sago coloured pink to please consumers, not the have taken perforce to synthetic globules, not the original palm product. The complaint that the railway freight on tapioca is double that on sago was made by a merchant. A model laboratory to improve local methods is to be set up. The capital employed is small and changes in sago prices. The following changes in tapioca prices. The demand from the starch industry is still rising and sago manufacturers have also to contend with rising wages in what is still a cottage industry. The home demand for sago is rising and imports are difficult. Barley and oats from abroad are scarcely a rival at present.

GROUNDNUT ACREAGE AND PRODUCTION
INCREASE

The all-India second estimate of groundnut, 1956-57, puts the current year's area and production at 11,299,000 acres and 3,559,000 tons (of nuts in shell) as against 10,968,000 acres and 3,372,000 tons for 1955-56, according to the Directorate of Economics and Statistics, Union Ministry of Agriculture. This shows an increase of 331,000 acres or 3.0 percent in area and 187,000 tons or 5.5 percent in production during the current year, compared with that of last year. The increase in acreage during the current year has been reported mainly by Bombay, Mysore and Andhra Pradesh and to a smaller extent by Madhya Pradesh, Madras, Punjab and Uttar Pradesh. It has been attributed generally to favourable climatic conditions and also sowing time. The increase in production has been shared mainly by Bombay, Andhra Pradesh and Mysore, and to a lesser extent, by Madras, Madhya Pradesh and Punjab. The increase in production has been attributed partly to increase in acreage and partly to timely rains during the growing period of the crop. This estimate covers the period generally up to the end of September of the beginning of October, 1956. Till then, the whole of the crop was reported to be, on the whole, satisfactory except in parts of Andhra Pradesh, Bombay, Rajasthan and Madhya Pradesh where it was affected by heavy and continuous rains during July-August, 1956. In parts of Kurnool district of Andhra Pradesh, the crop was reported to have been attacked by pests. The estimate does not cover the entire area sown to the crop during 1956-57. Past experience has shown that the area at the second estimate stage forms roughly about 84 percent of the area under the crop finally reported. The information given in this estimate relates to the set-up of States after their reorganisation.

Jute

CONTROVERSY OVER THE NEW FUTURES
MARKETRECOGNITION OF EAST INDIA JUTE AND
HESSIAN EXCHANGE OPPOSED

It will be recalled that, early in November, the Government of India issued a notification that it had accepted, with modifications, the recommendations of the Forward Markets Commission to bring into force certain provisions of the Forward Contracts Regulation Act. One of the recommendations was the recognition under Section 6 of the Act, of the East India Jute and Hessian Exchange as the body which would conduct futures trading in raw jute and jute goods for a period of three years. This proposal has met with strong opposition from the gunny trade. At a largely attended meeting held recently, it was resolved to protest to the Government against the recognition of the East India Jute and Hessian Exchange. It would be out of place here to discuss its merits and demerits, but it is quite obvious from the representative character of the meeting that the Exchange is not going to have the confidence of the gunny trade. This is an unfortunate start, since it is essential that the body which is to control futures trading should inspire the greatest confidence among those whose legitimate business will be affected.

In another part of the resolution passed at the meeting, it was stated that the Government had failed to appreciate the distinction between futures trading and forward trading in transferable specific delivery contracts. That is probably an exaggeration because, in the Government's resolution on the subject, provision is made exempting transferable specific delivery contracts from the provisions of the Act for stated periods after the coming into force of the relative Section. That there is a difference has, therefore, been realised by the Commission and the Government, but both of them have apparently failed to recognise that the prohibiting of transferable specific delivery contracts will disrupt established trade practices which have stood the test of time.

There are snags, too, in the case of raw jute. Already there are cases in the courts arising out of the notification of 29th October, 1953, which clearly shows that either the Commission or the Government, or both, had not understood the procedure under which jute was sold to mills. That notification was subsequently amended, but the amendment was not made retrospective, so a lot of unnecessary and expensive legislation has ensued. Moreover, the amendment itself is defective and seems likely to disorganise the trade in the Cossipore market, if it does not actually bring it to a standstill. These are only some examples of the difficulties which may arise through the enforcement of provisions which apparently have been drawn up by persons having only a hazy notion of trade practices. It would be well if no other provisions are brought into force until it is clear that the Act was intended to put a stop to malpractices and not to interfere with straightforward honest business.

THE JUTE MARKETS

Manufactured Goods: It has been a dull week for both hessian and sacking, so the tendency has been towards lower prices. Enquiry from overseas is reported to have been very meagre, and there has not been much local covering. Jute dealers have continued to sell B Twills in the fatka and rumours of a Government order, which still per-hedge against their holdings of raw jute, and sacking operations. Mills are not selling heavy sacking at the present prices and they prefer to wait. This has created an impression that there may be some substance in the rumours about Government orders. In some quarters, it is thought that in spite of the small stocks of hessian lying in mills, weaker than that of sacking. The opinion is based on the fact that heavy buying was done in con-order to build up stocks against delays in shipping during the Middle East crisis. It is now thought that overseas buyers will refrain from purchasing until their stocks come down to normal levels. In addition, hessian, sacking output will be correspondingly less and there are some who believe that internal demand will be sufficient to sustain the market. Others doubt this because they believe that the ready business of sacking for the winter crops has already been completed and normally sacking stocks the quotation for B Twills in the fatka market dropped from Rs. 117-12 to under Rs. 115. On Tuesday, there was a recovery to Rs. 117, but it was not maintained.

On Wednesday morning quotations were as follows:

	Ready	February	March	April-June
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	36-4	35-10	35-6	35
40in. 10oz.	43-14	43-14	43-12	43-8
B Twills	117-2	118	118	118-2
Heavy Cees				
(Plain)	119-8	118-12	118-12	118-2
A Twills	140-8	141-8	141-8	141
Liverpools	138	135-8	134-8	133-8
Cornusacks	119	120	120	119-4

Raw Jute: After a dull spell earlier, there was more buying of fibre in the past week. Mills took advantage of the keenness of sellers and the lower prices at which jute was being offered. Mesta was in good demand and sellers were offering freely at reduced rates. Considerable quantities changed hands at Rs. 26-8 basis Bottoms for the Daissee and Murshidabad varieties, against Rs. 28 basis Bottoms a week ago. White jute and Tossa did not record as great a fall; business was done in Murshidabad Tossa at Rs. 32-8, compared with Rs. 33 in the previous week, and in Northern jute ex Calcutta at Rs. 31-4, against Rs. 31-8.

In the early part of the period under review, a large transaction was reported in Northern jute ex Calcutta at Rs. 31-4. For the next day or two, business was mainly in mesta, which was bought by mills at Rs. 29 and Rs. 26-8 for Middles and Bottoms and also at Rs. 28-8 and Rs. 26-8. Murshidabad Tossa was sold at Rs. 32-8 basis Bottoms and Assam Tossa at Rs. 33 basis Bottoms. During the week-end a large amount of business was done in Daissee jute at Rs. 33 basis Bottoms and in Daissee and Murshidabad mesta at Rs. 28-8 for Middles and Rs. 26-8 for Bottoms. After the week-end there was a fair amount of business in Daissee mesta at Rs. 29 and Rs. 26-8 for Middles and Bottoms, respectively, and small transactions at four annas higher. Northern jute ex agency was done at Rs. 31-8 in small quantities. On Tuesday, some quotations were raised by four annas and sellers were more reserved with their offerings, but there was no response from mills. Jungli mesta was done at Rs. 26 basis Bottoms.

On Wednesday morning quotations were as under:

Indian Jute:	Landed at Mills	Bottoms.	Shipment.
	Rs. a md. basis		
Northern	31-12		Feb.-March
Assam	31-12		"
Murshidabad Jute	31		"
Murshidabad Tossa	32-8		"
Murshidabad Mesta	26-8		"
Daissee Jute	33		February
Daissee Mesta	27		"
Western Mesta	26		Feb.-March
Northern ex Calcutta	31		"
Jungli Jute	29-8		"
Bimil	26	F.A.Q.	"

During the week ended 29th January, 849 wagons were received in Cossipore. As buying was on a reduced scale, stocks increased and were reported to be nearly 725,000 maunds. Arrivals were mostly mesta and jungli jute, the prices of which eased considerably. There was little change in Northern jute and Tossa.

Mofussil: Some increase in imports into up-country centres was reported in Assam. In the jungli and western districts, arrivals of both jute and mesta were good. In Murshidabad, imports of mesta and tossa increased, and there was some increase in Daissee jute imports.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian	Cloth	Total
	Bags (Tons)	(Tons)	(Tons)
1st to 20th January, 1957	3,962.5	20,943.3	24,905.8
1st to 20th December, 1956	2,212.2	22,654.5	25,866.7
1st to 20th November, 1956	3,767.5	22,973.6	26,741.1
	Sacking		
1st to 20th January, 1957	18,396.4	1,344.9	19,741.3
1st to 20th December, 1956	17,964.3	1,474.0	19,438.3
1st to 20th November, 1956	26,297.7	1,116.3	27,414.0

GUNNY SHIPMENTS DURING DECEMBER

The following are the total net figures of manufactured jute goods shipped from Calcutta during the month of December, 1956, after providing for short shipments. These figures include shipments to coastal ports.

	Hessian	Cloth	Total
	Bags (Tons)	(Tons)	(Tons)
Gross	4,373.0	35,246.1	39,619.1
Short shipped	513.7	1,432.2	1,945.9
December, 1956 (Net)	3,859.3	33,813.9	37,673.2
November, 1956 (Net)	5,430.4	41,962.5	47,392.9
October, 1956 (Net)	4,697.4	30,420.9	35,118.3
	Sacking		
Gross	32,236.3	1,855.3	34,091.6
Short shipped	2,469.8	3.4	2,473.2
December, 1956 (Net)	29,766.5	1,851.9	31,618.4
November, 1956 (Net)	41,817.2	1,718.2	43,535.4
October, 1956 (Net)	38,948.6	1,265.6	40,214.2

MODERNISING THE JUTE MILLS

IMPORT BAN ON WARP SLIVER
SPINNING FRAMES

SO much has been written and spoken in the last few years about the need to modernise the jute industry if it is to compete effectively with the more recently established manufacturing centres in other countries, that one hesitates to add to what has already been recorded. There remains however, a large gap between the realisation of this need and the proper planning and execution of the means to fill it. Too often in the past, Calcutta mills have prided themselves on their conservatism. Recently they have been credited by the Government and others with an elasticity of finance which would enable them to overcome all their difficulties unaided. Conservatism surely is an anachronism in textile manufacture. Any elasticity there may have been in the industry's financial resources, has, due to the economic condition of the past two years, largely disappeared.

An example of the retarding effect of a conservative policy and the strain it can put on finances has been brought to light recently by the discovery that treble-shift working of preparing and spinning machinery is not necessarily the prerogative of other textile industries but can also be a feasible proposition in Indian jute mills. Almost overnight—one mill presumably having had the courage to try the experiment—the long-awaited and much-talked-about modernisation came substantially nearer completion, at least for the more progressive units of the industry, and at no extra cost. As a result, the proportion of mills equipped with modern sliver spinning moved at least potentially from 40 percent to 60 percent.

The moral of this is surely that one should not hesitate to learn from the experience of others, and in setting out to modernise themselves, the Calcutta mills might have paid more attention to manufacturing practice elsewhere in the world, particularly in the United States where the minimum of machines is installed to work the greatest number of hours at the maximum speed. They must, of course, be depreciated more quickly, but this is relative. They also have to be replaced earlier, but this gives the advantage of enabling the user to make use of the inventive capacity of the machinery manufacturers who in their turn will have a steadier, though admittedly more limited, production. But the greatest and most immediate advantage to India is that the capital required for putting its jute industry in a competitive position is substantially reduced and the funds which have been made available by the Government for modernisation will now go much further in the required direction than can have been originally anticipated. It is to be hoped that the machinery for scrutinising applications and for granting these loans, which by all accounts has moved to date so slowly and with such attention to what appear to be unnecessary details, will be speeded up so that full advantage may be taken of this great step forward.

The import of warp sliver spinning frames—the centre-piece of all modernisation programmes—has just been banned. The reasons for this, both as a protective measure for the indigenous machinery manufacturers and as a means of conserving foreign exchange, are clear and appreciated. But if these reasons are to be justified and if India's principal dollar-earner is to be given the help it deserves, steps must also be taken to ensure that the local machinery manufacturers are able to produce as quickly as required machines of workmanship equal to those previously imported. Regrettably, this has not so far been the case.

THE FOREIGN JUTE MARKETS

FIBRE PRICES WEAKEN
(FROM OUR DUNDEE CORRESPONDENT)

RAW jute prices are now showing distinct signs of weakness and over the past week there has been a drop of from £3 to £5 a ton, according to grade. Shippers appear to be anxious to get on with business and it is said that arrivals of jute from the upcountry markets have increased in Pakistan. The financial aspect of the situation has also something to do with the pressure to sell. At these high prices, it is not so easy to hold on to stocks or paper purchases. Mill Firsts have been reduced to £118 a ton, with Mill Lightnings down to £106, Mill Hearts to £101 and grade Hearts to £97, February-March, c.i.f., U.K. or Continent. Dark jute has not shown so much weakness as white. Good marks of Daissee-2/3 are lowest at £108 and grade at £105, while grade Tossa-2/3 is now at £115 and grade fours at £106 for the same shipment. Spinners are holding off meantime, and it is unlikely they will buy so long as the tendency is easier. During the past several seasons we have seen opening prices reverting to the minimum rates, or very nearly down to that level. The fixed prices below which they are not allowed to fall are Mill Firsts £91, Mill Lightnings £81, Mill Hearts £71, good Daissee-2/3 £91, grade £81, grade Tossa-2/3 £100 and fours £90. If the usual pattern is to be followed it can be seen that a stiff decline has to take place over the next five months or so. Calcutta goods have also sharply dropped, with sellers naming 66s 6d for 40in. 10oz. hessian and 60s and 49s 6d April-June. B Twills are on offer at 176s for February and 178s March to June, all f.o.b. Calcutta. Jute yarns and cloth in Dundee are practically idle and buyers are awaiting a reduction in prices, which appears to be not far off.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption took a surprising dip in December, 1956. At an estimated 72 million yards, it was 2 million yards below December, 1955, and 9 million yards less than November, 1956. The total for last year, at 878 million yards, was 6.3 percent more than during 1955, and was the best year since 1948. U.S. burlap stocks for December, 1956, declined 1 million yards from November, 1956. At an estimated 267 million yards at the end of December, 126 million yards were spots and 141 million yards were floats. Appearing below are two tables which include the December figures: (1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

THE PAKISTANI JUTE MARKETS

SLOW DECLINE IN FIBRE PRICES

(FROM A CORRESPONDENT)

TRADING conditions in Narayanjanj during the past week can only be described as dull and lifeless. Loose jute prices have very slowly and reluctantly come down by Re. 1, but imports have not increased at all. Prices have fallen because there is very little buying interest, and it is also reported that some of the Indian companies in Narayanjanj have temporarily stopped purchasing as their senior men have gone to Calcutta. Upcountry prices remain unchanged and arrivals are very slow. There has been a drop in pucca bale prices, which are now quoted at Rs. 207 for Export Firsts f.o.b. Narayanjanj, Rs. 198 for Export Lightnings and Rs. 185 for Export Hearts. Outport Tossas remain at a comparative premium, both overseas and locally. The biggest bear in the jute market at present is, of course, the London buyer, who has refrained from business as he is depending on the large afloat unsold position. During the first fortnight of January, total E.P.C. registrations amounted to only 100,000 bales. In this connection, it should be pointed out that, with the exception of India and the U.K., overseas countries have bought less so far during the current year than they did a year ago. It is hard to believe that their consumption this year will be less and if this is correct there still remain about 1.2 million bales to be bought for export overseas and to India. Prices for export are quoted at £106 a ton c.i.f. Continent, with 174s 6d freight, and there is a discount of about £1 for March-April shipment. Even at these levels, buyers are not interested. The views of balers in Pakistan are confused and it would be difficult to say that the majority have any specific ideas about the future. Undoubtedly, because of heavy losses in the past, many Narayanjanj balers look for better overseas prices, but they seem doubtful whether there will be any rise. If it comes, the rise should come soon or not at all this season.

Latest reports on the Jute Marketing Corporation for the local control of jute say that its purchasing and control will be restricted to the border areas. It has been suggested that the Corporation will be the only body in Pakistan which, during the next season, will be allowed to export kutchha bales to India. The amount involved will be about 500,000 or 600,000 bales. It appears that the Jute Marketing Board will not get any further than the planning stage. The trade has apparently convinced the Government authorities concerned that

it is impracticable. There is a chance, however, that, probably only to save face, it will be put into operation next season for India only as a trial. The theory behind this is that the scheme will be tried out on India before it is launched on the jute buying world.

The fall in gunny prices in Calcutta has, to say the least, disturbed Pakistani mills, and for the last few days, they have practically been out of the market. It is interesting to note that in spite of the gradual fall in prices in the overseas jute markets and in the Calcutta gunny market over the past month, local loose jute prices started this period by rising and have only just come down now to the level they were at a month ago. With most Pakistani mills the jute position is tight, and it is probable that all of them are looking for an opportunity to replenish their stocks. Since their average monthly purchases amount to about 80,000 pucca bales, it will certainly be a bullish factor if they decide to come into the market. In addition, there is always a possibility that China or Russia might buy raw jute.

The local gunny market has eased somewhat. B Twills are quoted Rs. 2 cheaper at Rs. 125, while 45in 11oz is Re 1 cheaper at Rs. 56. This is due to fairly large arrivals in Karachi, but as only one steamer is expected towards the end of next month, mills are looking for better prices shortly.

BETTER EXPORT PROSPECTS FOR PEPPER

FAIR BUSINESS WITH U.S.A. AND RUSSIA

(FROM A SOUTH INDIAN CORRESPONDENT)

FAIRLY large business in pepper has been reported with the revival of U.S. demand and substantial Russian purchases. Arrivals being heavy, there has not been a proportionate increase in prices; the average for the last two weeks was Rs. 575 a candy in Cochin. For some time past, New York had shown little interest in Indian pepper. But when the market reopened after the holidays, it bought several lots for shipment in January at the rate of 25 cents to 27 cents a lb. Some prominent dealers there have been showing interest in regular forward shipments for the first quarter of the year also. As is usual with them, after one or two weeks of hectic buying, they have again withdrawn, and are asking for further concessions in prices which the growers are reluctant to make. Another bullish factor has been short-covering by sellers to Russia. According to trade estimates, Russia has so far bought more than 2,000 tons, of which over 1,000 tons have already been shipped. The next shipment is expected to take place some time in February when a Russian steamer is scheduled to touch Indian ports. On the return voyage, she is likely to go via China, so market circles expect that China also will buy some parcels of Indian pepper for shipment by that steamer.

Pepper exports from India during December totalled 1,300 tons, according to a trade estimate. If the present tempo of purchases by foreign buyers continues, shipments during the first quarter of the year may well exceed 5,000 tons. Malabar black pepper being cheaper than red chillies, its internal consumption may go up further. At present, the price difference between these two is 8 annas a lb, the price of pepper being 12 annas a lb. The impact of internal demand will be felt from February onwards when the pressure of arrivals from central Travancore will decline. Crop reports from the Tellicherry area are not as good as those from the Travancore side, so the pressure of arrivals from that area is not likely to be so heavy as to depress the market at that time. In the Singapore market, Sarawak and Indonesian pepper are firmly held, so much so that there is a chance for the demand from Europe to be diverted to India. Viewed against these factors, trade sources expect that the price of Malabar black pepper is likely to go up slowly until the arrival of the new Sarawak crop in June.

Forward Trading

A significant development is the opening of forward trading in Cochin under the auspices of the India Pepper and Spice Trade Association. Although it is for the purpose of controlling unhealthy speculation that the Central Government has brought it under the control of a single association, a certain amount of speculation cannot be avoided, especially in the forward trade of a commodity like pepper which fluctuates widely in price. For instance, pepper prices, which were ruling about Rs. 4,000 four years ago, are today ceding at the low level of Rs. 500 to Rs. 600 a candy; surprisingly enough, the market has weathered these fluctuations without a crisis. Therefore, sudden fluctuations in pepper prices should not be considered as conclusive proof in assessing the tempo of speculation or used as a lever for closing the market.

Arecanut Marketing

Dr. Punjabrao S. Deshmukh, Union Minister for Agriculture, inaugurated the first conference of the Kerala Arecanut Growers' and Curers' Association recently in Trichur. Kerala has over 150,000 acres under arecanut, but production is very low at about 1,006,000 maunds. According to

experts, the yield should be 10 standard maunds an acre. One of the reasons why it is low is the unsatisfactory way arecanut is cultivated in Kerala. The Minister wanted arecanut growers to adopt the Japanese method of cultivation. He advised them to revitalise their existing gardens by the judicious selection of seeds, exchange of seeds with their neighbours, and raising a nursery on scientific lines. That alone, he said, would enable them to replace nearly 30 percent of the existing plants which were either sterile or poor bearers. He also suggested a mixed cropping programme by which a grower will be able to produce more pepper, cashewnuts and arecanuts in addition to other crops like plantains, betel leaves and pineapple.

Referring to marketing problems, the Minister said that he was aware that the marketing of arecanut, especially in the Kerala region, had to contend with serious handicaps due to the smallness of the holdings, growers' lack of resources and inadequate credit facilities. There are a number of intermediaries between the grower and the consumer and a substantial share of the price paid by the latter goes to these intermediaries. The Minister thought it desirable to bring the producers within the fold of a co-operative marketing organisation which could undertake harvesting, curing, grading and selling of arecanuts to the best advantage of its members. This would go a long way in reducing the burden on the consumer and also. The National Co-operative Development and Warehousing Board recently constituted by the Union Government will provide finance and storage facilities to the co-operative marketing societies of arecanut growers. The Minister suggested the establishment of a regulated market for arecanut in Kerala.

LONDON TEA SALES

AT last week's London tea sales, the 61,846 packages on offer realised an average price of 5s 9.59d a lb. against 5s 9.64d at the previous sale and 4s 4.40d a year ago. Plain broken pekoe was quoted at 5s 2.1d a lb. against 5s 2d at the previous sale. Prices obtained by some of the companies are given below:

	No. of packages	Average a lb.
Amalgamated	592	5/64
Angoorie	408	6/44
Anglo-American	677	5/9

U.K. Tea Stocks

U.K. tea stocks in London and provincial warehouses for the week ended 18th January amounted to 68,484,020 lbs. against 69,847,380 lbs. in the previous week. The total amount to be landed on 18th January was 46,888,490 lbs. Deliveries during the week totalled 11,919,490 lbs. and landings 10,556,150 lbs. The total afloat on the same date was 65,567,680 lbs. including 41,427,320 lbs. from Calcutta, 2,537,530 lbs. from Chittagong, 2,944,330 lbs. from Cochin, 15,288,500 lbs. from Colombo and 3,370,000 lbs. from other ports.

COCHIN TEA SALES

At Dust Sale C. 400,000 lbs. of tea were on offer. This was a strong demand in the market which was irregularly dearer for everything except for the best liquoring sorts which were rather easier.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN DECEMBER

Indian rubber output in December, 1956 was 2,914 tons, according to the Rubber Board of India. Exports during the month were 14 tons and 1,960 lbs, while imports totalled 266 tons. Consumption by manufacturers was 2,647 tons. Stocks with estates and dealers on the last day of the month totalled 5,648 tons including 1,506 tons in transit. Stocks with manufacturers on the same date were 2,663 tons. Manufacturers also used 319 tons of reclaimed rubber of which their stock at the end of December amounted to 602 tons, and consumed 262 tons of synthetic rubber, their month-end stock of which was 844 tons.

Engineering and Transport

AIR INDIA INTERNATIONAL TO BUY BOEINGS

FLEET STANDARDISATION IN THE JET AGE

(FROM OUR NEW DELHI CORRESPONDENT)

THE management of Air India International, in its third annual report, says: "In order further to standardise the Corporation's fleet and to avoid the complications of three different types of aircraft and engines when the jet aircraft, to which a reference is made in the ensuing paragraphs, are received, the Corporation is considering the possibility of disposing of its three Constellation aircraft and replacing them by two Super Constellation aircraft when the completion of the extension to the Hongkong airport makes it possible to operate Super Constellations from that airport. A decision is expected to be taken in the current year. After a careful study of the long-range jet aircraft offered for delivery from 1959 onwards by the Douglas Aircraft Company and the Boeing Airplane Company, and of the two types of engines offered, an order was placed during the current year, with the approval of the Government of India, for three Boeing 707-420 jet aircraft equipped with British Rolls-Royce Conway engines for delivery in the first quarter of 1960."

The aircraft will, in the configuration selected by the Corporation, fly at about 550 miles an hour and have a range at full payload adequate for any sector on any route likely to be operated by the Corporation. The extremely high cost of these aircraft is reflected in the figure of \$23.36 million, or Rs. 11.10 crores, which is the estimated total cost of the project, including spare engines, spare parts, flight simulator, ground equipment, Customs duty, preliminary and training expenses and delivery flights.

Sale of Constellations

Since then, a decision to sell the three Constellation aircraft, it is believed, has been reached, and one of the aircraft is being sent to Kabul to provide a demonstration for their sale to the Afghan airline, Aryana. It will be recalled that, as a gesture to Afghanistan, three Dakotas were taken off the register in India and were expected to become part of Aryana's fleet. The issue is why these aircraft are not being sold to the Indian Airlines Corporation. If the I.A.C. is prepared to purchase Russian aircraft about which no Indian knows anything, and thereby add to its fleet of Skymasters, Vikings, Dakotas and Herons, it can safely acquire three Constellations to replace some of its "aerial tongues." There is a shortage of foreign exchange. Unless the sale of three Constellations is to yield dollars to pay in part for the Boeings, it would be futile to sell these aircraft to the Afghan airline and then to spend foreign exchange for the purchase of replacements for Dakotas by the Indian Airlines Corporation.

The report that Air India International will use San Francisco as the terminus for a new trans-Pacific passenger service has been confirmed here. Details of the service to be provided by the State-owned airline are still not known, although it is understood that flights will begin next summer. The airline's former Commercial Manager, Mr. Jermeja S. Hundal, is now taking a six months' training course in Bombay preparatory to his re-appointment to San Francisco to be the airline's representative there. A year ago Mayor George Christopher of San Francisco invited Mr. J. R. D. Tata, chairman of the airline, to examine the city's airport facilities with a view to making it the west coast terminus for Air India International.

Commercial Jet Age

The introduction of U.S.-built jet airliners on inter-continental services between 1958 and 1960 will mark the beginning of the commercial jet age. These four-jet transport planes—the Boeing DC-8 inter-continental Stratoliner and the Douglas DC-4 Clipper—will make the world 40 percent smaller for air travellers by cutting flight time on inter-continental schedules. The maximum speed of both planes is Mach 0.85 (Mach 1 is the speed of sound). The British Government's recent decision not to go ahead with the production of the Vickers Armstrong V-1000 jet transport, the only British jet plane with enough range to cross the Atlantic, evidently means that the two U.S.-built jet airliners will be the only commercial jet aircraft flying non-stop trans-oceanic routes. The British and French will concentrate on medium-range jet airliners.

Pan American World Airways made a concrete move into the commercial jet age last October by ordering 20 Boeing 707s and 25 Douglas DC-8s at a total cost of \$269 million, including spare parts. Twelve days later, the United Airlines purchased 30 Douglas DC-8s at a cost of \$175 million for use on its trans-continental and Hawaiian routes. Other airlines, including K.L.M. Royal Dutch Airlines, have announced purchase commitments or authorisations to purchase fleets of either or both of these new straight jet planes.

The Boeing company plans to deliver an experimental 707 jet transport to Pan American World Airways in June, 1958, so that the airline's operations and maintenance personnel may familiarise themselves for six months before they receive the first aeroplane for service on the line in December, 1958. There is a possibility that Pan American might be given use of a Boeing KC-135, the mili-

tary tanker-transport version of the 707, even in 1957. Pan American's contract calls for a cruising speed for both planes of 575 statute miles an hour at 30,000 feet altitude. Some of the flying schedule estimates for the new jet airliners are as follows:

	Statute Miles	Hours-Minutes
New York-Paris	3,750	6:35
New York-London	3,535	6:15
New York-Buenos Aires	5,415	11:15
Chicago-London	3,950	6:45
Tokyo-Seattle	4,770	8:32
Honolulu-San Francisco	2,420	4:30
Los Angeles-Guatemala City	2,270	4:15
Honolulu-Seattle	2,785	5:00

The prospective flying time of 6 hours 35 minutes from New York to Paris compares with the present fastest schedule of 11 hours. An even more spectacular reduction in flying time will be made by the jet airliners from Chicago to London. Flying the northern arc, they will cover the distance in 6 hours 45 minutes instead of the present schedule of 16 hours. San Francisco to Tokyo will take 12 hours 45 minutes instead of 25 hours. The Douglas Company points out that Americans will be able to spend week-ends in Paris, thanks to the new jet airliners.

The two new jet airliners promise not only to be quieter for passengers inside the cabin but also to have a noise level in the vicinity of airports considerably less than that of any present-day multi-engine transport aircraft. Equipping the jet engines with new silencer devices, it is reported, will reduce their noise level by at least 10 percent. A final comfort comes from the ability of jet aircraft to fly high in the stratosphere. At their normal altitude of 30,000 to 40,000 feet, they will fly above most bad weather conditions. Radar sets will steer them through the least bumpy sections of the clouds which cannot be surmounted.

Accommodation in Jet Planes

The approach of the jet age might make many of the existing aircraft obsolete. A very big problem for world airlines is what to do with these aircraft. An early step towards meeting this challenge is being made from next April as far as the Atlantic is concerned. Here air fares are being revised in order to fit in a new class of air travel, namely the "coach" class. There will be a super luxury or de luxe class, as provided, say, by Pan American on its "President Special". There will be an intermediate class—a little less luxurious than the present first-class and a little more luxurious than the tourist class. Then there will be the coach or the lowest class, which is a little less comfortable than the present tourist class. The super luxury class will provide everything, such as food, wines, cigarettes, etcetera. The middle class travellers will have to pay for their drinks but their fare will include food. The new air "proletariat" will have to pay for what it needs. While the railways are reducing the number of classes, it seems the airlines are increasing them.

Popularity of Air Travel

Worldwide air travel will increase from the present 40,000 million passenger-miles to 60,000 million passenger-miles by 1960, prior to the advent of the jet age. After 1960, when jet aeroplanes begin flying, an estimated increase to 90,000 million passenger-miles by 1970 is "well on the conservative side," according to Mr. A. E. Raymond, Douglas vice-president for engineering. Jet transports now in production, he said, would lift the aviation industry to a speed plateau which should remain constant for at least 10 years. Further increases in speed, he explained, were economically unjustified because they ran into the drag-rise associated with the speed of sound. Thus airline assets were protected against the greatest factor of technical obsolescence and the carriers had entered a period in which they could consolidate their gains and improve standards of public service. DC-8 productivity (payload times speed) he said, would in effect, give operators a cost level. Field-length requirements for jets were in line with those for current aircraft. For operating ranges of less than 2,500 miles, requirements for the DC-8 are determined by landing, not take-off, and are 6,400 feet—about the same as the DC6B requirement at that range. For longer ranges, field length is determined by take-off and reaches 8,750 feet at the maximum full payload range of 4,500 miles. The DC-8 will demand even less runway strength than the DC-7, because of multiple wheel loading, and will be able to take its place in line with present transport in holding patterns and at airport terminals. The jet noise suppression programme, he said, was advancing according to schedule.

Jet Fuel Consumption

According to Mr. C. F. Holloway, an oil company engineer, the rate of consumption of civil jet fuels would increase at a steady rate up to 1960, to a total of approximately 1.25 million long tons. After that year, demand would continue to rise, until in 1970, total consumption reached 8 to 9 million long tons. On the choice of fuels, the engineer says: "It is considered impossible at the present stage of development of the jet aircraft and its engine to consider fuels outside the range of JP-4 and A.T.K. (Aviation Turbine Kerosene), but within these narrow limits, aircraft operation can be carried out with either fuel in safety."

Tourist Concession by Pan American

Tourism is being boosted in India. Some newspapers are being encouraged to bring out special

supplements on it. Here is one example of how tourism is encouraged in the west. A Pan American hand-out says: "The Riviera still is the glamourland, but the clientele is no longer restricted to the rich, titled and leisured." A tourist, for example, with \$700 but no yacht, securities or diamond mine to call his own, can have the time of his life there for two whole weeks. The \$700 covers his trip back and forth across the Atlantic, room, meals, car rental and entertainment. Here is a break-down of the expenditure of \$700. The tourist will pay \$520 for a 17-day round-trip excursion from New York to Nice on Pan American World Airways. If he prefers, he can even finance the air fare for 10 percent down and the remainder in 12 monthly instalments under the "Pan Am Pay Later Plan."

B.O.A.C. Britannia

A B.O.A.C. jet-prop Britannia will be in Calcutta for a demonstration flight on 27th February. Earlier in the month, on 15th February, it will give a similar flight in Delhi. The Britannia will be on its proving flight from London to Sydney, leaving London on 14th February. On its return journey, it will halt in Calcutta. The first Britannia service, as already reported, will leave London on 2nd March and arrive in Calcutta on the following day to reach Sydney via Singapore on 4th March. In the reverse direction, the first Britannia service will leave Sydney on 5th March. Britannia on this route will leave London three times a week, on Mondays, Wednesdays and Saturdays, calling in Calcutta the following day.

Visit of B.O.A.C. Chairman

Mr. Gerard d'Erlanger, B.O.A.C. chairman, came last week to India on a five-day visit. He is flying across the world in easy stages to inspect the arrangements being made for the reception of the Britannia jet-prop services. During his stay in New Delhi, Mr. d'Erlanger discussed matters of common interest with the civil aviation authorities. He left Delhi on 30th January for Bangkok, from where he will go to Hongkong, and then on to Japan, Australia and New Zealand. On his return journey to the U.K., he will visit Malaya and Ceylon. He is due back in London on 12th March.

K.L.M. Tourist-class Service

As from 1st March, K. L. M. will introduce—besides the existing first-class fares which will be increased by about 7 percent—the tourist class accommodation on its services to Rio de Janeiro, Montevideo, Buenos Aires and Santiago. The difference between the tourist class fare and the first-class fare will then be 28.5 percent. In comparison with the old first-class fare, this tourist class fare is about 23 percent lower. The service in the tourist class on this South Atlantic route, namely, a free baggage allowance of 20 kilos, meals free of charge, whereas cigarettes and drinks will be available at reasonable prices. It is the intention to equip the DC-6B aircraft, with which these services are to be operated, with 25 tourist chairs and 22 de luxe chairs, the so-called "sleep" Airs. Upon the introduction of the tourist class on the services to South America, K. L. M. will provide tourist class accommodation to all parts of its world service. The old standard class will be re-introduced on the North Atlantic K. L. M. service, Amsterdam-New York, on 1st April, so passengers on this route will be able to travel in three different classes—tourist, standard and de luxe.

U.K. AVIATION EXPORTS IN 1956

U. K. aviation exports last year passed the £100 million mark for the first time. The December figure of over £7 million brought the year's total to nearly £104.5 million. It was an all-time record, and beat the previous year's total by no less than 58 percent. In an announcement on 24th January the Society of British Aircraft Constructors pointed out that exports of aircraft and parts, excluding engines, amounted to nearly £72 million, a figure far exceeding the total aviation exports of any previous year. Of this amount the U.S.A. took £17.2 million worth, confirming its place as the U.K.'s best customer. Australia was second with £11 million, and Sweden third with nearly £3 million.

BIG P. & O. LINER FOR FAR EAST ROUTE

A new 45,000-ton passenger liner designed for the Far East route and costing £12.5 million is to be built for the Peninsular and Oriental (P. & O.) line by the Belfast firm of Harland and Wolff. The order is the biggest placed by a British passenger line for a single ship since the building of the giant Queen Elizabeth (83,673 tons). The new liner will reduce from four to three weeks the time taken for a voyage from Britain to Australia via Suez and Colombo. The ship will then go on across the Pacific to Vancouver, Canada, and San Francisco, the U.S.A., and back to the U.K. Details of the new vessel were given in London on 24th January, by Sir Donald Anderson, deputy chairman of P. & O. The liner will be nearly all-welded, and will have a superstructure almost entirely made of aluminium. All propelling machinery will be placed aft to facilitate the fullest use of space amidships for public rooms, swimming-pools, and cabins. The vessel will be fitted with two sets of stabilisers. Accommodation will be provided for 1,650 tourist passengers, 600 first-class passengers, and a crew of 960. The vessel is expected to be completed in 1960. The keel is to be laid in September.

Calcutta Markets

GOOD GENERAL DEMAND AT
TEA EXPORT SALE

PRICES FALL IN DUSTS

AT Sale No. 31, held on 29th and 30th January, offerings at the Export auction consisted of 68,700 packages for which there was a good general demand at easier rates. Once again, bright liquoring teas were keenly competed for and these, together with good medium Assams, generally sold at dearer rates. The bulk of the common and medium offerings, however, were up to 2 annas easier and Fannings grades were again more popular than Broken. Thin liquoring and stalky B.P.'s were the weakest feature of the Sale and many lines were withdrawn. Although slightly easier, C.T.C. teas received better support than in recent weeks, and a few of the bright liquoring invoices sold well. Well-made whole leaf grades were a strong feature and were from 1 to 2 annas dearer while stylish B.P.'s were up to 2½ annas stronger. Tippy teas were in very strong demand and were generally selling 2 annas to 4 annas above last rates. Darjeeling teas on offer were again neglected.

Quotations		1957	1956
		Rs.	Rs.
Clean Black Pekoe	2 3 6 to 2 4 0	2 0 0	
Plain B.P.	1 15 6 to 2 0 0	1 7 6	
Medium Assam B.P.	2 1 6	1 10 0	
Best C.T.C. Assam B.P.	2 9 0 to 2 10 0	2 3 0 to 2 5 0	

At the Internal Sale Dust offerings consisted of 24,095 chests for which there was a fair general demand, but prices again showed a further decline. The only teas to sell at about valuations were the few lines of bright liquoring C.T.C. Assams, but the remaining offerings of this description were from 1 anna to occasionally 3 annas easier. All other kinds were up to 2½ annas lower, although the black leafy types were the strongest feature and were fairly well supported.

Quotations		1957	1956
		Rs.	Rs.
Medium Doars Dust	1 12 6	1 7 6	
Medium Assam Grainy			
Dust	1 13 0	1 8 6 to 1 9 0	
Medium Assam C.T.C.			
Dust	2 1 0		
Best Assam C.T.C. Dust	2 9 0 (nominal)	2 4 0 to 2 6 0	

Other grades offered were 2,950 chests, for which there was a fair general demand, but generally at 1 anna to 2½ annas below last rates.

At the Internal Tea Sale held on 24th January, 25,139 chests of Dust were on offer. There was a fair general demand at lower rates when the market opened, but demand weakened as the Sale progressed and at the close, many teas were up to 3 annas easier. The few lines of bright liquoring C.T.C. Assams received good support and sold at about valuations, but the more ordinary teas of this description declined once more and were up to 2½ annas easier. There was less demand for all except the best black leafy exportable kinds and these teas shared in the general decline. The market for Commons, Doars and non-C.T.C. Assams was irregularly 2 annas easier at the commencement of the Sale, but at the close was a full 3 annas easier and there were a number of withdrawals.

Quotations		1957	1956
		Rs.	Rs.
Medium Doars Dust	1 14 6	1 7 6 to 1 8 0	
Medium Assam Grainy			
Dust	1 15 0	1 8 6 to 1 9 0	
Medium Assam C.T.C.			
Dust	2 2 0 to 2 3 0		
Best Assam C.T.C.			
Dust	2 9 0 (Nominal)	2 4 0 to 2 6 0	

Other grades offered were 4,088 chests. There was a good general demand. Any clean teas sold well, although they were slightly easier, while the more residual offerings generally were selling above valuations. There was fair support for the green tea on offer.

FREIGHT MARKET QUIET BUT
FIRM

THE freight market during the past week has been fairly quiet, but quite firm. Coal from Hampton Roads to the Continent has been reported at 105s a ton for February, whereas a January-February loader has been fixed at 105s 6d. A fixture for barley from Australia to picked Port U.K. has been reported at 207s 6d., option of Antwerp-Hamburg range at 5s less. Barley shippers are in the market for cover to Japan. Grain shippers are seeking tonnage for Gulf-Bombay any size prompt at 245s a ton. Indian ore shippers paid \$ (U.S.) 26.25 Vizagapatam-Northern Range April position. Vizagapatam or Madras to North France March-April paid 215s option Boucan 217s 6d with 45s less via Suez. A fixture from Bombay to Rijeka with ore has been concluded at 208s f.i.o.; Calcutta-Colombo coal January-February has been fixed at 85s f.o.b., trimmed. In the Time Charter market, a Liberty-size has been fixed for four to five months' trading within U.K.-Continent at 40s. An oilburner 10,050 tons d.w. was fixed for a trip out Persian Gulf delivery Tyne at 62s 6d.

COMPANY AND PUBLIC NOTICES

HULDBARI TEA ASSOCIATION, LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the abovenamed Company will be held at its registered office at No. 6, Church Lane, Calcutta-1, on Friday, the twenty-second day of February, 1957, at 11 A.M. for the purpose of considering and, if thought fit, passing the following Resolutions as Special Resolutions:—

- "That in accordance with Section 314 of the Companies Act, 1956, consent be and is hereby accorded, with effect from the date of commencement of the said Act, to J. Thomas & Company Private Limited, of which Mr. G. T. Routledge, a Director of the Company, is a member and Director, holding and continuing to hold an office or place of profit under the Company as Tea Brokers."
- "That in accordance with the provisions of Section 261 of the Companies Act, 1956, Mr. G. T. Routledge be and he is hereby appointed a Director of the Company, such appointment to have effect on and from the 9th November, 1956."

Notice of the intention to move the above Special Resolution relating to the appointment of Mr. G. T. Routledge as a Director has been received by the Company not less than twenty-eight days before the date fixed for the meeting and the said notice sets out the reasons which make the resolution necessary.

The Share Transfer Books of the Company will be closed from the 18th to the 22nd February, 1957, both days inclusive.

By Order of the Board,
DAVENPORT & CO. PRIVATE LTD.,
Sd/- R. G. WALLER,
Director,
Managing Agents.

Dated, Calcutta, 25th January, 1957.

Note: A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead and such proxy need not be a member of the Company.

EXPLANATORY STATEMENT.

For many years past your Company has sold its tea crop exclusively through J. Thomas & Co. Private Ltd., Tea Brokers, although neither the latter Company nor its predecessors has ever been appointed as such Tea Brokers and in fact your Directors maintain, as the fact is, that the Company is at liberty to sell its tea crop through such Tea Brokers as it may decide. In spite of this, doubts have been raised on the question whether J. Thomas & Co. Private Ltd., in the circumstances mentioned above, do or do not hold an office or place of profit under the Company so as to attract the provisions of Sections 261 and 314 of the Companies Act, 1956. Your Directors feel that, in view of these doubts and in fairness to J. Thomas & Co. Private Ltd. and to Mr. Routledge, a Director and Manager of J. Thomas & Company Private Ltd., and purely as a precautionary measure, it is desirable that the resolutions set out above should be passed. The first resolution is framed so as to have retrospective effect on and from the passing of the Companies Act, 1956 but in case it should hereafter be held that J. Thomas & Co. Private Ltd. do hold an office or place of profit under the Company, then Mr. Routledge would, notwithstanding the passing of the first resolution, cease to be a Director on and from the date of the last Annual General Meeting. In view of this it is necessary that the second resolution should also be passed so as to have retrospective effect from the date of the last Annual General Meeting. It is, of course, of great advantage to the Board of your Company to have readily available at Board Meetings the expert advice and assistance of a representative of the Tea Brokers through whom the Company sells its tea.

STATE BANK OF INDIA.

NOTICE

THE Second Annual General Meeting of the Shareholders of the State Bank of India will be held at the Local Head Office of the Bank, Apollo Street, Bombay, on Thursday, the 28th February, 1957, at 4 P.M. (Standard Time) for the transaction of the following business:—

To receive the Central Board's Report, the Balance Sheet and Profit and Loss Account of the Bank made up to the 31st December, 1956, and the Auditors' Report on the Balance Sheet and Accounts.

H. V. R. JENGAR,
Chairman.

Bombay, the 25th January, 1957.

TEZPORE TEA COMPANY, LIMITED.

NOTICE is hereby given that the period for submission to the Company of Fractional Certificates for allotment of fully paid Ordinary Shares in lieu thereof in regard to the issue of Bonus Shares on 12th December, 1955, has been further extended to 11th April, 1957.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.,
Managing Agents.
Calcutta, 28th January, 1957.

TEESTA VALLEY TEA COMPANY, LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the abovenamed Company will be held at its registered office at No. 6, Church Lane, Calcutta-1, on Thursday, the twenty-eighth day of February, 1957, at 11 A.M. for the purpose of considering and, if thought fit, passing the following Resolutions as Special Resolutions:—

- "That in accordance with Section 314 of the Companies Act, 1956, consent be and is hereby accorded, with effect from the date of commencement of the said Act, to J. Thomas & Company Private Limited, of which Mr. G. T. Routledge, a Director of the Company, is a member and Director, holding and continuing to hold an office or place of profit under the Company as Tea Brokers."
- "That in accordance with the provisions of Section 261 of the Companies Act, 1956, Mr. G. T. Routledge be and he is hereby appointed a Director of the Company, such appointment to have effect on and from the 5th October, 1956."

Notice of the intention to move the above Special Resolution relating to the appointment of Mr. G. T. Routledge as a Director has been received by the Company not less than twenty-eight days before the date fixed for the meeting and the said notice sets out the reasons which make the resolution necessary.

The Share Transfer Books of the Company will be closed from the 25th to the 28th February, 1957, both days inclusive.

By Order of the Board,
DAVENPORT & CO. PRIVATE LTD.,
Sd/- R. G. WALLER,
Director,
Secretaries.

Dated, Calcutta, 25th January, 1957.

Note: A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead and such proxy need not be a member of the Company.

INDIAN COPPER CORPORATION LIMITED.

THE following are the returns for the quarter ended 31st December, 1956:—

Ore treated	Short/Tons	111,894
Average grade of Ore treated		2,072%
Refined Copper produced	Long tons	1943
Refined Copper issued to Mine		1846
Rolled Brass produced		62
Yellow metal circles produced		71
Rolled Copper produced		carried out during the quarter

The results of development work on the properties of the Corporation quarter under review are as follows:—

	Footage developed	Footage sampled	Footage payable
Mosaboni	2675	2523	1568.5
Badia	348	348	208.5

THE INDIAN CABLE COMPANY LIMITED

NOTICE.

NOTICE is hereby given that a General Meeting of the Shareholders of The Indian Cable Co. Ltd. will be held at the Registered Office of the Company, 9, Hare Street, Calcutta, on Friday, the 22nd February, 1957, at 11-00 a.m., to consider and, if thought fit to pass, with or without modification, the following resolutions, namely:—

- (As a Special Resolution) that the capital of the Company be increased to Rs. 4,00,00,000 by the creation of 20,00,000 additional Ordinary Shares of Rs. 10/- each.
- (As a Special Resolution) that the regulations contained in the printed document submitted to the meeting, and for the purpose thereof, be approved and adopted as the Articles of Association of the Company, in substitution for, and to the exclusion of, all the existing Articles thereof.

By Order of the Board,
S. N. MUKERJEE,
Chairman.

9, Hare Street,
Calcutta, 21st December, 1956.

Note: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

THE BOMBAY BURMAH TRADING CORPORATION, LIMITED.

NOTICE is hereby given that the Ninety-third Ordinary General Meeting of the Shareholders of the Corporation will be held at the Indian Merchants' Chamber Hall, Lalji Naranji Memorial Building, 76, Veer Nariman Road, Bombay-1 on Monday, 25th February, 1957 at 3 p.m. S. T. for the purpose of transacting the following business:—

- To receive and adopt the Directors' Report and audited accounts for the year ended 31st May, 1956.
- To sanction the declaration of a dividend.
- To confirm the appointment of Mr. R. E. Forrester as Director.
- To elect a Director in the place of Sir Cowasjee Jehangir, Bart., G.B.E., K.C.I.E., who retires by rotation and is eligible for re-election, by passing the following resolution of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Corporation.

Resolved that Sir Cowasjee Jehangir, Bart., G.B.E., K.C.I.E., who has attained the age of 77 years, and who retires by rotation and is hereby re-elected a Director of the Corporation and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act, 1956, shall not apply to him.

- To elect a Director in the place of Mr. M. G. R. Aitken, who retires by rotation and is eligible for re-election.
- To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board,
R. E. FORRESTER,
Chairman.

Bombay, 9th January, 1957.

Explanatory statement as required by Section 173 of the Companies Act, 1956.

The Special Resolution set out under item 4 is required as Sir Cowasjee Jehangir, Bart., G.B.E., K.C.I.E., has attained the age of 77 years and hence cannot be re-appointed a Director except by a resolution in respect of which special notice has been given in accordance with Sections 190 and 281 of the Companies Act, 1956. Notice has been received that this Special Resolution will be proposed.

Sir Cowasjee Jehangir, Bart., G.B.E., K.C.I.E., has been on the Board of the Corporation for over 25 years. In view of his wide and varied experience in the business life of the country and the valuable services he has rendered to the Corporation, it is most desirable that the Board should continue to receive the benefit of his services.

INDIAN COPPER CORPORATION LIMITED.

(Incorporated in England).

Dividend No. 30 (Interim)

NOTICE is hereby given that the Registers of Members of the Company will be closed from the 23rd February, 1957 to the 2nd March, 1957, both days inclusive, for payment on the 15th April, 1957 to the registered stockholders as on 22nd February, 1957 of an Interim Dividend (30) of 6-2/3% (1.6d. i.e. anna 1 and pies 5 per unit of stock) free of Income Tax payable by the Company on account of the year ended 31st December, 1956.

By Order of the Board,
DAVID JOHNSTON,
Actg. Secretary.

Clive Buildings,
Netaji Subhas Road,
Calcutta,
28th January, 1957.

THE BURRAKUR COAL COMPANY LIMITED

NOTICE is hereby given to the members of the abovenamed Company that an Annual General Meeting within the meaning of the Companies Act, 1956 (being the one hundred and eleventh Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday, the 1st February, 1957 at 10 A.M. for the following purposes:—

- To consider and approve the Audited Accounts of the Company for the half-year ended 30th June, 1956, and to receive the Directors' and Auditors' Reports thereon.
- To declare Dividends recommended by the Directors.
- To appoint a Director in place of a retiring Director.
- To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 18th January to 1st February, 1957, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Calcutta, 21st December, 1956.

Note:

- A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.
- The dividends if declared, will be paid on or after 8th February, 1957, to those shareholders so entitled whose names appear in the Company's books on the 1st February, 1957, or to their mandatories. No application for Dividend Warrants will be necessary.

THE INDIAN IRON & STEEL CO. LTD.

NOTICE.

AT a meeting of the Board of Directors of the Indian Iron & Steel Co. Ltd., held to-day it was decided that in accordance with the resolution passed at the Extraordinary General Meeting of the Company held on the 1st December, 1956, the Rights offer of 5,183,708 new Ordinary shares of Rs. 10/- each at a premium of Rs. 3-3-0 per share be made to those persons who are registered as holders of Ordinary shares in the Company's Register of Members on the 11th March, 1957, in the proportion to one new Ordinary share for every Ordinary share held by each such person on the said date.

The Ordinary Share Register of the Company will remain closed for the purpose of this offer from the 21st February, 1957 to 11th March, 1957, both days inclusive.

Holders of Ordinary shares under blank transfer are particularly reminded that it is necessary to lodge the Certificates of Shares with instruments of transfer duly completed in all respects before the Register is closed in order to be entitled to the Rights offer. Authority of persons signing instruments of transfer and in cases of transfer of shares out of the names of deceased shareholders, grants of legal representation, Estate Duty Discharge Certificates or evidence of acquiring the shares by the transferees for valuable consideration must be registered with the Company, otherwise applications for transfer of shares in such cases cannot be entertained by the Company.

Legal Representatives of deceased shareholders should get their legal representations immediately registered with the Company to enable them to receive and deal with the Letters of Rights on behalf of the estate of the deceased.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

29th January, 1957.

-----	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----

The only real function of Bank rate in India at the present time is as an indicator of the rate of interest at which the Government is prepared to borrow from the market. It also has a limited psychological influence on the thinking of Indian business men, although this has probably been completely destroyed by the decision to distinguish between the rates at which the Reserve Bank will discount bills and that at which it will lend against them. To sum up: The only real advantage which can be gained from keeping the official Bank rate steady is that the Government will still be able to launch its borrowing programme at 3½ percent interest instead of 4 percent. That is if the market is prepared to accept Government loans at this rate without demanding too much discount; a possibility which could involve serious consequences for the Government's credit. There is the additional minor factor that it will still be possible for the Centre to lend to the States at the old rate.

The question arises whether this artificial distinction, with its rather nebulous advantages, can be maintained for long. Once again, there are no short-term money movements to take into consideration. The whole effect is internal and must act through the market's evaluation of the Government's creditworthiness. In the past, there has been little difficulty in raising all the money required, although, as was particularly noticeable last year, this has occasionally been done at the expense of the State Governments' borrowing programmes and the debenture section of the share markets. Bearing in mind the present trends in the saving habit, there is no guarantee that the market will go on taking up ever-increasing quantities of Government loans at a rate of interest which is out of line with the economy's yield structure, in spite of the fact that life insurance, the largest investor in this kind of security, is now Government owned. There may, in fact, be an unnecessary disincentive in having a Bank rate which is no longer realistic. The conclusion would seem to be that the desire to make more profit has put the Reserve Bank into a position where an ultimate increase in Bank rate is inevitable. Apart from the question of whether this amounts to good management in monetary matters or not, it remains a fact that the Government, by its actions, has brought Bank rate to a completely impotent and slightly disreputable position. All idea of its ever being used for its true purpose of regulating the supply of credit in the economy, must be abandoned for the time being. It is doubtful if its new substitute in this purpose, the lending rate against Government securities and eligible paper, will be any the more effective even if it is raised above the present level. In an economy such as India's is at the moment, where costs are of such little importance when compared to needs, the only effective instrument of control would be that of physical discrimination between conflicting demands. This is a method which was tried last year with some success. Further policy shaped along these lines would have less impact on the costs of the economy, and, incidentally, would have a more beneficial effect on inflation, than any tinkering with Bank rate either by increasing it, or by replacing it by another rate and increasing that.

BANKERS' ADVICE TO THE NEW CHANCELLOR GROWING DISLIKE OF DEAR MONEY

THE annual statements by the chairmen of the British banks are usually more conscientious than original, weighty declamations on more or less familiar themes. They are always relevant to the financial situation as it exists when the statements are prepared. This year, however, major changes in the Government occurred in the middle of the bankers' "season". Thus, between preparation and publication the statements were overtaken by events. However, an extensive change of personnel provides an opportunity for a change of policy. Mr. Peter Thorneycroft, the new Chancellor of the Exchequer, has doubtless studied the bankers' recommendations. He may respect their opinions, even though similar recommendations from other quarters have not hitherto had much obvious effect. The banks' chairmen are noted for their individualism. They have never hesitated to criticise official policy, no matter what Government is in power. Sometimes they have uttered words of warning, almost of alarm. This year, despite the crisis from which Britain has not yet fully emerged, the note of anxiety is almost inaudible. But the bankers are not altogether satisfied with policy.

As individualists, the bankers sometimes utter opinions that conflict with those of their colleagues. Usually, however, because all of them view the same situation from approximately the same standpoint, there are one or two themes that are stressed by most or all of them. This year they are generally critical of the high level of interest-rates,

and of the high level of taxation. Not for the first time, they emphasise the excessive expenditure of the Government, which is directly relevant to interest-rates and taxation. The burdensome expenditure on defence has been specifically mentioned as incompatible with economic health. The need to invest in national development has been duly appreciated. The economies in defence announced soon after the new team took office did not represent a new policy, rapidly emerging. Nor did the prompt statement of the new Minister of Power, Sir Percy Mills, that the nuclear-energy programme would be greatly expanded. The decisions on which these announcements were based had already been made by the old administration. They represent no more than a tiny fraction of an annual bill of more than £1,500 million for defence. However, the first public statement by the new Prime Minister, Mr. Harold Macmillan, emphasised the Government's policy of economising this expenditure. "No vested interests, however strong, and no traditions, however good, must stand in our way", he said.

Constructively, two special priorities were announced by the Prime Minister: power and education. The one is needed to provide the energy for increasing production, the other to provide the skilled personnel for expansion and efficiency. Some resources will be transferred from defence to these creative purposes. A problem with these economies, however, is that they take a long time to show results financially, and in terms of resources transferred. A large part—and economically the most damaging part—of the defence expenditure relates to scientific research and to development of the results of such research. This kind of organisation cannot be reduced as quickly as the number of men in an army. Factories tooled-up to produce weapons cannot be immediately re-tooled to produce machines or instruments of peace. It is not expected that next April's Budget will show any remarkable effects of this change of policy on defence (a change that will be designed to make it not less effective but more efficient). Similarly, the increase in resources devoted to investment (in equipment and personnel) will be a slow process, which will probably not make heavy demands on the national finances until a year or two hence. In the meantime, however, some positive financial stimulus is needed. It is at this point that the bankers' objections to "dear money" may receive sympathetic consideration. There were signs before he left the Treasury that Mr. Macmillan had some doubts about the policy of high interest-rates that he had helped to enforce. It is a costly policy for a Government that must live with a huge debt—and a serious burden on the balance of payments when a substantial part of that debt is held abroad. Mr. Macmillan's successor, Mr. Thorneycroft, had opportunities, in his previous position at the Board of Trade, to observe the restrictive commercial effects of high interest-rates—and he is a man who believes in expansion.

Most of the City, and of course, industry itself, would approve a reduction of interest-rates as a stimulant to production and capital-investment. But the British economy is still delicately poised between inflation and deflation. There are, indeed, many symptoms of deflation, and if the process went much further it would be damaging economically as well as politically. On the other hand, a policy of stimulation could undo much of the good work arduously performed in the past years' struggle against inflation. A reduction of interest-rates would be a stimulant; so would a reduction of taxation. The bankers have appealed for both. But until expenditure on defence is substantially reduced the community will probably have to be content with either the one or the other, and it is likely that the Government will favour lower interest-rates, which would benefit mainly production and trade, rather than lower taxes, which would equally benefit consumption. This is not the first year when the bankers have been criticised as appealing for too much—for advocating policies whose implications they have not clearly worked out. A policy of relaxation and expansion has been proposed by the bankers, and it is certainly acceptable to the reconstituted Government. But we shall not be allowed to forget that when a similar policy was adopted a few years ago a period of dangerous inflation followed. That policy was not the only cause of the inflation; and the basic position is probably less inflationary now. But the warning remains.

CURRENT COIN

B. I. Takes Mackinnons' Shipping.—A reorganisation of the structure and Board of the British India Steam Navigation Company—a member of the Peninsular and Oriental Steam Navigation group—has been announced. British India has acquired the shipping business of Mackinnon, Mackenzie and Co. (Private) Ltd. This concern is successor to Mackinnon, Mackenzie and Co. who have been managing agents of the British India company since 1882. Mackinnon, Mackenzie is

established in Calcutta and Bombay and has associated companies in Pakistan, Burma, Ceylon, Singapore and Malaya, Hongkong and Japan which have also been acquired. In addition, British India's London agency, held by Gray Dawes and Co. since 1885, has been terminated by mutual arrangement, and that part of the Gray Dawes' staff employed on the London agency has been engaged by British India. For many years membership of the Board of the British India company has been substantially the same as that of the parent concern, Peninsular and Oriental Steam Navigation Company. It has been decided now, however, to appoint a separate Board for British India. Sir Donald Anderson (hitherto a deputy chairman and managing director), Viscount Bledisloe, Viscount Bruce of Melbourne, Sir John Hathorn Hall, Mr. A. O. Lang, Viscount Leathers, Mr. A. D. Marris and Viscount Runciman of Doxford have resigned from the British India Board. The new Board now comprises: Sir William C. Currie, who remains chairman and managing director; Mr. E. J. Pakes (deputy chairman and managing director); Mr. K. M. Campbell (managing director); Mr. W. Dalgarno; Mr. A. T. Orr Deas; the Earl of Inchcape; Mr. W. Kerr; Mr. C. S. Mundy; and Viscount Simon, who has ceased to be a deputy chairman and managing director. The new members of the Board are Mr. K. M. Campbell, Mr. W. J. Campbell, Mr. W. Dalgarno, Mr. W. Kerr, and Mr. C. S. Mundy. Mr. Pakes has been a managing director of British India since 1954. Mr. G. B. Sibley, Mr. J. W. Dixon and Mr. R. B. Monteath have been appointed general managers. Mr. C. E. Ford succeeds Mr. W. Kerr as secretary of the company, while Mr. C. H. Minett, Mr. A. J. Ovey, Mr. J. R. Sharpe and Mr. L. G. Hudson have been appointed managers. British India is moving to new offices at 1, Aldgate, London, E.C.3.

Sir Alexander Fleck in India.—Sir Alexander Fleck, K.B.E., F.R.S., Chairman of Imperial Chemical Industries, England, has been visiting Calcutta this week. Sir Alexander became Chairman of I.C.I. Ltd. in June, 1953. Born in Glasgow in 1889, he started his working life as a laboratory assistant at Glasgow University and later took a chemistry degree at that University. During the first world war he joined Castner-Kellner Alkali Company, which eventually became part of I.C.I. by the merger of 1928. In 1931, he became managing director of I.C.I.'s General Chemicals Division and six years later was placed in charge of I.C.I.'s agricultural and fertiliser interests, later known as Billingham Division. He joined the I.C.I. Board in 1944 as director responsible for Billingham Division and for Central Agricultural Control. This is the second visit paid by Sir Alexander to India in three years, and is intended to keep abreast of India's growing industrialisation. He will examine at first hand the part to be played in that growth by I.C.I.'s associates in this country. Of these, Imperial Chemical Industries (India) Private Limited has for some years been following a policy of expanding production. The period since Sir Alexander's last visit saw the start of a new company, Indian Explosives Limited, in which I.C.I. (India) is at present the principal shareholder in partnership with the Government. This company is building a factory at Gomti in Bihar for the manufacture of the country's requirements of commercial blasting explosives. Another of I.C.I. (India's) associated companies, the Alkali and Chemical Corporation of India Limited, which has a large public shareholding, has for years been manufacturing at Rishra near Calcutta chlorine, caustic soda, B.H.C. insecticides, and high quality nitrocellulose and synthetic paints and industrial finishes. The quantities produced at this factory continue to increase. It has recently begun the erection of a plant for the manufacture of polythene. Atle Industries Private Limited, a company in which I.C.I. (India) is a partner with Atul Products Limited, is manufacturing vat dyes at Bulsar near Bombay and is at present extending its plant. I.C.I. (India) has a large dyes mixing and packing plant in Bombay and is at the moment erecting a plant to make textile and dyeing auxiliaries. In addition to the products manufactured indigenously, India still requires imported chemicals, and I.C.I. (India) continues to market I.C.I. products in this country, together with those of other agency principals.

Indian Coffee Report.—The statistical appendices to the latest annual report of the Indian Coffee Board for 1954-55 reveal that a progressive rise in seaborne exports has followed the increase in production. Norway and Denmark, important pre-war markets, bought larger quantities than the United Kingdom or Germany. It is curious that Malaya took more coffee than Saudi Arabia or Egypt. Fluctuations in volume are probably due to licensing policy, but Sweden took far less than Switzerland or Denmark. The statistics confirm the impression that eastern Europe was an inconsiderable market for Indian coffee in the decade 1945-55 and that the offtake of Pakistan by land or sea was negligible compared with that of Bahrain. The demand from the U.S.A. for Indian coffee was also negligible. That country is still the biggest world consumer, but in Europe the leading buyer

is France. Latin American countries have a very small trade in coffee since most are producers. Neither the Far East nor Africa has any trade in coffee, but it is noteworthy that French West Africa is a producer like Kenya and Tanganyika. The many grades of coffee produced in India sell at varying prices, but it is surprising to find Liberia coffee listed as a distinct variety like that from Travancore. Whether the rise in coffee consumption in 1954, during which year tea prices rose steadily, was due to the price advantage held by coffee is an interesting query raised by the statistics, which also make it clear that in 1954 Indian coffee was far cheaper than Brazilian or Colombian, the varieties still preferred by the U.S.A. The labour statistics indicate that in both Mysore and Madras over 66,600 persons were employed on coffee estates. The chief producing centre is Chickmagalur in Mysore, while cultivation in the Palnis has also made Madurai an important producing district. Wages in Madras for men and women were higher than in Mysore or Coorg in March 1952 and the objections taken by employers to the Plantation Award of October 1956, are underlined by the differences between wages fixed in Travancore-Cochin in June 1951 and the scales prescribed in the award for Madras estates.

Industrial Expansion in Bihar.—In his presidential address at the annual general meeting of the Bihar Chamber of Commerce last week in Patna, Mr. S. P. Jain pointed out that although Bihar had abundant natural wealth, the per capita income of its people was as low as Rs. 188 a year—that is, the lowest in India next to Orissa. It supplied 54 percent of the country's coal, 100 percent of its copper, 48 percent of its iron ore and 60 percent of its mica. Vast mineral wealth still lay untapped. Bihar also had the largest steel-making centre in Asia and the largest single centre for cement and paper boards. Yet its economy was mainly agricultural, as the low per capita income figure suggests. Mr. Jain was glad that Bihar's second five year plan was the largest after those of Bombay and Uttar Pradesh. The scope for developing engineering and chemical industries was vast. The State had the skill and experience for industrial development, but it was essential to co-ordinate various activities. There were some handicaps, however, such as those arising from the lack of accurate and up-to-date statistical information from the shortage of transport and from the Government's steel and coal pricing policies. Dealing with the first, he pointed out that the production targets in the State's second plan were based on the figures for 1949-50 and 1951, and he was unable to follow how without the 1955-56 figures, new targets for 1960-61 could be correctly determined. The inadequacy of transport made several mineral-bearing areas inaccessible. The Government, by fixing a uniform price for coal, has deprived Bihar's industries of an important economic advantage. Small-scale engineering industries there actually suffer a price handicap when they have to buy their steel from producers outside the State, an anomaly arising from the present steel distribution policy. Mr. Jain suggested that the Bihar Government pay greater attention to these questions in the interests of economic development.

Liberty Ships from U.S.A.—The Deputy Secretary to the Transport Ministry, Mr. S. K. Ghose, has returned from the United States after negotiating for the purchase of 12 Liberty ships for use in India's coastal trade. The U.S. Government has so far neither agreed nor refused to sell these ships. The question has been pending for some years. There are almost 2,000 ships in the U.S. "mothball" fleet; they are kept in reserve for emergencies, and can only be sold by a special Act of the U.S. Congress. But a shipping lobby in it is opposed to the sale, mainly because it might tend to intensify competition. India is not the sole potential purchaser. There are many others and their demand totals about 200 ships. As explained by Mr. Ghose, India's case is different from that of the others. She wishes to use these ships in her coastal trade, thereby adding to the transport potential for the second five year plan. In the coastal trade, there can be no competition with U.S. shipping. Each ship has a capacity of 8,000 tons, and the 12 ships would be an extremely useful contribution to the coastal fleet. The Government has decided to raise the rate of interest on loans to shipping companies to 4½ percent, and thereby make the rate uniform for coastal and overseas shipping companies. At present, coastal shipping companies pay 4½ percent interest and overseas shipping companies pay 2½ percent. The Production Ministry meanwhile is evolving a new formula for fixing the prices of ships manufactured at the Hindustan Shipbuilding Yard. The existing procedure is that the Government gives a subsidy after fixing the price of a ship manufactured in India on the basis of the price for a similar ship manufactured in Britain. According to the proposals now being discussed, the Government will fix the price of a ship on the basis of its cost of production, and then a rebate of, say, 20 percent will be given. In other words, prices will no longer be linked to British

prices. An early decision is expected. The Government is also examining other demands made by Indian shipping companies, including one for extending the repayment period for loans from 15 years to 20 years, and another for increasing the quantum of loans from 75 percent of the price of a ship to 95 percent.

Outlook for British Exports.—The January issue of the G.E.C. Export Guide shows that, in general, Britain's export prospects have grown brighter since October. This is because of an improvement in the internal economies of several countries. Whatever the short-term implications of the Suez troubles for Britain's domestic economy, world demand for goods remains undiminished. Hence, it is all the more important for British manufacturers and exporters to concentrate on expanding their sales to new and to existing markets. This is the G.E.C. Export Guide's prognosis about the current "outlook for British exports" to select countries: continuing good prospects for British exports to Canada, Federation of Rhodesia and Nyasaland, India, Switzerland, the U.S.A., Venezuela and Western Germany. Since the publication of the last Guide (October, 1956) the outlook has improved in Argentina, Australia, Belgium, Norway and Spain, and trading prospects are particularly good with Ceylon, Gold Coast, Kenya, New Zealand, Nigeria, Sweden and South Africa. Export prospects continue to improve with the Irish Republic, Italy, Malaya and Singapore and Trinidad. Market prospects for British exports have deteriorated in Iraq, the Netherlands, Pakistan and Russia, and the deterioration continues in Burma, Denmark, Finland, France, Hongkong and Portugal. Evaluating the U.K.'s overall export opportunities in the 34 most important foreign markets for the 36 groups of manufactured products shown in the Guide, it is found that in 14 of them the outlook is "good", in nine prospects are "improving", in ten "deteriorating" and only in one, in Egypt, are prospects "bad". Unless British exporters look upon the emergence of the European Common Market—with the Messina countries taking the lead by signing a Common Market treaty early this year—as a favourable long-term development for their exports, they will miss an immense opportunity for enriching U.K. world trade. Based on the first ten months' trading returns, U.K. imports were at the annual rate of £869.2 million from the 11 countries which one day might form the free trading area (Belgium, Luxembourg, France, Italy, Holland, Western Germany, Switzerland, Austria, Denmark, Sweden and Norway) and exports were at the rate of (including re-exports) £783.7 million. Looking toward the future, what are Britain's trading prospects with these 11 European countries? It appears that Britain is in a good position to develop her trade advantageously. This is shown by the fact that between 1949 and 1956 the U.K.'s imports have almost doubled (a 99 percent increase) and exports more than doubled (a 119 percent increase) to these countries. In sum, even discounting the implications of the emerging new free trading area in Europe, British trading relations with this fast expanding region must be reinforced if Western Germany is not to steal a march on the U.K.

THE FAMINE AND THE PLAGUE

IN an article on the "Government of India and Private Charity", *The Times* remarks that "the policy of the Government is suggestive of the reign of an Irish rather than of a Scottish Viceroy." We consider the remark very much out of place, because two of the very best Viceroy lords that India ever had, viz., Lord Mayo and Lord Dufferin, were Irishmen. And we have no hesitation in saying that if either of these distinguished noblemen had been at the head of affairs at the present juncture there would have been no complaint of any delay or want of promptness in the measures taken, and the public would have had the fullest confidence in them—a confidence which they certainly are unable to accord to the present Government. The miserable policy of delay, delay, delay which has characterised the Government of India in dealing, first with the famine and then with the plague, may have consequences of the most serious moment to India. We are fully in accord with the articles which have appeared in the *Englishman* and *Statesman*. Compared with what may be the far-reaching consequences of the plague, the famine almost dwindles into insignificance. The plague has now assumed a national and imperial importance, and unless the Government deals promptly with the matter in an imperial way and from the imperial funds, we warn Lord Elgin that the future historian will have something very different to say about him from that which, when he addressed his Council on the subject, he fondly anticipated would be the verdict upon him. The absolute ruin of a great Empire is hanging in the balance, and we have at the head of affairs a nobleman who is apparently quite incapable of grasping the situation.

SOME CASES IN THE ENGLISH COURTS

THE CAUSES OF DELIGHT: FAT MAN AS AN OCCUPATION

(FROM OUR LEGAL CORRESPONDENT)

WE are indebted to *Law Notes* for several more pleasing incidents of errors by lady typists. The words dictated were ".....would considerably reduce the access of daylight to one part of the premises." The typed version read ".....would considerably reduce the causes of delight to one part of the premises." "The second version," says our contemporary, "might have been more apt of course. It depends upon what was obstructed." The causes of delight were increased by the typist who reproduced a complaint by a purchaser's solicitor about bursts in the pipes of the water system as "When our client turned on the water, five bursts were revealed." On the other hand, here is an example of meticulous accuracy on the part of a client to whom his solicitors had sent a deed for execution with the request that he should fill in his occupation in the blank space left for that purpose. He sent a covering letter with the deed running as follows (the punctuation is unaltered): "Dear Sir,—I have signed the name on the stamp. I have given my occupation Fat Man I will give it in full Fat Man in a Sponge Cake Dept. You see it is a Process of Melting Fat and putting it in a machine for spraying on a machine for making them damp with Fat Before going into an oven for Baking so that it help them to Bake without sticking to the Cups the Sponge is mixing on."

And what about this one from a bank? "Confidential. For your private use and without responsibility on the part of this Bank or the Manager, Dear Sir, In reply to your enquiry letter of.....re Mrs. Bankers say: The above is highly respectable and considered good for your figure and purpose. Yours faithfully." "The above," comments *Law Notes*, "is a reference recently received by a reader which seems a little ambiguous in the absence of extrinsic evidence as to the enquirer's figure and purpose." This application from a hopeful aspirant to a job in a legal office seems, perhaps, "a little ambiguous" too. A solicitor advertising for a male clerk received a letter from a youth of 21 who applied on the grounds that he was "very interested in clerical work, and also in soliciting." The young gentleman added that at school he was "thought to be of normal standard."

The past year saw a number of interesting cases on negligence, than which it is probable that there is no other subject on which the lawyer has more difficulty in giving definite aye or nay advice. The

only method the practitioner can follow is to bear in mind the legal, which is also the commonsense, meaning of negligence and do his best to apply it to the particular facts. "Negligence" is the doing of something which a reasonable and prudent man would not do or the omission to do something which a reasonable and prudent man would have done. The trouble is that reasonably prudent men such as juries, judges and one's own professional colleagues with whom one talks over the matter as often as not disagree as to what this fictional reasonable and prudent man of the law's creation would have done or would have omitted to do, on the facts of the particular case under consideration. Reading through the 1956 English reports on cases of alleged negligence one is astonished at the number of appeals from one judge to others where the facts are quite simple, and still more at the number of times even in the Court of Appeal and the House of Lords one finds a minority of judges disagreeing with the majority. It confirms one in the opinion, held for years and often expressed in this column, that the average business man, in a case of alleged negligence in which he is interested, is more likely to come to a correct conclusion than his own lawyer, and that the more learned the latter gentleman is, the less likely he is to come to a right decision. For learning does not imply the possession of commonsense, which faculty the commercial man is in the habit of exercising every day of his life, and every question of negligence is primarily a question of commonsense.

Perhaps the reader will oblige the writer by considering the facts in this 1956 case and then coming to his own conclusion before he reads the decision of the Court of Appeal. One is almost prepared to guarantee that he will—and one submits—rightly disagree with the latter. These were the facts. The Ilfracombe Urban District Council provided, for the recreation of the residents of and visitors to that Devonshire seaside resort, a public recreation ground. The ground contained, among other amenities, swings and chutes. A child aged 4½ years was playing on this recreation ground. He was not accompanied by an adult. A chute, soundly constructed and properly installed, had a platform 12 feet from the ground, protected by a double line of rails. The child went up some steps leading to this platform, and fell from the platform sustaining injuries. There was no evidence as to how he came to fall. It was a small recreation ground. The municipality did not employ therein a groundsman or keeper or other attendant to supervise the activities of children playing in the recreation ground and using the chutes and swings or as attendant to other and adult visitors. Nor did the municipality put up any notices to the effect that children under five—or whatever the age might be—were not permitted on the chutes or swings. The child by his "next friend" sued the municipality for damages for his injuries.

The reader is now invited to stop here and consider his opinion, based on commonsense, as to whether the council failed in its duty to the child to take care and was therefore guilty of negligence. The writer came to the wrong conclusion, as he feels pretty sure the reader will too. Anyone who knows anything about the habits of children, especially boys, will be aware that a child of 4½ is quite likely to bend over or squeeze himself or fall through a railing. There should have been a groundsman to stop the child venturing on the platform. A "reasonable and prudent man" would have provided such an attendant. "Not so," said the Court of Appeal in effect. "There had been no breach of the duty owed by a licensor to a licensee since there was no element of inherent danger in a sound stationary and immobile chute which would not be obvious to a child of that age." Singleton L.J. (Jenkins and Parker L.J.J. concurring) said: "In the ordinary case of a small recreation ground such as this it is not their (the council's) duty to provide a groundsman or keeper. Nor do I think it their duty to put up notices....."

The facts in this case were quite simple and so is the definition of negligence; and it all tends to show that among the most difficult jobs in the everyday affairs of life is that of a solicitor advising on an affair of alleged negligence.

Facts are simple. Their application is difficult. Even the very highest tribunal, the House of Lords, may disagree, as our next example illustrates. Incidentally, the majority decision on the principle involved in it seems rather to confirm the doubt with which one accepts the correctness of the child on the chute decision. It is of importance, too, in shipping concerns.

A grain ship was on her way from England to Montreal to load grain in bulk. According to the usual practice, the holds were made ready for loading during the voyage. When ready, the upper deck hatches were battened down, but the 'tween decks hatch covers were left off. The vessel carried stanchions and a wire rope which could be fitted as a guard rail round each hatch, through which there was a drop of some 40 feet. Timber was stored in the 'tween decks, where the light was quite good. The plaintiff, a seaman, was sent with other men to fetch some of this timber, but, in a manner unexplained, fell into one of the holds and was injured. The evidence was that it was not the general practice to erect guard rails round the hatches of ships at sea. The House of Lords, by a majority of three law lords to two, found the employers liable. "The test was.....that where the alleged negligence of the employer consisted of a fault of omission it must be shown either that the thing which he did not do was a thing which was commonly done by other persons in like circumstances or that it was a thing so obviously wanted that it would be folly in anyone to neglect to provide it. But although there must be no facile finding that a precaution is necessary where there is no proof that it is one taken by other persons in like circumstances, the test is nevertheless the conduct and judgment of the reasonable and prudent man and in the opinion of the majority of the House such a man would have had the guard rail erected having regard to the frequency with which, in this vessel, men were required to go into the 'tween decks."

Going back to that child of 4½ on the Ilfracombe Park chute, may we not suggest that "the thing which (the council) did not do was a thing so obviously wanted that it would be folly in anyone to neglect to provide it", i.e. the employment of an attendant?

We will conclude with another case of negligence, the result of which may shake your confidence in the presence of that artificial gentleman, the law's "reasonable and prudent man", as it certainly has done with the writer. The plaintiff was one of a gang of six men employed by a stevedoring company to unload bags of chemicals from a barge. The gang was ordered by the hatch foreman to adopt a method of unloading which was safe, but, in his absence, by mutual consent they adopted another system which was unsafe, in that it left tiers of bags in a position in which they were bound to be unstable. When the foreman returned he instructed the gang to return to the safe method and told the plaintiff personally to level off the bags, which he said he would do. Despite further warnings by the master, engineer and mate of the vessel, the gang continued to follow the unsafe method until a pile of bags collapsed and the plaintiff was injured. Is the stevedoring company liable to pay damages to the plaintiff for his injuries? "Yes," said Lynskey J. at Liverpool Assizes. A duty was owed by each member of the gang to each of the others to take reasonable care in the work of unstowing and in the method of work employed. Although the plaintiff tacitly consented to the method adopted, he can hold his employers vicariously liable for the negligence of his fellow workmen which was in the course of their employment. The damages were reduced by one-half by reason of the plaintiff's own contributory negligence. One hopes this case will go further by way of appeal, and would have thought that the plaintiff's injuries were not the result of the disobedience of the whole gang but the result of his own individual disobedience to warnings and orders from foreman, skipper, engineer and mate, including personal orders to himself: the result, in fact, of his gross negligence.

A DITCHER'S DIARY

another aspect of pretty much the same sort of influence in spoken broadcasts—in news, talks and commentaries, for instance. Pearls of platitudinous wisdom, ever so lovingly gleaned from official oysters, are regularly strung together and offered a bored public. What A.I.R. needs most is independence, eclecticism and controversy. And until it is allowed them, it may as well put listener research into the waste-paper basket. That is what my friend is doing with his questionnaire.

It is good to be able to release Colonel Nasser from any suspicion of having damaged the market for art. I pointed out here lately that the Suez crisis had displaced post-impressionist paintings from the top of the list of inflation-hedges, in favour of oil tankers. I now learn that the main reason for this is that there are no reputable paintings left on the market, so sustained has been the demand in recent months. With all the classic canvases vanished into the salons or the cellars of the anxious rich, Colonel Nasser's coup channelled all the frenzied demand toward contemporary artists, who are today no doubt blessing him for producing an increase of 20 percent in the turnover of post-impressionist art. The last great pictures were sold last June, just before the Suez scare: a dancing scene by Degas went for £22,000, "Five Bathers" by Cezanne for £19,000 and a picture of a dog by Toulouse-Lautrec for £12,000. There is literally nothing left, by these masters, on the open market. Museums cannot compete at auctions with the Croesus who fears a fall in the value of money, so today when Parisians want to see some of the work of their great fellow-citizens they have to beg Mr. Richard Butler to send over from England a part of the Courtauld collection. Speculators who missed the great canvases have fallen back on lesser lights like Vlaminck, Gromaire and Villon, but supplies of these ran out during the Suez crisis so the currency gamblers are buying unknown work at £50 to £350 a picture. Young painters of any talent saw their studios emptied in a few days, and their order books—supposing these long-haired young gentlemen keep such things—are full for the next few months. Paintings being scarce and oil tankers being too substantial an investment for most operators, the demand for inflation-hedges has shifted toward Louis XV furniture, where prices have risen by 10 to 30 percent, and of all things, to papers bearing the signature of Napoleon Bonaparte or politics being no consideration in business, of Robespierre.

It was said of President Nasser's nationalisation of the Suez Canal that it was purely Egypt's affair. Whatever the moral aspect of the business, I am sure there can be few intelligent people who still hold that view. As subsequent events have shown, the Canal is as vital to western Europe as it is to Egypt and a simple accident of geography is no justification for a dictator's spleen being allowed to inconvenience over 250 million people. But western Europe is not the chief sufferer, or the one most permanently affected. I think the developing countries of Asia are going to qualify for that honour. President Nasser's action, and that of Indonesia in repudiating her debt to Holland, have done untold harm to the flow of private foreign capital to Asia. India might not be in the position she is today, facing inevitable cuts in her second plan, if her credit abroad were not now, albeit unfairly, bracketed along with that of less responsible Asian nations. Now I see that Ceylon may join the movement and take over her foreign-owned tea gardens at what is being described as "absurdly low" compensation.

Nobody is going to deny Ceylon the right to nationalise what she pleases, although expropriation will only bring unnecessary political bad feeling. But it is still to be hoped she does not do so, because the gain to her is going to be paid for many times over by such countries as India, which are trying to attract foreign capital. It is no consolation to a nation struggling against poverty to know that another has exercised its sovereign rights simply for the sake of doing so.

The U.S. "aerial inspection" proposals, when first put forward at the Geneva conference a year and a half ago, left me cold. How, one wondered, could mere flights over military installations possibly enable one to find out how big they were and what they were up to? Nor could the scope for camouflage be ignored. But a U.S.I.S. booklet containing some interesting reconnaissance photographs has recently reached me, and gives a broad idea of how the proposals would work. Two points in it are particularly striking. One concerns the difficulties of reconnaissance over vast areas such as Soviet Russia and the United States. The booklet mentions that a strip 490 miles wide and 2,700 miles long, from Los Angeles to New York, has been photographed in fair detail on a flight of less than four hours. The second concerns the difficulty of finding out from high above what goes on down below. On this, the booklet says that trained analysts, looking at photographs taken from nearly eight miles up, have been able to tell the way a particular house is built, the relative economic status of the family living in it, if they have a telephone, and even whether they use a rotary-type power mower to cut the grass on the lawn. Reading this, one begins to appreciate why Russia has for so long objected to "aerial inspection." It would certainly be embarrassing for her if the Americans started talking about the average number of patches on the Russians' coats and trousers.

I sympathise with those villagers of the Bulligunda constituency in Orissa who face the possibility of being eaten by tigers when they go to cast their election votes. I must confess it would take a good candidate indeed to persuade me to trek forty-two miles to a polling booth, much less run the risk of providing some wild animal with a meal on the way. I hope something is done for these unfortunate folk; it would be a bad thing if they had to forgo their hard-won democratic rights for a reason like this. But elections do have their hazards. And I do not mean the pneumonia the unfortunate British voter has to risk because polling is usually held in the spring and autumn when the weather can be relied upon to let him down. A few years ago a strange story was told about an incident in some self-governing part of western Africa, where an election was being held for the first time. One candidate's constituency included a number of backward tribes about whose habits little, apparently, was known. He did not return from his electioneering tour and subsequent enquiries revealed why. His constituents had eaten him. Their excuse: they had not liked his policies. Now I am not recommending such behaviour as a general solution in all cases where electors disapprove of what a candidate has to say, any more than I would agree to lynching the engine driver when the train is late. But I will lay a fair sum, and at any odds one likes to name, that the next person who went to solicit votes in that area weighed his words carefully. And what better safeguard for democracy can there be than that?

TAXATION REFORM IN INDIA

KALDORIAN SIEVES FOR CHECKING EVASION

By P. C. Jain

IN India, as in most economically backward countries, the Government is faced with the problem of making the tax system just, equitable and progressive, and of preventing tax evasion. In the more advanced countries, sufficient statistical information is available and the conditions are such that it is easier to achieve these objectives. In India, some estimate that the Government loses Rs. 50 crores to Rs. 100 crores a year through tax evasion. Taxation also weighs heavily on the middle class and on the poorer sections of society. The Kaldor report points out that "the present system of direct taxation in India is both inefficient and inequitable. It is inequitable because the present base of taxation, 'income,' as statutorily defined, is defective and biased as a measure of taxable capacity and is capable of being manipulated by certain classes of tax-payers. It is inefficient because the limited character of the information furnished by tax-payers, and the absence of any comprehensive reporting system on property transactions and property income, makes large-scale evasion through concealment or under-statement of profits and property income relatively easy".

To remove these defects, Dr. Kaldor has recommended the introduction in India of an annual tax on wealth, a tax on capital gains, a general gifts tax and a personal expenditure tax, the last one being in partial substitution of the present super-tax on income. The Government has already introduced the capital gains tax and it is expected that a gifts tax and an annual tax on total wealth might be introduced in the 1957-58 Budget. The Finance Ministry is also reported to be preparing a scheme for introducing an expenditure tax in

the near future. In view of this, Dr. Kaldor's proposals need careful scrutiny.

Expenditure Tax

As an instrument of tax reform, the most fundamental of them is the expenditure tax. Dr. Kaldor's reasoning is that it is not possible to define income as exactly as it is possible to define expenditure, and an expenditure tax is more equitable both for the person who pays the tax and for the Government which collects it. In judging inequality, which is what the tax system aims to remove, he feels that the inequality of consumption is a better criterion than the inequality of income or wealth. With the expenditure tax, a person is taxed according to what he takes away from the nation's stream of goods and services for himself, whereas with the income tax he is taxed on what he puts into this stream. The relative status of different persons should be judged on the basis of what they take away rather than what they put in.

There is some theoretical justification for the expenditure tax, but what makes it a bad measure is the enormous practical difficulties it creates. It was suggested as long ago as the middle of the last century, but could not be used by any country, with some minor exceptions, because of these practical difficulties. It is particularly unsuitable in India because some special difficulties have to be faced here. This country still has the joint-family system and the tax would be inequitable and unfair for big families with limited incomes. Dr. Kaldor has tried to overcome this difficulty by suggesting that the tax should be levied on a "per head basis", i.e. it will take into account the number of persons in a family. But quite a large number of people have to help persons who cannot possibly be included in their family by any definition of the term, and their total expenditure includes the expenditure on such "outsiders". The expenditure tax would be inequitable in such cases. The tax, moreover, might be equitable as long as

prices are constant but it ceases to be so if prices are rising or falling. When prices are rising, as they have been doing in India and as they might well continue to do, the consumer suffers in real terms, firstly, by having to pay more for goods and services, and secondly, by having to pay a bigger expenditure tax. His savings, as a result, are reduced if he chooses to consume the same amount of goods and services which he was consuming formerly. There is no practical method of determining his expenditure except to estimate his income and then to find how much has been saved out of it.

Hoarding Cash

Finally, in India, one of the greatest difficulties is tax evasion. The expenditure tax will still further increase evasion to the extent that people will be able to meet their current consumption from wealth hoarded in cash in the first year or from borrowings from persons whose incomes are not directly taxable and who do not have to submit a return to the income tax authorities. Moreover, the expenditure incurred on illness, marriage, purchases of durable consumer goods, etcetera, will create enormous difficulties. In India, smaller business men keep their personal and business accounts together. In such cases, it will not be easy to detect evasion where personal expenditure is passed on to the business account. In big business houses, the allowances given to executives for expenditure in connection with their work will create difficulties. As Professor A. R. Prest has pointed out, "Mr. Kaldor's mental picture is that of a small group of people squandering their hereditary wealth on luxurious consumption. An alternative might be that of a large number of people drawn from all income groups supplementing their nominal money incomes to differing degrees by incomes in kind and expense allowances of multifarious shapes and sizes". In their case, the expenditure tax creates more problems than it solves, and is, therefore, not suitable for India.

The capital gains tax, the gifts tax and the tax on total wealth suffer from the serious defect that they will drastically reduce the incentive to save, and will thus curtail capital formation, which is vital for the progress of the economy. In an advanced country like the U.S.A., such taxes might not do much damage because there is already a large accumulation of wealth, but in an economically backward country like India it is of primary importance to encourage capital formation and the accumulation of wealth. Moreover, the classical principle of "economy in taxation" is as important today as it ever was. The smallness of the yield from these taxes in the next few years does not justify the time and money which the Government will have to spend on their collection. Dr. Kaldor has made a gross over-estimate in suggesting that the Government's revenue from the capital gains tax might be Rs. 25 crores to Rs. 40 crores, from the gifts tax Rs. 30 crores and from the annual tax on wealth Rs. 15 crores to Rs. 25 crores. There is no way of calculating the possible yield because the statistical information is lacking, but the chances are that in the next few years it will be small. There is a shortage of trained income tax personnel; if there were more of them, they could first be put on the task of preventing evasion which would bring much more revenue to the Government than the taxes proposed by Dr. Kaldor.

Scope for Cross-checking

Dr. Kaldor's one strong argument in favour of his proposals is that they would prevent tax evasion; "if all these taxes were assessed at the same time, by the same authority, and on the basis of a single comprehensive account submitted by the tax-payer (containing all receipts in the year, all tax-exempt outlays, a record of all capital transactions, and a full statement of all property owned) evasion and concealment would become more difficult, not only on account of the difficulty of the individual tax-payer to conceal consistently particular receipts or items of property but owing to the fact that the evidence furnished by one taxpayer (in the interests of minimising his own liability) directly serves as a check on the return furnished by others". He has ignored two important facts in this connection. Firstly, experience shows that assesses who evade taxes have been cleverer than the income tax authorities; it should not be difficult for the former to secure consistency in their income tax returns even if they are supplying cooked up information, so it is not possible to rely on hoped-for inconsistencies in order to detect evasion. Secondly, it is not true that all the transactions of assesses are with other assesses, as a result of which information provided by one will serve as a check on others. It is possible for one assessee to show a cooked up item on which he is evading taxes in connection with a transaction with persons not subject to income tax. The vague possibility that there might perhaps be some scope for cross-checking does not justify the huge expense and trouble which is involved.

An important feature of tax evasion in India is that it is not only the present assesses who are evading taxes; quite a large number of people whose income exceeds the minimum exemption limit are not caught in the net because of the shortage of trained personnel. Some attention has so far been paid to big evaders, but a large amount of revenue is lost through evasion by smaller fry as well. In taxation, as in many other fields of economic activity, Central and State Governments have tried to copy new ideas from foreign countries in the hope of performing wonders. The results have frequently been harmful. The same might well be the case with many of the present tax reform proposals.

(Concluded)

sugar mill equipment to be manufactured in India

Texmaco has just concluded an agreement with Stork Werkspoor of Holland, world's leading designers and manufacturers of sugar mill machinery, for the manufacture of Evaporating Plants, Vacuum Pans, Crystallisers, Dryers and other equipment.

Texmaco, pioneer manufacturer of a wide variety of engineering products, again opens another chapter in the history of India's industrial development.

THE CALCUTTA MONEY MARKET

SHARP RISE IN INTERBANK

RATES

Wednesday, 6th February.

THERE has been little change in the upward trend of both advances and deposits during the past week, in spite of the recent ban on imports which might have been expected to have shown some effect by now. The main source of demand is still the sugar industry, but a fair amount of credit is going to cotton ginners and for the holding of cotton stocks. The requirements of the jute industry continue to rise to new record levels. Following last Thursday's announcement of an increase in the Reserve Bank's lending rate against Government securities and eligible papers, the interbank rate has moved up sharply from 3½ percent to 4½ percent. It is rumoured business has been done at even higher levels.

Few bills of any sort are reported from the market this week. Those which have come to hand have been chiefly on account of small tea shipments. Remittance has been fair. Sterling has strengthened since the announcement of the United Kingdom's balance of payments position as at the end of January. The forward rate particularly has benefited. Reports from London indicate that it is now safe to conclude that most of the damaging speculation which sterling has recently suffered, has ceased.

Silver was firm on short-covering and because of restricted arrivals. The price advanced from the previous week's level of Rs 182-6 to Rs 186, quoted today. The rate for forward delivery was Rs 185-8. The London and New York prices remained the same.

Gold was steady in sympathy with silver and the price increased from Rs 108-6 to Rs 109. The sovereign at Rs 69-2 showed a gain of 6 annas.

During the week ended 1st February, Government of India Treasury Bills for Rs. 79,46,50,000 were sold in favour of the Reserve Bank.

An increase of Rs. 8.50 crores to Rs. 1,494.02 crores in active notes was the notable feature of the return of the Reserve Bank of India for the week ended 1st February, 1957. The total note issue was Rs. 51 lakhs lower at Rs. 1,508.57 crores. A decline of Rs. 14.91 crores to Rs. 412.52 crores in foreign securities in the issue department was adjusted by an equivalent increase to Rs 855.03 crores in rupee securities. As a result, balances held abroad were Rs. 10.66 crores higher at Rs. 93.84 crores because of a transfer from the issue department. Deposits of the Government of India and other Government accounts increased by Rs. 89 lakhs and Rs. 3.35 crores to Rs. 52.35 crores and Rs. 16.68 crores, respectively. Balances of commercial banks rose by Rs. 2.68 crores to Rs. 54.44 crores. Investments were Rs. 1.81 crores up at Rs. 51.43 crores. Other loans and advances increased from Rs. 102.19 crores to Rs. 108.46 crores, of which advances to scheduled banks against usance bills totalled Rs. 58.88 crores against Rs. 59.31 crores. These advances amounted to Rs. 59.12 crores since 1st January, 1957. Ways and means advances stood at Rs. 6.25 crores (Rs. 7.48 crores).

The return of the State Bank of India for the week ended 25th January, 1957, shows a rise of Rs. 6.30 crores in total deposits to Rs. 252.03 crores. Investments in Government securities are down by Rs. 13 lakhs to Rs. 95.47 crores, while other authorised investments remain unchanged at Rs. 11.46 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have increased by Rs. 6.06 crores to Rs. 160.83 crores. Cash and balances are, in consequence, shown at Rs. 17.96 crores or Rs. 7 lakhs less.

The statement of the position of scheduled banks for the week ended 25th January, 1957, shows Demand and Time liabilities at Rs. 670.82 crores (Rs. 6.80 crores on account of borrowings from banks) and Rs. 462.30 crores (Rs. 2.56 crores), compared with Rs. 666.38 crores (Rs. 6.08 crores) and Rs. 458.91 crores (Rs. 2.46 crores), respectively, in the previous week. Cash has decreased by Rs. 3.42 crores to Rs. 33.06 crores, while balances with the Reserve Bank have increased by Rs. 1.73 crores to Rs. 50.05 crores. There is a drop of Rs. 48 lakhs in investments to Rs. 361.64 crores. Advances and bills discounted at Rs. 826.04 crores show a rise of Rs. 10.17 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.3 percent and 72.9 percent, against 7.5 percent and 72.5 percent.

The working of the PUNJAB NATIONAL BANK LTD. has resulted in a profit of Rs. 90.20 lakhs, including Rs. 2.35 lakhs brought in, for the year ended 31st December, 1956. An amount of Rs. 7 lakhs has been utilised for the payment of an interim dividend of Rs. 2 a share, leaving a balance of Rs. 83.20 lakhs. Taxation provision absorbs Rs. 27.50 lakhs, reserve fund Rs. 27.50 lakhs, and bonus to staff Rs. 13.00 lakhs. The directors have recommended a final dividend of Rs. 2 a share, making 16 percent for the year against 14 percent. A balance of Rs. 6.70 lakhs is carried forward.

FINANCES OF JOINT-STOCK COMPANIES

RESERVE BANK ANALYSIS OF TRENDS

AN article appearing in the *Reserve Bank of India Bulletin* for January, 1957, analyses the balance-sheets and profit and loss accounts, generally during 1950-54 and particularly in 1954. Of 751 public limited companies registered in India. Each of these companies had a paid-up capital of not less than Rs 5 lakhs and they together accounted for two-thirds of the total paid-up capital of all public limited companies registered in India, except banking, insurance and investment companies. According to the article, there was a sizeable rise in corporate profits and capital formation during 1954, reflecting the distinct recovery in economic activity from the post-Korean recession.

Income from sales of the 751 companies which had declined from Rs. 1,087 crores in 1951 to Rs. 962 crores in 1953, rose to Rs. 1,026 crores in 1954. Manufacturing expenses, which had fallen from Rs. 765 crores to Rs. 590 crores, increased to Rs. 636 crores. Salaries and wages went up steadily from Rs. 154 crores in 1950 to Rs. 198 crores in 1954. Managing agents' remuneration, which had declined from Rs. 12.4 crores in 1951 to Rs. 10.4 crores in 1953, recovered to Rs. 11.2 crores in 1954. Profits before tax (but after provision for depreciation) fell sharply from Rs. 85 crores in 1951 to Rs. 55 crores in 1952 but recovered to Rs. 66 crores in 1953 and Rs. 78 crores in 1954. A similar trend was evident in the provision for taxation and in retained and distributed profits. Provision for taxation accounted for slightly over two-fifths of profits before tax and dividends for slightly under two-thirds of profits after tax in 1954. The major portion of the increase in profits after tax during 1954 was retained.

During the whole of the five year period, 1950-54, profits amounted to Rs. 347 crores. They were dealt with as follows: tax provision Rs. 142 crores, distribution to shareholders Rs. 130 crores, and retention in business Rs. 75 crores. The average rate of dividend on ordinary shares, which had fallen from 8.2 percent in 1951 to 7.2 percent in 1952, recovered to 7.5 percent in 1953 and 8.3 percent in 1954. Most of the principal industries showed an increase in the rate in 1954 the outstanding rise being in tea plantations. There was no change in the iron and steel industry. The cement, paper, iute, vegetable oil and shipping groups experienced a decline; but in the cement and paper industries this was due to an increase in the paid-up capital and not to a decline in the amount of dividend. The ratio of net profits (i.e., retained and distributed profits) to net worth (i.e., paid-up capital and free reserves), which had fallen sharply from 9.6 percent in 1951 to 5.6 percent in 1953, rose to 6.8 percent in 1953 and 7.8 percent in 1954.

Capital Formation

The total gross capital formation of the 751 companies was more than doubled, from Rs. 49 crores in 1953 to Rs. 102 crores in 1954. Gross fixed assets formation accounted for Rs. 64 crores in 1954 (as compared with Rs. 43 crores in 1953) inventory accumulation for Rs. 10 crores (as against a liquidation of Rs. 14 crores) and receivables for Rs. 17 crores (as compared with Rs. 4 crores). Plant and machinery constituted nearly three-fourths of gross fixed assets formation. Increases in investments and cash were responsible for Rs. 5 crores to Rs. 6 crores each. The rise in inventories in 1954 was due almost entirely to finished goods and work-in-progress, while the fall in 1953 was due mainly to raw materials. During the four year period 1951-54 as a whole, the total gross capital formation amounted to Rs. 307 crores, of which fixed assets accounted for a little over 60 percent and inventories for about 13 percent. As for the sources of funds, the chief feature of 1954 was net borrowing from banks to the extent of Rs. 15 crores, as against net repayment of Rs. 7 crores in 1953, this being mainly due to the building up of inventories. Additions to free reserves in 1954 were higher at Rs. 15 crores. Depreciation provision and taxation reserves contributed a larger volume of funds at Rs. 28 crores and Rs. 8 crores, respectively, in 1954, as against Rs. 24 crores and Rs. 3 crores in 1953. New issues rose by Rs. 1 crore to Rs. 8.7 crores in 1954, a decline in ordinary and preference shares being more than offset by an increase in debentures.

The total of gross assets of the 751 companies, as at the end of 1954, amounted to Rs. 1,433 crores, compared with Rs. 1,136 crores at the end of 1950. Of this, over one-half comprised gross fixed assets (Rs. 743 crores) and over one-fifth inventories (Rs. 317 crores). Gross fixed assets rose by 34 percent during the four year period 1951-54, while inventories increased by 14 percent. Plant and machinery accounted for three-fifths of the gross fixed assets. Finished goods and work-in-progress formed one-half of inventories and raw materials about a quarter. Receivables constituted 11 percent, and investments and cash 5 percent each, of the total gross assets in 1954. As for gross liabilities, net worth constituted over two-fifths of the total and comprised paid-up capital of Rs. 380 crores and reserves of Rs. 207 crores. Borrowings formed less than one-fifth of the total gross liabilities and consisted mainly of bank loans (Rs. 101 crores) trade credit (Rs. 55 crores), debentures (Rs. 36 crores) and mortgages (Rs. 25 crores). Depreciation amounted to Rs. 354 crores, as compared with Rs. 253 crores and Rs. 58 crores, respectively, at the end of 1950.

Our City Cable

SHARES EASE AFTER EARLY FIRMNESS

GILT-EDGED WELL MAINTAINED

London, 6th February.

THE stock markets remained active and very firm prior to the week-end and most sections recorded further gains. Prices reacted subsequently, however, and apart from gilt-edged, which were a little firmer on balance, other sections were mostly easier compared with their previous levels. The reaction reflected the absence of further incentives and a more cautious approach to the markets after the recent sustained advance. Gilt-edged went ahead early in the week, but suffered a reaction later. The January gold and dollar reserve figures had little effect. Elsewhere, the generally lower trend on Wall Street and the concern felt in some quarters about the possible effect of the oil shortage on employment and production made for a less optimistic view. Foreign bonds and rails were generally neglected, while dollar stocks moved irregularly in sympathy with Wall Street. Prior to the week-end, interest in industrials was somewhat selective, with many good features present, but subsequently prices came back in the absence of fresh support and following a certain amount of profit-taking. Most of the leaders were little changed or slightly higher on the week, although gains in individual issues elsewhere in industrials sometimes amounted to several shillings. Store shares were outstanding and scored good gains, although they fell back from the best levels. Gold shares showed a lower

trend in the absence of interest, while coppers declined with the metal price. Oils moved within narrow limits generally. There was a distinct recovery in Ceylon tea shares following the previous week's sharp fall on the news that there was to be no precipitate action in nationalising foreign-owned estates. Rubbers were fairly well maintained.

The Money Market

The London money market had a rather difficult start during the past week and due to a fairly acute credit shortage, several discount houses were forced to borrow a moderate amount from the Bank of England. Thereafter there was a progressive improvement, although the supplies of credit were never plentiful and the general cost of money was around the level of 4½ percent. There was a fair offtake of bills from the market with the April maturities changing hands at 4½ percent, although 4½ percent had to be conceded during difficult phases. At the week's Treasury bill tender, the market made changes in its bid, and as outside offers were higher, the market secured only 2½ percent of its requirements. In view of the competitive bids, there was a slight easing in the average rate to 90s 10.07 percent.

Stock Market Prospects

The *Investor's Chronicle* market newsletter writes: With the continuation of Bank rate hopes and the further lowering of the bill rate, London gilts have reached the highest level for a year. Industrials are consolidating after reaching the best level since May. Gold shares have little pressure either way. Oils have a sound technical position with Burma doing well. In spite of domestic uncertainties, Wall Street could rally sharply on any better international news. As the authorities

have connived at the fall in the London bill rate and as the Government broker has also helped gilts, there is clear evidence that the Treasury intends to create better conditions for handling the summer maturities. Gilts should remain at least firm, but with reduced margins, industrials require more selectivity.

Big Rise in U.S. Gold Stock

The Federal Reserve Bank of New York reports that the United States gold stock rose by \$300 million during the past week—the largest weekly increase in 16 years. The rise reflected the sale of gold by the International Monetary Fund to the Treasury to replenish the former's supply of dollars depleted recently when the U.K. purchased more than \$500 million for sterling. Although the Treasury eventually would give the I.M.F. dollars, the Fund took payment immediately in interest-bearing notes. This has had the effect of adding \$300 million worth of gold to the Treasury's deposits with the Federal Reserve banks.

Hongkong Gold Market

Official trading in the Hongkong gold market was confined to a single day when turnover was negligible. Though the market was officially closed it was reported that small outside business was done on Saturday at \$111267½, with sellers later asking for \$111268. The forward contract was done at \$(U.S.) 37.73.

U.K. Sugar Imports

The U. K. is to free imports of sugar from the countries which are not members of the International Sugar Agreement, the Ministry of Agriculture, Fisheries and Food announced on 31st January. Imports will remain free, while world sugar prices continue at the present high level. The International Sugar Agreement permits certain free imports. The British delegation gave notice of the move to the current meeting of the International Sugar Council.

Freight Increases to Indian Ports

U.K.-Bombay Shipping Conferences announce that basic freight rates on shipments from the U.K. and Europe to the Indian sub-continent will be increased as from 15th March. In addition, the present surcharge of 15 percent for journeys round the Cape of Good Hope has been raised by 2½ percent from 1st February. The ports of destination covered by these increases include Calcutta, Chittagong, Madras, Cochin, Bombay and Colombo. This follows a previous announcement from Bombay disclosing similar increases for shipments from the Indian sub-continent to the U.K. and Europe.

World Bank Income Increases

The International Bank for Reconstruction and Development reports a net income of \$18 million for the six months ended 31st December, 1956, against \$13.7 million for the same 1955 period. The Bank made 13 loans totalling \$257.7 million in the half-year. The largest loan amounting to \$74,628,000 made in the last quarter was to an Italian organisation with the Government as guarantor. Two loans totalling \$59,230,000 were made to Australia.

MACHINE FOR CHECK-WEIGHING ON THE PRODUCTION LINE

The rapid and accurate weighing of packaged goods while on the production line is one of the greatest needs of most firms in the food, chemical, pharmaceutical, small goods and other industries whose end-product is a package containing solids or liquids. Mechanical systems developed hitherto have suffered from two main drawbacks. First, there is the inertia of moving parts which severely slows down the rate at which packages may be weighed with great accuracy; and second, there is the frictional resistance, producing wear, which demands constant maintenance and prevents high-speed weighing within very fine limits. By attacking the problem from an electronic standpoint, the manufacturers claim to have found the solution after considerable research and have placed two fully productionised "Solarchecks", as they are called, on the market. The Solarcheck No. 631 instantaneously weighs rigid or packaged goods and enables an operator to handle up to a rate of 60 items a minute in the production line. Its weighing accuracy to British Board of Trade specifications is better than 0.2 percent, and it has been specially designed for use by unskilled operators. The equipment consists of a mobile self-contained console with a weighing head, available in three sizes to suit the product to be weighed, inserted in its top. Nine standard models are available, according to the maximum weighing requirements of the user. The principle employed is the force balance, whereby an article placed on the weighing head is counterbalanced by a highly-stabilised electronic servo-system. Maintenance is stated to be easy and rapid, and the machine is said to be excellent both for semi-automatic production lines and for high-speed percentage sample checkweighing on fully-automatic high-speed systems. The Solarcheck model No. 630 is designed for incorporation into existing production lines of many types and will weigh at the rate of up to 120 items a minute to better than 0.2 percent within the Board of Trade specification. The product being weighed automatically operates, if necessary, an underweight and overweight rejector or channelling mechanism, as well as recorders and, if required, remote warning devices. The weighing head, of which there are three sizes in production, cover the weight range up to 70 oz., the basic principle again being the force balance described above.

Stocks and Shares

MARKET CLOSES QUIETER ON SETTLEMENT CONSIDERATIONS

JUTE SHARES ATTRACT BARGAIN HUNTERS

Wednesday Evening.

THE share market has been quiet this week, with some prices tending lower and business restricted. Uncertainty about the possible carry-forward charges when Indian Irons are declared ex-rights has limited activity in the main speculative counter. Other speculative shares have been generally quieter in sympathy. The books of the Indian Iron and Steel Company are to be closed on 21st February and the share will become ex-rights at the clearing on the day previous. The change in the Reserve Bank's advance rate against Government securities and other eligible paper depressed prices slightly, but the impact was surprisingly limited. The undertone of the market is now quiet and operators are at present occupied with anxieties about the coming budget which, so rumour has it, might contain some fresh taxation shocks.

Investment shares have been quiet, although most sections have maintained their price levels. In coals, the syndicate which has been holding a large portion of the shares of the Burrakur company, succeeded in lifting the price just before the clearing to Rs. 21-7. It is now almost impossible to transact in this share in spite of its being on the clearing list. Jute shares have been fairly well supported and prices have been marked up in a number of counters. Nationals have met with interested buying. Engineering and miscellaneous shares were well maintained, while tea scrip has benefited from the reduction in the export duty this month.

Details of the week's trading follow.

The announcement by the Reserve Bank, increasing its lending rate to scheduled banks against Government securities from 3½ to 4%, did not affect gilt-edged prices to any great extent. Three percent Conversion Loan 1946-86 was quoted at the previous rate of Rs. 73-9. Three percent Non-terminable Paper was marked back by two annas to Rs. 73-5. In the short-dated group, 3% 1957 and 3% 1958 were unchanged at Rs. 99-12 and Rs. 99-9 respectively. 2½% Loan 1960 was also unchanged at Rs. 96-5. 2½% 1961 was quoted at Rs. 93-4 ex-voucher. 3½% Loan 1961 met with some selling pressure and the price was marked back to Rs. 99-6, and 2½% 1962 had buyers at Rs. 93-15. Four percent 1960-70 declined to Rs. 100-11. Of the medium-dated issues, 3% 1963-65 was quoted at Rs. 94-4. 3½% 1964 was easier at Rs. 98-6, and 3½% 1965 was unchanged at Rs. 98-5. Three percent 1964 was wanted at Rs. 94-5. In long-dateds, 3% 1966-68 remained unchanged at Rs. 92-4 and 3% 1970-75 was fractionally easier at Rs. 87-3½. 1974 was unchanged at Rs. 98-8. In Provincial loans, 4% U.P. 1963 was dealt in at Rs. 98-14 and 4% Madras 1964 was wanted at Rs. 99. Four percent West Bengal 1964 had small buyers at Rs. 99 as did 4% U.P. 1968 at Rs. 97-15.

Business in preference shares was once again on a reduced scale. In the miscellaneous group, Aluminium Corporation 6% were easier at Rs. 96 while Burrakur 1st were taken at Rs. 118-8. Burn & Co., 6% were wanted at Rs. 110-8, but Calcutta Electric were offered at Rs. 9-12. Bharat Collieries were crossed at Rs. 51-4. Indian Iron were marked at Rs. 105 and a small lot of National Tobacco 2nd was done at Rs. 68. Smith Stanistreet were reported at Rs. 63. In jute, Anglo-India were reported at Rs. 100 and Bally at Rs. 103. Empire Jute came to hand at Rs. 102 and Hukumchand were taken at Rs. 101. A small lot of Lawrence "B" changed hands at Rs. 75-8.

In the banking section, United Commercial were slightly easier at Rs. 56-4 as were Punjab National at Rs. 55. Hind Bank and United Bank of India "D" shares were unchanged at Rs. 36-8 and Rs. 4-12.

Among railways, Dehri Rohtas were reported at Rs. 13-7 and small lots of Howrah-Amra and Howrah-Sheakhala were done at Rs. 62 and Rs. 50.

Cotton textile shares were featureless. Basanti were marked at Rs. 5-12 and Bengal Nagpur were crossed at Rs. 8. Cawnpore Textiles were unchanged at Rs. 7-12 as were Elgin Mills at Rs. 26-12. Jay-shree came to hand at Rs. 5-13 and Kesoram were taken at Rs. 16.

The only feature in the coal section was Bengal which was supported at the higher rate of Rs. 464. Most other prices were unchanged as will be seen from the following table:

	Opening 31-1-57 Rs.	Closing 6-2-57 Rs.
Amalgamated	18 12	18 12
Borra	20 12	20 12
East Indian	27 4	27 8
Katras Jheriah	62 6	62 6
New Beerbhoom	17 0	17 0
Pench Valley	18 12	18 12
South Karanpura	10 2	10 0

Burrakur fluctuated narrowly around Rs 21 with little business passing, but closed higher today at Rs. 21-7.

Selected jute shares met with good enquiry during the week, but owing to the prevailing low level of prices, sellers were very reluctant to part

with their holdings. Here is a chart showing representative price movements:

	Opening 31-1-57 Rs.	Closing 6-2-57 Rs.
Anglo-India	139 0	144 0
Dalhousie	92 0	94 0
Delta	140 0	146 0
Gourepore	210 0	220 0
Howrah	19 3	19 12
Kelvin	205 0	208 0
Kinnison	137 0	147 0
Lawrence	94 0	98 0
National	19 12	20 8
Northbrook	21 0	21 8
Reliance	9 14	10 2

In electrics, Calcutta were marked at Rs. 13-2 and Patna were better at Rs. 11-12, as were United Provinces at Rs. 14-7.

In sugar, there was some enquiry for Carew at Rs. 7-6 and Dyer Meakin Breweries at Rs. 6-4. Shree Krishna Gyanoday were marked at Rs. 11-6 and U.P. at Rs. 15-4. Samastipur were unchanged at Rs. 12.

In the engineering section, Indian Iron & Steel fluctuated between Rs. 29-4 and Rs. 28-12 to close at Rs. 28-10. At an emergency meeting of the Calcutta Stock Exchange Committee held on Monday, it was decided that dealings in these shares would continue on a cum-rights basis until further notice. The delivery of shares in clearing No. 232 will be compulsorily carried over to clearing No. 233 on a fixed carry-over charge of Rs. 0-1-9 a share in modification of the provisions contained in rule 15 of the existing bye-law regarding the clearing system. Bridge & Roof were reported after a long interval at Rs. 36. Bhartia Steel were steady at Rs. 17-2 as were Braithwaite at Rs. 27-14 and Burn & Co. at Rs. 332. Indian Standard Wagon were unchanged at Rs. 190 and Indian Steel & Wire fully-paid Ordinary were quoted nominally at Rs. 68. Jessop & Co., and Richardson & Cruddas were

Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

ASSAM OIL
COMPANY

A Member of the Burmah Group of Oil Companies.

easier at Rs. 27-14 and Rs. 20-6. Textile Machinery were subbed at Rs. 20-9 against an opening price of Rs. 21. Guest, Keen, Williams were fairly steady at Rs. 24-8.

In paper, there was a good enquiry for Titaghar at Rs. 39-2 with few declared sellers. India Paper Pulp were lower at Rs. 23 as were Orient at Rs. 33-5.

In cement, Sone Valley were depressed at Rs. 7-12 as were Dalmia at Rs. 12-2 and Orissa at Rs. 12-8. In contrast, Assam Bengal were slightly better at Rs. 6-9.

In insurance, New Asiatic were reported at Rs. 4-15 and General Assurance were marked at the lower rate of Rs. 23-6.

In shipping, India Steamship were neglected at Rs. 10-3 and India General Navigation were marked at Rs. 7-5.

Among miscellaneous industries, Alkali & Chemical Corporation were easier at Rs. 18-12 as were Anglo Brothers at Rs. 22-8. Assam Saws improved from Rs. 3-11 to Rs. 3-14. British India Corporation were shaded at Rs. 8-6 as were Calcutta Tramways at Rs. 16-2. Clive Row met with investment enquiry and improved from Rs. 9-12 to Rs. 10-6. Dunlop Rubber were unchanged at Rs. 25. Imperial Tobacco were quoted at Rs. 14-8 while Indian Aluminium were slightly easier at Rs. 14-3. Indo-Burma Petroleum were reported at Rs. 36-4 and Jardine Henderson were easier at Rs. 82. Metal Box, after being done up to Rs. 29-12, turned sellers at Rs. 28-14. Martin Burn improved further from Rs. 24-10 to Rs. 25 and National Carbon were well maintained at Rs. 26-10. Rallis were unchanged at Rs. 38 and there was some enquiry for Shaw Wallace at Rs. 11-6.

In mining, Indian Copper fluctuated narrowly around Rs. 3-10, while Metal Corporation met with

small enquiry and improved from Rs. 9-4 to Rs. 9-11. Other mining issues were unchanged.

There was more activity in tea shares following the announcement of a reduction in the export duty by two annas. Ananda Bag were crossed at Rs. 22 and Baghmari changed hands at Rs. 22-2. Betjan advanced sharply from Rs. 22 to Rs. 26 while Bishnauth moved up to Rs. 22. Brooke Bond came to business at Rs. 20-10 as did Dheakhat at Rs. 21-8. Dibrugarh at Rs. 23, East India at Rs. 23 and Gohpur at Rs. 23-4. Ledo had buyers at Rs. 21-11 and Methoni, Namburnadi and Sapoi were transacted at Rs. 21, Rs. 19-2 and Rs. 29-8. A small lot of New Cinnatollah changed hands at Rs. 105 and Tezapore were supported at Rs. 21-12. Baradighi were wanted at Rs. 19-12 as were Hantapara at Rs. 193, Huldibari at Rs. 25-8 and Killcott at Rs. 20. Ranicherra were done at Rs. 16-12 and Rydak spurted from Rs. 32 to Rs. 36. Tukvar came to business at Rs. 11-4 and a small lot of Central Cachar were done at Rs. 66. Patrakola and Telapara were both marked at Rs. 165 and Belgachi, Jay Shree and New Terai changed hands at Rs. 62, Rs. 11-14 and Rs. 21 respectively.

The profit of the STANDARD COAL COMPANY has amounted to Rs. 70,093 for the year ended last December. Taxation provision is Rs. 30,029 and depreciation is allocated Rs. 1,000. Making other adjustments, bringing in Rs. 17,347 and transferring Rs. 70,090 from taxation provision no longer required, there is Rs. 1,27,411. The general reserve allocation is Rs. 30,000. The dividend is the same at 10 percent, leaving a carry-forward of Rs. 17,411.

The profit of the MORARJEE GOCULJIAS SPINNING AND WEAVING COMPANY has amounted to Rs. 17,69

lakhs for the year ended last June. The ordinary dividend has been declared at Rs. 15 a share. Taxation provision absorbs Rs. 8 lakhs, leaving a carry-forward of Rs. 1,41,489, against Rs. 20,751 brought in.

Tata Industries Private Ltd., managing agents for the TATA IRON AND STEEL CO. LTD., report that the total approximate production of iron and steel at the steel works in Jamshedpur during January, 1957, was: pig iron 97,400 tons; steel ingots 94,300 tons; semis for sale 20,900 tons; and finished steel 49,600 tons.

Bombay Market

OPERATORS HESITATE ON FRESH TAX RUMOURS

ADVANCE RATE CHANGE HITS PRICES

Wednesday Evening.

TRADING on the Bombay stock market last week was marked by irregular fluctuations. Bouts of selling and buying took place according to variations in news. Although a number of adverse factors seemed to have affected sentiment, operators took courage to lift prices after taking a constructive view. Towards the close, the undertone remained rather hesitant.

The increase of $\frac{1}{2}$ percent to 4 percent in the Reserve Bank interest rate on advances against Government and other eligible securities to scheduled banks had a bearish influence, although its immediate impact was milder than had been ex-

pected. Operators were cautious on fears of higher budla charges following the closure of books of the Indian Iron and Steel Co. for the issue of rights shares. The apprehension of increased taxes, combined with discouraging advices from the piecegoods market, tended to depress sentiment.

Tata Steels ended around Rs. 178 and Indian Iron were quoted lower at Rs. 22-5. Alcock Ash-down were freely available at Rs. 262-8, while scattered interest was taken in Premier Construction at Rs. 181-8. Small activity took place in Tata Locomotive around Rs. 149-8. There was little interest in automobile shares which were freely available. Premier Automobiles came to hand at Rs. 104-4 and Hindustan Motors declined to Rs. 8.

There were a number of losses in the cotton mill group. Bombay Dyeing were lowered to Rs. 561-14 on profit-taking, while Century were quietly absorbed at Rs. 502 in the expectation that its rayon plant would soon go into production. Kohinoors were available at Rs. 323-4 and Svadeshi were done at Rs. 225-8. Simplex realised Rs. 181, as did India United Ordinary Rs. 10-15.

Miscellaneous industrials followed the general trend. Cement shares were quiet on uncertainties about the Tariff Commission's forthcoming investigation into the price structure of the industry. Associated Cement were taken at Rs. 170 and Digvijay were done at Rs. 151-8. Bombay-Burnah were a firm feature around Rs. 713-12 on prospects of amicable settlement concerning capital reorganisation. Tata Chemicals were done at Rs. 16-1 and National Rayon declined to Rs. 241-8 on profit-taking. Sugar shares attracted selective interest on the view that increased output would result in better profits. Belapur Sugar came to hand at Rs. 231 and Walchandnagar Industries were done at Rs. 262-8. Shipping shares were steady, as it was believed that companies' working would show an improvement due to increased freight rates. Scindia Steam were higher at Rs. 18-15 and India Steamship were quietly absorbed around Rs. 10-4. Mining shares were irregular. Sivrajpur Syndicate improved to Rs. 97-8 on replacement buying induced by rumours of a bonus issue, while Indian Copper were lowered to Rs. 3-9 on profit-taking due to the fall in metal prices.

Prospects of increased money costs tended to lower prices of bank shares, although sellers were few. Central Bank of India were fractionally lower at Rs. 54 and Bank of India were bought at Rs. 139-8. Insurance shares lacked interest, with New India being available at Rs. 43-12.

Shares of electricity supply companies met with increased interest, and Ahmedabad Electric, in particular, improved to Rs. 99-6 on payment of a higher final dividend. Tata Hydro were taken at Rs. 122.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations. Highest for the week. Lowest for the week. Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago the last named being shown in parenthesis and will not be given where such a quotation is not available.)

Commodity Markets

COMMODITY MARKETS IN U.K.

INCREASING FREEDOM OF TRADE

At the beginning of this year, London resumed dealing in sugar futures after an interval of 17 years. The occasion was a reminder that the process of restoring free markets was not quite complete—though control of imports of sugar destined for re-export (either raw or refined) had been withdrawn previously. An announcement by the Bank of England that non-residents could operate freely in the new market (differences between non-residents being paid from the appropriate non-resident sterling account) confirmed that the authorities' intention was to attract international business to this market. The desire to attract international business, with the commissions and financial services associated with it, impelled the postwar Socialist Government of Britain to restore free trading in one commodity after another, although many members of the Government preferred, in principle, trading by the State. Naturally, the conservative Governments of 1951 and after continued and, where possible, accelerated the process.

The need to protect sterling against the loss of dollars was the dominant consideration in the early years of decontrol. For that reason, the sterling commodities were freed before the dollar commodities—for instance, wool before cotton, tin before copper. Gradually, the distinction became dimmer and almost disappeared—and foreign countries' ability to buy dollar commodities through Britain represents convertibility of sterling in an important practical form. The main impediments to the practice of free marketing are now the policies relating to particular goods, mainly agricultural, whose producers the Government is committed to protect; although it may be that the currency problem would be more obtrusive in the paper trade if North American newsprint were more readily available.

Freedom from Politics

In principle, and usually in practice, politics play no part in the U.K.'s free markets. Countries of the Russian bloc can, and do, both buy and sell through them. In the recent period of strained relations, it has been suggested in some quarters that the U.K. should cease to import Russian furs; but the London fur market is well aware that most of these furs are re-exported—many of them for dollars—and that other centres would be glad of an opportunity to take London's place as the principal market for buying and selling furs. If there is a political threat to the U.K.'s markets it comes rather from those countries—including, perhaps mainly, sterling countries—which desire to establish their own markets for the commodities that they produce. But this is not only an abstract political idea: the tendency to sell commodities through the countries of origin rather than through a distant commercial centre has been in progress a long time, and it would doubtless continue for economic reasons, without artificial aid.

London Gold Market

Anyway, it has not been so difficult as many people imagined to regain pre-eminence in various

trades. An obvious success is the London gold market (gold is, after all, a commodity), which is accepted again as the leading centre. The London metal market can claim that its prices are widely accepted as the world prices. The London wool-tops futures market, although in existence less than four years (there was no such market in Britain before the war), has the largest turnover of any wool futures market anywhere. The London sugar futures market aspired to rival New York as the world's main centre for hedging in the commodity; and its more flexible method of working will help it to achieve this aspiration. The wool-tops futures market broadened its activities a few months ago by introducing a crossbred contract alongside the merino contract which was formerly its only basis; and the Liverpool cotton futures market has made a number of important amendments to facilitate trading. Flexibility is one reason for the success of these British markets. One of the most renowned, though not the best understood, is the Baltic Exchange (in full, the Baltic Mercantile and Shipping Exchange), which was primarily concerned with tallow a century and a half ago and is now the main centre through which tramp ships are chartered, and also for the trade in imported grain; but if one wished one could buy a ship there, too.

The Baltic Exchange

The Baltic Exchange emerged from the old Baltic Coffee House, and many other markets had a similar origin. Some of them, including the Baltic (of which a new extension was opened late last year), have grown to impressive size; others are still hidden in small streets in the City, familiar only to those who use them. Even the Metal Exchange, although dignified inside, would not attract the casual visitor's notice against the background of the meat and poultry of the nearby Leadenhall market. The most important of the markets has, indeed, no physical being at all. The London money market is not any particular place although it is mainly confined within a limited area. Within that area the experts meet—or, more often, telephone—to negotiate loans and discounts and exchanges, at "prices" most delicately adjusted, amounting to huge sums every day. Even in trades where a particular building exists as the centre of dealing it is common practice now to do business by telephone between offices, while the floor of the market is often a meeting place for discussion rather than for trading. However, the mechanics of these markets are important (in a negative sense) only when they get in the way of business. The markets have evolved by a natural process of growth, adapting themselves all the time to present needs. Their services will doubtless be required while international trade is done by ordinary traders, although they will not necessarily fit easily into arrangements between Governments. Free trade in sugar is complicated by a commitment to absorb in the U.K. some 1.5 million tons a year from the Commonwealth.

COMING TEXTILE TRADE FAIRS IN LONDON

The U.K. textile industry will stage its biggest trade show of the year—and the biggest of its type in the world—at Earls Court, London, from 4th to 8th March. To be known as the British Textile Show, it will embrace four separate trade fairs—the National Men's and Boy's Trade Fair; the

British Cloth Fair; the National Household Textiles and Soft Furnishings Fair; and the National Carpet and Floor-coverings Trade Fair. All four fairs will be under the same roof, but each will be entirely separate, divided from its neighbours by a 20-foot-high partition. More than 500 firms will take part in the show, exhibiting what the organisers describe as a cross-section of everything that is new in British textiles. Many overseas visitors are expected at the show, which is being sponsored by six national trade organisations.

DISTRIBUTION OF CAUSTIC SODA AND SODA ASH

Under the import policy of the Government of India, imports of caustic soda and soda ash are being canalised through the State Trading Corporation of India (Private) Ltd. The Corporation has made contracts with foreign suppliers for the regular import of these commodities in sufficient quantities. To ensure efficient distribution, the Corporation has appointed the following as its agents: Imperial Chemical Industries (India) Private Ltd.; Tata Industries Limited, Bombay; Chemical Importers and Distributors (Private) Ltd., Calcutta, and Chemical and Alkali Distributors Ltd., Bombay. All enquiries for supplies should be addressed to the agents.

TARIFF ENQUIRY ON REVISION OF CEMENT PRICES FOR PRODUCERS

The Government of India has decided to refer to the Tariff Commission the question of revising the prices of cement payable to cement producers. Firms or persons interested in the matter, who desire that their views should be considered, are advised to address their representations to the Secretary of the Tariff Commission, Central Government Office Buildings, 101, Queen's Road, Bombay 1.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced further by 0.8 percent to 424.2 (revised) ended 19th January, compared with 421.0 (revised) for the earlier week. The index was lower by 1.5 percent when compared with the corresponding week of the previous month, but was higher by 12.9 percent than that of a year ago. The index for Food Articles rose by 1.7 percent to 396.5 compared with 389.9 (revised) for the previous week as a result of an advance in the prices of *gur* (+1%), gram in Hapur (+4%), tea for internal consumption (+3%), rice (+2%) and wheat and salt (+1% each) in spite of a decline in the prices of *jowar* (-4%), gram in Patna and *bajra* (-3% each) and tea for exports (-1%). Higher prices of rapeseed in Bombay (+16%) and in Calcutta (+4%), copra (+6%), groundnuts, castorseed and cottonseed (+4% each), linseed (+3%), gingellyseed (+2%) and raw jute and lac (+1% each) raised the index for Industrial Raw Materials by 1.1 percent to 527.9, although prices of manganese ore (average export prices) (-9%), rapeseed in Kanpur (-5%), iron ore (-2%) and raw wool in Kalimpong (-1%) exhibited declines. Lower prices of gingelly cake (-6%), copra cake (-2%) and cotton yarn (-1%) brought down the index for Semi-Manufactures from 413.0 (revised) to 412.4 (estimated) in spite of an increase in the prices of coconut oil, groundnut oil, linseed oil and zinc (+2% each) and mustard oil (+1%). The index for Manufactures moved up by 0.2 percent to 587.7 compared with 586.8 (revised) for the previous week due to a rise in prices of jute manufactures and paints (+2% each). A fall of 0.2 percent to 592.9 compared with 594.0 (revised) for the earlier week in the index for the Miscellaneous group was caused by a decline in the price of cashewnuts (-4%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August 1939=100)

Groups and Sub-Groups	19-1-57	12-1-57	22-12-56	21-1-56

New Delhi

RUSSIAN REPORT ON MANUFACTURE OF HEAVY MACHINERY IN INDIA

LINK WITH PROJECT FOR CASTINGS AND FORGINGS RECOMMENDED

(FROM OUR NEW DELHI CORRESPONDENT)

A GROUP of Russian specialists headed by Mr. N. I. Babich, Deputy Minister for Heavy Machine-Building in Russia, which came here on the invitation of the Indian Government, has completed its report on constructing a factory for the manufacture of heavy machinery and equipment in this country. The report was submitted to the Central Ministry of Heavy Industries last week. As Mr. Babich informed the Tass correspondent, the construction of the works will give a start to the most important branch of industry—heavy machine-building. India will then be able to produce independently the main portions of the heavy machinery and equipment required for the iron, steel and other industries. The works will manufacture machinery and equipment for crushing and grinding mills, coke and by-product plant, blast furnaces, open hearth furnaces, rolling mills and handling facilities for the iron and steel industry, as well as excavators, heavy drilling rigs for the oil industry, winding engines for mines, forge and press machinery and other equipment. The rated annual production capacity of the works will be 80,000 tons of machinery and equipment. It will be able to produce metallurgical plant and equipment for an iron and steel works with an annual capacity of one million tons of liquid steel every year. The powerful multi-purpose works can be easily switched over to the production of other types of heavy machinery and equipment.

Training of Personnel

As it is a complicated task to train highly skilled designers, technologists and workers, and to master the technology of manufacturing heavy machines, the Russian specialists recommend carrying out the construction of the works in two stages. The production capacity of the first part of the works will be 45,000 tons of metallurgical and mining equipment a year. The report takes into account the decision of the Indian Government on the construction of a special plant for the production of castings and forgings. It should be borne in mind that the works for the manufacture of heavy machines will require casting and forging pieces weighing more than 100 tons each, and totalling more than 10,000 tons each year. For greater efficiency and economy, it is recommended that the plant for castings and forgings should be constructed alongside the works for manufacturing heavy machines. According to calculations, the units will employ more than 10,000 workers and officers.

The report provides for a considerable expansion of capacity later on. The complex of the works for manufacturing heavy machinery and equipment, and of the plant for castings and forgings, will be similar to that of the largest Russian works such as Uralmash in the Urals and Novokramatorsk in the Donet-Basin. It will provide a good school for training highly skilled workers and leading personnel of the heavy machine-building industry in India.

Indian and Russian technicians met here at a conference last week when the former asked for clarification of certain technical aspects in the report. The report itself will be discussed in the context of plans for Indo-Russian collaboration, with a view to implementing it soon. The Russian Government has indicated its willingness, generally, to help in the implementation of the report.

Sir Eric Coates's mission on heavy industries, it is believed, has signed its report in London and despatched it to India.

Diesel Electric Locomotives

The Government has placed an order for 100 broad-gauge 2,000 h.p. diesel electric locomotives with Alco Products Incorporated of New York. The total value of the order is about Rs. 10.7 crores. The first lot of 20 locomotives is likely to be shipped to India in June. The American firm is expected to sign an agreement with the Government of India for collaboration in training Indian personnel for the repair and maintenance of these engines. Training will be given in India and in America. The sections where the new diesel locomotives will be used initially are:

1. The Asansol-Anara-Rourkela and the Raj Kharswan-Barajamda sections of the South-Eastern Railway.
2. The Gomoh-Gaya section of the Eastern Railway.
3. The Igatpuri-Bhusaval section of the Central Railway.

The chief advantage of a diesel locomotive over a steam one is that it can haul bigger train loads at greater speed, thus overcoming to some extent the difficulties arising from limited line capacity. For instance, even in the undulating hilly country of the coal and iron ore areas, diesel locomotives

will haul 3,000-ton trains, or 35 percent more than what steam locomotives can haul.

At present, there are no diesel locomotives on the main lines of the broad-gauge system in India. Only a few are being used for shunting purposes. A few diesel locomotives are being used for the main line service on the Kundla-Deesa metre-gauge section of the Western Railway. As a considerable amount of foreign exchange is involved in the purchase of 100 diesel engines from a hard currency area, it is expected that the question of the World Bank financing this purchase will figure in the Government's discussions with that body.

Cement Control

It is expected here that stricter cement control will be introduced soon. The aim is to check the growing black market in the commodity, which has developed because demand greatly exceeds production. Last summer, the Government made arrangements to import cement. The Suez crisis led to a rise in freight charges and the prices of foreign cement were high, so imports were affected. Meanwhile, foreign exchange crisis having developed, it has been decided to ban cement imports completely. Even steel imports have been drastically curtailed. The Minister of Heavy Industries, Mr. M. M. Shah, has addressed three letters, including two to State Governments, urging them to rationalise the use of cement and steel and to prevent their wastage. The third letter has been addressed to industrial organisations with a similar request. It may be added that the general curtailment of imports is affecting the import of capital goods, which in its turn is expected to reduce the demand for steel and cement.

Indo-Danish Trade

The Danish trade delegation has had some interesting talks with the Government and with trade organisations during its recent visit to this country. Negotiations for a marine diesel engine project for steam launches are in progress. Denmark has expressed its willingness to supply equipment for making dairy products, and negotiations are going on with the Agriculture Ministry. The delegation is impressed with the progress India has made in recent years and expects an increase in trade between the two countries. The issue posed here is how to develop this trade?

The Indian Government has posted Trade Commissioners in many important countries. At home, it has set up Export Promotion Councils and has laid down the procedure for claiming drawback of excise duties on exported articles. It has entered into bilateral trade agreements with various countries and has been sponsoring visits by trade delegations to potential markets for Indian products. It has also decided to set up another Export Promotion Committee with Dr. D'Souza, Vice-Chancellor of Mysore University, as chairman, to study the existing pattern of trade and to make recommendations for improving it. Ultimately, it is for the Indian trading community to take advantage of these facilities and capture new markets. The Suez crisis has offered an opportunity, for instance, in Middle Eastern countries. But very little enterprise has yet been shown there by Indian traders. Similar, though not identical, conditions prevail in Denmark. Her interest in Indian products has been stimulated by Mr. H. V. R. Iengar's mission to that country last year and by the Danish trade mission which is now in India. It remains to be seen whether traders here will take advantage of the new opportunities.

Swedish, Finnish and Sudanese Trade Missions

Three more trade missions are expected here soon from Sweden and Finland this month and from the Sudan in March.

Diesel Engines for Ships

Proposals are being examined here to start the manufacture of diesel engines for ships manufactured by Hindustan Shipyard. These engines are at present imported.

Tower-wagons for Railways

The Government has placed an order for nine tower-wagons for the Indian railways with the British firm of Dr. Wickham and Company in Hertfordshire. Their estimated cost is £24,000.

Customs Procedures Enquiry Committee

The Government has appointed a committee to conduct a comprehensive enquiry into Customs procedures and organisation, and to make recommendations for improving them. Its chairman is Mr. F. C. Badhwar, Managing Director of Bird and Company. The members are Mr. S. M. Shah, President of the All-India Importers Association, Bombay; Mr. E. J. Benjamin, Director of Roberts, McLean and Company, Calcutta; and Mr. W. Sal-

danha, Officer on Special Duty, Central Board of Revenue, New Delhi. Mr. V. S. Ramaswamy, Assistant Collector of Customs, is secretary to the committee. The enquiry will cover the procedures for clearance of goods and passengers' baggage through the Customs, the administration of import, export and exchange control regulations, methods of classification and valuation of goods, procedures for the grant of Customs refunds and drawbacks, and liaison between the Customs, port trust and trade control authorities.

Schemes for Educating Workers

The Government has appointed an eight-member team of experts to advise it in formulating detailed schemes to cover all aspects of workers' education. The team, which has been appointed in co-operation with the Ford Foundation, will make concrete proposals on educating union representatives in the principles and techniques of trade union organisation, management and financing. It will also make proposals on educating union representatives for responsible and effective participation in management. The education of union members' Finance Act likewise expires on 31st March, and for the better performance of their duties as citizens, along with other general aspects of workers' education, will be included in the terms of reference of the team. Its members are Mr. Anthony Luchek, Professor of Industrial Relations and Director, Labour Education Service, Pennsylvania State University; Mr. Emory Bacon, Director of Education, United Steel Workers of America; Mr. Knut Larsson, formerly President of the Swedish Labour Organisation; Mr. Percy Knight, ex-Assistant General Secretary U.K. National Union of Seamen; Father A. Fonseca, of the Social Institute, Poona; Mr. A. S. Iyengar, retired Labour Commissioner, Bombay State; Mr. P. S. Easwaran, Chief Labour Commissioner, Government of India; and Mr. B. N. Datar, Director, Labour and Employment Division, Planning Commission.

Dissolution of Parliament

The present Parliament will be dissolved on 31st March, 1957. Dates are being fixed for the summoning of the new Parliament, and its first job will be to elect a President and a Vice-President. The last or "lame duck" session of the present Parliament, which will commence here on 18th March, will enable the Government to obtain a vote on account to defray the charges of administration after 31st March, when the 1956-57 financial year ends. The Finance Act likewise expires on 31st March, and a fresh Finance Bill will have to be passed to enable the Government to continue levying taxes.

U. K. ECONOMIC OUTLOOK
OBSCURESIGNS OF LEVELLING OFF
IN ACTIVITY

(FROM OUR LONDON CORRESPONDENT)

THE economic outlook at the moment appears to be unusually obscure, for the statistical indicators which provide the background for most assessments are surprisingly contradictory, or at all events are being interpreted that way by different circles. The City, judging by market movements, continues to be reasonably optimistic, with Stock Exchange prices well maintained and the Government particularly well placed in consequence to condition it for the funding operations which must lie ahead. Nor is there any lack of money seeking investment. The Midland Bank's new issue figures for January highlight this fact by disclosing that new money raised in Britain that month reached £67.2 million—the largest total for any month since March, 1920, if one excludes the sums raised by nationalised undertakings in the postwar years. Official opinion is also hopeful, for although the Treasury *Bulletin for Industry* for January does not anticipate that the price stability which persisted for the greater part of last year will continue into the early months of this year in the face of the increased price of oil, "the underlying strength and balance in the economy are a good deal better than a year ago". It admits a levelling out of investment in manufacturing industry towards the end of the year, which is confirmed by the last quarter returns of industrial building plans released by the Board of Trade to bring the 1956 totals to 2,470 schemes covering 71.4 million square feet for which certificates were granted, compared with 3,322 schemes covering 91.7 million square feet in the record postwar year of 1955. On the other hand, it is hoped that by various adjustments, "it will be possible to avoid any major restriction of output" as a result of the rationing of petrol and oil, and the survey concludes with a cheerful analysis of the overseas trade figures and the stimulating effect of the credit squeeze on our exports.

The other side of the picture can be seen in the latest revenue and expenditure return, which discloses an ordinary deficit of £133 million in spite of the very strong flow of revenue this year, against a surplus of £126 million at the same time last year. It is obvious that the inevitable increase in Government spending has not even been halted quite apart from an actual cut being achieved. The direct costs of the Suez operations must be partly responsible, as also the increased cost of interest on the National Debt, but the significant feature is surely that the supply services have so far cost nearly £260 million more than last year. Capital spending by the Government presents a slightly more favourable picture, the cumulative deficit being £441 million compared with £485 million a year ago. The overall deficit works out at £575 million against £359 million 12 months ago. Revenue will continue to overtake expenditure this month and even part of next, but it does not look as though Mr. Thorneycroft could depend upon Mr. Macmillan's targets of last April being realised. That probably explains the new directives which it is understood have gone out to all departments for the scrutiny of all programmes with special care this year, not necessarily to make sweeping reductions so much as to avoid the "natural annual increase." It certainly explains all the speculations about increased charges in connection with social services which some quarters expect the Government to put forward.

Unfavourable Factors

The T.U.C. obviously takes an unfavourable view of the situation, for a delegation discussed

with the Chancellor of the Exchequer and other Ministers last week the effect which oil supply restrictions will have on production and employment and the steps which it feels should be taken to minimise any adverse consequences. Unemployment and short-time working have both increased lately, so that there now seems to be an overall balance between those out of work and the vacancies available, but the changed circumstances do not yet appear to have convinced labour leaders of the necessity to increase output in support of higher wage claims or the danger to our exports of unofficial strikes such as the one last week which has virtually brought Ford car production to a standstill throughout the country.

The basic fact which everyone must be made to realise is that economic activity in Britain has ceased to grow and is now showing distinct evidence of levelling off. This is shown by the first attempt to meet Mr. Macmillan's request in his Budget speech last April for more up-to-date statistics, which takes the form of a new series of quarterly estimates of national expenditure and cuts the time-lag to four months. The new tables show that public authorities' current expenditure on goods and services in the first nine months of last year was £2,605 million or £221 million more than in the same period of 1955. Government expenditure on military defence was £93 million up at £1,218 million, and on health services £37 million up at £408 million. Much of the rise of £221 million was the result of higher prices and increased rates of pay. In the same period, consumers' expenditure increased by £486 million, or by 5 percent, to £9,802 million. Since prices rose by about the same proportion, there was little change in expenditure at constant prices between the two periods.

Domestic expenditure is estimated to have increased by £844 million, at current prices, from £14,101 million to £14,945 million between the first nine months of 1955 and the corresponding period of last year. Consumers' expenditure accounted for about one-half of this increase, while gross fixed capital formation and public authorities' current expenditure accounted for about one-quarter. In addition, exports of goods and services increased by £373 million, while imports increased by only £93 million. Expenditure on the gross domestic product—equal to the country's total output of goods and services—increased by £1,030 million to £13,226 million, or by about 8½ percent, between the first nine months of 1955 and 1956. About three-quarters of this increase was due to higher unit output cost, the real increase being about 2 percent. The most significant feature brought out by the figures is the progressive slowing down in each quarter in almost every sphere of activity.

Industrial Production Setback

The trend is also confirmed by the latest industrial production index. For 1956 this averaged 137, the same as in 1955 (1948=100), the most disappointing result since 1952, for in every previous year since the index was first compiled, with the exception of 1951 when it fell from 117 to 114, there has been a rise. The provisional estimate for November is now given as 145, compared with 147 a year earlier, while on the basis of information so far received the index for all industries for December, 1956, is expected to be 134-135, which compares with 138 for the corresponding month in 1955. The main cause of last year's standstill was the big drop towards the end of the year in motor-car and commercial vehicle manufacture. This was offset by better results in a variety of other directions, including machinery and industrial building. Since August the monthly production index has been consistently below the figures of a year earlier, and the gap has slightly widened in the fourth quarter.

In the face of these figures it is welcome to find that record orders from overseas customers, and a record rate of delivery of finished tools from the makers, are the two features of the monthly statement for November from the machine tool industry. Over £7.9 million worth of tools was delivered during the month, considerably above the rates achieved recently. Even so, the order-book of the industry as a whole is still over a year long. The figure for export orders of £24 million in November can be compared with an average of about £1.8 million in the previous three months. But elsewhere, unfortunately, the situation is still far from satisfactory, and not least of all in the motor industry.

Far East Textile Imports

According to the *Manchester Guardian*, which has apparently been canvassing the views of the cotton industry on the outcome of the Sir Cuthbert Clegg mission's visits to Bombay and Hongkong, there would be little surprise, and even less resentment, if it turned out to be negligible. Reports from both these centres have been extremely vague. Whereas Bombay hinted at some sort of agreement having been reached, Hongkong says that the representatives of the textile industry there have refused to undertake a restriction of their exports of made-up goods to this country on the lines suggested by the visiting representatives from Lancashire. Sir Cuthbert Clegg, however, has expressed the opinion that the visit to Hongkong was well worth while, and it is certainly much too soon to start talking of failure. Lancashire's opinion at the moment, as reported by the *Guardian*, would seem to be that the mission was given an unenviable task and traders here foresaw many difficulties which might be encountered in the effort to persuade the Indian or the Hongkong mills or both to accept a limita-

tion of their exports to the United Kingdom. It seems possible that there have been more difficulties than had been anticipated. Each of these countries needs, for political as well as economic reasons, to maintain production and exports at the highest possible levels, and the U.K. has been in recent years their largest overseas market for cotton goods. As their textiles enter this country free of restrictions of any kind they have had a large outlet on which they could rely, and they can hardly be expected to forgo this advantage willingly except in exchange for some other benefit or as a means of avoiding some unfavourable development in their trade relationships. Both India and Hongkong, moreover, may consider that if they curtailed their exports to the British market some other overseas supplier would secure the business and thus leave Lancashire no better off than before. It must not be forgotten that Lancashire still holds the view that Government action is the real answer to the problem, and failure on the part of the mission would furnish an excuse for saying "We told you so." The mission returned to England on 2nd February and a meeting of the Cotton Board Standing Consultative Committee has been called for 8th February, at which Sir Cuthbert Clegg and his colleagues will report on results.

Ceylon Tea Reactions

It was inevitable that the shares of Ceylon tea companies on the Stock Exchange should have been marked down following Mr. Gunawardena's announcement of plans to nationalise the foreign-owned tea estates in Ceylon. It was only temporary, for most tea traders, though disinclined to comment, felt the move came from pressure by extreme left elements and that more moderate opinion would ultimately prevail. In the long term, nationalisation is more than a possibility, but it was felt that in the short term the fact that the industry is well managed and provides a large part of Ceylon's national income would prevail. It was generally agreed that recent sale prices—and an increasing number of estates are changing hands—made the suggested compensation figure of about £69 10s an acre quite derisory. The conflict in official views on nationalisation was another reassuring factor. Mr. C. P. de Silva, Minister of Lands, for instance, recently stated that he had no instructions from the Prime Minister about such nationalisation plans.

Shipping Surcharges

The shipping lines in the outward U.K. and Continental conferences to India, Pakistan and Colombo have announced increases in shipment surcharges and freight tariff rates. The existing surcharge of 15 percent on shipments by vessels starting to load at each individual port was raised to 17½ percent on Friday of last week, and the existing tariff rates of freight will rise by 10 percent on shipments made by vessels starting to load at each individual port on and after 15th March. Similar increases are also being made in the home-ward trades from India and Pakistan to the U.K. and the Continent. Similar increases in shipment surcharges and freight tariff rates to Burma from British and Continental ports were later announced in Liverpool.

Commonwealth Council Proposal

A proposal for the formation of a Commonwealth Council has been made in a motion tabled by a group of Labour members in the House of Commons last week. The motion, which is signed by Mr. Peart, Mr. Blyton, Mr. Mellish, Mr. D. H. Howell and Mr. Daines, reads: "That this House, believing in the unity and strength of the British Commonwealth, calls upon the Government to initiate discussions with other Commonwealth Governments with a view to the setting up of a Commonwealth Council comprising a ministerial committee and a consultative assembly which would meet regularly to discuss problems affecting the political, economic and social developments of the Commonwealth."

Brevities

The World Bank has agreed to advance a loan of £1.5 million to Pakistan for a proposed Industrial Bank of Pakistan.

Mr. Low, former Minister of State, Board of Trade, has been appointed a director of John Brown and Company, Clydeside shipbuilders and marine engineers.

Mr. Thorneycroft, Chancellor of the Exchequer, is to preside at a meeting of the Organisation for European Economic Co-operation in Paris on 12th February. The Government hopes that from this meeting will emerge an agreement to begin active negotiations for the formation of the proposed European free trade area.

Total U.K. coal output for January is the highest since 1953. In each of the past three weeks, coal output was the highest for any parallel January week since nationalisation. During the third week of January, output was 4.75 million tons, about 250,000 million tons up on the same week last year. More men worked regularly, and absenteeism was down.

In spite of a drop in December output, production of man-made fibres reached a record level last year at 482.6 million lbs., an increase of 2 percent over 1955. The rise stems from greater demand for staple fibre in all the spinning industries.

Bombay

CHINESE COMPETITION FEARED
IN COTTON TEXTILESSHANGHAI MILLS TO BE
MODERNISED

(FROM OUR BOMBAY CORRESPONDENT)

THE cotton textile market remained steady last week. The demand for superfine fabrics, particularly dhories, was satisfactory. There was also some enquiry for sarees and mulls in the medium and coarse counts, but medium and mercerised shirtings were neglected and this caused a moderate drop in prices for these varieties. The actual volume of business was restricted. Similarly, there was some activity on the export side too but the actual turnover was only fair. The Indonesian Government renewed some of the import licences which had expired. As a result, fair business was transacted with that country, mainly in grey sheetings and drills, dyed drills and bleached longcloth. Australia too showed some interest while limited quantities of calendered grey sheetings and bleached longcloth were booked for Burma. It is believed that the import licences issued by the Burma Government recently have now been exhausted, but it is also reported that the Burma Government has established four corporations in conjunction with trade interests for the import of textiles. It is believed that each of these corporations will be given an import quota valued at Rs. 70 lakhs. Textile circles here believe that they will be able to capture a fair share of this new business when the corporations actually enter the market.

Meanwhile, reports reaching here indicate that Shanghai's cotton manufacturing industry is to undertake an ambitious expansion and modernisation programme this year. Eight of the biggest mills there are setting up an additional 80,000 spindles. Six other mills are scrapping 120,000 spindles and replacing them with the latest types. Output will be raised by 86,000 bales of cotton yarn. These projects are expected to be completed within six months from now. An extra 200,000 spindles may be put to work eventually if the mills take over all the unused building space now available. Shanghai, the most important textile manufacturing centre in Communist China, turned out 1,790 million metres of cloth last year, beating 1952, when the five year plan began, by about 60 percent. Although most of this production was consumed internally, it now appears that China is building up her industry in an attempt to capture a share in the world's export markets.

Rayon Continues Dull

The rayon yarn market here continued to be listless. The report that the Silk and Art Silk Mills Association had concluded a deal on favourable terms with Japanese manufacturers for bulk supplies helped to depress the spot market here. In the futures market too, prices dropped by as much as Rs. 12 a case for Italian material. Another contributory factor was the slack demand for rayon fabrics from upcountry centres. The Yarn Markets Association and Exchange has decided to introduce a forward contract in 150 D yarn with effect from this week. This will cover imported and domestically manufactured yarn in 150 and 120 bright hanks and cones. Initially, trading will be for April delivery. The recent upward spiral in cotton has come to a halt. Both the Jarilla and the Vijay contracts lost Rs. 30 each a candy. There was a great deal of nervous unloading and some speculators entered the market as sellers. This seems to be a natural consequence of the recent uncontrolled rise in prices. It was widely rumoured that the Government would intervene in an effort to stabilise the market. The East India Cotton Association is known to be keen to maintain prices at a reasonable level and so to regulate the forward market that it would bear some proportion to spot prices. In its effort to introduce a bearish tone, the Association, it is believed, has decided to maintain bye-laws 55 and 61. This would mean that the tendering differential, except for Jarilla B, would be on the basis of the forward market and not on the spot market. In regard to Jarilla B, the tendering difference will be based on the differential between the spot and hedge prices on the date of fixation. Various other measures are also being considered by the Association. It has asked the Government for authority to collect deposits from operators in case prices move up unduly. Stained and leafy cotton will also be allowed to be tendered if circumstances so warrant and within a defined price range.

Results of Speculation

The Association is reported to feel that perhaps more drastic measures may be necessary to curb the widening gap between forward and spot prices. This gap is mainly attributed to speculative activity. The Association is therefore considering the possibility of discontinuing forward delivery contracts. But this perhaps would be too severe a measure. A decision on the final measures to be adopted will be taken by the Association this week. The trade generally has not taken kindly either to the Association's fears or the domestic cottons was moderately active. Mainly attracting attention were 197/3, 0394, 216F, and new crop Surti. New crop Vijay, which is now quoted near the ceiling, found new buyers who probably expect some decline when the crop begins to move later this month. Due to small demand, prices of exportable styles were easy. Inquiries from shippers were few and limited to Choice Bengal and C. P. Deshi.

Uttar Pradesh

STEEP RISE IN U. P. FOOD
PRICESRUMOURS OF RATIONING
AND CONTROL

(FROM OUR LUCKNOW CORRESPONDENT)

A STEEP rise in foodgrain prices on the eve of the elections has caught the U.P. Government unawares. So emergency measures are being taken to cope with the situation. The Government of India has allotted the State 40,000 tons of wheat in addition to the 70,000 tons which the U.P. Government has already indented from the Central pool for distribution through 1,500 fair price shops. The sale of imported wheat which began in a small way last August has not been effective in holding down grain prices. The situation is not expected to ease for another two months, that is, until the rabi crop arrives in the market. To sustain its programme of importing wheat till then the State Government must get two special trains of wheat every day from Bombay for 22 days a month.

During 1955, the State exported about 1,900,000 maunds of wheat and imported 1,000,000 maunds. During the period April to December, 1956, it allowed exports of 2,000,000 maunds of wheat and imported 1,800,000 maunds. The exports were meant to arrest a slump in prices and the imports were to check a price rise. The quick transition from embarrassing plenty to conditions of scarcity indicates official miscalculation. Much of the wagon space wasted in these exports and imports could have been saved if the Government's food policy had been less erratic and more farsighted.

A recent official enquiry into the economics of foodgrain trading claims that both the consumer and the producer stand to gain by a scheme of total food control. Handling charges a maund by the Government under total control and rationing, according to the enquiry, work out to about 10 annas compared with over Re. 1 in private trade. The publication of this enquiry report, taken along with the scarcity conditions prevailing in the State, has caused the rumour which has been given wide currency that the State Government proposes to introduce foodgrain rationing.

Bonus to Textile Workers

An order under the U.P. Industrial Disputes Act instructing 67 sugar factories in the State to pay bonus totalling Rs. 1.42 crores to their workers for the years 1954-55 and 1955-56 has been issued by the Government. Not all factories, however, are in a position to pay bonus because of losses sustained by them. To examine such cases, a tripartite committee consisting of the State Labour Commissioner as chairman, an employers' representative and one of the workers, has been appointed. By another order, the Government has given partial relief to *khandasari* sugar dealers from sales tax. The relief will mean a reduction in the rate of sales tax from 6 pies to 3 pies a rupee, single-point, and on *khandasari* molasses from one anna to 6 pies a rupee, single-point.

Cane Prices and Quality

On the recommendation of the U.P. Government, the Central Government has selected four factories in the State for introducing a scheme of payment for cane on a quality basis. Cane prices as a whole in the current season will not, however, be linked to quality.

Railway Research Work

Details of the progress made in railway research work are contained in the annual report for 1955-56, published by the Railway Testing and Research Centre, Lucknow. Among the important investigations carried out at the Centre during the year were trial runs of high speed vestibular air-conditioned trains, the development of cycle trolleys, the use of loco coal ash as building material, the formulation of compounds to prevent corrosion of rails and the construction of better instruments to measure the force exerted by locomotives, etcetera. Designs of broad-gauge and metre-gauge trolleys capable of being pedalled without fatigue by one man at a time at a speed of 8 miles an hour when carrying a load of about 1,200 lbs. were finalised. Only two trolley-men would be required for running these trolleys which are light enough to be removed off the track by the same two men without difficulty.

Nearly 1,500,000 tons of loco ash are annually produced by the Indian railways and a large quantity goes to waste. Experiments carried out at the Centre, it is claimed, show that when suitably pulverised, it can replace a certain proportion of cement in construction work without affecting strength. The economics of pulverisation have yet to be studied. The Centre received a complaint of bug nuisance in the Bombay-Poona Janata Express. According to the report, two samples of insecticidal varnish furnished from this Centre, were found effective in destroying the bugs and preventing re-infestation for a period of two months.

State Electricity Board

The State Government has decided to set up an Electricity Board by next April. The various power projects now in hand will be placed under the Board. It will also regulate supplies between States connected by the grid system. The Board will consist of four members with a non-official as chairman.

Regulation of Motor Transport

The Government of India, it is understood, has turned down the U.P. Government's request for lar-

ger powers over the private sector of motor transport. The study group for transport planning has expressed the view that the issue of permits for motor vehicles in an area should be governed mainly by its extra transport needs. The quasi-judicial Transport Authority is at present the final dispenser of such permits. The State Ministry concerned wanted some powers for itself but they have been refused. The Ministry had also demanded that regional transport officers be empowered to suspend a permit, pending enquiry into charges against a permit holder for violation of the rules. The Ministry's contention was that such power would prevent the continued misuse of his permit by the offender during the period, which is seldom short, of the enquiry. This plea has also been rejected.

Factories Act and Small Industries

Some time back, on the recommendation of the U.P. Small-Scale and Cottage Industries Board, the Government had appointed a sub-committee to investigate and report on the question whether the provisions of the Factories Act 1948, adversely affected the growth and working of small-scale and cottage industries. For removing such handicaps, the State Government has suggested certain amendments to the Factories Act and forwarded them to the Central Government for consideration.

Industrial Estates

According to a statement of the Directorate of Industries, Kanpur, the scheme for setting up two industrial estates in Kanpur and Agra is receiving encouraging response from the industrialists. In Kanpur, land measuring 37.7 acres has been purchased, but due to a rush of applicants, the Development Board has been moved to allot additional land available near the estate. It is intended to provide in the estate factory accommodation for 69 small-scale industrial units. All the applicants in Kanpur have deposited 10 percent of the cost of the plot. In Agra, 60 acres of land has been purchased and handed over to the Improvement Trust for levelling and laying out of roads.

State Health Insurance

The general body of the Indian Medical Association (Lucknow Branch) has welcomed the State health insurance scheme for Lucknow. The I.M.A. has accepted the three principles on which the scheme is based, namely (1) that it should be voluntary, (2) it should be on a no-profit-no-loss basis and (3) the initial cost of the scheme should be borne by the Government. A number of private practitioners, however, are opposed to the scheme which they describe as a vote-catching device. Under the scheme, every individual paying a contribution of Rs. 12 would be entitled to free outdoor consultation, free medicines, including patent drugs and injections and certificates for incapacity. A doctor will be given Rs. 5 an individual a year under his charge. The maximum number of patients under the care of one doctor is fixed at 2,500 and patients are entitled to change their doctor every four months. The amount of Rs. 12 realised from a patient would be spent as follows: Rs. 5 as fee to the doctor, Rs. 3 for medicines, Rs. 1 for hospitalisation, Re. 1 for laboratory services, and Rs. 2 for establishment.

MANUFACTURE OF STEEL
BY L. D. PROCESSROURKELA WORKS ACQUIRE
PATENT RIGHTS

(FROM OUR NEW DELHI CORRESPONDENT)

HINDUSTAN Steel Ltd. has signed an agreement with a Swiss firm, B.O.T., under which it is acquiring the all-India patent rights for manufacturing steel by what is commonly called the L.D. process. Steel has so far been manufactured by the open hearth system. Bessemer, who is regarded as the father of modern steel-making, however, often wondered whether oxygen could be used. His dream has been realised through the L.D. process, or the oxygen-blown process.

This process is no longer in an experimental stage. It is now recognised by the British Lloyds Register of Ship-building for use in ship construction. It is used in the steelworks of Voest, Linz, Alpine Montagesellschaft Donawitz, Dofasco in Canada, McLouth Steel Corporation, Trenton, U.S.A., and in Japan. The Voest Works in Linz have special experience in the application of oxygen-blown steel to be reduced in a broad-strip mill.

The process will be used for the first time in India in the Rourkela steel works, in the setting up of which Krupps of Germany is collaborating. Krupps in its project report urged the Indian Government to adopt this system because, apart from reducing the cost of production as compared with the open hearth system, it would allow the manufacture of fertilisers. The Government has accepted the recommendation.

On the L.D. process, the Krupps project report says: "The blowing process is carried out in three basic-lined converters with a capacity of 40 tons each. The oxygen is blown, in a purity of about 99 percent, from the top down upon the surface of the heat by means of a lance and with a pressure of about 12 atm. gauge. The durations of blowings are about 25 minutes. For control of the heat temperature during the blowing process, about 3 percent of limestone and 12 percent of ore are added. We may mention that, in order to enable the ideal scrap-hot-metal process to be carried out in the open hearth furnaces, there is kept a remainder of scrap volume to be charged into the converters, that is not sufficient for the cooling of the heat. The quantity of slag is about 160 kg./ton of steel. This slag must be brought on the dump in the same way.

"The blowing process is performed in such a way that, after having charged the cooling scrap, the hot metal, lime and fluxing agents, the oxygen lance is entered and oxygen is fed. Reactions set in forthwith. While the blowing process is going on, lime, ore, limestone and scrap may be added to favour the formation of slag and to regulate the temperature of the heat. At the beginning, the speed of carbon combustion is very high, but is decelerating while the melting process is going on. Producing by the oxygen blowing method, a higher portion of the manganese contents of the hot metal remains in the steel bath than with the open hearth process; this is due to the shorter reaction time. Oxidation is setting in very soon. The phosphorus contents of the hot metal, due to the composition of Taldih ore and of the coke ash, are safely eliminated by the oxygen blowing method. The silicon oxydises already during the first few minutes. A special advantage of this process constitutes the great purity of the steel with respect to nitrogen.

"The waste gases developing during the refining process are evacuated through the chimneys; they are coloured brown owing to the iron oxides. The tapping of steel is done in the same way as with the steel produced in the open hearth furnaces. As a rule the total steel production must be poured downward, i.e., in a falling sense. The ingot moulds are brought to the pouring stands with special wagons. The cast slab ingots are brought to the stripper bay and from there, after being stripped, to the soaking pit bay. The cooling water requirement is secured by a particular circulation system."

In Rourkela, however, a combination of both methods is being adopted. It has been decided to manufacture 250,000 tons of steel by the open hearth method and 750,000 tons by the L.D. method. A certain amount of scrap is yielded by the L.D. method. For the open hearth method, the scrap-hot-metal process has proved most profitable. By using both systems, the internal recycle scrap from the rolling mills and the scrap from the L.D. process can be fully utilised. In an exclusively L.D. process plant, on the other hand, it would be impossible to have the required quantities of foundry iron. A scrap surplus would arise. Krupps have "no doubt that the L.D. method, under the prevailing Indian conditions, must be given preference to the open hearth method."

Tass on Bhilai

According to Tass, "a number of Leningrad enterprises and research institutes are taking part in the construction of an iron and steel plant in India. This entails the construction of a system of sidings and inter-factory railway tracks. This

part of the project was done by members of the oldest Soviet Institute of Railway Transport Engineers in Leningrad. A full year of arduous work was required to complete this part of the intricate scientific and engineering work. The latest designs currently accepted in transportation and the advanced techniques of Soviet and foreign railways were taken into account.

"On the basis of the principles developed in Leningrad, the U.S.S.R. Ministry of Railways' design office is preparing ship drawings for the construction of railway tracks in the compound of the Indian iron and steel works in Bhilai. The designing office of the Hoisting and Transport Machinery Works has also completed projects of 20 types of powerful hoisting cranes for the same enterprise, including 30, 50 and 75 ton travelling cranes intended for operation in blast furnaces, rolling mills and steel smelting shops, special cranes with rotating trolleys, magnetic grab mechanisms, etcetera. The first crane fit for service in the Indian climate has already been completed while several other hoisting machines are being assembled."

COMPLAINT BOOK AND VEHICLE DEFECTS
CARD

The Government of India in June 1955 instructed the automobile manufacturers in India to see that their dealers and sub-dealers prominently displayed and properly maintained complaint books in their service stations. The idea behind this move was to enable the owners to enter in such books any complaints they had to make about the working of their vehicles. Steps taken by the dealers and sub-dealers to remedy such complaints were also to be noted in the books. Secondly, the Government suggested to the manufacturers that, whenever a vehicle was sold by the dealers or sub-dealers, a blank vehicle defects report card should be supplied free of charge to the purchaser. If the buyer noticed any defects in the running of the vehicles, he would enter the defects in the card and send it to the Development Wing of the Ministry of Heavy Industries for further action. The manufacturers, the Government understands, have issued instructions to their dealers and sub-dealers on the above lines. Greater use by the public of these facilities would, in the opinion of the Government, enable the manufacturers, on the one hand, steadily to improve the quality of the products and the buyers, on the other hand, to have a quick method of having any serious defects rectified.

OUTPUT INCREASES IN HINDUSTAN
MACHINE TOOL FACTORY

The 100th lathe built by the Hindustan Machine Tool Factory was out on 5th February. The State-owned Hindustan Machine Tool Factory achieved a record production of 24 lathes during the months of November and December, 1956. The output rate increased further to 25 lathes during January, 1957. As a result, the factory's total production during the current financial year reached 97 lathes by the end of January. With two months to go, the factory is likely to achieve a production increase of 250 percent of a target of 57 lathes for 1956-57. According to its earlier production programme, the factory is to reach the level of 400 machines a year by 1960-61, but by the introduction of multiple-shifts, the production is expected to be doubled without any more substantial capital investment than was originally planned. Under an agreement signed with Messrs. Fritz Werner, a German firm, the Hindustan Machine Tool Factory will also start manufacturing milling machines of three types—horizontal, vertical and universal. These machines are expected to be in the market by about July this year.

CHEAPEST JET TRAINING AIRCRAFT IN
THE WORLD

A remarkable new aircraft, the first to be designed in the U. K. exclusively for jet training, is expected to make its maiden flight early in March. Costing only about £13,000, the *Student*, as it is known, has been developed over the last two years by F. G. Miles Ltd.—a name famous in British aviation. Already its many advanced design features have aroused the interest of Commonwealth and other air forces. According to Mr. Frederick Miles, chairman and managing director of the firm, the *Student* will be the cheapest jet trainer in the world, and could be built abroad by countries not possessing a highly developed aircraft industry because of its simple design and construction.

SUPersonic NAVAL FIGHTER PLANE
COMPLETES DECK-LANDING TRIALS

Vickers-Armstrongs (Aircraft) has announced that the Supermarine N.113 has successfully completed a series of deck landing and catapult launching trials. The twin-engined N.113, seen for the first time in public at the flying display last year, is a super-sonic naval fighter-bomber that can carry an atom bomb. It is fitted with "blown flaps" to reduce landing speed and improve handling qualities. Known as "supercirculation" this new system is operated by high pressure air fed from the engine compressors through a span-wise slot along the rear of the wing. This "artificial" air stream passes over the top surfaces of the flaps and has the effect of delaying the onset of turbulence and consequent loss of lift at low speeds and steep angles of attack.

Jute

THE IMPORTANCE OF PAKISTAN'S RAW JUTE
POLICY

OTHER COUNTRIES EXPERIMENT WITH FIBRE YIELD

ALTHOUGH there have recently been reports from the U.S.A. that the consumption of bur-lap bags has increased in the past year, it is generally agreed that the price of jute cloth and bags is too high for them to be safe from the competition of substitutes and alternatives. Yet jute manufacturers everywhere are complaining that, at current prices of jute manufactures and raw jute, it is difficult, if not impossible, to make ends meet. So far as India is concerned, the mills are able to make a small profit on hessian but are losing on sacking to an extent which outweighs it. The reason for this is, of course, that the prices of manufactures are determined by world factors while the price of raw jute is the result of the Indian supply being less than the requirements of Indian mills, plus the fact that the price of Pakistani jute has, for months, made its purchase by India prohibitive.

This is a situation which is of importance not only to the Indian jute industry but to jute manufacturers and consumers of jute goods all over the world. The key to the position is in the jute policy of Pakistan. Hitherto the Government of East Pakistan has restricted output and maintained high minimum export prices. The present Government has withdrawn restrictions on the growing of jute but, so far, has given no indication of any intention to lower the minimum prices for export. That is where the danger lies, and it is a danger not only to jute manufacturers outside Pakistan but also to those inside and to the jute growers themselves. As long as the prices of jute goods are maintained at high levels, consumers will look for cheaper materials which will serve their purpose as well, whether it be for packaging or furnishing or motor cars or anything else. Already bulk handling for grain has taken a big slice of the demand for jute bags. Bulk delivery of flour, meal and feeding stuffs to retailers and farmers by tank lorries is being developed in the U.K. Substitute fibres are being experimented with in other countries. If all these ways of avoiding the use of jute bags and cloth, or even some of them, are successful, Pakistan will suffer along with the jute industry in other countries. It will be more serious for Pakistan than for most, because East Bengal has nothing else except tea to export.

The danger is not, however, restricted to the use of substitutes or alternative means of handling goods. It does not require a very long memory to recall the time when Brazil started experimenting with jute-growing and the news was received in Calcutta with something between scepticism and scorn. Brazil is now practically self-supporting in jute and jute goods and may soon be exporting. It is also experimenting with another fibre believed to be of the same family as mesta. India is growing more mesta than ever before. The quality has been greatly improved and Indian mills have developed new techniques which enable them to use a greatly increased proportion in their manufactures. Other countries are trying out new fibres, and some that are experimenting with jute-growing claim that they are getting higher yields of green plants to the acre and higher yields of fibre from each plant. In the latter there is danger to both India and Pakistan, where research on that subject has been neglected. In some of the countries where jute-growing is being developed—British Guiana, for instance—the cost is at present prohibitive, but if they should succeed in producing a variety of jute plant which will yield an appreciably higher percentage of fibre, they may become serious competitors of Pakistan and India.

All this experimentation and research is the result of Pakistan's policy of keeping jute dear by excessive export duties and high minimum export prices. It is understandable, of course, that Pakistan wants her agricultural population to get as good a price as possible for jute, that she wants the revenue from export duties and needs the foreign exchange which jute earns. But if to press these needs to extremes brings about a decline in the industry all over the world, Pakistan will be the worst sufferer.

THE JUTE MARKETS

This has been another dull week. There has been little outside support for the gunny market which, in consequence, has been dominated by local speculative influences. Even the Government stimulus when it was announced. Raw jute has weakened because of slowing down of mill buyings and some improvement in the volume of supplies coming forward. A sharp fall in prices in Pakistan has also influenced the market in India. **Manufactured Goods:** Lack of any active demand from abroad left the market more or less in the hands of "fatkavallahs" who have played about with rumours of Government orders, of additional ships being placed for the export of gunnies, and the usual settlement-day operations. On Monday, it was rumoured that the Government had placed an order for 8,000 bales of B Twills. This being the speculative counter, it was the best fabric

that could be bought from the bull speculators' point of view, but the quantity was so small that it had little effect. Eight thousand bales amounts to less than 3,000 tons, whereas the I.J.M.A. output of sacking in November was 41,800 tons and in December 41,300 tons. Statistics are not available of the quantity of B Twills manufactured. The Government is reported also to have called for tenders for Liverpool. As was expected, hessian, in spite of the smallness of mills' stocks, was weaker than sacking and the price dropped during the week by about Rs. 36 a ton compared with a fall of about Rs. 20 a ton in sacking. Local speculators still cling to the idea of higher prices for hessian because of the low level of stocks in mills, forgetting that the mills have increased their output of hessian and that stocks of hessian outside India have increased. In other words, stocks have merely been transferred from Calcutta elsewhere without there being any significant increase in consumption.

On Wednesday morning quotations were as under:

	Ready Rs.	February Rs.	March Rs.	April-June Rs.
40in. 8oz.	35-12	35-4	35	34-8
40in. 10oz.	43-2	43	42-13	42-10
B Twills	115-10	116-2	116-4	116-4
Heavy Cees (Plain)	119	118	117-8	116-8
A Twills	149	140-8	140-8	140
Liverpools	134-8	134	134-4	132-4
Cornsocks	117-4	118-4	118-4	117-8

Raw Jute: Business during the week has been mainly in mesta. Early in the week small business was done on the basis of Rs. 26-8 for Bottoms, but later on there were sales at Rs. 26 basis Bottoms for assortments with a high percentage of Middles, while Rs. 26-8 was done for assortments of 20-80 and 30-70 Middles and Bottoms. Picked marks of Daissee and Karimpur tossa were sold at Rs. 35 and Rs. 34 respectively basis Bottoms. On Saturday, it was reported that fairly large business was done at Rs. 25-12 basis Bottoms for mesta and Rs. 24-12 F.A.Q. for bimli. There were also rumours of business in Northern jute at Rs. 30-8 basis Bottoms.

Quotations on Wednesday morning were as under:

Indian Jute:	Landed at Mills Rs a md. basis Bottoms.	Shipment. Feb.-March
Northern Assam	30-8	"
Murshidabad Jute	30-8	"
Murshidabad Tossa	29-8	"
Murshidabad Mesta	31-8	"
Daissee Jute	26	"
Daissee Mesta	32	"
Western Mesta	26-8	"
Northern Jute ex Calcutta	25-8	"
Jungli Jute	30	"
Bimli	26-8	"
	25 F.A.Q.	"

The market is easier with sellers pressing for sales and the above prices could be discounted.

Arrivals in Cossipore during the week were 701 wagons, which is more than usual at this time of year. As has been the case for some time past, most of the imports were mesta and jungli jute. Mill buying has eased off considerably and stocks have increased to about 800,000 maunds. It is also reported that mills have stopped or reduced their jetty purchases.

Mofussil: Imports are reported to have increased, especially in Purnea and other western districts. Buyers have been less active and prices are lower, but have not fallen to the same extent as in Calcutta.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 31st January, 1957	5,755.6	33,439.7	39,195.3
1st to 31st December, 1956	4,373.0	35,245.8	39,618.8
1st to 30th November, 1956	5,591.1	44,360.2	49,951.3
1st to 31st January, 1957	29,082.1	2,297.5	31,379.6
1st to 31st December, 1956	32,236.2	1,855.3	34,091.5
1st to 30th November, 1956	45,041.3	1,717.9	46,759.2

FRENCH JUTE GOODS OUTPUT FALLS

The total output of the French jute industry during the first 11 months of 1956 showed a decline at 88,738 tons of yarns and 68,240 tons of

fabrics from 91,299 tons and 72,114 tons respectively, in the comparable 1955 period, reports the *Jute Bulletin* of the Indian Central Jute Committee. Exports of French jute goods to foreign countries during the first nine months of 1956 rose to 7,088 tons from 5,704 tons in the corresponding period a year ago. But exports to French overseas territories showed a slight decline to 11,253 tons during January-September, 1956 from 11,968 tons in the same period of 1955. Imports of raw jute during January-September were up at 75,502 tons against 68,666 tons in the same period in 1955.

THE FOREIGN JUTE MARKETS

LITTLE BUSINESS DONE

(FROM OUR DUNDEE CORRESPONDENT)

THE weakness in raw jute prices, which has been persisting for some time, is restricting business here. Spinners are not buying the raw material because they expect an even lower level, and also because they have no incentive with the lack of business in jute yarns. Even with the drop that has recently taken place, prices for fibre are still considered too dear. They are a long way above the fixed minimum rates, which are supposed to give growers a good return for their labours, and some people must be reaping a rich harvest. There has been a further drop of from £3 to £5 a ton, according to grade, in shippers' prices for the fibre. Mill Firsts can now be bought at from £113 a ton, Mill Lightnings from £103, Mill Hearts from £98 and grade Hearts from £93, with good marks of Daissee-2/3 from £106, grade £103 and grade Tossa-2/3 from £112 and grade fours from £103, all February-March, c.i.f., U. K. or Continent. L.J.A. Firsts, it is reported, have been done to the Continent at £103 a ton, c.i.f. Some offers of jute float are being made at much the same rates as these ruling for shipment, but spinners are not interested. Complaints are still being made about the late shipment of jute from Pakistan. A number of shippers who are offering to sell jute here at very low rates have yet to send fibre against contracts for October-November. In some cases, firms whose jute has been very adversely reported upon are quoting the cheapest prices.

Calcutta goods have been a little irregular, but show little change from a week ago. Hessian is offered at from 66s 3d for 40in. 10oz. and 50s 3d for 70oz. February, 66s and 50s March and 65s 9d and 49s 9d April-June, with B Twills recovering from 177s 3d to 178s February to June, all f.o.b., Calcutta.

Business in jute yarns and cloth is idle. Consumers are waiting for a reduction in values, which appears to be long overdue. Spinners are not in need of orders, as they have enough on hand to tide them over the next two months at least.

Many readers will regret to learn of the death of Mr. Harry Graham Smith, who was joint managing director of A. & S. Henry and Company, Ltd., practically since his return to Dundee in 1952. Mr. Smith, who was about 62, was in charge of the firm's Calcutta office for many years, and he was a very popular member of the industry.

THE PAKISTANI JUTE MARKETS

SUBSTANTIAL FALL IN FIBRE
PRICES

(FROM A CORRESPONDENT)

SOME unexpected factors have caused the loose jute market in Narayanganj to decline considerably over the past few days, but many think that present prices do not present a true picture of local conditions. On Saturday, 26th January, a strike was called because of "Kashmir day". This paralysed the market and caused an accumulation of imports on the following Monday. On 28th January, workers in the Adamjee Mills started a strike. As the concern is a very big buyer, there was even more jute on offer. Balers have not changed their position as the trend overseas and in the Calcutta gunny markets remains weak. The position, therefore, is that although the number of buyers is the same or probably less, the amount of jute on sale is considerably more. This has weakened the loose jute market and prices are quoted in small lots as low as Rs. 31 for B Bottoms and Rs. 29 for C Bottoms. These, of course, are the lowest rates which have been paid and are not representative. Some sellers have refused to offer the loose jute which is lying in balers' godowns because they expect better prices. The pucca bale market is definitely weak. Export Firsts are quoted at Rs. 200, Export Lightnings at Rs. 190 and Export Hearts at Rs. 175. Cuttings are offered at Rs. 100 but very few people are interested and there are many sellers. Overseas buyers are remaining out of the market and one of the few reports of business mentions Export Firsts being sold privately at £103. There are free sellers overseas at £105 for Export Firsts and £95 for Export Hearts but no buyers. A feeling of despondency prevails in the Narayanganj market and the money position is serious. Not only have there been very heavy losses, but the banks are no longer prepared to make advances beyond the limits granted earlier to balers.

The local gunny market is also slightly weaker. Adamjee B Twills being quoted at Rs. 125 ex mill and 45in 11oz at Rs. 55.

the tyre with BUILT-IN PEACE OF MIND

Now from Firestone comes the modern safety tyre—the New DeLuxe Champion Tubeless Tyre. It gives you and your family protection never before provided in any tyre at any price. It's the first and only tyre with built-in peace of mind.

BLOWOUT SAFE

No longer any fear of dangerous blowouts—This tyre is fitted with an air-tight Saffi-Inner Liner instead of a tube. There is nothing to rip, tear or explode.

PUNCTURE SAFE

The Saffi-Inner Liner of the New DeLuxe Champion Tyre tightly grips puncturing objects and slows down the loss of air—so there's no more fear of having to change tyres on a busy road.

MORE MILEAGE

The New DeLuxe Champion Tyre gives longer mileage because the tough tread compound wears more slowly, and because its flatter tread wears more evenly.

PLANTATION ENQUIRY REPORT
ON RUBBERNEED TO INCREASE OUTPUT
EMPHASISED

THE Plantation Enquiry Commission, in its third and last report dealing with the rubber plantation industry, has recommended that 120,000 acres of land should be brought under high-yielding rubber by 1965 to meet the increasing internal demand. It has said that the target of replanting 70,000 acres, for which a scheme has already been sanctioned by the Government of India, should be reached within seven years. In addition, an area of 50,000 acres should be set apart for new planting with high-yielding trees. The Commission suggests that half the sanctioned area of 70,000 acres for replanting should be earmarked for small growers holding 50 acres and less, and the other half for estates of over 50 acres. The new area of 50,000 acres recommended by it should be distributed likewise.

The first two reports of the Commission dealt with the tea and coffee industries. The Commission consisted of Mr. P. M. Menon (chairman), Mr. K. G. Sivaswamy, whose death occurred recently, and Professor M. V. Mathur (members). Mr. Sivaswamy has appended a note of dissent to the report on the rubber plantation industry. With the submission of this report, the Commission has completed its work.

Rubber Replanting Fund

The Commission has recommended the creation of a "rubber replanting fund" on the lines of the replanting funds for the tea and coffee industries. The fund is to be created by crediting the element in the price of rubber allowed for rehabilitation with the Rubber Board in the name of each estate. A phased programme of replanting for each estate, to be implemented over a reasonable period, should be drawn up. The programme should continue even when estates are transferred. The Commission has also recommended a number of principles to be followed in regulating replanting and new planting. It is stated that one of the main problems of the rubber growing industry is to increase the production of raw rubber in order to make the country self-sufficient as far as possible. The Commission recommends that dividends and managing agency commissions should be reduced in companies where they are on the high side. The recommendations made in the tea and coffee reports on reducing dividends and managing agency commissions to increase the internal resources for replanting and to meet labour welfare costs apply to rubber also.

The setting up of a co-operative supply organisation, on the lines of the body recommended for the coffee industry, for distributing such materials as chemicals, chemical fertilisers, mixtures and other items required by estates, has been recommended by the Commission. In its analysis of the problems of small growers, it observes that the main problem facing them is the uneconomical size of the holdings. The minimum holding, in its opinion, should be of at least four acres. A chain of primary co-operative societies should be set up to maintain smoke houses where small holders can process their latex. The formation of State-partnered co-operative joint farming societies has been indicated by the Commission as one way of solving the problem of providing long-term credit to small growers. These societies should at the bottom be fostered by a central co-operative bank, a central supply society and a central marketing society.

Rubber Cultivation

The production of natural rubber is confined to south India and is concentrated in Kerala State, in whose economy the industry plays an important part. Rubber plantations have helped in the opening of vast areas of land. They give direct employment to about 100,000 workers. Indirectly, they provide employment for a large number of rubber was 207,239 acres and production was 22,481 tons. However, compared with the world total, India's output is hardly significant. In 1953, acreage and production 1.22 percent of the world output. Consumption in India has risen steadily. The entire indigenous production is consumed by the rubber manufacturing industry and substantial quantities have to be imported. On the whole, says the Commission, there is little variation in production costs between the rupee Indian and partly non-Indian companies. Costs are higher for sterling companies due to higher cultivation and processing charges and in spite of their higher yields.

Marketing Problems

On the marketing of rubber, the Commission says that as the large buyers in the market are only two or three, sellers often have no option except to sell their better grades as lower grades. Since large growers are in most cases able to sell their production without any difficulty about grading, it can be inferred that the loss arising out of de-grading of rubber mainly falls on the small holders. This loss can be averted only if State-partnered co-operative societies step into the field for processing and marketing the small holders' production of latex. The Commission recommends that licences granted for the import of rubber should not be valid for imports of Group I quality.

During seasons of higher production of rubber, manufacturers should step up their purchases as a *quid pro quo* for the assured internal supply of rubber. The important manufacturing concerns should reach an agreement on this point. Otherwise import licences should be issued to them on a quarterly basis, proportionate to the quantum of production of raw rubber in the quarterly periods on the basis of a formula. The Commission feels that minimum and maximum prices should be fixed for other important marketing centres, particularly Kottayam. At present these prices are fixed only on f.o.b. Cochin basis. The fixation of prices for more centres will remove one of the obstacles in the way of a large number of small holders getting the minimum prices.

Capital Structure

The total capital invested in rubber plantations of over 100 acres is estimated at Rs. 992 crores, of which Rs. 736 crores (76 percent) is Indian and Rs. 236 crores (24 percent) non-Indian. Those estates account for 100,000 acres out of the total acreage of 207,239. Between 1939 and 1954, there has been a noticeable shift in the investment from non-Indians to Indians. A study of the growth of share capital showed that (1) there has been no increase in share capital between 1946 and 1953 in sterling companies; (2) Indian companies had an increase in the share capital in the first period, 1939 to 1946; (3) the percentage of share capital to total assets between 1939 and 1953 decreased more in sterling than in Indian companies; and (4) the percentage of total share capital and reserves to total assets decreased under all types of management between 1939 and 1953.

The Commission says that the average gross profits for a majority of companies cannot be regarded as excessive. If depreciation charges for renewal of old trees are added to the costs, the average managing agency commission on gross profits was 7.67 percent in sterling companies, 4.5 percent and 10 percent in rupee non-Indian companies and 10 percent in Indian companies. In the last group, 41 percent of the companies paid an average commission over the statutory 11 percent laid down under the new Companies Act. In terms of acreage, the Indian companies had a net profit after tax of Rs. 119 an acre, rupee non-Indian companies Rs. 155 and the sterling companies Rs. 42. The Commission says that the percentage of dividends to profit after tax was high between 1951 and 1953 in sterling and Indian companies. As related to paid-up capital, dividends were highest in rupee non-Indian companies in 1953—24.76 percent. Indian companies paid 13 percent to 20 percent and the sterling companies 5.61 percent in 1953.

The Commission recommends that the Reserve Bank should use its good offices with the banks and, where necessary, use legal powers to secure discontinuance of the levy of commission made by some banks in addition to interest. Most of the companies and the large proprietary concerns had generally no difficulty in obtaining short-term finance. Some difficulties have been experienced by a section of the small companies and proprietary concerns. These can only be removed by the State Bank providing finance in abundant measure.

Finance for Replanting

The Commission recommends that dividends and managing agency commissions should be reduced in companies where they are on the high side. It recalls its suggestion in the tea report that dividends might be reduced by 50 percent to increase the internal resources for replanting and meeting labour welfare costs, as well as the recommendation in the report on coffee for reduction of dividends and managing agency commissions; it says that these apply to rubber also. Similarly, its recommendations in the reports on tea and coffee on the improvement of efficiency and reduction of administrative costs have an equal application to rubber. The Commission observes that the element of rehabilitation allowance and depreciation made available in the price of rubber has not been fully used by the industry. Not all companies will have adequate funds to meet replanting needs. Estates will need loans to supplement the rehabilitation allowance included in the price structure if a rapid programme of replanting is to be processed smoothly. The estates will need long-term loans for buildings, plant and machinery. Industrial Finance Corporations and the co-operative land mortgage banks of the States concerned should meet these needs. The State Finance Corporations should appoint a panel of experts in the technical aspects of the applications for loans. The Rubber Board should have a Plantation Finance Committee to keep a close watch on the financial needs of the rubber industry.

COCHIN TEA SALES

At Sale No. 3, 1,900,000 lbs of tea were on offer. There was a strong general demand for all low medium and medium descriptions with B.O.P.'s 3 to 4 annas and Fannings 1 to 2 annas dearer. Good Mediums and Best liquorings were quieter and their prices were very irregular.

TEA EXPORT DUTY REDUCED

The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty at Rs. 3-15 a lb. against Rs. 4-3 a lb. in force from 1st January. The export duty at this price will be 6 annas a lb. against 8 annas a lb. during January.

RECORD RUBBER OUTPUT AND
CONSUMPTIONEXPORTS OF BETTER GRADE
COFFEE

(FROM A SOUTH INDIAN CORRESPONDENT)

FOR the production and consumption of raw rubber in India, 1956 was a record year. The output of about 23,500 tons was the highest so far in the country and it compares with 22,482 tons in 1955 and 21,493 tons in 1954. The manufacturers' output of about 29,000 tons was also a new peak. When compared with that of 1955, it was roughly 1,500 tons higher. The year-end stock was 8,311 tons, the highest since 1953. The current year's production is estimated by the Rubber Board at 27,000 tons. Manufacturers say that they will require very nearly 40,000 tons this year or 11,000 tons more than their 1956 consumption.

S. Indian Tea Exports

Tea exports from Cochin during 1956 at over 81 million lbs. have also established a new record. More than 50 percent of this went to the U. K., while the U.S.A. took 6.7 million lbs., Canada 7 million lbs. and Australia 6.8 million lbs. When compared with the 1955 U.K. and U.S. imports, the figures did not show any appreciable change, but Canada took 1.5 million lbs. and Australia 4.2 million lbs. more. Shipments to other Indian ports fell to 4.5 million lbs. from 7 million lbs. Exports to other countries such as Egypt, registered a total gain of 2.3 million lbs. at 7.3 million lbs. Exports from Cochin represented 63.5 percent of south Indian tea production in 1956.

Coffee Stocks and Output

At the close of 1956, the Indian Coffee Board was holding a stock of 6,084 tons from the 1955-56 season's crop and 4,333 tons from that of 1956-57, making a total carry-over of 10,417 tons. This was the highest stock ever to be carried forward to a new year. In a recent newsletter, the Coffee Board admits that the 1956-57 season's crop will exceed the earlier estimate of 36,000 tons. Private estimates placed the season's crop at over 40,000 tons. In 1956, the Board sold for internal consumption 23,800 tons and for exports 7,475 tons. Recently, 275 tons of Arabica cherry from last season's crop was sold to Soviet Russia. With the larger crops that are now being envisaged for the future, India's export policy requires thorough modification. It will be advisable to export as much as possible of India's high quality coffees for which there is a good market abroad. This will be the most effective step to build up an export market. Even in the worst days of the slump before the war, high grade coffees always found a ready market abroad. Mr. R. C. Paterson, chairman of the Consolidated Coffee Estates when he spoke to his company's shareholders a few weeks ago, discussed this question. He said that it was of vital interest to the industry that the Coffee Board should encourage the consumption of the non-export grades in India itself which would allow for the establishment of permanent markets in Europe or elsewhere for premium coffees. He even recommended that in order to maintain the export markets it would be in the interest of all to fulfil any excess demand in India by allowing the import of the less expensive coffees from outside.

Fair Price for Coconut Products

One of the resolutions on the agenda for the meeting of the Indian Central Coconut Committee in Bangalore relates to the fixing of a fair price for coconut products. This will be the most controversial resolution the committee has ever to discuss within the 13 years of its existence. India is not self-sufficient in coconuts and she imports every year a substantial quantity of coconut oil and copra to bridge the gap between her requirements and indigenous production. The coconut growers in India have always been agitating against imports on the ground that the price of their produce is affected by the imported material. As a matter of fact, the Government of India has been giving protection to indigenous products by restricting imports and levying a heavy import duty. But the coconut growers want more than this. They even alleged that the Government had been allowing larger imports in order to please the soap manufacturers. According to official statistics, the industrial use of coconut oil in India is only 20 percent of total production and therefore, coconut growers' insinuation is baseless. Eighty percent of the total production is absorbed for edible purposes mostly in poor and middle class Malayalee families. Therefore, any unreasonable increase in the prices of coconut products will bear heavily on the common man on the west coast where the largest share of India's coconuts is produced and consumed. Coconut growers have been enjoying protection for all these years at the expense of the consumers. In spite of this, they have made little advance towards making this country self-sufficient or improving their production methods and reducing the cost of production which rules at a very high level on account of the primitive cultivation methods. Coconuts in India are grown in small fragments as against the plantation type of cultivation practised in Ceylon, the Philippines and other places. If the Coconut Committee fixes a fair price, making allowances for the Indian growers' cost of production, etcetera, it will have no parity either with the world market prices or with the prices of other food materials in this country. If the prices are arbitrarily fixed at a high level, the consumers are likely to react unfavourably. The demand for coconut products is not inelastic; plenty of other substitutes are available.

Calcutta Markets

GOOD GENERAL DEMAND
AT TEA EXPORT SALE

FAIR SUPPORT FOR DUSTS

AT Sale No. 32, held on 4th and 6th February, offerings at the Export auction consisted of 66,921 packages for which there was a good general demand, but the market for the bulk of the offerings was again easier. Bright liquoring teas, especially Fannings grades, were in strong demand and were up to 2 annas dearer, while tea for price met with keen competition and was from 1 to 2 annas dearer. Well-made and stylish whole leaf grades were fully firm to slightly dearer, but the remaining Common and Medium Broken were irregularly 1 to 1½ annas easier. The low-priced C.T.C. teas were often dearer, but the more expensive kinds in this category were easier and many were withdrawn through lack of interest. Darjeelings met with a slightly improved demand.

Quotations

	1957	1956
	Rs.	Rs.
Clean Black Pekoe	2 4 0	1 13 0
Plain B.P.	1 15 0 to 1 15 6	1 7 0
Medium Assam B.P.	2 1 0	1 9 6 to 1 10 0
Best C.T.C. Assam B.P.	2 9 0 (Nom.)	2 5 0 to 2 6 0

At the Internal Sale, Dust offerings consisted of 18,533 packages for which there was a good and general demand. The market opened a little irregularly and was occasionally easier, but strengthened slightly towards the close. Orthodox Assams with improving quality sold well and were sometimes dearer, while bright liquoring C.T.C. Assams were again a strong feature and were fully firm. Commons and Doonars received good support at the close, but the smaller kinds were better supported than the grainy types. Black exportable kinds from all districts were generally easier.

Quotations

	1957	1956
	Rs.	Rs.
Medium Doonars Dust	1 13 6	1 7 0
Medium Assam Grainy Dust	1 14 0	1 8 6
Medium Assam C.T.C. Dust	2 2 0	
Best Assam C.T.C. Dust	2 10 0	2 4 0 to 2 6 0

For the other grades offered there was a good general demand at about the last rates. Some 2,120 chests were on sale.

COAL FREIGHT RATES WEAKEN

RATES in the American coal trade have weakened somewhat and single voyage fixtures to the Continent have been reported at 95s 6d and 95s. A fair miscellaneous trade has been noted over the past week with rice from Burma to Ceylon showing a slight increase at 75s, and British Columbia to West Coast India was arranged at 210s. In the time charter section, a 7,000-ton motorship was fixed for one year at 50s and a Liberty for two years at \$(U.S.)5.40. Mormugao-Genoa was fixed at 137s 6d for a March loader, 5,800 tons, via Suez and 183s for a larger vessel via the Cape with 50s less via Suez for April loading.

SUGAR MARKET EASIER

During the week ended 6th February, sugar sales in the Calcutta market averaged 5,000 bags daily. Arrivals a day were 4,500 bags and stocks totalled 90,000 bags. Rates for ready sugar export delivery were Rs. 31-6 for ordinary grain and Rs. 33-4 for big grain. The market closed weaker.

HIDES AND SKINS STEADY

The market ruled steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 29th January and 4th February, 1957)

Cowhides: Wet salted (Ord.) 7,000 pcs.; on the basis of Rs. 7 to Rs. 8; Wet salted (Ord.) 5,000 pcs. on the basis of Annas 10; Wet salted (Slaughtered) 17,500 pcs. on the basis of Rs. 12-8 to Rs. 21.

Goatskins: Wet salted (Daissee, Killed) 106,210 pcs. on the basis of Rs. 245 to Rs. 260; Rs. 290 to Rs. 340 and Rs. 370 to Rs. 380; Assam-Dinaipur 55,000 pcs. on the basis of Rs. 245 to Rs. 290; Puneah-Maldah-Kissengani 7,650 pcs. on the basis of Rs. 290 to Rs. 320; Muzafferpore-Patna 63,700 pcs. on the basis of Rs. 280 to Rs. 295.

Bazaar Stocks

(4th February, 1957)

Cowhides: Wet salted 2,86,000 pcs.
Goatskins: Wet salted (Daissee, Killed) 34,000 pcs.; Assam-Dinaipur-Murshidabad 80,000 pcs.; Muzafferpore-Patna-Pakur - Puneah - Kissengani 36,000 pcs.

LINSEED FALLS

Prices have shown a notable decline during the past week and trading has been limited, with both buyers and sellers somewhat reserved. The discount for forward delivery has narrowed slightly but little interest has been shown by upcountry sellers of the new crop. The main factor restricting crushers' activity has been the dull condition

of the linseed oil market. In addition to a poor local offtake, quieter advices have been received from overseas, with buyers pausing even at below the parity level. Latest quotations were as follows: February Rs. 24-12 a maund and April-May Rs. 22-4 a maund.

SHELLAC DULL

During the week ended 4th February, the market was quiet at the beginning, steady at midweek and dull at the close. The range of quotations was as follows:

Pure Buttonlac	Rs. 110, 108 value.
Lemon No. 1 Shellac	Rs. 110 buyers; 111 done buyers; 108-8 buyers.
Lemon No. 2 Shellac	Rs. 105 done; 105 value; 105-8, 105 buyers; 103 value.
F. O. Std. 1 Shellac	Rs. 100 done buyers; 98, 99-8, 96-8 buyers.
Pure TN Shellac	Rs. 95, 94-8 basis done buyers; 95-8, 94-8 buyers; 91 basis buyers.
4% I.T.N. Shellac	Rs. 88 done buyers; 85-8, 86-8, 83-8 buyers.
No. 1 Kusmi Seedlac	Rs. 105-8 value; 105 buyers; 103-8 value.
No. 2 Kusmi Seedlac	Rs. 100 buyers; 101-8 value; 100 buyers; 99 value.
Fine Bysaky Seedlac (Manbhum)	Rs. 94-8, 96 to 93-8 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 88, 87-8, 89-8 to 87 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 79-8, 81-8, 79-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 74-8, 75-8 to 71-8 buyers.
Kireelac	Rs. 30, 30-8, 30 buyers.

Shipments during January until the 29th were 28,421 packages comprising shellac 20,036 packages, seedlac 5,991 packages, buttonlac 346 packages and others 2,048 packages.

Escape?

Impossible!

Liquids, steam and gases cannot escape from stuffing boxes, glands and cocks if they are sealed with Turner's "Firefly" asbestos packing. Use it and your worries about leakages are over.

By arrangement with Turner Brothers Asbestos Co. Ltd., England, we make "Firefly" Packings. We spin asbestos fibre into yarns, and then plait these yarns into packings which provide the perfect seal, unaffected by the temperatures and pressures normally encountered in industry.

Turner's "Firefly" Packings are just one of the many technical asbestos products that we at AM & FM make to meet the needs of India's industry. The increasing use of Asbestos is an index to India's industrial progress.

Where There's Industry There's Asbestos

We supply:
• FERODO® BRAKE AND CLUTCH LININGS
• FIRELY® ASBESTOS PRODUCTS
• SPRAYED "LIMPET" ASBESTOS
• "NEWALLS" INSULATION MATERIALS
• "PATTINSON'S" BRAND MAGNESIA CHEMICALS
• "SINDANYO" ELECTRICAL INSULATING BOARDS

THE INDIAN STEEL & WIRE PRODUCTS LTD.

NOTICE

NOTICE is hereby given that Twenty-first Annual General Meeting of the Shareholders of The Indian Steel & Wire Products Limited will be held at its Registered Office No. 7, Wellesley Place, Calcutta-1, on Wednesday, the 27th February, 1957, at 3.30 P.M. to transact the following business:

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Manufacturing and Profit & Loss Account of the Company for the year ended 31st March, 1956.
2. To declare dividend on Ordinary Shares.
3. To appoint a director in the place of Sardar Ajaib Singh, who retires by rotation and is eligible for re-appointment. In this connection to consider, and if thought fit, to pass the following resolution in respect of which a Special Notice, as required under section 261 of the Companies Act, 1956, of intention to move it as a special resolution for the reason that the said Sardar Ajaib Singh is a member and director of Indra Singh & Sons Private Limited and therefore "an officer and associate of the managing agents", has been received by the company and is hereby given to the members;

"RESOLVED that pursuant to Section 261 of the Companies Act, 1956, Sardar Ajaib Singh, a member, director, officer and associate of Indra Singh & Sons Private Limited, the Managing Agents of the company, be and is hereby re-appointed a director of the company".

4. To approve, pursuant to section 281 of the Companies Act, 1956, the appointment made by Indra Singh & Sons Private Limited, the Managing Agents of the company, of Sri J. C. Mukerjee as an ex-officio director of the company and to consider and if thought fit to pass the following resolution in respect of which a Special Notice, as required by the said section, stating that he has attained the age of 76 years, has been received by the company and is hereby given to the members:

"RESOLVED that pursuant to the provisions of section 281 of the Companies Act, 1956, the appointment made by Indra Singh & Sons Private Limited, the Managing Agents of the Company, of Sri J. C. Mukerjee as an ex-officio director of the company who has attained the age 76 years be and is hereby approved and it be and is hereby specifically declared that the age limit for directors prescribed in section 280 of the said Act, shall not apply to him".

5. To appoint a director in place of Sri P. C. Mustafa who vacates under sub-section (2) of section 280 of the Companies Act, 1956, and, being eligible, offers himself for re-appointment. In this connection to consider, and if thought fit, to pass the following resolution of which a special Notice, as required by the said section, stating that he has attained the age of 65 years has been received by the Company and is hereby given to the members:

"RESOLVED that pursuant to section 281 of the Companies Act, 1956, Sri P. C. Mustafa, who has attained the age of 65 years be and is hereby re-appointed a director of the company and it be and is hereby specifically declared that the age limit for directors prescribed in section 280 of the said Act, shall not apply to him".

6. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the company will be closed from 15th February, 1957 to 27th February, 1957, both days inclusive.

By Order of the Board of Directors,

INDRA SINGH & SONS PRIVATE LIMITED,

AJAIB SINGH,
Director,
Managing Agents.

7, Wellesley Place,
Calcutta-1.

31st January, 1957.

Note:—(1) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and upon a poll to vote instead of himself, and that a proxy need not be a member.

(2) The relevant Explanatory Statements in respect of items Nos 3, 4 and 5 of the Notice of the Annual General Meeting to be held on the 27th February, 1957, are annexed hereto as required by section 173 of the Companies Act, 1956.

(3) If dividend on shares, as recommended by the directors, are passed at the meeting, the payments will be made on

or after 12th March 1957 to those shareholders, whose names are on the Company's Registers on the 27th February, 1957.

THE INDIAN STEEL & WIRE PRODUCTS LTD.

Annexure to Notice:

Explanatory Statement as required under Section 173 of the Act, 1956.

To:

The Shareholders,

The Indian Steel & Wire Products Limited.

Dear Sir(s)/Madam,

In compliance with Section 173 of the Companies Act, 1956, the following explanatory statement relating to the items Nos. 3, 4 and 5 of the Twenty-first Annual General Meeting of the Company to be held on the 27th day of February, 1957, is annexed to the said Notice.

ITEM NO. 3:—

The company has received a Special Notice, as required by section 261 of the Companies Act, 1956, of the intention to propose the resolution set out under this item as a special resolution for the reason that Sardar Ajaib Singh, a director of the company, who retires by rotation of directors at this annual general meeting, is also a director, officer and member of Indra Singh & Sons Private Limited the Managing Agents of the company and as such "an officer and associate of the managing agents" and hence he can only be appointed a director of the company by a special resolution of the company under the said section 261 of the said Act and that it is in the interests of the company that it should continue to avail of the benefit of the valuable advice and guidance of the said Sardar Ajaib Singh by appointing him a director of the company.

ITEM NO. 4:—

Sri J. C. Mukerjee has been appointed an ex-officio director of the company by its Managing Agents Indra Singh & Sons Private Limited in exercise of the power vested in them under an agreement and the Articles of Association of the company. Hence he is not liable to retirement by rotation. But as he has attained the age of 76 years, he will have to vacate his office under sub-section (2) of section 280 of the Companies Act, 1956, at the conclusion of the third annual general meeting of the company unless his appointment is approved by a resolution passed by the company in general meeting specifically declaring that the age limit prescribed in section 280 of the said Act, shall not apply to him. As required by the said section 281 Special Notice stating that he has attained the age of 76 years and proposing to move the resolution set out in the notice under this item has been received by the company from some members. In view of his valuable advice and able guidance it is desirable that the company should approve of his appointment and declare that the age limit shall not apply to him.

ITEM NO. 5:—

Sri P. C. Mustafa, who was appointed director by the company in General Meeting held on 22nd May, 1956, has since attained the age of 65 years and therefore vacates his office at this annual general meeting under the provisions of sub-section (2) of section 280 of the Companies Act, 1956, and can only be appointed under the provisions of section 281 of the said Act by a resolution of the company in general meeting specifically declaring that the age limit shall not apply to him. As required by the said section 281 Special Notice stating that Sri P. C. Mustafa has attained the age of 65 years and proposing that this item has been received by the company from some members. In view of his experience as a retired Engineer and advice it is desirable that company specifically declaring that the age limit shall not apply to him.

By Order of the Board of Directors,

INDRA SINGH & SONS PRIVATE LIMITED,

AJAIB SINGH,
Director,
Managing Agents.

7, Wellesley Place,
Calcutta-1.

31st January, 1957.

THE STANDARD COAL COMPANY, LIMITED.

AT a meeting of the Board of Directors held on 31st January, 1957, a Dividend of 10% per annum was recommended to be paid for the year ended 31st December, 1956, without any deduction for Income-tax paid by the Company.

By Order of the Board,

F. W. HEILGERS & CO. (PRIVATE) LTD.,

Managing Agents,

Chartered Bank Buildings,
Calcutta.

Essential: Applicants should be Advocates or Solicitors and must possess high academic qualifications in law and practical experience of work in an Advocate's or Solicitor's office or experience of independent practice, for a minimum period of four years.
3. Economic/Statistical Assistants.
Essential: A first or high second class M.A. or M.Com. degree in Economics or Statistics of a recognised University.
Desirable: Practical experience of research in Economics or Statistics.
4. Field Inspectors.
Essential: At least a second class Bachelor's degree in Economics, Commerce, Agriculture, Mathematics or Statistics of a recognised University.
Desirable: 1. Practical experience of the working of Co-operative Credit Institutions or Agricultural Marketing and Processing Societies or Industrial Co-operatives.
2. Experience of field investigation work.

3. Special study of Agricultural Economics or Rural Sociology.

5. Field Investigators.

Essential: Matriculation or equivalent examination of a recognised University or Board in first or second class with at least 50% marks in English, Mathematics and Geography.

Desirable: 1. A Bachelor's degree of a recognised University.
2. Experience of field investigation work or of work in Co-operative Institutions.
3. Knowledge of two or more vernacular languages.

Note:—Field Investigators and Field Inspectors should be able to speak and write one or more of the following vernacular languages:

- (1) Bengali (2) Gujarathi (3) Hindi (4) Kannada (5) Punjabi (6) Tamil (7) Telugu.

The selected candidates for the posts of Probationary Assistants, Department of Research and Statistics/Legal Division will ordinarily be on probation for a period of three years.

The selected candidates for the posts of Probationary Assistants in the Department of Research and Statistics should be prepared to work in Districts selected for Rural Surveys and should be able to conduct the field work, if required.

The selected candidates for the posts of Field Inspectors and Field Investigators will be appointed on a temporary basis for a period of one year in the first instance but are likely to be made permanent and they will be stationed in Districts selected for Rural Surveys and will be required to carry on investigations in selected Villages in such Districts.

The selected candidates for the posts of Economic/Statistical Assistants will be required to appear for a written test.

Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees and they should also mention prominently on their applications the other posts applied for by them.

Applicants for the posts of Probationary Assistants must remit application fee of Rs. 7/8 by Postal Order, Cheque or Bank Draft on a Scheduled Bank payable at Bombay along with the application. Applicants for the posts of Economic/Statistical Assistants and Field Inspectors must remit an application fee of Rs. 2/- in a similar manner. The application fee is in no case refundable. Bonafide Refugee candidates who are NOT IN EMPLOYMENT applying through any of the Government Employment Exchanges are exempted from payment of application fees while in the case of candidates belonging to Scheduled Castes or Scheduled Tribes the fee will be reduced to 1/4th.

Applications should be in the candidate's own handwriting. Applications for the posts of Probationary Assistants, Department of Research and Statistics/Legal Division, Economic/Statistical Assistants should be in the prescribed form obtainable from any office of the Reserve Bank. Applications for the posts of Field Inspectors and Field Investigators should be on plain paper and must contain the following information:

Name in full: educational qualifications—Examinations passed with subjects, distinctions, classes and marks obtained; Schools, Colleges and Universities attended; date of birth; age; address; place of birth and domicile; community; details of previous office/research experience, if any; period of approved war service, if any; number of languages able to speak and write; father's name; father's occupation; extra curricular activities; proficiency in games, etc.

All the applications should be accompanied by copies of two testimonials (originals should not be sent; the Bank does NOT accept responsibility for returning the originals if sent through oversight) and forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before the 18th February 1957. Candidates already in service must submit their applications through their employers. Candidates belonging to Scheduled Castes or Scheduled Tribes should mention this fact prominently on their applications and also enclose a copy of certificate to that effect from a competent authority.

Appointments will be subject to candidates being found medically fit for service in the Bank. If any candidate desires to have his application acknowledged he should send it by "Registered Post Acknowledgment due". Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into any correspondence with them.

Canvassing in any form will be regarded a disqualification.

U.K. FIRM TO SELL SMALL-SCALE ATOM-POWER UNITS

Small atomic-power plants have just been placed on the market by a British company (Humphreys and Glasgow Ltd.), which is ready to accept orders immediately for plants of up to 25,000kW, with a completion time of two years. The plant is extremely compact, occupying about the area of a tennis court. A complete power station in the 10,000kW-to-15,000kW range, installed at an average site, will cost approximately £180 a kW—this figure being based on actual costings. Operating costs are also competitive, and electricity can be supplied at just under 1½d a unit. The reactor uses enriched uranium fuel, and will run for from 18 months to two years without a change of fuel elements. A high degree of safety is claimed for the design. The small- and medium-sized plants, modelled on a full-scale U.S. prototype, are likely to prove most useful to communities or industrial concerns in areas where the cost of fuel is high and long-range transmission uneconomic.

BUSINESS DONE BY CAUTEX COMPANIES DURING 1956

Caltex companies sold the equivalent of 218 million barrels of crude oil and refined products in 1956, an increase of more than 10 percent over 1955, it was reported in a statement issued in New York by the California Texas Oil Company, Limited. In 1956, Caltex companies and their affiliates spent \$80 million for new equipment and supplies, 75 percent of which went into the economies of the 67 countries of the eastern hemisphere where Caltex companies operate. They took delivery of three new tankers and authorised construction of 16 more, completed new refineries in Australia and Japan, installed new units in existing plants in Holland and France, entered the West German retail market in partnership with a local company, developed plans for a major expansion of crude oil transportation facilities in Sumatra and continued a worldwide programme of geological exploration and development of existing fields. This progress came about, the statement added, "despite international developments which had some adverse effect on the orderly conduct of business."

The Central Bank of India, Ltd.

(Incorporated in India, Liability of Members is Limited).

(Established—December, 1911.)

Head Office—MADHYA GANDHI ROAD, FORT, BOMBAY-1

THE KALDOR PROPOSALS FOR TAXATION REFORM

THE drastic proposals for reforming the Indian taxation structure made by Mr. Nicholas Kaldor on the basis of an investigation conducted a year ago, have been the centre of much controversy in recent months. There are two main reasons for this. One is the novel, not to say revolutionary, nature of his assumptions and concepts, the most prominent of which powerfully assail the prevailing fundamental that income alone can be regarded as the proper basis of taxation. The second is the reported sympathy his views have met with in important circles in New Delhi. The re-introduction of the capital gains tax, the Finance Minister's dark description of it as a preliminary to sweeping new changes in the entire taxation system which are to be completed by March 1958, and the general swing away from financial orthodoxy in recent months, have all encouraged the impression that Mr. Kaldor is to be India's fiscal mentor of the future. The Federation of Indian Chambers of Commerce and Industry, therefore, deserves warm praise for making a lucid and cogent analysis of the implications of his proposals in a recent pamphlet, entitled *Kaldor's Report on Indian Tax Reform: An Analysis*. The main conclusion which emerges is that in the novelty of the proposals lies an incalculable risk; that administrative shortcomings have been ignored; that the need to broaden the impact of taxation has been largely neglected; and that such increases as may be forthcoming for the public revenues will be secured at the expense of savers who support private industry.

As the pamphlet points out, Mr. Kaldor has confined his attention mainly to personal and business taxation. Under the former, he proposes the simultaneous levy of five taxes—income tax, capital gains tax, annual tax on wealth, personal expenditure tax and general gift tax—in place of the present income tax and supertax. He suggests that the present top marginal rate of tax on income (including supertax) be reduced from 14 annas in the rupee to seven annas, and that the supertax be partially replaced by a new personal expenditure tax along with the three other new taxes on the basis of a single comprehensive return to be submitted by each assessee. Broadly, the assumption seems to be that the prevailing fiscal definitions of income do not allow a true measure of taxable capacity; a revised assessment of the latter is, therefore, necessary in order to ensure that wealth is distributed more equitably, savings are encouraged and the evasion of taxes checked.

The Government's dilemma in framing its taxation policies is common to many countries, but is especially acute in under-developed ones which are trying to accelerate their rates of economic growth. One aspect of the dilemma is to raise revenue for a huge public investment programme from a population the greater part of which lives not much above the subsistence level. Its obverse, in a mixed economy, is to leave sufficient money in the hands of people who are capable of it, to start commercial and industrial enterprises on their own. Social and ideological pressures often ordain that Governmental needs for public investment must come not from the common people, who are assumed to have little to spare, but from the limited class which may have something to give—from the savers who by their frugality and enterprise support the private sector. Mr. Kaldor's proposals do little to resolve this dilemma. As the F.I.C.C.I. points out, the treatment he has accorded "to the problem of finance has tended to ignore the basic needs of the private sector and also the inter-relationships between the sources of finance for the private and public sectors.....It is not enough to think in terms of

diverting resources to the public sector. An equally important question is to adjust the tax system in such a way that it leaves the private sector with sufficient resources."

In so far as Mr. Kaldor's suggestions are aimed at mobilising more vigorously the economy's resources for investment, they suffer from serious shortcomings. The reduction of income tax (including supertax) would undoubtedly, by itself, increase the incentive to greater effort by increasing material rewards. But, as the F.I.C.C.I. says, "the apparent relief which he suggests in respect of personal income tax is more than offset by the new imposts proposed by him." As such, the disincentives implicit in the present high rates of taxation would remain, the shadow may change, but the substance would be the same. The attractions of an expenditure tax which Mr. Kaldor suggests, are apt to be exaggerated in circles which are preoccupied with their own arbitrary notions of conspicuous consumption, and in a country where the need for savings is otherwise rightly and strongly emphasised. But it would be unwise to assume that expenditure on consumption is detrimental to the growth of an economy. The F.I.C.C.I. emphasises that a rising demand for consumer goods would, by itself, provide the much-needed stimulus for increasing production. "The output of the producer goods sector also depends on a certain buoyancy in the market for consumer goods, and the task of economic policy should not be to choke off demand, but to direct it by suitable measures in the desired channels so as to ensure a balanced development." Whatever merit an expenditure tax might have in economies like the British, where domestic demand may have to be curtailed in order to promote exports, its relevance to Indian conditions is small. It can hardly be a better alternative to imposing a series of selective indirect taxes, which would allow greater precision in choosing the commodities for which demand needs to be curbed. In brief, says the F.I.C.C.I., selectivity, flexibility and administrative convenience favour indirect taxes, while all these factors go against the imposition of an expenditure tax aimed at checking consumption.

Turning to business taxation, Mr. Kaldor's main proposals are for stricter rules about deductible expenses, restrictions on the grant of capital allowances, severer limitation of the set-off and carry-forward of losses, and the integration of income tax and supertax on companies into a non-refundable company tax of seven annas in the rupee. As the F.I.C.C.I. points out, there is a certain disparity in the tax treatment of business and indi-

vidual incomes, since individuals are not allowed any expenses for the wastage of their earning capacity due to the limited span of the working life, and for the capital expenditure incurred in acquiring skill and qualifications. But the way to correct this disparity is not to whittle down the business expenses which are allowed, but to increase the allowances which are reasonably deductible in the case of personal income. Mr. Kaldor's proposals would disallow even legitimate business expenses and thus artificially inflate the assessable income. It is noteworthy that the Taxation Enquiry Commission did not make any recommendations on reducing the deductions already granted on business income.

The Commission's views on capital allowances were also very different from Mr. Kaldor's. The professor thinks that these allowances far exceed requirements at present, but he under-estimates the wide margin which has grown between historical costs and replacement costs in an inflationary world. If industry were unable to replace worn-out assets, the consequences for the economy would be serious. In the long run, the Government does not lose revenue by granting an accelerated additional depreciation allowance to begin with, for this automatically has the effect of reducing the depreciation allowance in later years. Ultimately, the total of the allowances is in any case restricted to 100 percent of the value of the asset excluding the development rebate. These allowances are necessary on a generous scale in order that industry may rehabilitate and expand its productive capacity, and thereby protect its competitive strength. Such conservation of resources is necessary not only for expansion, but also to enable the growing tax liabilities of the future to be comfortably met. Referring to Mr. Kaldor's proposals to simplify and integrate company taxation, the F.I.C.C.I. states that they are realistic on the whole, but they are based on the acceptance of his suggestions for reforming personal taxation. His recommendations to remove the penal taxation on Section 23A companies and the levy on bonus shares are welcome; the sole purpose of the latter, and beyond which it has no justification, is to counteract the tendencies likely to arise from heavier dividend taxation. But it is necessary to ensure that if the tax on companies is integrated into a single tax at a reduced rate, rebate should still be given to shareholders if not for the whole of the tax paid by the company, then at least to the extent to which it is now given. If this is not done, the fundamental principle that no income should be taxed twice would be violated.

The need for greater simplicity in tax collection is generally admitted, but apart from the integrated company tax, there is little in Mr. Kaldor's proposals to bring it about. The variety of business expenses is so great that no clear-cut list of the allowable ones can be made; the scope for doubt and dispute would be wide enough to offset entirely the benefits to the Exchequer of narrow-minded interpretations. In the sphere of personal taxation, the confusion which is likely to result from Mr. Kaldor's system will be even greater. No more than a handful of assesses can be expected to maintain detailed evidence of how much they have earned, of windfalls and gifts, of expenditure, and of the wealth they hold. It is relevant to reflect that the income tax administration at present, of which Mr. Kaldor seems to have an even poorer opinion than most, finds itself unable to keep track of even the one single item which it is expected to keep track of—assessee's earnings. To suppose that the need to do so will not arise once a system of comprehensive returns is introduced reflects a certain facile optimism. To assume that the return will serve as a litmus paper of honesty in the hands of an income tax staff which has not yet familiarised itself with the much simpler return of today, is no more than an exaggerated hope. The need to penalise evaders is recognised, but it is important to bear in mind that Mr. Kaldor's proposals hold no fear at least for the estimated 210,000 earners who evade tax at the margin of exemption. Whether the tax evaded is Rs. 25-30 crores, or (the professor's estimate) Rs. 200-300 crores, there is little hope that Mr. Kaldor with his new system will draw in much of it. The danger is that unproven fiscal experiments may throw off balance an economy whose first need is still for financial stability.

THE POST-MORTEM ON BANK RATE

LESSONS TO BE LEARNED FROM BRITAIN'S DECISION

THE reduction in the United Kingdom Bank rate was not unexpected. It had been considered as long ago as last November, but the closing of the Suez Canal caused some delay. This is the first move in dismantling Mr. Butler's "liberal" system for controlling inflation, and the next, another cut in the Bank rate, should not be far behind. The present cut, made at the same time as the physical, or rather the exhortational control is maintained intact, can be interpreted as nothing less than an admission that the Bank-rate method has failed. There is no reason for relaxing credit restraint; Mr. Thorneycroft has made that perfectly plain. Nor has there been any change in the general aim of discouraging a larger volume of investment than it is considered the country can afford. Yet the instrument which, less than two years ago, was being recommended as the neglected panacea for inflationary ills, now stands reduced and discredited. There must be a lesson in this for theories of monetary management the world over.

It can be said for the Bank rate that it was never allowed to be effective. In the modern world, political considerations, among others, appear to decree that official lending rates should not rise much above 5 percent whatever the state of inflation. In a highly-industrialised and organised economy such as that of the United Kingdom, the results of increasing Bank rate to punitive levels might well be a recession which could be infinitely worse than the inflation it is desired to cure. When it is accepted that Bank rate can never cross a certain level, most of the uncertainty in borrowing ahead is removed. Banks are more willing to adjust their ratios so as to compensate for any attempt the authorities may make to squeeze credit. The banking system can, therefore, become almost unmanageable in an economy which fears recession unless it is deliberately put on its honour to work in the national interest. When this is done, a high Bank rate becomes little more than a nuisance, and one from which the Government is just as likely to suffer as the general public. This appears to have been the case in Britain, and might prove to be so in other countries which put more faith in the efficacy of Bank rate than is warranted under modern conditions. The most effective feature of Bank rate has been the encouragement given to the flow of short-term funds into the United Kingdom. But as a quick glance at the figures for the past eighteen months will show, it did not succeed in reversing the overall loss of gold and dollars when the determination to make the necessary internal adjustments was lacking. And it did not prevent a flight from sterling when the international situation looked black. It can be argued that the effect of a high Bank rate in Britain was dulled because Bank rates were tending to increase throughout the world. But it is still true that Britain's was the highest of any among the more important trading nations, and it does not alter the fact that nowadays the short-term international investor, and the currency speculator if he is not indeed the same person, probably tends to watch internal economic signs rather more closely than the small differences in international rates of interest.

When the willingness to use Bank rate above a certain level is lacking, and the ineffectiveness of the instrument unless used along with others is accepted, the stage is reached when it becomes necessary to decide whether the advantages of employing this classical weapon against inflation outweigh the disadvantages. This is what the British Government has obviously been doing. A high Bank rate has increased the cost of servicing the national debt—a most important item in a country which is as burdened with its past wars as Britain is. Its usefulness in attracting short-term funds into the London market has been offset by the increased changes incurred, and this has placed an additional strain on the balance of payments at a time when it was least welcome. Then there are the technical factors to be considered. Overall economic considerations have prevented the authorities from placing too much pressure on long-term interest rates. The result has been that Bank rate has had to operate in isolation instead of being able to function in its rightful place as merely one, although the most important, of the many interest rates forming the economy's yield structure. This has caused a number of anomalies, among them the fact that with short-term rates so much higher than long-term, it has been almost impossible to dispose of long-dated securities to the public and the banking system.

One of the most serious disadvantages of a high Bank rate has, strangely enough, been found to be psychological. Internally, a persistently high Bank rate can choke off investment which is needed to maintain the permanent health of the economy, as distinct from touching off a temporary boom. The stage is reached where the slightest adjustment, instead of influencing investment plans at the margin, can lead to violent swings in business sentiment. The alternative to this, as is the case with most things affecting human sentiment, is that the Bank rate should have no influence whatever. Neither possibility is an attractive one, and the fact emerges that it is the changes in Bank rate rather than the absolute level, which are effective, if at all. A persistently high Bank rate, therefore, has disadvantages for the monetary authorities which are not compensated by any noticeable advantages for the economy as a whole. There is a strong case for reducing it to more convenient proportions when it has obviously become ineffective; and that is what the British Treasury has done. The question now is whether it is ever likely to be resurrected as an important instrument of monetary control, except in strictly limited circumstances. This is a point which has relevance for India, where the effective Bank rate, though not of course the official one, has just been adjusted ostensibly to counteract inflationary tendencies in the economy.

Britain's experience with the Bank rate has not been an altogether happy one. When it was first increased, the psychological effect was appreciable. But this soon wore off when it became obvious that determined measures to cut down inflated demand in the economy were not contemplated. The first lesson is, therefore, that Bank rate is nowadays useless on its own unless the authorities are prepared to increase it to any level required, regardless of the consequences. In the year 1957, such a possibility can be dismissed as impracticable. The second lesson is that a high Bank rate has to be paid for by the Government, and far from being deflationary, can actually have an inflationary effect if it leads to the higher servicing charges having to be covered by increased taxation. A change in Bank rate such as is possible these days can be absorbed by an inflationary economy with little effect other than to add to the pressure on the general price level. The third lesson is that, although a higher Bank rate does attract short-term funds, it puts an increased burden on the balance of payments to the extent that it does so, and that it is no substitute in the minds of international fund-switchers for determined policies to deal with internal difficulties. In other words, it can help persuade capital to come in, but it is ineffective in preventing it from leaving again if other reasons appear to be urgent enough. A persistently high Bank rate can, in fact, discourage capital because it gives the impression that the original economic difficulties are still present and may, therefore, be coming nearer to the crisis point. The conclusion would seem to be that those economists are right who have been saying for some years now that Bank rate has lost forever its position as an automatic and effective regulator of the monetary position in modern managed economies.

The alternative to regulating the credit supply through the Bank rate would seem to be selective control. This has been used in Britain to supplement the more orthodox method, and it can now be said with some certainty that it has been responsible for most of the success which is claimed for the "credit-squeeze" policy. By relying on the judgment of the individual banker, this method may have gained some of the advantages of imagination and flexibility which are not available with such indiscriminate instruments as Bank rate. But it must have suffered a great deal from favouritism and the obvious desire of a banker to please his best customers. As a permanent method of rationing credit, it has little to recommend it; its advantages are in the short period, when, for instance, the first signs of inflation are beginning to appear. In any case, it is no substitute for using the whole interest-rate structure, including the Bank rate, in the way it is meant to be used, and that whatever the risks involved. In Britain, Bank rate has failed because over-full employment and the inflated level of demand that this entails, has had to be maintained for political reasons. In India, a rise in the Bank rate, either official or otherwise, would be equally ineffective if the level of internal demand is kept artificially high by over-ambitious development spending.

INFLATIONARY TRENDS IN THE U. S. A.

BUSINESS reports in January do not warrant altering the generally sanguine expectations evident in year-end forecasts, reports the First National City Bank in its newsletter for the month of February. Passenger-car production and sales are running above year-earlier levels for the first time in over a year, steel mill operations continue close to earlier peaks, and petroleum output has set new records in meeting demand at home and abroad. Brisk wholesale buying is reported from January trade shows. Industrial purchasing agents—like a great many consumers—are basically optimistic, even though inclined toward caution in their purchases. The strong finish of 1956 left little doubt that sheer momentum would carry business along at peak rates during the first few months of 1957. The upsurge in overall output of goods and services during the fourth quarter of 1956 was unsurpassed in any quarter in the past four years. Even allowing for price increases, which during the year accounted for about half the overall rise, the fourth quarter advance was impressive. Spurts in consumer durable goods buying, defence spending, and business investment in equipment and inventories were strong influences. According to preliminary estimates by the Council of Economic Advisers, the gross national product achieved the record annual rate of \$424,000 million in the fourth quarter, up from \$413,800 million in the third quarter. Meanwhile, consumer spending plans were fortified by the rise in incomes to a new peak of \$287,000 million after taxes. Corporate profits, which have been declining since late 1955, are tentatively estimated to have rebounded in the fourth quarter to an annual rate only slightly lower than a year earlier. These recent advances have been sizable but far from unanimous. As usual, there are soft spots along with the strong ones. A number of industries, including lumber, paper, and paperboard, are operating below last January's rates, while in other lines the steam appears to have gone out of expansion. Nevertheless, there can be little doubt of the strength of overall demand. It has been strong enough to offset these soft spots and push industrial production and non-residential construction to new peaks in December, to keep skilled labour in short supply, and to maintain a record flow of goods through retail stores. Above all, the pressure of demand, along with higher wages and raw material costs, is evident in the steady rise in prices, which has once more focused attention on the problem of inflation. Prices in wholesale and retail markets have climbed to record levels. The official index of wholesale prices (1947-49=100) advanced to 117.0 in late January, breaking the record which had stood for nearly six years. During the past year, prices of farm products and processed foods have risen more than 6 percent and prices of other commodities—mainly industrial goods—averaged 4 percent higher. The consumer price index, at a new record of 118.0 in December, was 2.9 percent higher than a year earlier.

A price rise of this magnitude, of course, does not represent runaway inflation. The rise in consumer prices during 1956 was not appreciably greater than the average rate of increase for the past ten years. Yet creeping inflation cannot be ignored. It is sobering to reflect that through this process of gradual erosion—averaging less than 3 percent a year—the dollar has lost nearly one third of its purchasing power in a decade. In the year-end forecasts of 1957 business, economists reached well-nigh universal agreement on two points: that increasing Government expenditures would afford the main expansionary stimulus, and that prices would rise further. These expectations are associated. In an economy running at maximum sustainable speed, with many private employers handicapped by shortages of skilled help, no need is present for increased Government expenditures to provide employment opportunities. Many people share the misgivings expressed by Senator Byrd, in commenting on increased outlays programmed in the new federal budget that "we have embarked upon another era of inflation."

CURRENT COIN

Standard and Burrakur Coal.—In a circular to shareholders, the directors of the Standard Coal Co. Ltd. explain the reasons for dropping the scheme to amalgamate the company with the Burrakur Coal Co. Ltd. The present market price of Burrakur ordinary shares, they say, is such that the formula of two Burrakur shares for one Standard share would almost certainly be unacceptable to Burrakur shareholders. Any lower ratio, on the other hand, would not be attractive for Standard shareholders. The liquidation of Standard Coal has been considered, but decided against because there are certain legal obstacles connected with the transfer of the title of the coal

properties originally owned by the company, and, in addition, certain outstanding matters, such as pending tax appeals, which would delay the liquidation proceedings for several years. Moreover, with the recent changes in taxation laws affecting the liquidation of companies, a substantial percentage of Standard's assets, represented by accumulated reserves, would be dissipated in the form of tax liabilities during the process of liquidation. It is, therefore, proposed to convert Standard into an investment company. If any shareholder does not approve of the change and does not want to continue as a member of Standard, he can sell his shares to F. W. Heilgers and Co. (Private) Ltd. at the current price of Rs. 20-12 a share; this offer is open until 15th March. It is intended that, of the present assets, Standard should dispose of its share in the Chief Mining Engineer's bungalow in Bhulanbararee and its holding of Government securities and debentures. This will leave it with (1) 15,000 ordinary shares in Coal Shipments Ltd.; (2) 9,275 ordinary shares in Sijua (Jheriah) Electric Supply Co. Ltd.; (3) 200 ordinary shares in the Industrial Credit and Investment Corporation of India Ltd.; and (4) 802½ bighas of coal-bearing land in Mouza Sowardi. The first three yield a reasonable return, although in the case of Coal Shipments profits fluctuate widely according to the state of the coal export market. It is proposed to retain the Mouza Sowardi property because if the Government's policy on private collieries changes, it might be possible to work it or to sell it at an attractive price. If the Government sticks to its policy that all future development in the coal industry should be in the public sector, it is likely that the property will be compulsorily acquired, but possibly for more than Rs. 1.3 lakhs, which is the figure at which it now stands in the company's books. The result of all these proposals will be that Standard will have approximately Rs. 18 lakhs available for investment; it is proposed to invest this sum partly in the ordinary shares of companies under the management of Birds and Heilgers, and partly in other companies. Although it is difficult to predict accurately the future earning capacity of individual companies and the future tax liabilities of Standard Coal, conservative estimates are that it should be possible for Standard to pay a dividend of at least 10 percent, and possibly more. Heilgers have resigned their managing agency of Standard Coal with effect from 31st January, so the latter is becoming director-controlled.

Tea in Pakistan.—In his presidential address at the annual conference of the Associated Chambers of Commerce of Pakistan in Karachi last Thursday, Mr. W. E. Wilkie-Brown said that there had been a considerable improvement in the Pakistani tea crop during 1956-57, and it was expected to total 54 million lbs. The industry has in the past complained of delay in receiving such essential materials as fertilisers and insecticides, but arrangements during the past year have been much more satisfactory. Mr. Wilkie-Brown urged the Government to remove a taxation anomaly which amounted to double taxation of part of the profits of a tea company. As he pointed out, tea manufacture is partly an agricultural and partly an industrial process. Under a convention which has until recently been recognised by the Central and provincial taxation authorities, 40 percent of the profits have been taxed by the Central Government under the Income Tax Act, 1922, and 60 percent by the Government of East Pakistan under the East Bengal Agricultural Income Tax Act. It is common practice to grow on tea gardens certain ancillary products such as sun grass, timber and bamboo which are utilised for thatch on living quarters, fuel and fencing and similar purposes. These products are not sold, but are consumed on the garden, and their production and use are reflected in the profits of the complete enterprise. The provincial Government has recently claimed that these products should be taxed under the East Bengal Agricultural Income Tax Act at an assumed sale price, although they are not sold and their consumption has already been reflected in the profits of the company. This amounts to double taxation of a section of these enterprises. Furthermore, the agricultural income tax authorities have invoked this procedure with retrospective effect from the year 1949 and the tea industry is now faced with demands (although temporarily held in abeyance) running into several millions of rupees over the last eight years, which are unjust and which it is quite unable to meet. Even for years in which the industry suffered trading losses, certain companies have been called upon to pay tax on this notional income although no profit accrued to them for two to three years.

Export and Import Policy.—A meeting in Bombay between the representatives of the Indian Merchants Chamber and the Chief Controller of Imports and Exports, Mr. S. N. Bilgrami, held recently to discuss the export and import policies of the Government, led to a useful clarification of

some obscure points. Mr. Murarji J. Vaidya, President of the Chamber, stressed the need to reintroduce the usual provision for grant of actual users' licences for non-listed items. Mr. Bilgrami assured him that although the provision had been withdrawn in the new policy, the scheduled industries which had hitherto got licences through the Development Wing would continue to get them. On the import of essential machinery and capital goods, Mr. Vaidya felt that domestic manufacturers would be put to much inconvenience by the rigid licensing policy. The Chief Controller said that he would be prepared to make necessary adjustments "within the existing framework of the policy". For instance, he would consider the feasibility of allowing the use of part of the licence issued for a particular item for importing another allied item not covered by the licence, if the latter was developmental in character and if the holder of the licence agreed voluntarily to a corresponding cut in the face value of the licence for the item actually licensed. He would also consider the question of giving permission, on merits and in exceptional cases, to utilise part of the import licence for machinery and plant, for the importation of spare parts. However, he could not extend the validity of such licences as had been affected by the Suez Canal closure, as foreign exchange was short. For the same reason, the Government could not agree to the demand that increases in the c.i.f. values of licences caused by the Suez Canal developments should be permitted. But in the case of very essential machinery, all legitimate increases in the c.i.f. price due to higher freight and insurance charges resulting from the diversion of vessels round the longer route would be considered on their merits.

Prospects for the Glass Industry.—The glass industry is looking forward to the promising prospect of expansion, but at present a considerable part of its production capacity is lying idle. This arises partly from its intermediate character, in that the demand for its products depends on the development of other industries. But a more important reason is the shortage of transport facilities and of raw materials. Production has increased to a certain extent in recent years. But imports of glass manufactures have also increased; they are likely to drop sharply, however, under the drastic new import policy. In his presidential address at the annual general meeting of the Bengal Glass Manufacturers Association in Calcutta last week, Mr. F. N. Sen stressed the responsibility which now lay on producers, and assured customers that the Association would help them obtain their supplies at "reasonable prices". He said that at least 50 percent of the capacity of the working units and about 65 percent of the total capacity was still lying unutilised. "What is more, out of 131 glass factories registered under the Industries (Development and Regulation) Act, 1951, with an installed capacity of about 314,500 tons, not more than 84 units are working at present. This shows that 47 factories with a capacity of about 67,000 tons have been closed." Under the second five year plan, it is expected to raise production capacity to 330,000 tons, while actual output is to increase from 125,000 tons to 200,000 tons. But as long as the problems of transport and raw materials were not solved, Mr. Sen warned, the targets might prove impossible to fulfil. He advised that, under the circumstances, great caution should be exercised in licensing new units and in sanctioning expansion, except when it is justified on grounds of economy and "the diversification of output on newer and untried lines".

VIZAGAPATAM HARBOUR

WE are glad to see that there is every probability, owing to the unparalleled generosity of the Maharaja of Vizianagram, of the harbour of Vizagapatam being put into a thoroughly efficient state. If the improvements proposed are carried out and Vizagapatam becomes a harbour, capable of loading and unloading large vessels it may mean a serious loss to the import and export business of the Port of Calcutta; for if a railway be made from Raipur to Vizagapatam, it seems to us that the whole trade of the Central and North-West Provinces can be deflected to that port. It will bring the coalfields of Umaria within a measurable distance of the sea, and open out the Central Provinces in a most wonderful manner. The Bengal-Nagpur Railway should lose no time in constructing this line, and then, we imagine, they will be one of the most prosperous in India. If Vizagapatam really becomes a first-class port, free from pilotage and the great delays that now occur in coming up the Hooghly, it would mean probably two days' saving of coal and time on the part of the steamer as well as of the pilotage. The Maharaja is really rendering India an imperial service, and we only wish that there were more noblemen so far-seeing, enlightened and generous.

SOUTH EASTERN RAILWAY TENDERS

The Controller of Stores, Garden Reach, Calcutta-23 invites tender No. CS4/57/K6/41(56) for handling of materials at Khargpur Scrap Yards during 1.4.1957 to 31.3.1959.

Tender forms are obtainable from his Office (I. B. Section) on remittance of Rs. 2/- per copy (not refundable) by Money Order to him direct in the case of outside Firms and on Production of Cash Receipt from the Chief Cashier, Garden Reach by local firms. Closing date is 25.2.1957 at 12 noon. Firms not on the Railway's list of approved contractors must deposit Rs. 1,000/- in cash with the Chief Cashier Garden Reach as Earnest Money and enclose his receipt together with a valid Income Tax Clearance Certificate with the tender.

Without Prejudice

SOME CASES IN THE ENGLISH COURTS

THE DOCTOR'S DILEMMA: WIVES AS ITINERANT DIRECTORS

(FROM OUR LEGAL CORRESPONDENT)

CONCLUDING this short series of comments on matters legal in England in 1956, we present an ethical problem in which the law and medicine, or at any rate two of the foremost exponents of each of the professions differ, and in which the reader's own opinion is as likely to be right as either of them. The problem is: Should a doctor tell? "Yes," said Lord Justice Denning, straying from strictly judicial functions to give moral advice to medical students of King's College Hospital School, London, at the opening ceremony of its 125th session. "The problem we have had in the courts is whether a doctor is ever permitted to tell a lie to his patient. If a person is suffering from cancer, it is expected that he should not be told about it; he should be put off with some excuse or other. Is that right? It is never permissible to do a great wrong in order to get a great right. Indeed, if it were generally known that doctors do not tell the whole truth to their patients, the confidence which should exist between doctor and patient would be seriously undermined." Thus, one of the most learned and eminent of British judges.

A week later, on 5th October, Sir Francis Walshe, consulting physician to University College Hospital, said in an address at a rather similar function to inaugurate the 1956-57 session of the Royal Free Hospital School of Medicine (University of London): "We have been recently admonished by a learned judge that we must always tell the truth, but what in the relevant connection is meant by 'truth'? It generally means telling the patient the full nature of the prognosis of his illness as far as this can be seen. The problem presents no difficulties when the outlook is good. It is when the outlook is bad that our perplexities arise. If, for example, the case is one of malignant disease demanding surgical intervention, adequate reasons

must be given to the patient for this; but, suppose the case is inoperable and the prospect of survival is to be measured in weeks or months. How much is it necessary or expedient to say? The patient's relatives were likely to be against the patient being given a realistic account of his situation, yet many patients wished to know the facts, so that they might prepare for death, if they were religious believers, or that they might arrange their affairs. But not all men and women may safely be assumed to wish to know the worst, or to react with prudence and fortitude if they are told. I believe that every patient in such a situation must be considered as a separate human problem and that no glib generalisations can wisely be made on this subject." One likes *Law Notes*'s contribution to the controversy, which is a quotation from Pope: "Tis not enough your counsel still be true; Blunt truths more mischief than nice falsehoods do."

There is no more distinguished and practical-minded judge in England than Lord Goddard, Lord Chief Justice; nor one held in greater affection. Wherefore one endeavours loyally to suppress certain misgivings about this decision on a criminal appeal of the Divisional Court over which his lordship presided and delivered the judgment, with which one notes that one of the other two judges (Stable J.) disagreed. A similar case must be not unusual in India when the law in principle is the same but where, it is submitted, no court and certainly no High Court would come to the same conclusion. The facts were quite simple. The charge was one of larceny. A servant obtained an advance of £6 19s 6d on account of his week's wages which ultimately came to £7 3s 4d. Later the wages clerk, not knowing of the advance, handed to the servant a wages packet containing £7 3s 4d, which the servant received not knowing that the envelope contained more than was due to him. When the servant got home, he opened the packet, discovered the error and decided to appropriate, and did appropriate, the whole sum to his use. Should he be convicted of larceny of £6 19s 6d? "No," said a Divisional Court (Lord Goddard L.C.J., Hilbery J., Stable J. dissenting.) "The defendant did not know of the mistake when he took the money, so the taking was not *animo furandi*." Perhaps not, when he actually took the

money. But what about the *animo furandi* when he decided to stick to it?

A borderline case on income-tax and expenses. Husband and wife were the sole directors and shareholders of a company dealing in refrigeration. Their fees as directors were £5,000 and £460, respectively. The husband worked full time in the company's business. The wife did not attend the company's premises at all in the relevant year and had no technical qualifications, but was described as "a good conversationalist". They visited Australia so as to study refrigeration methods, a decision influenced a little by the fact that the husband had close family connections there, but apart from that he considered that the company would profit from his visit. There was no resolution from the board of directors requesting the wife to go to Australia and no suggestion that she was given any directions as to the functions she was to perform there, but the husband thought that she should go with him. There was evidence as to what the husband did during the 11 weeks spent in Australia, but none as to what the wife did. The travelling and other expenses of the visit as claimed for tax purposes totalled £11,220. The Special Commissioners allowed £980. The Crown appealed. Roxburgh J. dismissed the Crown's appeal as to the expenses of the husband but allowed it as to those of the wife, there being evidence on which the Commissioners could arrive at their decision only as to the husband.

The law of negligence again. A railway case this time; and you are invited once more to impersonate the law's irritating "reasonable and prudent man" to decide it. Would this fictional embodiment of commonsense voluntarily walk through a tunnel and, being injured in the course of his own intentional peregrination by being run over by an incoming train, would he claim damages against the railway company for his injuries so sustained? You may reply, as the writer did, with a clamant "No", and say that such a man would be an unreasonable and imprudent fool and would deserve what he got. Wrong again!

The railway was a narrow gauge one and the tunnel was about 66 yards long. The owners of the railway neither openly objected nor openly assented to members of the public strolling through their tunnel, and the public occasionally did so. The company knew that they did, and, so to say, shrugged its shoulders at the practice, but instructed its drivers to blow their whistles and slow down on entering the tunnel. Among these reasonable and prudent pedestrians using the tunnel was the plaintiff, a lady. One day when she was doing this, a train owned by the defendant company and driven by its servant entered the tunnel at its usual speed and without the driver blowing his whistle. The lady saw the train coming, lay down in the tunnel but was struck by the train and injured. She claimed damages against the company for negligence. Can she succeed?

Yes, she can and she did; and the answer illustrates what we urged in this column last week, that the lawyer's most difficult task is when he has to advise a client, aye or nay, on a question of alleged negligence. You may think that the proximate cause of this accident was not the non-blowing of a whistle or the non-slackening of speed by the driver but the lady's recklessness in voluntarily placing herself in such a dangerous situation by patrolling the tunnel of a narrow gauge railway, knowing that trains were in the habit of patrolling it too. *Volenti non fit injuria* is the legal maxim, and it may be roughly interpreted as meaning that if I willingly take a risk, the natural consequences of it fall on my head, as they did on this lady's, literally and metaphorically. That was the railway's defence, but it did not succeed. "The maxim *volenti non fit injuria* did not bar the claim," said the Court of Appeal (Denning, Birkett and Parker L.J.J.). "because though the plaintiff voluntarily took the risk of danger from the running of the railway in the accustomed way, she did not take the risk of negligence by the driver." But the lady having been guilty of contributory negligence, the company's liability in damages was reduced by 40 percent. Thus, if I, having paid for my seat therein go to the Eden Gardens at a Test Match and Mr. Umrigar hits a six, neglecting to warn me of his prior intention so to do, and the ball strikes me on the head, Mr. Umrigar and the owners of the ground will be 60 percent liable to me. While writing the above as a *reductio ad absurdum* argument, the writer has suddenly recollected that it is not absurd at all but a perfectly accurate statement of the law, except that Mr. Umrigar would be liable 100 percent and not 60 percent. The thing actually happened in England some years ago. The lady was injured by a ball hit for six. She was not even a spectator, but was sunning herself outside her own house adjacent to the ground which was that of the Cheadle (Manchester) Cricket Club. The hit was a prodigious one and the club proved in its defence that it was of such dimensions as had never before occurred on the ground, and urged that it could not reasonably have been expected to happen. But it did happen, the lady was knocked out, sustained severe injury and sued the club for damages. The case caused consternation in the cricket world and new clubs find it necessary to insure. For the lady won her case, and an appeal the judgment was affirmed.

A DITCHER'S DIARY

tator has dared be away from his country. Either Mr. Chou must be very sure of his power, or he does not enjoy the important position in the Government of China which we are all led to believe. I think the former is true; after all, one cannot murder ten million opponents without intimidating the opposition. On the whole, Mr. Chou has acquitted himself well abroad, although his support of the Russian massacre in Hungary was depressingly familiar stuff. He sensibly avoided most of the silly back-scratching and trouble-making of which Messrs Bulganin and Krushchev were guilty. But what puzzled me was his constant harping on the threadbare theme of colonialism. For one thing, to bracket China with the victims of European imperialism is to stretch a point too far for the sake of creating fellow-feeling. The only power which tried seriously to make a colony of China was her Asian neighbour Japan. For another, the only imperial powers of any consequence in Asia nowadays are Russia and, of course, China herself. One of the strange things about modern thinking on the subject of colonies is that territorial possessions are not recognised as such unless they are separated from the imperial power by miles of ocean; when they adjoin, nobody says anything about them at all. We are apt to forget that it is not fifty years since the Central Asian republics, which are now incorporated into the Soviet Union, were openly acknowledged as part of the Czar's Imperial Empire. And the same is true for such provinces as Inner Mongolia, Tibet and Sinkiang, which are now accepted as part of China. I cannot think that Mr. Chou is referring to the actions of his own country when he condemns colonialism. But I often wonder whether he is not hitting out at his ostensible ally, the Soviet Union, which is still in occupation of a number of areas to which the new China might like to lay claim.

For those whose sole mental pabulum is the Government of India's Press Notes, there have been three important developments concerning the railways in the past week. The first is the progress of the World Bank Mission's tour. The second is the expensive "new deal" announced by Mr. Jagjivan Ram. And the third is the stimulating news that railway revenues during the current year have suddenly and unexpectedly risen by Rs. 1-9. This last appears in a story the burden of which, briefly, is that a passenger jumped into a local train, discovered he was travelling second class instead of the third for which his tickets had been bought, and after some energetic correspondence insisted upon paying the difference of Rs. 1-9. My interest in the episode, which some newspapers seem to have taken to rather fondly, centres on three points. One is the implication that a simple bit of honesty among railway travellers is such a remarkable event in the eyes of the Government's Press Information Bureau that it deserves nationwide notice. The second arises from the question whether, whatever the railways might have gained, the official information services have nothing better to do than to waste effort on something the moral impact of which is just a shade less than its innate silliness. The third is the fear that other Government departments, whose noses for morality among their customers are not yet so long, might start to emulate the railways. The post office, for instance, might one day begin to regale us with anecdotes about conscience-smitten correspondents who fail to put postage stamps on

their letters. It makes one sad to think of the state of our modern civilisation if, in the eyes of some, honesty can no longer be accepted as a simple, natural human attribute, not even when it is worth only Rs. 1-9.

The decimal coinage system, which India will introduce later this year on what is traditionally regarded as the day of folly, is not itself so foolish. It is attractive for its neatness and comparative simplicity, although I have heard perverse minds argue that it is precisely the striving for these two qualities that is nowadays making automata out of us all. In India, it seems fairly certain, however, the first reactions to the decimal coinage will be far from robot-like. Already one can sense the official prophets getting worried that the currency change-over which begins in April might cause not only inflation, but also a certain amount of disturbance and unrest. It is not difficult to visualise why. Think of the crafty village *baniya* arguing with his unsophisticated customer about the missing pie in the price of his *biri*. Yet, whatever the complications, it must be confessed, with perhaps a slight tinge of regret, that the arguments for introducing the decimal coinage system soon in a country which wants it, are compelling—if for no other reason than that it is better to be confused now than confounded later. I hope, in the next few months, at least some of my readers will have nothing better to do with their evenings than memorise the conversion tables.

I remembered saying some weeks ago that for every piece of British propaganda or information that arrives on my desk I get a dozen from the Russians. The proportion has not changed since then. In fact, we have just received an offer which might increase it. Will we exchange *Capital* for any of twenty-one listed Soviet publications? Now this is flattering. But Moscow already takes a fair quota of *Capital*, a larger one, I might add, than Washington. So why the interest? It seems the answer is that it will "benefit scientific and cultural relations" between India and the Soviet Union. I have no need to point out that we think very highly of *Capital*. But we do not claim that it is a scientific journal, not unless business has to be accepted as a science these days—I am still old-fashioned enough to regard it as an art. Nor have we much to do with culture, unless the writing of good English is what Moscow is looking for, and somehow I do not think it is. A glance at the list of possible exchanges does not reveal much in the way of science or culture either. There is *The Medical Worker* but that could be a trade union organ, if they permit such things in the Soviet Union. And there is *Soviet Culture*, a title which has too much of the commissariat stamp about it to ring particularly true. But the others range from *Soviet Sport*, *Soviet Patriot*, *Railway Worker's Gazette* and *Pravda* to one or two which look as if they might have something to do with commerce and industry. There is no one among them I would care to see *Capital* exchanged for, not even the one with the appealing title of *Truth*, which I think means truth. The name for which I looked in vain was that of *Crocodyl*—I hope that is how it is spelt. Ths, so I am told, is the Russian equivalent of *Punch*. If that is true, then it is likely to be a better guide to Soviet culture than all these other stuffy titles put together. I am not particularly keen to exchange *Capital* for anything, but if that is what Moscow wants, then it will be *Crocodyl* or nothing.

THE DITCHER.

Contributing to Indian steel

Simon-Carves have been building coke ovens in India for nearly half a century, and most of the coke and gas used today by the Indian steel industry comes from Simon-Carves ovens. Simon-Carves have built nearly all the coke ovens in service at the great Jamshedpur and Hirapur steelworks, where major extensions and reconstructions are now in progress. At the new Durgapur steelworks

Simon-Carves will be responsible for the whole of the coal preparation plant and washery, the coke ovens, by-product plant and sulphuric acid plant, and the power station supplying high-pressure steam to the entire works. The contribution of Simon-Carves to Indian steel production springs from massive resources in world-wide experience and boldly progressive research.

TURNING A NEW ROLL

We have turned a new roll; and it has cost us three and a half crores of rupees.

To what purpose, pray?

At the end of the rolling, we get coils of flat, steel strip—skelp, as the steel man calls it. The skelp is passed on to the Indian Tube Company, which welds it into tubes.

Soon, a new plant will turn out the kind of steel tubes that go into the making of bicycles. Remember also that the locomotive speeding along the track is kept going by steel tubes which hold the steam.

Tata Steel's new Skelp Mill, the first of its kind in India, has a capacity of 200,000 tons. When there is enough steel, this mill will roll all the skelp and strip the country needs.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

BIG RISE IN EXPORT BILLS

Wednesday, 13th February.

THE upward movement of advances has gone on unchanged throughout the past week. Deposits have also risen, but at a rather slower pace. The main sources of demand have maintained their offtake of funds, and the jute industry is now absorbing more than it has done in the past 10 or 15 years. This is thought to be due to the fact that, during a bad trading year, so much of the jute industry's available resources has been absorbed in the present modernisation programmes. Conditions in the interbank market are easier this week and the call rate has fallen to 3½ percent.

A large number of export documents has come to hand in the past few days. This is due to the fall in the U.K. Bank rate, previous expectation of which had held up a flow of bills which has now been released. Remittance remains moderate. Sterling continues to rule strong against both Continental currencies and the dollar. There has been little, if any, effect from the cut in Bank rate.

Bullion was firm last week on strong support after frantic bear-covering. Arrivals were restricted. After declining slightly around mid-week, silver rose to Rs 184 at the close. Gold increased to Rs. 109-12 in sympathy with silver.

During the week ended 8th February, Government of India Treasury bills for Rs. 28,62,50,000 were sold in favour of the Reserve Bank.

Increases of Rs. 25.63 crores to Rs. 1,519.63 crores in active notes, and of Rs. 18.09 crores to Rs. 1,526.66 crores in the total note issue, were the outstanding features of the return of the Reserve Bank of India for the week ended 8th February, 1957. The currency expansion was covered by increasing rupee securities by Rs. 20 crores to Rs. 875.03 crores and reducing rupee coin from Rs. 123.26 crores to Rs. 121.34 crores. Deposits showed an all-round decline. Deposits of the Government of India and other Government accounts declined by Rs. 1.34 crores and Rs. 3.15 crores to Rs. 51.01 crores and Rs. 13.53 crores, respectively. Balances of commercial banks, at Rs. 50.70 crores, showed a decline of Rs. 3.74 crores. Balances held abroad rose by Rs. 28.32 crores to Rs. 122.16 crores, while investments declined by Rs. 14.70 crores to Rs. 36.72 crores. Other loans and advances increased from Rs. 108.46 crores to Rs. 124.22 crores of which advances to scheduled banks against usance bills increased from Rs. 58.88 crores to Rs. 67.63 crores. Such advances amounted to Rs. 80.45 crores since 1st January, 1957. Ways and means advances stood at Rs. 6.27 crores (Rs. 6.25 crores).

The statement of the position of scheduled banks for the week ended 1st February, 1957, shows Demand and Time liabilities at Rs. 679.75 crores (Rs. 7.04 crores on account of borrowings from banks) and Rs. 464.40 crores (Rs. 2.21 crores), compared with Rs. 670.82 crores (Rs. 6.80 crores) and Rs. 462.30 crores (Rs. 2.55 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.30 crores and Rs. 1.58 crores to Rs. 34.36 crores and Rs. 51.63 crores, respectively. There is a drop of Rs. 37 lakhs in investments to Rs. 361.27 crores. Advances and bills discounted, at Rs. 840.71 crores, show an increase of Rs. 4.67 crores. The ratios to total liabilities of cash and balances and of advances and discounts, are, in consequence, shown at 7.5 percent and 73.5 percent, against 7.3 percent and 72.9 percent.

The return of the State Bank of India for the week ended 1st February, 1957, shows a rise of Rs. 10.22 crores in total deposits to Rs. 262.25 crores. Investments in Government securities are up by Rs. 1 lakh to Rs. 95.48 crores, while other authorised investments are down by Rs. 2 lakhs to Rs. 11.44 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have increased by Rs. 3.85 crores to Rs. 164.68 crores. Cash and balances are, in consequence, shown at Rs. 18.03 crores, or Rs. 7 lakhs higher.

The following is a statement of the cash balances of the Central Government on the last day of October, 1956:

	Rs.
(1) At the Reserve Bank of India in India	56,91,92,000
(2) At treasuries in India	2,21,61,000
(3) In England (Sterling converted at 18d. the Rupee)	1,01,62,000
Total	60,14,85,000

The Government of India has negotiated a drawing of \$127.5 million from the International Monetary Fund. Of this amount, \$60 million will be drawn immediately and the remaining \$67.5 million after a month. In addition, the Fund has agreed to give a standby credit under which India will have the right to draw an additional amount of \$72.5 million at any time during the next 18 months.

POWER YOU CAN DEPEND ON

Continued leadership in design, improved methods of manufacture, and rigid inspection, guarantee to every Brush Kirloskar Electric Motor a strength and reliability which ensure dependable power and long, trouble-free service.

KIRLOSKAR ELECTRIC CO., LTD.
BANGALORE 1

SOLE AGENTS: **PARRY & CO. LIMITED** POST BOX No. 12, DARE HOUSE, MADRAS.

One of the largest telecommunication engineering organisations in the British Commonwealth Standard Telephones and Cables Limited is engaged in the research, development, manufacture and installation of all types of communication and control systems. Concerned with every aspect of telecommunication engineering, the Company is in an unrivalled position to undertake, within its own organisation, the co-ordinated systems-planning of complete communication projects involving inter-dependent systems of various types.

'Standard' productions include:—

- Telecommunication Line Transmission Equipment
- Radio Broadcasting Equipment
- Radio Communication Equipment
- Air Radio Navigational Aids
- Supervisory and Remote Control Systems
- Railway Communication Apparatus
- Railway Control Equipments
- Telephone Cable
- Sound-Reinforcement Systems
- Public and Private Telephone Systems

"Standard" telecommunication systems serve society on land, at sea, and in the air. In the realm of aviation, "Standard" radio equipment flies in many of the world's leading aircraft, including the Vickers Viscount illustrated above.

SHARES FALL BACK AFTER
EARLY RISEMODEST EFFECT OF BANK
RATE CUT

London, 13th February.

THE reduction from 5½ percent to 5 percent in Bank rate has had only a modest effect on the London stock markets during the past week as this had been largely discounted by the rise during recent weeks. The immediate response was favourable, but further consideration of the news and the subsequent warnings that it did not indicate any change in the Government's economic and credit policies, coupled with several other adverse developments, brought an uncertain and generally easier tendency in most sections. The markets have been little changed on balance. The contributory factors to the uncertainty which developed after the week-end included the Middle East situation, a sharp fall on Wall Street and the announcement of a £300 million long-dated Funding issue by the Government. The January trade figures were not a helpful factor. Business contracted compared with the activity of recent weeks and it appears that the markets have paused for reassessment in the light of the prevailing conditions. There was no excitement in the gilt-edged market on the reduction in Bank rate or following the subsequent larger-than-expected fall in the Treasury bill rate. Prices improved modestly following the news, but later turned irregular. Little of interest developed in the foreign bond and rail markets, but dollar stocks have fallen back sharply under Wall Street's influence. The industrial market inclined easier prior to the Bank rate change, but prices staged quite a good response to the reduction, only to fall back again after the week-end. On balance, there has not

been a great deal of change in the general body of prices. Gold shares have moved erratically and within narrow limits in very quiet conditions, but coppers have fallen back partly in sympathy with Wall Street. Other base metals have been uncertain. Leading oils have receded on nervousness about the Middle East situation, but certain western hemisphere issues have been in demand. Rubbers and teas have attracted little attention and generally, have not been greatly changed.

The Money Market

The reduction of Bank rate by ½ percent to 5 percent was the past week's feature in the London money market. It was a corollary to the steady decline in the Treasury bill rate since the beginning of 1957. The lower trend resulted from several factors including the Government's re-introduction of 63-day bills to cushion the effects of the drain on cash resources caused by seasonal tax payments. There has also been a sharp reduction in the Government's weekly borrowing through Treasury bills. Credit conditions have been rather tight and the market has twice resorted to borrowing from the Bank of England. The average rate for money early in the week was around 4½ percent. Later it fell to 3½ percent following the Bank rate cut. The Treasury bill rate at the week's tender was reduced by about 5/16 percent to 8½ to 8 7/8 percent. Fine trade bills were lowered to 5½ to 6 percent for three months and to 5½ to 6½ percent for six months.

Activity on Wall Street

In the foreign section of the bond market, in early dealings German nationals were mostly higher by fractions to a point, but eventually they backed away. Berlin City 6½ percents of 1951 and 6½ percents of 1959 moved up sharply by 16 and 13 points respectively on small sales. Italians registered fractional gains, while some Norwegians, Serbs and Polish issues lost a little ground. Denmark 4½ percents and the Union of South Africa 4½ percents were quiet and unchanged. Australians showed little change either way. A few firm spots were noted among Japanese with Yokohama adding three points on a single sale. Chile 3 percents were higher by a small fraction and a number of Brazilians were showing losses and gains of a point or more.

U.S. Federal Reserve Return

For the week ended 6th February U.S. gold stock rose by \$1 million to \$22,252 million. Foreign deposits increased by \$46 million to \$386 million, but foreign investments fell by \$71 million to \$3,670 million. The Federal Reserve sold \$65 million worth of bills, but purchased \$84 million worth of securities under repurchase agreements. Total U.S. Government securities thus increased by \$19 million to \$23,447 million. Total discounts and advances rose by \$161 million to \$839 million and the aggregate of excess reserves of member banks advanced by \$387 million to \$672 million. The daily average excess reserves of member banks rose by \$63 million to \$378 million, while their daily average borrowings rose by \$113 million to \$615 million. Business loans of the New York city banks fell by \$31 million to \$11,000 million compared with a decline of \$77 million to \$8,946 million a year ago.

Hongkong Gold Easier

The Hongkong gold market last week was easier on lack of demand and on reported arrivals of gold in Macao. Opening after the holidays at \$(H)269, values initially declined 13 points and by mid-week reached a low of \$(H)266½. Thereafter, they fluctuated narrowly between \$(H)266½ and \$(H)266½, finally closing at \$(H)266½. The market showed no particular feature and was inclined to follow the movements of sterling abroad. Carry-over charges totalled 55 cents a 10 taels. Arrivals in Macao were 35,000 ounces. Forward contracts were done at \$(U.S.)37½ an ounce, c.i.f., Macao.

Late Rally in Rubber

The rubber market recovered after early softness on trade buying and short-covering, with dealings fairly active. Declines of more than 1 cent a lb. were registered early in the week on hedge selling and Commission House liquidation. The break in the securities induced some selling in rubber as did fears in the trade about the financial position of a leading Singapore rubber house. However, although nervousness showed itself subsequently on sporadic selling movements, improvement in the markets abroad caused a recovery movement here with a number of traders uncertain about the extent of the financial difficulty of the Singapore firm. Factories were modest buyers of physicals over the week. The trade noted with interest the strike move among Good-year workers. The contract with labour expired on 10th February, and the workers' union has called for a strike vote.

Cost of U.S. Farm Price Support Policy
The farm price support programme has cost the Eisenhower administration \$2,944 million in the last four years—nearly three times the total of Government losses in the preceding 20 years of federal farm aid programmes. A Commodity Credit Corporation (Agriculture Department) report states that the total losses since the Roosevelt administration inaugurated the programmes in 1933 have been \$4,005 million. The Corporation owned surplus commodities worth \$5,892 million at the end of 1956, and it is expected that more losses will be incurred on these stocks before they are disposed of, the report adds. The figures exclude direct subsidy payments to farmers, cost of export subsidies under which some commodities have been sold abroad at reduced prices, or funds other than the Corporation's used to buy surpluses for relief and other distribution.

Stocks and Shares

BUDGET FEARS DOMINATE STOCK MARKET
SENTIMENTSHARP CONTRACTION IN BUSINESS: SUCCESSIVE
BEAR RAIDS DEPRESS PRICES

Wednesday Evening.

THE Calcutta share market has been quiet and depressed throughout the week. All speculative counters have been marked down and most of the investment sections are weaker. There has been a sharp fall in transactions. The market is in the grip of the usual pre-Budget fears, which even the rather more reassuring words of the Finance Minister about the reserve deposit provisions have not been able to dispel. News from Bombay about the difficulty which Tatas are having in raising the money for their rights issue has given rise to fresh gloom about the coming Indian Irons offer. It is feared that the procession of rights issues expected after the Budget will drain the market of funds even if, as anticipated, they meet with a poor response. Indian Irons fell during the period from Rs. 29-6 to Rs. 28-11. The undertone of the market is now weak.

Coal shares have been neglected following the Appellate Tribunal Award. The speculative Burakurs are easier, although it is reported that very little scrip is available in the market. Engineering shares have fallen in sympathy with Indian Irons and miscellaneous counters are generally weaker. Tea shares, along with the sugar and distillery section, have been unique in showing some improvement on the week. Government securities have been quieter.

Details of the week's trading follow.

The gilt-edged market was quietly steady, though there was some contraction in the volume of business. Three percent Conversion Loan 1986 recovered from Rs. 73-9 to Rs. 73-11 and 3½ Non-terminable Paper was quoted at Rs. 73-4. In the short-dated group 3½ 1957 and 1958 were unaltered at Rs. 99-12 and Rs. 99-9 respectively and 2½ 1961 was quoted at Rs. 93-4. 3½ 1961 was placed at Rs. 99-6 while 3½ 1959-61 was unchanged at Rs. 97-12. Among medium-dated issues 3½ 1964 was wanted at Rs. 94-4 but sellers were scarce. Three percent 1963-65 was unchanged at Rs. 94-3. Three percent 1964 was sold down to Rs. 98-4 but later buyers appeared at Rs. 95-5; 3½ 1965 dropped by 2 annas to Rs. 98-3 and 3½ 1967 was unchanged at Rs. 98-7. Four percent 1960-70 had buyers at Rs. 100-12 but sellers were scarce. In the long-dated group 3½ 1966-68 was quoted at Rs. 92-4 and 3½ 1970-75 was placed one anna higher at Rs. 87-1. 3½ 1974 was in demand at Rs. 98-8. In Provincials, 4½ U.P. 1968 was officially supported at Rs. 97-15 and there were buyers of 4½ West Bengal 1968 at Rs. 99.

A nominal amount of business was put through in preference shares. There was some enquiry for Alkali & Chemical, which were crossed at Rs. 102-4 and Burn & Co., 7½ were taken at Rs. 127. Calcutta Electric were offered at Rs. 9-8 and Humayun Properties were done at Rs. 9. Small lots of Chrestien Mica and Duncan Brothers were placed at Rs. 53 and Rs. 60 respectively. Indian Iron & Steel were shaded at Rs. 104 and Jardine Henderson were crossed at Rs. 61 as were Metal Box at Rs. 92. Karanpura Collieries were done at Rs. 59 and Richardson & Cruddas at Rs. 85-8. In jute, Anglo-India were sold down to Rs. 103 and Auckland 2nd were crossed at Rs. 61. Bally were offered at Rs. 102 and Delta were marked at Rs. 86. Gourepore were bought at Rs. 82 and Hooghly changed hands at 10-12. Howrah Mills 7½ were reported at Rs. 102 and New Central at Rs. 102. Waverley were crossed at Rs. 40.

In the banking section, Allahabad Bank Contributory were done at Rs. 181, while United Commercial were slightly easier at Rs. 56-12. Punjab National were unchanged at Rs. 55 and United Bank of India "D" shares changed hands at Rs. 4-12.

In railways, a solitary transaction was reported in Howrah-Amta at Rs. 52.

With the exception of Bowreah which were slightly better at Rs. 132, cotton shares tended to lower levels. Bengal Nagpur were marked down from Rs. 8 to Rs. 7-12 and Dunbar from Rs. 205 to Rs. 198. Kesoram dropped by 11 annas to Rs. 15-5 while Elgin were unchanged at Rs. 26-4.

Following the recent Appellate Tribunal Award whereby mining costs have increased on an average by a further 15%, coal shares displayed a sagging tendency. Even Bengal, which hitherto had kept remarkably steady, found sellers at the close at Rs. 27-4 and Burrakur were difficult to sell even at Rs. 20-14. Equitable were marked back from Rs. 28 to Rs. 25 and Katras Jheriah from Rs. 62-8 to Rs. 62. New Manbhoom suffered a sharp reaction from Rs. 10 to Rs. 8-8 but recovered today to Rs. 9-8; South Karanpura were depressed at Rs. 9-10. Contrary to the general trend there was a small but sustained enquiry for Union at Rs. 13-4. West Jamuria were marked down today from Rs. 10-4 to Rs. 8-8.

The recent enquiry for jute shares appears to have died down and prices were marked back on

a wide front as will be seen from the following table:

	Opening 7-2-57. Rs.	Closing 13-2-57 Rs.
Bally	163	161
Barnagore	107	105
Budge Budge	112	109
Delta	146	143
Howrah	19 12	19 2
Orient	123	120

Contrary to the general trend, Dalhousie were enquired for at the higher rate of Rs. 100, Gourepore at Rs. 225, Kinnison at Rs. 148, Northbrook at Rs. 22-2, Reliance at Rs. 10 and Union at Rs. 131.

In electrics, Calcutta were offered at Rs. 12-15 and Benares were reported at Rs. 18. U.P. were unchanged at Rs. 147.

In sugar and distilleries, a fair-sized parcel of Dyer Meakin was crossed at Rs. 6-2 and there was some enquiry for Carew at Rs. 7-6. Cawnpore were easier at Rs. 19 while Champarun were unchanged at Rs. 22-8 ex-dividend. Durbhanga were marked back from Rs. 21-12 to Rs. 20-12 but Bel-sund improved today from Rs. 10-12 to Rs. 11-4.

In the engineering section, successive bear raids brought down the price of Indian Iron & Steel shares steadily from Rs. 29-6 to Rs. 28-7; tonight's closing quotation is Rs. 28-11. Braithwaites were remarkably steady at Rs. 28-4 and there was a good enquiry for British India Electric at Rs. 13. Guest, Keen, Williams were steady at Rs. 24-7 and a small

"Hydrated
Magnesium
Silicate..."

...a fibrous mineral possessing resistive properties to combustion, corrosive liquids and other chemical and physical phenomena, or just asbestos...one of the most useful minerals known to man. It is made up of millions of tough, thin, tightly-compressed fibres, and is acid and fire-resistant.

The Call To Save

As citizens of India, you are called upon "to work wholeheartedly for the full and timely realisation of the tasks, targets and aims of the Second Five Year Plan."

The Plan has been embarked upon. Its success depends upon your providing capital for its working. In this effort no amount is too small—the man who saves a rupee and the man who saves hundreds—both are rendering national service.

Save as much as you can and entrust your savings to the nearest office of your Bank. In doing so you will help to build a new India and also create a valuable estate for yourself and your family.

STATE BANK OF INDIA
INDIA'S LEADING BANK

The State Bank's local head office at Calcutta, one of the more than five hundred offices waiting to take care of your savings throughout India.

In mining, Indian Copper met with selling pressure and at the close the price receded to Rs. 3-7-6. Metal Corporation were marked back from Rs. 9-8 to Rs. 9 while Karanpura Development and Orissa Minerals were unchanged at Rs. 16 and Rs. 21-8 respectively.

Providing Rs. 1.72 crores (Rs. 75 lakhs) for depreciation, the profit of the SCINDIA STEAM

Excepting Ahmedabad Electric, which were fractionally higher around Rs. 99-11. other electric city supply company shares were available at around their previous levels.

COOPER

Cooper Split Roller Bearings are regular anti-friction roller bearings with the ADDED feature of being split right down to the shaft.

The split feature enables the user to apply an anti-friction bearing where it would be impracticable or impossible to mount solid ball or roller bearings.

SPLIT RIGHT DOWN TO THE SHAFT.

The split feature does not limit the use of the Cooper bearing, — a wide range of dimensions and load capacities is available to suit the majority of applications, and many Cooper Split Roller Bearings have been used where a solid bearing would have been adequate. The selection of Cooper Bearings in such cases is based on a record of dependability and long life.

Cooper Split Roller Bearings are first choice for continuous process plant equipment and other modern machinery.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced by 0.4 percent to 125.7 during the week ended 26th January, 1957, compared with 124.1 (revised) for the previous week. The index was higher by 0.9 percent and 15.0 percent respectively when compared with the corresponding week of the previous month and that of last year. The average for January, 1957 worked out to 122.1, compared with 128.8 (revised) for December, 1956 and 376.0 for January, 1956. Higher prices of jowar (+9%), gur (+5%), rice (+3%) and coffee (+1%) raised the index for Food Articles by 0.8 percent to 399.7 in spite of a decline in the prices of tea (-10%), gram (-3%) and wheat (-1%). The index for Industrial Raw Materials advanced by 1.1 percent to 533.7, compared with 527.7 (revised) for the previous week as a result of an increase in the prices of manganese ore (average export prices) (+15%), rapeseed in Bombay (+12%) and in Calcutta (+11%) linsed in Bombay (+4%), groundnuts, castorseed and cottonseed (-3% each), gingellyseed in Jhansi (-2%) and raw cotton (-1%), although the prices of gingellyseed in Bombay (-8%), rapeseed in Calcutta (-5%), raw silk in Madras and lac (-2% each) and linsed in Calcutta (-1%) were marked down. A rise of 0.2 percent to 413.1, compared with 412.3 (revised), in the index for Semi-Manufactures was brought about by an increase in the prices of groundnut cake (+3%), gingelly oil (+2%) and groundnut oil and linsed oil (-1% each); the prices of copper and copra cake, however, fell by 1 percent each. The index for Manufactures witnessed a fall of 0.4 percent to 386.2 due to a decline in the price of jute manufactures by 3 percent. Lower prices of cashewnuts in Quilon (-10%), turmeric in Calcutta (-7%) and black pepper (-3%) were responsible for a decline of 0.6 percent to 588.2 in the index for the Miscellaneous group although the price of betelnuts in Calcutta moved up by 2 percent.

INDEX NUMBERS BY GROUPS AND SUB GROUPS
(Base: year ended August 1939=100)

Groups and Sub-Groups	26-1-57	19-1-57	29-12-56	28-1-56

WOOL ADVERTISING CAMPAIGN IN U.S.A.

"During the coming year the Wool Bureau Inc., New York, will launch the most powerful wool advertising campaign ever undertaken," said Mr. L. Francis Hartley, chairman of the International Wool Secretariat and of the Executive Committee of the Wool Bureau, on his return from his recent visit to New York. "This has been made possible by the allocation of increased funds by the American Sheep Producers' Council, and by new support from the most prominent wool mills in the United States, which will contribute directly to the consumer advertising programme. The funds provided by the Wool Bureau (contributed by the growers of Australia, New Zealand and South Africa) and the Boston and Philadelphia Wool Trades Associations, will thus be augmented to an impressive degree," he said. Mr. Hartley went on to say that the first campaign launched jointly three years ago by the Wool Bureau and the Boston and Philadelphia Associations, had acted as a "trigger bomb," setting off a chain reaction which had brought in additional support each year. The new campaign would tell the story of wool's superiority forcibly to the millions of Americans whose incomes were moving steadily upward and also to the fast-growing young adult group. Parallel with it, the Wool Bureau would continue an expanded programme of wool promotion, education and scientific research.

New Delhi

EFFORTS OF INDUSTRIALISTS TO WIN SEATS IN PARLIAMENT

OFFICIAL ASSURANCE ON COMPULSORY DEPOSITS SCHEME FOR COMPANIES

(FROM OUR NEW DELHI CORRESPONDENT)

THE activities of the Forum of Free Enterprise and the concerted efforts of certain leading industrialists to get into Parliament have attracted a good deal of interest here. In order to get into Parliament, some industrialists have joined the Congress, some have joined the Ram Rajya Parishad, and some are seeking election as representatives from tribal areas. The question which is being asked here is whether there is any real threat to the private sector. The Reserve Bank has periodically been publishing reports on the holdings of non-Indian firms trading in India. If a similar investigation were made into the assets of, say, 20 leading Indian industrial and commercial houses, it would be found that their holdings had risen very appreciably during the last ten years, it is asserted here. Then, again, almost all the units in the public sector, including the Reserve Bank, have boards of management on which Indian business men are represented. Thus, it is claimed, seldom before have they had a greater say in the policy-making of the Government.

Compulsory Deposits Scheme

There was a private meeting in New Delhi last week when leading Bombay industrialists, it is gathered, raised the issue of compulsory deposits. The Finance Minister, Mr. T. T. Krishnamachari, who was present, assured them that the draft rules on the subject would be circulated to the Associated Chambers of Commerce and Industry, the Federation of the Indian Chambers of Commerce and Industry, and other bodies, so as to obtain their views before they were finalised and adopted.

Heavy Machinery Project

While the Indian Government is holding on fast to the Russian project report on the heavy machinery manufacturing project, describing it as a "top secret document", a summary of it has been released through the Russian news agency. According to Press reports, the Russians have recommended Ranchi, Bihar, for the location of the project, which, according to them, will cost Rs. 94 crores—Rs. 42 crores in the first stage and Rs. 52 crores in the second. The amount of foreign exchange involved is estimated at Rs. 47 crores. The Russians are expected to offer credit facilities for the project on the familiar lines, namely, repayment in 15 yearly instalments, with the loan carry an interest of 2½ percent.

The report of the British heavy machinery mission, which came to India last November, was handed over to the Indian High Commission in London on 4th February. It is learned here.

Export Promotion Councils

At a meeting convened last week by the Export Promotion Wing of the Ministry of Commerce and Consumer Industries, the progress made by the various Export Promotion Councils set up in the last two years with Government support was reviewed. The eight Councils set up so far are for cotton textiles, silk and rayon, plastics, engineering goods, tobacco, mica, cashew and pepper, and leather.

Addressing the meeting, the Joint Secretary to the Ministry of Commerce and Consumer Industries, Mr. K. B. Lal, said that the main objective in establishing them was to help secure foreign exchange by finding larger markets for Indian goods abroad. The Councils had an important rôle to play in view of the increased requirements of foreign exchange to meet development demands during the second plan. Mr. Lal added that their progress would depend upon the support given by those in the industry or trade. The Councils were an administrative move towards the objective of export promotion and it was necessary to create conditions in which the export trade could flourish. The study of foreign markets and of the trade at home was their first responsibility. The Councils were, in a sense, doing pioneering work. They should benefit by the experience of other countries in the field of export promotion.

A review of their work showed that some of the Councils sponsored delegations to study markets in south-east Asia, West Asia and Africa. A delegation of the Engineering Export Promotion Council was at present touring east and north African countries. It would also visit Aden. The Council had earlier sponsored a survey of markets in British East Africa, Egypt and the Sudan. It is studying the export possibilities for Indian Cashew and Pepper Export Promotion Council has visited central and east European countries. The Council for Plastics is sending a delegation to Iraq, Iran, Aden, East Africa and Ethiopia. The Cotton Textiles Export Promotion Council has opened offices in Baghdad, Singapore, Aden,

Rangoon, Lagos and Mombasa. The Tobacco Council has carried out surveys of markets in Asian and African countries.

Surveys of Industries and Markets

The need for conducting surveys of industries with an export angle, and for collecting the basic data on them, was emphasised during the discussions. The Councils are likely to prepare surveys for the benefit of foreign importers and surveys of foreign markets to help Indian exporters. The meeting reviewed the results achieved by holding exhibitions of Indian products abroad. It was felt that there was a need for follow-up action. The Councils would consider whether they could jointly post a representative to look after the follow-up work and to attend to trade enquiries resulting from foreign exhibitions. The need for greater co-ordination between the Councils and the Exhibitions Branch of the Ministry of Commerce and Consumer Industries, which organises Indian participation in foreign exhibitions, was stressed. The Councils would review each year to what extent they had benefited from the holding of exhibitions abroad.

The question of opening showrooms for Indian goods in important foreign commercial centres was discussed. At present, India has five showrooms—in Cairo, Teheran, Geneva, New York and Colombo—and smaller showrooms in other places. The Engineering Export Promotion Council has set up one showroom in west Asia and another in east Asia. It was decided that the Export Promotion Councils would set up a committee to study how the showrooms could be effectively conducted, whether more showrooms could be jointly opened, and how trade enquiries made by visitors could be handled. The importance of supplying goods of the proper quality and specifications was emphasised. It was felt that a scheme to check quality could be started, to be adopted at the option of the exporter. The Cashew and Pepper Export Promotion Council is introducing a scheme to check quality. The steps taken by the other Councils were explained. The need for inspection of goods before export and the introduction of standard contract forms for exporters was emphasised.

There is a saying that one can bring a horse to the water but cannot make him drink. The Government's decision to facilitate exports by allowing a refund of the import duty illustrates the point. In the last two years, draft rules affecting 20 commodities have been published to elicit criticisms. But no comments have been received on the rules for ten of these commodities. Claims for the refund of import duty, according to enquiries, are negligible in number. This might offer some indication of how much the trade is interested in stimulating exports. The apathy in the trade, however, equals the red tape in the Government. A person claiming a refund is required to prove that it is he who has paid the import duty and that the goods for which the refund of duty is demanded are the goods in which the imported material has been used. Re-thinking on both sides is urgently necessary.

Trade Mission from U.S.A.

A five-man U. S. trade mission will tour India shortly and advise business men on commercial activities in the U.S.A. It will be headed by Mr. F. Preston Forbes, acting director of foreign commerce in the U.S. Department of Commerce. The members are Mr. Harold Cherry, deputy director of the Commerce Department's development division; Mr. Robert W. Kerr, Vice-President of the American Machine and Foundry Company, New York; Mr. Egil E. Krogh, president and general manager of Sibley, Lindsay and Curr, Rochester, N. Y.; and Mr. F. H. Von Mecklinburg, president of H. Botzow Incorporated, a New York city import-export firm. Mr. Von Mecklinburg was a member of a six-man U. S. trade mission which toured India in 1955 at the time of the Indian Industries Fair. The new mission's tentative itinerary includes visits to New Delhi, Bombay, Hyderabad, Madras, Bangalore, Coimbatore, Visakhapatnam, Calcutta, Patna and Kanpur. It will be in India for approximately six weeks. During its tour, it will meet Indian business men who are interested in selling goods to the United States, and explain to them trade regulations and credit possibilities. It will also furnish information to business men interested in importing materials from the U.S.A.

Attitude to European Free Trade Area

India's attitude to the European free trade area scheme will be determined to a large extent by the nature of Britain's participation in it. With the reported exclusion of food from the articles covered by the scheme, this country might welcome it if the term "Britain" excludes the U.K.'s

colonial possessions. But she would not welcome the latter's "British-controlled economies" entering the free trade area as a part of Britain. Further elucidation of the scheme is, therefore, being sought. The British proposals for establishing a free trade area in Europe cover all goods except foodstuffs.

Mr. Macmillan, then Chancellor of the Exchequer, announced in a debate in the House of Commons on 26th November, 1956, the intention of his Government to join a European free trade area if suitable terms could be negotiated. He explained that the British proposals would reduce, and eventually remove, tariffs and other restrictions within the area on all goods other than foodstuffs. This free trade area would evolve in stages with the development of the Customs union of the Messina powers. Members of the Customs union would have their own common tariff on imports from the outside world; but countries participating in the European free trade area which are not members of the Customs union would keep their own separate and different tariffs on imports from outside the area.

In a statement on 16th January, the U.S. Government welcomed efforts to establish a common market and free trade area in Europe. The State Department said: "The attitude of the United States with respect to current western European proposals for a common market and free trade area is determined by two traditional policies of the U. S. Government: our consistent support of moves to further the political and economic strength and cohesion of western Europe within an expanding Atlantic community, and our longstanding devotion to progress towards freer non-discriminatory, multilateral trade and convertibility of currencies. A European common market, based on provisions which hold the promise of attaining this objective, will have the support of the United States. This would be consistent with U. S. support of such arrangements as the General Agreement on Tariffs and Trade and the articles of agreement of the International Monetary Fund, both of which have as their objective the expansion of non-discriminatory multilateral trade."

In the opinion of the U.S. Government, the association of the British Government in a free trade area in Europe would further strengthen the unity of the Atlantic community and the free world. The hope was expressed that the free trade arrangements would also encourage the expansion of international trade from which all the countries of the free world, and not merely those participating in the common market and free trade area, would benefit.

Import Licences for Steel

Import licences for steel will be granted in future after carefully examining the merits of each case, it is learned. Last year, they were granted rather freely. They were given to meet requirements outside the quota allotments. Importers had to pay the world prices instead of the subsidised prices. All this has now changed. Imports have been regulated according to the availability of foreign exchange, and Rs. 20 crores of the latter allocated for steel imports during the January-June period. In addition, there is a split over from last year's allocation amounting to Rs. 70 crores, and a fair percentage of this steel is expected to arrive during 1957.

No Increase in Values of Import Licences

The Government is unable to agree to the demand of the commercial community for an increase in the c.i.f. values of import licences to cover the higher insurance and freight charges resulting from the diversion of ships via the Cape of Good Hope. This answer has been given to the Indian Merchants Chamber, which held talks with Mr. S. N. Bilgrami, Chief Controller of Imports and Exports. The Government might also decide, because of the tight foreign exchange position, that there should be no extension of the validity of import licences on account of the blockage of the Canal. However, Mr. Bilgrami has informed the Chamber that in the case of very essential machinery, if there is a diversion over a longer route, he would consider allowing increases in c.i.f. prices on the merits of the case.

Expanding Wagon Manufacture

Plans have been completed for a major expansion of the railway wagon-building industry to raise its installed capacity by as much as 80 percent. The present installed capacity is 20,000 wagons a year. This is to be increased by 16,000 wagons a year. The target of 36,000 wagons will represent roughly a ten-fold increase during the two five year plans. Indigenous production in 1951-52, the first year of the first plan, was only 3,700 wagons. India already has the largest wagon-building industry in Asia, not excluding Japan which has had a longer start.

The Railway Board, which is now considering the expansion of the wagon industry, is making efforts to see that even special types of wagons which are now imported are in future made at home. It is claimed that India is already practically self-sufficient in her requirements of ordinary wagons during the second plan. The expansion is intended as an advance preparation for the increased demands for goods wagons during the third plan. No orders for the general types of wagons were placed in foreign countries during 1956-57. This contrasts with the heavy orders which were placed abroad during the first plan. Sixteen new Indian firms have been selected by the Railway Board to assist in achieving the new installed capacity of 36,000 wagons a year. The

Location of the new manufacturing units is being deliberately arranged in different parts of the country, so that many areas benefit from industrialisation. Also, such distribution will reduce the burden on the transport system. The new units will be located in Delhi, Rajasthan, U.P., Saurashtra, Madras, etcetera.

Wheat and Rice Imports

Imports of wheat are steadily increasing. About 200,000 tons will be arriving in February, and over 250,000 tons in March. The Government seems to be confident of building a sizeable reserve stock during the next few months. During January, 126,514 tons of wheat were received from the U.S.A. and 67,564 tons from Australia. Official sources deny reports appearing in a section of the Press that supplies of rice through fair price shops will be discontinued. It is learnt that in addition to the already scheduled import of 40,000 tons of rice from Burma this month, arrangements have been made with the Burmese Government for the shipment during the current month of an additional 25,000 tons of rice, which India is due to receive this year under the five year Indo-Burmese agreement for the import of 2 million tons of rice. During January, 37,183 tons of rice were received from the U.S.A. and 14,272 tons from China. Pakistan, too, returned 8,600 tons of rice in part payment of the rice loan she received from India.

New Zealand Aid for Milk Schemes

Problems of financial and technical aid for several milk supply projects such as those in Calcutta and Delhi, equipment for the Aarey milk colony and the Co-operative Milk Union, Patna, were discussed here last week between members of a New Zealand mission and officials of the Union Ministry of Agriculture. Other projects for which allocations were discussed included the sterilisation plant for the National Dairy Research Institute in Karnal; and equipment for artificial insemination work and for the electrically-powered seed dressing apparatus meant for the Directorate of Plant Protection, Quarantine and Storage. The mission agreed to make a cash contribution of £800,000 for the Delhi milk supply scheme, and to provide technical personnel, such as an installation engineer, management adviser and a milk procurement adviser to help in the work of collection centres, and also a Milk Distribution Adviser for short-term periods. A sum of £350,000, which is needed in addition for the completion of the Delhi scheme, will now be paid by the New Zealand Government. As a rough working arrangement, it has been agreed that India will meet the cost of buildings for the project and New Zealand will supply the equipment and plant.

The mission accepted the idea of financing the whole project for an International Training Hostel in Aarey costing Rs. 11 lakhs, but the phasing of the investment was left for later consideration. The mission will make an on-the-spot study to assess the needs of the Patna Co-operative Milk Union Scheme. It has agreed to meet the cost of a sterilisation plant and of equipment required for pasteurising milk in the experimental dairy of the National Dairy Research Institute in Karnal. The New Zealand Government has already transferred funds to meet the cost of equipment for artificial insemination work, amounting to £14,000. The equipment for the electrically-powered seed-dressing apparatus is being manufactured in New Zealand and will be ready for shipment by mid-April. The mission has agreed in principle to giving assistance for the Madras milk scheme. Among the questions which were discussed at the meeting were those relating to the additional assistance which New Zealand can provide for the execution of other dairy projects; the need for a two-man advisory team from New Zealand in connection with the setting up of milk control authorities; and also the need for a resident consultant in India from New Zealand to advise on all projects receiving aid from that country under the Colombo Plan.

Nationalising Diamond Industry

The Government has decided, in principle, to nationalise the mining, processing and sale of diamonds. This follows the report of the Diamond

Mining Enquiry Committee, which recommended the nationalisation of this industry. Legislation is now being drafted.

Prospects for Second Plan

The Adviser to the Planning Commission, Mr. E. P. Moon, has made a realistic assessment of the second five year plan in a recent broadcast. It supports the stand its critics have taken since the initial stages. Mr. Moon is glad that the plan has, "at this early stage, bumped up against difficulties. It has compelled us to face realities, to build on facts rather than on hopes and to take corrective action before excessive exuberance had got us into a real mess." To put it conversely, the plan, as it was originally framed, ignored realities and was built on hopes rather than on facts. This is exactly what a member of the Planning Commission, Mr. K. C. Neogy, had said about it when it was being formulated. Mr. Moon refers to an "escape clause", stating that "owing to the magnitude of the plan, it will be difficult to implement it in five years." The first question is why, with this reservation, the plan is called a five year plan? Secondly, when was this reservation inserted, from the outset or after Mr. Neogy's note? Mr. Moon expresses his personal belief that the present shortage of foreign exchange and the somewhat inflationary conditions prevailing in the country "need lead to no worse results than slowing down or staggering the plan."

A revenue surplus of Rs. 350 crores was the foundation stone on which the grand edifice costing Rs. 4,800 crores was built. Even this Rs. 350 crores has now been converted into a deficit of Rs. 50 crores since the Government has agreed to some non-development expenditure during the plan period. Contrary to expert advice, the Planning Commission made deficit financing one of the principal ways of finding resources for the plan. While credit was taken for earnings from exports, some of its members did their best to discourage them by pressing for unrealistic policies. Planning basically means giving priorities. But in education, for example, the Planning Commission's first priority was a museum which is being constructed in New Delhi, the second was a theatre and the last a library. The Planning Commission's report was not a plan, but an accumulation of schemes in which the various Union Ministers were interested. It was largely formulated on the principle of "pullocracy", the pull a Minister had in the Union Cabinet.

Mr. Moon says: "We cannot go on at the pace that we have been going and will have to take a breather. This does not necessarily mean that projects already well advanced will have to be suspended. We shall contrive to procure whatever is required to bring them to completion, but, for a little time at least, we will have to go slow about ordering equipment for new projects and for some of those which are still in their early stages. These will, therefore, get delayed and to that extent certain parts of the plan will be staggered. Similarly, if internal prices continue to show an upward trend, it may be felt necessary to curtail deficit financing and, to the extent that this cannot be made good by increased taxation, it will mean that less expenditure can be incurred by the Government within the country, with a corresponding slowing down of some of the planned activities."

"You would probably like me to be more specific and indicate what parts of the plan will get deferred. The matter is currently under examination and it is, therefore, rather difficult for me to say anything except in somewhat general terms; but the main structure of the plan will remain unaltered. Thus, all the steel plants should go forward according to schedule, as the foreign exchange requirements have already been arranged. Consequently, all the plans for the extra coal and transport required for them will also have to go forward. On the other hand, some of the other projects which have not yet been started, for instance, foundries and forge shops, perhaps even some of the fertiliser factories and power plant, may get put back for a year or so. In the same way, the main programme for increasing agricultural production is likely to proceed unaltered; but some of the frills of the agricultural plan may get trimmed."

London

BANK RATE REDUCTION WELL RECEIVED

RESTRICTION OF EXPENDITURE REMAINS OFFICIAL POLICY

(FROM OUR LONDON CORRESPONDENT)

FOR months now the City has played the "this week, next week, some time" game over Bank rate reduction and an easing of the credit squeeze. The announcement came in the traditional form at noon last Thursday, and was greeted with enthusiasm, even though Mr. Thorncroft, making his first important pronouncement as Chancellor of the Exchequer, put the official point of view in the following terms: "It would be wrong to interpret the move from 5½ percent to 5 percent as a change in economic policy. This is not a signal for bankers or others controlling sources of finance to relax credit or to ease restrictions on lending. This reduction in the high rate which has prevailed for the last 12 months is designed to enable the Bank of England to maintain the full effectiveness of monetary policy. I am assured that their control will not be weakened by this move. I must emphasise that there is no change in the need to restrain both public and private spending and lending to make room for exports and essential investment. As long as these are our economic objectives we intend to continue to make full use of interest rates to discourage spending and encourage savings. At the same time monetary policy should remain flexible and Bank rate will be varied as circumstances require." The official view is still that inflation, rather than deflation, is the greater danger and that before re-expansion can be safely encouraged the strain on resources and savings must be eased by defence cuts and other curbs on spending. The reduction, which brings Bank rate closer to the prevailing market level, will be a help to the Budget and to the balance of payments, and be even more helpful in carrying on and expanding the Government's recent debt funding operations.

Reactions Slight

So far as Government securities are concerned, the cut in Bank rate had been more or less discounted, but the selective boomlet in industrials was less justifiable and, therefore, short-lived, and although there was an inevitable weakening of the pound against the dollar in the exchange market, foreign confidence in sterling was on the whole unimpaired and operators were content to await further developments to provide guidance as to the Government's intentions on economic policy.

The ½ percent cut will move rapidly through the whole structure of interest rates—to that allowed to the holders of deposit accounts, to the borrowings of the nationalised industries, leading industrial companies and private borrowers, and even in due course perhaps to long-term rates of interest. Neither mortgage nor hire-purchase rates are likely to be affected, though if the belief that this is only the first stage of a general move to lower interest rates is correct, even these may react later. The Labour Opposition in Parliament sought clarification of what seemed to be a "contradiction" in a lowering of Bank rate and the maintenance of the credit restrictions, but Mr. Thorncroft refused to be drawn at that time as later his economic policy as a whole was to come up for debate.

Free Trade in Europe

Mr. Thorncroft represents the U.K. at the current O.E.E.C. meeting in Paris on European free trade. The British viewpoint, which has been outlined in a White Paper and which it is hoped the Council will accept agrees to the starting of negotiations for the implementation of the proposals. Very briefly, the British plan is that the 16 countries in the area would agree to abolish their tariffs and quotas for trade with each other. This would be done progressively by agreed stages over a period of ten to 12 years. Britain would insist on food, feeding stuffs, tobacco and drinks being excluded to protect home agriculture and maintain Commonwealth preferences. The Government believes the project would "in no way prejudice the high level of employment" in Europe. The Chancellor has other preoccupations also, for the supplementary estimates show an excess of expenditure over the original estimates for 1956-57 (with £94.4 million for the Civil departments and £1.6 million for the Ministry of Defence) to a net figure of £107.3 million so far, with the Navy and R.A.F. Supplementaries still to come. The sum required is much the largest at this time of year, since February, 1952, when £121 million was needed to supplement the estimates, and would have been about £187 million but for the progress made by Mr. Macmillan as the Chancellor towards his declared aim of cutting the budgetary estimates by £100 million. Other uncertainties include the lack of any agreement as to the use of the Suez Canal, in spite of the progress of the clearance operations, and the Egyptian Government's attitude towards Mr. Hammarskjöld's approaches in this connection.

Dollar Reserves Still Falling

The January gold and dollar figures, showing a fall of \$49 million in the reserves, turned out to be more or less what had been expected. Although the December mobilisation of dollar credits effectively stemmed the speculative pressure against sterling, the balance of payments is now feeling the strain of the cost of Suez, more particularly in having to meet "considerable additional"

dollar expenditure on oil. Since there has been no draft on the \$500 million credit with the Export-Import Bank, these extra outlays have been met wholly through the exchange. Making allowance for all special payments, on the one hand for defence aid of \$4 million, and on the other for \$17 million paid to the European Payments Union, in settlement of the December deficit and \$3 million paid to E.P.U. creditors in bilateral settlements, there was a residual deficit last month of \$32 million. That compares with a residual deficit of \$158 million last December and of \$253 million last November. On that basis it is safe to infer that the speculative distortions which affected the two preceding months are no longer operative. At this time of year, the sterling area should be earning a big surplus, and needs to earn one if it is to survive the lean months of the autumn. On the January showing, however, it is hard to avoid the conclusion that, with further considerable dollar oil purchasing ahead, the process of rebuilding the reserves is likely to be both difficult and slow. The February figures will derive the benefit of a surplus of £9 million with the European Payments Union for January—the first since last May—and at some time or other, one presumes, the waiver of the interest payment on the American loan will be granted and the reserves receive a further lifeline.

Imports of Other Cotton Goods

While much attention is directed towards British imports of grey cotton cloth, there is not much mention of the imports of cotton yarn, and those of finished cotton cloth seem to be virtually ignored. The imports of cotton yarns, however, continue to increase. Last year they totalled 16,800,000 lbs, against 14,000,000 lbs. in 1955, 10,700,000 lbs in 1954, and only 3,400,000 lbs in 1953. Italy and Belgium were formerly the chief suppliers, but last year Hongkong took the lead with 4,400,000 lbs, against 2,100,000 lbs, in 1955, and India came second with 4,300,000 lbs, against 1,600,000 lbs, in the previous year. The third on the list in 1956 was Pakistan, which supplied 2,500,000 lbs, compared with only 100,000 lbs in 1955. Imports of bleached, printed, dyed and coloured cotton cloth increased to 38 million square yards last year, against 31.3 million square yards in 1955 and 30.9 million square yards in 1954. Of last year's total, 20.2 million square yards were coloured cloths (including 7.1 million square yards of damasks, tapestries, brocades and similar fabrics) and 9.8 million square yards were prints. Belgium, as in most recent years, was the principal supplier in 1956, sending 13.8 million square yards, against 12.5 million square yards in 1955, while Germany took the second place with 5.3 million square yards, against 3.5 million square yards, imports from India having fallen to 4.9 million square yards, compared with 6.1 million square yards.

H.P. Concession Boosts Motor Sales

Striking confirmation of the tonic effect on the motor trade of the recent relaxation of restrictions is provided in the January figures issued by Hire Purchase Information. They show total contracts numbering 70,711, against 30,315 for December and 48,510 for January, 1956. The outstanding feature is the used car figure of 34,086, which is well over double the preceding month's 14,105 and a considerable advance on the 21,546 recorded for January, 1956. New motor cycles, at 7,787 (2,078 December and 3,741 January, 1956) also show up well. Other figures are as follows: new cars 4,146 (2,432 and 6,782); commercial vehicles, new 3,070 (1,941 and 4,088), used 4,402 (2,610 and 3,427); used motor-cycles 14,666 (5,116 and 6,885).

Canberras for the I.A.F.

The Indian Air Force is to buy 68 English Electric Canberras jet bombers. The order, valued at considerably more than £20 million, is the biggest ever placed for British military aircraft by any country outside the N.A.T.O. and was signed recently. Delivery will begin later this year of 54 Mark light bombers, six, Mark four Canberras equipped with dual control, and eight Mark seven reconnaissance aircraft, together with spares and equipment. The aircraft will be built at the company's Preston factory, and tests will be carried out at Samlesbury airport nearby. Indian ground crews will be arriving for training in Britain soon to join Indian pilots who are already training with the R.A.F. India decided last April to re-equip her air force with Canberras in preference to the Russian-built Ilushins.

Dollar-earning Exports

Scotch whisky, as a dollar-earner, still leads British exports of consumer goods to the United States. This emerges from the annual report of Mr. R. W. J. Simmons, chairman of the American Buying Offices Committee of the American Chamber of Commerce in London, who says that in 1956 there was a further expansion of British-made consumer goods exports to both the United States and Canada, although for exports generally, the increase was most substantial among non-consumer goods. Lancashire cotton shirtings and dress goods continue to be well received in North America "regardless of higher costs" and there is an increased demand for blends of wool and cotton. Exports of children's knitted outerwear have recovered from the setback two years ago, caused by American promotion of synthetic fibres. "Many consumers are reverting to natural fibres."

On metal goods, Mr. Simmons states that "while the majority of Sheffield and Birmingham manufacturers are doing their utmost to ship only quality merchandise, it is unfortunate that considerable supplies of stamped blades bearing the name 'Sheffield' continue to be shipped to the United States for finishing. This type of merchandise may eventually injure the cutlery trade."

Bombay

EASIER CREDIT UNLIKELY TO HELP COTTON TEXTILES

HIGH STOCKS EMBARRASS MILLS

(FROM OUR BOMBAY CORRESPONDENT)

THE recent action of removing credit restrictions on cotton textiles has failed to stimulate the market. In the present context, this removal can only mean that the trade can hold larger stocks, but it is doubtful if it will wish to do so. The cotton piecegoods market continues to be listless and periodic improvements, when they do occur, are far below the normal for this time of the year. Usually, upcountry centres begin to replenish their stocks of fine and superfine cloth at about this time for the summer months. So far, this seasonal demand has been absent and the trade is not inclined to take a particularly optimistic view of the immediate future. But even if the demand for these varieties were to improve, it would make little difference to the trade as a whole because the coarse and medium counts, the bread and butter lines of the Indian textile industry, continue to be neglected. Prices have been barely steady at lower levels.

The mills have their problems too. They are faced with accumulating stocks in circumstances of a falling demand. The position is so serious that mills may find themselves compelled to keep stocks in excess of the limit prescribed by Government rules. Also, the cost of production is rising because of the higher prices of the new cotton crop. Industry circles believe that the time is now opportune for the Government of India to reconsider the question of the enhanced excise duty. It is contended that the incidence of the increased duty has led to consumer resistance. It is also pointed out that the Government did indicate its willingness to reconsider the question if prices declined to the December 1955 level. This condition would seem to have been fulfilled and it may be that a withdrawal of the enhanced excise duty would give the industry the stimulus it needs. Another factor which may tend to neutralise the effects of the removal of credit restrictions is that the money market is more stringent now than it was when the restrictions were imposed in September last. The export side of the business has been equally disappointing. Both Ceylon and Indonesia have shown hardly any interest. Burma has been a good customer for greys because of her recent tenders. Shipments to this country, however, will now slacken until the envisaged import corporations are set up and fresh quotas issued. Whether Burma will place further business in this country, and she needs qualities other than greys also, will depend on the competitive position of the Indian industry.

The Cotton Market

The cotton market, on the other hand, continues to be brisk. The announcement of a fresh export quota of 200,000 bales touched off renewed activity. It was feared earlier that the export duty on cotton would be increased, but since this has not come about, the market has gained further strength. Export prospects seem to be bright. It is known that Britain, France and Japan are interested and about 15,000 bales have already been sold. It appears that shippers will be able to use the entire quota without much difficulty. Of the total quota, 50,000 bales are allocated for Bengalis while the balance is spread over other varieties with ¾ staple and below. Prices so far are on a parity with Pakistan but a disturbing factor is that quota holders are demanding exorbitant unofficial premiums which tend to inflate the export price. It may be that these premiums will make business difficult, particularly at a later stage when the available export quota becomes scarce. It seems that mills have decided to buy in the spot market on the basis of their short-term needs. This means that they are constantly in the market and this has helped to keep prices at a somewhat higher level. Prices of the popular varieties of domestic cotton have increased by about Rs. 5 a candy. The demand is restricted to 320F and 216F but substantial interest has also been shown in yellow pickings. Short staple varieties have increased by Rs. 5 to Rs. 10 for each candy.

The futures market also revived with Jarilla March contract improving by Rs. 30 to Rs. 682 a candy on renewed buying and short covering. The Vijay April contract has also recovered its previous losses and it seems it will be carried still further on speculative buying. Adverse weather conditions in some cotton-growing areas have helped the Vijay contract to recover. Perhaps the most important development has been that the East India Cotton Association has decided not to make any changes in delivery contracts. It is true that some changes are contemplated in delivery contracts for May, June, July and August, but these are of a minor technical nature relating to Jarilla A and B descriptions. The weightage for Khandesh, Mogla Jarilla and Madhya Bharat is suggested at 9½ percent while the figure for the other tenderable varieties is sought to be maintained at the present level of 6½ percent.

Import Quotas

The trade looks forward to fresh import quotas for American cotton. The last import licences have now been exhausted. These were issued to cover textile exports to Burma. Limited business was done in Egyptian growths while the interest in Sudanese cotton is confined to the higher Gezira Sakel grades. There is demand for supplies from the Sudan's 1956 crop—both for afloat and spot shipments—but business has been limited because of a shortage of offerings.

The cotton yarn market was dull following reports that handloom cloth is accumulating with weavers. An important event was the introduction of a broad contract for forward delivery of rayon yarns. Under this contract, deliveries can be effected not only of domestic silk yarns in 150 to 120 deniers bright 1st, 2nd and 3rd qualities on cones, but also of the same domestic yarns in hanks. In order to broaden the delivery contract still further, it has been decided that imported bright yarns in 150 to 120 deniers on cones and hanks will also be eligible for tendering. Although this will help to curb some of the present unhealthy speculative activity, it is not the complete answer to the problem. The consuming industry needs much greater assistance for its yarn supplies.

Oilseeds Easier

Oilseeds ruled easier last week but the selling pressure seems now to have subsided. Export possibilities seem to be dull because the Indian product has been priced out of world markets. The Argentine has emerged as a heavy seller of groundnut oil and linseed oil and has lowered its quotations from £165 and £129 to £137 and £119 respectively. Cottonseed oil has also dropped from £145 to £129 with nigerseed oil similarly declining. Castor oil too is dull. With the exception of small consignments to Britain and the Continent, business is at a standstill. The United States has made no recent purchases. It seems that American importers are holding off because they feel that the satisfactory Brazilian crop will force Indian prices down. On the other hand, Indian exporters believe that the Brazilian crop will not be sufficient to meet the entire American demand. They anticipate that American importers will enter the Indian market at a later stage. Meanwhile, there is an impasse with both sides waiting for the situation to clarify.

I.F.C. LOANS TO PRIVATE INDUSTRY

MR. NADAR CONFIDENT OF CONGRESS VICTORY

(FROM OUR MADRAS CORRESPONDENT)

GREATER assistance from the Industrial Finance Corporation for the private sector seems likely in the light of assurances given by Mr. K. R. K. Menon, chairman of the I.F.C., during his recent visit here. He told chambers of commerce that no ceiling on loans to industry was being contemplated at present, particularly to sugar and textile concerns. I.F.C. shares held by banks and others have no market now; trading in them might enlarge public interest, although statutory restrictions appear to stand at present in the way of sale or transfer. The interval between the sanction and the actual disbursement of I.F.C. loans was referred to in the memorandum submitted to Mr. Menon. It was pointed out that interim payment in advance of legal formalities being completed was already in practice, but the I.F.C. as a body accountable to Parliament and using public funds, had to adopt strict and complete precautions in giving loans. The I.F.C. should have larger resources to help industry draw capital especially in the south where the banking facilities did not afford long-term aid to industry; this view was put forward by the Andhra Chamber. A higher return on I.F.C. shares through a bold new policy of investment seems possible to some who urge that the Corporation can borrow from the public on its debentures guaranteed by the Government, and acquire an interest in the equity capital of

promising ventures. In any case, fuller employment of funds held by the Corporation has been advocated, especially now in view of the stringency of money.

Congress Hopes of Success

The Congress Reform Committee is not worried about the expulsion of its members for six years by the Congress Committee acting at the instance of Delhi. But the C.R.C. may not score at the polls and may die of inanition according to many who point out that the Chief Minister's choice of candidates was made only in consultation with his colleagues on the committee. Mr. Nadar has declared that the Congress does not lose much by defections; the C.R.C. does not have big "names" and Press backing is not really much. The Chief Minister advises landlords to accept land reforms and hopes that the Congress will get 86 percent of the seats.

Pandyam Bank

The tenth anniversary of the Pandyan Bank, Madurai, led to a review of post-war banking developments there. Branch banking in the area round Madurai has certainly made great strides and the Pandyan Bank has been able to show a steady rise in deposits. The help of the Harveys has contributed to the rapid progress of the bank which has financed inland trade. Competition with big banks has not hindered it, for its local connections have been a sustaining factor. Higher rates of interest offered on deposits and secured on its advances to clients have also helped. It is noteworthy that other banks in Madurai have not made much headway and Pandyan Bank shares on the basis of a 7½ percent dividend are quoted at Rs. 40 a Rs. 25 share in line with the shares of the older and bigger Indian banks. The celebrations, over which Sir C. P. Ramaswami Iyer presided, led to expressions of goodwill from the leaders of business in Madurai including Mr. Craig Harvey and Sir James Doak whose help as chairmen in the past led to the yarn trade coming to rely on the bank. Concentrating on three districts in the south, the Pandyan has opened a new branch in Nagercoil in Kanyakumari district on the edge of the west coast planting area. Industrially, Madurai is growing and experts met recently to advise on an institute of management to create greater interest in the problems of organisation. With eight cotton mills and large road services, Madurai is a distinct blend of the old and new, a historic pilgrim centre with a big trade in coffee and cardamoms as well as handloom cloth and dyestuffs.

Buckingham Canal

Improvements to the Buckingham Canal running along the East coast are under examination. The Canal dug in 1877 as a famine relief work by the only Duke who was a Governor in India is narrow and shallow though it is connected with the canals in Andhra and can permit boats to go from Kakinada to Markanam in South Arcot, a distance of nearly 400 miles. Because of the strain on the railways, the Government has been asked to examine improvements by reinforcing the Canal's banks, deepening for letting bigger boats through and by the avoidance of filling by the city sewage. The canal rather than the river is the means for bulky traffic like straw, fuel and lime or bricks for the city. Punting by poles, not towing, is the rule, but the Canal's terminus is the Trivelyan Basin. Extension of the Canal into the port is considered advisable like the link-up with the southern end of the Canal which may be improved by letting the Adyar water flow into it after deepening. The scheme for making the Canal a big waterway to suit higher craft with diesel engines has been talked about for three years, but not until the scheme to link Calcutta with Cochin by a waterway has assumed a definite shape, will the plan to widen the Buckingham Canal be seriously considered.

New Industries in South

Mr. T. T. Krishnamachari has argued that industry in the south can grow only by having raw materials and fuel. As there will soon be some addition to industry in Mettur, there is no ground for complaint. The starting of a synthetic gem plant in Mettupalayam with Swiss help is not going to make much difference. There is already the manufacture of Rangoon diamonds in Tiruchi which has a big trade in cheap jewellery and relies on synthetic stones mainly. The manufacture of razor blades in Coimbatore is also contemplated. A loan from the Government is under consideration and an official publication noted two years ago that locally blades will sell well as imported blades are scarce and dear. The chances of manufacturing shoe polish on a big scale have been indicated by the display of shellac articles. A major problem is getting the tin containers. The exhibition held here last week indicated that the local abrasives industry relies on shellac as a raw material even as lacquers and paints are based on shellac at present. In some Madras forests also, the lac insect thrives and avenue trees are said to make good hosts for the lac insect. The making of sealing wax is common, but shellac as an item of foreign trade or local manufacture is unknown and that is why the display arranged by the Nankun Institute proved educative. A wider use of shellac at home is likely. The Forest Utilisation branch in Madras is hopeful of making lac cultivation popular and the vogue of many moulded articles made from shellac may increase after the exhibition which showed that records are only one of the many articles made out of shellac which in the electric age shares with mica the distinction of being an essential article of export to the dollar area. But Madras is not in the picture at all, and the shellac trade is primarily centred in Calcutta.

Jute

COMMITTEE TO STUDY RIVER TRANSPORT IN JUTE-GROWING AREAS

BOTH GOODS AND RAW MATERIAL MARKETS FALL HEAVILY

ACCORDING to reports from Delhi, a committee is to be set up soon to study the problem of river transport in Assam, Bihar and northern Bengal. It is not clear whether the committee will consider the question of communication between these districts and Calcutta without passing through Pakistan; one report states that it will be mainly concerned with the silting of existing routes through Bihar and the proposed canal to connect the Brahmaputra with the Ganga. While this proposal has much to commend it, there is doubt whether the east-west traffic between Assam and Bihar is sufficient to make it an economic proposition, while the fact that the canal would have to cut across the natural line of drainage in these areas would raise other problems.

From the point of view of the jute industry, the most urgent project is the re-opening of the Bhagirathi river to provide direct water communication between Bihar, northern Bengal and Calcutta. This proposal, which has been made many times in the past 20 or 25 years would, it is believed, be less costly than the Brahmaputra-Ganga canal. It would follow the natural line of drainage and be assured of a volume of traffic which would justify the cost. It would also provide irrigation and electric power for a large area. If the Bhagirathi project is given preference, the Brahmaputra-Ganga scheme could be executed later so that traffic from Assam, as well as from Bihar, could pass direct to Calcutta without having to go through Pakistan. If, on the other hand, the scheme is carried out first, there would still be no water route to Calcutta without going through Pakistan, and the canal would be useful only for east-west traffic. River traffic from Bihar and Assam to Calcutta would still have to go through Pakistan, or the goods would have to be transferred to the railways at points on the Ganga. The lines from the Ganga ferries to Calcutta are already congested.

Jute and Gunny Prices Slump

Regular readers will not be surprised at the sharp drop in prices which has taken place in both sections of the market during the past week. This is because the various factors which have combined to cause the fall have already been discussed in these columns. In the issue of 10th January, it was pointed out that the easier trend in gunnies then apparent was due to the heavy anticipatory buying which had been done at the time of the Suez crisis and that, with the prospect of re-opening the Canal, overseas buying would slacken off until stocks abroad came down to normal levels. Doubt about the adequacy of jute supplies was, however, given as a factor which might serve to sustain the prices of manufactured goods.

Later in January, when the revised estimate of the mesta crop showed a larger expected yield, a re-appraisal of the fibre supply position became necessary. It was pointed out that, while it had seemed previously that the raw material factor had been the prop on which the firmness of the gunny market rested, that prop had been knocked away. Also the fact that almost all jute dealers were holding stocks made the jute position vulnerable. Again, in the issue of 31st January, reference was made to the view that, in spite of the small stocks of hessian lying in mills' godowns, the hessian position was weak because overseas customers would refrain from buying until their stocks had returned to normal levels. On 7th February, attention was drawn to the fact that the low level of stocks in Indian mills was offset by increased stocks outside India. In fact, the stocks had been merely transferred elsewhere without there being any significant increase in consumption.

There were, of course, other factors which contributed to the fall in raw jute prices. One of these was the weakness of the market in Pakistan. This was said to have been brought about by the fears of Indian nationals in Pakistan that there would be trouble between the two countries over Kashmir. This fear brought a desire to liquidate holdings of raw jute. It was also said that the tightness of the shipping position in Pakistan had eased, and that high prices had been due to that. On the other hand, it seems likely that the strong demand which had raised prices in Pakistan was analogous to the gunny position—due to a fear about future supplies during the crisis. If that is so, overseas buyers of raw jute may also be expected to curtail their buying until their commitments are back to normal. Last week, it was pointed out that the price of Indian jute was to some extent determined by the price of Pakistani jute, which at present makes its purchase uneconomic for Indian mills. The disparity between Indian and Pakistani prices has now been reduced, but is still too much. There are, however, hopes that it may be further reduced.

One factor in favour of the mills has developed in the past week or two. The fall in the price of raw jute has been more than that of manufac-

tures and it is estimated that the mills' position as regards profit and loss has improved by about Rs. 50 a ton.

THE JUTE MARKETS

Manufactured Goods: The market has suffered a severe fall in prices during the week. This may have been touched off by weakness in raw jute but the increase in mills' stocks of manufactures at the end of January, which was announced on Friday, increased the weakness. There has also been a lack of demand from abroad. But the collapse, for it was really that, was probably the result of circumstances detailed elsewhere, and which have been accumulating for weeks. There has been heavy selling pressure in the speculative market. Some mills showed anxiety to make sales of ready goods but it is reported that business has been very meagre. In the last day or two, there has been some covering business by shippers and speculators and one fatka operator is reported to have made large purchases at the decline. At the time of writing, the fall seems to have been arrested and prices have recovered a little. On Wednesday morning, quotations were as under:

	February	March	April-June
	Rs.	Rs.	Rs.
40in. 8oz.	34-2	33-12	33-2
40in. 10oz	41-10	41-3	41
B Twills	113-10	113-2	112-2
Heavy Ceas (Plain)	116-4	114-12	112-12
A Twills	137-8	136-12	136
Liverpools	131	129-8	128-4
Cornsacks	115-12	115-12	114-8

Raw Jute: The market has been very weak with prices declining daily under pressure from sellers, and without much business being recorded until the end of the period. Weakness in the gunny market and lack of demand for gunnies kept mills out of the jute market except where they had to make small purchases to meet immediate needs for particular qualities, or where they have picked up bargains. On Monday, however, some buyers seemed to get the idea that the fall had been such that it was worthwhile picking up some cheap jute and this idea spread on Tuesday when a considerable amount of business was done. Possibly mills were also encouraged by the fact that, at the prices now current, they are able to do simultaneous business with less loss on sacking and more profit on hessian.

Business was reported in Assam and Northern jute at the beginning of the week at Rs. 29 basis Bottoms, but prices fell sharply to Rs. 28 from which they later recovered to Rs. 28-8. Assam tossa was done at eight annas higher. Mesta was sold at prices down to Rs. 23-8, but recovered to Rs. 24-8 basis Bottoms. Kissanganj Mesta Middles alone were done at Rs. 26 and Daissee Mesta Bottoms alone at Rs. 24-8. Jungli Middles alone were sold at Rs. 29. Bimil was taken at Rs. 22-14 F.A.Q. and ready bills of lading for Assam jute at Rs. 28-8 basis Bottoms. There was a fairly large turnover in Pakistani Cuttings at prices from Rs. 107-8 to Rs. 97 for parcels which had already arrived in Calcutta but had not been unloaded. Later on, Rs. 98 to Rs. 100 was paid for ready bills of lading and buyers were offering Rs. 97 to Rs. 98 for March-April shipment. Small business was reported in Pakistani Export Firsts at Rs. 210. At the time of writing, sellers are inclined to be reserved and to hold on in expectation of a recovery.

Quotations on Wednesday morning were as under:

Indian Jute:	Landed at Mills. Rs. a md. basis Bots.	Shipment.
Northern	29	Feb.-March
Assam	29	"
Murshidabad Jute	27-8	"
Murshidabad Tossa	29-8	"
Daissee Jute	31	One month
Daissee Mesta	24-8	"
Western Mesta	24	Feb.-March
Northern ex Calcutta	28	One month
Jungli Jute	26-8	Feb.-March
Bimil	F.A.Q. 23-8	"

I. J. M. A. STOCK FIGURES FOR JANUARY

The Indian Jute Mills Association reports that the total stocks of jute goods at the end of January, 1957, were as follows:

Description	31st January, 1957	31st December, 1956	Increase over (+) or decrease from (-) last month	31st January, 1956
	Lakh Yds. 000 Tons	Lakh Yds. 000 Tons	Lakh Yds. 000 Tons	Lakh Yds. 000 Tons
Hessian Cloth and Bags	8.85 23.9	6.98 19.7	+1.87 +4.2	9.41 25.6
Sacking Cloth and Bags	16.35 68.5	15.41 64.7	+0.94 +3.8	10.65 45.3
Others	11.7	11.3	+0.4	7.5
Grand Total (000 Tons only)	104.1	95.7	+8.4	78.4

N.B.—These figures are based on replies received and represent all members of the Association and Gaganbhal with estimates for three non-member mills.

The Cossipore market has been weak, as mills have withdrawn and the only business has been covering against previous sales. Imports were 675 wagons and, as the offtake has been small, there has been a further increase in stocks. It is also reported that those who issue stock statements have revised their figures and now put the stocks at between 10 and 11 lakh maunds.

Mofussil: Imports have been increasing in some districts and buyers have mostly withdrawn. Prices are lower, though they have not fallen to the same extent as in Calcutta. Other districts report that, because of lower prices, imports are being held back. Rain has been widespread. This will enable the ryots to start cultivation.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented:

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 5th February, 1957	282.5	7,475.7	7,758.2
1st to 5th January, 1957	1,160.6	14,577.4	15,738.0
1st to 5th December, 1956	1,375.3	10,859.9	12,235.2
Sacking			
1st to 5th February, 1957	4,315.6	1,241.6	5,557.2
1st to 5th January, 1957	8,285.5	426.1	8,711.6
1st to 5th December, 1956	9,578.8	367.0	9,945.8

THE PAKISTANI JUTE MARKETS

SHARP FALL IN FIBRE: REPORTS OF EARLY RAINS

(FROM A CORRESPONDENT)

THE Narayanganj market has dropped sharply and near panic conditions prevail among pucca balers. Loose jute lots are now available at Rs. 28-12 for B Bottoms, with a difference of Rs. 2 for C Bottoms and X Bottoms. Kutcha bale prices are about Rs. 1-8 higher. Pucca bales have been quoted at Rs. 175 for Export Firsts, Rs. 165 for Export Lightnings and Rs. 154 for Export Hearts. Business is reported in Cuttings at Rs. 88. Overseas markets continue to decline and very little interest is being shown. Free sellers are reported at £99 for Export Firsts, £94 for Export Lightnings and £89 for Export Hearts. There are no buyers at these prices; taking advantage of the large float position and fairly good shipments against old contracts, they continue to depress prices. There are even reports that overseas interests have cancelled some high-priced contracts.

In the local loose jute market, imports remain fairly small and it is noteworthy that what is coming now is mainly kutcha bales from the mofussil rather than loose jute. Fortunately, imports are in a better condition. This is probably because buyers are scarce, so that all wet jute is being rejected. Most of the purchases are being made by mills who are quietly buying loose jute which does not affect the market very much. There is also some enquiry from one or two big operators who have a short position and are buying the market down slowly. The Narayanganj market is so weak that reports of interest from a Burmese jute delegation have not affected it at all, although the delegation is expected to buy 20,000 bales.

The position of the ports is slightly better, but there is still a great deal of congestion. Reports are coming in, firstly, of early rains, which will help growers prepare the ground for early sowings, and secondly, of very large carry-overs from both the Pakistani and the Indian crops. In Pakistan, it is difficult to foresee a carry-over of more than 500,000 or 600,000 bales, even allowing for a considerable reduction in India's purchases compared with last year. It is felt that overseas consumers alone must buy at least 1,000,000 bales more.

Pakistani jute mills have a fairly comfortable position in sacking, and are, therefore, not keen to sell at the present low levels. The lack of demand from overseas, as well as the low fall in jute prices in Pakistan, are helping depress the gunny market. For the Karachi market, B Twills are quoted at Rs. 124 ex mill and 45in. 11oz. at Rs. 54, but the undertone is steadier.

Every day Clippers must pass the world's toughest fitness test

Before and after each flight, a rigorous inspection is made of all operating parts. Even in flight, the state of a Clipper's* health is under constant scrutiny—through the electronic eyes of Pan Am's Engine Analyzer.

Every 11 weeks engines are taken down with critical interest. Instruments probe vital parts. From nose to tail each square inch is thoroughly inspected, every part replaced at the slightest drop from peak efficiency.

Exact care like this is why experienced travellers will tell you, "Pan American knows how to run an airline!"

Let your Travel Agent arrange your trip—his services are free. Or call Pan American in:

I.J.M.A. PRODUCTION FIGURES FOR JANUARY

The Indian Jute Mills Association reports that the total production of jute goods in January 1957 was as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	2,767 tons
	193.7 lakh yds.
	79.0 lakh Nos.
(b) Sacking	41,478 tons
	971.9 lakh yds.
	4,01.9 lakh Nos.
2. Gunny Cloth	
(a) Hessian	36,092 tons
	13,93.8 lakh yds.
(b) Sacking	1,996 tons
	42.3 lakh yds.
3. Other manufactures	6,594 tons
4. Total production (above figures combined)	
(a) All kinds	88,837 tons
(b) Hessian (both bags and cloth)	14,97.5 lakh yds.
(c) Sacking (both bags and cloth)	19,14.2 lakh yds.

SUMMARY

	(00,000 Yds.)			(000 Tons)		
	Jan.	Dec.	Jan.	Jan.	Dec.	Jan.
Hessian	57	56	56	57	56	56
Sacking	14.98	14.27	14.43	38.8	37.7	39.3
Others	10.14	9.56	12.81	43.5	41.3	52.6
				6.5	5.9	6.0
	Grand Total			88.8	84.9	88.9
	Hours worked			212.0	206.9	200.5

N.B. These statistics are based on replies received and represent all members of the Association and Gagalbhai, with estimates for three non-member mills.

PAKISTANI ESTIMATES OF JUTE CARRY-OVER

P. J. A. PRESIDENT ANXIOUS ABOUT OFFICIAL MARKETING PLANS

IN his presidential address at the seventh annual general meeting of the Pakistan Jute Association last week, Mr. A. Dada, said: "The trade's estimate of the current crop is 6.5 million bales, which together with the carry-over of 250,000 bales, gives us 6,750,000 bales to dispose of. Out of this 2,140,000 bales were exported to overseas countries and 340,000 bales to India by December 1956. Considering that 1.2 million bales will be required for our own mills and for local consumption, we are confident that we shall be left with a very negligible carry-over."

"Baled kutcha jute prices for White B Bottoms during January 1955 to October 1956 ruled at an average of Rs. 28 in Narayanganj. This means that the cultivator, in our opinion, obtained during this period about Rs. 23 a maund, which we consider to be quite a fair return to him. From October 1956 onwards, prices have been rising consistently and received a great impetus from developments in the Middle East and Hungary. Overseas buyers were compelled to follow the soaring market and the situation closely resembled the Korean boom. Although world tension has since eased greatly, showing some reaction, prices have improved further to the present level of Rs. 32 for B Bottoms as compared with Rs. 27.8 in July 1956. The cultivator has benefited in no small measure by the interplay of these world political forces."

Competition from Substitutes

"While discussing jute, one cannot avoid making a reference to its substitutes. Pakistan's critics maintain that a basic commodity like jute cannot hold the world to ransom and have certainly not relished Pakistan holding its rivals in a cleft stick. They have, therefore, been making strenuous efforts during the last few years for the invention of new substitutes as well as for the wider application of those already in existence. The result is that despite the increase in world population and consequent expansion of the packaging trade, jute has not been able to maintain its erstwhile supremacy; if it appears to have held its own against substitutes, it is merely because the shrinkage of its consumption in advanced countries has been roughly balanced by its increasing consumption in countries that have begun developing recently. It would be very unwise if we allowed complacency to displace vigilance. The west, with its incomparable technological advance, seems to be in a position to make anything out of anything. That is why we are extremely shy of any heroic measures calculated to effect revolutionary changes in the marketing structure or export procedure. Any unsuccessful experiment with a crop which is the mainstay of the economy of the province will go down as an historic tragedy."

Marketing Export Board

"We understand there are plans afoot to form an Internal Purchasing Corporation and a Marketing Export Board to handle all export of jute by the Government. We understand that the two main objects of the scheme are: (a) to lift border jute to prevent smuggling; and (b) to ensure a fair return to the cultivator. With these lofty aims no one can have any quarrel. But we earnestly hope that the Corporation and the Board will not encroach upon the functions of the trad-

ing and commercial community. I do not wish to comment at length on the scheme since we do not know the full details. What I wish to underline is that in a scheme involving drastic economic changes in the province, it is not only necessary, but essential, that before putting it into effect the trade is given an opportunity to discuss it with the Government in detail. This is an issue that is considerably agitating this Association which represents 95 percent of the export trade, and we would be greatly pleased if you could give us an assurance that your Government would take us into confidence and discuss it in full detail."

Customs Examination

"We learnt, in April 1956, that the Central Board of Revenue was planning to introduce a new procedure involving the examination of all jute for export, whether by land or by sea, at the baling centres. We have on many occasions put forward our views regarding a workable alternative for the Customs inspection of jute, and that is to reinforce the existing establishment at Chittagong and Chalna for inspection of all consignments. We would suggest, as we have done on numerous occasions, that in case Customs suspect a consignment of misdeclaration, only 2 percent of it should be held up, and the rest of the consignment allowed to go forward. The 2 percent bales held up can be used for inspection, re-inspection or appeal inspection, as may be necessary, and such penalties as the inspection warrants can be imposed later. At a meeting of the Association representatives with the Collectors of Customs at the office of the Jute Board on 31st May, 1956, the Collectors advised that eventual location of the examination machinery at the ports was their ultimate objective but that since that was likely to take some time, they had devised the contemplated procedure as an interim measure. They further assured the conferees that they would not embark on any new plan that was likely to militate against the interests of the trade. In spite of these assurances, we learnt to our dismay, in October 1956, that the Central Board of Revenue were still planning to forge ahead with the scheme. I do not wish to appear to be sermonising, but I must repeat that the jute crop is not a commodity to experiment with too much. One experiment gone awry would spell ruin to a province periodically ravaged by famines and floods. We would feel greatly obliged if you would take up the matter with the Central Government and caution them that the proposed procedure would be a serious factor responsible for a steep decline in the prices of jute."

Internal Communications

"We have felt repeatedly that the capacity of the internal communications, i.e., the railways and the I.W.T., is quite inadequate for the requirements of the trade and industry. The movement of jute as well as of other commodities within the province has increased considerably of late. In the first place, the ban on the export of kutcha bales in December 1954 has necessitated the movement of jute from all over the province to the baling centres. Secondly, with the setting up of jute mills at different places, sizeable quantities of jute are moving to the mills. Thirdly, jute goods from the mills are moving in substantial quantities to the ports of Chittagong and Chalna. Fourthly, owing to the progressive commercial and industrial development of the province, other commodities are also being transported in larger quantities than before. And finally, during the last two or three years, food-grains have had to be moved in large quantities from the ports to the interior stations. The result is, as we have witnessed oftener than once, that there is a breakdown of the transport system during every period of emergency, resulting in widespread confusion and inconvenience. I would, therefore, take this opportunity of conveying the Association's strong feeling regarding the urgent necessity of taking immediate and effective steps to provide proper facilities for the full utilisation of the existing capacity and to initiate the replacement, modernisation and expansion of services where necessary, with a view not only to meeting the existing commercial and industrial requirements of the province but to ensuring, at the same time, a margin of safety."

Definition of Pakistani Firm

"Definitions are proverbially troublesome, but a greater source of trouble, in certain situations at least, is the lack of a definition. What is troubling some of us nowadays is the absence of an unambiguously precise definition of a Pakistani firm. There are instances of firms that are treated as Pakistani for purposes of a certain rule by one department of Government and as non-Pakistani for purposes of another by another department. We urge upon you that a Pakistani firm and a non-Pakistani firm should be precisely defined so that every one of us should know where he stands. Since commerce and industry have a point of contact with both the federal and the provincial administrations, we would suggest that a final decision should be arrived at by mutual agreement between the three Governments in Pakistan."

Simplification of Export Procedure

"The jute export procedure, cumbersome, complicated and time-consuming as it is, is anything but that required for an unimpeded outflow of the crop. Constant vigilance by the authorities against leakage of foreign exchange is an indisputable necessity, but our experience is that once the authorities devise a rule to cope with a certain situation, it continues to operate, by mere force of inertia, even though the changed situa-

tion might have rendered it utterly redundant. We are convinced that the export procedure can be greatly simplified without necessarily weakening the requisite vigilance. We would greatly appreciate it if you could arrange for an inquiry committee to be appointed to examine the current procedure in order to streamline it."

"The East Bengal Jute Dealers' Registration Act was promulgated in 1949 with the object of obtaining returns of stocks, purchases, sales, baling and shipment. We strongly feel that unless the stated purposes of the Act be adhered to, this Act should no longer be available to the executive machinery to obstruct the normal working of the trade and that recourse should be taken to proper investigation and proceeding in a court of law in the event of malpractices."

Chief Minister Replies

Replying to Mr. Dada's speech, Mr. Ataur Rahman Khan, Chief Minister of East Pakistan, declared: "During the last season, jute earned more than Rs. 100 crores of foreign exchange through the export of raw jute and jute goods. The credit for this earning goes fully to our growers who, in the face of numerous hardships and diminishing returns, have maintained a high level of productivity. The traders and industrialists have reaped their rewards as evidenced by the establishment of many baling presses and warehouses. The conditions of the growers have not, however, improved, and have in fact deteriorated."

"Year after year, the Government has to face the criticism that it has not protected the interests of the growers. The charge is based on the reasoning that, during the first three or four months after the crop is harvested, the prices are kept low and the tillers of the soil are given a meagre return. It is only later in the season that prices harden and improve. By this time the cultivator has already parted with his product. As a matter of fact, soon after the crop is sown the prices start weakening. It is to solve this tragic anomaly and correct this imbalance that the Government is determined to take such effective measures as may be necessary and I trust I can count on the co-operation of all those who have the good of Pakistan at heart to rise above their sectional interests and assist in this national task. I am conscious of the fact that the problem is not an easy one and it is hardly possible to lay down certain uniform rules which can effectively tackle all the manifold issues arising out of jute trade and industry. The Government is, however, taking measures to reduce speculation, for bringing about reasonable stability in the jute market, reducing the share of those unnecessary middlemen who are not rendering any useful service commensurate with their remuneration. These measures will, I hope, benefit equally the trade, industry and the jute growers."

THE FOREIGN JUTE MARKETS

LOWER PRICES FOR YARNS AND CLOTH

(FROM OUR DUNDEE CORRESPONDENT)

THOSE responsible for fixing selling prices for jute yarns and cloth in the U.K. took a long time to make up their minds about adjusting the rates to the heavy fall in the prices for jute from Pakistan. There has been a fall of £21 a ton in Mill Firsts, £16 in Mill Lightnings, £15 in Mill Hearts, £13 in crack Daisies 2/3 and £14 in grade Tossa 2/3 since the last change was made on 11th December, variously reducing all rates according to the quality and grade of yarns. Hessian qualities have come down from 17.08d to 15.72d a lb for common 8 lbs cops (C.H.W.). This stands for common hessian weft, a grade lower than "J.C.H.", the yarn usually used by manufacturers. Some spinners declare that they cannot spin this lower quality and that they must supply "J.C.H.", which would cost the manufacturer 16.29d a lb, the new rate for "J.C.H." 8 lb medium spools. Twist (J.C.H.) is reduced to 18.13d for 3 ply 8 lbs, from 19.35d a lb, and sacking yarns are only down to 13.84d from 14.09d for 24 lbs. Rove shows little change at £107, or 10s down, for 48 lbs. £1 15s down to £98 15s for 96 lbs and 15s down for 200 lbs at £85 10s a ton. In the cloth end, the price for 40in. 10oz. hessian is now 14.26d a yard, compared with 15.12d formerly, and for 40in. 10oz. common hessian, the price is 13.26d a yard, using the lowest rate for cops "C.H.W.". For 8oz. hessian, there is a fall from 11.73d to 11.32d a yard. Some interest has been shown by buyers of both yarns and cloth, and spinners and manufacturers have been compelled to refuse many orders because of the rush to get delivery, especially from those who had been holding off in the hope of large reductions, as it has been in the case of hessian yarns. These are down nearly by £13 a ton, compared with former falls of £5 at a time. Raw jute is quoted from £108 for Mill Firsts, £98 for Mill Lightnings, though as low as £95 has been mentioned, with Mill Hearts from £94, and down to £90 mentioned. Good Daisies 2/3 has been named at £102 and grade at £98, with Grade Tossa 2/3 at £108 and fours at over £98, all February-March, c.i.f., U.K.

Calcutta goods are weak and the lowest mentioned was 63s 6d for 40in. 10oz. and 48s 9d for 72oz. February and March, with B Twills down to 172s 3d same shipments, all f.o.b., Calcutta. The Jute Wages Council has granted the workers an increase of 4 percent on their wages in reply to a request for 10 percent. This will take effect in about three months' time.

Engineering and Transport

GLOBAL SERVICE PLANS OF AIR INDIA INTERNATIONAL

EXPANDING OPERATIONS OF CHINESE AIRLINE

(FROM OUR NEW DELHI CORRESPONDENT)

AIR India International has acquired two more Super-Constellations, which will be put in service on 1st March. This will be done to increase the frequency of the Bombay-London service to seven from six at present. As already reported, there are plans to increase the frequency of the India-Japan service from two to three a week and extend one service from Tokyo to San Francisco. The London-New York service, it is expected, will be inaugurated in 1958, which will make Air India International a global operator.

India-Australia Air Agreement

The present eight-year-old air agreement between India and Australia is about to be revised. An Australian air mission will shortly arrive in New Delhi to negotiate it. The existing agreement was made in 1949. Since then Air India International has opened a service to Australia, and is anxious to have operational rights up to Perth. The Australians, who operate their services up to Calcutta, are similarly anxious to extend their service to Madras.

According to latest reports, the sale deal of three Constellations to the Afghan airline, Aryana, has fallen through, at least for the time being. Pan American, which is also in the market offering a similar type of aircraft for sale, has quoted better terms, it is learned. Besides, Pan American owns 49 percent of the share capital of Aryana.

Aeroflot Services

The new air route to London via Kabul, Tashkent and Moscow has already been referred to in this column. So also has a recent agreement between the Indian Airlines Corporation and Aeroflot which provides connections to New Delhi, Calcutta and Bombay. A reciprocal agreement was also recently reached between Aeroflot on the one hand and Finnair and S.A.S. on the other, for the joint operation of services between Scandinavia and Soviet Russia. As a result of this, the Helsinki-Moscow route is now flown four times weekly by Aeroflot and twice weekly by Finnair, schedules having been co-ordinated to provide services on six days a week at departure times. The agreement between Aeroflot and S.A.S. provides for four flights weekly on the route Moscow-Riga-Copenhagen and a similar number via Moscow-Riga-Stockholm, extended to Oslo once weekly by S.A.S. The operation of these flights is shared equally by the two carriers and Aeroflot provides immediate connections four times weekly between Riga and Leningrad.

Sino-Russian Arrangements

The other main international routes operated by Aeroflot consist of services to the Far East. There are two daily flights in each direction from Moscow to Peking via Kazan, Sverdlovsk, Omsk, Novosibirsk, Krasnoyarsk, Irkutsk and Ulan-Bator (Mongolia). One of these is operated throughout by Aeroflot, while on the second service, the sector Irkutsk-Ulan-Bator-Peking is flown by the Chinese airline, Minhaiydu. In the outward direction, a night-stop is made at Irkutsk by all services, and there is an additional weekly flight each way between Moscow and Ulan-Bator. Services to the North Korean capital of Pyongyang are maintained six times weekly by the same route to Irkutsk and thence to China and Pyongyang. Intermediate calls are made at Hailar, Harbin and Shenyong (Mukden) in north-east China (Manchuria), and this sector is operated alternately by Aeroflot and Ukamps. Another connection with China is made via Alma-Ata, from where local services are operated twice weekly to Ili and Urumchi in the eastern province of Sinkiang; this route is operated jointly by Aeroflot and Minhaiydu.

The remaining international route of Aeroflot consists of a twice-a-week service from Moscow via Ural'sk, Aktyubinsk, Dzhusaly, Tashkent (where a night stop is made) and Termez to Kabul; here connections are available with the services of the Indian Airlines Corporation to Delhi and Calcutta. The arrangements for pool services with Finnair and S.A.S. also involve inter-line agreements for through-bookings from any point on the network of one carrier to any point on the other's system. Aeroflot has recently concluded a number of further inter-line agreements with western carriers and the following are known to have such arrangements with Aeroflot: Air France, Air India International, B.E.A., Czechoslovak Airlines, Finnair, Yugoslav Airlines, K.L.M., Polish Airlines, Hungarian Airlines, Minhaiydu, Pan-American, Sabena, S.A.S., Swissair, Bulgarian Airlines, Roumanian Airlines and Ukamps.

Air France-Aeroflot Link-up

Special mention should be made of the Air France-Aeroflot service—Paris-Prague-Moscow in both directions. The introduction of the Tu-104 will eventually continue eastward from Moscow to Novosibirsk to connect there with flights to Peking, thus providing a very rapid through service to China. As a result of the Aeroflot agreement with Air India International, it is possible

to book through from Russian cities via Kabul to points in south-east Asia and Australia.

Indian Air Service to China

Two officers of Air India International, Captain V. Vishwanathan and Mr. V. G. Gadgil, recently left for China to undertake a survey of Chinese aerodromes, and of the traffic potential of an India-China air service. This is a prelude to an India-China air agreement now under consideration. China is slowly coming into its own in the world of aerial traffic. The name "Minhaiydu", abbreviation for the Civil Aviation Administration of China, is probably not as well-known, for the airline was formed comparatively recently and is at present in the process of building up its route network.

The international routes of Minhaiydu to Alma-Ata and Irkutsk in co-operation with Aeroflot have already been described. Other routes to points outside China are a weekly service flown with 11-14s from Peking via Kunming (night stop) to Mandalay and Rangoon and weekly Li-2 flights from Canton via Nanking to Hanoi in North Vietnam. The Burma service provides excellent connections in both the directions at Rangoon with B.O.A.C. flights on their Europe-Far East route as well as with the services of other carriers. Unconfirmed reports suggest that there may now also be a line from Peking to Lhasa, capital of Tibet, probably flown via Chungking.

The Chinese domestic network is now being developed; principal routes include four-times-a-week services between Peking and Canton via Chengchow and Wuhan (Hankow) and between Peking and Shanghai via Hsichow and Nanking; eight weekly flights between Peking and Chungking via Taiyuan and Sian, two of which continue to Kunming; and four weekly services between Peking and Lanchow via Taiyuan and Chengchow, continuing after an overnight stop to Chuichuan (Suchow), Hani and Urumchi, where connections are made with flights to other cities in Sinkiang. In addition to several other local services, there are also flights four times weekly between Chungking and Shanghai and once a week between Chungking and Canton, both via various intermediate points as well as the northern route from Peking, with some flights operating via Tsientsin, to Shenyang (Mukden), Harbin and Tsitsihar. Aircraft employed on these lines are mainly Li-2s, although 11-14s are now making an appearance on a few of the principal lines.

The service at present touching the city of Hailar in north China is the joint Aeroflot-Ukamps line between Chita and Pyong-Yang. The winter, 1956, edition of Minhaiydu's time-table contains two new domestic routes; a twice-weekly service between Kweiyang and Chungking, where connections are made to and from Peking and other cities, and a weekly service from Urumchi to Sharasume in the far north of Sinkiang province. It is rumoured that a new international service to Japan may be opened shortly.

PROGRESS OF CALTEX OIL REFINERY

PRODUCTION EXPECTED TO START THIS YEAR

(FROM OUR NEW DELHI CORRESPONDENT)

WHEN the Caltex oil refinery "goes on stream" this year, India will become almost entirely independent of imports of refined petroleum products. The refinery, costing Rs. 15 crores, is being built by Caltex Oil Refining (India) Ltd. It will process 675,000 tons of crude oil annually, which will yield 13,500 barrels a day of refined products such as motor spirit, kerosene, diesel oil, jet fuel for aircraft and heavier industrial type fuels. When the sphere of operations widens, perhaps, by-products such as petroleum ether, benzene, liquid paraffin, wax and asphalt will be processed.

India's current consumption totals about 4 million tons of crude oil, but it is growing in such a way that it is difficult to say exactly how much it will be in 1960. The selection of Visakhapatnam for a refinery was based primarily on the natural facilities offered by its harbour. At the moment, the major commodities which pass through the port are manganese ore and tobacco. After the Caltex refinery goes on stream this year, the port will handle large ocean-going tankers bringing crude oil. Dredging operations and the building of new oil berths are part of the port's expansion schemes. Also adding to Visakhapatnam's importance as a port is the Hindustan Shipbuilding Yard.

The refinery site is Malkapuram, which before was practically waste land near the heart of Visakhapatnam. The land was cleared and roads built rapidly. Several local traders opened shops to provide the refinery with steel, cement, asbestos, timber, bricks, crushed rocks, etcetera. In this way, the refinery has acted as a spur to the growth of local industries. The new Gosthani river water supply project in Andhra Pradesh will meet the refinery's water needs. The Machkund hydro-electric project will feed it with electricity.

Indian Staff

The refinery employs some 6,000 Indians for construction. By the time it starts work, enough staff will have been trained to run it. Already 16 Indians are being trained at the Caltex refinery in Batangas, near Manila. The Batangas refinery was chosen for training because it is very similar to the Visakhapatnam one. Caltex has plans to

send more people abroad on orientation programmes.

The refinery will have the flexible two-stage crude distillation unit, the fluid catalytic cracking unit with gas recovery facilities, the propane de-carbonisation unit, treating and blending units and a polymer plant. It will have one of India's most modern machine shops where all the repair work will be carried out.

Oil Prospecting

The latest progress report on oil prospecting in India indicates that an aeromagnetic survey of the Jaisalmer area was undertaken by a Canadian team under the Colombo Plan during March-April 1956. The same team conducted an aeromagnetic survey of 10,000 line-miles of the Gangetic plains and the Punjab plains.

Petroleum Consultant

The services of Mr. A. I. Leverson, a petroleum consultant, were obtained under T.C.M. for advising India on the programme of oil exploration and various allied organisational matters.

Oil Drilling Equipment

A contract for the supply of three oil drilling rigs and some other equipment for oil exploration has been placed with the Russians. The contract also provides for the supply of technical personnel by Russia for the erection and operation of the drilling rigs as well as the seismic equipment, and for the training of Indian technicians. The services of a Russian drilling engineer, Mr. Zagrabians, have been obtained on a salary of Rs. 3,500 a month, in addition to free accommodation, medical attendance, etcetera. A contract for the services of four technicians (one geologist consultant and three other experts) has been signed with the Russian Government. One drilling rig with accessories, which was on display at the Indian Industries Fair, has been purchased from the Rumanian Government. This deal stipulates that technical staff to erect and operate the drilling rig and to train a sufficient number of Indians will be provided by the Rumanian Government. A part of the erection team has arrived in India.

Two Russian teams for seismic and gravity-cum-magnetic work, consisting of 15 persons and 11 persons respectively, are working in the Hoshiarpur-Ferozepore areas since the end of December, 1956.

German Oil Experts

Dr. A. Benz, a German oil expert who visited India in December, has recommended large-scale exploration work in Punjab, Jammu and Kashmir, Jaisalmer and Cutch.

Three German oil experts have already arrived in India for a 12-week visit to various oil prospecting sites in order to advise the Oil and Natural Gas Commission.

Oil Prospecting in Rajasthan

The Government is exploring the possibility of utilising the services of a French firm, known as Compagnie General de Geophysique, on a contract basis, for some geophysical work in the Rajasthan area. The firm sent an advance party of two officials for about 10 days to visit Jaisalmer in order to get an idea of the terrain where geophysical work has to be carried out. The company has subsequently submitted proposals which are being considered by the Oil and Natural Gas Commission.

UNITED INDUSTRIAL BANK LIMITED

A SCHEDULED & CLEARING BANK
(Established 1940)

CALCUTTA TEA AUCTIONS IN JANUARY

FAIR GENERAL DEMAND BUT PRICES MOSTLY LOWER

OFFERINGS during the month, totalled over 350,000 chests, and averaged about 70,000 chests a week. This heavy weight of tea met with quite a good general demand, but prices for most kinds showed an irregular decline of about 2 annas a lb. in each Sale, say Messrs. Carritt Moran and Company Private, Ltd. in their monthly tea market review. Any bright liquoring teas and those showing seasonal improvement were, however, well supported at firm to dearer rates. Tippy teas also met with keen competition and sold at dearer rates. Fannings generally met with better support than broken and any thin liquoring broken were a particularly weak feature. C.T.C. teas shared in the general decline, although a few selected invoices sold well. Darjeelings met with much less support and even the most flavoury invoices could only be disposed of at prices well below valuations.

Darjeeling leaf appearance was generally browner than in the previous month, but continued to be commendably free from stalk. Cup quality showed a marked seasonal improvement and the offerings included a number of attractive autumnal teas. Assam leaf appearance showed a distinct falling away and this was particularly noticeable in the teas of C.T.C. manufacture. With a few exceptions, cup quality showed an improvement, though very few really good autumnal teas were on offer. A seasonal decline in the leaf appearance of the Doora's offerings was apparent with the cup quality generally rather plain, although a few invoices showed fair autumnal character. Cachar leaf appearance showed a decline compared with the high standard of the previous month and the majority of the offerings were rather plain in cup.

Internal Sales

Leaf offerings totalled approximately 15,700 chests for which there was a good general demand. The teas with a clean leaf appearance followed the trend of the previous day's export sale. Those of a residue description and the green leaf teas on offer received fair support. A total of approximately 120,800 chests of Dust was offered. The demand in the earlier sales maintained the price level of the previous month, but in the three later sales, the demand weakened and prices showed a general decline. The very few lines of bright liquoring C.T.C. Assams on offer were well supported and continued to realise satisfactory prices, but the remaining kinds in this category declined by about 4 annas, and sometimes more. The black leafy exportable types continued to sell well and at a premium, although they shared in the general decline of the later sales. Commons, Doora's and orthodox Assams were firm or dearer in the first two sales, but there was less demand for orthodox Assams in the third sale and prices declined by about 1½ annas, and in the two final sales shared a further decline with Doora's and Commons of 4½ to 5 annas.

Sale No. 28 " " "	2	0	6	1
Sale No. 29 " " "	2	1	0	1
Sale No. 30 " " "	1	14	6	1
Sale No. 31 " " "	1	13	3	1

Export sales up to No. 30 of the 1956-57 season totalled 1,537,974 chests at an average price of Rs. 2-8-4 against the previous season's 1,422,357 chests at an average price of Rs. 2-3-7. Internal sales at 42,036 chests of Leaf and 519,699 chests of Dust (Rs. 1-10-8 and Rs. 2-3-7) go against 68,183 chests and 435,153 chests (Rs. 1-5-2 and Rs. 2-1-0) in the corresponding period of the previous year.

The price of export quota rose in the first week of the month from 36 pies a lb. to a peak of 48 pies a lb. declining irregularly thereafter to 34 pies in the third week, and strengthening to 42 pies at the close.

The estimated North Indian crop to the end of December, 1956 was 536,658,577 lbs., compared with 534,196,432 lbs. to the same date last year. The average figure at this date for the three years 1953-55 was 510,882,110 lbs.

The Government of India has issued a notification fixing the price of tea for the purpose of determining the export duty, at Rs. 3-15 a lb., against Rs. 4-3-0 a lb. in force from 1st January. The export duty at this price will be 6 annas a lb. against 8 annas a lb. in force previously.

Arrivals (in chests) in Calcutta warehouses during the period 24th December, 1956 to 23rd January, 1957 with the corresponding figures of the previous year in parentheses were as follows: by steamer 317,186 (194,774), by rail 136,345 (78,537) and by air 17,155 (16,080) making a total of 470,686 (289,391) chests. From the beginning of the season, 1st April, 1956 to 23rd January, 1957, arrivals have been: by steamer 2,787,710 chests

(2,838,887), by rail 1,001,842 (788,895) chests and by air 149,446 (177,187) chests, making a total of 3,939,998 chests (3,804,969).

IMPLICATIONS OF THE RUBBER ENQUIRY REPORT

CHECKS ON PRIVATE INITIATIVE (FROM A SOUTH INDIAN CORRESPONDENT)

SOME reactions to the Plantation Enquiry Commission's report on rubber are now available in South India. It is recognised that the Commission has made an attempt to point out some of the major problems of the rubber plantation industry and to suggest solutions for them. In its opinion, the most important problem is the widening gap between the production and consumption of rubber. Last year, there was a deficiency of about 6,000 tons. This is expected to increase to 14,000 tons by the end of the second plan period. The Commission emphasises the need to step up the Indian production of raw rubber with a view to reaching self-sufficiency. With this end in view, the Rubber Board has drawn up two ambitious schemes. One of them is a plan to replant 70,000 acres of the existing old and worn-out area with high yielding strains within ten years and with Government subsidy. This scheme has been approved by the Central Government and the Rubber Board has gone ahead to some extent with its implementation. The Plantation Enquiry Commission has made two important recommendations on replanting. It wants the scheme to be implemented within seven years, but it is doubtful whether the target can be reached within that period. The Commission wants that 50 percent of the area recommended for replanting be reserved for small growers holding 50 acres and less. It is difficult to understand the logic behind this. There are enough provisions in the present scheme to attract small growers. They are given preference in the matter of subsidy. While the small grower gets Rs. 400 an acre, the estate owner is allowed Rs. 100 less. This should be a good enough encouragement. The Rubber Board officials report that the small growers are rushing with applications for replanting subsidy. Whether this enthusiasm of small growers will last for long is very doubtful. Even if it does will it be advisable to earmark 50 percent of the targeted acreage for small growers? They, of course, should be encouraged to play an active rôle in replanting, but the provision that 50 percent of the targeted acreage be reserved for them is inadvisable.

Fund for Replanting

Another recommendation of the Commission on the subject is that a replanting fund should be created by crediting the element in the price of rubber allowed for rehabilitation with the Rubber Board. To a certain extent this recommendation is different from the methods suggested for coffee and tea. Tea and coffee estates are asked to contribute Rs. 50 and Rs. 37-8 an acre respectively towards the replanting fund. The price of tea is subject to fluctuations and two-thirds of our production is sold in the world market. Although coffee prices are controlled in the Indian market no provision is made for rehabilitation. When compared with coffee and tea, rubber enjoys a special privilege and, therefore, the rubber growers cannot oppose this recommendation. Though this element for rehabilitation has existed since 1952, very few growers have used it for the purpose. So it would be advantageous to the industry as a whole if the Rubber Board will collect it hereafter and use it for the purpose of replanting. The Commission has also recommended a number of principles to be followed in regulating replanting, but details are not available.

In his note of dissent, Mr. K. G. Sivaswamy opposes strongly new cultivation by estate owners. He wants new planting to be undertaken directly by the Government or the Government to take majority shares in the existing companies which are permitted to undertake new planting on a large scale. It does not appear that Mr. Sivaswamy has given any serious thought to the practical side of his proposal. To entrust the Government with the task of extending India's rubber cultivation instead of leaving it to more competent people, namely the planters, is a dangerous and unwise proposition.

Synthetic Rubber Plant

Dealing with the Government's scheme for setting up a plant to manufacture synthetic rubber the Commission says that it should be co-ordinated with the production of natural rubber so that rubber growers may have no cause for alarm. It is a welcome suggestion. The Commission wants the Government to make a clear policy statement about rubber development. The rubber growers are very apprehensive about the proposal to start the manufacture of synthetic rubber in India. Nobody knows how long rubber prices will be maintained at the present level or how long the rubber economy in India will continue to be insulated. To allay these fears and to make rubber growers earnest about raising their output, a policy statement as suggested by the Plantation Enquiry Commission is necessary.

Planters Criticised

As in the case of tea and coffee, strong attacks are made on big planters and managing agencies connected with the rubber planting industry. The Commission recommends that the dividends and the managing agency commission as well as managerial remuneration be reduced in order to increase the internal resources for replanting and to meet labour welfare costs. Here, the Commis-

sion was labouring under a wrong conception of things. A dissatisfied estate manager will have no strong inclination to improve the affairs of his company. The managing agents have rendered valuable services in building up the plantation industry to its present status. Any effort at ousting them will do more harm than good. Those who have invested money in rubber planting companies are not getting their due share in dividends. Yet the Commission wants dividends curbed. The Central Government has declared itself against imposing a ceiling on personal incomes. It does not appear that the Commission was thinking in this line when it was writing its report. Of course, it was appointed at a time when the atmosphere was filled with hatred towards the plantation industry propagated by responsible people, even in the Government, and it is no wonder the Commission has made such sweeping remarks about this industry.

Bureaucratic Control

Bureaucratic control of the rubber planting industry has also been recommended by the Commission. In addition to its present tasks, the Rubber Board has been assigned the new duties of the collection of the replanting fund, valuation of estates, regulation of sales of estates and the assessing of the economic needs of the industry. It appears that the Commission was holding the view that it is inevitable to bring the plantation industry under the wings of bureaucracy for its healthy growth. The plantation industry is still rich in managerial talent which has made it one of the most efficient industries in the world and any attempt to smother it with official control will do serious harm.

COCHIN TEA SALES

At Dust Sale D. 550,000 lbs. of tea were on offer. There was a good general demand for the commonest grades and the best liquors were steady. Others were irregularly 1 anna lower.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for the month of January, 1957:

Upper Assam: Weather generally seasonable with useful rain in Dibrugarh but dull, wet and unseasonable in Panitola; the season will probably be an early one in Tingri.

Central Assam: Weather generally seasonable; the season has closed and the cold weather has set in in Nazira; good rain has fallen generally and prospects are now brighter in Moran; early start to plucking expected in Jorhat.

Lower Assam: Weather generally dull and wet for January; growth two weeks ahead of normal in Borsola; the season will probably be an early one in Bishnath.

North Cachar: Weather generally seasonable; the season will probably be an early one in North Cachar; blight bright prevalent in North Cachar; blight not so severe in Lakhimpur.

South Cachar: Weather generally favourable but rainfall much above normal for the season to date in Haikalandi and Longai; good rain has fallen generally and prospects are brighter in Chutlabheer; blight bright prevalent in Chutlabheer and severe in some districts of Haikalandi.

Eastern Doora's: Good rain has fallen generally and prospects are now brighter in Kachini; the cold weather has set in and the season has closed at Jainti; hailstorms reported from Jainti but little damage resulted; blight bright prevalent in some districts of Kachini.

Central Doora's: Weather seasonable; Season will probably be an early one in Dalgao; blight bright prevalent in some districts of Dalgao.

Western Doora's: Weather generally favourable, but rainfall much above normal for season to date; immediate prospects fair; good rain has fallen generally and prospects are brighter in Oodlabari; season has closed in Dam Dim and Nagrakata; blight bright prevalent in Oodlabari.

Darjeeling: Weather seasonable.

Terai: Weather seasonable with light rain.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing prices on 1-2-57 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.41	1.41
No. 2	1.38	1.38
No. 3	1.35	1.35
No. 4	1.11	1.11
No. 5	1.06	1.06
Crepe:		
	Sht. Cuts. 1	1.05
	Sht. Cuts. 2	1.00
Water White	—	1.162
R.M.A. No. 1X	17/19	1.114
R.M.A. No. 1	110/15	—
Scrap Crepes:		
	Crepe 2	1.06
	Crepe 3	.981
		.89
Sc. Crepe No. 1	.90 Nom.	—
do. 2	.82/88	.764
do. 3	.75/80	—
Flat Bark	65/70	.671
	Sc. Crepe 3X	.80

To arrive at f.o.b. Colombo prices, add 53.53 cents a lb for crepe other than scrap crepe and 31.53 cents for scrap crepe to the above market prices.

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

FAIR BUYING IN DUSTS

AT Sale No. 33, held on 11th and 12th February, offerings at the Export auction consisted of 65,235 packages for which there was a good general demand at slightly easier rates. Once again bright liquoring teas were a strong feature and were keenly competed for at dearer rates, while the very few best C.T.C. teas were also well supported. The majority of C.T.C. offerings, however, were 1 anna easier Commons and Mediums with declining quality were generally 1 anna easier, although the broken grades received better support than in recent weeks. "Tea for price" was also from 1 to 1 anna easier. Well-made and stylish whole leaf grades were slightly dearer, but the poorer kinds were often up to 2 annas easier Tippy teas received fair demand, but Darjeelings were generally 2 to 4 annas below last rates.

Quotations	1957		1956	
	Rs.		Rs.	
Clean Black Pekoe	2	4	1	11
Plain B.P.	1	15	0	13
Medium Assam E.P.	2	0	1	8
Best C.T.C. Assam B.P.	2	8	0	2

At the Internal Sale Dust offerings consisted of 18,718 chests for which there was a good general demand. Clean leaf types and bright liquoring sorts sold well at about valuations particularly orthodox and C.T.C. Assams. The few lines of non-withered Doora's with improved liquors were also well supported, but the remaining offerings were definitely easier at the commencement of the sale and at the close, were as much as 2 annas lower.

Quotations	1957		1956	
	Rs.		Rs.	
Medium Doora's Dust	1	12	6	1
Medium Assam Grainy	1	13	0	1
Dust	1	13	6	1
Medium Assam C.T.C.	2	2	0	2
Dust	2	2	0	2
Best Assam C.T.C. Dust	2	2	0	2

There was a good general demand for the 2,521 chests of other grades on offer and the cleaner leaf teas were well supported although they were at times easier.

UNSETTLED CONDITIONS IN FREIGHT MARKETS

UNSETTLED conditions have prevailed in a dull week's trading, in spite of the fact that there was a fair volume of tonnage fixed to India and Pakistan for grain cargoes. The transatlantic coal rate has fluctuated between 97s 6d and 99s 6d for single voyages, but a contract April-September was arranged at 92s which is indicative of owners' views of the future trend. Wheat was arranged from British Columbia or U.S. Pacific-West Coast India at 210s for May loading and later at 200s April-May, but Karachi paid the higher figure of \$U.S.31.25 for similar business. A number of ore fixtures were reported including Dungen-Japan at 85s, Bombay-Genoa 195s, Mormugao-Genoa 185s and three small ships Mormugao-Trieste at 186s 3d, 190s and 200s. Antwerp-Colombo paid 190s for bagged fertilisers, but a similar cargo to Cuddalore was arranged at 157s 6d. There was some activity in local coal markets, but with Pakistan charterers unwilling to exceed 80s for Karachi, business failed to materialise. A tender for 17 vessels to Korea has been called with shipment over April-May and it is difficult to see where the tonnage will come from for this order.

SUGAR MARKET UNCHANGED

During the week ended 13th February, sugar sales in the Calcutta market averaged 4,500 bags daily. Arrivals a day were 5,000 bags and stocks totalled 95,000 bags. Rates for ready sugar export Kantapur delivery were Rs. 31-6 for ordinary grain and Rs. 33-8 for big grain. Ex-mill prices improved a little while the local wholesale market remained unchanged.

HIDES AND SKINS STEADY

The market ruled quietly steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 5th February and 11th February, 1957)
Cowhides: Wet salted (Ord.) 14,000 pcs. on the basis of Rs. 7 to Rs. 9: Wet salted 4,000 pcs. on the basis of Annas 10; Wet salted (Slaughtered) 18,600 pcs. on the basis of Rs. 12-4 to Rs. 21.

Goatskins: Wet salted (Daissee Killed) 95,000 pcs. on the basis of Rs. 285 to Rs. 320 and Rs. 365 to Rs. 375; Assam-Dinaipur 28,000 pcs. on the basis of Rs. 265 to Rs. 290; Purneah-Kissengani 2,000 pcs. on the basis of Rs. 280 to Rs. 290; Pakur-Patna 12,000 pcs. on the basis of Rs. 24 to Rs. 250; Muzafferpore-Pakur 64,100 pcs. on the basis of Rs. 275 to Rs. 310.

Bazaar Stocks

(11th February, 1957)
Cowhides: Wet salted 2,76,000 pcs.
Goatskins: Wet salted (Daissee, Killed) 43,000 pcs. Assam-Dinaipur-Murshidabad 91,000 pcs; Muzafferpore - Patna - Pakur - Purneah - Kissengani 57,000 pcs.

COMPANY AND PUBLIC NOTICES

ORIENT PAPER MILLS LIMITED.

NOTICE.

NOTICE is hereby given that an Extraordinary General Meeting of the ORIENT PAPER MILLS LIMITED will be held on Wednesday, the 13th March, 1957 at 8, India Exchange Place, Calcutta-1 at 2-30 P.M. to consider and, if thought fit, to pass, with or without modification, the following resolutions:—

AS AN ORDINARY RESOLUTION:

1. "RESOLVED that consent of the company be and is hereby given to the transfer of the Coal Mining Lease dated the 19th August, 1955, granted in favour of the company by the Orissa State Government for a period of 30 years, to the Central India Coal-Fields Limited for the unexpired residue of the said term of 30 years together with the benefits, rights, liberties and privileges and subject hereunto to the payment of the rent reserved by and the performance and observations of the conditions and covenants as contained in the said Lease and payment by the Central India Coal-Fields Ltd. of the actual cost of this company incurred in connection with the Colliery and that the directors of the company be and are hereby authorised to effect the said transfer and to do the useful in this connection."

AS A SPECIAL RESOLUTION:

2. "RESOLVED that the Articles of Association of the company be altered in the manner following:

A. For Article 37, the following shall be substituted, namely:

"37. The company shall have a first and paramount lien upon all the shares (other than fully paid up shares) registered in the name of each member (whether solely or jointly with others) and upon the proceeds of sale thereof for all moneys (whether presently payable or not) called or payable at a fixed time in respect of such shares and no equitable interest in any share shall be created except upon the footing and condition that Clause 14 hereof is to have full effect. And such lien shall extend to all dividends and bonuses from time to time declared in respect of such shares. Unless otherwise agreed the registration of a transfer of shares shall operate as a waiver of the company's lien, if any, on such shares."

B. For Article 38, the following shall be substituted, namely:

"38. (a) For the purpose of enforcing such lien, the Board of Directors may sell the shares, subject thereto in such manner as they think fit but no sale shall be made unless a sum in respect of which the lien exists is presently payable and until notice in writing of the intention to sell shall have been served on such member, his executors or administrators or his committee, curator bonis or other legal representatives as the case may be and default shall have been made by him or them in the payment of the sum payable as aforesaid for seven days after the date of such notice.

(b) The net proceeds of the sale shall be received by the company and applied in or towards payment of such part of the amount in respect of which the lien exists as is presently payable and the residue if any shall be paid to such member, his executors or administrators or assigns or his committee, curator bonis or other legal representatives as the case may be."

C. The word 'three' appearing in line 4 of the Article No. 184 be substituted by the word 'six'."

By Order of the Board.

BIRLA BROTHERS PRIVATE LIMITED,
Managing Agents.

8, India Exchange Place,
Calcutta, the 8th February, 1957.

N.B. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

The Company Meeting and Dividend table appears on page 219.

THE ORISSA MINERALS DEVELOPMENT CO., LTD.

The Board of Directors has decided to recommend to the forthcoming General Meeting of Shareholders a dividend at the rate of 20% per annum without any deduction in respect of taxation payable by the Company for the half-year ended 30th June, 1956.

By Order of the Board.

BIRD & CO. (PRIVATE) LTD.,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 11th February, 1957.

THE TINGAMIRA TEA SEED COMPANY, LIMITED.

NOTICE is hereby given that the 32nd Annual General Meeting of the Shareholders of THE TINGAMIRA TEA SEED COMPANY, LIMITED, will be held at "McLeod House," No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Tuesday, the 12th March, 1957, at 4 P.M. for the following purposes:—

- To consider the Profit and Loss Account for the year ended the 31st March, 1956, and the Balance Sheet as at that date and the Reports of the Directors and the Auditors
- To declare a Dividend.
- To appoint a Director in place of Mr. R. H. D. Campbell, who retires by rotation and who being eligible, offers himself for re-appointment.
- To appoint Auditors for the year ending 31st March, 1957, and to fix their remuneration.

As Special Business.

To consider and, if thought fit, to pass the following resolution:—

"That the Board of Directors be and is hereby permitted with effect from the Commencement of the Companies Act, 1956 to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 1st March, 1957 to 12th March, 1957, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,

A. T. DOIG,

Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 7th February, 1957.

NOTE:—

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend if declared, will be made on or after 19th March 1957, only to those members whose names are registered in the Books of the Company on the 12th March 1957, or to their Mandates.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT.

The Resolution being Item No. 5 of the above Notice is intended to provide the Board of Directors with authority to enable them to borrow moneys from time to time for the Company's business in excess of the statutory limit being the paid-up capital of the Company and its free reserves, pursuant to Section 253 (1) (d) of the Companies Act, 1956.

THE BORREA COAL COMPANY LIMITED NOTICE OF INTERIM DIVIDEND.

The Board of Directors of the above Company has sanctioned payment of the following Interim Dividends in respect of the year ending 31st December, 1956, without any deduction for Income-tax paid by the Company

On Preference Shares for ... 6½% per annum
half-year at rate of ... 5 %
On Ordinary Shares

payable on or after 7th March, 1957, to those shareholders (or their mandatories) whose names appear in the Company's books on 28th February, 1957, as the registered holders of the above shares.

The Share Transfer Registers of the Company will be closed from 21st to 28th February, 1957, both days inclusive.

By Order of the Board.

COAL COMPANIES

O, P, F and Dd indicate Ordinary Preferred Ordinary Founders' and Deferred shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.
