should have receded in April. Instead, the continued lack of rains has given stockists the needed impetus, so prices are once again beginning to rise and rumours are current that a drought in East Pakistan is imminent. A drought may not eventually materialise, but once again here is proof of the primary seller's strength. The present lack of rain is not particularly unreasonable; it has been only a few days late, but this reason has been sufficient for the market to rise. Jute, which continues to arrive in small quantities, is now quoted at the ghats at about Rs. 31 for B Bottoms, Rs. 29 for C Bottoms and Rs. 27 for X Bottoms. Kutchi bales from the mofussil which are dry command a premium of about 3 annas. There is a premium of a further one rupee for Mill Standards. Kutchi bale contracts from reputable local balers command a premium of another rupee. Pucca bales, which had receded to as low as Rs. 179 for Export Firsts, stand once again at Rs. 189, with a slight premium for Export Lightnings at Rs. 190. Export Hearts go at a slight discount at Rs. 163. The enquiry is mainly for Export Lightnings but the real shortage in loose jute and kutchi bales is to be found in the higher qualities.

E.P.C. registrations for the last half of March at 88,000 bales were lower than expected. India's purchases once again dropped off to 6,000 bales. Poland came to the market for 12,000 odd bales, but as this buying has been done through the London agents, it had no effect here. France and America have been the only buyers in quantity. France should still buy about 175,000 bales, compared with its last year's purchases. But since the production of her jute industry has fallen off, it may be reduced to only 130,000 bales. America, compared with last year, has still to buy 120,000 bales, and Belgium about the same quantity. Judging, therefore, from the figures available and general market conditions, it is probable that not more than 400,000 or 500,000 bales remain to be bought by overseas buyers before the end of June. Subject to rains falling within next two or three weeks, there is no reason why the present price levels should be maintained.

Total Exports

Exports during March were slightly better than expected and amounted to just over 300,000 bales, bringing the total exported to 3,600,000 bales. It is quite probable that during April, there will be more freight tonnage than jute offering. Overseas buyers, as can be seen from the above figures, have once again reduced their purchases, and as far as possible, bought selectively from better bales. Present prices indicated are about £105 for Export Firsts with a £3 or £4 discount for May-June shipment. Reports of business in the new crop indicate that less has been done this year than last year. Prices paid have been about £92 for Export Firsts, but new crop business done within East Pakistan has been at slightly higher prices. The local jute goods market remains unchanged at Rs. 130 for B Twills and Rs. 56 for 45in. 11oz. Pakistan jute mills, once again, have a short supply of jute. Adamee, Latif Bawany and Crescent have sufficient stocks, the others, however, are short and in one case, seriously short, which can be rather unfortunate at this time of the season. Difficulties over labour and food procurement continue to be serious obstacles.

THE FOREIGN JUTE MARKETS

FIBRE PRICES RISE

(FROM OUR DUNDEE CORRESPONDENT)

CONTRARY to expectations, prices for raw jute have become firmer during the past few days. It is reported that Continental spinners have been buying quite freely, Belgium, West Germany and France being in need of supplies for shipment, April-May. Most members of the trade have been waiting for values to fall, as in the opinion of many, they are higher than they ought to be. Sales have been made of new crop jute at £102 for Mill Firsts and at £94, £93 and £92 for Mill Lightnings for August-September shipment, c.i.f. U.K. or Continent. The old crop value is down to £113 for Mill Firsts and £103 for Mill Lightnings although it is still about £20 a ton above the minimum fixed rates. Good marks of Daissee-2/3 have been raised to £165, and grade is obtainable at £102, grade Tossa 2/3 at £112 and Grade Tossa 4 at £105, all April-May or May-June, c.i.f. U.K. Mill Hearts are offered at £99 and grade Hearts at £94, but, as in the case of other qualities, sellers are asking as much as £3 to £4 a ton more.

The Jute Control has just issued allocations for the balance of the strategic raw jute stocks it has been holding. Spinners can take up their share of the 50,000 bales between 12th April and 30th November. The balance of the strategic stocks of imported goods will be sold against orders received from now on. Jute yarns here are still very low, although the carpet trade is buying steadily. The cut in purchase tax on carpets and also on linoleum hessians should help the local jute industry. Already there are reports of an improvement in sales since the Budget was issued. Prices for all qualities of yarns are firm. There has been no weakening in the values of cloth or bags, in spite of the extreme quietness in trade.

Calcutta goods were easier at first but the tendency has again become firmer. Hessian has advanced by 9d or 1s for 40in. 10oz. to 62s 9d, for April, and May, 63s for June and 63s 3d for July-September, with 71 oz. 47s 9d for April to June, and 47s 6d for July-September. B Twills are offered at from 168s 10d April, and 170s May to September, all f.o.b., Calcutta. There is very little business.

CALCUTTA TEA AUCTIONS IN MARCH

LOWER OFFERINGS AND EASIER PRICES

THE March offerings were again smaller than in February and averaged a little below 60,000 chests a week. Although there was a fair general demand throughout the month, prices continued to decline, and withdrawals were fairly heavy, say Messrs. Carritt Moran & Co. Private Ltd. in their monthly tea market review. Fannings grades were the weakest feature, but stylish O. Ps and Pekoes were in favour again and appreciated in value, while tippy teas sold well, generally above brokers' valuations, and any really clean black leafed sorts were well supported. Comparatively little tea from Darjeeling was on offer during the month, and most of it was of a very ordinary description. At Sale 36 there were a few quite useful liquoring invoices of Assams, but thereafter quality fell away and the liquors of the bulk of the offerings were plainish and "end of season" in character, although leaf appearance was of a comparatively high standard, and above average for the time of year. Doars cup quality showed a progressive decline throughout the month, and leaf appearance also showed some falling away, stalk and fibre becoming more noticeable. Cachar leaf appearance was inferior to recent sales, although, on the whole, it was still above average for the time of year. A few sweet liquoring invoices were on offer, but most of the teas from this district were comparatively plain in cup.

Sale No. 39	1 11 0	1 4 9
Sale No. 39	1 10 6	1 8 0

Internal Market

Leaf offerings amounted to approximately 19,300 chests. The increased offerings met with a fair demand. The C. T. C. teas were of a residue description and together with the other stalky kinds were generally sold in buyers' favour. The few clean leaf teas were well supported. Dust offerings amounted to approximately 72,800 chests. Quality from Assam showed some improvement. Prices were generally slightly easier and were sometimes up to 1 anna lower. The best bright liquoring C. T. C. Assams continued to meet keen competition and sold well. The remaining offerings of this description with plain liquors were a weak feature and were easier. Demand for black leaf types from all districts improved and during the final sale, they were selling at a premium. Renewed interest was shown in the cleanly sorted powdery kinds. Commons and Doars followed the general trend of the market. The few flavoured invoices from Darjeeling realised very satisfactory prices.

Sale No. 36 Clean Common Dust	Rs. As. P.	Rs. As. P.
Sale No. 37	1 12 0	1 7 6
Sale No. 38	1 11 9	1 9 6
Sale No. 39	1 11 3	1 13 6
Sale No. 39	1 11 6	1 13 0

Export sales up to No. 39 totalled 2,076,220 chests at an average price of Rs. 2-6-3, compared with 1,378,851 at an average price of Rs. 2-1-6 during the corresponding period of the 1955-56 season. Internal sales at 79,920 chests of Leaf and 676,717 chests of Dust (Rs. 1-9-9 and Rs. 2-2-2) go against 96,232 and 587,241 (Rs. 1-4-3 and Rs. 1-15-11) for the same period last year.

The price of Export Quota declined in the first three weeks of the month from 60 to 45 pias a lb. Business closed on 20th March to the end of the month, some special export licence changed hands in forward business at rates which declined from 39 to 24 pias a lb.

The Government of India has issued a notification fixing the price of tea for the purpose of determining the export duty, at Rs. 2.74 a lb. against Rs. 3.38 a lb. in force from 1st March, 1957. The export duty, therefore, remains unchanged at As 6 a lb. (37.50 nP).

Arrivals (in chests) in Calcutta warehouses during the period 24th February, 1957 to 23rd March, 1957, with the corresponding figures of the previous year in parentheses were as follows: by steamer 9,370 (180,923), by rail 6,023 (53,075), by air 4,071 (13,474) making a total of 18,464 (247,472) chests. Since the beginning of the season, 1st April, 1956 to 23rd March, 1957, arrivals have been: by steamer 2,995,130 (3,390,263) by rail 1,055,828 (929,288) and by air 164,364 (204,109), making a total of 4,215,322 (4,523,660) chests.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop reports has been received for the month of March:

Upper Assam: The weather is generally seasonable though in Naharkatya it is too hot and rain is wanted; tipping and manufacture have begun in most areas.

Central Assam: The weather is generally seasonable, though in Jorhat and Nazira it has been very dry; manufacture has begun in Moran and in all areas the prospects are fair.

Lower Assam: The weather is abnormally hot and dry and rain is wanted in Borsola and Nowgong;

manufacture has begun at Mangaldai and general prospects are fair.

North Cachar: The weather is unusually dry and hot and unless rain falls soon the leaf prospects will be poor; manufacture has begun but the dry weather is upsetting it; blister blight is lifting.

South Cachar: The weather is unusually hot and dry and rain is needed; manufacture has commenced but the outturn is being upset by the dryness; red spider blight is prevalent in some districts.

Eastern Doars: The weather is dry; manufacture has begun.

Central Doars: The weather is hot and dry and rain is wanted to prevent poor leaf prospects.

Western Doars: Hot and dry weather conditions were relieved by rain and there have been some hailstorms, although little damage is reported; manufacture has begun and the crop prospects are favourable; red spider blight is prevalent in some districts.

Darjeeling: The weather is favourable; outturn normal; red spider blight prevalent in some districts.

Tera: Weather conditions dry and rain is badly needed; red spider blight prevalent.

COCHIN TEA SALES

At Sale No. 8, 9,600,000 lbs of tea were on offer. The quality showed a decline. There was a fair general demand, but prices were again easier. Low Grown and Mediums were ten to 15 nP lower. Good Mediums and High Grown were weakened by 15 to 20 nP. There was more demand for Whole Leaf teas.

DRIVE TO INCREASE DOMESTIC COIR CONSUMPTION

(FROM A SOUTH INDIAN CORRESPONDENT)

Reviewing the activities of the Coir Board, its Chairman said recently that the show room and the sales depot opened in New Delhi last year as a first step to promote the internal market, had proved very useful. Till the end of March 1957, goods worth about Rs. 82,000 were consigned to the sales depot by 11 manufacturers, and Rs. 33,000 worth of goods were sold out. The average sales for the past six months were Rs. 4,700 a month. Besides the actual sale of coir goods, the show room has helped create wide interest in coir products among north Indians. The Board proposes to start similar show rooms and sales depots in Calcutta, Bombay, Madras and Jullundur. It has also taken steps to run a publicity mobile van which will exhibit representative varieties of coir products. Publicity for improving the market for coir being a very important function of the Board, it has allotted for this purpose more than 50 per cent of its budget for 1956-57. Publicity takes the form of participation in fairs and exhibitions in and outside India, advertisement through newspapers, wall posters, hoardings, cinema slides, etcetera. The Board has so far participated in 18 fairs and exhibitions outside India, and eight exhibitions in this country. The possibility of bringing out a documentary film on coir is being considered. A brochure on the coir industry and a catalogue of representative varieties of coir and coir products are now in the press.

The Chairman hopes that coir will shortly get a new market in Russia and in east European countries. The Russian trade representatives who visited the Coir Board's show room in Delhi showed great interest in the exhibits there and were provided with samples and quotations which they have sent to their country. Representative samples and illustrations of coir products have also been supplied to the State Trading Corporation of the India to enable it to negotiate with some of the foreign buyers who have shown a good deal of interest in coir goods. There were no marked fluctuations in coir prices during 1956. The price of Anjengo Superior coir yarn, corresponding to which the prices of other yarns moved more or less, was fairly steady, ranging between Rs. 308 and Rs. 339 a candy of 6 cwt. Since the beginning of 1957, prices of both raw and retted husks have gone up a little, compared with those of the same period last year.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers' Association:

	Closing Prices on 5-1-57 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1.	1.26	1.26
No. 2.	1.23	1.23
No. 3.	1.20	1.20
No. 4.	.96	.96
No. 5.	.91	.91
Sheet cuttings	1	.95
do	2	.90

Crepe:		
Water White		1.14 per lb
R.M.A. No. 1X	1.15 Nom	1.10
R.M.A. No. 1	1.10/12	1.00
Crepe No. 2		.97
No. 3		

Scrap Crepes:		
Sc. Crepe No. 1	.90 Nom	.90
do No. 2	.85/87	.86
do No. 3	.75/85	.80
Flat Bark.	.70/72	.71
Sc. Crepe 3X		.83

To arrive at f.o.b. Colombo prices add 53.53 cents a lb. for crepe other than scrap crepe and 31.53 cents for scrap crepe to the above market prices.

Calcutta Markets

DUST TEAS EASIER

AT Sale No. 42, held on 16th April, Dusts on offer were 18,821 chests. The market was again generally easier. Black leafy exportable kinds were well supported, but the poorer C.T.C. Assams were a weak feature. Mediums with bright liquors and a clean leaf appearance sold at dearer rates, while the remaining offerings were from 4 to 8 nP easier, although orthodox Assams with useful liquors did not generally share the same decline.

Quotations

	1957	1956
Rs.	Rs.	Rs.
Medium Doars Dust	1.50 to 1.60	1 8 0 to 1 9 0
Medium Assam Grassy Dust	1.65 to 1.70	1 10 0
Medium Assam C.T.C. Dust	1.75 to 1.85	
Best Assam C.T.C. Dust	Not quotable	2 10 0 to 2 12 0

There was no internal Leaf sale.

QUIET CONDITIONS IN FREIGHT MARKETS

CONDITIONS in the freight market still remain comparatively quiet, particularly in trans-Atlantic business. There has been more activity in the eastern markets. One fixture was made at 66s for an American vessel Hampton Roads-Antwerp or Rotterdam, but owners generally are holding off in the hope of a rise in rates. In the ore trade, Calcutta-Gdynia-Gdansk was fixed at 129s f.i.o.t., and a 7,500-tonner and a 8,500-ton vessel were taken at 126s f.i.o., Masulipatam-Japan, June shipment. Bombay-Constantza was fixed at 115s 6d 5,000-ton f.i.o. April-May shipment. In the grain trade, two vessels were fixed for wheat U.S.-North Pacific-East Coast India with two ports' discharge at 165s and 166s 6d. In the time charter market, a British motor ship was fixed at 54s 6d for a trip charter India-Japan, while a 4,000 d.w.t. Danish motor-ship was chartered at \$ (U.S.) 37.00 for 12 months' trading with delivery East Coast, the U.S.A.

LINSEED FIRMER

After a rather quiet opening in the past week, a firmer undertone set in due to keener enquiries from buyers. Forward prices have come more into line with ready ones. New crop supplies were moving very slowly, and ready goods were very scarce. Trading has been competitive, although the actual turnover was small. The oil section has improved because of fresh export business. A fairly good demand from shippers for ready goods has resulted in fair activity at better prices. Latest quotations were as follows: Ready Rs. 21-12 a maund, and April-May Rs. 21-6 a maund.

SUGAR UNCHANGED

During the week ended 17th April, sugar sales in the Calcutta market averaged 5,000 bags daily. Arrivals a day were 6,000 bags and stocks totalled 85,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31.12 for ordinary grain and Rs. 33.25 for big grain. The market was unchanged.

HIDES AND SKINS STEADY

The market was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 9th April and 15th April, 1957)

Cowhides: Wet salted (Ord.) 31,000 pcs on the basis of Rs. 7.25 to Rs. 9.75; Wet salted (Slaughtered) 21,500 pcs on the basis of Rs. 12.50 to Rs. 21.

Goatskins: Wet salted (Daissee, Killed) 53,800 pcs on the basis of Rs. 300 to Rs. 310, Rs. 325 to Rs. 350 and Rs. 370 to Rs. 385; Assam-Dinajpur 56,200 pcs on the basis of Rs. 242 to Rs. 300; Punjab-Kissengani-Malda 39,200 pcs on the basis of Rs. 280 to Rs. 325; Pakur-Patna 3,700 pcs on the basis of Rs. 260 to Rs. 270; Muzaffarpore-Patna-Darbhanga 51,200 pcs on the basis of Rs. 275 to Rs. 325.

SHELLAC MARKET DULL

During the week ended 16th April, the market was steady at the beginning, and dull at close. The range of quotations was as follows:

Pure Buttonlac	Rs. 101.00, 100.00 buyers; Rs. 100.00 value; 98.00 buyers.
Lemon No. 1 Shellac	Rs. 103.50, 102.50, 101.00 buyers.
Lemon No. 2 Shellac	Rs. 98.00 to 95.00 buyers.
F.O. Std. 1 Shellac	Rs. 90.50, 90.00 buyers.
Pure TN Shellac	Rs. 87.00 basis buyers; Rs. 86.00 buyers; Rs. 86.00 basis done buyers; 85.00 buyers.
4% I.T.N. Shellac	Rs. 76.50 to 75.00 buyers.
No. 1 Kusmi Seedlac	Rs. 94.00, 92.50, 94.00 buyers.
No. 2 Kusmi Seedlac	Rs. 89.50, 88.50, 87.00 buyers.
Fine Bysaky Seedlac (Manbhumi)	Rs. 86.50, 85.00 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 84.00, 84.50, 83.50 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 77.50, 76.00 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 72.00, 70.00 buyers.
Kireelac	Rs. 30.50, 31.00, 30.50 buyers.

Shipments during April until the 11th were 9,540 packages comprising shellac 5,963 packages, seedlac 2,633 packages, buttonlac 161 packages, and others 783 packages.

COMPANY AND PUBLIC NOTICES

THE WESTERN INDIA MATCH COMPANY, LIMITED. NOTICE.

NOTICE is hereby given that the Thirty-fourth Annual General Meeting of the Shareholders of the abovementioned Company will be held at the Registered Office of the Company at Indian Mercantile Chambers, Nicol Road, Ballard Estate, Bombay at 4 p.m. on Wednesday the 8th day of May, 1957 to transact the following business:—

- To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1956.
- To declare a dividend and a bonus.
- To elect a Director in the place of Sir Rahimtoola M. Chinoy who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution, of which special notice as required by section 281 of the Companies Act 1956 has been received by the Company:—
"RESOLVED that Sir Rahimtoola M. Chinoy who has attained the age of 75 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit of 65 years prescribed by section 280 of the Companies Act 1956 shall not apply to him."
- To elect a Director in the place of Mr. Dinshaw D. Romer, who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution as a Special Resolution, of which special notice as required by sections 261 and 281 of the Companies Act 1956 has been received by the Company:—
"RESOLVED that Mr. Dinshaw D. Romer who has attained the age of 82 years and who is an associate of the Managing Agents of this Company, and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit of 65 years prescribed by section 280 of the Companies Act 1956 shall not apply to him."
- To appoint Auditors for the ensuing year and to fix their remuneration.
- To consider and if thought fit to pass the following resolution as a Special Resolution:—
"RESOLVED that the Company hereby sanctions the borrowing of an aggregate sum of Rs. 60 lakhs on Cash Credit account from the Bank of India Ltd. and the Central Bank of India Ltd. (to the extent of Rs. 30 lakhs from each Bank) and as security for the said borrowing the Directors be and they are hereby authorised to hypothecate and charge all the movable property and assets of whatsoever nature (exclusive of uncalculated capital) of the Company so as to create a floating security and charge on all such property and assets and to execute all such documents as may be required by the said Banks in connection therewith."

The Transfer Books of the Company will be closed from the 22nd day of April, 1957 to the 10th day of May, 1957, both days inclusive.

By Order of the Board,

A. HYDARI,

Executive Director.

2nd April, 1957.
Indian Mercantile Chambers,
Nicol Road, Ballard Estate,
Bombay.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

The dividend and bonus when sanctioned will be payable at the Central Bank of India Ltd., Bombay and Calcutta on and after the 14th day of May, 1957 to those shareholders whose names stand on the Register on the 10th day of May 1957 and warrants will be posted in due course to each shareholder at his registered address.

Explanatory Statement issued under section 173 of the Companies Act 1956 in connection with the items of special business to be transacted at the Thirty-fourth Annual General Meeting to be held on the 8th day of May, 1957.

As required by section 173 of the Companies Act 1956 the following explanatory statement is issued with the Notice of the Thirty-fourth Annual General Meeting of the Company and sets out all material facts relevant to items 3, 4 and 6 in the Notice.

Item 3: Your Director Sir Rahimtoola M. Chinoy is retiring by rotation. He has attained the age of 75 years and as such he cannot be re-appointed unless the shareholders pass a resolution specifically declaring that the age limit of 65 years prescribed under section 280 of the Companies Act 1956 shall not apply to him. As required by section 281 of the Act a special notice has been received by the Company proposing that Sir

Rahimtoola M. Chinoy be re-appointed a Director of the Company and that the age limit of 65 years prescribed under section 280 of the Act shall not apply to him.

Sir Rahimtoola M. Chinoy is a businessman of great and varied experience. He has been a Director of your Company for nearly 20 years and has rendered valuable services to the Company. It is in the interests of the Company that he should be re-appointed a Director.

Item 4: Your Director Mr. Dinshaw D. Romer is retiring by rotation. He has attained the age of 82 years. He cannot be re-appointed unless the shareholders pass a resolution specifically declaring that the age limit of 65 years laid down by section 280 of the Companies Act 1956 shall not apply to him. Furthermore, since Mr. Romer is an associate of your Managing Agents, the Swedish Match Company, being a Director of the Assam Match Company Ltd., which is a subsidiary Company of your Managing Agents, and since your Managing Agents are authorised to appoint a Director or Directors on the Board of your Company, Mr. Romer's re-appointment also requires a Special Resolution under section 261 of the Act. Special notice as required by sections 261 and 281 of the Act has been received by the Company proposing that Mr. Dinshaw D. Romer be re-appointed a Director of the Company and that the age limit of 65 years shall not apply to him.

Mr. Romer is a well known Solicitor and Director of several companies. Having been associated with your Board for the last 18 years, he has rendered valuable services and it is in the interests of the Company that he should be re-appointed a Director.

Item 6: In September 1938 your Company arranged to obtain Cash Credit loans from the Bank of India Ltd. and the Central Bank of India Ltd. to the extent of Rs. 10 lakhs from each of the said Banks against hypothecation of all the movable property and assets (exclusive of uncalculated capital) of the Company. Thereafter the Cash Credit arrangement with the Banks was being utilised as and when necessary. For some years however this Credit has not been utilised, but it has been kept alive in case of need. Now it has become necessary to increase our Cash Credit particularly because of the expenses to be incurred in connection with the establishment of the Company's new paper mill. The aforesaid Banks have agreed to grant a total Cash Credit loan of Rs. 60 lakhs (inclusive of the aforesaid earlier loan of Rs. 20 lakhs) against the same security, namely hypothecation and charge of all the movable property and assets of whatsoever nature (exclusive of uncalculated capital) of the Company. Each of the aforesaid Banks will grant Cash Credit to the extent of Rs. 30 lakhs. The terms on which the loan is offered by the Banks are fair and reasonable. Your Directors therefore recommend to the shareholders to sanction the necessary borrowing. Shareholders' sanction is required under Article 67 of the Company's Articles of Association.

The following Directors are interested in item No 6:

Sir Cowasjee Jehangir as a Director and shareholder of the Bank of India Ltd.

Mr. Dinshaw D. Romer as a Director and shareholder of the Central Bank of India Ltd.

Sir Chunnilal V. Mehta and Mr. Maneklal Premchand as shareholders of both the Bank of India Ltd. and the Central Bank of India Ltd.

By Order of the Board,

A. HYDARI,

Executive Director.

The Company Meetings and Dividends Table appears on page 557

MACNEILL & BARRY LTD.

NOTICE is hereby given that the Board of Directors of this Company has sanctioned payment of

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O, P, F and Dd indicate Ordinary Preferred Ordinary Founders' and Deferred shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

MOBILISING RESOURCES FOR THE BANKING SYSTEM

VALUE OF BRANCH EXTENSION SCHEMES: NEED TO PROMOTE SAVINGS

NO concrete evidence is available yet to show that the slightly easier supply of funds in the money markets which has been reported during the last two or three weeks is much more than a temporary phenomenon. There has been a small decline in the advance-deposit ratio of scheduled banks, but it is still at the high level of 74.3 percent. Demand for advances from the major industrial and trade borrowers shows no signs of slackening. Such easing in the supply of funds as has taken place may be due partly to payments made by Government departments at the turn of the financial year; to a much more limited extent, it may reflect the impact of the drastic cuts in imports made recently. Neither of these factors, however, promises to place banks in a much more comfortable position to meet the large requirements of borrowers in the future. The later months of 1957 could bring new strains if the tempo of industrial production is maintained in spite of the foreign exchange shortage, and if, as is expected, agricultural output increases. The scratching of heads which is now going on in banking circles is timely if the growing credit requirements of the economy are to be properly met. Two bank chairmen have made notable contributions to the debate during the past few days—Dr. N. N. Law in his address from the chair to shareholders of the United Bank of India, and Mr. G. D. Birla in a statement circulated at the annual general meeting of the United Commercial Bank. Both have stressed that the fundamental problem is to secure a more rapid increase in deposits, the rise in which has lagged far behind the rise in money supply. For the time being, some temporary expedients may be necessary, such as increased borrowing from the Reserve Bank and special measures to bring about prompt payments of bills by Government departments. But, on a longer view, none of these expedients seem likely to go to the root of the problem in such a way as to enable the banks to fulfil their proper functions in a climate of healthy independence.

Broadly speaking, there are two main considerations in planning for an expansion in deposits. The first, which both Dr. Law and Mr. Birla stress, is the need to maintain confidence in the future of private enterprise. The second is the importance of greater resourcefulness and initiative on the part of the banks themselves to attract the money which is not at present coming to them. Concentrating on the second, Dr. Law has drawn attention to an interesting scheme for launching a vigorous campaign of branch extension. Not all his proposals will meet with ready approval in view of the practical difficulties which are likely to arise, but taken together they constitute a useful basis for discussion. As concrete suggestions, they should do much to put in abeyance the charge that bankers are barren of ideas in dealing with the monetary stringency—a charge which has in any case been hollow to the extent that many of the causes of the banks' recent worries have been outside their control. With new money flowing to banking, with signs of developing inflation, and with a general lack of confidence in the Government's economic policies, it is not surprising that resources available to the banking system should have shown an inadequate increase. However, in meeting the new situation, the banks have

AMERICAN POLICIES IN THE MIDDLE EAST

THE ROLE INDIA AND THE COMMONWEALTH CAN PLAY

(BY AN INDIAN CORRESPONDENT LATELY IN U.S.A.)
THOSE who thought that the Eisenhower doctrine constituted an entirely new and comprehensive scheme to set the Middle East right—and there are too many such men in Washington—may well have been surprised by the U.S. President's recent reference, in relation to Jordan, to the 1950 declaration. So, after all, the United States has not arrived on the treacherous sands of the Middle East with a scheme to end all schemes. There is need for continuity, and there is room for Anglo-French co-operation, even if the character of that co-operation will of necessity be different. To rake up a dead past is futile, but if only to get the perspective right, it is necessary to record that it is American co-operation which had been lacking in the Middle East and which in its turn made a significant contribution to the whole chain of events leading to the crisis we have not yet seen the end of. The existence of a power vacuum in the Middle East, which is the starting point of the Eisenhower doctrine, is an observable fact. American omissions and commissions can be causally related to the creation of a not very small part of the vacuum. But what is far more important is that the United States is now ready to play its rightful part in the Middle East.

The part will not be played rightly without Washington ridding itself of some of its cherished assumptions, for the simple reason that they are either untrue or irrelevant. The first of these may be the idea that the world is a gadget, with which much is wrong but which can either be "fixed" in a sec. with America's famous "know-how" or scrapped and replaced by something of a later model. This is, admittedly, a crude and rather unfair way of describing American thinking on foreign affairs, but the first reactions in the United States to the Eisenhower doctrine suggested this analogy. Leader-writers almost asked the average American to accept the doctrine much as a high-powered advertising agency might have recommended on the radio a new highway code. As it happens, the world has more lanes and by-lanes, some of them blind ones, than it has express ways; and an American tail-fin automobile may not be the best thing in which to negotiate them. This is only another way of saying that American impatience with problems may occasionally retard their solution.

The second lesson America now has an opportunity of learning, without repeating the error Britain and France recently fell into. Russia is too formidable an enemy to face alone—even for the United States—and the President's perhaps casual reference to the three-Power declaration of 1950 is welcome but inadequate evidence that the need for co-operation among these three democracies is understood in Washington as widely as it should be. In the recent past, Britain and France permitted themselves to forget or ignore this fundamental—that, to be effective, the democracies must act together or not at all. But it is already admitted in the better informed circles in the United States that America had not done all that could fairly have been expected of her, even as Britain and France are recognising anew the indispensability of the American alliance. Mr. Richards's interim report on the number of countries in the Middle East to which he has "sold" the Eisenhower doctrine is something on which comment will be premature, but to use an analogy again—a bazaar in this part of the world has very little in common with an American supermarket.

Another point that must have struck many who were present in Washington at the time of Mr. Dulles's testimony before the Foreign Relations Committee on the Eisenhower doctrine was the excessive emphasis placed upon the fear of Communism. The Middle East can indeed be a region

Russia would like to penetrate with that insidious ideology, and the danger is obvious from the propaganda offensive Moscow has been carrying out for some years. The Administration probably has to overdraw the threat of Communism to persuade a parochially-absorbed Congress to take notice of anything farther than Guatemala, so that the visitor from abroad may not have appreciated the domestic significance of the apparent obsession with Communism. But it may still be necessary for Washington to remind itself that, whatever the truth in the global picture as a whole, Communism is not necessarily the only, or the most immediate, evil in every area in the free world. Certain sections in Britain and France may really be inadequately appreciative of what is described as Arab nationalism: certain sections in the United States may have over-simplified the Middle Eastern crisis in ascribing it all to a conflict between nationalism and what is still called colonialism.

It may not be inappropriate to bring India into the discussion at this point, for here, too, there is a tendency to reduce the complex Middle Eastern tangle into a few simple and popular formulae. That the Anglo-French invasion of Egypt would be unpopular in India, whose Government had not even been consulted, must have been foreseen in London. It was unpopular in the United States, too, which has begun to repair the Atlantic alliance instead of brooding on what had caused a temporary breach therein. It may be submitted that, even as Britain and America are now engaged more in charting a course for the future than in apportioning blame for what has gone before, similar re-thinking should begin in London—and in New Delhi. The coming Commonwealth Prime Ministers' conference will achieve little if it is not preceded by a re-discovery of the ties between this country and the other democracies of the world, Britain in particular. And these ties are stronger than all democracies always remember.

India's spontaneous sympathy for countries, especially those Asian, which have gained their independence recently is what entitles her to a position of near-leadership in the continent. On the other hand, it is an insult to her mature nationalism to place it on the same footing as all agitations elsewhere; indeed, it is this superiority in mellowness which led to the pre-eminence she rightly enjoys in the world today. It was the responsibility that comes with leadership which was evident when Mr. Nehru publicly disapproved Egypt's nationalisation of the Suez Canal by saying that this was not India's way. It has sometimes appeared since that India was being led by the extremism of other parties into positions she might not otherwise have taken. A country pledged to friendship with every other will naturally be friendly with the Arab peoples; and Pakistan's intransigence probably adds something to the need for that friendship. But it may be an error to think of Pan-Arabism as only anti-West. To take an anti-colonial stance in every situation is to fall into the fallacy of polarisation which presents a false view of the world we live in—a world which is divided into two camps and no more. Communism is not the only alternative to colonialism, as India has shown. Nor is Pan-Arabism the only alternative to colonialism, as India may yet have to recognise more clearly. India's political genius has been at its best in its discovery of a large world between that seen by Washington and the other one by Moscow. In consolidating this third area, to which the Commonwealth belongs, India has a supremely important part to play. The chance is hers to seize.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, *Capital's* Index of Indian Industrial Activity shows an advance of 3.0 points for November 1956. Mainly contributing to the increase were jute manufactures, paper and coal. Cheque clearances improved.

Expansion in Automobile Products.—The development of the automobile industry depends to a large extent on the growth of ancillary industries, which supply the component parts for a motor vehicle and spare parts for its maintenance. Mr. M. A. Chidambaram, addressing the annual general meeting of Automobile Products of India Ltd. in Bombay last week, pointed with satisfaction to the success of the company's efforts to extend its activities. The brake lining plant has started normal production. The quality of the products is comparable in every way to the American types and selling arrangements have been concluded with the Firestone Tyre and Rubber Co. of India Private Ltd. The Lambretta motor scooter, which is not an ancillary product but a vehicle in its own right, seems assured of a rising demand from those who want an economical and reliable means of transport but cannot afford a motor-car. The company has worked out a phased programme for the manufacture of Lambrettas. Orders have been placed, through the Milan associates, for machine tools, jigs, small standard tools and special tools; shipments have commenced. The assembly line and the test house for Meadows diesel engines

have been installed. They are capable of assembling and testing 20 engines a day. The assembly of Borg and Beck clutches out of c.k.d. components has started, and orders have been placed for the machinery needed for their manufacture. Progress has been made in the manufacture of rubber parts in the Lockheed brake system, and machine tools for master cylinders, wheel cylinders, hose, sleeves, etcetera, will be received in Bombay before the end of this year. The loan of Rs. 12½ lakhs offered by the Industrial Finance Corporation for the brake lining plant was subsequently reduced to Rs. 9 lakhs to cover the actual cost of the plant, but a further loan of Rs. 21 lakhs has been granted to meet the requirements of other programmes. With the annual turnover expected to go up to Rs. 3 crores, the company feels the need to increase its liquid resources. It is, therefore, proposed to approach shareholders and the public shortly for Rs. 20 lakhs of further capital. Mr. Chidambaram recalled that the Tariff Commission report on the automobile industry, submitted in October 1956, has estimated that the annual demand for motor vehicles is likely to increase by 1960-61 to 40,000 commercial vehicles, out of which 70 percent to 80 percent will be of the diesel-driven type. It is considered necessary that the manufacture of commercial vehicles should be given priority over passenger cars, that the output of diesel vehicles in particular should be increased to meet the growing demand, and that the additional capacity required for commercial vehicles should be installed in existing units rather than in new ones. The Commission has also emphasised the importance of establishing, as soon as possible, the complete manufacture of the engine, transmission, rear axle, suspension and chassis members.

Kerala Plantation Prospects.—There has been a steady decline in the values of plantation shares quoted on the Madras Stock Exchange. The Plantation Labour Award which was published last October brought about a crisis which compelled the authorities of the Stock Exchange to fix minimum prices for the ordinary shares of plantation companies. The downward trend which has recently set in is due to the installation of the Communist Ministry in Kerala. The market prices of several shares are now well below the minima fixed on 8th November, 1956. The main anxiety springs from the pronouncements of Communist leaders in Kerala suggesting that they intend to nationalise foreign-owned plantations there. The Central Government is opposed to the nationalisation move, but investors remain worried because the Kerala Ministry seems determined to press it. A mild recovery has taken place in selected shares during the past week, mainly because the low levels were considered attractive. But the outlook is still obscure. Plantation dividend announcements have so far been encouraging. The dividends which are yet to be announced also seem likely to be fairly satisfactory, if crops, price realisations and the generally more liberal distribution policies of management are any guide. However, the scope for capital appreciation seems limited and a further decline in values is considered likely in many cases; current yields may go up if capital depreciation takes place. Many think that the plantations in Kerala will not be nationalised, considering the economic, administrative and constitutional difficulties which will arise. But it is feared that the labour policy of the Kerala Government, coupled with its pressing need to increase its own revenues, will push up the cost of production. Plantation shares do not suffer the full impact of the dividend supertax because of the partially agricultural nature of the companies' income. As a result, investors fear that the agricultural income-tax may be raised further in Kerala, Mysore and Madras.

Andhra Ideas on Nationalising Mines.—The Andhra Pradesh Government will seriously consider nationalising certain mines in the State after the formation of its proposed State Trading Corporation for minerals. This was announced in the Andhra Legislative Assembly last week by Mr. V. B. Raju, Minister for Industries, while replying to the debate on the Andhra Pradesh Mica Bill. According to him, it is not an easy decision, the Government has to examine several aspects, such as the compensation to be paid to proprietors, lease-holders and others. The Government also has to see whether it has enough money to pay as compensation. Mr. Raju does not agree that the nationalisation of mica mines will bring profits to the Government; profits are an uncertain factor, as they depend on demand in foreign markets. But he thinks that the nationalisation of iron ore mines might be more useful as iron is essential for the industrial development of the State. That, the intention of the Government to widen the public sector in mines and other industries, according to Mr. Raju, is a logical corollary to accepting the principle of a planned socialist economy. The Andhra Pradesh Mica Bill has been passed with certain amendments to a clause relating to the disposal of mica in the possession of a licensee or a certificate holder whose licence or

certificate has been cancelled by the Government. The original Bill provided for the introduction of a system of licensing for the possession and sale of mica, and for a system of permits to control its removal and transport. It aimed at checking the smuggling of mica from non-royalty-paying areas to royalty-paying areas.

Insurance and Foreign Exchange.—In his address from the chair at the annual general meeting of the Indian Insurance Companies Association in Calcutta this week, Mr. D. Das Gupta states that general insurance companies can help increase foreign exchange earnings. Invisible earnings form an appreciable proportion of total foreign exchange receipts; in 1950, a committee estimated the proportion at 25 percent. General insurance, banks and shipping are an important source of these earnings. It was impressed on the committee "that the Government should provide in the licensing procedure that those importers who made use of the services of Indian shipping, banking and insurance companies, should be allotted an additional monetary quota for licensable imports equivalent to the difference between c.i.f. and c. and f. price, as the case may be, and the f.o.b. price of imports." In support of this claim, Mr. Das Gupta points out that while most exports are on an f.o.b. basis, most imports are on c.i.f. contracts. The committee agreed in principle to such a system being introduced, but, according to Mr. Das Gupta, nothing has so far been done. The Government, he thinks, should consider the matter seriously. Indian insurers have opened a number of branches in foreign countries, and earnings from these branches have increased considerably in recent years. But more can still be done. According to Mr. Das Gupta, the Government should grant permission for opening new branches and provide facilities which serve as an incentive for insurance companies to venture abroad. He also suggests that Indian insurers should be permitted to write life assurance business in foreign countries.

Planning in Pakistan.—The National Economic Council in Karachi has just approved Pakistan's five year plan covering the period 1955-60. In doing so, it has reduced the figure for the proposed outlay from Rs. 1,160 crores to Rs. 1,080 crores. Because of this reduction, the increase in national income is expected to be 15 percent, instead of the 20 percent envisaged in the draft. Over the five year period, the population is likely to rise by 7½ percent, so the increase in per capita income is placed at 7 percent. The public sector has been assigned a fairly important rôle. Its share of the proposed investment is Rs. 750 crores, compared with Rs. 330 crores in the case of the private sector. Water and power development will be the largest single item of investment in the former, the allocation for it being Rs. 269 crores. Transport and communications come next (Rs. 166 crores), followed by industry, fuels and minerals (Rs. 160 crores), village development and agriculture (Rs. 151 crores), housing and settlement (Rs. 86 crores), education and training (Rs. 58 crores) and health (Rs. 29 crores). Social services have been given a relatively unimportant place, with only Rs. 5 crores, as the Council considers it unrealistic to provide more for them. Of the Rs. 330 crores which the private sector is expected to find for itself, investment in industry is estimated at Rs. 140 crores. Capital formation in other sectors of private activity such as building construction, transport equipment and mineral development is expected to be of the order of Rs. 80 crores, Rs. 45 crores and Rs. 55 crores, respectively. It will be interesting to watch the progress of efforts to raise resources for the plan. One reason for reducing its size, it is said, is "lower resources due to the delay in the implementation of the plan and inadequate tapping of new sources of public revenue". If the aim is to prepare the base for quicker industrialisation, the order of priorities seems to be fairly rational. Yet it cannot be overlooked that the plan shows a lack of appreciation of the importance of agriculture. The final version has raised the proposed outlay on agriculture and village development to Rs. 151 crores, from Rs. 115 crores provided in the draft. But the new allocation may still prove inadequate. There has been some academic discussion of the need for land reforms. The idea of fixing ceilings for landholdings has been favoured, but the planners have realistically postponed concrete measures until "a scientific basis" is found on which to determine the ceilings appropriate to different regions. The immediate programme is to expand production by utilising lands which are not being cultivated at present.

Protection for Tyre Inflators.—The Tariff Commission is considering the question of continuing protection to the automobile hand tyre inflator industry beyond 31st December, 1957. The industry was granted protection in 1954 and the protective duty was fixed at 45 percent *ad valorem*. The scope of the last enquiry undertaken by the Commission was confined to hand-operated tyre inflators of all types which could be adapted for use as accessories of motor vehicles. Opening the public enquiry into

the question of continuing protection to the industry, Mr. K. R. Damle, chairman of the Tariff Commission, said the Development Wing has suggested that the scope of the present enquiry should be enlarged to cover hand tyre inflators used for motor cycles, scooters and bicycles as well. Five units were engaged in the manufacture of hand tyre inflators in 1954. The Tariff Commission estimated that the rated capacity of these five units was 140,000 for hand tyre inflators and 183,000 for pump connections. The rated capacity claimed by the same units in connection with the latest enquiry is 91,200 and 159,600 respectively. Referring to these figures, Mr. Damle said: "We have not received any satisfactory explanation for this reduction in capacity. The capacity figures furnished by the Development Wing also differ in some cases from the figures furnished by the firms. We would like to reconcile these discrepancies and arrive at the correct position in regard to the capacity of various firms." The production of hand tyre inflators and pump connections has steadily increased since 1954. The Commission has, however, received varying estimates of domestic demand from manufacturers and distributors. There is no definite information on imports of automobile hand tyre inflators; but the import policy indicates that they cannot have been large during the last three years.

Preservation of Pension Rights.—A problem which has baffled solution for a long time, even in India where pensionable employment carries a social status not accorded to it generally, is the frustration of an employee who continues in a job which has grown uncongenial solely to preserve the pension rights which have accrued in earlier years. Many committees of enquiry have reported on this vexed question, and the latest of these reports comes from a working party of actuaries, entitled *Preservation of Pension Rights*, to aid discussion of the subject by fellow members of the profession in London and Edinburgh recently. The report says that there is no technical reason why arrangements should not be made in any type of pension scheme to preserve the accrued pension rights of outgoing members. Such arrangements exist for school teachers, for employees of the National Health Service, including doctors, for university staff, Merchant Navy officers, and in the flour milling industry in Britain. All these are able to serve different employers within their particular profession and yet maintain continuity of membership for pension purposes. Apart from arrangements of this type, accrued rights can be preserved on a change of employment in two ways. The first is the transfer value method, under which a sum representing the value of the member's interest in the old scheme is paid over to the scheme associated with his new employment, where it is used to buy pension rights for him. The second is the cold-storage method, whereby the outgoing member retains the right to the accrued pension based on his actual service and this is placed in cold-storage until he reaches the retiring age. Arrangements for preserving rights in these ways are common within the public services, but there are no facilities for persons who transfer from the public service to private employment. In the latter, it is still the exception for an employer to arrange for the transfer of rights when an employee leaves him—which seems wrong, for the retention of an unhappy employee merely because of this can hardly enhance the value of his work.

STRINGENCY IN MONEY MARKET

ACCORDING to Voltaire, the man who invented palmistry was the first rogue who met a fool. But if the art of divination had been applied to the prospects of the money market during the last few months, we are not quite sure that the rogue would have the best of it, more especially if payment was to be made by results. Anything more contradictory than the condition of the money market in India ever since November last it is difficult to conceive. That money should be scarce and interest high in a year of famine is natural enough. But what is unusual and contradictory is that there should be evidence of very considerable sums of money hanging round the skirts of trade all the time without actually touching them or even affecting the value of money in the Presidency towns. The way private capital has played round just outside the radius of ordinary trade influence may be seen in the large imports of silver and Government paper, and in the absorption of the Port Trust 4 percent loan the other day at the unexpectedly high average of Rs. 105-12. Why should so little money be available for trade when there is apparently so much forthcoming for other investments at comparatively low rates of interest and in the case of silver of no interest at all? Why should solid institutions like banks, including the Presidency banks, be starved of deposits which afford comparatively high interest when so much money is lying idle in the hands of local capitalists? We think we shall not be far wrong in attributing this contradictory state of affairs partly to want of elasticity in trade and partly to native custom.

COAL POLICY IN INDIA

By
Andrew Farquhar

This booklet consists of reprints of articles written by Mr. Andrew Farquhar, former Coal Adviser to the Tata Iron and Steel Co. Ltd., which have appeared in *Capital* in recent years. As expert analyses of India's coal problems and policies, they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

Without Prejudice

ENFORCING THE PROVISIONS
OF A CONTRACTCLASH BETWEEN EQUITY
AND LAW

(FROM OUR LEGAL CORRESPONDENT)

THIS note has to do with a branch of the law concerning Government tenders. A, in response to a general invitation by the Government so to do, submits a tender to the Government for the supply to it of certain goods on certain terms, set out in the conditions relating to the tender prepared by the Government and accepted by A. A's tender is accepted, and by such acceptance, a concluded contract is arrived at between the two parties. And further emphasising the obvious in order to grasp fully the implications of an informative decision, of which perhaps more may be heard, one may point out that the obligation of contract is an obligation created and determined by the will of the parties to it; and that, generally speaking, apart from considerations of criminality, fraud, misrepresentation, disability, illegality and the like, the business of the law is to give effect to the intentions of the parties as expressed in the contract, by enforcing the performance and observance of the contract's terms. Contractor A may think the terms and conditions of the tender harsh, one-sided, arbitrary, unreasonable. But he is at arm's length with the opposite party, has every opportunity of obtaining legal advice, is not obliged to tender at all, and if, knowing the prescribed conditions, he does tender, you may think he is obliged to comply with them. Well, let us see.

This claim was for the recovery of Rs. 34,063-73 from the Government of India as the owner of the

Madras and Southern Mahratta Railway, represented by the General Manager of that railway. The plaintiff claimed that amount as damages consequent on a breach of contract alleged to have been committed by the Government as owner of the railway. The plaintiff's case was that in pursuance of an invitation by the railway administration for tenders for the supply of jaggery to the railway grainshops, he submitted on 27th January, 1948, a tender in the prescribed form offering to supply 14,000 imperial maunds of cane jaggery, Chittoore variety, first sort, during the months of February and March 1948, at the rate of Rs. 11-4 an imperial maund. The defendant, in a letter addressed by the Deputy General Manager of the railway dated 20th January, 1948, accepted the plaintiff's tender and called upon the plaintiff to remit a sum of Rs. 7,900 in cash to the paymaster and cashier of the railway in Madras on or before 7th February, 1948, as security deposit for the proper fulfilment of the contract, and intimated that on the receipt of advice of such remittance the official order would be placed with him. The plaintiff duly paid the amount and the railway by a letter dated 16th February, 1948, placed an order with the plaintiff for the supply of the entire quantity of 14,000 maunds, to be delivered in four instalments of 3,500 maunds each, on 1st March, 1948, 22nd March, 1948 and 21st April, 1948. The programme of delivery was altered later as follows: 3,500 maunds between 1st and 4th March, 1948; 3,500 maunds between 22nd and 25th March, 1948; 3,500 maunds between 5th and 8th April, 1948; and 3,500 maunds between 21st and 24th April, 1948.

The plaintiff supplied the first instalment of about 3,500 maunds as required by the railway, and the railway accepted it. But on 8th March, 1948, the Deputy General Manager of the railway addressed a letter to the plaintiff running as follows: "Please note that the balance of the

quantity of jaggery outstanding on date against the above order is treated as cancelled and the contract closed." The plaintiff protested, saying that he had invested more than a lakh of rupees to enable him to perform the contract, and that he was ready and willing to supply the goods according to the terms of the contract. But the railway refused to reconsider the matter, and said that it was well within its rights in cancelling the contract.

The railway administration at no time deemed it necessary to explain its reason for the cancellation of the contract. It had one trump card which it played with success in the trial court. The tender contained the following clause: "This Administration reserves the right to cancel the contract at any stage during the tenure of the contract without calling upon the outstandings on the unexpired portion of the contract." A hard condition, no doubt, and one conferring or purporting to confer on one of the parties power to act oppressively and arbitrarily to the great detriment of the other party. But there is nothing ipso facto illegal in hard conditions in a contract. I may let you my tumbled-down house at a rack rent with a clause in the lease that at the expiry of it, you shall deliver up the house to me in good and substantial repair and condition, with the result that you will have to rebuild it. But you have signed on the dotted line with your eyes open and the contract binds you.

The reader is invited to stop here, and give his own answer to this particular problem. One fancies that he will go wrong, as the writer did, and with great respect and diffidence, persists in so doing, believing that in matters of contract once one starts talking about such matters as good conscience, equitable considerations, natural justice and the like, one is in danger of losing sight of the clear principles of law and of being bogged down in a morass of abstract morality. The defendant railway did not hold all the trumps. The plaintiff had a good hand, too, and it included the ace. He claimed that the cancellation clause was null and void and that no effect should be given to it, as the clause, he said, was entirely repugnant to the existence of a valid contract between the parties, and was against public policy, justice, equity and good conscience. The plaintiff further submitted that even assuming that the railway had a right of cancellation, it could be exercised only for sufficient and valid reasons and not arbitrarily, which latter submission, you may agree with the writer, amounts to saying that words must be by implication added to the cancellation clause which are not actually in it and which, if added, would substantially vary its meaning as it stands.

There was some authority in favour of the latter proposition. In a Bombay case, decided in 1923, the plaintiffs had agreed to sell 25 bales of Japanese yarn to the defendants. The contract contained this clause: "To cancel or not to cancel the sold goods for any of the reasons, solely depends upon you (plaintiffs)." The learned judge (Mulla J.) held that this stipulation conferred upon the plaintiffs the power to determine the contract only if they could assign good reasons for so doing, and went on to add that "if the plaintiffs refused to deliver the goods without assigning any reasons, they would, I think, be liable to the defendants for breach of the contract unless they assigned some reason which would justify their refusal to give delivery." But the reader will note that the clause with which Mulla J. was dealing, unlike the one with which we are now concerned, did refer to "reasons" for cancellation, and it was largely on account of the plaintiffs in that case being impliedly obliged to assign a reason for so doing, if they decided to determine the contract, that Mulla J. held that the contract was a valid one. In the present clause, there is no indication that the railway need give any reasons for the cancellation of the contract. The right to cancel was or purported to be absolute, peremptory and unqualified.

In the Madras High Court, the trial judge, Ramaswami Gounder J., before whom Mulla J.'s Bombay decision was cited, held that there was nothing in it to warrant the proposition that an absolute power of cancellation of a contract cannot be validly reserved in favour of one of the parties to it. The learned judge held that the power conferred on the railway by the clause was absolute and unfettered by any qualification and could be exercised at any stage, that the clause was valid and enforceable, and that there was nothing to compel the railway to exercise the power of cancellation only for valid and sufficient reasons. On these findings, he dismissed the suit with costs. The plaintiff appealed. The appeal was successful. The Appellate Court held that there was in law a concluded contract between the parties, but that the cancellation clause was not a limiting provision only providing for contingencies subject to which the contract was enforceable. The effect of the clause was that there was an enforceable contract subject to the condition that it was open to one of the parties to say that it was unenforceable, that the clause did not indicate that the railway should give any reasons, still less, valid and sufficient reasons, for the cancellation of the contract. The clause purported to confer an absolute and arbitrary power on one of the parties to cancel the contract and was, therefore, void and unenforceable. The appeal was, therefore, allowed, and the suit was remanded back to the trial court for assessment of damages, if any.

SISTA'S-58-9

Your Income tax affairs need not worry you

Preparation of Income tax returns is a complicated matter these days. This need not, however, worry you.

You will find it to your advantage to place your Income tax affairs in the hands of your bank.

The State Bank of India will be pleased to undertake the preparation of returns, the checking of assessments and the submission of claims for refund of tax at moderate charges. The Bank will ensure that you obtain all the refunds to which you are entitled.

Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Calcutta, one of more than 555 offices waiting to serve you throughout India.

A DITCHER'S DIARY

IN spite of Mr. Nehru's reported, and very probably sincere, desire to see new incumbents in "positions of high responsibility," it cannot have been expected that the desire extended either to himself or to the majority of his trusted colleagues. The growing age of the Cabinet, together with the "leadership vacuum" just below, may well be the cause of some justifiable concern, but changes for their own sake have little to commend themselves. The fact that nobody ever thought of having a new Prime Minister is testimony that the country's zest for five-yearly jolts in political life is limited, although Mr. Nehru's overwhelming personality must also have been a significant determinant in the welcome choice. Contrary to forecasts, Maulana Abul Kalam Azad has not been made Deputy Prime Minister, not yet, and Pandit Pant's age and ability entitle him to serious consideration if the post be created at all. Mr. Krishna Menon's appointment as Defence Minister has not been universally popular, for he has been a controversial person, but, with Mr. Nehru at the helm, it seems unlikely that India's gallant armed forces will be radically different in the next few weeks. Mr. S. K. Patil's emergence as Cabinet Minister is recognition of his great organising ability, which has hitherto been used chiefly in the service of the Congress Party. Law and health are now in the charge of Ministers of State, but it would be surprising if this indicated any loss of their importance. As was expected, finance remains with Mr. T. T. Krishnamachari and, whatever one's views may be on the character of the present Cabinet, that of the next will be determined largely by the extent of his success in making the limited financial resources of the country go a long way—long enough to fulfil the five year plan. Mr. Krishnamachari's ability and energy are justly famous, and he has before him many helpful suggestions to make his difficult tasks slightly less so. Why, even we have made made not a few now and then—although we can well imagine Mr. Krishnamachari say with a smile, "Too many, in fact."

The economist may be said to have really come into his own during and since the war, with the result that his place in the scheme of things has become a matter of widening public debate, to which the latest contribution is made in an article in the April issue of *Lloyds Bank Review* entitled "The Economist in Whitehall". The author, Dr. I. M. D. Little, is himself an economist and for a time was deputy director of the Economic Section of the U.K. Treasury. More recently, Dr. Little has been at Nuffield College, Oxford, and is therefore familiar with both the administrative and academic setting in which the economist is called upon to do his work. From his article, as far as I can judge, Dr. Little would continue to keep both fields—academic and administrative—as separate as possible, but would have them establish a closer relationship for purposes of advising the Government. He compares British and U.S. practice, and notes approvingly the superior organisation of American statistics which are the raw material out of which the professional economist fashions his advice. But the real difference between the two countries, says Dr. Little, is that the U.S. political climate is such as to tolerate greater unemployment than could be the case in the United Kingdom. Because of this, the Americans take more risks with deflation and the British more risks with inflation. The net result is that since 1948 U.K. levels of employment have been relatively higher than those of the United States, but U.S. prices have been the more stable of the two. About economists themselves, Dr. Little says that

in the United Kingdom the requirement is for practitioners who are willing to go into Government service for limited periods, say three to five years. "Permanency would be wrong," he says, "for no one can remain an up-to-date professional economist for very long in Whitehall". Most British economists of the right personality and qualifications appear to prefer an academic career to work in Government service, and are therefore in permanent and secure posts, from which temporary release is difficult to arrange. I imagine that, given the choice, most Indian economists would opt for Government service in preference to an academic environment, if only because teaching is usually so wretchedly paid in this country. But in a planned economy the influence of the professional economist is bound to be considerable and, indeed, New Delhi is beginning to proliferate its own breed of economic advisers. Dr. Little seems to suggest that Governments, by and large, get the economists they deserve, and on the face of it there would seem to be a good case for seeing that such of India's economists as are in the service of the various Ministries are given opportunities to enlarge their experience and the frontiers of their knowledge.

The Indian correspondent lately in the United States who contributes a piece on page 578 of this issue of *Capital* is, I take it, among the not many who are trying to dot a few i's and cross a few t's in Mr. Nehru's foreign policy, hitherto passed *nem. con.* by every Indian. This is not to say that I agree with him on every point. In fact, I don't; but Mr. Nehru, I am sure, will be the first to welcome dissent and debate on his policy instead of its passive acceptance. On one point, however, the correspondent makes what seems to me an important omission; he does not even mention the United States' current phase of being "sent" by the United Nations. (In case you don't know, this is how bobby-soxers used to describe their condition on hearing Mr. Frank Sinatra; now it is Mr. Elvis Presley.) To have respect for the world organisation is one thing—as India and Britain have; it is quite another to delude oneself that the U.N. by itself is able to ensure peace. It was kind of Mr. Dulles to refer, on Monday, to "a distressing and unprecedented conflict of loyalties," to "historic ties"; but his devotion to the United Nations smacked of unreality, not to say hypocrisy. The United Nations can be an instrument of peace; it can also be impotent, as in Hungary. Nor am I sure just what part of the United Nations Mr. Dulles was proclaiming his devotion to—the General Assembly or the Security Council? In the former, the virtually assured majority of the United States may soon be a thing of the past; in the latter, of course, the United States has a veto—a very useful thing to have with which to be devoted to the U.N.

A foreign observer newly arrived in this country asked me last week whether India was the only place in the world where Communist leaders were not on talking terms with one another. Had the question been put a couple of months ago, one might have considered it too facetious to warrant a serious reply. But the evolution of Indian Communist policies since the general elections has provided a fascinating spectacle of pendulum politics, as these policies have swung

first to the left, then to the right, then to the left, then again to the right. The most remarkable of these swings have taken place on the question of nationalising foreign-owned plantations in Kerala; while one worthy has recommended nationalisation, another has implicitly pointed to its foolishness, a third has threatened to force the Centre to agree to it, and a fourth has invited American capital to that State. The contradictions are not confined only to particular issues; on much broader questions also, such as whether the use of violence is justified in securing power, the Communists seem to have not yet made up their minds. One of their Andhra sect, blissfully oblivious of what happened to his Party because it tried to engineer a rebellion in Telengana, has hinted that it will try the same sort of thing if the Kerala Government is not allowed to function. Mr. Ajoy Ghosh, the C.P.I. General Secretary, has promptly denied any such intention, and reflected in passing on his compatriot's mental calibre by commenting that "you must credit us with sufficient intelligence not to think along those lines." Contradictions such as these emphasise once again the dilemma of a Party whose extremism is becoming difficult to reconcile with the responsibilities of office. From this dilemma, it seems, is springing an opportunism whose blatancy in the present is likely to be matched only by its insidiousness in the future. The adjustment, if such it is, may be mostly verbal in nature, and will need to be watched with care and cynicism by the rest of the country. Words emanating from Communist caucuses carry meanings different from those to which one is accustomed; only a few days ago, Mr. William Gallacher gave an interesting glimpse into his private dictionary when he said that the Communist Party in Britain is the most democratic of all Parties in that country.

Nothing further has been heard lately about the discussions which were in progress some months ago on the final destination of the India Office Library. As we know, both India and Pakistan have claimed it as representing part of their historical archives, and the British Government has maintained as emphatically that it is essentially a record of British activity in India and collected largely by the gifts or loan of papers from individual administrators at various times. It has now been transferred to, and forms part of, the Commonwealth Relations Office, and there is much to be said in favour of it remaining there permanently with an arrangement that its records and facilities are made available to research scholars or other interested parties from all three countries. The latest annual report of Mr. S. C. Sutton, the Librarian, affords ample support for this argument by recording four recent acquisitions on permanent loan of important collections of papers relating to India and Burma, which probably would not have been possible had the library been dispersed overseas. Lord Powis has deposited a total of 11,042 folios dealing with the administrations of Clive and of his lesser-known son, the first Earl of Powis, Governor of Madras from 1793 to 1803. Sir Reginald Dorman-Smith, Governor of Burma from 1941 to 1946, has also lent his papers. Lord Halifax has sent those of his grandfather, the first Viscount, who as Sir Charles Wood was Secretary of State for India from 1859 to 1866. The fourth of these valuable collections is of the first Earl of Lytton, Viceroy from 1876 to 1880. These papers have been lent by his grand-daughter, Lady Hermione Cobbold, wife of the Governor of the Bank of England.

THE UNITED COMMERCIAL BANK LIMITED

CHAIRMAN MR. G. D. BIRLA'S REVIEW

Statement of Mr. G. D. Birla, Chairman of The United Commercial Bank Ltd., circulated to the shareholders at the Fourteenth Ordinary General Meeting of the Bank held on 18th April, 1957, Gentlemen,

The Balance Sheet and Profit & Loss Account for the year ended 31st December, 1956 have been in your hands for some time and they bear testimony to the brisk activity of the bank's business in the past year.

Profit & Loss Account

We have been able to show the substantially increased profit of Rs. 56,51,658-8-9 in respect of last year's working. This result is naturally a matter of considerable gratification to the Board as it would be to you and the Directors would like to see that it is maintained, and if possible, improved upon. It is, however, necessary, in view of the uncertainties of the monetary outlook and of trade, to sound a note of caution. The resources of banks are not expanding as fast as we would wish with the result that competition for deposits is very keen, and the rate of interest allowed on deposits has risen. But the rise in the rate of interest charged on advances is not adequate to offset the higher cost of deposit money. Borrowings from the Reserve Bank of India are progressively costing more. Operating costs, of which salaries are the largest item, continue to rise. In these conditions the maintenance of future profits at the higher level now attained is dependent on increase in business, greater volume of deposits and prevention of rise in working expenses through the achievement of greater efficiency.

Shareholders will observe that we have considered it prudent in these circumstances to utilise a substantial part of our additional profit to increase our allocation to the Reserve Fund which now stands at Rs. 1.15 crores. At the same time we have been mindful of the shareholders and the staff in that we have increased the dividend payable to shareholders and the bonus disbursed to staff.

Deposits

Turning now to the main features of the Balance Sheet, you will notice that the total of current, savings and fixed deposits and other accounts at the end of 1956 stood at Rs. 52.15 crores as compared with Rs. 47.69 crores at the end of 1955. The increase in deposits of Rs. 4.46 crores represents a rise of 9.3 per cent in 1956 against 17.9 per cent in 1955 and compares with the rise of 7.8 per cent in the deposits of scheduled banks as a whole for the year 1956.

Cash

Cash on hand and with banks was Rs. 7.51 crores

and represented 14.4% of our deposit liabilities.

Investments

The investments of the bank in Government and other approved securities stood at Rs. 19.43 crores which is a reduction of Rs. 2.74 crores from our holding at the end of 1955. In that year we invested in Government securities the bulk of our increase in deposits but we have now corrected that position and have effected a more even spread over advances and bills. The cash resources and unencumbered investments, together amounting in the aggregate to Rs. 22.03 crores, give a ratio of 42.2 per cent to total deposits.

In view of the bill market scheme of the Reserve Bank of India our liquid assets are not confined merely to cash and government securities but also include eligible bills which augment our liquidity.

Bills

The amount of bills discounted and purchased increased during the year from Rs. 9.74 crores to Rs. 15.92 crores. A good percentage of these are sight bills which are continually falling due while usance bills are available as collateral for advances from the Reserve Bank of India. You will be gratified to note that this self-liquidating asset forms 30.5 per cent of the deposits of the Bank.

Liquidity Ratio

The total of our liquid assets—cash on hand and with banks, unencumbered investments and bills—represents 66 per cent of our deposit liabilities, which you will agree is a very satisfactory liquidity ratio.

Advances

Our advances have risen from Rs. 17.85 crores to Rs. 22.54 crores and they form 43.2 per cent of our deposits. We have endeavoured to meet all legitimate demands of our customers for increased accommodation and, for this purpose, have freely drawn upon the facilities available with the Reserve Bank of India for advances against bills and government securities.

Foreign Exchange Business

The foreign exchange business of our Indian and Overseas Branches has shown a gratifying expansion. Owing to the increase in its activity our London branch was moved to more spacious premises at No. 12, Nicholas Lane, E.C. 4.

The credit for the excellent results of the working of the Bank goes primarily to the General Manager, Mr. S. T. Sadasivan and his able deputies and assistants, to whom I take this opportunity to record the thanks of myself and of the Board of Directors. I wish also to record our thanks to the other members of the staff of the Bank for their contribution in achieving these results. I also look forward to greater

co-operation from them in the current year and the years to come.

Bank Rate

The official bank rate of the Reserve Bank of India remained unchanged at 3½ per cent but the cost to commercial banks of borrowing from the central banking institution has been progressively increased. In the first place the rate of interest chargeable to commercial banks for loans against usance promissory notes under the bill market scheme was put up in two stages from 3 per cent to 3½ per cent and the concession that the Reserve Bank of India would bear half the stamp duty on usance promissory notes was withdrawn. Early this year, the stamp duty on bills of exchange and usance promissory notes was raised ten-fold to two annas per cent for three months or part thereof. This has enhanced the cost of half per cent against usance bills by a minimum of 1½ per cent and when allowance is made for the fluctuations in the debit balances of customers over a period and of the bank's borrowings against bills, the rise in the real cost is very much more than half per cent per annum. At the same time the Reserve Bank rate for advances to scheduled banks against Government securities was put up to 4 per cent. For all practical purposes, therefore, the bank rate has effectively risen from 3½ per cent to 4 per cent. The working of the bill market scheme will, however, be much facilitated if the Government would annul the recent enhancement of the stamp duties on bills of exchange and usance promissory notes, leaving it to the Reserve Bank to charge the same rate of interest to scheduled banks for loans against bills as against Government Securities.

While money rates in India are hardening there is a retreat from dear money in other international money markets. The Bank of England rate has gone down from 5½ per cent to 5 per cent while the open market rates in London are more akin to the still lower bank rate. The bank rate in Germany has been brought down in two successive stages from 5½ per cent to 4½ per cent.

Monetary Conditions

For the past six months conditions in the money market have been very stringent and the demand for funds has continued unabated. Short and long-term factors have been at work in creating these conditions. Among the short-term factors may be mentioned the deflationary effects of adverse balance of payments caused by excessive imports. Imports of machinery have imposed a heavy drain on bank finance and import of iron and steel, which has been exceptionally heavy, has been a new factor in the demand for funds. There has been a seasonal character of which has been blurred on account of financial requirements of industry being spread evenly throughout the year. Secondly, inventories of trading, manufacturing and engineering companies stood at a very high level. The long-term trend has been the rising demand for money from industries to meet the increased needs of a developing economy. The resources of commercial banks have not risen proportionately to the increased demand. The further tightening of money during the conventional busy season as a result of the requirements of crop finance and of the sugar industry being superimposed on the more stable pattern of industrial demand.

The problem for the monetary authorities is, therefore, how to meet the legitimate demands for accommodation while at the same time keep inflation in check during a period of substantial development expenditure under the Second Five-Year Plan.

It is gratifying to note that the Finance Ministry and the Reserve Bank of India have taken measures to remedy the situation in good time and liberalised the bill market scheme so as to make Central Bank credit freely available to scheduled banks for the legitimate purposes of credit expansion during the current busy season. Another welcome step is the open market policy of the Reserve Bank as regards its open market operations in Government securities. The sale by banks of Government securities during the busy season was a normal method of providing themselves with funds during periods of stringency but the Reserve Bank discontinued buying securities since the middle of 1951 save in exceptional cases and banks had therefore to put themselves in funds by borrowing from the Reserve Bank. During the current busy season the Reserve Bank has changed its policy and has bought securities freely from banks. The only unsatisfactory feature is that bank deposits have not registered a growth commensurate with the growth of economy. Conditions have to be created under which there may be a revival of real savings and encouragement to domestic capital formation.

Medium-term Credit

The problem of medium-term credit has to be tackled urgently. What should be the organisation or institution that should disburse medium-term credit to private industry and how should the large resources required for the purpose be raised? There is already an appreciable element of medium-term financing included in the advances of scheduled banks and their investments. There is an increase in investments by banks in ordinary and preference shares of industrial companies and in their debentures. The banks have also subscribed to the capital of institutions like Industrial Finance Corporation, Industrial Credit & Investment Corporation of India and State Finance Corporation, which have been organised to extend medium-term credit to industry. Advances have been made by banks against stocks and other approved securities but in reality the money so raised has been utilised for the purpose of expansion of bank.

With the ratio of advances to deposits well over 70 per cent and, in individual cases, topping even the 80 per cent mark, it is clear that commercial banks now lack the credit base to carry the load of medium-term finance to industry. 60 per cent of bank deposits are payable on demand, another 30 per cent are, probably, repayable within three to six months and the bare 10 per cent of deposits have a grant out of term loans ranging from five to seven years out of the resources of this nature conflicts with financial sound banking. Whether medium-term institutions should be the responsibility of special undertakings or whether commercial banks should undertake this additional responsibility, and if the latter the well established better course, to what extent the well established practice of commercial banks should be modified and what protection should be given in the event of the loans getting frozen, are all matters which

have to be carefully enquired into. Banks may legitimately employ a part of their capital and resources not represented by fixed assets in such loans and this they have already done.

A wider incursion in the field of medium-term loans to industry would require the previous development of long-term deposits from the public. Swiss banks are known to have raised funds through the issue of bonds with a maturity of three to six years and if Indian banks could issue such bonds successfully, a base for medium-term credit to industry would have been established. In Switzerland the stamp duty on such bonds is a nominal 1.2 per mille per annum, whereas by virtue of the recent Finance Act, the stamp duty in India has been stepped up to one per cent. If on the analogy of the debentures issued by Industrial Finance Corporation of India and the Co-operative Central Land Mortgage Banks, the Bonds to be issued by Commercial Banks are exempted from stamp duty, and the interest thereon is made payable after deduction of income-tax at source, as in the case of Government Securities, the ground would be well prepared for an interesting experiment.

Such an experiment would, however, take a long time to produce results whereas the medium-term credit needs of industry are urgent. In view of this, the U.S.A. funds arising from the sale of wheat which are earmarked for assistance to the private sector of industry, could well be handed over to the Commercial Banks and utilised for medium-term loans to existing industries for the purpose of expansion, such loans to be repaid out of subsequent earnings of the borrowing companies.

Finance for starting new industries and permanent capital required by existing industries should be left to be raised by issue of new capital to the public through the normal channels and it is here that the Stock Exchange comes into the picture. The Stock Exchange does not create or destroy the prosperity of the country. But it does act as the barometer of the conditions obtaining in industry and, as such, the present low level of activity in the Stock Exchange clearly indicates how confidence in the stability of industry has been shaken among the investors, and how impossible it is for companies, now, to raise any new capital. It is, therefore, necessary to bring about an amelioration in the condition of the middle classes and a revival of the confidence of investors in order that companies might be able to raise new capital through the customary channels.

Success of the First Five-Year Plan

The execution of the First Five-Year Plan has been acclaimed as a success on all hands and the targets of development and production have been fully achieved and in some cases surpassed. In the field of agricultural production the output of foodgrains rose from about 44 million tons to 65 million tons; cotton from 2.9 million bales to 4.9 million bales; jute from 3.3 million tons to 4 million tons; oilseeds from 5.1 million tons to 5.5 million tons. In the field of industrial manufactures the production of cotton textiles increased from 418 million yards to 685 million yards; sugar from 1.1 million tons to 1.7 million tons; paper from 114 thousand tons to 200 thousand tons; cement from 27 million tons to 4.3 million tons; fertilisers from 46 thousand tons to 380 thousand tons and automobiles from 16,500 units to 25,000 units. The First Plan was a modest one which did not strain the available resources. The total investment was very roughly Rs. 3100 crores of which the investment in the private sector accounted for a little more than half the total. The net borrowing from the Central Banking Institution, which is the extent of deficit financing, was only Rs. 250 crores. As a result of the financial operations during the First Plan period and the economic development during the period bank deposits went up from Rs. 882 crores to Rs. 1042 crores and the currency Notes in circulation from Rs. 1247 crores to Rs. 1467 crores. Thus the total money supply during the First Plan period increased by Rs. 380 crores.

Achievement of the Private Sector in the First Plan Period

Another factor to be noticed during the execution of the First Plan is the very substantial contribution made by the private sector for the success of the Plan. In the First Plan period, though the overall investments by the public and the private sectors were about equal, the investment outlay in the large and medium industries by the public sector was Rs. 148 crores as compared with Rs. 340 crores by the private sector. The private sector was able to mobilise the resources required and contributed in such a spectacular manner to the rise of industrial production during the First Plan period.

Wide Scope for Private Enterprise in the Second Plan

Turning to the Second Five-Year Plan the industrial development by the public sector in the field of large and medium industries and minerals envisages an investment of the order of Rs. 700 crores whereas the investment allocated to the private sector is Rs. 575 crores over new projects and Rs. 150 crores on replacement and modernisation. It will thus be seen that from the financial point of view, the private sector is invited to play as important a part as the public connection in the field of industrial development. In this of the investment in the public sector relates to the three steel projects, heavy electrical machinery, machine tools and fertilisers, all of which, in any case, could not be developed by private enterprise without a very substantial backing from the Government. The wide range of industries awaiting development and expansion on a big scale in the private sector are the iron & steel, ferro-manganese, refractories, aluminium, cables, heavy and light engineering industries, industrial machinery, bicycles, motors, transformers, chemicals, industrial explosives, dyestuffs, rayon, sugar, cement, plastics, paper and a host of medium-sized industries too numerous to mention. It is, therefore, expansion of industries is placed and the private sector has, therefore, plenty of scope for initiative and resourcefulness. There is, therefore, no need to emphasise the demarcation between the public and private sectors or to harp upon any imaginary conflict between the two.

Foreign Exchange Gap

We are, however, faced with the most serious problems when we turn to examine the resources available to both the public and the private sectors for the execution of the various tasks allotted to them. In my speech last year, I drew your attention to the

seriousness of the inadequacy of foreign exchange resources to carry through the Plan. I, then, estimated that the foreign exchange required would be anything between Rs. 1600 and Rs. 2000 crores and that, even on the basis of the lower figure, there would be a deficit of Rs. 800 crores to be found. This gap has turned out to be wider than anticipated. But if I had foreseen serious difficulties in respect of foreign exchange, I admit I had not expected similar difficulties in the availability of internal capital which has now suddenly become so scarce. Even if we had adequate external finance, without its rupee counterpart, obviously, no industry could be built up. Internal finance has, at present, become so scarce that even the best industrial series are selling on 8 to 10 per cent yield basis. With the interest rates so high, who would invest his savings in a new venture with all its concomitant uncertainties? If none, then how is the Plan to be implemented? The external and the internal finances are the two main rocks on which the Plan may wreck and, therefore, we cannot afford to ignore the danger.

Voluntary Savings

The plain truth of the matter is that the resources for the Plan can come only from savings, whether forced or voluntary. Forced savings can be effected through direct and indirect taxation and such measures as compulsory deposit of reserves. Voluntary savings emerge from the profits of companies and personal savings, and it is these that form the sources of funds for capital investment in new companies in the private sector. With individual taxation at a very high level, there is very little money with the private investor to subscribe to new issues, and the middle class investor, who formed the backbone of every flotation of capital in the past, has ceased to exist. Since the advent of independence, we have looked after the rural and industrial areas very well, but have neglected the middle class, a fact which is perhaps reflected in the recent elections. We must hence-forward lay greater emphasis on the prosperity of the urban areas—the cities—if the middle classes are to be rehabilitated and reconstituted as a source of support for industrial flotations.

Industrial Profits

As regards corporate savings, there has, unfortunately, been a sudden change in the pattern of industrial profits in recent months. The Jute industry is in a bad way and had a record of disastrous losses during 1956. The Textile industry, which was doing well a few months back and was expanding production enormously, is now finding it difficult to sell its products. I venture to hope that this is only a passing phase. If not, it is a real danger to production. Tea prices have gone down and the profit of tea companies and the foreign exchange earnings arising out of the export of tea have declined. The coal industry has its own special problems. It is only cement, steel, paper, engineering and a few other miscellaneous industries, which are really enjoying prosperous conditions. I do not mean to say that there is anything in the nature of an industrial crisis brewing but I certainly feel that the present net earnings of industry are not conducive to large-scale investments and quick expansion of production.

The Finance Minister has rightly remarked in some of his speeches that he was not against earnings but that he desired these earnings to be utilised for the benefit of society. This objective is undoubtedly one which will find echo from every quarter but rather than have the earnings put to good use through compulsion, it would be better to achieve the desired result through methods of persuasion.

Incentive for Savings

The experience in all democracies has been that without a friendly climate and expectation of reward, there has been no industrial expansion either in the private or in the public sector. Even the public sector can only thrive upon profits. It appears to me that for development of internal finance, the first and foremost action that we have to take is to revive confidence and create conditions conducive to the greater earnings by industrial concerns to be ploughed back for expansion schemes.

Private Foreign Investments Should Be Encouraged

As for external finance, the search for foreign credits and extended terms of payment goes on and may afford some relief and so also the borrowing from the International Monetary Fund and the World Bank. The time has now, however, come to revise our attitude towards private foreign investment which, if freely encouraged, could go a long way to solve our problem of the exchange gap. History teaches us that all backward countries have been built up with the help of foreign capital and we cannot afford to ignore the lessons of history. We must appreciate the fact that we can build up India quickly only through the help of foreign capital and, since we are an independent nation, I do not see why we should be afraid of it. I feel therefore that not only should we allow foreign investment without any restriction but we should welcome it, improve the climate for it and make the investor feel that the opportunities for profitable utilisation of capital here compare favourably with those available anywhere else in the world. Some time ago the Finance Minister stated that he was not against foreign capital but that it had to make peace with Indian capitalists. I hope Indian industrialists will not take a narrow view of the situation but, in the higher interests of the country, make it absolutely clear that they welcome foreign capital.

I have tried to deal at some length with the question of internal and external finance required for the Second Five-Year Plan and have also suggested measures which may lead to the establishment of a better atmosphere. I am sure the Hon'ble Finance Minister is already aware of these considerations. Mr. T. Krishnamachari is no novice in the field of finance. As Minister for Commerce & Industry, he gave a great fillip to production and trade during his brilliant record of achievement. He may, therefore, be trusted to apply his talents to the financial problems of the Second Five-Year Plan and achieve greater success in his new sphere of responsibility. The Commerce Ministry is now presided over by an equally able Minister, but like the Finance Minister he is also faced with great problems. I am, however, confident that he would solve the difficulties in such a way that production and trade expand during his stewardship. With these two key portfolios in the hands of such distinguished Ministers, I look to the future with faith and optimism.

P & O

Peninsular and Oriental Steam Navigation Company

THE EFFECTS OF SUEZ

THE LIFELINE OF

EAST/WEST TRADE

WHO would have thought a year ago that a few months later the greatest international shipping highway in the world would be blocked? Stockholders may well ask what the closing of the Canal has cost the P. & O. Group. It means the re-routing of ships engaged in trade to Australia, Persian Gulf, India, Pakistan, Malaya, China and Japan, and by the time we reach the end of the chapter we will have re-routed the ships normally using the Canal no less than four times. Each re-routing loses revenue and increases costs for the change-over voyage, but the computation goes much further than that. The price of oil, one of the major costs in a liner voyage, rose enormously. The ships are out of their carefully constructed programmes, and have lost some voyages altogether. Some traverse a longer route between the same points; some reduce their ports of call and shorten their voyage; some are transferred to different routes to maintain an emergency service. It will be many months after the Canal is being used again before the ships can once more be properly spaced out on their normal services. It is impossible to evaluate the net loss to the Group through the seizure of the Canal by Egypt in July 1956, simply because much of it has been indirect and will continue for long after the ships are passing through the Canal again.

It is almost an article of faith that the Shipping Industry does not indulge in politics. But when politics impinge in a dangerous degree on the fortunes of the Shipping Industry, then in self-defence it must make its views heard.

This is so in the case of the seizure of the Canal on 26th July last and of the Canal Company's assets in Egypt, followed, for no practical reason, by the blocking of the Canal in November and by the destruction of many of its assets.

To the citizens of this country in their personal lives, to the commercial community, as well as to shipping, this act of sabotage has caused grievous loss. And not only to the West but also to the East.

There can be no confidence in the future in the administration of the Canal unless it is responsible to an international body on which users will be strongly represented. In 1955 154½ million gross tons of shipping passed through the Canal; it is unlikely that this figure will be maintained but it gives one an idea of the magnitude of the undertaking and of the necessity for representation of the users. I hope all stockholders will use their influence to see that this highway of international trade between East and West never lie in the unfettered control of one Government.

Port Delays

One of the difficulties which shipping has to face is that of delays at ports, these, due to congestion and to strikes, in the financial year covered by the accounts under review have totalled for the Group 2,805 days; representing 27½ million d.w.t./days and costing, inclusive of depreciation, £1,048,000. These are formidable figures and have to be covered by the freight. Contrariwise, I should, however, make mention of the successful steps which the East African Railways and Harbour Board administration have made to obviate delays in their main ports, in particular Mombasa.

Our Earnings

Rates of freight current at the time when the plans for a ship are being prepared are not infrequently below what is required to show a reasonably return on the investment. But fortunately signs are not lacking of an appreciation amongst importers and exporters that if new ships are to be built to keep open the lifelines of trade in the Commonwealth and elsewhere, rates of freight must rise to a level which will allow for the current cost of replacement in addition to providing reasonable interest on the capital invested in the ship. In the long term, unless this simple economic fact is recognised, the money to pay for new ships will not be forthcoming.

If you are interested in these extracts from Sir William Currie's speech at the 117th Annual General Meeting please write for a full report to the Secretary, P. & O. Steam Navigation Co. 122 Leadenhall Street, London, E.C.3.

Dalmia Products
for modern homes and offices

QUALITY STONEWARE AND PORCELAIN PRODUCTS

- STONEWARE PIPES (for underground drainage) salt glazed, acid-resistant and tested to standard specifications.
- R.C.C. SPUN PIPES for irrigation, culverts, water supply and drainage, available in all classes and sizes.
- INSULATORS AND ACID-RESISTANT TILES etc.
- REFRACTORIES for all industrial purposes; firebricks, mortars, insulating bricks in all heat ranges and shapes.
- PORCELAIN SANITARY WARES Indian and European closets, wash-basins, urinals etc.
- DALMIA PORTLAND CEMENT for general construction

DALMIA CEMENT (BHARAT) LTD.
DALMIAPURAM (TIRUCHIRAPPALLI)

GOVERNMENT OF WEST BENGAL DURGAPUR COKE OVEN PLANT COKE AND COKE BREEZE FOR SALE

The following types of Coke and Coke Breeze from the Coke Oven Plant at Durgapur are expected to be available for sale with effect from September/October, 1958.

- | | |
|---|-----------------------|
| (1) Sized Coke above 1½" | 770-800 tons per day. |
| (2) Coke-Rubble and Smithy between 1½"-1" | 60-75 tons per day. |
| (3) Coke Breeze, below 1" | 60-75 tons per day. |
- Screened Rubble and Smithy Coke will also be available.

All parties interested in purchasing are advised to communicate with the Administrator, Durgapur Project, New Secretariat Buildings, Block 'A', 1st Floor, 1, Hastings Street, Calcutta-1, stating quantity and quality required and the respective destinations.

AUDITORS' REPORT

We have audited the annexed Balance Sheet of United Bank of India Ltd. as at 31st December, 1956 and also the annexed Profit & Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Branches audited under Section 228 of the Companies Act, 1956 by other Auditors.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949 read with the provisions to sub-sections (1) and (2) of section 211 and to sub-section (5) of section 212 and section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit & Loss Account are not required to be audited and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that :

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory.

(b) The transactions of the bank which have come to our notice, have been within the powers of the Bank.

(c) In our opinion proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank.

(d) The Bank's Balance Sheet and Profit & Loss Account dealt with by this report are in agreement with the books of account and the returns.

(e) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956 and the Profit & Loss Account gives a true and fair view of the Profit for the year ended upon that date.

REPORT OF THE AUDITORS TO THE MEMBERS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION

We have examined the above Balance Sheet with the books of the Corporation kept in Hong Kong, with the audited Accounts of the London Office and with the Returns received from the other Offices. We have obtained all the information and explanations we have required for the purposes of our examination. The above Balance Sheet gives the information required by the United Kingdom Companies Act 1948 in the manner prescribed for a Banking Company and on that basis, in our opinion, is a full and fair Balance Sheet properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs at 31st December, 1956, according to the best of our information and the explanations given to us and as shown by the books kept in Hong Kong and the Returns received from the other Offices.

Hong Kong, 25th February 1957.

AUDITORS' REPORT ON THE INDIAN BRANCHES OF THE HONGKONG AND SHANGHAI BANKING CORPORATION UNDER SECTION 30 OF THE BANKING COMPANIES ACT 1949.

We have audited the above Balance Sheet and the annexed Profit and Loss Account of the Indian Branches of the Hongkong and Shanghai Banking Corporation with the books and accounts of Calcutta Branch and with certified returns from Bombay Branch.

In accordance with the provisions of Section 29 of the Banking Companies Act 1949 read with the provisions of Section 21(1), (2) and (3) and Section 22(3) of the Companies Act 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with Schedule VI of the Companies Act 1956, but are in conformity with Forms A and B of the third schedule of the Banking Companies Act 1949.

We report that—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for our audit.

(b) In our opinion proper books of account as required by law have been kept by Calcutta Branch so far as appears from our examination of those books and proper returns adequate for our audit have been received from Bombay Branch which was not visited by us.

(c) The above-mentioned Balance Sheet and Profit and Loss Account are in agreement with the books of account and certified returns.

(d) In our opinion and to the best of our information and according to the explanations given to us, such Balance Sheet and Profit and Loss Account give the information required by the Companies Act 1956, in the manner required for Banking Companies, and on such basis give respectively a true and fair view of the state of the affairs of the Indian Branches as at 31st December, 1956 and their profit for the year ended on that date.

Calcutta, 12th April, 1957.

REPORT OF THE AUDITORS.

We have audited the above Balance Sheet of THE BANK OF TOKYO LTD. as at 31st December, 1956 and the annexed Profit & Loss Account for the year ending on the same date with the books of account as kept in the Head Office (Calcutta) in which have been incorporated the information and explanations we have required and have found them to be satisfactory.

(a) The transactions of the Bank which have come to our notice have been within the powers of the Bank.

(b) The audited accounts received from the Bombay Branch have been found adequate for the purpose of the audit.

(c) The Balance Sheet and the Profit & Loss Account are drawn up in conformity with the law.

(d) Such Profit and Loss Account shows a true balance of profit for the year.

(e) Such Balance Sheet exhibits a true and fair view of the state of affairs of the Bank according to the best of our information and explanations as given to us and as shown by the Books of the Bank.

(f) In our opinion the Books of Account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913; and

(g) The accounts have been drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

the Airline of Switzerland

SWISSAIR

inaugurates regular flights

across the Indian Skies

EASTBOUND to Bangkok, Manila and Tokyo

WESTBOUND to the Middle East,
Switzerland, all of Europe, the USA
and South America.

The Swiss Cross—the traditional symbol of peaceful Switzerland, a country of world-wide precision industry fame, will be cruising Far Eastern skies.

With more than 35 years of experience in air service, Swissair is world famous for its expertly trained crews, its traditional Swiss courtesy, its thoroughness and for the utmost comfort offered on its luxury four-engined Douglas DC6B airliners.

Swiss precision and hospitality is now available in India for your World travels.

Westbound from Bombay every Saturday evening, arriving in Geneva and Zurich Sunday morning. Additional departure, from Calcutta every Tuesday evening, beginning July 8.

Eastbound from Bombay every Wednesday evening, arriving in Tokyo Thursday evening, via Bangkok and Manila. Additional departure from Calcutta every Saturday evening, arriving in Tokyo Sunday evening via Bangkok and Hong Kong, beginning July 5.

THE ONLY BOMBAY-BANGKOK NON-STOP FLIGHT!

Consult your Travel Agency for further details, or

Swiss Air Transport Co. Ltd.
Hotel Ambassador, Bombay.
Phone: 241554

The most modern equipment and the experience of a generation in international air travel guarantee that your Swissair flight will be an unforgettable experience. For your added comfort all planes are equipped with RCA airborne radar.

Full length sleeper-seats at no extra charge in First Class, large reclining seats in Tourist Class. Pressurized cabins, air-conditioned for travel through all weather conditions and climates.

The famous hospitality of Swiss hotels is reflected in Swissair's service. Delicious meals free of charge, free drinks in First Class—all served by cabin attendants whose only concern is to make your flight as agreeable as possible.

Stocks and Shares

TRADING ENDS ON MORE CHEERFUL NOTE

FAVOURABLE REACTION TO RE-FINANCE CORPORATION SCHEME

Wednesday Evening.

PRICES in the stock market have remained fairly steady during the past week, although trading has been on the quiet side. A certain amount of optimism seems to have prevailed since the announcement about setting up the Re-Finance Corporation, with money secured from the sale of American surplus commodities in this country. Operators think that the Corporation will play a useful rôle in providing medium-term finance for various industries. Surprisingly, there has not been very much reaction to the report that the Government intends to issue an ordinance compelling industrial units to pay retrenchment compensation to their workers even when they are closing down permanently.

In individual sections, few notable movements can be reported. Jutes remained subdued, although Ganges Jute have reacted to rumours of a change in the management of the company. Engineerings are steady in sympathy with Indian Irons, but coals have been neglected. Miscellaneous issues have been moving narrowly, and teas remain dull. Gilt-edged are steady.

Details of the week's trading follow.

The Government securities market remained steady and the enquiry for selected short-dated and medium-dated loans was fully maintained. The 3% 1966 improved further to Rs. 74.47 but closed with sellers at this price, while Non-terminable Paper was nominally quoted at Rs. 73. In short-dated loans, 3% 1957 was steady at Rs. 99.75 and 3% 1958 had buyers at Rs. 99.65; 2½% 1961 was traded at Rs. 93.50 and 2½% 1960 was on offer at Rs. 90.50. The 3% 1959-61 was asked for at Rs. 97.75 and 3½% 1961 had buyers over at Rs. 99.50. In the medium-dated group, 2½% 1962 changed hands around Rs. 93.82 and 3% 1963-65 continued on offer around Rs. 94.19; 3½% 1964 was marked at Rs. 98.45 cum-voucher and was later done at Rs. 98.35 ex-voucher, while 3½% 1965 was steady at Rs. 98.30. Business was also reported in 3½% 1967 at Rs. 98.50. Sellers continued to predominate in long-dated loans but prices were unchanged; 3% 1966-68 was marked at Rs. 92.12, 3% 1970-75 at Rs. 87.12, and 3½% 1974 at Rs. 98.50. In provincial loans, enquiry for U.P. issues was maintained but was centred on the 4% 1963 and 1964 issues; 4% West Bengal 1967 changed hands at Rs. 99.37 and 4% West Bengal 1968 had buyers over at Rs. 99 without attracting sellers.

Preference shares continued to suffer from lack of business and prices showed little variation. In jute, Auckland 4½% changed hands at Rs. 57.50 and Barnagore were reported early in the week at Rs. 35. A small lot of Hooghly Mills was transacted at Rs. 8.31 and Naitati 2nd came to hand at Rs. 58.50. Among miscellaneous preference shares, Alkali and Chemical were wanted at Rs. 96.50, and Burn 6% were sold around Rs. 109. Calcutta Electric were better at Rs. 9 and a small lot of Indian Aluminium was done at Rs. 68. Business was reported in India General Navigation at Rs. 68. Indian Iron and Steel were taken at Rs. 99 and Indian Standard Wagon were wanted at Rs. 126. Richardson and Cruddas were crossed at Rs. 85 and Rohtas Industries B changed hands around Rs. 62. A solitary transaction was reported in Smith Stanistreet at Rs. 78 and Ryam Sugar at Rs. 9.

In the banking section, Bank of Bikaner came to hand at Rs. 18.25 and Central Bank at Rs. 48. Hindustan Commercial were quoted at Rs. 9.75 while United Bank of India D shares were unchanged at Rs. 4.25, as were Punjab National at Rs. 49. United Commercial were steady at Rs. 53.

The only share dealt in the railway section was Dehri-Rohtas at around Rs. 10.42.

With the exception of Kesoram Cotton, which were shaded at Rs. 13.50, all other issues were unchanged. Business was reported in Cawnpore Textiles at Rs. 6.12, Dunbar Mills at Rs. 175 and Elgin at Rs. 21.50. Jay Shree were subdued at Rs. 5.50.

Business in coal shares was of a retail nature, with prices moving narrowly. Amalgamated were offered at Rs. 16 and Bengal were reported at their previous quotation of Rs. 216. Bharat Collieries slightly better at Rs. 21.60. Central India were marked at Rs. 6.06 and New Churulia were crossed and were marked down from Rs. 15.50 to Rs. 14.87. South Karanpura were quiet at Rs. 8.25 while Western Bengal were slightly better at Rs. 5.44. Equitable rose from Rs. 21.50 to Rs. 23 during trading hours today.

Standard and Ganges were prominent in the jute section, the former improving from Rs. 56.50 to Rs. 63 with further buyers at the closing rate, and the latter from Rs. 45 to Rs. 51 on rumours of a possible change in management. Barnagore were easier at Rs. 87, while Chitavalah improved from Rs. 11.75 to Rs. 12.25. Gondalpara were offered at Rs. 7.25 without attracting buyers and Howrah were marked down from Rs. 15.75 to Rs. 15.37. Kinnison were slightly better at Rs. 128, and Megna, on rumours of a higher distribution, were enquired for at the improved rate of Rs. 78 against an opening price of Rs. 70. New Central were quietly

steady at Rs. 12.12 as were Northbrook at Rs. 20.31 and Union at Rs. 112.

In the electric supply section, Calcutta were neglected at the lower rate of Rs. 12.69 and Patna were easier at Rs. 10.75. Mirzapore were quoted at Rs. 6 and Muzaffarpore at Rs. 6.66. Shahjahanpur Electric changed hands at Rs. 5.87.

In the sugar section, Belsund were better at Rs. 10.87 x.d. and Cawnpore were marked at Rs. 16.25 x.d. Champaran were lower at Rs. 19, and Darbhanga, on interested buying, improved sharply from Rs. 21.25 x.d. to Rs. 23. Dyer Meakin were wanted at Rs. 6.19 and Ramnugger were better at Rs. 25.

In the engineering section, Indian Iron and Steel hovered around Rs. 19.75 and have kept steady around this rate during the past week; tonight's closing quotation was Rs. 20.15. Guest, Keen, Williams had buyers at the higher rate of Rs. 26 and Jessop were better at Rs. 25.50. Bhartia Steel improved from Rs. 15.37 to Rs. 15.62 while Braithwaite were slightly lower at Rs. 24.50. Burn were unchanged at Rs. 310 and Kumardhubi Engineering were higher at Rs. 9.44. Marshalls were steady at Rs. 4.75 x.d., as were Richardson and Cruddas at Rs. 18. Textile Machinery were quietly steady around Rs. 19.

In paper, Orient were lower at Rs. 30.50 but Shree Gopal recovered from Rs. 15 to Rs. 15.12. It is believed that the response to the issue of second preference shares has so far been quite satisfactory. India Paper Pulp were unchanged at Rs. 21.50 while Titagur reacted from Rs. 34 to Rs. 33.50. Sirpur Paper, after being enquired for up to Rs. 9.50, turned easier at the close at Rs. 9.19.

In cement, Dalmia Cement deferred were done at Rs. 2.19 and Jaipur Udyog at Rs. 12. Orissa Cement was steady at around Rs. 13.25 while Sone Valley were depressed at Rs. 6.31.

In insurance, New Asiatic came to hand at the higher rate of Rs. 3.97 and Ruby General were unchanged at Rs. 5.50.

In shipping, Calcutta Steam Navigation were done at Rs. 15.94 while India General Navigation closed one point lower at Rs. 66. India Steamship fluctuated narrowly around Rs. 10. There was some enquiry for Port Shipping at Rs. 16.25.

In the miscellaneous section, Alkali and Chemical were steady at Rs. 11.56 but the rights gradually declined from 25 nP to 10 nP. It is rumoured in the

FIRM CONDITIONS IN STOCK MARKETS

INDUSTRIALS RISE: TIN AND RUBBER SHARES HIGHER

London, 24th April.

THE London stock markets have given a satisfactory performance during the past week. Despite the Easter holidays, general conditions have remained fairly active and very firm. The markets re-opened on a quieter note, but the tone soon became firm, and the fact that the Middle East uncertainties have persisted has not affected the markets at all. The main feature is the firmness of industrial equities due to persistent though selective buying. Earlier, the gilt-edged securities lost ground steadily on small but persistent selling. But the decline was arrested last Thursday when it became known that the Treasury bill rate had fallen below the 4½ mark. Prices promptly responded and made further headway after the holidays, helped by the talk of a reduction in Bank rate. Foreign bonds were subordinated with interest centred mainly on Chinese issues which reacted on the statement that there is very little chance of a substantial increase of trade with that country. Foreign rails were neglected, but dollar stocks, particularly Canadian issues, have been higher. The industrial market presented a very firm appearance with extensive but small gains, with most groups participating in the upward movement. Overseas issues were quieter pending

the publication of the Finance Bill. Leading oils showed very little change, but there were good features among the more speculative issues. Rubber shares continued their recent advance on renewed buying, and further widespread gains were established. Tea shares were also very firm, but demand was rather more selective. South African gold shares were slightly weaker on the week. Coppers showed very little change. Tin shares continued to respond to Budget tax concessions to concerns with overseas interests.

The Money Market

In view of a shorter working week and a heavier bill take-up by discount houses, short loan conditions in the London money market last week were again rather difficult. The supply position, however, was better as a result of disbursements of the Government's departmental money and the rate for day-to-day loans was on the easier basis of 3½ percent. The authorities, in continuing their open market policy of smoothing out operations, gave their usual assistance when the supply of money was short of demand, but during the week, it was on a small scale. At last Thursday's tender, there was a further sharp fall in the Treasury bill rate, the discount houses again raising their bids in order to secure as many bills as possible against keen competition from outside sources. This has led to the revived talk in some quarters of a possible further reduction in Bank rate.

Stock Market Prospects

The Investors' Chronicle market newsletter writes: "Despite good savings figures and a lower Treasury bill rate, the London gilt-edged securities drifted lower on scattered selling and some switch-

ing. The rise in industrials continued although the momentum was lessened by Middle-East developments. The barometer was fair. Among Kaffirs, good activity continues in selected financials. The remainder have rallied after failing to penetrate the previous low points. Selected oils and lead and zinc shares reflect tax hopes following the Budget. After rallying, Wall Street will pause to consolidate unless it gets further incentives. Some irregularity in London markets is natural in the Easter holiday season, and after the recent sharp advance. Middle East uncertainties also conduce to quieter trading. But the market should consolidate easily as there is evidence that the Budget has tempted institutional investors back to the market. In some cases, the rise may have been overdone for the moment, but the markets should soon be able to advance further as the new bull market is still young."

Activity on Wall Street

Activity in the U.S. bond market in the past week has been limited, with prices tending to fall. Long-dated U.S. Government obligations and investment quality corporates softened fractionally in dull dealings. Rails showed a narrow and mixed change. Convertibles were mostly lower under the lead of General Dynamics and Dow Chemicals. Foreigners ruled quiet. German Nationals, Italians and Norwegians were fractionally mixed. Denmark 4½ percents and Serbs were a shade higher, while Greeks weakened slightly. Australians were mixed. The Union of South Africa 4½ percents declined. Japanese issues were firm under the lead of Government 6½ percents. Chile 3 percents were fractionally lower.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 17th April shows that the gold stock rose by \$10 million to \$23,317 million. Foreign deposits rose by \$26 million to \$360 million, while foreign investments rose by \$50 million to \$3,749 million. Total discounts and advances fell by \$418 million to \$809 million, while the average excess reserves of member banks fell by \$155 million to \$242 million. The daily average excess reserves of member banks fell by \$1 million to \$548 million, while their daily average borrowings rose by \$14 million to \$1,219 million. Business loans of New York city banks rose by \$115 million to \$11,748 million, compared with a fall of \$60 million to \$9,588 million in the corresponding week a year ago.

World Rubber Statistics

Advance statistics issued by the International Study Group shows that world production of natural rubber in the month of February totalled 125,000 tons. Consumption amounted to 157,500 tons including estimated imports into Russia of 5,600 tons and into China of 8,850 tons. Stocks at the end of the period totalled 802,500 tons of which producing areas held 257,500 tons, consuming areas 372,500 tons and floats were 172,500 tons. The stock figures exclude those not available to industry in the U.K., the U.S.A. and France. Synthetic rubber production during the month was 95,000 tons and consumption 100,000 tons, while stocks held at the end of the period were 245,000 tons. The Group estimates exports from Indonesia during the month at 35,545 tons. U.K. consumption of natural rubber for the month of February was 14,453 tons. Imports were 14,900 tons and re-exports 6,550 tons. Stocks held by manufacturers and in warehouses (exclusive of U.K. Government stocks) at the end of the month totalled 33,637 tons.

I.C.I. SCIENTIFIC ESSAY COMPETITION

As a contribution to the meeting of the British Association for the Advancement of Science to be held in Dublin from 4th to 11th September, 1957, Imperial Chemical Industries Limited, publishers of the quarterly scientific review *Endeavour*, have offered the sum of 100 guineas to be awarded as prizes for essays submitted on a scientific subject. As the primary purpose of these awards is to stimulate younger scientists to take an interest in the work of the British Association and to raise the literary standard of scientific writing, the competition is restricted to those whose 25th birthday falls on or after 1st June, 1957. Five prizes will be awarded. A first prize of 50 guineas, a second prize of 25 guineas, a third prize of 15 guineas and two special prizes of 5 guineas each for competitors who have not passed their eighteenth birthday on 1st June, 1957. The subjects for the essays are: (1) The International Geophysical Year, (2) Science Fiction, (3) Irritation, (4) Chemistry and the Conquest of Disease, (5) Particles in Plant and Animal Cells. The essays, which must be in English and typewritten, should not exceed 4,000 words in length, and only one entry is permitted from each competitor. All entries should be addressed to the Assistant Secretary, British Association for the Advancement of Science, Burlington House, Piccadilly, London, W.1. The envelope should be clearly marked "Endeavour Prize Essay." The latest date for receipt of entries is 1st June, 1957. The essays must be submitted without signature. The competitor's full name and address and date of birth should be disclosed in a sealed covering letter attached to the essay. In judging the essays special attention will be paid to the originality of the approach to the subject, and great importance will be attached to literary style. The competitor's age will also be taken into account. The essay winning the first prize will be published in *Advancement of Science*, journal of the British Association.

New Delhi

REORGANISATION OF CENTRAL GOVERNMENT

PORTFOLIOS

ALLOCATION OF FUNCTIONS AMONG ECONOMIC MINISTRIES

(FROM A NEW DELHI CORRESPONDENT)

THE reorganisation of portfolios, effected simultaneously with the formation of the new Union Cabinet last week, has affected primarily the Ministries dealing with economic affairs. The consensus of opinion in the capital is that the changes are in the right direction, namely, a rational distribution of functions. A weakness of the Governmental set-up during the last five years was the overlapping of responsibilities which existed in the same field of more Ministry than one. This not only hampered co-ordinated planning but led, not infrequently, to inter-ministerial jealousy, which, in turn, clouded the Government's policy relating to the public and private sectors of industry. An outstanding example was the controversy that developed towards the close of 1954 over the Durgapur steel project, between the Production Ministry representing the public sector and the Ministry of Commerce and Industry which at that time was concerned with the private sector exclusively. A way out was ultimately found through the creation of a single Ministry of Iron and Steel in 1955. But this barely touched the fringe of the problem. Overlapping still remained; for instance, the responsibility for the textile policy continued to be shared by both the Production Ministry and the Ministry of Commerce and Industry, and the shipping policy was as much the concern of the Transport Ministry as of the Production Ministry.

The reorganisation announced last week may not have been as rational as some critics would like it to be, but it has, at least, the merit of removing a complicating factor which existed with the Production Ministry. Its functions have been distributed among the Ministry of Commerce and Industry, the amalgamated Ministry of Transport and Communications, and the newly created Ministry of Steel, Mines and Fuel. Likewise, the Ministry of Natural Resources and Scientific Research has been abolished. Its two wings have been transferred to the Ministry of Steel, Mines and Fuel, and the Ministry of Education and Scientific Research. This step, together with the separation of the work relating to oil and petroleum products from the Ministry of Works, Housing and Supply, has resulted in the unification of the responsibility for oil policy which was formerly widely diffused. Finally, the Finance Minister has been relieved of the direct responsibility for iron and steel. This accords with the convention that he should not normally hold the additional charge of any spending Ministry. The separate Iron and Steel Ministry has been abolished, and its work transferred to the newly created Ministry of Steel, Mines and Fuel. The allocation of business in the three principally affected economic Ministries, as they emerge from the reorganisation, will be as follows.

Ministry of Commerce and Industry

The Ministry of Commerce and Industry, incorporating the formerly separate Ministries of Commerce and Consumer Industries and Heavy Industries, will have three departments: (1) Department of Commerce and Light Industries (dealing with all items formerly handled in the Ministry of Commerce and Consumer Industries, the National Instruments Factory, the Khadi and Village Industries Board, the Handicrafts Board and the Silk Board); (2) Department of Chemical and Pharmaceutical Industries (dealing with all fertilisers, caustic soda, soda ash and other chemicals including the D.D.T. Factory, the penicillin plant and pharmaceuticals, fine chemicals, and salt); and (3) Department of Heavy Industries (dealing with all items formerly handled by the Ministry of Heavy Industries, all State-owned heavy engineering projects, the heavy electrical equipment project, the Hindustan Machine Tools Factory, and the manufacture of heavy engineering equipment for all industries, including coal-mining equipment).

Ministry of Steel, Mines and Fuel

The new Ministry of Steel, Mines and Fuel is likewise divided into three departments: (1) Department of Iron and Steel (dealing with the steel plants in Rourkela, Bhilai and Durgapur and the Mysore Iron and Steel Works, all steel plants in the private sector and the office of the Iron and Steel Controller); (2) Department of Mining (dealing with all mines and mining, the Indian Bureau of Mines, the Indian School of Mines and Applied Geology, and special mining projects); and (3) Department of Fuel (dealing with fuels including coal, lignite, gas and oil, the last comprising exploration, drilling, existing and future refineries, distribution and pricing).

Transport and Communications

Also divided into three departments is the new Ministry of Transport and Communications: (1) Department of Transport (dealing with major and minor ports, maritime shipping and navigation, lighthouses and light ships, road transport including the Delhi Road Transport Authority, inland water transport, tourism, road development includ-

ing national highways, the Central Road Fund, co-ordination of transport, and the Hindustan Shipyard); (2) Department of Communications (dealing with wireless planning and co-ordination, posts and telegraphs, overseas communications, railway inspection, the Indian Telephone Industries, and meteorology); and (3) Department of Civil Aviation (dealing with Air-India International, the Indian Airlines Corporation, the operation and maintenance of aerodromes, important capital works connected with civil aviation, flying clubs including the Delhi Gliding Club and other gliding centres, and international and bilateral agreements relating to the operation of air services).

Co-operative Farming

Co-operative farming is to be discussed by State Development Commissioners who will meet in Mussoorie on 26th April. It is interesting to note that the discussion of this controversial subject will be on the basis of a modest target of development. The target now proposed is one co-operative farm in each community development block when it has attained the "post-intensive stage". Some 300 blocks are now in this stage. During 1952-53 and 1953-54, they were taken up for intensive development under the community projects scheme. Of the 900 N.E.S. block inaugurated during the first plan period, 400 have been converted into community project blocks. Under the second plan, it is proposed that 3,880 more N.E.S. blocks will be started so as to cover the entire country, and that 1,120 of these will be converted into the intensive community project type. However, only the 450 N.E.S. blocks converted into the community project pattern will have attained the "post-intensive" phase in 1960-61. The target of new co-operative farms under the second plan, as now visualised, is therefore, only 1,150. This represents a mere doubling of the number of co-operative farms, only 1,000 of which existed in the country at the start of the second plan.

Chinese Model

The modest scale of development which is now envisaged is in striking contrast to the call issued by State Ministers when they met, also in Mussoorie, last July, for the establishment of 500 co-operative farms during 1956-57. This was recommended as the first experimental step towards the target, recommended by the conference, of "at least one co-operative farming society" in each of the 5,000 community development blocks to be formed by 1960-61. Later in October, Mr. P. N. Thapar, then Secretary of the Union Ministry of Food and Agriculture and a member of the Krishnappa delegation which studied agricultural development in China, expressed the view on return from Peking that "we should organise the starting of agrarian co-operative societies as experiments on the scale of, say, two for each national development block. This will give us about 10,000 such societies in the first year (1960-61). If the experiment proves a success and if we find we can get the necessary co-operation of the people, we can develop the programme in the second and subsequent years".

From 10,000 to 1,150 in the target for co-operative farms under the second plan is a steep fall. The downgrading is attributable to practical as well as ideological reasons. For one thing, the 500 co-operative farms it was proposed to establish during 1956-57 have not materialised. Though the precise figure is not available, the number of agrarian co-operatives newly formed during the year is placed at below 50. Secondly, the developments in Poland and Hungary since last October have demonstrated the failure of the forced development of agrarian co-operatives. No less a person than the new Polish Communist Party leader, Mr. Wladyslaw Gomulka, has admitted that co-operative farms, despite the many advantages conferred on them by the State, showed poorer yields and entailed higher costs than individual farms. "A quantitative development of producer co-operatives cannot be planned," he told the Central Committee of the Polish Communist Party last October, "because, on the basis of voluntary entry into a co-operative, this would amount to planning the growth in human consciousness, and that cannot be planned." Thirdly, and this is perhaps the most important among the factors which have induced the new realism in official proposals for the development of co-operative farming in India, the members of the delegation sent by the Planning Commission to China for the exclusive study of agrarian co-operatives have found themselves irreconcilably split on the fundamental question of the relevance of the Chinese example to India.

Five out of the seven members of the delegation were not only highly impressed by the virtually "complete co-operativisation" of agriculture which they saw in China, but also came away with

the belief that a similar movement could be successfully launched in India despite the vast difference in the two political and social systems. The majority group comprises Mr. R. K. Patil, leader of the delegation; Mr. Dev Kanta Borooah and Mr. H. V. Tripathi, two prominent Congress legislators; Mr. M. P. Bhargava, adviser on co-operation to the Union Ministry of Food and Agriculture and Mr. H. D. Malaviya, editor of the *A.I.C.C. Economic Review*. Their report contains the views already expressed by some of them individually in public, to the effect that coercion played but a small part in the spread of the agrarian co-operative movement in China, and that a similar programme should be undertaken in India.

Dissenting Minority

The dissenting minority consists of Mr. B. J. Patel, a co-operator of long standing and honorary general secretary of the All-India Co-operative Union, the national federation of State co-operative bodies, and Mr. F. N. Rana, Registrar of Co-operatives in Bombay, which State is the most advanced of all in the field of co-operation. They refuse to grant the name of "co-operatives" to the present agrarian producers' organisations in China, and regard them rather as collectives which have been brought about by organised violence and coercion by the State. Whereas the majority of the delegation have ascribed "a small part of the increase in production in 1954, a fair part of it in 1955 and a large part of it in 1956" in China to the formation of agricultural co-operatives, the minority trace the increase not to this factor, but to the application of steadily better techniques and more finance to agriculture. "In our view," the two members say in their dissenting report, "the organisation and working of the so-called co-operatives in China is neither voluntary nor democratic...When the State has a complete monopoly of the purchase of agricultural produce, when it imposes prohibitory taxes and delivery quotas on individual farmers and denies them essential supplies and credit, which are again in the hands of the State, the so-called freedom of the peasants to continue individual farming can only be illusory and temporary...Our colleagues have admired the system of norms, but the system of norms devised in China goes beyond the capitalist piece-rate system, for a man not fulfilling the norms would not merely get proportionately less remuneration for less work, but would actually be punished for doing less work." The two members are not against joint farming in principle, and would welcome it "if this is brought about in complete freedom, through the understanding and free will of the people themselves. We however consider that the development of co-operative farming should not be the subject of a governmental programme as the launching of a governmental programme of co-operativisation would ultimately mean coercion in one way or another."

U.P. Minister Opposes

The majority and minority reports, together with a reply to the dissenters by the leader of the delegation, are now being studied by the Planning Commission. In considering the extent to which the State can stimulate co-operative farming, the planners may also be expected to take into account the critical comments on joint farming offered by a study group of the Indian Co-operative Union and the vigorous plea against the pooling of land advanced by Mr. Charan Singh, Agriculture Minister of Uttar Pradesh, in a privately printed book which he has circulated to those interested in the subject. The book contains impressive statistical material drawn from different countries to prove the superiority of family farming over co-operatives in terms of production and costs and carries an appreciative foreword by Dr. Sampurnanand, Chief Minister of Uttar Pradesh. Meanwhile, the keen interest displayed by India in the Chinese pattern of joint farming has stimulated the curiosity of the U.N. Food and Agriculture Organisation. A recent visitor to the F.A.O. headquarters in Rome found that copies of the report of the Krishnappa team on Chinese agricultural development were in hot demand. It is gathered that this specialised agency of the U.N. is planning to organise in the coming winter a seminar of agricultural experts from different lands on the subject of co-operative farming. The experts are likely to visit various countries stretching from Israel to Japan to study the operation of different types of agrarian co-operatives, and compare their results with those obtained from efficient family farming based on co-operative services only.

Deposit of Company Profits

While publishing the draft rules governing the scheme for the deposit of a percentage of the current profits of companies with the Reserve Bank, the Finance Ministry announced last week that the comments of the interests concerned should reach the Department of Revenue by the end of April. Though the interval is short, it is pointed out in official circles that the Government had the benefit of informally hearing the views of industry even before the draft rules were framed. The Associated Chambers of Commerce, it is stated here, sent the Finance Ministry a memorandum setting out its views soon after the scheme was announced. Similarly, a group of prominent Indian industrialists including Mr. G. D. Birla, Mr. Dharamsey Khatau and Mr. Kasturbhai Lalbhai, discussed the subject at an informal meeting with the Finance Minister and the Minister for Commerce and Industry in New Delhi. The draft rules, as now published, will be discussed by the Committee of the Federation of Indian Chambers of Commerce and Industry when it meets in Bombay on 26th April.

Norman Rockwell

Master Pilot John Mattis, one of the Clipper Captains who have logged over 500 trans-Atlantic flights.

Eyes that see around the world

The look of experience is something all Clipper pilots have.

It comes from watching the weather through all the Seven Skies over all the Seven Seas—year in and year out.

It's the look you want in your pilot when you fly. And it's one great reason why more people choose Pan American when they fly—anywhere.

For on every Clipper flight deck there are as many as three qualified over-ocean pilots—trained to the most rigid and exacting standards in the world.

And beneath every Flying Clipper, all around the world, there extends the great supporting force of watchful experts—the vast ground forces of Pan American, 17,600 strong.

In the skies or on the ground, these are the people who make possible the fastest, most frequent service to the United States or to any of the 81 lands on our world-wide system—over 600 offices throughout the world.

Remember, when you fly Pan American, you're on the only airline with over 60,000 trans-Atlantic crossings.

Let your Travel Agent arrange your trip—his services are free. Or call Pan American in:

NO RELIEF IN EXCISE DUTY ON TEXTILES

MILL OUTPUT CONTINUES TO INCREASE

(FROM OUR BOMBAY CORRESPONDENT)

THE announcement by Mr. Morarji Desai, Union Minister of Commerce and Industry, that there will be no relief in excise duty on textiles has brought an end to the long period of uncertainty. Although this decision by the Government of India has come as a disappointment, it is believed that the market will gradually settle down and a new equilibrium between demand and supply will come into being. The trade has confined itself so long to purchases for immediate needs, but with the excise duty situation now clear, it is possible that the offtake will broaden for it is known that stocks in upcountry centres are at a low level. The revival is, however, likely to be of a short duration because the monsoon period is a traditionally slack season for textiles. It is estimated that stocks of piecegoods with mills now amount to 292,000 bales or approximately one month's production. In addition, mills are also holding approximately 250,000 bales which have been sold forward to dealers although the latter have not yet taken delivery. These stocks can be appreciably reduced only if offtake increases considerably between now and the beginning of the monsoon season. Meanwhile, production continues to increase. The output for the first quarter of this year is estimated at 1,375 million yards compared with 1,258 million yards in the corresponding period of last year and 1,352 million yards in the last quarter of 1956. The export trade has remained somewhat quiet. Fair business was reported with Ghana. There were

some enquiries for medium greys from the United Kingdom. Although the Indonesian Government has not yet issued fresh import licences, it is believed that these will not be long delayed. On this basis some provisional business has been transacted.

The decision of the Government of India to allow further imports of sterling area cottons has been welcomed. It is pointed out that had this permission been given earlier, it might have been possible to obtain supplies cheaper. Import licences—valid for shipment till the end of June—will now be issued for a total quantity of 50,000 bales on a "first come first served" basis. These cottons will range in staples from 1-1/32 inch and 1/3-16 inch and the varieties permitted are African growths like Jinja, Bukhedi, BP 52, West Nile and Busoga. For the first seven months of the current season 392,000 bales of cotton have been imported against a quantity of 607,000 bales licensed. Imports from the U.S.A. have been higher at 248,919 bales. Imports of Sudans, East Africans and Egyptians have amounted to 37,397, 56,255 and 33,746 bales respectively.

Futures Trading in Cotton

Trading in cotton futures was suspended for a short while but resumed under stringent conditions. Special deposits in the futures section have been doubled. It has also been decided not to permit futures trading in Jarilla July and Vijay August contracts for the current season's crop. Ceilings for Jarilla May and Vijay June have been fixed at Rs. 745 and Rs. 978 a candy respectively. Higher margins and low ceilings are expected to restrict trading in these contracts. The results have been immediate with the Vijay June contract dropping from Rs. 882 to Rs. 860 and Jarilla May from Rs. 759 to Rs. 730. It is possible, of course, that traders will make an attempt to push these contracts to a level approaching the ceilings. Most varieties in the spot market have dropped by about Rs. 10 a candy but the undertone continues to be strong because of increased demand and limited stocks. This is reflected in the Vijay April contract, which has continued to rise and now stands at

Rs. 910. Tenders against this contract have not exceeded 5,450 bales so far.

Yarn Market Stagnant

The cotton yarn market remained stagnant. There was hardly any turnover in spite of the fact that some mills offered to dispose of their stocks at reduced prices. Rayon yarn was equally dull. In the future section, 120d cones April delivery opened at Rs. 807 and improved to Rs. 811 but there was no support at this level and prices dropped again. The June delivery contract was quoted at a premium of Rs. 13 over the current month's contract. The spot market was somewhat better because some deniers were reported to be in short supply but most qualities eased because of adequate stocks with dealers and mills. In the case of staple fibre yarn, the 2/40s April delivery dropped to Rs. 617 but the June contract commanded a premium of a rupee. The spot market continued weak due to the decline in demand from weavers.

Castor-seeds Firm

The temporary suspension of trading in cotton futures has its effect on the oilseeds market. Trading in castor futures opened at Rs. 178.50 and after an initial decline rose to Rs. 182 for May delivery; but operators feared that the Government might intervene in the seeds market in addition to the cotton market, so this gain was wiped out. But fears subsided and the market recovered during the week to close firm at Rs. 182.50. The firm tone is attributed to the belief that the export prospects for castor oil are good. Although buyers in the United Kingdom and the U.S.A. are not still showing much interest, it is believed that the communist countries are preparing to make fresh purchases on a substantial scale. Furthermore, arrivals from Gujarat have slowed down. This could have contributed to the firm tone. The linseed market also continued firm although actual business was somewhat slow. The May contract opened at Rs. 29.50 and rose to Rs. 31.25 during the early part of the week. This optimism is based on substantial enquiries from Australia and the Continent for linseed oil at favourable prices; but a difficulty is the freight position.

Jute

PROSPECTS FOR THE NEW JUTE CROPS

ANXIETY ABOUT WEATHER CONDITIONS CONTINUES

THIS is a year when, more than in any other, anyhow, much more than in most, hopes have been centred on growing an early and big crop of jute in India. But, the weather god has disappointed us and rain, so far, has been late and patchy. Except in the Daissee districts, sowings should have been completed or nearing completion two or three weeks ago. The crop is, therefore, going to be late in coming to maturity and that may affect the mills' position, as far as raw material is concerned, by widening the gap between old crop and new crop. We may, of course, still get a big crop because, individual holdings of jute lands being small, the whole crop can be sown in a few days after rain. It is not as if each grower had hundreds of acres to sow, as is the case in other countries, but that there are millions waiting to sow the crop as soon as rain comes. And, as was pointed out last week, a late-sown crop frequently gives a bigger yield and better quality. In Pakistan, sowings are also later than usual, and though we are hoping to be independent of Pakistani jute, the size of the crop in Pakistan has an influence on prices in India. It is reported from across the border that some lowland areas which were not sown when there was rain a few weeks ago have been abandoned because it is unlikely that the plants would reach maturity before the rise in the river levels enforces cutting. It is also expected that the rivers will rise early because recent high temperatures will accelerate the melting of the snows.

What faces the industry, therefore, is the possibility of a shortage of Indian jute before the 1957 crop becomes available. Up to now, arrivals of Indian jute and mesta have been very satisfactory and have exceeded those of last season by 640,400 bales. Some people are of the opinion that, because the high prices of Pakistani jute forced Indian mills to concentrate on the purchase of Indian jute, the Indian crop came forward more quickly than usual and will also be exhausted earlier than usual. The figures available do not, however, fully confirm this view. In the current season, the peak of arrivals of Indian jute was reached in December when 691,600 bales arrived. Since then, there has been a slow but steady decline, and arrivals last month were only 440,700 bales, which is less than the mills' monthly consumption. This decline is, however, seasonal. Last season, the peak was reached in November, when arrivals from Indian sources were 680,500 bales and the seasonal decline followed month by month, the arrivals in March 1956 being 485,100 bales, or only slightly higher than last month's arrivals. There is, as yet, therefore, no indication of exhaustion of the current crop even though arrivals may be running rather below those of the corresponding period last year. Reports are now coming in, however, that there is little fibre of any kind left in some districts but, on the other hand, there appear still to be good supplies of mesta in certain areas. In fact, it is the mesta crop which has saved the situation for India. Taking the estimated percentage of mesta now used by mills it seems to be highly probable that they have already consumed more mesta than the total crop estimate given by the Government and there are still supplies coming forward with three months of the jute year still to run.

That is the fibre position as it stands at present. With a late crop in prospect, the mills will have to buy sufficient fibre to carry them on for, say, nearly a month more than normal before they can get supplies of new crop in quantity. The question is, therefore, whether there will be enough fibre in India to enable them to do so or whether they will have to buy old crop from Pakistan at uneconomic prices. Some people think that the latter course will be forced on the mills; others think that they will just scrape through. No one seems to be optimistic enough to believe that supplies will be ample.

THE JUTE MARKETS

Continued lack of rain has been an important factor in maintaining steadiness in the markets during the past week. Showers have been reported from many places, but more rain is needed generally throughout the jute-growing districts. Sowings are not yet much behind what they were two years ago, but the seriousness of the position is that an early crop this year was very desirable. Gummy speculators seem to base their operations on weather conditions for jute sowings more than do jute dealers. When rain fell in Calcutta on Monday the gummy fatka market turned easier but jute sellers remained steady.

Manufactured Goods: There have been reports of fairly general enquiries for heavy sacking for overseas destinations, but it is not known whether it is fresh business or shippers covering business they already had in hand. Most people seem to be inclined to the latter opinion and think that shippers have been covering because of the fear that continued lack of rain will cause prices to rise. It was reported that the Government of Burma called for an increased quantity against its recent order, and that the Government of India had placed a sizeable order for fertiliser bags.

For the nine months, July-March, total arrivals of jute were 5,108,800 bales, of which 4,584,700 bales came from Indian sources and 524,100 bales from Pakistan. These figures compare with a total import in July-March, 1955-56, of 5,224,400 bales, of which 3,944,300 bales were Indian jute and 1,280,100 bales were Pakistani. It may be noted that the figures for imports from Pakistan in February 1957 have been amended and also that the Indian figures include mesta.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the Port of Calcutta. These are gross figures based on shipping bills presented.

	Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 15th April, 1957	602.1	9,254.1	9,856.2
1st to 15th March, 1957	930.1	18,395.3	19,325.4
1st to 15th February, 1957	1,308.1	17,371.3	18,679.4
Sacking			
1st to 15th April, 1957	8,759.6	882.0	9,581.6
1st to 15th March, 1957	21,204.8	3,367.4	24,572.2
1st to 15th February, 1957	11,276.2	2,211.6	13,487.8

THE FOREIGN JUTE MARKETS

FIBRE PRICES FALL

(FROM OUR DUNDEE CORRESPONDENT)

THE tendency of raw jute prices during the past week has again been downward. For the past few days, some sellers have reduced their terms by 20s a ton. The buying by the Continent, so prominent in the previous week and the reason for an advance of about £3 a ton, has subsided and sellers are not so firm in their ideas. Reports state that jute imports from upcountry in Pakistan are quite good, but the quality is not so good now. There have not been reports of any probable scarcity before the new crop comes along, although it is recorded that new jute will be late in arriving this season. Sowings have been held up due to the lack of rains in many areas, but beneficial showers, it is reported, have fallen lately. All over Europe and in Dundee, business in productions continues quiet, and it is amazing how long buyers can keep out of the market at times. There is, of course, always something doing in Dundee, but the quantities are usually small and for follow-on delivery. Spinners are not much interested in offers of raw jute for shipment. They usually content themselves with picking up any parcels afloat or on spot, for which they pay much the same prices as those quoted for shipment. Mill Firsts have reverted to £112 and Mill Lightnings to £104, with Mill Hearts available at from £101 and grade Hearts from £95, May-June shipment, c.i.f. Daissee-2/3 is offered very sparingly at £105 and grade from £101, with grade Tossa-2/3 from £111 and grade Tossa-4 from £104, August-September, c.i.f., U.K. Shippers are very reluctant to name any prices for new crop this year. They got their fingers badly burned last year by selling early at around the minimum prices. Buyers would no doubt be interested in new crop at the rates done a week or two ago, namely, £102 for Mill Firsts and £92 for Mill Lightnings, August-September, but there are no sellers. Jute yarns are quiet so far, particularly weaving qualities, but carpet yarns still enjoy a good demand. Prices remain firm and unchanged on the basis of 15.72d a lb. for common hessian weft, and 16.29d for 8 lb. spools. Manufacturers are selling little cloth bags. Considerable quantities of sugar and pulp bags have been placed for home trade for delivery June to September. Prices are firm and unaltered all round.

There were rumours that the Argentine was showing interest in hessian. Burlap consumption in the U.S.A. in March was more than one million yards higher than in February while spot and afloat stocks were down by about 3 million yards. This had a steadying effect on the market, which has been maintained with little change throughout the week.

On Wednesday morning, the market was steady but quiet and quotations were as follows:

	April Rs.	May Rs.	June Rs.	July-Sept. Rs.
40in. 8oz.	34	34	34	33.87
40in. 10oz.	41.62	41.87	41.94	42
B Twills	112	112.37	112.50	112.62
Heavy Ceers (Plain)	111.50	112.25	112.50	112.62
A Twills	134	134	135	135
Liverpools	126	126	126	125.50
Corn sacks	111.50	112.50	113.12	113.62

Raw Jute: There has been more activity in raw jute than in the preceding week and, except on holidays, there has been business daily. Northern Middles alone have been in demand at Rs. 31 to Rs. 31.50 and the discount on prices for Middles alone has disappeared. Good business was done in Northern and Assam qualities in fairly high assortments at Rs. 28.50 basis Bottoms and Daissee jute was bought at Rs. 30.50 to Rs. 31.25 basis Bottoms. Desal mesta was done at Rs. 25.75, Northern at Rs. 26 and Daissee at Rs. 25. Bimbi was reported done at Rs. 23 for F.A.Q. Mills have continued to be active buyers in Cossipore and it is reported that stockholders have been able to dispose of fair quantities of jungle jute under Northern tickets at good prices. Imports in Cossipore were 476 wagons, compared with 503 wagons in the previous week. Indian Mill Firsts were sold at Rs. 210 along with Lightnings at Rs. 190. Pakistani N.C.'s were done at Rs. 102.

Quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms.	Shipment.
Northern	29	April-May
Assam	29	"
Purnea	28	"
Jungli	26	"
Murshidabad Tossa	31	"
Daissee Jute	31.50	One month
Daissee Mesta	25	"
Murshidabad Mesta	24	April-May
Desal Mesta	26	"
Northern Mesta	26.50	"
Northern ex Calcutta	28	One month
Local Packing	27	"
Bimbi	23.50 F.A.Q.	April-May
Pakistani	104 N. C.'s	"

Mofussil: Moderate quantities of mesta are reported to be coming forward in the Bihar districts, but imports of jute are very small everywhere.

Fairly widespread showers have been reported and sowings have been done in these areas but much more rain is now urgently needed.

Arrivals of Raw Jute

During March, 479,400 bales of raw jute were received in Calcutta and at mills in the Calcutta area, compared with 644,900 bales in March 1956. Arrivals from Indian sources were 440,700 bales, against 525,200 bales in February and 485,100 bales in March 1956. Arrivals of Pakistani jute were well down compared with those of March last year, being only 38,700 bales compared with 159,800 bales. It is thus the fall in imports from Pakistan which accounts for most of the fall in the total arrivals.

FALL EXPECTED IN NEXT COFFEE CROP

RAIN CAUSES EXTENSIVE DAMAGE

(FROM A SOUTH INDIAN CORRESPONDENT)

INDIA'S coffee crop prospects for the 1957-58 season are not very bright. The recent showers and storms have done extensive damage to coffee blossoms in some of the principal producing areas such as Coorg and Mysore. The preliminary estimate of the Coffee Board places the next season's crop at 32,000 to 35,000 tons. In view of this, the Government's coffee policy should require a revision next year. The Indian consumer has been getting a subsidy from export earnings at the rate of 3 annas a point in 1953 and 1954, and 2 annas a point from 1955. With very little coffee to spare for export out of the next season's crop and with declining prices, earning from exports will be too small to maintain this subsidy at the present rate. The Government may even be forced to drop the subsidy altogether. Pool receipts from the current season's crop show a substantial increase over the previous season's. To the end of March, receipts amounted to nearly 35,000 tons. The current season's output is estimated at over 40,000 tons. The low percentage of cherry to plantation is being maintained this year also.

Rising Home Consumption

Consumption in the internal market for the quarter ended 31st March, 1957, was 6,194 tons.

At this rate the year's consumption would amount to very nearly 25,000 tons, or over 1,000 tons more than what the home market absorbed in 1956. India will have about 14,000 tons of coffee for export this year, according to the latest estimates, but export sales are not progressing well to cope with such a big allotment. Another disquieting factor is the steady decline in export prices. The Board, at a special meeting recently, considered the export position, the fall in prices, and the best way of marketing the surplus stocks. It is sticking to its policy of clearing coastal stocks first. Enquiries for Indian coffee received recently from Russia and Egypt have not materialised into business. The Coffee Board held discussions with the trade delegations from the U.S.A., Australia and Finland on the prospects of exporting Indian coffee to those countries. The Board is considering the question of establishing a soil testing unit at its Balehonnur research station under the Technical Co-operation Mission Programme.

Indo-Australian Trade

Mr. L. R. K. Miller, a member of the Australian trade delegation, had discussions with the representatives of the cashew trade of Kerala. During the talks the representatives of the cashew trade urged that Australia buy more cashew kernel from India. Mr. Miller pointed out two limiting factors in Australia's import trade with India: they were the import restrictions in Australia and the disparity in the levy of import duty and other taxes. For instance, while cashew imported from British East Africa is subject to a tax of 3d a lb. and an import duty of 5 percent *ad valorem*, that from India is subject to 6d a lb. as tax and 10 percent *ad valorem* as import duty. Pepper imported from India also is subject to a duty of 10 percent *ad*

valorem. Whereas no duty is levied on dry ginger imports from Africa, a duty of 12 percent *ad valorem* is imposed on Indian ginger.

Mr. Miller gave the assurance that the Australian trade delegation intended to raise these matters with the Government of India. He felt that there was need, to reconsider the present policy of the Indian Government on the exports of these commodities to Australia. He further suggested that it would be a good thing if a high-level conference of the representatives of the Indian and Australian Governments was held to strengthen trade relations between the two countries.

Activity in Pepper Market

There has been some activity in the pepper market for the past few days. It is understood that some exporters in Cochin have received orders for shipment of about 1,200 tons of pepper to Russia and east European countries during May. American buyers are also showing some interest. Pepper exports during the first three months of this year amounted to about 6,000 tons.

Record Lemongrass Oil Output

India's lemongrass oil production and exports touched new peaks during the 1956-57 season, which is about to close. Production, according to trade estimates, amounted to 1,250 tons compared with last season's 1,000 tons, which itself was a record. Shipment in 1956 amounted to 1,055 tons against 733 tons in 1955. Another 155 tons were exported during the first two months of the year. Stocks as on 31st March, 1957, are estimated at about 100 tons. Crop prospects for the next season are equally bright. Lemongrass oil prices have come down to Rs. 80 a dozen bottles (194 lbs.) in Cochin. At this time last year, it was selling at over Rs. 130. This heavy fall in price is due to oversupply caused by an indiscriminate expansion of lemongrass cultivation. It is estimated that there were about 40,000 acres under lemongrass during the 1956-57 season.

Plantation Wages Agreement

The wage agreement reached between the plantation workers of Madras State and the management represented by the United Planters Association of Southern India has been formally ratified by the parties concerned with certain slight modifications. One of the changes effected stipulates that in no case will the wages paid be less than those notified by the Government for plantation workers.

Research on Coir

Calcutta will shortly have a small coir technical institute. This has just been announced by the Chairman of the Coir Board. This institute will have a small coir factory attached to it. Training will be given here to those who are interested in the manufacture of coir and coir products generally, and coir ropes of different varieties in particular. The main technical and research institute of the Coir Board will, however, be located in Kerala. Steps are already being taken to acquire a site for this. This institute will assist the trade by providing the necessary scientific and technical advice for improving the standard of production of the coir fibre, which in turn will help improve the quality of coir products. A technologist of the Coir Board is now conducting research on coir fibre in the National Chemical Laboratory in Poona. His experiments are directed principally towards ensuring the pliability of coir fibre without losing its strength.

COCHIN TEA SALES

At Dust Sale I, 575,000 lbs. of tea were on offer. There was a fair general demand, but the market was irregularly 10 to 15 nP lower all round except for coloury mediums which were firm to dearer. High-grown were neglected.

COMPETITION BETWEEN NATURAL AND SYNTHETIC RUBBER

The steady increase in the use of rubber presented a challenge to the natural rubber growing industry and also to the synthetic rubber producer, and it also offered great opportunities to both, said Mr. G. E. Beharrell, managing director of the Dunlop Rubber Company, when addressing an international symposium on synthetic rubber in London. Mr. Beharrell estimated that within the next 10 years, total rubber consumption was likely to exceed 4 million tons a year. Last year, consumption was about 3 million tons, of which about 1,850,000 tons was natural rubber. He added that the use of natural rubber last year was just that about in balance with production. Saying that recent advances in polymer chemistry suggested that the synthetic-rubber industry was only at the beginning of its development, Mr. Beharrell added that this did not mean that the plantation industry was likely to experience a progressive recession in the foreseeable future. Science and technology would be applied to improve the uniformity and quality of natural rubber, as well as to reduce its cost of production. Sir David Eccles, President of the Board of Trade, in officially opening the symposium said that he did not think there was "a great conflict" between the natural and synthetic products. "What we need is that the world should grow richer. Healthy competition between natural and synthetic rubbers is in the true interests of everyone", he said.

Engineering and Transport

EXPANDING EXPORTS OF ENGINEERING GOODS

REPORT OF TRADE MISSION

A FIVE-MEMBER trade delegation, sponsored by the Engineering Export Promotion Council of India, recently visited British East Africa, Ethiopia, Sudan, Egypt and Aden to explore the export possibilities for Indian engineering goods. The general conclusions and recommendations of the delegation's report are as follows:

The countries visited by the delegation are the traditional markets for India. She has been exporting mainly cotton textiles and jute goods to these countries. It is necessary to develop new lines. These countries have a potential market for many of India's engineering goods. Some engineering goods are now being exported, but the volume must be increased, and this can only be achieved if export is organised and developed on proper lines. The countries are agricultural, but their economies are developing fast. Their requirements are increasing, so the present is an opportune time for India to increase her exports. The pattern of development in these countries is similar to India's. Some of the engineering products manufactured in India, that is, diesel engines, pumps, etcetera, are particularly suitable for tropical conditions, and will meet the requirements of these countries.

While there is good scope for developing this country's exports, it must be remembered that markets everywhere are highly competitive and the buyers are getting discriminative. Indian manufacturers should, therefore, be prepared not only to compete with other manufacturers on the basis of price, quality and delivery, but also to cater for the particular requirements of foreign markets. It is necessary to establish connections with reputable importers or appoint suitable agents to maintain a proper flow of exports. In the case of machinery, items such as diesel engines, pumps, rice mill machinery, etcetera, it is necessary to have agents who have good distribution arrangements and can render effective after-sales service. It is also important that Indian manufacturers should as far as possible afford training facilities in their own factories to their agents. Such facilities are necessary not only to enable the agents to render effective after-sales service, but also as a step towards market expansion. The manufacturers are advised to carry out survey of market requirements periodically. All complaints should be promptly and sympathetically attended to, and suggestions for alterations or improvements carried out. Business depends on contacts and the creation of confidence and the business that can be done by visiting the markets personally cannot be done through correspondence.

Display of Goods

Display of goods is an important part of modern salesmanship. It is all the more necessary in markets where products of various other countries are comparatively better known than the Indian goods. The delegation considers that show rooms should be organised in all the important places where sales are to be promoted. To begin with, the delegation feels that sales organisation is necessary in Nairobi, Mombasa, Addis Ababa, Khartoum and Cairo. In Mombasa and Cairo, the Government is shortly opening trade centres. These may have a section set apart for the engineering goods. The Engineering Export Promotion Council should have a salesman in charge of these sections. He should not only be a good salesman but should also have general technical knowledge about engineering goods available for export from India. In Addis Ababa and Khartoum, there are at present no commercial sections attached to the Indian missions. It is necessary that commercial sections should be organised in these places under a commercial secretary who may be of the First Secretariat or Second Secretary rank. There are good prospects for the development of India's exports to these countries and the efforts of the manufacturers and exporters are likely to be hampered if there is no Government organisation to back their efforts. Attached to the commercial sections in these places there should be sample rooms where all the engineering goods available for export should be displayed.

Government Purchases

Large purchases are made by Government departments in these countries, and they want to see samples of goods before deciding to place orders. It should be an important part of the duty of the commercial sections to keep a watch on tender notices issued by Government departments for purchases and communicate these notices, or requirements which are to be met without asking for tenders, to the Engineering Export Promotion Council. This work may be done by the Council's employee in places where there is one. The Council should circulate such information immediately to all interests concerned. Manufacturers will be well advised to keep some stocks of their rates, deliveries and other particulars about their products, in order that the agents may be able to offer goods for quick delivery, or may be in a position to put in tenders in response to notices as soon as these are published in newspapers.

Press Publicity

The delegation feels that general publicity by the Council and publicity by individual manufac-

turers through the medium of the Press is necessary to enable the importers and consumers know the range of engineering products which can be imported from India. Publicity to be effective should be in a planned manner. Advertisement in newspapers published in local languages is necessary so that the largest possible number of people may get the opportunity of knowing about Indian goods. Haphazard advertisements in the Press are not likely to serve any useful purpose. Manufacturers should publish illustrated catalogues and attractive leaflets giving full information about the specifications, types, and the variety of their products, and they should be available with their agents and at show rooms for sales promotion.

Standardisation of Products

It is very necessary that the goods exported from India should be of uniform quality and according to international standards. A great deal of damage to India's export can result, and has in some cases resulted, from unscrupulous exporters sending sub-standard goods. The Indian Standards Institution, through its certification marks scheme, can play an important part in gaining the confidence of the overseas buyers. The delegation would suggest that the goods exported from India should bear the I.S.I. mark. This certification mark should also be given for those goods which are according to specifications other than I.S.I. In case of goods where neither I.S.I. nor B.S.S. or other international standards are available, manufacturers will have to see that the goods supplied by them conform to the requirements of the buyers and according to specifications laid down by them. In export promotion, the importance of inspiring confidence in the overseas buyers cannot be too highly emphasised. The Council must study ways and means of ensuring that the quality of goods exported satisfies customers in every way. One way of making a beginning in this direction may be for the Council to maintain a list of reputable and reliable manufacturers and exporters, which

should be supplied to overseas buyers. Through Government commercial representatives, the Council's own representatives and advertisements, the Council can publicise such list to overseas buyers. Only those manufacturers and exporters should be put on to this list who give an undertaking to the Council that in case of dispute, they will abide by the decision of the Council and will be prepared to abide by such other conditions as the Council may impose to ensure quality.

Improvement in Packing and Finish

Indian manufacturers should further improve their packing. The packing should be attractive, sturdy and seaworthy. A great deal of attention has also to be given to standard marking methods. The delegation feels that if Indian packing is improved and brought to the international standard, Indian goods will have not only much greater appeal to buyers but might also fetch better prices. Clumsy and defective packing makes an article look inferior although in quality and workmanship it may be second to none. The markets are highly competitive and Indian manufacturers can greatly increase their chances of competition with foreign products if they can continue to improve their finish. A better finish has a better sales appeal.

Shipping Facilities

White adequate shipping facilities are available between Bombay to East African ports, the existing shipping facility between Calcutta and East African ports is far from adequate. There is only one shipping company plying one service a month. To remove the present difficulties, it is necessary that another shipping company should provide one more sailing in a month. The delegation heard complaints that the payment of commission to agents abroad was very much delayed in some cases. In order to avoid such complaints and create a sense of security and confidence in the minds of agents, arrangements should be made for expeditious payment of commission.

SEARCH FOR SYNTHETICS

THE THREAT TO PRIMARY PRODUCERS

THE news that the American General Electric Company had created in its laboratories a new material harder than diamond came within a few days of the news that British and American scientists were to co-operate more closely in the development of fusion energy—the energy that is released by the fusion of light elements, as in the hydrogen bomb. These items remind us that investigation into the nature and properties of matter is progressing rapidly, and that it is being directed towards practical uses. The economic significance of this development cannot be precisely assessed, but it is certainly profound. Last year, the General Electric Company startled the world by announcing that it had made synthetic diamonds—not substitutes with similar characteristics, but substances which were virtually the same as natural diamonds, having the same physical structure. Some people questioned whether the achievement was worth the effort, since the natural substance is obtainable much more cheaply and supplies of it are not nearly exhausted. To go a step further and produce a "super-diamond" however opens up important industrial possibilities.

It may be, of course, that General Electric's so-called "Borazon", which can withstand much higher temperatures than diamond, does occur in nature, but has not yet been discovered. It may, on the other hand, be an entirely new substance, made by man. If so, it is in a sense comparable with the "transuranic" elements, of which plutonium is now familiar though these elements are

primary, whereas Borazon is a compound substance. If Borazon does exist in nature, its creation by man can be compared with the fusion of light elements, in that both require special physical conditions which in certain circumstances nature provides, but which have not previously been made. We are, rightly, concerned at present with the practical problems of increasing production, with particular emphasis on increasing power. But many scientists, and even Governments, are convinced that the results of long-term policies are not necessarily so remote that such policies need not concern us. The idea of simulating the conditions in which the sun releases energy by fusion of light elements is practical enough to justify substantial expenditure on research and development of the process. Not many years ago many people thought it a waste of time and money to attempt to develop fission energy—the energy that is released by the fission of heavy elements; but nuclear power is now an accomplished fact and capable of saving countries such as Britain from a serious deficiency of power in the next generation.

Widespread Use

While new modes of power are being developed and new substances are being created, we continue with the practical task of making substitutes for the products of nature, and of finding new ways of using nature's products. The use of synthetic materials is now widespread, and the synthetic that is familiar that the public accepts them as "natural". Plastics—materials formed of man-made chemical combinations—appear everywhere. Synthetic fibres, made of chemicals from coal or oil, are rapidly extending their share of the total trade in textiles—though that share is still small. Synthetic rubber has caused apprehension in Malaya for years, and the true character of the threat has lately been investigated there. West Africa has lately learned with some consternation that Unilever has evolved a substance with proper-

ties similar to those of cocoa-butter; so we shall doubtless be eating synthetic chocolate before long, as we have been eating synthetic butter (margarine) for years.

These reactions in the primary-producing countries are characteristic. Australian wool-growers have, it seems, been persuaded that synthetic fibres can increase consumption of wool, because blends of wool and synthetics have special qualities that neither can attain individually. In general, however, the increase in supplies of synthetic substances encroaches on demand for natural substances. The first impetus to the development of synthetics may be actual or prospective scarcity of the corresponding natural product but at a later stage a successful synthetic acquires a momentum of its own. Few primary producers can be absolutely sure that no synthetic substitute for their product will be found, and some of them recognise that it is in their long-term interest to keep their prices low. Even the free play of the market can make prices that embarrass producers. When copper seemed too dear, one big copper-mining group fixed its prices "below the market", in the hope of warding off the threat of substitution by other materials, including plastics.

Warning Light

At the same time, natural materials are fighting back with the weapon of economy. Technical advance is not merely in the substitution of "new" materials for "old" ones, but also in the more efficient use of the "old" ones. Organic substances can be disintegrated and reformed differently. Rayon uses some "waste" products as well as primary woodpulp. New forms of manufactured timber—in some respects far superior to natural timber—are made of small pieces that had until recently no economic value. Wasteful practices in the use of raw materials and food belonged to the age of relative abundance—in the sense that the richest

resources were still available. Now technologists work on the assumption that the increasing population of the world will satisfy its needs with increasing difficulty, and that concentrated effort is needed to make wider use of the substances that are still and will remain plentiful—including the hydrogen of the oceans that can be the "fuel" of fusion energy. The countries of advanced technology are manufacturing more of their own materials; the distinction between materials and manufactured products is becoming blurred. The natural materials of the less industrially developed countries will still, generally, be needed in increasing quantities for a long time yet. But the cocoa-growers and the diamond-miners and many others have perhaps seen the warning light.

WHOLESALE PRICE INDEX UNCHANGED

THE official wholesale price index (base: year ended August 1939=100) was unchanged during the week ended 6th April at the previous week's level of 420.7. The index was lower by 0.2 percent when compared with the corresponding week of the previous month, but was higher by 7.3 percent than that of last year. The index for Food Articles rose by 0.9 percent to 405.1 as a result of an increase in the prices of gur (+3.5%), rice in Calcutta, wheat and gram in Hapur (+2.5% each), and tea for internal consumption (+1.5%) although dal arhar (-2.5%) and wheat in Amritsar (-1.5%), exhibited declines. The index for Industrial Raw Materials declined by 1.0 percent to 514.7 compared with 519.9 (revised) for the previous week due to a fall in the prices of manganese ore (average export price) (-34.5%), rapeseed in Kanpur (-5.5%), gingellyseed (-2.5%), raw silk, raw wool, linseed in Bombay and copra (-1.5% each); prices of castor-seed in Bombay (+2.5%), rapeseed in Bombay and lac (+1.5% each), however, showed an advance. The index for Semi-Manufactures also moved down by 0.4 percent to 398.8. Items which witnessed significant variations during the week were: sheepskins (-17.5%), cowhides (-5.5%), zinc (-4.5%), gingelly oil (-3.5%), goatskins, coconut oil and mustard oil (-2.5% each), copper in Calcutta (+7.5%) and gingelly cake (+3.5%). The index for Manufactures moved down from 384.1 to 383.9 during the week due to a fall in the prices of tyres and tubes (-2.5%) and a slight decline in the prices of cotton manufactures. The prices of cigarettes (+3.5%) and jute manufactures (+1.5%), however, moved up. Lower prices of chillies in Patna (-6.5%), betelnuts in Calcutta (-4.5%) and Cashewnuts (-2.5%) were responsible for a decline of 0.5 percent to 564.6 in the index for the Miscellaneous group compared with 567.2 (revised) for the previous week in spite of an increase in the prices of chillies in Calcutta (+6.5%) and black pepper in Cochin (+1.5%).

ACREAGE UNDER RABI PULSES INCREASES

The all-India first estimate of rabi pulses other than gram and tur for 1956-57 puts the current year's area at 9,827,000 acres against the corresponding adjusted estimate of 9,237,000 acres for 1955-56, according to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture. This shows an increase of 590,000 acres or 6.3 percent in area during the current year compared with last year. The increase in acreage during the current year has been shared by Bihar,

Madhya Pradesh, Uttar Pradesh, Punjab, Bombay, Rajasthan and Delhi. The increase in acreage has, however, been attributed to favourable weather conditions at the time of sowing. The increase in acreage has, however, been offset to some extent by decreases registered in Andhra Pradesh and Mysore. As between different pulses, the increase in area has occurred mostly in the case of lakh, masur and urad. This estimate covers the period up to the end of December 1956. Till then the condition of the crops was reported to be generally satisfactory. This estimate does not cover the entire area shown to rabi pulses other than gram and tur during 1956-57. Past experience has shown that the area at the first estimate stage forms roughly 85 percent of the area finally reported.

OUTLOOK FOR U.K. CARPET INDUSTRY

PRICE FOR STANDARD GOODS RAISED

THE Federation of British Carpet Manufacturers in its latest annual report says that there has been a marked improvement in the U.K. carpet trade in recent months. Looking ahead at the prospects for 1957 it emphasises that much depends on credit restrictions in Britain and import restrictions in overseas markets, especially Australia. The withdrawal of import restrictions in Australia will assist the industry considerably, as also would expansion in other overseas markets. This, says the report, will call for a more energetic effort by manufacturers in increasingly difficult circumstances.

Imports of cheap cotton carpets into the U.K. during 1956 reached the figure of 6,727,000 square yards—a sharp increase on previous years and no less than 18 percent of the total of traditional carpeting produced and sold in the U.K. Pointing to this, the report says that if the U.K. is to compete with foreign manufacturers, it is essential that it should have an adequate home market and be

allowed to meet low cost imports on equal terms. "The carpet industry has always endeavoured, for the sake of stability, to maintain prices at a constant level, and to this end, has often absorbed additional costs, rather than increase the cost of its goods to the public. Apart from the very high capital cost which has to be faced by a carpet manufacturer in keeping his plant completely modernised, few people appear to appreciate the high costs incurred in experimenting in colour and design, a necessity if export markets are to be held. This is no hobby to be indulged in and, to be worthwhile, must be supported by a healthy demand at home," the report states. An increase of 5 percent in prices of standard carpets was announced at the meeting. Increases in costs of conversion and distribution had made this essential, the report said.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to March, 1957. As compared with February, the March Index for Food indicates a drop of 1 point, while those for Clothing, Fuel and Lighting, and Miscellaneous remain unchanged at 543, 268 and 283 points, respectively.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living declined by 1 point during March, 1957.

FORECAST FOR KUSMI LAC CROP

The yield of the Indian Kusmi lac crop for the year 1956 is estimated at 64,000 maunds compared with 61,000 maunds in 1955 and a normal production of 90,000 maunds. The yield of this crop is below normal, mainly because of the shortage of broodlac at the time of infection. The yield of Baisakhi lac crop this year is expected to be 675,000 maunds compared with 683,000 maunds and 813,000 maunds in 1956 and 1955 respectively. The normal yield, based on the average production of 10 years preceding 1956, is 740,000 maunds. The crop has suffered some damage in Palamau district of Bihar and in western parts of Madhya Pradesh due to hailstorm. The crop is reported to have progressed satisfactorily in Ranchi and Purulia districts.

April 25, 1957.

Calcutta Markets

DUST TEA PRICES IMPROVE

At Sale No. 43, held on 23rd April. Dust offer-ings were 18,937 packages. Once again prices were sometimes up to 10 nP easier when the market opened. Demand improved as the sale progressed and most descriptions were firm to slightly dearer. Black leafed types were a strong feature while non-wither Dooras, powdery C.T.C. Assams and residue kinds sold fairly well. The very few best C.T.C. Assams on offer received only limited support and were generally easier.

Quotations	1957		1956	
	Rs.	1957	Rs.	1956
Medium Donors Dust	1.00 to 1.65	1 8 0		
Medium Assam Grainy Dust	1.70	1 9 0 to 1 9 6		
Medium Assam C.T.C. Dust	1.70 to 1.10	7 9 6		
Best Assam C.T.C. Dust	not quotable	2 10 0 to 2 12 0		

Other grades on offer met with a keen general demand for the 4429 chests. Clean well made whole leaf grades and B.O.P.'s were particularly strong features and all descriptions were dearer.

LINSEED FIRM

Very firm conditions have prevailed throughout the past week. There has been a continuous advance in prices, although the actual turnover has been disappointing. Supplies have been scarce. Ready goods were virtually unobtainable, and sellers for forward delivery were very reserved. The new season's supplies have been disappointing because of the apparent intention of upcountry merchants to withhold stocks as far as possible. The hope of a better demand for oil from abroad has encouraged local buyers to take increased interest at higher prices. Latest quotations were as follows: Ready Rs. 23 a maund and April-May Rs. 22-12 a maund.

HIDES AND SKINS STEADY

The market continued steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 16th April and 22nd April, 1957)

Cowhides: Wet salted (Ord.) 2,000 pcs. on the basis of Rs. 0.61; Wet salted (Ord.) 84.00 pcs. on the basis of Rs. 7.75 to Rs. 9.12; Wet salted (Slaughtered) 17,500 pcs. on the basis of Rs. 12.25 to Rs. 21.
Goatskins: Wet salted (Daissee, Killed) 43,870 pcs. on the basis of Rs. 255 to Rs. 280. Rs. 310 to Rs. 340 and Rs. 370 to Rs. 380; Assam-Dinajpur-Jalpaiguri 11,900 pcs. on the basis of Rs. 285 to Rs. 365; Purneah-Kissengani 6,500 pcs. on the basis of Rs. 285 to Rs. 315; Patna-Pakur (Ord.) 2,200 pcs. on the basis of Rs. 255 to Rs. 265; Muzafferpore-Patna 38,100 pcs. on the basis of Rs. 275 to Rs. 325.

Bazaar Stocks

(22nd April, 1957)

Cowhides: Wet salted 3,04,500 pcs.
Goatskins: Wet salted (Daissee, Killed) 35,000 pcs.; Assam-Dinajpur-Murshidabad 36,500 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissengani 120,000 pcs.

SUGAR BETTER

During the week ended 24th April, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 5,000 bags and stocks totalled 120,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31 for ordinary grain and Rs. 33.12 for big grain. The market was weak at the beginning, but strengthened towards the close. It may rise further in the next few days if the rate of arrivals does not improve.

SHELLAC STEADY

During the week ended 23rd April, the market was dull at the beginning, steady at midweek and firm at the close. The range of quotations was as follows:

Pure Buttonlac	Rs. 98, 102, 105 buyers.
Lemon No. 1 Shellac	Rs. 101, 104.50 buyers; 110 done buyers; Rs. 109 buyers.
Lemon No. 2 Shellac	Rs. 95.50, 99, 103, 101 buyers.
F. O. Std. 1 Shellac	Rs. 90, 93, 95.50 buyers.
Pure TN Shellac	Rs. 85, 87 buyers; 90 basis done buyers.
4% I.T.N. Shellac	Rs. 75, 78, 80 buyers.
No. 1 Kusmi Seedlac	Rs. 93.50, 95.50, 97 buyers.
No. 2 Kusmi Seedlac	Rs. 87.50, 90.50, 92 buyers.
Fine Bysaky Seedlac (Manbhumi)	
Fine Bysaky Seedlac (C.P.)	Rs. 85.50, 88, 90 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 83.50, 85.50, 87.50 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	
Ordinary Bysaky Seedlac (C.P.)	Rs. 76, 87, 81 buyers.
Kireelac	Rs. 72, 73, 75 buyers.
	Rs. 31, 32 buyers.

Shipments during April until the 16th were 13,942 packages comprising shellac 8,848 packages, seedlac 3,758 packages, buttonlac 319 packages and others 1,016 packages.

Books and Publications

FINANCING SMALL INDUSTRIES

Place and Problems of Small Industries. By S. K. Basu. (Published by A. Mukherjee and Co. Private Ltd., 2, College Square, Calcutta. Price Rs. 4; pages 97.)

Dr. Basu stresses the importance of small industries in the economy. The emphasis in the second five year plan is on the development of heavy industries, but some think that small industries should be given a more significant rôle so that they may meet consumption demands and provide employment opportunities for the growing population. Dr. Basu covers fresh ground when he discusses the financial problems of small-scale industries. His analysis will prove useful in formulating a practical plan for their development. Reports of Government committees have paid little attention to the problems of financing small industries, which invariably have great difficulty in securing funds in the form of equity capital. Studying the condition of such industries in the U.K. and the U.S.A., he shows the difficulties in giving them loans from commercial banks. Dr. Basu's suggestions, especially those relating to the operation of State Finance Corporations, are constructive. The book should help research workers who may be interested in the financial troubles of small industries.

SERVICE UNDER THE STATE

The Law Relating to Service in India (Vol. III, Service under the State). By N. Barwell and S. S. Kar. (Published by Orient Longmans Ltd., 17, Chittaranjan Avenue, Calcutta. Price Rs. 12; pages 234.)

This is the third and concluding volume of a trilogy, each work being complete in itself but designed to form together one picture of the whole law of service in India. The present volume, being a symposium of the law relating to Government service and the rules and regulations applying thereto, is necessarily of much more limited interest to commercial undertakings in general than its two predecessors. Nevertheless, with various industries, for good or ill, likely to be nationalised, as the business of life assurance has already been, under the five year plan, and their employees to become Government servants, the law

as to conditions of service under the Government becomes of importance to many, hitherto, not in the least interested in it. This treatise, the first, and one believes the only one, of its kind to be published in India, therefore, fills a definite, if restricted, want. The reviewer can claim to have read the first volume of the series from cover to cover and shares Mr. Kar's touchingly expressed regret that Mr. Barwell, the co-author and designer of the composite scheme, was not spared to see its completion and has had no part in the present work. Gone is the fascinating flowing style of that master of conversation changed into the printed word. But the value of the book does not suffer on that account and its length is shortened correspondingly with the result that we have a clear exposition of the law written in terse, succinct form by an acknowledged expert. With the completion of this, the third, volume, we have now, for the first time in India, a comprehensive treatise on the whole law of service. All three works should be mastered together.

INDIAN ECONOMIC PROBLEMS

The Economic Weekly Annual Number, 1957. Edited by Sachin Chowdhury. (Published by Asian New Age Publishers Private Limited, 15, Tamarind Lane, Fort, Bombay 1. Price Rs. 250; pages 214.)

This publication is comprehensive, thoughtful and interesting; it maintains the standards of its predecessors. The subjects covered are topical. The issue begins with an analysis of the Congress Working Committee's conception of the "socialist pattern of society", while another article discusses the significance of socialism against the background of "perspective planning". But the main theme is the foreign exchange prospect for the second plan. Dr. B. N. Ganguli's analysis of trends in the balance of payments emphasises the need to hold down imports of consumer goods. Dr. Tinbergen has discussed the controversial theme of mill as against cottage industries, while Professor Shigeto Tsuru makes a searching scrutiny of the theoretical basis of economic planning in India. The other topics covered include rural development, community projects, co-operative farming, import trade control and industrialisation. There are two interesting studies by Dr. Daniel Thorner and Dr. S. A. Palekar.

The reliability and high efficiency in design, materials and performance associated with Weir Auxiliaries for steam installations are now being applied to Weir equipment for Nuclear Power plant.

Research, development, design and manufacture of the highest standard, maintain Weir leadership in the auxiliary field whatever the source of energy.

We invite consultations on all questions relating to design and manufacture of Pumps, Valves, Heat Exchangers and other Auxiliaries for Nuclear Power circuits.

In the rapidly changing field of power reactor technology, the expert assistance which we can give on such equipment is essential.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to November, 1956. Compared with the preceding month, there were increases in jute manufactures 3.8 points, paper 13.5 points, coal 14.4 points and

wagons loaded 8.1 points, while decreases occurred in cotton consumption 1.4 points, steel ingots 9.4 points, pig iron 0.9 point, cement 1.7 points and electricity 3.8 points.

The index for cheque clearances rose by 1.5

points, while that for notes in circulation dropped by 0.8 point.

Correlating all the factors, the Capital Index of Indian Industrial Activity advanced by 3.0 points during November, 1956.

	Industrial Production						Mineral Production	Total Number of Wagons Loaded (T)	Financial Statistics	Trade: Foreign & Coastal		Trade: Foreign & Coastal		General Monthly Index

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY (1935)

COMPANY AND PUBLIC NOTICES

PRESIDENCY JUTE MILLS COMPANY, LIMITED

NOTICE is hereby given that the 72nd Annual General Meeting of the Members of Presidency Jute Mills Company, Limited will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company on Tuesday the 21st day of May, 1957 at 3-30 O'clock in the afternoon for the following purposes:—

- To receive and consider the Profit and Loss Account for the half-year ended 30th June, 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
- To declare a dividend.
- To appoint Directors in place of Mr. N. B. Elias and Dr. S. C. Law, the Directors retiring by rotation at the Meeting who, being eligible, offer themselves for re-appointment.
- To appoint Auditors and fix their remuneration.

As Special Business:

To consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

- That the requirements of Articles 82, 83, 87, 121, 176, 180 and 181 of the Articles of Association of the Company be not complied with in respect of the half-year ended the 31st December, 1956.
- That the Articles of Association of the Company be altered in manner following:—

(a) Articles 82 and 83 shall be deleted and the following new Article substituted therefor:

82. In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors. Such General Meetings shall be called "Annual General Meetings" and shall be specified as such in the notice convening the meeting. All other meetings of the Company shall be called "Extraordinary General Meetings".

(b) Article 87 shall be deleted and the following new Article substituted therefor:

87. The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring by rotation, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business.

(c) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor.

(d) Article 176 shall be deleted and the following new Article substituted therefor:

176. At every Annual General Meeting the Directors shall lay before the Company a Balance Sheet and a Profit and Loss Account made up in accordance with the provisions of Section 210 of the Companies Act, 1956, and such Balance Sheet and Profit and Loss Account shall comply with the requirements of Sections 210, 211, 212, 215 and 216 of Schedule VI to the said Act, so far as they are applicable to the Company but, save as aforesaid, the Directors shall not be bound to disclose greater details of the results or extent of the trading and transactions of the Company than they may deem expedient.

(e) In Article 180 line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.

(f) In Article 181, lines 1, 2 and 3, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing, shall be deleted and the words "Annual General" substituted therefor.

The Share Transfer Books of the Company will be closed from 7th to 21st May, 1957, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta.

24th April, 1957.
Note: Payment of the proposed dividend, if declared, will be made on or after 4th June, 1957, only to those members whose names are registered in the Books of the Company on 21st May, 1957, or to their Mandatees.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

PROSPECTS FOR THE RE-FINANCE CORPORATION

DOUBTS ABOUT THE BANKS' VENTURE INTO MEDIUM-TERM INDUSTRIAL LENDING

GROWING interest has been shown recently in the Government of India's scheme to set up a Re-Finance Corporation for providing credit facilities to medium-sized industries in the private sector. The stock markets have reacted bullishly to the announcements which have appeared so far, on the assumption that a wealthy new institution is about to be born which will flush with funds many industrial undertakings which are now short of them. Cynics may reflect that some of the shares which have reacted most vigorously represent units which do not qualify for assistance under the scheme. But even so, the purposes for which the Corporation is being established, if not altogether the ways in which those purposes are to be fulfilled, deserve an enthusiastic reception. There is hardly any industry which has not felt the inadequacy of long- and medium-term, as well as short-term, finance growing more acute. Built with counterpart funds obtained from the sale in India of U.S. farm surpluses which are coming under the Indo-U.S. Agricultural Commodities Agreement signed in August last year, the Re-Finance Corporation represents an idea which could usefully be extended to other under-developed countries. The arrangements implied in the Indo-U.S. Agreement, while a tribute to American generosity, are mutually beneficial to both countries. They help the U.S. Government in disposing of agricultural surpluses which are burdensome and expensive to hold; as far as India is concerned, the money obtained by selling these surpluses is used for the industrial development she is vigorously promoting. The arrival of agricultural commodities is particularly welcome at a time when food and raw material shortages are promoting the inflationary conditions generated by heavy development expenditure.

Once the conception underlying the proposals of which the Re-Finance Corporation is an aspect has been appreciated, however, it is to the practical problems involved that attention must turn. The Government's plan is to set up the Corporation with an ordinary share capital of Rs. 12.5 crores, subscribed initially by the Reserve Bank (Rs. 5 crores), the State Bank (Rs. 2.5 crores), the Life Insurance Corporation (Rs. 2.5 crores) and selected commercial banks (Rs. 2.5 crores). With the Re-Finance Corporation will be placed the U.S. counterpart funds amounting to Rs. 26 crores; these will be given as an interest-bearing loan for a period of 30 years. The Corporation's total resources will thus amount to Rs. 38.5 crores, and this sum will be used to provide re-lending facilities against loans given by the 15 participating banks for increasing production in specified industries. Each bank will be given a quota out of the total of Rs. 38.5 crores, and it can use the Corporation's re-discounting facilities up to the amount of its quota. Loans can be given for periods of three to seven years, and no single borrower will be advanced more than Rs. 50 lakhs. When giving loans, it will also be seen to that no single industrial concern has total resources amounting to more than Rs. 2.5 crores.

The Re-Finance Corporation, it is stated, will not concern itself with the credit-worthiness of the primary borrowers; the full liability in case of default will fall on the bank concerned, and it will be for the latter to assess the standing of the borrower. Although it will thus take no risks, the Corporation will be lucky enough to earn 5 percent on the money it re-lends. The banks, who take the entire risk and who will have to invest in setting up the elaborate organisation required for the venture into medium-term industrial financing, will be entitled to take from primary borrowers a minimum of 1.5 percent above the 5 percent they pay the Corporation. The latter's sole function, it thus seems, will be to hold Rs. 38.5

crores of funds, and to distribute them as medium-term loans in such a way as accords with the purposes of the second five year plan. Even in the choice of these purposes, there may not be much independence or discrimination it can exercise. It is proposed to list the industries for which re-lending facilities will be allowed, and the preliminary list which has been drawn up indicates a strange order of priorities. It does not include coal, which many would regard as the most essential of capital-starved industries in the second plan; and it does not include tea, which is the country's second biggest (sometimes the biggest) earner of foreign exchange. There is a provision that the Corporation's re-discounting facilities will be available only for the purpose of increasing production in the selected industries. Working capital is no less important than the capital required for investment in fixed assets when production has to be increased; it therefore needs to be clarified whether both these types of capital requirements will be within the scope of the Corporation's activities.

*

What precise function the Re-Finance Corporation is intended to serve, lying as it does between the Government which holds the U.S. counterpart funds and the banks which are to make those funds available to industry, is not altogether clear. It is said the intention is that it should direct these funds into the proper channels, by being choosy about the industrial loans it re-discounts. But the fact is that industrial expansion is already strictly controlled in other ways, and the same object can be achieved under existing legislative measures. The inadequacy of these measures has not yet become so obvious as would justify an extra check over the use of the U.S. counterpart funds through the new Re-Finance Corporation. In any case, the check that the Corporation exercises cannot be very strict unless it is prepared itself to examine the credit-worthiness of primary borrowers. There is hardly much reassurance to be got from the fact that a few lakhs of rupees have been advanced to, say, an engineering firm which is doing vital

COMPULSORY DEPOSITS FROM COMPANIES

ALTHOUGH the draft rules obliging companies to deposit a portion of their current profits with the Reserve Bank have been published, misgivings continue about how the system of compulsory deposits, originally announced in the supplementary Budget of November 1956, will affect corporate finances. The principle underlying the system is pernicious, and amounts to a raid on the resources of the private sector for the benefit of the public sector. Since neither accumulated reserves nor current profits represent idle resources held in

work for the second plan, without being certain about how that firm is likely to use those few lakhs of rupees. The Corporation may feel that since the liability for default lies with the lending bank, the bank itself will have made sure that the money will be properly used. But it is open to question how many banks have the technical expertise necessary to examine propositions for medium-term industrial financing; and those banks which have already gone in for such financing on a fair scale, might well have a quite natural inclination at first to re-discount with the Corporation only the less liquid of the industrial loans they have given.

An important aspect of the whole question which does not seem to have been adequately considered so far is how the liquidity of the banks is likely to be affected by the Re-Finance Corporation scheme. At first sight, it might seem that liquidity will increase; more money will be available to the banks under the re-discounting facilities offered, and only part of it is likely to be lent out again. But liquidity is not represented merely by the cash in the till; it also has something to do with the ease with which banks can get back their advances should the need arise. By promoting an expansion in medium-term industrial lending, without assuming any of the risks inherent in such lending, the Corporation's activities are likely to affect the banks' liquidity adversely.

The working of the Re-Finance Corporation will be watched with close interest,

menting the part of the deposit scheme relating to accumulated reserves. But in an age when one must learn to be grateful for small mercies, it is something that no action has been taken—as yet—on this. The second point to notice is the rule relating to exemption from compulsory deposits. The exemption applies to companies in which at least 40 percent of the share capital is held by Central or State Governments; companies incorporated under special Acts of Parliament; banking and insurance concerns; and units engaged in the generation or supply of electricity. The third relaxation—if it can be described as such—is that although the Finance Act empowers the Government to require deposits up to 75 percent of the excess of the "statutory surplus" over Rs. 1 lakh, the proportion has been fixed at 50 percent. This is in accordance with the announcement made by the Finance Minister when introducing the Finance Bill last November, that not more than 50 percent would be required for the time being. Most company managements would consider this rate heavy enough in any case.

These features of the draft rules are more than counterbalanced by some serious defects. For one thing, in view of the importance of the matter and the complexity of the problems raised, the time allowed for study and comment appears inadequate. Even for professional accountants, auditors and income-tax experts, the rules are a bewildering maze, through which they have to thread their way slowly and carefully. The fortnight allowed for public comment has already ended, and if the Government adheres to the deadline fixed in the Gazette notification, no further comments will be considered. That would be unfortunate, for even a lay perusal of the draft rules can indicate some glaring discrepancies and defects.

One example is Draft Rule 2, Sub-Section 8. This relates to the calculation of the "statutory surplus", which is the basis for assessing the deposit which a company will be required to make, the deposit required being 50 percent of the amount by which the statutory surplus exceeds Rs. 1 lakh. This surplus is defined as the sum of the following amounts: (a) the total income of the company for the previous year, as reduced by the amount of income-tax and super-tax payable in respect thereof and by the dividends, if any, declared during the previous year; and (b) the sum of the allowances made under clauses VI, VIa, VIb or VII of Sub-Section 2 of Section 10 of the Indian Income Tax Act, 1922, that is, the various depreciation allowances. The definition appears to be defective in many important aspects. First, the dividend which is to be deducted from the total income of the company is the dividend "declared during the previous year." The dividend declared during a certain year, say 1956, often has not much relevance to the profits earned in that year. It mainly refers, in all probability, to profits earned in an earlier period, say 1955. Now, if the deposit called for relates to current profits in 1956, there seems to be no point in deducting therefrom the dividend relating to the profits of some other period. Common-sense suggests that the clause should refer to "dividends declared in respect of the previous year," just as the income-tax and super-tax, which are also to be deducted from the total income of the company for the previous year, are the income-tax and super-tax "in respect thereof."

But if the clause in question is modified in this way, the rule about the "due date" by which the deposit has to be made becomes even more anomalous than it would otherwise be. "Due date" is defined as 30th June of the year following the "previous year," subject to the qualification that, in the case of a company whose previous year ends after 21st December and before 1st May, the due date will be six months after the end of the previous year. The trouble about this time limit is that it appears to be a little more rigorous than the one in Section 166(c)

of the Companies Act, 1956, which states: "The next annual general meeting of a company (after the first) shall be held by it within nine months after the expiry of the financial year in which the first annual general meeting was held, and thereafter, an annual general meeting shall be held by the company within nine months after the expiry of each financial year." The Companies Act thus allows nine months after the close of the accounting year for a company to hold its annual general meeting at which the audited accounts of the company and the dividend will be passed. The draft rules purport, in effect, to allow a shorter time limit, since they reduce the period to six months by requiring (Rule 19) that "every form shall be submitted in duplicate and shall be accompanied by certified copies of the profit and loss accounts and the balance sheet of the company for the relevant previous year and the year preceding it." Moreover, if the dividend to be deducted from the total income is the dividend "in respect of the previous year," this dividend will be finalised only at the annual general meeting and therefore cannot be known earlier. In practice, there are many cases where companies take full advantage of the nine-month period permitted by the Companies Act, particularly sterling companies.

The other defect in the definition of "statutory surplus" is that it refers to the "total income of the company" for the previous year, less income-tax and super-tax and dividends, plus depreciation. As a result, even if a company had no assessable income in the previous year, due to the carry-forward of losses or to unabsorbed depreciation, it would still be called upon to make a deposit, as long as it earned current profits. To take an imaginary example, a shipping company may have earned a profit of Rs. 14 lakhs in 1956. Depreciation for that year amounted to Rs. 4 lakhs and the unabsorbed depreciation of previous years to Rs. 40 lakhs. The total depreciation of Rs. 44 lakhs, set off against the profit of Rs. 14 lakhs, would leave a loss of Rs. 30 lakhs. No taxes would be paid, and presumably there would be no dividends too out of the previous 1955 result. So total income, for purposes of calculating the deposit, would be minus Rs. 30 lakhs. But the rule requires that the Rs. 44 lakhs of depreciation should be added back, making a positive amount of Rs. 14 lakhs. Deduction of the statutory exemption of Rs. 1 lakh leaves Rs. 13 lakhs, 50 percent of which, that is, Rs. 6½ lakhs, would be the amount of the deposit the company is required to make. This, to put it mildly, would be a little hard on the company.

There are other deficiencies. In defining the "approved purposes" for which exemptions and refund of deposits may be claimed, the rules specify "capital expenditure for the construction, erection or acquisition, by way of replacement or otherwise, of buildings, plant, machinery and other fixed assets required for the purpose of the existing business of the company." The restriction of capital expenditure to "existing business" for approved purposes raises the question of whether expenditure for expansion or for starting new lines of business would be considered an approved purpose. Another approved purpose, according to the rules, is "repayment of moneys borrowed by the company on the security of its fixed assets for the purpose of carrying on such business." There seems to be no adequate reason why this concession should be limited to loans against fixed assets. Loans against the security of stocks and even unsecured loans deserve similar consideration. Claims for exemption from deposits will be submitted to the Commissioner of Income-Tax, who will take a decision within ten days. If he is unable to do so, the matter will be referred to the Board of Referees. The draft rules set no time limit for the Board of Referees to give their decision. In the meantime, the company concerned would have to deposit an arbitrarily fixed amount. Furthermore, there can be no appeal against a decision by the Board of Referees.

It is difficult to make an estimate of the amount of money the system of compulsory deposits will take away from the private sector. But a study of 410 companies in five industries appearing in *Economic Trends*, a publication issued by the Association of Indian Trade and Industry in Bombay, offers a rough indication. The industries studied are iron and steel, cement, paper, sugar and cotton textiles, and the companies included cover 75 percent to 100 percent of the installed capacity in each of these industries. Their total paid-up capital was about Rs. 175 crores, their gross block Rs. 425 crores and their production Rs. 650 crores. The figures relate to 1954-55. The aggregate liability of the 410 companies, on account of both accumulated reserves and current profits, would fluctuate between Rs. 53 crores and Rs. 8 crores, according as the rules made by the Government are strict or liberal. But this sample includes only 410 out of 30,000 companies in India. It is difficult, therefore, to make even a rough guess about the total sum involved in the deposit scheme. The only certainty is that the scheme will severely reduce the financial resources available to the private sector.

CURRENT COIN

Progress of I.C.I.C.I.—Sir Ramaswami Mudaliar, chairman, has given an effective answer to criticisms about the working of the Industrial Credit and Investment Corporation of India in his speech at the recent annual general meeting (reported more fully on another page). The complaint has been made that the Corporation is "too slow and too cautious in its lending policy." "The directors," says Sir Ramaswami in reply, "have had these criticisms very much in mind, and from time to time, have reviewed past activities to see whether these criticisms were justified. They have reached the conclusion that they were not." The aims and objects of the Corporation have been clearly defined, and it is realised that these cannot be achieved by being over-cautious. Certain risks have to be taken in all ventures, but these risks must be carefully calculated, not blindly incurred. Some industrialists have criticised the practice of making a detailed investigation of all aspects of a project before it comes up to the I.C.I.C.I. directors for decision. They think that since they have already examined the matter to their own satisfaction, there is no need for further scrutiny by the Corporation's management, technical advisers, and finally by the board. This is not a correct appreciation of the Corporation's responsibility. Sir Ramaswami says. It is not only the custodian of the shareholders' money, but there is entrusted to it also a substantial amount as a loan from the Government which has to be repaid in due course. There has been some criticism recently that the Corporation has failed to utilise the line of credit of \$10 million granted by the World Bank, which is willing to grant further credit when the present loan is exhausted. But here again Sir Ramaswami's reply is that until the Government took drastic measures to cut foreign exchange expenditure, the board had no applications before it from industrial promoters for foreign exchange. The situation has now changed, and a number of enquiries for loans in foreign currency have been sent to the Corporation; it expects to present some of the proposals to the World Bank in coming months. Stressing that the future of the Corporation is linked closely with the future of private industry, Sir Ramaswami says that the growing load of taxation, which might be increased further by coming Budgets, has had a dampening effect on private enterprise. The authorities seem to be realising that their taxation policy has seriously reduced capital resources. The change in the Government's policy towards foreign capital has been welcome.

Expansion Plans of Dunlop Rubber.—Discussing the expansion programmes of the Dunlop Rubber Co. (India) Ltd., Mr. John Luckham, chairman, has reminded shareholders that the Government has approved the establishment of another tyre factory in Madras (a fuller version of the speech is given in a later page). "A substantial amount of additional capital will be required to finance this new project and as soon as our plans have been finalised you will be advised of the board's proposals. An issue of further share capital will form the basis of these plans." The company has been expanding its Sahaganj factory and the programme will be continued for the next two years at least. The introduction of the new Dunlop roadster giant tyre has proved successful. The company retains its leading position in car tyre manufacture, and is preparing to meet the demand for scooter tyres. Production continues to lag behind the demand for cycle tyres and rims, so imports have been increased. Industrial development has increased the off-take of conveyor belting. The demand for Dunlopillo latex foam cushioning "remains ahead of production." Work on chemical plant lining has made considerable progress; the company has made sufficient orders in hand and they justify its decision to undertake this work. Referring to the year's trading, Mr. Luckham says that the factory has worked to full capacity and new output records have been achieved. Total sales were 12½ percent higher in value than in 1955, but due to the lower level of selling prices, the ratio of profit to turnover declined from 3.6 percent to 3.2 percent after taxation. "This exceedingly modest profit percentage provides, I think, a good measure of our service to the community."

New Uses for Aluminium.—The use of aluminium is rapidly increasing. The metal is being utilised for the panelling of railway coaches and the building of bus bodies, as well as in the electrical, building, construction, canning and packaging industries. Mr. K. C. Mahindra, in his address at the annual general meeting of the Indian Aluminium Co. Ltd. (which is reported more fully on a later page), has pointed out that although the aluminium industry will continue to be a substantial consumer of aluminium, "the possibilities of expanding consumption in this industry appear small." The company has made efforts to diversify its production and to cater to the needs of various industries for technically more advanced aluminium products.

Mr. Mahindra refers with satisfaction to the success of the recent capital issue. Aluminium Ltd. of Canada has subscribed to one-half of the issue, and the subscription has special significance in view of the acute scarcity of foreign exchange. "The new dollar investment by Aluminium Ltd. and the loan of \$1 million it is further proposed to obtain from the company's principal shareholder, are of vital significance to the company in obtaining imports of capital equipment essential to the execution of its expansion programme." The Canadian group has generously extended assistance since the Government expressed its inability to provide the remaining foreign exchange required for completing the Hiraakud scheme. Through this collaboration, Indian Aluminium has also received the benefit of the accumulated experience of one of the largest companies of the world engaged in the industry. The foreign company is helping in the training of Indian personnel, by providing facilities for them in its establishments in Canada and Europe.

Manganese Ore Exports.—World demand for manganese ore of all varieties remains satisfactory, and prices have been improving steadily. But there is a danger that India might lose the opportunities offered by the market because of the export policy now followed by the Government. Mr. A. N. Haksar's presidential speech at the ordinary general meeting of the Shivrampur Syndicate Ltd. indicates how this might happen (a fuller version of the speech appears on a later page). "State trading," Mr. Haksar says, "has introduced a dislocation or partial disruption of the old trade channels at a time when the export duty on manganese ore, together with the higher freight rates for shipping caused by the closure of the Suez Canal, have substantially increased overall costs to the consuming countries." The risk of overseas buyers turning away from India to new sources of supply is now real. Judging from the trend of developments abroad, Mr. Haksar is inclined to conclude that efforts in that direction are already being made. The Bethlehem Steel Company in the U.S.A. it is reported, has completed arrangements after five years of development and exploration to extract 600,000 tons of manganese ore annually from a new mine in Brazil. Of this quantity, about 200,000 tons will be offered for consumption by American industry, and the rest will go into the stockpile. A U.S. company is also about to undertake the mining of the world's largest manganese ore deposits in north Chile. In the U.K., Russian and South African competition is increasing. Ghana is likely to emerge as a formidable competitor. A commercial publication reports that Canada has evolved a new method by which low-grade ores can be processed for producing ferro-manganese and iron ingots. In view of these developments, India's efforts to increase her exports seem inadequate. Mr. Haksar says that Shivrampur Syndicate has not been able to make forward sales for 1958 and 1959, as the advent of State trading in ore makes this impossible. The Government proposes to canalise the export of manganese ore "in a progressively increasing measure through the State Trading Corporation and only limited opportunities will be allowed to mining and trading interests...for direct participation in the export trade, within the limits of the broad policy announced by the Government of India from time to time."

Textile Demand Prospects.—In his speech from the chair, Mr. R. E. Castell has told the shareholders of the Bangalore Woollen, Cotton and Silk Mills Co. Ltd. that the "apparent adequacy" of supplies gives a misleading picture of the textile situation. "Within a year or two there is more likely to be a shortage." It is true that in 1956 "the Indian textile industry as a whole experienced an accumulation of stocks, and these conditions during the year is largely responsible for this. The Bangalore Mills have not had to carry a big stock of cotton textiles as the company has reduced its prices for cotton cloth in spite of the excise duty increase. "It seems strange that the supply of cloth should be more than enough," according to Mr. Castell, "when only 16 yards of cloth are available per capita for internal consumption." It may reasonably be expected that demand will rise "towards the official estimate of 18½ yards per capita" by the end of the second five year plan. Even this estimate of per capita consumption in 1961 may prove to be on the low side.

New Headaches for Importers.—Importers have been badly hit by the restrictions imposed in the import policy for the current January-June licensing period—restrictions which cover even important items such as heavy machinery and spares. The reluctance of the Government to allow essential imports of heavy machinery might affect industrial development. Restrictions on the import of spare parts have made the position particularly difficult, as old machinery cannot be properly serviced either. Mr. L. R. Patel, in his address at the annual general meeting of the Calcutta Import Trade Association last week, has

criticised the drastic restrictions on importing types of machinery which are manufactured in India. He says that "the policy is neither realistic nor related to the simple theory of demand and supply. This policy is, therefore, defeating its own object inasmuch as, in its eagerness to protect the established indigenous manufacturer, it is suffocating the further development of the country in every other field, by creating a shortage of essential items of machinery." Supplies of diesel engines and electric motors—of from 3 to 30 h.p.—are limited. The Association has asked that *ad hoc* licences be given for electric motors, but they remain on the banned list although the Chief Controller of Imports and Exports promised earlier that something would be done. Stone crushers of up to 16in. by 19in. jaw size are still on the list of prohibited machinery "in spite of the several representations made during the previous periods." Imports of essential components, such as pistons, piston rings and cylinder lines less than six inches in diameter, are restricted. Mr. Patel complains against the inordinate delay in finalising quotas, and against the frequent changes and sub-divisions of the existing serial numbers of the import trade control schedule. The delay creates an artificial shortage of materials, for importers have to go without any licences, there being no specific provision for issuing interim licences. Importers also have to face difficulties during the appraisal of goods, for appraisers try to obtain the maximum by applying a tariff schedule with a higher rate of duty. The port authorities have introduced a new system of realising wharf rent to expedite the clearance of goods; this is causing hardship. A serious problem arises in the recovery of outstandings from the Directorate-General of Supplies and Disposals. "Very large sums of money are outstanding and the trade is not only suffering interest losses, but is unable to fulfil all its obligations because of the blockage of capital," Mr. Patel says.

Little Light from Lamps.—Much of Mr. H. Sinha's presidential speech at the recent annual general meeting of the Indian Lamp Factories Association was devoted to discussing the factors which he thinks have retarded the development of the industry. The claim is made that lamps produced by different units satisfy the required specifications and prices also are normally uniform, but there is a "lack of balance" among the operating units. It has been difficult to appreciate what precisely Mr. Sinha means by "lack of balance." If by this he implies that some units are getting too big a share of the market while others are getting too small a share, there cannot be anything very surprising about it for this is true of most industries. The differences in rates of growth may be merely a reflection of the comparative efficiency of individual units. Mr. Sinha complains that cut-throat competition prevails in the market. But from the consumer's point of view, nothing could be better. He states that lamps produced in India but marked with foreign brands have a special appeal to consumers, regardless of their price and quality. "Such a prejudice which has, in actual practice, divided the products of the industry into two categories, viz., more popular and less popular brands, is, needless to emphasise, a very undesirable feature of the industry, inasmuch as it is primarily because of this fact that the factories producing less popular brands of products have not been able to increase their production to a level they should have attained." It is hard to agree with Mr. Sinha; one would have thought that it is for the manufacturers themselves to remove consumer prejudices by selling more vigorously and being fully competitive in terms of quality and prices. The Government has sanctioned an increase in the production capacity of six units; but licences for the import of machinery have not yet been issued due to the shortage of foreign exchange. The industry will find it difficult to cater to the increased demand if the factories are unable to expand or replace their over-aged equipment. In spite of the shortage of foreign exchange, the industry has to import materials, such as glass rods and tubes, brass caps, lead-in wires, electrodes, tungsten wire, molybdenum wire, capping cement and gases. It is, therefore, necessary that manufacturers and the Government should give serious thought to attaining self-sufficiency in raw materials. Mr. Sinha thinks that the restrictions imposed on lamp imports during the current licensing period are a step in the right direction, since they are likely to help the development of the industry; but he feels that there is scope for tightening the restrictions further.

Attracting Foreign Investment.—India's eagerness to secure foreign capital for industrial development is growing rapidly, although it seems that too little positive, concrete effort is being made to attract it. Foreign investors have done much in recent times for the economic development of the United States, Canada, South Africa, Australia and Japan, because these countries have created the conditions which have encouraged their interest. COAL POLICY IN INDIA

By
Andrew Farquhar

This booklet consists of reprints of articles written by Mr. Andrew Farquhar, former Coal Adviser to the Tata Iron and Steel Co. Ltd., which have appeared in Capital in recent years. As expert analyses of India's coal problems and policies they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

merce last week, Mr. K. P. Goenka said that it would be necessary to create more favourable conditions to bring investment here so that the implementation of the second five year plan becomes easier. If foreign investors find that conditions in this country are not attractive enough, they will naturally be inclined to divert their resources to countries where conditions are more favourable. A considerable amount of foreign capital has already been invested in the less developed countries of Europe, South America and Africa. An important reason why foreign investors are reluctant to put their resources in India is that they are anxious about the Government's policy on nationalisation of industries. They also feel that compensation should not be fixed arbitrarily under an act of the legislature alone, but that it should be justifiable. Furthermore, there is the problem of double taxation. "The Government is aware of the difficulties which the foreign investor feels in this country due to double taxation. The sooner a way is found to give relief to foreign capital the better it would be," according to Mr. Goenka. Like many other underdeveloped countries, India is experiencing serious difficulties in obtaining foreign technicians. Many of them do not find it worth while coming to this country as the level of taxation compares unfavourably with that prevailing in some of the industrially advanced countries. As Mr. Goenka suggests, it would help if foreign technicians are given tax relief for at least five years.

Dull Days for Presshouses.—The hydraulic press industry has for some time been operating under unfavourable economic conditions. As the supply of raw jute going to it has decreased, baling activity has dwindled. Mr. M. S. Chunder, chairman, estimated at the recent annual general meeting of the Calcutta Hydraulic Press Association, that during the first nine months of the current season, the total quantity of jute handled for baling fell to 90,000 tons, from 140,000 tons in the same period of the previous season. The downward trend in business has caused many presshouses to close. The West Bengal Government some time ago appointed a special officer to investigate and report on "the possible ways of utilising the unoccupied press-house godowns and the idle plant and machinery." The report was received by the industry last January. But, according to Mr. Chunder, "we were most

disappointed to find, after waiting for so long, that it was of no practical value whatever to us." He then discussed the industry's difficulties with Mr. Manubhai M. Shah, Union Minister for Heavy Industries. Mr. Shah was sympathetic and asked the industry to send a deputation to New Delhi for negotiating assistance under the Government's programme for aid to small industries. During the talks the Minister suggested that the Association seriously consider running one or a few small industries. The capital required could be obtained from its reserves and also from subscriptions made by its members. The profits would be distributed among those members. By embarking on such a scheme, which constitutes "a radical departure from normal policy", it is thought that the industry can keep itself going during the second plan. According to Mr. Chunder, there is reasonable hope that in this interval "the production of jute in India will increase to the extent that it will be in excess of the mills' requirements." The Government might then be in a position to consider the desirability of resuming exports of baled jute from India. But, at the moment, the prospect of India being able to export jute is a distant one. It is to be hoped that this is not a matter on which the baling houses will try to hurry the Government.

Foundry Advisers Seek Business.—One of the biggest problems facing industrial development in Asia is that of producing good castings, for foundry facilities are few and far between. That explains the all-out drive conducted in India, Hongkong, Japan and Australia by Mr. R. A. Miller, Sales Director of Foundry Services Ltd., an international organisation manufacturing chemical compounds which help foundry men to produce better castings, which has its head office in Birmingham. The company was founded by two Bavarians, Mr. Eric Weiss and Dr. K. Strauss, who started work in a room over a tailor's shop in Birmingham 25 years ago. In the last ten years, associate companies have been formed in Austria, Canada, France, Western Germany, Italy, South Africa and the United States, and one will shortly be formed in Switzerland. The company has been granted a concession to manufacture in Japan. F.O.S.E.C.O., as the organisation calls itself, produces a standard range of more than 200

chemical preparations for the foundry. It provides a service which diagnoses defects in castings (last year the laboratories in Birmingham advised on 2,500 samples). A team of technical representatives is maintained, making inspection visits to foundries in Britain and abroad; and technical literature is produced in simple language with the object of educating the foundry worker.

Advertising British Cotton Goods.—Authority is being sought to increase by £75,000 the maximum sum which the U.K. Cotton Board may raise each year by its levy from the industry to enable it to extend its activities in sales promotion for cotton goods. It was only after much discussion and careful consideration of the many aspects of the problem that it was decided to undertake the sales promotion campaign which the Cotton Board started last year. It was appreciated that if any lasting benefit was to be derived, the campaign would have to be both persistent and expensive. Nobody doubted that there would be much expense, and it will be remembered that the trade unions in the industry, which pay no levy to the Board, showed their enthusiasm for the project and their appreciation that it would cost a great deal of money by providing £10,000 for the purpose of their own funds. Operations over a period of three years are contemplated and, although only the first phase has so far been carried out, its manifestations must have reached a very large proportion of at any rate the women among the customers of whose interest it was hoped to arouse. The bulk of the expenditure so far seems to have gone on exhibitions and displays of one sort or another, which have attracted wide interest in the Press, and, in consequence, been surprisingly well attended by the public. But other media have not been ignored, and many attractive showcards and similar material have been supplied to retailers in order to stimulate demand at the actual point of sale and encourage support from the retailers. The additional funds will enable the organisers to make the most of the experience they have already gained to carry the campaign further and to increase its effectiveness.

Appraising Equity Shares.—Mr. E. F. J. Plumridge, Investment Controller of Pearl Assurance, is well known in the City of London as a shrewd judge of security values. His sagacity and experience were reflected in a recent address to the London and District Society of Chartered Accountants on "Thoughts on Investing," and some of his more general observations are worthy of an even wider public. Much of his talk deals with the implications of inflation, and he appears as a strong supporter of the virtues of equity shares. Investing in these, however, is not without its pitfalls. For one thing, politics can take the profit out of equity shares overnight, although some degree of re-insurance can be obtained by geographical spread. Mr. Plumridge stresses the key importance of management in assessing the relative merits of equity investments. The successful of "small" points out, must acquire an acute sense of Mr. Plumridge has much else to say that is illuminating on other aspects of equity investment, such as assets backing, the need for flexibility of mind and for good timing of purchases and sales. He regards "rights" issues as often affording suitable buying opportunities.

SERVICE AFTER RETIREMENT

TIME was when Civilian entered the Service, and, having reached the maximum appointment they could reasonably expect to attain to, retired on their pension and their savings, but now *non aons change tout cela*, and instead of now retiring at the end of their services, we see many Civilian trying to obtain appointments under Native States and Rajas. We consider that it is extremely undesirable that any Civilian should be allowed to take service after his retirement in any zemindary or Native State with which he has had in any way to deal when he was active service; for this reason we cannot say that we altogether viewed with favour Mr. D. R. Lyall's transfer from the Board of Revenue to the Cooch Behar. We now see it stated that a Hon'ble Mr. C. C. Stevens, on his retirement at the year hence, will become the Manager of the year hence, the appointment being kept warm for him meanwhile. We have heard it stated that should the Lieutenant-General be compelled to take leave, Mr. Stevens will act for him during his absence, and it strikes us that the transfer from Belvedere to Hutwah is not altogether a thing to be desired or admired. If this kind of thing is to go on, we shall, we presume, some day see an announcement that at the termination of the period of office of His Excellency the Viceroy, he will be appointed manager of the Durbunga Raj; that the Lieutenant-Governor is arranging to become Private Secretary to Sir Jotendro Mohan Tagore that the Chief Justice will take up the portfolio of legal affairs at Hyderabad; and that the Finance Minister is arranging to take over the cash department at Whiteaway stores. We really think that some member of the Parliament should ask a question in "the House" regarding this.

A DITCHER'S DIARY

Service is at the moment running a series of *Portraits of Power*, the four subjects of which are Hitler, Gandhi, Roosevelt and Stalin. Each of these men practised a different kind of technique for exerting power over the mass of his countrymen, and of the four, only Mahatma Gandhi brought any really new ideas to the practice of politics and the use of power. Hitler and Stalin relied on brute force to acquire and retain power. Roosevelt, manipulated with consummate skill (and sometimes none too scrupulously) the immensely complicated American party machine and cast a spell over the common people which no other modern President could equal. Gandhi understood the party machine well enough and, when necessary, could play politics with the most accomplished performer. But the power derived from elsewhere and this, says my correspondent, was admirably brought out in the programme of the television series which was devoted to Mahatma Gandhi. Nonetheless, my correspondent considers that the Gandhi programme was in some important respects technically inferior to the others, because many of the Mahatma's activities of twenty years ago were neither filmed nor recorded and this type of television feature relies heavily upon pictures from the past. Not even the televised reminiscences of Mrs. Pandit, Lord Mountbatten or Mr. H. S. L. Polak could apparently make good this deficiency.

A few weeks ago, a leading Indian industrialist was reported as having said that there is hardly any industry in India at present run by the State which private enterprise could have run as easily. The statement—which, I must confess, I have been able to find in only one newspaper so far, but the authorship of which I have not seen denied—struck me as particularly strange, coming as it did from one who had not so long ago lost an airline and a few odd insurance companies to the Government by the cool magic of nationalisation (apart from having had a promising steel plant project scotched on similar grounds). I was reminded of it last week while reading Mr. A. D. Shroff's address at the first convention of the Forum of Free Enterprise, in which he speaks of business men generally having been "seized with a fear complex" as the Government has come to exercise more and more control over the economy. I do not share Mr. Shroff's exaggerated cynicism, although I am well prepared to believe that some business men at least have become chary of criticising the Government because they fear retaliation when circumstances compel them to seek official sanction and patronage. Personally, I am one who believes that criticism of the Government—not by business interests alone but by others, too, whatever their ideological complexion—must at all times be vigorous, honest and courteous. Experience shows that most criticism is likely to be unpalatable to the victim concerned, but to be persuasive, the least that is necessary is that it be sincere. This is hardly the quality most noticeable in the know-towing to officialdom implicit in the industrialist's statement I mention above. On the other hand, much of the attention the Forum of Free Enterprise has attracted to itself—a good deal of it unfavourable, I admit—owes to the vigour and sincerity with which its affairs have been conducted. It may be an indirect, although not wholly welcome, compliment to the Forum that even when persons of Mr. Nehru's eminence wish to criticise it, they have to resort to such misinterpretations as that it seeks a return to the anachronisms of

nineteenth-century *laissez-faire*. This is one of the things it firmly denied the day it was born.

Nobody who has experience of the depressing studios at 1, Garstin Place, which house was once believed to be haunted, will grudge the Calcutta station of All India Radio its proud new building in the Eden Gardens, to be completed in 1958. Fifty lakhs of rupees may seem a lot of money, but there will be as many as five storeys on no less than 1.5 acres of land. The report that there will be 35,000 square feet of office accommodation will confirm the view of some critics that there is a trifle too much administration in All India Radio and not enough creative thinking. The rôle of the administrator is important; broadcasting is too serious and expensive a thing to be left solely to long-haired boys bursting with new ideas on the arts of music and speech. But broadcasting at its best does require something akin to creative thinking. It is not a compliment to All India Radio that it cannot claim to have built up a single broadcasting personality, that it has always sponged on talent discovered elsewhere. Perhaps the bureaucracy, which dominates the organisation, is afraid of creating monsters like Gilbert Harding and others who may then demand (a) control of the organisation, and/or (b) much higher fees than A.I.R. is prepared to spend on programmes. Whatever the reasons, it seems undeniable that pervasive bureaucracy has prevented broadcasting from being the powerful instrument it might have been; Dr. Keskar is only a latter-day stifle. Mr. Nehru once toyed with the idea of an independent corporation on the lines of the B. B. C.; there is no evidence that the idea has made much progress—or will do so in the foreseeable future. A.I.R., Calcutta, I find, is going to have an auditorium to hold 500 people. Might it not be more economical to use recorded laughter and applause, on which so many American comedians depend?

Hopes that the improvement in London traffic conditions, which was so noticeable a feature of the restrictions on motoring imposed after the closing of the Suez Canal, would continue have already been dispelled with the easing of the fuel shortage. The removal of the restrictive and temporary addition of one shilling a gallon to the duty will no doubt complete the process. This will be most regrettable, for the 1954 survey of travel in London carried out by the London Transport Executive shows that real responsibility for the acute parking and traffic-jam problems rests with a small minority of private motorists. That is certainly what the figures imply, even though they may have altered to some extent between the carrying out of the survey and the time petrol rationing began. It is rather surprising to find that only 3 percent of workers in the central area regularly come in by motor-car, that twice as many use motor-cycles, bicycles or just foot-slog, and that 91 percent use public transport. Nearly 17,500 people were questioned for the survey, the most extensive of its kind, with the object of securing comprehensive information about travel into and out of the central area, and directions and variations in traffic flow. One London household in six reported that it ran a motor-car, which was used more for pleasure than for work. There were "high concentrations" of people starting and finishing work at the clock hour or half hour, "emphasising both the need and the scope for staggering of working hours." Whether Mr. Watkinson's new transport legislation, which has no doubt been drawn up with the results of this survey in mind, will provide the solution to the problem, remains to be seen.

You will of course realise that your Board of Directors are not only the custodians of the shareholders' funds but have also entrusted to them a substantial amount by way of loan from Government which has to be repaid in due course. The aims and objects of your Company have been clearly defined and it is realised that these cannot be achieved by being over-cautious. Certain risks have necessarily to be taken in all such ventures but these risks must

Head Office: **Oriental Buildings, BOMBAY-1.**

I would like to thank the officers and strenuous efforts of the Comptroller who have done hard and honest work during the year under review. The nature and extent of that work is not reflected by the number of applications which the Board has ultimately sanctioned, but by the number of applications received and examined. In respect of many of these constant advice has been sought and freely given; several are under going further scrutiny before final tribute be made to the Board. I would like to pay special tribute to the General Manager and the Deputy General Manager who have both devoted themselves with great conscientiousness to the onerous duties that they have to discharge.

Whatever endeavours we make, whether it be in the field of sales development or production operations or labour relations, the success of our effort is influenced considerably by the actions of the Government. The State today not only operates the Railways, on which we must depend for transportation of our raw materials and finished products, but it also owns an increasing number of manufacturing industries, to whom we must sell our products. It

India is at the crossroads of destiny after a decade of political freedom. The pace and the velocity of the changes are quickened. There is a revolution in the air of rise and fall of expectations if we are to survive as a nation of decent and dignified human beings. It ill befits the experience and the wisdom of the business groups to indulge in cheap and vulgar comparing polemics about the Plan or diminish the high hopes and endeavour required for democratically reaching the objectives of a progressive and a happier social order. Foreign observers have pointed out that "Indian business carries on its shoulders a deep sense of social responsibility and a strong feeling of social duty. It is not a Government doing exactly what it is told, but it is a business community exhibiting a posture of dialectical defiance under the convenient label of free enterprise. Surely, there is a middle line both for business people and for the Government planners; there is enough acumen and independence to find it."

In conclusion I should like to express on your behalf and mine, our appreciation of the services rendered by the staff and the workers of the Company in making possible the achievements of the past year and giving promise of better results for the future.

THE BANGALORE WOOLLEN, COTTON & SILK MILLS CO., LTD.

CHAIRMAN MR. R. E. CASTELL'S REVIEW

Presiding at the Seventy-fourth Annual General Meeting of the Shareholders held at the Registered Office of the Company, Agharam Road, Bangalore City, on Saturday, 27th April, 1957, Mr. R. E. Castell said:

Gentlemen,

The Directors' Report and Accounts for the year ended 31st December, 1956 having been with you for

the requisite time, I propose with your permission to take them as read, but after my speech I shall be glad to attend to any questions members may wish to ask.

The delay in publishing the accounts and the holding of the Annual Meeting is regretted. It is due to complications arising from the introduction of the new Companies Act and because of the additional notice to shareholders which it is now necessary to give.

As you will see from the accounts, your Company has concluded another successful trading year, the results of which have been assisted by the continuing programme of rehabilitation and replacement of machinery and the further improvement of processing methods. In spite of all that has already been accomplished, we still have a long way to go before we can complete our plans for modernisation and for this purpose more machinery and components are required, some of which must of necessity be imported, and we trust that our further progress in this direction will not be retarded by the present stringency in import licensing arising from the shortage of foreign exchange.

As you know, your Company manufactures an unusually wide range of textile fabrics, including cotton, woollen, union and silk goods, and to maintain our reputation for quality and variety, it is impossible to rely wholly on equipment and materials made in India. Apart from the matter of machinery, therefore, your Directors are perturbed by the prospect of severe cuts in imports of those dyes and other essential stores which can only be obtained abroad.

Last year, the Indian textile industry as a whole experienced an accumulation of stocks, and these conditions still obtain. I think it must be accepted that the heavy increases in excise duties during 1956 were largely responsible for the decline in off-take. Traders have developed the habit of buying cautiously partly because of the general impression that the last increases in excise duties on 1st September, 1956 were a temporary measure, and also because of the uncertainty about Government's intentions for replacing existing sales taxes on cotton textiles of excise duties. The consumer is also being cautious or may be he is spending more of his money otherwise.

Accumulation of Stocks

There was no serious accumulation of stocks in your Mills during the year, but it was found necessary to reduce prices for cotton cloth in order to keep goods moving despite the increases in excise duties already mentioned. It seems strange that the supply of cloth should be more than enough when only 16 yards of mill and handloom cloth is presently available for internal consumption and one could reasonably expect demand to be rising towards the official estimate of 183 yards as at the end of the Second Five Year Plan, an estimate which many of us consider to be too low.

I do not think, however, that we should be misled by the present apparent adequacy of supply as within a year or so there is more likely to be a shortage. I hope, therefore, that Government will proceed with their plans announced last year for the expansion of the textile industry. For the most part these plans depend on expansion by the handloom industry assisted by Spinning Mills and Ambar Charkas and on conversion of handlooms to powerlooms. The expansion of composite mills has in fact been linked to the export trade.

The conditions laid down by Government for the installation of additional automatic looms were difficult in several respects, particularly in their insistence that all the production of the new looms be exported, as well as almost all the production previously exported. However, after carefully considering every aspect of the matter, your Directors decided that the Company should not miss the opportunity to expand their existing installation. We have, therefore, accepted an allocation of 96 new automatic looms, of which we have agreed to buy 24 from Indian manufacturers. We are waiting for Government to announce their policy regarding the other looms which we need to buy abroad.

In spite of intense competition in overseas markets, the Company's export sales of cloth in 1956 were considerably more than in the previous year, and we shall continue to exert ourselves to secure foreign exchange for India by further developing our export trade.

Woollen Section

It is pleasing to record that after several years of losses, the Company's woollen section made a modest profit in 1956. This change of fortune was the result of sustained efforts by our technical, administrative and sales staff to increase production and to introduce new qualities and designs. Every further effort will be made to ensure that the woollen section continues to pay its way, but a fair reward is unlikely to come to us or any other unit of the Indian woollen industry so long as the present heavy excise duties and cesses apply to woollen goods. Also, for some time now we have had to pay higher prices for wool, both indigenous and imported.

The year brought a further increase in production and sales of our popular Union fabric "Cotswol" and of the heavier cloth "Angola" which although mainly supplied to the Armed Forces is also in general demand.

Production and sales in the Company's silk section exceeded all previous records, but we now face a new problem in that we specialise in the manufacture of superior quality silk sarees and other fabrics, and although we use considerable quantities of raw

silk produced in Mysore State, we must rely on importing a proportion of our requirements of flature silk and most of our needs of spun silk to maintain our reputation for the quality of our silk fabrics until such time as the indigenous materials are further improved. Unfortunately supplies of the imported materials have lately been severely cut and unless we can find some remedy for this, our production and trade in silk fabrics is likely to be seriously disturbed.

The imposition of a heavy octroi duty on raw materials and other essential items entering the City limits, announced by the Bangalore Corporation in 1954 is still a matter serious in its implications. The Company lost its case in the Mysore High Court, but has decided to appeal to the Supreme Court, for if this duty prevails, the local industry will be handicapped by an increase in costs which will not affect other manufacturing centres.

Towards the end of 1956, the Company was asked to reduce consumption of Corporation water supply by 40 per cent. So heavy a reduction would have seriously disturbed the Company's manufacturing activities, but fortunately the Authorities later agreed to reduce the cut to about 20 per cent. Within this limit we have so far managed to avoid any serious dislocation of our output, but although we shall continue to do everything we can to offset the reduced water-supply by economies in consumption and use of bore well water, we hope that the former full supply of Corporation water will be restored shortly.

Good Relations with Labour

Although during the year we were involved in long discussions and negotiations with the Labour Association on a number of issues, I am glad to say that there were no stoppages of work causing loss of production.

Your Directors have set aside Rs. 3 lacs to cover the estimated cost of Workpeople's housing during 1957, including the electrification of all the houses in Binnyset Village.

The published accounts, particularly the Profit and Loss Account, have this year been shown in much greater detail and I think give you all the information you require regarding the financial position and the trading results of the Company.

Although there was a slight reduction in the profits of the Cotton Section, satisfactory trading in all other sections was responsible for the improvement in the profits when compared with the previous year.

You will observe from the comparative figures given in the Directors' Report that the allocations for Depreciation, Bonus, Officers Retiring Fund and Dividend remain approximately the same, but that it has been necessary to increase the Provision for Taxation by Rs. 9½ lacs in order to cover the liability on the higher profits and also that arising from the additional burdens placed on companies by the Finance Acts of 1956.

In this regard I refer to the incidence of the increased Dividend Tax which is particularly severe on Companies where the ordinary capital represents a relatively small proportion of the total capital. In the case of your Company, for example, the ordinary dividend represents a moderate distribution of profits of slightly over 4% on the ordinary capital plus the reserves and it seems to me inequitable that we should be called upon to pay the excess Dividend Tax. However, merely because this tax is assessed arbitrarily on the rate of dividend on the ordinary capital, we are liable to an additional tax of Rs. 2,83,500.

Deposit of Company Reserves

Your Directors view with grave concern the implications of the provisions relating to the compulsory deposit with the Central Government of certain proportions of accumulated and current reserves. This Company, which has consistently followed the conservative financial policy of a reasonable allocation of profits between dividends and reserves is all the more adversely affected by this recent legislation and I can only hope that the draft rules, which have recently been published for general input that those finally make it clear beyond all doubt that those Companies where the reserves are being fully used for the purposes of the business will be exempt from making such deposits.

At an Extraordinary General Meeting of the Company held on the 29th March, 1957 the necessary resolutions authorising the capitalisation of Rs. 81 lacs from reserves and the issue to shareholders of two ordinary shares for each ordinary share held by them on that date were unanimously passed and the new share certificates are now being prepared and will shortly be issued to shareholders.

You have already received notice of an Extraordinary General Meeting which is to be held later this morning for the purpose of passing certain resolutions regarding the re-appointment of Binny & Co. (Madras) Ltd. as Managing Agents of the Company for a period of 10 years with effect from 1st January, 1957. The results of their management over a long period of years are well known to you. I am happy to inform you that the Central Government have approved of their re-appointment and your Directors recommend these resolutions for your approval.

The Workpeople's and Employees' Provident Funds do not appear in the published accounts of the Company as they are vested in Trustees. The liabilities of these Funds as at 31st December, 1956 amounted to Rs. 64,12,070/- and Rs. 4,58,264/- respectively and corresponding amounts are invested in Trustee Securities.

I feel you will wish to join me once again in expressing appreciation of the valuable work done by the executive and supervisory staff of the Management and the Mills.

I deeply regret the untimely death last year of two former Directors of the Company, Mr. B. W. Batchelor, C.B.E. and Mr. D. V. Bullock, who worked in Bangalore for several years and whose endeavours over a long period contributed much to the present efficiency and prosperity of these mills.

Note:—This document does not purport to be a report of the proceedings of the General Meeting.

THE DUNLOP RUBBER CO. (INDIA) LTD.

MR. JOHN LUCKHAM'S REVIEW

The 31st Annual General Meeting of The Dunlop Rubber Co. (India) Ltd. was held in Calcutta on the 29th April, 1957. Mr. John Luckham, Managing Director, said:

The Directors' Report and Accounts for the year 1956 have been in your hands for some time and with your permission I will take them as read.

I should like to preface my remarks this year by referring to changes in your Board of Directors. Mr. Cecil Stack, who had been a Director of the Company since 1942 and Managing Director for the last six years, resigned at the end of last month. During the last year Mr. Stack had been in indifferent health and since he had served for 33 years in this country he decided to accept an appointment offered to him by the Dunlop Rubber Co. Ltd. in London. It was with great regret that the Board accepted his decision and I am sure you will wish to join me in expressing our appreciation of Mr. Stack's long and valuable services.

You will have seen from the notice convening the meeting that it is proposed to appoint Sardar H. S. Malik to the Board. Sardar Malik, as I am sure you are all aware, has recently retired from a long and distinguished career in the service of the Government of India and latterly as Indian Ambassador to France. I am confident that Sardar Malik's wise counsel and great knowledge of affairs will be of the utmost assistance to your Board and I commend this appointment for your approval.

The Year's Trading

The factory was working to full capacity throughout the year and new records of output were achieved. Nevertheless, we were unable to meet the demand for all of our products and a shortage of Giant and Cycle Tyres and Cycle Rims necessitated the Government granting import licences for these products to alleviate the situation. We have plans for increasing our production and I will deal with these later on in this review.

Once again distribution of the Company's products was adversely affected due to the shortage of railway wagons. Many pleas have been made from both the public and private sectors for serious action to be taken to improve the situation, and it is to be hoped that this important problem will receive the attention it deserves.

Total sales in value were 121% higher than in 1955, but with the lower level of selling prices prevailing throughout 1956, the ratio of profit to turnover declined from 3.6% to 3.2% after taxation. This exceedingly modest profit percentage provides, I think, a good measure of our service to the community.

Products

We have continued to receive the full benefits of the Dunlop worldwide research activities and many improvements have been put into effect during the year.

Last year my predecessor announced the introduction of the new Dunlop Roadster Giant Tyre, and it is with great pleasure that I am able to tell you that this has been extremely successful and has proved ideal for most conditions. This new tyre, combined with the ever popular Dunlop Trakmaster Giant Tyre, provides users with an ideal selection to choose from to cover the different types of service conditions which are found in this country.

Car Tyre performance continues to be excellent and we have retained our premier position in the market.

I must make mention here of the very rapid growth in the development of the Scooter and to say that your Company have prepared themselves to meet the demand for the special type of tyre required.

The Bicycle Industry continues to develop very rapidly and so far we have been unable to keep pace with the demand for our Cycle Tyres and Rims, and, as already stated, imports were necessary to help fill the gap.

Substantial increases in sales were also achieved in our Industrial Rubber Products range. The second Five Year Plan has already increased the demand for Conveyor Belting and we are taking steps to ensure that we can play our part in meeting this. Further great strides were made in Dunlop's Latex Foam Cushioning and demand remains ahead of production.

Our work in chemical plant lining made considerable progress during 1956, and we now have orders in hand which fully justify our decision to undertake this work.

New Factory

I am happy to be able to tell you that in addition to the expansion which has taken place and will continue at least for the next two years at your Sahaganj factory, the Company has obtained Government approval for the establishment of another tyre factory in Madras. The Chairman stated at this time full part in meeting the very considerable increase in India's Second Five Year Plan. The new factory in South India will, it is hoped, give us sufficient overall capacity to meet the demands for our products for some time to come. A substantial amount of additional capital will be required to finance this new project and as soon as our plans have been finalised you will be advised of the Board's proposals. An issue of further share capital will form the basis of these plans.

Raw Materials

The raw material supply position, with the exception of crude rubber, was generally satisfactory and we were fortunate that at the time of the Suez

Canal crisis we had adequate stocks of imported materials.

As in the previous year, consumption of raw rubber by manufacturers at 31,405 tons far exceeded production at 23,444 tons and substantial imports were made.

Since the world market price of rubber had fallen below the Indian controlled price, Government introduced a cess on imported rubber equal to the difference between the landed cost of the imported rubber and the local price, applicable to all imports after August, 1956. The amount collected under this price equalisation policy is payable to the Rubber Board as a contribution to the rehabilitation of rubber plantations. We were happy to co-operate with Government in this scheme, but have been unable to get any indication of how the importer will stand in the event of the world rubber price again rising above the local price.

Generally costs tended to rise during the latter half of the year, chiefly due to increases in freight rates and import duties. For instance, the duty on rayon yarn, one of our chief raw materials, was increased by 25% and to a lesser extent carbon black and tyre valves were also affected.

Profit & Loss Account

The net profit for the year after providing for depreciation, interest and taxation was Rs. 55,09,909 and after taking into account the balance of profit carried forward the amount available for disposal is Rs. 66,81,594 compared with Rs. 61,28,686 for 1955. The Directors are recommending the same rate of Ordinary Dividend as for 1955, that is 15%, which will absorb Rs. 24 lakhs. The Directors also propose the transfer of Rs. 26 lakhs to General Reserve against Rs. 22 lakhs last year. This will increase the General Reserve to Rs. 216 lakhs and you will see from the Balance Sheet that the Ordinary Share Capital is covered more than twice by the total Reserves and Surplus. These reserves are, of course, fully employed in the business and the continued availability of profits for appropriation to reserves is

very necessary to assist in providing the funds for development and expansion.

Balance Sheet

The additions to Fixed Assets during the year amounted to Rs. 42,22,000, consisting mainly of Plant and Machinery for expansion and modernisation. The amount of depreciation written off in 1956 was Rs. 30,55,000 as against Rs. 27,51,000 in 1955.

Stock inventories at Rs. 455,47,000 were Rs. 63,84,000 higher than at the close of the previous year. This was partly due to increased production but also to the fact that some raw material stocks were abnormally low at the end of 1955. Sundry Debtors were up by Rs. 28,79,000, due to the greater sales turnover. Cash, Bank and Current Balances Assets Rs. 107,15,000. Deducting the increase of Rs. 17,96,000 in Sundry Creditors and other current liabilities there is shown a net increase in working capital during the year of approximately Rs. 89 lakhs, which is reflected in the combined rise in the bank overdraft (including the usance promissory notes) and unsecured loans.

Employee Relations

During the past year we have continued our efforts to maintain and improve our high reputation for congenial working conditions and welfare facilities. At our Sahaganj factory we now house, at low rents, a community of 4,600 employees and their families. The standard of housing is very high and excellent medical services including a modern hospital are available to all. Canteens have been provided in which good meals are available at subsidised prices. The existing educational facilities for children are now providing inadequate and a new school building is under construction. A market building is also being provided to improve shopping conditions for the residents in the Company's housing estate. The construction of 65 additional houses, to which the Chairman referred on this occasion last year, is now well advanced and improved street lighting is being installed. All forms of sport are encouraged, for which the Company provides the necessary grounds and buildings. Thus we strive to look after the welfare of our employees and extend their social amenities. General labour relations remained consistently good throughout the year. Staff and operatives have given us their loyal support and contributed greatly towards the successful outcome of the year's activities. I am sure you will wish to join with the Directors in thanking them for their faithful service.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

This may shrink

This will not shrink

That's why people look for 'Sanforized' on the label!

The 'Sanforized' trade mark inspires such confidence that people all over the world pick 'Sanforized' trade marked fabrics—knowing they bear this assurance: This garment will not shrink out of fit—even after many, many washings!

It adds value and prestige to your own label—enables you to sell with confidence—and assures the public that you take trouble to give them value.

People rely on you to serve them well—so serve them 'Sanforized' labelled cloth.

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay 2.

THE SHIVRAJPUR SYNDICATE LTD.

CHAIRMAN MR. A. N. HAKSAR'S REVIEW

Addressing the Fifty-third Ordinary General Meeting of The Shivrampur Syndicate Limited, held in Bombay on 25th April, 1957, the Chairman, Mr. A. N. Haksar, said:—

Ladies and Gentlemen,

During the year under review it was not possible to step up the output of your Mines for reasons given in the Report, and Raisings amounted to 83,238 tons as against 91,427 tons in the previous year. However, there was an improvement in the supply of wagons, which enabled shipments and local sales to be increased to 117,482 tons as compared with 82,352 tons in the year 1954-55.

You will also be interested to hear that there has been a continued demand for manganese ore of all qualities, at prices which have shown a progressive improvement over those previously obtained. Although it was the intention of the Management to make new Forward Sales of your Company's Ore to regular Buyers for delivery in 1958 and 1959, consistent with their policy, it was not possible to do so due to the advent of State Trading. You are probably aware that the Government have proposed to canalise the Export of Manganese Ore in a progressively increasing measure through the State Trading Corporation, and that only limited opportunities might be allowed to Mining and Trading interests for direct participation in the Export Trade, within the limits of the broad policy announced by the Government of India from time to time. As a beginning a Quota System of exports on a limited scale was introduced, and your Company was granted a Quota for a period of one year ending 30th June, 1957, for the export of 73,650 tons. The Government has also indicated that the balance of ore due for shipment against your Company's old Contracts, which will remain after this Quota is exhausted (i.e. 85,464 tons), can be partly canalised through the State Trading Corporation on a commission basis of 6½% of the Contracted Price and the remainder shipped subsequently against future Export Quotas.

In December last, the Chairman and other representatives of the Syndicate interviewed the Officials of the State Trading Corporation in Delhi and as a result of the discussions which took place, the S.T.C. promised all reasonable facilities in future for disposal of your Company's Ores. However it may not be out of place to mention here the risk involved to the country's economy as a whole, arising from the advent of State Trading in manganese ore. This is the risk of forcing overseas buyers in gradually increasing measure to turn to new sources of supply, with the result that India's very valuable export trade in this commodity might be very seriously reduced, or even irreparably damaged. State Trading has introduced a dislocation or partial disruption of the old trade channels at a time when the Export Duty on manganese ore together with higher freight rates

for shipping caused by the closure of the Suez Canal, have substantially increased overall costs to the consuming countries. It is reported that the Bethlehem Steel Company in the U.S.A. has completed arrangements to extract 600,000 tons of manganese ore annually from its new Mine in Brazil, after 5 years of development and exploration. Of this quantity, about 200,000 tons will be made available for consumption by the American industry and the remainder will go to the U.S. Government Stockpile. In addition, it is also learnt that the National Tungsten Corporation in the U.S.A. will soon begin exploitation of one of the world's largest manganese deposits, namely a new reef located West of the Andes Mountains in North Chile. There has been increased competition from Russia and South Africa so far as the U.K. market is concerned, while yet another potential competitor is the new State of Ghana from where increasing quantities of ore are expected to be exported. Such sources of supply are likely to prove formidable competitors to the Indian Manganese Ore Trade, and this likelihood would become a certainty if once the steady flow of supplies from India became interrupted or erratic.

Furthermore, I would draw attention to a recent report in a Commercial Publication that a completely new method has been evolved of processing low grade manganese ore deposits in New Brunswick, Canada, and that a prototype plant has already been installed for this purpose. It is claimed that the process will prove economic and it is intended to erect a production plant capable of handling up to 5,000 tons of manganese per day to give an annual output of 75,000 tons of ferro-manganese and 75,000 tons of ingot iron. It is further claimed that the utilisation of the process on a broad scale would make the North American Continent completely independent of other sources of supply by making possible the treatment of low grade manganese ores, which hitherto were regarded as incapable of treatment.

Renewal of Leases

With regard to the question of renewal of the Shivrampur Estate Leases, it will be recalled that my predecessor when he addressed you last year referred to the prospects of renewal of the old "North" and "South" Leases, and expressed the hope that the Thakore Sahib would sign with your Company a new Lease for a period of 20 years. Unfortunately, due to the illness of the Thakore Sahib's Adviser, execution of the Lease was delayed and in the meantime the Industrial Policy Resolution of the 30th April, 1956 was announced by the Government of India. This ruled that new deposits of certain minerals including Manganese Ore, would in future be worked only by Government, while old mining concessions could be renewed only after the prior approval of the Central Government. Accordingly the Thakore Sahib applied on the 16th October, 1956 through the State Government, for the necessary consent to the granting of the

new Lease. Your Company has also followed up this appeal, and the Government's reply is awaited.

Whilst on this subject, I might also mention that the Bauxite Lease of your Company at Kapadvan, working rights of which have been transferred to the Associated Cement Companies Ltd., has been renewed by the Government in accordance with the Mineral Concession Rules, 1949, for a further period of 30 years from the 2nd January, 1953.

It will be seen from the Report that various amenities, including the provision of further Buildings and Quarters, are being progressively provided for the employees at the Mines and I am happy to say that our relations with the labour and the Union's Officials have continued to be cordial.

You will also have seen from the Report that permission has been granted by the Government to capitalise a portion of the Reserves by the issue of Bonus Shares. I may assure you that your Board of Directors has this question under active consideration and, if it should be decided that it would be in the Company's interest to make any issue of Bonus Shares the Shareholders will be advised immediately.

Turning now to the Accounts, you will note that the layout of the Company's Balance Sheet and Profit & Loss Account has been changed to meet the requirements of the Companies Act, 1956. The results for the year can, I think, be considered satisfactory, and adequate provision has been made for Taxation and other liabilities which the Company has to meet, for example Retiring Gratuities to employees. In view of the large expansion programmes which are continuing to proceed on the Mines, particularly in the Panti and Bamankua areas, your Directors considered it prudent to set aside a sum of Rs. 7 lakhs to Mining Development & Prospecting Reserve, Rs. 1 lakh to General Reserve and Rs. 1,50,000 to Equalisation of Dividends Reserve. After making these allocations, the Directors have recommended a dividend of Rs. 5/- per share and a bonus of Rs. 3/- per share, both free of Income Tax, for the year.

As regards the future, both new development and existing Mining Operations are progressing satisfactorily. This, coupled with other measures taken in respect of modernisation of equipment and installation of an additional Generating Set, are calculated to increase production in due course.

The Government appears to be keen to promote exports of ore, and it is hoped that your Company will be granted an adequate Export Quota, thus enabling it to meet much of its shipping commitments during the current financial year. As against this, it should not be forgotten that there exist other factors such as the tendency to an increasing imposition of taxes, increasing costs of mining machinery and Stores, and transport charges, etc., which would increase total mining costs. In fact only last month it was announced that Government had increased the rate of Royalty from 7½% to 12½% for manganese of 45% and over, and at the rate of 10% for ore below 45%. Nevertheless, consequent on the improved trend of the market, the future I feel need not yet be viewed with any undue pessimism.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting which will be sent separately to shareholders.

a new look for an ancient land

The barren land that for centuries has looked out over Visakhapatnam harbour now gives way before the might of man and machine—strange new shapes of steel and concrete rise into the sky. The new Caltex Refinery is rapidly taking shape to provide India's petroleum needs. Irrigation and power projects... improved transport... increased agricultural output... new industries... all these need oil. And Caltex, yet another symbol of free enterprise, will supply it.

OIL is the Lifestream of Progress

P. L. SANDEMAN,
Manager.

AUDITORS' REPORT:

We have audited the foregoing Balance Sheet of the Indian Branches of the British Bank of the Middle East, as at the 31st day of December, 1956, and also the foregoing Profit and Loss Account of the Indian Branches of the Bank for the year ended on that date, in which are incorporated the unaudited returns of Calcutta Branch not visited by us. In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions of Sub-Section (1) and (2) of Section 211 and Sub-Section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be audited and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949. We report that:

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit;

(b) In our opinion, proper books of account as required by law have been kept by the Indian Branches of the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branch of the Bank not visited by us;

(c) The Balance Sheet and Profit and Loss Account of the Indian Branches of the Bank dealt with by this report are in agreement with the books of account and the returns;

(d) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Indian Branches of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit of the Indian Branches for the year ended upon that date.

Chartered Accountants.

BOMBAY, 28th March, 1957.

Engineering and Transport

PROTECTION FOR GRINDING
WHEEL INDUSTRYQUESTIONS BEFORE TARIFF
COMMISSION

IN opening recently the Tariff Commission's enquiry into the question whether protection for the grinding wheel industry should be extended Mr. K. R. Domic, chairman, said: "This industry has been enjoying protection for about 10 years. During this period, particularly during the last three years, it has expanded considerably. With the establishment of new units internal competition is also assured. It is, therefore, time now to consider whether the industry still requires protection. One of the units has stated that the protection granted to the industry may be withdrawn, provided duty-free imports of synthetic abrasive grains are allowed. The other units, however, desire the protection granted to the industry to be continued for a further period and have submitted their costs of production. Our Cost Accounts Officer has examined the costs of production of two of the units and the details of the individual costs will be discussed separately with the representatives of these units; but we may discuss, in general terms, the various factors which make it necessary for a section of the industry still to claim continuance of protection and the nature and extent of protection or assistance that may be necessary."

"The Tariff Board examined the claim of the industry to protection first in 1946 and recommended that a protective duty of 80 percent *ad valorem* should be levied on all grinding wheels and segments for a period of three years, that licences for imports of grinding wheels, segments, oil stones, sharpening stones, etcetera, should not be granted for the remaining period of 1946 and that all railway and Government orders should be placed with the Indian manufacturers up to the limit of their productive capacity. The Government, however, held the view that this industry was not likely to survive foreign competition even with as high an import duty as 80 percent *ad valorem* and decided that all imports of grinding wheels should be prohibited during the financial year 1947-48 except the types and sizes not produced in the country, that a duty of 50 percent *ad valorem* should be imposed on the types and sizes of wheels which were not produced in the country and that a duty of 50 percent *ad valorem* should be imposed on the varieties of wheels manufactured in the country, when the import restrictions were removed. The restrictions on imports of grinding wheels continued till December 1948 after which they were placed on O.G.L. The Government, then, reconsidered its previous decision on the rate of import duty and decided to levy a duty of 80 percent *ad valorem* on all varieties of grinding wheels as originally proposed by the Board. That duty was to remain in force up to 31st December, 1950. On a representation received from the industry, the Board undertook a review of the quantum of protection required by the industry and on its recommendation the rate of duty was increased to 100 percent *ad valorem* on 11th May, 1949."

Protective Duty

"Under the Finance Act of 1951, a surcharge of 5 percent was added to the then existing duty, bringing the total duty to 105 percent *ad valorem*. In November 1951, the Board examined the case for continuance of protection to the industry and recommended that the protective duty on grinding wheels and segments should be reduced from 105

percent *ad valorem* to 50 percent *ad valorem*, including surcharge. The Board also recommended that the types and sizes of wheels not produced in the country should be removed from the scheme of protection, and that a revenue duty of 31½ percent *ad valorem* should be levied on them. The Government agreed to discontinue protection to the types of wheels not produced in the country; but decided to levy the protective duty at 50 percent *ad valorem* exclusive of surcharge and the revenue duty on items not produced in the country was maintained at 25 percent *ad valorem* exclusive of surcharge. The last enquiry into this case was held by the Tariff Commission in 1954. On its recommendation, then, the protective duty was reduced to 25 percent *ad valorem*."

"The present enquiry is undertaken to investigate into the working of protection granted to the industry and to recommend any further action required with a view to increase, decrease, modify or abolish protection according to the circumstances of the case. At present, grinding wheels of any thickness or bore but more than 24 inches in diameter, as well as those of any diameter or bore, but more than nine inches or less than 1½ inch in thickness and diamond impregnated wheels are not granted protection. One of the producers has suggested that the scope of the present enquiry be enlarged to cover bonded abrasive industry instead of only grinding wheels and segments, thereby including bonded abrasive specialities like scythe stones, combination sharpening stones, floor polishing blocks, finished sticks, etcetera, within the ambit of protection. We are also informed that there is no technical difficulty in producing wheels up to 36 inches in diameter. We shall examine these requests and see whether there is any need to expand the scope of the enquiry."

Domestic Demand

"In 1954, the Commission estimated the domestic demand at 750 to 800 tons a year and it was expected to increase to 1,500 tons in next five years. The Planning Commission also expects the demand to increase to 1,500 tons a year by 1960-61. The Development Wing feels that the estimate of the Planning Commission is on the conservative side. According to it, the current consumption itself is more than 1,500 tons. Its estimate of demand by the end of the second plan period is 3,000 tons. We have received varying estimates of demand from manufacturers also."

"In 1954, only Grindwell Abrasives Ltd. Bombay was in production. It had a capacity of 600 tons a year. Two more units, Carborundum Universal Ltd., Madras and General Abrasive Co. (Private) Ltd., Bombay were expected to go into production in 1955. At present there are five units in production, three in Bombay and one each in Madras

and Delhi. The aggregate capacity of the five units comes to 2,370 tons a year. A sixth unit has been licensed in Calcutta. We understand that it has finalised negotiations with a foreign firm for technical collaboration. The production of grinding wheels has more than doubled during the last three years. In 1954, the production was only 506 tons. It increased to 693 tons in 1955 and to 1,132 tons in 1956. The production includes sticks, segments, stones, etcetera, in addition to wheels."

"The most important raw materials used in the manufacture of grinding wheels are synthetic abrasive grains and bonding materials. Synthetic abrasive grains are not produced in the country and are allowed to be imported free of duty. We, and are allowed to be imported free of duty. We, however, understand that the Krishnalal Thirani and Company, Calcutta, has completed its plans for the manufacture of aluminium oxide grains and it may go into production by the end of 1957. It has also plans to produce electro-corundum in the second stage. Of bonding materials, one major unit has claimed that its requirements of vitrified, elastic and mineral bonding materials are met from local sources, while another unit obtains its requirements from foreign sources. We shall examine this further, when we take up the question of raw materials for discussion."

"After a careful assessment of the evidence received by it, the Commission came to the conclusion in 1954, that the standard types of indigenous wheels are equal in quality to the imported product, and that most of the complaints related to wheels manufactured against fresh specifications and to the initial samples of such wheels. Complaints are still received about excessive wear, lack of consistency in hardness, etcetera. The evidence received by us, however, indicates that there has been an improvement in the quality of wheels produced in the country. In this connection we would like to discuss the progress made in the formulations of standards by the Indian Standards Institution."

"We have received some complaints about the delay in the execution of orders placed on the manufacturers. We have received explanations from the manufacturers for such delays. We would like to discuss this matter to know how such delays could be avoided. Grinding wheels and segments are classified under serial No. 24(b) of Part II of the Import Trade Control Schedule for purposes of issuing import licences. Since January-June 1955, only 16 percent of one-half of the best year's imports was allowed to be imported. On this quota, there has been a further restriction for the import of sizes commonly produced in the country. During the current licensing period the quota continues to be 16 percent of one-half of the best year's imports with the stipulation that not more than 50 percent of the face value of the licences, or Rs. 500, whichever is higher, can be utilised for the import of wheels of less than 25 inches in diameter and more than 1½ inch but less than 9 inches in thickness. Actual users' licence is also issued, wherever necessary."

Imports

"The imports of grinding wheels since 1953-54 are given below:

Quantity in tons Value in '000 Rs.	1954-55	1955-56	1956-57 (April-Dec.)
Protected categories	80.2	389	79.2
Non-protected categories	31.9	119	78.7
Total	112.1	508	157.9

The bulk of the imports came from the United Kingdom. Grinding wheels and segments made of synthetic abrasive grains, excluding wheels of any thickness or bore but more than 24 inches in diameter or of any diameter or bore but more than 9 inches or less than 1½ inch in thickness and diamond impregnated wheels are assessed to a protective duty of 25 percent *ad valorem* under 71(8) of the first schedule to the Indian Tariff Act, 1934."

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

SLIGHT RISE IN ADVANCES

Wednesday, 1st May.

THERE has been a slight rise in advances in the Calcutta money market during the past week. Accommodation for grains and seeds is mainly responsible for the increase as crops have been arriving in the markets. Cotton and sugar advances show a slight rise, but jute credit is around the previous levels. Interbank market conditions have not changed much, but the call rate shows a fractional rise to 3½ percent.

Very few bills have passed through the exchange market, the majority having been on account of gunny shipments. Remittance has been on a normal scale. Sterling is steady.

Silver was firm because of good demand and limited arrivals. The price advanced from the previous week's level of Rs. 179.75 to Rs. 182.75, quoted today. The rate for the ready metal was quoted at Rs. 183. The London and New York prices remained the same as before.

Gold showed little change. The price was quoted at Rs. 106.75. The sovereign, at Rs. 69.50, remained the same as last week.

During the week ended 26th April, Government of India Treasury bills for Rs. 56,64,25,000 were sold in favour of the Reserve Bank.

A decline of Rs. 7.20 crores to Rs. 1,561.91 crores in notes in circulation was the notable feature of the return of the Reserve Bank of India for the week ended 26th April, 1957. The total note issue was Rs. 99 lakhs higher at Rs. 1,582.48 crores. Notes held in the banking department consequently increased by Rs. 8.19 crores to Rs. 20.57 crores. Deposits of the Central Government improved by Rs. 1.42 crores to Rs. 52.83 crores, as did other Government accounts by Rs. 82 lakhs to Rs. 6.38 crores. Balances of commercial banks, at Rs. 67.60 crores, showed a loss of Rs. 4.29 crores. Balances held abroad declined further by Rs. 7.44 crores to Rs. 92.39 crores. Investments were Rs. 48 lakhs lower at Rs. 112.42 crores. Other loans and advances declined from Rs. 98.80 crores to Rs. 96.24 crores, of which advances to scheduled banks against usance bills amounted to Rs. 53.24 crores against Rs. 57.28 crores. Such advances totalled Rs. 195.18 crores since 1st January, 1957. Ways and means advances stood at Rs. 16.27 crores (Rs. 15.17 crores).

The statement of the position of the State Bank of India for the week ended 19th April, 1957, shows a rise of Rs. 4.40 crores in total deposits to Rs. 304.48 crores. Investments in Government securities and other authorised investments are up by Rs. 1 lakh and Rs. 21 lakhs to Rs. 94.07 crores and Rs. 11.46 crores, respectively. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have declined by Rs. 1.09 crores to Rs. 180.98 crores. Cash and balances are, in consequence, shown at Rs. 34.90 crores, or Rs. 2.24 crores higher.

The statement of the position of the scheduled banks for the week ended 19th April, 1957, shows Demand and Time liabilities at Rs. 732.08 crores (Rs. 9.85 crores on account of borrowings from banks) and Rs. 495.66 crores (Rs. 2.13 crores), compared with Rs. 725.86 crores (Rs. 7.97 crores) and Rs. 497.69 crores (Rs. 2.30 crores), respectively, in the previous week. Cash has declined by Rs. 50 lakhs to Rs. 38.28 crores, while balances with the Reserve Bank have advanced by Rs. 5.78 crores to Rs. 69.84 crores. There is a drop of Rs. 98 lakhs in investments to Rs. 345.03 crores. Advances and bills discounted, at Rs. 901.31 crores, indicate a fall of Rs. 98 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.8 percent and 73.4 percent, against 8.5 percent and 74.3 percent.

The Indian branches of the BRITISH BANK OF THE MIDDLE EAST have made a profit of Rs. 1.59 lakhs for the year ended last December. Deposits amounted to Rs. 2.41 crores. Advances were shown at Rs. 4.10 crores. Investments totalled Rs. 38.53 lakhs. Cash stood at Rs. 51.68 lakhs.

The profit of LLOYDS BANK LTD. for the year ended last December was £2,541,793. The figure given on page 553 in *Capital* of 18th April was a misprint.

Commodity Markets

INCREASE IN WORLD OUTPUT OF VEGETABLE OILS

LARGER SHIPMENTS FROM COMMONWEALTH

THERE was a further substantial increase in the world output of vegetable oils in 1955-56 and the total tonnage was the highest ever recorded. *Vegetable Oils and Oilseeds 1956*—one of the annual commodity reviews of the Commonwealth Economic Committee—shows that the estimated production was about 7 percent greater than in 1954-55, the previous peak year, and some 40 percent greater than in 1938-39. Not only was the apparent *per capita* supply in 1956 larger than before the war, but, because of a relative decline in the consumption of these oils for soap production and other technical uses, a larger proportion of the total output was available for edible purposes. Preliminary estimates indicated that world production—particularly of copra and soya beans—would again be at a high level in 1956-57. Commonwealth countries provided nearly a quarter of the estimated world oilseeds and oil production in 1955-56 and over a third of the world exports in 1955. Prices in 1956 were generally higher, on an average, than in the previous year. Net supplies of vegetable oils and oilseeds entering international trade in 1955 were at the postwar record of 4.5 million tons, in oil equivalent, or about 4 percent heavier than in 1954, when world exports were increased considerably by the disposal of surplus stocks in the U.S.A. and Argentina. Much of the increase in world trade was attributed to heavier shipments from Commonwealth sources, particularly India and Ceylon, among foreign producers, consignments from China and the Philippines showed the greatest expansion. Provisional figures indicated a further increase in world trade in 1956, with heavy shipments from the U.S.A., China, the Philippines and Nigeria.

Rise in Exports

Commonwealth exports in 1955 showed a very substantial rise and exceeded those of 1938 for the first time since the war. There was a marked expansion in exports of groundnut, linseed and castor oil from India and a considerable increase in supplies of copra and coconut oil from Ceylon, Malaya and the Pacific Islands. Substantial exports of linseed were also made by Canada. The Commonwealth was a net exporter of vegetable oils and oilseeds for the third successive year, the expansion in the favourable balance to nearly four times that of the previous year being attributable mainly to the re-emergence of India as a very substantial net exporter, although heavier shipments from Ceylon and Malaya, and a further reduction in the net imports of the United Kingdom, were important. In prewar years the Commonwealth had large export surpluses of oils and oilseeds of the edible and edible-industrial groups and a relatively minor import balance of industrial oils and oilseeds; due, however, to the higher levels of consumption in the United Kingdom during the war and postwar periods and the considerable decline in shipments of oilseeds from India (also due to increased domestic consumption), the Commonwealth was a consistent net importer until 1952. A small export balance in 1953 was increased slightly in 1954, and with the marked improvement in 1955 the Commonwealth net exports in that year were nearly as great as in 1938. The lower level of Indian shipments in recent years has been offset largely by heavier supplies from Nigeria and the Pacific islands, while South Africa has become a net exporter. The Canadian import balance has been considerably reduced, as well as that of the United Kingdom. Compared with this, imports of vegetable oils and oilseeds into western Europe have grown appreciably, and Commonwealth countries are now sending larger supplies to this region. *Vegetable Oils and Oilseeds* contains detailed statistical appendices showing, for each of the main consuming countries, the annual supplies of vegetable oils, with production figures for soap, margarine and compound cooking fat and the quantities of the various oils and fats used in the manufacture of these commodities. There is a section on import duties on oils and oilseeds in importing countries and a summary of the world production of and trade in whale oil.

SUGAR PRODUCTION AND DESPATCHES

The production and despatches of indigenous sugar amounted to 1,701,000 tons and 944,000 tons up to 15th April, 1957, in the current season, against 1,546,000 tons and 735,000 tons respectively, in the corresponding period of last year. The stocks with the factories on this date stood at 1,285,000 tons, compared with 1,221,000 tons last year.

For over 30 years "BEHAR" FIRE-BRICKS and FIRECLAY REFRACTORIES have been used by leading Iron and Steel Works, Cement and Glass Factories, Tea Industries, Sugar and Cotton Mills and other industries in the Country.

OUTLOOK FOR WORLD WOOL TRADE

ALTHOUGH official figures cannot be known for some time, there is reason to believe that wool consumption in most of the chief manufacturing countries maintained in the first quarter of this year the improving trend noted in the later months of 1956. That was almost certainly the case in the United Kingdom—still the largest consuming country in the world. During 1956, the United Kingdom was one of the few large manufacturing countries which did not improve on their 1955 level of consumption. But the level of consumption was not, on the whole, unsatisfactory. Over part of 1956, U.K. consumption of wool was slightly lower than in the previous year, but an increase in the later months enabled her to finish the year with an aggregate consumption virtually unchanged from 1955. That improvement has continued during the first two months of the current year. Consumption, for example, has been ranging from 7 to 10 percent higher than in the corresponding months of 1956, varying according to the class of trade. There have been occasions in the past quarter when U.K. output of processed wool in certain forms has been running at postwar record levels. A continued high level of export demand for U.K. wool tops suggests that the importing countries, too, have experienced an increase in trade. From the Continent, encouraging trade conditions are reported from France and Germany in particular, as substantial turnover has been done in wool products of all kinds. During the final quarter of 1956, the total consumption of wool textile raw materials by ten of the largest manufacturing countries in the world was at probably the largest aggregate level since the war, with virgin wool representing a slightly higher proportion of the whole. Commercial reports available during the current quarter encourage the hope that this level may at least be maintained during the first three months of 1957.

Price Stability

Over the period, wool values have moved within relatively narrow margins and have shown remarkable stability in spite of succession of international crises, which might have been considered anything but helpful for trade and commerce. A relatively slight relaxation in prices midway through the quarter was followed by a substantial recovery before the end of March, and the quarter closed with prices of both merino and crossbred wool at one of the best points of the season and above the average for last season. As the Commonwealth wool marketing season enters its final quarter, there is in all markets a strong and buoyant demand for wool. There is also reasonable indication that all the wool in sight will be wanted in order to keep pace with a sustained healthy consumption. An outstanding feature of the marketing season is that prices are not supported only by the activities of a few relatively large users, but by the well-spread demand from buyers which the trade has known in postwar years. In South Africa, the full-length combing wool season is now at an end and only short wools remain for disposal. In New Zealand, it is estimated that fewer than 150,000 bales of greasy combing fleece remain for auction. Although reasonable quantities are still to be catalogued in Australia, remaining offerings are considered by no means large when related to the reduced stock position which exists in several of the chief importing countries. Commercially the outlook for wool demand is regarded as good for the remaining part of the season.

PRODUCTION OF SMALL MILLETS GOES UP

The all-India second estimate of small millets for 1956-57 puts the current year's area and production at 11,527,000 acres (*kharif* and *rabi*) and 1,728,000 tons (*kharif* only) against the corresponding adjusted estimate of 11,535,000 acres (*kharif* and *rabi*) and 1,601,000 tons (*kharif* only) respectively for 1955-56, according to the Directorate of Economics and Statistics, Ministry of Agriculture. This shows a negligible decline of 8,000 acres or 0.1 percent in area (*kharif* and *rabi*) and an increase of 127,000 tons or 7.4 percent in production (*kharif*) during the current year compared with the previous year. Production estimates for *rabi* crops will be available at the final estimate stage only. There is only a nominal fall in area under small millets this year compared with last year. The decline recorded in Madhya Pradesh, Andhra Pradesh and Mysore have largely been offset by increases in Uttar Pradesh, Bihar and Rajasthan. In spite of the decrease in area, the production of *kharif* small millets during the current year shows a sizeable increase. This is due to favourable weather conditions during the growing period of the crops. The increase in production has been reported by all the States except Bombay and Mysore. This estimate generally covers the period up to the middle or third week of January 1957. Till then, the condition of standing crop was reported to be generally satisfactory except in parts of Visakhapatnam, Nellore, Kurnool and Cuddapah districts of Andhra Pradesh and in parts of Himachal Pradesh where the crop was affected by excessive rains. This estimate does not include the entire area sown to small millets, since only preliminary estimates of area relating to *rabi* crop have been included in it. Complete estimates of area sown to both *kharif* and *rabi* small millets will be included in the final estimate.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced by 0.2 percent to 421.0 during the week ended 13th April compared with 420.2 (revised) for the earlier week. The index was almost at the same level as in the corresponding week of last month, but was higher by 7.8 percent than that of a year ago. Higher prices of *gur* (+7%), wheat (+2%), and rice in Calcutta (+1%) raised the index for Food Articles by 0.7 percent to 406.1 compared with 403.4 (revised) for the previous week in spite of a decline in the prices of tea for internal consumption (-6%) and gram (-3%). A fall of 0.2 percent to 513.6 in the index for Industrial Raw Materials was caused by a decrease in the prices of manganese ore (average export price), and rape seed in Bombay (-3% each), groundnuts (-2%) and linseed and gingellyseed (-4% each); the prices of rapeseed in Kanpur (+5%) and raw silk, raw wool, copra and lac (+1% each) were, however, marked up. The index for Semi-Manufactures rose by 0.2 percent to 399.6. Items which exhibited significant changes were: groundnut cake (+7%), castor oil in Calcutta and linseed oil (-2% each). The index for Manufactures stood at 384.1 compared with 384.3 (revised) for the earlier week; the prices of jute manufactures showed a slight fall. Prices of chillies in Calcutta (+6%), black pepper in Cochin (+4%) and cashew nuts in Quilon (+3%) showed advances while those of cashewnuts in Mangalore (-2%) and chillies in Patna (-1%) witnessed declines, and the index for the Miscellaneous group went up by 0.2 percent to 565.9.

Stocks and Shares

STEADY UNDERTONE IN RESTRICTED TRADING

STUNTED CROP OF BUDGET RUMOURS

Wednesday Evening. The undertone in the stock market has been steady during the past week, but operators have been moving cautiously. There has been some talk of easier money conditions to help the bulls, but against this a good deal of anxiety prevails about the Reserve Bank circular asking banks to restrict advances which might be used for cornering operations. A few good company reports have appeared, such as the one from Guest, Keen, Williams, but their effect has been confined almost strictly to the shares concerned. Elsewhere, the inclination is not to extend commitments, as doubts prevail about not only the contents of the Budget but also the date on which it will be presented. The market's taxation experts seem to be surprisingly restrained in making forecasts about the Budget proposals this time. A gift tax is rumoured, as also an annual tax on wealth, but some operators are feeding themselves happily on hopes that the taxes on earned income will be reduced.

Jutes are selectively better on dividend announcements from the Andrew Yule group. Among coals, turnover has been limited, but there are a few features, such as Bengal and Equitable, Teas remain dull because it is feared that production might exceed demand during 1957. There have been few features in the miscellaneous group. Gilt-edged are generally maintained.

Details of the week's trading follow.

On the whole, Government securities ruled steady, but there were few price changes. The enquiry for short-and medium-dated loans was maintained but there was a slight decline in the volume of business. The 3% Conversion Loan, after improving to Rs. 74.50, had sellers at the close at Rs. 74.40. In short-dated loans, 3% 1957 and 1958 were unchanged at Rs. 99.75 and Rs. 99.65, but 3% 1959-61 turned sellers at Rs. 97.75, 2½% 1961 was traded around Rs. 93.50 and 3½% 1961 was better at Rs. 99.53. In medium-dated loans, 2½% 1962 was asked for at Rs. 93.85 but 3%, 1963-65 was on offer at Rs. 94.19, as was 3% 1964 at Rs. 94.40. The 3½% 1961 eased to Rs. 98.33 and 3½% 1965 was offered at Rs. 98.30. Business was reported in 3½% 1967 around Rs. 98.50. Long-dated loans staged a small recovery, with 2½% 1976 quoted at the higher rate of Rs. 83.15 and 3% 1970-75 at Rs. 87.18. However, 3% Loan 1966-68 was easier at Rs. 92.10 while 3½% loans continued on offer at Rs. 98.50. Among State loans, enquiry for 4% U.P. 1963 and 1964 was maintained; 4% West Bengal 1967 changed hands around Rs. 99.31 and 4% West Bengal 1968 was traded around Rs. 99. The 4% Madras 1968 met with sustained selling pressure and was marked down sharply from Rs. 98 to Rs. 97.25.

Very little business was reported in preference shares. In jute, Empire changed hands at around Rs. 98 and Fort Gloster 2nd at Rs. 69. Hooghly Mills were done at Rs. 8.44 and Naihati Jute 7% were marked at Rs. 88.

In the miscellaneous group, British India Corporation met with some enquiry around Rs. 121 and Calcutta Electric were steady at Rs. 9.19. A small lot of Dunlop Rubber 2nd were crossed at Rs. 88 and Indian Iron and Steel changed hands freely around Rs. 98. Indo-Burma Petroleum were depressed at Rs. 97 and Textile Machinery were reported at Rs. 71.50.

Bank shares were unchanged, with Punjab National quoted at Rs. 49, United Commercial at Rs. 53, Hind Bank at Rs. 33 and United Bank "D" at Rs. 42.5.

Business in coal shares was on a reduced scale. Bengal were a good feature today with the price improving smartly from Rs. 218 to Rs. 228 on the announcement of a higher dividend. New Manbhoom were better at Rs. 8.75. Another feature was Equitable, which advanced from Rs. 23 to Rs. 25. Burrakur were crossed at the higher rate of Rs. 21.72 and closed today at Rs. 22, while New Beerbhoom were easier at Rs. 14.50. Other shares in this section were unchanged.

In cotton, Elgins were marked back to Rs. 20.25 and Kesoram to Rs. 13.12. Bengal Nagpur receded from Rs. 7 to Rs. 6.75 and New Victoria were shaded at Rs. 1.75.

In electrics, Calcutta were lower at Rs. 12.62, as were Jubbulpore at Rs. 12.87 and Patna at Rs. 10.62.

Among engineering issues, Indian Iron and Steel fluctuated narrowly around Rs. 19.87 to close at Rs. 19.93. Guest, Keen, Williams, on a good report, improved further to Rs. 26.87. Britannia Engineering met with enquiry and were slightly better at Rs. 13.37, as were Burn at Rs. 312. Textile Machinery were fairly steady at Rs. 18.85, while both Jessop and Richardson and Cruddas closed lower at Rs. 24.25 and Rs. 17.25. The outstanding feature was Hooghly Docking, which spurred from Rs. 125 to Rs. 150 on rumours of a bonus issue.

After many months the jute section received some cheering news from a few mills in the Andrew Yule group, namely Cheviot, Delta and Orient. Cheviot announced a dividend of Rs. 2 against nil, Delta Rs. 5 against nil and Orient Rs. 2,

against Re. 1. Here is a chart showing representative price movements:

	Opening 25-4-57	Closing 1-5-57
Rs.	Rs.	Rs.
Agarpara	8.37	8
Angle India	135	139
Delta	125	128
Cheviot	126	126
India	123	130
Gondalpara	725	700
Megna	78	78.50
Kamarhatty	88	94
Kankannarrah	58	63
Orient	103	102
Presidency	3.75	4

Standard were unchanged at Rs. 63, as were Reliance at Rs. 7.50. National fluctuated narrowly around Rs. 20.20.

In paper, India Paper Pulp were shaded at Rs. 21.19 while Sirpur improved from Rs. 9.19 to Rs. 9.44. Titagur and Shree Gopal were unchanged at Rs. 33.50 and Rs. 15.10.

In shipping, India Steamship were slightly better at Rs. 10.06 while India General Navigation were unchanged at Rs. 66.

In insurance there were small buyers of Triton at Rs. 140 and sellers of Hercules at Rs. 21.62. New Asiatic were unchanged at Rs. 3.97, as were Ruby General at Rs. 5.50.

Among miscellaneous industrials, Balmer Lawrie were taken at the lower level of Rs. 142 but closed higher at Rs. 145. Angelo Brothers moved down to Rs. 18.25, as did Assam Saws to Rs. 2.94. British India Corporation met with selling pressure and were marked down to Rs. 7. Clive Row closed lower at Rs. 9.37. Good business was reported in Dunlop Rubber around Rs. 24, while there were sellers of Godfrey Phillips at the lower rate of Rs. 21.75. Imperial Tobacco were taken at Rs. 13.56 while Indian Aluminium were depressed at Rs.

12.75. Indian Rubber Manufacturers continued to meet with interested support and improved further from 26.25 to Rs. 27. The final dividend of 7½ percent announced by the National Carbon Company was received with disappointment and the shares reacted from Rs. 25.75 to Rs. 25. Martin Burn were better at Rs. 23.31, as were Metal Box at Rs. 27.19. Rallis were unchanged at Rs. 30 and Rohtas Industries were steady at Rs. 18.12. Sone Valley closed lower at Rs. 6.15.

In sugar, Belsund continued to meet with enquiry and improved to Rs. 11, as did Darbhanga to 25 and Ramnugger to Rs. 25.75. Carew were slightly lower at Rs. 7.30, while Dyer Meakin Breweries were steady at Rs. 6.19.

Little interest was shown in tea shares. Prices on the whole tended towards lower levels. Choonabhatti were marked down from Rs. 290 to Rs. 285 and Hattikhira from Rs. 15 to Rs. 14.75. Jutlibari closed lower at Rs. 21 while Dhelakhat were slightly better at Rs. 21.75.

In the mining section, Chrestien Mica improved to Rs. 14.75 and Karanpura Development recovered from Rs. 11.87 to Rs. 12.25. Orissa Minerals were offered at the lower rate of Rs. 18.37, but Indian Copper kept fairly steady around Rs. 3.28.

The ASSAM MATCH COMPANY has increased its profit by Rs. 1.88 lakhs to Rs. 10.24 lakhs for the year ended last December. The dividend has been maintained at 12½ percent, including a bonus of 2½ percent against 5 percent. General reserve is allocated Rs. 90,000 (Rs. 60,000) and dividend equalisation reserve receives Rs. 25,000 (nil). The taxation provision is Rs. 4.80 lakhs (Rs. 4 lakhs), leaving a carry-forward of Rs. 1,72,873, against Rs. 1,18,395 brought in.

The net earnings of the INDUSTRIAL CREDIT AND INVESTMENT CORPORATION OF INDIA have increased from Rs. 28.56 lakhs to Rs. 36.99 lakhs for the year

ended last December. The taxation provision is Rs. 15.25 lakhs. Bringing in Rs. 7,16,506, there is Rs. 26,81,149. A maiden dividend of 3½ percent has been declared. The general reserve allocation is Rs. 5 lakhs. The carry-forward is Rs. 6,31,149. The directors state that up to the end of 1956 no opportunities had occurred for making use of the loan of \$10 million which has been made available to the company by the International Bank for Reconstruction and Development for the purpose of meeting the external costs of projects which the company assists. As long as promoters of new projects were in a position to obtain their foreign exchange needs in the normal course, it was unnecessary for them to borrow foreign currency from the company. Because of the shortage of foreign currency and the consequent revision of the import licensing policy the situation is likely to change and the company is ready to assist by making use of these facilities in suitable cases where loans in foreign currency are sought.

Providing Rs. 29.75 lakhs for taxation and making other adjustments, the profit of the BANGALORE WOOLLEN, COTTON AND SILK MILLS COMPANY has amounted to Rs. 27.64 lakhs for the year ended last December. Bringing in Rs. 2,38,649 and other miscellaneous receipts, there is a balance of Rs. 33,33,947. The ordinary dividend is the same at Rs. 30 a share, including an interim of Rs. 10 a share. General reserve is allocated Rs. 11 lakhs. The carry-forward is Rs. 2,82,947.

The profit of the BUCKINGHAM AND CARNATIC COMPANY has amounted to Rs. 48.49 lakhs for the year ended last December, after providing Rs. 15 lakhs for taxation. Bringing in Rs. 2,38,445 and other miscellaneous receipts, there is a balance of Rs. 57,72,765. The ordinary dividend has been maintained at Rs. 10 a share, including an interim of Rs. 4 a share. General reserve is allocated Rs. 11

lakhs and debenture redemption fund receives Rs. 5 lakhs. The carry-forward is Rs. 2,28,220.

Providing Rs. 69.61 lakhs for taxation, the net profit of GUEST, KEEN, WILLIAMS, LTD. has amounted to Rs. 82.21 lakhs for the 52 weeks ended December 1956. Bringing in Rs. 17,03,427 and making other adjustments, there is Rs. 96,32,714. General reserve is allocated Rs. 38 lakhs. An interim dividend of 8 percent was paid to absorb Rs. 11.28 lakhs. The final dividend has been declared at 15 percent, absorbing Rs. 30 lakhs. The carry-forward is Rs. 17,04,234. The company was converted into a public company on 22nd October, 1956, and this was followed by the issue to the public in India of 589,400 ordinary shares in November 1956, thereby increasing the subscribed capital to Rs. 2 crores for the purpose of financing the various development schemes, such as rolling mills, additional steel melting furnace and road wheel plant in the Calcutta works and the expansion of the wood screw and allied fastenings plant in the Bhandup Works.

Bombay Market

PRICES FLUCTUATE NARROWLY ANXIETY ABOUT TEXTILE PROSPECTS

Wednesday Afternoon.
FLUCTUATIONS were narrow in the Bombay stock market last week, following intermittent buying and selling. Although the establishment of the Re-Finance Corporation improved sentiment for the time being, by encouraging the belief that the supply of credit to industries would become easier, operators were inclined to take a cautious view of

the future. It was feared that fresh taxation would be imposed in the Central Budget, which is expected in about two weeks' time. Steels were maintained on the report that the Indian Iron rights issue had been over-subscribed. The accumulation of cloth stocks caused concern, so the mill group showed minor losses on balance.

Tata Steels were transacted at Rs. 168 and Indian Iron were maintained at Rs. 19.95 on support from Calcutta interests, although an easier feeling was evident towards the close on fears of higher budla charges. Tata Locomotive declined to Rs. 145.50 on profit-taking. Alcock Ashdown were freely offered at Rs. 255, and scattered interest was taken in Premier Construction at Rs. 163.75. Mahindra and Mahindra came to hand at Rs. 15 on a satisfactory report. Motor shares lacked interest, and Premier Automobiles were sold at Rs. 88.50. Hindustan Motors were quoted at Rs. 7.15, with sellers predominating.

In the mill group, Bombay Dyeing recovered to Rs. 541.50, as did Century to Rs. 459 on short-covering. Standard were done at Rs. 442 on prospects of an expansion in activity. Kohinoors were taken at Rs. 319 by knowledgeable quarters. Simplex realised Rs. 171 and India United Ordinary were done at Rs. 10.10.

In the miscellaneous group, cement shares were quietly steady. Associated Cement were transacted at Rs. 160 and Digvijay were taken at Rs. 144.25. Sugar shares were selectively bought due to the prospect of increased exports. Belapur were quoted at Rs. 228.50 and Walchandnagar Industries were transacted at Rs. 251. Steamship company shares were steady, and Scindia Steam came to hand at Rs. 18.40. Great Eastern Shipping were maintained at Rs. 18.20. Mining shares showed minor changes, and Shrivraj Syndicate were transacted at Rs. 91.50. Bombay-Burmah reacted to Rs. 567.50 on profit-taking, while National Rayon were steady at Rs. 226 on replacement buying. Tata Chemicals were quoted at Rs. 16.50 and B.B. Petrol made Rs. 12.46.

Banking shares were barely steady and turnover was limited. Bank of Baroda came to hand at Rs. 99.50 and United Commercial Bank were available at Rs. 55.50. There was scattered enquiry in insurance shares, and New India Assurance were bought at Rs. 40.

Electricity supply companies met with selective buying, and Ahmedabad Electric were maintained at Rs. 94. Tata Hydro were quoted at Rs. 121.

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations, Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. WIDE RANGE OF PRODUCTS AT BRITISH INDUSTRIES FAIR

Some 50 countries in all parts of the world are likely to be represented among the buyers coming to the British Industries Fair which will be open from 6th to 17th May. But this year the Fair will not be in London and Birmingham, as in the past. It will be held in Birmingham only. In the past, the Birmingham section of the Fair accommodated heavy engineering, electrical, hardware and building goods—the backbone of British industrial effort. This year these sections will again be organised, but the scope will be widened to include consumer products. Anybody who previously exhibited at the London fair and who is connected in any way with these industries will be eligible to show in Birmingham. Many London exhibitors have signified their intention to participate. The Birmingham Chamber of Commerce owns, on the Castle Bromwich site, the largest single-roofed exhibition hall in Europe. It is in this hall that the exhibition is to be held. Better facilities than ever before are to be offered, not only to exhibitors but also to buyers, to give them an impression that British industry is capable of supplying the world's needs in a period when competition is growing and normal trading conditions are beginning to return.

The layout of the exhibition is simple. There are to be seven avenues under one roof. Each trade section is to be self-contained. There will be an Overseas Buyers' Club in the centre of the Fair, where there will also be a central information bureau to supply travel information to buyers and to arrange for their accommodation. Outside the main hall there are open spaces where mechanical handling devices for those who will attend the fair will be greater than in any previous year, and already the B.I.F. authorities have prepared a list of approved accommodation for buyers. An added attraction in that during the period of the fair, the "Festival of Birmingham" will take place. The B.I.F. is a general or samples fair: it is not devoted to any one particular trade. The range of products on show is, therefore, very wide, and this year every effort is being made to make the exhibits more attractive. For instance, on one stand a complete foundry, showing modern methods of production of castings, will be in operation. The fact that the Fair is a general one is of particular advantage to buyers who cannot spare the time to visit the many specialised shows that are usually held at various periods in the year. The B.I.F. is noted for the new products which are often shown there for the first time. This year is no exception. At roughly the same time as the B.I.F. in Birmingham, there are to be three other exhibitions in London—the Instruments, Electronics and Automation Exhibition in Olympia, 7th to 17th May, the Gifts Fair at Alexandra Palace, 13th to 17th May, and the Factory Equipment Exhibition at Earls Court, 29th April to 4th May.

STRIKE MOVE BY KERALA PLANTATION WORKERS

HEAVY PRICE FALL IN GINGER MARKET

(FROM A SOUTH INDIAN CORRESPONDENT)

PLANTATION workers in Kerala, numbering about 200,000 will strike if no settlement is reached within the next two weeks over their immediate minimum demands which include bonus for 1955-56. The decision was taken at a meeting of the various estate workers unions, affiliated to the All-India Trade Union Congress, the United Trade Union Congress and the Hind Mazdoor Sabha, held in Ernakulam last week. Although the I.N.T.U.C. led unions were not represented at this meeting, their leader, Mr. B. K. Nair, has since offered their co-operation to the proposed strike move. The Communist Labour Minister of Kerala, Mr. T. V. Thomas, said last week that he would be calling a meeting of the Plantation Labour Committee to decide the question of bonus for last year. This Committee met last month to consider the same issue, but it could not recommend any solution as the representatives of the workers and the

management on the Committee could not arrive at a settlement.

Bigger S. Indian Tea Crop

South Indian tea crop for the first quarter of 1957 is estimated at 27.3 million lbs, 4.5 million lbs higher than that of the corresponding period last year. Ceylon's output was higher by eight million lbs at 60 million lbs during the first two months. In 1956, both Ceylon and South India produced less, mostly on account of the unfavourable weather conditions that obtained during the first half of the year. Tea shipments from Cochin during the first three months of the year were slightly lower, compared with those of the corresponding period last year. Exports amounted to 15.1 million lbs against 16.3 million lbs in the same period of 1956. Exports from Kozhikode amounted to another 700,000 lbs. Exports of South Indian teas during the season ended 31st March, 1957, totalled 68.5 million lbs representing 52 percent of the region's output. North Indian tea exports during this period amounted to nearly 72 percent of the production in north east India.

Lower Rubber Output

Rubber production in South India during March was slightly lower, compared with the period last year. Production amounted to 1,220 tons compared with 1,165 tons in February and 1,279 tons in March, 1956. The Rubber Board has sanctioned replanting

subsidy for about 6,250 acres of low-yielding rubber area out of the target of 7,000 acres fixed for 1957. The Board has a scheme for subsidised replanting of 70,000 acres of low-yielding rubber area with better strains, within a period of 10 years. The Board has also finalised the plans for giving subsidy for replanting to be done in 1958.

Higher Ginger Export

There was a heavy export of ginger from India during the first three months of the current season. A total of 3,701 tons were shipped during this period against 1,522.5 tons during the previous corresponding period (November 1955 to January 1956). Aden, Saudi Arabia, the U.S.A. and the U.K. were the main importers. However, Indian ginger has been in difficulties for the past few months. The current price of Rs. 52.50 a cwt. is less than 40 percent of the prices ruling at this time last year. This heavy fall is attributed to the sudden and steep increase in the Indian crop from 9,000 tons last season to 16,000 tons this season, and to nervousness of the Indian shippers. A large Indian crop might upset the balance between world supply and demand, although there are reports that the Jamaican and East African crops are below normal this time. East African producers, it is stated, are disinclined to part with their stocks for anything less than Rs. 106 a cwt. Whereas the African ginger is commanding a price of nearly Rs. 135 a cwt. in the London market, Indian ginger is getting only Rs. 87 there. The trade doubts that there is so much difference in quality between the Indian and African ginger as to justify this big difference in value.

COCHIN TEA SALES

At Sale No. 9, 1,900,000 lbs of tea were on offer. There was good but weakening demand for Commons, but Low Mediums were about steady. Mediums were irregularly 15 to 20 nP easier. Best Liquorings were firm with quality otherwise irregularly lower. Whole Leaf grades were strong.

TEA EXPORT DUTY REDUCED

The Government of India has issued a notification fixing the price of tea for the purpose of determining the export duty, at Rs. 2.41 a lb, as against Rs. 2.74 a lb in force from 1st April, 1957. The export duty at this price will be 25 nP a lb, as against 37½ nP a lb. in force hitherto.

KENYA TEA OUTPUT AND EXPORTS

Acreage planted with tea in Kenya at 31st December last amounted to 27,030 acres, an increase of 1957 acres over the previous year. At the same date, 67,674 acres were increased for tea growing, an increase of 6,184 acres during the past year. Production of tea during 1956 was 21,269,290 lbs (average for the five years 1951-55 was 15,918,010 lbs); 15,044,013 lbs, valued at £2,734,250, were exported (of which 10,055,194 lbs went to the U.K.). Some 6,300,264 lbs were consumed locally during 1956. The estimated value of tea sold on the Kenya markets in 1956 was £931,781.

RUBBER PRODUCTION AND CONSUMPTION IN MARCH

Indian rubber output in March was 1,220 tons, according to the Rubber Board of India. Exports were 3 tons 1,423 lbs, while imports were 320 tons. Consumption by manufacturers was 2,586 tons. Stocks with estates and dealers on the last day of March were 2,921 tons, including 443 tons in transit. Stocks with manufacturers at the end of the month amounted to 3,454 tons. Manufacturers also consumed 314 tons of reclaimed rubber, of which they held a month-end stock of 740 tons, and used 209 tons of synthetic rubber, their month-end stock of which was 996 tons.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing prices on 12-2-57 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.26	1.26
No. 2	1.23	1.23
No. 3	1.20	1.20
No. 4	.96	.96
No. 5	.91	.91
Sheet Cuttings 1		.94
Sheet Cuttings 2		.89
Crape:		
Water White	—	—
R.M.A. No. 1X	1.15/18	1.16
R.M.A. No. 1	1.11/12	1.11
Crape No. 2		1.00
Crape No. 3		.97
Scrap Cresses:		
Sc. Crape No. 1	.92 Nom.	.91
Sc. Crape No. 2	.88/91	.88
Sc. Crape No. 3	.77/87	.72
Flat Bark	.70/75	.85
Sc. Crape 3X		.85

To arrive at f.o.b., Colombo prices, add 53.53 cents a lb for crape other than scrap crape and 31.53 cents for scrap crape to the above market prices.

New Delhi

IMPLEMENTATION OF HEAVY ENGINEERING PROJECT

PROSPECTS OF GETTING RUSSIAN AND BRITISH CREDIT FACILITIES

(FROM A NEW DELHI CORRESPONDENT)

THE Russians, it is understood, have, during their negotiations with Indian officials, suggested that a comprehensive plan for utilising the long-term credit offer of Rs. 60 crores be drawn up before they commit themselves to assisting individual projects. It is also learnt that they want an Indian delegation to visit Russia and discuss the plan. The Russian attitude was revealed in the course of negotiations for working coal mines on the basis of the Russian mining experts' report on the Korba coalfield. The report, which was submitted to the Indian Government early this year, says that the area is suitable for mechanised processes and can be developed so as to obtain an annual output of four million tons by 1960-61: two million tons by mining and two million tons by the open-cast process. The report adds that Russia can deliver the equipment for quarrying operations in 1958, and for mining operations in 1959-60. This fits in neatly with the time-table for utilising the long-term credit, which is to be available in the form of machinery and equipment over a three-year period starting from 1958-59. After studying the report, the former Production Ministry decided to request the Russians to undertake the development of the Korba area for an annual production of only 2.5 million tons of coal. But the Russians have replied as stated above.

Whether or not the proposal to send a delegation to Russia is accepted, the discussion of the comprehensive plan for utilising the Russian credit is awaited with interest. It will provide an answer to the question whether Russia is prepared to collaborate in the heavy engineering project, if it is not of the type the Russian experts have recommended, and if India secures Western assistance for part of the project? The question has arisen because of the following factors. Firstly, the Jehangir Ghandy Committee has favoured the establishment of multiple units as recommended in the British report in different parts of the country, as against a giant integrated plant of the Russian experts' conception. Though the Ghandy Committee's report is still under the Government's consideration, the acceptance of its basic recommendations is regarded as virtually certain. Secondly, the Russian Government has offered no further long-term credit besides the Rs. 60 crores promised last October. This has belied the expectation in India that Russia would offer separate assistance for the heavy engineering project.

U.K. Aid Hopes

On the other hand, hopes of U.K. assistance, implicit, in a sense, in the despatch of the Coates mission to India, have been strengthened by the subsequent visit of Sir Norman Kipping on behalf of the F.B.I. and the favourable view he has expressed on India as an investment risk. However, no specific figures of long-term British credit for industrial equipment and machinery have yet appeared. In view of India's large credit needs, the Government is expecting collaboration, at least in the heavy engineering project, from both Russia and Britain, each taking up some parts of the proposed multiple-unit project. Aid from West Germany or Czechoslovakia, which have both shown interest in the foundry-forging part of the project, should be welcome.

The Russians have not given up their interest in the heavy engineering project, in spite of the certain prospect of the Indian Government preferring dispersed units to a single integrated plant. This is indicated by the fact that a Russian Embassy official called at the Department of Heavy Industries when a newspaper report suggested that India might rely exclusively on British assistance for implementing the project. He was assured that no decision had been taken. Meanwhile, the Russian and British proposals as if they involved rivalry. The same attitude will apply to further consideration of the project for the manufacture of coal-mining equipment. On this, recommendations have been made by a team of Russian experts and by the Coates mission. It is understood that the Government proposes to provide Rs. 45 crores for the project. This contrasts with the estimate of Rs. 13.2 crores for the comprehensive project recommended by Russian experts and Rs. 3 crores for the modest scheme outlined by the British team. The Government is still considering the suggestion, which, it is reported, the Jehangir Ghandy Committee has made, for appointing a separate technical committee to consider the specific items of coal-mining equipment to be taken up for manufacture under the proposed Rs. 4.5-crore project.

Agricultural Development

Mr. V. T. Krishnamachari's inaugural address at the conference of State Development Commissioners in Mussorie was a good analysis of the problems of agricultural development. It also raised the issue of the contribution which agriculture should make to industrial growth. The Deputy Chairman of the Planning Commission pointed out

that in China, where the cultivated area is practically the same as in India though the yield is double, "agriculture pays annually taxes amounting to Rs. 550 crores to Rs. 600 crores, as against India's Rs. 80 crores to Rs. 90 crores". Mr. Krishnamachari was not suggesting that the same scale of agricultural taxation was necessary or even desirable in India.

Trade Delegations

An exceptionally busy "season" for trade delegations has ended with the departure of the 37-strong Australian mission for Ceylon last week. During the four months of the current year, New Delhi has received trade delegations from as many as nine countries, which together account for about a third of India's foreign trade. The following table sets out the figures of trade with each of these countries during 1955-56. Countries are given in the order of the arrival of the respective delegations since January. The total value of India's foreign trade during 1955-56 was Rs. 1,250.26 crores.

Country	Imports into India	Exports from India
	(Value in Rs. crores)	
1. Denmark	4.18	2.04
2. Pakistan	27.1	8.4
3. Sweden	7.86	1.57
4. U.S.A.	89.30	85.26
5. Egypt	23.09	9.46
6. Finland	2.70	.33
7. Australia	13.47	24.81
8. West Germany	60.28	14.73
9. Sudan	12.68	5.63
Total	240.66	152.23

India's new import policy for capital goods, with its requirement of credit over varying periods for certain categories of machinery and equipment,

was explained to the delegations from the six countries which are industrially advanced enough to export such goods. The peculiar problems of border trade and transport dominated the discussions with the delegation from Pakistan, while it was India's turn to offer industrial products, and even some items of machinery, for sale to Egypt and the Sudan. Notable among the formal agreements which resulted from the trade talks are the new Indo-Pakistan trade pact, effective till 31st January, 1960, and the special rupee account opened by the State Trading Corporation for importing cotton worth Rs. 5 crores from Egypt, at what are expected to be slightly concessional prices, and the export of goods of equivalent value from India to Egypt.

It has been decided that an Indian business delegation will pay a return visit to West Germany shortly. The development of trade between the two countries justifies the step. The principal task of the Indian mission has to be the exploration of the means to increase Indian exports to West Germany. During the period from April to November 1956, imports from that country totalled Rs. 58.34 crores, or nearly as much as during the whole of 1955-56. But Indian exports to West Germany were of the value of only Rs. 14.77 crores during the same eight-month period.

World Bank Loan

Great expectations of World Bank assistance for India's railway development programme have been roused, in view of the statements made by the Bank's president, Mr. Eugene Black, and the appreciative comments on the performance of Indian railways by the expert mission which the Bank sent out under the leadership of Mr. Slater. The final round of talks to be held soon with World Bank officials in Washington by Mr. B. K. Nehru, Secretary of the Economic Affairs Department in the Union Finance Ministry, it is hoped, will result in the announcement of a sizeable loan. Mr. B. K. Nehru is expected to spend a total of six weeks abroad. He will visit London, Paris, and perhaps other West European capitals. He returned after making a first-hand survey of the European capital market last August with the impression that, given the state of supply and demand, India could hope to attract substantial foreign capital only if prevalent ideas in this country about interest rates were realistically revised. Such a change in ideas may now have taken place under the stress of the foreign exchange shortage and the consequent search for long-term credit. There is also now a better appreciation abroad of India's needs and the terms on which she seeks the supply of capital goods. The results of Mr. B. K. Nehru's renewed exploration of Europe's financial centres will, therefore, be awaited with interest.

A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

MOVE TO INCREASE U.K. TRADE WITH CHINA

CAPITAL EXPENDITURE BY INDUSTRY STILL RISING
(FROM OUR LONDON CORRESPONDENT)

FOLLOWING the Easter holidays, there has been little fresh to report on the economic situation. Last week it was expected that a further drop in the Bank of England rate would be announced. Such a move would have been incongruous with the Chancellor of the Exchequer's insistence that the credit squeeze must be maintained, but Thursday passed without any change. There have been two other developments of great significance, namely, the American agreement, following upon the Bermuda discussions, to some relaxation of the controls on trade with Communist China, and the submission to the United Nations of the final terms drawn up by the Egyptians under which international shipping may use the Suez Canal. Unfortunately, both will call for careful consideration by various parties before their possible effects can be judged.

So far as the lifting of the embargo on the export of a considerable range of goods to China is concerned, the U.S. lists have yet to be examined in detail here before they are presented to the 15 member-nations of the Consultative Group in Paris. In the meantime, it is likely that the Sino-British Trade Committee, which represents the five leading trade associations in this country, will put in hand arrangements for groups of British business men to visit Peking in accordance with

an agreement already reached with the Chinese Government without any dates being specified. The British Foreign Office has welcomed the American action, but has not been willing to commit itself further until full details of the proposals have been studied. Official reactions to the Egyptian statement on the Suez Canal are equally guarded, for the Minister of Transport has told members of the General Council of British Shipping who sought his views that it would have to be considered by the Security Council and by the Suez Canal Users' Association, and meantime, British shipowners should still avoid using the canal. The French and U.S. Governments have given similar advice to their shipowners, while the Norwegians and Swedes are avoiding it of their own volition without any official guidance. This solidarity of the major shipping countries may not last indefinitely, however, for the liner companies in particular are suffering losses in passenger traffic through having to go round the Cape.

Higher Capital Spending

Total fixed capital expenditure by manufacturing industry during the last quarter of 1956 was 17 percent higher than during the corresponding period of 1955. The Board of Trade Journal estimates that such expenditure during the whole of 1956 was 20 percent higher than during 1955, compared with an increase of 27 percent between 1954 and 1955. Building work showed the greatest increase (23 percent) compared with 1955, against a 13 percent rise between the previous two years. Expenditure on plant and machinery rose by 21 percent (compared with 20 percent) and that on vehicles by eight percent (29 percent). Expenditure by shipping companies is estimated to have been 30 percent higher during the fourth quarter of 1956 than during the corresponding period of 1955, and for the whole of 1956 to have been 12 percent higher than during 1955. Expenditure by the textile and clothing group was lower than during 1955 for the whole of the year, but all the other industry groups shown in the Board of Trade tables showed increases.

March Export Details

The detailed returns of the record March export total of £297 million show that chemicals played a major rôle. There was also a notable increase in steel products and exports of machinery, the growth of which has been less rapid since mid-1955. The recent improvement in exports of road vehicles and of textiles was maintained, and exports of all wool and textile products were particularly high. It is interesting to note some market changes relating to these products. The United States and not Australia is now the biggest market for motor-cars, taking almost twice as many as Australia and paying almost three times as much for them, and for woollens; while India is the biggest market for chemicals and machinery, including electrical machinery, apparatus and appliances, with Australia a close second. On the import side, oil shipments continued to rise and were only two percent lower than the monthly average for January-October, 1956 in volume, but the rise in prices and freights took the value to over £41 million, which was 30 percent higher. As a result of a one point decline to 110 in the import price index and an unchanged export index, also at 110 (1954=100), the terms of trade—the ratio of import to export prices—moved in Britain's favour during March. After three months at 101, the index fell to 100.

Industrial Relations

Lord Cameron's report on the recent dispute at the Ford subsidiary, Briggs Motor Bodies Ltd., has gone some way towards indicating the need for a new approach to employer-worker relations in British industry as a whole. In that 25,000-word document, which has inevitably aroused some resentment but even more widespread approval, he urged the employers to seek closer links with union leaders, improve consultation with workers and speed up remedying their grievances. On the other hand, the trade unions were advised to review the shop-steward set-up and consider if rules need changing to confine their powers. This report, however, deals with a specific dispute, so it is not surprising to learn that the Government is at least considering the possibilities of setting up an independent enquiry aimed at: (1) examining the machinery of negotiation and arbitration; and (2) seeking ways of relating wage rises to increased productivity. The Government is especially keen to break down the habit of confining talks to wages and to get away from the almost inevitable acrimony and distrust set up by the prevailing sequence of wage claim, strike threat or strike, talks, demands and counter-offers, and finally an obviously unsatisfactory compromise.

The whole question, of course, is a complex one, and the Government will, of necessity, have to move carefully. It will be essential to have the full co-operation of both sides if the enquiry is to achieve anything at all, while to secure that it will be necessary to make it absolutely clear that neither is committed so far as acceptance or rejection of the findings are concerned, and that ultimately only direct negotiations will regulate actual conditions. It might be useful in assisting these, however, to have at least a general pattern to which to conform. The last enquiry of this nature took place in 1916 by the Whitley Committee and its findings then still influence much of the negotiating machinery available to industry now.

Outlook for Steel

Not the least of the problems facing the steel industry, according to the annual report of the British Iron and Steel Federation for 1956, is that of the supply of raw materials. In addition, ade-

quate prices of steel will be essential if sufficient funds are to be secured from either internal or external sources to sustain the plans for capital expenditure. There was a record steel output of 20,690,000 tons last year; output this year is expected to exceed 22 million tons; capacity should rise to 24 million tons next year, and to 28 million tons by 1962. The supply of steel to the home market again rose in 1956. For sheets and some of the lighter products particularly affected by the Government's economic restraints, the pressure of demand slackened. For most other products, the demand remained intense throughout the year. There was a parallel change in the pattern of finished steel imports. The tonnage of sheet and tinplate imports fell as the year progressed; nearly two-thirds of the total finished steel imports were in the first six months. Imports of iron ore were greater than in any previous year, although there was strong competition for shipping space, and political disturbances reduced the flow of supplies from French North Africa. Imports of scrap iron and scrap, though still substantial, were lower than in 1955, mainly because of an increase in British pig iron production and the continuance of the policy of obtaining the maximum possible tonnage of scrap from home sources. During 1956, 10 more companies were sold to private enterprise. By the end of the year, three-quarters of the industry had been denationalised. Since then, the sale of other firms has brought the proportion of steel production denationalised up to 86 percent.

An Automation Pool

A national "clearing-house for know-how" in automation is to be set up soon, if the Councils of most of the 20 organisations, which took part in exploratory meetings last month, agree to their representatives' recommendations. Under the title, the British Conference on Automation and Computation, a central link will arrange liaison between interested bodies to foster progress in Britain, and present the British contribution in these fields internationally. The announcement of the proposed permanent conference was made by the three Institutions of Civil, Mechanical and Electrical Engineers last week. The Conference in essence will be a link between three groups of societies with close common fields of interest. If the governing bodies agree, the groups will be called together and other bodies can be invited to join later. The groups with their special fields and their proposed convenors and sponsors are: (a) Engineering applications of automation—convenor: Institution of Mechanical Engineers; sponsors: Institutions of Civil, Chemical, Electrical and Production Engineers; (b) Development and applications of computers, automatic controls and programming techniques—convenor: Institution of Electrical Engineers; sponsors: Institutes of Cost and Works Accountants, and of Physics, the Office Management Association and the Society of Instrument Technology; (c) Sociological and economic aspects of automation and computation procedures—convenor: British Institute of Management; sponsors: Industrial Welfare Society, the Institutes of Cost and Works Accountants and of Personnel Management, and the Institution of Production Engineers. Other bodies which took part in the exploratory meetings included the British Productivity Council, the National Institute of Industrial Psychology and the British Association for Commercial and Industrial Education.

Shipyards Still Doing Well

Despite the recent strike and some discrepancy between the returns of the Shipbuilding Conference and those of "Lloyds Register"—the former dealing with orders while the latter lays emphasis on construction—it is apparent that shipyards in Great Britain and Northern Ireland are still doing well, but that they are continuing to fall behind of the rest of the world. The British proportion of new ships laid down has dropped from 23 percent a year ago to 17 percent, and of ships launched to 28 percent to 18 percent. Japan continues to be the world's biggest shipbuilder. Orders for new merchant ships have continued to come into the first British shipyards at an increasing rate. In the first quarter of the year, 90 ships of 600,000 gross tons were ordered, of which about 30 percent was for the foreign account—the same proportion as for the orders booked in the year 1956. The total order book has risen further to 896 ships of 6,741,000 gross tons, valued at about £915 million. This compares with 822 ships of 5,300,000 gross tons at the end of March 1956, and gets close to the peak figure of 1,135 ships of just over seven million tons at which the order-book stood at the middle of 1952. On the other hand, "Lloyds Register", which estimates the strike loss of production at about 60,000 tons, shows that in British yards vessels under construction at the end of March totalled 348, of 2,086,262 tons gross, a decrease of 49,956 tons compared with the previous quarter. During the quarter, 75 ships of 298,563 tons gross were begun, 53 of 224,945 tons were launched, and 54 of 349,303 tons were completed.

Brevities

Car production in February at 47,640 was better than January's figure of 41,598, but was 20,941 down compared with output in the same month of 1956. Exports, at 28,400, compared with only 26,040 in February 1956. March figures show further improvement, output being 69,709 and exports 35,925—highest since April 1955.

Car insurance rates, it is expected, will go up by at least 12 percent as soon as petrol rationing ends to cover the higher cost of repairs and heavier liability on third party claims. It may also prove necessary to penalise the accident-prone driver more heavily, and make insurance prohibitive to the really "bad case" driver.

Bombay

TURNOVER SHRINKS IN COTTON FUTURES

CLOTH MARKET STEADY

(FROM OUR BOMBAY CORRESPONDENT)

THE volume of business in cotton futures has fallen by about 60 percent. Transactions now average around 6,000 bales a day and business seems to be of a squaring up nature. The Jarilla May contract has lost a little more than Rs. 45 a candy following the Forward Markets Commission's decision not to allow this contract to exceed Rs. 700 a candy. This was being quoted at Rs. 745 and has now fallen to Rs. 696. It is expected that the Jarilla May contract will move around this level because, according to the Forward Markets Commission's directive, the deposit on this will be raised to Rs. 200 a bale if the figure of Rs. 700 is exceeded. The Vijay June contract has fallen from Rs. 860 to Rs. 833 a candy. The Vijay April contract went off the board at Rs. 910. Total tenders amounted to 9,450 bales consisting of 3,400 bales of Laxmi A, 2,500 bales of Jaydhar B, and 1,550 bales of 320 F. There is great interest in imported growths, particularly East African, and the recently announced import quota has now been exhausted. The quota for Egyptian and Sudanese cottons is also likely to be finished within the near future although there is a tendency to wait because it is believed that prices for these varieties will fall still further. In this connection, the creation of a rupee account for the import of 20,000 bales of Egyptian cotton has been welcomed here. It is believed that import will be permitted on private account but the State Trading Corporation will be entitled to a commission of 1 percent.

Export Prospects for Cloth

The cotton textile market has remained steady. Calcutta, Delhi and Kanpur are the main centres to have shown interest. Enquiries have been concentrated on superfine qualities while the demand for fine and medium counts is described as being moderate. The export markets, however, continue to disappoint. Popular export varieties have fallen, 6 ples and 9 ples a yard respectively. Shippers believe that because of the lower price level now ruling, export demand may broaden over the next few days. The expected business from Burma has yet to materialise.

The weakest section is the cotton yarn market, which remains stagnant. Turnover is limited and prices show a tendency to fall. Reports that the Government would curtail the import quota for rayon yarn have not helped improve either the futures or the spot market. There is no buying support and the turnover is poor. The April delivery contract for 120 dull cones has dropped from Rs. 812 to Rs. 792 a case. The June contract has declined from Rs. 824 to Rs. 810 a case. Staple fibre yarn has done slightly better but the April contract has fallen from Rs. 619 to Rs. 612 in sympathy with rayon yarn. June delivery commands a premium of Rs. 2 a case. The April delivery contract for 150 Bright cones remains at Rs. 625 a case.

Oilseeds and Oil Erratic

The oilseed and oil market have moved somewhat erratically. While an upward tendency is noticeable, operators prefer to book profits fearing that the Government may intervene if prices remain at an artificially high level. The May castor contract opened at Rs. 180.75 and slowly moved up to Rs. 184.75 but the quotation has dropped on first but has fallen slightly now because the inflow of seeds from the growing areas is satisfactory. There have been no export enquiries for castor oil. Earlier reports that the Communist counter-revolution market has moved in sympathy with castor seeds. The May contract opened at Rs. 173.25 and has gone up to Rs. 175.25. West Bengal and Punjab traders are active while vanaspathi manufacturers here have lent support to groundnut oil. Despite this, the quotation has fallen to Rs. 172.12 towards the close.

Madras

RIGHTS SHARE ISSUES BY TEXTILE MILLS

IMPORT RESTRICTIONS HOLD UP

CAPACITY EXPANSION

(FROM OUR MADRAS CORRESPONDENT)

THE textile industry in the south is about to expand, if the offer of rights shares by some mills is an indication. To offset high labour charges, the mills are eager to attain productive efficiency by raising output. The investors, however, have not yet taken an optimistic view of the prospects. The recession in mill shares over the past fortnight is a pointer that not only the power-cut, but the outlook for lower dividends might further affect sentiment. Lower dividends, mainly due to higher taxation, are, of course, inevitable. The cut in Madras mills' dividend to 17½ percent heralded, for example, the season of reduced dividends for 1956. A mill chairman, Mr. R. E. Castell has said that higher commodity taxation has led to the contraction of demand. Capital import restrictions will hold up his mill's renewal and replacement programme. The demand for cloth is still increasing and the mill has decided to install 144 automatic looms but this programme is being held up due to restrictions on machinery imports.

The dismal outlook for cloth trade is reflected in the poor demand during the recent Muslim festival, as well as the failure of mofussil markets to indent on a large scale this year. On the other hand, establishment charges are high and unless turnover is increased, the closure of many shops is inevitable. The decline in the number of wholesale traders over recent years shows that decontrol has not helped restore profitable trading, and merchants, like mills, face the grim prospect of reduced income and increased establishment charges.

Improved Port Facilities

The improvements in the port of Madras this year have increased its handling capacity. The congestion of shipping berths has been alleviated by the installation of additional equipment. Traffic facilities may be increased by the Port Trust railway here. The loan from the World Bank is awaited, but it is clear that before ports like Mangalore are improved with Central assistance or the channel in the Palk Strait is widened, work in the existing ports will have to wait for the time being. The assumption of control over minor ports by the Union Government might mean that the Minor Ports Fund will be more economically used. The Rail Sea Co-ordination Committee has advocated more scope for coastal shipping. It has also pleaded for an increase in freights to help Indian shipping companies pay more attention to inter-port traffic. Mr. Lokur and his colleagues have preferred the diversion of long-distance traffic to the ports, in order to make full use of the investments undertaken by the Port Trusts in the face of increased demand for railway transport.

Ramanujam Institute

The anxiety that the Ramanujam Institute set up by Dr. R. M. Alagappa Chettiar, may close down has been dispelled by the Madras University's offer to take it over. The grant of the Union Government will help put the Institute in its feet and help from the Tata Institute of Fundamental Research will also enable it to mark out its own line of activity. It has been reported that before public appeals for running the Institute were made, the University had expressed willingness to take it over. The Institute's annual expenditure is placed around Rs. 22,000. The publication of the note books, compiled by Mr. Ramanujam, may help the Institute only nominally. The great mathematician's earlier works have been prepared for publication by the late Professor Hardy.

Electricity Board

Following other States, Madras is now ready to set up an Electricity Board. The Electricity Department, which generates and distributes 98 percent of the power, is now prepared to leave the administration of the Board to an independent body. The South Arcot Electricity Company is going to be taken over in June. However, generat-

ing capacity will increase only after the Kundah project is commissioned. The thermal plant in Neyveli may help increase generating capacity, but the difficulty is that licensees are unable to get motors and appliances even at high prices. Licensees hope that the Board will help distributing companies keep tariffs in line with the needs of consumers.

Trade Prospects

The Finance Minister's visit to Madras during the week-end led to an exhaustive review of the economic needs of the country. He gave an assurance that no project would be held up for lack of money, and that efforts would be made to secure capital goods from abroad. Imports of consumer goods will have to be limited due to the shortage of foreign exchange. Trade opportunities in south-east Asia as well as in the Middle East are growing; it is also believed that trade with Malaya can be substantially increased. The visit of the Sudanese trade delegation has created the impression that the Sudan may buy more in return for cotton sold to India. It may even look to India for the supply of capital goods in the future. Tobacco traders hope to explore new markets, while leather exporters think that useful trade with the Sudan, especially in raw hides and skins, could be developed—though this will mean the diversion of trade from Aden.

Prohibition Programme

The disclosure that Prohibition offences continue to increase in Madras explains the report that the Home Minister has instructed the police to enforce Prohibition more strictly. The problem in Madras is one of curbing illicit distillation in areas near the towns. The reconstitution of local boards may not help in this matter, as the police feel that vested interests have grown up. The last police administration report, which referred to the difficulties arising from the repeal of the Criminal Tribes Act, frankly indicated that public opinion is indifferent and bootleggers are not looked upon as criminals at large. The reorganisation of the districts may lead to a more vigorous enforcement. The proposal to appoint commissioners to supervise district collectors' work has not been dropped officially. Prohibition is, however, only nominally under the Board of Revenue, for the issue of licences for medicinal preparations is its main job. Official statistics suggest that illicit tapping is common; and except in the prosperous deltaic areas, the traffic in illicit liquor was increasing even last year. In the area nearest to the city, the number of offenders has increased and the city police have, therefore, started a vigorous drive.

Industry in Andhra

A review of State-owned industries in Andhra Pradesh is shortly to be undertaken. Though the Nizam Sugar Factory has done well, other State-owned enterprises have fared badly. The first object of the new Ministry is to find out why the investments have not produced a reasonable and regular return. It has decided to leave the new cement factories to the private sector. The Sugar Company K.C.P. has started operating its new plant in Guntur. The assurance that the Nagarjunasagar scheme will go according to plan, will help cement-makers in Andhra. The raising of output by the existing three cement factories is certain. Last month, the Andhra Cement Company issued ordinary capital for Rs. 20 lakhs to its shareholders at par. The Andhra Government hopes to start a shark liver oil factory in Vizagapatam. Whether the Centre should invest in the new industrial undertakings in Andhra is a new issue. Big paper plants cannot be set up without Central assistance. Expansion of the Singareni collieries, of which the Andhra Pradesh Government hold the bulk of the issued capital, might also be held up if Central aid is withheld. After the transfer of some State-owned enterprise to private management, industrial policy in Andhra is in a confusion. Road traffic is marked out for early nationalisation, but the Government's resources are limited. Experience in Madras is also a warning. Madras is unable to expand and improve, in spite of the rising revenue. The gold mines taken over in Mysore do not offer a parallel to the State enterprises operating in Hyderabad at present. The Andhra Government's proposals on the State mining of mica, the collection of a royalty and manganese or iron ore exports by itself are still in a tentative stage.

an airconditioner with better cooling capacity at lower running cost

Accaire
AW-101
ROOM AIRCONDITIONER

This vastly improved Accaire is amazingly quick in cooling the room. Its superior efficiency may be judged from its higher capacity to cool at a lower running cost. What's more, it is made by the pioneers of airconditioning in India.

OTHER ADVANTAGES INCLUDE:

- Choice of six delightful colours
- More silent operation
- Better service after sale
- One year's guarantee

RENEWED FIRMNESS IN STOCK MARKETS

SELECTIVE SUPPORT FOR INDUSTRIALS

London, 1st May. Stock markets immediately after the Easter holidays; but uncertainty developed later under the influence of the situation in Jordan and a number of disappointing preliminary statements from leading industrial concerns. A better tendency developed again after the week-end, but on balance most sections are lower. The outstanding exception was provided by gilt-edged securities as they advanced in response to renewed talk of an early reduction in Bank rate. The firmness of sterling was also a helpful factor. The upward movement was, however, halted by the appearance of another new issue of £111 million for the East Africa High Commission. Nevertheless, gains predominated on the week. Foreign bonds and rails attracted very little attention, but dollar stocks, particularly Canadians, advanced in response to the rise in transatlantic markets. Several disappointing preliminary statements from leading companies were responsible for some uncertainty in the industrial market prior to the week-end, so prices reacted following their earlier advance. Later, the market staged a recovery on selective buying, but small losses were recorded on balance. Among the disappointing statements were those of Associated Portland Cement, Babcock and Wilcox, Imperial Chemical and United Drapery. The share of all these companies lost ground subsequently. The publication of the Finance Bill had no effect on overseas issues, since it will take time to assess its effects. South African gold shares recorded on small selling but developed a steadier tendency towards the close. Tin shares reacted on the news that the U.S.A. had ceased buying for the stockpile while lead and zinc eased on the statement that the U.S. stockpile will cease buying zinc within a few months' time. Oil shares lost ground on the Middle East situation, but rallied later. A fair amount of profit-taking developed in rubbers after the recent advance, but selective buying continued and there were some irregular price movements on balance. Tea shares were

irregular but gains predominated. Dimbula, Lunuva and Tea Corporation were good features.

The Money Market

Credit conditions in the money market last week were not quite so difficult as before. However, money continued to be usable, especially during the first two days after the Easter holidays, but later conditions were more comfortable. The market was able to secure its requirements at a slightly cheaper cost, 3½ percent being the top rate for day-to-day accommodation and 3½ percent the minimum. The market made no change in its bids for last Friday's offer of Treasury bills on account of outside competition. There was a decline of approximately 6d percent in the average rate to £3 18s 3.43d percent.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: London gilts rallied on the lowest Treasury bills rate for two years. Industrials, which edged upwards to test the 1956 high may have some consolidation after the virtually uninterrupted rise of the past month. Despite excellent quarterly reports from younger mines, gold shares remain subdued awaiting a lead. Oils appear to be in an area of consolidation. The Wall Street pattern continues favourable with industrials at the highest for five months, but the recent sluggishness of rails reflects some short-term uncertainty. The London Stock Exchange has shown promising form. The first real Conservative Budget for many years has inspired the market people, giving relief where it is most deserved and will do most good. The consensus of opinion is that the markets will continue upward. Some shares look high enough for the time being, but the undertone is extremely good.

Activity on Wall Street

United States Government bonds held the trading spotlight on Wall Street last week. Long-term issues slumped sharply to the lowest level since mid-January, reflecting the uncertainty over the Treasury's refinancing plans and the expectations of continued tight conditions in the money market. The downward slide, however, was eventually halted, and prices recovered partially with some buying evidently attracted by favourable yields. High-grade corporate securities followed the trend of the Treasury list. Foreign bonds were mostly fractionally mixed in quiet dealings. Australians, German Nationals and Italians showed minor changes either way. German and Polish issues improved, while Serbs and Japanese Governments were a shade lower. Norwegians were unchanged.

Chile three percents were off slightly to finish the week at the year's low of \$44.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 24th April shows that the gold stock rose by \$1 million to \$22,318 million. Foreign deposits increased by \$28 million to \$388 million, and foreign investments increased by \$12 million to \$3,761 million. The Federal Reserve sold \$70 million worth of certificates held under repurchase agreements—the latter now standing at nil. Total discounts and advances fell by \$135 million to \$674 million, while the aggregate of excess reserves of member banks rose by \$2 million to \$244 million. The daily average of excess reserves of member banks were \$20 million higher at \$368 million, but their daily average borrowings fell by \$297 million to \$922 million. Business loans of the New York city banks fell by \$128 million to \$11,620 million.

New English Electric Stock

The issue of £9 million 5½ percent debenture stock, 1977-82 at £97 percent and 3,044,344 ordinary shares of £1 each at 50s a share has been announced by the English Electric Company, London. The object of the issue is to raise about £16 million in order to clear a group of bank overdrafts of £16,250,000 substantially, the company director, Mr. P. Horstfall, said. The official announcement stated that the new ordinary shares were being offered in the form of a rights issue to ordinary stockholders registered at the close of business on 8th April last in the proportion of one new ordinary share for every £5 nominal of ordinary stock then held. The holders of the company's debentures, preference or ordinary stocks registered on 8th April are being invited to subscribe to the debenture stock at £97 a £100 of stock.

Rubber Market Steady

Despite the rubber market's dullness during the short trading period after the Easter recess, values last week were held very steadily, with fluctuations few and small, in the absence of any important influencing factor. The increased U.S. consumption during March, compared with February, was about as expected and had no marked effect. Some U.K. factory interest was reported for the lower grades of sheet, but standard grades remained largely neglected. The steadiness was interrupted nearly the close when some easing occurred following increased cheaper offers from the East attributed to Singapore stocks at the end of March being larger than expected. In the final stages the Jordan developments reversed a decline as sellers adopted a little more reserved attitude. Buyers showed a more interest and some Continental orders for shipment parcels circulated. Values closed for the period about 1d a lb higher on balance. Uninteresting conditions continued in the sole crepe market. Small stocks on hand were ample for buyers' limited requirements, and no change was made in the quotations.

Restricted Trading in Oils

Trading in most vegetable oils started the week at a restricted pace although prices remained steady in most sections. On first-hand advice Indian castor oil retained a firm undertone but U.K. buying was less assertive. British East African castor oil was very sparingly offered and while the price was rarely placed much over £76 c.i.f. May-June, sellers were talking nearer £78. Coconut oil was generally repeated price-wise with North European interest in Straits bulk oil largely confined to Hamburg whence bids were emanating for float oil up to £91 c.i.f. without apparent success. This is due to the fact that most of the float oil was bound for Rotterdam. Copra was featureless with near shipments of Philippines slightly pressed for sale in order to fill early freight but buyers were not responding. Linseed oil was fully steady for near deliveries although interest was generally outpriced. Groundnut oil lacked support, while groundnuts turned easier, with the Nigerian Board £1 a ton cheaper at £73 c.i.f. May-July, but unable to compete with resellers and speculators. American cotton and soyabean oils were fractionally steadier, but buyers were reluctant to follow the rise due to the relatively cheap supply of oil in the Continent. Nigerian palm kernels encountered modest support with the Board claiming business in July-August shipments at £50½ c.i.f. but Sudanese cottonseed received further support from the United Kingdom crushers with the Sudanese Board quoting prices around £38 c.i.f.

World Shortage of Castor Oil Forecast

The Business and Defence Service Administration of the United States Commerce Department has predicted a possible world shortage of castor oil. The B.D.S.A. says that the world deficiency in the supply of castor oil may be as high as 25 million lbs in 1961. In the next four years, consumption of castor oil will be at a level of approximately 565 million lbs with supply at only 540 million lbs, based on the anticipated castor bean production.

General Electric Sales

General Electric's prospects for the remainder of 1957 are promising, and the year's sales, it is expected, will exceed last year's level by about 15 percent, declared the President of the company at the annual meeting. General Electric's 1956 sales were the largest in the company's history at \$4,090,015,685. He based his expectations on the U.S. economy continuing to perform, as predicted, with a 4 percent increase in the gross national product. He said the firm would spend \$185 million this year on new laboratory and manufacturing facilities. This, the second largest capital expenditure by the company, was exceeded only by last year's outlay of \$205 million.

Jute

PLANNING FOR BIGGER CROPS OF MESTA AND JUTE

REQUIREMENTS OF MILLS DISCUSSED

At the conference which was held recently in Calcutta, representatives of the Government and the jute industry, it is reported, discussed the proportions of jute and mesta which mills would prefer to be grown, and the percentages of the various grades considered desirable. The percentage of mesta used by mills varies very considerably but it is increasing. It is probable that they will want more mesta produced even at the risk of reducing the output of jute in some areas. Mesta has the advantage of being substantially cheaper to grow than jute, so mills can buy it more cheaply. Formerly it was cheap due to the fact that when ample jute was available, mills scorned the use of mesta because of its poor spinning qualities and the high rate of wastage in processing. When necessity forced them to use mesta, new techniques were developed to enable them to increase the percentage of such fibre used, to improve its spinning qualities by better preparation before spinning and to reduce the wastage in process. And, sotto voce, when Pakistan prohibited the growing of mesta, seeds of the best varieties were brought from East Bengal which enabled the area under mesta to be expanded rapidly and better quality plants to be grown. It is going to be difficult, however, to arrange for the growing of a specified percentage of mesta because it can be grown on a greater variety of terrain and climatic conditions than jute. The area under mesta is, therefore, more widely distributed but that has an advantage in that, while there may be a failure of the crop in one or more districts, it is unlikely that there would be a general failure. It has also another advantage in that it grows more quickly than jute so that, if rain comes late, it can still be sown and come to maturity before it has to be cut because of the rise in river levels.

As for grades, the conference had before it suggestions as to the percentages of the various grades required by the mills. It is not known what percentages were considered desirable nor is it known what proposals were made as to how these percentages were to be obtained. At one time, when there had been a particularly good crop of jute and high grades were almost unsaleable, a wag proposed that the Central Jute Committee should plan to grow a crop of Bottoms! Actually, except for a small percentage of specialties made by Indian mills, high grades are not required. If it is desired to produce high grades, all that is needed is to give the growers a substantial premium to compensate for the extra work and care required and, possibly, for the higher price of better seeds, for there are areas in India which can grow as good jute as any that ever came out of Pakistan. As far as the ordinary grades are concerned, anyone who peruses the daily quotations can see that Middles alone are generally available at a discount from the price in assortment, showing that the percentage of Middles turned out is greater than is required by the mills. To induce the growers to spend time and labour in turning out more Middles is, therefore, to mislead them, for they will then be producing something of which there is already too great a supply and that would further reduce the margin between Middles and Bottoms. Also, in the process of turning out more Middles, the standard of Bottoms would be raised and that would further reduce the demand for Middles. One can, of course, see the advantage to mills of producing higher quality jute at lower prices, but if, to do so, the growers have to spend more time and labour without getting any return, then it is not a kindness to them.

THE JUTE MARKETS

The dominating factor in all sections of the market has been the drought which, with the exception of a few areas, has continued throughout the week. This has produced a reserved attitude among holders of jute stocks who are adopting a waiting policy in the hope that, if the drought is prolonged, they will be able to sell at higher prices. The delay in sowing because of lack of rain is having its effect on the jute goods market also. It is a safe assumption that, if there had been timely sowing, there would have been heavy selling of gunnies in the fatka market as has been the case in recent years, but the lateness of the sowing has deterred the bears and has tended rather to produce a bullish feeling.

It must be a number of years since there was so little of the new crop sold by this time. Jute or three years by making early sales of the new crop at prices below those of the old crop. These sales of manufactured prices enabled the mills to effect the mills were, at the same time, protected against any fall in the price of the new crop jute which they purchased for forward delivery. Jute sellers, on the other hand, had no means of protecting themselves, and when unfavourable weather and other natural calamities came, they were caught and suffered heavy losses. Experience seems to have taught them a lesson for, apart from the fact

that few want to sell the new crop at all and that very little business has been done, some sellers are adopting the attitude that, instead of being expected to offer the new crop at a discount, they should get a premium for carrying the risk of adverse weather conditions and other factors which might cause the price of jute to rise. They also point out that the forward prices of most standard jute goods are higher than the prices for near delivery and they ask why they should sell new jute at a discount and carry the risk while the mill's sell gunnies forward at a premium and run no risk.

In the meantime, it looks as if conditions are developing which will discourage selling the new crop, but if there is any substantial rise in prices, there is little doubt that sellers will want to put some business on their books at the higher prices in the hope that the crop will ultimately turn out to be adequate and that they will reap a profit when prices fall. That does not, of course, prevent them from asking for a premium but the chances are that, if prices are high enough, they will sell at a discount to induce buyers to come into the market.

Manufactured Goods: It is reported that there has been very little overseas enquiry during the week and that, apart from specialties, there has been very little fresh business. Some shipper covering was reported and there was an unconfirmed report that certain mills had sold manufactured goods for deliveries up to the end of the year. The fluctuations in the fatka market have been within narrow limits, but on Tuesday afternoon, there was a sharp rise in the fatka quotations, said to be due to the issue of crop reports showing sowings much behind those of 1956.

On Wednesday morning, the market opened firm and quotations were as follows:

	Ready	May	June	July-Sept.
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	34.25	34.25	34.25	34.25
40in. 10oz.	42	42.25	42.37	42.56
B Twills	114	114.50	114.52	114.75
Heavy Ceers				
(Plain)	113	114.75	114.62	114.75
A Twills	138.50	138	138	138
Liverpools	127	128	128	128
Cotonsacks	113.81	114.75	115	115.75

Raw Jute: Mills have bought daily throughout the week and there has been quite a substantial turnover. Most groups have been in the market and buyers have met with a good deal of reserve on the part of sellers. Interest has been mainly in mesta which mills are finding attractive because it is so much cheaper than white jute or Tossa and Daissee. Mills are also using increasing percentages of mesta. Assam and Northern white jute was bought at Rs. 28.25 to Rs. 29.50 basis Bottoms and Assam Middles alone at Rs. 32. Mesta changed hands at Rs. 26.50 to Rs. 27 for Northern, Rs. 26.25 to Rs. 27 for Desal and Rs. 25 to Rs. 26 for Daissee. Mills continued to buy in the Cossipore market and there, too, their interest was mainly in mesta. There was, however, a fair amount of white jute done. Some mills were endeavouring to pick out parcels of real Northern jute and paying premiums for it but, actually, there is very little Northern jute in the Cossipore market and most of the jute is jungli baled under the names of well known places in north Bengal. In fact, much of the jute arriving from jungli areas in Bihar has the names of north Bengal stations on it when it arrives.

Arrivals in Cossipore totalled 447 wagons, compared with 476 wagons in the previous week.

Opening quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms.	Shipment.
Assam	30	May-June
Northern	30	"
Purnea Desal	29	"
Purnea Jungli	27.50	"
Daissee Jute	31.50	"
Murshidabad Tossa	31.50	"
Jungli Tossa	31	"
Northern Mesta	28	"
Desal Mesta	27.50	"
Daissee Mesta	26	One month
Jungli Mesta	24.50	May-June
Northern Jute		
ex Calcutta	29.50	One month
Local Packing	28.50	"
Bimili	25 F.A.Q.	May-June
Cuttings Pakistani	112.50 N.C.'s per bale	"

Mofussil: Imports are small but may be considered normal for the time of year, though there is a tendency to hold them back in areas where the drought still continues.

In the eastern districts of Upper Assam, towards Dibrugarh, there has been good rain and sowing is proceeding rapidly. Elsewhere there have been scattered showers, which have been heavy in some places. Where the rain has been sufficient, sowing is going on but over most of the jute districts the weather has been hot and dry, and it has not been possible to put down any seeds. In some places where sowing was done previously in expectation of rain, the seeds, it is reported, have been burned

up and where germination has taken place the seedlings are not in a good condition.

GUNNY SHIPMENTS IN MARCH

The following are the total net figures of manufactured jute goods shipped from Calcutta during the month of March 1957 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	3,030.5	32,415.9	35,446.4
Short Shipped	68.0	1,654.7	1,722.7
March 1957 (Net)	2,962.5	30,761.2	33,723.7
February 1957 (Net)	1,882.2	26,288.0	28,170.2
January 1957 (Net)	5,442.7	32,602.5	37,445.2
Gross			
Short Shipped	1,305.0	64.5	1,369.5
March 1957 (Net)	38,790.4	5,347.8	44,138.2
February 1957 (Net)	25,236.4	3,427.9	28,664.3
January 1957 (Net)	27,035.8	2,271.2	29,307.0

THE FOREIGN JUTE MARKETS

FIBRE PRICES HIGH

(FROM OUR DUNDEE CORRESPONDENT)

THE firm tendency in fibre prices during the past week has accumulated the uncertainty about the future. Whether consumers of jute goods are running down their stocks to low levels, or whether they are waiting for a fall in value is not exactly known, but there has been a prolonged spell of quiet trading. Large business was done in both yarns and cloth during the Suez crisis, and it may be that a good deal of stocks is still in the hands of the consumers, who can afford to hold off yet. That is certainly the case with some buyers of jute yarns, while the others are purchasing only enough to meet their immediate requirements. They buy just a few tons at a time and, unfortunately for spinners, there are too many sellers offering prompt delivery. Spinners in Dundee are showing little or no interest in old crop jute now, and they cannot get shippers' agents here to name rates for the new crop. Business could be done if reasonable prices were quoted, and, doubtless, the rates of £102 for Mill Firsts and £92 a ton for Mill Lightnings would be paid again for August-September shipment, c.i.f. U.K., if shippers were prepared to accept these, which they did about four or five weeks ago.

There seems to be no reason for raw jute rates being so high. The only inference is that the weather conditions are not very favourable for the new crop, and it is believed that it will be later this year than last. Mill Firsts are offered at from £115 and Mill Lightnings from £107, Mill Hearts from £103 and grade Hearts from £98, while good marks of Daissee-2/3 are available from £107 and grade at £104, and grade Tossa-2/3 from £114 and grade Tossa-4 from £108, all c.i.f. U.K., May-June shipment. An occasional sale of float or spot jute is reported, but generally speaking, Dundee spinners, it is thought, have bought practically all their needs for the season. Yarn prices are very firm, and spinners are still in a better position than manufacturers. Some of the latter are already cutting down their working to three days a week, while others are paying off their workers.

THE PAKISTANI JUTE MARKETS

FIBRE SUPPLIES IMPROVE: RAIN

IN JAT DISTRICTS

(FROM A NARAYANGANJ CORRESPONDENT)

DURING the past fortnight there has been a slight improvement in supplies, and jute has been available at approximately Rs. 30 for B Bottoms, Rs. 28 for C Bottoms and Rs. 26 for X Bottoms, with an 8 anna premium for bone-dry jute. The quantity remains limited. The percentage of moisture is high. Pucca bales, on the other hand, have increased in price. The quotations are at Rs. 195 for Export Firsts, Rs. 187 for Export Lightnings and Rs. 173 for Export Hearts. The jat districts of East Pakistan have had scattered showers, and latterly fairly heavy nor'westers have brought very welcome rain. On the whole, however, rainfall figures are well behind last year's and the position is that the jat area has now had sufficient rain for the lowland crop to proceed quite satisfactorily, and for sowings of the midland crop to be completed. Rains in the district areas, particularly around Faridpur and Khulna, have been fair, but more are required. In the northern areas, rainfall has been unsatisfactory, so the crop there may well be late. In general, it appears that the jat areas, from every point of view, will produce a satisfactory crop. It may be a little late, but there are indications already that sowings may be larger than last year. It is difficult to say anything about the other areas until the middle of May, but although there is some danger of the crops being retarded, one must remember that the jute plant is very sturdy, and it would take a very severe drought to do it any serious damage. It is noteworthy that the snows have melted early this year so that river levels are, if anything, slightly above normal. This means that the ground, at least for the chur land and lowland crops, will retain its moisture, and even though the land is dry on top, the growing of the crops will not be retarded. Because high prices prevail and because the lack of rains is not as serious as market gossip makes it out to be, there is no reason why next season's crop should not be every bit as large, if

PAINT IN PLANS AND PROJECTS

... to meet the varied, specialized and ever-increasing demands of India's new projects and industrial programmes, Shalimar Paint Products are formulated and manufactured to give long life and lasting protection, as well as technical and aesthetic satisfaction.

... That's because Shalimar Paint Products are backed by over 55 years of manufacturing experience in India.

Whatever the need, specify the purpose when you order **SHALIMAR PAINT PRODUCTS**

Write to P.B. 68, Calcutta-1, for the Shalimar Ready Reference leaflet which will introduce you to the complete range of our products.

not larger, than the present one even though it may begin to come in a little late. The delay, of course, may well cause prices to remain high in the beginning of the season until the full effect of the crop is felt.

Registrations for the first half of April stand at 172,846 bales, which is comparatively high. France, again, is the biggest buyer, followed by Germany. Russia has come in for the first time this season to buy 15,000 bales. If it buys more than usual, the market, which is already itching to put prices up, will undoubtedly react sharply. Business overseas is reported at better prices after the holidays, and there appears to be more interest in new crop at about £100 for August-September and £105 for June-July.

The Pakistan gunny market stands at Rs. 131 for B Twills and Rs. 56-8 for 45 in. 11 oz. The increase in sacking is due to a shortage of supplies in Karachi and a shortage of shipping space. Furthermore, it is expected that the Pakistan Government will shortly call for a tender of 20,000 bales of B Twills, in expectation of which the mills are reluctant to offer sacking overseas. Fair business is reported with South Africa in hessian at a small premium over Indian prices.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption reached more satisfactory levels in March. At an estimated 73 million yards, it was about 2 million yards higher than March a year ago, and brought the total for the first quarter of this year to within 1 million yards of the total for the same period last year. Burlap stocks in the U.S.A. for March, at an estimated total of 233 million yards, consisted of 123 million yards spots and 130 million yards afloats. Overall stocks declined 3 million yards during the month, but were 10 million yards higher than a year ago. Appearing below are two tables which include the March figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

U.S. Burlap Consumption (as reported to T.B.M.A.) (Million Yards)				U.S. Burlap Consumption (Estimated Industry Total) (Million Yards)

NEW ELECTRONIC INSTRUMENTS TO AID JUTE MANUFACTURE

Two instruments developed at the laboratories of the British Jute Trade Research Association in Dundee, Scotland, will be included in a display of new instruments at the Electronics and Automation Exhibition which opens in London on 7th May. The first is an electronic meter which measures the moisture content of textile packages, including jute, in a matter of seconds. A number of these meters are already in use in Dundee jute mills as aids to processing efficiency and control. The other device, also electronic, has been developed for measuring tension on running yarns. Its main advantage is that it is a self-contained portable instrument requiring no external power supply.

EXPORT OF KUTCHA JUTE BALES FROM PAKISTAN

The Pakistan Government has ordered that no jute shall be exported in kutcha bales except by the East Pakistan Jute Marketing Corporation from the border areas adjoining West Bengal, according to a notification in a Gazette of Pakistan Extraordinary dated 24th April, 1957.

PROMOTING EFFICIENCY IN STATE CONCERNS

NEED FOR CLEAR INCENTIVES

(Contributed)

THE Government of India's move to constitute an industrial management service to provide trained personnel for State industrial enterprises is welcome. It is a belated recognition of the fact that the management of industrial enterprises is very different from civil administration. By taking comparable units in the public and the private sectors, instances can be cited of the lower efficiency in the former. A number of enterprises which were started originally under the auspices of State Governments had to be entrusted to private managing agents and their performance under private management has been more satisfactory.

Of the many possible reasons for lower efficiency in the public sector, the most serious is probably the method of remuneration. Government servants have to be content with their salaries only and no distinction is made between the more and the less efficient. If at all, the recognition comes rather late when promotions to higher cadres are made. Here again, the weightage is given to seniority, and merit plays a less important part. On the other hand, in the private sector, most of the progressive undertakings have production bonus schemes, besides the basic salaries and wages, by which the efficient worker earns more than the inefficient. This serves as a powerful incentive. A number of schemes combine both quantity and quality in determining the final bonus payable, so as to keep an eye on the quality of the output. The general administrative departments and other service departments whose efforts cannot be directly connected with the output of the factory also share the bonus from a central bonus fund to which a fixed percentage of the are prepared for specific periods—generally annual bonuses earned by the different productive departments is contributed. Again, in private enterprises, merit is recognised more quickly and is more suitably rewarded either in the form of special increments or upgrading.

Thus the more successful operation of private industrial units has been made possible by a suitable system of pay-scales and payment by results. To promote efficiency in the public sector, it is imperative that the Central Government change its policy on pay scales and the methods of remuneration. The example of Singareni Collieries Ltd., a joint stock company managed by the former Hyderabad (now Andhra Pradesh) Government, is noteworthy.

The importance of the incentive bonus system as the most powerful factor in maintaining and promoting efficiency is obvious. With the Central and State Governments starting more and more giant enterprises, it is imperative that their efficiency be improved. It might become more difficult, if not impossible, to do this at a later stage. The second most important factor is to run public industrial units on strictly commercial lines. It might be advantageous to include in their boards of management leading business men, at least in the initial stages. There should be no interference in day-to-day administration. Periodical working and other reports should, however, be asked for.

Role of Cost Accountants

The statistician-cost accountant, otherwise termed "efficiency expert", has a very vital role to play. He should be constantly on the alert and report promptly all mis-happenings to the executives concerned so that corrective action can be immediately taken. Progressive industrial entrepreneurs have full-fledged costing-statistical departments which are vital to the organisation. In a large number of cases, departmental budgets—and consolidated into a master budget. These budgets give a detailed estimate of production, sales, profits, costs, and selling prices, etcetera. The statistical-costing department periodically compares the actual performance with the budgets, which are prepared on a suitable basis and are flexible. Thus, if there is a basic change in any of the items, it is revised and actuals are compared with the revised budget. Of course, suitable safeguards are necessary in framing the budget so as to avoid any secret reserve in the form of inflated cost estimates. The differences between the actual and the budget figures are most important from the point of view of the top management. There are various methods of analysing these differences according to the responsibility of each of the departmental officers.

The remuneration of the departmental manager should be related to the efficiency of his department as measured by these variances. This scheme of organisation is eminently suitable and can be fitted into the framework of the five year plans. It need not be confined to industrial undertakings only. A constant watch on the progress of the multi-purpose projects, each costing several crores of rupees, is necessary. The system of budgetary control outlined here can be conveniently and easily applied.

Some details of the proposed industrial management cadre are available. It is reported that merit alone and not seniority will be the criterion in determining promotions, etcetera. Even annual increments will not be automatic, but will be granted only if the performance of the officer is, in the opinion of the board of control, credit-worthy. This is good, but many practical difficulties are likely to arise. It is necessary to modify the rules so as to guarantee a minimum annual increment, but special increments should be given only on the basis of performance.

Calcutta Markets

LESS GENERAL DEMAND AT DUST TEA SALE

AT Sale No. 44, held on 30th April, Dust teas on offer were 18,325 chests. There was less general demand, and this, coupled with a decline in quality, resulted in lower rates for most descriptions. Black leaf types were in good demand and Middle Eastern buyers were operating fairly freely, but their prices, too, shared in the general decline. Teas from Assam, Dooars and Cachar were irregular, but were often 4 to 6 nP easier, while the grainy C.T.C. teas were up to 20 nP easier. Powdery C.T.C. Assams were, however, in more demand, and were sometimes dearer, particularly the very best.

Quotations		1957	1956
	Rs.		Rs.
Medium Dooars Dust	1.60 to 1.63	1 8 0 to 1 9 0	
Medium Assam Grainy Dust	1.65 to 1.70	1 9 6 to 1 10 6	
Medium Assam C.T.C. Dust	1.70	2 12 0 to 2 14 0	
Best Assam C.T.C. Dust	Not quoted.		

There was no internal leaf sale.

SLACK CONDITIONS IN FREIGHT MARKETS

SEASONAL slackness in the freight markets is fairly widespread, although last week there was some booking of grain from Australia to Karachi at 115s for May-June loading from Geelong. Far Eastern business was quiet with only one fixture noted in the Indian ore trade. This was from Madras or Vizagapatnam to North France at 123s via Suez. Whichever loading port is nominated, owners face a delay of 15 to 20 days in berthing, and this is, of course, reflected in the rate of freight. The American coal trade fluctuates narrowly around 65s while wheat from North Pacific to Bombay showed a decline at 145s for May loading. In the time charter section, an 8,850-ton motorship accepted 51s for six months' trading, and a Liberty type 42s 6d for the trip out to Bombay with delivery Rotterdam.

LINSEED EASIER

Although the undertone of the market has been fairly steady during the past week due to a scarcity of supplies, prices have declined to some extent following a fall in the price of linseed oil. Sellers have been rather reserved; despite a fairly good demand from crushers, the turnover has been small. In the oil section, shippers have been unwilling to pay enhanced rates because of an appreciable decline in overseas prices. There has been some small activity in ready goods, chiefly for shipment against previous sales. Latest quotations were as follows: Ready Rs. 22-10 a maund; April-May Rs. 22-8 a maund.

HIDES AND SKINS STEADY

The market was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 23rd April and 29th April, 1957)
Cowhides: Wet salted (Ord.) 4,000 pcs. on the basis of Rs. 0.61; Wet salted (Ord.) 45,000 pcs. on the basis of Rs. 7.12 to Rs. 9.25; Wet salted (Slaughtered) 21,000 pcs. on the basis of Rs. 12.50 to Rs. 21.

Goatskins: Wet salted (Daissee, Killed) 47,480 pcs. on the basis of Rs. 260 to Rs. 280; Rs. 310 to Rs. 350 and Rs. 370 to Rs. 385; Assam-Dinajpur-Murshidabad 14,200 pcs. on the basis of Rs. 270 to Rs. 350; Maldah-Purneah-Kissanganj 16,100 pcs. on the basis of Rs. 285 to Rs. 350; Patna-Pakur 1,000 pcs. on the basis of Rs. 260 to Rs. 270; Muzaffer-pore-Pakur 15,000 pcs. on the basis of Rs. 300 to Rs. 325.

Bazaar Stocks

(29th April, 1957)

Cowhides: Wet salted 2,12,500 pcs.
Goatskins: Wet salted (Daissee, Killed) 21,000 pcs.; Muzaffer-pore - Patna - Pakur - Purneah - Kissanganj 78,500 pcs.

SHELLAC STEADY

During the week ended 30th April, the market was quiet at the beginning and steady at close. The range of quotations was as follows:

Pure Buttonlac	Rs. 103. 100, 102 buyers.	105.50
Lemon No. 1 Shellac	Rs. 105.50, 105, buyers.	
Lemon No. 2 Shellac	Rs. 100, 97.50, 99 buyers.	
F. O. Std. 1 Shellac	Rs. 94, 92 buyers; 90 done buyers; 91 buyers.	
Pure TN Shellac	Rs. 89 buyers; 88, 87 basis done buyers; 87 buyers.	
4% I.T.N. Shellac	Rs. 79, 77.50, 78 buyers.	
No. 1 Kusmi Seedlac	Rs. 96, 95 buyers.	
No. 2 Kusmi Seedlac	Rs. 92, 90, 91, 90.50 buyers.	
Fine Bysaki Seedlac (Manbhum)	Rs. 89.50, 88 buyers.	
Fine Bysaki Seedlac (C.P.)	Rs. done; 88.50 buyers.	
Ordinary Bysaki Seedlac (C.P.) under 5%	Rs. 87, 84.50 buyers.	
Ordinary Bysaki Seedlac (C.P.)	Rs. 80.50, 79, 79.50 buyers.	
Seedlac (C.P.)	Rs. 75 buyers; 75 value, 75	
Kireelac	Rs. 32.50, 33 buyers.	

Shipments during April until 24th were 17,666 packages comprising shellac 10,841 packages, seedlac 5,289 packages, buttonlac 389 packages and others 1,147 packages.

COMPANY AND PUBLIC NOTICES

THE ASSAM MATCH COMPANY, LIMITED.

NOTICE.

NOTICE is hereby given that the Thirty-second Annual General Meeting of the Shareholders of the abovenamed Company will be held at the Registered Office of the Company at Indian Mercantile Chambers, Nicol Road, Ballard Estate, Bombay at 12.30 p.m. on Friday the 24th day of May, 1957 to transact the following business:

- To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1956.
- To declare a dividend and a bonus.
- To elect a Director in the place of Mr. Dinshaw D. Romer, who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution, of which special notice as required by section 281 of the Companies Act 1956 has been received by the Company:

"RESOLVED that Mr. Dinshaw D. Romer who has attained the age of 82 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit of 65 years prescribed by section 280 of the Companies Act 1956 shall not apply to him."

- To appoint Auditors for the ensuing year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 16th day of May, 1957 to the 25th day of May, 1957, both days inclusive.

By Order of the Board,
A. HYDARI,

Joint Managing Director.

18th April, 1957.

Indian Mercantile Chambers,
Nicol Road, Ballard Estate,
Bombay.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

The dividend and bonus when sanctioned will be payable at the Central Bank of India Ltd., Bombay and Calcutta on and after the 28th day of May, 1957 to those shareholders whose names stand on the Register on the 25th day of May, 1957 and warrants will be posted in due course to each shareholder at his registered address.

Explanatory Statement under Section 173 of the Companies Act, 1956.

Your Director Mr. Dinshaw D. Romer is retiring by rotation. He has attained the age of 82 years and as such he cannot be re-appointed unless the shareholders pass a resolution specifically declaring that the age limit prescribed under section 280 of the Companies Act 1956 shall not apply to him. The necessary special notice as required by Section 281 of the Act has been received by the Company proposing that Mr. Dinshaw D. Romer be re-appointed a Director of the Company and that the age limit of 65 years prescribed under section 280 of the Act shall not apply to him.

Mr. Romer is a well known Solicitor and Director of several companies. He joined your Board in April 1937 and has been the Chairman since 1939. He has rendered valuable services and it is in the interests of the Company that he should be re-appointed a Director.

By Order of the Board,
A. HYDARI,

Joint Managing Director.

GODFREY PHILIPS INDIA LIMITED

ORDINARY GENERAL MEETING

NOTICE is hereby given that the Twentieth Ordinary General Meeting of the members of the abovenamed Company will be held at the Registered Office of the Company at Chakala, Andheri, Bombay, on Friday, 31st May, 1957 at 4 o'clock in the afternoon, in order to transact the following business:—

- To receive and adopt the Directors' Report and Audited Accounts for the year ended 31st December, 1956.
- To declare dividends.
- To elect Directors in place of those retiring

(a) Mr. B. A. Bilimoria retires by rotation under Article 126 of the Company's Articles of Association. In addition he has attained the age of 65 years. Notice has been received by the Company and a resolution will be moved to the effect that he be re-appointed a Director of the Company and that the age limit shall not apply to him. Mr. B. A. Bilimoria has signified his willingness to stand for re-election. The following resolution will therefore be proposed as an Ordinary Resolution:—

"RESOLVED that Mr. B. A. Bilimoria who was born on the 6th day of February 1884 and has therefore attained the age of 65 years be and is hereby appointed a Director of the Company and that the age limit laid down in Section 280 of the Companies Act 1956 shall not apply to him."

(b) Mr. H. C. Brown retires by rotation under Article 126 of the Company's Articles of Association and being eligible offers himself for re-election.

- To appoint Auditors and fix their remuneration.
- The following resolution will be proposed as an Ordinary Resolution:—

"RESOLVED that the Company hereby accords its approval to the appointment of D. Macropolo & Company (Private) Limited as its Sole Distributors for India for a further period of one year ending on 30th June, 1958 on conditions stated in the Letter of Appointment.

- The following resolution will be proposed as a Special Resolution:—

"That the regulations set out in the printed document submitted to this Meeting and for the purpose of identification subscribed by the Joint Managing Directors be and the same are hereby adopted as the Articles of Association of the

Company in substitution for and to the exclusion of all existing Articles thereof."

EXPLANATORY STATEMENT

Messrs. D. Macropolo & Company (Private) Limited have acted as Sole Distributors of the Company's Brands since the commencement of their manufacture in India. The Letter of Appointment is available for inspection by any Shareholder at the Registered Office of the Company between 11 a.m. and 4 p.m. on any working day except Saturday.

EXPLANATORY STATEMENT

Your Directors consider that it is desirable in the best interests of the Company that it should possess a set of up-to-date Articles of Association reflecting the numerous changes in the law relating to companies which have taken place since the existing Articles of your Company were framed in 1946. The new Articles now presented to you for adoption have accordingly been drawn up to conform to the present state of the law and a copy is available for inspection by any shareholder at the Registered Office of the Company between 11 a.m. and 4 p.m. on any working day except Saturday.

Any member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

The Share Transfer Register will be closed from 25th May to 31st May, 1957, both days inclusive.

By Order of the Board,

D. K. MITRA,
Secretary.

Bombay, 1st May, 1957.

MAHINDRA & MAHINDRA LIMITED

NOTICE

THE Eleventh Annual General Meeting of the Shareholders of Mahindra & Mahindra Ltd. will be held at the Green's Hotel, Apollo Bunder, Bombay 1, on Wednesday, 22nd May, 1957 at 4.00 p.m. to transact the following business:—

- To receive and adopt the Directors' Report, the audited balance-sheet and profit and loss account for the year ended 31st October, 1956.
- To declare dividend on Preference and Ordinary Shares.
- To appoint a Director in place of Mr. A. K. Mitra who retires under Article 110 of the Articles of Association but is eligible for re-election.
- To appoint a Director in place of

ALLIANCE JUTE MILLS COMPANY, LIMITED.

NOTICE is hereby given that the One Hundred and Twenty-third Annual General Meeting of the Members of ALLIANCE JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Friday, the 31st day of May, 1957, at 3 o'clock in the afternoon for the following purposes:—

- To receive and consider the Profit and Loss Account for the half-year ended 30th June, 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
- To declare a dividend on the Preference Shares.
- To appoint a Director in place of Mr. G. L. Bangur, the Director retiring by rotation at the Meeting, who, being eligible, offers himself for re-appointment.
- To appoint Auditors and fix their remuneration.

As Special Business.

To consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

- That the requirements of Articles 82, 83, 87, 121, 175, 179 and 180 of the Articles of Association of the Company be not complied with in respect of the half-year ended the 31st December, 1955.
- That the Articles of Association of the Company be altered in manner following:—
 - Articles 82 and 83 shall be deleted and the following new Article substituted therefor:—

82. In addition to any other Meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors. Such General Meetings shall be called "Annual General Meetings" and shall be specified as such in the notice convening the meeting. All other Meetings of the Company shall be called "Extraordinary General Meetings."
 - Article 87 shall be deleted and the following new Article substituted therefor:—

87. The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring by rotation, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business.
 - In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor.
 - Article 175 shall be deleted and the following new Article substituted therefor:—

175. At every Annual General Meeting the Directors shall lay before the Company a Balance Sheet and a Profit and Loss Account made up in accordance with the provisions of Section 210 of the Companies Act 1956, and such Balance Sheet and Profit and Loss Account shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the said Act, so far as they are applicable to the Company but, save as aforesaid, the Directors shall not be bound to disclose greater details of the results or extent of the trading and transactions of the Company than they may deem expedient.
 - In Article 179, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.
 - In Article 180, lines 1 and 2, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing, shall be deleted and the words "Annual General" substituted therefor.

and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 6th May, 1957.

Note:

Payment of the proposed dividend, if declared, will be made on or after 7th June, 1957, only to those members whose names are registered in the Books of the Company as holders of the Preference Shares on 31st May, 1957, or to their Mandatees. Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT IN RESPECT OF SPECIAL BUSINESS.

In order to comply with the Articles of Association of the Company, the Company's Accounts have been closed and audited half-yearly and a Profit & Loss Account in respect of each half-yearly period ending on the 30th June and the 31st December in each year and the Balance Sheet as at each date, have been laid before the Company in General Meetings held twice in every calendar year.

Under the provisions of the Companies Act, 1956, each such half-yearly period has to be regarded as a "financial year" and as a result, the usual half-yearly General Meetings will each be deemed to be an "Annual General Meeting" within the meaning of the Act, thus resulting in two "Annual General Meetings" in each calendar year. Having regard to the obligations imposed on a Company by the Act in respect of every Annual General Meeting, viz. retirement of Directors by rotation, appointment of auditors, and filing of an Annual Return, etc., and the work and expense attending the preparation of the Accounts to be laid before members in conformity with the provisions of the Act, your Directors recommend that the Articles of Association of the Company be amended to provide that the Company's Accounts be closed and audited annually and laid before the Company at an Annual General Meeting in each calendar year. The proposed amendments are set out in Resolution 6 of the convening notice. In respect of the half-year ended the 31st December 1955, it is proposed that the accounts be not separately prepared and laid before members but that they be embodied in consolidated accounts for the period commencing on the 1st July, 1955. Special Resolution 5 in the convening notice suffices to effect this proposal. If Special Resolutions 5 and 6 are passed, the accounts of the Company will be closed on a date subsequent to the 31st December, 1956, of which Members will be advised later, which hereafter will be the closing date of each financial year of the Company.

The foregoing changes will not result in any financial benefit either to the Directors or to the Managing Agents of the Company, and interim dividends may, subject to trading results in a current financial year be declared by the Directors under Article 161.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED (INCORPORATED IN ENGLAND)

NOTICE is hereby given that the Board of Directors of this Company have declared payment of a Dividend on the Company's Preference Stock at the rate of £1-1-10½ per cent net for the three months ended 31st March, 1957. Payment will be made on 15th May, 1957 to those stockholders whose names are registered in the Company's Stock Register on 8th May, 1957.

Applications for transfers received in this office before 2 P.M. on Wednesday, the 8th May, 1957, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

By Order of the Board,
I. A. MACPHERSON,
Agent.

Victoria House,
Calcutta, 25th April, 1957.

TEZPORE TEA COMPANY LIMITED NOTICE

THE Directors have declared on 25th April, 1957 a Dividend at the rate of 8% per annum, without any deduction for Income-Tax paid by the Company, payable on the Cumulative Preference Shares for the year 1956.

Dividend Warrants will be despatched to the registered addresses of, or in accordance with the instructions received from, those Members whose names appear in the Company's Register on the 28th May, 1957. The Transfer Register will be closed from the 20th May, 1957 to 28th May, 1957, both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.,
Managing Agents.

26th April, 1957.

GUEST, KEEN, WILLIAMS, LIMITED**NOTICE**

THE Twenty-seventh Annual General Meeting of the Shareholders of Guest, Keen, Williams, Limited will be held at the premises of the Bengal Chamber of Commerce and Industry, Royal Exchange, Calcutta-1, on Wednesday, 29th May, 1957, at 11 a.m. to transact the following business:—

- To adopt the Directors' Report and the Audited Accounts for the 52 weeks ended 28th December, 1956.
- To declare a Dividend.
- To elect Directors.
- To appoint Auditors and fix their remuneration.
- As special business to consider and if thought fit to pass the following resolution, namely:—

"That the Books, Registers and other documents required to be maintained by the Company and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 144, 163, 196, 301, 302, 304, 307, 352 and 372 of the said Act, shall be available for inspection at the Registered Office of the Company by the persons entitled thereto to the extent and in the manner and on payment of the requisite fees, if any, specified in the aforesaid provisions, between the hours of 10 a.m. and 12 noon on each business day. Provided, however, that the Register required to be maintained under Section 307 of the Act shall be open for inspection of the members or holders of debentures of the Company between the times aforesaid only during the period prescribed by Sub-section 5(a) of Section 307."

The Register of Members of the Company will be closed from the 8th May, 1957 to the 29th May, 1957, both days inclusive.

By Order of the Board,
W. MORRICE,
Director & Secretary.

Calcutta, 1st May, 1957.

NOTE—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the Meeting.

EXPLANATORY STATEMENT REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956

Item No. 5. With reference to the resolution relating to inspection of Books, Registers and other documents referred to in the above notice, the Companies Act, 1956, provides that the Company may impose reasonable restrictions on such inspection but so that not less than two hours in each day are allowed for inspection, and the resolution is being moved accordingly.

2½ U.P. Zemindary Abolition Compensation Bond (per Rs. 100) 39/25*				

These notes refer to the Debentures on the next page.

(a) Option to repay at par on 6 months' notice—
(i) after 1 year from date of issue.
(b) at any time.
(c) on or after 1-1-61.
(d) on or after 14-11-53.

(e) Option to repay on 6 months' notice—
(i) at any time after 30-6-61 at 101/100.
(ii) at 101/100 % between 1-1-60 & 31-12-64.
(iii) at 102/80 % after 30-6-68 but before 30-6-64.
(iv) on or after 31st July 1960 at Rs. 102/80 % or at par on or after 31st July 1965.

(f) Option to repay on 3 months' notice—
(i) at any time at 3% Premium.
(ii) at 1% Prem. after 1-2-54 but before 1-2-57 and 1% Prem. on or after 1-2-57.

BANKS

H indicates that Share capital is half paid. O, C. and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE IRRATIONAL AIMS OF LABOUR POLICY

EFFECTS OF RETRENCHMENT COMPENSATION ORDINANCE ON INDUSTRIAL EFFICIENCY

NEW industrialists can afford to contemplate with equanimity a disturbing new trend which has become evident in the Government of India's labour policy. The most important indication of this trend is the ordinance issued a few days ago under which retrenchment compensation has to be paid to the workers of a concern even when its closure has been *bona fide* or when its ownership has been transferred from one employer to another. The ordinance has been given retrospective effect from 1st December, 1956, and has been issued because some industrial undertakings have been closed down during the past few months, especially in Ahmedabad, Kanpur and West Bengal. The official Press Note, while referring to these developments and outlining the terms of the ordinance, follows a neat principle of modern propaganda by quietly glossing over the reasons for the closures—the one point on which the justification or otherwise of the ordinance may be said to hinge. It merely states that a number of undertakings “have closed down or put up notices of closure for one reason or another”. But this evasiveness cannot conceal the drastic decision to shut has been taken for only one reason—that they have been suffering heavy losses, and no improvement in working conditions is expected in the foreseeable future. Why these losses have been incurred, and why the undertakings have become uneconomic, are points which the Government has not stopped to consider. Yet, they are crucial to the whole problem, and on a longer view, to the future of Indian industry generally.

conditions become adverse, whether because of poor demand, taxation or the high price of raw materials, the number of casualties steadily increases.

The Government seems for a long time to have taken the view that remuneration to labour should be related not to the capacity of an industry to pay, but to vague and arbitrary notions of what is "fair." This is a view which many labour tribunals have shared and sought to put into practice, regardless of the ultimate consequences. Not a few of the jute industry's present difficulties, of which mill closures are the latest prominent symptom, spring from the fact that costs have risen because of such measures as the Omnibus Jute Tribunal Award of 1955 and the increase in employees' provident fund contributions proposed subsequently. An outstanding example of irrational decisions was reported from south India, when a tribunal awarded new concessions to plantation labour, which would have caused a large number of estates simply to stop working; the less burdensome compromise between employers and workers which was later reached indicated how far out of touch with reality the tribunal had strayed. The coal industry has suffered from a similar type of thinking.

The Government's labour policy has hitherto consisted of stumbling along from one expedient to the next, but it seems the stage may have been reached where it is necessary to bring into it a certain realism and consistency. Few enlightened employers would deny that as an industry prospers, its workers should share in that prosperity. But this does not mean that temporary booms, such as tea enjoyed in 1954 or cotton textiles during the early months of last year, should be taken as justification for large and permanent increases in labour costs. The reasons for prosperity, as well as the development needs of the industry concern-

PROBLEMS FOR THE RADCLIFFE PROBE

THE members of the Radcliffe Committee have just been named in London, and they will now be beginning their work. The Committee is the one whose appointment was announced by the Chancellor of the Exchequer in his Budget speech, and its task is to investigate the working of the monetary system. Aided by the information on techniques which the Committee will provide, Chancellors of the Exchequer will be able to control the economy more effectively than it has been controlled in former years. It may be said that the mistakes of policy that have been apparent in the past generation cast doubt on such investigations, for the Macmillan Committee appointed late

in 1929 had a similar task and published—29 months later—a profound report on the whole subject. But the Macmillan Committee was concerned with problems of deflation, whereas the background of the Radcliffe Committee's investigations is inflation. In any case, by the end of the war the monetary mechanism itself, as well as the circumstances in which it operated, had changed; hence the need for a new investigation relevant to current affairs.

The mill closures which have already taken place, and a number which are yet to take place, indicate that the structure of industrial costs has become too rigid for the competitive market conditions of today. Expenditure on labour has been rising steadily for many years. Welfare legislation for the employees of organised industry, and the manner in which industrial tribunals have tended to interpret it, have put on manufacturers a burden which is becoming increasingly difficult, sometimes impossible, to bear. Units which are less advantageously placed have been suffering heavy losses, and are therefore gradually closing down. In a number of industries, the effect of high labour costs does not show so prominently, either because unsatisfied demand allows adequate profit margins or because other items of cost, such as raw materials, have remained relatively inexpensive. But, as the experience of the cotton textile and jute industries now shows, none of these favourable factors can be taken for granted. When

direct controls which most financial opinion prefers in principle are reliable enough to be used instead, and, if so, which of the indirect controls are the most effective.

Perhaps the least known factor is the rate of interest. Expert opinion is at present sharply divided on the question whether high interest rates have played a major part in the recovery of Britain's finances in the past year or two. The evidence would be clearer if interest rates had been allowed to work alone—though no one suggests that the authorities should have relied on this instrument entirely. In fact, a few months after Bank rate had been brought into active use in 1955, the banks were directed to restrict, selectively, their advances to customers. How much the subsequent restriction of credit is attributable to reduction of demand caused by the rise in interest rates, how much to the banks' obligatory rejection of requests for advances, is not apparent; but the investigators will probably be able to get some useful information on this matter from the banks. Interest rates themselves form a complex structure. The Committee may find that this structure is not now properly adapted to modern needs. The traditional relation between Bank rate on the one hand, and the Treasury bill rate (and, therefore, market rates of discount generally) and the rates charged by the banks for overdrafts on the other, is, perhaps, an impediment to the working of the short-term monetary mechanism.

A related problem is the Treasury's management of the national debt, which, in turn, affects the banks' liquidity. It is generally believed in the City of London that the Government has stimulated inflation by financing its current deficits by means of Treasury bills, which become a part of the liquid base on which (since bank credit does not follow the principles of structural engineering!) a superstructure of longer-term loans can be built. It is possible that the Committee will report that this potential inflation has been controlled by the directives that restrict the banks' lending. The implication, then, would be that the Treasury must always be ready to impose this direct control of lending unless it is able and willing to finance more of its borrowing by means of long-dated stock. This proposition raises, however, the fundamental question—a question that is outside of the Committee's terms of reference. Can any monetary system be firm and healthy while the Government is persistently borrowing? Which raises another question: is this investigation itself really necessary, when the techniques which are being investigated are those used to control an inflation that should not have been generated in the first place?

Financial opinion in London is too realistic to give a negative reply to the latter question. The elements of inflation exist, and they seem to be active again. The Government is still over-spending and over-taxing, and it is only sensible to find the best means of moderating the effects of these evils. But financial opinion is equally certain that the Committee's recommendations must not be used as an excuse for making no changes in policy. Meantime, the authorities have no clear preference for any particular method of control, and, indeed, seem reluctant to apply consistently any control at all. The Budget did not apply the recognised deflationary instrument, an overall surplus. Interest rates have lately tended downward, the banks' lending is increasing—even, it seems, with official approval. It will be unfortunate if the Radcliffe Committee is used as an excuse not merely to continue wrong policies but also to put in abeyance the techniques of control that have worked, however imperfectly, in the past two years.

COAL POLICY IN INDIA

By

Andrew Farquhar

This booklet consists of reprints of articles written by Mr. Andrew Farquhar, former Coal Adviser to the Tata Iron and Steel Co. Ltd., which have appeared in *Capital* in recent years. As expert analyses of India's coal problems and policies, they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

Calcutta 1.

INCREASING PRODUCTION OF NON-FERROUS METALS

THE production of non-ferrous metals has increased, notably in the case of such items as copper, lead and antimony. Only aluminium output has fallen compared with the level of 1955, because of a prolonged labour dispute. Since imports of virgin metals have also been higher, demand for non-ferrous metals has clearly risen. Inaugurating the annual meeting of the Indian Non-Ferrous Metal Manufacturers Association in Calcutta on Friday, Mr. Manubhai Shah, Union Minister for Industries, said that the Government is taking a keen interest in the development of the industry, and a Development Council for Non-Ferrous Metals has been set up. Mr. P. R. Kamani, president of the Association, recalled that the progress of the industry during the first plan has been "credible." There has been an all-round increase in production capacity, and it will increase further during the second plan. Prospecting operations for copper are going on, although their success is still uncertain. Bigger supplies of copper are needed, since total annual requirements are over 35,000 tons while production amounts to about 7,000 tons. Mr. Kamani, therefore, urges the Government to start prospecting in the Khetri mines in Rajasthan. The proposal for establishing an electrolytic copper refinery, he thinks, would provide a valuable adjunct to the electrical industry. But it is desirable that such a refinery should not compete with alloy-makers. Electrolytic copper refineries have been built in Germany and Italy in spite of the fact that these countries have inadequate domestic resources of copper.

The aluminium manufacturing units are increasing their production capacity. The Aluminium Corporation, for example, has plans to raise its production three-fold. The capacity of the industry will go up sharply when the Hirakud smelter of the Indian Aluminium Company is commissioned. It is hoped to produce about 8,000 tons of lead by 1960, and if the power supply is adequate, about 12,000 tons of zinc a year. In spite of all this, various virgin metals and metal scrap will still have to be imported. Mr. Kamani thinks that the growth of the non-ferrous metals industry has been helped by the liberal import policy of the Government. But he stresses the need to maintain an adequate stockpile of metals. The Government, however, has little assurance to offer on this point; as Mr. Shah says, whether India can continue to keep virgin metals on the O.G.L. depends on the foreign exchange position. But he appreciates that as non-ferrous metals are basic materials, the Government will have to be as liberal as possible in allowing imports; otherwise consuming industries might not be able to undertake the expansion programmes on account of the shortage of raw materials. Mr. Kamani refers to the problem of idle capacity which exists in the case of brass and copper sheets, zinc and lead sheets, lead pipes, copper and yellow metal rods, and copper and yellow metal wires. "While the import policy has generally been very helpful to these and has assisted the utilisation of indigenous capacity, I will add that there would seem to be no necessity to import items as brass rods, bronze rods, brass and bronze wires, aluminium foils, phosphor copper, phosphor tin in nickel alloys in castings, zinc up to 18 gauge, phosphor bronze sheets up to 30 gauge, soft, hard and cored solder, etcetera." Mr. Kamani suggests that in framing its stores purchase policy, the Government should take into account the components which can be manufactured in India.

CURRENT COIN

Raw Materials for Paper.—In his address from the chair to the Indian Paper Makers Association last week (reported at length on another page), Mr. P. H. Sykes has emphasised the raw material problem which the expanding paper industry will have to face in the future. Consumption has been increasing in line with the Planning Commission's estimates, and Mr. Sykes thinks that the targets of production fixed in the second plan are realistic. But it is difficult to be certain how things will go in the third and fourth plans. This uncertainty arises not because of any doubt about the demand prospects, but because raw material resources are inadequate and have to be shared with a number of other consumers, such as village industries. "When one thinks of the vast potential business in the wrapping and packaging trade alone," Mr. Sykes says, "the fringe of which has barely been touched, one can well believe, assuming that industrialisation continues at the same tempo and that education is on the increase, that demand and consumption will continue to climb for a long time yet, but what is going to be worrying is the raw material position in, say, ten years' time." Unless a big planting programme is initiated very soon, the industry will tend to "run out of bamboo." So, in the meantime, it should exploit "to the full the possibilities of bagasse, reeds, grasses and various

types of wood." The Government's suggestion to rely on waste material for pulp manufacture might mean that "the national (railways, etcetera) and other industrial demands for certain types of woods and the commercial demand for bamboo may continue to receive preference over our demand for timber and bamboo for paper-making purposes." The mills situated in bamboo-growing regions are able to get what they need, but eventually the shortage might affect them also unless large-scale planting is undertaken now. Those who have to obtain supplies from the States other than where they are located face a worse prospect. The continuity of existing leases has been guaranteed, but they can no longer obtain new long-term leases. They can put up new pulp-making units in States where the raw materials can be found, but that might be a waste of money compared with an expansion of their existing pulp-making units. Furthermore, the shortage of raw materials means that new paper mills cannot be set up in the States which do not produce these materials. The obvious remedy, to Mr. Sykes's mind, lies in breaking away from the present system of integrated paper-pulp making units, and making pulp-making an altogether new industry, "situated where the raw material grows." This will not only enable separate paper-making units to be established near the paper markets, but "it would also encourage the exploitation of remote areas and would lay the foundation of an export business."

Scope for Sugar Exports.—Sugar had to be imported to relieve domestic shortages only three years ago. There has been a heartening reversal of the position since and there is now a surplus. Total production was 1,589,000 tons in 1954-55 and 1,856,000 tons in 1955-56; it is estimated to reach 2,020,000 tons during 1956-57. In addition to this record output, there is a carry-over of well over 500,000 tons. Referring to this remarkable increase in supplies, Mr. C. R. Srinivasan, chairman, has said at the annual general meeting of the East India Distillers and Sugar Factories Ltd. (reported more fully on a later page) that new sugar mills are being started while the crushing capacity of several old ones is being expanded. Domestic consumption of sugar is estimated at 1,900,000 tons at present and it is expected to increase to 2,250,000 tons (as against a total production of 2.5 million tons) at the end of the second plan period. "If sugar economy is to be protected, obviously, apart from expanding internal consumption, a regular outlet by way of export has to be created, developed and maintained. By good luck, we have made a promising beginning and if only the Government will take note of the export potential and the need to build it up in all possible ways, I believe the sugar industry, apart from safeguarding its own economy, is destined also to play an important part in the balance of payments position of the country." The importance of sugar exports cannot be underestimated while foreign exchange is scarce. The Government, Mr. Srinivasan says, is ready to release stocks for export and it has no idea of imposing any rigid limit. But it will be necessary to see that exports do not create a shortage of sugar, leading to a rise in prices. The sugar industry has developed an export market partly because of fortuitous circumstances; the closure of the Suez Canal created a shortage in the Middle East, which gave an opportunity to producers here to export at remunerative prices. At present, these exports are being handled by the Indian Sugar Mills Association. So far, orders amounting to about 86,550 tons have been booked and shipments have commenced in accordance with an agreed schedule.

Satisfactory Year for Punjab National.—Among the economic trends which have special relevance for banking activity, that towards tighter money is the most striking. In his address at the annual general meeting of the Punjab National Bank, Mr. S. P. Jain (whose speech is reported more fully elsewhere in this issue) says that India, like the U.K., should realise that a policy of making money dearer in order to curb inflation has had no significant effect. He welcomes the liberalisation of the terms of the bill market scheme and the revival of open market purchases of securities by the Reserve Bank, but warns that new money is not being attracted to the banks from small investors and the mofussil areas. Referring to the foreign exchange shortage, Mr. Jain points out that the system of deferred payment for capital goods, though costly, functions as a screening process, in so far as projects which are not adequately remunerative will not be implemented immediately. As for the investment outlook, not everyone will share his optimism that because industries are making reasonable profits, savings and investment will revive and the share market will improve once the uncertainties about the forthcoming Budget are out of the way. Mr. Jain pleads for the extension of effective credit to agriculturists, tapping of rural savings through the extension of commercial banking activity in the rural areas, bolder and more positive operations by industrial

finance institutions and the removal of uncertainties about the Government's economic policy. The Finance Minister, he believes, should evolve a policy which would induce people to part with their gold, even if that involves the Government in buying the metal at a premium over the world price. For the Punjab National Bank, the past year has been one of considerable progress, with profits, deposits, advances and foreign exchange business reaching new high levels.

Prospects for Tea.—The tea industry has had a fair year in 1956. There has been no burdensome surplus, thanks to the crop regulation scheme, and exports have increased by as much as 43 percent over the 1955 figure. Export earnings total Rs. 26 crores more. Discussing this, Rai Saheb H. B. Kanoi, president of the Tea Association of India, says that 1956 exports have exceeded even those of 1954 by 14 percent, and are "an all-time record." Such factors as Russian buying and increased imports by Egypt, (which could not buy from Ceylon due to foreign exchange difficulties) have helped. "One of the main factors contributing to the improvement in tea prices," the Rai Saheb adds, "was the crop regulation scheme which helped north Indian planters to improve the quality and cut the quantity, the season ending with a total of 536 million lbs only." During the year, Pakistan has increased her exports by 2 million lbs, but Ceylon has exported 5 million lbs less and Indonesia 4 million lbs less. Referring to the negotiations for reviving the International Tea Agreement, he says that there was a time when "the Agreement had a great influence on the tea industry the world over, and it was welcome to India as the production and absorption was to be kept under close study and control through this machinery." But conditions have changed since. East Africa is expanding her acreage rapidly, and her production costs are lower because labour is cheap there. Thus, under the present conditions, if the Agreement is to be effective and if it is to be of any use to India, it should cover all producing nations. Otherwise, it might actually harm India's interests, as those outside it will gain markets at her expense. Rai Saheb Kanoi points to some of the difficulties which are hampering Indian tea exports, the main one being high taxation. The industry is "subject to large-scale taxes which are not only heavy but also multi-point." The export duty, in particular, is not only reducing the industry's competitive strength, but is practically eating away the exporter's profits. The levy varies so often that it proves "irritating to overseas buyers as they alter their buying programme whenever the duty is increased in India." They then prefer to purchase teas from alternative sources. It also undermines the producers' financial strength. It does so particularly at the present time when their liquid resources are over-strained.

Handloom Development in Andhra.—Andhra Pradesh has few large-scale industries, but it possesses a large variety of cottage industries, among which handlooms are the most important. The latter number more than 450,000, and a large percentage of the population depends on them for a living. It is not surprising, therefore, that successive Governments of the State have devoted particular attention to the promotion of handlooms and the welfare of the weavers. At present, the State has three sales emporia, one each in Delhi, Madras and Bombay. It is proposed to open a fourth one in Calcutta so as to promote the marketing of handloom products. The total amount provided in the second plan for the development of industries in Andhra is Rs. 250.87 lakhs, for the year 1957-58. Of this, the ceiling for handlooms producing cotton fabrics is Rs. 96 lakhs. The year's programme includes the provision of a number of housing colonies for weavers. Mr. K. A. Padmanabhan, Secretary to the All-India Handloom Board, has been studying the progress the handloom industry has already made, with special reference to production. He is to examine schemes to develop it and advise on how to step up output so as to fulfil the target fixed under the second plan. About 14,000 handlooms in the State produce woollen fabrics, and 80 percent of these are located in the Telengana region. There is a proposal to expand the woollen handloom industry. The kambals produced in Andhra Pradesh are in great demand in the Nilgiris and other parts of India and Ceylon.

Outlook for Engineering Industry.—The engineering industry has an important role to play in the programme of industrial development. Its progress during the last five years has been remarkable, for while the general index of production, with 1951 as the base year (equalling 100), was 143 in 1956, it was as high as 293 for sewing machines, 467 for transformers, 574 for bicycles and 144 for automobiles. Speaking at the annual general meeting of the Engineering Association of India, Mr. P. R. Bagri, president, has said that the targets fixed under the second plan will be realised provided the industry is supplied with raw materials and allowed to work under favourable conditions. Mr. Manubhai Shah, Union Minister of Industries, has claimed that the country will be able to produce machinery worth Rs. 90 crores to

Rs. 100 crores every year by the end of the second plan, compared with the present figure of Rs. 23 crores only. A large variety of engineering goods, particularly plant and machinery, has to be imported. These imports, amounting to Rs. 310 crores, represent about 45 percent of total imports. "The engineering industries can do a great deal to make the country more or less independent in the matter of such supplies and, in doing so, we shall be helping the country to solve one of the most serious problems, that is to say, the problem of foreign exchange." At present, the export of engineering goods is insignificant, being only Rs. 8 crores in the total export trade of Rs. 642 crores. The Engineering Export Promotion Council is trying to explore new markets; but the existence of a home market, which is ready to absorb all that is produced, hinders an increase in exports. Mr. Bagri says that the conventional ways of price fixation do not always work in foreign markets. He, therefore, urges that an organisation in the Ministry of Commerce and Industry be set up to consider in what manner special assistance should be given in extraordinary cases. A smooth procedure for the refund of import duties on materials used for export, facilities to discount export bills and the remission of taxes on export profits can help manufacturers. The industry needs large supplies of iron and steel, but the production of these will not substantially increase before 1959-60.

Information for Employees.—Strange as it may seem, an enquiry into the disclosure of financial information to employees—conducted by the British Institute of Management to ascertain the advantages or disadvantages of a widely discussed procedure—shows that workers are more interested in their firms' wider trade prospects and developments than they are in profits and what is done with them. The results are made available in a report, *Presenting Financial Information to Employees*, which costs 21 shillings, but is worth the expense for the guidance it affords over a rather ticklish problem in labour relations. Between 32 percent and 53 percent of workers interviewed in six out of seven companies chosen for detailed investigation said that they were interested in new developments and whether trade was getting better or worse. Between 3 percent and 18 percent were interested in profits and what was done with them. As few as 2 percent, 4 percent and 7 percent of the workers interviewed at the seven companies said that they were "not interested in any information other than that which affects me personally." The highest percentage choosing this answer was 15. The signs were that more companies were giving their employees financial information, but the number at present was probably less than a fifth. Only three of the 160 firms which co-operated in the survey have given financial information to employees for 20 years or more. Of the 89 companies which habitually present information, 75 have done so for less than ten years. The main object of giving financial information, says the report, was to help to identify the employees' own interests with the company's continuing success.

LITIGATION AND LAWYERS

AS the Apostle Paul said: "All things are lawful, but all things are not expedient;" and with every sympathy with the endeavour of the Government of India to check litigation in Bengal, we doubt if the times are in joint for carrying out their views, and we fear that the remedies suggested, if put in force, will lead to considerable discontent. There is no doubt that litigation in Bengal is increasing enormously. We see that the total number of civil suits instituted in India in 1894 was 1,743,640. Of this number only 395,212 were contested, yet the appeals numbered 113,319, that is to say, about 30 percent of the contested cases were appealed against. Having stated this, the Government of India, in addressing a letter to the Government of Bengal, proceed to an examination of the English statistics. These show that in 1894 the total number of suits instituted in England was 1,136,042. Considering that the population of India is probably eight times as much as that of England, the comparison of institutions certainly is in favour of India. But when we come to the appeals, we find that, whereas those in India were about 1 in 3, those in England were 1 in 4,000; here, to our thinking, lies the crux of the situation. The people in England generally are satisfied with their tribunals; they have confidence in the Judges who preside over them; and, unless the case be one of very great importance, the decision of the first Court is almost invariably accepted as final. But we have not the same personnel in our Courts in India, the people have not the same confidence in administration of justice here as they have in that at home, and hence appeal after appeal is filed until the litigants are ruined, or the ultima thule of litigation is reached. If the Government of India desire to reduce the spirit of litigation they must, among other things, take steps to reduce, to use the words of Lord Roberts, the horde of unscrupulous pleaders that have sprung up to encourage useless litigation, impoverish their clients and create much ill-feeling against our laws and administration.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

MERGER OF COURTAULDS AND BRITISH CELANESE

(FROM A SPECIAL CORRESPONDENT)

THE most recent reports of industrial companies show heavy reductions in profits, although in most cases, the turnover has been maintained. The falls range from £1 million in the case of the well-known engineering concern, Babcock and Wilcox, to over £3 million for Imperial Chemical Industries. In every case, the explanation given is that it has been necessary to cut profit margins sharply in order to meet foreign competition, which has gathered additional strength over the past year. These results, however, have failed to damp the exuberance which has been a pronounced feature of the industrial temper. Indeed, the argument has been heard that it is just as well that these declines in profits should have occurred, because it will make labour more reasonable in its demand for wage increases. How near this supposition is to the truth can be seen from the preliminary recommendation of the Amalgamated Engineering Union, which extends to £20 a week for skilled workers. It is true that this figure is not representative of the Union as a whole, and that other sections are content merely to insist upon "a substantial increase." But the proposals of no section suggest that wages should fall when profits suffer recession, that they should be subject to any kind of stabilisation, or that an increase of wages should be strictly related to an increase of output.

The amalgamation of Courtaulds Ltd. and British Celanese Ltd. came as a great surprise. It is true that this idea had been in the air at various times, even in the distant past, but then the possibility of such a consummation was denied by both parties. Those were the days when Courtaulds were noted for financial conservatism to a degree unshared by the Brothers Dreyfus, who then controlled the fortunes of Celanese. The brothers, on the other hand, were distinguished by the possession of a technical genius unequalled elsewhere in the realm of rayon. Over the past decade, Courtaulds have greatly strengthened themselves on the research side, and a more conservative element has been introduced into Celanese finance. The gulf between the two companies has, therefore, narrowed considerably, and, for this reason, conditions for an amalgamation had become more propitious than

formerly. There is little doubt that the growing competition in the field of man-made and synthetic fibres generally has been an important, if not a deciding, factor in bringing about this latest development. The vast U.S. company, Du Pont, has gained a marked success with its fibre "Orlon", which is so far the only one of the man-made fibres closely resembling wool. Consumption of this fibre steadily increases in Europe, including the U.K. and Du Pont has recently created an extensive European marketing organisation. The manufacture of Orlon is closely guarded by patents, but, of course, it is not beyond the bounds of possibility to evolve a fibre differently constituted, yet having similar or superior characteristics. The pooling of the research knowledge of Courtaulds and Celanese, with its cross-fertilisation of ideas, adds to this likelihood.

While, in a sense, this textile "close association" (as it is officially called) stands by itself, it should be noted that the amalgamation tendency in general is undergoing a revival. It may be recalled that shortly after the first world war, a similar movement became manifest. But amalgamations then were rather desperate ones of companies, often comparatively small, which had been weakened by years of industrial depression, and whose uniting offered the only chance of survival. The sequence of a demand for rationalisation followed, with its insistence that British industry could not continue without better machinery and equipment and the command of far larger amounts of capital. But today, the companies that are uniting are not weaklings; indeed, they are veritable giants which have no lack of capital, or, at least, of the means of readily obtaining it. The emphasis is put much more upon the technological advantages to be gained, than was the case from 1920 to 1938, and of the desirability of companies having similar technological needs and aims working together. This is a logical offspring from the great scale of operations which the fulfilling of so many modern industrial contracts require. As matters are, the receiver of a contract award can often only cope with his responsibilities by apportioning a good deal of the work, and the planning, to sub-contractors. That is a convenient system with many advantages. But the practice can be a weakening one, and at the expense of centralisation and sureness of direction.

Miscellaneous Companies

This kind of amalgamation, having a truly common interest as its prompting, must not be confused with the collecting together of all sorts of enterprises in harmony on paper, but which

in reality, are engaged in, occupations far removed from each other. The temptation to effect these groupings and giving them an allegedly common head, has arisen from companies having made very large profits in their original line of business during the abnormal conditions of the last few years, and not knowing what to do with their abundance of surplus funds. Investment possibilities in their own native field yielding further opportunity. So we find a mixed bag of undertakings being nominally controlled by one company, on the old theory that if you take over the management staff, then you need have no special knowledge of the business yourself. Company after company is now finding that it only requires the process of time to reveal a management staff taken over in such a way, deprived of any individual interest, falls back upon the equally comforting and equally fallacious idea that, with plenty of money at the back, the day for unduly exerting oneself is for ever gone. When practised by large companies, this system of acquisition is socially reprehensible, and if not its objectionable features. Further, when the acquirer finds that all is not going well with what has been taken up, it seeks to dispose of that interest and perhaps to purchase another instead. So what was thought of as a factor making for solidarity, may, in actuality, cause instability in old-established businesses. For this reason, companies which through being excessively flush of funds, go outside their legitimate range of business, as indicated by past activities, are being suffered disquiet among investors, who have suffered disillusionment concerning resultant profits. They are also criticised by persons anxious to preserve a sound basis to the national industrial system.

A. E. I. Results

One of the most interesting of company meetings has been that of the Associated Electrical Industries. This vast combine, with a capital of nearly £104 million and employing 88,000 persons, provides virtually all kinds of industrial, transport and domestic electrical equipment, its turnover last year amounting to £133 million. It has participated recently in the extensive hydro-electric schemes in New Zealand and Rhodesia, and is prominent in nuclear physics and automation. It is, in fact, one of the chief examples of industrial modernity in action. The chairman mentioned in his annual speech that the company continues to make "remarkable advances" in the use of germanium and silicon. For the first time in the world, an electric train using power from a germanium rectifier has been on trial. Both germanium and silicon are non-metallic elements in the fourth group of the periodic system. Their great value for rectifiers has been known for some years. Germanium has been known for a special report issued under the auspices of the Department of Scientific and Industrial Research. This element was formerly regarded as very rare, but an investigation into the ways and means of recovering it from coal has eased the position. Three factories of the Associated Electrical Industries are now engaged in the manufacture of germanium products. A new electronic plant is being constructed, which will occupy 70,000 square feet, with ample room for expansion. A special industrial laboratory, "the first of its kind in Britain" for investigating the properties of radio-active materials is being built in Manchester. The chairman expressed the belief, when announcing various other activities of the company (it has a manufacturing space of 16 million square yards) that, in the electrical industry, "to stand still is to die."

Profitable Textile Lines

It has been long contended that the future of Britain's textile industry depends upon an expansion of the output of high quality fabrics, and that the trade in low qualities will inevitably pass to the younger textile nations. That being so, interest is lent to the fact that one of the Manchester groups of textile manufacturing companies, namely, Ashted Brothers and Co., which has been a strong upholder of the fine quality policy, announces a substantial increase in profit for last year—a rare experience among textile concerns. Several factors have contributed to this success, but the rise in the value of stock, as shown in the balance sheet, is evidence that the proportion of the company's output of high priced fabrics to low, is much greater than it was a year previously. Indeed, the chairman, Mr. Oliver L. Jacks, said that the yarns used in the company's superior fabrics cost as much as 30s a lb. Note must also be taken of the fact that while the company's interests were at one time wholly cotton, it has vigorously undertaken the development of synthetic yarns and fabrics, which have often required specialised machinery for their manufacture.

It is significant that the company is now taking delivery of weaving machines from the Swiss Sulzer Company. This concern has a wide reputation for the ingenuity of its looms, which embody exclusive features. The trade unions have agreed to allow these machines to be operated on a three-shift system. In addition, steps have been taken to render the company's organisation more vertical and for quality control to be closer—al together, an example of a thoroughly progressive concern, and of the results which can be forthcoming from the pursuance of an enterprising policy in a keenly competitive world. It is not surprising that the chairman showed no hostility to the creation of a European free trade area. He could describe it as a far-sighted plan which could ultimately be a great benefit to industry.

May 9, 1957.

It is difficult to follow just what made Pandit Pant, Home Minister, ask the State intelligence chiefs the reasons for Congress election reverses in certain areas; that, one should have thought, was primarily a subject for the party to enquire. The impropriety of the enquiry apart, the police appear to have given the Home Minister some quite interesting information. The majority of Government employees in West Bengal, the police think, voted against the Congress. (How do they know—unless the ballot is not really secret?) The report I have seen in a Calcutta daily can have been based only on what some participant in the presumably secret conference had confided to a reporter, and the official concerned may be representative of his colleagues in not being a very strong friend of the Congress Party. The Press is entitled to go to the official who will talk, but I am wondering whether the Prime Minister's recent advice to Ministers to cultivate mass contact is not being taken by certain officials a little too literally. Hardly a day passes in Calcutta now without some newspaper coming out with revelations of corruption in one department or another. Excellent for the exposure of official corruption is one of the chief functions of a free Press. What I find mildly disturbing is that most of the recent revelations have been possible because some other department of the same Government, or some other officers of the same Corporation, have let the Press into secret files. The public is naturally angered by inside stories of corruption; it must also be wondering whether the principle of competitive co-existence among departments and officials is not degenerating into downright malice and ill-will.

The proposal to establish a specialised cadre of economists and statisticians in permanent Government service is intrinsically sound, and will fulfil an old need. But I wish I could feel sure that the gentlemen who populate the cadre will be able to enjoy the independence without which their work may be nearly worthless. Not a few of the Government and semi-Government institutions existing today have done valuable research on economic and statistical problems. Business men and journalists well know that the Planning Commission itself, which is the progenitor of the new cadre idea, has become one of the most important sources of information in New Delhi. But as the volume of information that is gathered and collated has increased, the application of the critical faculty to interpret it has, it seems to me, steadily decreased. Why this should have been so, it is not easy to say, but I imagine it must have something to do with the morale in various departments and ministries. The Reserve Bank, for instance, probably has equipment for economic and statistical analysis which is as good as any available elsewhere; but whether it can put it to the best use in the face of constant threats and pin-pricks on general policy matters from New Delhi, as have been coming for some months past, seems to me rather doubtful. I do not suggest that economists in the Government's employ should be proving their independence and critical acumen every so often by rising up in arms and saying that such-and-such policy is nonsense. On the contrary, loyalty is the first need in any institution, including the Government. But the expression of honest differences of opinion is an essential element in loyalty, and it is this element which strikes me as becoming somewhat rarer these days. I do not think that civil servants alone can be blamed for the tendency; if the senior-most among them find their positions becoming shaky when they cannot concur with ministerial opinion, the rapidity with which de-

A DITCHER'S DIARY

moralisation seeps down the ranks can hardly be a source of surprise.

De mortuis nil nisi buncum, but if an exception has been made by some newspapers in the case of the late Senator McCarthy, it is because his own brief political career had consisted largely of what can only very charitably be called bunkum. Not many politicians in the United States see any virtue in verbal restraint, but Senator McCarthy of Wisconsin went far beyond irresponsible speaking. He was to blame for the creation in America of an atmosphere which discredited democracy the world over and provided Communism and its friends with ammunition which may not have been exhausted with the death of the Senator. There must have been something human even in McCarthy, for, I read somewhere the other day, he felt the absence of a child in his home to the extent of adopting one; but there must be many children in the United States who are today suffering in consequence of what McCarthy did to their fathers. The actual harm wrought by him was probably exaggerated beyond all proportions by those who only wanted a stick to beat America, or simply the Republicans, with—this is a danger we must still beware of—but he did succeed in setting up for a time a régime of fear and suspicion in which personal relationships, the essence of a liberal society, looked like counting for nothing and in which officials and professors could not consider themselves free to act according to what they believed to be good for America. With McCarthy gone, the question will be asked whether McCarthyism is gone too. A more useful subject of enquiry, I suggest, is what made McCarthy possible. "Wall Street" is probably the Communists' pat answer. Perhaps closer to the truth is—Radio City. Without T.V., radio and the Press, I doubt whether McCarthy would ever have been anything bigger than the small man he really was.

What precise function the National Book Trust which the Government is sponsoring is intended to serve, I am still, to my great regret, unable to fathom. But I am inherently suspicious of all attempts to breed literature in official hothouses, and my doubts can hardly have been expected to wane after reading the apt, if disparaging, comments even *Pravda* has found it necessary to make on the qualities of the Russian Press. Not that I am suggesting that literature and the Press are invariably the same thing; they are not, but even so, when Big Brother takes over, the effect on both is likely to be identical. As we have seen, the Indian Government's experiments with culture, with all due apologies to Dr. Keskar and Maulana Azad, have in no case so far been a memorable success. Writers, I feel, must learn to flourish solely on the support of their readership; to establish a new and select coterie of publisher-critics, even if it be blessed with the title of an autonomous Trust, can hardly create the atmosphere of freedom and controversy in which good literature is born. In the comments I refer to, *Pravda* has described Russian newspapers as colourless, lifeless, boring and difficult to read; perhaps the compliment could be returned, but the description seems nonetheless true, judging from such of Moscow's English language publications as I have seen, including *New Times*. It is equally true of the books and pamphlets the Indian Government issues; its Publications Division, which is to be the principal publisher of the Trust, already gives the impres-

sion of having more work than it can conveniently cope with, without taking on the additional responsibilities involved in the Trust's literary ventures. It may be true that many good authors today are starving, not only in India, but elsewhere, too; but it is hard to see what special qualifications the Government or its nominees might have in picking them out and providing the crutches with which they may limp along to prosperous recognition.

Personalities rarely make institutions; but there can be few institutions of its kind, I think, which owe so much to a single individual as the U.N. Economic Commission for Europe does to Gunnar Myrdal. His resignation as Executive Secretary of the organisation which he has built in a mere ten years into one of the United Nations' finest research institutions has come as a surprise to many; yet the decision dates back to three and a half years ago, when he made an extensive tour of south-east Asia, where he is now coming to conduct a special study under the auspices of the Twentieth Century Fund. Looking back on his years in Geneva, Mr. Myrdal can recall with particular satisfaction two of E.C.E.'s major achievements. One is that it has established an independent research division whose economic studies have won the respect and attention of many besides the Commission's member-Governments. The other is that it has provided a forum where the Governments of eastern and western Europe have been able to meet and discuss their economic problems. But the achievements of E.C.E. have not been only in the rarefied atmosphere of research. In unobtrusive ways, it has done useful work in arranging the allocation of Polish coal and timber, for instance; and a standard code for engineering contracts, which one of its committees has produced, might do much in the future to facilitate the growth of trade in capital equipment between eastern and western Europe. To the extent that E.C.E. has had its shortcomings, many of them can be traced to the cold war; some of the controversies which have erupted at its meetings have been traceable purely to the political rivalries of our time. But Mr. Myrdal will be leaving Geneva with the satisfaction that he, and E.C.E., have done their useful best to temper these rivalries with realism in the economic sphere.

I see that Lord Heyworth, Chairman of Unilever, has followed his now established pattern of devoting his annual statements to shareholders to a different topic of general industrial interest, and this year his choice has fallen upon research. No fewer than 2,250 people are employed in his organisation on research and development, and 665 of them are qualified scientists and engineers. Stressing the importance of market research, Lord Heyworth says that each year the group spends on it one-half of its total outlay on scientific research and development throughout the world. An important part of the research effort is in the United States, where on the spot enquiries are essential for business success. Of particular interest is his emphasis on the benefits that can accrue from the continued search for raw materials. If, for example, synthetic detergents had not been invented, current world demand for vegetable oils and fats for soap-making would be greater by nearly one million tons a year. This extra fat is now available for food, and is sufficient to provide the portion of diet bought as fat each year for about 50 million people in the West, or about 250 million people in Eastern countries.

CALCUTTA BOMBAY DELHI MADRAS KANPUR

THE PUNJAB NATIONAL BANK LIMITED

MR. S. P. JAIN REVIEWS ECONOMIC TRENDS

COMMERCIAL BANKS TO COLLECT RURAL SAVINGS AND EXTEND CREDIT TO CULTIVATORS

The 110th Ordinary General Meeting of shareholders of The Punjab National Bank, Ltd., was held on Saturday, the 27th April, 1957, at the Head Office of the Bank, Shree Niwas, 8, Underhill Road, Delhi.

Following is an extract from the speech delivered by the chairman, Mr. S. P. Jain :—

Gentlemen,

I extend to you all a hearty welcome to the 110th Ordinary General Meeting of the Bank.

The past year has been one of outstanding progress for your Bank with profits, deposits, advances and foreign exchange business touching new peaks.

Balance Sheet 1956

The Accounts show a profit of Rs. 90.20 lakhs including Rs. 2.35 lakhs brought forward as against a profit of Rs. 69.49 lakhs in 1955. This profit has been arrived at after provision for contingencies. After transfers—Rs. 27.5 lakhs to taxation, Rs. 27.5 lakhs to Reserves, Rs. 13 lakhs for bonus to staff, Rs. 2 lakhs for gratuity to staff and charity—the Board has proposed a final dividend of Rs. 2/- per share in addition to the interim dividend of Rs. 2/- per share. This raises the rate of dividend to 16% per annum. It has been proposed to form a Trust under which a fund will be built up by annual appropriations from profits for gratuity benefits to employees.

Deposits

The working capital has risen by Rs. 28 crores to Rs. 141 crores registering 21 times increase over 1950. Against our paid-up capital of Rs. 67.5 lakhs, our reserves stand at Rs. 125 crores including the share premium amount of Rs. 37.5 lakhs. Deposits rose to Rs. 106 crores registering an increase of Rs. 16 crores during the year against Rs. 14 crores in 1955. It will be noted that the quantum of increase in the total deposits of all scheduled banks in 1956 declined as compared with 1955. The growing confidence of the public in your Bank is reflected by the fact that of the increase in the deposits of all scheduled banks in 1956, 20% was gained by the Punjab National Bank. Your Bank did not make any general increase in the interest rates and the cost of money remained, therefore, steady in the year under review.

Liquidity

The figures on the assets side indicate a strong liquid position. Cash in hand, bank balances, money at call and short notice and investments aggregate Rs. 59.3 crores constituting 55.7% of the deposits. If the bills discounted and purchased amounting to Rs. 8.77 crores are added, we have a total of Rs. 68 crores raising the ratio of our liquid assets to deposits to 64%.

Loans

Our loans and advances show an increase of Rs. 12.84 crores from Rs. 42.02 crores in 1955 to Rs. 54.86 crores in 1956. There has been 31% increase in our advances. Our efforts to step up advances to meet the developmental needs are continuing and we are strengthening our organisation to that effect both in the Head Office and in the field.

Foreign Exchange Business

You will be glad to know that there has been rapid increase in our Letter of Credit business. "Acceptances, endorsements, and other obligations" which are mainly in connection with foreign exchange business amounted to Rs. 13.4 crores in 1956 as compared with Rs. 6.53 crores in 1955 registering 100% increase.

Bonus Shares

Your Bank's application for issue of bonus shares about which I had mentioned in my review at the last meeting is still pending with the Finance Ministry. The required permission should be obtained before long, because your Bank's issue is against share premium which are but receipts of capital from the shareholders themselves.

Branch Offices

Our network of branches continues to expand. With the opening of 14 branches during the year, we have 340 offices including one office in Rangoon and two in Pakistan. The demand for lockers was well sustained and we are continuing to develop this business. You will be glad to know that the Head Office building in New Delhi is coming up and will be complete in about a year for occupation. The removal of the Head Office to New Delhi will meet the convenience and wishes of a large number of the Bank's customers. With regard to branch offices also, we are trying to improve the premises and follow a policy of progressive extension of service to the public. In this connection, our expansion programme is also receiving careful consideration.

Tight Money

The problems of the banks during the last year were the consequences of the problems that faced the country. What have agitated all minds are the acute-ness of finance for domestic needs as well as to pay for imports and the rising trend of prices. There were the large needs for development, imports of steel, capital machinery, etc. There was an increase of Rs. 158 crores in advances and bills against an increase of Rs. 77 crores in deposits. The banks had to resort to increased borrowings from the Reserve Bank, liquidate a small part of

their investments and reduce cash balances to meet the demand. Shri T. T. Krishnamachari, the Commerce Minister, on taking over the Finance portfolio was confronted with the serious problem of credit for trade and industry and the limited capacity of the commercial banks to meet the same. Laying up to his reputation for prompt and dynamic action the Finance Minister had consultations with the Governor of the Reserve Bank and liberalised the bill market. This very largely assisted the commercial banks to meet the demand for funds from industry and commerce and Shri T. T. Krishnamachari rightly earns the credit for the easing in the otherwise tight situation. The higher money cost aimed at curbing inflation in India has had no significant effect. Similar is the experience in the U.K. and they are in the process of reversing gears. The gilt-edged market has been adversely affected and but for the open market operations which induced confidence, there would have been a greater drop in prices. The stamp charges and higher interest rates raised the cost of money to banks. The banks had to incur the stamp charges on bills even when the bills were not ultimately fully utilised. The stamp charges could have been covered if of all necessary in the interest rates. The cost of money from the Reserve Bank induced the banks to raise their interest rates. This affected money already with the banks and pushed up its cost in large commercial centres. New money was not attracted to banks from small investors and mofussil areas.

Rise in Prices and Decline in Agricultural Production

The second significant economic trend as regards rise in price levels was characterised as inflationary arising from large developmental expenditure. In the White Paper published in March, the Finance Minister has analysed that the rise in prices has been basically due to declining agricultural production. There has been some complacency in this respect due to the comparatively comfortable position in regard to agricultural supplies at the end of the First Plan. The White Paper states: "The success of the Plan, it is apparent, would turn largely on the realisation of the targets of agricultural production. Apart from the obvious effect of agricultural production on prices and on the balance of payments, the flow of savings in the economy also depends to a significant extent on production in this sector. Scarcity of food grains and agricultural products in India often leads to relatively sharper increases in agricultural prices than in the prices of manufactures and this in turn leads to a redistribution of national income away from both the fixed income groups and the investing classes". This has been the crux of our problem.

Foreign Exchange Scarcity and Deferred Payment Terms

The foreign exchange scarcity is another serious problem to be effectively tackled. The difficult foreign exchange position arising from developmental activities is being understood and appreciated all over the world. The appearance of this scarcity condition earlier than expected only confirms that the rate of development has been faster and larger than planned. The position was also aggravated by higher prices of capital equipment and increased transport cost that has been evolved is of course very costly but it is a screening process by itself. Projects which are not adequately remunerative will not be proceeded with immediately and foreign exchange curtailed. Representatives of capital exporting countries abroad who have visited our country after the announcement of deferred payment scheme have understood and appreciated the value and desirability of such a scheme. Our efforts in the direction of rapid economic and industrial development are also appreciated. In order, however, that import of necessary equipment in line with the policy enunciated by the Government takes place, certain institutional facilities have to be arranged for. They are (i) the normal trade risk by Government or any Government acceptable guarantee to the overseas seller (ii) manufacturers in industries of national importance should be able to obtain financial assistance for development from institutions like the World Bank, International Finance Corporation etc. It will be necessary for the Finance Ministry and the Reserve Bank to work out details.

Magnitude of Second Plan and Standard of Living

Second Plan aims at increasing the national income by 1961 to Rs. 13,480 crores from Rs. 10,800 crores. The rise in the national income at the end of the present saving of Rs. 2,680 crores. Against Rs. 1,482 crores. The increase in our savings for re-investment and development will be Rs. 682 crores. Thus three-fourths of the additional income viz., Rs. 2,000 crores, will be available for sustaining a higher standard of living. If our effort is not of the magnitude planned, our national income will not go up as envisaged. If our national income does not go up as targeted, the quantum available for consumption will be curtailed with its consequence on the standard of living. What we have to fulfil is no doubt a big task but we have to gear ourselves to the best effort.

Rural Savings and Banks

More funds are needed by both the public and

private sectors. There has to be a proper apportionment of the available resources if the overall economic activity has to be stepped up. The tax policy of the Government has to be such as to leave savings in the hands of that class of society which has the habit of saving for investment. While there has been more expenditure in the rural sector, the burden on the urban sector has been increasing. As the Taxation Enquiry Commission has stated: "The per capita tax is uniformly and distinctly higher in urban than in rural areas. The per capita Central taxation in the urban sector is a little over two and half times the rural estimate while the State taxes come to nearly three times". Vast sums of money are thus diffused and not drawn into the money stream.

The Commercial banks have to organise themselves to collect money from the unorganised sectors and supplement their deposits through other facilities. In large towns there is already keen, rather unhealthy, competition. The current deposits are being converted to Call deposits which were paid higher interest rates. This does not create any additional money but only makes the money dearer. The commercial banks have, therefore, to expand their activities in the rural areas either directly or through the agency of subsidiary or small banks. To a large extent, the success of this effort will depend on the policy and support of the Government of India and the Reserve Bank. Fortunately, we have at our helm a Finance Minister who is bold and who has ideas and vision. The greater the difficulty of a problem the greater appears to be his resourcefulness and courage. The new Reserve Bank Governor, Shri H. V. R. Iyengar has intimate knowledge of the problems relating to the development of our economy and is aware of the needs of industry and trade. This knowledge and experience will help him to have a practical outlook in his new task.

In the banks' expansion in the country-side, there are certain factors of primary importance. The Government should provide facilities for security of cash and other assets so that banks may be saved of large expenditure on employment of chowkidars, which forms an appreciable percentage of expenditure in small branches. This may be done by giving instructions to the police authorities to take special care for the safety of the property of banks. Some scheme of co-operative insurance may also be evolved by the banks themselves or through Insurance Companies. Secondly, to enable large banks to open branches, the wage structure for the new offices should be in consonance with the prevailing living conditions in the rural areas concerned and not according to the bank classification.

Credit to Cultivator

The third factor is that the banks should be in a position to cater to the credit needs of the rural areas. It is difficult for the banks to make available such credit from their existing resources. The Reserve Bank is not finding a proper agency in the Co-operative banks to make available the entire money that they have apportioned for supplementing credit to the rural areas. The Co-operative banks are only confining their activities to co-operative societies and, knowing as we do, the weak structure of the co-operative societies, in certain States especially, we should not insist on credit being made available only through them. By commercial banks expanding in the countryside, rural credit will be augmented. The commercial banks may also in turn take the help of agencies which have commercial dealings with agriculturists at present such as sugar factories, ginning presses, rice mills, oil mills, etc. The Reserve Bank may lay down a condition at the time of discounting that the bills of commercial banks for rural credit that the cost of money to the cultivator should not be higher than what he will have to pay when he obtains credit through co-operative societies. We are under the impression at present that credit through co-operative societies is cheaper. What we find to-day in many parts of the country is that the ultimate cost of money to the cultivator is 3% to 4% higher than the rate at which the Reserve Bank makes available the money. When we are keen on increased agricultural production we should use all agencies to make available to him necessary credit at reasonable cost. The utilisation of the commercial banks in this sphere will achieve a dual purpose. The non-monetised savings of the country will be channelised through savings of the rural sector coming into banks. The agriculturist will get organised credit in his effort to increase food production which is admittedly the key to the success of the Second Plan. I hope the Reserve Bank will find this proposal worth pursuing.

Financial Institutions

In the growth of new industries, a great handicap is sluggishness in the Stock Exchange. It is difficult for any new enterprise or even the existing ones to raise additional finance through the stock exchange. Therefore, it is important that the financial institutions in the country should carry on a more positive and active role. The Industrial Finance Corporation, the State Finance Corporations and also the Industrial Credit and Investment Corporation have done satisfactorily during the last year. But for meeting the tempo of development in this country they have to do very much more. The present limit of advances at the State level should be increased considerably. It should be brought up to something of the order of Rs. 25 lakhs. All small and medium needs should be met by the State institutions. The State Corporations should be strengthened by additional resources through the Reserve Bank. The Industrial Finance Corporation of India should increase their limit from 1 crore to 21 crores of rupees. Most of the large industrial organisations to-day cost us anything between 3 and 8 crores. Money should be advanced when the Corporation is satisfied that the undertaking or project in question is in line with the general policy and pattern of the National Plan. The Industrial Credit and Investment Corporation should also, in my opinion, be more active and finance large industries like non-ferrous metals, chemicals and large engineering workshops are of very great importance. These industries have been left under the Second Plan to be developed by the private sector. In this connection, it is heartening that a Refinance Corporation is being formed to utilise the U.S.A. Wheat Sales Fund for extending medium term credit. The terms that have been announced are very sound and I am confident

dent that banks will take advantage. It will greatly improve money market conditions and the requirements of industry for expansion will be met considerably.

Better Climate and Investment Prospects

The industries in this country are, by and large, making reasonable profits and I am confident that with the better atmosphere that may now be created with the removal of the uncertainties when the new budget will come, the share market will improve and the investor will come forward to invest his savings in the industrial projects of this country. The process will be greatly aided if the investors find it convenient to borrow money against their industrial securities whenever money is needed and the advances against industrial shares could be rediscounted by the Reserve Bank. The Finance Minister should come out with a clear cut policy and a four-year budget that will give him the resources that he requires and enable the people to budget as he does

and fulfil their responsibilities under the Plan with the resources that they require. I am confident that with the boldness and imagination that he possesses, Shri T. T. Krishnamachari will see that he gets what he requires for carrying on the responsibilities of Government and at the same time creates conditions and an atmosphere under which the people will have the enthusiasm and resources to fulfil a difficult but essential task.

People's Gold for Development

A suggestion that I would like to refer here is that of the Prime Minister in one of his speeches that the people should give their gold to the Government so that hoarded wealth may be put to use. The Finance Minister should evolve a policy that will induce the people to part with their gold. Even if the Government buys gold at a price higher than the world price the gold stock with the Government will help to strengthen our currency considerably and will enable Government to get money from abroad at

more reasonable cost. What the exchequer will lose in the purchase price will be adequately compensated by the large financial resources that could be obtained and by the early development of our country.

Before I conclude, I must express my thanks to all our worthy constituents for their continued co-operation and confidence. I owe more than formal thanks to my colleagues on the Board and the Local Advisory Committees. I would also like to welcome our new General Manager, Mr. A. M. Walker, whose experience with the erstwhile Imperial Bank of India should prove of real value to our institution under the present fastly developing conditions in the country. I must also record my appreciation for Shri R. L. Tuli who has carried on with diligence and ability, the responsible and onerous duties of General Manager till Mr. Walker's taking over. I have also to thank other officers and staff at all levels at the Head Office and elsewhere for their loyalty and sense of devotion to the interests of the Institution.

What Forum of Free Enterprise Stands for

SINCE the Forum of Free Enterprise came into being with the object of educating public opinion on the values of Free Enterprise and the significant contribution which it can make to the rapid progress of economic development, a great deal of enthusiasm for its cause, and interest in its work has been generated. Along with this, controversy has been provoked as to whether the tenets of Free Enterprise are consistent with the social and economic ends which the country seeks to attain. The Forum is convinced that they are; and in this statement reiterates its attitude towards some of the basic issues which have been raised so that no misconception or doubt on its point of view can be left in the public mind.

Free Enterprise not "Laissez Faire"

We consider that "Laissez Faire" or Nineteenth Century Capitalism has no place in contemporary Indian life. These systems, whatever their usefulness might have been, have outlived it. Today they are as dead as the dodo and can make no contribution to the industrial, social and economic advancement we seek. Equally do we hold that the Marxist approach to socialism through State ownership of the means of production is outmoded in time and thoroughly discredited in practice.

Capitalism of today, or as we prefer to call it "Free Enterprise", operating within a planned economy, is the most alive and the most vigorous economic system in the world. Its motive power is rooted in the fulfilment of the individual, controlled and bounded always by the values and principles of the society in which he lives. Thus, Free Enterprise contributes to the moral and material betterment of society by the voluntarily harnessed efforts of the people which compose it. From this must spring a happier and a richer life for all. Reverse the process by introducing authoritarian planning, which places the State above the individual, and the result

will inevitably be confusion, frustration and the loss of liberties.

"The Socialist Pattern of Society"

As far as we know, this phrase has not yet been defined in specific terms. The Forum unreservedly accepts the concept of a fuller and better life for all, equality of opportunity, eradication of unjust privilege; in brief, the establishment of a Welfare State. Indeed we hold that these objectives will be attained more rapidly, more effectively, and with a greater degree of enthusiastic co-operation of the people, through Free Enterprise, than through any other system. Inherent in our acceptance of these social aims is also that of a planned economy, and the common existence and mutual interdependence of a State-controlled and Free Enterprise Sector. What we do not accept is the theory that this State-owned sector should continuously expand until it dominates the national economy, for then, as night follows day, will there be a regimentation of life, totally at variance with India's outlook and traditions, which have always recognised the place and worth of the individual in society.

The Bhakra-Naung Dam, the Fertiliser Factory at Sindri, the Aary Milk Colony in Bombay, to take only a few examples, are State achievements which are matters of pride not only to their authors but to the whole country. On the other hand, the Nationalisation of Life Insurance, the introduction of State Trading and the

acquisition of the Kolar Gold Fields are equally in our opinion examples of unwarranted State intervention. It is this trend which must be curbed and halted if the free way of life in our country is to be preserved and its economic progress through the democratic processes assured.

Free Enterprise and Scientific Advancement

A good deal has been said recently on the need to avoid obsolescent thinking in this age of atomic power and of breathtaking scientific advancement. It is important that we define our stand on this issue. We believe that the challenge of our times is to evolve a synthesis of these techniques and their effective use by free members of a democratic society. In many ways our country is blessed by the fact that she is embarking on her plans of industrialisation at a time when superb scientific aids are available to her. Possibly for the first time in history conditions prevail when the question of Bread or Freedom need not even be asked. For, today, science offers us not only Bread and Freedom, but also Speed of attainment thrown in for good measure. It would be a tragedy indeed if this bountiful opportunity were distorted and misconstrued to impose Centralised State Control as the instrument of applying the benefits of science to a regimented society. This and not our approach would be a demonstration of obsolete thinking.

Conclusion

For the reasons which we have given we claim that socially responsible private initiative, or Free Enterprise as we term it, is the most dynamic and effective system available to attain the moral and material ends which all of us so ardently hope for. That is why the Forum has pledged itself to the task it has undertaken, and that is why it will continue its effort in the certainty that in our good country the values of Free Enterprise will ultimately prevail.

Forum of Free Enterprise

235, DR. DADABHAI NAOROJI ROAD, BOMBAY 1.

A non-political organisation to educate public opinion on Free Enterprise

THE EAST INDIA DISTILLERIES & SUGAR FACTORIES LIMITED

CHAIRMAN MR. C. R. SRINIVASAN'S REVIEW

Statement by Chairman, Mr. C. R. Srinivasan at the Annual General Meeting of The East India Distilleries and Sugar Factories Limited, held at Bare House, Parry's Corner, Madras, on Tuesday, the 30th April 1957.

Last year, when I had the privilege of addressing you for the first time, as Chairman of the Company, I indicated to you in broad outline the shape of things to come, following the merger of Parry's with E.I.D. Now that I have the opportunity of addressing you again, you will not doubt be interested to know what progress we have made in the objectives set out. The E.I.D. is now a director-managed concern, with a majority of Indians on the Board. You will remember that at the time the merger proposals were placed before you, only myself and Sri V. Ramakrishna were on a Board of five, the other three being Messrs. Winton, Noel-Tod and Hadfield. The Board invited two distinguished Indians Dr. U. Krishna Rau and Sri R. Venkataswamy Naidu to join the Board and I may take this opportunity to record how much we valued their co-operation and goodwill, their knowledge and understanding of the problems that came for assessment at the Board level. May I also take this opportunity of recording my appreciation of the spirit of loyalty and sense of duty that uniformly characterised my British colleagues on the Board who were all in executive charge and entrusted with the responsibility of implementing the decisions of the Board. I have nothing but praise for the way the Directors on Parry Board also responded to their call. The Parry Board all along has been a close preserve of senior British Executives but today we have two Indian nationals on the Board and I have no doubt that in due course more Indians will find their place on it. It is the accepted policy of the Company that other things being equal, Indian nationals will have preference and priority in recruitment to the service cadre of the Company. It is also the policy of the Company to have these recruitments to the covenanted ranks by open competition. For the first time posts were advertised and applications invited towards the close of last year and I may confess I was amazed at the thousands of applications that came pouring in. From a study of these applications two things emerge viz. that there is plenty of qualified talent in this country waiting for openings and opportunities and that service in Parry's set-up is greatly coveted even by men already in service elsewhere. My only regret is that we are not in a position yet to make fuller use of the abundant talent available. Of those who are in the service of the Company today it is but right that I should record that I have found them in good fettle, eager and willing to give of their best, especially in the new set-up.

And now let me turn to the Report and the Accounts for the year ending 30th September 1956. These have been in four hands for the statutory period and with your permission I shall take them as read. I regret very much that these Accounts are submitted to you later in the year than has been done in the past. The delay however has been quite unavoidable. It has been largely occasioned by this being the first time that consolidated Group Accounts have been furnished and the preparation of Accounts in this form has necessarily had to be done with great care. Also, the provisions of the Indian Companies Act 1956, regarding the charging of expenses by a Managing Agent to Managed Companies, have delayed the finalisation of the accounts of our subsidiary, Parry & Company Ltd. To enable the Directors of Parry & Company Ltd., to formulate an equitable assessment of the amounts of overheads etc., that should correctly be charged to the Managed Companies, an elaborate system of recording through Time Sheets, the time spent by each member of the staff on the affairs of each Company in the Group was introduced. The consolidation of the information made available by these Time Sheets took some time to complete but in order to comply with the spirit and the letter of the Indian Companies Act it was quite essential that this additional work should be undertaken. Having now accumulated reliable statistics, I expect, it will not be necessary in succeeding years to undertake this work in such detail and I therefore hope that it will be possible to issue the Accounts for the current year well before this time next year. You are of course aware that in order to ensure that dividends were paid within the fiscal year ended 31st March 1957 your Directors declared a second interim dividend of 10% in anticipation of these Accounts being adopted and thereby shareholders have been saved the embarrassment of the final dividend being paid the next fiscal year.

Export Market

The operations of the year have been fully reviewed in the Directors' Report and there are only one or two points I should like to refer in this context. You would have noticed with interest that the sugar industry has developed a new facet with the emergence of an export market due to fortuitous circumstances. Part failure of the beet crop in Europe and the closure of the Sugar Cane Estate of sugar supply in the Middle East which it was possible for India to cover at remunerative prices. Exports are being handled through the agency of the Indian Sugar Mills' Association, on a non-profit basis. Such profits as are made are carried over to a Reserve with a view to balance any loss that may be incurred in the future in the maintenance of the export market. So far, firm orders to the extent of about 86,550 tons have been booked and shipments in substantial measure have already commenced according to an agreed schedule. Further orders are expected and the Government of India, I understand, are agreeable to release stocks for export and they had no idea of imposing any rigid limits in this respect. In hammering out the export scheme and giving it dynamic expression you will be

glad to know that Mr. P. Hadfield, Deputy Managing Director of this Company, played a notable part as Vice-President of the Indian Sugar Mills' Association. Our Group has not yet sold any sugar for export. This is understandable against the background that South India is still deficient in sugar and it is easier to negotiate freight at the two ports Bombay and Calcutta, from which exports are now made. But the value of this offset by means of exports cannot be overlooked or underestimated in sugar economy. Today there is an all India surplus in production, supply outpacing demand. This no doubt is a heartening reversal of the position three years back when sugar had to be imported to relieve shortage in the country. In 1954-55 the total production of sugar in the country was 15.89 lakhs of tons; in 1955-56 it moved up to 18.56 lakhs of tons; in 1956-57 it is estimated production will touch 20.2 lakhs of tons. Besides expanding production, we have also a carry over of well over 5 lakhs of tons. The present pace of consumption is rated at 19 lakhs of tons and at the end of the Planning Period it is expected this may move up to 22.5 lakhs of tons. At the same time, with new sugar mills progressively coming into production during the Plan Period and several of the old ones expanding their crushing capacity the total production in the country is expected to reach up to 25 lakhs of tons at the end of the Second Planning Period. If sugar economy is to be protected, obviously, apart from expanding internal consumption a regular outlet by way of export has to be created, developed and maintained. By good luck we have made a promising beginning and if only Government will take note of the export potential and the need to build it up in all possible ways, I believe the sugar industry apart from safeguarding its own economy is destined also to play an important part in the balance of payments position of the country. Before leaving this subject, may I crave your indulgence to correct a misstatement in the Directors' Report. In the last para under the heading "Sugar" in page 6 of the Report the closing sentence says that the export target at the end of the Second Five Year Plan has been fixed at 2,500,000 tons. This is obviously a mistake, the figure refers to the total production target.

You will also have observed that in the Report mention is made of the substantial increase in Fertiliser turnover. The turnover in fertilisers during the period under review amounts to just under two crores of rupees equivalent to £13 million sterling and that of chemical imports to 61 lakhs of rupees equivalent to 457,000 pounds sterling. Business in these lines bids fair to increase in the coming years as people in the agricultural sector are getting fertiliser minded and it is the policy of the Government to increase food production by extensive as well as intensive cultivation. With a view to simplify and streamline operation and control of the Group's factory at Ranipet where the major part of our fertiliser manufacture is carried on, the transfer of Parry's interests in the fertiliser business to East India Distilleries & Sugar Factories Ltd., has just been completed and in addition it is proposed to set up another factory at Bezwada to which I shall refer in greater detail presently. It is obvious that a turnover of this magnitude running into millions of pounds will require careful consideration of our cash and credit resources. On the basis of our present capital and reserves it seems to me our credit resources are fully extended and it would be unwise to base our further expansion programme on such additional banking facilities as may be available to us. Your Directors are now exploring various alternatives by which further capital can be introduced into the Group and we shall come forward presently with proposals to this end. In this context it may be just as well to correct a possible misapprehension arising from the acquisition of Parry's equity shares. Although the total cost of cash for the purchase of the Parry ordinary shares amounted to £558,000, the actual net outgoing of cash from the Group on this account is £204,000 only. This is because £255,000 of the outgoing amount was immediately used by the main sellers the Coromandel Investment Trust Ltd., to purchase the E.I.D. shares then held by Parry & Co. Ltd., and they also agreed to accept deferred payment in respect of £144,000, balance of the purchase price. Of this amount of £144,000 for which deferred payment over 5 years was agreed, a first instalment of £15,000 only has just been paid.

Financial Results

Turning to the results of the year, I would like to stress that the Accounts of our two main subsidiary Companies, Messrs. Parry & Company Ltd., and Messrs. Parry Murray and Company Ltd., are for 9 months only, but it is most satisfactory to note that for these 9 months they have recorded profits on a par with their results for the previous 12 months which confirm the view taken by your Directors 18 months ago on the profitability of acquiring the ordinary capital of these Companies. If we convert these figures to a basis of twelve months and if we reduce the taxation charge by the sum applying to previous years, we find that the net profit after taxation would have been increased by some £60,000/- and that our present dividends would be covered three times by earnings. On the basis of a full year's income, the figures for 1956 show that the purchase price of ordinary shares in Parry & Co. Ltd. (on an annual basis of 22.4%) works out to less than five years' yield on these shares. I may also make a reference to the amount of taxation paid on the Group profits for the year under review, as set out in note 3 of page 18 of the Report and Accounts. The total amount of tax represents the very high figure of about 56% of the profit and of the total amount of taxation, £66,223/- consists of additional taxation imposed by the Indian Finance Act 1956 and the Indian Finance (No. 3) Act 1956. This sum represents 13% of the profit or, viewed in another way, 12% on the Ordinary Capital. I feel therefore that it may be recorded as a matter

for satisfaction that in spite of the burden of this upsurge in taxation your Directors have been able to maintain a total dividend of 15% on the Ordinary Share Capital. To what extent the burden of taxation may have varied during the current year is of course dependent on the contents of next month's budget and I cannot therefore venture on any forecast but the figures I have quoted will establish beyond doubt and dispute that private enterprise, rightly directed, will prove a bulwark to our national economy.

Turning to the prospects for the current year I am glad to say that progress is well maintained in all directions. It is common knowledge that import restrictions have progressively been tightened in recent months. To the extent that the policy is dictated by a desire to protect indigenous industries we may take comfort that the trading activities of Parry & Co. Ltd., will not be seriously affected, as in Parry's sales agency portfolio we hold a high proportion of goods of Indian manufacture. The major items in the import agencies that we hold are essential commodities such as sulphur, phosphates and plant for generation of electricity in respect of which, I expect, restrictions will be relaxed. Incidentally Shareholders will be interested to learn in connection with the last item that over the past eighteen months Parry's have secured orders for three Diesel generating equipment manufactured by Messrs. Mirless-Bickerton & Day Ltd., of Stockport to a total contract value of just under two crores of rupees or very nearly £12 million. These orders include about 6,000 kilowatts of power for the Kovva Project in Bombay, 6,000 kilowatts of power for the construction of the Russian Steel Plant at Bhilai in Madhya Pradesh, and over 20,000 kilowatts for the Delhi State Electricity Board. It must however be recognised that the general exchange position has sadly deteriorated and its shadows have begun to fall even in respect of capital goods. Unless long-term credit facilities, exchange restrictions, I am afraid, will affect the flow of orders in respect of capital goods. It may be possible to arrange medium if not long-term credit facilities to can find ways and means to guarantee exchange rates. I understand, Government are considering at the moment representations to this effect from concerned interests and I hope that the problem posed will be resolved soon.

Apart from the direct activities I have so far referred to, you are aware that Parry & Co. Ltd. perform the duties of the Managing Agents for the three Companies, The Deccan Sugar & Akbari Co. Ltd., The Travancore Sugar & Chemicals Ltd. and Parry's Confectionery Ltd. You will be glad to hear that all these companies are in good shape and have maintained their dividends. In respect of the Deccan Sugar & Akbari Co. Ltd., you will be interested to know that the Company is at the moment engaged in a programme of modernisation and reorganisation of its factories at Samalkot and Pugalur which will considerably improve the efficiency of both units. The Company is issuing 3,40,000 shares at par totalling about 20 lakhs of rupees which I expect will easily be taken up by the shareholders having regard to the record of the Company in the past and current market quotations for these shares.

Cauvery Sugars and Chemicals

Last year the Cauvery Sugars & Chemicals Ltd., was promoted with the goodwill and co-operation of the East India Distilleries & Sugar Factories Ltd., and Parry & Co. Ltd. Capital issued was of the order of 49 lakhs and the entire issue was underwritten. Orders have been placed for the requisite machinery and the factory is now under construction. The factory is well located at Pettavathal in Kulitalai Taluk, Tiruvellore District, as good quality cane is in sufficient supply is confidently expected to be available. The capacity of the factory is 800 tons of cane per day. The East India Distilleries & Sugar Factories Ltd. have been appointed Technical Consultants and Parry & Co. Ltd. are the Secretaries & Treasurers. The main reason which prompted our association with this new Company is the desire to have a common selling organisation which will not only operate economically but also ensure a fair margin for the production of Nellikuppam Factory, Pugalur Factory and Cauvery Factory. The new factory is expected to go into production in June/July next year.

Earlier, I referred in another context to our intention to set up a factory at Bezwada for Fertilisers to cover the needs of the Krishna & Godavari Delta. In which Company (Andhra Fertilisers Private Ltd.) in which the East India Distilleries & Sugar Factories Ltd. will be equal partners with Messrs. K. C. P. Ltd. will shortly be formed. It is proposed to establish a superphosphate manufacturing unit, for which Government approval has already been obtained. The sales franchise of this new company will be exercised by the East India Distilleries & Sugar Factories Ltd. I don't think I need say anything more about the value or importance of this unit intended as it is to enable us to improve our coverage in Andhra in respect of fertilisers.

One other Company that we propose to interest ourselves in is the Pamba River Starch Co. Private Ltd. in which the East India Distilleries & Sugar Factories Ltd. will be an equal partner with Messrs. Corn Products Ltd. and Messrs. Travancore Sugar & Chemicals Ltd. The object of the Company is to manufacture starch from Tapioca roots a high grade starch principally for the export markets. We are holding up the integration of the Company pending clarification of the conditions under which companies may be required to deposit a part of their Reserves with the Government, pending also the issue of an import licence for the plant required and finally pending a clarification of the policy of the present Government of Kerala on the issue of nationalisation.

I shall now revert to the Report and Accounts placed before you, before proposing the adoption of the Report and Accounts for the year ending 30th September 1956. I shall be glad to answer to the best of my ability any questions which any shareholder may wish to put to me concerning the Report and Accounts.

The Directors' Report and the Accounts for the year ended 30th September 1956 were unanimously adopted. Mr. R. Venkataswamy Naidu and Mr. P. Hadfield were re-elected to the Board, and the Auditors, Messrs. Lovelock & Lewes, were re-appointed.

N.B.—This does not purport to be a Report of the Proceedings of the General Meeting.

INDIAN PAPER MAKERS ASSOCIATION

CHAIRMAN MR. P. H. SYKES'S REVIEW

Speech delivered by the Chairman, Mr. P. H. Sykes, at the Annual General Meeting of the Association held on 1st May, 1957, in the Bengal Chamber of Commerce and Industry.

This has been a dull year, by comparison with its predecessors, if one rates as excitement the usual series of worries over labour troubles, transport difficulties, adverse legislation, etc., from all of which I am glad to say there has been some relief—a sign, perhaps, that the country is steadily surmounting its growing pains. The year has however been far from dull from the point of view of the development of the industry that is taking place at present. In this connection progress has been remarkable. I speak not only in respect of increase in production achieved but also in increase in production planned but also in respect of the great interest now being taken by the Government in our industry and of the very real understanding of our problems they are so clearly demonstrating.

This interest is being shown in many ways, the latest of which being their appreciation of the rise in our costs and their sanctioning of an increase in the price of our run—its complete understanding still—in the long run—is their complete understanding of the raw material problem and the necessity to link it with their desire for increased production. This desire, I can assure you, is tempered by the realisation that more paper cannot be made unless there is something—and an indigenous something—out of which to make it. Within the framework of their demand, they say, is likely to go up by 400% within the next 15 years, but they realize production targets (a) supply of the necessary raw materials is assured and (b) the new projects they finance are only for lines of paper in maximum demand or for lines hitherto imported.

I feel there has been too much slanging of Government and too much talk of Private and Public come under the Industries (Development & Regulation) Act but Government are clearly showing that they expect plenty of co-operation from them. If our projects are sound we can go ahead, so can Government or, alternatively, they are happy to join hands with us in joint enterprises and find these signs of willing co-operation, and of goodwill towards us, eminently satisfactory and it is up to us to show what we are made of.

Production Targets

I referred just now to production targets. A year ago I myself was staggered by the size of the targets being fixed by Government and I was sceptical of their chances of achievement but to-day I am a convert, at least so far as the Second Five Year Plan is concerned. The fact of the matter is that the rate of consumption is going up on the lines of the Planning Commission's calculations and you have only got to study to-day's demand to realize this. It is however difficult to be certain of how things will go in the Third and Fourth Plans. When one thinks of the vast trade alone, the fringe of which has barely been touched, one can well believe, assuming that industrialisation continues at the same tempo and that education is on the increase, that demand and consumption will continue to climb for a long time yet but what is going to be worrying is the raw material position in 10 years' time. I believe that, unless a big plant programme is initiated, and very soon at that, we will tend to run out of bamboo and that it is up to the industry in the interim to exploit to the full the possibilities of bagasse, reeds, grasses and various types of wood. Government are of the opinion that waste materials are what the paper industry should rely on for their pulp manufacture. That should give us to think. It means that the national (i.e. railways, etc.) and other industrial demands for certain types of wood, and the commercial demand for bamboo may continue to receive preference over our demand for timber and certain types of wood may be denied us and the public's demand for bamboo for commercial and village industry purposes will continue to be given first preference.

The paper industry is already experiencing difficulty in obtaining its full requirements of bamboo because not only are the various units competing amongst themselves but, as I have already mentioned, there are extensively in the villages, there is a large cottage industry use for it and there is a big commercial trade in it (scaffolding, lathis, etc.). There may, for the time being, still be supplies of bamboo available for mills established in forest areas sufficient for them to expand but, even in those cases, a declining supply position will, unless large-scale planting is undertaken, eventually bring expansion to a halt. Mills situated in States short of raw materials cannot expand under present conditions for, whilst they are infinitely grateful for the decision taken at the end of 1955 guaranteeing continuity of their existing leases in other States and for the way those States are honouring this guarantee, they cannot obtain new long-term leases of forest areas in States which, as opposed to their own, are rich in pulp-making raw materials. Thus, unless they are permitted to import wood pulp independently (which will not be the case) they cannot expand and, up to the present, their only means of securing their pulp requirements so as to enable them to increase production is to agree to put up new units in waste of money when compared with expansion of their existing units, which could be effected much more quickly and cheaply. Furthermore, the shortage of raw material supply means that new paper mills cannot be set up in other non-raw material producing States.

To my mind, the remedy is obvious and that is a source of supply of indigenous pulp which will enable

paper (as opposed to paper-cum-pulp) units to be sited anywhere. At present, because of the integrated mill system (mills producing both pulp and paper), not only, as I have already said, are paper mills being confined to States with raw materials but, because of transport and other material problems, they are naturally tending to be further confined to those raw material-rich areas which are central and easily accessible.

An independent pulp industry sited where the raw material grows would not only enable separate paper-making units, small as well as large, to be established near the paper markets but it would also encourage the exploitation of remote areas and would lay the foundation for an export business. The indigenous pulp would replace imports of wood pulp and of paper at present made from imported wood pulp worth, together, many crores of rupees per annum.

Pulp-making Enterprise

It is for these reasons that a decision has been taken by a group to embark on a pulp-making enterprise and Assam has been selected as a suitable site for the mill. I am glad to tell you that the Governments of India and Assam are in full accord with the promoters and the theory I have just outlined and have given every encouragement and assistance to the project. Let us therefore wish the sponsors well in this new venture which is of obvious importance, pioneering as it will a new industry for our country.

Another point I have to make is that a pulp mill of this nature will greatly assist the railways. Bamboo, reeds and grasses take up a lot of room and the railways cannot enjoy locking up great numbers of wagons over long hauls. The short hauls contemplated by the pulp mill in Assam will be confined to a small congested area, while river-rafting, road transport and, perhaps, aerial ropeways, will help out. The finished article, pulp in bales, will be definitely more economic to transport, for the wagon space occupied by the amount of bamboo necessary to manufacture one ton of pulp is about 3½ times as much as that required by one ton of pulp in bales.

I now propose referring to the new Panel for the Pulp and Paper Industry that has recently been set up by the Government of India. The formation of this Panel, which, I am glad to say, has industrial representation on it as well as governmental, marks, I consider, a very great step forward in the development of the industry. It is a well-knit body, with representatives from the Development Wing of the Ministry, the Planning Commission, the Forest Service and the Railway Board serving on it and it embraces the interests of the rayon industry as well as those

of ours. Our Association has always been keen on an Advisory or Development Council for the paper industry but one has never been formed. Now this Panel has been set up and it will provide a very adequate substitute. It will furnish a close link between the industry and Government on all matters of development and its scope will be very wide. It will, for instance, examine the whole of India's forest materials position and thus be in a position to recommend to Government the best places for siting new units. It may even study the marketing and distribution of the end-product and the types of paper that are being manufactured or need manufacturing. It will certainly organize the dissemination of technical information within the industry and it will advise the Government on the manufacture in India of paper-making plant and equipment. Sub-committees have already been established in most of these various connections and the one that deals with forest resources may very possibly take the place of the Ad Hoc Committee, a purely governmental body, which was established towards the end of 1953.

I think it will be in the interests of all of us to get used to the idea of pulp and paper machinery and equipment being manufactured in India. Though it will take a long time it has got to come and, until the new industry has become properly established, we shall undoubtedly have to make allowances for many teething troubles. Engineering firms are so booked up at the moment that the process will be a protracted one but the determination of India to manufacture her own machinery is both obvious and natural and the desire to get a move on is being spurred on by the current foreign exchange difficulties. We all know that the importation of capital plant for new projects, now necessitating arrangements for deferred payment, etc., is not going to be so easy as it was and the more equipment therefore that we can get made out here the better for us. Government are going to do all they can to promote indigenous manufacture and we must do our best to co-operate but only to the point that the quality of our paper is not affected for—I think we all agree, and so do Government—the raising of the standard of Indian-made paper is of equal importance. I wish very much we could get our prices down but with the trend in costs as it is—it looks as though another rise in freight rates was coming—and with the possibility of having to pay more for our equipment it is quite impossible.

Before I close I would like for a moment to touch on a not very pleasant matter. It concerns the cornering of the shares of one of our oldest member-companies. It is disgraceful that an attempt should have been made by people of no experience whatsoever of our industry to oust from its managing agency a firm that over the past sixty years has shared extensively in the building up of the Indian paper industry to its present position and has invariably helped its managed company to surmount the many grave difficulties that that company, in common with the rest of the industry, has had to face during the past.

It gives me pleasure to acknowledge the services of our efficient Secretary and of our parent body, the Bengal Chamber, and to thank my fellow committee members for the assistance they have given.

Our new Analytical Laboratory offers its services to the trade for the competent analysis of

Acids and Alkalies. Oils. Fats. Waxes. Shellacs. Oil Seeds. Heavy & Fine Chemicals. Ores. Minerals. Soils. Drugs. Coals. Pharmaceuticals. Vitamins. Alkaloids. Water. Salts. Metals and Alloys, etc., etc.

Prompt service and moderate terms.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the annexed Balance Sheet of HINDUSTHAN MERCANTILE BANK LIMITED as at 31st December, 1956, and also the annexed Profit & Loss Account of the Bank for the year ended upon that date in not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act 1949, read with the provisions to Sub-sections (1) and (2) of Section 211 and Sub-section (5) of Section 211 and Section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit & Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that subject to the provisions for Income-tax for the completed assessments for the year 1952-53, the Balance Sheet and Profit & Loss Account of the Bank for the year ended upon that date in not visited by us.

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory; (b) The transactions and balances of the Bank which have come to our notice, have been within the powers of the Bank; (c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank; (d) The Bank's Balance Sheet and Profit & Loss Account drawn up by the Bank in accordance with the provisions of the Companies Act, 1956, and the Balance Sheet and Profit & Loss Account of the Bank as at 31st December, 1956, and the Profit & Loss Account of the Bank for the year ended upon that date, give a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit & Loss Account of the Bank for the year ended upon that date.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

RISE IN ADVANCES CONTINUES

Wednesday, 8th May.

ADVANCES have risen again in the Calcutta money market during the past week. A substantial increase is reported in accommodation for grains and seeds. Sugar credit is higher, but jute advances are around the previous levels. Cotton mills' borrowings show a small decrease. There has been some activity in the interbank market, and the call rate has risen to 3½ percent.

The exchange market is dull, with only a trickle of gunny bills reported. Remittance has been on a moderate scale. Sterling is steady, having been helped by the publication of the figures for the sterling area's gold and dollar reserves.

Gold was firm at Rs. 107.50 because of good offtake and restricted arrivals.

Silver reacted to Rs. 181.50 on profit-taking induced by the prospect of increased imports of Tibetan coins.

During the week ended 3rd May, Government of India Treasury bills for Rs. 93,46,50,000 were sold in favour of the Reserve Bank.

An increase of Rs. 15,20 crores to Rs. 1,577.11 crores in active notes, and of Rs. 3.67 crores to Rs. 1,596.15 crores in notes in circulation, was a notable feature of the return of the Reserve Bank of India for the week ended 3rd May, 1957. The currency expansion was covered by increasing rupee securities by Rs. 4.97 crores to Rs. 929.87 crores. Deposits showed a general decline. Deposits of the Government of India decreased by Rs. 1.02 crores to Rs. 51.81 crores, and other Government accounts by Rs. 2.12 crores to Rs. 4.26 crores. Balances of commercial banks, at Rs. 64.06 crores, were Rs. 3.54 crores lower. Balances held abroad fell by Rs. 8.49 crores to Rs. 83.90 crores, while investments increased by Rs. 14.72 crores to Rs. 127.14 crores. Other loans and advances increased from Rs. 96.24 crores to Rs. 105.31 crores, of which advances to scheduled banks against usance bills rose from Rs. 53.24 crores to Rs. 59.98 crores. Such advances amounted to Rs. 208.25 crores since 1st January, 1957. Ways and means advances stood at Rs. 15.72 crores (Rs. 16.27 crores).

The return of the State Bank of India for the week ended 26th April, 1957, shows a drop of Rs. 5.33 crores in total deposits to Rs. 299.15 crores. Investments in Government securities and other authorised investments remain unchanged at Rs. 94.07 crores and Rs. 11.46 crores, respectively. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have advanced by Rs. 2.40 crores to Rs. 183.38 crores. Cash and balances are, in consequence, shown at Rs. 27.65 crores or Rs. 7.25 crores less.

The statement of the position of scheduled banks for the week ended 26th April, 1957, shows Demand and Time liabilities at Rs. 729.09 crores (Rs. 8.63 crores on account of borrowings from banks) and Rs. 502.90 crores (Rs. 2.52 crores), compared with Rs. 732.08 crores (Rs. 9.85 crores) and Rs. 495.66 crores (Rs. 2.13 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 31 lakhs and Rs. 3.98 crores to Rs. 37.97 crores and Rs. 65.86 lakhs, respectively. There is a drop of Rs. 52 lakhs in investments to Rs. 344.51 crores. Advances and bills discounted, at Rs. 907.94 crores, indicate a rise of Rs. 6.63 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.4 percent and 73.4 percent, against 8.8 percent and 73.4 percent.

Provisional figures of foreign trade of India by all routes—sea, air and land—on private and Government accounts, during February 1957, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding transit countries, namely, Nepal, Tibet, Sikkim and Bhutan: exports Rs. 5,425 lakhs, re-exports Rs. 30 lakhs, imports Rs. 7,132 lakhs; total trade Rs. 12,587 lakhs. Treasure; exports of currency notes Rs. 5 lakhs, currency notes Rs. 510 lakhs, others—nil. Balance of trade: the merchandise import figures are exclusive of the value of certain consignment of Government stores awaiting adjustment. Subject to this deficiency in import figures, the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs. 1,679 lakhs.

The HINDUSTHAN MERCANTILE BANK has made a profit of Rs. 4,631 for the year ended last December. Deposits amounted to Rs. 1.78 crores. Investments were shown at Rs. 91.40 lakhs. Advances stood at Rs. 1.46 crores. Cash totalled Rs. 18.35 lakhs.

We know the drill!

for saving
India's
foreign currency

Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

ASSAM OIL COMPANY

A Member of the Burmah Group of Oil Companies.

to Rs. 481. Richardson and Cruddas met with selling pressure and were marked down from Rs. 17 to Rs. 16.31. Textile Machinery at one time improved to Rs. 19.20, but in sympathy with the general trend, closed easier at Rs. 18.90.

In paper, Sirpur were better at Rs. 9.25, as were Titagur at Rs. 33.75. India Paper Pulp were shaded at Rs. 21.06, while Orient fluctuated narrowly around Rs. 30.20.

In cement, Ashoka were reported at Rs. 10, while Dalmia were lower at Rs. 11.50. Jaipur Udyog met with good enquiry and improved from Rs. 11.43 to Rs. 13.06 but receded at the close to Rs. 12.62. Orissa Cement were maintained at Rs. 13.25, while Sone Valley were slightly better at Rs. 6.25.

In shipping, India Steamship recovered slightly from Rs. 9.94 to Rs. 10.09, while India General Navigation were unchanged at Rs. 66 and Port Shipping at Rs. 16.37. Calcutta Landing recorded a small improvement to Rs. 12.25.

In the miscellaneous section, Alkali and Chemical were enquired for at Rs. 11.75 while Angelo Brothers were unchanged at Rs. 18.25. Assam Saws attracted a few bargain hunters and the price improved slightly to Rs. 3. Britannia Biscuit closed lower at Rs. 12.87, as did British India Corporation at Rs. 6.70. Clive Row Investment were better at Rs. 9.56 and Dunlop Rubber changed hands freely around Rs. 24. Indian Cables met with selling pressure and were marked down from Rs. 25 to Rs. 24. The announcement of a final dividend of Re. 1 a share by Indo-Burma Petroleum Co. Ltd., making 20% for the year as against 40% for the previous year, was received with disappointment. The shares, after recovering from Rs. 28.50 to Rs. 30.50, slid back at the close to Rs. 28.87. Imperial Tobacco were better at Rs. 14, while Jardine Henderson were unchanged at Rs. 78 and Martin Burn at Rs. 23.31. National Carbon were offered at the lower rate of Rs. 24.75 and Rallis were neglected at Rs. 30. Rohas Industries were better at Rs. 18.25.

In the mining section, Burma Mines improved to Rs. 2.45, as did Indian Copper to Rs. 3.28 and Karanpura Development to Rs. 12.50. Orissa Minerals were slightly better at Rs. 18.62.

Dr. B. C. Roy's suggestion in his address to the Tea Association on Sunday that tea companies should not distribute dividends exceeding 6% or 7% introduced a note of caution in an already depressed tea section. Bishnauth eased to Rs. 19.25 and Hattikhira to Rs. 14.50. New Doars were marked back from Rs. 272 to Rs. 270. Jutibari from Rs. 21.37 to Rs. 21.25, and Tezpur from Rs. 19.37 to Rs. 19.19.

The profit of GODFREY PHILLIPS, INDIA, LTD. has increased by Rs. 3.37 lakhs to Rs. 22.38 lakhs for the year ended last December. Providing Rs. 11.2 lakhs (Rs. 9.1 lakhs) for taxation, there is a balance of Rs. 10,87,734. Bringing in Rs. 11,96,811 and adding other miscellaneous receipts, the distributable amount totals Rs. 23,32,206. The ordinary dividend is the same at 20 percent. Gratuitous reserve is allocated Rs. 1.06 lakhs against Rs. 79,000, leaving a carry-forward of Rs. 13,04,518.

BRUSHWARE LTD. has increased its profit from Rs. 7,280 to Rs. 24,322 for the year ended last November. The dividend is increased from 12 annas to Re. 1 a share. Rehabilitation reserve absorbs Rs. 7,500 against Rs. 3,500, leaving a carry-forward of Rs. 6,549 against Rs. 7,251 brought in.

Providing Rs. 33 lakhs (Rs. 29.1 lakhs) for taxation, the profit of the BOMBAY DYEING AND MANUFACTURING COMPANY has increased from Rs. 25.30 lakhs to Rs. 54.16 lakhs for the year ended last December. Bringing in Rs. 73,129, there is a balance of Rs. 54,89,593. The dividend has been maintained at Rs. 25 a share, including an interim

of Rs. 7-8 a share (same). Development rebate is allocated Rs. 23,14,077, leaving a carry-forward of Rs. 2,41,366.

Bombay Market

RISE IN SHARES NOT MAINTAINED

CAUTIOUS TRADING AS BUDGET DAY APPROACHES

Wednesday Evening.

THERE was a short-lived rally in prices on the Bombay stock market during the past week as money conditions were temporarily easier. In the beginning, speculators were encouraged by rumours of relief in taxation on earned income. Towards the close, sentiment suffered a setback and top gains were shaded on realising. Trading was cautious and there was a general inclination to reduce commitments in view of the Central Budget, which is expected to be presented on 15th May. Revival of pressure on funds, coupled with the Reserve Bank's circular asking commercial banks to be more discriminating in their advances against shares, caused a great deal of uncertainty.

Tata Steels reacted to Rs. 169.25 and Indian Iron were quoted lower at Rs. 20.35 after touching a peak of Rs. 20.75. Buying orders for the latter came especially from Calcutta interests. Tata Locomotive declined to Rs. 147 on profit-taking, while Alcock Ashdown were freely offered at Rs. 257.50, with sellers predominating. Premier Construction were quietly steady around Rs. 163.50. Routine turnover was seen in automobile shares. Premier Automobiles came to hand at Rs. 91 and Hindustan Motors were talked around Rs. 7.25.

The closing prices of cotton mill shares were

May 9, 1957.

below the best of the week. In spite of a satisfactory report, Bombay Dyeing reacted to Rs. 542.50 and Century declined to Rs. 461 on long liquidation. Kohnors realised Rs. 321.50, and S. 214 by knowledgeable Sivasdeshi were bought at Rs. 214 by knowledgeable Sivasdeshi and India United Ordinary were freely available at Rs. 10.10.

Fluctuations in miscellaneous shares were mixed. Cement shares were fairly steady, and Associated Cement were transacted at Rs. 159.25. Digested were done at Rs. 145.50, and Belapur were taken in sugar shares, and Belapur were made Rs. 250.50. Profit-taking receded the prices made Rs. 18.35 on pressure, but India Steamship were quietly steady at Rs. 10.10 on short-covering. Great Eastern Shipping were done at Rs. 18.60. Mining shares were subdued, and Shrivraipur Syndicate were sold at Rs. 84. B. B. Petrol were bought at Rs. 2.64. National Rayon were shaded at Rs. 16.25 on 27.25, as were Tata Chemicals at Rs. 16.25 on 27.25. Wimco were steady at Rs. 170 on main-realising. The distribution. Godfrey Phillips improving to Rs. 23.4 on a good report, indicating payment of the same ordinary dividend of 20 percent.

Limited turnover was seen in banking shares. Bank of India were transacted at Rs. 132.50 and Central Bank of India fetched Rs. 51. Insurance shares showed minor variation, with New India coming to hand at Rs. 41.25.

Electricity supply shares met with selective support. Ahmedabad were taken at Rs. 94 and Tata Power came to hand at Rs. 1,225.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paise].

Plan for Progress

People's Prosperity

Fields swaying with golden corn, tall chimneys

spouting smoke, flowing waters generating power, and a network of

roads, railways and airways linking remote distances are

today creating new opportunities for a richer and fuller life for the

Indian people. By the end of the Second Five Year Plan

the total national income will have risen by 25%, and the per

capita income, by 18%. Textile Machinery Corporation

Limited is proud to play its part in this mighty adventure of

bringing plenty, prosperity and happiness to the people.

A pioneer in many fields of engineering, it supplies industry,

railways and river valley projects with a wide range of equipment.

geared to our better tomorrows

Engineering and Transport

PROTECTION FOR PISTON ASSEMBLY INDUSTRY NEED TO IMPROVE QUALITY AND CUT COSTS

IN its report on the automobile industry, the Tariff Commission placed special emphasis on the development of ancillary industries. Piston assembly is one such industry. It has a vital rôle in the development of the automobile industry, but to maintain quality is of prime importance. As transport requirements are steadily increasing with the progress of the second five year plan, the demand for automobiles will increase in the future, and with it, the demand for piston assemblies also. The industry, therefore, has a bright future before it, provided it succeeds in maintaining high quality and in keeping its costs low.

Mr. C. Ramasubban, member of the Tariff Commission, opening the public enquiry into the question of continuing protection to the piston assembly industry, recalled that the Tariff Commission enquired into the claim of the industry to protection first in 1935. It recommended giving protection up to 31st December, 1957 by levying a protective duty of 50 percent *ad valorem*, standard, on trunk piston assemblies of diameter 6 inches and below, and pistons, rings (excluding chromium-plated rings) and gudgeon pins required for such piston assemblies imported separately. The preferential rate was left to be fixed according to the relevant trade agreements. The Government accepted those recommendations and protection was granted to the industry from 23rd November, 1955.

At present, the scheme of protection is restricted to the following items: trunk piston assemblies of diameter 6 inches and below, trunk pistons of diameter 6 inches and below, trunk piston rings (excluding chromium-plated rings) of diameter 6 inches and below and gudgeon pins for trunk pistons of diameter 6 inches and below. Protection has been granted on the condition that they are adapted for use as parts and accessories of internal combustion engines of all kinds. These exclude such articles as are used exclusively as parts and accessories of internal combustion engines of agricultural tractors and aeroplanes. The Commission has received representations from the industry to enlarge the scope of the present enquiry to cover chromium-plated rings and cylinder liners

(wet and dry). Chromium-plated rings are not yet produced in the country. But it could be examined whether there was any case for extending the same quantum of protection to chromium-plated rings as had been given to other types of rings. Mr. Ramasubban said. As for cylinder liners, the Commission prefers to hold a separate enquiry, if necessary.

Domestic Demand

At the 1955 enquiry, the Commission estimated the domestic demand, outside the requirements of the Defence Services, at 600,000 each for pistons and gudgeon pins and 4,800,000 for piston rings. The demand was expected to increase by 10 percent during next two years. In connection with the present enquiry, the Commission has received varying estimates of demand from the Development Wing and two of the producers. The Development Wing has estimated the current demand for pistons at 738,000 numbers, for piston rings at 5,900,000 numbers, and for gudgeon pins at 738,000 numbers. One of the producers has estimated the demand at 650,000 numbers for pistons, 4,500,000 numbers for piston rings and 650,000 numbers for gudgeon pins. The corresponding estimates of the other producer are 894,400 numbers, 7,633,600 numbers and 894,400 numbers. One of the producers is of the view that the demand is likely to receive a setback during 1957. The basis to be adopted in arriving at the above estimates of demand would be examined by the Commission which also would see whether the estimates furnished by the Development Wing required modification.

In 1954, only India Pistons Ltd., Madras, was manufacturing pistons, rings and gudgeon pins for use as original equipment as well as for replacement. Its capacity on single shift was estimated at 3,600,000 for pistons, 1,800,000 for piston rings and 480,000 for gudgeon pins. Another unit, namely, Hindustan Motors Ltd., Calcutta was manufacturing piston assembly for use in engines manufactured by it. One more unit, Goetze (India) Ltd. of New Delhi, with a capacity of 1,500,000 piston rings in the first year, was expected to go into production early in 1956. Besides, there were some small engineering units manufacturing component parts of piston assembly according to orders, but necessary details about them were not available. The position at present remains more or less the same.

Existing Capacity

The present capacity of India Pistons Ltd. has been furnished by the firm at 300,000 for pistons, 2,280,000 for piston rings and 360,000 for gudgeon

pins. The lower capacity for pistons and gudgeon pins submitted by the company is attributed to the wider range of large-size pistons in its manufacturing programme. Goetze (India) Ltd. could not commence production as scheduled and the firm now expects to go into production of piston rings, including chromium-plated rings, in July, this year. Its capacity remains unchanged at 1,500,000 rings on single shift. The capacity of Hindustan Motors Ltd. has been furnished by the Development Wing at 80,000 pistons a year. As was the case during the last enquiry, no statistics are available about the small engineering units engaged in the manufacture of component parts of piston assemblies for their own use. The output of India Pistons Ltd. during last three years, showing a steadily upward trend, was as follows:

	1954	1955	1956
Nos.	Nos.	Nos.	Nos.
Pistons	114,223	132,042	1,602,38
Piston rings	1,575,668	1,917,762	2,080,528
Gudgeon pins	22,790	134,056	142,187

Referring to the quality of the indigenous products, Mr. Ramasubban said that at the last enquiry, the general opinion was that the quality of pistons, piston rings and gudgeon pins manufactured by India Pistons Ltd., was satisfactory. But the evidence now received revealed that consumers' opinion on their quality is divided. Some of the consumers have stated, he said, that indigenous products have given satisfactory service and that they compare favourably with the corresponding imported products, while others have complained that indigenous products are inferior to imported ones. "We would like to know from the consumers the specific defects in the domestic products noticed by them and would also like to discuss with the manufacturers the steps taken by them to remedy these defects."

Import Classification

At the last enquiry, piston assemblies were classified for the purpose of issue of import licences, under various serial numbers of the Import Trade Control Schedule, according to their uses. Since then, imports have been canalised for all types of internal combustion engines, other than aircraft, under List III of Appendix XXVI of the I.T.C. Schedule. The current import policy is as follows. In the case of piston assemblies, a quota of 100 percent general and 100 percent soft, of one-half of their best year's imports has been fixed for established importers, but not more than 25 percent of the face value of the quota licences can be utilised for the import of piston assemblies of 6 inches diameter and below. Further, licences will not be valid for the import of piston rings except as component parts of complete piston assemblies. Actual users' applications from garages for import of complete piston assemblies of certain makes will also be considered *ad hoc*. Licences granted against this item will also be valid for the import of (a) piston assemblies of 36 m.m. diameter and below and (b) piston assemblies for auto attachments of all types provided the pistons are of 40 m.m. and below. The quota will be calculated on the basis of imports of complete piston assemblies and pistons. The established importers' quota for piston rings is the same as in the case of piston assemblies, that is, 100 percent general and 100 percent soft, but not more than 10 percent of the face value of the quota licences can be utilised for the import of piston rings of 6 inches diameter and below. Piston rings will also be allowed to be imported when they are imported with (a) original equipment either C.K.D. or assembled and (b) fitted to pistons when imported as complete piston assemblies.

Imports

The statistics of imports of piston assemblies and their components are being maintained separately by the D.G.C.I. and S. only from January 1956. The total imports during 1956 as furnished to the Commission were:

	Quantity Nos.	Value Rs.
1. Trunk piston assemblies of diameter 6 inches and below	93,923	13,75,260
2. Trunk pistons of diameter 6 inches and below	71,385	12,81,240
3. Trunk piston rings (excluding chromium plated rings) of diameter 6 inches and below	190,264	7,30,993
4. Gudgeon pins for trunk pistons of diameter 6 inches and below	20,406	59,904

The protected categories of trunk piston assemblies and their components are assessed to protective duty of 50 percent *ad valorem*, standard, and 42½ percent *ad valorem*, preferential.

AIR FRANCE PLACES ORDER FOR SEVEN MORE BOEINGS

Air France has increased its order from ten Boeing 707 inter-continental airliners to 17, fully to equip its fleet for operation on long distance routes. By placing this order, Air France becomes number one European airline to possess the largest number of four-engine jet planes of the inter-continental type. The delivery will commence in November, 1960, and will be completed by November, 1961. Air France thus will be able to put into service a large fleet of four engine jet aircraft during the peak season of summer 1960.

New Delhi

DECISION ON HEAVY ENGINEERING PROJECT EXPECTED SOON

REPORTED PREFERENCE FOR RUSSIAN RECOMMENDATIONS

(FROM A NEW DELHI CORRESPONDENT)

THOSE critics of the second five year plan, belonging mainly to the extreme Left but representing also a section of the Congress Party, who have been unhappy because of the reduced targets of heavy industrial development, may soon have some good news. In Professor P. C. Mahalanobis' plan-frame, the proposal for the creation of machine-building capacity to fabricate annually, from 1961, the equipment required for a one million ton steel plant, and other producer goods involved an estimated expenditure of Rs. 150 crores. The provision was later whittled down in the memorandum drawn up by the Planning Commission's advisory panel of economists. Not all members of the panel were convinced that the cut financial provision for the development of the railways and other transport. Subsequently, the mission's Informal Consultative Committee, consisting of members of Parliament, it was officially reported that "with reference to the pattern of allocations proposed in the plan, several members suggested an increased provision for heavy industry, especially for machine building." But the final version of the plan, issued in May 1956, made no mention of any proposal to create indigenous capacity for the fabrication of a one million ton steel plant each year from 1961. The document said that about Rs. 35 crores would be available to the National Industrial Development Corporation "for pioneering new basic and heavy industries." It spoke in general terms of "the desirability of ensuring conditions for the fabrication within the country of the bulk of the heavy machinery that will be required in the third five year plan." When the second plan was debated in Parliament last year, Mr. A. K. Gopalan, leader of the Communist group, was joined by some Congress members in criticising the allocation for heavy industries as inadequate. On the other hand, it was Mr. Asoka Mehta, the Praja Socialist Party leader, who asserted that "the democratic fabric will not be able to stand the strain" of any increase in the industrial component of the plan, as demanded by Mr. Gopalan.

Subsequent Developments

Subsequent developments served to confirm the impression that the plan-frame concept of heavy industrial development had been abandoned, and a more modest scale of development was planned. When Russia last winter offered to deliver machinery and equipment worth Rs. 60 crores on long-term credit, during the last three years of the utilisation of the aid were in terms of fertiliser factories, optical glass manufacture, mining equipment and an oil refinery in the public sector, leaving little for machine-building. It was, therefore, thought that the recommendations of the Russian expert team on heavy engineering, for a giant machine-building establishment to turn out equipment for steel plants, could be implemented only with additional Russian aid. The cost was estimated at Rs. 42 crores in the first stage and Rs. 52 crores in the second. The limitations imposed by the plan provision of only Rs. 35 crores was very much on the minds of the members of the Jehangir Ghandy Committee in their examination of the proposals made by the Russian team and by the Coates mission from Britain. The latter, it should be remembered, concerned itself with the manufacture of equipment for a number of industries besides steel and lying outside the scope of the Russian report, such as heavy machine tools, fertilisers and other chemicals.

Under the present programme for the development of heavy industries, with assistance not only from Russia but also from Britain, Western Germany and any other source of long-term credit, be sought. It now seems probable that the size and scope of the machine-building project will be far bigger, and much closer to the first stage outlined in the Russian report than was thought possible by most people—including the members of the Jehangir Ghandy Committee. The emergence of this prospect, which means a return to the plan-frame idea of creating capacity to fabricate steel plants, it is understood, is due directly to the Prime Minister. He is believed to have proposed that the plan provision for heavy industry should be increased, and that the first priority in utilising Russian credit be given to machine-building, by sacrificing some of the original projects. The subject of utilisation of Russian aid was discussed by the Planning Commission at a meeting last week in which Mr. Nehru participated. The Government, it is expected, will reach its decision shortly.

Cost Estimates

An estimate of the cost of the machine-building project, and of the extent of Russian credit it will entail, must await a technical examination of the question whether a foundry-forge should form part of it. This has been recommended in the

Russian experts' report. It is stated that it is not unusual even in Russia to have large castings transported over long distances from favourably situated centres of production. On the other hand, there are advantages in having a forge-foundry at the same site. While the distribution of capacity for heavy castings and forgings, for which three units were originally planned by the N.I.D.C. remains to be decided, the latest preference for the fabrication of steel plant equipment seems unlikely to be reversed, initiated as it has been by the Prime Minister himself. The governing idea is said to be that the country should become self-reliant by the middle of the third plan, at least in three strategic industries—steel, coal and cement. The machine-building project for the manufacture of steel plant components is, therefore, held to be indispensable, even if it calls for the postponement of some other second plan schemes. Among the likely casualties that have been mentioned are the proposed dry dock in Vishakhapatnam, and the development of synthetic fibres among consumer industries. The former Production Ministry was already pursuing a scheme for the manufacture of

coalmining equipment. It will now be pursued by the Department of Heavy Industries. The manufacture of cement machinery has not posed any comparable problem for the Government since a large project in the private sector, estimated to cost Rs. 20 crores, has been approved for this purpose. The project, in which two foreign firms—Babcock-Wilcox and Vickers—are collaborating with A.C.C., is expected to start production in 1960-61, and attain the full level of its output in 1964. It is designed to produce, besides cement machinery, some mining equipment, water tubes and high-pressure boilers. With plans thus in hand for coal and cement and most probably steel, the Government's attention should now turn to the prospects of securing assistance from Britain and the Continent concerning any foundry-forge units that it may decide to set up outside the machine-building project, the fertiliser and chemical industries, and heavy machine tools.

The increase in the size of the plan, and the heavy demand which it will make on the country's resources and the railway system, have been criticised by many responsible people including a member of the Planning Commission, Mr. K. C. Neogy. They feel that even if the foreign exchange needs are covered by long-term credit, an increase in the heavy industries programme, with the priority calls it will make on internal resources as well as the ports and railways, will starve the consumer industries of both finance and transport.

Views on Company Reserve Deposit Scheme

A deputation on behalf of the Federation of Indian Chambers of Commerce and Industry last week met Mr. A. K. Roy, Revenue Secretary in the Union Finance Ministry, to discuss the Government's draft rules for the deposit of a portion of current company profits with the Reserve Bank. The members of the deputation,

What's the job going to cost!

Before you buy your earthmoving equipment find out the job-costs

It's the total job cost that should be considered and not only the purchase price of equipment. Get the best for your job—buy "Caterpillar" earthmoving machines. You will have less downtime, lower operating costs, better service and ready supply of parts.

Pushing, pulling or carrying, on tracks or rubber, "Caterpillar" will move more earth in less time at less cost per cubic yard than any other machine. The high efficiency of Caterpillar performance more than offsets the initial costs.

KEEP AHEAD OF SCHEDULE WITH

who later paid a brief courtesy call on the Finance Minister, included Mr. Sri Ram, Mr. G. D. Somani, Mr. G. L. Bansal, Mr. G. P. Kapadia and Mr. B. P. Singh Roy. The discussion was on the basis of a memorandum already submitted by the F.I.C.C.I. in response to the Finance Ministry's invitation when the draft rules were published last month. The following are some important suggestions made in the memorandum:

(1) *Proportion of profits for deposit:* It has been urged that the percentage of current profits to be deposited should be fixed at 37½ percent, against the 50 percent specified in the draft rules and the maximum of 75 percent sanctioned by the Finance Act (No. 3) of 1956. The argument advanced is that the actual saving to a company under the deposit scheme is not the absolute amount of depreciation allowance or development rebate, but the amount of tax that would otherwise be levied on that. Therefore, the saving is to the extent of only about half the amount of depreciation allowance and/or development rebate. Since it is obviously the intention of the Government to leave a reasonable margin with the company, the deposit, it has been submitted, should be fixed at 37½ percent.

(2) *Rate of interest on deposits:* The Federation has submitted that the interest to be paid by the Government on the deposits should be not less than one percent above Bank rate. The memorandum says that, in certain circumstances, companies may have to borrow money in order to make the deposit at rates of interest much higher than Bank rate. According to the draft rules, interest will be allowed at the rate which may be notified by the Central Government for each financial year.

Approved Purposes

(3) *Definition of "approved purposes":* The Federation has urged that, in addition to what the draft rules provide, the following heads of expenditure should be specifically included in the definition of "approved purposes": capital expenditure for the expansion of existing business and working capital for the development and maintenance of business; loans of any kind, and not only those raised on fixed assets, and the payment of interest; expenditure on stock-in-trade and stores, and other trade outstandings and advances; cash resources required for the purpose of the business; and investments in Section 15C or 56A and such other companies and industries as may be considered important for the country's industrial development.

(4) *Definition of total income:* It is urged in the memorandum that income, for the purposes of the deposit scheme, should be computed according to commercial principles and should not mean assessable income. Otherwise, donations and other expenses which are added back to assessable income would have gone out of the company's hands, but the company would still be called upon to make a deposit relating to that portion of income. It is also urged that receipts in kind, in the form of shares or debentures, should be exempted from the computation of total income. Another suggestion is that allowance should be made for taxes paid in foreign countries, and for restrictions placed on remittances from foreign countries, in computing the statutory surplus for the purpose of the deposit scheme. The business profits tax levied in Pakistan has been cited in support of the plea that only the total income received in India should be taken into account.

(5) *Use of reserves:* The memorandum says with reference to draft rule 11 (1) that "reserves and accumulated profits" should be clearly defined, and it should also be made clear what exactly would constitute "a substantial portion" of such reserves and accumulated profits. More fundamental is the objection raised in the memorandum to the requirement that the utilisation of reserves in the past must have been for approved purposes now defined. It is argued that a company should not be penalised for having utilised its funds in previous years for purposes which then appeared necessary but might not now qualify for approval. The rules, the Federation has urged, should, therefore, provide that the question of a deposit should rise only if current profits are not utilised for approved purposes.

(6) *Board of Referees:* Finally, the memorandum urges that the Board of Referees, to whom any differences between a company and the Commissioner of Income-tax are to be referred and against whose decision there will be no appeal, should be constituted as an independent body. The draft rules do not say anything about the composition of the Board, but provide that it shall work under the general control of the central Government. The Federation has urged that the Board of Referees should be free from the

Cement from North Viet-Nam

control of the Central Government, like the Income-tax Appellate Tribunal, so that it can create confidence among the assesses.

It is understood that the import of cement from North Viet-Nam is being negotiated in addition to the purchase of 7,000 tons of rice, which was announced last week. The rice agreement included by the State Trading Corporation with a visiting trade delegation from North Viet-Nam marks the first major transaction with that country. Under the contract, North Viet-Nam has agreed to use the proceeds for the purchase of Indian commodities including jute manufactures, textiles, and engineering goods.

London

ENQUIRY REPORT ON LABOUR DISPUTES IN U.K.

DETAILS OF OVERSEAS TRADING COMPANY TAX RELIEFS

(FROM OUR LONDON CORRESPONDENT)

THE labour situation looms large on the economic scene at the moment, for the Court of Enquiry's reports into the recent disputes in the engineering and shipbuilding industries have been presented to the Minister of Labour. It has suggested that the parties must now choose between either a straightforward wage increase of 5 percent, or a larger increase of roughly 6½ percent in return for important concessions by the unions which include a promise to refrain from further wage claims for a year, to settle all disputes by negotiation, encourage better productivity and time-keeping, and end restrictions on earnings. The unions, it will be remembered, asked for 10 percent, and the employers' best offers were 3½ percent in the engineering industry and 5 percent in the shipyards, with "strings" attached. The three-man court has gone further by proposing the establishment of National Joint Industrial Councils for both industries, and of an authoritative and impartial body to consider "the wider problems of wages policy in an inflationary setting." The Government has already welcomed the last of these proposals and has promised to give it "urgent consideration" which will involve discussions with both sides of industry. The attitudes of the employers and the unions to the court's findings will not be made known for another week or two and until the reports have been studied fully, but initial reactions, at least in the more moderate circles, are not unfavourable.

The 5 percent "pattern" gets more and more established. It has just been accepted by the N.U.M. executive, and the employers will no doubt be prepared to go even further if the unions are, in fact, prepared to implement the attached conditions. On the other hand, the belligerency displayed at the annual conference of the Amalgamated Engineering Union, at the instance of the Communist element, in pressing a fresh wage claim before the present one has been decided, suggests that any further negotiations between the two sides might be both protracted and perhaps acrimonious. Short time working is contracting again, with only 75,000 involved on 26th April against 82,000 a month earlier; motor-car manufacturing is getting back to normal; the effects of the oil and fuel crisis have not been so great as many expected; and labour's recent fears of unemployment are fading fast.

Overseas Trading Corporations

The complex task of drafting the Finance Bill has been completed, and it duly made its appearance last week. Part IV, which concerns the position of companies trading abroad and the special tax treatment to be accorded them calls for detailed consideration. The "Overseas Trading Corporation" (abbreviated to O.T.C.) is defined as a company carrying on trade outside the U.K., or a non-trading company which has a trading subsidiary overseas, and no U.K. subsidiaries which are not O.T.C.s. Activity in Britain other than the exercise and control of central management disqualify from O.T.C. status. There is an exception here for companies of this type producing commodities such as rubber, tin and tea and they may sell their commodities on recognised commodity markets in Britain. An O.T.C. which exports British goods must buy them f.o.b. and not incur expenses or provide services relating to the goods in Britain before the f.o.b. point. A company disqualifies as an O.T.C. unless its profits are chargeable in some country to a tax similar to U.K. income-tax or profits tax; or if its profits are the kind that would be liable to income-tax in some country if the whole world has a tax identical with the U.K. income-tax. As already stated in the Budget speech, certain businesses are expressly excluded from the scheme. The most important are banking, hire-purchase finance, dealing in securities, insurance, shipping and air transport.

The benefit conferred by the O.T.C. scheme is in general limited to the excess of the U.K. rate of tax over the rate of tax appropriate to the particular company in the country where it operates. But, where the other country's general rate is as high as the U.K. rate, there may still be a benefit if the company could enjoy special reliefs—say for depletion of minerals or as a pioneer industry—in the overseas territories. An O.T.C. will not be liable to income or profits tax on its trading profits. It will remain liable to both taxes on any investment income. Moreover, the O.T.C. will be liable to income-tax, subject to double taxation relief, on trading profits. A shareholder which is a U.K. company will be liable to profits tax on dividends and other distributions from an O.T.C.

An O.T.C. deducts income-tax from its dividends at the standard rate and accounts to the Treasury for the deducted tax. But it is granted credit for tax which it has paid abroad. Subject to the new provisions relating to double tax relief, non-resident shareholders (other than subsidiaries of U.K. companies which are not O.T.C.s) are entitled to repayment of the deducted tax. For this purpose, an O.T.C. which has an O.T.C. subsidiary will be treated as a non-resident. Relief for repayment of deducted income-tax is limited to the standard

rate less the credit for the tax paid abroad. A U.K. company which is a shareholder in an O.T.C. pays profits tax on dividends received since these are not franked income.

Transfer of Profits

For the larger and more complex British companies, the most important new provision is the means whereby they can transfer profits from one overseas country to another without incurring U.K. tax. Until now dividends from a locally-controlled subsidiary remitted to the holding company in Britain incurred U.K. tax, even when the money was reinvested in another overseas subsidiary. An O.T.C., on the other hand, can operate in several overseas countries. Moreover, a non-trading company which has only O.T.C. subsidiaries can itself be an O.T.C. and would not have to be the top company in its group. Profits can thus be transferred from one country to another, and dividends would become liable to U.K. tax only when paid by the O.T.C. to its parent which was not an O.T.C. In addition, there is the convenience of having centralised management and control in Britain instead of having to form local boards divorced from U.K. control.

It would be quite wrong, however, to think that there are no snags. The biggest will arise in the political sphere in the case of those large groups who have fostered local control and management of overseas subsidiaries to accord with sentiment in the countries concerned and have benefited thereby. To switch back now would certainly be a retrograde step of doubtful value. Attempts will no doubt be made during the Committee stage to overcome this difficulty, but may not prove successful. As dealing in securities does not qualify, mining finance houses would have to "hive-off" this part of their business. Provision of technical and managerial services in their mines, it is thought, would qualify as an O.T.C. Investment income could stay in the O.T.C., but is always taxable whether from home or abroad. At all events, the new proposals will certainly mean busy days for the Registrar of Companies, for there is little doubt that any company qualifying will take advantage of the new concessions.

Industrial Production Checked

The rise in industrial production in January and February came to a halt in March, according to the index compiled by the Central Statistical Office. The provisional estimate for March is 142.143, against 143 in February and 141 for March a year ago. The figure adjusted for seasonal factors is 135.136, which was actually lower than the February level of 137. March had no holidays in it this year, and should have shown an increase over February which had fewer working days, but the strikes in the shipbuilding and engineering industries cut back production at the end of the month, with falls in the motor industry particularly severe. The April figures will be affected, too, but after that, if the present trends continue, there should be an upturn.

Gold and Dollar Reserves Up

The gold and dollar reserves rose last month by \$111 million to a total of \$2,320 million, largely due to the American and Canadian decision to waive the year's interest on the postwar loans, which allowed \$104 million to be taken back into the reserves from the temporary suspense account. There was also a receipt of \$2 million of United States aid. On the other hand, \$6 million was paid to the European Payments Union to settle the March deficit and a further \$3 million to repay old debts. In April, the transactions with the E.P.U. produced a surplus of \$16 million, of which three-quarters will be received this month in gold. This reversal of the preceding month's experience reflects the normal heavy imports of sterling area raw materials into Europe at this season, reinforced by abnormally large French imports until last week, when restrictions were imposed. In contrast to the trend in February and March, there was no further drawing of dollars by India from the International Monetary Fund. In view of the fact that heavy dollar payments for oil imports have so far been made without touching the credit from the Export-Import Bank, nor indeed the stand-by credit from the I.M.F., the gold and dollar position is not unsatisfactory, though the build-up to meet the adverse seasonal factors experienced in the autumn cannot get very far unless the U.K. can do better than earn a net surplus—excluding all special payments—of only \$14 million a month.

Capital Expenditure by Industry

One of the major criticisms of Mr. Peter Thorneycroft's first Budget, put forward both by the Opposition and some economic experts in the City, was that it failed to provide any incentives to industry to invest more heavily. They contended that the slackening of demand resulting from the credit squeeze would ultimately result in a widespread falling-off in orders for capital goods. The Chancellor, however, has continued to assert that the only approach to this matter must be a cautious one if we are not to see a repetition of what happened following Mr. Butler's cut in Bank rate in 1954—an investment boom and some revival of inflationary conditions generally. Some figures in the Treasury's latest *Bulletin for Industry* help explain Mr. Thorneycroft's refusal to relax his present firm grip on credit. They disclose that although there was a smaller rise in investment spending by manufacturing industry in 1956 than in 1955, (20 percent against 27 percent), the quarterly figures show an upward trend after an initial setback, and this is expected to persist in the current year, so that total investment in manu-

facturing, especially on plant, machinery and vehicles, will "remain at the high level now attained." The nationalised industries spent £537 million last year against £505 million in 1955; this year, an expenditure of £643 million has been approved, which is a rise of nearly 20 percent. Central Government spending, which is being largely inflated by the atomic energy programme, was not cut at all last year; it rose by 15 percent to £226 million and is expected to grow again by that amount this year. Even the local authorities increased their capital spending last year by 5 percent to £567 million, though in their case, "a lower rate of increase" is expected for 1957. These figures suggest that fears should be occasioned less by prospects of any decline in capital spending as by once again spending too much.

Credit Squeeze Continues

That the Government is serious about the maintenance of the credit squeeze, in spite of suggestions that relaxations are "just around the corner," is made evident in the April statements of the London clearing banks. These show that between 20th March and 17th April advances rose by £17 million to £1,993.5 million. During the same period, bank borrowings of nationalised industries rose by £12.6 million to £524 million. Bank lending to the private sector thus rose by only £4.4 million, which is insignificant in view of the steadily expanding requirements of essential industries. It implies that the seasonal increase in advances, noticeable in February-March, has come to an end. The banks' liquidity ratios are almost unchanged on the month at 32.65 percent but Lloyds had to sell £22 million of its investments to get back into line, while the National Provincial has dropped below the accepted working minimum of 30 percent. Gross deposits have risen by £41.7 million to £6,203 million, but the index of net deposits compiled by Lloyds Bank, which smooths out seasonal variations, is down from 105.9 to 105.6.

The squeeze by directive in the case of the banks is also being maintained in another quarter. The capital expenditure of local authorities is also being checked. Figures just released show that loans sanctioned in England and Wales in the first three months of 1957 were £15 million lower than in the same period last year, the totals being over £118 million against £131 million. Sterling on a wide range of capital projects is being restricted, and a number are being deferred. Housing, school building and certain major work on roads are excepted from the restrictions. The education figure, nevertheless, is about £3½ million lower. The biggest cuts are on account of sewage schemes and water supplies which between them show a total fall of over £3½ million. Expenditure on libraries has also been heavily curtailed and that on town halls and offices nearly halved. Large sums, however, were sanctioned for car parks and highways.

Lancashire Delegation Visits Pakistan

The delegation from Lancashire under the leadership of Sir Cuthbert Clegg, Vice-President of the Cotton Spinners' and Manufacturers' Association, has just left for Pakistan, the same delegation visited India and Hongkong earlier this year for discussions with representatives of the cotton industries in those countries on the possibility of reaching agreement on a voluntary limitation of textile exports. It will hold similar discussions with the leaders of the Pakistan cotton industry. The talks will complete the circle of discussions, which started in January, between the Lancashire industry and the foreign industries which compete in the British home market. It will be remembered that the delegation met with a most encouraging response in Bombay, where the Indian representatives agreed to put a ceiling on their exports to Britain if the leaders of the industry in Hongkong would do the same. Hongkong, however, refused and the Indians later announced that since the essential condition of the agreement had not been fulfilled, it must be regarded as inoperative. Later, after the delegation had returned to Britain, it decided to bring Pakistan into the scope of the discussions, and a hint was given that if this proved to be successful another approach might be made to Hongkong.

Brevities:

Motor insurance rates are to be increased by varying amounts of up to 33½ percent from 1st July, because of the ever increasing cost of claims, it is announced by the Accident Officers Association, whose members write a substantial share of the motor insurance business in the United Kingdom. Private cars, commercial vehicles and motorcycles are all involved.

Lack of transport facilities in India has continued to affect the results of Central Provinces Manganese Ore. Profit for the past year, after transferring £225,622, against nil, to ore stock reserve, was slightly lower at £529,067, against £1,574,340. The latest figure includes only £10,685 relating to earlier periods, against £30,111 last time. Tax absorbs £1,080,000, against £931,000. The distribution is held at 35 percent tax-free, a final of 16½ percent and bonus 6½ percent again being paid.

Mr. Leo d'Erlanger, Chairman of the Channel Tunnel Company, informed shareholders at the annual meeting that the Suez Canal Company is to make a technical study of the possibilities of a Channel tunnel. The cost of a geological survey is estimated at between £250,000 and £275,000. A syndicate will be formed consisting of the Suez Canal and Channel Tunnel companies, with British and French railways and British, French and American banks.

Bombay

CASE FOR WITHDRAWING CONTROL ON COTTON

TEXTILE MARKETS CONTINUE

TO IMPROVE

(FROM OUR BOMBAY CORRESPONDENT)

THE East India Cotton Association has made a case for the withdrawal of the control on cotton from the new season. In a communication addressed to the Textile Commissioner, the Association, it is reported, has pointed out that the control on cotton loses much of its meaning in the absence of a similar control on cloth. It is further stressed that the present control prevents the formulation of a realistic hedge contract, and does not permit the futures and the spot sections of the market to move in sympathy and in accordance with the normal laws of supply and demand. The Government contention seems to be that the statistical position of cotton does not warrant a removal of the present restrictions. The Association is reported to have suggested that a stricter control on exports and a more liberal import policy may help the situation. If, however, the Government feels that it is not possible to remove the control, the Association suggests that the floor prices for the new season's crop be raised from Rs. 495 to Rs. 600 for Jarilla 25/32 in, with the ceiling at Rs. 825. This will narrow the differential between the floor and the ceiling prices to Rs. 225, against the present gap of Rs. 325. It is believed that this will also encourage the grower to step up production. Meanwhile, the futures market has picked up again following the recent depression. Despite the introduction of higher marginal deposits in relation to the Jarilla May contract, it shot up to Rs. 710, against the previous week's Rs. 696.50. The Vijay June contract finished at Rs. 849, having gained Rs. 849. There is still no enthusiasm for the 20,000 bales of Egyptian growths permitted to be imported under the special payments system. There was

some interest in spot lots of Californian cottons. The recent improvement in the cotton textile market continues. Amritsar, Delhi, Kanpur, Patna and Andhra have been Bombay's best customers. Business with Calcutta has been disappointing, while Rajasthan accounted for moderate transactions. Superfine and fine varieties continue to be in demand. On the export side, moderate business has been reported with Singapore and Burma. Further business with the latter is expected shortly. Moderate business has been reported with Ghana and the United Kingdom for grey cloth. It does not seem likely that business with Indonesia will be possible for some time because of the foreign exchange crisis there. But the overall picture is not entirely depressing. Exports of cotton piece-goods from Bombay during the first quarter of this year amounted to 239,250,000 yards valued at Rs. 16.46 crores. This compares with an export figure of 177,380,000 yards valued at Rs. 12.3 crores for the corresponding three months of last year. Exports of greys increased from 100,920,000 yards to 141,460,000 yards. White cotton piecegoods exports were considerably higher at 45,380,000 yards, while coloured goods rose to 49,410,000 yards. Exports of apparel and other textiles fetched Rs. 2,220,000.

Yarn Market Better

After a long period of inactivity, the cotton yarn market showed some signs of life. There were enquiries, particularly for the coarse counts. Some mills held on to stocks in the expectation that the demand would broaden further leading to a higher price level. It was reported that some manufacturers of rayon yarn in Europe were offering fine deniers for quick shipment at a price reduction of around 4d a lb. This led last week to a near crisis in the local market with 120 dull cones May delivery touching Rs. 790. The June contract lost over Rs. 10 a case and fell to Rs. 803. The June contract for 2/40 lost even more and declined from Rs. 614 to Rs. 602 a case. Staple fibre was easy following a lack of interest in Punjab and Uttar Pradesh. Dealers are carrying heavy stocks and reports that south Indian producers are willing to sell their production at reduced prices further depressed the market.

P. N. B. WORKING RESULTS AT A GLANCE

STATEMENT OF ACCOUNTS AS ON 31-12-1956

LIABILITIES	
i. Paid up capital	Rs. 87,50,000
ii. Reserve Fund and other Reserves	Rs. 1,25,00,000
iii. Deposits	Rs. 1,06,38,58,201
iv. Other Liabilities (including contra items such as Bills for collection and acceptances, endorsements and other obligations)	Rs. 32,52,11,363
Total ..	Rs. 1,41,03,19,564
ASSETS	
i. Cash and balances with Bankers	Rs. 12,39,23,611
ii. Investments	
(a) Investment in G. P. Notes, Municipal Loans and shares guaranteed by the Central and State Govts.	46,89,66,671
(b) Other investments	1,40,42,990
iii. Loans and advances	48,30,09,661
iv. Other assets (including contra items such as Bills Receivable being Bills for collection and constituent liabilities for acceptances, endorsements and other obligations)	54,86,00,526
Total ..	Rs. 1,41,03,19,564

FIRST MEETING OF CENTRAL ZONAL COUNCIL

ASSESSMENT OF RESOURCES

FOR PLAN

(FROM OUR LUCKNOW CORRESPONDENT)

A HIGH-POWERED committee to assess the resources and needs of the central zone comprising Uttar Pradesh and Madhya Pradesh has been set up by the zonal council which met last week. The Union Home Minister, Pandit Pant inaugurated its discussions. The headquarters of the zone will be in Allahabad. It has a population of 89 million and an area of 284,600 square miles. Although Madhya Pradesh is the larger State in area, it has a smaller cultivated area. Of the total cropped land of 92 million acres in this zone, more than 78 million acres are under foodgrains. The areas under oilseeds, cotton and sugarcane are 9.4 million acres, 2.5 million acres and 2.7 million acres, respectively. While sugarcane is produced in Uttar Pradesh, most of the cotton growing area lies in Madhya Pradesh. Jute, with an area of 33,000 acres, is grown in Uttar Pradesh only. Normally both Madhya Pradesh and Uttar Pradesh are self-

sufficient in food supply, but the zone as a whole is relatively deficient in communications—a fact which was particularly stressed by Pandit Pant.

As against the total outlay of Rs. 444 crores in the second plan, the contribution of the two States is estimated to be Rs. 142 crores—Rs. 114.3 crores from Uttar Pradesh and Rs. 27.7 crores from Madhya Pradesh. The gap of nearly Rs. 300 crores has to be covered, which appears to be the chief problem. Some important projects of the Central Government are located in this zone. The completion of the Bhilai steel project and the heavy electrical plant in Madhya Pradesh and the development of coal mining are expected to assist the diversification of the economy. The first meeting of the council discussed, among other things, the construction of the Rihand dam and the Matatila dam. A proposal for the extension of the Northern Indian Canal and Drainage Act of 1873 to Madhya Pradesh was considered. It was suggested that the administration of the canals belonging to U.P. and irrigating that area be taken over by the U.P. Government. It was also suggested that the Madhya Pradesh Government accept the *jemabandis* presented by U.P. irrigation authorities and the realisation of irrigation dues be made on the basis of those records. The Home Minister's reference to the border between Madhya Pradesh and Uttar Pradesh which in the opinion of many, he said, "was not rational" has given rise to some specula-

tion whether boundary readjustments are again in the offing.

Textile Mill Closure

The U.P. Government has moved the Government of India to appoint some authorised controller or to contact some millowners to take over the textile mill run by the British India Corporation, Kanpur, where about 5,000 workers are facing retrenchment. The State Government has itself contacted the mill authorities to prevent closure of the mill. The Corporation had announced its intention to close the Kanpur Cotton Mill branch with effect from 12th May. A joint statement, issued by the chairman, Mr. Mundhra, and the Deputy Managing Director, Mr. R. L. Powell, says that since 1952, the mill has been incurring heavy losses. The statement adds that to continue the cotton textile business will endanger the Corporation's other businesses. Consequently, in the interests of the Corporation and the 7,000 workers it employs in its other branches, it has been decided to close the cotton textile mill.

According to industrial circles in Kanpur, the closure of this mill might have been prevented if the Government had allowed the management to go ahead with its rationalisation plans. Its losses since 1952 have amounted to Rs. 90 lakhs, and it is possible that this money could have been better employed in introducing technical improvements on the production side. It is also stated that matters have gone so far that even if the Corporation is offered the choice of rationalisation now it is not in a position to accept it. It may be recalled that the Kanpur Textile Rationalisation Enquiry Committee had anticipated a redundant surplus of only a little over 2,000 workers in the event of its proposals for rationalisation in only seven of the Kanpur mills being implemented. The Committee had also suggested ways and means of absorbing this surplus. The number of workers affected by the impending total closure of one mill alone is more than double the number anticipated by the Rationalisation Committee.

Co-operative Farming Controversy

At the Development Commissioners' recent conference in Mussorie, a sharp controversy over the question of co-operative farming was expected. But the controversy did not prove a sharp one. Only U.P.'s spokesmen gave their views against co-operative farming. The case for the State Government was stated in a pamphlet published over the signature of the Revenue Minister, Mr. Charan Singh, and with a foreword by the Chief Minister, Dr. Sampurnanand. According to the Chief Minister, the consolidation of holdings, now being carried on in Uttar Pradesh, is itself a great step, so its results should be watched carefully before embarking upon other experiments. Mr. Charan Singh's argument is that if *zamindari* abolition was psychologically right, co-operative farming is psychologically wrong, because the peasant-proprietor will no longer be his own master, but be subject to the control and direction of group management. He concedes that the co-operative principle may be fruitful in agriculture, but when stretched to the point of the merger of holdings, it violates, he holds, the essence of co-operation. Another objection he has advanced is that large-scale farming, whether collective or co-operative, will inevitably attract mechanisation. Mechanised tilling, in his view, reduces and not enhances the yield. Another evil, he says, is the reckless waste of money by co-operative managers. He is, however, willing to try co-operative farming on an experimental basis in the Bhodan lands, provided an independent evaluation of the results is made.

Increased D.A. for Government Servants

The U.P. Government is considering the question of giving increased dearness allowance to Government employees. The Chief Minister told a meeting of the Federation of Ministerial Service Associations that even if only Rs. 5 more was given, the increased cost to the Exchequer would be Rs. 3.5 crores. The Union Government is prepared to contribute Rs. 2 crores towards the cost, in which case the State's liability would be reduced to Rs. 1.5 crores. But the Central subvention would cease after five years and the whole burden would fall on the State.

Company Reserve Scheme

In a communication to the Central Board of Revenue, the U.P. Chamber of Commerce has proposed a number of modifications to the draft rules on current profit deposits by companies. The Chamber has suggested that there should be a definite time limit within which the Board of Referees should dispose of applications from companies for the refund of deposits. It has also requested the Board to provide for a system of staggered payments to enable companies to meet their liabilities under the deposit scheme. It is stated that only a small portion of the companies' profits and reserves is kept in cash and it is ploughed back into business. Most of the companies will, therefore, be obliged to borrow from banks and pay a higher rate of interest. The Chamber has also proposed a modification of the period within which the excess deposit may be determined by the income-tax officer and the interest on it has to be made. Thirty days allowed for the purpose, it is considered, is too short. In the case of an appeal, preferred or pending against an assessment order, the Chamber holds that the amount of deposit to be made should be computed on the basis of the return submitted by the assessee. The Chamber is further of the view that in determining the statutory surplus of a company, the total income of the company for the previous year should be reduced by the amount of losses carried forward.

Commodity Markets

WORLD TRADE IN COTTON TEXTILES

JAPAN ESTABLISHES NEW RECORD

WORLD production of cotton yarn reached a record high level in 1956, according to the Cotton Board's latest Quarterly Statistical Review, which covers the fourth-quarter returns. Exports of piecegoods were not quite so good over the year as a whole, although the experience of individual countries varied. Man-made fibres established new trading records, and it is significant that Japan is rapidly re-establishing her pre-eminence in almost every sphere of activity. In those countries for which regular figures are available, yarn output increased in the final quarter of the year, reaching a level 3½ percent higher than in the corresponding period of 1955. Output in 1956 as a whole was about 2½ percent greater than in 1955. Japanese production increased rapidly from the second quarter onwards as restrictions were removed, and the Indian mills also recorded steady progress. Almost all the main western European industries succeeded in expanding their output during 1956, but in the United Kingdom—despite some improvement in the final quarter—production throughout 1956 remained below the 1955 level. In the U.S.A., the rate of activity slackened in the second half of 1956, and for the year as a whole cotton yarn output was less than in 1955. World trade in cotton piecegoods normally shows a sharp seasonal expansion in the fourth quarter. Last year the increase was particularly great and in the final quarter, the volume of exports from those countries for which statistics are regularly avail-

able, exceeded the level reached in the corresponding period of the previous year. The increase in Japanese exports in the fourth quarter was particularly striking, but all the other main exporting countries with, probably, the exception of Hongkong, share in the increase to varying extents. Exports in 1956 from those countries for which statistics are available were about 3 percent less than in 1955, but increased exports from other countries, notably China, eastern Europe and Pakistan, probably brought the world total to slightly above the 1955 level. Japanese exports increased from 1,139 million square yards in 1955 to 1,262 million square yards in 1956. Exports from India (about 740 million square yards), the U.S.A. (about 520 million square yards) and the United Kingdom (474 million square yards) were all less than those in 1955, while the U.S.A. took over Britain's place as the third largest exporter of cloth. Exports from Hongkong, France, Germany and Italy were all less than in 1955, but Dutch, Belgian, Swiss and Portuguese exports increased to varying extents. World trade in piecegoods of man-made fibres established a new record in the final quarter of 1956, with Japanese exports showing another impressive increase. Exports from most of the other important exporting countries also increased in the fourth quarter, but British and French exports declined once again. World trade in these fabrics in 1956 was about 12 percent greater than in 1955, with Japan by herself accounting for the whole of the increase. Exports from most of the smaller European countries were also greater than those in 1955, but British, French and German exports declined somewhat, while American exports showed little change.

U.K. Trade in Textiles

Since the beginning of December there had been a marked slackening in the rate at which new

orders had been received by the producing sections of the British cotton industry, and order books had shown a general tendency to shorten. Clearly many merchants had anticipated their requirements in the previous flurry of buying. However, the vast majority of mills were fully occupied in working off the orders they received in that period. The daily rate of cotton, spun rayon and mixture yarn output in February was the best for any month since March 1955. Output of spun rayon yarns continued at a high level, thanks to the new trade in coarse yarns for tufted carpets. The weaving section had been more badly hit by the shortage of labour than other sections and the daily rate of output in January was less than it had been in all but two months of 1956. Compared with a year ago the decline in the output of rayon fabrics was much more severe than that of cotton fabrics, but the production of synthetic fibre fabrics and mixture fabrics had been well maintained.

Exports of cotton piecegoods increased from 112 million square yards in the third quarter to 126 million square yards in the fourth quarter, but the total of 474 million square yards for 1956 as a whole compared very unfavourably with the 555 million square yards exported in 1955. The major increases in shipments in the fourth quarter were directed to Burma—a result of the "triangular" deal based on American aid, and to British West Africa. There were also increases in exports to the Belgian Congo, French West and Equatorial Africa and the U.S.A., and in these three cases the volume of trade was greater than in the corresponding period of 1955. Exports to Australia and New Zealand in the final quarter of last year were slightly below the third quarter level but slightly greater than in the fourth quarter of 1955. Shipments to Rhodesia declined again but trade with South Africa continued to show little alteration.

A cool, calculated investment . —the 'Crystal' room air conditioner!

FRESH, quiet, free from dust and outside noises—your 'Crystal'-cooled office invites good work, impresses clients and visitors. You can calculate for yourself how many dividends it earns you in better business, more goodwill . . . and cool comfort!

The 'Crystal' is made in India for India, by Voltas Limited—the people who know air conditioning best. Its smart appearance adds distinction to your office . . . its low installation and running costs recommend it to every astute businessman! And remember the 'Crystal' is backed by Voltas' unrivalled after-sales service.

VOLTAS the people who know air conditioning best!

Unlike exports of cotton fabrics, those of man-made fibres and mixtures declined further in the fourth quarter and for 1956 as a whole totalled only 121 million square yards against 134 million square yards in 1955. Shipments to Australia and Indonesia declined sharply in the fourth quarter and, as in the case of cotton cloth, the trade with Rhodesia had been decreasing since the beginning of 1956. In contrast with the trade in piecegoods, exports of cotton yarn in 1956 were maintained at the previous year's level. There is little doubt that only the closing of the Suez Canal prevented an increase in the imports of cotton piecegoods in the fourth quarter of last year. In fact, there was a moderate decrease in imports from India and little change in the quantities coming from other sources.

Setback in the U.S.A.

The signs of a revival in the outlook for the U.S. cotton industry which were reported last autumn proved to be short-lived. In January, the daily rate of cotton consumption was less than in the corresponding month of the previous year for the eighth consecutive month. Spun rayon was hit earlier and presumably more than cotton, largely because of the competition from the natural fibre aided by new finishes. These trends are well brought out by the available statistics. In the fourth quarter, consumption of cotton in spinning mills was 4 percent less than in the fourth quarter of 1955; consumption of rayon staple decreased by 14 percent, but there was some recovery in the consumption of nylon staple. The effect of the automobile industry's buying policy could be illustrated by the 19 percent drop in tyre cord and fabric output in the fourth quarter compared with a year earlier. The latest figures of cloth production relate to the third quarter when, in comparison with the third quarter of 1955, cotton cloth output showed a drop of 3 percent, rayon cloth output 22 percent (especially marked in spun fabrics) and nylon cloth output 39 percent. There was a fair measure of recovery in American exports of cotton cloth in the final quarter of 1955, no doubt largely because of the subsidy paid to exporters by the Government as rough compensation for the higher domestic price of raw cotton. The chief increase in the fourth quarter were in exports to Canada and the Philippines; exports to the former market were running above the 1955 level, but shipments to the Philippines and Cuba—the two next most important markets—have declined since 1955. There was little change in exports of fabrics of man-made fibres in the fourth quarter, and the total for the year, as a whole, was much the same as that for the preceding year.

Details are now available of the agreement in accordance with which the Japanese Government is to restrict the exports of cotton goods to the U.S.A. from 1957 onwards. The agreement is to last five years and it contains a provision for annual review. It provides a quota for cotton piecegoods (113 million square yards) and for four broad classifications of made-up goods; the limit for any of these five groupings may be exceeded by up to 10 percent, provided the grand total square yardage does not exceed 235 million square yards in any year. (This compares with total exports of 270 million square yards in 1955.) Within the five broad groupings, subsidiary limits have been fixed for individual products, including one of 35 million square yards for gingham and one of 2.5 million square yards for velveteens. As a result, it is understood that the applications for tariff increases on these two items have been shelved. It is also reported that Italy has agreed to restrict the export of velveteens to the U.S.A.

Increase in Japanese Exports

With the removal of restrictions on output, the production of cotton yarn and cloth in Japan reached new postwar record levels in the fourth quarter and for the year as a whole. Both domestic and export demands were very strong during 1956. In the man-made fibres sector, too, output,

was still leaping ahead, leading to fears of possible overproduction of spun rayon yarn. All cotton spindles had to be registered by 20th October, which accounts for the rapid increase in spindleage since the early summer. The intention is that there will be a strict control over any further additions to capacity, and there are provisions to eliminate the spindles which prove to be redundant. In addition to the 9 million cotton spindles, there were 2.8 million operable spun rayon spindles in October; thus the combined spindleage is virtually as great as the prewar peak.

There was a very great expansion in Japanese exports of cotton cloth in the fourth quarter, the total volume constituting a new postwar record. Exports in 1956 as a whole totalled 1,262 million square yards which, while well above the 1955 level, was just short of the postwar record of 1,278 million square yards achieved in 1954. The fourth quarter increase was directed to almost all of Japan's main markets with the exception of the U.S.A., to which exports were voluntarily limited, and Hongkong, whose re-export trade with Indonesia has virtually disappeared. The biggest increases were in trade with Burma, a consequence of the "triangular" deal involving American aid, Siam and Singapore. The Philippines and Ceylon were two markets which had been taking a rapidly increasing volume of Japanese cloth, apparently at the expense of American and Indian trade respectively, and exports to Indo-China remained at a very high level. Exports of rayon piecegoods were also at a record level in the final quarter of last year, with very large quantities having been shipped to British West Africa, Hongkong and Iraq.

Indian Mill Production Exceeds Demand

In the fourth quarter of last year, mill production of cotton yarn and cloth in India continued to be greater than in the corresponding period of the previous year. Mill production of cloth in 1956 set up a new all-time record, but yarn output was slightly less than the 1943 record. Stocks of cloth are reported to be mounting steadily, as the increased excise duty is restraining consumption. In the absence of any expansion in weaving capacity, the increased production has come about primarily through the extension of shift working—almost half the spindles and over a quarter of the looms are now working three shifts. Exports of Indian cotton piecegoods by sea fell fairly sharply in the third quarter. Most of India's main markets took smaller quantities, especially the Sudan, British East Africa, Aden and the United Kingdom. In contrast, shipments to British West Africa and Ceylon improved substantially. It is understood that there was a very pronounced recovery in exports in the fourth quarter.

Bigger Output in Western Europe

The cotton industries of most of western Europe were exceedingly active in the final quarter of 1956. In contrast to the position in the United Kingdom, cotton yarn output in the region as a whole in the fourth quarter was about 8 percent greater than in the corresponding quarter of 1955. Output in 1956 was about 4 percent greater than in 1955 and about the same as in 1954. French output of both cotton and rayon goods expanded very strongly in the fourth quarter. The Government is understood to be considering the restriction of imports of raw cotton to save foreign currency and to compel the substitution of home-produced rayon staple. The production of cotton goods in Germany continues to increase, although there might have been some decline in the output of spun rayon yarns and fabrics. Output in Italy, Belgium and Austria seems to have been well ahead of the level reached in the corresponding period of 1955, and the improvement is noticeable in both the cotton and the rayon sections of each industry. The experience of the Dutch industry seems to have been rather different; indeed, production in the fourth quarter of 1956 appears to have been slightly less, at least in spinning, than in the fourth quarter of 1955. It is understood that

the Dutch mills are suffering from an acute shortage of labour.

Western European exports of cotton piecegoods made the usual strong seasonal recovery in the final quarter of 1956, but the year's total was about 7 percent less than the 1955 figure. With the disappearance of the re-export trade with Turkey, German exports in the second half of 1956 were well below the level reached in the corresponding period of 1955. Exports to Sweden have also declined, and Denmark is now Germany's principal foreign market. Italy has also suffered from the decline in the Turkish trade, but Italian exports of cotton piecegoods seem to have been stabilised, at an admittedly low level, with the U.S.A. the main market in October and November. The steep drop in French exports, as a result of the drying-up of the Indo-China trade, appears to have run its full course by now. Dutch exports continue to expand strongly; shipments to Indonesia declined sharply in the fourth quarter, but there has been an upward trend in trade with Germany, Belgium, French West Africa and the Belgian Congo. Exports from Belgium continue to make a good showing, due to an increasing trade with the United Kingdom, the Netherlands and Germany—the three main markets. Exports of piecegoods of man-made fibres from western Europe expanded seasonally in the final quarter of last year, and the volume exported in 1956, as a whole, was probably much the same as the previous year's figure. German exports as declined during 1956 for the second year in succession. French exports appear to have decreased in the final quarter of the year, but exports from Italy continued to run at round about the previous year's level. Austrian exports have recovered strongly and exports from the Netherlands and, especially, Belgium expanded markedly during 1956.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939=100) advanced by 0.5 percent to 423.1 during the week ended 20th April, 1957 compared with 421.2 (revised) for the previous week. The index was higher by 0.3 percent and 7.9 percent respectively when compared with the corresponding week of the previous month and that of a year ago. The index for Food Articles went up by 1.0 percent to 410.7 compared with 406.6 (revised) for the earlier week as a result of an increase in the prices of tea for internal consumption (+2.9%), coffee (+3.5%) and wheat in Amritsar and gur (+2.2%) in spite of a decline in the prices of wheat (new crop) in Hapur (-1.6%) and in Jabalpur (-1.1%) and gram (-4.4%). Higher prices of manganese ore (average export price) (+9%), manganese ore (average export price) (+9%), rapeseed and copra linseed in Bombay (+5.4%), rapeseed and copra linseed in Bombay (+5.4%) raised the (+2.2% each) and groundnuts (+1.1%) raised the index for Industrial Raw Materials by 0.5 percent to 516.4; the prices of castorseed (-6.1%) and raw hides (-1.1%) were, however, marked down. By index for Semi-Manufactures also moved up, 0.2 percent to 400.4. Items which exhibited noticeable variations during the week were: castor oil in Madras (+9.9%), mustard oil in Kanpur (+8.8%), linseed oil in Bombay (+6.6%), buffalo hides (+5.3%), cow hides and coconut oil (+2.2% each), copra cake (-10.1%), mustard oil in Patna (-3.3%) and gingelly oil (-2.2%). The index for Manufactures remained unchanged at the previous week's level of 384.1. A rise of 0.2 percent to 568.5 compared with 567.4 (revised) for the previous week in the index for the miscellaneous group was caused by an advance in the prices of black pepper in Cochin (+4.4%) and cashewnuts (+3.3%) although the price of chillies in Patna declined by 3 percent.

INDEX NUMBERS BY GROUPS AND SUB GROUPS

(Base: Year ended August 1939=100).

DELAY IN ARRIVAL OF NEW CROP LIKELY

SIGNIFICANCE OF RISE IN RIVER LEVELS

ALTHOUGH there has been rain in many places in Assam and in a few places in north Bengal, there are large areas which are still suffering from drought and it is now certain that the Indian crop will be late. In the days when mills had the money to carry large stocks and when there was always a big carry-over of old crop, that would not have mattered. But, in these times, when their stocks are small and there is no large surplus of old crop available for purchase, it may have a material effect on the raw jute market, for it widens interval between the stage when old crop jute will be getting scarce and the arrival of new crop in substantial quantities begins. Much will depend on just how much of the 1956 crop of jute and mesta there is still to come forward. At times like these, reports from the districts invariably tell us that imports into the mofussil centres are small and that there is little jute left in the villages. But, in the past, these reports have always been found to be exaggerated. It is natural that growers and upcountry dealers should propagate such stories in order to obtain better prices. It is also natural that they should withhold supplies in the hope of getting better prices, which, in turn, gives the impression that there is truth in what they say about the supplies available.

The latest bit of propaganda that is being put out is that, because the rivers are now rising in Assam, it may be necessary to cut the lowland crop before maturity and, as the sowings were late, early harvesting will substantially reduce the yield. It is really too early to discuss such a contingency. The rivers are rising but that is normal at this time. Heavy rains have been reported in the hill districts in north-east Assam, but the rise in the rivers which is taking place now is due more to the melting of the snows than to excessive rainfall. What may cause an early rise in the rivers is the unusually early melting of the snows due to the excessive heat which has prevailed recently. It is too early yet, however, to pay heed to these Cassandra-like prophecies. As far as the mills' raw jute stock position is concerned there does not at present seem to be any cause for anxiety. At the end of March—the April figures are not yet available—they had jute in their godowns equal to approximately 13 weeks' consumption, which would take them to the end of June. It is estimated that the jute which they received in April was not far short of their consumption and, if that is correct, they now have enough to carry them on towards the latter half of July. So, if they can get from the balance of the current crop jute equivalent to two months' consumption, they will be safe, though the margin may be small. It is impossible to estimate accurately how much jute is actually available, but there is in Cossipore, roughly, sufficient for two weeks' consumption and the arrivals there do not show any marked sign of falling off. Mill purchases in April are estimated to have been only about half the month's consumption. It is probable, therefore, that arrivals at mills' stations in May will be less than the monthly average but, if so, it must not be deduced that that is due to a decrease in supplies, as it may be only the result of smaller purchases.

I.J.M.A. Stocks of Manufactures

For the past week or ten days, there has been some nervousness in the gunny market over the poor shipment of goods during April. It was expected that there would be an increase of about 10,000 tons in the mills' stocks at the end of this month. The figures now issued show that hessian stocks are higher by 5,600 tons than those at the end of March, while sacking stocks have increased by 2,300 tons. There was a decrease of 600 tons in other kinds, leaving a net increase of 7,300 tons. An increase in stocks at this time of year is more or less normal, and last month's increase should not cause any alarm. Comparison with last year does not, of course, give a true picture because mills had then in operation looms which had a short while ago been unsealed and stocks were mounting up rapidly. Two years ago, when the number of looms at work was the same as at present, stocks increased by 8,700 tons. The present position may, therefore, be considered not unsatisfactory. Out of the 105,000 tons held by the mills at the end of April, 35,400 tons or 33.7 percent were hessian and 58,800 tons or 56.0 percent were sacking. Of the stocks at the end of April, 1956, hessian accounted for 33.3 percent and sacking for 58.7 percent. It is noteworthy that there is very little difference between the percentages at the end of April this year and those at the end of April last year, in spite of the reduction in sacking output and the increase in hessian.

THE JUTE MARKETS

Manufactured Goods: The market has been firm. This has partly been due to the continued drought over a large part of the jute-growing areas, as may be deduced from the fact that, as soon as there were reports of rain from a considerable number of places, there was an immediate and sharp drop in the fatka market. Prices did not, however, remain down for long. Shipper buying for the Argentine was reported and there was a report that the Burmese Government had called for tenders for a further quantity of heavy

goods. Some enquiries for specialities and orders for internal consumption were reported. Mills have been reserved on account of the firmer tendency of raw jute and it is reported that it has been difficult to place orders with them.

On Wednesday morning, the market opened easier and quotations were as under:

	Ready Rs.	May Rs.	June Rs.	July-Sept. Rs.
40in. 8oz.	34.50	34.50	34.50	34.50
40in. 10oz.	42.75	42.60	42.70	42.50
B Twills	115.10	115.35	115.35	115.30
Heavy Cees				
(Plain)	114.25	115.10	115.35	115.30
A Twills	140	138.50	138.50	138.50
Liverpools	128.25	128.75	128.75	128.75
Cornstecks	115	115.50	115.65	116

Raw Jute : Early in the week, there was fairly heavy buying by mills. Later, business continued on a reduced scale. It was mostly for mesta but Purnea, north Bengal and Assam white jute and Murshidabad Tossa came in for attention. After the buying early in the week, sellers were reserved but rain in a number of places brought more offers and prices dropped by Re. 1 a maund. The fall did not last long, however, and prices soon recovered. Assam and Northern jute, after being sold at Rs. 30.50 basis Bottoms, dropped to Rs. 29.75 and then recovered to Rs. 30.50. Assam and Northern Middles alone were done at Rs. 31.75

I.J.M.A. STOCK FIGURES FOR APRIL

The Indian Jute Mills Association reports the total stocks of jute goods for the month of April as follows:

Description	30th April, 1957		31st March, 1957		Increase over (+) or decrease from (-) last month		30th April, 1956	
	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons
Hessian Cloth and Bag	13.24	35.4	10.86	29.8	+ 2.38	+ 5.6	13.26	35.9
Sacking Cloth and Bag	14.14	38.8	13.74	36.5	+ 1.40	+ 2.3	15.02	40.3
Others			10.8	11.4		- 6.6		8.7
Grand Total (000 Tons only)		105.0		97.7		+ 7.3		107.9

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

3,800,000 visitors!

Mofussil: The import position remains much the same but there is a tendency on the part of stockholders to wait for better prices.

Rain fell in most districts in upper Assam. There were scattered showers in the rest of Assam and in parts of north Bengal. There were also showers in some of the Daissee districts, but elsewhere the drought continued.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the Port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian (Tons)	Cloth (Tons)	Total (Tons)
1st to 30th April 1957	2,603.3	22,844.0	25,447.3
1st to 31st March 1957	3,030.3	32,415.7	35,446.0
1st to 28th February 1957	2,054.4	27,761.0	29,815.4
Sacking			
1st to 30th April 1957	26,176.6	1,401.3	27,577.9
1st to 31st March 1957	40,095.4	5,412.2	45,507.6
1st to 28th February 1957	27,004.9	3,433.4	30,438.3

THE FOREIGN JUTE MARKETS

FIRMER TENDENCY IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

CONDITIONS have been pretty bad in the jute trade for some weeks past, but the prolonged spell of idleness may end soon. Buyers of jute yarns and cloth are showing more interest because of the continued firmer tendency in raw jute, there has been more trading this week in anticipation of an advance being granted in prices of jute yarns. Spinners are complaining bitterly because there has been no increase in the fixed rates for their manufactures, while, since the last change in prices was notified to take place from 7th February, prices of fibre have risen by £12 or £14 a ton. The Pakistanis have so often unwarrantably raised their prices for raw jute during the past few seasons that the trade is reluctant to exploit anything that can be seized upon to firm up the market. At the moment, reports state that the weather is hot and dry and that good rains are required to permit sowings to continue in both India and Pakistan. It is stated that the crops are likely to be at least one month late.

Meanwhile, there is not so much offering in raw jute, presumably because of the holidays in Pakistan. But the tendency has been in an upward direction and Mill Firsts are raised to £122, Mill Lightnings to £113, Mill Hearts to £108 and grade Hearts to £102, with good marks of Daissee-2/3 at £112 and grade at £108, grade Tossa-2/3 at £119 and grade at £112, all c.i.f. U.K., May-June shipment. Spinners have bought a few thousand bales, mainly on spot and afloat, but also a little for prompt shipment. It is distressing to learn that there are some parcels of jute which should have been shipped as long ago as September-October which are only now being sent from Chalna or Chittagong. Tentative offers of new crop Lightnings have been made for August-September shipment at £102 a ton, but no business has been reported. Calcutta goods have advanced this week to 64s 3d for 40in. 10oz. and 48s 6d for 74oz. May, 64s 6d and 48s 6d June and 65s and 48s 6d July-September, with B Twills at 176s 3d, 176s 6d and 177s 6d for the respective positions of shipment, all f.o.b. Calcutta.

THE PAKISTANI JUTE MARKETS

SHARP RISE IN FIBRE

(FROM A NARAYANGANJ CORRESPONDENT)

DESPITE reasonably low prices which prevailed over the past month or so, the undertone remained bullish, as sellers were merely looking for an excuse to raise their prices. The excuse at last turned up, and over the past seven days, prices have risen sharply. Arrivals have been poor as rail bookings from the north have been stopped, partly due to trouble on the line. Evidence is increasing firstly, that the current crop is not as large as was expected; secondly, that it will have to be stretched further due to the late arrival of the new crop; and finally, of course, that there is a lack of rain which is the real factor behind this speculative increase in prices. The news that the Chinese have bought 3,000 tons privately from a big baler for ready shipment at the c.i.f. Continent equivalent of £110, and that they are openly in the market for ready shipment at the equivalent of £115, has also contributed to it. The reaction, naturally, has been a swift rise of prices, mainly in pucca bales.

Loose jute prices, where available, are quoted at Rs. 32-8 for B Bottoms, Rs. 30-8 for C Bottoms and Rs. 28-8 for X Bottoms with dry jute scarce. With these high prices, arrivals should have increased were it not for the fact that wagon arrivals from the north have been scarce. As most of the purchases made by China are for ready shipment, the rise in prices is reflected mainly in pucca bales which are now quoted at Rs. 210, for Export Firsts, Rs. 200, for Export Lightnings and Rs. 187 for Export Hearts even Cuttings are steady at Rs. 90 ready, with a slight premium on forward. The rise in loose jute has been

mainly sympathetic and also due to the Idd holidays. It may soften slightly in the near future. On last Friday and Saturday, there were very heavy rains and Saturday's rains, it is reported, were very widespread. Although this may help the crop, it is rather late to have much effect on the market.

While there is no doubt that the crop will be late, it appears fairly certain that the Jat area is not adversely affected except possibly that the growth may have been slowed down, and as a result, the chur land crop which is about 2 annas of the total, may have to be harvested earlier or immature. The district area, as it could be seen from the air, appears to be growing very sparsely and the ground is quite dry. Reports indicate that conditions are the same in the north, but with the rains that have started it may be that these crops will come up well if somewhat late. Reports from overseas indicate interest mainly in prompt shipment in small quantities. The afloat market is at a premium except, of course, for Dundee which is well bought. New crop business is also reported at improved prices.

Several of the Pakistani mills came into the market when Calcutta prices showed signs of increasing to Rs. 112 for B Twills and Rs. 41-8 for hessian. Since then the Calcutta market has risen to Rs. 116 for B Twills and Rs. 42-8 for hessians, but due to the holidays, the Pakistani mills, with a few exceptions, have been unable to take advantage of this rise. The Karachi market remains unchanged, and there is still no news of the local sacking tender. South Africa again came into the market for Pakistani goods and bought fairly well before the rise which occurred during the Idd holidays.

Plantation Topics

COCHIN TEA SALES

A T Dust Sale J. 700,000 lbs of tea were on offer. There was less demand and prices were irregularly 15 to 25 nP easier.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received for the month of April 1957.

Upper Assam: Weather reasonable and wet with heavy rain in the last half of the month; hail damage is reported in Doom Dooma and Dibrugarh, though generally fair to good prospects are indicated in the region as a whole.

Central Assam: Rainfall deficient in Jorhat and Golaghat, though elsewhere satisfactory; red spider blight severe in Golaghat; immediate prospects generally fair.

Lower Assam: All districts except Borsola suffering from hot and dry weather, which is affecting outturn; the prospects in Nowgong are unfavourable and Tezpur has suffered extensive hurricane damage; immediate prospects elsewhere are fair.

North Cachar: Red spider blight is prevalent; the outturn for last month was poor, and hail has caused damage in Lakhimpur; rain has now improved prospects.

South Cachar: Hot, dry weather relieved in second half of month by rain; hail damage is reported in Hailakandi; rain still needed in Chargola and Longai; red spider blight prevalent; outturn last month was poor.

Eastern Doonars: Dry, hot weather; red spider blight prevalent.

Central Doonars: Abnormally hot; red spider blight prevalent; outturn last month normal, but immediate prospects are bad.

Western Doonars: Hot and dry with rain badly needed; outturn poor; red spider blight is prevalent.

Darjeeling: Outturn last month good, but immediate prospects bad; weather abnormally dry; red spider blight is severe in some districts.

Tera: Severe drought conditions; crop prospects nil unless rain falls; red spider blight is severe.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing prices on 25-4-1957 (Rupees a lb.)	Average for the week (Rupees a lb.)
Sheet:		
No. 1	1.26	1.26
No. 2	1.23	1.23
No. 3	1.20	1.20
No. 4	.96	.96
No. 5	.91	.91
Crepe:		
Water white	—	—
R.M.A. No. 1X	1.12/15	1.13
R.M.A. No. 1	1.09/12	1.09
Scrap Crepes:		
Sc. Crepe No. 1	.95	.95
Sc. Crepe No. 2	.92/94	.92
Sc. Crepe No. 3	.85/91	.86
Flat Bark	.75/80	.78
To arrive at f.o.b. Colombo prices add 53.53 cents a lb. for crepe other than scrap crepe, and 31.53 cents for scrap crepe to the above market prices.		

Calcutta Markets

FAIR GENERAL DEMAND AT TEA DUST SALE

A T Internal Sale No. 45, held on 7th May, tea dust offerings amounted to 20,715 chests. There was a fair general demand which weakened as the Sale progressed. C.T.C. Assams were irregular, but were generally easier while the orthodox kinds from this district were 10 nP easier at the close of the Sale. Commons and Doonars were also easier, and at the close, were selling up to 12 nP below last rates. Once again the black leafy types suitable for export were the strongest feature.

Quotations:	1957 Rs.	1956 Rs.
Medium Doonars Dust	1.60	1 8 0 to 1 9 0
Medium Assam Grassy Dust	1.60 to 1.65	1 9 0 to 1 10 0
Medium Assam C.T.C. Dust	1.65 to 1.70	2 12 0 to 2 14 0
Best Assam C.T.C. Dust	Not quotable.	

There was a good demand for Leaf at irregular rates for the 1,186 chests on offer.

WEAK UNDERTONE IN FREIGHT MARKETS

THE weakness observed in most freight markets last week has intensified and there have been reductions all round. The American coal trade fell to 60s 9d for single voyages and, with tonnage plentiful in June, will probably fall further. Coal from Australia to Japan was fixed at 84s f.i.o.s. with a 1,500-ton load which compares most favourably from the importer's point of view with the current indication of 125s from Calcutta with a 750-ton load. There seems very little prospect of Indian coal ever recapturing the Japanese market. In the Indian ore trades, a number of fixtures were made at very reduced rates compared with recent business. Two Ports East Coast-Poland paid 130s, Mormugao-Rotterdam-Emden 126s 6d gross terms and 112s 6d f.i.o. to Rotterdam direct and Vizagapatam-Antwerp-Rotterdam 120s, f.i.o. Grain rates were also lower with various fixtures from Pacific Coast to Bombay at rates ranging from 137s 6d down to 132s 6d and Geelong-Karachi was done at 110s with Chittagong 115s.

LINSEED STEADY

A steady undertone has been maintained during the past week due to the continued withdrawal of upcountry sellers, and an acute scarcity of arrivals. Buyers and sellers have been rather reserved, and trading has been poor. The oil section has been fairly inactive, as local prices were out of parity with overseas markets; small ready lots have been sold to shippers in fulfilment of previous contracts. Latest quotations were as follows: Ready Rs. 22-12 a maund and May-June Rs. 23 a maund.

MIXED TREND IN HIDES AND SKINS

The market in skins ruled steady, while that of hides was easier. Stocks were less than in the previous week.

Bazaar Sales

(Between 30th April and 6th May, 1957)
Cowhides: Wet salted (Slaughtered) 12,000 pcs. on the basis of Rs. 12.50 to Rs. 20.
Goatskins: Wet salted (Daissee, Killed) 6,700 pcs. on the basis of Rs. 310 to Rs. 350 and Rs. 375; Puneah-Kissenganj 14,200 pcs. on the basis of Rs. 285 to Rs. 300; Muzafferpore-Patna 20,000 pcs. on the basis of Rs. 317.50 to Rs. 320.

Bazaar Stocks

(6th May, 1957)
Cowhides: Wet salted 2,11,000 pcs.
Goatskins: Wet salted (Daissee, Killed) 18,000 pcs.; Assam-Dinajpur 22,100 pcs.

SHELLAC QUIET

During the week ended 7th May, the market was quiet. The range of quotations was as follows:

Pure Buttonlac	Rs. 102, 100 buyers.
Lemon No. 1 Shellac	Rs. 105 done buyers; 102.50, 101.50 buyers.
Lemon No. 2 Shellac	Rs. 97.50, 98, 65.50 buyers.
F.O. Std. 1 Shellac	Rs. 90, 90.50, 88.50 buyers.
Pure TN Shellac	Rs. 86, 85 basis done buyers; 83, 84 buyers.
4% I.T.N. Shellac	Rs. 76.50 to 75 buyers.
No. 1 Kusmi Seedlac	Rs. 94 buyers; 93, 92 value.
No. 2 Kusmi Seedlac	Rs. 89.50, 88 buyers; 89, 88.50 value.
Fine Bysaky Seedlac (Manbhumi)	Rs. 87.50 to 85 buyers; 84 done and buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 83.50, 82.50, 83 buyers; 82 done and buyers.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs. 78 to 76 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 74 value, 73, 71 buyers.
Kireelac	Rs. 33 to 32 buyers.

Shipments during April until the 30th were 22,220 packages comprising shellac 13,763 packages, seedlac 6,384 packages, buttonlac 640 packages and others 1,433 packages.

COMPANY AND PUBLIC NOTICES

THE CALCUTTA JUTE MANUFACTURING CO. LTD.

NOTICE is hereby given that an Extraordinary General Meeting of the Shareholders of the Calcutta Jute Manufacturing Co. Ltd. will be held at the registered office of the Company, Stephen House, 4, Dalhousie Square East, Calcutta on Tuesday, the Fourth day of June 1957 at 3 p.m. to consider, and if thought fit, to pass with or without modification the following resolutions:—

1. As a Special Resolution

RESOLVED that the Articles 127, 128 and 129 of the Articles of Association of the Company be deleted and in its place the following articles be adopted in substitution for and to the exclusion of the existing articles Nos. 127, 128 & 129 of the Articles of Association of the Company.

127 (1) At every Ordinary General Meeting which shall be held within nine months after the expiry of each financial year ending with 31st December in each year the directors shall lay before the company a Profit and Loss account in compliance with the requirements of part II of Schedule VI of the Act so far as they are applicable in case of the company and a Balance Sheet in the form prescribed by the Act and giving information required by the Act made up to a date not earlier than the date of the meeting by more than nine months or if the company is carrying on business or has interest outside the Union of India by more than twelve months, subject in either case to the right of the Registrar to extend the period for any special reason.

127 (2) The Auditors report (to be prepared in accordance with the provisions of the Act) shall be attached to the Balance Sheet or there shall be inserted at the foot thereof a reference to the Report, and the Report shall be read before the company in General Meeting and shall be open to inspection by any shareholder.

128. Every such Balance Sheet and Profit and Loss account shall be accompanied by a Report of the Directors as to the state and condition of the company and as to the amount (if any) which they recommend to be paid out of the profit by way of dividend or bonus to the members and the amount (if any) which it is proposed to carry to the Reserve Funds according to the provisions in that behalf hereinbefore contained; and the account, Report and Balance Sheet shall be signed by two Directors or if there be only one Director for the time being in the Union of India by such one director and in either case shall be countersigned by the Managing Agents. Whenever any such Balance Sheet is signed by one Director only there shall be subjoined thereto a statement signed by such one Director explaining the reason why it has not been signed by a second Director.

129. A printed copy of such account and Balance Sheet together with the Reports of the Auditors and Directors shall at least twentyone days previously to the meeting be sent to the Registered address of every member of the company and a copy shall also be deposited at the Registered office of the company for the inspection of members of the company during a period of at least fourteen days before the meeting.

Special Resolution

RESOLVED that the consent be and is hereby accorded to the appointment of Sri Durga Prasad Poddar, who is a brother of Sri Debi Prasad Poddar and a nephew of Sri Satnarain Poddar, directors of the company, as the Secretary of the company on terms and conditions set out in the draft agreement placed before the meeting and for the purpose of identification signed by the Chairman.

3. As an Ordinary Resolution

RESOLVED that the Register Book and documents of the company required to be maintained and kept open for inspection under the provisions of the Companies Act 1956, and particularly under Section 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301, 303, 304, 307, 356 to 360, 362, 372 and Schedule VIII to the Act be kept open for such inspection by the persons entitled thereto under the aforesaid provisions to the extent in the manner and on payment

of fees, if any, specified in the aforesaid provisions at the registered office of the company between the hours 2 p.m. to 4 p.m. on any working day except when the Register Books are closed under the provisions of the Companies Act 1956 or the Articles of Association of the company.

The Share Transfer Book of the company will remain closed from the 23rd May to 4th June 1957 both dates inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the Proxy need not be a member.

By Order of the Board.

for the CALCUTTA JUTE MANUFACTURING CO. LTD.

DAYARAM & SONS,

Managing Agents.

Stephen House,

4, Dalhousie Square East,

Calcutta

Dated, 30th April 1957.

Explanatory Statement as required under Section 173 of the Companies Act 1956.

1. Special Resolution No. 1

Under the existing Articles, General Meeting are held and accounts of the company are examined twice in every year. In view of the new statutory definition of "Financial Year" which included even less than a year for which a "Profit & Loss Account" is prepared and laid before a general meeting of the company and the provisions of the Act relating to the steps to be taken at the end of "Financial Year", it is proposed to close the accounts on the 31st December in each year and not to continue with financial half-years which will tax the company's administrative resources. The other alterations are necessary to bring the articles in conformity with the provisions of the Companies Act 1956.

2. Special Resolution No. 2

The company intends to appoint Sri Durga Prasad Poddar as the Secretary of the Company in place of Sri Debi Prasad Poddar who has resigned his office. As he is a brother of Sri Debi Prasad Poddar and nephew of Sri Satnarain Poddar, Directors of the Company, sanction of the company for such appointment is necessary under provisions of Section 314 of the Companies Act 1956. The draft agreement of appointment is open for the inspection of the members at the Registered Office of the company between 12 and 2 p.m. Be it noted that the terms and conditions of appointment is similar to those on which Sri Debi Prasad Poddar was acting.

3. Ordinary Resolution No. 3

Under the relevant sections of the Companies Act 1956, the company in general meeting is entitled to impose reasonable restrictions on keeping such Register and documents for inspection by the persons entitled thereto so that no less than two hours in each day are allowed for inspection. The hours of inspection sought to be prescribed by the said resolution are reasonable and convenient from the administrative point of view.

CALCUTTA GAS COMPANY (PROPRIETARY) LIMITED.

NOTICE

NOTICE is hereby given that the Ninth Annual General Meeting of the Shareholders of Calcutta Gas Company (Proprietary) Limited will be held at the Registered Office of the Company, No. 8, Dalhousie Square East, Calcutta, on Friday the 7th June, 1957 at 4-15 P.M. to transact the following business:—

- To receive and adopt the Audited Accounts for the year ended 30th September, 1956 and the Directors' and Auditors' Reports thereon.
- To consider the declaration of the Dividend as recommended by the Directors.
- To elect Directors in place of those retiring by rotation.
- To appoint Auditors and to fix their remuneration.
- To consider and if thought fit to pass the following resolution as an Ordinary Resolution of which a special Notice as required under Section 381 of the Companies Act, 1956 has been received by the Company

"Resolved that pursuant to the provision of Section 281 and other applicable provisions (if any) of the Companies Act, 1956 the appointment of Dr. N. N. Law, who has attained the age of 69 years be and is hereby approved as a Director of the Company and it is hereby specifically declared that the age limit of Directors prescribed under Section 280 of the said Act shall not apply to him."

Any other business that may be transacted at an Annual General Meeting.

The Share Transfer Registers of the Company will be closed from the 31st May, 1957 to 7th June, 1957 both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,

For & on behalf of

CALCUTTA GAS COMPANY (PROPRIETARY) LIMITED.

SOORAJMULL NAGARMULL,

Secretaries.

8, Dalhousie Square East,

Calcutta-1.

Dated the 30th April, 1957.

NOTE:—Warrants for the dividend when declared will be forwarded in accordance with registered instructions, but if no such instructions have been received, to the registered address of the Shareholders whose names appear on the Company's Register at the date of declaration.

Explanatory Statement as required by Section 173 of the Companies Act, 1956.

ITEM No. 5. In respect of item No. 5 of the Notice of the Annual General Meeting it is notified that Dr. N. N. Law has attained the age of 69 years and hence he cannot continue as a Director of the Company except by a resolution in respect of which special Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a special Notice from some members notifying their intention to move the resolution as set out. Dr. N. N. Law joined the Board of Directors of the Company in 1947. (Since inception).

He is a business man of wide experience and during the long period of his association with the Company he has rendered very valuable services to the Company. As it is in the interest of the Company that the Board should continue to receive the benefit of his advice as a member of the Board, it is desirable that he be appointed as a Director.

THE BRITISH INDIA CORPORATION LIMITED.

NOTICE is hereby given that the Share Transfer Books of the Corporation will be closed from 25th May, 1957 to 22nd June, 1957, both days inclusive.

By Order of the Board,

E. C. CALDWELL,

Registrar.

THE DILEMMA IN FINANCING RAILWAY EXPANSION

DOUBTFUL JUSTIFICATION FOR NEW FREIGHT SURCHARGE

THE Railway Budget for 1957-58, presented by Mr. Jagjivan Ram, Railway Minister, in the Lok Sabha on Tuesday, reflects a dilemma that is becoming increasingly familiar in the running of the State's biggest commercial enterprise. The first manifestation of this dilemma came 14 months ago, when the previous Railway Minister, Mr. Lal Bahadur Shastri, spotlighted the fact that the railways have been asked to undertake expansion on a huge scale, but have not been given enough money for it. Mr. Shastri, never unmindful of the railways' virtual monopoly in India's transport system, sought to solve the problem in the least inconvenient way it could be solved: by mulcting railway users through a 6½ percent surcharge on practically all types of goods traffic. Mr. Jagjivan Ram has now emerged as a devoted admirer of the precept, and has decided to raise the surcharge to 12½ percent with effect from 1st July. The only lucky commodities to escape the surcharge are grains and pulses, fodder, manure, khadi, newspapers, newsprint and books; but as far as railway revenues are concerned, they are of relatively little importance. In a full year, the higher surcharge would have been likely to bring in Rs. 12.5 crores more; since it takes effect only on 1st July, the extra revenue during 1957-58 will be around Rs. 9½ crores.

The justification or otherwise for the surcharge has to be considered against the background of the railways' growing difficulties. This background is by now fairly familiar. At the time the second five year plan was finalised it was estimated that over the quinquennium the railways would have to provide for a 30 percent increase in passenger services, and that goods traffic would rise by 60.8 million tons to 180.8 million tons. To cope with these increases, it was stated that an outlay of at least Rs. 1,480 crores would be necessary. The Government and the Planning Commission, while not challenging any of the estimates, merely provided to find Rs. 375 crores from their own resources. The railways estimated that with the reduced provision, they could increase their carrying capacity by no more than 47 million tons; 5 million tons out of this increase would be absorbed by the demand for their facilities which remained unsatisfied at the time, with the result that net increase in capacity over the second plan period would be only 42 million tons. Of this, 25 million tons would be required to carry coal and other raw materials for the new steel plants; 6 million tons for coal for other consumers; and 4 million tons for cement. The margin left to meet increases in the general merchandise traffic demands of trade and industry would, in the words of both Mr. Shastri and Mr. Jagjivan Ram, have been "very meagre."

Even these calculations, worrying as they were, have now been

initiative and to widen and sustain popular zeal. This is, however, the place to mention that while a "psychological revolution" in India's villages would perhaps be a welcome event, capable of releasing much latent energy, it is also possible to place too much emphasis on the psychological aspect of development with a consequent under-estimation of physical achievements. A school can be the result of a community's efforts (as it can be that of Governmental initiative) but a school, however built, is capable of improving the community in important respects.

A little less talk about changing minds—always a more difficult thing to do in which it is almost impossible to assess results—and a clearer view of the objectives—where "social justice" now enjoys a priority that does not belong to it—and we might see that some of the laments of the Programme Evaluation Organisation are really not so relevant. Indeed, it might then be possible to appreciate the results obtained. If it is true, as the report says it is, that items including physical change, especially constructional and irrigational activity, and those involving changes in production attitudes in agriculture and animal husbandry have been comparatively successful, then clearly something substantial has been achieved. Interest in adult literacy or *panchayat* activities, which the report says is limited, can only follow the satisfaction of the basic physical needs of the villager, and if the community development projects' success in these latter departments has been below expectations it may be only a matter of time. The way to attack this second problem may be through greater efforts with regard to the first. The Evaluation Organisation, now the Board, will probably find that, once the farmer's harvest has been good because of what he has learnt from the project officers, he will be found in the community centres and youth clubs as often as his boy is at the primary school.

Another conclusion arrived at by the Programme Evaluation Organisation is that there is "wide disparity in the distribution of achievements." This is where the question of "social justice" has been brought in, perhaps very prematurely. Pace the Programme Evaluation Organisation, it is not a matter of immediate concern that some areas have done better than others or that the large holder is better off than the small. Reference is also made to the political consequences of these inequalities, which tends to suggest that the problem of rural uplift is already getting mixed up with political considerations. These may be inescapable in a democracy, but the Government must recognise that this detracts from the economic effort. It may even lead to greater attention being paid to the question of distribution of benefits than to their production, a tendency painfully noticeable in some other financial policies of the Government too.

"People's Plan" and slogans like these are other obscurers of visions. It may be a pity that the Indian villager today shows so little initiative, but it is a fact that cannot be talked away. Thus, to say that community development is a programme which must start at the bottom and is not meant to be enforced from the top, as is often said, is to evade, possibly unconsciously, responsibility at the top. For reasons it is not necessary to go into, almost nothing in India has started from the bottom in recent centuries, and it is admitted in the report that the Government's well-intentioned plan to show the way and then leave it all to the villagers themselves has already proved disappointing. What is called the "post-intensive programme," the stage at which the Government bows out and the people are supposed to take over, is beginning to expose the falsity of the assumption that a large mass of poor and illiterate peasants can be made to take charge of themselves in a short time. It should have been foreseen that "inactivity or what largely appears to be so" would succeed the intense activity initiated by the Government. It is not, in this context, wholly encouraging to be told that in the next few years the whole country will be covered by the community development projects or the nation-

COAL POLICY IN INDIA

By

Andrew Farquhar

This booklet consists of reprints of articles written by Mr. Andrew Farquhar, former Coal Adviser to the Tata Iron and Steel Co. Ltd., which have appeared in *Capital* in recent years. As expert analyses of India's coal problems and policies, they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

al extension blocks. There is reason to suspect that effort is being spread thinly over too large an area, with no appreciable lasting benefit anywhere.

If, therefore, it is conceded that the administration's responsibility will continue to be great for a long time to come, it is necessary to examine the Programme Evaluation Organisation's recommendations in this behalf. They are quite drastic. "Unless the whole administrative machinery of the Government," says the report, "gets permeated with the philosophy of community development, problems of co-ordination will continue to hamper the programme." Let us, again, leave alone the "philosophy" part of the proposal, and look at the concrete things the report suggests. The district officer, it is pointed out, is tending to become the kingpin of the development programme, although it is complained that the administrative implications of this transformation have not been realised either at the district level or at the State level. It is difficult to follow just what the report is getting at here, until one comes to the suggestion that "the primary function of the administrative head of the district should be recognised as development and he should be given special assistants for dealing with law and order and revenue functions rather than the other way about." The revolutionary character of the suggestion is obvious; it is nothing short of a complete reversal of the priorities of district officers today. The importance of community development cannot be exaggerated but to subordinate law and order and revenue collection to it is to take a very big risk, perhaps bigger than the present Government will, or even should take. Many will wish the Programme Evaluation Organisation had made its recommendations a little more practical and a little less revolutionary. One of the objects of the community development programme is the avoidance of a revolution.

NEW SCHEME FOR MANAGEMENT EDUCATION

A NEW scheme for management education, providing training in business, industrial and general management, has been approved by the Management Board of the All-India Board of Technical Studies. The scheme will serve as a model for reorganising management education, and is to be implemented in selected centres in each region. The Board's recent meeting, held under the chairmanship of Sir Jehangir J. Ghandy, has decided to provide training facilities to managerial personnel through comprehensive courses in two stages—intermediate and final. The intermediate stage is intended to bring candidates of different academic disciplines to a level of initial preparation for management training, while the final stage will provide for specialised training in any of the three branches of management education. The new scheme does not treat training for management as a course, since a candidate aspiring to managerial responsibilities must have sufficient knowledge and practical experience in the different branches. Keeping this broad perspective in mind, the Board has recommended that the scheme for training should be open to those who are employed in industrial or commercial organisations or in Government departments. The scheme will be conducted on a part-time basis extending over a period of four years, and many aspiring candidates will try to avail of its facilities; the Board says that it will be organised on a full-time basis as soon as the required facilities are available.

The Board has appointed a four-man expert committee which will visit different centres and discuss details for adopting the scheme. The centres chosen by the Board for providing management education appear to be appropriate; they include the Indian Institute of Technology, Kharagpur, and the All-India Institute of Social Welfare and Business Management, Calcutta, in the eastern region; the Delhi School of Economics, Delhi, in the northern region; Bombay University and the Victoria Jubilee Technical Institute, Bombay, in the western region; and the Madras University and the Indian Institute of Science, Bangalore, in the southern region. These centres will gradually adopt the new scheme and will provide training facilities in business, industrial and general management.

The response made by industrial and commercial organisations to the scheme has been heartening. In fact, the demand for seats from candidates has been far in excess of what the Board can provide. The Board has accordingly decided to extend the facilities to meet the increasing demand for management education. It also notes with satisfaction the Government's decision to send a team of five Indian experts to the United States to study the organisation of important business schools in that country. A team of professors from some leading American management schools will come here to advise how management education should be organised. These visits will be sponsored under the U.S. Technical Co-operation Mission programme providing assistance for the development of management education.

CURRENT COIN

Enquiry on Amending Company Law.—The Government of India's decision to set up an *ad hoc* committee to examine what amendments are necessary in the Companies Act, 1956, has been widely welcomed. The legislation is a little over a year old, but serious practical difficulties have already arisen in its working and administration. The committee is expected to complete its work within three months. It has Mr. A. Viswanatha Sastri, a former Judge of the Madras High Court, as chairman. Its members are Mr. C. C. Shah, Solicitor, Bombay; Mr. G. Basu, former President of the Institute of Chartered Accountants; Mr. J. D. K. Brown, director of Jardine Henderson Ltd., Calcutta; and Mr. K. R. P. Aiyangar of the Department of Company Law Administration. Considering the aims and objects of the Companies Act, the committee is expected to recommend such changes as may be necessary to overcome practical difficulties in its working and in its administration; (b) to remove such drafting defects and obscurities as may have interfered with the proper working of the Act; (c) to ensure the better fulfilment of the purposes underlying the Act; and (d) to consider what changes in the form or structure of the Act, if any, are necessary or desirable to simplify it. Chambers of commerce, associations representing other business or shareholding interests or any other body or individual interested in this matter may communicate in writing to the Government in the Department of Company Law Administration in the Ministry of Finance such views as any of them may like to express on any matters connected with the working of the Companies Act, 1956, which fall within the terms of reference. All communications may be addressed to Mr. F. N. Sanyal, Under-Secretary Department of Company Law Administration, Reserve Bank Building, Park Street, New Delhi, so as to reach the Department not later than 15th June, 1957.

Ancillaries to Large Industries.—In a letter to 3,000 large industrial units licensed under the Industries Act, the Ministry of Commerce and Industry has asked them to consider to what extent collaboration with small units might help the latter to grow up as ancillary enterprises. The letter emphasises the need to foster collaboration between large and small industries, in order that both can develop as complementary to each other instead of being competitive. A suggestion has been made that large units should try to secure their supplies of components and accessories from small industries, as far as is practicable. The large units have been asked to put forward their suggestions to the Development Commissioner for Small-scale Industries, the National Small Industries Corporation, the Directors of the Regional Small Industries Service Institutes or the State Directors of Industries, especially if specific technological improvements are required to ensure better quality and precision in small industries' products. This closer inter-dependence may be welcomed to the extent that it will provide an opportunity to small industries to improve their prospects. The larger units might also find it possible to invest less in machinery and equipment if they can secure components and accessories from small units. Heavy industries in Japan restrict their manufacturing activities only to parts requiring precision, while other parts which are comparatively easy to produce are obtained from small units. But the problem here is that small industries are not adequately developed and may not be able to supply components and accessories at an economic price or of the right quality and specifications. Large units will hardly be inclined to obtain accessories from small units if they can produce them with their own machinery. That close co-operation between large and small enterprises cannot always be organised has been seen in the case of the automobile industry here. But a number of large units have accepted the scheme for collaboration in principle. A big bicycle factory, for example, has prepared a detailed plan for establishing eight small-scale ancillary units to manufacture components, and entrepreneurs have already been selected for setting up three of these units. Another bicycle factory is obtaining its requirements of handle bars and brake fittings from small units. An automobile manufacturing works in Bombay and the Government-owned Hindustan Machine Tools Factory in Bangalore are reported to be among the large manufacturers who have accepted the scheme for collaboration in principle.

Food Scarcity and Statistics.—Disturbing reports have recently appeared of food scarcity in parts of Bihar and West Bengal. Rice prices in West Bengal have risen from Rs. 22 to Rs. 26 a maund, reflecting shortages even in some districts which usually have a surplus. The West Bengal Government has started test relief works to ease hardship in the affected areas. About 350,000 people, it is reported, have been brought under a modified rationing scheme. In spite of this, hunger

has not been alleviated in Murshidabad district, while people in other areas are still demanding measures to bring down rice prices. Border trading and smuggling to East Pakistan, which appears to be chronically short of rice, and the ban on exports from Orissa have depleted supplies in West Bengal. Mr. P. C. Sen, Food Minister in Calcutta, has said that the population of the State has increased from 21.2 million in 1947 to 28 million, and total consumption requirements are now about 4.2 million tons. He estimates a deficit of 400,000 tons, "provided every ounce of grain comes on the market." Bombay, Bihar and U. P. have also complained of scarcity. The damage to cereal crops in these areas has been caused mainly by drought or excessive rainfall. There has been considerable damage to the *rabi* crops in parts of Bihar; such areas as Khagaria sub-division have already been declared famine-stricken. Orissa, being anxious to avert near-famine herself, has demanded the introduction of physical controls on paddy. Faced with the bleak prospect, the Union Food Ministry has decided that the food scarcity in the eastern regions should be specially studied by the first meeting of the Eastern Zonal Council. State Governments, meanwhile, have opened many fair price shops to provide relief to consumers. Mr. A. P. Jain, Union Food Minister, has issued the assurance to them that there is no reason for alarm as the crop damage has so far affected coarse grains only. Certain official statistics seem to be encouraging the complacency. The final forecast of rice production estimates a harvest of 28.1 million tons; contrasted with the earlier forecast of 23.9 million tons, it implies an increase of 4.2 million tons. Against this background, the recent rise in rice prices would be difficult to justify—unless the statistics are defective.

U.S. Business Confidence Grows.—American business news during April has been reassuring, according to the latest monthly letter of the First National City Bank of New York. Two or three months ago, misgivings and uncertainties were spreading. They still persist, and good arguments can be found for a cautious attitude. However, business in overall terms has been well sustained, and there are few signs of early or general weakening. In spite of slackness in housing, sluggishness in automobile sales and contraction in steel operations, strength in other areas supports employment and trade; and both the action of the stock market and surveys of business expectations show that there are more optimists than was the case in February, when sentiment seems to have touched its low. "Optimism" probably should be defined as one who expects the trend to continue sideways. After the long advance, the soft spots and the evidence of topping out in key lines, few count ahead; most rather expect continued irregularity. Nevertheless, recent reports bolster the outlook. Backlogs are large in the heavy lines, and new orders are flowing in good, if somewhat reduced, volume. Notable among the April reports is the fact that, contrary to the general expectations, the Federal Reserve Board's index of industrial production for March did not decline, but held at 146 (1947-49 equals 100), the same level as in four of the five preceding months. Expectations of a drop doubtless were caused by attention being concentrated too much on steel and automobiles. One rise in fuel production, reflecting in part the Middle East shortage. Now petroleum production is being cut back, and the temporary stimulus is disappearing. More fundamentally, however, the strength in industrial activity is due to the engineering industries—machinery and tools, shipbuilding, railroad equipment, and aircraft—offsetting the relative softness in steel and automobiles, building materials and various appliances. It is worth noting that while weekly output of steel ingots dropped from 98 percent of capacity in February to 89 percent or lower by late April, except automobiles, increased or held steady in March. In spite of the inventory accumulation in recent months and the resulting need for adjustment, steel consumption evidently is still running strong. Retail trade figures show that consumer spending remains one of the chief business supports. With employment and consumer income at new high levels, department store sales set a record for the Easter season. Favourable first quarter earnings reports seem to show that in overall terms less severe than many had feared. These reports have added something to confidence, and have been reflected in stock market improvement. Finally, a new McGraw-Hill survey—suggesting that business men in the aggregate are tending to step up, not cut back, their capital spending plans for 1957 and the years beyond—both reflects and contributes to a confident view.

Trading with India.—It has long been felt that the main hope for continued participation in the Indian market for many foreign manufacturers,

even those with a long and valuable connection, would call for an entirely new approach and the adoption of different methods. Not all foreign traders appreciate this; but realisation of the inevitability of change is spreading, and this is apparent in the address given to shareholders of Mather and Platt Ltd. by Mr. L. E. Mather, the chairman. In accordance with a growing trend in the working of engineering firms of this nature, trading and gross profits show good progress, but the net profit is lower after meeting essential depreciation and taxation. Even the record trading results will only be maintained if capital investment is enhanced. This is especially true of trading overseas, for although Mr. Mather has reported gratifying progress in this sphere, he has also pointed out that more and more the company is having to consider the establishment of subsidiary companies, not only to meet fiscal requirements of countries served previously through branches or agents, but also to make use of more local materials for the purposes of assembly and, in some cases, for complete manufacture. In India, where capital investment is much in evidence due to developments under the second five year plan, conditions are said to be partly favourable and partly unfavourable. The import of capital goods from the United Kingdom is still looked on favourably and British goods are generally given precedence over other imports, provided quality and prices are comparable. Textile finishing machinery, for example, has been in good demand, but the firm's products are meeting with increasing foreign competition. There is a growing tendency, moreover, to encourage local manufacture with foreign technical and financial assistance. As a result of this tendency, foreign firms are faced with the need to make considerable changes in their method of trading. In this connection, Mr. Mather says, the company's secretary spent several weeks in India studying the implications and restrictions embodied in the Indian Government's recent legislation, which affects both the demand for imports and the service conditions of non-Indian staff.

Cost of Hungarian Repression.—Repressions are less expensive than wars, but still are highly costly operations. It is estimated that the overall expenses and losses of the Hungarian uprising totalled at least \$1,000 million in destruction of property, loss of production and foreign trade, cost of military expenditures, etcetera. The annihilation of such an amount had deep repercussions on the value of the currencies of the rouble group. In the May issue of *Pick's World Currency Report*, the monetary effects of these events are analysed in the following table:

BLACK MARKET RATES OF THE U. S. DOLLAR IN NATIONAL CURRENCY UNITS

	30th Sept. 1956	30th April, 1957	Percentage Rise
Berlin (East)			
(Ostmark)	17.30	18.70	8
Bucharest (Lei)	26.15	36.50	39
Budapest (Forints)	49.50	100.00	101
Moscow (Roubles)	19.00	37.50	97
Prague (Korunas)	39.75	54.00	36
Sofia (Levs)	34.00	45.00	32
Warsaw (Zlotys)	74.00	115.00	55
Shanghai (Yuans)	6.30	8.20	30

Most of these units have reached postwar lows of free market value and in spite of recent partial devaluations in Hungary and Russia, both creating new "tourist rates" for hard currencies, the monetary situation is critical. New devaluations seem inevitable. Comparisons of recent free market value, as opposed to official value, of the individual units show the Chinese People's yuan leading, with 30 percent of its official value. The free market value of the Rumanian lei is 16½ percent of its official rate, followed by 15 percent for the Bulgarian lev, 13½ percent for the Czech koruna, 11½ percent each for the East German mark and the Hungarian forint, 10½ percent for the rouble and only 3½ percent for the Polish zloty.

U.K. Hosiery Manufacturers Criticised.—An analysis of advertising expenditure in the British textile industries would show that competition is keenest in the hosiery section. This may explain the rather severe criticism of the apathy of the majority of manufacturers towards research activities, which is made by a team from Leicester University College led by Mr. A. G. Pool, Professor of Economics. Nearly 75 percent of manufacturers, the report finds, failed to give financial support to a co-operative research organisation. In 1954, the income of the industry's research association was £38 for every 100 workers employed, a much lower percentage than those of the other textile industries. The cotton industry, for example, contributed £108 a 100 workers. Moreover, there was little private research to make up for this. Attention is drawn to the need for an industrial consultant service to enable more economic planning of factories and methods. Suggestions are made for a hosiery and knitwear design centre and a co-operative export organisation. The report points out, however, that the setting up of these two services would be impeded

by the fact that "competition is very much a matter of rivalry among differentiated products serving the same general purposes." On the subject of manufacturers' associations, that report suggests that a weakness of the present structure is the duplication of functions by rival associations. It suggests that amalgamation would make for greater financial strength. It is apparent that the industry is badly in need of rationalisation, but whether or not the report will be acted upon remains to be seen.

Man-made Fibres.—The rapid growth in the number of man-made fibres, and their increasing utilisation for a variety of purposes, has inevitably given rise to some confusion about their various properties and best usage. To avoid disappointment to the user, a clearer differentiation is certainly necessary. For some little time now, British Celanese Ltd. has been using the description "Tricel" tri-ester fibre for a new yarn and staple fibre which it is making from cellulose triacetate, the acetic acid tri-ester of cellulose. This description, the company explains, has been adopted to prevent confusion between the new products and those made from secondary cellulose acetate which have become widely known as "acetate." "Tricel" tri-ester fibre is in many ways different from acetate fibre, and it resembles the wholly synthetic fibres in several respects, particularly in that it can be "heat-set." This "heat-setting" property is largely responsible for certain valuable characteristics of tri-ester fabrics. These can be ironed with a very hot iron without damage. They have very high resistance to shrinkage and

stretching. Many of them have "drip-dry" and "non-iron" characteristics and can be permanently pleated and embossed. The adoption of the new name should emphasise the difference between the tri-ester fibre and the others. Development is proceeding with the use of the fibre in dresses, blouses, shirts, skirts, trousers and children's garments of all kinds, and it is arousing much interest in trade quarters.

Lancashire Trading Figures.—United Kingdom trade returns in recent months have shown a slightly better trend for the cotton textile industry, but the well-known annual analysis of trading results prepared by Frederick W. Tattersall Ltd. of Manchester, helps to reinforce Lancashire's claim that 1956 was a year of difficulties during which it suffered quite a serious setback. The aggregate profits reported by Lancashire textile companies last year, though they again exceeded £5 million, were nearly £3 million less than in 1955, and dividends declared showed a sharp reduction to give an average rate which was the lowest since 1948. Some of the details are worth examination. The earnings announced by 14 leading spinning and weaving combines and their subsidiaries last year amounted to £3,148,656, compared with £4,665,012 in 1955. The average profit was £224,804 a group, against £333,215. The average dividend paid was 13.23 percent, against 14.99 percent in 1955. The average profit announced by 52 independent spinning mills during 1956 was £19,861 for each company, compared with an average of £27,745 for 60 companies in 1955, and one of £31,226 for 67 concerns in 1954. The average

dividend paid by 55 spinning mills last year was 15.75 percent, against 23.42 percent for 62 companies in 1955. The average profit announced by 20 concerns combining spinning and weaving was £35,500 each company last year, compared with £57,999 in 1955. The average dividend for 22 companies was 11.86 percent, against 13.39 percent. For the whole of the 72 firms, the average profit was £24,205 in 1956, against £35,984 for 80 concerns in 1955, while the dividends announced last year for 77 companies averaged 14.65 percent, against 17.52 percent in 1955. The adverse conditions had their severest effects on firms solely engaged in weaving. The average profit of 24 such companies was £28,090 each firm, against £52,962 in 1955. Dividends averaged 9.61 percent, against 15.24 percent in the previous year.

New Use for Acetate Staple.—A new outlet for acetate staple, which may ultimately make it much more important than it has been in the past, has been developed by Courtaulds Ltd. Hitherto acetate staple has mainly been used for blending with viscose for various cloths, including a successful shirting of the taffeta type, and has met with some success in blended wool yarns for tufted carpets, underwear and so on. "Fibroseta" in a crimped form for the manufacture of resilient waddings is now available on a commercial scale and some half a dozen or more of the largest wadding manufacturers in Britain are taking it up and have the necessary plant to carry out the latest bonding process. Super-crimped acetate staple is bonded together by the application of a plasticiser followed by heat treatment. The bonded wadding can be made in a wide range of densities, thicknesses, rigidities and widths according to requirements and extending from dense, rigid film-like materials and waddings, to light and open floss-like structures, and a full range of colours is available. It lends itself particularly to welding by the modern radio frequency technique, so that when used as a padding for car upholstery and mattresses, or as the filling for the fluting of car seats, sealing, fluting and quilting are carried out without stitching. For moulded products, such as display material, toys and so on the moulding is carried out on the plasticised acetate before the final bonding takes place, and by this moulding process it is possible to make packaging materials to shape. Bonded material of this type for heat and sound insulation is claimed to be extremely easy to handle and is rot-resistant, not attacked by vermin and, as the fibres are bonded together, it is stable to vibration. For insulating aircraft, refrigerator doors and similar purposes, it does not "bend down", and fire-resistant and water-resistant qualities are available. It is said to compare favourably in price with existing similar materials in common use.

British Oxygen.—The British Oxygen Company, however much it might disagree with the more critical views of its activities taken by the Monopolies Commission in its recent report, has met the situation in a dignified manner. It has published a booklet in which the chairman actually welcomes the criticism by the Commission and agrees with many of its recommendations; so much so, that some of them will be applied at once. It is made quite plain, however, that the company does not agree with all the criticisms. On one point, the size of profits, it disagrees completely, and the booklet sets out its reasons.

INSURANCE OF TEA GARDENS

WE publish in our correspondence column a letter regarding the insurance of tea garden premises. Our correspondent thinks that it will be generally admitted that the rates charged are fair, but he considers that special conditions are unnecessary, and quotes a special case as evidencing that the insurance companies do not always act up to their profession. He points out that in the tariff published by the companies, it is stated that an allowance will be made from the rates charged for fire insurance if a certain number of buckets are kept in each room always full of water; and he complains that gardens that have complied with this condition have not always received the rebate on the ground of an insufficient water-supply, his grievance being that there is nothing about such supply of water in the tariff conditions. We cannot say that we are altogether in accord with our correspondent. Rules of this description must be read in a commonsense way: and we think that when the insurance companies provide that there shall be certain buckets filled with water, they contemplate that there shall be also a supply of water readily available when those buckets become empty. If this were not so in the case of a fire, the tea garden would be very much in the position of the Dutch captain who possessed an anchor to his ship but who, when he required to use it, found that it had been left at home.

FROM
CAPITAL

12th May, 1897.

REPUBLICANS need almost as much pageantry as benighted monarchists, and New Delhi had it in good measure on Monday when Dr. Rajendra Prasad was sworn in as President for a second term and then proceeded to address free India's second Parliament. (By the way, republicanism is a relatively recent thing in Delhi, which has probably seen as much pageantry as any other capital in the world.) If on the stage new faces were few, the audience was not exactly the same, and to many the display must have been quite a novel experience. In the inaugural address itself, the President did not say much that was startling; but there was a comprehensive review of the problems facing India and the world. The reference to the second plan was cautious in the extreme, and it could mean more than one thing; it is possible that the Government itself has more than one thing in mind. The omission to mention West Bengal's food shortage has been noted locally, but it is unlikely that the problem is not on that account exercising the appropriate ministry. The President's claim that his Government has obtained encouraging results in the past few years inside the country and worked for peace abroad will be endorsed by most observers. But, not long after the colourful ceremonies were over, Mr. Nehru addressed his Party in Parliament and spoke on specific problems. This is what the Lok Sabha will have to do in the next five years. The time for generalities is over, or at least should be.

With much of Mr. P. L. Verma's vigorous presidential address to the Indian Roads Congress on Sunday, I would heartily agree. And even on the points where I do not agree, I would readily admit that his approach is thoughtful, constructive and illuminating. There are too few rupees, and too few engineers, to build the roads we badly need. State Governments, which prattle away ceaselessly about accelerating the economic intercourse between town and country, have done their deplorable best, through their road transport policies, to hinder the intercourse. Yet, one aspect of what the shortage of transport can mean in terms of poverty and human suffering may be seen in many Bihar and West Bengal districts today, where near-famine conditions prevail at the same time as Mr. Ajit Prasad Jain, Central Food Minister, gaily issues reassurances about the size of his food reserves. I do not believe that our transport inadequacies, especially those concerning roads, are purely financial in origin. They are as much psychological—in the sense that planning nowadays seems to consist of fixing targets for production, and then taking consumption for granted, without bothering about how goods are to move from the conveyor belt to the retail shop. But the financial difficulties are there, too in road development as in other fields, though they would be less if the levies road users already pay are utilised for their benefit rather than diverted to the grandiose "welfare" schemes of our poverty-stricken States can really afford. Mr. Verma makes a very attractive suggestion about increasing the technical manpower for road construction; that students be taken out of engineering institutions, given practical experience in road-building for two or three years, and then returned to the institutions for completing their studies. This seems to me one of the finest methods of nurturing the empiricism which seems so lacking even in our professional pursuits nowadays.

In purely economic terms, Whitehall's decision to withdraw its objection to British ships floating

A DITCHER'S DIARY

up and down the Suez Canal represents a concession to realism. Yet, it must be admitted, it also represents a concession to Colonel Nasser—not himself at all times the most readily recognisable incarnation of that quality. The U.K. decision could not have been deferred much longer; a conference last week spotlighted the extent to which the Suez Canal Users Association has been splintered by the strains of economic self-interest. However, it is to the future that eyes will now be turned; and the first hope here will be that those who have done most to get the Egyptian colonel roughly what he wanted, will have enough effective persuasion left in them to ensure that he fulfils his obligations. At least one of these obligations—granting the right of passage to Israeli ships—I cannot see him accepting for a long while yet; but many countries, both to the east and to the west of Egypt, will have reason to hope that a selfish and arbitrary nationalism will not give rise to interference in other forms. If it does, Colonel Nasser may before long find himself having won not much more than a Pyrrhic victory. Egypt's interest, which has always lain in keeping the world as heavily dependent on the Canal as possible, has already suffered much since nationalisation. Europe now knows that even with the Canal shut and the pipeline from Iraq dynamited, she is only inconvenienced, not starved. And the new trends—towards building supertankers, laying pipelines in more secure territories, and investing more heavily in the possibilities of atomic energy—are likely to make Suez look a lot less important than it did, say, a year ago. While no one still knows where the money for the Aswan Dam is to come from, looking ahead it is not difficult to visualise Colonel Nasser with rather less of the smug satisfaction than he may appear to have today.

The long-proven futility of intermediate arts and science courses in Indian colleges is being belatedly realised; and the Deshmukh Committee's estimate that changing over to the three-year degree course will cost about Rs. 25 crores suggests that the sum is not too much to spend on what, I feel, will prove a welcome reform. Unfortunately, the way some of our educational authorities are setting about implementing the reform does not indicate that the results will be as good as one might expect. In West Bengal, for instance, the neat-looking formula has been followed that instead of students spending ten years in school and four years in college, they will in future spend eleven years in school and three years in college, with mainly this difference that a small chunk of their first year's intermediate course is nipped off and attached to their new school curriculum. Since study in the intermediate grades supposedly involves a certain amount of specialisation, it is hard to see what can be gained by burdening schoolboys and schoolgirls with an academically negligible titbit of specialised knowledge. Rather, I had thought that the distinctive feature of a good school education is that it is general in nature while thorough in providing the foundation on which specialised knowledge can later be built. It is important that firm steps should be taken to prevent lazy adjustments of this sort, and also to see that one of the other major benefits expected from the three-year degree course—less overcrowding in colleges—is realised. The Deshmukh Committee suggests that the number of students in each college should be restricted to 800 or 1,000, but many acquainted with conditions prevailing today will tell you that even these figures are too

high. The danger of having more students than professors can reasonably be expected to cope with is that "cramming" increases and standards deteriorate. To spend Rs. 25 crores on the three-year degree course reform would be a waste of money if the intellectual calibre of graduates remained much the same as it is now.

For once, I think, the Queen would have been amused. Dr. Ram Manohar Lohia's *satyagraha* in Uttar Pradesh was high farce right from the beginning, for he knew perfectly well that his few supporters could not constitute even a nuisance to the State Government, and the chances are that he will have fewer at the end of his campaign. And then to have offered to call off the *satyagraha* if the statues of foreigners were removed was to reduce the whole thing to the level of the lowest comedy. There was a report that, as the result of a tussle between the police and Lohia's men in Banaras, some negligible damage was done to a statue of Queen Victoria. This is the centenary year of the mutiny, the end of which saw Her Majesty take over the administration of this country. Both were serious events, and the serious discussions now in progress on both certainly do not lack in variety. The Queen herself was a very serious person, and that a statue of hers should have been the object of a comical fight between the police and some political agitators who do not know what they want, suggests a childish and frivolous attitude to history on the part of Dr. Lohia who, I am told, is a serious student of history and has written extensively on historical evolution. Perhaps he is thinking of Toynbee's challenge-and-response? He flatters himself when he thinks he is a challenge to the U. P. Government—or to the place in history of the Queen on whose statue Dr. Lohia let loose his young and thoughtless vandals. There is an older generation of Indians who still think of Queen Victoria with respect and affection, and they know more of what she did during her long reign.

Congressional threats to cut the President's allocation for the United States Information Agency appear to have had little effect so far on the U.S.I.S. in Calcutta, which continues to give the city a series of fine exhibitions. "The Family of Man" drew crowds counted by the hundred thousand, and now we have "Asian Artists in Crystal"—with no fewer than five Indian artists represented. This is art in industry as much as industry in art; artists like Gopal Ghosh and Jamini Roy have provided the designs, and Steuben Glass Inc., of New York has engraved them in crystal. The result is almost entirely satisfying—almost, because the feeling persists that one is not seeing the original creation. The feeling is rather like that of reading a very good translation of a foreign masterpiece; or, to put it differently, of reading the foreign translation of a work one is familiar with in one's own language. This is, of course, the result of not being familiar with this medium, which is also part of its attraction. The thirty-six pieces on view betray very little of the technical effort involved; the blowing and fashioning of glass and the rare and delicate art of glass engraving are not subjects on which I can pretend to be an expert, but that the lay viewer is almost unaware of the infinite pains undoubtedly taken in their making is itself a tribute to Steuben's craftsmanship. I was told that these pieces could not be mass produced, perhaps not an altogether bad thing.

IRREGULAR TREND IN STOCK PRICES

SELECTIVE DEMAND FOR INDUSTRIALS

London, 15th May.

THE recent burst of strength was not maintained in the stock markets during the past week. Although conditions remained active, price movements generally were irregular. Profit-taking after the rise had its effect on prices, but a number of other adverse influences were also operating. These included the local election results, the appearance of a fairly large corporation issue and the prospects of more new issues to come. The absence of the expected reduction in Bank rate and the rise in the Treasury bill rate last Friday, were also adverse factors, which occasioned a good deal of selling in gilt-edged securities. In the foreign bond market, German and Japanese bonds tended higher while several rail shares improved. Dollar stocks advanced under the influence of Wall Street. Good selective interest continued to be shown in industrial issues, but the general trend in this market was irregular, although there were a few firm spots. Steels fell back sharply on Mr. Bevan's re-nationalisation warning while shipping shares reflected the decline in freight rates. There was very little interest in South African gold shares which recorded only minor changes on the week. Base metals inclined easier with the exception of tins which often recorded small gains. Oil shares responded to the news that British ships are to be allowed to use the Suez Canal and to the prospect of petrol rationing being ended shortly. Rubber shares were firm and active on bid possibilities, coupled with the favourable effects of the tax concessions on overseas trading profits in the Finance Bill. Many useful gains were recorded on reported eastern buying. Tea shares were selectively firm. Chandore and Sylhet responded to their increased dividends. Pundaloya were strong following their higher distribution. Nedem receded on the deferment of the preference dividend.

The Money Market

Active conditions have continued in the London money market during the past week, and the credit situation has been at times difficult. The expectations of a reduction in Bank rate have again failed to materialise. Last Friday, the Treasury bill rate reversed its trend of the past few weeks and moved up to £3 16s 18d percent from the previous level of £3 14s and 9d percent. The surplus of funds on that day proved short-lived, and on the following Monday, the credit position became acute with discount houses clutching at every form of relief. Full privilege was taken by some houses. Although the authorities provided both direct and indirect assistance, two or three houses were compelled to borrow from the Bank of England on full Bank rate terms.

Stock Market Prospects

"With no lack of bullish support, the stock markets have continued to move forward," writes the *Investors' Chronicle* newsletter. "In a wide-spread advance on Monday, the *Financial Times* industrial ordinary index rose 1½ points to 206.1 accompanied by an expansion of markings to the highest level since July 1955, the time of the previous market boom. Investors are back in the

market for good class industrial equity prompted by the upward trend in prices and wages and the consequent talk of continuing inflation. The recent profit announcements from the whales of industry have shown that for the moment at least, inflation is certainly leading to increased costs but not to better profits. On short term, therefore, the purchase of equities may give only limited protection against the erosion of money values. Meanwhile, the investors might consider some second string industrial concerns which appear to have been overlooked."

Activity on Wall Street

Foreign bonds have continued to be slow and mixed on Wall Street. German Nationals generally have shown only minor variations either way, although the 4 percents of 1952 have moved up over a point on small volume. Polish issues have been soft with losses ranging up to nearly 2 points. Australians and Italians have drifted irregularly in a narrow range with Denmarks 4½ percents and Norwegians steady at unchanged prices. Japanese Governments have been mixed with the 6½ percents of 1964 moving up and the 5½ percents of 1957 lower. Chile 3 percents have shown little change on the week. U.S. Government obligations have fluctuated in sluggish dealings with traders inclined to remain on sidelines to await the Treasury's decision to issue a new long-term bond. Investment quality corporates have been marking time and rails have been mixed in limited activity.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 8th May shows that the gold stock increased by \$1 million to \$22,319 million. Foreign deposits increased by \$42 million to \$353 million, but foreign investments fell by \$34 million to \$3,653 million. The Federal Reserve sold \$48 million worth of bills, but purchased \$59 million worth of securities under repurchase agreements. Total discounts and advances fell by \$291 million to \$804 million, while the aggregate excess reserves of member banks fell by \$143 million to \$352 million. Daily average excess reserves of member banks rose by \$91 million to \$497 million, while their daily average borrowings rose by \$263 million to \$867 million. Business loans of the New York city banks fell by \$71 million to \$11,592 million, compared with a fall of \$65 million to \$9,615 million a year ago.

Restricted Buying in Rubber

Trading in the rubber futures market has continued to be very light, with only 30 lots traded. In the ready contract prices were 10d to 20d higher on week-end covering, according to traders. In the physical market, modest factory buying was reported, while dealers did some buying of shipment rubber. Reliable trade sources said that manufacturers are keeping their natural rubber stocks low, because they can buy spot and nearby rubber from the Government stockpile. When the Government sells rubber to the factories, it must simultaneously buy equal amounts of rubber in the shipment rubber market. Traders said that the cost of rubber is secondary as far as the factories are concerned but they are assured of a continued flow of rubber for their operations.

Price of Quicksilver Raised

The London spot price of quicksilver has been raised a further 20s to bring the ex-warehouse price to £88 a flask. This follows a rise of 20s on 6th May. Dealers say that the reasons for this rise are the same, namely the shortage of physical metal on the spot in the U.K. and no prospects of an early relief from the main producing countries.

Finance in India and Abroad

BUDGET TAXATION PROPOSALS

BIG INCREASE IN REVENUE EXPECTED

THE following is a summary of some notable tax proposals put forward by the Finance Minister, Mr. T. T. Krishnamachari, in the Central Government's Budget, presented on Wednesday evening. He has explained that the purposes of these tax proposals are to increase revenue; restrain consumption in order to check inflation and encourage investment; and change taxes in order to make tax yields more responsive to increased incomes and to ensure orderly development. The total increase in revenue expected from the new taxation proposals is about Rs. 77.85 crores.

Union Excise Duties: Proposals in respect of these duties are estimated to yield Rs. 60.80 crores in a full year. For the remaining part of the current year, their yield is estimated at Rs. 53.20 crores.

Personal Income Tax and Super Tax: It is proposed to revise the schedule of these rates and introduce a new scheme of surcharge levy. This will mean that the total income-tax, super-tax and surcharge for the highest slab will be brought down from the existing level of 91.8 percent to 84 percent for unearned and 77 percent for earned incomes. The surcharge will be five percent on the tax computed at the standard schedule rates for earned income up to Rs. 1 lakh and ten percent on incomes in excess of that sum. For unearned incomes, there will be a uniform surcharge of 20 percent over the standard schedule rates. When a person's income is partly earned and partly unearned, the unearned income will be considered to belong to the slab in which the earned income ends and to higher slabs where necessary. The rates for the lower slabs have been adjusted in keeping with this change in respect of top slabs. To provide relief to middle classes, no surcharge on unearned income is proposed where the total income does not exceed Rs. 7,500.

There is to be a levy on wealth. Exemption has been granted up to Rs. 2 lakhs, and for Hindu undivided families up to Rs. 3 lakhs. The rate of the tax will be ½ percent for the first Rs. 10 lakhs, one percent for the next Rs. 10 lakhs, and 1½ percent thereafter. Companies will be exempt up to Rs. 5 lakhs, and thereafter a tax of ½ percent is proposed.

An expenditure tax, applicable to incomes above Rs. 60,000 a year, is proposed for the financial year 1958-59.

The minimum limit for income-tax has been lowered from Rs. 4,200 to Rs. 3,000 a year.

Taxation of Companies: The income-tax payable by companies is proposed to be raised from four annas in the rupee to 30 percent and the corporation tax from two annas nine pies in the rupee to 20 percent. While the net effect of the proposal will not be very significant it will, to some extent, help check tax evasion. In view of the increase proposed in the rate of corporation tax, it is proposed to reduce the excess dividends tax as follows:

To 10 percent on distribution of dividends between 6 percent and 10 percent of the paid-up capital;

To 20 percent on distribution between 10 percent and 18 percent of the paid-up capital; and

To 30 percent on the balance.

It is also proposed to raise the tax on bonus issues from the present level of 12½ percent to 30 percent.

It is proposed to reduce the rate of inter-corporate super-tax to 10 percent both for Indian and foreign companies on dividends received from Indian subsidiaries. At present the rate is 17 percent for Indian companies and 20 percent for foreign companies. The effect of the reduction will be, so far as foreign companies working through subsidiaries are concerned, the total tax payable by them will remain practically unaltered. Similarly, for foreign companies operating through branches and earning other incomes, the rate of corporation tax will be reduced from 36 percent to 30 percent. These changes are expected to give some encouragement to the investment of foreign capital in India.

With regard to the tax on undistributed profits of companies, it is proposed to reduce to 45 percent the minimum percentage of available profits which an industrial company of a specified type should distribute in order to avoid the penal consequences of inadequate distribution. For non-industrial companies the percentage will continue to be retained at 60 percent. For a company which derives profits partly from industrial activities and partly from other activities, the minimum distribution required will be 45 percent of available industrial profits and 60 percent of other available profits. Investment companies will be required to distribute 100 percent as usual. In cases where the accumulated profits and reserves of the firm assets, the minimum percentage required to be distributed is at present 100 percent for all companies. It is proposed to reduce the

FINAL BUDGET ESTIMATES

	Budget 1956-57	Revised 1956-57	Budget 1957-58
Revenue :	Rs. 527.39 lakhs	Rs. 571.49 lakhs	Rs. 634.97 lakhs Plus Rs. 77.85 lakhs (Effect of Budget proposals)
Expenditure :	Rs. 545.42 lakhs Minus Rs. 18.04 lakhs	Rs. 533.55 lakhs Plus Rs. 37.94 lakhs	Rs. 658.09 lakhs Minus Rs. 33.12 lakhs Plus Rs. 77.85 lakhs

percentage to 45 percent for industrial companies and 90 percent for others.

The changes proposed in the taxation of companies will bring an additional revenue of Rs. 7½ crores.

A newsagency summary lists certain duty changes as follows:

1. Customs duty has been increased on approximately 80 items to yield Rs. 6 crores.

2. The motor spirit duty has been raised from 98nP to 125nP.

3. Higher duties will be imposed on tea, coffee, tobacco, matches and paper.

4. The cement duty is up from Rs. 5 to Rs. 20 a ton.

5. The sugar duty is up from Rs. 5.52 to Rs. 11.24 a cwt.

6. The steel duty has been raised from Rs. 4 to Rs. 40 a ton.

7. The duty on paraffin oil has been increased from 18½nP to 20nP.

A series of railway fare taxes are proposed, which are estimated to yield Rs. 14 crores. These taxes are to be at the rate of 5 percent on distances of up to 30 miles, with season tickets exempted. On distances between 31 and 500 miles, the tax will be 15 percent, and on longer distances it will be 10 percent.

Rates for postcards have been raised. In the case of single postcards, they will go up from 5nP to 6nP and in the case of reply postcards from 10nP to 12nP. For local postcards the single rate will move up from 3nP to 4nP, and for reply postcards from 6nP to 8nP.

In the case of inland telegrams, for every additional word beyond the minimum of eight words the rate will be raised from 7nP to 8nP, and for express telegrams from 14nP to 16nP.

The Finance Minister has announced that a new series of National Plan savings certificates will be issued bearing compound interest at the rate of 4.25 percent.

The revenue deficit is now estimated at about Rs. 6 crores higher than the figure of Rs. 26.87 crores mentioned in the interim Budget. The overall deficit on capital and revenue accounts, which was estimated at Rs. 385 crores two months ago, is now expected to be Rs. 2.89 crores higher.

THE CALCUTTA MONEY MARKET

ADVANCES HIGHER AGAIN

Wednesday, 15th May.

THERE has been a moderate rise in advances in the Calcutta money market during the past week. Nearly all categories of borrowers are responsible for this. Cotton and jute credit is slightly higher, while accommodation for sugar and for grains and seeds has also increased. Funds have been in fair demand in the interbank market but supplies have been sufficient, so the call rate has remained at 3½ percent.

In the exchange market, a slightly larger number of bills have been transacted, mainly on account of gunny shipments. Remittance is reported to have been on a normal scale. The value of sterling in relation to the dollar and Continental currencies is almost unchanged.

Bullion was steady in minor fluctuations. Silver was quoted at Rs. 182 today for forward delivery and the rate for ready was quoted at Rs. 182.25. The London and New York prices remained the same as before.

Gold was firm on good demand and advanced to Rs. 109. The sovereign fetched Rs. 71.37.

During the week ended 10th May, Government of India Treasury bills for Rs. 53,93,50,000 were sold in favour of the Reserve Bank.

An increase of Rs. 19.08 crores to Rs. 1,605.23 crores in the total note issue and of Rs. 18.25 crores to Rs. 1,595.36 crores in active notes were the outstanding features of the return of the Reserve Bank of India for the week ended 10th May, 1957. The currency expansion was covered by increasing rupee securities by Rs. 20 crores to Rs. 949.87 crores. Deposits of the Government of India increased by Rs. 3.11 crores to Rs. 54.62 crores but other Government accounts declined by Rs. 2.15 crores to Rs. 2.11 crores. Balances of

commercial banks at Rs. 59.66 crores were Rs. 4.40 crores lower. Balances held abroad fell by Rs. 9.83 crores to Rs. 74.07 crores. Investments were Rs. 1.24 crores lower at Rs. 125.90 crores. Other loans and advances increased from Rs. 105.31 crores to Rs. 113.71 crores, of which advances to scheduled banks against usance bills amounted to Rs. 62.24 crores, against Rs. 59.98 crores. Ways and means advances stood at Rs. 19.23 crores (Rs. 15.72 crores).

The return of the State Bank of India for the week ended 3rd May, 1957, shows a drop of Rs. 2.19 crores in total deposits to Rs. 296.96 crores. Investments in Government securities and other authorised investments are down by Rs. 1 lakh and Rs. 16 lakhs to Rs. 94.06 crores and Rs. 11.30 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 4.54 crores to Rs. 187.92 crores. Cash and balances are, in consequence, shown at Rs. 24.07 crores, or Rs. 3.53 crores less.

The statement of the position of scheduled banks for the week ended 3rd May, 1957, shows Demand and Time liabilities at Rs. 721.79 crores (Rs. 10.96 crores on account of borrowings from banks) and Rs. 505.03 crores (Rs. 3.04 crores), compared with Rs. 729.09 crores (Rs. 8.63 crores) and Rs. 502.90 crores (Rs. 2.52 crores), respectively, in the previous week. Cash has increased by Rs. 99 lakhs to Rs. 38.96 crores, while balances with the Reserve Bank have decreased by Rs. 1.21 crores to Rs. 64.65 crores. There is a drop of Rs. 4 lakhs in investments to Rs. 344.47 crores. Advances and bills discounted, at Rs. 923.61 crores, indicate a rise of Rs. 15.67 crores. The ratios to total deposits of cash and balances, and of advances and discounts, are, in consequence, shown at 8.4 percent and 75.3 percent, against 8.4 percent and 73.7 percent.

The following is a statement of the cash balances of the Central Government on the last day of February 1957:

	Rs.
(1) At the Reserve Bank of India in India	46,02,76,000
(2) At treasuries in India	13,99,000
(3) In England (Sterling converted at 18d the Rupee)	2,51,62,000
Total	48,68,

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to March, 1957. Compared with February, the March index for preference shares indicates a drop of 2.7 points, while that for Government securities remains unchanged at 96.5 points.

There were decreases in coals 4.1 points, jutes 13.1 points, cements 2.6 points, engineering 8.8 points, teas 0.8 point, papers 14.6 points, and miscellaneous 7.8 points while increases occurred in banks 6.1 points, cottons 0.8 point, minings and oils 1.0 point and sugars 1.7 points.

Correlating all the factors, the Capital variable yield securities index shows that the index for stock prices in these classes of shares declined by 4.3 points during March 1957.

	Index of Govt. Securities	Index of Preference Shares	Variable-Yield Securities												Combined Index

Stocks and Shares

MARKET REACTS UNFAVOURABLY TO SEMI-KALDORIAN BUDGET

MOST PRICES MARKED DOWN: BANK RATE RAISED

Wednesday Night.

THE Calcutta Stock Exchange opened on a steady note when trading commenced during the special budget session tonight. As the various tax proposals started coming through, however, prices began to wilt under selling pressure. The steep increase in direct taxation has confirmed almost the worst fears of investors. Professor Kaldor's tax proposals appear to have been accepted to a substantial extent by the Government of India. Of the five suggestions made by him, three have now been implemented, namely, the expenditure tax, tax on wealth and (in the November supplementary budget) the capital gains tax. The steepening in the rate of bonus tax is a severe blow to investors. The annual tax on wealth may reduce interest in investment. The increase in indirect taxation on various commodities which are the products of industries in which the share market is interested, such as paper, cement, tea, tobacco and sugar will be burdensome. Much will depend on whether the incidence of these taxes can be passed on to consumers in the form of higher prices.

Here is a chart showing price movements of a representative list of shares during tonight's special Budget Session.

	Opening	Highest	Lowest	Closing
Indian Iron	19.42	19.72	18	18.03
Indian Copper	3.36	3.36	3.15	3.16
National Jute	20	20	19.30	19.50
Textile Machinery	18.25	18.25	17.75	17.75
Burrakur Coal	22	22	22	22
Orient Paper	27.87	27.87	27.50	27.50

The Reserve Bank of India's announcement this afternoon of an increase in Bank rate with effect from tomorrow from 3½ percent to 4 percent was not entirely unexpected in market circles. It caused a mild reaction in 3% Conversion Loan 1986 which was marked down from Rs. 74.40 to Rs. 74.20 and in Indian Iron and Steel from Rs. 19.45 to Rs. 19.18. The last change in Bank rate was in November 1951, when it was increased from 3 percent to 3½ percent. The increase in Bank rate will be welcomed by electricity supply companies in particular, as the standard rate of return, which has been fixed at 2 percent higher than Bank rate, will rise to 6 percent, as against 5½ percent prior to the change. As far as Government securities and other fixed interest stocks are concerned, the view is taken that prices have already adjusted themselves and that they are unlikely to fall to any great extent as it was well known that Bank rate was artificially pegged at interest rate on the Reserve Bank of India's advances to scheduled banks against Government and other eligible securities was increased by ½ percent to 4 percent.

Details of the week's pre-Budget trading follow:

The gilt-edged market eased further and at the close the undertone was quiet. Except in short-dated loans, sellers predominated and the prices of medium-dated and long-dated issues were fractionally lower. The 3% Conversion Loan 1986 was quoted nominally around Rs. 73. In short-dated loans, 3 percent 1957 and 1958 had buyers at Rs. 74.40 to Rs. 74.20, while Non-terminable Paper dated loans, 3 percent 1957 and 1958 had buyers at the official prices of Rs. 99.75 and Rs. 99.65; 3% 1959-61 was asked for around Rs. 97.50. The 2½% 1961 had buyers at Rs. 93.50, as did 2½% 1960 at Rs. 96.45, but 3½% 1961 turned sellers at Rs. 99.50. In the medium-dated group, 2½% 1962 met with good enquiry at Rs. 93.85 cum-voucher and later at Rs. 93.75 ex-voucher. However, 3% 1963-65 eased further to Rs. 94.10 and 3% 1964 was quoted lower back to Rs. 93.30; 3½% 1964 and 1965 were both marked dated loans were quotably unchanged but the enquiry for them had subsided and sellers once again predominated; 3% 1966-68 was offered at Rs. 92.06 and 3% 1970-75 at Rs. 87.20, while 3½% 1974 was traded around Rs. 98.50.

Little business was reported in State loans and prices, where changed, showed further falls. The 1968, which was marked down to Rs. 97.06, and 4% U.P. 1968, which fell to Rs. 97.55.

There was a little more enquiry for preference shares, though jute shares remained neglected. In fact, no transactions were reported in jute preference shares during the week. Among miscellaneous issues, Bengal Paper "A" were taken at Rs. 119.50 and British India Corporation were easier at Rs. 9.15 and Carew were crossed at Rs. 100, as came to hand at the higher rate of Rs. 46 and Gillanders Arbuthnot were done at Rs. 60. Indian Iron and Steel met with some enquiry around Rs. 99 and Indo Burma Petroleum were slightly

better at Rs. 98. Jessop changed hands at Rs. 89 and Metal Box were crossed at Rs. 91.50. Textile Machinery first preference changed hands at Rs. 94.50 and Titagur first were marked at Rs. 131.

In the banking section, Punjab National were unchanged at Rs. 53, as were United Commercial at Rs. 53.75. Hindustan Mercantile were transacted at Rs. 12 and United Bank of India "D" shares changed hands freely around Rs. 4.25.

In railways, Bukhtiarpur-Bihar came to business after a long interval at Rs. 21.

Cotton shares tended to lower levels and most issues showed losses. Bowreah came back from Rs. 181 to Rs. 115, Cawnpore Textiles from Rs. 5.75 to Rs. 5.62 and Dunbar from Rs. 175 to Rs. 167. Kesoram were unchanged at Rs. 13.50. Elgin were shaded at Rs. 19, as were New Victoria at Rs. 1.81. A few transactions were reported in Muir Mills, after a long interval, around Rs. 73.50.

Coal shares backed away in the absence of support, with the exception of Burrakur, which were steady around Rs. 22.25. Prices in most other cases were lower than those prevailing at the beginning of the period under review. Here is a chart showing representative price movements:

	Prices on 9th May 1957	Prices on 15th May 1957
Bengal	220	214
East Indian	24.75	24.50
Equitable	25	24.50
Western Bengal	5.31	5.25
New Beerboom	14.50	14.25

The recent enquiry for jute shares fizzled out and prices were marked down on a broad front.

60 ft. Single-Screw Diesel Steel Launch

Contrary to the general trend, National were steady at around Rs. 20. The following table illustrates representative price movements:

	Prices on 9th May, 1957	Prices on 15th May, 1957
	Opening	Closing
Anglo India	141	140
Champania	120	112
Chitavalah	124	125
Gourepore	230	227
India	123	127
Kamarhatti	95	94
Megna	79	77

Electric supply shares were more or less unchanged, with the exception of Calcutta which were slightly better at Rs. 12.56. Agra were offered at Rs. 138 and U.P. were reported around Rs. 136.

In sugar, the recent enquiry for Darbhanga, it appeared, had petered out, with sellers at the lower rate of Rs. 24.50. Belsund were slightly easier at Rs. 10.87, as were Cawnpore at Rs. 14.94. Carew and Dyer Meakin were fairly steady at Rs. 7.95 and Rs. 6.19. S.K.G. changed hands around Rs. 10.

Pre-Budget fears brought the price of Indian Iron and Steel shares down at one time to Rs. 19, against the opening quotation of Rs. 20.09. But towards the close bear-covering caused a small recovery to Rs. 19.39. Braithwaite changed hands freely around Rs. 24.50 and Britannia Engineering met with some enquiry, the price improving to Rs. 13.81. Burn were offered at Rs. 310 as were Jessop around Rs. 23.62. Richardson and Cruddas were quiet at Rs. 15.87. Guest, Keen, Williams, changed hands at Rs. 26.12 and Textile Machinery recovered from Rs. 18 to Rs. 18.25. Kumardhubi met with profit-taking and the price was marked down from Rs. 9.12 to Rs. 8.94 but the shares recovered to their former price later.

Pre-Budget rumours of an excise duty on paper brought some selling pressure in paper shares, particularly Orient, which were marked down from Rs. 28.20 to Rs. 27.70. Sirpur were easier at Rs. 9.06, as were Titagur at Rs. 33.50 and India Paper Pulp at Rs. 21.06. Shree Gopal, on the other hand, were unchanged at Rs. 14.94.

In cement, Sone Valley were easier at Rs. 6.19 and Dalmia were neglected at Rs. 11.56. Jaipur Udyog were easier at Rs. 12.12.

No business was reported in insurance shares.

In shipping, India Steamship, after being sold down to Rs. 9.94, recovered at the close to Rs. 10.03 on expectations of a further increase in freight rates. India General Navigation were unchanged at Rs. 66, as were Port Shipping at Rs. 16.37.

Among miscellaneous industrials, Alkali and Chemical had small buyers at Rs. 11.87 while Anglo Brothers were slightly easier at Rs. 18. Assam Saws were quietly steady at Rs. 3 while Boral Flour lost three points to close at Rs. 26. British India Corporation improved from Rs. 6.19 to Rs. 6.37, while Clive Row were slightly lower at Rs. 9.50. Dunlop Rubber were unchanged at Rs. 24 and Imperial Tobacco receded to Rs. 14, as did Indian Aluminium to Rs. 12.75. Indian Cable continued to meet with selling pressure and closed lower at Rs. 23.56. Indo-Burma Petroleum were offered at the lower rate of Rs. 28. Jardine Henderson were unchanged at Rs. 77 while Martin Burn eased to Rs. 23. Metal Box were offered at the lower rate of Rs. 27 and National Carbon were dull at Rs. 24.37. Rallis was a good feature, the price improving from Rs. 30 to Rs. 34. Rohas Industries were trimmed down to Rs. 17.56, while Shaw Wallace were better at Rs. 11.44.

In the mining group, good business was reported in Indian Copper, the price improving from Rs. 3.28

to Rs. 3.36 (after Rs. 3.43). All other mining issues were practically unchanged.

Tea shares spent another dull week and, in the absence of support, prices were marked down. Banarhat eased to Rs. 264 and Choonabhatti closed five points lower at Rs. 280. Dhelakhat reacted from Rs. 21.87 to Rs. 21.50 and Hantapara from Rs. 165 to Rs. 160. Jay Shree changed hands freely around Rs. 10.25 ex-dividend while Tezpur were unchanged around Rs. 19.

Providing Rs. 65,000 for depreciation and making other adjustments, the loss of the ALLIANCE JUTE MILLS COMPANY has amounted to Rs. 65,330. Bringing in Rs. 23,103, transferring Rs. 1 lakh from reserve and making other adjustments, there is a balance of Rs. 80,645. The usual preference dividends have been paid but the ordinary ones have again been passed over. The carry-forward is Rs. 34,402.

The profit of CAREW AND COMPANY has improved by Rs. 3.83 lakhs to Rs. 6.47 lakhs. Bringing in Rs. 12,445 and adding other miscellaneous receipts, there is a balance of Rs. 6,61,995. The taxation provision is Rs. 5.89 lakhs. The usual preference dividends have been paid, but the ordinary dividend has been passed over, as against 4 annas a share. The carry-forward is Rs. 20,716. The Rosa factory crushed 3,500,585 maunds with a recovery of 9.41 percent; the Darsana factory had a crush of 5,075,082 maunds and recovery amounted to 8.12 percent. The Darsana pharmaceutical division has earned a small profit for the first time.

Messrs. Tata Industries Private Ltd., managing agents for the TATA IRON AND STEEL CO. LTD., report that the total approximate production of iron and steel at the steel works in Jamshedpur during April, 1957, was: pig iron 92,300 tons; steel ingots 49,200 tons; semi for sale 14,700 tons; and finished steel 47,800 tons.

Bombay Market

DULL CONDITIONS BEFORE BUDGET

TATA STEEL OUTPUT FIGURES DISAPPOINTING

Wednesday Afternoon.

LISTLESS conditions prevailed in the Bombay stock market last week, and turnover was restricted before the Budget. The decline shown by the output figures of the Tata Iron and Steel Company for April was discouraging. Prices of speculative issues until today fluctuated according to various rumours about the Central Budget. There was a short-lived rally on bear-covering induced by the Railway Budget, which was taken as better than expected. Selected scrip were bought by knowledgeable quarters.

Tata Steels improved to Rs. 166 and Indian Iron to Rs. 19.27 on short-covering by Calcutta interests. Tata Locomotive gained at Rs. 148 on hopes of expansion plans. Alcock Ashdown were freely offered at Rs. 253.75 without attracting support. Premier Construction were barely steady at Rs. 149.50. There was little interest in automobile shares, and Premier Automobiles came to hand at Rs. 88.50, while Hindusthan Motors were freely sold down to Rs. 7.15.

The mill group showed minor gains on replacement buying. Bombay Dyeing were quoted at Rs. 527, and Century at Rs. 444. Kohinoors were

bought at Rs. 315 on investment account. Svadeshi were done at Rs. 210 and Central realised Rs. 110. India United Ordinary were transacted at Rs. 9.95.

The miscellaneous group showed minor variations. Sugar shares were fairly steady, and Belapur were bought at Rs. 219.75. Cement shares were steady, and Associated Cement were quoted at Rs. 157. Digvijay Cement increased to Rs. 145.50. The trend in mining shares was mixed. Indian Copper improved to Rs. 3.39 on rumours of a satisfactory final dividend, but Shrivraipur Syndicate were offered at Rs. 80.50. Interest revived in steamship company shares on hopes of an increase in coastal freight rates. Scindia Steam were fractionally higher at Rs. 18.25 and Great Eastern Shipping were bought up to Rs. 18.50. National Rayon recovered to Rs. 223.50 on short-covering, and Bombay-Burmah to Rs. 547. Tata Chemical were steady at Rs. 16.05.

Quiet trading took place in banking shares. Bank of India were transacted at Rs. 133.75 and United Commercial Bank were taken at Rs. 54.25. Insurance shares lacked interest, and New India Assurance came to hand at Rs. 41.25.

Electricity supply undertakings were selectively bought, and Ahmedabad improved to Rs. 93.25. Tata Hydro were bought at Rs. 122.50.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paisel.]

INCOME TAX LAW FOR THE LAYMAN

The Central Board of Revenue has, in an attempt to help the taxpayer in understanding the income-tax law, been from time to time bringing out various publications, dealing with various aspects of the subject. The latest of these is a new edition of *Income Tax for the Layman*. In this booklet, the law as it stands, after the passing of the Income-Tax Act, 1956 (No. 18 of 1956) has been explained in simple language. Technical terms have been avoided as far as possible, but where the use of some of them could not be helped without the risk of misinterpreting the law, effort has been made to explain them with suitable illustrations. The illustrations include maps and charts showing such details as the number of persons assessed, revenue yield from each group of assesses, the administrative set-up of the department, liability of different types of persons, etcetera. In particular, the procedure for submitting returns, obtaining refunds, filing appeals and such like matters has been clearly explained. As the layman has no concern with the complex provisions of the Income-Tax Act, which are designed to meet cases of a complicated type, details relating to such provisions have been omitted. Since it was first published in 1953, the booklet has already gone through three editions, in all of which a total of 25,000 copies have been printed.

Engineering and Transport

OIL PROSPECTING IN WEST BENGAL

STANVAC STARTS DRILLING OPERATIONS

THE 147-foot high oil derrick with a 25-foot square base rigged up by the Standard-Vacuum Oil Company near Burdwan is specially designed for the drilling conditions likely to be encountered in West Bengal. Like all modern derricks, this one is capable of carrying the load of hundreds of tons of equipment needed for drilling the well, and to take the shocks of drilling operations. Being built of special steel, it has the rigidity to withstand violent storms. A distinct advantage of this rig is that it can be assembled within a short time and dismantled just as quickly.

When Drake drilled wells, he struck oil at a depth of only 69 feet. Today, wells more than a mile deep are numerous while many are two miles deep. The Stanvac well is expected to reach a depth of 10,000 feet, which is still considered unusual. The equipment for the Stanvac Project is specifically designed to drill wells to a depth of 8,000 to 10,000 feet, though with slight adjustments and some ancillary equipment, the depth to which the rig will go can be materially increased.

The type of equipment which Stanvac has installed is known as the rotary drilling rig—the more modern of the two principal methods for drilling oil. In this type of drilling, a hole is bored into the earth much the same way as with the carpenter's brace. A heavy turntable which rests on a steel base just above the derrick floor is rotated on roller bearings. This table grips and turns a pipe with the "bit", or the cutting tool attached to the lower end.

Hard alloy steel containing chromium, tungsten or vanadium are used for cutting the corners, edges and the faces of the drilling bits. There are many kinds of bits for rotary drilling and high technical skill and judgment come into play in the selection of the precise type that would yield the best results. The type of bit being used in Burdwan is called the tri-cone rock bit or roller bit, and is generally used for hard rock formations, whereas the fish-tail type is used where soft formations are encountered. The third type is called the diamond bit and is usually used for what is known as core drilling. As the diamond bit bores in, it cuts a core of the rock which is left in the centre of the diamond drill. These cores, ranging between 1½ in. to 3 in. in diameter, indicate to the oil technicians and oil scientists a great deal about the formation of the rock layers, especially if they are of the type which are usually associated with the presence of oil.

The unit is powered by three twin engine diesel units, each capable of developing 400 h.p. As a measure, two extra engines are kept ready for emergencies. The integral part of the equipment are the specially built tanks for mixing and storing drilling fluid, commonly referred to as "mud". Compounded of water, special kind of mud and chemicals, drilling mud, it is so complex and im-

portant that engineers have to be on duty 24 hours to maintain a constant quality control check on the fluid. Drilling mud which is pumped into the well through the drill pipe cools and lubricates the bit. The fluid is then forced upward through the drill hole to the surface. Here the drill cuttings which had been washed away by the fluid is separated from the mud and is examined to determine the kind of stratum which is being drilled.

As the drill eats deeper, the well may be lined with successive lengths of steel pipes called "casing." The purpose is to prevent the well from caving in as well as keeping out unwanted water. Each string of casing with a decreasing diameter slides down the previous one so that ultimately the casing extends from top to the bottom of the hole. The result is something like a telescope with the large end at the top and the small end at the bottom. Finally to firm up the casing, cement is pumped between the casing and the sides of the well.

Skilled Personnel

As can be imagined, every phase of the operation—from the rigging to drilling—calls for men of specialised skills and wide experience backed by expensive machinery. Even when one leaves out the expensive, patent and highly exacting work of oil technicians who carry out exploration work over a wide area using a variety of methods prior to the drilling stage, it is still true to say that it requires technicians skilled in hundreds of different trades and techniques for drilling a well. They include, to mention a few, transit men, equipment operators, riggers, welders, electricians, mechanics, derrick men, rotary helpers and drillers. A well presents the concerted efforts of many men of many skills. The materials required for an average 10,000 feet well all the way from 200 lbs of cotton waste, 5 tons of saw dust to 14,000 feet of drill pipe, 10,000 feet of wall casing and nearly 5,000 sacks of cement. The cost involved in a well of the same depth may be anything between Rs. 80,000 to Rs. 100,000 in operating cost alone. And there is never any assurance that oil will be found in the well. In a sense, drilling a well is like carrying out a major surgical operation. Once started, drilling must go on right round the clock till the well is either abandoned—or completed.

GUIDED WEAPONS IN U.K. DEFENCE

IMPORTANCE OF LONG-RANGE ROCKETS

THE age of "push-button" warfare will soon begin. Recent U.K. Government announcements have made this abundantly clear. The role of the defensive manned fighter will soon be partially taken over by guided weapons and, at a later date, bombers will be superseded by medium or long-range rockets—the "Intercontinental Ballistic Missiles". Defence against manned bombers flying at 50-60,000 ft. (15,240-18,288 miles) at more than 600 m.p.h. (966 km. p. h.) carrying nuclear bombs must be made as completely effective as possible. If only very few attacking aircraft survive to deliver their deadly loads, untold damage will be accomplished—perhaps a knock-out blow.

Work on guided weapons in Britain to counter this threat was initiated after the last war, but their development was influenced by the Staff assessment that there was little likelihood of a major conflict before 1957. The same calculation had influenced military aircraft development. This meant that a number of intermediate weapons—similar to some of those in service with the American forces today—were by-passed or not put into production.

The British guided weapon programme is co-ordinated by the Ministry of Supply. The English Electric-Marconi Wireless Telegraph-Napier Group is working on a ground-launched anti-aircraft missile, Bristol and Ferranti on a ramjet-powered ground-to-air device, Armstrong Whitworth and General Electric are collaborating on a ship-to-air missile for the Navy, and de Havilland Propellers are evolving an air-to-air weapon. In addition, Fairey has already produced the Fireflash for use by the R. A. F. as a training weapon, and a large number of other companies is engaged on power-plant, radar and guidance systems. These weapons are geared to the radar chain which encircles the British Isles. The American radar system is different from that of Britain and it is, therefore, unlikely that a large-scale adoption of U. S. guided weapons is imminent, as has been suggested in some quarters. The cost of adapting either the defensive radar system or each American weapon purchased would be prohibitive. In any case, it is logical to suppose that in view of the ten year development plan initiated in 1947, Britain's own guided weapons may be operational in the not-too-far distant future. However, it is possible that one or two American interim weapons—such as Nike Hercules or Talos—not dependent on a radar chain for guidance, may be suitable as a stop-gap measure. Once released, these "beam-riders" fly along a thin radar beam emitted by the ground station on to the target. But it is unthinkable that the years of effort and expenditure of money and resources on guided weapons in Britain should be brought to nought and valuable research teams disbanded. The industry is developing the long-range rocket or I. C. B. M. Its effective operational use in the U. K., as in the U. S. A. and Russia, is still some years distant. The main problem is accurate guidance. A weapon with a range of hundreds of miles would have to be directed by internal gyroscopes or astral navigation, systems which present many development problems and, therefore, lead one to believe that manned bombers will be in use for some time yet.

Once these deadly missiles are in use equipped with nuclear warheads, what defence measures can be expected to counter them? There is no known answer at present. It is possible that a radar system automatically linked to a chain of defensive guided weapons, also fitted with nuclear warheads, might be effective. The defensive weapons would be exploded in the path of the I. C. B. M. at extreme altitudes, breaking it up before it could do any damage.

COST OF ATOMIC ELECTRICITY

A forecast that the cost of atomic power would fall by half by 1990 was made by Sir Christopher Hinton, managing director of the industrial group of the Atomic Energy Authority, when he delivered the Axel Johnson Lecture to the Royal Swedish Academy of Engineering Sciences in Stockholm. The net cost of electricity from the atomic power stations now being built, he said, would be 0.66d a unit. Thirty years hence it would be no more than 0.32d a unit. Sir Christopher's argument was based on an estimate of how the designs of power stations now being built would be modified by future progress in atomic technology. Most important among the changes to come would be the tendency to operate these power stations at higher temperatures, and tendency to make each ton of uranium fuel loaded into the reactors capable of delivering more power to the electrical turbines. The table below shows the estimates of the future cost of a unit of electricity from atomic power stations:

	1960	1970	1980	1990
Interest and depreciation	0.43	0.34	0.29	0.24
Fuel	0.24	0.13	0.08	0.06
Operating cost	0.06	0.05	0.04	0.03
Total	0.73	0.52	0.41	0.33

Less:
Credit for plutonium produced 0.07 0.05 0.03 0.01
Net cost 0.66 0.47 0.38 0.32

The figures in the table are in pence for each unit sent out from nuclear power stations. They are of some interest because they reveal, for the first time, the price at which the Atomic Energy Authority is going to buy plutonium from the Central Electricity Authority. This price is expected to fall as rapidly as shown in the table. This is because the generating costs of atomic energy will be so low that it will become less profitable to burn plutonium in power stations of advanced design. The table has been calculated on the assumption that in later years it would not be possible to run all atomic power stations to supply the electricity base load. Without this assumption the cost of electricity in 1990 would have worked out at less than a farthing a unit. As a contrast, Sir Christopher went on to predict the future cost of electricity from conventional power stations. Since 1925, he said, the cost of coal had risen in real terms so that it had outweighed the improvements which power plant engineers have been able to bring about. He thought this tendency would continue, so that the cost of conventional power would rise from 0.60d a unit to 0.67d a unit between 1960 and 1970. By 1990, he thought that electricity from coal would cost 0.94d a unit to generate.

New Delhi

EXPANDING ACTIVITIES OF STATE TRADING CORPORATION

PROSPECTS FOR INDIAN ORE EXPORTS

(FROM A NEW DELHI CORRESPONDENT)

THE State Trading Corporation is a young organisation, having been registered under the Companies Act only a year ago, on 18th May, 1956. But it is expanding fast. Mr. Morarji Desai, Minister for Commerce and Industries, said in the Lok Sabha last November that the Corporation had till then entered into firm contracts worth about Rs. 17.4 crores, the value being divided equally between imports and exports. Latest figures show that the volume of business has more than doubled in the five months since. On 1st May, 1957, the total value of contracts entered into by the Corporation stood at Rs. 36.83 crores, with a significant change in the relative share of imports and exports. Import contracts were of the value of Rs. 12.35 crores, while the value of export contracts was Rs. 24.48 crores. Although many of the export contracts will be fulfilled over a longer period than the import contracts, it is claimed that the Corporation's actual earnings so far have exceeded the outlay on imports. It is now considering the possibility of extending assistance on a modest scale for projects which have a direct bearing on foreign trade, such as the construction of roads to minor ports. The following table gives the details of the major export contracts concluded by the Corporation:

Commodity	Country	Quantity	Value
		(tons)	(Rs.)
Iron Ore	Japan	1,700,750	9,33,33,439
	Poland	1,40,000	72,00,000
	Hungary	15,000	8,00,000
	Italy	75,000	43,50,000
	Czechoslovakia	507,000	2,68,43,667
	Yugoslavia	45,000	25,30,000
	Holland	20,000	11,46,666
	U.S.A.	9,000	4,98,000
	East Germany	18,000	9,96,000
	Total	2,529,750	13,81,97,832
Manganese Ore	Japan	85,100	1,54,31,265
	Holland	67,500	1,51,11,087
	U.S.A.	87,521	1,65,94,357
	Italy	22,000	57,18,478
	U.K.	62,000	1,05,99,612
	France	40,521	65,63,660
	Norway	1,000	1,28,250
Total		365,642	7,01,46,910
Chrome	U.S.A.	6,500	11,00,813
	Japan	12,000	19,28,590
Total		18,500	30,29,403

Miscellaneous (including 500,000 pairs of shoes worth Rs. 113.29 lakhs for Russia, and handicraft products worth Rs. 16.86 lakhs for Russia and Rs. 2.28 lakhs for Czechoslovakia) 3,34,00,000

Grand Total 24,47,74,145

Exports to Communist Countries

The State Trading Corporation claims that by specialising in the new Communist market it has done much to diversify the export trade. It has been able to secure an export order for the first time for Indian shoes, and has indirectly improved the outlook for the export of engineering goods. Egypt, for instance, has agreed to use part of the special rupee account of Rs. 5 crores, to be built by the sale of her cotton, for buying Indian machinery and equipment. The Corporation has secured orders for handicraft products which are not only considerable in size, but also afford an opportunity for learning to overcome those problems—processing, packaging and adaptation to consumer tastes—which have so far hampered their export on a large scale. These "educative" orders cover ivory goods, zari bags, brocades and numda carpets; handloom products might benefit in due course. The Corporation has been able to negotiate a triangular trade deal, involving two countries of Europe and east Asia. Above all, it claims to have brought about a significant increase in the export of certain commodities, not only by developing Communist markets but also by securing long-term bulk orders from traditional buyers. Of the latter, the outstanding example is the agreement reached last November for the sale of 7.2 million tons of iron ore to Japan over five years from April 1957. Even during 1956, although the Corporation entered the scene only in June, iron ore exports reached the record level of 1,765,000 tons, compared with 1,288,000 tons during 1955. Contrary to the impression created by the official but incomplete statistics from the ports, there was an improvement during 1956 in the case of manganese ore also. Exports totalled 1,395,000 tons, the highest since the Korean boom period, com-

pared with 1,232,000 tons during 1955. According to officials, the increase in ore exports has been possible because of the guarantees about delivery and quality which the Corporation is in a position to offer buyers.

But the increase in ore exports by the Corporation threatens to displace the private trade, and in the case of iron ore, the latter may, with effect from July be completely eliminated. According to an official spokesman, the S.T.C. has already booked orders for the export of 2.1 million tons of iron ore during the 12 months from July next. It expects that the commitments will increase to at least 2.5 million tons. Since this is well above the record level of exports attained during 1956 by the S.T.C. and private trade together, it looks as if the Corporation is going to have a monopoly in iron ore exports. This is expected to be followed by an increase in the Corporation's share of manganese ore exports. The trend towards such a monopoly is the less happy side of the export promotion drive. Government spokesmen argue that the impending monopoly in iron ore will be restricted only to export contracting, and that the private interests engaged in production and internal handling will not only continue their operations undisturbed, but will be able to do so on a larger scale. But this is poor consolation to private exporters who will lose their business. The private trade in general will, therefore, be more suspicious of the Government's declared policy that the Corporation's activity will be confined to those commodities which it is peculiarly fit to handle, and only to the extent that it may be necessary or desirable in the national interest. It is an encouraging sign however that the present management of the Corporation is well aware of the limitations of an official institution. For instance, the Corporation has not attempted to sell cotton piece-goods directly. Even when it has found a new market, it has invited private traders to negotiate contracts. Secondly, the Corporation has found that State trading is disliked, except when it is useful to the buyers, not only by the free enterprise countries of the West but also by Communist States.

Import Contracts

Imports on Government account have a longer history. But while criticism in the past has been directed at the Government's losses on imported food, the complaint now heard against the S.T.C. is that it has been making an undue profit on cement. It is the most important of the commodities it has been importing as the following table shows:

Commodity	Country	Quantity	Value
		(tons)	(Rs.)
Cement	Rumania	25,000	29,66,644
	f.o.b.		21,19,000
Yugoslavia		25,000	29,06,400
	Russia	25,000	29,83,333
Japan		50,000	55,21,000
	f.o.b.	5,000	5,83,334
Poland		100,000	1,07,40,000
	Pakistan	26,000	26,52,000
Total		105,000	1,04,25,000
		30,000	30,00,000
		4,000	5,88,000
Caustic Soda	The U.K.	45,000	2,10,33,000
	East Germany	425	1,64,000
Ammonium Sulphate	The U.S.A.	70,000	1,31,45,000
	East Germany	34,520	78,74,000
Ships	Yugoslavia	Two	1,38,80,000
			2,29,80,289
Grand Total		12,35,61,000	

When State trading in cement was introduced on 1st July last year, the Government equalised the issue price of cement at all railheads, and fixed it at a level higher than the then prevailing controlled rate, but lower than that of imported cement. All indigenous producers were required to sell to the S.T.C. at fair prices fixed by the Government, and a Press note then issued by the Ministry of Commerce and Industries said: "The difference between the prices which the producers will be paid and the uniform selling price of cement will be used mainly for two purposes, firstly, to cover the incidence of freight which an f.o.r. destination price implies, and secondly, to subsidise all imported cement and sell it at the uniform price." It is now officially admitted that the equalisation scheme has yielded a sizeable surplus. This, it is understood, will be utilised for the development of industry in a

manner which will be decided soon. But the S.T.C. disclaims the motive of making the maximum profit from the import of scarce materials. It is pointed out that the prices of soda ash and caustic soda, imported from the west, did not increase in India even during the Suez crisis because the Corporation drew on its stocks to maintain supplies.

Heavy Engineering Project

With the announcement of the Government's decision in favour of an ambitious programme of heavy machinery manufacture comprising the machine-building plant of the Russian conception, for producing steel plant equipment, as well as some of the other heavy engineering goods recommended by the Coates mission, interest has turned to its financing and the likely impact it will have on other plan projects. The following is a rough and preliminary estimate of the overall cost and its foreign exchange component, relating to the seven parts of the programme of heavy machinery manufacture: machine building plant, Rs. 24 crores (foreign exchange component Rs. 16 crores); foundry forge shop, Rs. 22 crores (Rs. 13 crores); heavy structural shop and plate and vessels shop together, Rs. 17 crores (Rs. 10 crores); heavy machine tool plant, Rs. 11 crores (Rs. 7 crores). No estimates appear to have been worked out as yet for the alloy and tool steel plant. It is likely, therefore, that the cost of the entire project will be nearer Rs. 100 crores than the Rs. 80 crores to Rs. 90 crores mentioned in the semi-official announcement, with a foreign exchange expenditure of about Rs. 60 crores.

The tentative plan for utilising the Russian credit offer of Rs. 60 crores, which it is understood, the Government approved last week, is also available. It proposes the import of Russian machinery and equipment of the value of Rs. 27 crores for two units of the heavy machinery project, namely, the machine building plant (Rs. 13 crores) and the unit for producing mining equipment (Rs. 11 crores). The next largest allocation is for the thermal plant which is to form part of the Neyveli lignite project. The allotment of Rs. 16 crores of the Russian credit for this purpose, it is understood, has been approved after some debate on the question whether a thermal plant is important enough to deserve it. The third major project for the utilisation of the aid is the development of the Korba coalfield, which is expected to absorb up to Rs. 8 crores of the credit. Rs. 1 crore each has been allotted for the manufacture of optical glass and for a methanol plant, the latter being of interest not only for industry but for defence, too. It is evident that the Government does not at present expect Russia to take up the foundry-forge unit, though it is among the countries with which discussions are going on. It is believed that Czechoslovakia might collaborate in setting up this unit, in which case there will be no difficulty in locating it along with the machine building plant in the way the Russian experts have suggested. Likewise, West Germany is rated high among the probable sources of assistance in setting up the heavy machine tool plant, while British collaboration is expected for the structural fabricating and plate-and-vessel shops.

The outcome of these negotiations will be awaited with interest. The decision concerning

the utilisation of Russian aid has made it necessary to look elsewhere for credit in connection with those projects which it had been planned earlier to finance with Russian assistance. Among these was an oil refinery in the public sector, but this never was regarded as urgent, in view of the proposal for setting up a refinery in the north-east, with western collaboration, for processing the newly found oil in Assam. More important was the desire of the former Production Ministry to utilise as much as a third of the Russian credit for expanding fertiliser production. Of the three fertiliser plants to be set up under the second plan, in Nangal, Rourkela and Neyveli, only part of the foreign equipment needed for the first has been arranged on long-term credit (from Italy) so far. The fertiliser programme may itself be recast, since there are doubts now about the feasibility of proceeding immediately with the fertiliser part of the lignite scheme. Besides, the chairman of the Nangal project has been authorised to negotiate with the refineries in Bombay on the rates for the supply of waste gases for the possible establishment of a fertiliser plant in that city.

Checking Food Price Rises

A little over two years ago, the Government appointed a committee under the chairmanship of the Deputy Food Minister, Mr. Krishnappa, to examine the food price support scheme. While the Krishnappa Committee was engaged in its investigations, food prices started rising. Now conditions seem to have changed completely with Mr. A. P. Jain's announcement on appointing a high-powered committee to investigate the causes of food price rises, and to suggest measures for preventing speculative hoarding and for arresting the increases. But the Minister's argument that the present wholesale food price index is not higher than its 1952-53 level is surprising. Mr. Jain said that the latter year "is now generally taken as the base year". If 1952-53 prices are to be regarded as normal, it is contended, where is the necessity to appoint a high-powered committee? The Government is perhaps taking the step to fix floor and ceiling prices at well-defined levels. The situation, as Mr. Jain said, is paradoxical, as prices have been rising in spite of higher foodgrain production. But the Government, at the moment, seems to be relying more on imports rather than taking steps further to increase food output. Mr. Jain said that the import of foodgrains during the second plan period is likely to exceed 6 million tons, although it was thought at one time by the planners that 3 million tons will be sufficient. Chances are that more than 6 million tons will be needed. Mr. Jain has confirmed that the annual import of 500,000 tons of foodgrains will continue, besides the 31 million tons of American surplus wheat coming under the Indo-U.S. agricultural surplus commodities agreement, and 2 million tons of rice under the agreement with Burma. Much interest has been shown in the visit to the capital last week of Mr. Earl Butz, U.S. Assistant Secretary for Agriculture. He met the Prime Minister and the Central Ministers of Finance and Food. It is not known whether the proposal for a second deal to obtain U.S. farm surpluses was formally raised in the course of these talks, but it is likely that informal soundings for the purpose will be made through the American Embassy, or that they have actually been made.

Import and Export Advisory Councils

The first meeting of the re-constituted Import Advisory Council, scheduled for 25th May, will now be held on 6th June. The Export Advisory Council will meet on the following day, that is, 7th June instead of 26th May. Both meetings will be held in New Delhi. Mr. Morarji Desai, Minister for Commerce and Industry, will preside.

London

CONDITIONS FOR RELAXING CREDIT SQUEEZE

REPAYMENT OF MATURING GOVERNMENT LOANS

(FROM OUR LONDON CORRESPONDENT)

THE second-reading debate on the Finance Bill added little to people's knowledge of the Government's economic policy, providing no more than a detailed reiteration of the Budget proposals by the Parliamentary Secretary to the Treasury and a further defence of them by the Chancellor of the Exchequer. The Opposition criticisms also covered familiar ground. Indeed, Mr. Peter Thorneycroft was much more forthcoming when he addressed the National Production Advisory Council of Industry at the Treasury by indicating that if certain conditions are fulfilled—he emphasised the "if"—it might be safe to relax the credit squeeze. The conditions, well, first, to keep up and, if possible, raise the proportion of output going to exports, and second, do everything to offset higher wage rates by higher productivity.

Are these conditions likely to be fulfilled? It is hard to say. Exports are certainly doing well, but in spite of a strong move in favour of moderation by the Amalgamated Engineering Union and the Transport and General Workers Union, the Executive of the Confederation of Engineering and Shipbuilding Unions intends to carry on its fight with the employers to secure the maximum rise suggested by the Court of Enquiry, but without the conditions attaching thereto. Their negotiators have been given a free hand, but if the employers are not prepared to give way, and it is most unlikely that they will, the problem will probably be back where it started.

Benevolent Control

The Treasury's firm, if somewhat benevolent, control of the credit system was made evident by the surprise announcement last week that there was to be no conversion offer to the holders of the £300 million 5 percent Exchequer Stock, or of the £101 million 2½ percent Funding Stock maturing in the middle of June. Instead, the outstanding amounts not already acquired by Government departments through open market operations will be repaid at par from the proceeds of a new cash loan of £100 million (an addition to the £658 million of 4½ percent Conversion Stock, 1962, already existing) launched successfully in 15 minutes last week at an issue price of £99. Too much significance can be attached to this first paying-off operation since the war, which is a lot less inflationary than it appears to be, and will actually leave the money supply practically unchanged, but it reinforces the Government's announced monetary policy and should, therefore, restore confidence and perhaps even add strength to the gilt-edged market in the long run. Meantime, Thursday follows Thursday and the expected lowering of Bank rate fails to materialise. The City is convinced that it cannot be delayed much longer, for once again it is completely out of step with market conditions and developments. On the other hand, its maintenance so far has undoubtedly assisted the Government's modified funding moves, and the need for that sort of help certainly remains.

The Radcliffe Committee

Lord Radcliffe's Committee of enquiry into the working of the money and credit system will have the assistance of a distinguished list of members, including Professor A. Cairncross of Glasgow Uni-

versity, an economist of wide experience; Sir Oliver Franks, chairman of Lloyds Bank and former British Ambassador in Washington, who was head of the Ministry of Supply at the end of the war; Lord Harcourt, a merchant banker who is at present British Treasury representative in Washington; Mr. W. E. Jones, vice-president of the National Union of Mineworkers; Professor R. S. Sayers of London University, a leading expert in monetary matters; Sir Reginald Verdon-Smith, joint managing director of the Bristol Aeroplane Company; Mr. George Woodcock, assistant general secretary of the T.U.C.; and Sir John Woods, a former Treasury official and permanent Secretary of the Board of Trade, who is now a director of the English Electric Company. The Treasury has appointed Mr. R. T. Armstrong, who has been private secretary to three successive Chancellors, as secretary of the Committee.

The Committee is being asked to review the working of the system in present conditions, taking into account the great importance of the public finances and the need to maintain a high level of savings and investment. It will have to make recommendations on any improvement it considers necessary, offering to come forward and propose changes. The composition of the committee, which includes a number of men of outstanding ability in general affairs rather than technicians of money and mechanics, makes it likely that its work will have a profound effect on the management of the British economy. It will be able to deal with the central problem of reconciling full employment and stable prices.

Steel Output and Distribution

British industry bought 6 percent less steel in the first quarter of 1957 than in the first three months of 1956. Most of the reduction, however, took the form of smaller imports. Deliveries from the British steel mills to home consumers were only 0.7 percent lower than a year ago, and steel exports were 20 percent higher. Supplies of steel to the shipyards were 8½ percent above the previous year in the first quarter. Supplies to coalmining, railways and building were also substantially increased. But the motor industry and associated trades took much less steel. Stocks of steel in the hands of consumers and merchants are still rising. They increased by another 1½ percent in the first three months of 1957. Within the total, the stocks of sheet and plate stocks rose. In April, production of steel was still affected by the engineering strike and the Iron and Steel Board estimates that about 50,000 tons of output was lost during the whole period of the strike. April production, which was also affected by the Easter holidays, was at a rate of 430,000 tons a week. In March, it averaged 431,000 tons a week, and in April last year 421,100 tons. The annual rate of production in April was 22,360,000 tons, against 21,896,000 tons a year earlier. Pig iron production in April averaged 277,400 tons a week compared with 277,200 tons in March and 254,300 in April last year. The annual rate was 14,425,000 tons, against 13,225,000 tons in April 1956.

Machine Tool Output

The latest figures from the machine tool industry show that the slight recovery in the pace of new orders was not maintained in February. Orders for home delivery that month were worth £4,445,000, against £4,956,000 in January and £7,541,000 in February 1956, while orders for export were worth £2,303,000 against £2,527,000, and £2,107,000, respectively. Deliveries were also lower, but February was a short working month. The net result was that the industry's total order book fell by just over £400,000 to £96,164,000, of which £72,293,000 was for home industry and £23,871,000 for exports. This is only about 5 percent below the level a year ago of £103,559,000 and not much more below the peak reached in May 1956 of £104,810,000. These figures confirm the latest Board of Trade statistics. Any cuts which are being made in capital spending are affecting building. Expenditure on plant and machinery is being well maintained in spite of fluctuations from month to month.

Industrial Building Check

The slow-down in industrial building plans has continued into the first quarter of the year. In that period, industrial building schemes totalling 13.7 million square feet were granted industrial building certificates. This area total was slightly lower than the 15.3 million square feet approved in the last quarter of 1956, but considerably less than the 21.7 million square feet approved in the first quarter of last year. It was the lowest quarterly figure in the past two years. For the first time, the Board of Trade is giving estimates of the total area and number of schemes started and completed in certain periods for which information is so far incomplete. It is, however, not possible to make these estimates until six months after the end of the period. The area now estimated to have been started in the third quarter of 1956—17.3 million square feet—was higher than for several preceding quarters. The estimate of 14 million square feet completed in the same period is the highest quarterly figure recorded since 1946.

Export Credit Claims Up

Claims paid by the Export Credits Guarantee Department in the year ended 31st March 1957 rose to £5.4 million, a figure exceeded only in 1949-53 and 1953-54, the years of the heaviest Brazilian claims payments. For 1955-56, payments were £2.3 million. The figures now released do not

show premium income, but on the basis of the total face value of policies issued, £726 million, it is unlikely to have materially exceeded claims paid. The volume of business is up by 50 percent on 1955-56, when premiums amounted to £3.6 million, and expenses were £383,000. But the appearance of the balance sheet will be improved by recoveries of £5.3 million. "Commercial" business declared last year was £445.7 million, 14.3 percent above 1955-56 and a shade higher than the £420.9 million recorded for 1951-52. Short-term and extended-term policies increased in value by 34 percent and medium-term policies were more than doubled in value.

Aid for Redundant Workers

Although the fears of widespread unemployment which arose from the slump in the motor industry a year ago are now fast disappearing, they might well be revived as the effects of the Government's cuts in defence expenditure, to accord with the new conception of atomic as opposed to conventional armaments for the fighting services, are put into effect. This development is estimated to render about 28,000 workers redundant over the next 12 months, and to absorb them in other employment may not be too easy. It is a good thing, therefore, that a Government scheme to help displaced workers has just been completed and was announced by the Minister of Labour last week. The new scheme applies to workers who have been unemployed for at least eight weeks for whom there is no early prospect of obtaining suitable employment locally and who continue to maintain dependents at home. It will be generally available outside areas covered by the present resettlement transfer scheme, but will not apply to workers who usually follow seasonal employment. Nor will it apply in cases where similar assistance is normally provided by prospective employers. The present scheme only applies to unemployed workers permanently moving from designated areas of poor employment prospects and to unemployed ex-regular servicemen and disabled persons wherever they live.

With the knowledge of the Ministry's local office, these workers must take up employment beyond daily travelling distance for which no suitable local unemployed worker is available. Facilities under the new scheme are: (1) lodging allowance of £1 15s weekly for up to 12 months so long as no suitable employment is available in the home area; (2) free fares to the new area; (3) free return fare to the home area to be interviewed for employment if necessary; (4) free fare home to take up employment in the home area; and (5) continuing liability allowance, as an alternative to lodging allowance, where dependents join the worker in the new area and he remains liable for items such as rent and rates at home.

Restrictive Practices Court

New appointments to the Restrictive Practices Court, which is expected to begin work in the autumn, were announced last week. Mr. Justice Pearson will join the judges already appointed and five full-time and three part-time lay members are named. The full-time members will not take up their appointments until later in the year. They will be: Mr. W. G. Campbell, a chartered accountant; Sir Stanford Cooper, a director of Ford's; Mr. Bernard Gilbert, formerly at the Treasury; Mr. W. L. Heywood, a member of the Trades Union Congress, and Mr. W. Wallace, chairman of Rowntree's. Appointed part-time members are Sir Andrew Clow, Sir Godfrey Mitchell and Mr. G. H. E. Parr, who will be the northern Ireland representative.

Brevities

The employment situation is much brighter. Between March and April, the number of wholly unemployed dropped by 14,103 to 342,259, and of those temporarily stopped by 6,583 to 21,009. In March, the respective figures were 362,945 and 27,592, and in April last year 251,515 and 23,987. Unfilled vacancies on 10th April were 284,558.

It is believed in the London tin market that the manager of the International Buffer Stock buy tin, according to the monthly review of A. Strauss and Co., the metal merchants. This operation is giving support to the market at the moment. Messrs. Strauss also estimate that exports of tin from Russia now amount to several hundred tons a month.

The Decca Navigator Company has received a contract from the Indian Government for the provision of two Decca Navigator Chains—one to be centred on Bombay and the other on Calcutta.

Lord Bruce of Melbourne has decided to retire from the chairmanship of the Finance Corporation for industry after the next annual meeting in July. He will then have been ten years in that position and, as he is in his 75th year, he wants to begin to limit his many activities. He will be succeeded as chairman of the F.C.I. by General Lord Weeks.

The Government has chosen Mr. George Blaker, who is Chief Information Officer and Deputy Head of the Information Division at the Treasury, to be financial adviser to the British High Commissioner in India, Mr. Malcolm MacDonald, and to be the Treasury's representative in south Asia, including Ceylon and Burma. He will leave to take up his new appointments at the end of this month.

Bombay

HIGHER RATE OF VANASPATI OUTPUT

FALL IN COTTON YARN EXPORTS

(FROM OUR BOMBAY CORRESPONDENT)

THE vanaspati industry has functioned satisfactorily so far this year. The output during the first quarter of 1957 amounted to approximately 82,000 tons which is an increase of a little over 10,400 tons over that of the corresponding period of last year. Industry circles estimate that if the current rate of production is maintained, the total output at the end of this year will amount to about 325,000 tons. The offtake has also improved. Stocks with dealers, local and upcountry, now stand at a reasonable level. Although the price of groundnut oil has fluctuated less violently than it did last year, it has been maintained at a somewhat high level because of the slow rate of deliveries of groundnuts. This has hit the smaller units, and only 40 of the 51 units have been functioning. But this situation is now showing signs of improvement. Some 60,763 tons of groundnuts arrived in Bombay last month against only 7,659 tons in the previous month. Supplies of groundnut oil also increased from 1,901 tons to 2,429 tons. This increase has been possible because of the larger movement of the crop at terminal markets in most growing areas.

This perhaps explains why the spot market for groundnuts has remained steady at a time when the futures section has shown signs of rising. The May contract last week opened at Rs. 174.75 and moved up to Rs. 178. Profit-taking depressed the market, and the contract dropped to Rs. 176, but closed around Rs. 177.62. Groundnut oil was quoted at Rs. 20.50, which represents a gain of about 25 p. Apart from groundnuts, other oilseeds, too, have been arriving here in large quantities recently. The total quantity of seeds received in Bombay during April amounted to 70,422 tons against 17,386 tons. The inflow of vegetable oils was 6,940 tons, compared with 6,055 tons in March. Receipts of castorseed improved from 4,403 tons in March to 4,570 tons last month and that of rape and mustard from 739 tons to 827 tons. Imports into Bombay of cottonseed were slightly higher at 1,863 tons, but arrivals of linseed declined from

2,540 tons to 2,031 tons. Imports of castor oil increased from 2,491 tons to 3,390 tons. Although U.S. importers are still reluctant to buy from India, the indications are that the Communist countries are in the market for fresh supplies. This has imparted strength to the futures market and the May contract, which last week opened at Rs. 177, closed at Rs. 186. The spot market moved in sympathy and the price rose from Rs. 35.9 to Rs. 36.14 a cwt. Oil was also quoted 12 annas and 10 annas dearer for the commercial grade and B.S.S. quality respectively.

Exports of cotton yarn fell sharply last year from 47,418 bales in 1955 to 29,660 bales. Increased competition in international markets and the high price level ruling in this country are the two main factors which contributed to this decline. Hong-kong, one of India's leading customers, reduced its purchases from 14,148 bales to 5,097 bales. Sales to Ethiopia dropped from 7,372 bales to 5,828 bales. Exports to Aden dropped by 1,557 bales. Britain was India's best customer last year accounting for 8,739 bales against 4,156 bales in the previous year.

Cotton Contract

The East India Cotton Association is now considering a scheme to introduce a more realistic hedge contract for the new season. It is believed that the Association is in favour of reverting to a single hedge contract because of the statistical position of cotton. Further, the Association believes that the price control should be eliminated and uncontrolled speculation checked by means of heavy margins. Trade circles believe that exports of cotton should be allowed freely because the exportable varieties find little or no market from Indian mills. Meanwhile, they are anxiously awaiting the announcement of a new 70,000-bale import quota for American cottons. There is no interest in Egyptian growths because mills here believe that prices will fall still further. The announcement that shipments of American cotton under the tripartite agreement with Burma will be allowed until 30th June, 1957, has caused no enthusiasm among mills here because of the complications involved in this method of trading. Although the export demand for cotton piecegoods is still slow, there has been an improvement in the domestic market. Enquiries from upcountry centres continue to pour in, particularly for superfine and fine qualities. Despite the improved offtake, stocks with mills and dealers are still heavy.

CAPITAL

Founded in 1888, is India's oldest and most widely read financial newspaper. It gives its readers in all parts of the world the most up-to-date service in Indian economic intelligence and information of any newspaper in the daily or weekly field, and includes a complete list of all shares and securities dealt in on the Calcutta Stock Exchange, together with full details of latest balance sheets.

Published every Thursday.

This tool has been developed to cut mild steel sheet up to 14 S.W.G. It is fitted with an exceptionally powerful motor to maintain a fast cutting speed. All spindles and gears are made from alloy steel and carefully machined hardened and ground, and are supported by generous sized bearings throughout. A special feature is the detachable side handle giving complete operation convenience and control.

PROSPECTS FOR THE NEW
TEA CROP

DANGER OF OVERPRODUCTION

IT would be rash indeed to make any forecast at this early stage of the new season about the trend of prices during the coming months, since this will be controlled by figures of production, and particularly by the size of the north Indian crop, which cannot be assessed with any accuracy until the end of August, say Messrs. Carritt Moran & Co. Private Ltd. in their monthly tea market review. Present indications are that world crops are not likely to fall below last year as the Ceylon crop already shows a substantial increase and a further extension of production in East Africa is anticipated. While April has been unfavourable for growth in most districts of north-east India, this is unlikely to have any substantial effect on the crop for the full season unless weather conditions continue to be unfavourable for a considerably longer period. An increase in world production therefore appears probable. The world stock position would also appear to have eased to some extent since this time last year. On 12th April the stocks in the U.K., including teas entered for Customs but not yet received in the warehouses, amounted almost exactly to 50 million lbs. more than at the same date last year, while the figure for teas afloat on the same date was very similar to the previous year, being only approximately one million lbs. less. In Calcutta, however, stocks in the main warehouses were some 35 million lbs less than at the same date last year and the overall increase in stocks may therefore be of the order of 25 million lbs. This increase, it must be noted, has been achieved in spite of the regulation of the north Indian crop last season by the cessation of plucking on 20th November. The removal of this world surplus stock from Calcutta to London this year may result in a satisfactory level of prices for low medium and common teas in the early auctions in Calcutta. If so, this would be due to the demand from internal operators and would be liable to rapid adjustment once this initial demand had been met. The danger of serious overproduction during the coming year is clear and the results could be two-fold. Firstly, a very severe financial strain on many gardens with the present high level of cost structure, and secondly, the creation of a large stock of surplus tea which could probably be adjusted only over a long period.

Reduction of Export Duty

It is clear that the Government of India could do much to relieve producers of financial strain by the reduction of export duty. The Governments of Assam and West Bengal could also similarly help the producers by granting a remission of their provincial levies. This would assist by making Indian tea more competitive with other growths; but previous experience hardly encourages the hope that any action that may be taken in this direction will be either sufficiently liberal or swift. The disadvantage of the present slab system of imposing export duty on the London price for Indian tea was demonstrated last year when export duty on the rains teas was being assessed on the basis of the prices ruling in London for the best second flush teas. This system should be rectified immediately to ensure that the duty is related to the current prices in Calcutta and Cochin, or to a balanced formula of London and Indian prices. This seems essential to avoid the possible repetition of a high export duty at a time when large

quantities of rains teas are reaching the Calcutta market and prices may be declining to an uneconomical level. A further imposition from which the Indian exporter could be relieved is the present system of having in certain circumstances to purchase export quota. Retained since the end of the International Agreement as a means of securing adequate supplies within India at reasonable prices, export quota appears to have little advantage in the light of increasing world crops. The exporter in any case has to pay a substantial premium over the local consumer through the export duty. If it is now too late for the coming season to abolish the export quota system, then fluctuations and high prices for export quota should at least be avoided by swifter releases of quota by the Government. While much could therefore be done by the Government to assist producers through timely action, there remains the very difficult problem of a possible large increase in world stocks. Although a problem for all producing countries, this situation has twice been avoided by the voluntary efforts of the North Indian producers and it seems unreasonable that they should continue to save the industry as a whole from what appears to be a danger of chronic overproduction. The obvious answer is the renewal of the International Agreement through which all the main producing countries could regulate their exports and their production. It is clear, however, that with the growing importance of East Africa and other districts as producers, the signatories to any agreement would now have to be on a wider basis than ever before, and that a more comprehensive scheme for exports and extensions would be essential if the agreement of the major producing countries is to be obtained.

Need to Increase Consumption

An alternative, or complementary to a new International Agreement, should be steps to increase world consumption, and here it is generally felt that considerable scope within India itself and to that extent the Indian industry would appear to be at an advantage over certain of its competitors. Without the co-operation of producers to regulate exports and further extensions, and without the ability to achieve a substantial improvement in world consumption, the danger of production seriously outstripping consumption must be near at hand, and the only alternative in which a more permanent readjustment between production and consumption can be achieved will then be by the painful process of the failure of the less economically sound tea gardens in all countries. Messrs. Carritt Moran conclude that the Government should consider now what steps may be necessary to place the Indian industry on a more competitive basis with other producing countries and to free it from the many encumbrances which make its cost structure so inelastic, as at present.

CALCUTTA TEA AUCTIONS IN
APRILFAIR DEMAND BUT PRICES
IRREGULAR

ONLY one export sale was held in April. Practically no Darjeeling tea was on offer, and the bulk of the offerings, totalling 54,598 chests, and including a considerable proportion of reprinted tea, was of an ordinary "end of season" description, say Messrs. Carritt Moran & Co. Private Ltd. in their monthly tea market review. There was a fair general demand, mostly from internal buyers, but prices were irregular and often 10 to 20 nP easier.

Clean black leafed teas and well made whole leaf grades were the strongest feature of the sale. As prices were not truly representative, no quotations were given.

Internal Market

Only three sales were held and the offerings, which amounted to approximately 12,700 chests of leaf, included the reprints from the last export sale of the season. In the third sale, there was an active general demand and prices showed considerable advances but in the earlier sales a quieter tone prevailed and prices generally moved in buyers' favour. The delay between the lifting of a dust invoice and its eventual date of sale continued to be about three months. The offerings in the five sales held amounted to approximately 95,300 chests of dust. Except for a few occasional invoices, quality was not outstanding. The few invoices of best C.T.C. Assam continued to realise satisfactory prices but demand was definitely weaker. Orthodox kinds from all districts made weekly fluctuations but overall, were about steady, the exception being the black leafy kinds suitable for export which were obtainable at a premium.

Quotations

	1956-57	1955-56
	Rs. nP	Rs. nP
Sale No. 40 Clean Common Dust	1.65	1.81
Sale No. 41 " " "	1.62	1.70
Sale No. 42 " " "	1.66	1.64
Sale No. 43 " " "	1.66	1.62
Sale No. 44 " " "	1.63	1.62

Export sales up to No. 44 totalled 2,129,745 chests at an average price of Rs. 2.37 compared with 2,095,188 at an average price of Rs. 2.06 during the corresponding period of the 1955-56 season. Internal sales at 93,127 chests of Leaf and 768,275 chests of Dust (Rs. 1.57 and Rs. 2.09) go against 112,464 and 661,217 (Rs. 1.25 and Rs. 1.98) for the same period last year.

The price of Special Export Licence rose throughout the month from 11 nP a lb to 24 nP a lb in the third week, declining to 23 nP a lb at the close. On 7th April an interim release of 1957-58 quota was announced, to the extent of 50 per cent of the crop basis of tea estates. A limited amount of business on a forward basis was transacted in new season's quota at prices which varied between 25 nP and 30 nP a lb.

The crop figures issued by the Indian Tea Association are based on the actual returns received from the gardens submitting them which account for 75 per cent of the total North East Indian production, plus an estimate of the crops of non-reporting gardens based on the last known crop figures of those gardens. Recent information on the crops of non-reporting gardens has resulted in certain changes in the estimated total crops of North East India for 1955 and 1956 and these are given below:

	1955	1956
	million lbs	million lbs
Original estimate	534.20	536.65
Revised estimate	539.05	540.05

Arrivals (in chests) in Calcutta warehouses during the period 24th March, 1957 to 23rd April, 1957 with the corresponding figures of the previous year in parentheses were as follows: by steamer 954 (31,958) by rail 2,234 (36,453) by air 3,205 (6,923) making a total of 6,393 (75,334) chests. Since the beginning of the season, 1st April, 1956 to 31st March, 1957, arrivals have been: by steamer 2,995 (3,409,825) by rail 1,056,367 (950,855) by air 164,982 (206,670) making a total of 4,216,479 (4,567,350) chests.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing prices on 3-5-57 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.26	1.26
No. 2	1.23	1.23
No. 3	1.20	1.20
No. 4	1.20	.96
No. 5	.96	.91
	.91	.92
Sheet Cuttings 1		.87
Sheet Cuttings 2		
Crape:		
Water White		1.14
R.M.A. No. 1X	1.15/20	1.09
R.M.A. No. 1	1.08/12	1.03

Crape No. 3		
Scrap Crape:		
Sc. Crape No. 1	.95 Nom.	.94
Sc. Crape No. 2	.90/93	.91
Sc. Crape No. 3	.80/90	.84
Flat Bark	.72/75	.73
Sc. Crape 3X		.88

To arrive at f.o.b. Colombo prices, add 53.3 cents a lb for crape other than scrap crape and 31.53 cents for scrap crape to the above market prices.

PEPPER PRICES SPURT ON
EXPORT DEMAND

DOMESTIC OFFTAKE INCREASES

PEPPER prices in the terminal markets of India have made a handsome gain of Rs. 100 a candy over the past one month. Revival of overseas enquiries, bull speculation and lower stocks, have together influenced this rise. New York buyers, who were keeping aloof for a considerable time, have made their appearance again in the market. That was perhaps the single most important factor that gave the market the boost. Shippers to Communist countries have also been covering against their commitments. At the same time, arrivals have been slowing down. Now market sentiment is stronger than what it was a month ago, and prices have jumped from Rs. 525 to Rs. 625 a candy although foreign enquiries have slackened a little.

The immediate outlook appears to be satisfactory. Indian growers may not have to face any serious difficulty until the new Sarawak and Indonesian crop moves in substantial quantities on to the world market. The stock position in India is comfortable as far as the growers are concerned. The Indian crop is not as large as it was thought to be earlier. Towards the beginning of the season, it was estimated at about 24,000 tons, but later, this estimate had to be revised in view of the extensive crop failure in the Tellicherry area. The present estimate stands at about 20,000 tons.

Home Consumption

Domestic consumption has been increasing. According to one estimate, the home market consumed nearly 50 per cent of last season's output of 19,000 tons. The internal market is likely to require still more this season in view of the lower prices at which the commodity is available. Export figures show that more pepper is going out. Official statistics for the first three months of the current season are now available, according to which 5,306 tons were exported during this period against 4,469 tons during the corresponding period of last season. This shows an increase of 836 tons. Unofficial figures place the export to the end of April at the high figure of about 9,000 tons, although there is yet another six months for the season to close. Export during last season was to the tune of 13,225 tons. The current season's supply including the carry-over from last season's crop may not exceed 23,000 tons. If from this the estimated export and home consumption to the end of April are deducted, the stock figure becomes 8,000 to 10,000 tons, which cannot be considered as big for the remaining six months.

World Output Estimates

If reports that the Sarawak and Indonesian crop next season will be lower are true, strong competition need not be feared. They indicate that world production of pepper in 1957 will be less than expected. The Indian crop is likely to be 4,000 tons lower than the original estimate, and Indonesia and Sarawak are expected to produce less than their usual quantity. On the other hand, there is no indication that world consumption will decline. India has another advantage. She has a new market for her pepper in Communist countries. During the last season, she sold 4,227 tons to them and that was nearly 32 per cent of the total exports. Exports to Russia and other Communist countries have been larger this season, and according to one estimate, may touch the high figure of nearly 4,000 tons by the end of May.

Unemployment in Coir Industry

Kerala's Minister for Industries, Mr. K. P. Gopalan, is shortly convening a conference of various interests in the coir industry, with a view to finding a solution for the unemployment problem in it. Representatives of the trade unions, the industry, members of the Legislative Assembly representing the coastal region, the Chairman of the Coir Board, Coir Special Officer and other officials concerned with the industry are expected to attend. The Government of Kerala has requested the Central Government to increase the provision of Rs. 56 lakhs in the State's second five year plan for the coir industry to Rs. 1.2 crores.

U.S. RUBBER CONSUMPTION REACHES
RECORD LEVELS

U.S. consumption of rubber reached record levels during the first quarter of 1957, according to a report of the U.S. Business and Defence Services Administration. Consumption in the first three months of this year—the report said—totalled 393,165 tons, which means an increase of 2.1 per cent from the record 384,894 tons registered in the first three months of 1956. Consumption of new rubber in March this year amounted to 131,357 tons. The March figure ran well ahead of February—123,687 tons—and March 1956—127,668 tons. The percentage of natural rubber in total new rubber consumption was 37.1 in March 1957. This represents a slight drop in percentage from March 1956. Meanwhile, the Journal of Commerce reported that the value of crude rubber imports fell during March 1957 from the levels recorded in February 1957. It explained, however, that this decline resulted largely from the dock strike of February, which reduced all import activity. Crude rubber imports were valued at \$25.3 million for February, the comparable figure in February 1957 totalled \$1,002.1 million—about 16 per cent lower than the preceding month.

Commodity Markets

DEVELOPMENT OF HEAVY
CHEMICAL INDUSTRYMEASURES TO PROMOTE
EXPORTS

THE Union Minister for Industry, Mr. Manubhai Shah, while addressing the reconstituted Development Council for Heavy Chemicals recently said that the chemical and alkali industries in the country have now reached a stage of development when not only quick expansion can take place, but growing export market for their products can be developed. The Minister complimented the alkali and chemical industries on the very good progress achieved in the last few years. He called upon industrialists and technicians, represented on the Development Council for Heavy Chemicals (Alkalis), to work out schemes which can speedily reduce the dependence on imports for several chemicals and their by-products, and think in terms of export promotion. He drew the attention of the Council to the scope for developing exports of chemicals such as magnesium chloride, chlorine, liquid carbon, bleaching powder, zinc chloride and insecticides. The Minister said that the Government has decided to set up an export promotion cell in the Development Wing of the Ministry of Commerce and Industry. So far, the main work of the Development Wing has rightly been in the field of promotion and development of industries, and the formulation of related import policies to provide a fillip to indigenous industry. It will now also pay increasing attention to the work of export promotion. The development councils for different industries, Mr. Shah said, should give special attention to the work of export promotion and assist the various export promotion councils. The proposed export promotion cell in the Development Wing will be in a position to study the recommendations of different export promotion councils and development councils and co-ordinate and implement suggestions made by them. The cell, which will cover heavy industries, engineering industries, chemical industries and consumer and light industries, will try to co-ordinate the work of the development councils on the one hand, and the export promotion bodies on the other.

Fertiliser Policy

Mr. Shah made a special mention of the very good progress of the fertiliser industry, particularly the progress in the production of nitrogenous fertilisers such as ammonium sulphates, nitro-chalk, double salt, urea etcetera. Now that the various fertiliser industries have been re-organised under the new set-up of the Ministry of Commerce and Industry, it is possible, he said to evolve a national fertiliser policy in close collaboration with the Ministry of Food and Agriculture and other Government agencies concerned. He pointed out that no country could depend for all time on the production of one type of fertiliser alone, namely, nitrogenous fertiliser. Modern agricultural practices require a balanced development of nitrogenous as well as phosphatic and potassium fertilisers. He, therefore, requested the Development Council to consider the question of development of phosphoric acid and phosphatic industries and the recovery of the potassium salts from the salt industry in the country.

He informed that a joint meeting of the development councils for alkalis, acids and fertilisers, drugs and pharmaceuticals, and representatives of other Ministries, will be convened in June in Bombay to discuss and formulate a national fertiliser policy, and draw up a programme of balanced development of important components of fertilisers. The joint meeting of these three councils will also be in a position to discuss and evolve a national drug policy based on the indigenous manufacture of primary intermediates, synthetic drugs, vitamins, antibiotics, alkaloids and other drugs and heavy alkalis and acids.

Drugs and Pharmaceuticals

The Council, the Minister said, was already aware of Government proposals to set up in the public sector sizable capacities for primary intermediates, vitamins, antibiotics, synthetic drugs and alkaloids. This programme will be fully integrated with the industries manufacturing formulations and penultimate and complexes of drugs and pharmaceuticals in the country. Referring to the chronic problem of the alkali industry, namely the profitable utilisation of chlorine, the Minister hoped that the national fertiliser policy, which would take cognisance of the development of phosphatic fertilisers, both from raw phosphates and bones, will offer a good avenue for the economic and profitable use of chlorine from the alkali industry.

India, the Minister said, is exporting about 150,000 tons to 200,000 tons of bones every year, and if bone utilisation plants of economic sizes were set up in the north, south, west and central regions of India, near the caustic soda-chlorine factories, the country will gain valuable products such as bone meal, ossein for high-grade gelatine and glue and phosphates, which will also enable it to earn more foreign exchange. These products could serve as a direct fertiliser as well as an important source for phosphoric acid, very badly needed for the fertiliser industry.

PRODUCTION AND DESPATCHES OF SUGAR

The production and despatches of indigenous sugar amounted to 1,822,000 tons and 1,035,000 tons up to 30th April, in the current season, against

1,653,000 tons and 806,000 tons respectively in the corresponding period of last year. The stocks with the factories on the same date stood at 1,314,000 tons, compared with 1,258,000 tons last year.

REPORT ON MARKETING OF CHILLIES

Chillies, which were introduced in India about the middle of the seventeenth century from the West Indies, are now grown extensively and occupy an important place among spices in the country. A report on the marketing of chillies in India, published by the Directorate of Marketing and Inspection of the Central Ministry of Food and Agriculture, estimates that the annual production of chillies is about 18 million maunds—8 million maunds green and 10 million maunds dry—covering an area of about 1,200,000 acres. Important chilli-producing States are Madras, Andhra, Bombay, Madhya Pradesh, Mysore and Bihar which together account for 88.9 per cent of the total area under the crop. Of these, Madras has the largest acreage, followed by Andhra and Bombay in that order. There is hardly any import of chillies into India. On the other hand, India exports, on an average, about 187,000 maunds a year, the largest importer being Ceylon. There are many varieties of chillies in India, differing in size and shape and pungency. They are grown both as a garden and a field crop and also as a rain-fed or an irrigated crop.

According to the report, marketing of chillies in India has been in a very disorganised state. In the distribution of chillies, the grower does not generally take any part. There is great disparity in marketing charges levied in different centres. No grading of the produce is carried out at the producing, gathering and distribution levels. Inadequacy in selection and improper storage of seed lead to mixing of different varieties. To add to these, the financing of marketing operation is generally made by petty merchants, commission agents or wholesale merchants at exorbitant rates of interest. Yet the weights used in different areas for selling chillies are neither similar nor standardised. The report emphasises the need for improving market intelligence and the methods of storing, grading and packing. It says that co-operative societies should be developed for gathering and distributing chillies, and State Governments should enact legislation for regulating markets. The report lays stress on the necessity of improving the financial resources of the producers and of adopting effective measures to fight pests and diseases as also of introducing improved methods of cultivation.

RECORD PRODUCTION OF IRON ORE

There was a record production of 4,650,000 tons of iron ore in India during 1955. The value in terms of money was Rs. 3.24 crores. Two States of the Indian Union—Bihar and Orissa, between them, accounted for 85 per cent of the total production. Extensive deposits of good quality iron ore are scattered in several areas in Bihar, Orissa, Madhya Pradesh, Andhra and Mysore. The approximate estimates of reserves of iron ore in the country are:—Bihar and Orissa—8,000 million tons, Madhya Pradesh—7,000 million tons, Mysore—2,500 million tons, Madras—1,000 million tons, Bombay—300 million tons, Andhra—54 million tons and others—2,100 million tons. Out of the estimate,

SOUTH EASTERN RAILWAY TENDERS

The Controller of Stores, S. E. Railway, Garden Reach, Calcutta-23 invites tender No. CS15/57/225-CS (R)/57—for supply of 46 Rolls Woven Wire Welded Fabrics B. R. C. or similar. Tender forms are obtainable from his Office (I. B. Section) on remittance of Rs. 2/- per copy (not refundable) by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Rly., Garden Reach by local firms. Closing date is 29.5.57—at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the Tender. Earnest money is Rs. 250/-.

TO SERVE YOU IN THE LAND OF GOLDEN PAGODAS

Established in August 1954, the STATE COMMERCIAL BANK is to-day the largest commercial bank in BURMA. With branches located at important trade centres in BURMA, the Bank is in the best position to look after your needs in this LAND OF GOLDEN PAGODAS. The Bank also handles the major foreign business of the country through many correspondents in all parts of the world.

STATE COMMERCIAL BANK, BURMA.

Authorised Capital Kyats 5,00,00,000
Paid-up Capital Kyats 2,00,00,000

the proved and indicated reserves are 6,400 million tons. The total iron content in all classes of ore is placed at 42,000 million tons. Nearly three-fourths of the output is being smelted in the country for making pig-iron and steel. The rest is being exported. Japan is the principal importer of iron ore from India. There was a record export in 1955 of 1,200,000 tons which fetched foreign exchange worth Rs. 5.3 crores.

MAIZE PRODUCTION THIS YEAR HIGHEST ON RECORD

According to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, the all-India final estimate of maize for 1956-57 puts the current year's area and production at 9,244,000 acres and 3,020,000 tons respectively, against the partially revised estimate of 9,116,000 acres and 2,554,000 tons for 1955-56. This shows an increase of 123,000 acres or 1.4 percent in area and 466,000 tons or 18.2 percent in production during the current year compared with last. This means that maize production during the current year is the highest on record. The increase in area has been reported mainly by Uttar Pradesh, Bihar and Jammu and Kashmir. This has been attributed to favourable seasonal conditions at the time of sowing. The increase has, however, been offset to some extent by the decreases reported mainly by Rajasthan and Bombay. The significant increase in production has been shared by all the maize-producing States except Rajasthan, Bombay and Madhya Pradesh. Notable increases in production have been reported by Uttar Pradesh, Punjab and Bihar. The increase in production has been attributed partly to the increase in area and partly to favourable climatic conditions during the growing period of the crop. The decrease in production is marked in the case of Rajasthan and Bombay. This is due partly to decrease in area and partly to unfavourable climatic conditions during the period of growth. In Bombay, especially, the crop suffered heavily in growth and production in the Gujarat division on account of continuous and heavy rains during the south-west monsoon period.

COMMITTEE TO INVESTIGATE COAL PRICES

The Government of India has set up a six-member committee to investigate the prices of coal. Mr. S. Boothalingam, Secretary, Ministry of Steel, Mines and Fuel, will be the chairman of the committee. It will examine and report upon the cost of production of coal in the country, taking into account the awards and other relevant factors that have a bearing on the coal production programme of the second five year plan. The committee, which has been asked to submit its report within a period of two months, will also recommend the changes necessary in the price-structure of coal and report on the impact of the price changes recommended by the committee on the economy of the country and on industry generally. Other members of the committee are: Mr. V. Narayanan, Joint Secretary, Ministry of Finance; Mr. S. R. Kalyanaraman, Member (Commercial), Railway Board; Mr. P. M. Menon, Joint Secretary, Ministry of Labour and Employment; Mr. S. R. Kaiwar, Joint Secretary, Ministry of Steel, Mines and Fuel and Coal Controller of the Government of India.

PROTECTION TO COCOA AND CHOCOLATE INDUSTRY EXTENDED

The Government of India's resolution on the Tariff Commission's Report (1956) on continuing protection to the cocoa powder and chocolate industry has recently been published in a *Gazette of India Extraordinary*, says a Press Note issued by the Ministry of Commerce and Industry. The Commission's main recommendations are: (A) that protection to this industry should be continued for a further period of one year i.e. up to 31st December, 1958; (B) that the protective duty on cocoa powder should be maintained at the existing rate of 31½ percent *ad valorem* (including surcharge), and (C) that the protective duty on covering chocolate should be 50 percent *ad valorem* or Re. 1 a lb. (including surcharge) whichever is higher (against the existing rate of 50 percent *ad valorem*). The Government has accepted these recommendations and the revised rate of duty on covering chocolate, as in (C) above, is being brought into force with immediate effect. The Commission has also made certain ancillary recommendations for granting general assistance to this industry. The Government has noted these and suitable action will be taken in due course, the Press Note says. The Commission has emphasised the importance of salesmanship and publicity. It has also pointed out that the producers should keep abreast of technical developments. These are being brought to the notice of the industry.

WORLD STEEL OUTPUT RECORD

Steel production in the free world in 1956 reached the record total of 237.9 million tons, which compares with 228.7 million tons in 1955. These figures are given in the United States Department of Commerce annual world steel survey which stresses that output in Communist countries of Europe and Asia increased to 24.3 percent of total world output. By 1960, the Communist bloc is expected to be producing 26.3 percent of the world total. Production in the U.S.A., however, is expected to decrease to 35 percent of the world total by 1960, compared with 36.9 percent last year when output fell two million tons to 115.2 million

tons. Last year, Japan's output rose from 10.4 million tons to 12.2 million tons, and West German production increased from 23.5 million to 25.6 million tons. India's output rose from 1,910,000 to 1,957,000 tons.

SLIGHT RISE IN WHOLESALE PRICE INDEX

THE official wholesale price index (base: year ended August 1939=100) stood at 423.5 during the week ended 27th April, compared with 423.3 (revised) for the previous week. The index was higher by 0.6 percent and 8.5 percent respectively, when compared with the corresponding weeks of the previous month and a year ago. Compared with April 1957 worked out to 422.1 compared with April 421.3 (revised) for March 1957 and 391.3 for April 1956. Prices of wheat in Hapur and salt (+9% each), gur in Ahmednagar and rice (+2% each) and gram in Hapur and sugar (+1% each) exhibited advances while those of tea for internal consumption (16%), gur in Muzaffarnagar and gram in Patna (3% each), wheat in Amritsar (2%) and dal arhar and coffee (1% each), were marked down, and as a result, the index for Food Articles advanced by 0.1 percent to 411.6 against 411.1 (revised) for the earlier week. A fall of 0.5 percent to 514.0 in the index for Industrial Raw Materials was mainly due to a decline in the prices of manganese ore (average export price) (-15%) and linseed in Bombay and raw silk (-3% each); the prices of copra (+2%) and castorseed (+1%) witnessed increases. The index for Semi-Manufactures rose by 0.2 percent to 401.4 compared with 400.4 for the previous week. Items which showed significant changes were: buffalo hides (+3%), cowhides and groundnut oil (+2% each) and castor oil (-4%). An increase in the prices of glass (+2%) supported by a slight increase in the price of jute manufactures raised the Manufactures group index by 0.1 percent to 384.6. The index for the Miscellaneous group also moved up by 0.4 percent to 570.6 due to a rise in the prices of black pepper in Cochin (+4%) and cashewnuts in Quilon (+1%).

Calcutta Markets

SELECTIVE DEMAND FOR DARJEELING TEAS

IRREGULAR TREND IN DUST PRICES

THE first Sale of the new season held on 13th May consisted of 7,555 chests of Darjeeling tea. Quality was generally rather disappointing, although a number of invoices with useful flavour were on offer. At the beginning of the Sale, there was a good demand from exporters, and the more useful invoices on offer sold well above brokers' valuations, while the poorer quality teas received fair support, but were often selling below valuations. As the Sale progressed, the demand weakened and prices of most descriptions were generally considerably below valuations. Internal operators were active and showed particular interest in the lower-priced Broken and smaller Fannings grades. At the Internal Sale, there was a fair general demand at irregular rates for the 19,902 chests of Dust on offer. The market was generally easier with the best C.T.C. Assams again being a weak feature and selling between 10 and 20 nP below last rates. Black exportable kinds were well supported at slightly lower rates while the remaining offerings were up to 12 nP easier.

Quotations	1957	1956
	Rs.	Rs.
Medium Doars Dust	1.55	1 8 0
Medium Assam Grainy Dust	1.60	1 9 0 to 1 10 0
Medium Assam C.T.C. Dust	1.60 to 1.65	
Best Assam C.T.C. Dust	Not quotable	2 12 0 to 2 14 0 (Nominal)

There were only 43 chests of Leaf on offer.

SUGAR STEADY

During the week ended 15th May, sugar sales in the Calcutta market averaged 5,500 bags daily. Arrivals a day were 5,000 bags, and stocks totalled 100,000 bags. Rates for ready sugar exportable delivery were Rs. 31.88 for ordinary grain and Rs. 33.75 for big grain. The market remained steady on account of a rumour that the excise duty on sugar would be increased.

FIRM UNDERTONE IN LINSEED

The undertone has been firm throughout the past week, and trading has been on a larger scale because of better arrivals. In the oil section, shippers have been inactive, the local prices being out of line with overseas markets, local buyers, however, have displayed a fairly keen interest for small ready lots. Latest quotations were as follows: May-June Rs. 23-2 a maund; June-July Rs. 23-6 a maund and July-August Rs. 23-12 a maund.

HIDES AND SKINS STEADY

The market was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 7th May and 13th May, 1957)
Cowhides: Wet salted (Ord.) 21,500 pcs. on the basis of Rs. 7 to Rs. 8; Wet salted (Slaughtered) 17,800 pcs. on the basis of Rs. 12.50 to Rs. 21.
Goatskins: Wet salted (Daissee, killed) 70,800 pcs. on the basis of Rs. 260 to Rs. 280. Rs. 325 to Rs. 350 on the basis of Rs. 380; Assam-Dinajpur-neah-Kissenganj-Murshidabad 2,700 pcs. on the basis of Rs. 285 to Rs. 352; Pakur 700 pcs. on the basis of Rs. 280; Muzafferpore-Patna-Murshidabad 81,100 pcs. on the basis of Rs. 317.50 to 355.

Bazaar Stocks (13th May, 1957)

Cowhides: Wet salted 2,25,000 pcs.
Goatskins: Wet salted (Daissee, killed) 21,700 pcs; Assam-Dinajpur-Murshidabad-Jabalpuri 26,700 pcs; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 78,500 pcs.

SHELLAC QUIET

During the week ended 14th May, the market was quiet at the beginning, steady at mid-week and again quiet at the end. The range of quotations was as follows:

Pure Buttonlac	Rs. 100.00 buyers; 102.00 done buyers; Rs. 102.00 buyers; Rs. 99.00 value.
Lemon No. 1 Shellac	Rs. 101.50, 103.00, 102.50 buyers; 99.00 done.

COMPANY AND PUBLIC NOTICES

THE SOORAH JUTE MILLS COMPANY LIMITED

NOTICE is hereby given that the 120th Ordinary General Meeting of the Shareholders of the Company will be held at 8, India Exchange Place, Calcutta at 2-30 P.M. on Wednesday the 12th June, 1957 for the following purposes:—

- (1) To receive and consider the Report of the Directors and to pass the audited Accounts for the year ended 31st December, 1956.
- (2) To declare Dividends on Ordinary and Preference Shares.
- (3) To elect Directors in place of those retiring by rotation.
- (4) To appoint Auditors and fix their remuneration.
- (5) To transact any other business which may be brought before the meeting with the permission of the Chairman.

The Share Transfer Books of the Company will remain closed from the 1st June, 1957 to the 12th June, 1957, both days inclusive.

By Order of the Board.

HINDUSTHAN INVESTMENT CORPORATION LTD.,

Managing Agents.

Calcutta.

Dated, 8th May, 1957.

N.B. (i) The Directors have recommended dividends on Preference Shares @ 7% (free of income-tax) and on Ordinary Shares @ Rs. 1/8/- per share (free of income-tax).

If dividends on shares as recommended by the Directors are declared at the meeting, THE DIVIDENDS WILL BE PAYABLE ONLY TO THE REGISTERED SHAREHOLDERS whose names are on the Company's Register on the 12th June, 1957. No application need be sent for dividends, as relative Dividend Warrants will be posted to such shareholders by the 30th June, 1957. The shareholders are advised to notify any change of address.

(ii) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

THE ASSOCIATED HOTELS OF INDIA LIMITED

THE Board of Directors are pleased to announce that a final 6% dividend, subject to tax, on the Ordinary Shares of the Company for the year ended 31-3-1956, making a total dividend of 12%, subject to tax, has been declared in the Annual General Meeting of the Company.

S. S. REEN,
Secretary.

THE BENGAL FLOUR MILLS CO. LTD.

THE Board of Directors has decided to recommend to the forthcoming Annual General Meeting of the Company a final dividend of 13½% for the year ended 31st December, 1956.

By Order of the Board.

BALMER LAWRIE & COMPANY LTD.,
D. MANSON,
Secretary.

Managing Agents.

21, Netaji Subhas Road,

Calcutta.

10th May, 1957.

TEA COMPANIES

O. Po and Dd indicate Ordinary Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

A DISCOURAGING BUDGET FOR INVESTORS

POOR CASE FOR TAXES ON WEALTH AND EXPENDITURE

STRONG opposition has been developing over the past few days to the drastic new taxation proposals presented by the Finance Minister, Mr. T. T. Krishnamachari, with the Central Government's Budget for 1957-58. The basis of the opposition is partly political and partly economic. Congressmen newly returned to the Central legislature find it embarrassing to be beginning (or resuming) their parliamentary careers by having to endorse a Budget which soaks nearly everything. The stock markets reacted sharply initially, although a slightly steadier trend has been noticeable this week—partly because special measures have improved the technical position, and partly because investors have belatedly felt that there is a teaspoonful of sugar in the bucketful of quinine they have been given to swallow. Three of the new levies which were proposed—the higher import and excise duties on kerosene and the increased import duty on newsprint—have already been jettisoned. Reports from New Delhi suggest that a few others may go the same way as the Finance Minister's initial firmness softens under the pressure of Party opinion. There is no evidence yet that the adjustments which are likely to be based on economic realism, so the ultimate outcome of the Budget debate may be viewed with mixed feelings. Yet, it would be idle to deny that far-reaching changes are necessary in the taxation proposals which have been presented. And they are necessary, if for nothing else, then at least for fulfilling the very aims which the Finance Minister has set himself in order to quicken the rate of economic progress in the country.

as a disincentive to earning more, and will thus actually reduce the quantum of savings.

It is worth enquiring whether there is any incentive left for wealthy people with relatively large incomes to increase their earnings. Take the case of an individual possessing assessable wealth worth more than Rs.

ing of economic neophytes by impressing upon them that there is a limit to the printing of currency notes: "The stresses and strains that have developed in the economy are a warning against unrestricted deficit financing. I am not against deficit financing; I recognise it can play a rôle in promoting development. But it is a medicine to be taken in small doses; it is not food that would sustain the system." Having two months ago denied that he was budgeting for inflation, the Finance Minister now readily admits that the overall deficit which remains even after the sweeping new series of taxes carries the risk of inflation. It is some consolation that awareness of the risk is replacing the cool denials of days gone by.

LIFE INSURANCE UNDER THE NATIONALISERS SHORTCOMINGS AND EXCUSES

NATIONALISATION, like other products of the new economic ideology, will ultimately be judged by results. The great debate started by the decision suddenly to take life insurance business into the public sector on 19th January, 1956, will be decided by whether or not the Life Insurance Corporation is able to sell policies more successfully than the private companies it has displaced. Other phases of its activity, such as its relations with employees and investment support for the stock market, however important they may be intrinsically, are from this point of view of secondary significance. A statement made in the Lok Sabha by the Deputy Minister for Finance, Mr. B. R. Bhagat, last week provides the data for a tentative verdict. The most impressive fact it brings out is that the total life insurance business transacted in 1956 amounted to Rs. 200 crores, compared with Rs. 268 crores in 1955, Rs. 247 crores in 1954 and Rs. 168 crores in 1953. The decline in 1956 from the high levels touched in the two previous years is officially attributed to two broad factors. One is that certain abnormal developments had swollen the figures of new business in the earlier years. The other is that some disorganisation and dislocation occurred when the work of 249 separate units servicing about 52 million policies had to be integrated into a single organisation.

It cannot be readily agreed that the high figures for new life business in 1955 and 1954 were mostly abnormal. Those figures, in fact, represented the country's growing prosperity and also the vigour and efficiency with which insurers took advantage of that prosperity to mobilise savings. But the Government is now making many unjustified assertions to excuse its own shortcomings in the field of insurance. The Staff Assurance Scheme for the insurance in bulk of institutional employees, which became common in these years, it says, led to very low rates and intense competition among insurers. Ultimately, the Government intervened and prohibited this type of business in October 1955; so none of it could be written in 1956. It is true, however, that the coming into force of the Estate Duty Act in 1953 was responsible for the issue of a large number of estate duty policies which helped reduce the incidence of estate duty on the property of the insured persons passing on their death. By the end of 1955, this source of new business had been tapped to a substantial extent, but that does not explain why its contribution during 1956 should have been negligible. It is officially claimed that the reduction in premium rates in 1954 provided an incentive to policy-holders to convert their old policies into paid-up policies and to take out fresh policies at reduced premium rates. But even if this rush of what was in fact merely the conversion of old business rather than a real increase in new business tended to subside in 1956, it does not amount to a substantial reason for the decline which actually took place.

As for the disorganisation following nationalisation, it is stated that no such effect was apparent until the end of August 1956. Policy-holders know

COAL POLICY IN INDIA

By

Andrew Farquhar

This booklet consists of reprints of articles written by Mr. Andrew Farquhar, former Coal Adviser to the Tata Iron and Steel Co. Ltd., which have appeared in *Capital* in recent years. As expert analyses of India's coal problems and policies, they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

Copies available from

CAPITAL (PRIVATE) LTD.,
5, Mission Row,
Calcutta 1.

the facts to be different. During this time, the old life insurance companies continued to function as separate units under custodians. New business written over this period amounted to Rs. 145.51 crores, which was slightly more than the figure for the corresponding period of 1955, when life insurance was in private hands. But there was a heavy fall in business in September and October 1956, after the Life Insurance Corporation took over. Staff and records had to be moved between offices, and the different methods of work followed by individual insurers had to be unified and co-ordinated. The official statement claims that these difficulties have been successfully overcome, as, in the last two months of 1956, the momentum was regained and the volume of new business steadily increased.

This seemingly plausible, but incomplete, explanation is aimed at suggesting that, in fairness, judgment may be suspended until the Corporation has a little more time to show its merits—and limitations. Mr. Bhagat's statement lists the various steps which are being taken to mobilise new business. Fourteen thousand new agents have been appointed since 1st September, 1956, he says, forgetting to mention how many thousands have retired or resigned. Restrictions on insuring the lives of females are to be removed. As a result, except for minor restrictions in certain specific cases, there will be sex equality for insurance purposes. Whether this charming notion of sex equality is justified on actuarial grounds, however, is not quite certain. The scientific basis for other changes also seems to be worth enquiring into. Army and navy personnel (but not those of the air force) will be eligible for unconditional policies, without any extra premium or restriction, provided they have no liability or intention to engage in aviation, gliding or parachuting. Group insurance schemes have been designed to provide life insurance protection to employees, while they are in service, at reduced rates of premium and without medical examination, where the cover is not large. Superannuation schemes have been formulated for providing pensions to employees on their retirement from service. But such schemes

are no tribute to the inventive genius of the Life Insurance Corporation; they were offered in varying forms by private offices before.

Finally, it is stated that the Life Insurance Corporation intends to introduce the Janata Policy Scheme, on an experimental basis, later this year. It will be brought in at first in industrial cities like Calcutta, Bombay, Ahmedabad, Sholapur, Bangalore, Coimbatore, Madras, Hyderabad, Kanpur and Delhi, and in selected rural areas. The policy will be for small assured sums, varying from Rs. 250 to Rs. 1,000. There will be no medical examination except when the person is over 35. Door-to-door collection of premiums, by authorised agents or through the sale of stamps, will be arranged. The idea of spreading life insurance among the masses is attractive in principle, but formidable practical difficulties are likely to arise. The cost of procuring, administering and servicing this sort of business is likely to be extremely high. Even before nationalisation, the relatively high expense ratio of Indian companies, compared with those in other countries, was explained in part by the low average value of a policy in India. Indian offices had to handle a larger number of policies for the same sum assured. In the Janata scheme, this difficulty will be greatly accentuated.

Life insurance has so far hardly touched the fringe of the country's needs. There is huge scope for extension of business, particularly in the rural areas, where incomes have been rising as a result of development expenditure under the five year plans. But it is not easy even now to sell life insurance to such people. The difficulties are likely to increase with the mounting burden of taxation and rising prices. The steady increase in living costs caused by taxation reduces the margin out of which saving is possible and makes it correspondingly more difficult to persuade people to take out life insurance policies. The rising trend of prices or what is even more important, the belief that the trend will continue,

is a strong deterrent to the sort of saving in money represented by life insurance. If money is a depreciating asset, the value of which is steadily eroded by inflation, it is not likely to appeal to people as a form of value in which to hold their savings. There is definitely both the opportunity and the need for an enormous extension of life insurance. What is still far from definite is whether a monopolistic, State-managed Life Insurance Corporation, dominated by officialdom and deprived of the spur of competition, is the proper agency for accomplishing this task. Mr. Bhagat's statement amounts to an impressive list of excuses for past shortcomings; but it is on achievements, not purely on handicaps, that the work of the Corporation will be judged.

RIGHTS ISSUE BY DUNLOPS

THE Dunlop Rubber Co. of India Ltd. has announced an attractive issue of ordinary rights shares. From investors' point of view, there are three main features to note. One is that the rights shares will be issued at a premium of Rs. 5 above the par value of Rs. 10 each (that is, at an aggregate price of Rs. 15 a share). The second is that the issue will be made in the proportion of seven new shares for every eight now held by stockholders. The third feature is that the company expects to maintain its ordinary dividend at 15 percent on the increased capital. The dividend seems to be reasonably covered by the present rate of earnings. During the year ended last December, Dunlop Rubber made a net profit of Rs. 1.02 crores. After the ordinary capital has been increased by the rights issue from the present Rs. 1.60 crores to Rs. 3 crores, a 15 percent dividend will involve a sum of Rs. 45 lakhs. That 15 percent dividend at the issue price of Rs. 15 for the new shares implies a yield of 10 percent, which is good in present market conditions. As has been known, in present market conditions, a share which will be the money raised from the rights shares will be spent on the construction of a new tyre factory in Madras. Dunlop Rubber is already expanding its existing undertaking, and earnings should increase further when the new factory begins production. An interim dividend of 7½ percent has been announced for the current year. This is expected to encourage shareholders in subscribing to the new issue.

CURRENT COIN

Technical Work for the Jobless.—The Central Labour Ministry proposes to introduce next year a scheme for vocational guidance and employment to counselling. The purpose of the scheme will be to persuade unemployed youth to take up technical rather than "white collar" jobs. The Ministry intends to equip nine employment exchanges in major cities and towns with "special sections", manned by trained officials; they will help job-seekers choose the most suitable occupations in the light of their aptitudes. Most job-seekers are comparatively young, an analysis of the age distribution of applicants registered with employment exchanges at the end of December 1956 shows that out of 758,503 applicants, no less than 305,104, or 40.2 percent, were 18 to 22 years of age. Another 203,275 were between 22 and 25 years, while those between 25 and 35 years numbered 153,425, or 20.3 percent. There are, of course, certain inherent limitations in these statistics, because all those who are unemployed are not registered as unemployed, and all those who are registered are not unemployed. But the preliminary report issued by the National Sample Survey has shown that the total of urban unemployed and under-employed was about 5 million. This report also confirms the general impression that most of the educated youth have a harder time finding work than the illiterate. The Labour Ministry views this trend with concern, and thinks it necessary to have vocational guidance sections in more employment exchanges so that by the end of the second plan there will be about 50 such sections in all. The exchanges will have suitably trained vocational guidance officers, who will make a special study of the psychological, social and economic problems of the applicants. The sponsors appreciate that the scheme, in its initial phases, will be of limited significance, for vocational guidance will be available to only those who apply and to the exchanges for employment assistance and are interested in taking up technical jobs. But it is stressed that the attention of the young unemployed should be diverted from clerical jobs to more gainful technical work. The Labour Ministry has already made an arrangement with the Ministry of Steel, Mines and Fuel for the supply of 3,000 trained workers for the three State steel plants every nine months during the next three years. A similar arrangement has been made for the heavy electrical equipment project.

Demand for Tinplate.—In his address at the recent annual general meeting of the Tinplate Fabricators Association, the chairman, Mr. B. N.

Kayan, says that the tinplate fabricating industry has "a great future ahead." Demand has been increasing steadily, as is evident from production and import figures. In 1953, the country consumed 79,200 tons of tinplate (of which 20,400 tons were imported). In 1954, demand fell to 74,300 tons (7,100 tons); but in 1955, it went up to 110,200 tons (40,000 tons) and in 1956 to 131,800 tons (60,100 tons). In spite of the rise in tinplate consumption, total demand in terms of cans amounted to only 8 million a year. How small this figure is can be judged from the fact that the U.K. consumes 2,285 million cans and the United States 19,200 million cans annually. Even Malaya uses 120 million cans a year. Mr. Kayan, however, feels that with the rise in the production of the industries which use tinplate containers, consumption is likely to grow at a quicker rate in future. According to the Planning Commission's estimates, by 1960-61 the demand for tinplate will have gone up to 150,000 tons and the installed capacity to 120,000 tons, leaving a gap of 30,000 tons to be met by imports. The fabricating industry could accept this as a basis for framing its future plans. But while the need for higher production has become increasingly obvious, the prospect of getting raw material supplies has become less certain. The industry had no difficulty in the past in obtaining all its raw material needs by importing freely. Now, with the foreign exchange scarcity, the Government is unlikely to adopt the same liberal import policy for tinplate. So Mr. Kayan urges it to take steps to ensure an adequate supply of the raw material, without which many units, mostly small or medium in size, will be faced with the problem of uneconomic production. One way of meeting the fabricators' requirements, he says, is so to regulate the distribution of indigenous tinplate that their demands are fully met. This calls for a revision of the existing basis of allotment, and Mr. Kayan hopes the Government will "extend all assistance to the industry."

Worries of Paint Producers.—The output of the organised sector of the paint industry has increased from 39,000 tons in 1955 to over 41,000 tons in 1956. The demand for paint products will rise further on account of the expansion programmes launched by the railways and by other industries. It is estimated that the use of paints, varnishes and enamels will increase by about 50 percent, that is, from about 40,000 tons in 1955-56 to 60,000 tons in 1960-61. Speaking at the annual general meeting of the Indian Paint Manufacturers Association, Mr. A. E. Faizullahbhai, president, has pointed out that the paint industry has been brought within the scope of the Industries (Development and Regulation) Act. One of the objectives in doing this is to utilise the idle capacity before fresh capacity is created. In spite of the increase in production, the industry still has a considerable amount of unutilised capacity. "In the circumstances, it is only reasonable to suggest that before further expansion is permitted, adequate facilities are given to the existing units to improve their production and to make better utilisation of their idle capacity." Since the excise duty was first imposed on paints and varnishes with effect from 1st March, 1955, manufacturers have been experiencing considerable difficulties. Mr. Faizullahbhai suggests that there should be a separate manual of excise rules for the paint industry and these should take into account its special problems. Producers have suffered greatly from the shortage of raw materials. Titanium dioxide is made by one unit only, which has a capacity of 1,800 tons a year; the supply is not only irregular but also costly. Mr. Faizullahbhai urges the Government to permit imports in sufficient quantities until indigenous production is able to meet the entire demand. Some paint manufacturers have long been complaining against the procedures adopted by the Government Test House; samples of paints are rejected on "rather test reports blocks finance and interrupts production. Mr. Faizullahbhai asks the authorities to be more sympathetic to producers, especially on the important question of testing. But there is no reason why standards should be relaxed; some manufacturers have still to learn that they owe consumers quality paints, and not just lucky mixtures of varying hues.

Outlook for British Exports.—A recent issue of the G.E.C. Export Guide indicates that favourable export prospects for British manufactured goods continue in many major overseas markets. Although the number of overseas markets where the outlook for British goods is "good" or "improving" remained the same since the end of last year, export prospects have changed in some important importing countries during the first quarter of 1957. Current export prospects in the 34 countries analysed in the Guide are as follows: "good" in 14 countries, "improving" in six, "deteriorating" in four, and "bad" in four. Prospects for individ-

al countries are: "Good"—Canada, the Federation of Rhodesia and Nyasaland, Ghana, Italy, Kenya, Malaya and Singapore, New Zealand, Nigeria, Norway, Switzerland, Trinidad, South Africa, Venezuela and Western Germany; "Improving"—Argentina, Australia, Belgium, Burma, Iraq and Russia; "Deteriorating"—Ceylon, Denmark, Finland, France, Hongkong, India, the Netherlands, Pakistan, Sweden and the United States; and "Bad"—Egypt, the Irish Republic, Portugal and Spain. Between January and March, 1957, trading opportunities have "improved" in Burma, Iraq and Russia, and are now "good" in Italy, Malaya and Singapore, Norway and Trinidad. They have "deteriorated" in Ceylon, India, Sweden and the United States, and are now "bad" in the Republic of Ireland, Portugal and Spain. A survey of Commonwealth trade over the past seven years—from 1950 to 1956—also appears in the same issue of the G.E.C. Export Guide and shows that the Dominions and the Colonies are still the largest single market for British goods. Although the value of British trade with the whole of the Commonwealth has risen from £1,064 million in 1950 to £1,483 million in 1956 (an increase of 40 percent) the proportion of British exports to all Commonwealth countries has declined in relation to total U.K. world exports from 47 percent to 45 percent during this period. Balance of payments problems on the one hand, and the growth of domestic industries on the other, are the two main factors in this decline. An interesting example of growing Commonwealth industrial strength—a factor of great importance in future trade relations—is that of Australia, which exported 2,000 locally-manufactured vehicles in 1956 to New Zealand—64 percent more than in 1955. Rising industrial activity in the Commonwealth implies that the composition of British exports to those countries will be undergoing a slow but consistent change in the years to come. Taking the Colonial territories alone, the Guide shows that their imports from the United Kingdom have risen both absolutely and relatively. The value of British exports to the Colonies rose from £248 million in 1950 to £430 million in 1956, and their share of U.K. world exports advanced from 11 percent to 14 percent. British exporters have done well in the Colonies, which continue to remain expanding markets. In three specially prepared and detailed tables, the Guide depicts: (a) the movement of British exports to the whole of the Commonwealth; (b) the export performance of six important groups of manufactured products; and (c) the export successes of six product groups of "new or expanded" industries.

THE FINANCES OF INDIA

THE full text of Sir James Westland's financial statement has now reached this country, and we are, therefore, in a position to undertake a somewhat more detailed criticism of the financial position of the Indian Government than was possible in the article on the Indian Budget in our issue of 20th March, based as it was on a mere telegraphic summary of the more salient features of the situation. The statement is, as usual, an exceedingly complicated production, and we think it is much to be regretted that Indian administrators, many of whom are wont to complain of the apathy and lack of interest displayed by their countrymen at home towards Indian matters in general, cannot devise some means of placing the Indian financial position before the public in a somewhat less complex, if not more attractive, form. The financial statement covers a period of three years. It deals in the first instance, with the closed accounts for the year 1955-56. The original estimates for that year anticipated a small surplus of Rs. 46,200. This, in the revised estimates, was raised to Rs. 951,400. The final accounts for the year, however, show, as was expected, a much better result, and close with an actual surplus of Rs. 1,534,000, after providing Rs. 1,750,000 for the cost of the Chitral Expedition, Rs. 1,000,000 for famine insurance and restoring contributions amounting to Rs. 405,000 forced upon Provincial Governments during the financial difficulties of the previous year. This satisfactory result was principally due to better exchange, which reduced the anticipated loss under that head during the year by close on Rs. 1,500,000, but also to a marked improvement under railways and other principal heads of revenue. It will thus be observed that when the year 1956-57 opened, there was every reason to believe that financial equilibrium had been restored, and that the Indian Government might confidently look forward to a period of considerable prosperity. It is, however, the unexpected which so frequently happens to upset human calculations, and these bright anticipations were unfortunately not destined to be realised. In place of the small surplus of Rs. 465,100 originally estimated, it is now expected that there will be a deficit of Rs. 1,986,900, or in other words, the position is worse than was anticipated a year ago by Rs. 2,450,000. This rapid and unexpected descent from a position of financial prosperity to one of considerable temporary embarrassment is, it is perhaps needless to remark, entirely due to the great calamities of famine and plague. The Budget estimates for the present year show a deficit of Rs. 2,464,000.

SOUTH EASTERN RAILWAY TENDERS

The General Manager, Garden Reach, Calcutta-23 invites sealed tenders for supply of the following materials:

1. Tender No. Con/GM/11/WP/1331/14/F2/57 for supply of 22700 ft. Rodding Point 1½" solid or tubular to IRS Drg. S.3635. Earnest money is Rs. 1000/-.
2. Tender No. Con/GM/12/WP/CE/6066/F1/57 for supply of 3032 Nos. of Glazed Indian Type closet—20" with foot rests. Earnest money is Rs. 1000/-.
3. Tender No. Con/GM/13/CE/F1/3/GA/57 for supply of 5000 Nos. Beaters wooden with handle. Earnest money is Rs. 1000/-.
4. Tender No. Con/GM/14/CM-2/346/34/HC/57 for supply of 2,80,000 ft. Casing and Capping 1½" as per CME's Drg. No. 3358A. Earnest money is Rs. 1000/-.
5. Tender No. Con/GM/15/CE(C)/WP/99/C/57 for supply of 1 No. Pneumatic Tyred Mobile Crane Diesel Elec : 10 tons—30 ft. boom. Earnest money is Rs. 1000/-.

Tender will be opened on June 6, 1957 at 12.00 hours.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs. 5/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Ry., Garden Reach, Calcutta by local firms.

The tenders should accompany a receipt from the Chief Cashier, S. E. Ry., Garden Reach, for depositing the amounts towards earnest money as above for each tender without which the tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs. 1000/- with the Controller of Stores need not pay the earnest money.

Firms not on this Railway's list of approved contractors must enclose a valid Income Tax clearance certificate with the tender.

PROBLEMS OF ECONOMIC DEVELOPMENT

HOW BOLIVIA LEARNT THE HARD WAY

(Published below is an extract from the latest monthly letter of the First National City Bank of New York, describing the evolution of economic policies in Bolivia. Its relevance to conditions in India suggests that it may be of considerable interest to other under-developed countries.)

PEOPLE everywhere share a common desire to increase their incomes and improve their standard of living. Governments, responding to these desires, try to formulate and carry out policies which will promote national economic growth and prosperity. Basic to the success of these efforts is the ingenuity, hard work and sacrifice of the citizen, reinforced by sound Government policies. But too often people and their Government are not content with the slow but surer process of development that comes from working and saving, and devoting the surplus over consumption to augmenting the capital resources essential to real gains in economic welfare. They seek short cuts, almost inevitably involving inflation through overstrained Government budgets and easy credit.

This attempt to do too much too fast, though by no means confined to the undeveloped countries, tends to be their besetting sin. With relatively low living standards and a growing awareness of the gap between their economic status and that of the more developed countries, they are eager to catch up. The main obstacle is lack of capital. Low productivity and the fact that the people live so close to a mere subsistence level, give little room for the internal savings needed to finance development. These countries must attract outside capital or their progress will be painfully slow. In such circumstances, the temptation to inflate becomes well-nigh irresistible. To make matters worse, political agitation against foreign capital has tended to dry up the only available large-scale capital source capable of translating national aspirations into reality.

Example of Bolivia

Bolivia provides a clear example of what happens when a country errs on both counts. In about four years, from 1952 to November 1956, the cost of living rose about 30 times. Its currency, the boliviano, declined in the free market from 190 to the dollar to as low as 13,000. The deteriorating currency created economic distortions; social unrest flared into public riots. Bolivia, in trying to check this disastrous inflation, is now reversing its past policies. Instead of budget deficits, cheap money and exchange and price controls, it is working towards budget balance, free markets, and money people can trust. Nationalisation schemes have been replaced by policies that encourage foreign investment. The past experience demonstrates to all countries the folly of scaring away outside capital and the futility of trying to hasten economic progress by pushing on the inflation pedal.

Bolivia, almost twice the size of France, has only about 3½ million inhabitants to France's 43 million. It has potential wealth in fertile land, hydro-electric power, forests and petroleum and other minerals. Despite all this, Bolivia is one of the poorest countries in Latin America. With internal capital formation low, Bolivia depended for its development on the investment of export surpluses and the inflow of foreign capital. In both respects, however, it has been in a weak position.

The country's exports, consisting up to 65 per cent of one commodity, tin, reflected the fluctuation of the world price of that metal. Furthermore, foreign currency derived from the sale of tin and a few minor metals had to pay for imports of mine equipment, most manufactured goods, and a third of food requirements. What little was left was usually retained abroad—and for a good reason: the political instability of the country. There have been some 178 revolutions in Bolivia's 132-year history. This also discouraged new foreign capital investment.

If Bolivia was to prosper and grow it would have to do many things: diversify exports, increase food output, develop a transportation system that would bring the various products of the country to the main consuming centres, raise the productivity of workers, and integrate its Indians—more than half of the total population—into the country's economic life.

Past Mistakes and Mismanagement

In 1952, the National Revolutionary Movement (MNR), a party with strong socialist leanings, took office and its leader, Victor Paz Estenssoro, became President. The MNR was well aware of the country's needs. In trying to satisfy them, however, it was impatient for progress and tried to move too fast. An agrarian reform was passed, giving farm plots to thousands of Indians and abolishing all compulsory labour, paid and unpaid, on large estates. But this sudden change found most of the Indian sharecroppers unprepared for responsibility as independent farmers. Social legislation setting wages, hours, benefits, and working conditions, made it almost impossible to discharge an unsatisfactory worker. Bolivia's misfortunes were blamed on the "Big Three" tin companies, which thereupon were nationalised. Instead of creating conditions favourable to foreign capital inflow, the reformists not only antagonised foreign capital but also scared much domestic capital out of the country.

Before long, Bolivia began to feel the effects of the MNR's decrees. The agrarian reform resulted in confusion, and marketable surpluses declined sharply. To avoid hardship, more and more foreign exchange earnings had to be shifted to pay for food imports. To aggravate matters, foreign exchange earnings contracted when a glut of tin in world markets led to a price decline. Moreover, the Government found it could not operate the tin mines as efficiently as their private owners had. While this was partly due to the exhaustion of the more profitable ore deposits, the main troubles were lack of proper maintenance, shortage of technicians and capital, and, above

all, lapse of discipline and low productivity of the miners. President Paz was quoted last spring as admitting that Government operation of the mines was a failure economically. The miners, he said, worked harder for the private owners than they did for the Government. Tin output, around 34,000 tons in 1951, the year before nationalisation, slipped to less than 26,000 tons by 1956.

Calculated Deficit Financing

To pay for over-ambitious development programmes—and to satisfy workers' demands for wage increases—the Government resorted to "calculated deficit financing." Money rolling off Government printing presses increased buying power without adding to the supply of available goods, so prices advanced. Extension of controls over the economy and manipulation of exports and imports brought little relief. Soaring prices touched off a flight from currency as people sought to get rid of money for goods and real estate. Since no one wanted to save, capital formation came to a halt. The situation would have deteriorated even more rapidly except for American aid extended at the annual rate of \$25 million, not counting indirect aid in the form of tin bought at above world prices. In the long run, however, efforts to slow down inflation with the help of food received from the U.S.A. served only to discharge local production and create absurd price relationships. This spurred smuggling and speculation.

By 1954, the disastrous efforts of the MNR policies sobered the more responsible leaders of the party. President Paz still maintained that some inflation was needed to "finance nationalisation of the tin mines and lay the ground work for the Government's effort to diversify the economy." But, he came out against any further nationalisation: "To those who demand the nationalisation of all industries, I say that it would be tantamount to nationalising misery.... Our policies of nationalisation are limited and our past actions have not established a pattern. We want the impelling force of foreign capital in our economy, and we want to establish a climate which will attract private capital in mining activities, in the oil fields, and in industries associated with agriculture."

The Government then set about trying to provide a climate favourable to the private investor. An investment guarantee was signed in the fall of 1955 which allowed American investors to convert earnings into dollars and protected them against loss of capital through expropriation. A new petroleum exploration code was drawn up so as to attract foreign oil companies. Prices continued to climb, however, because of the indulgence of inflation by the Paz Government. In the first 11 months of 1956, the cost of living index soared more than 230 per cent.

Reforming the Reformers

When Bolivia's present leader, President Hernan Siles Zuazo, took over last fall he recognised that deterioration of the currency was the country's biggest problem. In his inaugural address he warned: "Inflation is a fire that is burning down our house.... But do not expect to saunter out of the house wearing a new suit and smoking a cigarette. We will be lucky to get out at all.... Unless inflation is checked the country will evolve into an inept rightist dictatorship or a chaotic regime headed by Trotskyite or Stalinist Communists."

Although placed in power by the MNR, the new President has reversed that party's economic theories. The Central Bank has been ordered to stop issuing new currency. All price controls and food subsidies have been scrapped. Striking unions, for the first time since 1952, have found that the Government is not taking their side against employers in unreasonable wage demands. This point was dramatised a few months ago when President Siles went on a hunger strike to induce miners, who were demanding higher wages, to go back to work. All trade and exchange restrictions have been removed and a single fluctuating exchange rate has been established in place of the previous multiple rates. To help with currency stabilisation, the International Monetary Fund, the U.S. Treasury, and the International Co-operation Administration have granted Bolivia credit lines totaling \$25 million. Since establishment of the single exchange rate, the boliviano has fluctuated around 7,500 to the dollar.

Currently, the reform involves adjustment of wages and salaries, after which they are to be frozen for one year. An increase in rents, frozen for the past 10 years, has been permitted. During the next phase, the Government hopes to balance its budget and revise its tax system. It has also announced plans to begin repayment on dollar bonds that went into default in 1931 and thus to rebuild the creditworthiness of Bolivia abroad.

A Courageous Policy

President Siles, in cutting away controls, keeping a tight rein on Government-created credit, and trying to get the country to live within its means, is laying a sound base on which Bolivia can build. It took courage to institute these policies. It will take more courage to continue them in the face of pressures from those who would risk the chaos resulting from a complete breakdown of the currency rather than work hard and accept the sacrifices that are necessary because of previous excesses. Given continuation of sound policies, and patience on the part of the people, so they won't expect miracles overnight, Bolivia now has the opportunity to demonstrate its recuperative powers and make economic progress.

Finance in India and Abroad

THE BUDGET ESTIMATES

SURPLUS WITH FRESH TAXES

PUBLISHED below is a summary of the Budget and revised estimates for 1956-57, and the Budget estimates for 1957-58.

	REVENUE		
	Budget 1956-57	Revised 1956-57	Budget 1957-58
Customs	1,50.00	1,71.00	1,62.00
Union Excise Duties	1,70.35	1,88.73	2,09.43
Corporation Tax	48.24	48.24	50.50

THE WEALTH TAX RATES FOR COMPANIES AND INDIVIDUALS

THE object of the Wealth Tax Bill, 1957, is to impose an annual tax on the net wealth of individuals, Hindu undivided families and companies. The proposed tax is an important constituent of an integrated tax structure which the Government has been aiming at for some time. With income-tax, estate duty and a tax on capital gains already in existence, and with the addition of the wealth tax and a tax on large personal expenditures (separately being proposed) the direct taxes will form a composite system made up of complementary elements. Apart from the fact that a composite tax system of this type helps to satisfy the criterion of the ability to pay, according to the statement of objects and reasons attached to the Bill, it is consistent with the avowed goal of the attainment of a socialistic pattern of society.

The following are extracts from the Wealth Tax Bill:

Charge of Wealth Tax and Assets

Subject to the other provisions contained in the Act, there shall be charged for every financial year commencing on and from 1st April, 1957, a net wealth on the corresponding valuation date of every individual, Hindu undivided family and company at the rate or rates specified in the Schedule.

(1) In computing the net wealth of an individual, there shall be included:

(a) the value of assets which on the valuation date are held:

(i) by his wife to whom such assets have been transferred by the individual, directly or indirectly, otherwise than for adequate consideration or in connection with an agreement to live separately, or

(ii) by a minor child not being a married daughter to whom such assets have been transferred

by the individual otherwise than for adequate consideration, or

(iii) by a person or association of persons to whom such assets have been transferred by the individual otherwise than for adequate consideration for the benefit of the individual or his wife or minor child, or

(iv) by a person or association of persons to whom such assets have been transferred by the individual otherwise than under an irrevocable transfer:

(b) where the assessee is a partner in a firm or a member of an association of individuals, the value of his interest in the assets of the firm or association determined in the prescribed manner. (2) Where the value of any assets is to be included in the net wealth of an assessee in accordance with clause (a) of sub-section (1), there shall be deducted from such value any debts owing on the valuation date by the transferee mentioned in that sub-section in so far as such debts are referable to the assets.

Exemptions on Certain Assets

Wealth tax shall not be payable by an assessee on:

(i) any property held by him under trust or other legal obligation for religious or charitable purposes within India;

(ii) the interest of the assessee in the coparcenary property of any Hindu undivided family of which he is a member;

(iii) any works of art, archaeological, scientific or art collections, books, manuscripts or heirlooms belonging to the assessee and not intended for sale;

(iv) the right of the assessee to receive a pension or other life annuity for past service under an employer;

(v) the rights under any patent or copyright belonging to the assessee;

Provided that they are not held by him as assets of a business, profession or vocation and no income or benefit accrues to him therefrom:

(vi) domestic animals and furniture, household utensils, wearing apparel, jewellery, provisions and other articles intended for the personal or household use of the assessee, subject to a maximum of Rs. 25,000 in value;

(vii) the right or interest of the assessee in any policy of insurance before the monies covered by the policies actually become due and payable to the assessee;

(viii) the tools and instruments necessary to enable the assessee to carry on his profession or vocation, subject to a maximum of Rs. 2,500 in value;

(ix) ten-year Treasury savings deposit certificates 15-year annuity certificates deposits in post office savings banks, post office cash certificates and post office national savings certificates held by the assessee;

(x) any deposit made by the assessee with the Government or in any security of the Government or of a local authority not specified in clause (ix) which the Central Government may, by notification in the official Gazette, exempt from wealth tax;

Provided that the value of any deposit or security so exempted shall be included in computing the net wealth of an assessee;

(xi) the amount standing to the credit of an assessee, being a salaried employee, in any provident fund maintained by his employer to which the Provident Funds Act, 1925, applies or which is a recognised provident fund within the meaning of Chapter IXA of the Income-tax Act;

(xii) the property received by an assessee from the Government in pursuance of any gallantry award instituted or approved by the Central Government.

Exclusion of Assets

In computing the net wealth of an individual who is not a citizen of India on the valuation date, or of a Hindu undivided family, or company not resident in India during the year ending on the valuation date, the value of the assets and debts located outside India shall not be taken into account.

Explanation I.—A Hindu undivided family shall be deemed to be resident in India during the year ending on the valuation date in all cases except where the control and management of its affairs during that year is situated wholly without India.

Explanation II.—A company shall be deemed to be resident in India during the year ending on the valuation date if during that year the control and management of its affairs is situated wholly in India.

The value of any asset, other than cash, for the purposes of this Act shall be estimated to be the price which in the opinion of the Wealth Tax Officer it would fetch if sold in the open market on the valuation date.

(2) Notwithstanding anything contained in sub-section (1)—

(a) where the assessee is carrying on a business for which accounts are maintained by him regularly, the Wealth Tax Officer may, instead of determining separately the value of each asset held by the assessee in such business, determine the net value of the assets of the business as a whole having regard to the balance-sheet of such business as on the valuation date and making such

adjustments therein as the circumstances of the case may require.

(b) where the assessee carrying on the business is a company not resident in India and a computation in accordance with clause (a) cannot be made by reason of the absence of any separate balance-sheet drawn up for the affairs of such business in India, the Wealth Tax Officer may take the net value of the assets of the business in India to be that proportion of the net value of the assets of the business as a whole wherever carried on determined as aforesaid as the income arising from the business in India during the year ending with the valuation date bears to the aggregate income from the business wherever arising during that year.

Schedule of Rates

PART I

(a) In the case of every individual:

(i) on the first Rs. 2 lakhs of net wealth Nil.

(ii) on the next Rs. 10 lakhs of net wealth 1 per cent.

(iii) on the next Rs. 10 lakhs of net wealth 1 per cent.

(iv) on the balance of net wealth 1½ per cent.

(b) In the case of every Hindu undivided family:

(i) on the first Rs. 3 lakhs of net wealth Nil.

(ii) on the next Rs. 10 lakhs of net wealth 1 per cent.

(iii) on the next Rs. 10 lakhs of net wealth 1 per cent.

(iv) on the balance of net wealth 1½ per cent.

PART II

In the case of every company:

(i) on the first Rs. 5 lakhs of net wealth Nil.

(ii) on the balance of net wealth 1 per cent.

Rule 1.—Where the net wealth of an assessee includes the value of any asset on which wealth tax is not payable, the amount of tax payable by the assessee shall be an amount bearing to the total amount of wealth tax which would have been payable on the net wealth had no property been exempt the same proportion as the unexempted portion of net wealth bears to the net wealth.

Rule 2.—Where the net wealth of an assessee, not being a company, in any assessment year includes the value of any shares in a private company as defined in Section 3 of the Companies Act, 1956, the wealth tax payable by the assessee on his net wealth for that assessment year, computed in accordance with the rates, specified above, shall be reduced by the amount, if any, by which the sum of the following, namely:

(a) that portion of the wealth tax payable by the assessee computed as aforesaid as bears to the whole amount of the tax, the same proportion as the value of the shares aforesaid included in his net wealth bears to his net wealth,

(b) that portion of the wealth tax, if any, paid by the company in the same assessment year, as bears to the whole amount of the said tax, the same proportion as the paid-up value of the shares included in the assessment of the assessee aforesaid bears to the aggregate paid-up value of the share capital of the company as on the relevant valuation date,

exceeds the amount calculated at the rate of 1.5 per cent on the value of the shares included in his net wealth.

THE EXPENDITURE TAX

RATES OF LEVY AND EXEMPTIONS

IN the Statements of Objects and Reasons the Central Finance Minister, Mr. T. T. Krishnamachari says that the object of the Expenditure Tax Bill is to impose an annual tax on personal expenditure, above a prescribed level, of individuals and Hindu undivided families. Such a tax, in addition to being a deterrent to excessive personal expenditure and an incentive for savings, also forms a significant part of an integrated tax structure, he states.

The following are extracts from the Bill:

Subject to the other provisions contained in the Act, there shall be charged for every financial year commencing on and from 1st April, 1958, a tax (hereinafter referred to as expenditure tax) at the rate or rates specified in the Schedule on the expenditure incurred by any individual or Hindu undivided family in the previous year:

Provided that no expenditure tax shall be payable by an assessee for any assessment year if his total income under the Income-tax Act during the previous year does not exceed Rs. 60,000.

In computing the expenditure liable to tax under the Act, the following amounts shall be included, namely, any expenditure incurred, whether directly or indirectly, by a person other than the assessee in any obligation or personal requirement of the assessee or any of his dependants which, but for the expenditure having been incurred by that other person, would have been incurred by the assessee.

Exemptions

No expenditure tax shall be payable under the Act for any such expenditure as is referred to in the following clauses, which has been incurred by the assessee namely:

(a) any expenditure, whether in the nature of current expenditure or capital expenditure, in-

curred by the assessee wholly and exclusively for the purposes of the business, profession, vocation or occupation carried on by him, but not including any personal expenditure:

(b) any expenditure incurred in the acquisition or construction of any immovable property;

(c) any expenditure incurred by way of investment in current and fixed deposits, loans, shares and securities;

(d) any expenditure incurred by way of contribution as capital to a firm or other association of persons in consideration of a share in the profits of the firm or association;

(e) any expenditure incurred by way of repayment of any loan or other borrowing;

(f) any expenditure incurred for any gift, donation or settlement on trust or otherwise for the benefit of any other person;

(g) any expenditure incurred for paying premiums against any policies of insurance on the life of the assessee or of any of his dependants or for any health, accident or disability policies of insurance;

(h) any expenditure incurred by way of contributions to a provident, thrift or superannuation fund;

(i) any expenditure incurred by an assessee, who is not a citizen of India, outside India from any income or capital, accrued or realised outside India.

Where any expenditure is not wholly and exclusively incurred for any of the purposes specified above, the provisions of that sub-section shall apply to so much of that expenditure as is reasonably attributable to any such purpose.

Deductions

In computing the taxable expenditure, the following deductions and allowances shall be made, namely:

(a) any taxes including the expenditure tax payable under this Act duties, cesses or fees paid to the Government or a local authority, but not including—

(i) taxes or fees for any conveyance or other movable asset intended for the personal use of the assessee or any of his dependants;

(ii) customs duties on articles imported for the personal use of the assessee or any of his dependants;

(iii) any fine or penalty for an offence under any law relating to the levy of taxes, duties, cesses or fees;

(b) any expenditure incurred by the assessee for the marriage of any of his dependants, to the extent of Rs. 5,000 for each such dependant;

(c) four-fifths of any expenditure incurred by way of capital expenditure on the purchase of jewellery, ornaments, works of art, furniture and other household goods, motor cars and other conveyances or any other article for the personal use of the assessee or any of his dependants;

Provided that where a deduction as aforesaid is made, one-fifth of the said capital expenditure shall be deemed to be incurred by the assessee in each of the four years succeeding the previous year in which the expenditure was actually incurred, and no deduction shall be made under this clause in the assessment for any succeeding year for the expenditure so deemed to have been incurred in any earlier year;

(d) a basic allowance of Rs. 24,000 and a further allowance, if claimed, of Rs. 5,000 for each dependant;

TENDERS

The Controller of Stores, Garden Reach, Calcutta-23, invites tender No. CS/1/PC/57/WS/306/A/CB4 for supply of 50 Cwts Bar Round Phosphor Bronze Hollow (Cast) 3" x 1" x 12" to I.R.S. Spec. No. N6—Class I. Supply to be inspected and passed by the Director of Inspection. Tender forms are obtainable from his office on remittance of Rs. 2/- per copy (not refundable) by Money Order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, Garden Reach by local firms. Closing date is 14th June, 1957 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

A sum of Rs. 400/- as earnest money to be deposited with the Chief Cashier, Garden Reach and the receipt to be attached with the tender.

Provided that the allowance under this clause for any dependant shall be reduced by the amount, if any, of the separate income of such dependant, but so as not to exceed Rs. 5,000 in any case;

Provided further that where any expenditure claimed by any individual as having been incurred for any of his dependants has been allowed as a deduction from his taxable expenditure, the allowance permissible under this clause in the case of a Hindu undivided family, of which the dependant is a coparcener, shall be Rs. 2,000.

Schedule of Rates

In the case of every individual and Hindu undivided family, on that portion of the taxable expenditure, the rates shall be as follows:

(i) which does not exceed Rs. 10,000: 10 percent.
(ii) which exceeds Rs. 10,000, but does not exceed Rs. 20,000: 20 percent.

(iii) which exceeds Rs. 20,000 but does not exceed Rs. 30,000: 40 percent.

(iv) which exceeds Rs. 30,000 but does not exceed Rs. 40,000: 60 percent.

(v) which exceeds Rs. 40,000 but does not exceed Rs. 50,000: 80 percent.

(vi) which exceeds Rs. 50,000; 100 percent.

THE CALCUTTA MONEY MARKET

UPWARD TREND IN ADVANCES CONTINUES

Wednesday, 22nd May.

ADVANCES have risen slightly in the Calcutta money market during the past week. With the inflow of grains and seeds into the trading centres, accommodation for them has risen. Sugar credit remains around the previous levels. But in the case of jute and cotton, advances have decreased, substantially for the former. There has been more demand for funds in the interbank market but the supply has been fairly adequate, so the call rate is unchanged at 3½ percent.

The feature of the exchange market has been the strong demand for forward remittance cover by importers. Bills have been few. There were some on account of tea shipments and a few odd ones relating to gunny and shellac. Sterling is steady against the dollar. But it has weakened in relation to Continental currencies, reportedly on seasonal demand.

Bullion firmed up on strong spot demand following the proposed taxes on wealth and expenditure. Gold soared to Rs. 112 and silver to Rs. 183-12. Imports of Tibetan coins, it was reported, declined.

During the week ended 17th May, Government of India Treasury bills for Rs. 8,80,25,000 were sold in favour of the Reserve Bank.

A decline of Rs. 5.13 crores to Rs. 1,590.23 crores in active notes was the outstanding feature of the return of the Reserve Bank of India for the week ended 17th May, 1957. The total note issue was Rs. 17 lakhs higher at Rs. 1,605.40 crores. Notes held in the Banking Department consequently increased by Rs. 5.30 crores to Rs. 15.17 crores. Deposits of the Government of India declined by Rs. 5.05 crores to Rs. 49.87 crores while other Government accounts were Rs. 97 lakhs higher at Rs. 3.08 crores. Balances of commercial banks, at Rs. 62.55 crores, showed an increase of Rs. 2.89 crores. Balances held abroad fell by Rs. 9 crores to Rs. 65.07 crores, but investments improved by Rs. 1.40 crores to Rs. 127.30 crores. Other loans and advances increased from Rs. 113.71 crores to Rs. 119.73 crores, of which advances to scheduled banks against advance bills amounted to Rs. 63.29 crores, against Rs. 62.24 crores. Ways and means advances to Governments stood at Rs. 20.69 crores (Rs. 19.23 crores).

The return of the State Bank of India for the week ended 10th May, 1957, shows an increase of Rs. 3.86 crores in total deposits to Rs. 300.82 crores. Investments in Government securities are up by Rs. 6 lakhs to Rs. 94.12 crores, while other authorised investments remain unchanged at Rs. 11.30 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 5.18 crores to Rs. 193.10 crores. Cash and balances are, in consequence shown at Rs. 20.17 crores, or Rs. 3.90 crores less.

The statement of the position of scheduled banks for the week ended 10th May, 1957, shows Demand and Time liabilities at Rs. 719.51 crores (Rs. 11.86 crores on account of borrowings from banks) and Rs. 517.24 crores (Rs. 3.12 crores), compared with Rs. 721.79 crores (Rs. 10.96 crores) and Rs. 505.03 crores (Rs. 3.04 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have decreased by Rs. 86 lakhs and Rs. 3.25 crores to Rs. 38.10 crores and Rs. 61.40 crores, respectively. There is a drop of Rs. 41 lakhs in investments to Rs. 344.06 crores. Advances and bills discounted, at Rs. 935.89 crores, show a rise of Rs. 12.28 crores. The ratios to total liabilities of cash and balances are, in consequence shown at 8.1 percent and 75.7 percent, against 8.4 percent and 75.3 percent.

Stocks and Shares

BUDGET HANGOVER DEPRESSES MARKET SENTIMENT

ANXIETY ABOUT CORPORATE TAXES: DUNLOPS ANNOUNCE RIGHTS ISSUE AND INTERIM DIVIDEND

Wednesday Evening.

THOUGHTS in the stock market during the past week have remained centred on the Central Budget presented by the Finance Minister. Mr. T. T. Krishnamachari, last Wednesday. On the whole, the reaction to the Budget remains strongly adverse. A slight improvement in prices took place last week, partly because the Stock Exchange authorities enforced a special clearing and then fixed a margin of Rs. 3 a share to be paid as deposit for selling Indian Irons. This recovery also owed something to the view that the tax reliefs for certain classes of personal income and the lowering of the dividend supertax rates would be helpful.

The requirement about depositing Rs. 3 as margin has been withdrawn today. Indian Irons have subsequently fallen, although this may be due partly to fears of payment difficulties concerning the last clearing in Bombay.

The value of the tax reliefs is now considered to be very little. It is felt that the ability to invest will be greatly undermined by the expenditure tax and the wealth tax. A sharp increase is also thought to be likely in the taxes companies will have to pay.

Dunlop Rubber has announced a rights issue. It is offering rights shares in the proportion of seven for eight held at a premium of Rs. 5 above the par value of Rs. 10 a share. An interim dividend of 7½ percent for the current year has also been announced. It is hoped that the total dividend of 15 percent will be maintained on the increased capital.

The excise duties have hit particular categories of shares. Papers have declined and sugars have become dull. Tea investors are disturbed by the increase in the excise duty on that commodity. Details of the week's trading follow.

During the early part of the past week, the Government securities market ruled weak. Prices of medium and long-dated loans were marked back under heavy selling pressure. Later the Reserve Bank appeared as a buyer of 3% Conversion Loan 1966 at the old rate of Rs. 73 and the market quickly stabilised with a noticeable improvement in prices. The 3% Conversion Loan, after drifting from Rs. 74.20 to Rs. 73, closed better at Rs. 73.40. Short-dated loans were unaffected by the Bank rate change and the enquiry continued at Rs. 99.75 and Rs. 99.65, respectively; 3% 1959-61 was traded around Rs. 97.75, while 2½% 1961 was steady at Rs. 93.50 and 2½% 1960 was in demand at around Rs. 96.45. The 3½% 1961 was initially marked back to Rs. 99.25, but closed steadier at Rs. 99.50. In medium-dated loans, 2½% 1962 had recovered later to Rs. 93.94. Both 3½% 1964 and at the close to Rs. 98.20 to Rs. 98 but recovered at the close to Rs. 98.25. The 3½% 1967 were marked back to Rs. 98.35 but closed better at Rs. 98.40. Among long-dated loans, the pattern of trading 1966-68, after being marked down to Rs. 91.75, closed better at Rs. 91.87 and 3% 1970-75 recovered from Rs. 86.75 to Rs. 86.90. The 3½% 1974 was also steady at Rs. 98.45. State loans remained dull and trading was restricted. Both 4% Madras and U.P. issues continued to meet with selling pressure and prices eased to Rs. 96.75 and Rs. 97.45, respectively.

Business in preference shares was on a very small scale due to lack of interest. In jute, the only share dealt in was Budge Budge around Rs. 98. Among the miscellaneous group, Birds Investment at Rs. 84.50, British Ceylon were taken at Rs. 9.07 and Indian Iron at Rs. 99. Burn 6% changed Dunlop Rubber second were marked around Rs. 88 and British India Corporation at Rs. 121. Gilanders Arbuthnot were placed at Rs. 20 and Shaw Wallace around Rs. 68.

In the banking section, the feature was Punjab National Bank which spurted from Rs. 52 to Rs. 55; today, however, the shares reacted to Rs. 53. United Commercial were fractionally better at Rs. 54. Business was reported in United Bank of India "A" shares at Rs. 6.50 and in the "D" shares at Rs. 4.25.

The only share dealt in in the railway section was Delhi-Rohas around Rs. 10.25.

Cotton shares were devoid of interest. Bowreah were depressed at Rs. 111 and Kesoram were marked down from Rs. 13.50 to Rs. 13.25. Jayshree Textiles were easier at Rs. 5.50, as were New Victoria at Rs. 1.69.

In coal, Bengal were better at Rs. 215 while Burraukur were shaded at Rs. 22. Central India were easier at Rs. 5.81, as were Western Bengal at Rs. 5.19. The outstanding feature was Union, which on interested buying improved further from Rs. 15.25 to Rs. 17. Equitable were quoted lower at Rs. 24, though no actual business was reported.

Jute shares continued to suffer from lack of interest, and prices generally tended to lower levels. Here is a chart showing representative price movements:

	Opening Prices on 16th May, 1957.	Closing Prices on 22nd May, 1957.
Barnagore	Rs. 88	87
Howrah	15.06	13.75
Kamarhaty	94	87
National	20	19.25
New Central	12.31	11.37
Ganges	49	47

Calcutta Electric was the only share which was transacted in the electric supply section around Rs. 12.50.

Sugar shares were practically unchanged. Carew improved from Rs. 7.25 to Rs. 7.31 but Champaran eased from Rs. 17.75 to Rs. 17. Balram-pore were easier at Rs. 6 and Dyer Meakin Breweries were lower at Rs. 6.12.

In the engineering section, Indian Iron recovered from Rs. 16.75 to Rs. 17.90, but reacted again at the close to Rs. 17.48. Jessop rallied from Rs. 22.25 to Rs. 24.87, to close tonight at Rs. 24. Richardson and Cruddas were quiet around Rs. 15.37. Textile Machinery were at one time sold down to Rs. 16.70, but recovered at the close to Rs. 17.05. Guest, Keen, Williams were fairly steady around Rs. 26.19 as were Braithwaite at Rs. 25.

Paper shares were dull following the increase in the excise duty on paper in last week's Budget and Orient Paper were hammered down to Rs. 25.60. India Paper Pulp were quiet at Rs. 20.75, as were Sirpur at Rs. 8.50. Titagur recovered slightly from Rs. 32.87 to Rs. 33.37.

In cement, Sone Valley were unchanged at Rs. 6, while Jaipur Udyog eased to Rs. 11.81. Dalmia

were unchanged at Rs. 11.50 as were A.B. Cement at Rs. 5.50.

In insurance, Ruby General were crossed at Rs. 5.56 and Standard General recorded business at Rs. 5.12. In shipping, India Steamship receded from Rs. 9.81 to Rs. 9.75. India General Navigation were unchanged at Rs. 66, as were Port Shipping at Rs. 16.37 and Calcutta Landing at Rs. 12.25.

Among miscellaneous industrials, there was some enquiry for Alkali and Chemical, with the price improving from Rs. 11.50 to Rs. 11.87. Anglo Brothers were slightly better at Rs. 17.75, while Balmer Lawrie were unchanged at Rs. 145. Bengal Flour receded from Rs. 26 to Rs. 25.50, but Dunlop Rubber were steady at Rs. 23.75, as were Imperial Tobacco at Rs. 14.06 and Indian Aluminium at Rs. 12.81. Indian Cables were neglected at Rs. 23, while Indian Rubber Manufacturers and Indo-Burma Petroleum were maintained at Rs. 27 and Rs. 28 respectively. Jardine Henderson recovered from Rs. 73 to Rs. 76. Martin Burn were quiet at Rs. 22.69. National Insulated Cables were better at Rs. 19.25 and Rallis were steady at Rs. 34, as were Rohtas Industries, which improved from Rs. 17.25 to Rs. 17.37. Shaw Wallace were lower at Rs. 11.25.

In the mining section, Burma Mines were slightly easier at Rs. 2.36 while Indian Copper recovered from Rs. 3.20 to Rs. 3.47; profit-taking at the close, however, brought the price down to Rs. 3.30. Western Stockholders were marked down from 88 nP to 82 nP.

Tea shares moved in sympathy with the rest of the market and in the absence of enquiry prices tended to sag, despite the excellent interim dividend announcements by a number of tea companies in the McLeod group. Here is a chart showing

ing price movements of a representative list of shares:

	Opening Prices on 16th May, 1957.	Closing Prices on 22nd May, 1957.
Bishnauth	19	18.50
Brooke Bond	17.75	16.81
Hantapara	160	157
Hasimara	24	23.50
Tezpur	19	18.50

The DUNLOP RUBBER COMPANY LTD. (ENGLAND) has earned a net profit, after taxation provision, of £1,943,591 during 1956, against £2,857,531. The ordinary dividend is reduced from 14 percent to 10 percent, including an interim of 2½ percent. General reserve is allocated £380,000 (£650,000). The carry-forward is £1,501,980, against £1,498,496 brought in.

The NATIONAL CARBON COMPANY (INDIA) LTD. has made a net profit of Rs. 90,42,717 for the year ended 25th December, 1956, before providing for taxation, against Rs. 86,82 lakhs. The final dividend has been declared at 7½ percent, making 15 percent for the year. The estimated taxation liability is Rs. 84 lakhs. The zinc rolling mill of the Metals and Ores Company, a division of the National Carbon Company (India) Limited, was completed in Alipore, Calcutta, and inaugurated on 23rd August, 1956. During 1956, in four months of operation, 245 tons of zinc were processed; by the end of the year production had reached the rated level. The mill is operating satisfactorily and it is expected that rated output will be maintained throughout 1957. Capital expenditure for the construction of new production facilities and expansion and modernisation of the existing facilities

amounted to Rs. 44,35,377 for the year. It is expected that capital expenditure in 1957 will be appreciably higher than in 1956 due primarily to the cost of constructing the flashlight case factory and the chemical plant.

Providing Rs. 3.91 lakhs (Rs. 4.82 lakhs) for depreciation, Rs. 26.93 lakhs (Rs. 28.90 lakhs) for taxation, bringing in Rs. 77,112 and transferring Rs. 5 lakhs from general reserve, there is a balance of Rs. 23,25,807 for the INDO-BURMA PETROLEUM COMPANY for the year ended last December. The final ordinary dividend has been declared at Re. 1 a share, making Rs. 2 a share for the year. The directors carry-forward is Rs. 67,682. The directors' report that during the year under report, with the consent of the Government, the company entered into a joint venture with Steel Brothers and Co. Ltd. to prospect for oil in England. Two wells have been drilled in Lancashire, which failed to prove oil or gas in commercial quantities and were abandoned. The company's share of expenditure on this account was Rs. 5,93,030. Preparations are now in hand to test another structure which is considered to have reasonable prospects.

VT. 5140

during the past week and fluctuations varied according to rumours about how they might be modified. Irregular fluctuations took place, especially in the speculative stocks. There was a temporary recovery due to short-covering, but prices eased again when it was believed that the Finance Minister was unlikely to make any substantial modification in his proposals. Towards the close, there were some substantial improvements on buying by the Life Insurance Corporation. Bombay Dyeing, in particular, received attention. The undertone, nevertheless, remained hesitant since operators thought that credit would become more expensive in coming months as a result of the increase in Bank rate from 3½ to 4 percent.

Tata Steels closed at Rs. 153.25 and Indian Irons improved to Rs. 17.40 on support from Calcutta interests. The imposition of margins on sellers in the latter scrip, although withdrawn on Wednesday, it was believed, improved the technical position substantially. Tata Locomotive reacted to Rs. 142 after a temporary rise on hopes of expansion. Alcock Ashdown were freely offered at Rs. 243.75 and Premier Construction lacked support at Rs. 140.50. There was little interest in automobile shares, and Premier automobiles were bought at Rs. 86.25. Hindustan Motors were sold down to Rs. 6.75.

Fluctuations in the mill group were irregular. Bombay Dyeing recovered to Rs. 517.50 on sustained support from knowledgeable quarters, but Kohinoors were depressed at Rs. 296.50. Century were sold at Rs. 395 and Simplex at Rs. 161. Swadeshi slumped to Rs. 187, as the chairman of the company referred to the uncertain outlook for the industry in his address at the annual general meeting. India United Ordinary fell to Rs. 9.55.

Miscellaneous shares moved in line with the general trend. Sugar shares declined, Belapur falling to Rs. 218 on the belief that a substantial portion of the increased excise duty would fall on the industry itself. The effect of the higher excise duty on cement was softened by the raising of the selling price of the commodity. Associated Cement were transacted at Rs. 149.50 and Digvijay came to hand at Rs. 145.25. Steamship company shares were steady at lower levels, and Scindia Shipping were dealt in at Rs. 17.10. Great Eastern Shipping were taken at Rs. 18.40. In mining shares, Indian Copper retreated to Rs. 3.30 after being higher on the expectation of a satisfactory final dividend. Shri Rajpur Syndicate were quoted at Rs. 77. Bombay-Burmah declined to Rs. 514 on long liquidation, and National Rayon were lower at Rs. 211. Wimco declined to Rs. 159.50 on the proposal for an increased excise duty on matches.

Banking shares were quietly steady and prices were more or less unchanged. Insurance shares lacked support and prices tended to decline further.

Electricity supply undertakings improved fractionally as the standard return has been increased by ½ percent to 6 percent following the increase in Bank rate. Ahmedabad Electric came to hand at Rs. 92 and Tata Power were transacted at Rs. 121.5.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations, Quotations for the Corresponding Closing Date a Year Ago, the last-named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paisa].

FIRM TONE IN STOCK MARKETS OIL SHARES RISE: FALL IN GILT-EDGED

London, 22nd May.

THE stock markets maintained a generally firm tone last week, but buying was selective and the level of business was somewhat below that of the previous week. Nevertheless, there was a fair amount of activity in several sections. Many good features developed among industrials which were favourably influenced by good company news, but the widening of the overseas trade gap in April and the weakness of sterling were adverse factors. Widespread and substantial gains were recorded in oil shares with activity stimulated by the abolition of petrol rationing, the apparent improvement in the Middle East situation and the excellent results of Shell Trinidad. A notable exception to the generally firm tone was the weakness of gilt-edged securities, which suffered some sharp decline, the main adverse factor being fading hopes of the possibility of an early reduction in Bank rate. New issue activity and the knowledge that there are many more new issues on the way, as also the weakness of sterling, contributed to the downward movement. Insurance shares declined under the influence of the Labour Party's pension plan, but banks improved following the Westminster Bank's capital scheme and higher dividend forecast. Foreign bonds and rails attracted very little attention, while dollar stocks fluctuated with Wall Street, but were mostly higher on balance. South African gold shares were quiet, but fairly well maintained while similar conditions prevailed in base metals. Many good features developed among rubber shares mainly on bids or hopes of eastern buying. Rubber Trust eased following their results, and Riverview lost ground due to a disappointing dividend. Tea shares were irregular. Travancore, Southern India and Kanan Devan eased on the nationalisation threat, and other Indian issues showed occasional recession following the Indian Budget proposals.

The Money Market

Difficult conditions persisted in the money market during last week, with the supply of funds on most days falling short of market requirements. Only on one day was the market able to proceed without official assistance and at midweek, two or three houses had to borrow a small amount from the Bank of England on Bank rate terms. The disbursement of Government departmental money did little to relieve the situation, and tight conditions remained up to the end of the week. More often than not, the rate for loans was 3½ percent, with some loans obtainable at 3¼ percent during less difficult periods. Business in bills was restricted due to the tightness of money. At last Friday's tender, the average rate for Treasury bills came out slightly higher at £3 16s 7½d percent.

Activity on Wall Street

Long-term U.S. Government obligations moved irregularly last week. Early in the period, prices sagged to within a striking distance of the January lows, reflecting rumours that the Treasury was about to issue new long-term securities in exchange for the maturing savings bonds. However, the market subsequently reversed its trend following the news that the Treasury had decided to "postpone indefinitely" any new long-term offering to holders of maturing bonds. Investment quality corporates firmed with the Treasury list. Rails continued mixed, while convertibles were mostly higher with the stock market. Foreign dollar bonds were slightly more active with the trend mixed. Most German Nationals showed only fractional changes. Italians and Danmarks 4½ percents moved irregularly, while Norwegians were unchanged to a shade higher. Australian and Japanese issues were unchanged to fractional. Union of South Africa 4½ percents were up nearly a point to equal the year's low of \$2. Brazilians were firm in the South American list with gains of 2 points, while Chile 3 percents were unchanged at \$43.

Hongkong Gold Quiet

Trading on the Hongkong gold market last week was the quietest for some time with the undertone easier. Non-arrival of gold from Macao was a brake to the downward trend. After a dip in values in the middle of the week, there was a rally when the delay from Macao was reported. Carry-over charges were 520 cents in favour of buyers. The official turnover was 790 taels and unofficial turnover 13,200 taels. Forward contracts were done at \$(U.S.) 37.73 an ounce.

Insurance Surcharge for Suez Risks

The Institute of London Underwriters has announced that the surcharge on war and strike riot and civil commotion shipping risks on cargo passing through the Suez Canal is now 1s 3d, £100. A fortnight ago this surcharge was reduced from 5s to 2s 6d a £100. At the height of the Suez crisis, the surcharge was 10s. The additional basic rate for the voyage through the Canal remains unchanged at 9d a £100.

U.S. Copper Output

Production of copper in the United States in April amounted to 110,016 tons compared with 106,718 tons in March, according to figures issued by the Copper Institute. Production of refined copper in April totalled 144,013 tons compared with 143,961 tons in March.

New Delhi

BUDGET LEVIES CRITICISED BY CONGRESS M.P.s

KRISHNAMACHARI DEFENDS WEALTH TAX ON COMPANIES

(FROM A NEW DELHI CORRESPONDENT)

AT last Saturday's informal meeting of Congress M.P.s with the Finance Minister, Mr. T. T. Krishnamachari, to discuss the Central Budget, Mr. Chandulal Parikh, a business man, spoke of the likely effect of the new taxation proposals. According to Mr. Parikh, the changes proposed in the income and corporation taxes and the levy of the new tax on wealth will oblige companies to pay 56 percent of their assessable profit as taxes instead of 43 percent as at present. At the new level of taxation, only about 200 out of the 10,000 companies engaged in manufacturing activity would be able to pay a tax-free dividend of 6 percent on capital and reserves, with a small carry-over to reserves for expansion or to meet emergencies. The remaining companies would be able to carry nothing to reserves, and not more than 500 of them would be able to pay even a dividend of 6 percent. Under such circumstances, Mr. Parikh argued, capital formation and industrial development were bound to suffer. Preference shares, debentures and mortgage loans, which fetched more than 6 percent, would attract the investor, bringing about a neglect of equity capital. If industrial development was the Government's aim, he said, the new corporate taxes would frustrate the objective.

But at a Press conference the same day, the Finance Minister not only said that he had left no margin for concessions, but even defended specific items of the increased taxation on companies. He elaborated the remark in his Budget speech that, though the wealth tax was intended primarily as a measure of personal taxation, "in the peculiar economic structure of India, I consider it advisable not to exclude companies from the purview of this tax". Mr. Krishnamachari said that a very large number of companies in India were owned by a group of individuals. Asked why at least public limited companies were not exempted from the tax, the Finance Minister said that companies with large assets, on whom alone the wealth tax would be levied, generally made more profit and could well afford the new tax which had been fixed at the low rate of 1 percent. Estimating the additional burden imposed by the levy on wealth at between 2 and 3 percent of the amount of tax now being paid by such companies, he remarked: "I would much rather have it this way." About the increase in the tax on bonus shares from 12½ percent to 30 percent, the Finance Minister made it clear that he was not impressed by the adverse stock effect of the changes in corporate taxation would not be adverse for the foreign investor. The Finance Minister also firmly ruled out a suggestion abroad in order to conserve foreign exchange. He remarked that such an extreme step could be considered only if the country became involved in war.

The incidence of the wealth tax in certain typical cases is shown below:

Total wealth	Payable by individuals	Payable by Hindu undivided families	Payable by companies
Below Rs. 2 lakhs	Rs. Nil	Rs. Nil	Rs. Nil
Rs. 2 lakhs to 5 lakhs	Nil	Nil	Nil
Rs. 5 lakhs to 10 lakhs	500	Nil	Nil
Rs. 10 lakhs to 20 lakhs	1,500	1,000	Nil
Rs. 20 lakhs to 50 lakhs	4,000	3,500	2,500
Rs. 50 lakhs to 1,00,000	13,000	12,000	7,500
Rs. 1,00,000 to 2,00,000	57,000	55,500	22,500
Rs. 2,00,000 to 5,00,000	1,32,000	1,30,500	47,500

Taxation of Foreign Companies

The effect of the changes made in existing taxation on foreign companies working through Indian subsidiaries, and on foreign companies operating through branches and earning other incomes, is brought out in the following table:

Classes of companies	PRESENT		PROPOSED	
	Income-tax and Surcharge	Corporation Tax	Income-tax and Surcharge	Corporation Tax
1. Companies which have made prescribed arrangements for the declaration and payment in India of dividends, and for the deduction of supertax from dividends paid to non-resident shareholders	%	%	%	%
(a) Companies in which the public are substantially interested with total income not exceeding Rs. 25,000				
(i) On dividend income derived from a subsidiary Indian company	26.25	11	31.5	10
(ii) On the balance of income	26.25	11	31.5	15
(b) Other companies:				
(i) On dividend income derived from a subsidiary Indian company	26.25	17	31.5	10
(ii) On the balance of income	26.25	17	31.5	20
2. Companies which have not made the prescribed arrangements referred to in (1), that is foreign companies				
(i) On dividend income derived from a subsidiary Indian company	26.25	20	31.5	10
(ii) On the balance of income	26.25	36	31.5	30

Apart from the alterations in the minimum distribution of profits by Section 23A companies, the Income-tax Act is being amended in an important particular as far as companies in general are concerned. It relates to the carry-forward of losses in business or capital gains, for which the period is at present not limited. It is now proposed to impose a maximum limit of eight years for such carry-forward of losses. The provision relating to the deposit of a portion of undistributed company profits is also being revised so as to bring out the Government's intention more clearly.

Expenditure Tax

The incidence of the expenditure tax in certain typical cases is shown in the following table (H.U.F. indicates a Hindu undivided family):

Expenditure on personal consumption	Tax payable by an individual with two children	A H.U.F. comprising two children each	A H.U.F. comprising three children each
Rs.	Rs.	Rs.	Rs.
25,000	Nil	Nil	Nil
36,000	200	Nil	Nil
50,000	2,200	Nil	Nil
60,000	5,400	600	Nil
80,000	17,800	5,400	600
1,00,000	37,000	17,800	5,400

Though a note appended to the Expenditure Tax Bill places the number of likely assesses at 4,500 individuals and 1,500 Hindu undivided families, it is now officially estimated that the number of assessable individuals is likely to be 5,500 and the number of H.U.F.s only 1,000. No estimate of the probable yield appears to have been worked out, but the cost of collection is estimated at Rs. 5 lakhs on officers and staff and Rs. 3 lakhs on incidental expenses.

Personal Rates of Tax

With the various changes made in the personal income-tax structure, from the rates applicable to the highest slabs down to the exemption limit, the actual amount of tax (inclusive of supertax and surcharge) payable by married persons at different levels of income will be as follows:

Income	PRESENT		PROPOSED	
	Earned	Unearned	Earned	Unearned
Rs.	Rs.	Rs.	Rs.	Rs.
3,000	—	—	18	—
3,600	—	—	60	—
5,000	94	141	60	—
10,000	508	804	457	522
20,000	2,132	3,182	2,058	2,352
40,000	11,451	11,713	10,458	11,952
50,000	17,620	17,620	16,233	18,552
60,000	24,182	24,182	22,553	25,752
70,000	31,401	31,401	29,358	33,552
1,00,000	55,026	55,026	51,408	58,752
1,50,000	98,667	98,667	89,908	1,00,652
2,00,000	144,604	144,604	128,408	142,752
2,50,000	1,90,541	1,90,541	1,66,908	1,84,752

In addition to the concessions in favour of earned incomes, the middle class stands to gain from two changes that are being made in the Income-tax Act. One relates to the rebate of income-tax on life insurance premia payments and provident fund contributions, which is now allowed up to a maximum of one-fifth of the total income, or Rs. 8,000 in the case of individuals and Rs. 16,000 in the case of Hindu undivided families, whichever is less. The limit of one-fifth is being raised to one-fourth, though the maximum amount qualifying for rebate will remain unchanged. The second change concerns the employer's contribution to a

recognised provident fund, which is now included in the employee's total income. It is proposed to exclude the employer's contribution from total income, subject to a maximum of 10 percent of the employee's salary. The exchequer, on the other hand, will benefit by the increase in the number of income-tax assesses from 500,000 to 900,000 on account of the reduction in the exemption limit from Rs. 4,200 to Rs. 3,000. When the exemption limit was last at the level of Rs. 3,000, the number of assesses was about 830,000. It is estimated that about 70,000 more would now have come into the income range of Rs. 3,000 to Rs. 4,200.

Tax on Railway Travel

There was an informal meeting of Congress M.P.s with the Railway Minister, Mr. Jagjivan Ram, last week. But in the stir caused by the imposition of a tax on railway passenger fares as part of the General Budget, the Railway Minister's doubling of the surcharge on goods and parcel freight was virtually ignored. Instead of enquiring about the likely effect of the increased transport costs of goods on the price level, the M.P.s, it is understood, concentrated their attention on the tax on passenger fares. They did not, in the first place, approve of this tax, particularly on short-distance travel. Secondly, they wondered why the tax should not have been levied by the railways to meet their own admittedly pressing need for additional funds. Mr. Jagjivan Ram, later at his Press conference, made light of the formal distinction between general and railway revenues, and pointed out that if the Centre's loan assistance to the States was not reduced by Rs. 8 crores this year through the distribution of the proceeds of the railway passenger tax, the amount would have had to be found in some other way. While the propriety of the Finance Minister's resort to Article 269(d) of the Constitution will probably continue to be disputed, Parliament is certain to witness a less academic debate on the rates at which the railway travel tax has been levied. Many Congress members are likely to join the Opposition in demanding exemption from the tax for short-distance travel, say, up to 10 miles.

Opposition to Excise Duties

Of all the tax proposals, the one which has evoked the widest protest in political circles is the increase in excise duties, which accounts for the bulk of the additional taxation yield, embracing such articles of common consumption as sugar, vegetable oils, tea, coffee, tobacco and matches. The removal of the additional excise and import duties on kerosene, and of the import duty unconditionally levied on newsprint, will make no significant difference to the size of the new excise burden. The Finance Minister urged at his Press conference that the small increases on various commodities should not be exaggerated. He pointed out that excise duties were unavoidable in any underdeveloped country trying for a rapid increase in investment. He recalled in this connection that Russia until 1937 raised almost her entire revenue from the turnover tax. But Mr. Krishnamachari himself did not attach undue importance to the "statistical exercise" which showed that, on the basis of the weights devised by the Taxation Enquiry Commission for consumption expenditure at all income levels, the new excise duties affected items accounting for only 2.34 percent of domestic expenditure in rural areas and 4.38 percent in urban areas. He said candidly that there could be no guarantee against a rise in prices beyond the size of the increase in excise duties without the imposition of controls, for which neither the ruling party nor the Opposition was prepared. The only article about which the Finance Minister gave the common man an assurance of relief from high prices was food; a subsidy fund of Rs. 25 crores is to be created for this. But the Finance Minister's spotlighting of this Budget provision, as proof of his concern for the consumer, has also had the effect of emphasising the fact that the Government's policy is yet to proceed beyond preparedness for subsidising the sale of imported food. The basic difficulty is that there appears to be no agreed view on the part of the Government about what should be regarded as the reasonable level of foodgrain prices in the present circumstances. This vulnerable point in its economic policy is likely to be the target of many critics.

Central Aid to Kerala

The talks which took place in the capital last week between some Union Ministers and Mr. E. M. S. Namboodiripad, Chief Minister of Kerala, have induced observers to believe that the State's Communist Government intends to play a long innings, and is planning to provoke no conflict with the Centre by embarking on the nationalisation of foreign-owned tea and rubber plantations. When questioned on the subject at a Press conference, Mr. Namboodiripad naturally reiterated his Party's faith in ending foreign ownership in all important industries. But it is learnt that he did not raise the subject himself during his talks with any member of the Union Government. He was more concerned about securing an increase in the Centre's financial assistance to the State for various projects, and additional supplies of rice from Central stocks for sale through fair price shops in the three difficult monsoon months which lie ahead. Mr. Namboodiripad returned to Trivandrum with the assurance of an additional rice surpluse. He could not expect to receive a similar prompt reply to the request for increasing the size of Kerala's second five year plan. He gave the impression of being content to await further consideration of his move to obtain a larger scale of Central assistance.

USE OF SUEZ CANAL BY BRITISH SHIPS ARRANGEMENTS FOR PAYING DUES IN STERLING

(FROM OUR LONDON CORRESPONDENT)

THE Government's decision that British shipping should be allowed to use the Suez Canal, "with reservations", and the subsequent two-day debate in the House of Commons on an Opposition motion of censure, occupied the headlines last week. The decision was inevitable when it became clear at the S.C.U.A. meeting that only France was determined to continue boycotting the canal until the United Nations' six points for the operation of the canal were fulfilled by the Egyptian Authority. The U.K. Chamber of Shipping had already made it clear that it would not be possible to continue going round the Cape much longer with the ships of other nations using the canal, since for voyages to the Persian Gulf, India and the Far East, the competitive disadvantage would have been too great. Although the canal has been reopened only a short while, British shipowners, quoting as much as 50s a ton higher for the carriage of general cargo via the Cape, have lost several thousands of tons destined for points east of Suez to speculators operating foreign flag tramps through the canal. Efforts to secure a long-term settlement on the basis of the U.N. directive are to continue, while there is to be a speeding up in plans to make this country less dependent upon the canal for oil shipments from the Middle East, but these factors were not sufficiently emphasised in the Commons debate. Fourteen Conservative backbenchers abstained during the division, which the Government nevertheless won by 49 votes, and eight of them declined the Whip to sit in future as Independent Conservatives.

So far as the City was concerned, the principal interest was as to how the exchange control regulations were to be amended to make the payment of canal dues in sterling a practicable proposition. These arrangements were negotiated by representatives of the Bank of England and the National Bank of Egypt in Basle over the previous week-end, and it is interesting to find that they have been welcomed by the Egyptian Press—which has been surprisingly moderate in its comments on the development as a whole—as a possible prelude to further contacts towards bettering the situation generally. The new Exchange Control Order has the effect of reinstating the "Egyptian Monetary Area" in the "Transferable Account Area", but maintains the restrictions on the use of Egyptian accounts and No. 2 accounts of banks in the Egyptian Monetary Area. Payments for goods will continue to be made into the blocked No. 1 account. As Egypt has an embargo on trade with Britain (and France) this is unlikely to be of much practical consequence. Payments for exports to the Egyptian Monetary Area may be received in sterling from a Transferable, American, Canadian or Registered Account or in any specified currency. This enables, say, Germany to settle her trading commitments with Egypt in sterling via London. As Britain has no control over any other country's transactions with Egypt, and such a transaction could be settled in any currency, the possibility to do so in sterling will at least ensure some commission income accruing to London. Meantime, there have been reductions all round in both freight and war risk rate surcharges.

April Trade Returns

Provisional figures released by the Board of Trade show that there has been a falling away in overseas trade from the unusually good returns in March, but after allowing for the Easter holidays, delays in imports occasioned by using the longer Cape route from the East and, to some extent, the labour unrest in this country, the general trend continues to be fairly satisfactory. The value of British exports in April was £272.2 million, 2½ percent below the monthly average for the first quarter. In the first four months of 1957, the value of exports (excluding silver bullion repayments to the United States) was 7 percent more than in the corresponding period of last year. Imports in April amounted to £349.6 million, 1 percent less than the monthly average for the first quarter. In the first four months of 1957 the import bill was 7½ percent higher than in the same period of last year, but one-third of this increase was due to arrivals delayed from 1956 through diversion round the Cape. Principal cause of the setback was the sharp fall in re-exports, which at £8.6 million were one-third less than the monthly average in the first quarter. The trade "gap" or excess of imports, was £68.8 million in April against the March figure of only £48.4 million. In the first four months of this year, the gap has averaged £63 million a month; allowing for the delayed arrivals in the import figure, this shows little change from the average of £56 million a month in the first four months of 1956.

The most encouraging feature of the returns is the fact that the U.K.'s exports to north America are holding up excellently. In contrast to the £236.2 million in March, exports in April amounted to £44.1 million. Apart from the value of the liner *Empress of England* (about £6 million) delivered to Canada, the figure includes a final

instalment of £1.5 million worth of silver being repaid to the United States. This brings the total repayments since April 1956, to £294 million. Excluding silver bullion, dollar exports in April were £104 million more than the monthly rate in the first quarter. In the first four months of 1957, they were 17½ percent more than in the corresponding period of 1956. April shipments to the United States alone were slightly down at £19.5 million; but for the first four months of this year (excluding silver repayments), they were 1½ percent up on the same period of 1956. Exports to Canada in April were £24.6 million, the highest figure so far recorded. In the first four months of 1957, shipments to Canada were worth 23 percent more than in the corresponding period of 1956.

Hire-Purchase Credit Rising

Hire-purchase credit, control of which has been a major factor in the Government's economic policy over the last few years, is on the increase once again even though the total outstanding at the end of March, estimated by the Board of Trade at £363 million, was still 19 percent below the peak of £450 million at which it was estimated at the end of 1955. Of the total, £209 million was due to retailers and at least £154 million to finance houses. The detailed breakdown shows that new hire-purchase credit extended by finance houses in March was 24 percent higher than in February and 80 percent above the level of a year ago. Advances for most types of motor vehicles were 25 to 30 percent higher than in February. Compared with March last year, new credits for motorcycles were 237 percent higher. Those for second-hand cars rose by 147 percent. Advances by finance houses for household goods were 9 percent higher than a year ago, and fell only 2 percent below the February figure. The March 1956 figures were, however, affected by the restrictions introduced in mid-February. Hire-purchase sales of furniture in March rose 2 percent above February and were 3 percent more than a year ago. Sales by hardware, radio and electrical goods shops fell by 6 percent in February, but were 21 percent higher than in March last year.

Basic Materials Up

The basic materials index, after falling 1.5 percent over the previous three months, rose 0.6 percent in April from 159.1 to 160 (1949 = 100). Higher molasses and wool prices were mainly responsible. The price of molasses rose by 68.2 percent in the month, but this commodity carries only a small weight in the index. Wool prices rose by 2.6 percent, rubber by 1.8 percent, copper by 0.7 percent, zinc by 1.8 percent, and linseed oil by 3 percent. These rises were slightly offset by falls of 7.7 percent in imported steel scrap and of 1.6 percent in hides and skins. Indices for materials used in the engineering industries showed little change last month. The index for all manufactured products rose 0.7 percent, largely through higher prices for textile products, clothing and metal manufactures.

Cheap Textile Import Problem

The Lancashire trade delegation to Pakistan has returned to report its failure to persuade the millowners there to restrict their exports of cotton goods to this country. It is felt here that the negotiations were prejudiced by the recent announcement that the Hongkong industry was unable to agree to any arrangement involving limitation of its exports to the United Kingdom. In the face of that, Pakistan, which undoubtedly feels that it has stronger reasons than both Hongkong and India, for wishing to retain freedom to improve on its past performance in export trade with the British market, could hardly be expected to adopt any other attitude. Pakistan no doubt considers that it can gain orders from this country at India's expense, as the Indian mills no longer derive such a great advantage in competing for world trade from the prices they pay for domestic raw material. It may also believe that, as its productive capacity increases, it will be able consistently to offer goods on more attractive delivery terms than the Hongkong industry can achieve. In the circumstances, it is not surprising that the Pakistani millowners, in rejecting the suggestion of voluntary limitation of exports by the different suppliers individually, should propose the establishment of a maximum, for shipments from the three countries as a whole, leaving each to secure for itself as large a proportion of the total as possible. It is admitted here that the plan is ingenious. Doubts may well be entertained, however, whether either India or Hongkong would seriously consider participating in it. Even if the principle was accepted, moreover, there would be great difficulty in arranging the administration of a scheme on those lines. Lancashire is naturally disappointed that the delegation has not been more successful, but takes heart from the fact that all three of the countries approached appear to recognise Lancashire's problem. The next move has yet to be decided upon, but it is thought likely that it will be another approach to the Government, particularly since Mr. Peter Thorneycroft has left the Board of Trade. His successor, Sir David Eccles, is popularly supposed in Lancashire to be more sympathetic to cotton.

Savings in Building Societies

What may ultimately prove to be the decisive factor towards an economic revival in this country is the steady growth over the last couple of years of savings, for it represents both a revival of confidence as well as a refutation of the contention that earnings are not keeping pace with rising living costs. The latest confirmation of a returning thriftiness comes from the returns of the Building

Societies' Association, which disclose the attraction of an increased volume of new funds despite keen competition from rival forms of saving. Thus 207 societies, whose combined assets represent four-fifths of the whole movement in the first quarter of this year received £82,640,000 on shares or deposits. This was an increase of £9.6 million on the £72.4 million received in the last quarter of 1956, and was back at the level of the first quarter of last year, which was £82.3 million. Unfortunately, withdrawals at £61.5 million were well above the £55.3 million recorded in the final quarter of 1956, but they were below the level of the first quarter of last year, when the figure was £63.2 million. At £59.6 million, new advances made in the first quarter of this year have fallen just short of the £60.8 million in the last quarter of 1956. They are substantially lower than the £64.8 million in the first quarter of last year. The Association points out that this is due rather to the traditional caution of the societies than to any reduction in the demand for mortgages, which remains high, although slightly less than it was a year ago. A striking feature of the latest quarterly figures is the strength of the liquid position. Cash and trustee securities, amounting to £258.2 million, represent nearly 15 percent of the societies' total assets.

New British Turboprop Airliner

Another British turboprop airliner has just been announced. It is a new version of the Handley Page *Herald* transport plane, which will be powered by two Rolls-Royce Dart turbo-prop engines. It has been designed for branch-line operators throughout the world. The plane will carry 43 passengers in pressurised comfort, or nearly five tons of freight, or a combination of both passengers and freight at a mean cruising speed of 275 m.p.h. This raises the number of existing or projected British turboprop aircraft to eight. The others are the Vickers Viscount and the Bristol *Britannia* already in service; the Vickers *Vanguard*, the Fairey Rotodyne (50-seater helicopter with a jet-powered rotor and twin turboprops for forward drive), the Armstrong-Whitworth 650 freighter, the *Accountant* feeder or executive aircraft, and the Miles 107 feeder liner. Parallel production is planned both for the turboprop and the piston-engined *Herald*. In many regions, especially remote areas, the piston-engined type (with Alvis Leonides engines) will remain more suitable. It will score particularly in very hot countries and in operation from small high-altitude airstrips in difficult terrain. The Dart-engined *Herald* however, is some 70 m.p.h. faster, and it will be especially suited to fast branch-line services in developed areas. Its take-off and landing performance is almost as good as that of the piston-engined aircraft in temperate regions, where

its greater speed and smoothness may make it more attractive to operators and passengers alike. A Dart *Herald* will cost £175,000, including furnishings. The operating cost of this new turbo-prop airliner will say the manufacturers, be less than 1½d a passenger-mile and 16d a ton-mile. The first flight is scheduled for early next year.

Nuclear-Powered Tanker

The British Admiralty has set up a committee, led by Rear-Admiral Wilson, but drawn from a wide circle of those interested in shipbuilding or the operation of merchant fleets, to consider the development of nuclear-powered merchantmen. An actual experimental project is expected to be drawn up and put in hand in the not too distant future. The project is to build a tanker of 80,000 tons capacity to cost £10 to £12 million, which could be ready for sea in six years. It is believed that the Treasury will wholly or partly finance it. It is emphasised that the tanker—unlike the American projects likely to be afloat earlier—will be a fully economic proposition, able to compete in freights with conventionally powered ships, and will be the first commercially viable nuclear vessel in the world. Because of the great weight of the nuclear unit, the machinery must be placed amidships instead of astern as in conventional ships.

Brevities

The Treasury has announced that 499,544,813 coins were produced at the Royal Mint in 1956—almost ten million every working week. The coins weighed 2,900 tons, of which 68 percent were United Kingdom coins, 17 percent for other parts of the Commonwealth, and 15 percent coins for foreign administrations.

With effect from 20th May, the maximum prices of a limited range of steel products, including non-alloy steel wire rods, rivet, bolt and nut bars, cold-rolled strip, intermedial widths of hot-rolled strip, and bright non-alloy steel bars (other than commercial quality rounds, squares and hexagons) are to go up in varying amounts from 10s to £3 a ton, according to the Iron and Steel Board. No significant change has been made in the general level of steel prices by this move.

United Kingdom airlines carried 12 percent more passengers on scheduled services last year, while the passenger mileage rose by 15 percent. Figures issued by the Ministry of Transport and Civil Aviation show that 3,364,000 passengers travelled 2,079 million passenger-miles on scheduled services. Total traffic carried increased by 12 percent to 275 million short ton-miles. The number of passengers carried on scheduled services by the private companies increased by 9 percent to 537,804.

"The time has come," the Walrus said,
"To talk of many things.
Of silks and spice, mica and mice,
And how to give them wings."

SMART chap, the Walrus.

NEED FOR SPECIAL AID TO TEXTILE MILLS

SUGAR PRODUCTION PROSPECTS

(FROM OUR LUCKNOW CORRESPONDENT)

MR. J. K. Srivastava, chairman, Employers Association of Northern India, has pleaded for a scheme of special assistance to the economic units of the textile industry in Kanpur. In a statement issued with reference to the closure prospect facing the Kanpur Cotton Mills in the British India Corporation group, Mr. Srivastava says that unless remedial measures are taken forthwith, other mills will soon share the same fate. The special assistance programme he has outlined has a short-range and a long-range aspect. The long-term plan should aim at reorganisation and rehabilitation of uneconomic units for which loans should be made available from the National Industrial Development Corporation, which has been specially set up by the Government for this purpose. The execution of the short-range programme, however, should be the responsibility of the State Government.

Describing the main features of the scheme, Mr. Srivastava says: "The execution of the rehabilitation plan would normally take three years and in the intervening period Government should afford special facilities and concessions to uneconomic units which are in the process of closing down so that they may be kept on their feet until such time as their rehabilitation schemes have materialised. Similar concessions should also be given to those units which have already closed down to enable them to be re-commenced. Assistance in the field of sales tax, electricity duty, reorganisation of the labour structure and special exemptions from the oppressive labour and Factory Act regulations and legislation should be made available. The Textile Commissioner should be deputed to investigate the causes of closure or threatened closure as the case may be, and it is only when he is satisfied that this has been necessitated by factors beyond the control of the management that a unit could qualify for assistance. This would not affect the revenue of the State in any way and yet the relief granted for a specific period of time would help these mills to tide over the critical period of transition." Mr. Srivastava thinks that the Government of India does not take into consideration any regional economic obstacles when formulating its textile policies which are often based on the prosperous conditions of the industry in Bombay and Ahmedabad.

Raising Cement Production

The production of cement in the Government-owned cement factory in Churk will shortly be raised to 1,400 tons a day, according to an announcement made by Mr. T. L. Mahendra, director of the factory. Global tenders were invited last September and five tenders were received which have been scrutinised by the Technical Committee. Final acceptance of tenders is to be made this month after the Government of India has taken a decision on deferred payment. According to Mr. Mahendra, the factory recorded its highest production last month with 21,200 tons of cement and 18,000 tons of clinker. The annual production was the highest during April 1956 to March 1957 when the clinker produced amounted 180,000 tons and the cement to 196,000 tons. Approximately two-thirds of the production is utilised in Government projects and one-third is being made available to the public.

Sugar Output

The production of sugar in Uttar Pradesh during this season is now estimated at 1,040,000

tons against the country's total production of 2,000,000 tons. The State, which has half of India's total of 134 sugar mills, has almost doubled its production during the last five years. Its 67 sugar factories crushed 5,871,428 tons of cane and produced 592,000 tons of sugar in 1950-51. In the last year of the first plan, they crushed 9,900,000 tons of cane producing 989,000 tons of sugar. This year the crushing is estimated at 10,714,285 tons of cane. Land under sugarcane in the State today aggregates 2,600,000 acres. 2,000,000 acres being the reserved area for the factories. Of the reserved area, 800,000 acres is the gate area, nearest to the factory, which is intensively developed while the remaining 1,200,000 acres are called the outlying area. It is proposed to start intensive cultivation in 300,000 acres of this outlying area. The purpose of this move is to reduce the acreage under cane so that more land may be available for foodgrain crops. No less than 66 percent of the sugarcane grown in the State is utilised for the manufacture of gur, 24 percent for the manufacture of white sugar, and the remaining goes for chewing or seed purposes. A seminar on open pan crystal sugar manufacture was recently held in Lucknow when Dr. Punjabrao Deshmukh expressed the hope that by adopting improved methods of khandasari manufacture, cane-growers would be able to get a return of 75 percent of the value of cane supplied to the factories. The growers who convert their cane into gur and khandasari at present get a return of only 60 percent of the cane supplied to factories. The gur and khandasari industry employs about 2,100,000 seasonal workers in the State and about 70,000 whole-time workers and accounts for an investment of about Rs. 40 crores. The State's Labour Minister, Acharya Jugul Kishore, has announced in the State legislature that the Government will shortly appoint a wage board for the sugar industry.

Judgment on Sales Tax

A full Bench of the Allahabad High Court has held a notification issued by the Governor of Uttar Pradesh on 31st March, 1956 enhancing the rate of sales tax on certain commodities to one anna in the rupee as invalid. The main contention of the petitioner was that on 31st March, 1956, Section 3A of the U.P. Sales Tax Act stood un-amended and that under the unamended subsection the Governor had no power to make the impugned declaration. The argument of the Government was that the Governor could make the declaration in anticipation of the amendment. The Chief Justice who wrote the main judgment observed: "In my opinion no question of the application of Section 22 of the U.P. General Clauses Act for the purpose of establishing the validity of the notification by the Governor on 31st March arises. In my opinion recourse can be had to Section 22 of the General Clauses Act only if a notification is issued under the Act or ordinance which had been published but not come into force. Had the notification been issued under Section 3A and enforced on 1st April, the position might have been different. But it was not so issued and it is common ground that under the unamended Section 3A the Governor had no power to issue the notification. I am of the opinion that the notification is invalid." The Chief Justice added: "In the case of the present Ordinance, there can, I think, be little doubt that it was the intention of the Governor that the ordinance should come into force on 1st April, 1956. The purpose of the Ordinance was to amend the U.P. Sales Tax Act, 1948. That purpose was to have been achieved by Sections 2 to 13 of the Ordinance and the amendment effected by those sections were not to be effective till 1st April, 1956. The Ordinance was, in the words of Lord Goddard, in a state of suspended animation until that date. In my opinion the Ordinance did come into force within the meaning of Section 22 on the date on which it was published."

Bombay

OFFICIAL CONCERN OVER HIGH FOOD PRICES

TEST RELIEF WORKS IN AFFECTED AREAS

(FROM OUR BOMBAY CORRESPONDENT)

THE food situation in Bombay State is causing some concern. The Minister for Civil Supplies has stated that the Government is doing all in its power to build adequate stocks to meet emergencies. He has pointed out that Bombay is a deficit State and that it will receive 50,000 tons of wheat each month from the Union Government till the end of the monsoon period. Of this, 20,000 tons will be held for Bombay city while the remainder will be diverted to the districts, particularly those which are difficult to reach during the rainy season. Referring to the possibility of food rationing, the Minister said: "We are prepared for any contingency. If it becomes necessary to reintroduce food rationing, we will not hesitate to do so. In case of emergency, we are prepared to go to any extent." The Minister also said that test relief works have been organised in those parts of the State where crops had failed either because of a shortage or excess of rainfall. Referring to prices, he said that these had notably increased. The price of wheat in Ahmedabad was Rs. 13-6 in April 1955. It increased to Rs. 17-11 in November 1956 and was ruling at Rs. 18 in March this year.

Piecegoods Active

The cotton piecegoods market has improved considerably and the demand has broadened over a wide range of qualities. Prices improved for *saris* and *dhotis* in medium counts following satisfactory enquiries. Grey sheetings were also popular, the prices of which increased by three to five percent. The demand for superfine and fine qualities also improved. The main centres to show interest were West Bengal, Punjab, Uttar Pradesh and Bihar. Export business, however, continues to be disappointing though some modest orders were received from Hongkong and Singapore for medium grey sheetings and medium drills. Burma has bought small quantities of printed and bleached mulls and voiles but better business with that country is expected as it is believed that import licences have been issued to the Government-sponsored joint venture corporation. The lack of import licences is hindering trade with Indonesia. The United Kingdom purchased moderate quantities of medium greys and coarse drills. It is reported here that the Egyptian Government has decided to increase the discounts it offered to India on cotton prices from 10 to 13 percent. So far, mills have been reluctant to purchase Egyptian growths because of high prices even when a discount is taken into account. But Alexandria prices are now showing signs of falling and if the discount rate is increased, it is possible that business will result with Egypt.

Damage to Boiler

The Tata hydro-electric companies announced that boiler No. 1 in their Trombay thermal station had been put out of commission because of some damage caused to its tubes in the course of normal operation. The extent of the damage has yet to be fully ascertained but, it is clear, that the boiler will remain out of commission for some time until new tubes are imported to replace the damaged ones. Fortunately, there will be no interruption in power supply because the station's second unit, which is likely to come into normal operation by the end of this month, is capable of meeting the entire demand. Meanwhile, it is reported that progress of the Koyna hydro-electric project is being maintained according to schedule. The construction of the dam and the power house, which will be located in a cave and which is now being blasted, is going well ahead. Progress is also being made in the boring of tunnels which will be used for channelling the waters from across the hills. The main tunnel is expected to be completed by March 1960 and the dam a year later. The power house will be completed by 1959. The first phase of the scheme, estimated to cost Rs. 38 crores, will be in partial operation towards the end of 1960 and will be completed by the middle of 1962. Initially, about 60,000 kW will be available for distribution. Thereafter, a similar amount will be added every six months until all the four units are functioning at a capacity of 240,000 kW. Of this, 200,000 kW will be transmitted to Bombay for distribution over the Tata system and the balance will be supplied to Satara, Kolhapur, Sholapur and the Ratnagiri districts for the purpose of industrial development.

The irrigation aspect of the first phase of the project will be of secondary importance. Only the spillway waters will be channelled off for river purpose. The height of the dam from the river bed will be 207.5 feet impounding about 36,043 million cubic feet of water. The height of the dam will be raised by 64 feet in the second phase which will mean that it will impound 98,780 million cubic feet of water, of which 28 million cubic feet will be available for irrigation and another 11,000 million cubic feet will be reserved as carry-over. The third phase envisages the use of tailwaters from the original power house as they run down the foot of the hills and produce an additional 60,000 kW of power, and another power house at the foot of the dam generating 30,000 kW of seasonal power.

Jute

SUPPLY OF RAW JUTE FOR INDIAN MILLS

LESS NOW ARRIVING FROM DOMESTIC SOURCES

DURING April, arrivals of jute and mesta in Calcutta and at mills' stations totalled 375,500 bales, compared with 479,400 bales in March. Of the arrivals last month, 340,900 bales were Indian jute and mesta and 34,600 bales came from Pakistan. In April 1956, the total arrivals were 477,500 bales, of which 383,500 bales were Indian and 94,000 bales were Pakistani. The total arrivals for the ten months, July 1956 to April 1957, were 5,484,300 bales, compared with 5,701,900 bales in the corresponding ten months of 1955-56. Arrivals of Indian jute in the ten months were 4,925,600 bales, compared with 4,327,700 bales in the same period of last season, while the Pakistani arrivals were 558,700 bales against 1,374,200 bales. The following table shows the position at a glance:

	1956-57			1955-56		
	Indian	Pakistani	Total	Indian	Pakistani	Total
April	4,925,600	558,700	5,484,300	4,327,700	1,374,200	5,701,900
July						
April	4,925,600	558,700	5,484,300	4,327,700	1,374,200	5,701,900

It is interesting to note the decline in imports of Indian jute in the last three months as compared with the imports in the same months of last year.

	1957	1956
January	681,890	532,000
February	525,200	533,200
March	440,700	485,100
April	340,900	383,500

These figures support the view that, because arrivals of Indian jute were heavy in the early months of the season, there would be a rapid fall. It is estimated that, at the end of April, mills had in their godowns about 125,000 bales and had purchased further 400,000 bales which would cover their consumption up to about the first week of August. It is also estimated that there are still in uncountry centres and in Cossipore about 700,000 bales of unsold jute, which, if it all comes forward, would carry the mills well into September. By that time, even if the new crop is late, good supplies should be coming in.

Another point of interest is that, while the total arrivals in Cossipore and in mills since the beginning of the season have exceeded the mills' consumption, the position has been reversed in the past two months. In March, the arrivals were 479,400 bales, against the mills' consumption of 494,000 bales. In April, arrivals were 375,500 bales, against the mills' consumption of 506,000 bales. It has also to be noted that the arrivals do not all go direct to mills: a large percentage go to Cossipore where, of course, they are ultimately bought by mills.

THE JUTE MARKETS

Firm conditions have continued during most of the week with the usual fatka fluctuations. There was a mild recession on Monday because of reports of rain in some places and because of the gunny fatka settlement, but both sections of the market recovered on Tuesday afternoon.

Manufactured Goods: During most of the week, the market has been firm and the fatka ported, have done a fair amount of covering and mills have sold for deliveries to the end of the year. Enquiries came for cornsacks to Australia and Easter on Monday on account of the fatka settlement but recovered on Tuesday and closed firm. On Wednesday morning quotations were as follows:

	May	June	July-Sept.	Oct.-Dec.
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	34.60	34.60	34.60	34.30
40in. 10oz.	42.95	43.05	43.25	42.90
B Twills	117.25	117.20	117	116.35
Heavy Cees				
(Plain)	116.75	117.20	117	116.35
A Twills	130.50	130.50	130.50	130
Liverpools	129	129.50	129.50	129
Cornsacks	117.40	118	119	117.50

Raw Jute: Early in the week, good business was done in most classes of jute at firm prices. Mills paid Rs. 30.50 to Rs. 31.50 basis Bottoms for Assam and Northern jute, Rs. 32.50 to Rs. 33 for Daissee, Rs. 28 to Rs. 28.50 for Desal and Northern jute, Rs. 27 to Rs. 27.50 for Daissee mesta and districts, mills paid Rs. 33 to Rs. 33.50; and for Rs. 32 basis Bottoms. Dhulian-Nimitta white jute was done at Rs. 28 basis Bottoms while Punea jute was sold at Rs. 25. Bimbi was done at 26 F.A.Q. and Pakistani N.C.'s at Rs. 116. On Monday, the market eased off because of reports of rain in some jute districts and because the gunny market was lower on settlement transactions. It was still easy on Tuesday morning, but it firmed up during the day when a number of mills indicated interest at the lower prices being quoted. Sellers immediately became more reserved and offerings were restricted, but some business resulted at Rs.

33.25 for Middles only and Rs. 30.75 to Rs. 31 basis Bottoms for assortment. Mesta was done at Rs. 28.50 for Northern and Desal and bimbi F.A.Q. at Rs. 25.50. On Wednesday morning quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms.	Shipment.
Assam	31.50	May-June
Northern	31.50	"
Purnea Desal	30.50	"
Purnea Jungli	28	"
Daissee Jute	33.50	One month
Murshidabad Tossa	33	May-June
Jungli Tossa	30.50	"
Northern ex Calcutta	30.50	One month
Local Packing	29	"
Pakistani N.C.'s	115	a bale May-June
Mesta:		
Assam	29	May-June
Northern	29	"
Desal	28.50	"
Daissee	27.50	One month
Jungli	25.50	May-June
Bimbi	26	F.A.Q. "

The Cossipore market was firm and mill buyers paid very full rates for picked lots. Arrivals were less than in the previous week, there being only 441 wagons against 646 the previous week.

Mofussil: Imports are small but it is reported that growers are now releasing early jute of better quality, which is giving a higher percentage of Middles. The releasing of this "raki pat", as it is called, is said to indicate that those who are now selling it are coming to the end of their stocks.

The Assam crop is reported to be doing well. Elsewhere, rain is badly needed for the young plants and for further sowings. In some places, the ground has not yet been ploughed because there has been no rain. It is reported also that, in those areas where there is a shortage of rice, paddy will be sown instead of jute.

THE PAKISTANI JUTE MARKETS

FIBRE PRICES REMAIN HIGH

(FROM A NARAYANGANJ CORRESPONDENT)

DESPITE slight fluctuations, prices during the past week have remained unchanged, and at times were slightly higher. B Bottoms are quoted at Rs. 35-8, C Bottoms at Rs. 33-8 and X Bottoms at Rs. 31-8. Pucca bale prices are about unchanged with cuttings about Rs. 2 higher. Although very little jute is available at upcountry stations, imports into Narayanganj have increased as sellers have been attracted by high prices. The moisture content remains high, yet there is no shortage of buyers. It is expected that more kutchha bales will be arriving from the northern districts in the next few days, since bookings have once again been opened.

A recent visit to the jute-growing areas indicates that in general, in areas east of a line drawn through Mymensingh and Dacca, the crop has not suffered from the delay in rains in the lowland areas, but the midland and highland crops have been affected. On the other hand, in the areas to the west, practically all the jute will be a bit late. There is no reason to believe that the size of the crop has been affected by the weather, but it is quite possible that more paddy has been sown than previously. It looks as if the early *chur* land crop may be expected during June, together with weedings from the lowland crop, and after that, imports may fall off for about a month, unless there is premature harvesting of jute due to a swift rise of the rivers. A temporary fall in arrivals so early in the season may well push prices up.

At the same time, reports of local business done for August-September, at prices ranging from Rs. 29 to Rs. 32 for B Bottoms, will tend to keep prices during July-August at levels which, although low by the current standard, should be considered high for the next crop. The only factor which might counteract these bullish tendencies during the early part of next season, is the tightness of money. Quite possibly, the primary sellers who are financially better off than ever before, may be prepared to "finance" their old established buyers, but undoubtedly jute will be cheaper for those who can pay cash. Overseas buyers continue indifferently in the market as they find the prices too high. With their total purchases up to

The reliability and high efficiency in design, materials and performance associated with Weir Auxiliaries for steam installations are now being applied to Weir equipment for Nuclear Power plant.

Research, development, design and manufacture of the highest standard, maintain Weir leadership in the auxiliary field whatever the source of energy.

We invite consultations on all questions relating to design and manufacture of Pumps, Valves, Heat Exchangers and other Auxiliaries for Nuclear Power circuits.

In the rapidly changing field of power reactor technology, the expert assistance which we can give on such equipment is essential.

B. PARKER
Manager.

the end of May at over 3,700,000 bales, it is unlikely that they will have much more to buy.

The local Jute Marketing Board has at last filled its senior executive posts. The chairman, as expected, is Mr. Sanwar Ali. Directors also have been appointed. The most suitable appointment is that of Mr. Simon as general manager. Until recently a director of the Sinclair and Murray group, he has wide experience of the jute trade. With him looking after the practical side, the Board stands a better chance of proving successful. A further advantage is that these posts have been filled early, giving the Board time to organise its establishment and agencies before the arrival of the jute crop. Many obstacles still remain, among them being the appointment of the men who will run the various agencies and baling centres. One wonders how the Board will act up to its avowed intention of buying jute at Rs. 20 a maund, when the market value will almost certainly be about Rs. 30.

The Pakistani mills have done some forward business up to October, at reasonable prices, to the United States and South Africa. In Karachi, although stocks are falling off, prices are down to Rs. 129 for B Twills and Rs. 56.8 for hessian. The reason for this is that ships are loading fairly heavily for Karachi in Chittagong and Chalna.

On 14th May, a mill in Chittagong went on strike. Since then, it is reported, the management has dismissed the entire staff. This is a brave attempt to quell the rapidly rising number of strikes, which tend to frustrate Pakistan's young jute industry.

THE FOREIGN JUTE MARKETS

DULL TRADING

(FROM OUR DUNDEE CORRESPONDENT)

CONSUMERS of jute yarns and cloth are apparently determined to use up their stocks rather than purchase further quantities. It is believed, however, that the trade is not interested in increasing its offtake. Meantime, there are many reports of firms paying off weavers and also spinners, but not nearly to the same extent. One big firm is credited with paying off 60 weavers last week-end. The greatest difficulty of manufacturers is to secure work for the wide looms. Linoleum hessians are very much quieter, and the trade in wide hessians for the new tufted carpets has fallen away. Unfortunately, the quietness has come at the wrong time. This is usually a quiet spell and the trade will have to wait until July-August before it can see any improvement. Pakistan is keeping up the prices for raw jute and some members of the industry believe that there may be a squeeze for fibre before the new crop is available. Others, however, think that there is ample material to satisfy demands this season and that the new crop may not be as late as has been stated.

Raw jute prices have eased off a little to £125 for Mill Firsts, £117 for Mill Lightnings, £113 for Mill Hearts and £106 for grade Hearts. £114 for good Daissee-2/3 and £112 for grade, with grade Tossa-2/3 from £122 and grade Tossa-4 from £116, all c.i.f. U.K., May-June. For June-July, there are sellers at £2 less in most cases. Some tentative offers of new crop are being made at £115 for Mill Firsts and £105 for Mill Lightnings for August-September shipment, c.i.f. but there are no spinners interested at these rates, which are about £14 above the minimum fixed prices in Pakistan. Jute yarns are still quiet at 15.72d a lb. for 8 lb common hessian weft and 16.86d for medium 8 lb spools. Buyers are taking only small quantities to meet urgent needs. Manufacturers are quoting unchanged rates for common hessians at 13.26d for 40in. 10 oz. and 11.32d for 8oz. Calcutta hessians are firmer by 6d for 10oz. and B Twills are 1s 3d up. The latter are now at 179s May-September, with 40in. 10oz. at 65s May-June and 65s 6d July-September and 74oz. 49s May to September, all f.o.b., Calcutta.

STANDARDISATION OF BLANKS FOR LAY BLOCKS IN JUTE LOOMS

The Indian Standards Institution has published an Indian standard specification for blanks for lay blocks for jute looms (IS: 1043-1957). The standard lays down general requirements, such as freedom from defects and knots, and specific requirements such as slope of grain. Other requirements relate to the species of timber, dimensions and the grading of the blanks. The lay block in the lay of loom carries among other things the reed and two shuttle boxes and the lay race. Lay blocks are made of wood. The dimensions and tolerances in standard, since they are shaped to the correct size in the consumers' workshop. The recommended code of practice for the manufacture of blanks for lay blocks and a list of approved species of timber with a short description of each, are given in the appendices to the standard. It is expected that this standard would be of use to the manufacturers, in making lay block blanks of acceptable quality, and to purchasers in acquiring dependable quality. Copies of this standard can be had from the Indian Standards Institution 19, University Road Delhi-8, Street Fort, Bombay, and P-11, Mission Row Extension, Calcutta.

Plantation Topics

BIGGER SOUTH INDIAN TEA CROP

UNSATISFACTORY COFFEE EXPORTS

(FROM A SOUTH INDIAN CORRESPONDENT)

THE South Indian tea crop for March amounted to 11.4 million lbs, according to official estimates. This was 2.4 million lbs higher than that of March, 1956. For the first three months of the year, output totalled over 27 million lbs, compared with 22.8 million lbs in the first quarter of last year. Ceylon's crop for the same period amounted to 106 million lbs, against 84.4 million lbs in the first three months of 1956. Thus, south India and Ceylon together increased their output by 26 million lbs during this period. At this rate their production is likely to go up during the coming months. It is the even spreading of rains from the beginning of the year that is responsible for such an increase. The planters do not expect that the May "rush" will reach its usual size this year. The other factor which is expected to exercise a check on production is the low price at which tea is now being sold. In the absence of the price incentive planters may resort to finer plucking with greater care and that will, in turn, reduce the size of the crop. Therefore, it is felt in certain quarters in the south that the big harvest both in south India and Ceylon during the first quarter of 1957 need not cause undue worry.

It appears that the Coffee Board will not be able to dispose of the exportable surplus out of the current season's crop. Until the end of April it could sell only 5,486 tons out of an estimated surplus of 14,000 tons. For the two export sales in May, 2,043 tons have been released. Including the sale of 725 tons to Russia, negotiations for which have been completed, the Board may not be able to dispose of more than 8,236 tons by the end of May. So it seems that the Board will not be able to implement fully its policy of disposing of its exportable surplus before the onset of the monsoon. Rains have already started on the west coast. It is doubtful whether the Board can be blamed for not being able to dispose of more. Unfortunately for the coffee industry in south India, its record production has coincided with a depression in the world coffee market.

Latest Crop Estimates

The latest revised estimates of the Coffee Board places the current season's crop at 40,425 tons, comprising 27,785 tons of arabica and 12,640 tons of robusta. The receipts into the pool of the 1956-57 season's crop to the end of April amounted to 39,515 tons. Most of the robusta having already come into the pool, further receipts of these grades are unlikely to be appreciable. The internal market absorbed 8,316 tons during the first four months of the year. Releases for home consumption in April were to the tune of 2,191 tons. There was a balance of 72 tons out of the 1955-56 season's crop towards the end of April. This is likely to be cleared this month. The pool account for 1955-56 crop is now being finalised, and the final payment is expected to be made by early June. The Coffee Board is participating in the Poznan Trade Fair to be held from 9th to 23rd June. Mr. C. B. Sankara Iyer, I.A.S., from Mysore has been appointed Coffee Development Officer under the Board.

COCHIN TEA SALES

At Sale No. 11, some 1,175,000 lbs of tea were on offer. There was a strong general demand mainly from internal buyers. Black Leaf Broken were 5 to 10 nP dearer, while others were about steady. Fannings were slightly easier, while Whole Leafs were stronger, and at times, dearer.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing prices on 10-5-57 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.26	1.26
No. 2	1.23	1.20
No. 3	1.20	.96
No. 4	.96	.91
No. 5	.91	.87
Crape:		
Water White	—	1.15
R.M.A. No. 1X	1.15/16	1.12
R.M.A. No. 1	1.10/14	1.04
Crape No. 2	—	1.01
Crape No. 3	—	—
Scrap Crape:		
Sc. Crape No. 1	.95	.95
Sc. Crape No. 2	.90/93	.85
Sc. Crape No. 3	.80/90	.75
Flat Bark	.75	.88
Sc. Crape 3X	—	.88

To arrive at f.o.b. Colombo prices, 53.53 cents a lb for crape other than scrap crape and 31.53 cents for scrap crape to the above market prices.

Commodity Markets

FOOD SITUATION IN INDIA

STEPS TO MEET REGIONAL SCARCITIES

THE following is the text of a statement made last week by Mr. A. P. Jain, Central Minister for Food and Agriculture, on the food situation in India: "Agricultural production is highly susceptible to vagaries of nature, but nevertheless, it is clear, on a study of the production figures over the last ten years, that the overall production of cereals as well as the yield an acre are considerably higher at present than at the beginning of that period. In 1947-48, the total production of cereals was 43.7 million tons and the yield an acre was 569 lbs. In 1956-57, the total production of cereals has been 56.2 million tons and the yield an acre 591 lbs. The following statement gives the five-yearly moving average production from 1951-52:

Quinquennium ended	Average production of cereals (In million tons)	Average yield an acre (In lbs.)
1951-52	43.5	519
1952-53	44.6	514
1953-54	47.6	531
1954-55	49.6	544
1955-56	52.1	557
1956-57	54.8*	579*

*Based on provisional advance estimates.

The above figures clearly establish that there has been a steady improvement in production. If we compare the figures for the quinquennium ended 1956-57, we find that the production has gone up by 25.9 percent while the yield an acre has gone up by 11 percent. The figures for rice, wheat and coarse grains separately, which make up the total for cereals, are given below:

	In total production	In yield an acre
Rice	20.0	13.1
Wheat	36.8	14.9
Coarse grains	29.9	12.2

Rice and Wheat Output

The latest position is that the production of rice this year has been 28.1 million tons which is an all-time record. In spite of the recent damage to wheat crop in certain parts of the country, the production of wheat is expected to be about 8.6 million tons against 8.3 million tons last year. It is very near the record production of wheat in 1954-55, namely, 8.8 million tons. The production of coarse grains this year is slightly better than last year, though it is still about 3 million tons less than the record production of 1953-54. Altogether, the total production of cereals this year is expected to be 56.2 million tons which is higher than that of last year or the year before. There is, therefore, no justifiable cause for alarm, even though the wheat crop has suffered in certain areas due to the recent rains, hailstorms and rust. The overall supply position is such that no serious difficulties need be apprehended. The Government has a very substantial import programme of wheat to meet the legitimate requirements of different areas where the wheat crop may have suffered.

The position in the different States and the steps taken by the Government to meet the difficulties where the rabi crops have suffered are indicated below:

Bihar: The Minister visited parts of the districts of Patna, Monghyr and Bhagalpur, where the rabi crop, in particular wheat, had been damaged by rust, rains and hailstorms. The wheat grain was shrivelled and the yield was low. Other districts, reported to be affected, are Santhal Parganas, Purnea, Saharsa, Darbhanga, Muzaffarpur, Gaya, Palamau and Shahabad. The normal production of wheat in the State of Bihar is of the order of 400,000 tons, out of which 60 percent is reported to have been lost. The demand of the State Government for wheat for distribution in the affected areas has been accepted in full. It has been agreed that for the three months—May to July, 1957—60,000 tons of wheat will be supplied. Additional 15,000 tons of wheat will be supplied for stocking so that in the event of floods during the rainy season, this wheat may be readily available for meeting the emergency. Already a number of special trains have been despatched from the port towns where wheat is in stock, and it is expected that before the end of May, about 35,000 tons of wheat will reach Bihar. The position will be reviewed in July and the programme of supplies during the subsequent months, will then be decided upon. If Bihar gets a good maize crop in August, the position is expected to ease. In order to enable early sowing of maize, the State Government has reduced the rate for tube-well water by 25 percent. The Bihar Government is undertaking relief works to provide employment in the scarcity affected areas.

Uttar Pradesh: The demand of the U.P. Government for the hill districts and eastern U.P. where the rabi crop has suffered, has been accepted in full. Some of 15,000 tons of wheat a month will be made available to the U.P. Government for

distribution in these areas up to the end of September when the position will be reviewed.

Rajasthan: In Jodhpur division, the rabi crops have been damaged, and the distribution of wheat is, therefore, being continued at an augmented rate in Jodhpur. Substantial stocks of wheat are being built up in the other central depots in Rajasthan.

Bombay: In certain parts of Bombay, the jowar crop was damaged. It has, therefore, been agreed to make available adequate quantities of wheat to the Bombay Government for distribution in the districts. This will relieve the adjoining areas of Madhya Pradesh from the pressure of demand from Bombay. The full wheat requirements of Bombay city, which is cordoned, will continue to be met by the Government of India.

West Bengal: Although the aggregate production of rice in West Bengal has been about 200,000 tons more this year compared with last year, difficult conditions continue to prevail in some districts including Burdwan, Murshidabad, Nadia, Hooghly and Howrah which were affected by floods in October last year. There has also been damage to rabi crops in certain districts. In addition to 3,000 tons of wheat a month which was being issued for distribution in the districts, another 6,000 tons of wheat will now be supplied a month to meet the additional requirements. Like Bombay, the full wheat requirements of Calcutta, which is cordoned, will continue to be met by the Government of India. During April and May, 1957, 14,000 tons of rice have also been made available to the West Bengal Government against a total demand of 15,000 tons. The West Bengal Government has

also sent the estimate of its requirements for the remaining months of the year, and suitable allocations will be made to it from time to time.

Kerala: In this State, the rice crop this year has been normal but due to the high density of its population and the crop pattern, large quantities of rice and paddy are generally imported every year from Andhra and Tanjore districts of Madras. Those sources are open to the State but the Government of India, has during the four months from January to April, supplied 78,000 tons of rice for distribution through 4,000 and odd fair price shops. The State Government has reported that the prices are showing an upward trend and expressed a desire to open more fair price shops. Discussions are likely to be held with the representatives of the State Government shortly and additional supplies will be given in the light of the overall availability of stocks.

Reports of difficulties from some areas in Mysore and Assam have also been received. Adequate steps are being taken to meet the situation.

Price Level

In spite of the record rice crop and the improvement in the total production of cereals this year compared with last the prices continue to be generally higher this year than last year. It is natural for the consumers, therefore, to complain of these high prices, but for a proper appreciation of the situation it is very desirable to have the proper perspective. Against 100 as the price index for 1952-53, which is now generally taken as the base year, the latest wholesale price index for rice

A TOWER OF STRENGTH

in India's Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

A member of the
Burmah Group of Oil Companies

ASSAM OIL COMPANY

This year, the Government is in a better position to counteract increases in wheat prices. The imported wheat will not only meet the entire demand of the port towns of Calcutta and Bombay, but will also be distributed in neighbouring areas, which, but for the larger releases from the Government stocks, would have been compelled to import wheat from the northern and other States. This will reduce avoidable movement as also discourage rise in prices.

"There are probably several reasons," Mr. Jain continued, "why the prices of foodgrains are generally higher than last year in spite of better production. Apart from increased consumption arising from higher incomes, one obvious reason may be hoarding both by traders and producers. To discourage hoarding by the traders, the Reserve Bank of India, at the instance of the Government, directed the scheduled banks to limit advances against foodgrains. From all accounts it seems that due to better credit facilities available to the farmer and increase in prices of cash crops, the agriculturists are generally in a better position than they have in the past to hold on to their stocks in order to get better prices later in the lean months. This improvement in the position of the agriculturists is no doubt the result from one point of view, but the natural consequence from the consumer's point of view is that now they have to pay higher prices. The Government has been fully alive to the complex issues

THE wholesale price index (base: year ended August, 1929=100) declined by 0.5 percent to 421.3 during the week ended 4th May, compared with 423.4 (revised) for the previous week. The index was higher by 0.2 percent and the 8.3 percent, respectively, when compared with that of a corresponding week of last month and that of a year ago. The index for Food Articles declined by 2.9 percent to 399.6 due to a fall in the prices of tea for internal consumption (-26%), wheat (-5%), gram (-3%), gur in Ahmednagar and salt (-2%), and of native flat and sugar (-2%) each, although the prices of gur in Muzaffarnagar (+8%) and rice (+1%) were marked up. Higher prices of cottonseed (+12%), linseed and Bombay (+6%), raw jute (+5%), groundnuts and button-lac pure (+2%, each) and rapeseed in Calcutta and raw cotton (+1% each) were responsible for an increase of 2.1 percent to 525.0 in the index for Industrial Raw Materials; the prices of, ginseng in Calcutta (-3%), rapeseed in Kanpur, gingellyseed and shellac t.n. (-2%, each) and Semi-Manufactures moved up by 0.1 percent to 401.9. Items which showed noticeable variations were: copra cake (+10%), sheepskins (+6%), mustard oil in Patna, goatskins and gingelly-cake (+3%, each), coconut oil in Bombay (+2%), copper in Bombay (-4%) and zinc (-3%). Lower prices of rayon and silk manufactures (-1%) brought about a fall of 0.1 percent to 384.2 in the index for Manufactures compared with 384.7 (revised) for the earlier week in spite of an advance in the prices of jute manufactures (4%). Prices of chilies (+4%) and betelnuts and bricks and tiles (+2%, each) showed increases while those of black pepper in Cochin (-3%) witnessed a fall, and in the result, the index for the Miscellaneous group moved up by 1.0 percent to 573.6 (estimated), compared with 567.8 (revised) for the previous week.

Only from 1956, reliable statistics of mica in the country have been available under the Mineral Conservation and Development Rules. Prior to this, the statistics of production of mica were mainly based on the export figures, which were more or less a true index of mica production in India, as the bulk of production is exported.

THE freight markets have continued to decline over the past fortnight, and do not yet appear to have reached the bottom yet. The Trans-Atlantic coal rate declined to 50s for a single voyage, and rates in the Far East followed the same trend, with coal Chingwangtao-Karachi at 66s, salt Karachi-Chittagong 78s 6d and ore Vizagapatnam-Poland 115s and Madras-Yugoslavia 108s. A handy-sized vessel to Chittagong at 52s for the first and 50s for the second, while there are reports of a Singapore fixtures at 80s which appears high on the market now. The recent budget proposals are again likely to affect tramp shipping and the tax on freights may well be about 12 percent. This is most unfortunate at a time when the State Trading Corporation is trying to earn foreign exchange only to find the tax authorities raising their demands to that point where tramp owners will either make rates of freight uncompetitive for Indian ore, or will have to change their business.

During the week ended 22nd May, sugar sales in the Calcutta market averaged 5,000 bags daily. Arrivals a day were 5,000 bags, and stocks totalled 105,000 bags. Rates for ready sugar, ex-Kantapur delivery were Rs. 34.50 for ordinary grain and Rs. 36 for big grain. Prices rose due to the excise increase proposal in the Central Budget.

The market was steady. Stocks were less than in the previous week.

(Between 14th May and 20th May, 1957)

Cowhides : Wet salted (Ord.) 32,000 pcs. on the basis of Rs. 7 to Rs. 9; Wet salted (Slaughtered) 18,500 pcs on the basis of Rs. 13 to Rs. 21.

Goatskins : Wet salted (Daissee, Killed) 80,500 pcs. on the basis of Rs 290 to Rs. 300. Rs. 335 to Rs. 350 and Rs. 360 to Rs. 375; Pakur-Patna (Ord.) 1,000 pcs on the basis of Rs. 267 to Rs. 280; Assam-Dinajpur-Murshidabad 31,300 pcs on the basis of Rs. 265 to Rs. 345; Purneah-Kissenganj 3,000 pcs on the basis of Rs. 300 to Rs. 310; Muzafferpore-Patna 15,900 pcs. on the basis of Rs. 315 to Rs. 320.

(20th May, 1957)

Cowhides: Wet salted 1,61,000 pcs.

Goatskins: Wet salted (Daissec. Killed) 2,00,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 29,000 pcs.

During the week ended 21st May, the market was quiet at the beginning and steady at close. The range of quotations was as follows:

Pure Buttonlac	Rs. 96, 95 value, 95 to 98.50 buyers.
Lemon No. 1 Shellac	Rs. 97 buyers; 96 done buyers; 99, 100 buyers.
Lemon No. 2 Shellac	Rs. 92.50 buyers; 91 done buyers; 93 to 95 buyers.
F. O. Std. 1 Shellac	Rs. 87.50 buyers; 87 done buyers; 88 to 90.50 buyers.
Pure TN Shellac	Rs. 92.50, 90.50, 83.50 buyers.

4% I.T.N. Shellac	Rs. 82.50, 80.50, 83.50 buyers;
No. 1 Kusmi Seedlac	85.84 basis done and buyers.
No. 2 Kusmi Seedlac	Rs. 72.50, 70.50, 73.50 buyers.
Fine Bysak	Rs. 86.50 buyers; 85.50 value;
	80.90 buyers.
	Rs. 82.50 buyers; 81.50 value;
	83.85.50 buyers.

Bysaky Seedlac (Manbhum)	Rs. 80 buyers; 80 done buyers; 81.50, 82 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 76, 75 to 78.50 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 71.50, 70 to 75 buyers.
Ordinary Bysaky Seedlac	

Shipments during May until the 15th were 17,948 packages comprising shellac 9,931 seedlac 5,597, buttonlac 597 and others 1,823 packages.

There has been a flood of books suddenly released on the new Companies Act which, as the learned authors of this work point out, has revolutionised the law in one of the most important branches of Indian jurisprudence. Some, no doubt, written in haste with a desire to be first in the field, and suffering in value accordingly. And, in any event, we must wait for a really authoritative commentary on the Act until the High Courts and eventually the Supreme Court have had their say on the innovations introduced by this monumental enactment. Nevertheless, a perusal of the formidable list of offences and penalties, some of the latter extending not only to fines of Rs 5,000 and upwards but also to imprisonment imposed by the Act for breach or non-observance of its provisions, makes it obvious that some kind of general and specific written guidance by acknowledged experts is essential not only to lawyers and company promoters but also to chartered and incorporated accountants, secretaries, auditors, directors and all, in fact, who have anything to do with the day-to-day management of limited companies, public or private. This immediate necessity has been met by the present work, especially by the first of the two learned authors. If it is too early in the juridical day for us to have the benefit of judgments of the various High Courts on the unsolved problems arising out of the new Act and its various sections, we have in this book the considered opinions of an eminent former High Court judge on some of them, reinforced by the practical knowledge and experience of a senior official of the Indian Chamber. And that is valuable help.

The Investor's India Year-Book, 1957. Compiled by Place, Siddons and Gough. (Published by Orient Longmans. Price Rs. 20. Pages 390).

The forty-third edition of this well-known Year-Book maintains the high standards of the predecessors. The publication begins with a critical appraisal of India's economic policy. Referring to the prospects for the share market, the compilers say that it is difficult to take an optimistic view. "The past year has been one of falling prices and restricted turnover. There is nothing in the im-

can be built by

Because India's expansion programme is in full swing, many new industries requiring

Because India's expansion programme is in full swing many new industries are coming into existence and due to the 'Grow More Food' campaign more food is being produced. More and more goods are being carried by road transport.

To open up new areas, to take care of the increasing traffic, new roads must be built and old roads have to be improved.

Better roads can be built with Caterpillar equipment. You do not save time by stopping the clock. Neither do you save money by buying cheap equipment. Caterpillar equipment will save you both time and money by giving you better output with less downtime and more economical operating costs.

Invariably a first choice among Government engineers and leading contractors, **CATERPILLAR** will, no doubt, play a leading part in building India's future Highways.

mediate economic outlook to suggest that this trend will be dramatically reversed, although it will almost certainly be halted because most shares are well below the values justified by their growth prospects." The detailed analysis of the position of major industries will prove particularly helpful to investors. Almost all the leading companies, whose shares are quoted on the stock exchange, have been included in separate groups. The book contains much useful information and will be a valuable work of reference for investors.

6500 OF US...

...and YOU!

All 6,500 of us in Hindustan Lever, a small army of men and women, have something very important in common. For us, it is not enough to make soaps, toiletries and cooking fats—with each of our products we aim to give you what you need in unvarying quality, so that you—the families of India—may know and trust and use them.

For almost eighty years, we have grown with your growing needs. And, like a flowering plant, we have put forth new and exciting blooms—dynamic pioneering activities behind the actual manufacturing scenes. Our Market Research department—unique in this country—carefully studies your preferences, your habits and opinions, and guides production with its findings. Our Quality Control department carries

out strict tests on each product from the raw material stage to the finished article. The Dada Advisory Service and the Washing Information Service are there to help you make the best use of our products.

And what are these products? You know them well—Sunlight Soap, for instance . . . Lifebuoy . . . Lux . . . Rexona . . . Gills S.R. Toothpaste . . . Dalda Vanaspati . . . and others that have become household friends. We are proud that so many of you have chosen to use them every day in your homes. At the same time we realise that your patronage lays upon us a duty, that of keeping steady our common aim, to offer the very best quality and value to our customers . . . to you!

COMPANY AND PUBLIC NOTICES

THE INDO-BURMA PETROLEUM COMPANY LIMITED

NOTICE is hereby given that the Forty-ninth Annual General Meeting of the members of the Company will be held at the Registered Office of the Company at Gillander House, Netaji Subhas Road, Calcutta on Monday the 10th June, 1957 at 10 a.m. to transact the following business:—

- To receive and adopt the Directors' Report and the Audited Balance Sheet and Profit & Loss Account for the year ended 31st December, 1956.
- To sanction the declaration of a dividend.
- To elect a Director in place of Mr. H. J. Silverston, who retires by rotation and is eligible for re-election.
- To consider and, if thought fit, to pass the following resolution of which a special notice as required by Section 281 of the Companies Act 1956 has been received by the Company.

As an Ordinary Resolution:

That the age limit prescribed under Section 280 of the Companies Act 1956, shall not apply to Mr. Mohamed Ismail Kee Kee Bhai, a Director who has attained the age of 68 years and who retires by rotation, and that he be and is hereby re-appointed a Director of the Company.

- To consider and, if thought fit, to pass the following resolution of which a special notice as required by Section 261 of the Companies Act 1956 has been received by the Company.

As a Special Resolution:

That Mr. W. Hutchinson who is an employee of Messrs. Steel Brothers & Co. Ltd., the Managing Agents, be and is hereby elected a Director of the Company.

- To appoint Auditors for the year ending 31st December, 1957 and to fix their remuneration.

Notice is further given that the Equity Register of Members of the Company will be closed from 27th May, 1957 to 10th June, 1957, both days inclusive.

By Order of the Board,
STEEL BROTHERS & COMPANY LTD.,
Managing Agents.

Gillander House,
Netaji Subhas Road,
Calcutta.
8th May, 1957.

- N.B. 1) A member entitled to attend and vote at the abovementioned Meeting may appoint a Proxy who need not be a member to attend and, on a poll, to vote on his behalf.
- 2) An explanatory statement concerning items 4 and 5 as required by Section 173(2) of the Companies Act 1956, has been posted to the shareholders.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED.

(Incorporated in England)

NOTICE is hereby given that the Board of Directors of this Company have declared payment of a Second Interim Dividend on the Company's Ordinary Stock at the rate of £3 per cent net (tax applicable at 8s. 6d. in the £) for the 15 months ended 31st March, 1957. Payment will be made on 28th June, 1957, to those stockholders whose names are registered in the Company's Stock Register on 8th June, 1957.

Applications for transfers received in this Office before 12 O'clock noon on Saturday, the 8th June, 1957, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

By Order of the Board,
I. A. MACPHERSON,
Agent.

Victoria House,
Calcutta, 18th May, 1957.

THE TATA IRON AND STEEL COMPANY LIMITED

NOTICE.

THE Transfer Books of the Company will be closed from Monday, the 24th June to Saturday, the 20th July, 1957, both days inclusive.

The dividends for the year ending 31st March, 1957, when sanctioned, will be made payable to those shareholders whose names stand on the Share Registers of the Company on Saturday, the 20th July, 1957.

By Order of the Directors,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
J. D. CHOKSI,
Director.

Bombay, 17th May, 1957.

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED.

THE Directors of The Dunlop Rubber Company (India) Limited announce the following decisions:—

- A Rights offer of 14,00,000 new Ordinary Shares of Rs. 10 each at a premium of Rs. 5 per share for cash payable in full on application will be made to the members whose names appear on the Register of Members in respect of the existing Ordinary Shares on 11th June, 1957, in the proportion of seven new Ordinary Shares for every eight Ordinary Shares then held.
- An interim dividend at the rate of 7½% free of tax for the year ending 31st December, 1957 will be paid on 19th June, 1957, to the members whose names appear on the Register of Members in respect of the existing Ordinary Shares on 11th June, 1957.

For the foregoing purposes notice is hereby given that the Share Transfer Books and Register of Members holding Ordinary Shares in the capital of the Company will be closed from 4th June, 1957 to 11th June, 1957, both days inclusive.

Holders of Ordinary Shares under blank transfers are particularly reminded that it is necessary to register the transfers prior to 4th June, 1957 in order to be entitled to the Rights offer. Legal representatives of deceased shareholders should get their legal representations immediately registered with the Company to enable them to receive and deal with the Letters of Rights on behalf of the estate of the deceased.

By Order of the Board,
J. LUCKHAM,
Managing Director.

Calcutta, 22nd May 1957.

The Company Meeting and Dividends table appears on page 735

THE ASSAM SAW MILLS & TIMBER COMPANY LIMITED.

NOTICE is hereby given that an Annual General Meeting of THE ASSAM SAW MILLS & TIMBER COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday, the 14th June, 1957, at 10-30 A.M. for the following purposes:—

- To consider and approve the Audited Accounts of the Company for the year ended 30th September, 1956, and to receive the Directors' and Auditors' Reports thereon.
- To appoint a Director in place of a retiring Director.
- To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from 31st May to 14th June, 1957, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Calcutta, 16th May, 1957.

NOTE:—

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A Proxy need not be a member of the Company.

INDUSTRIAL FINANCE CORPORATION OF INDIA,

PARLIAMENT STREET, NEW DELHI.

NOTIFICATION.

IT is hereby notified that the Share Register of the Corporation will be closed and the registration of transfers suspended from the 16th June, 1957 to the 30th June, 1957 (both days inclusive).

By Order of the Board,
H. V. VENKATASUBBIAH,
General Manager.

Dated: the 16th May, 1957.

HIGHER INTEREST ON EMPLOYEES PROVIDENT FUND

The Government of India has decided, in consultation with the Board of Trustees of the Employees' Provident Fund, to grant interest to subscribers of the fund on their accumulations at the rate of 3½ percent during the year 1957-58. The rate of interest for the year 1956-57 was 3 percent. The Employees' Provident Fund Act, which came into force in 1952, covers more than 2 million workers. Accumulations in the fund amount to over Rs. 75 crores.

The Act, which originally applied only to factory industries, was amended in 1956, empowering the Government to extend it to non-factory establishments also.

RENEWAL OF THE TRADE PACT WITH CHINA

INDIA'S INTEREST IN A GROWING MARKET

COMMUNIST China's rapidly increasing import-economic and political repercussions; it has already caused a rebellion against America's restrictions by her west European allies and this may be only the prelude to extensive reorganisation of international trade. The countries east of Suez have felt the impact of China's vastly increased trade, especially, of course, since the Canal crisis, and most nations in south Asia are accumulating heavy deficits with the People's Republic. Unfortunately, this is true of India; and the renewal last Saturday of the trade agreement between this country and China which was originally signed in October 1954 brings a reminder of the sharp deterioration in the balance of trade which has taken place recently. The deterioration, the extent of which is indicated in the table below, springs primarily from the fact that India bought more of iron and steel manufactures from China, but was able to sell her less raw cotton and jute manufactures. Trade between the two countries in the last few years has been developing as follows:

VALUE IN LAKHS OF RUPEES

India's Imports from China to India	India's Exports from India to China	Total trade	Balance of trade
1953-54	99	180	-18
1954-55	203	297	+94
1955-56	438	635	+215
1956-57 (April to January)	638	282	-356

The magnitude of the exchange problems involved can be judged from the following figures on China's trade with the free world:

	January-August 1955	January-August 1956
China's imports from "free world"	\$202.7 million	\$240.9 million
China's exports to "free world"	\$296.7 million	\$392.9 million
"Free world's" deficit	\$94 million	\$152 million

Burma and Ceylon, despite the latter's favourable rice-rubber pact, are running similar deficits with China but these deficits are nothing compared with the heavily unfavourable trade balances of Indonesia and Malaya—last year, for instance, Malaya imported 28 times as much from China as she exported to that country. Japan too has a chronically unfavourable balance with her neighbour and it was only the closure of the Suez Canal last November that enabled her to balance accounts by increasing her exports of machinery and fertilisers to the mainland by 400 percent.

The very substantial balances that China builds up in this trade with her Asian neighbours she uses to finance her rising trade with Europe. It is probable that in her trade with Russia and the Communist nations of eastern Europe, China runs a deficit; one cannot know the details of these State transactions. But in her trade with the Western democracies, China still manages to profit for imports each month. And the reason for this is that the European countries which accept any measure of U.S. aid are forbidden to sell a long list of products to Communist China, and this list is longer, sillier and more spiteful than similar blacklists governing trade with Russia and the other Communist countries. It has been recognised for some years past that American policy towards Communist China is no longer rational but the product of fantasy and foolishness. Non-recognition, the blackmailing and intimidation of the nations' allies who sought closer trade connections with Peking, the refusal to permit such policies cannot be justified by any reasonable argument. They are not in fact "policies" in the normal sense (for Washington recognises their futility as clearly as London and New Delhi do) but rather hush-money paid first to the late Senator McCarthy and then to Senator Knowland to keep Communist policies in the more important field of relations with Russia.

Remembering this, America's allies in Europe are infringing Washington's regulations, and, now openly. This evasion of the

This imbalance is plainly a matter of serious concern to countries which are already suffering from exchange problems. The weakness of the United States' moral position in the debate is clear when we remember that two of the main causes of these exchange problems are her own tariff laws and her ban on trade with the Communist world. That the latter is an important element in the deficit in trade with China can be seen from the case of Switzerland, which is not subject to blackmail by the U.S. Congress. She trades freely with China, and last year became China's second supplier, displacing even Britain: her exports to China were rather less than Western Germany's, but unlike Western Germany she managed to achieve a favourable balance with China. No doubt some of Switzerland's success in trade with China is due to the fact that she is the channel for evasion of the U.S. regulations by other west European countries, but these latter are nevertheless confident that if the regulations were relaxed they could equal and surpass Switzerland's achievement, at similar profit to themselves.

The most that the American negotiators have envisaged in the discussions in Paris is that trade with China be placed on a similar footing with trade with the other Communist countries. This means that China will cease to be the object of special victimisation but will remain subject to the same strategic restrictions as now govern trade with Russia. The British, French and Japanese have been demanding even more than that, but the importance of this American concession can be judged from the British estimate that such a relaxation would permit Britain to increase her exports to China from £11 million in 1956 to £40 million next year. Obviously, this American concession was worth snatching at, all the more because American generosity in the matter will not be extended to U.S. exporters, so the west Europeans would have the profitable China trade more or less to themselves—an important point for the European automobile industries thus preserved from American competition. Naturally, there was a thorn with this American rose: Washington has asked that in exchange for freer trade with China, further restrictions be placed on trade with Russia. One of the restrictions innocently suggested by the

State Department was on copper wire, which happens to be Britain's biggest single export to the Soviet bloc.

More important than the exact additions and subtractions in the blacklists is the

Without Prejudice

TERMINATING THE SERVICES
OF WORKMENACTION DURING APPEAL
PERIOD

(FROM OUR LEGAL CORRESPONDENT)

SECTION 22 of the Industrial Disputes (Appellate Tribunal) Act, 1950, imposes a peremptory obligation on employers. It provides that except with the express permission of the Appellate Tribunal concerned, no employer shall alter the conditions of service to the prejudice of, or discharge, or punish any workman, whether by dismissal or otherwise, concerned in an appeal before the Appellate Tribunal during the pendency of such appeal or during the period of 30 days allowed for filing such an appeal. The penalties for contravention of the provisions of Section 22 are drastic. Contravention constitutes a criminal offence punishable with imprisonment for a term which may extend to six months, or with fine which may extend to Rs. 1,000, or with both; and while we are on the point, and to emphasise the gravity of contravention, we may add the reminder that where a person committing an offence under the Section is "a company, or other body corporate or any association of persons (whether incorporated or not) every director, manager, secretary, agent or other officer or person concerned with the management thereof shall, unless he proves that the offence was committed without his knowledge or consent, be deemed to be guilty of such offence." (Section 51). And that preliminary aide mémoire brings us to the interesting and instructive case of four

gentlemen "concerned with the management" of the Crown Flour Mills charged criminally before a learned magistrate, first class, Delhi, and subsequently coming before the learned Chief Justice and Khosla J. in the Delhi High Court for alleged breach of Section 22, punishable as above stated, for the termination of the services of 87 workmen.

The facts were that there was a dispute between the employers and the employees of the Crown Flour Mills. This dispute had been referred to the Industrial Tribunal. The workmen lost the case which was decided by the Industrial Tribunal against them. The workmen thereupon appealed to the Appellate Tribunal. So in the words of Section 22, they were "concerned in such appeal", and anything done or step taken by the management until the final disposal of the appeal would be so done or taken—again in the words of the Act—"during the pendency" of the appeal. The management did take steps. "While the appeal was pending," said Khosla J. in the High Court later, "a notice was sent by the management of the mill to 87 workmen informing them that the mill was being closed down with effect from 12th March, 1954, and that, therefore, the services of these 87 workmen were being terminated. The management had not previously obtained the permission of the Appellate Tribunal before taking this step, and so the four respondents were prosecuted for the offence punishable under Section 22 of the Act. It was alleged by the prosecution that they had deliberately dismissed the workmen while their appeal was pending before the Appellate Tribunal."

Now it is a fact that the number of technical offences artificially manufactured by statute and

which would not be offences at all under the common law "has increased, is increasing and ought to be diminished" as was said some hundred years ago by the Commons about the powers of the House of Lords. In England this aspect of trial by bureaucracy became so alarming that that great Lord Chief Justice, Lord Hewart, was moved to write a book about it which he called *The New Despotism*. The name has stuck, out the practice in England of prosecutions by the Tite-Barnacle clan has not ceased. Far from it. Only the other day, the writer picked up his local west of England newspaper and read therein of the case of a gentleman of irreproachable character who, at some risk to himself, visited the house of friends of his in the same village who—they were husband and wife—were violently quarrelling. The gentleman made the peace between the couple, but, as a precaution, dispossessed the husband of his revolver and took it away and locked it up in his own house until such time as he could safely return it. It is barely believable that for this he was prosecuted for being in possession of a revolver without a licence. It is true that a sensible bench of magistrates refused to convict him, but he had to suffer the ignominy of appearing in court on a serious criminal charge and to pay an advocate to defend him.

You will note that this gentleman undoubtedly was in possession of a revolver. Equally without doubt, he had no licence for it; and to be in such possession is an offence of great gravity. How then were the magistrates able to give him, as they did, an "absolute discharge"? The answer lies in two Latin words, or rather in the doctrine—invaluable to the liberty of the subject—arising out of them; and it was this venerable doctrine which the learned Chief Justice and his colleague in Delhi applied to the four accused members of the management of the Crown Flour Mills. The two words are *mens rea*, and the doctrine is this. In criminal law the purpose or object with which an act is done is all important. Briefly it may be said that in criminal law the constituent element of an offence is the *mens rea*, a guilty mind directed to a guilty intent. The commission of an act without the guilty intent is not as a general rule, sufficient to constitute a crime. This doctrine saved the management of the mill.

Said Khosla J. (Bhandari C.J. concurring): "It is quite clear that Section 29 of the Act makes punishable a criminal offence. A criminal offence is only committed when an act which is forbidden by law is done voluntarily. English jurists give the name of *mens rea* to the violation which is the motive force behind the criminal act. If there is no *mens rea*, no offence is committed although the act may prove detrimental to individuals. It is only voluntary acts which amount to offences. If a person is compelled by force of circumstances to perform an act forbidden by law he cannot be said to do it voluntarily and, therefore, he will not be held liable for the consequences of that act. An involuntary act may give rise to a civil remedy by an aggrieved person, but it will certainly not amount to an offence which is punishable at the instance of the State. In the present case, we find that the closing down of the mill and the subsequent termination of the workmen's services were not voluntary acts. They were performed consciously. The respondents were forced to close down the mill because no other course was open to them. The workmen were demanding a bonus which was not warranted by the finances of the mill. The award of the Tribunal was against them and the workmen took the matter up in appeal to the Appellate Tribunal. This happened in March 1954. In the year 1952-53, the mill had suffered a loss of Rs. 51,645 and in the following year (1953-54), had suffered an even greater loss of Rs. 89,372-10. These figures are evidenced by the balance-sheets produced by the respondents in the trial court. The Delhi State derationed grains and so the supply of wheat to the mill stopped abruptly on 1st March, 1954.

"The mill found itself in a state whereby to run each day would mean financial loss which would go on mounting as time passed. No employer, when faced with such a situation, can keep his mill open merely because the provisions of Section 22 of the Act require him not to alter the conditions of service or to dismiss any of his workmen without the permission of the Appellate Tribunal. The object of Section 22 is to safeguard the interests of the workmen and to keep them secure from any kind of victimisation by their employers while their dispute is pending before the Industrial Tribunal. In the present case there can be no question of victimisation. For two successive years the respondents had suffered heavy losses in the running of the mill. They found themselves unable to carry on the business because conditions suddenly altered by the derationing which came into force on 1st March, 1954. In this view of the matter, it cannot be said that the act of the respondents in closing down the mill was a voluntary act which contravened the provisions of Section 22. That being so, the respondents cannot be said to have committed any offence." The appeal of the State against the acquittal by the trial court was, therefore, dismissed.

Their lordships' judgment concluded with an observation which, if not specifically intended as a hint to Tribunals concerning employers generally, might well be accepted as such: "The mill was not a charitable institution designed to make payments to workmen when payments could not result in any profitable business."

A DITCHER'S DIARY

I SHALL often wonder whether the Congressman who last week suggested that Mr. Nehru should give up the Prime Ministership and devote himself to reorganising the Party could have meant his resolution to be taken seriously. That the Party machine, like our jute mills, could do with some rehabilitation and modernisation, few would deny. Nor would many, I think, dispute the fact that Mr. Nehru is the best man to do it. But if you accept that the advantage of the nation is more important than the interests of a single Party, I think you will also agree that Mr. Nehru's first duty is to remain Prime Minister. There is much in the view, shared apparently by him, that nobody should stay in office continuously for a long period. But the only substantial argument I can see for Mr. Nehru leaving the Government at the present time is not that the Congress needs more of his attention to tone itself up; it is that thinking should begin in rather more concrete terms on the question of a possible successor. The tendency to depend on him goes to some quite extraordinary lengths these days. A few weeks ago, Mr. Jaya Prakash Narayan discovered the need for a strong Opposition Party, and urged Mr. Nehru to organise it. Now, somebody else wants a strong Congress, and thinks once again that Mr. Nehru should organise it. One begins to wonder whether a greater devolution of responsibility is not now beginning to be clearly necessary. Perhaps too many people have been swept to eminent positions on Mr. Nehru's coat-tails without actually having the ability to face up to their responsibilities; perhaps, too many have tended to hide their unpopularity and their shortcomings under the cover of his distinguished leadership, with the result that we have periodic symptoms of waning self-confidence in the ranks.

The most significant thing about the Family of Man, I think, is not that it has a great deal in common, but that it is an increasing one. The alarming rate of its increase, with no comparable growth in the world's total resources, was brought out by the United Nations demographic survey; Mr. Nehru brought it home with his observation that in another thirty years or so, India will have doubled her already sizeable population. Set aside the very real doubts about India's second, third, fourth and fifth five year plans: grant them all the success and more and add to it several times the foreign aid India is even likely to ask for—and you will still see an enormous gap between what the country will have in 1987 and what it will need to feed its 740 million men, women and children. Mr. Nehru is entirely justified in being mildly proud of his Government's official participation in family planning schemes but he will be the first to admit that the extent of the effort to date falls far short of the magnitude of the problem facing the country. The Prime Minister spoke of a problem of communication; the Government, he implied, had not yet evolved a language the common people can understand. This is not the Hindi-English problem; this is a problem arising out of the fact that educated and uneducated Indians live on two distinct levels of existence, and rarely do they use the same idiom, even when the language they speak is the same. This is a question the answer to which I cannot pretend to know, but more family planning clinics in the villages may yet produce results. By the way, cannot the community project workers, who are or should be recruited in the villages, be used more extensively for explaining birth control? This seems to me a little more urgent than explaining democracy and socialism.

Preparations are proceeding apace, I gather, to put into effect the State Bank's scheme to issue

rupee traveller's cheques. As is known, this is probably the first time that such cheques will be issued in the Indian currency. But while complimenting the Bank on the initiative it is showing, I hope I will be forgiven for expressing a little anxiety about the immediate prospects for the scheme. Some of this anxiety centres on the fact that people going abroad from India—who would have constituted the best potential market for the new traveller's cheques—can go much less often than they used to because of the recent exchange restrictions on foreign travel. (You have to join the Railway Board these days if you want to see the world.) Whether many foreigners undertaking a grand tour of, say, Europe or the Far East will take the State Bank's traveller's cheques, rather than those issued by other established agencies, I am not quite sure. Much will depend on negotiability—on how efficient and widespread is the State Bank's network of offices, correspondents and agents selling and cashing its traveller's cheques. Much will also depend on what foreigners think of the Indian rupee as a store of value: this will be particularly important for people going to currency markets which are relatively free, such as Switzerland's, or those which are relatively black, such as France's. A special series of the State Bank's traveller's cheques will be for use within India. These, I expect, will prove popular for they will combine the advantages of cash with the safety of a bank draft—for instance, during your few hundred journeys to Delhi in search of an import licence or of payment for bills from the Government. The State Bank hopes that these cheques will be used not only by the comparatively well-to-do, but also by the common man going to fairs, festivals and on pilgrimage. But since the traveller's cheques are to be issued, at least initially, in denominations of Rs. 50 and Rs. 100, it is open to question how many of the poorer people will find them convenient.

As far as I can see, Port Arthur was not much mentioned in the speeches made during the visit to India of Mr. Nobusuke Kishi, Prime Minister of Japan. But those who are old enough to remember 1905 in Bengal cannot have forgotten what the Russian defeat did on these shores to boost Asian nationalism. Much of that goodwill was dissipated when Japan attacked China; the rest was destroyed when during the war some Asian countries made a closer acquaintance with Japanese soldiers. Next perhaps only to Western Germany's Japan's postwar recovery has rightly earned the admiration of the world. There is much that both countries can gain from closer Indo-Japanese relations. Indeed, it has often been a surprise to me that even some of this country's better economists have looked more to China than to Japan for industrial inspiration. Democracy is perhaps an infant in Japan; in China, it has not yet been born. Nor is China's much-publicised achievement anywhere near Japan's. I have now and then read of Indian experts being sent to Japan and Japanese experts coming to India, but little is known of what has come of these visits. This gives rise to the suspicion that there may not have been much to be known. There are limits to the extent to which the Japanese can come close to neutral India, but in the commercial and industrial fields there is a larger area in which the two countries can co-operate than appears to have been explored yet. All the talk we hear these days about the future of Asia being decided by the competition between democratic India and Communist China seems to me rather facile in as

much as it leaves out of account the most industrialised nation in Asia—Japan. It is by no means certain that political ideologies are more decisive than economic realities.

Public transport in Calcutta is not among the world's best. Nor is New York's, but then they have all the automobiles in the world. In any event, Calcutta has certainly not suffered from a dearth of ambitious schemes intended to provide adequate transport for the increasing population of the city. Underground trains, overhead railways—they have discussed them all, always coming to the question of finance (lack thereof) rather late in the day. I always admire an imaginative administration, but in West Bengal, ministerial fancy may well have roamed a trifle too free and wide, and it came to bear very little relation to the State's resources. The Calcutta Tramway Company's plan to introduce three-coach streetcars in Calcutta is evidence that the solution of many problems lies not necessarily in grandiose new schemes of doubtful financial feasibility but in improvisation and extension of the existing. Three-coach cars are not unknown in India; in some old northern cities they were once among their ugliest features. But in Calcutta, which hardly remembers its horse-drawn tramcars, they will appear a little queer in the beginning. The relief to passengers who now hang on bumpers and mudguards will, however, be great, and it is to be hoped that Authority will accord early approval to this on'y practical answer to the city's public transport problem. As for our getting used to three-coach tramcars, you would be surprised how many things which only recently were unthinkable are today accepted as but normal. Eight-page newspapers with 40-page supplements and tiny little States with huge big ministries are no more "natural" than three-coach trams.

The forty-second Calcutta Dinner, held as usual at the Connaught Rooms, was, a London correspondent tells me, notable for some quick improvisation. Lord Home, Secretary of State for Commonwealth Relations, was to have been the chief guest but Lord Salisbury chose that evening to make his apologia in the House of Lords for resigning from the Government and to move his vote of censure on the Suez "surrender". As the Cecils always have precedence over everything and everyone else, Lord Home begged to be excused from the dinner; but Lord Simon (who some elderly Ditchers may remember in the 1930s as Gilbert Simon), took his place with credit to himself, the shipping industry and the peerage. The other piece of improvisation was that Hubert Gotts, who for the last two years has been acting as honorary secretary of the dinner, mislaid the table plan in a Southern Railway compartment three days before the function. It is no easy matter to do the seating for over three hundred people. However, with the aid of a prodigious memory, some burning of the midnight oil and a little extra co-operation from the printer, all was well on the night. If Mr. Gotts is not the honorary secretary for next year's dinner it will not be because of this incident, but because he is shortly going off to Ghana to take charge of one of the new State banks which independence has called into being. It is quite likely that his talent for improvisation will come in useful there too. Mr. O. T. Jenkins, who presided, scattered his epigrams right and left in proposing the toast of the City of Calcutta. The Wentworth Roffe orchestra got through *Jana gana mana* without a hitch and a good time was had by all.

THE BURMAH OIL COMPANY LIMITED

A YEAR OF CONTINUED EXPANSION

CHAIRMAN'S STATEMENT

The fifty-fifth annual general meeting of The **Burmah Oil Company Limited**, incorporated in Scotland, will be held on Friday 14th June, 1957 in the Merchants' Hall, 30, George Square, Glasgow.

The following statement by the Chairman, Sir Kenneth B. Harper, has been circulated with the Directors' Report and Accounts for the year ended 31st December, 1956.

Accounts

Once again I am glad to be able to report a year of continuing trade expansion with Group trading profits for 1956 at £7,584,750, an increase of £1,566,576 over the corresponding figure for 1955. Sales continued to expand, while our profit margins were on the whole little different from those obtained in 1955.

I refer later to the formation of a new Rupee Company with Indian participation to take over the oilfield at Nahorkatiya and certain other areas in Assam. Pending the formation of this company we have gone ahead with a comprehensive development programme in the areas to be taken over by it, the cost of which we have carried forward in our Accounts.

Depreciation at £1,243,080 is rather less than that for 1955, in which year there was an exceptionally high charge mainly in respect of the new seaboard installation in East Pakistan.

Dividends from Trade Investments have this year been shown as part of our trading income in the Consolidated Profit and Loss Account, in order to bring out more clearly the profit arising from all our trading interests. These dividends are brought into account as and when they are received and this year include the first dividend on our holding in **Burmah-Shell Refineries Limited**. The amount of the dividends actually received during the year from our other main Trade Investments was less than was received last year.

Dividends and interest on Other Investments received in 1956 amounted to £8,018,336 and are £1,082,834 up on 1955, due mainly to larger dividends received on other holdings. The **British Petroleum Company Limited** and in the **"Shell" Transport and Trading Company, Limited**.

Full provision has been made for U.K. and Overseas taxation amounting in all to £9,550,543, compared with £7,642,336 in 1955. No account has been taken of the possible effect of the recent budget proposals, but as we already pay relatively little U.K. taxation on our overseas trading profits by reason of double tax relief the benefits that may accrue to us from these proposals are unlikely to be material.

The net profit for the year is thus £7,123,896, compared with £5,990,453 in 1955, an increase of £1,133,443. After adding the balance brought forward from 1955, there is available for distribution £7,764,382, from which falls to be deducted the interim dividend of 5 per cent, paid on the Ordinary Stock on 23rd November, 1956, together with the dividends on the Preference Stocks. From £6,407,108 remaining for disposal your Board have appropriated £1,650,000 to General Reserve and recommend that a final dividend of 15 per cent, be paid on the Ordinary Stock on 5th July, 1957. This, if approved, will amount to £4,146,710, leaving a balance of unappropriated profit of £610,398 to be carried forward.

The continued expansion of the activities of our Subsidiary Companies and the development of the new productive areas in Assam are reflected in Fixed Assets and Current Assets and Liabilities in the Consolidated Balance Sheet.

Trade Investments increased during the year due mainly to the call up of further capital by the **Burmah-Shell Marketing Companies** in India and in Pakistan to provide additional distribution facilities to meet the expansion of trade.

Trading

Our Group's own production and purchased oils are marketed by our wholly owned Subsidiary Companies in Burma, Assam and part of East Pakistan and by **Burmah-Shell** in the rest of India and Pakistan.

By comparison with the previous year the Group's sales increased by 12 per cent, in Burma, 7 per cent, in India and 2 per cent, in Pakistan.

The increase in **Burma** was satisfactory having regard to the state of the country which is still subject to outbreaks of insurgency despite Government's efforts to suppress them.

The demand for motor spirit tended to slacken off during 1956 but this was more than compensated for by increases in the kerosine and furnace oil offtake. There has been more purchasing power in the hands of the cultivator and the demand for kerosine last year expanded in spite of quite an extensive electrification programme coming into operation. The demand for furnace oil is growing as new industrial units come into commission.

In **Pakistan** a contributing factor to the small increase in sales was some loss of trade in Furnace Oil because of displacement by Sui gas, but to us the loss of the former was partly offset by the latter.

The organisation for the development and sale of Sui gas is now as follows:—

- (1) The gas is produced by **Pakistan Petroleum Ltd.** at Sui.
- (2) That Company sells it to **Sui Gas Transmission Co. Ltd.**, who own and operate a pipeline for transmission of the gas to Karachi.

- (3) **Sui Gas Transmission Co. Ltd.**, resell the gas for distribution to industrial and other consumers.

- (a) on the pipeline route, to **Indus Gas Co., Ltd.**;
- (b) in Karachi and suburbs, to **Karachi Gas Co., Ltd.**

Your Company has no financial or management interest in either of the two retail companies, which are 100 per cent. Pakistani owned.

Our interest in the ownership and management of Sui gas therefore goes no further than the Karachi end of the main pipeline. Sales of gas were running at the rate of 23 million cubic feet per day at the end of the year. This is less than earlier estimates, partly because the retail companies had not got fully into their stride in this new business and partly because of difficulties in getting import licences for equipment. Sales have been improving steadily this year.

Disappointing in some respects as the rate of off-take was, it has already begun to make a valuable contribution to Pakistan's foreign exchange balances. Last year's sales of gas were equivalent in value to about £1 million in terms of imported fuel oil.

There was a satisfactory expansion of trade in **Assam** which is Digboi's main supply area. The increase was in all products and particularly in furnace oil for which our chief customers are the tea gardens.

In the rest of **India** the distribution of petroleum products was affected by a continuing shortage of tankwagons, but the most marked feature of the trade was an increase in sales of diesel oil for automotive use alongside an almost negligible increase in motor spirit. The increases in our Group's sales of these two products were 31 per cent, and 1 per cent, respectively. The increased demand for the former is in keeping with the encouragement given by the Indian Government to the production of diesel engine vehicles in the assembly works sponsored by them. Imports of petrol driven cars were restricted in favour of cars assembled in India, which were for the most part of the small, lower powered variety.

The petroleum products trade in all our markets and perhaps particularly in India is a "growth industry" and given normal conditions in the domestic as well as the international sphere we can look for a gradual annual expansion in volume. This expansion should become more marked as the Government's industrial plans take practical shape, but expansion calls for more and more facilities and therefore more funds for more finance. The Government of India has shown appreciation of this position by granting development allowances under its taxation laws. This has been welcomed but it goes only part of the way.

The finance required for expansion of the oil industry has for the most part to be generated by the industry itself, and selling prices must accordingly be allowed to remain at a level to meet this need as well as providing an acceptable return on the capital employed.

Oilfield and Refinery Operations

Burma. Our interest in these operations in Burma is through our 55 per cent. shareholding in **The Burma Oil Company (1954) Limited**. The Union Government holds one-third of the equity in this Company and is helpful and co-operative, in the spirit of partnership in a joint venture.

The "1954" Company maintained crude oil production at Chauk and Lanya— the latter field having been developed originally by one of the other shareholders—at the level required to meet Chauk refinery needs, and has since increased it to provide also the required throughput of the new refinery at Syriam, which came on stream in February this year.

The capacity of this new refinery is about one-quarter of our pre-war Syriam refinery which we were ordered to destroy in 1942 to deny it to the Japanese enemy, but the combined throughput of Syriam and Chauk is now sufficient to supply the whole of Burma's present requirements of the main petroleum products, thus making a valuable saving of foreign exchange which Burma has since the war had to find for imports.

Pakistan. Production of crude oil at Balkassar and of gas at Sui is in the hands of **Pakistan Petroleum Limited**, in which our partners are the **Pakistan Government** (29.3%) and the **Pakistan public** (0.7%). Relations with the **Pakistan Government** are cordial and the Company receives every assistance from it.

The small quantity of crude oil derived from Balkassar is refined under contract at the **Attock Oil Company's** Rawalpindi refinery.

At Sui no new wells were drilled during the year. These already completed are capable of supplying all the gas required for some years to come.

Despite unprecedented floods, the **Sui Gas Transmission Company's** main pipeline from Sui to Karachi continued to operate successfully, delivering gas to the two Pakistani owned retail distribution companies to which I have referred.

India. **Assam Oil Company's** new "field" consists of the three contiguous areas near Nahorkatiya, i.e. the original discovery area, the Nahorkatiya Extension and Hugrijan, and now a fourth area, Moran, about 25 miles to the south-west.

During 1956, out of eleven wells drilled on these areas nine were oil producers, one a gas producer and one a dry hole. All four areas have now been proved and the production target has been raised from

one million tons a year, as reported last year, to two-and-half million tons.

Outstanding progress was achieved in increased drilling speeds, with in consequence satisfactory reductions in cost per foot drilled.

It was a condition of the grants in 1953 of concession rights in these areas to **Assam Oil Company** that if oil were found a rupee company would be formed to develop it and that a prescribed percentage of the equity would be reserved for Indian participation. This percentage has been agreed at 33% and the Indian Government has decided to take up this shareholding interest itself.

Throughout last year and up to the present date discussions have been going on with the Government regarding the formation of this rupee company and in the last few weeks have reached the stage where a formal agreement appears to be in sight. In the course of these discussions our main difficulty has been to reconcile the development of the valuable oilfield we have discovered with Government's restrictive policy towards this kind of private enterprise.

At **Bombay**, the **Burmah-Shell** refinery had its first full year of operation and treated nearly two-and-half million tons of crude oil imported from Iran and Kuwait. This refinery company refines crude oil for your Group, **Shell** and **BP** and the products are sold through **Burmah-Shell's** marketing organisation.

At **Digboi**, **Assam Oil Company's** refinery had a trouble-free year. For many years past it has been quite normal to record that the transport of petroleum products to markets outside Assam had been interrupted by breaches in the railways, through flooding or landslides. In 1956 **Assam Oil Company** suffered no major interruption to its operations from this cause and, with **Nahorkatiya** to draw upon to supplement its crude oil production at **Digboi**, the refinery enjoyed a record throughput.

Prospecting

Burma. During the year the "1954" Company made good progress with the geophysical survey of the **Irrawaddy Delta**.

The terms and conditions governing future exploration in **Burma** have been under discussion and this survey was undertaken on assurances received by the Company in that respect.

A test well in the **Delta** area and another at **Onwue**, 30 miles south of our old **Yenangyung** field, will be started when formal licences have been granted.

Discussions are taking place between the Government of **Burma** and the "1954" Company for the grant to the oil industry in **Burma** of taxation conditions on the same lines as those granted in other countries where the search for oil is recognised as an important industry.

Pakistan. **Pakistan Petroleum Limited** has continued its vigorous programme of exploration in both East and West Pakistan. A second well at **Sylhet** in East Pakistan repeated the indication of a useful natural gas field, first disclosed by the well which was destroyed by fire in 1955. Unfortunately no oil was found in either of these wells, but if further drilling confirms results to date this **Sylhet** gas, while not on the same scale as **Sui**, should prove valuable to industry in East Pakistan. The development and utilisation of the gas is now under consideration with the **Pakistan Government**. Meantime the search for oil has moved further south to **Lahore**, where a test well will be started in the current year.

In West Pakistan two test wells were started, one is still drilling, so far without success, and the other found poor quality natural gas in considerable quantity but of no commercial value. Testing continues at the latter well in the hope of obtaining evidence which will assist in the search elsewhere.

The **Pakistan Government** during the year concluded an agreement with **Pakistan Petroleum Limited** which provides, mainly by taxation arrangements, additional incentive to the Company's prospecting effort.

India. Apart from continued drilling to prove the value of the concessions at **Nahorkatiya**, **Hugrijan** and **Moran**, no prospecting was undertaken in India during the year.

By a Resolution on Industrial Policy which was announced early in the year, private enterprise is to be permitted in future to prospect for petroleum only by means of a rupee company in which Government itself will have a majority shareholding and therefore the controlling voice. Your Board and I should recommend any further expenditure of stockholders' money on prospecting for new areas in India so long as such conditions persist.

Our Group has been prospecting in India for 40 years, though with more disappointments than successes, and has been responsible for developing and producing all the oil that has so far been found in India. We have served both India and ourselves well in the process and we would like to continue to do so, but only on conditions that will benefit both.

Private Enterprise in India

Last year and the year before I referred to the difficulty we were finding in determining the place of private enterprise in India's "socialist pattern of society", because verbal encouragement was not being matched and indeed was being contradicted by legislative and executive measures. There were further instances of such measures last year, for example:

- (1) The Seventh Amendment to the Constitution legalised the setting up of State Trading Corporations to compete with normal private enterprise.
- (2) The Resolution on Industrial Policy to which I have already referred deprives private enterprise of the opportunity to develop the country's natural resources except as an instrument of Government.
- (3) The Finance (No. 3) Act of 1956 contains provisions under which a company cannot qualify for the benefits of depreciation allowances for income tax purposes unless it deposits a sub-

MAHINDRA & MAHINDRA LIMITED

CHAIRMAN MR. K. C. MAHINDRA'S REVIEW

The following is an abbreviated version of the speech delivered by the Chairman Mr. K. C. Mahindra at the Eleventh Annual General Meeting held in Bombay on 22nd May, 1957.

This is the first occasion on which the Chairman of your Company is addressing the Shareholders. It is a matter of satisfaction and a little pride that the report which has been presented to the shareholders reflects the conclusion of an exceedingly successful year of operations for the Company. It has been a year where high levels of sales and earnings have been reached. This achievement was possible principally because of your organisation keeping pace with the demands of an expanding economy. Illustratively, for instance, Government put through a programme of heavy purchasing of Steel from abroad. As one of the principal importers of steel, your Company was in a position to service this demand for additional steel and thereby continue to occupy a dominating position in imports. It should be mentioned that under the very rigid regulations governing steel business, the profit margins are extremely low and importers and dealers usually depend upon large volume in order to meet the substantial expenditures of such an operation.

The turnover in Jeeps and allied vehicles was about 20% more than the previous year, but a very satisfactory improvement was made by the Spare Parts Division. Tractors achieved a remarkable advance in sales, almost tripling the record of the previous year. With the commissioning of your new Trailer factory at Pimpri the Company is now in a position to embark on the manufacture of heavy Trailers, and several steps are at present being taken to improve upon the techniques of production, and equip ourselves to service the demands for heavy Trailers in the country.

The problem of manufacture of Jeep components has been our foremost concern, and while the progress so far made is in accordance with the progressive phases of manufacture presented to Government in 1955, it is early to say whether the restrictions now enforced in respect of import of capital goods and tooling would seriously disturb the schedule of timing. Every effort is being made to overcome the difficulties of foreign exchange, and I have hopes that no serious set-back will be experienced during the current year in maintaining our progress.

Shareholders will appreciate that although it was the original design to gradually build and concentrate the Jeep operations at Pimpri, a major decision in this respect became inevitable last year, when owing to scarcity of steel and cement it was found that the requisite building operations would not be completed within the time available to us. Accordingly, decision was taken to re-locate the Jeep programme. For this purpose we were fortunate in acquiring certain built-up factory areas in Worli and in Ghatskopar and accordingly the manufacturing operations did not suffer too much of a lag in time.

I will not be doing my duty to the shareholders if I were to gloss over the great difficulties which the manufacturing organisation is facing today: difficulties principally in the matter of foreign exchange but also connected with scarcity of steel and cement, and the continuously rising costs. Problems of this nature will surely rear, if not bring to a halt, our expansion programmes.

There is, besides, the great problem of financing the operations, which are now at a high level. You to the line of credit of approximately one million dollars which the **Willis Overland Export Corporation** extended to the Company. This credit is in itself an evidence of faith and confidence which our Principals have shown in your organisation, and I should like to place on record on your behalf our appreciation of this gesture from the Kaiser interests, who now own the **Willis** organisation.

Tariff Commission's Report

During the year, the Tariff Commission rendered a great service to the automobile industry by presenting

THE BURMAH OIL COMPANY LIMITED

(Continued from page 762)

tantial part of its current and accumulated profits and reserves, not represented by fixed assets, with the Reserve Bank of India. Any release of the deposits requires the approval of Government.

Each of these measures could directly and adversely affect our business and their cumulative effect is such that it must be taken into account whenever we have to consider investing further capital in India.

Tankers

Our small fleet usually trades in Indian waters, for which the ships were specially designed, returning to the United Kingdom only for Special Surveys or repairs which cannot be undertaken in yards in India and Pakistan. Two of our ships came home for these reasons during the year and both have now returned to the East.

The remainder of the Fleet continued to operate steadily and satisfactorily.

During the year the Government of India acquired their second tanker.

Staff

The staff of all the Group Companies at home and overseas, and on the seas, have given us another year's good service. The East is no longer "unchanging" and new situations constantly arise. Our Managing Directors, Managers and Staffs cope with them with understanding and in an admirable spirit and our gratitude is due to them.

ing a very able report to the Government, and it is encouraging to know that the industry has now been placed in the category of protected industries eligible for receiving the favours and the bounties attached to such developments. Nevertheless, the industry, in order to become strong and self sustaining, must proceed to develop sound and healthy lines. It is imperative that during the ten years' period recommended by the Tariff Commission and accepted by the Government, the ten years of course in a manner that it relieves the country and the consumers of such burdens as will naturally be suffered during the protection stage. I do not see this happy consummation being reached unless a considerable degree of common exploration and research is carried out in order that we develop an automotive vehicle which will suit not merely the conditions of locomotion and transport in the country, but which will also suit the pockets of the millions of this land where purchasing power is so low and where the roads are scanty and undeveloped. Your Company is engaged in developing a vehicle ideally suited to the road conditions of India but I must confess it does not qualify as a peoples' car because of its high cost today. Cost can only be brought down by sheer weight of volume turnover. There is no other way in the automobile industry. It is incumbent upon the operators of the automobile business in India to explore the operational uses of a vehicle like the Jeep, to develop and build on its functional structure and evolve the multi-types suitable for what people need, suitable for the roads and available within the purchasing power of India but I must confess it does not qualify as a peoples' car because of its high cost today. Cost can only be brought down by sheer weight of volume turnover. There is no other way in the automobile industry. GUEST, KEEN, WILLIAMS, LIMITED

MANAGING DIRECTOR'S STATEMENT

Statement made by the Managing Director, Mr. H. M. L. Williams, at the 27th Annual General Meeting held in Calcutta on 29th May, 1957.

I welcome you to this the Twenty-seventh Annual General Meeting of the Company. The Directors' Report and the Statement of Accounts have been circulated and in your possession for some time, and I propose with your permission they be taken as read. Before we pass on to the formal business of the meeting, I want to tell you about some of the more important events which have occurred in your Company and its fully owned subsidiary since the last Annual General Meeting.

The Board

The Company has been fortunate in being able to recruit to the Board Sir A. Ramaswami Mudaliar and Mr. K. C. Mahindra, both of whom need no introduction to you being well known for their wide experience of public and business affairs; their wise counsel and ability are proving most valuable. We have also been fortunate in obtaining the services of Mr. K. C. Matra, the Managing Director of Sankey Electrical Stampings Private Ltd., with which Company we have much in common both as a customer and a supplier, and also as an occupier of part of our Bhandup Estate near Bombay.

Retirements from the Board were Mr. E. J. Evans, who resigned on 31st March last and Mr. W. E. Murphy, who resigned on 31st March this year, both of whom have left after over 20 years service with the Company in India, during which time they have contributed much by their wise guidance and their personal examples of devotion to duty. Mr. Evans has from 1st July last been appointed Manager at the Company's London Office, and Mr. Murphy is expected, on completion of his leave, to join our Associates Messrs. Guest Keen & Nettlefolds (Midlands) Ltd. in a technical capacity.

Accounts

The Accounts are presented for the first time in the form required by the 1956 Companies Act. Consequently on certain specific groupings called for under this Act, figures of the previous year have not been shown as they would not be comparative with the figures of the year under review. However, next year's Statement of Accounts will show the comparison with the current year's figures.

In addition to the Statutory Statement of Accounts, simplified presentations of the Balance Sheet and Profit and Loss Account are included so that Shareholders can at a glance obtain a broad view of the Company's Capital structure and see how Earnings were used in 1956.

Trading Profit

For the 52 weeks ended 29th December, 1956, Invoiced Sales amounted to Rs. 7,91,30,588/- as compared to Rs. 6,09,72,201/- for the previous financial year. This increase results mainly from a greater out-turn of both Calcutta and Bhandup Works, but the Invoiced Sales figure alone must not be taken as an infallible yard-stick because it is both inflated by statutory increased steel prices and reduced by a larger use of customers' own raw material.

After charging all manufacturing expenses, providing Depreciation on Fixed Assets and adding Income from Investments and other Non-Trading sources, the surplus before taxation for the 52 weeks ended 29th December, 1956, amounted to Rs. 1,52,76,593/- as compared to Rs. 92,57,430/- for the previous financial year.

The provision for taxation on the profits of the current period is Rs. 69,60,774/- compared to Rs. 43,60,000/- for the previous year, in addition to which a further sum of Rs. 2,88,490/- had to be provided to make up a deficit in the tax provision for the previous year; offset against this is a credit of Rs. 99,264/- in respect of tax provision in earlier years no longer required. If the tax amendments as proposed by the Finance Minister when presenting his Budget on the 15th of this month are adopted, adjustments of a similar nature will have to be made in the current year's Accounts for the taxation liability of the year ended 29th December, 1956.

Appropriations

You will see from the Report of the Directors, that having paid an Interim Dividend of 8% free of tax, they now recommend a final Dividend of 15% free of tax and a transfer to General Reserve of Rs. 38,00,000/-, leaving a balance of Rs. 17,04,234/- to be carried forward.

In making these recommendations your Directors have given consideration to the present-day taxation structure and the paramount need to retain as Reserve the maximum amount possible for financing the Company's large rehabilitation and development projects. Present-day plant and machinery prices are about four times pre-war levels and have nearly doubled during the last ten years.

Unfortunately, under Section 23-A of the Income Tax Act, your Company is compelled to make a minimum distribution of 56% of its surplus, failing which a penalty tax is incurred. There is a proposal in the latest Budget to reduce this figure to 45%. At the same time if the distribution exceeds 60% of the Paid up Capital, the Company is deprived of certain rebates in respect of Super Tax payments on account of what might be called an excess Dividend Tax. It will be seen therefore, that either way the Company is penalised. It is my belief that the introduction of more modern plant and equipment with increased operating economies is essential to counteract the continual rising costs of production. The position therefore is most invidious for an expanding Company such as yours which relies on profits and future investment to meet its development costs.

Balance Sheet

The Capital Expenditure for the 52 weeks ended 29th December, 1956, amounted to Rs. 36,38,362/-, whilst Depreciation written off Fixed Assets was Rs. 16,02,213/- (Additional Depreciation of Rs. 2,09,416/- has been provided to allow for the general upward trend in prices, but this amount has not been written off Fixed Assets).

Stocks in hand as at 29th December, 1956, were valued at Rs. 1,97,24,582/- showing an increase of Rs. 61,01,736/- during the year. This increase is mainly on account of raw materials.

Customers' Accounts at Rs. 1,49,31,765/- recorded a rise of Rs. 33,47,932/- over the previous year which is attributed to the marked improvement in Sales. There is, however, an influencing factor to which the Management is giving constant attention; I refer to the Book Debts outstanding for more than 3 months, which at 29th December, 1956, amounted to Rs. 57,26,717/-. Your Directors are very conscious of the need to conserve to the maximum the Company's finance, but I regret to say that these overdue bills (now considerably liquidated) were for the most part on account of the Statutory increase in the price of steel which occurred as far back as June, 1956. The Company on the other hand had to pay the increased prices for raw materials immediately they occurred.

The improvement in cash resources at the end of the year is the result of the Capital Reconstruction which took place on 7th November, 1956, when 5,89,400 shares of Rs. 10/- each were offered for public subscription at a premium of Rs. 10/- per share. It must, however, be mentioned that in the ensuing months a considerable amount of cash will be required to meet large payments of Plant and Machinery for the Development Projects. There is also the possibility that under the Finance (No. 3) Act, 1956) the Company may be called upon to pay over a certain amount of cash in the form of "Refundable Deposits" to be entitled to its claim for Income-tax Depreciation Allowances.

After giving effect to the various transfers, the amount which has been added to the General Reserve and Surplus of the Company is Rs. 39,16,310/- making the cumulative position as at 29th December, 1956, Rs. 1,58,37,252/-. Bearing in mind the Interim Dividend distribution already made and the Final Dividend now proposed, the results can I think be considered most satisfactory.

Production

During the past year both Calcutta and Bhandup Works had full Order Books in almost all Departments and, helped by improved supplies of steel imports, were able to achieve greater out-turns compared to the previous year. Also of immense benefit was the delivery of rods from our Associated Company, Guest Keen & Nettlefolds (South Wales) Ltd. meeting the entire needs of Bhandup Works throughout the year. Furthermore we were very fortunate in being assisted from the same source by the supply of all the smaller size rods for Calcutta Works, enabling our own 8" Rolling Mill to concentrate on longer runs of more profitable sections. Our Calcutta Works Rolling Mills as a whole achieved a record output of 45,913 Tons.

The production of railway track sleepers was generally maintained at a good level due to availability of imported sleeper bars. Railway Switches and Crossings produced were the highest on record, as also were forgings for the wagon builders, and the specialised Permanent Way Fittings. P. & M. Anchors and Mills Loose Jaws, of which the Company has been the pioneer in India.

The Company's Bolt & Nut Works achieved a record output, but due to the very high costs of this specialised plant a commensurate return on investment in this Section is dependent on high working efficiency, and this cannot be achieved until sufficient steel is available to operate the full plant on a two shift basis.

The 5-Ton Electric Steel Melting Furnace at Calcutta Works with a record output of 7,200 ingot tons during the year 1956 has again fully justified its existence. This furnace is making medium, high carbon and alloy steels, utilising as its main raw material low value steel scrap from the Company's manufacturing sections.

Bhandup Works, which made its first wood screw as recently as the autumn of 1953, also achieved a record output and during the year completed its second stage of development which consisted of a 50% building and plant expansion. This development, besides increasing the output of wood screws and safety pins, extended manufacture to a wider variety of fastenings including Timmer's rivets, cotter pins and machine screws, all of which are being produced to a standard of quality equal to the best imported goods and are proving very popular with the Company's customers. The introduction of Hypodermic Needles was also made; but although these needles are manufactured to the same standards of quality as the best imported article, it will take time to overcome a certain amount of consumer resistance. However, I am hopeful that this will be a popular manufacture. When the anomalous position of import duty on the finished article being less than that on the raw material can be corrected, Hypodermic Needles should become a satisfactory income earning item.

Agency Department

Although the Invoiced Sales and Commissions at Rs. 26,78,769/- of this Department were a little better than the previous year the net profit was lower due to rises in cost of sales. Some of these rises are natural to present-day trading but some are not compatible with an efficient economy and should be avoidable; I refer to demurrage charges which are now all too common on consignments coming through the Port of Calcutta. Not only are the demurrage charges a direct enhancement of the costs but the inordinate Customs and Port delays are adding to the financing costs of these imports whether they come by air or sea. Of three recent air consignments of technical equipment required most urgently, the clearing of these goods varied from 15 to 27 days from lodging of documents. Of sea consignments to Calcutta, stores and ordinary machinery are regularly taking over a month from the vessel's arrival to be cleared; and if the consignment requires a heavy lift and/or a special wagon, the delays in delivery can be much longer and quite unpredictable.

Employee Relationships

Your Company has continued its policy as a pro-

gressive employer, laying stress on the need for an efficient recruiting organisation and good training facilities. To this end the Labour Welfare and Personnel Sections have been strengthened, and a fully qualified officer with a life time experience in engineering teaching has been appointed at Calcutta Works where a special Training School building is nearing completion.

Last month the findings of a Labour Industrial Tribunal were gazetted on a number of issues concerning Calcutta Works. Amongst other things the Tribunal gave a decision revising the Annual Bonus for the year 1954 against which the Company has been granted leave to appeal. However it supported the Company's request to revise the Production Bonus Scheme which had been in operation for the past 10 years, but which in the light of present-day practice required a more equitable distribution to have real incentive value.

A renewed attempt has recently been made to reach a long-term Bipartite Agreement with the three Unions at Calcutta Works, but it is premature to express an opinion on the outcome of these negotiations. I believe that agreements of this type are not only in the interests of the Shareholders and the employees but also are of great importance to the Country's future prosperity. An endeavour is also being made to negotiate a similar Bipartite Agreement at Bhandup Works.

Overseas Assistance

Your Company has the benefit of association with Messrs. Guest Keen & Nettlefolds Ltd., whose World-wide engineering organisation extends to over 70 separate units ranging from large Steel Works to small concerns making specialised products of great variety. The assistance from this association is invaluable. Not only do we receive the benefit of their technical experience but also research and advanced training facilities are available to us. These are essential factors in consolidating expansion and in effecting new developments economically with a minimum of delay. Your Company is therefore in a better position than many in the engineering industry.

Future Prospects

A statement such as this to the Shareholders at the Annual General Meeting is usually not considered complete without some estimate of the future. At this particular time it is not easy to predict with accuracy the immediate future, and it is difficult to see how the current year's earnings are to be maintained at 1956 level. In spite of this I have complete faith in our products, our organisation and our ability to maintain and develop our business against competition.

In addition to the difficulties I have already mentioned in this Review, there are other circumstances outside our control which, if allowed to continue, will lengthen the time before the various rehabilitation and development projects can be brought to an income earning stage. I refer to the difficulties of obtaining cement and steel for essential construction purposes, and Foreign Exchange not only for plant and equipment but for imported steel for processing to make up the shortfall of indigenous supplies. Furthermore, there are the recent Budget increases in the cost of steel and cement to be taken into account. The latest proposals of increased Income and Corporate Tax on a Company's earnings and the introduction of Wealth Tax do not appear an inducement to any investor.

However, these difficulties are not peculiar to your Company and I sincerely hope they can be corrected and the promotion of a more favourable atmosphere created in the industry with a greater incentive to attract investment both from indigenous and foreign sources.

For the more distant future I believe the Company will prosper on a policy of continued development along with proper consolidation. Given the circumstances to effect such development, it is the aim of your Directors to supply customers with first class quality goods at reasonable prices. As the Country's specialised engineering requirements grow it is my hope that your Company will be able to meet such needs of the future and, at the same time, to continue to supply its present customers and the Indian Railways who to-day are the largest users of our products.

Management Staff and Workers

I am certain that it will be your wish that I should express your thanks to the Management, the staff and the workmen of the Company for the very real combined effort that has been exerted during the past year. Again the background of difficulties ahead, the clearing feature is the skill and determination of the Management and all employees alike who overcame the obstacles in 1956, to repeat the effort in 1957.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

SLIGHT FALL IN ADVANCES

Wednesday, 29th May.

THERE has been a slightly downward tendency in advances in the Calcutta money market during the past week. Jute and sugar are mainly responsible for the decrease. Cotton credit is a little higher, while other types of accommodation are at the same levels as before. In the interbank market, funds have been fairly plentiful but the call rate remains at 3½ percent.

Very few export bills have been reported, and these have been mainly on account of tea and gunny shipments. Remittance continues on a fair scale, a substantial portion being of a forward covering nature. In spite of minor fluctuations, sterling is steady against the dollar.

Bullion was quiet on profit-taking. The price of silver declined from the previous week's level of Rs. 183.75 to Rs. 182.25, quoted today. The prices in London and New York remained the same as before.

In sympathy with silver, gold was quiet and declined from Rs. 112 to Rs. 110.50. The sovereign fell from Rs. 72.75 to Rs. 72.50.

During the week ended 24th May, Government of India Treasury bills for Rs. 20,50,00,000 were sold in favour of the Reserve Bank.

A decline of Rs. 11.83 crores to Rs. 1,578.40 crores in active notes was the outstanding feature of the return of the Reserve Bank of India for the week ended 24th May, 1957. The total note issue was Rs. 58 lakhs higher at Rs. 1,605.98 crores. Notes held in the Banking Department increased by Rs. 12.41 crores to Rs. 27.58 crores. Deposits of the Government of India improved by Rs. 4.35 crores to Rs. 54.22 crores and other Government accounts were Rs. 2.58 crores higher at Rs. 5.66 crores. Balances of commercial banks, at Rs. 62.36 crores, showed a decline of Rs. 19 lakhs. Investments increased by Rs. 9.74 crores to Rs. 137.04 crores but balances held abroad declined by Rs. 8.16 crores to Rs. 56.91 crores. Other loans and advances fell from Rs. 119.73 crores to Rs. 111.27 crores, of which advances to scheduled banks against usance bills amounted to Rs. 59.65 crores (Rs. 63.29 crores). Ways and means advances stood at Rs. 19.89 crores against Rs. 20.69 crores.

The return of the State Bank of India for the week ended 17th May, 1957, shows a rise of Rs. 76 lakhs in investments to Rs. 301.58 crores. Investments in Government securities remain unchanged at Rs. 94.12 crores, while other authorised investments are up by Rs. 21 lakhs to Rs. 11.51 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 2.19 crores to Rs. 190.91 crores. Cash and balances are, in consequence, shown at Rs. 22.72 crores, or Rs. 2.55 crores higher.

The statement of the position of scheduled banks for the week ended 17th May, 1957, shows Demand and Time liabilities at Rs. 716.90 crores (Rs. 11.37 crores on account of borrowings from banks) and Rs. 517.04 crores (Rs. 3.01 crores), compared with Rs. 719.51 crores (Rs. 11.86 crores) and Rs. 517.24 crores (Rs. 3.18 crores), respectively in the previous week. Cash has increased by Rs. 2.17 crores to Rs. 40.27 crores, while balances with the Reserve Bank have declined by Rs. 2.75 crores to Rs. 58.65 crores. There is a drop of Rs. 7 lakhs in investments to Rs. 343.99 crores. Advances and bills discounted, at Rs. 936.73 crores, show an increase of Rs. 84 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.1 percent and 75.9 percent, against 8.1 percent and 75.7 percent.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land Customs revenue collected in the Indian Union during the month of March 1957, amounted to Rs. 1,767 lakhs compared with Rs. 1,742 lakhs in the corresponding month of the previous year. The comparison in the following figures with those of the corresponding period of the preceding year. Of the total customs revenue Rs. 1,427 lakhs, import duties accounted for Rs. 1,550 lakhs against Rs. 1,427 lakhs, export duties for Rs. 169 lakhs against Rs. 303 lakhs and land Customs and miscellaneous for Rs. 48 lakhs against Rs. 12 lakhs. The total gross collection of Union excise duties amounted to Rs. 1,765 lakhs compared with Rs. 1,254 lakhs. During the 12 months, April 1956 to March 1957, the grand total of gross Customs and Union excise revenue realised was Rs. 36,560 lakhs compared with Rs. 32,019 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 14,318 lakhs against Rs. 13,083 lakhs, export duties for Rs. 3,007 lakhs against Rs. 3,750 lakhs, land Customs and miscellaneous for Rs. 379 lakhs against Rs. 200 lakhs and Union excise duties for Rs. 18,856 lakhs against Rs. 14,900 lakhs.

LONDON FINANCIAL LETTER

MAINTAINING THE STRENGTH OF STERLING

By Air Mail.

THE municipal elections in Britain in May, confirming the leftward tendency shown in parliamentary by-elections in preceding months, weakened sterling. The currency had previously been disturbed by talk of a further reduction of Bank rate, and it responded to the authorities' evident reluctance to "abdicate from monetary control". Over a rather longer period, however, sterling has shown distinct signs of recovery; and the improvement was one reason for the belief that Bank rate would be reduced. If overseas opinion is confused, so, too, is opinion at home. Three weeks after a Budget that was intended to appear strict, the Chancellor of the Exchequer stated that the economy was in a state in which a more expansive policy was permissible. He does not, apparently, share the City's apprehensions about the revival of inflation. Scarcely a trace of last year's recession is left: the weakened industries are fully active again, and in a tightening labour market wages are rising strongly. Socially, this development is gratifying, but financially, it must bring back memories of 1955—and of the restraints that were urgently needed to avert a crisis.

The Government has still (at the maximum) three years in which to restore the Conservatives' popularity in preparation for general election. Full employment and rising wages are doubtless considered necessary for this purpose. But the public demands also stable prices; so there is something to be said for control of inflation for domestic as well as external reasons. The Government must do more than nibble at its grossly inflated expenditure. That is a relatively long-term problem, and in the meantime, it may yet be necessary to take some action in defence of sterling, whose period of seasonal strength has not many weeks to run. However the issue this month of £50 million to the Exchange Equalisation Account is solid evidence of a policy of strengthening the reserve, rather than allowing the seasonal demand for sterling to exert its full effect on exchange rates. When sterling was under pressure, the Account accumulated large amounts of it, purchased in exchange for other currencies to support the rate; and as much as £300 million was transferred from the Account to the Treasury last June, a further £50 million last October. The recent transfer of £50 million in the opposite direction suggests that purchases of foreign currencies have left the Account short of sterling.

Managing the Debt

Much bigger transfers are involved in the Treasury's latest financing operation, but they are likewise mostly internal. The Treasury has made the surprising announcement that no conversion offer would be made to holders of two stocks, totalling just over £400 million, due for redemption next month. A further tranche of five-year Conversion stock, at 4½ percent interest, has been issued to the amount of £100 million nominal, and the proceeds of this issue will be rather more than enough to repay the minority of the maturing stocks that is held outside of Government departments, which have gradually acquired the greater part of them. Buying in maturing stocks is not a new technique, but this is the first time since the war that the authorities have so arranged their maturities that repayment can be made without an offer to convert. Thus, on paper, some of the national debt is being repaid. The effective national debt is, however, a fluid quantity, even while no financing operations are in progress; for the stock held "inside"—many hundreds of millions of pounds' worth—is potential, not actual, debt. These "inside" holdings are a useful instrument of policy, as the Government can reduce the supply of money by selling stock or increase the supply by buying it.

In this latest instance, however, the authorities seem to be concerned rather with economy than with monetary management. They are confining their activities strictly to that sector of financing where interest rates have been appreciably reduced in the past year, ignoring long-term funding until long-term interest rates are lower. There is a moderate inflationary element in the latest operation, but it does not involve a substantial increase in the issue of Treasury bills or in the supply of money paid in exchange for stock, since the acquisitions of maturing stock have mostly been financed by sales of other stock, due for redemption some years hence. However, the result of all this reshuffling will be a reduction of some £300 million in the total of funded debt, in that part of it which is held "inside". So in the books of the Bank of England it will be necessary to show that much more Treasury bills are available through the "tap". Some eyebrows were raised at the implication that the authorities were in no hurry to proceed with funding floating debt. Also implied in this financing operation was that the authorities would "feed" less stock to the market than had been expected; and some observers said that some such sign was all that was needed to start a firm rise in the values of Government stocks. Yet a few days after the announcement, the gilt-edged market was falling heavily. The municipal elections and the weakening of sterling were factors in the decline, but the main reason was apparently the persistent flow of new issues from municipalities and companies.

Our City Cable

FURTHER FALL IN STOCK MARKET ACTIVITY

GILT-EDGED AND INDUSTRIALS EASE

London, 29th May.

THERE was a further contraction in business in the London stock markets last week. With interest more selective and at a lower level, prices in most sections were easier, under the lead of gilt-edged securities which suffered a sharp setback. South African gold shares resisted the general trend however, and oils scored numerous gains while there were good features elsewhere on selective buying. The general dullness of the markets reflected the lack of fresh incentives rather than specific adverse news, and there was very little selling except in the gilt-edged market. The recent buying movement, it appeared, had spent its force, at least for the time being. The weakness of gilt-edged securities was the main feature of the week. Thursday's announcement of an unchanged Bank rate was followed by renewed persistent small selling, and although there was an appreciable recovery after the week-end, losses ranged to about one point compared with the previous week's level. There was very little interest in foreign bonds and rails, but dollar stocks generally gained ground, Canadian stocks being prominent. Insurance shares lost further ground. Bank shares were dull. Occasional good features developed in the industrial market, but

the general tendency was towards lower levels and extensive falls were recorded on the week. The market developed a steadier tendency after the week-end partly in response to the recovery in gilt-edged securities, the earlier weakness of which had contributed to the dullness of industrials. South African gold shares were well maintained with the wide fluctuations in Central Mining on bid developments as the chief feature. Copper shares receded, but there were occasional firm spots elsewhere in base metals. Many good features developed in oils outside the leading issues, but profit-taking reduced some of the gains. Western hemisphere issues were the chief beneficiaries. Active and firm conditions continued in the rubber share market, and there were many useful improvements on bid hopes. Eastern buying contributed to the advance and many shares moved up under this influence. Teas were irregular.

The Money Market

The current phase of tight monetary conditions in the London money market continued last week. Demand was keen throughout, and 3½ percent was the general rate with 4 percent paid on occasions under pressure while there was a hardening trend for bill rates with August and "hots" at 3½ percent. The authorities rendered a fair amount of help, but several houses had to borrow from the central bank at the beginning of the week. The disbursement of some Government departmental money at the end of the week gave temporary relief. In view of the continuing credit shortage, discount houses revised their bids at the weekly tender and a further upward trend was seen in the Treasury bill rate, the average rate being over 1s 6d percent higher at £3 18s 2½d percent.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 22nd May shows that the gold stock was unchanged at \$22,320 million. Foreign deposits rose by \$10 million to \$353 million, and foreign investments rose by \$45 million to \$3,662 million. The Federal Reserve sold \$113 million worth of \$22 bills. Total discounts and advances fell by \$22 million to \$669 million while the aggregate excess reserves of member banks fell by \$22 million to \$179 million. The daily average excess reserves of member banks rose by \$14 million to \$492 million, while their daily average borrowings fell by \$177 million to \$772 million. Business loans of the New York city banks fell by \$128 million to \$11,513 million compared with a fall of \$40 million to \$6,591 million in the corresponding week of last year.

Hongkong Gold Firm

After a steady opening last week, the Hongkong bullion market turned firm after the midweek. Firmness was attributed firstly to uncertainty over arrivals in Macao, secondly to weaker sterling rates and thirdly, to favourable carry-over charges totalling 94 cents a 10 taels in buyers' favour. It was also attributed to higher international prices. Sentiment was aided by the French Government's resignation and the anti-American rioting in Formosa. The official offtake was 2,270 taels and the unofficial 7,800 taels. No forward contract was reported. Arrivals in Macao were unknown, but it was believed that they were nil.

Sharp Fall in Paris Gold

French gold prices soared early last week but finally dropped sharply to end the week considerably below the level of the previous Friday. This trend was attributed to the absence of hoarders who failed to follow professional covering operations noted earlier. The Government crisis and the country's financial difficulties this time did not attract investors who preferred to enter the stock exchange rather than the gold market. For this reason business remained at a relatively modest level, though the exchanges were nevertheless more active than in the previous session.

Rubber Surcharge Clause Removed

The London Rubber Traders Association has decided to remove a clause from the contract, inserted last December, whereby any variation in the then 13 percent freight surcharge was to be for the account of the buyer. There is now no surcharge clause in existence, although a surcharge of 5 percent is still levied on shipments from the Far East. The decision has come into effect since 27th May.

Export of U.S. Ferrous Scrap

According to Washington advices published by the Journal of Commerce, Japan is shortly to notify the United States that she will voluntarily restrict her purchases of U.S. heavy ferrous scrap to slightly under 1,700,000 tons for 1957. At present, the 1957 purchase quota is about 300,000 tons more of No. 1 and 2 scrap than Japan bought from U.S. exporters last year. There will be no limit to Japanese purchases of lighter grades of iron and steel scrap. The Journal also states that the Commerce Department is advising U.S. shippers to apply for export licences to cover the proportion of the 1,700,000 tons not already licensed. This breaks the licensing embargo imposed a fortnight ago for Japan, western Europe and Britain. Meanwhile, it is said that an agreement with western Europe on its purchases of U.S. heavy scrap is not immediately in sight. However, officials believe that an arrangement with Japan will help arrive at a prompt settlement with the European Coal and Steel Community over the amount of scrap it might purchase in 1957. Last year, the Community bought slightly more of Nos. 1 and 2 heavy melting scrap than Japan.

Stocks and Shares

SHARE PRICES STEADIER BUT ACTIVITY REMAINS RESTRICTED

OPERATORS HOPE TAX PROPOSALS WILL BE AMENDED

Wednesday Evening.

THE stock market has been a little steadier during the past week, but activity remains restricted and it would be an exaggeration to say that the recovery is in any way promising. The taxation proposals in the Central Budget are still the cause of the hangover, but operators are hoping that they will be amended and made less burdensome. The Bills relating to the expenditure tax and the wealth tax are to go before select committees of Parliament; some think that small concessions may result from this examination. The technical position of the market seems to have improved and bear-covering is responsible for much of the past week's rise in prices. At one time, it was thought that difficulties might arise in connection with the recent clearing in Bombay, but actually things have passed off quite smoothly. Small investment support has been forthcoming at the lower levels in a number of shares.

Engineerings generally are a little better in sympathy with Indian Irons, which ended with today's settlement at Rs. 18.48. Coals remain neglected. Jutes are also dull because of uncertainty about fibre supplies. Among miscellaneous shares, there has been a fractional improvement in papers. Dunlops have held up well since their rights issue announcement. The tea section has suffered badly in response to the recent auction results and the higher excise duty. The trend in gilt-edged is softer.

Details of the week's trading follow.

On the whole, the Government security market ruled quietly steady but the recovery reported last week was not maintained and prices at the close were easier on renewed selling pressure. The 3% Conversion Loan 1946-86 was initially marked up to Rs. 73.47, but it closed lower at Rs. 73.40. The enquiry for short-dated loans was fully maintained, with 3% 1957 in demand around Rs. 99.75 and 3% 1958 better at Rs. 99.68. The 2½% 1961 was asked for at Rs. 93.50 and 2½% 1960 was better at Rs. 96.50. 3% 1959-61 changed hands around Rs. 97.75 while 3½% 1961 met with good enquiry due to the approach of the half-yearly interest payment date and closed firm at Rs. 99.55. Among medium-dated issues, 2½% 1962 was fully maintained at Rs. 93.80, but 3% 1963-65 turned sellers at Rs. 93.94. Both 3½% 1964 and 1965 were again easier at Rs. 98.15, and 3½% 1967 was traded around Rs. 98.40. Among long-dated loans 3% 1966-68 eased further under selling pressure to Rs. 91.75 and 3% 1970-75 was quoted slightly lower at Rs. 86.97. The 3½% 1974 changed hands at Rs. 98.45. Very little business was reported in State loans and the only item of interest was the further fall in the price of 4% Madras 1968 to Rs. 96.45.

Little interest was shown in preference shares and very few transactions were recorded. In the jute section, only two shares changed hands—Hooghly at Rs. 7.81 and Shree Ambica around Rs. 81. Among miscellaneous issues, British India Corporation were dealt in at Rs. 106 ex-dividend and Bowreah were taken at Rs. 99.50. Calcutta Electric changed hands at Rs. 9.12 and Indian Standard Wagon were taken at Rs. 127. Purbapore Sugar were transacted around Rs. 14 and Shaw Wallace were wanted at Rs. 67.

In the banking section, there was some enquiry for Punjab National at the higher rate of Rs. 53 and United Commercial at Rs. 54. Hind Bank were reported at Rs. 32.50 and United Bank of India "D" shares were unchanged at Rs. 4.25 without any business passing.

The only transaction reported in the railway section was in Dehri-Rohas at the lower rate of Rs. 10.25.

Cotton textile shares were dull though prices showed little change. Shares dealt in included Bowreah at Rs. 111, Jayshree at Rs. 5.56 and Kesaram at Rs. 13.12. New Victoria were fractionally better at Rs. 1.72.

There were few price changes in the coal section and business was on a very restricted scale. Burrakur were steady around Rs. 22.37. Bengal were slightly easier at Rs. 21.4, as were Bhalgora at Rs. 4.56. Central India and Western Bengal changed hands at their previous rates of Rs. 5.87 and Rs. 5.18 respectively. Equitable were lower at Rs. 23, while East Indian changed hands at their previous quotation of Rs. 23.75. A solitary transaction was reported in Talcher at Rs. 1.56. Union Jute shares continued to rule quiet though prices showed little variation except in the case of Bally, which receded sharply from Rs. 147 to Rs. 137. Here is a chart showing representative price movements:

	Opening Prices on 23rd May, 1957.	Closing Prices on 29th May, 1957.
Chitavalsah	Rs. 12.25	Rs. 12
Delta	131	123.50
Howrah	14	14.37

National	19.50	19.70
Birla	13.75	13.50
Megna	70	65
Union	112	105

In the electric supply section, Agra were offered at the lower rate of Rs. 127, as were Benares at Rs. 16. Calcutta were unchanged at Rs. 12.50. Mirzapur changed hands at Rs. 6 and Muzafferpore at the same rate.

In the sugar and brewery section, Dyer Meakin improved from Rs. 6 to Rs. 6.25. Despite the maintenance of a Rs. 2 dividend by the Ramnugger Cane and Sugar Company, the shares reacted from Rs. 25.75 to Rs. 25. S. K. G met with some enquiry and improved from Rs. 9.50 to Rs. 10. Carew were steady at Rs. 7.31 while Balramore were easier at Rs. 5.75, as were Purbapore at Rs. 15.50.

In the engineering section, Indian Iron and Steel improved steadily from Rs. 17.60 to Rs. 18.53; tonight's closing quotation is Rs. 18.48. Braithwaite were better at Rs. 25.25, while Burn were unchanged at Rs. 305. Indian Galvanizing improved from Rs. 18.75 to Rs. 19 and Guest, Keen, Williams were remarkably steady at Rs. 27. Indian Standard Wagon reacted from Rs. 162 to Rs. 159. Richardson and Cruddas were depressed around Rs. 14.75, as were Jessop at Rs. 24.19. Textile Machinery, on rumours of a higher dividend, hardened to Rs. 17.50.

In paper, India Paper Pulp improved from Rs. 20.75 to Rs. 20.87 and Orient recovered to Rs. 26.10. Sirpur, after being sold down to Rs. 8.25, improved at the close to Rs. 8.44. Titagur were steady around Rs. 33.25.

In cement, Assam Bengal were unchanged at Rs. 5.50 while Sone Valley were easier at Rs. 5.94. Dalmia Cement changed hands at Rs. 11.37.

In insurance, Concord of India improved from Rs. 10.75 to Rs. 11 while New Asiatic were shaded at Rs. 3.87. Triton Insurance had buyers at the

BRITISH OVERSEAS AIRWAYS CORPORATION WITH S.A.A., C.A.A., QANTAS AND TEAL

higher rate of Rs. 150 against last week's closing price of Rs. 140.

In shipping, India General Navigation were unchanged at Rs. 65. India Steamship were slightly better at Rs. 10. Port Shipping were quoted at the lower rate of Rs. 16.25.

In the miscellaneous section, Alkali and Chemical Corporation met with enquiry and rose from Rs. 12.05 to Rs. 12.50. Angelo Brothers were better at Rs. 17.87 and Balmer Lawrie changed hands at Rs. 145. Bengal Flour eased further to Rs. 25.12, and British Burma Petroleum improved to Rs. 251. British India Corporation were renoted at Rs. 6.50 ex-dividend (10 nP) a share. Dunlop Rubber were better today at Rs. 23.12 cum-dividend, cum-rights. Calcutta Tramways were dealt in at the lower rate of Rs. 15.56. Indo-Burma Petroleum came to hand at Rs. 27 ex-dividend and Indian Wood Products were shaded at Rs. 28.50. Jardine Henderson remained at Rs. 75 and Metal Box shed Rs. 1.25 to close at Rs. 94.75. National Carbon were slightly better at Rs. 23.75, as were Bellis at Rs. 34.25 and Rohtas Industries at Rs. 17.56.

In mining, Indian Canner were maintained at Rs. 3.35 and Orissa Minerals improved from Rs. 19 to Rs. 19.50. Burma Mines were unchanged at Rs. 2.26 while Western Stockholders Investment were slightly better at 84 nP.

Tea shares were extremely depressed and prices fell away because of an almost complete lack of support. Here is a chart showing representative price movements:

	Opening Price on 23rd May, 1957.	Closing Price on 29th May, 1957.
Pasmatia	29.50	29
Brooke Bond	16.81	16.75
Choonabutti	29.50	29.75
Gumb "A"	16.4	16.1
Hasimara	23	21.75
New Dears	25.3	25.0

The profit of the BENGAL COAL COMPANY has amounted to Rs. 48.29 lakhs for the year ended last October. Bringing in Rs. 7.31.563 and providing Rs. 18 lakhs for taxation, there is Rs. 37.61.033. The ordinary dividend has been declared at Rs. 17-8 a share, including an interim of Rs. 7-8 a share. Reserve against valuation of stocks is allocated Rs. 8 lakhs, and general reserve receives Rs. 2 lakhs. The carry-forward is Rs. 9.44.657. Dividends declined from 2,599,787 tons to 2,320,356 tons, and despatches from 2,899,167 tons to 2,559,063 tons. The directors mention that the Labour Appellate Tribunal has given its decision and the issues are now before the Supreme Court. It is hoped that once these issues are settled and the committee recently constituted by the Government to revise coal prices completes its work, the coal industry will be placed on a sounder footing so as to be able to discharge its responsibilities under the second five year plan.

Providing Rs. 1.55 lakhs for depreciation, the profit of the ASSAM SAW MILLS and TIMBER CO., LTD. has amounted to Rs. 19,015 for the year ended last September. The debit balance has been reduced to Rs. 4,95,522. There is again no dividend. The directors state that despite the somewhat better results, which show a small profit in place of the

substantial losses of recent past years, they regret that there are no signs of increased demand for the company's products. During the year under review, although production increased to 513,964 sets of panels, sales declined from 493,483 sets to 448,173 sets. This resulted in a substantial carry-forward of stocks into the current year, but no improved demand for sets of panels has been noticed. Indigenous capacity remains heavily in excess of demand, and with unapproved panels still finding a market, the directors do not view the immediate prospects with optimism.

The DUNBAR MILLS, LTD. has made a profit of Rs. 3.26 lakhs for the year ended last December. Bringing in Rs. 1,37,951, there is a balance of Rs. 4,64,235. The dividend has been declared at Rs. 6 a share, leaving a carry-forward of Rs. 3,50,225. Depreciation is allocated Rs. 4.28 lakhs.

Bombay Market

IMPROVEMENT IN EQUITY PRICES

INSTITUTIONAL SUPPORT HELPS RECOVERY

Wednesday Evening.

THE improvement in the prices of equity shares in the Bombay stock market during the past week was due partly to technical considerations and partly to selective support by institutions. The Life Insurance Corporation, it was reported, bought large parcels of assorted stocks. Sentiment improved on the belief that the reference of the Wealth Tax Bill and the Expenditure Tax Bill to select committees was encouraging. It was hoped that the tax on wealth, especially on companies' wealth, could be substantially modified. Turnover, nevertheless, was limited as operators were not inclined to take a view either way until the Central Budget proposals were finalised.

Tata Steels improved to Rs. 156 and Indian Irons were higher at Rs. 18.45 on good support from Lyons Range. Considering that there was little prospect of serious payment difficulties, the possibility of a further recovery was not ruled out. Alcock Ashdown were quoted at Rs. 260 and Premier Construction were taken at Rs. 143.75. Tata Locomotives were fractionally higher at Rs. 142.50 on replacement buying. Automobile shares were listless, and Premier Automobiles were done at Rs. 87. Hindustan Motors were freely offered at Rs. 8.50 without attracting any worthwhile support.

Bear-covering helped improve prices of mill shares. Bombay Dyeing increased to Rs. 524 on substantial institutional support. Kohinoors were taken at Rs. 233 while Century met with selling pressure at Rs. 400. Svadeshi were bought at Rs. 187 and Simplex were transacted at Rs. 162. India United Ordinary were offered at Rs. 9.56, with sellers predominating.

Miscellaneous industrials were about steady. Associated Cement met with support at Rs. 153.50 and Digvijay realised Rs. 141.50. Sugar shares were bought by knowledgeable quarters on the belief that increased exports might be helpful. Belapur were transacted at Rs. 222 and Walchandnagar Industries came to hand at Rs. 247.

Steamship company shares were steady following the prospect of increased coastal freights. Scindia Steam were done at Rs. 18 and Great Eastern Shipping were bought at Rs. 19.15. Bombay-Burmah recovered to Rs. 527.50, and National Rayon were higher at Rs. 215 on short-covering. Tata Chemicals were taken at Rs. 16.35 while Wimco were offered at Rs. 156. There was little interest in mining shares, and Shivrampur Syndicate were talked around Rs. 78.50.

Turnover in banking shares was limited and quotations showed minor variations. Insurance shares were freely offered and buyers did not appear to be taking much interest. New India Assurance were offered at Rs. 44.50.

Electricity supply undertakings were steady, and Ahmedabad Electric were dealt in at Rs. 94. Tata Power were transacted at Rs. 1,213.75.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations. Highest for the week, Lowest for the week, Closing Quotations, Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paisa).

Sonai River	Rs. 12/00-12/00-11/87-11/87.

STANDARD FOR METRIC CONVERSION FACTORS AND CONVERSION TABLES

The Indian Standards Institution has published Indian Standard Conversion Factors and Conversion Tables (IS: 786-1956). With the introduction of decimal system of coinage and the Government of India's decision to introduce the metric system as the only system of weights and measures for the country within a period of ten years need will be felt, during the changeover, for a useful reference book for conversion of values from the existing system of units to metric system. To meet this need, the ISI has published this standard. It is hoped it will assist trade and industry Government departments, engineers, technologists, scientists, students and others interested in quick and accurate inter-conversion of values. The Standard contains 154 tables covering inter-conversion of values on basic unit's mass, length, area, volume and capacity, weight, temperature, angle, speed, density and concentration, stress and pressure, transport, force, energy, power and heat. A ready 50,000 copies of the standard forming the first imprint, have been sold out. While the ISI is proceeding with the reprint those interested in acquiring copies may write, indicating the number of copies they require to ISI headquarters at 19, University Road, Delhi, or its branch offices at 40/40A, Cowasji Patel Street, Fort, Bombay, or P. 11, Mission Row Extension, Calcutta.

THE GANGES MANUFACTURING CO. LIMITED.

NOTICE is hereby given that Messrs. Macneill & Barry Ltd. have resigned their office of Managing Agents of the Company with effect from the expiry of the 18th May, 1957 and the Board of Directors of the Company at their meeting held on the 18th May, 1957 accepted the resignation subject to the provisions of Section 312 of the Companies Act 1956.

All correspondence should henceforth be addressed to the Company at 2, Fairlie Place, Calcutta-1.

LAKSHMIPAT SINGHANIA,
Chairman.

Calcutta.
The 20th May 1957.

COMPANY MEETINGS AND DIVIDENDS DECLARED OR PROPOSED

Name of

AMBIGUITIES IN CENTRAL SALES TAX ACT

LIABILITY IN INTER-STATE TRANSACTIONS
(By G. P. Agarwala)

THE question of levying sales tax on inter-State transactions by different State Governments has been the subject of interpretation by the Supreme Court on more than one occasion. We are familiar with the decision of the Supreme Court in the case of the Bengal Immunity Company. There it was held, in contrast to the previous view taken in the case of United Motors, that State Governments have no power to impose or authorise the imposition of tax on the sale or purchase of any goods where such sale or purchase takes place in the course of inter-State trade or commerce, unless Parliament by law provides otherwise. This pronouncement was made in September, 1955, and it affected the budgets of different States. In order to protect State Governments from the complications which arose, the Central Government promulgated an ordinance known as the Sales Tax Laws Validation Ordinance, 1956, which ultimately became an Act. Parliament, therefore, by this enactment made legal all the collections made by State Governments from 1st April, 1951, till 6th September, 1955, the date the Supreme Court pronounced the judgment. It also legalised the measures of the different State Governments which had been declared invalid by the highest court of the country.

Even after the enactment of the Sales Tax Laws Validation Act, doubts were expressed about the competence of Parliament to validate such measures under Article 286, sub-clause 2 of the Indian Constitution. These doubts were expressed on various constitutional points but did not find favour with the High Courts and the highest judicial pronouncement is still awaited. Article 286 of the Indian Constitution now stands amended. The most important amendments have been in clauses 2 and 3, and in the explanation to clause 1 which has been omitted altogether. The changes are very important, because these provisions created most of the difficulties which resulted in the final interpretation by the Supreme Court in the case of the Bengal Immunity Company.

Power to Tax

One of the important questions on which the final verdict of the Supreme Court has not been

given so far is the taxing power of the different State Governments on inter-State transactions even after the passing of the Sales Tax Laws Validation Act, 1956. Some State Governments started completing their assessment for the period saved by the Validation Act. A question arose about their power to do so. It was alleged that there was no existing enactment in the sales tax laws of such State Governments whereby they could levy sales tax on inter-State transactions. Section 2 of the Validation Act removed the fetters on the taxation of inter-State sales during the period from 1st April, 1951 to 6th September, 1955, in cases where a State law providing for such an imposition already existed. This question was considered by the Travancore-Cochin High Court and also by the Andhra High Court. It was held that Section 22 of the Madras Sales Tax Act did not create any liability to tax if the transaction was not liable to be taxed under the Act; that the Section was only a reproduction of Article 286; and that, as the bans imposed by clauses (a) and (b) of Article 286 were separate and independent, the explanation to Section 22 could not be read as an explanation of the definition of the word "sale" in the Act. There was, therefore, no particular law existing in the State of Andhra imposing and authorising imposition of tax on sales falling under the explanation to Article 286 1(a); the Sales Tax Laws Validation Act, 1956, could not be applied to such sales.

Uniform Legislation

Thus, after maintaining the *status quo* up to September, 1955, the Central Government resolved to introduce uniform legislation for taxes levied on inter-State sales or purchases. This has resulted in the passing of "the Central Sales Tax Act, 1956". In this enactment there are certain questions which are open to controversy and will require to be resolved by judicial pronouncements.

Section 7 provides for the registration of a dealer under the Act and an application is to be made in the prescribed form to such authorities in the appropriate State as the Central Government may, by general or special order, specify. "Appropriate State" has been defined under Section 2 as meaning: "(i) in relation to a dealer who has one or more places of business situated in the same State, that State; (ii) in relation to a dealer who has one or more places of business situated in different States, every such State with respect to the place or places of business situated within its territory." There is an explanation attached to it which defines the place of business as meaning: "(i) in

the case of a sale of goods in the course of inter-State trade or commerce falling within clause (a) of Section 3, the place from which the goods have been moved by reason of such sale; (ii) in the case of any such sale falling within clause (b) of Section 3, the place where the sale is effected". Section 3, to which reference has been made in explaining the phrase "place of business", provides the necessary conditions when the sale or purchase shall be deemed to take place in the course of inter-State trade or commerce.

Take the example of a dealer who is carrying on business in one State only. Apparently, he would make an application for registration under Section 7 of the Act to the proper authorities of the State Government in which he carries on his business. By virtue of the legal fiction created by the definition of "place of business", the other State Governments where the goods are being sent by the dealer (under Section 3(b)) might also require the dealer to apply for registration. Failure on his part has been made punishable under Section 10 of the Act. This is an anomaly which requires to be resolved either by judicial pronouncement or by suitable amendment of the Act. The tax is leviable only at one point, so registration in one State would be sufficient compliance. But this offence of non-registration under Section 7, though technical in nature, cannot be avoided by dealers in general.

Taxing Turnover

Section 8 of the Act provides for the levy of tax at the rate of 1 percent of the turnover. The proviso attached to it saves from taxation only certain goods which are exempted generally and not in specified cases or in specified circumstances. The position, therefore, is that, even if a dealer gets exemption from a State tax on certain raw materials or other commodities which he purchases for the manufacture of certain articles, he would be liable to pay Central sales tax at the rate of 1 percent on the turnover. This would certainly affect industries and is not healthy for the promotion or growth of such industries or class of industries which manufacture goods at competitive rates.

Section 4 of the Act defines the conditions when a sale takes place inside a State and outside all other States. A sale or purchase of goods shall be deemed to take place inside a State if the goods are within the State:

- in the case of specific or ascertained goods at the time the contract of sale is made; and
- in the case of unascertained future goods at the time of their appropriation to the contract of sale by the seller or by buyer where assent of the other party is prior or subsequent to such appropriation.

Under the Sale of Goods Act, where there is an unconditional contract for the sale of specific goods in the deliverable State, the property in the goods passes to the buyer when the contract is made and it is immaterial whether the time of payment or the price or the time of delivery of the goods, or both, are postponed. The position, therefore, is that if the contract for sale is completed before the goods are moved from one State to another, it would become an intra-State sale; it would be an inter-State sale in the opposite case. This, in actual practice, is bound to create complexities for dealers in general. Similarly, if the documents of title are transferred before the goods are moved, the sale would be an intra-State sale. In the opposite case, it would be inter-State sale.

Exports and Imports

Section 5 defines when a sale or purchase of goods would be considered as having taken place in the course of export of goods out of the territory of India and import of the goods into the territory of India. If the sale or purchase occasions the export of the goods out of the territory of India or is affected by a transfer of documents of title to the goods after the goods have crossed the Customs frontier of India, the sale would be deemed to have taken place in the course of export of the goods. Take the example of a dealer who has contracted with foreign parties for the export of ascertained goods and has delivered them to the agents in India in the process of export of the goods. Now, in accordance with Section 4 of the Act, this transaction would become an inside sale and the Government of the State in which this sale would be deemed to have taken place would start proceedings for the levy of the tax. On the other hand, under Article 286, sub-clause 1 of the Indian Constitution such transactions would be exempt from the levy of sales tax. From a reading of the Act, it appears that much emphasis is laid on the time factor in the case of transfer of documents of title to the goods, while judging whether a transaction is intra-State or inter-State.

The last, but not the least important, anomaly which appears in the Act is that there is no express provision whereby a seller is authorised to realise sales tax from the purchaser. In most of the sales tax laws of State Governments, registered dealers are authorised to realise sales tax from their customers. In the absence of such statutory authority, a purchaser having agreed to pay sales tax may later refuse to pay it on the ground that there is no such statutory right given to the selling dealer to realise sales tax from his customers. These are, in short, some of the important aspects of the Central Sales Tax Act, 1956, which require careful scrutiny. It is hoped that ambiguities will be clarified by amendment at an early date.

New Delhi

NEHRU AND KRISHNAMACHARI DEFEND TAXATION MEASURES

PROSPECTS OF OBTAINING LONG-TERM CREDIT FROM JAPAN

(FROM A NEW DELHI CORRESPONDENT)

THE Government's intention to adhere firmly to the new taxation proposals in this year's Budget is confirmed, firstly by Mr. Nehru's address to the Congress Parliamentary Party last Saturday, and secondly, by the reply of the Finance Minister to the Budget debate in the Rajya Sabha. Apart from the already announced withdrawal of the import and excise duties on kerosene and the import duty on newsprint, the only other changes that are likely to be in postal rates, the tax on railway passenger fares and certain excise duties. The net reduction in the quantum of new taxation will probably be negligible. While indicating the Government's willingness to withdraw the increase in the price of postcards, Mr. Krishnamachari made it clear that he would seek to make up the fall by transferring the increase to the envelope and/or other postal articles and services. The Railway Minister some time ago hinted at the likely exemption of short-distance railway third-class travel from the passenger tax. In inviting Congressmen to discuss the various commodity excise duties with the Finance Minister, Mr. Nehru did not by any means suggest that the total size of the burden could be significantly reduced. On the contrary, while conceding that the excise levies were unpopular, he maintained that they were dictated by the unavoidable need for greater revenue.

In the sphere of direct taxation, the Finance Minister said in the Rajya Sabha that, but for the limitation of resources, he would have given some further relief to the new income-tax assesses through allowances for children, in addition to the increase of the tax-free slab for married people. This remark has led to speculation that he may yet do so. But it is clear that the exemption limit of Rs. 3,000 has come to stay. In defending this step, which had been recommended by the Taxation Enquiry Commission, Mr. Krishnamachari pointed out that even the new limit was at least ten times the national per capita income, while the proportion was 1.22 in the U.S.A., 1.45 in the U.K., 1.37 in Western Germany, 0.8 in France, and 2.25 in Japan. Speaking on the tax on wealth, the Finance Minister referred to the complaint that, in the case of companies, the same property would be taxed twice if, as proposed, the levy was applied to companies as well as to their individual shareholders. He offered to consider all grievances at the Select Committee stage, but made it clear that companies would not be exempted: "The scheme itself will have to be dropped if the wealth tax on companies is removed." Mr. Krishnamachari said that India would not be alone in imposing the wealth tax on companies. It is levied in Western Germany on domestic companies at the rate of 0.75 percent, in Norway at 0.6 percent and in Switzerland and Italy at 0.75 percent. Even in the U.S.A., he added, property tax was levied on companies in many States at rates which went up to 2 percent. On the expenditure tax, Mr. Krishnamachari offered to consider only "matters of a marginal character" when the relevant Bill is referred to a Select Committee of the Lok Sabha in July.

Corporate Taxation

About the overall effect of the changes in corporate taxation, the Finance Minister claimed that even after the increase proposed by him, the incidence of taxation on companies in India would remain lower than in many countries. In contrast to the figures cited by Mr. Chandulal Parikh at a meeting of the Congress Parliamentary Party, the Finance Minister estimated the present incidence of corporate taxation at 32.78 percent compared with 33 percent "even in Pakistan". As the result of his Budget proposals, the Indian figure would go up to 37.7 percent. He contrasted this with the rate of 40.85 percent in the U.K., 50.5 percent in the U.S.A., 40 percent in Canada and 57 percent in Sweden.

Economic Collaboration with Japan

Mr. Nobusuke Kishi, Prime Minister of Japan, has a background of varied experience, including successive terms of office as Director of the Industrial Bureau and Vice-Minister and Minister of Commerce and Industry. During his brief visit to the capital last week, in the course of a good-faith talks with the Prime Minister, Mr. Nehru, but also discussed specific projects for Indo-Japanese economic collaboration with the Minister for Commerce and Industry, Mr. Morarji Desai, and the Finance Minister, Mr. T. T. Krishnamachari. The scope for increasing the volume of Indian exports to Japan, it is understood, was examined. During 1956, India's imports from Japan were of the value of Rs. 42.49 crores (steel alone accounting for Rs. 22 crores; machinery Rs. 8.14 crores; and vehicles, mainly railway rolling stock Rs. 2.31 crores). India's exports amounted to only about Rs. 30 crores (the main items being cotton Rs. 10.5 crores; iron ore Rs. 9.6 crores; manganese ore Rs. 2.26 crores and hides and skins Rs. 1.7 crores).

Though a long-term agreement has been

reached for the export of 7.2 million tons of iron ore to Japan over five years, commencing from April 1957, India needs further to explore the possibilities of export promotion in order to reduce the adverse balance of trade. The payments position will improve if the talks now under way, for the supply of Japanese steel, machinery and equipment on a deferred payments basis, succeed. Mr. Kishi said at a Press conference last Friday that an identity of views was yet to be achieved on the duration and interest terms of long-term credit from Japan. But he struck a hopeful note when he added: "Recently, however, we have made some progress and our differences on these points have been narrowed." It will be recalled that the talks between Mr. H. Kano, vice-president of Japan's Export-Import Bank, and Indian officials here last month were encouraging enough for both sides to agree on further negotiations for the supply of automatic looms and hydro-electric equipment by Japan on long-term credit. Mr. B. K. Nehru, Secretary for Economic Affairs in the Finance Ministry, who is now engaged in negotiations with the World Bank in Washington, is expected to visit Tokyo on his way back to resume the talks with Mr. Kano.

Indo-Japanese Trade

The proposed Indo-Japanese trade agreement will be a natural sequel to the growth in economic relations between the two countries. This subject was discussed by the Indian Ministers with Mr. Kishi, along with the question of obligations towards Japan under the General Agreement on Tariffs and Trade. The talks covered the proposal

for the establishment of a training centre for small-scale industries in India with Japanese assistance. Also covered were two projects for the expansion of ore exports to Japan. One of them is the improvement of Honavar, Redi and other minor ports on the west coast for the shipment of low-grade iron ore, and the other is a scheme for the exploitation of iron ore around Rourkela, with American assistance (under President Eisenhower's Asian regional development fund) for export to Japan in exchange for steel. Mr. B. R. Bhagat, Deputy Finance Minister, stated in reply to a question in Parliament last week that the report of an American survey team on the last project is expected by September, and that negotiations will be held thereafter with the Governments of the U.S.A. and Japan.

Nationalisation of Coal-bearing Areas

The debates on the President's Address and the Budget have overshadowed the consideration of an important nationalisation measure, the Coal Bearing Areas (Acquisition and Development) Bill, by the new Parliament in its first session. The statement of objects and reasons recalls that, according to the Industrial Policy Resolution of 1956, the future development of the coal industry is the responsibility of the State, which will set up all new units save in exceptional circumstances. Pointing out that the public sector has been allotted the responsibility of raising 12 million tons a year out of the 22 million tons of additional production to be achieved during the second five year plan, the statement explains that "the bulk (10 million tons a year) will have to be raised by the development of new coalfields such as Korba, Karanpura, Kathara and Jhilmili and Barampur. Very nearly all the coal-bearing areas, however, are covered by mining leases held by private persons or prospecting licences which carry a right to a mining lease. Hence it is proposed to take power to acquire unworked coal-bearing areas covered by private leases or prospecting licences which are found surplus to the production required in the private sector, and to work these areas as lessees of the State Governments. With the acquisition of zamindari rights by the State Governments, the rights in minerals are now vested in all areas in the State Governments, and it is not appropriate to use the Land Acquisition Act, 1894, for the acquisition of mineral rights, particularly because the Central Government does not intend to acquire the proprietary rights vested

Power for Progress

THE SECOND FIVE YEAR PLAN ensures continuance of the pace, set by the First Plan, for developing the tremendous hydro-electric power potential in the country.

As representatives of leading French manufacturers, we have already been privileged to supply various mechanical and electrical machinery of power stations for various projects.

The latest orders were received from: THE KOYNA HYDRO ELECTRIC PROJECT TO SUPPLY 4 PELTON TYPE NEYRPIC TURBINES, each rated at 87,000 BHP at 300 Rpm under an effective head of 1560 feet, one house turbine of 2,250 BHP, high pressure spherical valves and other accessories.

The Andhra Valley Power Supply Co. Ltd., Bombay, for remodelling of 6 Pelton turbines, each of 17,500 BHP, for their Bhivpuri Power Station.

Neyrpic Pelton Turbine runner 105,000 BHP at 428 Rpm under a net head of 2428 feet.

Brahmanabad

Inside a house excavated at Brahmanabad in Sind, has been found an interesting piece of earthenware tubing. A basin like altar which probably served as the seat for bathing some household deity, is connected by this tubing to a covered drain. This tubing unlike other pipework found at various sites of the Indus Civilisation, has a corrugated outer surface, obviously as a safety measure against breakage.

41, Chowringhee Road, Calcutta-16

In the States. There is no other existing Central or State legislation under which the Government has powers to acquire immediately the lessee's rights over the coal-bearing areas required by the Government for the additional coal production. It is accordingly considered necessary to take powers by fresh legislation to acquire the lessee's rights over unworked coal-bearing areas on payment of reasonable compensation to the lessees, and without affecting the State Government's rights as owner of the minerals or the royalty payable to the State Government on minerals."

Terms of Compensation

Where a prospecting licence ceases to have effect by a notification under this Act, the compensation payable will be the sum of the bona fide expenditure actually incurred in the land, (i) in obtaining the licence; (ii) for preparing maps, charts and other documents relating to the land, the collection from the land of cores or other mineral samples, and their due analysis and the preparation of any other relevant records or material; (iii) for the construction of roads or other essential works on the land, if such roads or works are in existence and in a usable condition; and (iv) for any other operation necessary for prospecting carried out in the land. Where a mining lease is acquired the compensation will cover the actually incurred expenditure of the nature referred to above, together with the *salami*, if any, paid for obtaining the lease, as well as the expenditure incurred by way of payment of de-*rent* or minimum royalty during years when there was no production of coal. Further, interest will be paid on such expenditure at the rate of 5 percent for the first five years, and 4 percent for each subsequent year, subject to the proviso that the sum paid as interest shall not exceed 50 percent of the expenditure which is compensated. Where any land is acquired, the compensation will be determined after taking into consideration the market value of the land. In determining the market value the value of any minerals lying in the land will not be taken into account, but allowance will be made for the damage sustained by the person concerned by taking any standing crops or trees, and certain other specified damages. Where the amount of compensation can be fixed by agreement, it will be so paid. Where no agreement can be reached, the Central Government will constitute a tribunal consisting of a person "who is or has been or is qualified to be a Judge of a High Court," for the purpose of determining the amount. Appeals against the tribunal's award, to the appropriate High Court, are allowed.

During the first reading of the Bill in the Lok Sabha last week, some Congress members joined leftists in criticising the proposed compensation as being unduly liberal. The Minister for Steel, Mines and Fuel, Mr. Swaran Singh, defended the terms and said that the Government would not pay unduly large compensation. It only wanted to be just and fair. During the clause-by-clause consideration, a Congress member, Mr. Thakurdas Bhargava, unsuccessfully moved an amendment seeking to exclude from the scope of the Bill the existing private collieries and areas immediately contiguous to them, which are necessary for the efficient exploitation and expansion of the collieries. Mr. K. D. Malaviya, Minister for Mines and Fuel, gave the assurance however that "it is not our intention to deny facilities to the private sector so far as existing collieries are concerned, nor do we propose to stop them from expanding for the sake of efficiency when the right moment for such expansion comes". The Minister also rejected a suggestion from the Opposition that compensation should be paid in transferable 4 percent bonds maturing after 15 years. He estimated the compensation that the Government might have to pay at Rs. 20 to 40 lakhs every year and said that such small sums did not require deferred payment.

U.S. Private Capital Investment

In a report last summer on the Indian Government's Industrial Policy Resolution, Mr. Harry Robinson (the American economist whose services have been provided by the Ford Foundation for studying methods of stimulating foreign investment in India), hailed the new declaration as an improvement on the 1948 Resolution from the point of view of the private investor. Though he regretted that the 1956 resolution did not explicitly welcome foreign investment, the report was calculated, by and large, to influence the foreign investor favourably, and was widely circulated in the U.S.A., at the time. Mr. Robinson, who has since been engaged in routing enquiries from Indian industrialists for possible American collaboration, will now personally discuss specific investment proposals with American industrialists. He left for the U.S.A. last week, carrying with him proposals covering a wide range of industries: the manufacture of railway wagons, conveyors and air conditioning equipment, paper and sugar mills, pharmaceutical plant, manufacture of special paints, electrical equipment and automobile accessories. Mr. Robinson's work will involve a study of the attitude of American businessmen towards investment in India, and their reaction to the terms suggested by Indian entrepreneurs. After spending three months in the U.S.A., he will visit western European countries to study—for possible collaboration by India—the incentives and conditions offered by the Governments of those countries to foreign investors. He will also study the working of the investment centres established by the Governments of Belgium, the Netherlands and Denmark.

London

WAGE INCREASE FOR U.K. ENGINEERING WORKERS

MOVE TO INCREASE TRADE WITH CHINA

(FROM OUR LONDON CORRESPONDENT)

At a cost of something like £70 million, the engineering industry has bought a year's respite from further wage claims, a development which should help materially in the maintenance of its export drive by enabling it to quote fixed prices. Nevertheless, it is a sizeable amount to pay. Some of the smaller firms may be hard hit but for the fact that in addition to the wage standstill, the trade unions have also accepted the other conditions suggested by the Court of Enquiry as part of the 6½ percent wage increase, namely, to try and stop all embargoes on overtime, restrictions on output and earnings, and unofficial strikes; to encourage the introduction of new machines and techniques; and to enforce punctuality in starting and stopping work and the elimination of interim breaks. Provided the new agreements are implemented in the right spirit, the industry can look forward to both a peaceful and prosperous year, for the additional costs might well be offset by greater productivity. Some three million workers are affected, but the 200,000 shipyard workers also represented by the same unions have refused to join their engineering colleagues and are still holding out for the maximum increase without any conditions, a proposition to which the employers seem unlikely to agree even in the face of yet another threatened strike.

The main basis for labour wage claims is the increasing cost of living and although the general acceptance by employers of a 5 percent rise suggests that an upward move of about that extent has taken place, this is certainly not supported by the statistical evidence. On 16th April, according to the Ministry of Labour, the official index of retail prices was still standing at 104 (January, 1956=100) for the fourth consecutive month. In April last year it stood at 103. Rises in wage levels have more than exceeded this slight increase. An economic expert recently undertook what promised to be a rather unrewarding task—an examination of what had happened to Mr. Macmillan's "price plateau" policy and negotiations when he was Chancellor of the Exchequer. This has been subjected to not a little cynicism, and at times ribald criticism since he succeeded to the Premiership. The expert was apparently surprised to find that the critics were wrong, and Mr. Macmillan surprisingly accurate in his forecasts. In fact, the "plateau" has been reached and maintained, even though the immediate future and the possibilities of holding the position are other matters.

Trade with Egypt and China

The inflationary danger is certainly far from having been averted, but the Government's confidence in the country's ability to expand exports to a level sufficient to meet balance of payments needs continues unimpaired. To some extent this has influenced many recent decisions. For instance, the resumed use of the Suez Canal and the even more far-reaching financial talks with Egyptian representatives in Rome, as also the firmer attitude being adopted in Paris on the question of trade with China. The talks with Egypt have the immediate object of setting up a special account into which British shipping companies will be able to pay their Canal dues and other charges in sterling which will be freely available to the Egyptian Government and transferable over the greater part of the non-dollar world. There will also be some discussion of the extent to which the British Government is prepared to unfreeze Egypt's ordinary account to enable her to resume trading with the sterling area. Finally, there is a possibility that the claims and counter-claims of the two countries arising out of the nationalisation of the Suez Canal Company and the British intervention in Egypt will be considered. It seems hardly likely, however, that on this subject the talks can be more than exploratory in view of the large sums involved and its general complexity.

So far as China is concerned the British delegation to the China Committee meetings in Paris, it is believed, has been advised to emphasise that the U.K. considers that many of the 450 items banned from exports to China have no strategic value and are not on the Russian list. The hopes of substantial relaxation of the embargo engendered by the Macmillan-Eisenhower discussions in Bermuda are not fulfilled in the latest American proposal which offers a reduction of the China list, but an expansion of the Russian list. The British view is that there should be one list of rationally defined strategic commodities which should not be exported to both these countries and, failing agreement, the U.K. is prepared to differ with America and "go it alone" if necessary. The collapse of the China Committee, with the U.S.A. playing a lone hand, is not unlikely unless the latter is willing to be more realistic.

Commonwealth Economic Policy

Trade as a whole, indeed, appears to be occupying a predominant position in Government policy-making at the moment, and with the European free market idea making fair progress this is hardly surprising. Where does the Com-

monwealth fit into this picture? The answer may be forthcoming at next month's conference of Commonwealth Prime Ministers. As is well known, no formal agenda is prepared for these meetings, but it is reported in the Beaverbrook press—which takes a particular interest in these affairs—that Mr. Macmillan has decided on a new Commonwealth economic policy in which Imperial Preference will be whittled down but investment and development will have a greatly expanded rôle. He believes that the system of Imperial Preference is obsolete, arguing that it was based on the concept of an industrial Britain with the Dominions and Colonies as producers of food and raw materials. But now more and more overseas industrial development is needed. Unfortunately, the capital requirements are greater than Britain can quickly provide. By linking the Commonwealth to the European free trade area, however, the Government hopes to attract foreign capital into Commonwealth development. Commonwealth nations will also be invited to invest in under-developed areas. Mr. R. A. Butler, Mr. Peter Thorneycroft, Sir David Eccles and Lord Home form the ministerial team charged with the task of drawing up the development plans to be put before the Commonwealth Prime Ministers. Mr. Macmillan's broad proposal is that an alliance between the sterling area and Europe can build up a combination economically equal to the United States and the Communist bloc.

Trade Trend Pointers

The detailed trade returns for April disclose one or two significant pointers for the future. Petroleum imports at £43 million were nearly two-fifths greater in value than the average for the ten-month period prior to the closing of the Suez Canal though about the same in volume. Indeed, the increase in oil prices and freights accounted for about half of the rise in total imports. On the other hand, there is encouragement in the recovery in exports of motor cars and spares to 17 percent above the first quarter's rate and in 1956 were worth £13 million against £10 million in April 1956. What is more, they earned good dollars, for over three times as many cars were shipped to the United States in the first four months of this year as in the corresponding periods of the previous two years. Total exports are shown as being 21 percent down on the monthly average for the first quarter—a somewhat larger fall than might have been expected on seasonal grounds. Nevertheless, exports of engineering products were one percent higher and steel exports also continued to rise, so far this year (over the first four months) being 27 percent up in value on the same period of 1956. The inclusion of the final instalment repayment of lend-lease silver and the special inflation of the ship sales figures by the delivery of the Empress of England render these a bit abnormal. In these circumstances, it is unfortunate to learn from these and other Board of Trade statistics that total car production is still well below 1955 and 1956 levels. In the first quarter this year, output was 25 percent below last year's. The result is that exports are now taking a much higher proportion of production—something like 60 percent against 49 percent a year ago. The number of cars produced in April was 60,771, compared with 69,709 in March and 58,947 in April last year. Exports were 34,621 compared with 35,925 in March, and 30,451 in April 1956. Commercial vehicle production is even worse off, and so also are exports.

Coal Could Help

There can be little doubt that exports of coal could go a long way towards stabilising our balance of payments, but in the face of rising stocks some miners are reported to be considering a stoppage of Saturday working because recent figures have shown that coal stocks—thanks mainly to the mildness of the winter—are at a higher level now than they ever have been. It may be no more, of course, than a subtle warning to the National Coal Board that it must do better than its recent 5 percent wage increase offer, which the miners have rejected, but from the point of view of the general public, surely a better argument would be the fact that output is improving. Coal production in the second week of May was the highest since nationalisation, apart from the Easter "bull" week. Provisional statistics show that the total saleable output of deep-mined and opencast coal was 4,789,600 tons, which was 197,700 more than for the previous week and 362,100 tons more than for the same week in 1956. Open-cast production in the same week was the highest for a year at 295,000 tons. The figures also show that output a man-shift for faceworkers for the previous week was 3,468 tons, the highest on record.

That the Coal Board is not unappreciative of good work has been demonstrated by recent concessions to the miners' other demands, and if this rate of output can be maintained, the pay claim would also stand a better chance of acceptance. It certainly appears more convincing than talk of further restriction in the face of the latest report of the British Coal Exporters' Federation. This points out that present restrictions on coal exports are causing loss of overseas markets to Britain which it may need in the future. Many of Britain's traditional coal outlets, it says, have already been lost to oil and others are committed to American producers by long-term coal and freight contracts. The report foresees a British coal surplus of 7 million tons a year by 1965 and bigger surpluses after that.

Bombay

INCREASED OUTPUT OF SODA ASH

NEW COMPANY TO MAKE PEST CONTROL PRODUCTS

(FROM OUR BOMBAY CORRESPONDENT)

THE heavy chemicals industry continues to make good progress. The production of soda ash amounted to 24,199 tons during the first three months of the current year. This represents an annual output rate of 96,796 tons against 84,234 tons achieved last year and 77,268 tons produced in 1955. The demand for soda ash is expected to increase to approximately 230,000 tons by 1960-61. It is hoped that domestic production will rise correspondingly and will be adequate to meet it. The Tata plant in Mithapur achieved a record production of 5,412 tons during January which represents a daily average of 174.6 tons. This follows the expansion of the plant from an installed capacity of 140 to 200 tons a day. The new carbon dioxide compressor recently installed in the Mithapur works is expected to improve and stabilise production at higher levels. The company's first phase of expansion to 200 tons a day can now be considered as having been completed. The second phase of expansion is now in hand which will increase the rated capacity of the Mithapur plant to 400 tons a day. A welcome feature is that Tata's expansion plans envisage the production of 30,000 tons of heavy soda ash a year. At present, the country's entire requirement is imported from foreign sources. This grade is chiefly required by the glass industry which is unable to use light soda ash because it shows a greater tendency to foaming and consequently lowers the filling capacity of the pots. In the recuperative and regenerative furnaces, the losses in the form of dust are greater with light ash. Such losses not only affect the composition of the melt, but also clog the recuperative galleries and remunerative chambers.

Expansion Cost

Simultaneously with the expansion of the soda ash plant, Tatas are also to double the production of sodium bicarbonate from 15 to 30 tons a day. The cost of financing these expansion schemes, including the auxiliary services, is estimated at around Rs. 2 crores spread over a period of three to four years. This is in addition to the sum of about Rs. 2.24 crores spent on the expansion programme just completed. Licences for three new plants have been issued by the Government of India: one in Porbandar, another in Tuticorin and the third in Dalmanagar. The plant licensed for Porbandar is now under construction and it is expected that it will be commissioned some time next year. The rate of production of caustic soda was maintained in the Mithapur plant and a notable feature is that the electrolyzers there are now working to full capacity. This has not been possible in the past because there was no outlet for the chlorine which is automatically manufactured as a by-product when caustic soda is produced by the electrolytic process. The problem has now been solved by the benzene hexachloride plant which can use the entire quantity of chlorine generated by the electrolyzers.

Steps have been taken to form a new company in association with the British firm of Fisons Pest Control. This new company will purchase benzene hexachloride from Tata Chemicals and market suitable products. The potential market for pest control products is very great. One of the more important products is copper oxychloride which is used in south India on tea and rubber plantations as well as in the tea gardens of Assam in the form of 4 percent and 6 percent copper dusts and 50 percent wettable copper formulations. It is estimated that India's annual requirements of copper fungicides are about 3,000 tons of 4 percent dust, valued at Rs. 31 lakhs, and 400 tons of 50 percent wettable powder, valued at Rs. 24 lakhs. The copper oxychloride equivalent of these quantities is about 600 tons. Tata Chemicals are now in the process of installing a plant for the basic manufacture of copper oxychloride while Tata-Fison will undertake the formulation and marketing of copper fungicides as well as a full range of other pest control products including insecticides, weed killers and fumigants.

Chlorinated Rubber

Another development at the Tata plant in Mithapur is that the manufacture of chlorinated rubber has been investigated in detail in the research laboratory as a part of the programme for the utilisation of chlorine. Chlorinated rubber finds its use as a base in the paint industry where high stability and low viscosity are the most important characteristics. Chlorinated rubber is particularly resistant to the action of acids, alkalis and salt solutions and is therefore used mainly in the production of corrosion resistant paints. It is estimated that their durability is about four times that of the common anticorrosive paints. Other uses of this product are in the preparation of quick drying varnishes with improved chemical resistance, for the manufacture of traffic paints that have greater durability and longer road life, and for the preparation of adhesives to be used with rubber for the impregnation of textiles and paper. It finds its use also in making special cable lacquers, marine finishes and printing inks. The laboratory process for the manufacture of chlorinated rubber has now been translated into a pilot plant. The plant will manufacture stabilised paint grade chlorinated rubber.

Madras

CENTRAL TAX PROPOSALS CRITICISED

SAVINGS LIKELY TO DECREASE

(FROM OUR MADRAS CORRESPONDENT)

VIGOROUS criticism of the Budget featured the speech of Mr. M. A. Chidambaram at the annual meeting of the Southern India Chamber of Commerce. He endorsed the view that the new taxes would stifle enterprise and would reduce savings and investment. He pleaded that more business men should seek election to legislative bodies. Other complaints related to the meagre allocation for shipping in the second plan and the paucity of tonnage on the coastal routes. He regretted that railway rates were being raised before the Rail Sea Co-ordination Committee's report was presented. Higher excise duties would lead to the demand for higher wages and anti-inflationary measures would fail in their object. Novelties like the wealth tax and the expenditure tax were described by him as harmful since administrative difficulties would lead to oppression and corruption.

The Chief Minister in his address commented on the need for extra revenue to step up public investment and asked the business community to appreciate the Government's purpose in broadening and deepening the tax base. Mr. Kamaraj Nadar disposed of the criticism that the Budget would discredit the Congress now in power. He said that taxes were not wantonly increased. While the D.M.K. held demonstrations and asked the Finance Minister to resign and seek re-election, the Dravida Kazhagam leader supported the new tax proposals and suggested that all classes and interests must make sacrifices for the plan.

Share Values Slump

The stock exchange proved vulnerable and declines in textile shares were recorded. Sugar shares lost ground because of the levy of higher excise duty while planting shares were not favoured on account of the fear that prices of coffee and tea might decline both at home and abroad. The settlement of the Kerala bonus dispute, promising more concessions for estate workers, brought little cheer. The increase in wages in Mysore as from 1st April may depress share values and the preference for Coorg Coffee shares may disappear soon as the truce agreement provides for a 40 percent increase in wages as well as compulsory provident fund benefits. The restoration of the power cut did not help textile shares and fears that changes in Section 23A of the Income Tax Act and the increase in bonus tax would lead to reduced dividends were the main causes which led to the decline in quotations for Mettur and Bangalore. Proposals to raise the present paid-up capital brought down Coimbatore Cotton and Vijayalakshmi, while Rayon eased to Rs. 13.35 cum dividend of 10 percent as it is believed that political prospects in Kerala are a grave risk facing the investor. Only Spencer Ordinary held firm at Rs. 16.60 on the news of the normal interim of 10 percent. Bank shares found more support on the assumption that profits would increase following the rise in Bank rate and the high level of advances in 1956-57. In view of the 10 percent dividend for 1956, Overseas held firm at Rs. 138.50 and Indian, partly paid, was in demand at Rs. 141 in view of the call on shareholders for Rs. 5 and a possible realignment of capital in the Jubilee year.

Disincentives to Capital Formation

The Madras Trades Association at its annual meeting heard Mr. C. W. Stephenson deplore the new disincentives to capital formation. He pointed out that productivity had to be raised to match the rise in wages under awards and argued that the Government must try to hold wages down if it was earnest about checking inflation. Reform of the company law so as to obviate the reference under Section 294 on the appointment of selling agents with shareholders' approval appears necessary. The cut in import quotas for the sake of conserving foreign exchange has been accepted by the Trades Association as necessary.

Power Cut Restored

The early monsoon has enabled the Government to restore the power cut earlier than expected. It has also allowed water from the Cauvery for irrigation in the delta ahead of the usual date, which is 20th June. The rainfall in certain districts has not brought down foodgrain prices yet, but it is noted that the retail prices of oils, pulses and condiments have not been raised by local traders. The Chief Electrical Engineer has claimed that the annual provision of Rs. 25 crores has so far kept Madras in the lead in the matter of power generation. The Madras Electricity system will be on a strong footing as soon as the new powerhouse, costing Rs. 3 crores, is ready. Work on the Periyar project is ahead of schedule, and the powerhouse will come into operation early next year. The execution of the Kundah project is also going on well. Some visiting Canadians have commended the State Government on the speed of work on this project, which may pave the way for an enlargement of the Canadian aid now given to it. It is hoped that transmission lines via Salem to Madras city will augment the

power supply and an application for extra help from Canada has been placed before the Union Government. Madras also hopes that aid for Kundah may be increased under the Colombo Plan.

Electrification of Southern Railway

Mr. T. A. Joseph, General Manager of the Southern Railway, explained last Thursday that electrification would save coal and help divert wagons now transporting railway coal to other uses. He hopes that electrification up to Villupuram will be undertaken in the current programme. The advantages of a double track on certain sections lie in the higher speed, and the avoidance of dislocation of services. But he has pointed out that a double track up to Villupuram will be far more costly than electrification. Mr. Joseph has explained that deviations from time-tables arose on account of the overriding need for safety. He confessed that overcrowding on the suburban sections was inevitable, and restricting the issue of tickets was not legally possible. New electric engines from Italy had arrived and some relief had also been obtained by getting ten integral coaches for use on the Madras-Bangalore route. He pointed out that more long-distance passenger trains would mean the elimination of two goods trains, and the Southern Railway was helping the public by putting in more coaches on trains running on the metre gauge. The railway's major achievement he claims is the ending of the transport bottlenecks in Bezwada and Raichur. Consequently, ore from Mysore is no longer sent for shipment via Cochin. Surveys for new lines have not been dropped. He stated that the M. G. line from Ernakulam to Quilon would be ready before the end of this year and the new line from Macherla which will be ready in a year will help move materials for the Nagarjunakonda dam.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939=100) advanced by 1.5 percent to 428.9 during the week ended 11th May, compared with 427.7 (revised) for the earlier week. The index was higher by 1.8 percent and 10.0 percent respectively when compared with the corresponding week of last month and that of a year ago. An advance in the prices of tea for internal consumption (+3.2%), dal arhar (+6%), wheat in Hapur, gram and gur (+5%, each), rice (+2%) and coffee-Native Flat (+1%), was responsible for a rise of 4.4 percent to 419.2 in the index for Food Articles compared with 401.4 (revised) for the previous week; the price of wheat in Amritsar (-3%) was, however, marked down. The index for Industrial Raw Materials advanced by 0.6 percent to 534.4 compared with 531.0 (revised) for the previous week due to a rise in the prices of rapeseed and cottonseed (+5%, each), groundnuts in Bombay and castorseed (+3%, each) linseed (+2%) and gingellyseed in Bombay and raw cotton (+1%, each), although the prices of groundnuts in Cuddalore and raw hides (-3%, each) and manganese ore (average export price) and lac (-1%, each) exhibited declines. The index for Semi-Manufactures stood almost unchanged at 40.8 compared with 40.9 for the previous week. Items which showed significant variations were: kerosene oil (-4%), gingellycake (-3%), groundnut cake (+6%), mustard oil (+3%), and groundnut oil in Bombay (+2%). A rise of 0.1 percent to 264.6 in the index for Manufactures was caused by an increase in the prices of jute manufactures (+1%). Lower prices of black pepper in Calcutta (-7%) and cashewnuts (-3%) brought down the Miscellaneous group index by 0.5 percent to 570.7 (estimated) compared with 573.6 (estimated) for the previous week. The price of black pepper in Cochin witnessed an increase of one percent.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: Year Ended August 1939=100)

Groups and Sub Groups	Week Ending			
	11-5-57	4-5-57	13-4-57	12-5-56

METRIC SYSTEM IN TEXTILE INDUSTRY

The textile industry in India will make purchases and sales on the metric system from April next year. This has been decided at a meeting held in Bombay under the chairmanship of Mr.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA
(Base: August 1939)

The Middle Class Cost of Living Indices, by groups, have now been brought up to April, 1957. As compared with March, the April Indices for Food, Clothing and Miscellaneous disclose rises of 6 points, 1 point and 1 point, respectively. The Middle Class Cost of Living Index Number

Groups	Weights	GROUP INDICES											
		April 1956	May 1956	June 1956	July 1956	Aug. 1956	Sept. 1956	Oct. 1956	Nov. 1956	Dec. 1956	Jan. 1957	Feb. 1957	March 1957

Compiled and constructed by the Statistical Department of "Capital"

V. Nanjappa, Textile Commissioner. Representatives of the millowners' associations and textile machinery manufacturers attended. While purchases of raw cotton will be in kilograms, the sale of cloth in metres will relate to wholesale transactions only; retail selling of cloth in metres will be adopted gradually, at a later stage. In the meanwhile, all marking of cloth will be on both systems, i.e., in yards as well as in metres, the metre being the primary unit. The practical difficulties that will be faced by the industry during the transitional period were discussed, and a technical committee was constituted to go into the problems in detail: the committee is expected to submit its report within two months. While the industry expressed readiness to change over to the metric system, it was pointed out that a concerted programme of education and publicity was necessary in order to condition the public to transact in terms of the metric system. The chairman said that this was a problem which would require co-operation of the consumer and the retail seller, and expressed the "plan already drawn for a 'leader-campaign'. Mr. Nanjappa also pleaded for 'leader-ships and initiative' on the part of the industry. Referring to replacements during the transitional period, representatives of the textile machinery manufacturers explained that the U.K. was already supplying textile machinery to the metric countries on the continent, and that there would be no difficulty on this account.

PRODUCTION AND ACREAGE OF KHARIF PULSES INCREASE

According to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, the all-India final estimate of kharif pulses other than tur for 1956-57 puts the current year's area and production at 16,166,000 acres and 1,664,000 tons, against the partially revised estimate of 15,567,000 acres and 1,632,000 tons for 1955-56. This shows an increase of 599,000 acres or 3.8 percent in area, and 32,000 tons or 2.0 percent in production over last year. The increase in acreage has been shared mainly by Bombay, Rajasthan, Punjab and Andhra Pradesh and has been attributed generally to favourable climatic conditions at the time of sowing. This increase has, however, been offset to some extent by the decreases registered in Bihar, Madhya Pradesh, Mysore, Uttar Pradesh and Himachal Pradesh. The increase in production has occurred in Andhra Pradesh, Bombay, Bihar, Madras, Punjab, Rajasthan and West Bengal, and has been attributed partly to increase in acreage and partly to favourable climatic conditions during the growing period of the crops. As between various pulses, the increase in production has occurred in the case of mung, moth and kulh. Some of the pulses included in this estimate are also grown during rabi season in some States. Kharif pulses reported in this estimate, however, cover about 62 percent of the total area under pulses other than gram and tur.

RECEIPTS UNDER INDO-U.S. AGRICULTURAL COMMODITIES AGREEMENT

In a written reply to a question in the Lok Sabha on the commodities so far received under the Indo-U.S. Agricultural Commodities Agreement, Mr. Ajit Prasad Jain, Minister for Food and Agriculture, recently laid the following statement on the table of the Sabha:

"Commodities received up to 30th April, 1957 with their quantities and values:

Quantity	Value (c.f.)	Lakhs of Rs.
Wheat	741,000 tons	3.079
Rice	133,000 tons	1.088
Cotton	88,149 bales of 480 lbs. each	744

Grants and loans: Nil so far.
Out of the rupee proceeds of the commodities to be received under the Agreement, namely wheat, rice, cotton, tobacco and dairy products, a grant of \$54 million and a loan of \$234.1 million will be given to India after the loan agreement has been signed and the projects on which it is to be utilised are decided between the Government of India and the Government of the U.S.A. by natural agreement.

LABOUR IN THE JUTE INDUSTRY

NEED TO MAINTAIN COMPETITIVE EFFICIENCY OF MILLS

THE jute industry is again having to face criticism, this time from two sides. One criticism comes from the report of the committee appointed by the Government of West Bengal to enquire into labour conditions in jute mills. The other comes from members of Parliament for Bihar on the question of the price of raw jute. One of the points noted by the West Bengal Government's committee from the replies to its questionnaire is the reduction in the number of women employed. It is stated that this is probably the result of the increase in wages granted by the last tribunal, and also of the maternity benefits to which women workers are entitled. There is a good deal of truth in this, and it is probably correct to state that because of the higher wages and maternity benefits and the cost of providing other amenities such as children's creches, the employment of women has become uneconomic. There are, however, other reasons for the reduction in the number of women employed. One of these is the mechanisation of work that was formerly done by women. There have been cases where sack sewers, for example, have gone on being paid by mills long after there was no work for them just because it was cheaper to do that than to pay the retrenchment compensation laid down in tribunal awards. Their elimination has come through natural wastage.

Another point remarked on by the committee is the reduction in the number of permanent hands and the increase in the number of temporary employees. The fall in the number of permanent workers is mainly due to the introduction of labour-saving machinery and better handling methods. This may be deduced from the fact that the number of permanent employees has fallen by 19,000 in five years, while the number of temporary workers has increased by only 10,000 in the same period. One reason for the increase in temporary employees is said to be that mills which are in the course of modernising their plant are not engaging any new permanent workers to replace normal wastage, as the new employees would merely have to be paid off with compensation when the modernisation has been completed.

On the subject of housing, the committee states that conditions are not satisfactory. It is alleged that mills have not taken advantage of the Government's scheme to provide loans or subsidies for housing. Surely the reason for this is obvious. The mills are so hard pressed from depletion of their resources because of high labour costs and the disparity between the price of raw material and that of manufactured goods that they are finding it difficult to raise funds even for their day-to-day operations. If they are now compelled to deposit with the Government a portion of their profits and reserves—where they have any left—how can money be found to construct houses for workers? The Government's action in destroying the profit-earning capacity of the industry has undermined the latter's ability to provide new accommodation and improve existing accommodation for workers.

Water Supply

Another matter commented upon by the committee is water supply. It complains that every house does not have a water tap. It has omitted, however, to notice the colossal waste of water through many taps being left open perpetually so that the water runs to waste. This is simply due to the fact that workers—and it applies to other industries besides jute—are not appreciative of the cost of providing them with water which they get for free, and so count it as of no value. The committee does not comment either on the fact that the water supplies installed by jute mills are, in some cases, ment nor the municipalities having bothered to provide any. In most countries, the provision of water supplies is the concern of public bodies and not of private industry.

On the general subject of employment, it is obvious that if the industry is to compete with its rivals, it must install all the labour-saving devices available. That naturally means a reduction in the number of employees and it is a problem which must be faced. If the industry does not modernise, it will not be able to compete and the number thrown out of employment will be greater than the number retrenched through modernisation. In fact, as one of the important employers of labour in India, the alternatives then are modernisation and reduction of the number of workers, or anti-lation and almost total unemployment. The latter is unthinkable and the former ought to be easily enough mitigated for, if the second plan is a success, the redundant labour should be easily absorbed.

Prices for Bihar Jute

In a statement issued a few days ago, Mr. Sudhansu, M.L.A. and President of the Bihar Jute Growers Association, said that he welcomed Dr. Deshmukh's assurance in the Lok Sabha that the Government wanted to ensure a fair price for jute. But he went on to say that Dr. Deshmukh's observation that the prices prevailing in February, March and April this year compared favourably with those of last year showed a regrettable com-

placency. He said that the growers had been facing a crisis for some years because of the fall in prices and had been losing Rs. 6 crores annually. It looks as if the Association's President has based his statement on a comparison with the fantastic prices which prevailed after decontrol in 1951. The prices which the growers have obtained in the past few years have been higher than can be justified by the prices of manufactured jute goods in the world's markets, and they have been high enough to encourage the growers to sow bigger crops. If they had been losing money on the scale suggested, it is certain that less jute would have been grown instead of more. How far out of touch with reality Mr. Sudhansu has strayed, is shown by his suggestion that the Government should impose a heavy import duty on Pakistani jute. He is apparently unaware that the cost of Pakistani jute is already so high that its import is uneconomic except for small quantities for special purposes. He also proposed that the Government should permit the export of raw jute to prevent the creation of a buyers' market. He seems to be ignorant of the fact that the market has favoured the growers for some years to such an extent that they have greater holding power than they have ever had. It is a pity that anyone in a responsible position should make a statement so far out of accord with facts.

THE JUTE MARKETS

Firm conditions prevailed throughout the past week until Monday afternoon when a storm broke over Calcutta and brought about easier conditions in both jute and gunnies. Actually, little rain fell. The storm was purely local and could not in any way influence the crop, but it served to expose the weakness of the position which has been built up on the basis of the prolonged drought in the jute districts. Immediately the storm began there was a wave of nervousness among jute dealers and large offers were made at prices 25 nP to 50 nP below what was being quoted in the morning. Forgotten was the talk about small stocks of the old crop and poor prospects for the new crop. The idea was to effect sales so as not to be left holding jute on a falling market or to sell bear in the hope of making a quick profit by covering when the market fell. From sellers' reactions, it seems clear that there is more jute available than they would like to believe. Buyers' actions were not much better than those of sellers and few took the chance of securing jute at prices lower than they had been paying a few hours before. They may, of course, think that now that the fiction of shortage has been exposed they can afford to wait, and they may have been deterred by the fact that gunny prices also dropped steeply when the storm broke. On Tuesday morning, when it was realised that the storm was confined to the locality and that the rainfall was negligible, sellers raised their quotations to the levels prevailing before the storm.

Manufactured Goods: As usual the fatka market has been the dominating influence. Early in the week, the B Twill fatka was around Rs. 117 but bear-selling by a prominent operator brought about a reaction. The continued drought in a large part of the jute-growing area prevented any serious fall and quotations remained between Rs. 116 and Rs. 117 until Tuesday afternoon. It is reported that there has been good enquiry for both hessian and sacking for shipments up to the end of the year, but mills have been reserved because of the firmness of raw jute. On Monday afternoon, the B Twill fatka dropped below Rs. 116 but it recovered on Tuesday morning.

On Wednesday morning, the market opened steady with quotations as follows:

	Ready Rs.	June Rs.	July-Sept. Rs.	Oct.-Dec. Rs.
40in. 8oz.	34.50	34.75	35	34.50
40in. 10oz.	43.10	43.35	43.60	43.20
B Twills	116.95	117.10	117.36	117
Heavy Cees	116.50	117.25	117.75	117.20
(Plain)	139.50	140	140	139.50
A Twills	128.50	129	129	129
Liverpools	117.10	117.75	118.75	118
Cornsacks				

Raw Jute: For most of the past week, the market was firm and sellers were offering only small quantities, for which they were asking higher prices. Most offers were of high assortment, it being stated that imports in the mofussil centres were mainly of qualities yielding a high percentage of middles. Buyers were mentioning prices slightly below the quoted rates but, in some cases, conceded an advance and prices rose during the week by 25 nP or 50 nP. Business was reported in Northern and Assam jute at Rs. 30.50 to Rs. 31.50, in desal white at Rs. 29.50 to Rs. 30 and in Daissee jute, including Kolaghat, at Rs. 33 to Rs. 33.50. Mesta was done at Rs. 28 to Rs. 28.50 for desal and Rs. 28 to Rs. 29 for Northern and Assam. Tossa was sold at Rs. 33 to Rs. 33.50. Pakistani N.C.'s fetched Rs. 115 and bimli was bought at Rs. 25.50 to Rs. 26. On Monday afternoon, when a nor'wester broke in Calcutta, there was a rush to sell and business was done at 25 nP to 50 nP below the rates quoted in the morning.

Only small business was done as buyers withdrew, but on Tuesday morning sellers had recovered and were quoting the rates prevailing before the storm. On Tuesday, small business was reported at Rs. 31.25 basis Bottoms for Assam jute.

On Wednesday morning, quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms.	Shipment. June
Assam	31.50	"
Northern	31.50	"
Purnea Desal	30.50	"
Purnea Jungli	28	"
Daissee Jute	33.50	"
Murshidabad Tossa	32.50	"
Jungli Tossa	30	"
Northern ex Calcutta	30.50	"
Local Packing	29	"
Pakistani N.C.'s	115 a bale	"
Mesta:		
Assam	29	"
Northern	29	"
Desal	28.50	"
Daissee	28	"
Murshidabad	26.50	"
Jungli	26.50	"
Bimli	F.A.Q. 26	"

The Cossipore market has been firm, with mill buyers active and paying full prices. Imports were 546 wagons, compared with 441 wagons in the previous week.

Mufussil: Imports are small, but not less than usual at this time of year. Drought still continues in Bihar, central Bengal and in the daissee districts. In Assam, the crop is doing well. In North Bengal there have been occasional local showers but general rain is needed to promote growth and allow more sowing to be done.

CORRECTION

In last week's notes, it was stated that mills' stocks of jute at the end of April were 125,000 bales. That should, of course, have been 1,250,000 bales.

THE PAKISTANI JUTE MARKETS

FIBRE SUPPLY INCREASES

(FROM A NARAYANGANJ CORRESPONDENT)

AFTER a slight recession, the market has again steadied. Last week's prices are being maintained in spite of considerably increased arrivals. Considering the fact that this is the end of May and that for the past two months there have been complaints of scarcity, it is amazing that so much jute is available now. This may be mainly due to the attraction of high prices, but it also indicates that the fibre was hoarded. Although there may be a slight squeeze by the end of June, it is unlikely that there will be any serious shortage despite the lateness of the new crop, and there is no indication that prices will weaken more than a rupee a maund. Many of the Pakistani mills have sold hessian as far forward as October at prices which allow them to buy B Bottoms at Rs. 32-8. This being the case, it is reasonable to expect that now or later, the mills will buy fibre as soon as prices fall below this level. If they do, it is most likely that jute will not fall so low for more than a day or two.

In spite of the current steadiness in the market, overseas buyers seem to have withdrawn and are reducing their prices. In the pucca bale market, where prices are nominally unchanged, there is very little buying interest; it is reported that pucca bale prices have been maintained simply because one large baler has a fair amount of covering to do. Comparatively, the price for pucca bales is considerably higher than for loose jute or kutcha bales. In Karachi, hessians remain unchanged at Rs. 56-8, but B Twills are steadier at Rs. 130-8. The rise is mainly due to a demand for all sizes of B Twills for bagging salt from Karachi to East Pakistan.

THE FOREIGN JUTE MARKETS

CONTINUED STEADINESS IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE manner in which prices for all jute commodities are being maintained is rather remarkable, and there must be more business passing than appears on the surface. A quieter tone is observed in the raw jute market one day, but the tendency is steadier the next, and it is especially noticeable that shippers are very reluctant to make offers of new crop this year. Quite a lot of jute of the new crop had been sold last year at this time, which the sellers had reason to regret later as they had no opportunity of covering in because of the big advance caused by the Suez crisis. It is known that several shippers have fair quantities of jute to cover in again, sales made over the past few months, and this is believed, is the reason for the maintenance of old crop rates. As far as the new crop is concerned, the weather conditions are now quite satisfactory in most districts. Tentative offers are being made at £104 for Mill Lightnings and £100 for Mill Hearts, c.i.f. U.K. There are no September-October shipment. There are no September-October shipment yet, which indicates the fear shippers have of any repetition of last year's losses on early sales of the new crop. Dundee spinners are so far not touching the new crop, but they continue to pick up any available parcels of old crop, mainly afloat or spot material, which is offered at around shipment rates. There are £113 for Mill Hearts and £107 for grade B.

£123 a ton for Mill Firsts, £117 for Mill Lightnings, while good marks of Daisies-2/3 are quoted at £114 and grade from £112 and grade Tossa-2/3 from £121 and grade Tossa-4 from £116, all c.i.f. U.K., May-June. For June-July shipment, 20s less all round is quoted. Sales were recorded last week at £117 for Mill Lightnings, £114 for crack Daisies-2/3 and £115 for Tossa-4, afloat and ex-warehouse.

Calcutta goods have shown little change, with slight fluctuations. Hessians have ruled very steady at 65s for 40in. 10oz. May, 65s 3d June and 65s 6d July-September, with 71oz. at 48s 9d May to September. B twills are quoted at 178s 6d, 178s 6d and 178s 3d for the respective positions mentioned, all f.o.b. Calcutta. Trade in jute yarns and cloth continues dull, and production is being steadily curtailed.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption was somewhat disappointing in April. Although approximating that for April last year, it was 5 million yards below March, and brings the total consumption for the first four months of this year to 2 million yards below the same period last year. Burlap prices last month were about 8 percent higher than a year ago. This undoubtedly was a contributing factor to this year's performance not being better than it was. U.S. burlap stocks at the end of April, at 257 million yards, were 6 million yards lower than at the end of March. The 257 million yards included 175 million spots and 122 million afloats. Stocks are now at about the same levels as were reported last year. Appearing below are two tables which include the April figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

U.S. Burlap Consumption (As reported to T.B.M.A.) (Million Yards)		U.S. Burlap Consumption (Estimated Industry Total) (Million Yards)

KERALA PLANTATIONS MAY BE TAXED MORE

RISE IN SOUTH INDIAN TEA AND COFFEE PRICES

(FROM A SOUTH INDIAN CORRESPONDENT)

PLANTERS in Kerala may have to pay more to the State exchequer if Mr. Namboodiripad's recent statements on his Government's taxation policy are put into effect. An enhancement of the plantation agricultural income-tax is considered probable in the State's new Budget.

Tea and coffee have become dearer in south Indian markets as a result of the enhancement of the excise duty on them, and of rail freight. The Coffee Board, in turn, has made certain upward adjustments in its release prices with effect from 15th May. The pool sales price of Plantation A, the highest grade coffee, is now fixed at Rs. 219.30 a cwt., compared with Rs. 201 a cwt. formerly. Similarly, the price of the best quality coffee powder sold through the Board's propaganda units has been raised from Rs. 2.62 a lb. to Rs. 2.76 a lb. Quotations from different south Indian markets show an increase of Rs. 10 to Rs. 15 a cwt. Tea dealers have also raised their quotations to accommodate the increase in duty. In the auction room buyers are cutting less probably with the intention of passing the tax burden on to producers. At last week's internal sale in Cochin most sorts declined in value by 10 to 20 p.p. a lb. The price increases in beverages, brought about by higher taxation, are likely to have an adverse effect on internal consumption.

C. Co-operative Scheme

Until the end of April 1957, the Government of Kerala spent over Rs. 78 lakhs on the co-operative scheme which was introduced in Travancore-Cochin in 1950, says an administrative report. Out of this, Rs. 66.8 lakhs was issued as loans to build the working capital of 103 co-operative societies and Rs. 7.5 lakhs as grants to 208 societies for their establishment and contingent expenditure. Now there are about 224 coir and *thundu* societies, two central societies and 15 co-operative unions functioning in Kerala. These societies have a membership of about 5,00,000 (of which about 80 percent are workers). They have sold 156,359 shares, and collected Rs. 8 lakhs as share capital. The business transacted so far in the purchase and sale of husks and coir yarn amounts to Rs. 13.4 lakhs. Steps are now being taken to extend the co-operative scheme to the Malabar area of the State.

The Government claims that tangible results have been achieved in the Travancore-Cochin area. Rotted husks at very reasonable price are being supplied to the members of the co-operative societies. The purchase and sale of the yarn produced by them are being advantageously carried on. Besides, this scheme has provided permanent employment for about 600 persons and temporary work for about 3,000 persons. Of the 500,000 people engaged in the various sectors of the coir industry in Travancore-Cochin, more than 10 percent have joined co-operatives. Since it is not usual for all adults engaged in the coir industry to get themselves enlisted as members of the societies, it would be reasonable to assume, the report says, that almost 50 percent of the families engaged in and depending on the coir industry have come within the co-operative orbit. About 20 to 25 percent of the husks required for the coir industry are now being controlled by the societies working under this scheme, while they have control over nearly 35 percent of the yarn produced for sale. The Government hopes that by the end of the second plan period the desired result of eliminating intermediaries will have been achieved.

Extension of the scheme to the entire industry is the goal of the Government. With this end in view, it has asked the Central Government to raise

the amount provided for coir in the second five year plan to Rs. 1.5 crores. The Kerala Industries Minister, Mr. K. P. Gopalan, dealt with the necessity to reorganise Kerala's coir industry on a co-operative basis, when he addressed the coir conference held in Trivandrum on 19th May. Nearly 300 persons representing the various interests participated. The conference, which was called to find a solution to the present crisis in the industry, generally accepted the suggestions put forward by the Government. The suggestions, briefly, were the re-organisation of the industry on a sound co-operative basis, elimination of all the intermediaries, fixing the price of raw husks in relation to the prevailing prices of coir products from time to time, and ensuring adequate supply of husk to the co-operative societies. The Government would consider subsidising the price of husk, which is the basic raw material used in the coir industry, if necessary with the assistance of the Central Government.

Plantation Strike Averted

The plantation workers' strike, scheduled to start on 21st May, did not take place as the major issue at dispute—bonus for the years 1955 and 1956—was settled amicably at a tripartite conference held in Trivandrum on 18th and 19th May. Under the agreement reached, the workers employed in the tea estates and falling under the purview of the Plantation Labour Act will be paid 21 1/2 percent of the annual average of their total earnings for the two years and those in other tea estates 15 1/2 percent. In rubber estates, those with an area of 200 acres and above will pay 18 percent of the annual average of the total earnings of workers for the two years. The question of payment of bonus to workers on coffee estates was left to the meeting of the Plantation Labour Committee. Workers have been demanding bonus at the aggregate rate of 25 percent of the total earnings for 1955 and 1956. But the employers' contention is that they would not be able to pay anything more than 18 percent in tea estates and 15 1/2 percent in rubber estates. It was also decided at the conference immediately to set up a committee to go into the question of wages, future bonus and other connected issues relating to employment in the plantations.

Tea Shipments

Tea shipments from Cochin during the first four months of 1957 amounted to 21.2 million lbs showing a small decrease of 300,000 lbs over that of the corresponding period last year. Exports to the U.K. at 10.7 million lbs and to the U.S.A. at 2.9 million lbs maintained last year's level. Canada and Australia took more or less the same quantity they bought at this time last year.

Competition in Cashew Growing

The Kerala State Government has received a communication from the Indian Council of Agricultural Research suggesting that a crop competition for cashew be conducted in Kerala to encourage growers. It is understood that similar communications have been addressed to the Governments of other cashew-growing States.

Pepper Cultivation in Kerala

A scheme for the development of pepper cultivation in Kerala has been drawn up by the State Government. It will be spread over a period of four years during the second five year plan. It envisages the establishment of seven nurseries, one in each of the seven revenue districts of the State, to raise rooted cuttings from quality vines of high yield for distribution among the growers. The scheme will be looked after by a pepper development officer, with headquarters in Palghat.

Participation in Poznan Fair

Along with the Coffee Board, the Pepper and Cashew Export Promotion Council has decided to participate in the Poznan Industrial Fair to be held from 9th June. Exhibits will include different grades of cashew kernels and pepper as well as cashew shell liquid.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing prices on 17-5-1957 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.26	1.26
No. 2	1.23	1.23
No. 3	1.20	1.20
No. 4	.96	.96
No. 5	.91	.91
	Sheet Cuttings 1	.92
	Sheet Cuttings 2	.87
Crape:		
Water White	—	—
R.M.A. No. IX	1.16/18	1.16 1/2
R.M.A. No. 1	1.12/15	1.12 1/2
	Crape No. 2	1.04 1/2
	Crape No. 3	1.00 1/2
Scrap Crape:		
Sc. Crape No. 1	.95	.95
Sc. Crape No. 2	.92/94	.92 1/2
Sc. Crape No. 3	.82/91	.85 1/2
Flat Bark	.75/80	.76 1/2
	Sc. Crape 3X	.89

To arrive at f.o.b. Colombo prices add 53.53 cents a lb for crape other than scrap crape and 31.53 cents for scrap crape to the above market prices.

Engineering and Transport

LIGNITE MINING IN NEYVELI

MULTI-PURPOSE PROJECT

THE Prime Minister, Mr. Jawaharlal Nehru, inaugurated recently the earth moving operations of the first mine cut of the lignite reserve in Neyveli, in South Arcot district of Madras State. The Neyveli lignite reserves are being harnessed under a Rs. 68.9-crore multipurpose project to produce electricity for industrial development in the south, to manufacture fertilisers for agricultural development and to produce briquettes for use as domestic and industrial fuel. The project has been accorded a high degree of priority in view of the acute shortage of fuel in south India, which has retarded the development of industry and agriculture in this region. The total estimated reserve of lignite in the area is 2,000 million tons. Only an area of 200 million tons has been selected for exploration. It would suffice a mine life of about 57 years at an average mine output of 3.5 million tons a year.

As the most economic utilisation of lignite is to use it as fuel in boilers close to the mine itself, generation of electric power is the most important scheme in the integrated project. The installed capacity of the thermal station consisting of two units, which will be set up at a cost of Rs. 21 lakhs, will be about 200,000 kW. The first of the two will be commissioned by the middle of 1960, and the second by the end of that year. Another aspect of the multipurpose project is the production of nitrogenous fertilisers which would help step up agricultural production. The fertiliser plant in the project is intended to produce fertilisers with a nitrogen content of 70,000 tons a year. The fertiliser plant, it is expected, will go into production by the end of 1960, the time by which lignite mining in commercial quantities is scheduled to start.

The balance of lignite, after meeting the requirements of the power house and fertiliser plant, will be utilised for producing briquettes. It is proposed to set up a plant for the production of 714,000 tons of raw lignite briquettes, which, on carbonisation, will yield 318,000 tons of carbonised briquettes and by-products.

T.C.M. Aid

Under the aid from T.C.M., a pilot plant for the briquetting and carbonising equipment is expected to be received and erected by the end of October 1957. After completion of the tests with the plant, preparation of the specifications for the briquetting and carbonising equipment will be taken up. The operation of the plant, which is estimated to cost Rs. 10 crores on a commercial scale, is expected to commence by about October 1961. The estimated cost of the lignite project excluding the fertiliser unit will be Rs. 46.90 crores, out of which Rs. 21 crores will be spent in the second five year plan period. The fertiliser unit is estimated to cost Rs. 21 crores and the construction phase of this scheme will last through the period 1957-61.

Mining Operations

But the mining of Neyveli lignite was no easy task. Investigations revealed that the ground water control at a pumpage of 27,000 to 28,000 gallons a minute was the pre-requisite to mining operations. It was also in the nature of large-scale open-cast mining which has not been attempted in India before. It was, therefore, decided to engage the services of expert consultants. An agreement was executed on 9th May with Messrs. Powell Duffern Technical Services Ltd. of London for expert consultancy services on the mining scheme. Orders for the supply of conventional and specialised mining equipment to the extent of Rs. 5.5 crores have already been placed with a West German firm. The specialised mining machinery under preparation in West Germany, and the first consignment of the equipment is expected to arrive in India only in 1958. But no time had to be lost in the execution of such an important project. It was decided to begin the work with conventional mining machinery which had already arrived. The target date for exposing the first cut in the lignite mine is in 1960, and the full production stage of the mine will be reached at the end of 1960 or early in 1961. The tests have revealed that Neyveli lignite has a moisture content of 50 percent and an ash content of 3 percent. About 2 1/2 tons of raw lignite could be equivalent in thermal value to a ton of good coal and the annual target of production of 3.5 million tons would, therefore, be equivalent to a little over a million and a quarter tons of good coal. Raw lignite is, however, bulky and liable to spontaneous combustion. It is also to be briquetted bringing the moisture down to about 15 percent.

Project Administration

During the investigation stages, the project was administered departmentally. In view of the magnitude and importance of the project and in order to ensure effective and flexible management as in the case of Sindri fertilisers and National Coal Development Corporation, the Government organised the undertaking into a private limited company known as the Neyveli Lignite Corporation Private Limited, in which the Government holds 100 percent shares. The Company was registered under the Companies Act, 1956, in Madras on 14th November, 1956, and started functioning

from 6th December, 1956, with a share capital of 25 crores.

IRRIGATION SCHEMES FOR

THIRD PLAN

THE Planning Commission has, in a letter addressed to State Governments, suggested the establishment, in each State, of an investigation unit under the charge of an experienced superintending engineer to undertake preliminary work relating to irrigation and power projects to be included in the third five year plan. Emphasising the importance of completing detailed investigations of irrigation and power projects before they are included in the plan, the Planning Commission says, that the time has come to take adequate steps to see that fully worked out schemes are got ready in time for the third plan. The work of the investigation unit will be (i) the location of areas requiring irrigation; (ii) the examination of and recommendation on the relative priorities of such areas; (iii) the assessment of water resources available and the needs of the region; (iv) the determination of possible project sites making use of the available Survey of India maps; (v) the preparation of preliminary reports on quantities of water that can be utilised at different sites in each river basin; (vi) the reconnaissance of possible project sites; and (vii) the preparation of outline project reports. In fixing and assessing the water requirements of areas that need irrigation by major and medium projects, the investigation unit will also determine such areas as can best be irrigated by minor irrigation projects, or are best suited for contour bunding and dry farming. The requirements of water for these areas will have to be kept in mind in preparing the proposals for major and medium irrigation works. The Planning Commission has strongly recommended that the investigation units should be set up as soon as possible so that the preliminary works might be completed in about a year. Detailed investigations, surveys, and preparation of project reports can be taken in hand thereafter on schemes that the State may like to suggest for the third plan.

A number of big river valley projects have been included in the first and second plans. Most of these will continue in the third plan. The Planning Commission has, therefore, recommended that new irrigation projects in the third plan should be preferably medium projects which can be completed quickly and yield benefits in the third plan or immediately after. This, it is stated, will be an important criterion in the selection of irrigation projects in the third plan and should be borne in mind in formulating proposals. While most irrigation schemes will be medium-sized, certain river valley projects may have to be taken up for generating power. These, the Planning Commission suggests, should be confined to areas situated away from coal-bearing regions as the bulk of power in the latter will have to be generated by steam in order to utilise low grade coal and large volumes of middlings from coal washeries.

NO PROPOSAL YET FOR A STEEL PLANT IN SOUTH INDIA

Reports published in certain newspapers that a 2-million-ton steel plant will be set up in south India during the third five year plan are baseless. Schemes of steel production in the third five year plan have not been formulated yet, and no decision has been taken about the capacity or the location of future steel plants in the country. Only preliminary studies were undertaken which gave indication that if anything like a target of 15 million tons of steel production is to be achieved, not only should the capacity of existing units of steel production be expanded, but new works should be set up. The use of lignite for iron smelting in south India has no doubt, become a possibility after the inauguration of the Neyveli Lignite Project. But the extent to which Neyveli lignite reserves could be utilised for setting up a steel plant in that part of the country is yet to be examined. No decision has also been taken about the setting up of a steel plant in Bokaro. It was one of the alternative sites suggested for one of the three steel plants in the second five year plan. It will, therefore, naturally come up for consideration when schemes for setting up steel plants in the third five year plan are formulated.

"...and a bonus of goodwill to the management — for installing the

'Tushar'
WATER COOLER!"

QUICK DIVIDENDS in improved staff relations—and greater efficiency! That's what investment in a TUSHAR Water Cooler brings you.

The TUSHAR provides a constant supply of cool, hygienic drinking water for your staff and clients. It's easy to operate and most economical to run. Why not get in touch with Voltas Limited, and order a TUSHAR now?

'Tushar'
WATER COOLERS

A modern must for factories, offices, schools, hotels, hospitals and colleges

With the TUSHAR you get

- A continuous supply of instantly-cooled water at the touch of a button—no unhygienic refilling or storing.
- A choice of two handsome models.
- Ease of installation.
- Economical to run.

GOVERNMENT OF INDIA

4% TEN-YEAR TREASURY SAVINGS DEPOSIT CERTIFICATES
(FREE OF INCOME-TAX)

Interest at the rate of 4% will be payable free of income-tax annually from the date of deposits and will not be taken into account in calculating the total income of the depositors for the purpose of income-tax.

The maximum amount that may be held in these deposits including the amount invested in 3½% Ten-Year Treasury Savings Deposits in terms of Government of India, Ministry of Finance Notification No. 7(1)-B/51 dated 22nd January 1951 will be:—

For an individual	Rs. 25,000
For an individual jointly with another	50,000
For charitable institutions	1,00,000
For other institutions	50,000

Deposits in cash/cheque will be received from the 1st June 1957 until further notice in multiples of Rs. 100/-.

Deposits will be refundable at any time after expiry of one year from the date of deposit at certain discounts.

Applications will be received at the offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras and Bangalore, branches of the State Bank of India, State Bank of Hyderabad and Bank of Mysore Ltd. conducting Government Treasury business and Treasuries and Sub-Treasuries in India at places where there is no such office of the Reserve Bank of India or branch of the State Bank of India, State Bank of Hyderabad or Bank of Mysore Ltd.

Deposit certificates will be accepted for safe custody by Public Debt Offices and interest remitted to holders if so desired.

Calcutta Markets

DEMAND FALLS AT TEA EXPORT SALE

FAIR GENERAL SUPPORT FOR DUSTS

AT Export Sale No. B, held on 27th and 28th May, export offerings were 9,400 packages, which were of a generally ordinary description. The few invoices that possessed attractive flavour were keenly competed for, and were sometimes dearer. There was much less demand than in the last sale and most kinds were selling at 50 p.p. below valuations and sometimes more. The weakest feature of the Sale were broken and Fannings grades and these were frequently withdrawn. Less interest was shown by internal buyers than in the previous sale, but exporters gave good support to well made whole leaf grades, although at lower rates.

At the Internal Sale 48, Dust offerings consisted of 19,767 chests. There was a fair general demand, and prices improved as the Sale progressed. There was less buying for Middle East types, but clean leafed teas from all districts were about firm. Medium C.T.C. Assams were firm and sometimes dearer, but the best C.T.C. Assams were a weak feature and often difficult of sale. Commonest types were generally irregular.

Quotations	1957	1956
Medium Doars Dust	1.40 to 1.45	1 6 6 to 1 7 0
Medium Assam Grains Dust	1.50 to 1.55	1 8 0
Medium Assam C.T.C. Dust	1.55 to 1.65	1 8 0
Best Assam C.T.C. Dust	Not Quotable	2 11 0 to 2 13 0

There were 325 chests of leaf on offer, and prices were irregular and generally easier.

FALL IN ORE FREIGHT RATES

IN the freight markets last week, a further decline of 3s a ton to 47s was noted in the trans-Atlantic coal rate, and charterers are still talking the market down. Ore rates from India have slumped and two ports East Coast-Poland was done at 100s. There has been a very much reduced demand for ships on time charter, although liner companies trading to India were seeking suitable tonnage at rates considerably under those last paid. The paucity of orders in the Far East trades was illustrated by the fixture of a vessel to load South African maize and which would ballast from Japan.

Meantime, with the monsoon almost upon us, a depressing picture is apparent at most Indian ports. In Calcutta even vessels carrying grain now face berthing delays of up to five to six days, while ore loading labour continues its go-slow tactics. In Vizagapatnam, delays of up to 30 days for vessels loading ore are again prevalent, and ships with steel for Bhilai are taking nearly 40 days to discharge part cargoes. In Madras, delays of 14 to 21 days appear certain over June, and Bombay is likely to be overrun with grain ships next month.

SUGAR MARKET RISES

During the week ended 29th May, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 3,000 bags and stocks totalled 150,000 bags. Rates for ready sugar ex-Kantapur delivery rose to Rs. 35.50 for ordinary grain and Rs. 36.50 for big grain.

LINSEED UNCHANGED

Conditions were more or less unchanged last week and both buyers as well as sellers were reserved. The weekly turnover was very poor. The oil section was inactive and buyers showed very little interest due to lack of enquiries from overseas and a smaller local demand. Latest quotations were as follows: May-June Rs. 22-8 a maund; June-July Rs. 22-12 a maund and July-August Rs. 23-4 a maund.

HIDES AND SKINS STEADY

The market was steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 21st May and 27th May, 1957)

Cowhides: Wet salted (Ord.) 18,000 pcs. on the basis of Rs. 7 to Rs. 9; Wet salted (Slaughtered) 17,500 pcs. on the basis of Rs. 12 to Rs. 21.

Goatskins: Wet salted (Daissee, Killed) 30,100 pcs. on the basis of Rs. 290 to Rs. 300; Rs. 325 to Rs. 345 and Rs. 370 to Rs. 380; Assam-Dinajpur-Purneah 10,900 pcs. on the basis of Rs. 275 to Rs. 320; Purneah-Kissanganj 4,000 pcs. on the basis of Rs. 325 to Rs. 330; Pakur-Patna (Ord.) 26,500 pcs. on the basis of Rs. 290 to Rs. 305; Muzafferpore-Patna 60,800 pcs. on the basis of Rs. 315 to Rs. 320.

Bazaar Stocks
(27th May, 1957)

Cowhides: Wet salted 1,59,500 pcs.

Goatskins: Muzafferpore - Patna - Pakur - Purneah-Kissanganj 42,000 pcs.

COMPANY AND PUBLIC NOTICES

BENGAL POTTERIES LIMITED.

NOTICE

NOTICE is hereby given that the Forty-fifth Ordinary General Meeting of the Bengal Potteries Limited, will be held at the Registered Office of the Company, 45, Tangra Road, Calcutta, on Tuesday, the 18th June, 1957, at 4.0 P.M. to transact the following items of business:—

- To receive and adopt the Directors' Report, the Audited Balance Sheet and the Profit and Loss Account for the year ended 31st December, 1956.
- To declare dividend.
- To elect Directors.
- To appoint Auditors for the current year and to fix their remuneration.
- To consider, and if thought fit, pass the following Resolution as a Special Resolution:—

"Resolved that the Company may receive moneys from Messrs. Madan Mohan Lall Shri Ram & Co. Private Ltd., Partners of the Managing Agents, Messrs. Bharat Ram Bhagat & Co., or from associates of the said Managing Agents, by way of deposits, loans or advances, and pay interest thereon at such rates as may be agreed upon between the lender and the Board of Directors of the Company, so however that the rate of interest shall not be higher than what the Company will pay to the Industrial Finance Corporation on the additional loan of Rs. 20 lakhs, terms and conditions of which have already been accepted by the Company."

"Further resolved that payment of interest on loans outstanding on 1st April, 1956, or made thereafter be and is hereby approved."

The Share Transfer Register of the Company will be closed from 7th June, 1957 to 1st July, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board of Directors,

BHARAT RAM BHAGAT & COMPANY,
Managing Agents.

45, Tangra Road,
Calcutta.

Dated, 15th May, 1957.

THE BENGAL FLOUR MILLS CO., LTD.

The Report of the Auditors thereon the Report of the Board of Directors, to declare a dividend, and to transact other ordinary general business of the Company.

Notice is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 3rd June, 1957 to 19th June, 1957, both days inclusive.

By Order of the Board,

BALMER LAWRIE & CO., LTD.,
D. MANSON,
Secretary,
Managing Agents.

21, Netaji Subhas Road,
Calcutta, 22nd May, 1957.

NOTE:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

STATE BANK OF INDIA

NOTICE is hereby given that a Local Meeting of the Shareholders of the State Bank of India on the Branch Register of Shareholders kept at the Calcutta Local Head Office of the Bank will be held at the Calcutta Local Head Office, No. 3, Strand Road, Calcutta, on Wednesday, the 26th day of June 1957, at 4.00 P.M. (Standard Time) for the purpose of electing one person to be a Member of the Local Board at Calcutta in pursuance of Regulation 48 of the State Bank of India General Regulations, 1955, in place of Shri Dharendra Nath Mitra, a Member of the Local Board, whose term of office will expire on the 30th June, 1957.

P. C. BHATTACHARYYA,
Chairman.

Bombay, 22nd May, 1957.

JENSON AND NICHOLSON (INDIA) LIMITED.

NOTICE

NOTICE is hereby given that the Annual General Meeting of Members of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Thursday, 20th June, 1957, at 11 A.M. for the following purposes:—

- To receive and consider the Directors' and Auditors' Reports and the Profit & Loss Account for the year ended 31st December, 1956 and the Balance Sheet as at that date.
- To declare Dividends.
- To elect a Director in place of Mr. B. J. Nicholson who retires by rotation and is eligible for re-election by passing the following resolution of which special notice as required by Section 281 of the Companies Act 1956 has been received by the Company.
- To appoint Auditors and fix their remuneration.
- As Special Business:—To pass, if thought fit the undernoted resolutions:—

"Resolved that Mr. B. J. Nicholson who has attained the age of 68 years, and who retires by rotation be and is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act 1956 shall not apply to him."

(i) As an Ordinary Resolution: "That Mr. H. S. Challis be appointed an Alternate Director of the Company to act for Mr. B. J. Nicholson during his absence from West Bengal."

(ii) As a Special Resolution: "That the consent of the Company be accorded to the holding by Mr. H. S. Challis of the office or place of profit of Secretary and Accountant of the Company notwithstanding that he be a Director of the same."

The Share Transfer Books of the Company will be closed from the 13th to 20th June, 1957, both days inclusive.

By Order of the Board,
H. S. CHALLIS,
Secretary.

2, Fairlie Place,
Calcutta 8th May, 1957.

NOTE: A member entitled to attend and vote at the above Meeting may appoint a proxy to attend and vote instead of him. A proxy need not also be a Member of the Company.

EXPLANATORY STATEMENT

The Resolution set out under item 3 is required as Mr. B. J. Nicholson has attained the age of 68 years and hence cannot be re-appointed a Director except by a resolution in respect of which special notice has been given in accordance with Sections 180 and 281 of the Companies Act 1956. Notice has been duly received that this Resolution will be proposed.

Mr. B. J. Nicholson will be away from India for more than three months and the Board of Directors recommend that Mr. H. S. Challis be appointed to act as his Alternate, accordingly the Ordinary Resolution under item 5 (i) has been proposed.

The Special Resolution under item 5 (ii) is necessitated by the facts therein specified and the operation thereon of Section 314 of the Companies Act 1956.

THE RAMNUGGER CANE & SUGAR COMPANY LTD.

NOTICE is hereby given that the Twentieth Ordinary General Meeting of the Shareholders of the Ramnugger Cane & Sugar Co. Ltd. will be held at the Registered Office of the Company, 7, Wellesley Place, Calcutta, on Thursday the 4th July, 1957, at 12 noon to transact the following business:—

- To receive the Directors' Report and pass the Audited Accounts for the year ended 31st August 1956.
- To declare a dividend on Preference Shares.
- To declare a dividend on Ordinary Shares.
- To elect Directors.
- To appoint Auditors and fix their remuneration.
- To transact any other business which may properly be brought before the Meeting.

NOTICE is also given that the Share Transfer Registers will be closed from the 15th June to 4th July, 1957, both days inclusive.

By Order of the Board,

ANDERSON WRIGHT LTD.,
Managing Agents.

Calcutta, 22nd May, 1957.

Note—A member of the Company who is entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a Member of the Company.

BHARTIA ELECTRIC STEEL CO., LTD.
NOTICE.

NOTICE is hereby given that the Twenty-eighth Annual General Meeting of the Members of Bhartia Electric Steel Co. Ltd. will be held at the Registered Office of the Company at 42, Shibtolla Street, Calcutta, on Friday, the 28th June 1957 at 4 p.m. to transact the following business:—

AS ORDINARY BUSINESS:—

- To consider and pass the Audited, Balance Sheet and Profit & Loss Account of the Company for the year ended 31st December 1956 together with the Reports of the Directors and Auditors of the Company.
- To declare Dividend.
- To elect Directors in place of Shri H. P. Saraf and R. B. Mungtullal Tapudish, who being longest in office retire by rotation.
- To appoint Auditors for the year 1957 and to fix their remuneration.

AS SPECIAL BUSINESS:—

- To consider and if thought fit to pass with or without modifications the following as Ordinary Resolutions:—

(i) Resolved that the Company accords its consent to Shri R. L. Bhartia, a whole time Director of the Company to continue to draw a salary of Rs. 2,500/- per month from 1st January 1957.

(ii) Resolved that the Company accords its consent to Shri P. R. Bagri a whole time Director of the Company to continue to draw a salary of Rs. 1,500/- per month from 1st January 1957.

(iii) Resolved that the remuneration payable to Shri P. R. Bagri a whole time Director of the Company be increased from Rs. 1,500/- to Rs. 2,500/- per month with effect from 1st January 1957 subject to the approval of the Central Government.

(iv) Resolved that consent of the Company be and is hereby accorded to borrowing of moneys by the Company exceeding the aggregate of the Paid-up Capital of the Company and its free reserves i.e., reserves not set apart for any specific purposes.

EXPLANATORY NOTE WITH REGARD TO THE AGENDA NO. 5:—

5. (i) & (ii) Shri R. L. Bhartia and Shri P. R. Bagri, two of the whole time Directors of the Company had been receiving remuneration at the rate of Rs. 2,500/- and Rs. 1,500/- respectively per month. Sanction of the Shareholders under Section 309 (1) of the Companies Act 1956 is necessary for continuance of payment of such remunerations from 1st January 1957.

5. (iii) Shri P. R. Bagri is in the service of the Company since last 18 years and was appointed a Director on and from 1-4-50. For a man of his experience and abilities his present emolument is quite inadequate and the Directors have recommended an increment of Rs. 1,000/- per month. This increment will become valid only after the Shareholders have accorded their sanction and the Central Government has also approved of the proposed increment as required by the provisions of Section 310 of the Companies Act 1956.

5. (iv) Under Section 233(d) of the Companies Act 1956 the consent of the Shareholders is necessary for borrowing moneys by the Company exceeding the aggregate of the Paid-up Capital and its free reserves, that is, reserves not set apart for any specific purpose. The borrowings of the company have not so far exceeded the said limit, but, in view of the increased prices of the raw materials and expansion programmes undertaken by your Company, it may be necessary for the Company to borrow in excess of the aggregate of the Paid-up Capital and Free Reserves.

By Order of the Board,

for BHARTIA COMPANY LIMITED,
Sd/- JWALAPRASAD BHARTIA,
Managing Director,
Managing Agents.

42 Shibtolla Street,

Calcutta, 24th May, 1957.

Note:—(1) The Share Transfer Register of the Company will be closed from 14th June, 1957 to 28th June, 1957, both days inclusive.

(2) A member of the Company entitled to attend and vote at the above meeting of the Company shall be entitled to appoint another person as his proxy to attend and vote instead of himself and proxy need not be a member.

The Company Meeting and Dividends table appears on page 769

PORT ENGINEERING WORKS LTD.

THE Board of Directors has today decided to recommend to the forthcoming Annual General Meeting of shareholders a final dividend of 63 Naye Paise per share without any deduction in respect of taxation payable by the Company for the year ended 31st December, 1956.

By Order of the Board,

ANDREW YULE & CO., LTD.,
Managing Agents.

Calcutta, 29th May, 1957.

RATIONALISATION OF THE SMALL SAVINGS STRUCTURE

INFLATIONARY PRESSURES AND BULLION MARKET TRENDS

As wealth becomes more widely diffused, the importance of small savings—in absolute terms, as well as in relation to other types of savings—is expected to grow steadily. Further details have now been issued about the reforms in the small savings structure which were outlined by the Finance Minister, Mr. T. T. Krishnamachari, in his Budget speech recently. The main features of these reforms are two-fold: one is that the structure is being rationalised by a reduction in the types of savings certificates, and the other is that interest rates are being raised. As a result of rationalisation, only two kinds of savings certificates will now be left: the new series of National Plan Savings Certificates, and the Treasury Savings Deposit Certificates. The former will have a currency of 12 years, and will replace the present National Savings Certificates and the National Plan Certificates. The latter will have the same life as they do now, that is, ten years.

that saving in the form of gold is unproductive, and is damaging from the point of view of the nation's economic future. But the trend of bullion prices, especially during the past six months, suggests that capital appreciation more than compensates for the loss of interest

already exist. For the banks have, in fact, been lending some money for relatively long terms—up to eight years in a recent scheme to finance the building of oil tankers. But such operations are a very small part of their business. The advocates of long-term bank credit for industry contend that the proportion should be substantially increased, and that the banks should not only grant extended credit but also participate directly in industry through the medium of shares.

Mr. Bland's argument has not converted this school of thought. It is agreed that the banks cannot create savings by "financial wizardry". But Mr. Bland is on less sure ground when he argues that if the savings exist they will find their way into industry through the existing capital market. This is an entirely different proposition. Saving takes many forms and as the distribution of wealth changes, the forms of saving change with it. High taxation of big incomes and estates, and the increase in wage earners' incomes, have spread wealth, and therefore savings, more evenly; and the new class of savers is not traditionally interested in the stock market. The masses' savings are accumulated these days rather in the big financial institutions, primarily in the insurance companies, to a less extent in the building societies and the banks. The insurance companies are investing an increasing proportion of their resources in industry, and also in real property. The building societies' function is to guide savings into property. The banks' deposits, representing both individuals' and companies' savings, are mostly employed in the money and discount markets, in Government securities, and in temporary loans to individuals and companies; about one-third of them is represented by liquid assets in the strictest sense.

Mr. Bland himself recognises that the banks have sometimes, rightly, granted special assistance to special types of borrowers, outside of the normal conventions of banking; so, tacitly, he admits that the banks can make capital available to industry if they are willing to do so. The question is whether they could, and should, make such capital available in greater quantities and over a wider range. The idea that the banks might materially reduce their liquidity ratios finds no favour in banking circles and is certainly not approved officially. The idea in the minds of "progressive" bankers is that non-liquid resources could be more positively employed. The Treasury might not like the implication that a smaller proportion of assets should be invested in Government stocks, but if insurance companies can invest substantially in ordinary shares and grant special long-term assistance to companies, there is no evident reason why banks should not do likewise.

A better idea is that the banks' resources should be increased, to enable them to lend more. But Mr. Bland objects that offering higher interest rates on deposits, though it might cause some transfer of existing deposits, would not materially increase the total of deposits within the banking system. What is needed is an increase in total savings. But it is also necessary to ensure that, by some appropriate means, the savings shall be made available for genuinely productive uses. One can dispute Mr. Bland's assumption that the existing arrangements for distributing capital are adequate, and that only the capital itself is deficient. But one cannot dispute that the primary need is to promote voluntary saving. Without an increase in saving, any increase in investment, whether through the banks or otherwise, will stimulate inflation—unless the Government can release resources by reducing its expenditure.

INCOME ESTIMATE FOR WEST BENGAL

EFFECTS OF REFUGEE INFLUX

THE Statistical Bureau of the West Bengal Government has made some useful and enterprising studies in recent years. The survey of unemployment carried out between September and December 1953 brought together much interesting information. The survey of small-scale industries was another valuable investigation. The latest in the series of socio-economic surveys, and perhaps the one it has been most difficult to compile, is a venture to compute the income of West Bengal for the years 1948-49 to 1951-52. It is not too difficult to estimate the national income of an integrated economy, but the measurement of the income of a single State bristles with many practical difficulties. "Up-to-date statistics are not available for many sectors. The scope and definition of the terms used are not clear in many cases. Though in recent years statistics are being collected on many items, which had been previously left untouched, there are still large gaps in the statistical picture." These drawbacks may be largely removed if the Government accepts the Bureau's recommendation to carry out continuous socio-economic surveys.

In computing its estimate of West Bengal's income, the Bureau frankly confesses that the pic-

ture presented is far from complete. In spite of various limitations—which are mainly statistical in nature—it is hoped that the findings of the Bureau will induce other State Governments to make similar important surveys. The Bureau has estimated West Bengal's income by sectors, as was done by the National Income Committee. Its estimate shows that the total income of the State, for the four years 1948-49 to 1951-52, was about Rs. 674 crores. Rs. 691 crores, Rs. 740 crores and Rs. 760 crores, respectively. The per capita income is estimated at Rs. 292, Rs. 294, Rs. 303 and Rs. 304 a year, respectively. The figures show that the upward trend in income during the three years from 1948-49 to 1950-51 was almost arrested in 1951-52. The reason is not far to seek: the influx of refugees increased the size of the total population without bringing about a corresponding rise in total income. The contribution of West Bengal to the aggregate national income of India is of the order of 8 percent. The Bureau has estimated that the per capita income of West Bengal is about 15 percent higher than that of India as a whole. But this picture of prosperity appears to be superficial on closer analysis, for during the period 1948-49 to 1951-52, the per capita income in India increased by 11 percent whereas in West Bengal it rose by only 4 percent. The rate of increase in West Bengal's income would have been higher had there been no heavy influx of refugees.

Although West Bengal is fairly advanced industrially, the contribution of agriculture to its total income is still bigger than that of any other sector. No less than 57 percent of the population of West Bengal depends on agriculture, while 47 percent directly earns its livelihood from it. More interesting is the fact that although big industry in the State accounts for a larger share of the total income compared with big industry in India, the State's share in the total income from small industry is still unusually small.

In estimating the income of different "occupation classes", the Bureau was faced with some ticklish problems. "The difficulty in this sector is that a large number of persons under these classes are employed not only by the Government, but also by various industrial establishments, commercial houses, plantation farms and so on." There are people, grouped in this category, who are not self-supporting, but support themselves on charity and donations from others; the task of the Bureau has been greatly facilitated by previous records relating to an unemployment survey. The total income in this sector comes to Rs. 25.2 crores in 1948-49, Rs. 25.6 crores in 1949-50, Rs. 26.6 crores in 1950-51 and Rs. 27.2 crores in 1951-52. There are some minor deficiencies, but they are perhaps inevitable in view of the statistical handicaps. In estimating the income from house property, the non-municipal urban areas have been treated as rural areas since there is little definite information. Such worthies as barbers, hair-dressers and laundresses have been grouped in the sector of "professions and liberal arts"; they might have been put more appropriately under petty traders. Many drawbacks may disappear as the results of a number of surveys, carried out by the Bureau only recently, become available. In fact, the Bureau has said that the present estimates should be considered provisional, and are therefore subject to revision.

PROGRESS OF GUEST, KEEN, WILLIAMS

SHAREHOLDERS in Guest, Keen, Williams, Ltd., including those who subscribed to the November 1956 issue of Rs. 10 shares at a premium of Rs. 10 each, have been rewarded for their sound judgment. A final dividend of 15 percent, free of tax, has been recommended; and most people will agree with Mr. H. M. L. Williams, managing director, that it is very satisfactory. After charging manufacturing expenses, providing for depreciation on fixed assets and adding income from investments and other non-trading sources, the surplus before taxation, for the 52 weeks ended 29th December, 1956, amounts to Rs. 152,76,593 as compared with Rs. 92,47,430 in the previous year. Of this, taxes take Rs. 69,60,774, compared with Rs. 43,60,000 in the previous year, not counting a sum of Rs. 2,88,490 which had to be provided to make up for a deficit in the tax provision for the previous year or an offsetting credit of Rs. 99,264 in respect of tax provisions in earlier years, no longer required. The tax measures in the Central Government's Budget for 1957-58 will necessitate similar adjustments in the current year's accounts. As to whether the satisfactory results will be maintained, Mr. Williams's statement shows some uncertainty. The Finance Minister Mr. T. T. Krishnamachari, has not made things easier by increasing the income tax on companies and the corporate tax, or by making companies liable to the wealth tax in a considerable underestimation. Mr. Williams says of these levies that "they do not appear an inducement to any investor." The rise

in the prices of steel and cement (thanks to the steep increase in excise duties) and foreign exchange restrictions will tend to lengthen the time before the rehabilitation and development projects can be brought to an income-earning stage.

With all this, Mr. Williams allows himself a measure of consolation. The difficulties are not peculiar to his company. Nearly everybody else is in the same boat, but Guest, Keen, Williams belongs to a group which enjoys the advantage of having foreign associates. Guest, Keen and Nettelfolds, of Britain, with their worldwide engineering organisation, are well equipped to provide technical experience along with facilities for research and advanced training. The company is thus in a better position than many of its competitors in the engineering industry. Both the Calcutta and Bhandup works have had full order books in almost all departments. Helped by a rise in steel imports, they were able to increase their output. A record output was achieved in the Calcutta works rolling mill, in railway switches and crossings, forgings for wagon-builders, specialised permanent way fittings, P and M anchors and mills loose jaws, and in the bolt and nut works. The Bhandup works, which made its first wood screw in the autumn of 1952, also achieved a record output and completed its second stage of development, consisting of a 50 percent building and plant expansion.

Mr. Williams draws special attention to an anomaly in the tax system concerning Section 23A companies like Guest, Keen, Williams. Such companies are compelled to make a minimum distribution of 60 percent of their surplus (which the latest Budget proposes to reduce to 45 percent), failing which they become liable to a penal super-tax. At the same time, if the dividend distributed exceeds 6 percent of the paid-up capital, it attracts the excess dividend super-tax. Thus the company is penalised both ways, whether it distributes dividends or whether it retains its profits. This is particularly hard when it has to rely on the reinvestment of profits to meet development costs. Mr. Williams has spoken strongly about Customs and port delays and the resulting demurrage charges. In the case of three recent air consignments of technical equipment, which were required most urgently, clearing of goods took 15 to 27 days from the time of lodging the documents. As for sea consignments to Calcutta, stores and ordinary machinery take over a month, after the vessel's arrival, to be cleared. If the consignment requires a heavy lift or a special wagon or both, delays in delivery can be much longer and quite unpredictable.

CURRENT COIN

Estimates of National Income.—The national income of India at 1948-49 prices was Rs. 10,420 crores in 1955-56 and Rs. 10,280 crores in 1954-55 as compared with Rs. 10,030 crores in 1953-54. The per capita income at 1948-49 prices correspondingly rose from Rs. 268.7 in 1953-54 to Rs. 271.9 in 1954-55 and Rs. 272.1 in 1955-56. This is shown by the fourth issue of the annual paper on national income just released by the Central Statistical Organisation. The estimates for 1954-55 included in this paper are based on the detailed method of estimation followed for the earlier years and show an upward revision over the preliminary estimates published last year. The estimates for 1955-56 are, however, based on partial material and are subject to revision. The table below indicates the trend of national income (or net national output) at 1948-49 prices since 1948-49:

Year	Net National Output at 1948-49 prices (Rs. crores)	Per capita net output at 1948-49 prices (Rs.)
1948-49	8,650	246.9
1949-50	8,820	248.6
1950-51	8,850	246.3
1951-52	9,100	250.1
1952-53	9,460	256.6
1953-54	10,030	268.7
1954-55	10,280	271.9
1955-56	10,420	272.1
(preliminary)		

On the whole, during the first five year plan period (1951-52 to 1955-56) the national income in real terms increased by 17.7 percent, as against the original plan target of 11 percent. The corresponding rise in the per capita income was 10.5 percent. The absence of any pronounced rise in 1955-56 over 1954-55 was mainly due to the fall in agricultural production shown by the latest available crop figures. The total contribution to national income at 1948-49 prices by agriculture showed a decline of Rs. 50 crores in 1955-56 over 1954-55, as compared with a rise of similar magnitude in 1954-55 over 1953-54. There was no appreciable change in the yearly increase in the overall contribution by other sectors. Expressed at current prices, the national income stood at Rs. 9,650 crores in 1955-56 and Rs. 9,620 crores in 1954-55, or Rs. 830 crores

and Rs. 860 crores lower than the 1953-54 level. The per capita income at current prices correspondingly declined from Rs. 280.7 in 1953-54 to Rs. 254.4 in 1954-55 and Rs. 252.0 in 1955-56. The fall in the national income at current prices in 1955-56 and 1954-55 was entirely due to price changes, the national income in real terms having shown a rise in both the years. The level of agricultural prices, in particular, was considerably lower in 1955-56 and 1954-55 compared with 1953-54 and this also accounted for the sharp decline in the income at current prices originating in the agricultural sector. As the estimates are presented in the paper in terms of rupees abja (100 crores) corrected up to one decimal place, changes smaller than Rs. 5 crores are ignored. Although there was some progress during 1955-56 in small sectors like "mining" and "organised banking and insurance," it was not large enough to be shown by the figures presented in this paper.

West Bengal Financial Corporation.—The West Bengal Financial Corporation has to increase its resources if it is to meet the larger new applications for loans which are now coming before its management. The shortage of private capital and the tightness in the money market have forced more and more companies to seek loans from the Corporation. Mr. B. M. Birla, its chairman, has at the recent annual general meeting expressed surprise that even "first-class companies, which should have normally experienced no difficulty in raising money from the market, are unable to do so and are coming to us for comparatively small loans." The Corporation lent Rs. 71,65,000 during the year ended 31st March, 1957, the progressive total of its loans sanctioned so far being Rs. 1,14,92,000. Mr. Birla points out that the total loans sanctioned, "despite the fact that the Corporation had to reject 60 percent of the applications as they did not come up to the minimum standard required, have exceeded the present resources of the Corporation—comprising entirely its paid-up capital of Rs. 1 crore." So he feels that the time has come to mobilise more resources. The only effective way the Corporation can do so is to issue debentures and bonds with the approval of the Reserve Bank and the State Government, he says. The law provides that the payment of interest on such debentures and bonds shall be guaranteed by the State Government. But even then, Mr. Birla thinks, the success of the issue cannot, "in view of the prevailing tight conditions in the money market, be regarded as fully assured without direct support from Governmental institutions such as the Reserve Bank, the State Bank and the Life Insurance Corporation." Discussing the changing character of the investment market, Mr. Birla says that while it is "very gratifying" that these Government-sponsored bodies have done much to relieve the financial hardships of industry, there is, unfortunately, little encouragement for the private investor to offer his own capital. As matters stand, entrepreneurs provide only 25 percent of the capital, "the institutions, in some cases, supplying 75 percent." Some years ago, the opposite was the case. "The situation has deteriorated to such an extent that it is now being seriously considered whether the Finance Corporations should encourage the capital market by starting the business of underwriting shares and participating in equity capital," Mr. Birla declares.

Workers' Participation in Management.—The Study Group which was appointed by the Government of India to report on the question of workers' participation in management has done so after having studied the problem in several European countries. The central point of its recommendations seems to be that no rigid system should be imposed from above and that the forms of participation should be flexible. "Joint consultation should be in-built," it says. It therefore emphasises the co-operative spirit, and says that the permissive legislation it recommends for enactment should only provide the framework, "the procedure being left to be developed by joint consultation." The success of such bodies depends upon the spirit in which they are worked. "The law cannot prescribe the spirit," Education, the Group says, will play a fundamental part in the "reorientation of attitudes" that will be necessary for the success of the idea. It suggests that the Government take a leading part in arranging for educational courses for workers, in collaboration with employers' organisations, trade unions, universities and non-official bodies. "In every country we visited," says the Group's report, "there are workers' colleges, courses, evening classes, seminars, printed literature and the like to train them not merely to become more skilled, but also to acquire an understanding of the work they are engaged in, so that they can really 'participate' and not merely be passive tools in the hands of demagogues." As a starting point for applying this principle, the Group suggests that it would be advisable to begin the experiment with undertakings which are not too complex. Smaller industries where workers have to be protected under the Minimum Wages Act should be left alone.

Where an undertaking is spread over several places, there may be separate councils at the local, regional or national levels. The functions of the joint councils should not be confused with those of the trade unions. "Joint councils cannot cover the whole field of workers' interest. A demarcation of functions is necessary and matters requiring collective bargaining should be left to trade unions. But even after the demarcation of duties, it is necessary to ensure that the trade unions co-operate with the joint machinery." Dealing with the functions of joint councils, the Group's report says that they "may be conveniently consulted on matters like alteration in standing orders, retrenchment, proposals for rationalisation, closure, reduction in or cessation of operations, introduction of new methods, procedure for engagement and punishment." They may have the right to receive information and make suggestions about the general economic situation of the concern, the state of the market, production and sales programmes, organisation and general running of the undertaking, circumstances affecting the economic position of the undertaking, methods of work and annual balance-sheet and profit and loss statements and connected documents and explanations. The councils should also have administrative powers; the spheres of responsibility here should cover welfare schemes, safety measures, vocational and apprenticeship schemes, preparation of schedules of working hours and breaks, preparation of holiday schedules and payment of rewards for valuable suggestions. The Study Group was composed of Government officials, and representatives of trade unions and employers. It toured the U.K., France, Germany, Sweden, Yugoslavia and Belgium.

The Value of Advertising.—Advertising tries to increase the conscious wants of the consumer. By making him dissatisfied with the little he has, it tempts him to work harder. The valuable social function it thereby performs is often poorly appreciated even by people in authority. Many have a sneaking suspicion that the big advertiser, in one way or another, restricts the freedom of the Press. But a recent speech at the Bombay Rotary Club by Mr. K. U. Mathew recalls that when the Royal Commission in Britain asked several senior newspaper editors whether there was any interference with editorial policy by big business, they said that they had never heard of an editorial blacklist. The Press Commission in India has echoed the same view in saying: "No industry or group of industries contributes such a high proportion of revenue to the Press as a whole as to be able to hold it to ransom." In former times, a newspaper depended on a small group of business houses for its advertising revenue. But today its income is derived from a large number of sources, so there is no inclination to compromise editorial policy for the sake of an advertiser or a group of advertisers. Mr. Mathew gives the estimate that the aggregate income of a large Bombay group of newspapers is approximately Rs. 140 lakhs, but "the biggest single advertiser does not contribute more than a lakh of rupees to this total." Advertising expenditure in India is about Rs. 10 crores a year. This works out to 0.1 percent of the national income, which compares with 2 percent in the United Kingdom and 3 percent in the United States. Mr. Mathew says that the average revenue from circulation is in the region of 55 percent and the revenue from advertising 45 percent. "If it were not for advertising, newspapers would at least cost double of what they do today."

U.S. Steel Expansion.—The increase in U.S. steel production capacity this year may exceed last year's expansion of five million tons. Mr. Benjamin F. Fairless, president of the American Iron and Steel Institute, told the Institute's annual meeting recently that the steel industry's plans for 1958 are "no less ambitious." Over the long range, U.S. steel production capacity "must be added at a rate of at least three million tons." Reviewing the industry's growth in the past decade, he noted that 42 million tons of new steel capacity have been added in that period to bring production capacity in 1956 to 133.5 million tons. U.S. mills are currently operating at about 87 percent of rated capacity.

Effects of High Taxes.—The wealth tax and the expenditure tax have been strongly criticised on the ground that although they may increase the Government's revenues, their adverse effect on savings and investment will far outweigh the gains. Speaking at the recent annual general meeting of the Southern India Chamber of Commerce, Mr. M. A. Chidambaram, president, has pointed out that there will be many practical difficulties in making assessments, and a vast new army of officers will have to be appointed. "It will not be too much to say that these measures will prove to be a veritable engine of oppression and will surely embitter the good relationship between the assessee and the Government. It will destroy even the little incentive that the individual may now have. The increase in the tax on companies, coupled with the levy on wealth, will have a de-

pressing effect on investment." The higher excise duties will increase living costs, and will particularly hit people in fixed income groups. The external payments deficit is widening, and has exceeded the estimate of the planners, so there is an urgent need to increase and diversify exports. Mr. Chidambaram thinks that the targets fixed under the second plan for many exportable commodities are on the low side. He does not deny that there will be hardship if enough goods are not available for domestic consumption. "But a country wedded to a planned all-round development should be prepared for some austerity measures and we may have to tighten our belt."

Lloyd's Deposits.—The growing trend for insurance companies in Britain to move away from gilts and to invest funds in equities has received what will undoubtedly be considered strong support in the recent decision that up to one-half of the deposits lodged by Lloyd's underwriters with the committee may in future be invested in non-trustee securities. Until now all securities deposited had to be trustee stocks. The non-trustee stocks which may now be included, such as industrial ordinary shares, will have to be approved by the committee. Membership of Lloyd's exceeds 4,000, and the average minimum deposit required from a member is about £10,000. This policy change by the committee indicates the growing investment status of industrial equities. It also im-

plies that, with income tax and surtax at present levels, investors in the high income groups are becoming increasingly interested in capital appreciation potentialities than in taxable interest payments.

CORRESPONDENCE

LITTLE LIGHT FROM LAMPS

(TO THE EDITOR OF "CAPITAL")

Sir,

My attention has been drawn to the editorial comments appearing in your issue dated 2nd May on certain observations which I had made in course of my presidential address at the recent annual general meeting of the Indian Lamp Factories Association. In particular, I would like to refer to the comments as extracted below:

"The differences in rates of growth may be merely a reflection of the comparative efficiency of individual units. Mr. Sinha complains that cut-throat competition prevails in the market. But from the consumer's point of view, nothing could be better. He states that lamps produced in India but marked with foreign brands have a special appeal to consumers, regardless of their price and quality. Such a prejudice which has in actual practice, divided the products of the industry into two categories, viz., more popular and less popular brands, is, needless to emphasise, a very undesirable feature of

the industry, inasmuch as it is primarily because of this fact that the factories producing less popular brands of products have not been able to increase their production to a level they should have attained. It is hard to agree with Mr. Sinha; one would have thought that it is for the manufacturers themselves to remove consumer prejudices by selling more vigorously and being fully competitive in terms of quality and prices."

I regret to have to point out that your reading of the problem of lack of balance stands on a misconception. In order that this basic problem may not be misunderstood by your readers and/or others concerned, and also in the interests of the industry as a whole, I deem it my duty to address this letter clarifying the implications of the problem to which I have made a pointed reference in my speech. At the outset, I would like to point out that the growth and expansion of a particular unit in the lamp industry has been, primarily, influenced by the consideration whether its products are branded with internationally reputed foreign brands or not. Consumers' prejudice in favour of such foreign branded lamps is still so great that the manufacturers of less popular brands are encountering considerable handicaps and difficulties in selling their products in competition with their counterparts, notwithstanding the fact that the quality and the prices of the less popular brands of lamps are equal to those of foreign branded lamps. I may point out that the prices of less popular brands are comparatively cheap in a few cases. Even then, it has not been possible for the manufacturers of less popular brands of lamps to enjoy a better position in the market solely due to the consumers' prejudice.

Thus, the general observation to which you have made a reference, namely, that the differences in rates of growth may be merely a reflection of comparative efficiency of individual units, is not applicable in the case of the lamp industry. From the practical point of view, the efficiency of a particular unit is found to be of no value to the consumers so long as the quality and the prices of lamps available in the market are the same. Besides, your advice to the effect that the manufacturers should themselves remove the consumers' prejudices by selling more vigorously and being fully competitive in terms of quality and prices, not only involves a contradiction, but is also neither correct nor possible, having regard to the facts as explained above.

As I have already stated, so I would like to reiterate on this occasion also that the lopsided development of the operating units is directly the result of consumers' prejudice in favour of foreign brands and their active patronage and support towards the same. In my address, I drew particular attention to this aspect of the problem as I felt that unless the cause of the unbalanced development of different units was handled at the very root, the overall interests of the industry would continue to suffer. This is why I dwelt on the problem in detail and offered a few suggestions for consideration by the Government. I hope I have made the position quite clear to you, and I shall be glad if you will kindly publish the letter in the next issue of the journal, so as to enlighten the reading public on the basic problem faced by some units in the industry.

Yours etc.,

H. SINHA,

President of the Indian Lamp Factories Association.

Calcutta, 29th May.

[Reference is made to this letter in A Ditcher's Diary]

CURRENCY EXPERIMENTS

IT is more than two years ago that we gave up supporting the present currency experiment, and our main reason was that, depending as it did, and does still, on contraction of the currency and on nothing else, its chances of success were doubtful and remote, and we would only arrive at the desired goal over the ruin of India's trade. Opinions which have lately been expressed by members of the Indian Currency Association and others seem to confirm our arguments, and the experience of the last six months proves clearly, we think, the harmful tendency of our present currency laws. In India itself, we have always had to contend with a slow and spasmodic distribution of loanable capital. That is in no way to be laid at the door of Government legislation, but there is no doubt, we think that our present currency laws have greatly aggravated the evil. We published in another column a pamphlet forwarded to us by Mr. Sleight, the Secretary and Treasurer of the Bank of Bombay and the leading member of the Indian Currency Association of Western Presidency. Mr. Sleight's argument coincides with those which we have frequently expressed, viz., that the first desideratum of currency legislation is that it shall encourage and not in any way hamper freedom of finance or free distribution of capital.

FROM

CAPITAL

1st June, 1897.

A DITCHER'S DIARY

"THE least I could do to save the plan", said Mr. T. T. Krishnamachari in defence of his Budget taxation proposals about three weeks ago. With the changes in the proposals announced last Friday, more than Rs. 5 crores out of the Rs. 93 crores extra he intended to raise have gone. It may not, therefore, be wholly irrelevant to enquire how much of the plan is now likely to be "saved", although the taxes that remain are still substantial. Of course, as far as the Government is concerned, lower taxes do not always necessarily mean less money. The currency printing presses, in Nasik and elsewhere, would have been busy fulfilling their production target of Rs. 275 crores of paper notes this year; with the target now up by another Rs. 5 crores, it should still not prove too difficult to achieve, although I suspect things are getting to the stage where their brave Stakhanovite workers might have to be paid heavily for overtime. As for last week's tax concessions, they represent for the most part adjustments which had to be made in response to the political pressures in Parliament and outside. This is particularly true of the changes affecting postcards and short-distance railway travel. But the decision to bring the excise duties on tea and coffee back to their original levels is welcome; so also is the logic shown in exempting new industrial undertakings from the wealth tax for five years and in removing an anomaly affecting inter-corporate investments. If the readjustment of the children's and marriage allowances encourages those getting less than Rs. 20,000 a year to have a couple of children, and those getting more not to marry, it would not become me, in my innocence, to say who would be the happier.

It is difficult to see the Finance Minister concede Mr. Dange's claim that the general strike in West Bengal last Thursday was responsible for the tax reliefs. That would be one way of inviting, and getting, more general strikes in the weeks to come. The latest strike did not depart much from the pattern we in Calcutta are painfully familiar with, and it was a success, too, in a manner of speaking. Shops were closed, offices worked with what are exaggeratedly called skeleton staffs, and after 5 in the evening there was what without exaggeration can be called a mammoth meeting at the foot of the Ochterloni monument. Resentment against the taxes was wide, but not to that should we attribute the "success" of the strike; and some Leftist parties are less than honest in claiming a share of the credit, for there is reason to think that they joined in the appeal for the strike against their wishes. Possible loss of face was the chief motivator in their case, even as the almost certain loss of property or worse was what kept the shops shut. It is perhaps too much to expect that parties in opposition will desist from proclaiming general strikes on the slightest pretext, in spite of the real hardship they cause to the very people these parties profess to champion; but the sole provider of these pretexts, the Government, must ask itself why it should so oblige the opposition so often. The Congress once knew, and in advance, what the country wanted. Perhaps it no longer does. Perhaps this is the result of what Mr. Nehru calls the Congress's lack of touch with the people. Subsequent bending makes it the easier for Mr. Dange and his comrades to take the fullest advantage of the ruling party's failing powers of intelligent anticipation.

T. S. Eliot's "nothing but a set of obsolete responses" would perhaps be too harsh a judgment on the latest deliberations of the All India Congress Committee in New Delhi, but even Mr. Krishnamachari's "socialism in our time" sounded

like an echo from the past. It is, however, on the question of Ministers' salaries that Congressmen betrayed how little their thinking had kept pace with changing events. The figure of Rs. 500 still casts a spell on Congressmen out of office—until, of course, they become members of Parliament, when they quickly find out that they cannot manage with the allowances of yesteryear. Apart from a nostalgia for ascetic austerity, which has by and large been abandoned in practice if not in theory, there is behind these periodic demands for reducing Ministers' salaries an incredible amount of ignorance about the history of administration in this country. It is only when the East India Company ceased to pay its imported writers £5 a month—or was it a year?—that corruption began to diminish. It is not, unfortunately, true that a well-paid official will necessarily be honest but, surely, he is less likely than an ill-paid man to succumb to temptations which, incidentally, mount as the administration spreads its arm over enlarging areas of life. I do not know just how Mr. Nehru's net monthly salary happens to be no more than Rs. 1,600—even after the rate has been determined by presumably substantial earnings from royalties and other sources—but it is a pity that his defence of existing salaries was not a good deal firmer. An enquiry into the ways of Ministers less lucky in authorship would probably show that their salaries are a small part of what they cost the Government. I am all for economy in the administration, but economy consists in paying a man Rs. 5,000 and getting work worth Rs. 6,000 from him—not in paying him Rs. 500 and getting no more than Rs. 250 worth of work. The latter is what I call waste, and what may be too true of too many in the employ of the Government.

On the opposite page today, there appears a remarkable letter from Mr. H. Sinha, president of the Indian Lamp Manufacturers Association. The most striking feature in it is the use of the term "consumers' prejudice"—which is employed in making the charge that the Indian consumer is prejudiced because he buys "foreign branded" lamps rather than the ones Mr. Sinha thinks he ought to buy. What exactly "consumers' prejudice" is, in the particular sense in which Mr. Sinha uses the phrase, I have failed to divine. As far as I know, there is no industry and no product in the world which does not have to cope with at least a certain amount of "consumers' prejudice"—or consumer preference, which is in my view the more rational term to use. This consumer preference, of course, implies nothing more than that a buyer thinks that one thing will serve him better than the other. If consumers want "foreign branded" lamps rather than those which are not so branded, I think the logical reaction should not be to grieve, but to try and find out why this is so. Consider the problem on the purely personal level. If some people prefer black cigarettes with gold tips to white ones with no tips, I cannot see how any manufacturer has a right to complain; all he would have a right to do is either to persuade them that the white cigarette is the better, or to start making the black one they like. To say that the Government should intervene in order to make people buy a certain type of cigarette, or a certain type of lamp, is ridiculous. Manufacturers are apt to forget that once official intervention begins, there is often no end to it. The interference which one day starts with one's choice of cigarettes and lamps may in time spread to one's choice of trousers and underwear. The occasion could even arise when we would all be asked to wear ties which

are replicas of the Congress Party flag. Some automobile concerns have been able to inflict shoddy products on consumers by obtaining official protection on the false pretence that there is too much competition. But there is no reason why the lamp industry should now follow their example. The difference between firms which are expanding and those which are not, arises from their relative ability to compete. In a free market, the "prejudice" of the consumer no more than mirrors the reputation and efficiency of the producer.

In spite of much solid academic achievement, Mr. George Schwartz, whose weekly economic dissertations in a British Sunday newspaper bring joy to the hearts of thousands, is generally reckoned to be the funny man of the dismal science. Discussing the future of savings in the *Westminster Bank Review*, he sets down some thoughts which are not without a certain relevance to India's present problems. We are living, he says, in an unprecedented age as far as capital development is concerned. When were the ambitions of mankind for capital projects so universal and so grandiose? He continues: The capital development the world has experienced so far has been tentative, sporadic and local. Suddenly it has become compelling, assured and global. From China to Peru, the world is bent on assuaging the capital hunger of centuries. Mr. Schwartz asks who is going to release the resources for the investment stage? Who will do the forgoing and the concomitant saving? The popular answer to this, expressed in attitude and behaviour, is, he finds, terse and unequivocal. By common consent it's the other fellow. But there the common consent stops, for personal saving in the old sense is on the decline, and with the growth of a welfare philosophy, saving tends to be increasingly institutional or by Governmental accumulation. Mr. Schwartz sees dangers in this. In the first place, a larger and larger number of individuals will feel the sacrifice without experiencing the satisfaction of saving. Secondly, the State achieves savings by high taxation and high taxation reduces the ability of the individual to save. But perhaps more important is the concentration of savings and the decisions on their investment into fewer and fewer hands, with the consequent enhancement of the power of the State to control the whole machinery of investment.

The sudden death of Phulan Prasad Varma on Sunday night deprives the Damodar Valley Corporation of one of the most likeable and most conscientious members of its senior personnel. Varma certainly was an unusual kind of Congressman, as his many friends in the Calcutta Club must now remember, with regret that they will see him no more with that endearing smile. For a man with no great administrative experience before independence, membership of the Corporation was an unusual appointment. Yet he survived all other first members, and came to be truly loved by officers and workers alike. The Indian Civil Service does not easily see efficiency out of its ranks, but I have heard more than one member of that service speak of Varma with respect and affection. He was Bihar's nominee to the D.V.C., and yet most Bengalis in the organisation never thought of him as such. To the corporate idea of doing big things like dams, he brought more than a mere socialistic belief; to hear him on the subject was to encounter something indistinguishable from a personal faith. Only the other evening I met Phulan Varma at a party, and I could have taken a bet then that he was nowhere near 56. The D.V.C. is the poorer without him.

THE DITCHER.

Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

AUDITORS' REPORT:

Sd/- W. K. Chiang,
Manager.

We have audited the above Balance Sheet of the Indian Branches of the BANK OF CHINA as at 31st December, 1956 and also the annexed Profit & Loss Account of the Bank for the year ended on that date, in which are incorporated the unaudited returns of the Bombay Branch not visited by us, with the books of accounts of the Branch and with certified returns and particulars from the Bombay Branch.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949 read with the proviso to Sub-section (1) and (2) of Section 211 and Sub-section (5) of Section 211 and Section 221 (5) of the Companies Act, 1956, the Balance Sheet and Profit & Loss Account are not required to be drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:-

- We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit;
- In our opinion, proper books of account as required by law have been kept by the Indian Branches of the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank not visited by us;
- The Balance Sheet and Profit & Loss Account of the Bank dealt with by this report are in agreement with the books of account and the returns;
- In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956 in the manner so required for banking companies, and on such basis and read with the notes appearing on the Balance Sheet the said Balance Sheet gives a true and fair view of the state of the affairs of the Indian Branches of the Bank as at 31st December, 1956, and the Profit & Loss Account gives a true and fair view of the profit of the Indian Branches for the year ended upon that date;

CHANGES IN CENTRAL BUDGET TAXATION PROPOSALS

RELIEFS AND CONCESSIONS

THE Finance Minister, Mr. T. T. Krishnamachari, last Friday announced in the Lok Sabha the following changes in the Budget proposals made by him on 15th May, 1957.

Excise duties: The increases proposed in the rates of excise duty on tea and coffee have been withdrawn.

Small producers of matches, it is proposed, will be given adequate protection in the matter of the enhanced excise levy.

The question of relief in the excise duty on tobacco is being examined and the difficulties that have been pointed out and found to be genuine will be remedied by administrative action.

Postal rates: The increases in the rates of post-cards, including local cards and on parcels, have been dropped. It is now proposed that the initial slab of weight for inland letters including business reply envelopes should be raised from one tola to 1½ tolas and the rates for such inland letters should be raised from 13nP to 15nP. The additional weights will also be computed in 1½ tolas instead of 1 tola as at present and the rate will be increased from 6nP to 10nP.

Railway fares: Exemption, it is proposed, will be granted from the tax on passenger fares for the first 15 miles. But there will be a tax of 5 percent on journeys above 15 miles and up to and inclusive of 30 miles. The other slabs will remain as proposed in the Finance Bill.

Income tax: While the minimum taxable limit will remain at Rs. 3,000, it is proposed to make a further addition to the marriage allowance already provided for. There will be an allowance of Rs. 300 a child subject to a maximum of Rs. 600. But this allowance will not be admissible to persons with incomes above Rs. 20,000. In these cases, the marriage allowance of Rs. 2,000 provided for in the Budget proposals will be withdrawn.

Wealth tax: A wealth tax holiday is proposed for the first five years from the date of incorporation on the value of the assets pertaining to an industrial undertaking of a new company. However, such an undertaking should not be formed by the splitting up or the reconstruction of business already in existence or by transfer to a new business of buildings, machinery and plants already used in an existing business. It is also proposed that investments of one company in another company should not be included for the purpose of wealth tax in the hands of investing company.

THE CALCUTTA MONEY MARKET

RISE IN ADVANCES

Wednesday, 5th June.

ADVANCES have increased in the Calcutta money market during the past week, mainly on account of seeds and grains. Accommodation for cotton is slightly lower, while that for jute has expanded. The downward trend in sugar credit continues. In the interbank market, ample funds have been available, but the call rate remains at 3½ percent.

The number of bills passing in the exchange market has been small, but those on account of gunny shipments have increased. Remittance continues on a fair scale. Sterling has been steady since the publication of the sterling area's gold and dollar reserve figures.

Silver was quietly steady and arrivals were restricted. The price advanced from the previous week's level of Rs. 182.25 to Rs. 182.75, quoted today, for ready delivery. The price in London and New York remained the same as before.

In spite of the rise in silver, gold was easier and the price declined from Rs. 110.50 to Rs. 108.50. The sovereign fell from Rs. 72.50 to Rs. 72.

During the week ended 31st May, Government of India Treasury bills for Rs. 22,55,00,000 were sold in favour of the Reserve Bank.

Declines of Rs. 9.98 crores to Rs. 1,596 crores in the total note issue and of Rs. 8.40 crores to Rs. 1,570 crores in active notes were the outstanding features of the return of the Reserve Bank of India for the week ended 31st May, 1957. The currency contraction was covered by reducing rupee securities by Rs. 10 crores to Rs. 939.87 crores. Deposits of the Central Government declined by Rs. 57 lakhs to Rs. 53.65 crores while other Government accounts increased by Rs. 1.17 crores to Rs. 6.83 crores. Balances of commercial banks were held abroad fell further by Rs. 4.36 crores to Rs. 27.55 crores, but investments improved by Rs. 42.55 crores to Rs. 164.39 crores. Other loans and advances declined from Rs. 111.27 crores to Rs. 106.55 crores, of which advances to scheduled banks against usance bills totalled Rs. 58.17 crores (Rs. 59.65 crores). Ways and means advances stood at Rs. 19 crores against Rs. 19.89 crores.

The return of the State Bank of India for the week ended 24th May, 1957, shows a rise of Rs. 2.51

crores in total deposits to Rs. 304.09 crores. Investments in Government securities are down by Rs. 2 lakhs to Rs. 94.10 crores, while other authorised investments remain unchanged at Rs. 11.51 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have decreased by Rs. 1.74 crores to Rs. 189.17 crores. Cash and balances are, in consequence, shown at Rs. 23.68 crores, or Rs. 96 lakhs higher.

and of advances and discounts, are, in consequence, shown at 7.6 percent and 75.3 percent, against 8.1 percent and 75.9 percent.

The following is a statement of the balances of the Central Government on the last day of March 1957:

	Rs.
(1) At the Reserve Bank of India in India	57,70,43,000
(2) At treasuries in India	(—)3,69,55,000
(3) In England (Sterling converted at 18d the Rupee)	34,76,000
TOTAL	54,35,64,000

The Indian branches of the BANK OF CHINA made a profit of Rs. 9.46 lakhs for the year ended last December. Deposits amounted to Rs. 54.56 crores. Advances were shown at Rs. 64.10 crores and investments stood at Rs. 58.95 lakhs. Cash amounted to Rs. 2.49 crores.

Stocks and Shares

TRADING REMAINS DULL AND RESTRICTED

LITTLE REACTION TO CHANGES IN TAXATION PROPOSALS

Wednesday Evening.

THE stock market has been extremely dull during the past week. The changes in the Budget taxation proposals announced by the Finance Minister last Friday have had little effect, presumably because the concessions relate mainly to indirect taxation. Operators are pleased that new industrial undertakings will be exempt from the wealth tax for their first five years; this has been a very welcome change, because under the original provision industrial expansion would have been unfairly penalised. The other concession, concerning the application of the wealth tax to one company's investments in another, is also worthy of approval. The changes, however, are minor compared to the major original injustice of applying the wealth tax to companies at all. The market hopes that when the Bills relating to the expenditure tax and the wealth tax go before select committees, further drastic amendments will be made.

Indian Irons have been notable for their steady trend which owes much to buying by the Life Insurance Corporation. There is nothing very special to report from the various sections individually. It might have been thought that tea shares would improve because the excise duty has been brought down to its former level; but this has not been the case, since fears of overproduction are making the outlook for the commodity bearish. Jute has attracted very little interest; worried by the fairly firm trend in fibre prices, investors are inclined to sell their holdings. In the miscellaneous section, interest has been selective, while coals remain dull. Gilt-edged have eased, except in the case of short-dateds.

Details of the week's trading follow.

With the exception of short-dated loans, the enquiry for Government securities petered out and prices receded further under selling pressure. The undertone of the market was quiet and the volume of business was on a small scale. The 3% Conversion Loan 1986 was marked back from Rs. 73.40 to Rs. 73.20 and 3% Non-terminable Paper eased to Rs. 73. The enquiry for short-dated loans continued unabated, with 3% 1957 in demand at Rs. 99.75, while 3% 1958 hardened to Rs. 99.68; 2½% 1961 had buyers over at Rs. 93.50 and 2½% 1960 was asked for around Rs. 96.50. The 3½% 1959-61 was traded around Rs. 97.75, but 3½% 1961 was marked back after payment of the half-yearly interest from Rs. 99.55 cum-voucher to Rs. 99.40 ex-voucher. In the medium-dated group, 2½% 1962 was fully steady around Rs. 93.80, but 3% 1963-65 was marked back from Rs. 93.94 cum-voucher to Rs. 93.82 ex-voucher, while 3% 1964 was easier at Rs. 93.95. Both 3½% 1964 and 1965 continued on offer and prices receded from Rs. 98.15 to Rs. 98.10 in each case, while 3½% 1967 has sellers over at Rs. 98.40. Long-dated loans were weak, with 3% 1966-68 quoted lower at Rs. 91.60, while 3% 1970-75 was marked back to Rs. 96.85 and 3½% 1974 to Rs. 98.40. State loans were dull and neglected, 4% Madras 1968 receding further to Rs. 96.40, and 4% U.P. 1968 being marked back to Rs. 97.50. Among other issues, 4% West Bengal loan 1963 was traded at the lower rate of Rs. 99.60 and 4% U.P. 1964 was easier at Rs. 98.75.

Preference shares were extremely dull with more sellers than buyers. In the miscellaneous group, Associated Hotels were crossed at Rs. 60 as were Bengal Timber at Rs. 33.50. Bharat Collieries hands at Rs. 49.25 and Burn 7% changed hands at Rs. 128. Calcutta Electric were reported at Rs. 9.12 and Indian Iron and Steel at Rs. 99. Indo-Burma Petroleum were marked at Rs. 97 ex-dividend, Jardine Henderson were crossed at Rs. 59.50 and Muir Mills at Rs. 83. Richardson and Cruttdas were offered at Rs. 67 and Rohtas Industries "B" preference were sold at Rs. 62. Martin were done at Rs. 98. In jute, Barnagore were taken at Rs. 30.50 and New Central were crossed at Rs. 100.

In the banking section, Punjab National and United Commercial were both well maintained at Rs. 54. United Bank of India were slightly easier at Rs. 4.19.

In the railway section, a solitary transaction was reported in Bukhtiarpur-Bihar at Rs. 20.

Cotton shares were dull and very little business was reported. Cawnpore Textiles were extremely quiet at Rs. 5.44 and Kesoram were marked down further to Rs. 13. Dunbar changed hands at Rs. 167 and Jaysree Textiles were crossed at Rs. 5.75.

Scattered business was reported in coal shares, with prices drifting to lower levels. Burrakur hand at Rs. 22.15 and Bengal came to Rs. 203 ex-dividend. Bokaro and Ramgur were marked at Rs. 12.12 and Central India were transacted at their previous quotation of Rs. 5.87. Talcher were unchanged at Rs. 1.56 while Western Bengal were sold at the lower rate of Rs. 5.12.

Jute shares continue to meet with selling pressure and prices moved to new low levels, as will be seen from the following table:

	Opening	Closing
	31st May, 1957	5th June, 1957
Rs.	Rs.	Rs.
Alliance	70	67
Anglo-India	136	134

Barnagore	85	81
Belvedere	92	80
Delta	123.50	120.50
Gourepore	234	228
India	127	124
Kamarhatti	85	82
Kinnison	135	131

Contrary to the general trend, Titagur and Victoria were both better at Rs. 9.25, while National were well maintained at around Rs. 19.70.

Electric supply shares were featureless, with prices showing little variation. Mirzapore were done at Rs. 5.90 and Calcutta were unchanged at Rs. 12.56. Patna Electric were crossed at Rs. 10.62 and Bhagalpur were reported at Rs. 7.94.

In the sugar section, Carew were maintained at Rs. 7.31, but Dyer Meakin Breweries were slightly easier at Rs. 6.12. Ramnugger Cane were unchanged at Rs. 25, as were Champaran at Rs. 16.50. There were small buyers of Shree Krishna Gyanoday around Rs. 10.

In the engineering section, continued support from the Life Insurance Corporation helped maintain the price of Indian Iron around Rs. 18.75. Most other issues in this section were easier, with the exception of Indian Galvanizing, which were steady at Rs. 20 against the opening quotation of Rs. 19.25. Here is a chart showing representative price movements:

	Opening	Closing
	31st May, 1957	5th June, 1957
Rs.	Rs.	Rs.
Braithwaite	25.37	25
Burn	305	300
Indian Steel and Wire Products	57	55
Jessop	24.06	22.56
Richardson and Cruttdas	14.62	13.75
Textile Machinery	17.40	17.25

Paper shares suffered further losses. Orient were marked down to Rs. 25.70, Shree Gopal to Rs.

To make the second Plan a success, India has to import materials worth crores of rupees. To pay for these imports in foreign exchange she has to build up a sizeable export trade, of which iron ore and manganese are important components. The South Eastern Railway carried in 1956 over 13 lakh tons of ores to the ports of Calcutta, Bombay and Visakhapatnam, employing on an average 184 wagons daily. Now more wagons are being loaded to earn for the country this valuable foreign exchange.

SOUTH EASTERN RAILWAY TENDERS

The General Manager, South Eastern Railway, Garden Reach, Calcutta-23 invites tender for supply of the following items:

Tender No. GMI 57/PD 2CS(57) for supply of 1809 TW Tables for clerks, 1985 Chairs armed TW 1198 TW Tables supervisory, 1339 Chairs TW crossed-legged, 262 Tables T.W. Typist and 627 TW Steel oval to the Railways drawings.

Tender forms are obtainable from the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23, (P. D. Section) on remittance of Rs. 5/- per copy per tender (not refundable) by money order in full direct in the case of outside firms and on production of cash receipt from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta-23, by local firms. Earnest money against the tender is Rs. 1,000/- Closing date of the tender is 27-6-57 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid income tax clearance certificate along with the Earnest Money receipt with the tender.

14.50 and Titaghar to Rs. 32.75. Sirpur were fractionally lower at Rs. 8.31 while India Paper Pulp were unchanged at Rs. 20.50.

In cement, Ashoka were reported at Rs. 9.25 and Assam Bengal around Rs. 5.19. Dalmia were unchanged at Rs. 11.37 while Sone Valley were slightly easier at Rs. 5.81. Orissa were fairly steady at around Rs. 13.

In insurance, Standard General were offered at Rs. 5.25, while Triton were crossed at Rs. 150, with further buyers at this rate.

In shipping, India General Navigation lost one point to close at Rs. 65 and India Steamship were lower at Rs. 9.81.

Among miscellaneous industrials, Alkali and Chemical improved further to Rs. 13.37, but Assam Saws were marked back from Rs. 2.75 to Rs. 2.31. Britannia Biscuits had small buyers at Rs. 13.12, while British India Corporation on renewed selling pressure reacted from Rs. 6.90 to Rs. 5.85. Clive Row had small buyers at Rs. 9.87 and Dunlop Rubber were dealt in on an ex-dividend ex-rights basis at Rs. 16.62, against last week's quotation of Rs. 23 cum-dividend cum-rights. Hercules were lower at Rs. 21 and both Imperial Tobacco and Indian Aluminium were steady at Rs. 14 and Rs. 13 respectively. Indian Cables were depressed at Rs. 22.27, as were Indo Burma Petroleum at Rs. 26.25 ex-dividend. Jardine Henderson and Martin Burn were both unchanged at Rs. 75 and Rs. 22.62. Metal Pox were shared at Rs. 24.60, as were National Carbon at Rs. 23.50. Rallis were wanted at Rs. 35 and Shaw Wallace were better at Rs. 11.44. National Insulated Cables and Rehtas Industries were steady at Rs. 20.12 and Rs. 17.62 respectively.

In the mining section, Indian Copper were steady at Rs. 3.40 as were Orissa Minerals at Rs. 20.06. Barma Mines were marked at Rs. 2.32 and Western Stockholders Investment at 94p.

The withdrawal of the increase in excise duty on tea failed to arouse any interest in tea shares. Tukvar were quoted at Rs. 11.25 and Brooke Bond changed hands at Rs. 16.62. Bishnauth were traded at Rs. 18.50 and Hansena and Jayshree came to hand at Rs. 27 and Rs. 9.87 respectively. Ellenbarrie were wanted at Rs. 190 while Ebbahari, Hasimara and Rydak were quoted at Rs. 12.75, Rs. 20.50 and Rs. 32.50 respectively.

The BENAL FLOUR MILLS COMPANY has increased its profit by Rs. 3.22 lakhs to Rs. 9.66 lakhs for the year ended last December. The dividend has been declared at 25 percent, against 22 percent. The taxation provision is Rs. 4.52 lakhs (Rs. 2.90 lakhs). The general reserve allocation is the same at Rs. 2 lakhs and tax contingency reserve receives Rs. 1.46 lakhs. The carry-forward is Rs. 93,079 (Rs. 76,830).

The profit of the BENAL ASSAM STEAMSHIP COMPANY has declined from Rs. 10.81 lakhs to Rs. 5.25 lakhs. Providing Rs. 3 lakhs (Rs. 8.90 lakhs) for taxation there is Rs. 2,25,194. Bringing in Rs. 55,826, the available balance is Rs. 2,81,020. The ordinary dividend has been maintained at Rs. 7.50 a share, leaving a carry-forward of Rs. 1,10,020. The directors say that since the closing of the accounts, raw jute arrivals in this country have been disappointing and they show little sign of future improvement. The level of coal exports by water to East Pakistan is being maintained, but the freight on coal carried to Pakistan without return cargoes of jute is not itself sufficient to maintain and utilise fully the company's fleet. The possibility of extending the company's services elsewhere is being considered.

Bombay Market

IRREGULAR FLUCTUATIONS IN QUIET TRADING

GLOOM ABOUT BONUS ISSUE PROSPECTS

Wednesday Afternoon.

IRREGULAR fluctuations took place in the Bombay stock market during the past week. Steel shares were supported and values improved due partly to short-covering and partly to buying by the Life Insurance Corporation. Calcutta interests, in particular, it was believed, took delivery of large parcels of Indian Irons. Operators were not inclined to lengthen their commitments as uncertainty prevailed about the future outlook. The decision of a number of companies to withdraw their applications for the issue of bonus shares was a discouraging factor. It was stated that the increased tax on bonus shares would be too burdensome, and that company managers did not consider it worthwhile paying so much for capitalising reserves.

Sentiment in the mill group was weak because of slow trading in the piecemeal market. Stocks of cloth, it was thought, had accumulated. It was also feared that the experiment concerning labour participation in management would be made first in the textile industry. Prices in consequence tended to decline on long liquidation.

Tata Steel's were quoted to Rs. 158. Indian Irons increased to Rs. 18.70 on good support from Calcutta interests. Alcock Ashdown were available at Rs. 267.50 in spite of an improved report. Tata Locomotive were taken at Rs. 142.50 in routine turnover. Premier Construction came to hand at Rs. 142. Automobile shares lacked support, and Premier Automobiles were available at Rs. 87.50. Hindustan Motors were freely offered at Rs. 7 without attracting support.

The mill group was marked with a number of losses. Bombay Dyeing were transacted at Rs. 523 and Kohinoor declined to Rs. 284 on pressure. Century were quoted lower at Rs. 393 and Simplex declined to Rs. 162. Svadeshi were difficult to negotiate at Rs. 9.40.

Miscellaneous shares moved in sympathy with the general trend and activity was restricted. Sugar shares were barely steady, and Belapur were taken at Rs. 217. Phalton Sugar were done at Rs. 133. Mining shares were steady, and Shivrajpur Syndicate came to hand at Rs. 78. In spite of the decision of the Scindia Steam Navigation Company to proceed with its programme for capitalisation of reserves, the scrip declined to Rs. 17.75 on pressure. Bombay-Burmah improved to Rs. 536 on support from South Indian interests. National Ravon recovered to Rs. 216 and Tata Chemicals ended at Rs. 16.40 after minor variations. Wimco were sold at Rs. 156 on the belief that the increased excise duty on matches would be borne largely by the industry itself.

Banking shares were steady, and Central Bank were taken at Rs. 51.50. Bank of India were transacted at Rs. 138.25. Scattered interest was taken in New India Assurance at Rs. 45 after the publication of its report.

Electricity supply shares were steady and routine business was done. Ahmedabad were taken at Rs. 93.75 and Tata Power came to hand at Rs. 120.5.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations. Highest for the week. Lowest for the week. Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago, the last-named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paisa].

RISE IN STOCK MARKETS INDUSTRIALS HIGHER BUT GILT-EDGED FALL

London, 5th June.

THE stock markets last week went ahead with the opening of the new account, but irregular conditions developed later. Gains generally predominated, but business suffered a further contraction partly due to the lack of fresh incentives, and partly under the influence of the approaching holiday. The industrials market benefited from good company news, and from the Chancellor of the Exchequer's statement that the Government's policy of reducing taxation will be continued. This was also a favourable influence in the gilt-edged market, but its effect proved short-lived, partly in view of the subsequent statement in Parliament that no artificial means would be used to stimulate interest in gilt-edged securities. This section remained highly sensitive and nervous, with the volume of business small. After recovering part of the previous week's losses, Government securities reacted and closed lower on balance. There was a selective demand for foreign bonds, with Chinese issues particularly favoured on the relaxation of trading restrictions with China. Rails were featureless while dollar stocks were rather irregular. The feature was the firmness of Canadian issues. The industrials market went smartly ahead at the opening of the new account, and although it developed some irregularity later, prices recorded numerous gains on the week. The chief feature was the fluctuation in Central Mining on bid developments. Coppers were dull with the Rhodesian Selection Trust's production cut a depressing influence. There were occasional firm spots in leads, zincs and tins. Oil shares were strong, following the increase in Persian Gulf prices announced by British Petroleum and the publication of the Royal Dutch Shell quarterly figures which were better than expected. Hopes of further bids continued to stimulate interest in rubber shares and many good features developed, but the market turned dull on suggestions that the Malayan Government might take steps to discourage bids. Teas were irregular.

The Money Market

End-of-the-month preparations and a lack of maturities were responsible for the continued shortage of credit in the money market last week. Apart from last Saturday, when the turn of the month brought a short spell of improvement, day-to-day operations continued on the basis of stringent credit conditions, and under the pressure for funds, up to 4 percent was realised. The main bulk of market requirements was usually transacted at 3½ percent. However, the market was forced only once into the Bank of England for a small amount, and that at the beginning of the week. On most days, the authorities intervened and bridged the gap between the market's needs and the funds available in the banking system. Bill business was fair with August and "hots" at 3-13 16 percent, although when hard pressed, 3-27 32 percent was conceded. No change was made in the general bid of the money market for the weekly offer of Treasury bills, but due to reduced competition, market houses were able to secure a large number of bills at a more favourable rate, the average rate being a few pence higher at £3 10s 5.25d percent.

Activity on Wall Street

U.S. Government obligations in longer term maturity ranges suffered further losses in sluggish dealings. A number of the issues came within striking distances of the record lows reached last January. In the foreign section, German Nationals were a firm spot, while Italians, Norwegians as well as Denmark 4½ percents and Poland 4½ percents of 1963 were easier and Greeks unchanged. Investment quality corporates were weak early last week, with many issues down by large fractions, but they eventually staged a slight recovery on a better volume of business. Rails were mostly lower in slack dealings. Convertibles fluctuated irregularly. Serbs and Union of South Africa 4½ percents were neglected. Australians were mostly higher. Japanese issues showed little change. Chile 3 percents advanced by a small fraction on fair activity.

Slight Interest in Vegetable Oils

With the conference on oils and seeds in Rapallo getting under way, trading interest in vegetable oils remained slight. Sharp price cuts of around £8 a ton in Argentine linseed oil followed the week-end announcement by the Argentine Central Bank of new export assessments. June shipments were offered tentatively in the region of £86½ c.i.f., with the price expected to drop a further £2 when freight charges are fully known. The tender on 4th June of a further one million bushels of U.S. linseed by the C.C.C. restricted activity. There was minor interest in Nigerian groundnut oil, with the Continent reported to have paid £125 c.i.f. for afloat. Groundnuts were a neglected market, with re-sellers mainly offering Nigerian to any destination at £67½ c.i.f., July-August, while a similar position for British East African was reduced to £64½ c.i.f. The Nigerian Board offered palm oil at 10s a ton lower at £91 a ton c.i.f. June-July without reported business. Indian castor oil was inclined to drift lower. Continental and eastern European buyers were generally indifferent, while for Pakistan, castor seed pure basis bids were invited for June-July at £73½ c.i.f., but apparently without result.

New Delhi

FINANCE MINISTER AMENDS TAXATION PROPOSALS

MEASURES TO BRING DOWN FOOD PRICES

(FROM A NEW DELHI CORRESPONDENT)

THE tax reliefs which the Finance Minister announced last Friday in the course of his reply to the Budget debate in the Lok Sabha were, as expected, small. But they were well received in the lobbies. Though the net effect will be a reduction of only Rs. 5.78 crores in the proposed additional taxation, the concessions made are popular. The proposed increases in the excise duty on tea and coffee have been withdrawn; they would have brought in Rs. 3.25 crores of additional revenue. The post card rates will remain the same as before, but the envelope will now bear a heavier levy. Railway travel up to 15 miles will be exempted from the tax on passenger fares. The effect of the income-tax on the lower income groups will be mitigated by the grant of an allowance of Rs. 300 a child, subject to a maximum of Rs. 600. The Finance Minister also promised some small mercies for companies in connection with the proposed wealth tax, and also for those assessable to the tax on expenditure.

Reiterating his intention to refer the Bills concerning the wealth tax and the expenditure tax to one or two select committees of the Lok Sabha, Mr. Krishnamachari said: "There will, therefore, be further opportunity to discuss the various details of these Bills. Meanwhile, I may as well state that it is my intention to ask the select committee to agree to giving a 'wealth tax holiday' for the first five years from the date of incorporation of a company on the value of the assets pertaining to an industrial undertaking of a new company, provided that the undertaking is not formed by the splitting up or the reconstruction of business already in existence or by the transfer to a new business of buildings, machinery and plant already used in an existing business. I also propose that investments of one company in another company, in what is called inter-corporate existence, should not be included for the purpose of the wealth tax. This is in tune with the provisions of Section 62 of the Income-tax Amendment Act, an amendment to which was made three or four years ago at my instance." On the Expenditure Tax Bill, which now provides in Clause 3 that the levy will not be applicable to an assessee "in respect of any assessment year if his total income under the Income-Tax Act during the previous year does not exceed Rs. 60,000", Mr. Krishnamachari said that the ultimate determination of the limit would be left to the select committee. "It is more than likely," Mr. Krishnamachari said, "that several provisions of this Bill will need revision: (a) in the direction of tightening the provisions; and (b) in allowing, in some cases, some elasticity for a period of time, so that particular individuals might change over from their normal expenditure limits to the new ones, of course, subject to the fact that there will be saving, and they can prove that they have been incurring this expenditure. May be in the case of some people who have retainers, to whom money has to be paid, that has to be excluded from the expenditure. Some people have mentioned about a large increase in medical bills. It will be for the select committee to consider all these matters."

The exemption of industrial undertakings of new companies for five years from the wealth tax, and of investment of a company in other companies in computing its wealth will make little difference to the estimated yield from the new levy on companies. Meanwhile, making allowance for the total tax credit of about Rs. 10 crores given by the Income-Tax Department every year on the income-tax paid by companies in the personal assessments of shareholders, the Central Finance Ministry has issued the following table to show that the incidence of corporate taxation in India, even after the proposed increase of 5 percent, will be less than in many industrially advanced countries. The rates are on the basis of distribution of 30 percent of the taxable profits.

The Finance Ministry's accompanying commentary defends the increase in the rate of income-tax on companies on the ground that it will reduce the loss accruing to the Government through the non-declaration of their dividend incomes by the bigger shareholders, while the smaller shareholders still get their refund. In addition, it is claimed: "We have a liberal development rebate as also depreciation allowances. An industrial company which has assets for which the standard rate of depreciation is 10 percent can write off 80 percent of its original cost in five years. The total tax rate being about 50 percent, this means that in a period of five years the company saves by way of taxes 40 percent on its investment. This is a very large concession which is not given anywhere in the world except only for shipping in the U.K."

Action against Food Hoarders

The new Parliament passed the Essential Commodities (Amendment) Bill. Introduced by the Government at the eleventh hour as a weapon to check hoarding and the consequent rise in food prices, the measure evoked two types of criticism. One, voiced mainly by Congress members, was that the power taken by the Government to requisition food stocks might lead to the harassment of small

producers and traders. It might pave the way for the return of unpopular controls and rationing. In reply to this, Mr. A. P. Jain, Minister for Food and Agriculture, ruled out rationing. He said that it was not the Government's intention to touch the small trader or the small farmer: "We propose to confine our operations to check hoarding by the

why the action now proposed was not taken much earlier. He said that while the country and the Finance Minister had been aware for some time of the rising trend of food prices and had been expressing concern, the Food Minister had been "consistently complacent". Spokesmen of the Opposition Parties sarcastically recalled the Food Minister's prediction last August of a "crash" in food prices. Those who wanted energetic action to bring down the market criticised particularly the proviso in the amending Bill on the payment of prices. In the event of the Government taking over food stocks from dealers in notified areas, the payment—in the absence of mutual agreement or a controlled price—will be on the basis of "the average market rate prevailing in the locality during the period of three months immediately preceding the date of the notification," the proviso runs. Since market prices during recent months have been unduly high it was argued, the Government was, in effect, accepting these as the norm, and would have to subsidise the sale of stocks seized from hoarders.

Country	Normal tax	Surplus, profits tax, social security tax	Total taxes	Credit to shareholders	Net incidence

Messrs. Binny & Co. (Madras) Ltd., Madras
Messrs. Harrison & Crosfield Ltd., Quilon

During the week ended 18th May, the group index for food articles moved up further to 423.7, the figures for the three sub-groups being 558, 401 and 263, respectively. Yet Mr. A. P. Jain confidently declared that, in taking action "almost immediately" under the amended Act, prices would be fixed equitably both for the consumer and the stockist. He did not elaborate how this could be accomplished. At present, there is no control of prices in any part of the country, and the notification of controlled prices—under the amendment of the Essential Commodities Act of 1955 was required—would appear to be the only way by which the Government could pay less than the average market price of the preceding three months."

Long-term Measures

Speaking on the long-term policy for maintaining food prices "at a reasonable level," Mr. Jain

announced that the Government was negotiating a second agreement for American farm surpluses. It also proposed to announce shortly "certain very important" incentives for producing more food. The incentives will presumably be on the lines of the A.I.C.C. resolution which calls for the assurance of minimum prices of foodgrains and the award of a larger number of prizes for high productivity. Finally, Mr. Jain said that though rationing was out of the question, the Government might exercise greater powers of control over food-grain prices if the measure to requisition stocks from dealers did not prove adequate. He did not specify what the further steps might be, but it is expected that, in the next harvesting season, restrictions will be imposed on the movement of foodgrains out of surplus States, and that the Government will supplement its imported reserve stocks with internal purchases. The absence of zonal

restrictions on food movement has led to the paradox of Andhra, a rice-surplus State, making a request for 50,000 tons of rice from Central stocks for distribution through fair price shops.

Heavy Machinery Project

Mr. Manubhai Shah, Minister for Industry, made a statement in the Lok Sabha last week on the programme for the development of the heavy machinery industry in the coming years. Pointing out that very little machinery was produced in India at the time of partition, he said that indigenous production had increased in value from an estimated Rs. 5.10 crores in 1951 to Rs. 19 crores in 1954, Rs. 23 crores in 1955 and Rs. 30 crores in 1956. The demand, however, was far bigger, and the value of machinery imports was Rs. 83 crores in 1954-55; Rs. 118 crores in 1955-56; and Rs. 114 crores in the period from April to December 1956. It was estimated that requirements of machinery by 1960-61 would be of the order of Rs. 250 to 300 crores a year. The anticipated indigenous production, taking into account the schemes already sanctioned in the private sector and those being made for the public sector, would be Rs. 90 to 100 crores worth of machinery. There would thus be a gap of Rs. 150 to 200 crores.

With this prospect, Mr. Shah stated, "the Government invited two missions—one from Russia and the other from the U.K.—to visit India last year and to give us their ideas as to how heavy machinery manufacture should be initiated and developed in our country. After making a detailed survey of the existing capacity as well as the likely future needs, the two expert missions submitted their reports to the Government. The Government has given its most careful consideration to these two reports. It has decided in principle to proceed with the implementation of the heavy machine building shop as proposed by the Russian team as also a factory for the manufacture of coalmining equipment as proposed by another Russian expert mission. The Government has also decided to go ahead with three other projects recommended by the U.K. team, namely, the heavy machine tool factory, the heavy structural works, and the heavy plate and vessel works. In order to provide the heavy castings and forgings for these factories, the Government proposes to set up a heavy foundry and forge shop of sufficient capacity to meet the requirements. Four project reports have been studied by the Government relating to this foundry and forge shop, and it is expected that the decision as to which of the four parties is to be selected as technical collaborators will be taken shortly. The statement goes on to give the following details of the different projects:

Heavy machine building project: This factory will have an output of about 45,000 tons of machinery in the initial stage, and will be capable of being expanded later to an output of 80,000 tons of machinery a year. The principal items it is intended to manufacture in the initial stages are coke ovens and by-products plants, blast furnaces, steel melting furnaces, ore crushing and grinding equipment, cranes, rolling mills and their spare parts. The estimated cost of the plant excluding working capital, cost of township, etcetera, is about Rs. 20 crores in the first stage of 45,000 tons of output a year. In due course, it will be possible to expand the output of the plant to 165,000 tons of machinery a year.

Foundry and Forge: The estimated cost of this project is about Rs. 20 crores, exclusive of working capital, cost of township, etcetera. The capacity of the plant will be 28,000 tons of steel castings a year up to 100 tons piece weight; 30,000 tons of iron castings a year up to 100 tons piece weight; and 27,300 tons of forgings a year up to 30 tons piece weight. The plant layout will be so planned as to enable the doubling of this capacity if the need arises. Foreign technical collaboration for this project is still to be finalised.

Heavy machine tool works: This is the largest of the three projects based on the British mission's recommendations. They are together intended to meet the machinery and plant requirements of a number of industries such as chemicals, fertilisers, structural, shipbuilding yards, cement factories and railway workshops. The heavy machine tool works will have a capacity of 3,500 to 4,500 tons of machine tools a year on single shift, and it is estimated, will cost Rs. 5 crores exclusive of working capital, cost of township, etcetera.

Heavy structural works and plate and vessel works: These units will each have a capacity of 10,000 to 12,000 tons a year on a single shift basis, and are together estimated to cost Rs. 6.3 crores. The estimate does not, again, include working capital, cost of township, etcetera.

Coalmining equipment factory: This will have an output of 30,000 tons a year of coalmining machines and equipment, and is estimated to cost Rs. 13 crores excluding working capital, cost of township, etcetera. The principal items it is intended to manufacture are coal cutters, coal loaders, conveyors and conveyor drives, winders, haulages, mine locos, winches, mine pumps and fans. The factory will have its own small foundry and forge for light castings and forgings.

In reply to another question in the Lok Sabha, Mr. Manubhai Shah stated that the long-term credit of 500 million roubles offered by Russia, it is tentatively proposed, will be utilised in the following manner: heavy machinery building project and mining machinery project, Rs. 26.8 crores; development of Korba coalfields, Rs. 8 crores; power plant in Neyveli, Rs. 16 crores; optical glass plant, Rs. 85 lakhs; and equipment for balancing and reconditioning the methanol plant lying in Sindri, Rs. 1 crore. These add up to Rs. 52.35 crores.

London

FURTHER TAX CUTS LIKELY IN NEXT U.K. BUDGET

RESTRICTIONS ON TRADE WITH CHINA RELAXED

(FROM OUR LONDON CORRESPONDENT)

IF the Government feels worried at the trend displayed by the recent by-election results, this is not apparent from the determination with which it is pursuing its declared policies. Criticism of the Finance Bill was not lacking during the Committee stage of its consideration in the House of Commons, but with an average majority of about 40 votes, the clauses have been put through with almost time-table regularity, and the only concessions have been minor ones. Markets got a shot in the arm from the Chancellor of the Exchequer's promise of further tax concessions in the next Budget, contending that he had gone as far as he could in the present one under prevailing circumstances. That he is considering further relief, even so far off, is regarded as being indicative of official confidence. The Rent Bill, though it is alleged to be the main cause of the Government's unpopularity is being put through according to programme. The Shops Bill, on the other hand, which is strongly supported by the Opposition but is not so popular with Conservative backbenchers, is being dropped for this session. American disapproval has been risked on the unilateral decision to "go it alone" on raising the trade embargo with Communist China; and the European free trade area plan is still being supported enthusiastically. Mr. Macmillan is certainly demonstrating that he has the courage of his convictions.

There are many uncertainties ahead which will have to be overcome before the Government can face the next election with any hopes of success against the trend which the by-elections have shown. The chief of these is the success or failure of the fight against inflation. That danger persists. Almost as high on the list is the attitude of labour. The 5 percent wage rise as a sensible settlement of the latest spate of claims is finding more and more acceptors, and it is even more encouraging that many unions are also prepared to admit the need for some sort of standstill in wage claims and for increased productivity; but the shipyard workers are still holding out and being unnecessarily belligerent in the process and if Mr. Hill and other trade union leaders holding somewhat similar views can influence the mass of workers by their speeches employer-union relations will be a lot less reasonable than they have been hitherto.

Industrial Production Stale

The index of industrial production issued by the Central Statistical Office does not help to explain Mr. Thorneycroft's confidence in the future. Indeed, it is so contradictory that it must be lagging well behind current developments. It does not yet reflect the obvious recent revival of activity in many industrial centres, and particularly in the motor industry. The index for March is estimated at 143, and the number for April is expected to be 133-134. This compares with 140 for March 1956, and 136 for April 1956. In the first four months of 1957, the output index averaged 139, the same as in the corresponding period of 1956. Corrected for seasonal changes, the index comes out at 157 for both January and February 1957. March, and provisionally 136-137 for April. According to these figures, there has been no change in total industrial production for two years, apart from a short-lived spurt at the end of 1955, and as trial investment in new plant and equipment in British industry, there must now be a great deal of productive capacity under-employed, or some other obscure reason for the comparative anomaly. The March and April figures might have been affected adversely by the shipyard and engineering strikes, and, of course, the unusual mildness of the winter has reduced the demands for both coal and electricity. The figures for May and those for succeeding months should be more illuminating, and will no doubt be awaited with some interest.

In view of this, the economists' forecast of the economic trend for 1957 looks quite unreal. Compiled from the answers of 67 economists working in industry, commerce, finance and the universities on the basis of a questionnaire issued by the study section of the Royal Statistical Society, this has just made its appearance for the sixth year in succession. Once again it records a wide divergence of opinion—even some changes over the course of the last few months—and although it may be a most inaccurate method of assessing the value of the views expressed, the only way of arriving at a general picture is to take an average. Almost unanimously they predict an increase in production of about 2½ percent over 1956, which would call for a somewhat substantial rise over the rest of the year if the official index is a true guide. Personal consumption is expected to show an increase of a similar amount. Investment in fixed assets, on the other hand, is estimated at £50 million more than in 1956, against that year's rise of £80 million over 1955, but there is likely to be a change in direction, for allowance is made for a drop of about £30 million on housing. The rising export trend is expected to continue, but at a somewhat slower rate, namely 4½ percent against the 1956 increase of 6 percent. A significant fall in the present unemployment percentage of 1.7 is forecast, but less satisfactory is the belief that retail

prices will continue to rise though at 4 percent or just under the rate of increase will show a tendency to slow down. The interpretation of these figures depends on individual approach but they seem to be reasonably near to probabilities.

Control of Hire-Purchase Sales

The recent steady growth in the volume of hire-purchase trade—to damp down which has been a feature of the Government's anti-inflationary measures—is no doubt responsible for last week's slight tightening of the screw on business in motor cars. The temporary reduction of the deposit on hire-purchase sales introduced last December to bolster the slump-hit industry and avert unemployment has more than achieved its purpose, as latest statistics go to show. The cut then was from 50 percent to 20 percent. The minimum deposit is now raised to 33⅓ percent—the trade is divided as to whether it will stay at that level for some time, or alternatively be raised still further—and as a sort of *quid pro quo*, the minimum deposit for heavy vehicles and machinery has also been reduced to the one-third level from the half at which it stood previously. There has been some criticism of what is called "chopping and changing" but flexibility of control measures would seem to be an advantage in most cases.

There is no doubt that hire-purchase sales are an important influence on economic developments these days, and no secret has been made that official attention for some time has been concerned with the need to place it on a proper footing. Rumours have increased recently that the Government's long-delayed measure to do this may be expected in the not-too-distant future, and that it will lay down minimum capital requirements for hire-purchase companies as well as minimum "liquidity ratios." This would mean that an expanding company would have to increase its capital as well as its holdings of cash and Treasury bills to keep these in a constant ratio with its business. There have been reports that certain small companies want to increase their authorised capital before the controls are announced. People in the hire-purchase world are not convinced that there is any need for linking the amount of capital with the volume of business. The Chairman of the Campbell Discount Company in a note accompanying his company's accounts, writes that "the amount of business which may be done is not ultimately determined by the amount of capital which a banker possesses, but by the volume of the deposits entrusted to his care." His argument is that the safety of a hire-purchase house depends on liquidity to meet a sudden withdrawal of deposits, not on the amount of reserves on the liabilities side of the balance-sheet. In essence, these companies work on much the same lines as banks, so it would seem fair enough that they should present the same measure of control in the interest of the public.

Trade with China

Outside America, there will probably be general agreement that Britain has taken the obvious and only sensible decision by deciding to reduce restrictions on trade with China to the same basis as that which now applies to all trade with countries behind the Iron Curtain. What is more, she has done it without withdrawing from the China Committee and her example, therefore, is likely to be followed by many other members of that organisation. The practical results are not likely to be spectacular—a probable doubling of present exports to China to about £20 million a year for the U.K.—though it could bring even further benefit to Commonwealth trade which now runs at about £50 million a year. The most useful development would be a nearer balancing of payments, for China has recently been running a substantial credit which has involved a drain on our gold and dollar reserves. The effect of the British decision is completely to remove the differential between the list of goods embargoed for China and the list for the countries of the Russian block. There are 207 items, falling under ten headings which will be removed from the China list and will now be able to be exported with controls to China. These include some machine tools, some electric motors and generators, rubber-working machinery, most motor vehicles and tractors, most railway locomotives and other railway equipment, most internal combustion engines, some scientific instruments, rubber and most tyres and various chemicals. The Russian black list comprises 268 items, and all these items will feature on the China list. Of these items 180 are under full embargo, 25 are under quantitative control,

and 63 are on the so-called watch list, which means that the volume of these goods has to be notified to the Russian Committee. It is the Government's view that the same procedure should be adopted towards the items now removed from the list of goods embargoed for China. Some of them will be completely freed of all controls, some will be placed on the quantitative list and some on the watch list. In addition to the 238 items on the Russian list, there are 16 items listed as munitions, and 35 items in the field of atomic energy, which are embargoed also for the Russian block. These items will continue to be embargoed for China.

Apprentices in Commerce

A scheme which will attract considerable attention has just been launched with Government approval by the Association of British Chambers of Commerce. It is a national apprenticeship scheme for commercial employees, designed both to raise the general standard of clerical work and to equip "candidates for management succession" with a comprehensive basic training. The scheme will be run by the Association's 100 affiliated Chambers of Commerce in collaboration with the local youth employment offices and technical and commercial colleges and is based on a deed of apprenticeship under which employer and employee contract to undertake an organised five-year course of training. This will comprise practical instruction in office organisation and methods, and at least two other departments of the employer's business such as accounting, purchasing, sales and marketing together with attendance on a part-time day-release basis at classes at a college of further education for the equivalent of at least one working day a week, supplemented by evening and home study. In preparation for the Higher National Certificate in Commerce or the final examination of a professional body. Apprentices who successfully complete the practical training course will get a diploma from the Association if they also obtain one of these higher qualifications, and a certificate if they only pass the examination for the Ordinary National Certificate in Commerce.

To qualify for enrolment as an apprentice, an employee must be between 16 and 30 years, and must normally hold a General Certificate of Education, with passes in English language and two other subjects (including mathematics, geography, history, a foreign language, science or commerce) at ordinary level, or in two subjects at advanced level. He must serve a probationary period of three months before the deed of apprenticeship is signed. The deed of apprenticeship will be drawn up by, and deposited with, the local Chamber of Commerce, which will receive annual reports on the apprentice's progress from his employer and the principal of his college. The Association's Commercial Apprenticeship Boards will approve the employer's scheme of practical training and the apprentice's choice of professional examination. They reserve the right to terminate the deed of apprenticeship if either the apprentice or his employer fails to carry out his obligations. Both employer and apprentice have the option of terminating an agreement after the first two years, and there is provision for an apprentice to complete an interrupted course with another employer. A pilot survey has shown that many textile, chemical, shipping, engineering and warehousing firms are willing to participate in the scheme immediately, and the first apprentices (about 1,000 are expected as a start) will begin their courses this autumn. The response of the Clerical Workers' Union has also been favourable, though the scheme does not lay down any improved rate of pay for apprentices; their wages and conditions of employment will be "those in operation in the employer's establishment." Registered apprentices will be eligible to apply for deferment of National Service.

Brevities

A further reduction from 10 percent to 5 percent (it was cut from 17½ percent to 10 percent a fortnight ago) was made last week in the freight surcharges imposed as a result of the Suez Canal blockade by the outward and homeward conference lines (1) U.K.—Continent—India, Pakistan, Colombo, (2) East African ports and (3) outward to Port Sudan.

Coal output figures continue to improve, production during the third week of last month being over a million tons higher than in the corresponding week a year earlier. So far this year we are four million tons ahead of the 1956 total, and imports over the period are only 1,562,400 tons against 2,675,600 tons. Distributed stocks are almost 2 million tons higher.

How banking serves the SPICES INDUSTRY

There is tremendous demand throughout the world for pepper and cardamoms and South India produces the bulk of these spices. One-third of the entire world demand for pepper is grown between Karwar and Cape Comorin; and in 1951-52, India's exports earned more than Rs. 27 crores.

Within the last ten years there has been a remarkable increase in cardamom growing, particularly in the South Indian states of Mysore and Coorg, and the districts of Madurai, Tinnevely, Malabar and Coimbatore.

The Indian spices industry has a happy future, and banking will naturally help to expand and improve it. The facilities and guidance of a good bank, such as the availability of ready funds when needed and the collection of dues from any part of the country, have become part of efficient organisation in every industry.

We at Palai are proud that many spice growers of South India employ the complete banking service we offer:

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office: PALAI. TRAVANCORE-COCHIN

Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppy, Mangalore, Bangalore, etc. Also at: Delhi and New Delhi.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business, ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

Head Office: Oriental Buildings, BOMBAY-1.

Efficiency goes up
...in premises cooled by

Carrier self-contained air conditioners!

Your staff feels better, works better—in an atmosphere air conditioned by CARRIER. Efficiency goes up, so does production... and the initial cost of your CARRIER self-contained air conditioner is soon paid off!

Specially designed coils and filters make the CARRIER extra efficient, help it to cool better at lower cost. And the CARRIER removes gallons of moisture from the air while it cools—provides a cleaner, healthier atmosphere!

The CARRIER self-contained air conditioner is one of the best investments you can make. Write to us for further details—and remember, we offer unique service-after-sales, too!

EXPANSION OF CEMENT INDUSTRY

PRODUCTION TARGETS MAY BE TOO LOW

(FROM OUR BOMBAY CORRESPONDENT)

THE cement industry has made good progress in recent years. Production last year amounted to approximately 4.9 million tons, as against a little less than 4.5 million tons in 1955. But it remains short of requirements by about 500,000 tons and the gap has to be bridged by imports. The second five year plan has fixed a production target of 18 million tons a year by 1961. It is planned to expand existing factories and to install new ones in order to achieve this target. The capital cost of expansion schemes is conservatively estimated at Rs. 75 crores. On the basis of its past record, there seems little doubt that the industry will achieve the target but actual demand may still exceed output.

Diversifying Production

Efforts are to be made to diversify production by the manufacture of blended cements for special purposes. Blended cements are generally manufactured by the inter-grinding of artificial pozzolanas, such as burnt clays and blast furnace slag, with controlled quantities of Portland cement clinker. At present, three types of cement are manufactured in this country conforming to Indian standard specifications. These are the ordinary, rapid hardening and low heat cements. Ordinary cement is used for normal construction purposes, rapid hardening cement where high early strengths are required and low heat cement where massive concrete work, as in dams, is involved requiring a low heat of hydration during the setting and hardening of the concrete in order to prevent shrinkage cracks.

Manufacturing Process

Another likely development pertains to manufacturing processes. There are two principal methods of manufacturing cement. They are the wet and the dry processes. The former is widely used in this country. It involves the reduction of the finely ground and blended raw materials to a state of fluid paste with the addition of water during grinding. After that, they are processed through the rotary kiln for roasting and chemical transformation. Although the wet process uses more fuel, the advantage is that it is easier and cheaper to blend and make homogenous the ingredients than in the dry process. But technical research is now under way on the blending and homogenising of the ingredients by the dry process. It is possible that within the next few years, some ultra-modern dry process plants will be functioning. A variety of raw materials are used in the production of ordinary Portland cement. For instance, the principal raw material, limestone or calcium bearing substances, ranges from sea shells, shells of marine biological origin, soft sedimentary deposits to highly crystallised metamorphic rock approximating to the hardness of granite. Yet another raw material was added, namely calcium carbonate sludge, which is obtained as a by-product in the manufacture of ammonium sulphate at the Sindri fertiliser factory. Although these resources seem impressive, a disadvantage is that high grade materials seem to be concentrated in remote areas, which involves heavy transport charges. These charges account for 20 percent of the selling price of cement.

Greater Mechanisation

A greater degree of mechanisation needs to be introduced in order to effect further economies in production. The use of mechanical excavators, for instance, is practically unknown. Manual operation involves a tremendous waste in terms of man-hours and adds to production costs. But mechanisation presupposes a highly developed group of ancillary industries which this country lacks at present. The industry plans intensive research in concrete technology. Such research will be directed towards the full utilisation of the properties of cement related to prestressed concrete, vibrated concrete, the development of soil cement and low cost canal linings. In addition, techniques of application will have to be evolved which suit Indian conditions.

Mechanical Equipment

In the last few years, industry has undertaken the fabrication of some units of heavy mechanical equipment required by cement manufacturers. One group manufactures nearly 70 percent of the heavy mechanical equipment needed by its units. This side of the industry is to be expanded in collaboration with British interests. The new Rs. 8 crore concern will specialise in the manufacture of cement, general mining and industrial machinery. Apart from fabricating cement units, such as stone crushing plant and rotary kilns, it will manufacture pressure vessels for the sugar and chemical industries and large capacity low head pumps for irrigation purposes.

June 6, 1957.

SMALL-SCALE MANUFACTURE OF JUTE GOODS

OFFICIAL PROPOSAL TO ESTABLISH TRAINING CENTRES

LONG before the introduction into India of power spinning and weaving of jute, the manufacture of jute bags by hand was already an established industry in Bengal. It is recorded that as far back as the eighteenth century and, in the first half of the nineteenth century, it had attained some importance. Production was at first for local consumption, but by the middle of the nineteenth century, exports of jute bags to Burma, Indonesia and other countries were quite substantial and formed a considerable proportion of the export trade. With the establishment of steam-power manufacture in the 'sixties, hand-made goods could not compete with the machine-made products and the hand industry gradually faded out though its goods went on being exported until late in the 'seventies. The West Bengal Government is now proposing to revive the handloom industry in some districts in north Bengal in order to provide employment for people belonging to the scheduled castes. Training centres are to be established, and spinning wheels and looms are to be supplied by the Government. Trainees are to be given subsidies to enable them to establish production centres. It will be interesting to see how the experiment progresses. Mills need not fear this competition and it is possible that there may be a market for the goods produced, but it is doubtful if it will be possible to sell them at a price low enough to compete with the mill product. Hand-spun cotton yarn and hand-woven cloth cannot compete with the factory products; it seems unlikely that hand-made jute goods will fare any better.

THE JUTE MARKETS

The markets remained steady until Saturday with mills offering prices for raw material just under the quoted rates and sellers unwilling to accept lower prices because of the continued drought. The market for manufactures was also steady and it was reported that overseas buyers were showing more interest having, it was stated, apparently made up their minds that the crop prospects did not justify expectations of lower prices. After the rain at the end of the week, both sections of the market eased but prices did not show any drastic fall and by Monday had recovered to the previous levels.

Manufactured Goods: Overseas markets, it is reported, have shown more interest and enquiry for heavy goods has been reported from Australia, New Zealand and West Africa. The Argentine is said to be buying, though not in large quantities. Rain in the jute districts brought about a fall in the fatka market and bulls did some unloading, but prices soon recovered from the lowest levels touched. Mills are reserved and brokers report positions. Quotations on Wednesday morning are as follows:

	Ready	June	July-Sept.	Oct.-Dec.
40in. 8oz.	Rs.	Rs.	Rs.	Rs.
	34.50	34.70	35	34.60
40in. 10oz.	42.86	43.10	43.40	43
B Twills	115.80	116	116.15	115.65
Heavy Cees (Plain)	115.40	116.15	116.90	115.80
A Twills	140.50	140	140	139.50
Liverpools	128.50	129	129.25	129.25
Cornacks	116.15	116.80	117.50	116.80

Raw Jute: Until Saturday, the market was steady, with a moderate amount of business passing daily. Reports of rain produced an easier tone and quotations fell. Buyers mostly withdrew from the market on the expectation of lower prices but, by Monday, sellers had raised rates to the previous levels. Buyers, however, held back and in the past two days there has been little business. Before the rain, business was done in Assam and Northern jute at Rs. 31 to Rs. 31.25 for assortment, while Middles alone were done at Rs. 33.50 and Bottoms alone at Rs. 31.50. After the rain, Assam and Northern was done at Rs. 30.75 but it is delivery from Calcutta. Mesta was sold at prices up to Rs. 29 basis Bottoms for Assam and Northern. Bimbi was bought at Rs. 26 to Rs. 26.50 and Pakistani N.C.'s at Rs. 115.50.

In the Cossipore market, mills continued to buy at full prices. Arrivals during the week ended 4th June were 370 wagons, against 546 in the previous week. Stocks declined further.

On Wednesday morning quotations were as follows:

Indian Jute:	Landed at Mills Rs. and basis Bottoms.	Shipment June-July
Assam	31	"
Northern	30	"
Purnea Desal	31	"
Purnea Jungli	28	"
Daissee	32.50	One month
Assam Tossa	32.50	June-July
Murshidabad Tossa	32.50	"
Jungli Tossa	30	"
Northern ex Calcutta	30.50	One month
Local Packing	29	"

Mesta:	29	June-July
Assam	29	"
Northern	28.50	"
Desal	27.50	One month
Murshidabad	27	June-July
Jungli	26	"
Bimbi	26	"
Pakistani N.C.'s	115.00 a bale	June-July

Mofussil: In Assam, and especially in Bihar, imports are more than normal for the time of year and they are expected to increase in Bihar now that rain has come. In north Bengal, Murshidabad and other districts, there is not much fibre coming forward.

Showers have fallen in almost all districts and sowing is now going on. In Assam and north Bengal, the crop is making good progress. More rain would be beneficial.

GUNNY SHIPMENTS DURING APRIL

The following are the total net figures of manufactured jute goods shipped from Calcutta during the month of April 1957 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	2,603.5	22,844.3	25,447.8
Short Shipped	432.5	1,837.3	2,269.8
April 1957 (Net)	2,171.0	21,007.0	23,178.0
March 1957 (Net)	2,962.5	30,561.2	33,523.7
February 1957 (Net)	1,892.2	26,288.0	28,170.2

	Sacking	1,401.3	27,577.9
Gross	26,176.6	1,401.3	27,577.9
Short Shipped	2,266.4	Nil	2,266.4
April 1957 (Net)	23,910.2	1,401.3	25,311.5
March 1957 (Net)	38,790.4	5,347.8	44,138.2
February 1957 (Net)	25,236.4	3,427.9	28,664.3

THE PAKISTANI JUTE MARKETS

FIBRE MAINTAINED: GUNNIES

STEADIER

(FROM A NARAYANGANJ CORRESPONDENT)

THE quantity of jute available at present in Narayanganj, and even in upcountry centres, is large for this time of the season. But prices also are high, last week's levels having been maintained after very small fluctuations. Railway connections to the northern areas have often been interrupted, restricting the flow of fibre. Moisture is less apparent than before. In spite of high prices, imports are being fully taken up and sellers are reluctant to haggle for very long over jute which has been landed. If their price is not paid, they know very well that it is difficult to find a buyer. More business has been reported for August-September in kutcha bales to the mills at Rs. 30-8 for B Bottoms. Inter-baler business in Narayanganj is restricted; the eagerness to buy loose and kutcha bales indicates a short position among shippers. Overseas prices are quoted at about £119 for Export Firsts but buying has been very selective.

During the last few days, there has been widespread rain throughout East Pakistan and for the first time some rain is even reported in the northern districts. The midland and highland crops, especially Tossa, should not therefore suffer unduly from the late rains. There will probably be a fall in the outturn in the northern areas, but it remains extremely difficult to give any accurate estimate of the final crop. In some areas, there are reports that sowings have exceeded last season's. River levels continue to rise but are not too high. Both by the law of averages and by the general weather conditions this season, it is fair to assume that there will be no flooding of a serious nature.

Various departments of the Pakistan Government have asked for tenders for a total of 28,000 bales of B Twills for delivery between June and August. This has steadied the market slightly. Karachi B Twills are now quoted at Rs. 131 and hessian at Rs. 45-8.

THE FOREIGN JUTE MARKETS

FIBRE KEEPS STEADY

(FROM OUR DUNDEE CORRESPONDENT)

IN spite of more favourable news about weather conditions for the new crop, raw jute prices have been very well maintained during the past week. Buyers of most commodities in the industry, however, are feeling confident that values must come down sooner or later, and any business that is being done in all sections of the trade is confined to satisfying the more pressing needs. The jute industry is losing customers because of the high level of prices and the uncertainty about the future. There is no need for Pakistan to keep prices so high. If it considers the minimum fixed prices enough to give the growers an adequate return for their labours why are the current quotations £30 to £40 a ton higher? Mill Firsts are offered at £124. Mill Lightnings at £118. Mill Hearts at £114 and grade Hearts at £107, good

Daissee-3 at £116 and grade at £133 and grade Tossa-3 at £122 and grade Tossa-4 at £117, all June-July, old crop, c.i.f., U.K. It is difficult to get shippers to name prices for the new crop, but one or two firms have indicated £104 for Mill Lightnings and £100 for Mill Hearts, September-October, c.i.f. Buyers' ideas are somewhat lower and, naturally, there is no business being done. By this time last year, shippers had a considerable number of orders on their books for new crop jute, much of which has been bought at minimum rates.

The Calcutta goods market has, like jute, been well maintained at unchanged prices. Little business is passing here at 65s 6d for 40in. 10oz. hessian and 49s 3d for 7oz. June. 65s 8d and 49s 3d July and 66s and 49s 6d August-September, with B Twills at 178s 9d, 179s and 179s for the respective positions of shipment f.o.b., Calcutta.

Dundee spinners and manufacturers are very perturbed about the complaints made by merchants who are losing business in jute cloth to sellers of paper and paper bags. They are appealing for the abolition of control so that they can purchase cheap jute goods from India or Pakistan and compete all the better with any other commodity being substituted for jute. Though jute has many advantages as a packaging material the question of price is a serious one. Meetings are being held between Government officials and the jute trade here, and some move is likely to be made soon. Meantime, trade in yarns and cloth is very dull and production is being increasingly curtailed.

Engineering and Transport

DIESEL FUEL INJECTION
EQUIPMENT INDUSTRY
ENQUIRY ON EXTENDING
PROTECTION

OPENING the public enquiry into the question of continuance of protection to the diesel fuel injection equipment industry beyond 31st December, 1957. Mr. C. Ramasubban, Member, Tariff Commission said that the first enquiry into the claim of this industry to protection and assistance was conducted by the Tariff Commission in 1954. In its report submitted to the Government in March 1955, the Commission recommended protection to the industry up to 31st December, 1956, by levying a protective duty of 60 percent *ad valorem*, standard, on single cylinder fuel injection pumps for stationary diesel engines and nozzleholders with a clamping capacity up to 1 in. clamping diameter for nozzles (atomisers) and their component parts excluding elements and delivery valves when imported separately and nozzles respectively. The preferential rate of duty on nozzleholders of British manufacture was left to be fixed in accordance with the Indo-U.K. Trade Agreement. These recommendations were accepted by the Government and protection was granted to the industry from 7th September, 1955. Subsequently, in consultation with the Tariff Commission, the period of protection which was due to expire on 31st December, 1956, was extended by one year, that is, up to 31st December, 1957.

At present, protection is restricted to (a) single cylinder fuel injection pumps for stationary diesel engines, and component parts of such pumps, but excluding elements and delivery valves and their component parts, and (b) nozzleholders with a clamping capacity up to 1 in. clamping diameter for nozzles (atomisers) for use on stationary or automobile diesel engines, and their component parts (excluding nozzles). In connection with the present enquiry, the Development Wing has suggested that the scope of the enquiry may be widened so as to cover nozzles.

Domestic Demand

At the last enquiry, the Commission estimated the domestic demand for single cylinder pumps at 17,000 and for nozzleholders at 50,000. In connection with the present enquiry the Development Wing and Motor Industries Co. Ltd., Bangalore,

have furnished varying estimates of demand. The Development Wing has suggested that the demand for multi-cylinder pumps may also be assessed this time as it would be of help in planning the development of the industry. The estimates furnished by the Development Wing and Motor Industries Co. Ltd., are:

	Development	Wing	M.I.C.O.
		Nos.	Nos.
Single cylinder pumps	18,600	—	14,000
Multi-cylinder pumps	24,350	—	—
Nozzleholders	161,700	73,800	—
Nozzles	446,000	240,000	—

The basis adopted in arriving at the above estimates would be examined during the course of the discussions to assess the current demand for pumps, nozzles and nozzleholders and also to arrive at an estimate of the future demand for those items.

In 1954, there were three units licensed for the manufacture of diesel fuel injection equipment of all types and their components, namely, Motor Industries Co. Ltd., Bangalore (M.I.C.O.), Fuel Injections Ltd., Bombay and Kulko Engineering Works Ltd., Kolhapur. Of these only M.I.C.O. was producing fuel injection equipment on a commercial scale. Its capacity was then estimated at 4,000 for "P.F.A." type pumps, 6,000 for "P.F.B." type pumps and 10,000 for "S" type nozzleholders a year. Kulko Engineering Works was manufacturing fuel injection equipment for its own engines. Fuel Injections Ltd. went into production only in De-

ITEMS	Oct.-Dec. '55		1956	
	Quantity	Value	Quantity	Value
	Nos.	Rs.	Nos.	Rs.
Single cylinder fuel injection pumps for stationary diesel engines and component parts thereof excluding elements and delivery valves	2,201	54,216	4,791	3,88,181
Nozzleholders with a clamping capacity up to 1 in. clamping diameter for nozzles (atomisers) for use on stationary as well as automobile diesel engines and component parts (excluding nozzles) thereof	1,807	1,75,243	52,171	9,63,373

NOTE: Value of parts is also included in the above figures.

cember 1956. The present annual capacity of M.I.C.O. on single shift has been furnished by the Company at 12,000 for single cylinder pumps, 6,500 for multi-cylinder pumps, 48,000 for nozzleholders, 66,000 each for elements and delivery valves and 75,000 for nozzles. The capacity of Fuel Injections Ltd. on single shift is stated to be 10,000 for elements and 30,000 for nozzles. Fuel Injections Ltd.,

produced 350 nozzles in December 1956, and 670 nozzles during January-March 1957.

As regards raw materials required by the industry, it is understood that while one of the units meets its requirements partly from indigenous sources and partly from imports, the other unit depends entirely on imports. The supply position of raw materials would be examined with a view to finding out how far the dependence of the industry on imports could be reduced.

At the last enquiry, the Commission was of the view that the quality of M.I.C.O.'s products would be satisfactory because they were being manufactured according to Bosch standards. The Commission's view has been fully confirmed and no complaints on quality have been made, although one or two parties have expressed the view that there is scope for improvement. Complaints have been received from consumers that Bosch/Bryce type pumps, nozzleholders and nozzles cannot be fitted to certain engines. A clearer picture of the position relating to the engines which cannot use Bosch/Bryce type of equipment is however necessary. Mr. Ramasubban said.

Imports

Imports of protected categories of diesel fuel injection pumps and nozzleholders are being recorded separately by the Collectors of Customs and the D.G.C.I. & S. Calcutta, from October 1955. The total imports during October-December 1955 and 1956 were:

ITEMS	Oct.-Dec. '55		1956	
	Quantity	Value	Quantity	Value
	Nos.	Rs.	Nos.	Rs.
Single cylinder fuel injection pumps for stationary diesel engines and component parts thereof excluding elements and delivery valves	2,201	54,216	4,791	3,88,181
Nozzleholders with a clamping capacity up to 1 in. clamping diameter for nozzles (atomisers) for use on stationary as well as automobile diesel engines and component parts (excluding nozzles) thereof	1,807	1,75,243	52,171	9,63,373

The bulk of the imports came from the U.K.

The protected categories of diesel fuel injection pumps and nozzleholders and their parts are assessed to protective duty of 60 percent *ad valorem* under item No 75(18) of the First Schedule to the Indian Tariff Act, 1934. Nozzleholders of U.K. manufacture are assessed to a preferential duty of 52½ percent *ad valorem*.

One of the manufacturers has prayed for the continuance of protection for a further period of at least five years, while another has pleaded for its continuance with the inclusion of elements and nozzles within the scheme of protection. The Cost Accounts Officer has examined the costs of production of representative types of single cylinder pumps and nozzleholders produced by M.I.C.O. and the details of the costs will be discussed separately with the representatives of the Company, but it is proposed to discuss in general terms the various factors which have compelled the industry to claim continuance of protection, and the nature and extent of protection and assistance that may be necessary. The equipment is a vital component of diesel engines, both stationary and automotive, and production under the extremely fine precision limits permissible calls for the exercise of unrelenting efforts on the part of the manufacturer to maintain quality. The growth of this industry is, therefore, of vital importance for the development of the automobile industry as a whole.

NEW PROCESS FOR TREATING MACHINERY
PARTS SAVES ON LUBRICATION

A new process for treating metal surfaces has been invented in Britain. It enables machinery to run almost indefinitely without the moving parts being in need of lubrication. It is claimed by testing experts to be "the most important development in engineering since the introduction of steel". The new process—known as "Promac"—is the invention of a Scottish engineer, Mr. John McGregor. In his pioneering work and the fitting of treated parts in various industrial establishments in the area, the inventor was helped by the Dundee engineering firm of William McLean and Sons. Of the many applications of the Promac process, one spectacular test was carried out at a jute factory in Dundee where tests on the spindles of a jute loom began on 22nd February. It is now reported that not one drop of oil was needed to be applied to the spindles in all that time, while the oil requirement of normal loom spindles is once every two hours. An experiment is now to take place with a shuttle where one of the major results is expected to be the lessening of factory noise. Several Edinburgh buses have already been fitted with Promac-treated parts. Among the notable results reported after their use were easy starting from zero temperature, quieter running and economy in petrol consumption as buses could run two miles more to each gallon of fuel. Another test is claimed to have shown no measurable wear to a motor-car engine even after 20,000 miles' running, and in another, car lubricating oil was still quite clean after running 70,000 miles. There had also been a 12 percent improvement in petrol consumption. For a long time, tests with machinery in moving parts have been made on machinery in Edinburgh, Glasgow, Dundee, Sheffield, and Newcastle. After the machine tests, reports show that the process adds up to 10 times the normal life to cutting tools running at high speeds, and 20 times the normal life to power-press tools.

Commodity Markets

CANALISING IRON ORE
EXPORTSFUNCTIONS OF THE STATE
TRADING CORPORATION

ON a review of the procedures adopted since 1953 for regulating iron ore exports and in view of the pattern of the trade abroad, the Government has decided to canalise its exports through a single agency, a Government Press note says. This, the Government hopes, will prevent fragmentation of quotas, facilitate bulk movements, help in the co-ordination of rail movements with shipping programmes, and above all, make it possible for the development of mining, to be synchronised with the availability of transport. Accordingly, the responsibility for canalising iron ore exports has been entrusted to the State Trading Corporation with effect from 1st July. The Government, it is said, is keen to ensure that established trading and mining interests participate fully in the business. The State Trading Corporation has accordingly been directed to utilise the existing channels of trade and give effect to the maximum extent practicable to the recommendations made by the Liaison Committee in this behalf. In particular, the Corporation will ensure that every established shipper and mineowner-exporter is given an opportunity to participate in the business relative to his performance during the four-year period ended December 1956, and that the interests of mineowners who are not shippers are duly safeguarded. Export Trade Controllers have been instructed to give *ad hoc* permission to shippers and mineowner-exporters to facilitate the shipment of iron ore moved against current quotas to the ports before 30th June, 1957, provided such shipments are intended to be made against contracts concluded before 31st March, 1957.

Utilising Private Trade

In a separate trade notice, the State Trading Corporation has announced that it has already concluded contracts for the export of a little over 2 million tons of iron ore during 1957-58. It expects to achieve the target of 2.5 million tons set already by the Liaison Committee. The Corporation has implemented the Government's directive that the maximum extent possible, the Corporation also proposed to procure iron ore from shippers and mineowners who have exported iron ore during the basic years 1953, 1954, 1955 and 1956 to the extent of 50 percent of their average exports. Allotments of each individual supplier will be calculated separately for three groups of ports, namely, Calcutta, Madras and Bombay ports and Kandla and Bhavnagar ports. The Corporation will buy on an allotment basis from suppliers whose individual allotment is 20,000 tons or more. Allottees with less than 20,000 tons each will be free to bulk their individual allotment and nominate anyone among them to operate on their behalf. The Corporation will also buy on f.o.b. basis from associations or co-operatives of allottees registered as a corporation body, provided the membership is 15 or more. The Corporation will buy on f.o.b. basis from suppliers whose individual allotments fall below 20,000 tons and who have not been able to bulk their allotments with others. It will not, however, purchase directly from any individual whose allotment is less than 100 tons. The Corporation will also be prepared to buy ready stocks from persons holding stocks at ports which are moved before 30th June and not covered by the overseas sales contracts. The Corporation is negotiating for the sale of low grade ores to Japan and Europe; and hopes to conclude contracts shortly for substantial quantities. Ores originating from Redi, Hanover and Naydupetah areas will also be exported by the S.T.C. It will be willing to make its purchases of these low grade ores from mineowners and shippers at a negotiated price.

Quota Licensing for Manganese Ore Exports

On a review of the procedures for regulating the exports of manganese ore, the Government has decided to continue the system of quota licensing for the period July 1957 to June 1958. Movement and shipment quotas will be given to shippers and mineowners equal to 60 percent of their exports made in 1955 or 1956 to be selected by them. Quota holders will be required to utilise at least 60 percent of the quotas issued to them for the export of manganese ore containing 42 percent manganese and below. This restriction will not apply to mineowners who establish to the satisfaction of Export Trade Controllers that their mines do not contain manganese ore containing less than 42 percent manganese and to those shippers and mineowner-exporters who have outstanding commitments for higher grades. The Government trust that commitments made by shippers and mineowner-exporters to foreign importers for the export of manganese ore prior to June 1957 will be honoured to the maximum extent practicable. It is hoped that quotaholders will utilise their quotas for the fulfilment of their outstanding commitments in the first instance. The State Trading Corporation is also being advised to make available a portion of its quota where convenient to shippers and mineowners whose quota allotments fall short of their genuine commitments to meet their obligations on a basis acceptable to the parties concerned. Quotas will be valid for management facilities only on sectors on which

quotaholders have been operating during the period July 1956 to June 1957.

The State Trading Corporation will be allotted an adequate quota to enable it to maximise the exports of manganese ore. The Corporation is being advised to seek the co-operation of established trading and mining interests to make this effort a success.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939=100) advanced by 13 percent to 434.6 during the week ended 18th May, compared with 428.9 for the earlier week. The index was higher by 2.7 percent and 11.1 percent respectively when compared with the corresponding week of last month and that of a year ago. Higher prices of rice in Vijayawada and in Patna (+5% each), gur (+4%) and tea (+1%) raised the index for Food Articles by 1.1 percent to 423.7 in spite of a decline in the prices of gram (-5%), dal arhar (-4%), wheat (-3%) and rice in Calcutta (-1%). The index for Industrial Raw Materials rose by 1.2 percent to 540.6 as a result of an increase in the prices of manganese ore (average export price) and raw jute (+5% each), rapeseed in Kanpur and raw silk (+3% each) and castorseed and gingellyseed both in Bombay, linseed in Calcutta and copra (+1% each), although the prices of lac (-6%), linseed in Bombay (-2%) and groundnuts (-1%) witnessed a fall. The index for Semi-Manufactures went up by 2.0 percent to 410.0 compared with 401.9 (revised) for the earlier week. Items which showed significant changes were: semis (+17%), petrol (+12%), gingelly oil (+6%), linseed oil in Calcutta, groundnut cake and coconut oil (+3% each), castor oil and groundnut oil (+2% each), zinc (-4%) and linseed oil in Bombay (-2%). An increase of 1.4 percent to 390.0 compared with 384.7 (revised) for the previous week, in the index for Manufactures was caused by an advance in the prices of matches (+31%), cement (+15%), iron and steel manufactures (+9%), paper (+6%) and dyestuffs (+2%); the prices of glass and paints (-1% each) were, however, marked down. The index for the Miscellaneous group moved up by 0.4 percent to 572.9 (estimated) on account of a rise in the prices of vanaspathi (daldia) (+5%), betelnuts (+2%) and black pepper (+1%) while turmeric (-4%) and cashewnuts (-1%) showed decreases.

GIVE YOUR WARE PACK LABEL MARK CARE...

Crores of rupees are paid by the Railways every year to meet claims for damaged or lost consignments. This colossal drain on our National Exchequer can be easily and almost wholly prevented if only you, as a consignor, help the Railways by taking a little care.

Ensure that your consignment is always securely packed, properly labelled and correctly marked..... to prevent losses to our Railways..... to guarantee your goods reaching the destination on time..... to avoid all the unnecessary trouble involved in claims cases.

THIS IS HOW YOU CAN HELP

- Pack the goods in strong cases. Nail properly and securely.
- Enclose a spare label.
- Remove all traces of old markings.
- Line the case with shock-absorbing and water-proof material.
- Mark correctly.
- Address neatly, boldly & indelibly.
- Indicate the nature of goods consigned.

COAL COMPANIES

O. Po. F and Dd indicate Ordinary, Preferred, Ordinary Founders and Deferred shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the month of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

A SUPERANNUATION SCHEME FROM
THE BRITISH LABOUR PARTYPOSSIBLE EFFECTS ON INVESTMENT
TRENDS

THERE has been much hostile criticism, as well as some grudging admiration, of the British Labour Party's superannuation scheme. The insurance community admits that it did not expect from that source a scheme so sound in basic principle—the principle that a superannuation fund must be accumulated from savings exacted for that specific purpose, and so used that it will help the economy to produce enough to keep retired people in comfort. But U.K. life offices are shocked by the main implication of the scheme, as it affects themselves, that many private pension schemes would have to be abandoned because they would be inferior to the national scheme. When it was known that the political parties were drawing up plans for much-enlarged pension schemes, the life offices remained confident that their services would still be needed to supplement any national scheme. After studying the Labour Party's document, *National Superannuation*, they can envisage circumstances in which much of their business would be transferred to the State; and this threat, being indirect, is not so easily counteracted as the earlier threat of direct nationalisation.

The Labour Party is not at present in power; and the Party's own conference may pull the scheme to pieces—for in its promises for the next few years it is much too cautious to satisfy more ardent socialists. But the plan has, undeniably, introduced a new element of uncertainty into life assurance in Britain. Any changes brought about by criticism within the Party are likely to make the scheme less sound in itself rather than less damaging to private life assurance. Indeed, since a striking feature of this scheme is that it is planned to take effect only gradually (the final stage, where everyone receives the pension deemed appropriate, is deferred until the year 2030!), it must be assumed that changes intended to make it politically more attractive would hasten its adverse effects on private business. The broad idea of this scheme is that, ultimately, people would retire on half-pay, having contributed commensurately—that is, according to their earnings. The full benefits would not accrue to anyone born before 1965, and for some years, the pension fund would be building up rapidly. The annual excess of income over outgo would be, initially, about £400 million and the fund would soon swell to thousands of millions of pounds, even after absorbing the deficits of the scheme that it superseded. These huge resources would be in the hands of trustees appointed by the Government; and they would be authorised to ignore the conventional trustee lists and to invest in ordinary shares.

In a preliminary statement on the scheme, the Life Offices Association and the Associated Scottish Life Offices, referring to the trustees, remarked: "There is no assurance that their primary objective would always be to invest the money in the interests of the contributors. If the money were used for the piecemeal acquisition of controlling interests in industry" (a reference to another plan evolving in the Labour Party) "it would introduce a new and politically controversial factor into the field of pensions." The statement objected, too, to the principle of using contributions not only to build up the superannuation fund but also to pay the growing annual deficit on flat-rate pensions—said the flat rate, both for immediate pensions and for minimum pensions under the new scheme, would be raised from the present £2 to £3 a week. Even so, there would be a big increase in compulsory saving in the early years—bigger, perhaps, than the economy could comfortably accommodate. The later trend of savings is much more problematical. Mr. H. J. Twigg, an authority on superannuation, writing in *Co-operative News* (the co-operative movement has its own big insurance society), commented: "If, with the prospect of more or less adequate pensions on retirement, those who now

save in a variety of ways...decide that with a universal pension scheme they need not bother and can start to spend their full current incomes, the reaction on the total supply of savings, on investment policy and the future standard of living, may be very drastic indeed."

Industrial and commercial companies and individuals in Britain are nowadays tending to invest more in equities. Sometimes they see prospects of substantial recovery in Government stock prices and come into the market as buyers; but as every rise is quickly lost it becomes more difficult to restore confidence in fixed income stocks. In recent weeks, many investors have abandoned faith and transferred their money into ordinary shares. Essentially, this disillusion results from inflation. Only when inflation seems to be losing its strength, and there is a reasonable possibility of stable prices, is faith in fixed incomes temporarily restored; but the mood soon changes again, as inflation appears to be a permanent condition of this era of economic development. In Britain this year, wages have been rising strongly, demand for goods and services, hesitant last year, has revived; the atmosphere favours the kind of investment that can respond to trading activity and offer some protection against depreciation of the value of money. Another important factor in the weakening of British Government stocks and comparable securities this year has been the flow of new issues; and the market knows that many other intending borrowers are awaiting their turn. Whenever the market is reasonably receptive more stock is offered. The most numerous borrowers are municipalities, but it is known that public bodies, such as the Electricity Authority, must borrow on a very big scale in the coming years.

The demand for capital, in the form of long-dated stock, is not only a reason for the market's weakness but also a reason for strengthening the market, for restoring confidence in this form of investment. It is a major problem for the British Government, how to finance the huge programme of national investment in power (especially nuclear power) and transport and other services while investors, large and small, are unwilling to hold fixed income stock. The authorities can restrict the flow of capital into private industry by restricting new issues of ordinary shares, but the effect of such a policy is rather to inflate the value of existing shares than to divert savings into gilt-edged. It is against this background that the U.K. Treasury's recent financing policy has been criticised. The authorities have been properly concerned with the increase in the cost of servicing the

TOO MANY MOUTHS

MARKXISTS and Malthusians have between them created an atmosphere in which it has become exceedingly difficult to bring to the discussion of the world's population problem that minimal degree of detachment without which useful conclusions are impossible to reach. For the former, until recently the problem did not exist at all; the spectre of an overpopulated world was a capitalist invention to deceive the workers of the world. But as China is beginning to discover, it is not all a chimera. For the Malthusians, the problem acquired an exaggerated urgency, which so far remains unfulfilled in actual experience. Now there is an increasing realisation among them that it is self-defeating to present the population problem as one of tomorrow—when, in fact, it is probably of the day after tomorrow. Whether it is bred by Marxism or fatalism, the complacency prevalent in many countries is clearly at variance with the very real nature of the danger. Even in India, where the Government takes part in

national debt that has resulted from the rise in interest rates. They have also been properly concerned with the need to restrict the issue of Treasury bills, so that the finances of the business community (especially of the banks) shall not become (or remain) excessively liquid. They have tended, therefore, to satisfy their current needs by issuing short-term bonds, with a "life" not exceeding five years. There is still a firm demand for this kind of investment, and by thus borrowing on relatively favourable terms the Treasury has effected considerable economies in the servicing of the national debt.

Preparation for this phase of financing began nearly a year ago, when the rate of discount on Treasury bills began, with the authorities' assistance, to diminish; later the lowering of Bank rate added impetus to the downward trend of short-term interest rates. An abnormal divergence appeared between short-term and long-term rates, and the authorities made it appear that they intended to keep long-term rates high—and the value of long-dated Government stocks low—indeinitely. But even shorter-dated stocks have more recently suffered selling by the banks as the shortage of Treasury bills has required action to maintain liquidity ratios. Many in the City feel that the U.K. Government is mismanaging its long-term financing, and that it will soon have to resort to inflationary financing by Treasury bills unless it can restore the public's faith in Government securities. Stopping inflation would restore it.

An important feature of the Labour Party's plan is that it proposes the establishment of a National Pensions Fund, with authority to invest some of its immense resources in ordinary shares. A much more conservative body, Lloyd's, has broken with tradition already by authorising investment of underwriters' reserves in ordinary shares. The insurance companies have been gradually increasing the proportion of their assets held in this form. Investment trusts have shown a similar inclination. It has been suggested that even the banks should do likewise. But the Labour Party's acceptance of equity investment for the nation's superannuation fund is the most important development of all (though, of course, tentative as yet), because the £400 million of investible resources estimated to be available to the fund in its first year is approximately equal to the annual increase in the investible resources of all the "institutional" investors combined. Sir Oscar Hobson, a leading authority on the finances of the City of London, has calculated that the holdings of marketable securities of the "institutions"—insurance companies, pension funds, banks, building societies, investment trusts—aggregate approximately £8,670 million, of which £3,500 million is attributable to the insurance companies and £1,950 million to the clearing banks. In terms of annual increase in holdings, the biggest investing group is the insurance companies, disposing of some £200 million a year, followed by private pension funds, £120 million a year. Both these categories would presumably be reduced considerably if the Labour Party's plan, or anything similar, were put into effect, and if the national fund tended towards equity investment more than do the resources of the "institutions", there would be a large-scale diversion of capital into ordinary shares.

popularising family planning, the problem receives no sustained attention. The Prime Minister's views on the subject are known to be realistic, but he certainly has not accorded to it the priority it deserves, if only because without a more determined attack on the basic question of population control all other planning is sure to go awry. It is only of limited academic interest that the United States' rate of growth is not lower than India's or that Belgium has a higher density of population than some Asian countries. In the final analysis, it is a problem confronting entire mankind; its solution, however, will have to be sought on a national basis, and Indian apathy is perceptibly producing not merely a larger population than

million, as a result of a very marked reduction in the death rate all over the world while the birth rate has remained almost unchanged, it is not surprising that anxiety centres on whether food supplies can keep pace with so rapid an advance. U.N. experts estimate the world birth rate in 1955 to be in the neighbourhood of 34 births a 1000 persons each year, while the death rate is now about 18. This leaves a net gain of 1.6 percent a year—an increase calculated to double the world's population by the end of the century. These statistics are presented in the U.N. *Demographic Yearbook* for 1956, which records and analyses the census results of almost 200 separate areas of the world. One-tenth of the world's annual increase in population occurs in Latin America, at the rate of 2.6 percent or 4.4 million persons a year, while Africa, south-west Asia and Oceania are growing almost as rapidly, with rates of some 2 percent. North America and Russia are growing at almost the same rate, namely, 1.7 percent a year—just above the world's average—while Europe is growing least of all, with rates varying from 0.6 to 1 percent. Besides the fast rate of increase, Asia can also lay claim to more than half the population of the world and accounts for the largest absolute addition to the world's population—an increase of some 24 million persons a year. Asia's distinction is also indicative of the fact that countries with high rates of population increase are experiencing an acceleration of their growth.

These observations indicate a need for urgent consideration of how programmes for economic and social development can keep pace with expanding population trends, caused by birth rates varying between a high of 45 a 1,000 in Africa, middle America and south-east Asia (India) and a low of 18 to 21 for Europe, coupled with falling death rates. Almost without exception, the study shows that death rates for 1950-54 were lower than those for 1945-49, and countries with the highest rates in the earlier period (Africa and Asia) experienced the greatest reduction. This phenomenal decline in mortality is the most significant demographic event of the last decade; its impact is only now beginning to be felt and its implications for the future understood. The decline may be attributed in the main to progress in environmental sanitation and disease control through the application of medical and public health techniques. The revolutionary decline in mortality has also been reflected in increased life expectancy at birth. The country which now records one of the lowest crude death rates, the Netherlands, records also the highest average expectation of life at birth for males and females, namely, 71 and 73 years, respectively. The shortest average life expectancy in a major country is found in India, where the records show 32 years for males and females.

Age distribution is an important economic factor. It is estimated that on the average 34 percent of the world's population is under 15 years of age, 58 percent aged 15 to 59, and 8 percent over 60 years of age. By far the largest proportion of the populations in Africa, middle America and south-east Asia are children. In these areas, more than 40 percent of the population is under 15 years of age, while in Europe and north America the corresponding proportion is less than 30. There is, of course, a corresponding reversal in the proportion of the population of working age in these areas. Africa, middle America and south-east Asia have slightly over 50 percent in the ages 15 to 59, while north America, Oceania and Europe have over 60 percent at working ages. Presumably because of better health conditions, north America, Oceania and Europe also have a larger proportion of their population living to the age of 60. The age distribution of population naturally determines in part how many persons will be in the "working population" or, as shown in the *Yearbook*, the "economically active". The percentage of the total male population reported as economically active normally reflects the industrialisation of a nation's economy. It also indicates the proportion of the population which essentially bears the responsibility of supporting the rest. The statisticians point out that in Europe, males in the working population, i.e., in the "productive ages", almost invariably exceed 60 percent of the total, while in Latin American and Asian countries the percentages fall in the 50's, as does that for the United States, which is 58. It will be noted that there is little variation by age in the percentage of the population in the labour force until the upper ages are reached. At ages 60 and over, there begins to be evidence of the retirement of men in western European countries, Australia, New Zealand, the United States and Canada, as indicated by the drop in the percentage of males in the labour force.

The participation of women in the economy of various countries is brought out in figures showing percentages of women of all ages reported as "economically active", although these figures are admittedly affected by many irrelevant factors. This percentage varies from a high of 54 for Haiti, Turkey and Bulgaria, to a low of 4 in

Pakistan. Percentages of 7, 4 and 2 are also shown for Asian populations in Africa. Many of the Latin American countries show percentages of 9 and 10. The majority of European countries fall between 20 and 40 percent. The United States has 22 percent and Canada 17 percent. The United Kingdom has the largest percentage of its school-age population attending school. At the time of the last census, 97 percent of the population between the ages of 5 and 14 was in school in Scotland, 95 percent in England and Wales, and 91 percent in Northern Ireland. Percentages above 80 are found in Japan and the United States, but they fall as low as 41 in Portugal, 34 in the Dominican Republic, 28 in Bolivia, and 27 in Turkey. These low percentages are perhaps the reason for the high proportion of the population reported as economically active in these countries.

Behind these statistics lies the stark fact that with no commensurate increase in the means of subsistence the population of the world is increasing at a rate that must be considered alarming. If science has seen to it that infant mortality is now negligible and that more and more diseases will come off the list of "incurables," it is to science that we must look for an answer to the problem the twin facts have given rise to. The time has come to stop discussing the various ways of birth control, for some of them have proved to be frankly useless and must now be discarded. A bolder approach, which in this country is made possible by the absence of religious objections to the adoption of scientific methods, is now clearly indicated. The vastness of the country and the illiteracy of the masses make it difficult to carry the message of family planning where it is most needed, but it is only one more challenge for the Government of India. There are other means of communication besides the written word. It is not known that the medium of broadcasting has been exploited much for the propagation of family planning, or the cinema—both accessible to the unlettered. What has been lacking is a vigorous approach on the part of authority, in part a victim of both Marxism and fatalism. Unless, however, this problem of population is tackled urgently, it will soon be found that efforts in all other direc-

tions have not only resulted in no progress but that the standard of living, already sadly low, has in fact fallen further.

WEALTH TAX ON COMPANIES

CONCESSIONS MINOR AND INADEQUATE

THE concessions announced by the Finance Minister, Mr. T. T. Krishnamachari, in applying the wealth tax to companies—the five year tax holiday for new industrial undertakings and the exclusion of investment by one company in another in inter-corporate existence—are welcome. But the fundamental objection, that the application of the tax to companies involves a violation of fiscal equity, remains valid. So far, the Finance Minister has refused to change his views and the prospects of any substantial modification at the stage of consideration by the select committee are not bright. Yet the issue is basic. The wealth tax on individuals has been defended on the ground that it is necessary in order to overcome the limitations in taking income as a measure of the ability to pay, though there may be reservations about the wisdom of imposing the tax in an under-developed economy where capital formation is already slow. But there is not a shred of theoretical justification for extending the tax to companies. The argument that certain other countries have done so is hollow, because in those countries companies enjoy many compensating benefits. "The peculiar structure of India" which, according to the Budget speech, necessitated bringing companies within the purview of the tax, is a vague phrase which has not been elucidated.

The small mercy in the case of inter-company investment will prevent triple (or more than triple) taxation of the same assets, but the charge of double taxation remains. The incidence of double taxation of this sort may not be extensive, it is said, because most shareholders will be outside the scope of the wealth tax. The Bombay Shareholders Association places the figure for non-

financial companies at as much as 75 percent. Here there is no question of double taxation, but the imposition of the wealth tax on companies amounts to an indirect extension of the tax to a class of persons who are ostensibly outside its range and whose inclusion does not in any way contribute to the Government's egalitarian aims. The levy on companies is not really a tax on the wealthy, as the Rs. 2 lakh exemption limit for individuals seems to suggest. It is a tax on all those who invest in companies, whether the investors are wealthy or otherwise. The socialist quality of this tax, of which so much has been heard, thus appears largely illusory. Objections along similar lines may be made to the income tax on companies, were it not for the provision that individual shareholders can claim a refund on their personal income tax for dividends on shares, since the company has already paid income tax on that income. No similar provision exists for the wealth tax. To remedy this, it has been suggested that companies should issue wealth tax payment certificates to shareholders, by the use of which those shareholders who are not liable to the wealth tax could claim a refund, and those who are liable could claim a credit for the tax already paid by the company on their holding.

Exemption from the wealth tax of new industrial concerns for five years removes one of the principal defects of the original scheme, but it is unfortunate that companies will remain liable to the tax in good years as well as bad. In the case of individuals, wealth will be assessed to tax, irrespective of the income which it yields. This may encourage people to keep their wealth in the form of assets which yield a bigger income. But for a company, the same argument hardly applies. It cannot be assumed that because a company will have to pay the wealth tax, whether it earns profits or not, it will be induced to earn the highest possible profits. A business enterprise does it to need the spur of a wealth tax to encourage it to make profits. But as a result of circumstances beyond its control, such as the Budget proposals of the Finance Minister or a depression resulting from an ambitious plan being foisted on the economy, a company may find its profits declining or even disappearing while its wealth tax liability remains constant.

The rate fixed for the wealth tax on companies, half percent on net assets in excess of Rs. 5 lakhs, may not be too onerous in times of prosperity. It is estimated that for the Indian Iron and Steel Company the liability on this account will amount to Rs. 13.25 lakhs and for the Tata Iron and Steel Company Rs. 21 lakhs. In these cases, dividend prospects are not likely to be adversely affected. But these concerns have also to carry an increased income tax on companies and corporation tax which raises the total liability arising from the wealth and corporate taxes together by Rs. 66.25 lakhs for Indian Iron and Rs. 79 lakhs for Tata Steel. Moreover, investors have an uneasy feeling that the rates are unlikely to remain at the present levels for long. Such fears will inhibit investment.

CURRENT COIN

U.S. Export-Import Bank Mission.—The U.S. Export-Import Bank and the International Monetary Fund will be sending two separate missions to India next October. The mission from the International Monetary Fund will be of a routine nature. This will, however, be the first time that the U.S. Export-Import Bank will be sending a mission to appraise India's credit-worthiness and credit needs. The World Bank is sending a two-man mission to help India prepare a long-term transport plan.

West Bengal Budget.—The Budget which Dr. B. C. Roy presented last week to the West Bengal Legislature as "final demands for grants and appropriations" for 1957-58 was substantially the same as the one presented last March for "vote on account". Revenue receipts, it is now estimated, will be slightly higher at Rs. 61.89 crores, but expenditure under "capital" heads is also expected to increase. The net result, therefore, is a large deficit of Rs. 10.29 crores on revenue account and Rs. 1.88 crores outside it, making an overall deficit of Rs. 12.17 crores. This will be partly offset by the year's opening balance of Rs. 8.75 crores, and thus it will close with a negative balance of Rs. 3.42 crores. For some years, deficit budgets have been usual in this State, but the reasons are understandable. Refugees, over-population and the housing and law and order problems in urban areas, together with educated unemployment, claim a large proportion of resources. In defending his Budget, Dr. Roy says that development needs claim a large share of the State's revenue. In accordance with the Central Government's suggestion, West Bengal has been trying to raise funds for the plan out of its own resources. It has executed the "first five year plan in full". For the second plan, it will have to make bigger

efforts. The outlay on the second plan for the State is Rs. 153.7 crores. Under the original arrangement, the resources which West Bengal could raise itself were estimated at Rs. 29.5 crores; the balance of Rs. 124.2 crores was to come from the Centre. The arrangement has now been changed. The State's share has been "pushed up" to Rs. 64.4 crores, and the Centre's share reduced to Rs. 89.3 crores. In spite of the reduction, Dr. Roy appears to complain, the Central aid so far available falls short of what the State has been led to expect. During the second year, the estimated expenditure on the plan is Rs. 33.41 crores. Although no definite intimation was available at the time the Budget was framed on the amount of Central assistance that would be forthcoming this year, it has been estimated in the Budget at Rs. 15.56 crores, including Rs. 4.92 crores for the D.V.C. The State could find only Rs. 11.8 crores from its own resources, by a combination of devices consisting largely of taxation and borrowing. The State has to raise Rs. 14 crores by additional taxation during the second five year plan, and during the current financial year, Rs. 1.3 crores will have to be so raised. Also, the State Government, "subject to the advice of the Reserve Bank", proposes to raise a market loan of Rs. 5.5 crores during 1957-58. "We have been asked to raise a further amount of Rs. 3 crores in 1957-58 by additional taxation by special endeavour". Dr. Roy informed the House. His Budget speech, however, was notable for one omission—the need for economy in administrative expenditure which ought to go with the search for more revenue.

Higher Costs for Bombay Gas.—In his address to the shareholders of the Bombay Gas Co. Ltd. this week, Mr. B. L. Jalan, chairman, gives a fairly comprehensive account of its operations (a fuller version of his speech appears on a later page). Gas output over the decade since 1946 has increased by 37 percent, and the company has plans to expand supplies further. But a steep increase in the cost of production due to higher coal prices and higher freight rates could bring serious difficulties if the selling price of gas is not suitably revised. Mr. Jalan says that although the production of gas in 1956, at 1,529.2 million cubic feet, was higher than the previous year's 1,511.8 million cubic feet, the financial results of 1956 are "rather disappointing," compared with those of 1955. The surplus shown by the revenue account of the company has dropped to Rs. 1,16,227 from Rs. 10,98,667. Explaining this fall, he points out that the price of coal was raised by Rs. 3 a ton from July 1956, and on that account alone, the company had to spend extra Rs. 1,04,481 for the following six months of the year. "Another sum of Rs. 1,06,302 is accounted for by the increase in the surcharge in freight at Rs. 1-6 a ton of coal from April 1956, higher terminal tax at 12 annas a ton of coal from 15th October" and the change in the rate of employers' contribution to the employees' provident fund. Mr. Jalan thinks that further rises in the cost of production are in prospect. The company asked the Government in September last year to appoint a gas advisory committee to revise the price "in accordance with the recommendations of First Gas Advisory Committee." Only last month was an assurance received that such a committee would be appointed. But the matter has been complicated by the condition that the question of prices for the sludge gas which the company will be obtaining from the Municipal Corporation should be settled first. Mr. Jalan points out that this condition is irrelevant as the two matters are independent. Sludge gas is not likely to be available until next year, whereas the cost of producing the company's gas has gone up since last year.

Bigger Business for B.I.C.C.—In his statement to shareholders of the British Insulated Callender's Cables Ltd. (an extract from which appears on a later page), Mr. W. H. McFadzean, chairman, reviews the company's worldwide activities. It was entrusted with the task of installing submarine power cables connecting Vancouver island with the mainland of Columbia. "In the two and half years since we received this order, we had designed and built a new plant and manufactured, shipped and installed almost 100 miles of this unique cable, some in continuous lengths of 16 miles weighing 700 tons a length and all capable of operating at 138,000 volts 600 feet below water." The new factory in Pakistan, in the construction of which B.I.C.C. and some British companies have collaborated, has made a good start. Referring to the activities of the Indian Cable Company, the chairman says that it is one of the largest wire and cable concerns in Asia and "a works we would be proud to be associated with anywhere." But the introduction of certain new taxation measures by the Government of India in 1956 made it impracticable to retain financial control, though B.I.C.C. still has a substantial shareholding in the Indian Cable Company and is continuing as consulting engineers. B.I.C.C.'s overseas business in 1956 accounted for some 36 percent of the total sales compared with 33 percent in the previous year; of the total sales, some £82 million represented sales in Britain and the balance of £47,000

represented direct exports from that country plus the turnover of overseas subsidiaries.

Debenture Issue by Dunbar Mills.—On another page of this issue of *Capital* appear details of an offer of Rs. 25 lakhs of debenture stock, at par, by the Dunbar Mills Ltd., carrying interest at the rate of 6 percent per annum (taxable). Subscription lists for the stock will open on 17th June and subscriptions will be in Rs. 500 or multiples thereof. Interest will be payable on 30th June and 31st December each year for the half-yearly periods ending on those dates. Such part of the stock as has not been previously purchased or redeemed will mature for payment at par with accrued interest on 30th June, 1972. The company will, however, have the option to redeem the whole or any part (to be selected by drawings) of the stock on or any time after 30th June, 1967, at par plus accrued interest, on giving three months' previous notice to the stockholders. Following certain changes in the ownership of Kettlewell Bullen and Co. Ltd. in 1954, the results of the Dunbar Mills Limited have shown a steady improvement. Against a loss of Rs. 3,27,568 incurred for the half-year ended 31st December, 1953, which increased the debit balance in the profit and loss account to Rs. 12,51,654, the company earned a profit, after allowing Rs. 4,27,508 for depreciation, of Rs. 3,26,385 during the year ended 31st December, 1956. There is now a sum of Rs. 3,50,335 at the credit of the profit and loss account in the latest balance-sheet. The debenture loan is to be utilised for the purchase of modern machinery.

Expanding Co-operative Credit.—The Reserve Bank of India's monograph on statistical statements relating to the co-operative movement in India, 1955-56, speaks of a considerable expansion in the activities of the co-operative organisations. The number of co-operative societies of all types increased and they found an opportunity to play an important rôle as their working capital rose. The number of agricultural credit societies showed a larger increase, and "they represented numerically the most important single class of co-operative institutions." The membership of primary societies increased and the total amount of advances granted by them rose sharply. But the number of State co-operative banks remained unchanged. Efforts were made to strengthen the share capital structure of several apex banks by Government contributions and the total amount sanctioned for this purpose increased substantially. The working capital of the apex banks increased, and there was a rise in the quantum of financial accommodation provided by the Reserve Bank. The number of central banks and banking unions declined, mainly due to the policy of rationalisation of central financing agencies pursued in certain States, such as Himachal Pradesh and Jammu and Kashmir. The number of agricultural and non-agricultural credit societies increased; but the deposits of the former constituted an insignificant percentage of their working capital. "This indicates that the primary agricultural credit societies have laid inadequate emphasis on the promotion of thrift and savings." Fair progress was also recorded in the non-credit structure. The number of State non-credit societies rose and their business doubled during the year in question. Agricultural and non-agricultural non-credit societies showed a general rise in their number, membership and business. There may be reason for optimism about the progress of the movement, since there has been a general improvement in the profits of all types of societies. But greater efforts are necessary to attract deposits if they are to function as strong and economic units.

INDIA AND THE SUEZ CANAL

WRITING some weeks ago we observed that one of the most important events in the history of British India was the opening of the Suez Canal, and it may be interesting here to record the growth of the trade that has been carried on with India through it. The following figures give the value of the imports and exports since the opening of the Canal:

Year ended	Imports	Exports
31st March	Rs.	Rs.
1872	9,09,46,164	5,45,47,715
1882	17,66,78,928	14,82,15,984
1892	23,55,49,632	22,82,02,816
1897	28,44,81,516	30,69,57,570

It will be seen from the above how steadily the trade has increased, and that the proportion which the trade of Calcutta through the Canal bears to its total foreign trade was last year 76.9 percent. But from this total trade we must, for the purpose of comparison, deduct the trade with China, the Straits, Australia, Ceylon and Mauritius, which, of course, could not go through the Suez Canal. This amounts to 14.78, so that we have it that the proportion of trade via the Suez Canal to via the Cape is 76.9 out of a possible 85.24.

SOUTH EASTERN RAILWAY TENDERS

The Controller of Stores, Garden Reach, Calcutta-23, invites sealed tenders for supply of the following materials:

1. Tender No. CON/COS/18/63-CS/Gb10 for supply of 50 Nos. Tent Field Officers Kabul Pal 10'x10'. Earnest money is Rs. 500/-.
2. Tender No. CON/COS/19/64-CS/Gb10 for supply of 100 Nos. Tent Shouldaries or servant Pal 10'x10'. Earnest money is Rs. 460/-.
3. Tender No. CON/COS/20/65-CS/Gb10 for supply of 5 Nos. Tent Swiss Cottage 14'x14'x11'. Earnest money is Rs. 220/-.

Tenders will be opened on 21. 6. 57 at 12.00 noon.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs. 2/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Ry., Garden Reach by local firms.

The tenders should accompany a receipt from the Chief Cashier, S. E. Ry., Garden Reach for amounts towards earnest money as above with out which the tender is liable to be rejected. Approved contractors who have already made permanent deposit of Rs. 1,000/- with the Controller of Stores need not pay the earnest money.

Firms not on this Railway's list of approved contractors must enclose a valid Clearance Certificate with the tender.

DIFFERENCE BETWEEN LAW
AND MORALITY

ATTITUDE IN INTERPRETING

SOCIAL LEGISLATION

(FROM OUR LEGAL CORRESPONDENT)

ONE may be permitted to doubt whether, even in the minds of Scots readers other than graduates of the University of Edinburgh, the name of Robert Knox, M.D., will ring a bell. Yet he was the most famous, or shall we say notorious, professor of anatomy ever to lecture or demonstrate within the walls of the University, and his fame, with that of the two Irish gentlemen who were his coadjutors in the year 1828, became almost worldwide where the English language is spoken. Perhaps the bell will be rung when we mention the names of these two painstaking assistants. They were Messrs William Burke and William Hare. We are citing Dr. Knox's case with the legally undeserved smear on his reputation as illustrative of a fact which is often forgotten and even totally denied, that the law is not a code of ethics. It is not, as such, a science enforcing the principles of human morality, moral philosophy or morals. Those who think otherwise may be reminded of an incident before old Judge Sir Henry Hawkins (Enery Orkins, as he was affectionately styled by the hoodlums whom he sentenced), who demolished their whole theory in one sardonic sentence. Mr. Phillimore, Q.C. (afterwards Lord Justice), was a pious, sincerely religious man, much disliked for his smugness. It was of him that Lord Esher, Master of the Rolls, who on principle or by constitutional inability disregarded the aspirate, remarked to a colleague: "Ere comes that 'Oly old 'Umbug' umming one of his 'ymns. 'Ow I 'ate 'im." Mr. Phillimore was arguing before Hawkins J. that the criminal law was the embodiment of the Christian religion in practice. The cynical old judge leaned forward and asked him: "Mr. Phillimore, have you ever been instructed to draw up an indictment against a man for not loving his neighbour as himself?"

That is the whole point. I may have the bitterest hatred in my mind towards a man. The act I perform may be dictated by that hatred, may be morally indefensible and may, in accordance with the deliberate intention behind it, ruin the man. But if the act is not illegal, the law will not concern itself with it. And that brings us back to Dr. Knox diffusing surgical and anatomical

learning in Edinburgh University. To do so, the doctor needed cadavers; and from natural causes and operative dismemberment the stock-in-trade of the same was subject to rapid depreciation and needed constant replenishment. Messrs Burke and Hare did the replenishing, first more or less innocently by robbing graves of the newly interred, then by murdering the subjects, some 15 to 20 of the latter type. Dr. Knox bought the lot at prices dependent on the quality of the exhibits, ranging from £8 to £14 each. The two "honest tradesmen" would have been more prudent to have stuck to the original design, for a man dead and buried is not missed by relatives whereas a person murdered (in the last instance it was a beautiful and well-known *demi-mondaine*) is. It was for the murder of this girl by suffocation that Burke and Hare were at last arraigned. Hare was convicted and duly hanged. Burke, by turning "King's Evidence" or "approver", as we should style him in India, was let off scot free. To save him from the fury of the Scottish populace, who would have dismembered him as surely as if less scientifically than Dr. Knox did his victims, the authorities escorted him to the border and set him on the high road to London. Near Carlisle, he fell in with some labourers in a lime kiln and was recognised. They ended his career as a body snatcher by thoughtfully destroying his eyes, and years later he died in London a blind beggar.

The curious are referred to Robert Louis Stevenson's story *The Body Snatcher* for further enlightenment, and for the lighter style of the trade of Resurrection Man to the likeable Jerry Cruncher in Dickens's *Tale of Two Cities*, the original "Honest Tradesman". So much for Burke and Hare. But what about Dr. Knox? He could not be charged as an accessory to some 20 murders since there was not a particle of evidence that he knew there had been any. Nevertheless, though the learned professor was careful to ask no questions, he must have known that there was a public outcry in the city about the despoiling of graves, and that when a couple of drunken unemployed labourers brought him for sale a regular and continuous supply of every variety of newly dead bodies, such merchandise could not have been honestly come by. Why not then a charge against the doctor of receiving stolen property, to wit the corpses of X, Y and Z, well knowing the same to have been stolen? The answer is that in law there can be no "property" in a dead body and therefore it cannot be stolen. And the whole object of this note is to emphasise the fact that a citizen in arranging his acts and deeds is perfectly entitled, however great the moral opprobrium and just censure he may incur by so doing, to take advantage for his own profit or the loss of profit to others,

including the State, of any loophole in the law which will enable him to carry his intention into effect. Dr. Robert Knox, more than a century after his death may go down in history, and in fact he does in the *Encyclopaedia Britannica*, not as a famous anatomist but as the callous associate of two wholesale murderers; nevertheless he outwitted the law and demonstrated the truth that every one of us is entitled to do the same—if one can.

The principle is similar in civil law and we see it mainly in operation against the State to defeat the revenue. "It is trite law," said Viscount Sumner in an English case, "that His Majesty's subjects are free, if they can, to make their own arrangements so that their cases may fall outside the scope of the taxing Acts. They incur no legal penalties and, strictly speaking, no moral censure, if having considered the lines drawn by the legislature for the imposition of taxes, they make it their business to walk outside them." And the subjects of the republic of India can try, though the Finance Act, 1955, will take a lot of getting round, to "make it their business to walk outside them" too. Thus, Courtney-Terrell, C.J., in the Bombay High Court: "Needless to say, the mere fact that the transaction is a device to escape income tax ought not to prejudice the assessee. Any subject of the State is entitled to escape taxes, if he can devise a lawful method of doing so...."

But we now know—for the first time so far as the writer is aware—that much stricter standards than those applied to taxation laws are applied to attempts to evade the provisions of social legislation. That eminent commercial judge Chagla C.J. was dealing in the Bombay High Court with what his lordship described as "a rather glaring attempt at resorting to a subterfuge in order to defeat the law." A silk mill was run by a partnership consisting of a father and his son and was doing the business of manufacturing silk and dealing in silk yarn and silk cloth. On the death of the father, the son entered into partnership with his two major sons. This was in November 1951. Shortly before the coming into force of the Employees Provident Funds Act, "this partnership purported to close its business" on account of financial difficulties (*inter alia*). Subsequently, the machinery was leased to the members of the family owning the factory, including minor sons. The members made a show of carrying on the various processes as separate units. It was their contention that five separate units were started, doing manufacturing processes which were originally done by what we may term the "parent mills", i.e., the Standard Silk Mills. These units were said to be (1) Narayan Weaving Works; (2) Jayant Weaving Works; (3) Govind Throwing Works; (4) Tara Processing Works; and (5) Hemu Finishing and Dyeing Works.

The important point was this. If these five units were genuinely what they purported to be, separate units, then as the five factories came into existence on 4th November, 1953, they were what is known as "infant factories" and the Provident Funds Act not applying to them, the demand of the Commissioner for the contributions necessary under that Act was an illegal demand. We have not the space to go into the facts in more detail or into the very ingenious document leasing the various machinery to the members of the same family said to be owning the separate units though as a matter of curiosity, we may mention that the document contained a clause which to the writer is a rather unusual one solemnly stating that the parties were signing it without being intoxicated. The question was whether this was a *bona fide* real transaction or a mere subterfuge to avoid the liability of contribution under the Employees Provident Funds Act.

"A clever device or subterfuge," said the learned Chief Justice, "(which) does not bring about any change whatsoever in the conditions which prevailed before this lease was executed and subsequent to it. The five units which it is suggested constitute five separate factories are all run by constitute five separate factories are all run by the same members of one undivided family....The same machinery is being used for the same purpose. Instead of the Standard Silk Mills manufacturing silk by different processes, the silk is being manufactured by the very same processes, in the very same machinery by these five units artificially set up which are under a clear obligation to manufacture silk by various processes on behalf of what might be called the parent company...These five units are not independent units; they are clearly interdependent, and the processes are carried on for the benefit of the Standard Silk Mills and for no one else."

His lordship concluded with some trenchant and instructive observations which are worth careful note: "It is a well settled canon of taxation law that a subject is entitled to avoid paying tax if legally he can do so....but the Act that we are dealing with is not a taxation law. It is social legislation and the canon of construing social legislation is very different from the canon of construing a taxation law. The court must not construe any subterfuge which would defeat the provisions of social legislation and the court must even, if necessary, strain the language of the Act in order to achieve the purpose which the legislature had in placing this legislation on the statute book. Therefore, not only must the court disapprove all subterfuges to defeat a social legislation but must actively try to prevent such subterfuges succeeding in their object."

Plain and pungent speaking indeed!
(L.L.J. 1957. Vol. 1. 448.)

* 13. T. C. 486.

* Rajniti Prasad Singh, 4. I.T.C. (1930). 264.

THE effect of governmental efforts to improve the arts is almost always unfortunate; they distort the very nature of artistic creation, as is now admitted with varying degrees of frankness by writers in the Communist countries. There may, however, be an exception or two, and one such may be the proposal now before the Ministry of Commerce and Industry to restrict the length of Indian films. (What makes this good for art, of course, is the fact that the Government is not trying to improve the cinema at all but only to conserve foreign exchange.) To the film industry it should not be an altogether novel experience, for during the last war no Indian film could be longer than 11,000 feet. Some length, even at that ceiling, but the more important fact is that Indian producers then began to see virtue in conciseness and to learn the great art of leaving out what is better left out. I still remember the visitor from Europe who was being told the greatness of an Indian film in terms known to Wardour Street and now familiar in Indian filmdom—matchless, peerless, etcetera, etcetera. "And endless," said the visitor quietly. There are themes, classical ones, which must be treated at length. Even in three hours and forty minutes, only a part of the story of War and Peace could be told. But the "slice of life" theory of the literature of the 'twenties has now established itself in the world of the cinema too, and there seems no good reason why the principle should not be practised in this country where the increasing number of films under production has brought them out of the limited epic field of years gone by. It is a libel on the Indian public that it is never happy with fewer than three deaths, two marriages and a dozen songs.

Whatever the Government may or may not do about cutting imports of raw film, I sincerely hope that enough will be left for making cartoons. The performance given by Mr. B. M. Chinai, president of the Federation of Indian Chambers of Commerce and Industry, at the Import Advisory Council meeting last Thursday, it seems to me, might have been eminently suitable for such treatment. At a time when India is striving to maintain her credit abroad so that she can get the foreign exchange she urgently needs, there can be few ideas more perverse than Mr. Chinai's suggestion that a small cut be made in the profits which foreign firms remit to their home countries. Unlike some of her neighbours, India has so far had a fine record in this matter, and the Government has been wise in ignoring earlier Communist recommendations similar to Mr. Chinai's. What intrigues me is, if one believes the rumour that Mr. Chinai is acquainted with business working, how can he fail to understand the effect which a restriction on the remittance of profits will have on investment? One begins to wonder whether his subtle intention is, in fact, mainly to reduce the inflow of foreign investment, but that he hesitates to say so openly because the proposal would be regarded as merely foolish in India's present circumstances. It is only six months since Mr. T. T. Krishnamachari said in Calcutta that the greatest obstacle for the flow of foreign capital into this country is not the Government but the jealousy of Indian capital. It seems his words are truer than one might have thought at the time. I hear a "goodwill" delegation of Indian business men and industrialists will shortly be visiting America and Europe, under the auspices of the F.I.C.C.I., to discuss trade and investment possibilities. With Mr. Chinai as one of its members, I shall be more than usually interested to see just how much "goodwill" it is likely to spread.

A DITCHER'S DIARY

Mr. Donald Soper, it must be admitted, has refuted pretty nearly every argument that has never been adduced seriously by critics of Prohibition, in India or elsewhere. There is, first, a basic difference between the problem in India and that in the countries cited by the former leader of Britain's Methodist Church. In India, the problem simply didn't exist, for it is on record that only a very small percentage of the people drink. Alcoholism as a disease, the only thing worth combating at an official level, has affected very few in this country. While it is all right for Mr Soper to "want a deal of convincing that there has not been a tremendous improvement in village life as a result of this enforced sobriety to set alongside (the) bad effects," anyone familiar with rural India knows that those parts of the population which used to drink continue to do so and those who did not drink are now paying for the farce of Prohibition. Rajkumar Amrit Kaur, whose statement in the Rajya Sabha appears to be Mr. Soper's immediate provocation, knew what she was saying when she invoked the name of the Mahatma in asking the Government to scrap Prohibition; that should dispose of the "moral" irrelevancies introduced in the argument by Mr. Soper. As for the effectiveness of legislation in making people good, he himself says, "Of course you can't." The malicious pleasure to be derived from making it harder for people to be bad—not as though I ever accepted these moral categories in the context of drinking—is something I want no part of. I stick to the economic argument. But, perhaps, I should not have discussed Prohibition at all. Mr. Soper does not conceal why he favours Prohibition. "The drink trade," says he, "is unadulterated capitalism." (Of course, there is no drink trade in the Communist countries.) He adds, "...drinking... dulls the revolutionary fervour of the exploited." There is, you will see, some political madness in Mr. Soper's methodism.

It is essential for a journalist to be able to write quickly; for most other people it is desirable that they should be able to read at speed. I believe the late Lord Passfield (Sidney Webb, the founder of Fabian Socialism) read a book a day for the greater part of his life. Some people think it might have been better for subsequent generations if he had read less. But how fast can you read? Tests and classes designed to improve speed in reading (without loss of comprehension of what is read) have recently become fashionable in Britain and America, particularly the latter. From some particulars that have come my way, I gather that if you read less than 250 words a minute you are classified as slow, while 250 to 350 words a minute is normal and above 350 words a minute is fast. The aim of the reading classes is to get you into the 350 words a minute category. The instructor times his pupils over a fairly stiff piece of reading, for example, an extract from Bertrand Russell or a Reith lecture, and then asks questions to test their understanding of what they have read. The idea is to widen the span of the eye and reduce the period of fixation, so as to take in a longer phrase in a shorter time. In Harvard, in America, films have been prepared as a mechanical aid to the reading courses. Reading passages are shown on the screen, moving at first by one-fifth of a line at a time. Then the span is widened and as the course progresses the films are speeded up. Most of one's bad reading habits are acquired in one's teens.

but the amount of reading the average business executive has to get through today is such that the slow and careless reader often wastes both his own energy and his firm's time.

Tatas opened a permanent establishment in the U.K. as long ago as 1907 and a London correspondent tells me that the jubilee of the London wing of this famous House was fittingly celebrated a few nights ago at a reception at the Dorchester. Mr. J. R. D. Tata and his wife, together with Sir Frederick James who looks after Tatas' affairs in Britain, received some three hundred guests who came to felicitate the company on the occasion. They included almost everyone who is prominent in Indo-British affairs and, in addition to a sprinkling of ministers and senior officials, the City and the U.K. steel and engineering industries were especially well represented. There were visitors from the Continent too, including a party from Western Germany who had made the air journey to London specially to attend the affair. As someone said, "a long way to travel for a drink", but a sign nonetheless of the importance which the Germans attach to their Indian business connections. At home and abroad, Tatas pay a good deal of attention to public relations, and in doing so they perform a considerable service to India. The London celebration was an appropriate reminder that the House of Tata is not only famous but also old established, and that its business origins go back a good deal further than the steel works with which it is chiefly associated in the public mind.

"Critic," of the *New Statesman and Nation*, recently attempted to write a piece for a "nature column" in his London Diary. His enterprise, as well as certain phenomena accompanying the recent weather, have inspired me to compose the following on a subject which, to my great dismay, is sadly neglected in Indian journalism: "Tuesday's pre-monsoon showers pleased the birds; they got wet and chirped. But the dogs were not pleased, presumably because the rain soaked their hair. A neighbour's Dachshund, which regularly barks outside my window at 6 a.m., woke up fifteen minutes earlier the following morning. His barking annoyed a hen, who started cackling. The cackling annoyed a duck, which was picking grass in the lawn; thereupon she ran away. In the distance, I saw a crow rise from a tree, and after flying around for a few minutes, alight on another (tree). The horses in the stables nearby neighed, and a cat thirteen yards away turned her head to see why. Puzzled, she looked up at the hedge, where the leaves seemed greener. Just then, a squirrel emerged from the foliage. The horse's neighed again, and the squirrel went back. On the other side of the hedge was a lizard; it had two eyes, but did not blink. The rain stopped, and there was a slight breeze. Then the breeze stopped, and there was a little rain. A bee, looking like a rather big fly (or perhaps a fly, looking like a rather small bee) came buzzing round the lizard. The lizard blinked, and moved towards the hen. The hen moved towards the duck, and the duck towards the dog. The dog looked at the crow, and barked. The crow looked back, and cawed. I came away, blissfully unaware of what happened thereafter." Ah, well, who cares anyway? I only hope the worthies who write on "Country Life" in the *Spectator*, for instance, or "Country Notebooks" for newspapers nearer here, will pardon my near-plagiarism of their literary efforts.

THE DITCHER.

The Teahouse of the December Moon

IT should have opened in August, but the tea didn't get there! You've heard about a slow boat to China; but there are some pretty slow ones from India, too. There's no future in a tea party without any tea, so the whole thing rather went to pot as you might say.

If only they had sent the tea as CARGO BY AIR! It's the fast, economical and sensible way of getting things where you want them, when you want them!

And A.I.I. flies twice a week to Tokyo, via Bangkok and Hong Kong, with immediate connections to cities all over the world.

So why have a storm in your teacup, since you can fly your goods by A.I.I.

THIS IS AN ADVERTISEMENT AND NOT A PROSPECTUS. A COPY OF THE PROSPECTUS DATED THE 31ST MAY, 1957 HAVING ATTACHED THERETO THE DOCUMENTS REQUIRED BY SECTION 60 OF THE COMPANIES ACT, 1956 HAS BEEN DELIVERED FOR REGISTRATION TO THE REGISTRAR OF COMPANIES, WEST BENGAL. COPIES OF THE PROSPECTUS AND APPLICATION FORMS MAY BE OBTAINED FROM THE REGISTERED OFFICE OF DUNBAR MILLS, LTD., AND FROM THE COMPANY'S BANKERS AND BROKERS.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open for public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

Application will be made to the Stock Exchange at Calcutta for permission to deal in and for quotation for the whole of the Stock now being offered.

The Subscription list will open on the 17th day of June 1957, and will close at the discretion of the Directors.

THE DUNBAR MILLS, LIMITED.

(Incorporated under the Indian Companies Act, 1882)

AUTHORISED		ISSUED AND FULLY PAID	
Rs.		Rs.	
50,00,000	Ordinary Shares of Rs. 100	19,00,000	
50,00,000		19,00,000	

LOAN CAPITAL

Rs. 25,00,000/- 6% Debenture Stock 1967/72 being the Stock now offered.

The Company has no mortgages, debentures or other loan capital outstanding other than the stock now offered and an overdraft with Lloyds Bank Ltd., secured by hypothecation of stocks of cotton, yarn, cloth and book debts and an overdraft with Didwana Industrial Bank Ltd., secured by hypothecation of stores and a second charge on stocks of cotton, yarn, cloth and book debts. As at 31st March 1957, such overdraft with Lloyds Bank Ltd., amounted to Rs. 74,06,346-10-2 and with Didwana Industrial Bank Ltd. to Rs. 10,00,000-0-0.

The amount of unsecured loans from the Managing Agents was Rs. 18,31,122-14-6 as at 31st March, 1957.

ISSUE OF

Rs. 25,00,000/- 6% Debenture Stock 1967/72 at par.

The Rs. 25,00,000/- of Debenture Stock was created by a Resolution of the Board of Directors of the Company passed on the 29th January 1957 and will be secured by a Trust Deed in favour of Messrs. R. N. Bangur, J. L. Esplen and Dalhousie Holdings Ltd., as Trustees for the Stockholders. The following are the principal terms on which the Debenture Stock is being issued:—

- Interest:** Interest will be payable on the 30th June and the 31st December in each year in respect of the half-yearly periods ending on those dates. The first payment will be made on the 31st December 1957 in respect of the period from the date of receipt by the Company of the Application Form accompanied by a remittance for the amount due and will be at the rate of 6% per annum, income-tax being deducted at the appropriate rate.
- Security:**
 - Payment of principal and interest will be secured by a first fixed charge on the Company's immovable properties including fixed plant and machinery relating thereto and by a floating charge on the remainder of its undertaking and assets present and future excluding any uncalled capital such floating charge being subject as to the Company's Stocks of cotton, yarn, cloth and book debts Ltd. and as to the Company's Stores subject to the hypothecation in favour of Didwana Industrial Bank Ltd. In respect of not been obtained when the Trust Deed is executed, the charge affecting such property will not be of immediate effect but will be postponed until such consent has been obtained.
 - The Company may create mortgages or charges on its stocks of cotton, yarn, cloth, book debts and stores ranking in priority to or pari passu with the floating charge to secure sums borrowed from or obligations incurred by the Company in the ordinary course of business of the Company but save as stated the Company may not create any charge ranking in priority to or pari passu with the floating charge and/or the fixed charge.
- Redemption:**
 - Such part of the Stock as has not been previously purchased or redeemed will mature for payment at par plus accrued interest any time after the 30th June 1967 at par plus accrued interest on giving three calendar months' previous notice to the Stockholders.
 - A Sinking Fund will be created by which annual contributions will commence in 1963 with a contribution in respect of the year ending the 31st December 1962. Such contributions will be payable only out of the distributable profits of each year as defined in the Trust Deed and certified by the Company's Auditors. Where such profits exceed Rs. 2,50,000/- the Company shall contribute to the Fund a minimum of Rs. 2,50,000/- but the amount by which any contribution exceeds Rs. 2,50,000/- may be applied in reduction of the Company's obligations in any later year or years. In a year in which the Distributable profits are less than Rs. 2,50,000/- the amount of the Company's contribution in that year will be determined by its Directors unless it makes up the amount by which such profits fall short of Rs. 2,50,000/- in any subsequent year or out of any excess of a Fund may be utilized in the purchase of stock in the market at a price not exceeding par plus accrued interest or may be invested in trustee securities or deposited with a bank until required for purpose of redemption. Stock purchased or redeemed out of the Sinking Fund is not to be re-issued.
 - In addition to purchases out of the Sinking Fund the Company may at any time purchase any of the Stock at any price not exceeding par plus accrued interest or at a higher rate with the consent of the Trustees and the Company may re-issue any stock so purchased.

HISTORY AND BUSINESS:

The Company was incorporated on the 10th November 1896 and is one of the earliest cotton mills in West Bengal. Its mill is situated at Shannagur in the District of 24 Parganas and consists of 42,944 Spindles and 518 looms.

The Directors have in their contemplation a scheme for overall modernisation of the machinery comprised in the mills as the same had already become out of date and as it is necessary that the Company should maintain its position as one of the premier cotton mills in West Bengal. The first stage of modernisation will be taken in hand in pursuance of the above scheme and the cost of replacement and addition of certain machineries are estimated at Rs. 25,42,760/- approximately and the machineries to be purchased include Mercerising Range Reeling Machine, Dyeing plant, combing machines, drawing frames, Humidification plant, Drying Range, padding Mangle, Carding Engines and electric baling press, etc. The proceeds of this issue will almost entirely meet such cost and the balance will be met out of the Company's own funds. Orders for mill machinery to the value of Rs. 25,42,760/- have already been placed and out of the machinery ordered for a part of it worth Rs. 15,81,282/- will be imported from foreign countries. The Company has paid Rs. 17,69,930/-

as the price of certain plant and machinery; this amount was obtained by way of loan and is intended to be repaid out of the proceeds of this issue.

TRADING AND FUTURE PROSPECTS:

It is expected that the demand for cloth which shows signs of increase will further increase. Further the Government of India has announced its policy relating to cloth and the target for mills in India for 1961 has been raised to 8,400 million yards. The Directors are confident that with the replacement and addition of machinery of the mill the Company will be able to improve the quality of the cloth that will be manufactured and maintain the sale of cloth and other varieties and accordingly maintain its position.

The Report by the Auditors of the Company shows that at 31st December 1956, net assets (after deducting Bank Loans) amounted to Rs. 46,15,566-0-0. If to this is added the net proceeds of the present issue of Stock, the resulting sum of Rs. 70,40,566-0-0 will cover the total amount of this Stock.

MANAGING AGENTS:

The Company is under the Managing Agency of Kettlewell Bullen & Co., Ltd.

APPLICATION FOR DEBENTURE STOCK:

Application for the Stock (which must be for Rs. 500/- or multiples thereof and must be made on the Application Forms issued by the Company) should be sent to the Company's Bankers Lloyds Bank Limited at 29, Netaji Subhas Road, Calcutta, or at Dadabhai Naoroji Road, Bombay. The Didwana Industrial Bank Limited, Didwana, or to the Company's Brokers Messrs. Place, Siddons & Gough or Messrs. Harkishandas Laxmidas or to the Company's registered office. Cheque/Drafts must be crossed "Not Negotiable" and made payable to "The Dunbar Mills Limited or Order". Any alteration from "Bearer" to "Order" must be signed by the drawer. A separate cheque must accompany each Application Form. Cheques drawn on and presented in Calcutta, Bombay and Didwana need include no allowance for collection charges. All other cheques drawn must include commission at the rate of As. 4 per 100/-. Any non-resident person, firm or Company applying for Stock must first apply for and obtain the sanction of the Reserve Bank of India. Copies of the Prospectus and Application Forms may be obtained from the Registered Office of the Company and from the Company's Bankers and Brokers.

THE BOMBAY GAS COMPANY LIMITED

CHAIRMAN MR. B. L. JALAN'S REVIEW

Extracts from the speech delivered by the Chairman, Mr. B. L. Jalan at the Annual General Meeting of The Bombay Gas Company Limited held on the 11th June, 1957.

Since we assembled here last, the international relations have witnessed many convulsions. The nationalisation of the Suez Canal once threatened a large scale conflagration. Thanks to the efforts of our Prime Minister and President Eisenhower, a reassuring calm has returned. The Middle East, however, continues to be in turmoil at one centre or the other. The world tension has increased also with renewed activity in the development of nuclear weapons. A race for ever new achievements is under way, one power trying to outstrip the other. But let us hope that in a not very distant future, more lasting peace will be established.

Nearer home, the Kashmir question was revived. The Jarring Commission Report, which also referred to 'the changed context', is yet to be debated by the Security Council. In the meanwhile, it has brought about further deterioration in the relations with our neighbour and also affected our economic operations in that country. The visa problem between the two countries has worsened beyond recognition. Notwithstanding a lack of full realisation, it has been demonstrated once more that good and neighbourly relations are absolutely essential for mutual benefit of both the countries.

In the midst of these none-too-happy developments abroad, India has crossed another milestone in her advance towards more effective democracy by completing the second general elections.

The progress of industrial programmes during the last few years has been fairly encouraging. It is contemplated that the production of several important industries will be increased manifold during the second plan.

The fulfilment of the ambitious industrial programmes requires both economic stability and favourable investment climate. You will recall that last address to you, that I was afraid 'the investment potentialities and needs of the country have been exaggerated; the outlay in the public sector is far too excessive; and some real risks involved in the heavy doses of deficit financing have been ignored'. The first year of the Plan was out only last month and it appears that the new strains developed by the economy have not belied my fears.

Wholesale Prices

The Economic Advisors' general index of wholesale prices stood at 424.3 for the week ending 4th May, 1957. This represents an increase of about 8 per cent over the level a year ago. The rise has not been spread over uniformly on all groups of commodities so that new imbalances have been created, all of which are, unfortunately, unfavourable to the industrial sector. Between March, 1956 and March, 1957, the prices of raw materials increased by about 9 per cent and of food articles by 14.5 per cent but the increase of manufactured goods advanced only by 2.5 per cent. In other words, the costs of industry have increased without a corresponding increase in the revenues of industry.

A very serious deterioration in the balance of payments position has been a still more disquieting feature during the first year of the Second Plan. Our external payments suffered a deficit of Rs. 300 crores, which has to be maintained as minimum currency reserve. We have also drawn a credit of Rs. 60 crores from the International Monetary Fund and the solution of the problem is not yet in sight.

The money market appears to be passing through a drought of capital and the stock market through a crisis of confidence.

There is one stream of national income and savings from which both the sectors have to draw their gramine with undue emphasis on the State sector. The meagre resources have been left at the disposal of the private industry. The sources of revenues of the State are rigid and claim the first priority. Whether one likes or not, taxes have to be paid. The due of resources, and the means which it can employ are definitely voluntary. The entire brunt, therefore, of the inadequacy of resources to fulfil a given plan has to be borne by private industry.

Taxation

Heavy taxation is a two-fold evil. It dries up the capital fund available to industry. It creates disincentive for investment. The situation becomes worse if, as in the present case, taxation is levied beyond the taxable capacity of different sections of the people and the form of taxes is biased against savings and investments.

In the name of the Plans the last few budgets imposed several new and enhanced taxes. Some taxes were justified on grounds of restraining consumption, others on fighting inflation, reducing inequalities of incomes or foreign exchange deficits, and still others on raising adequate revenues for the Plan. The piecemeal approach to different items of taxation has not served the basic objectives of our economy as the one object offsets the other.

Since Taxation Enquiry Commission and Prof. Kallor reports have been published, the Government has found an easy pretext for several new taxes. In part reports naturally suggested such untapped resources but they made it unequivocally clear that these suggestions formed an integral part of their new tax pattern and any tax suggested by them lost all its merit if a system of reliefs and concessions recommended by them was not adopted. Whereas the Government have found it convenient to swear by these expert opinions, the second integral part of reliefs and concessions has been completely ignored.

I do not wish to dwell at length on individual budget proposals but I must observe that the wealth and expenditure taxes do not serve the interests of our planned economy. They are likely to increase the

harassment of the assesses and jeopardise the basis and privacy of our family life. The wealth tax will, of course, liquidate existing capital and act as disincentive to the formation of fresh capital, but even the expenditure tax will militate against the objective of increased savings and investments. The ultimate object of incomes is expenditure and if tax payer is effectively restrained from expenditure even in future, he will as well not save at all.

Those who still believe that some of the proposals of the budget will promote capital formation—as the highest rate of income tax—super tax has been reduced from 92% to 84%—must be squarely told that at certain levels of income the assesses will pay more than 100 per cent tax of their incomes by whatever name we will call it, income tax, super tax, expenditure tax, or wealth tax. One cannot understand how we can promote savings and investments if we must toll the assessee that if he earns 100 units of income we will take away, say, 105 units or even more. From this practical point of view one can easily follow how reduction in the income tax—super tax rates is only illusory.

The direct effect of expenditure tax will be that a car purchase at say, Rs. 20,000 will cost the assessee Rs. 40,000 (tax of Rs. 20,000 being payable in 5 years) if his spending exceeds a certain specified income, which is not very high either. This will also seriously distort the relationship between 'cost to producer' and 'price to consumer' and inter-commodity price relationship within the economy. Thus a radio priced at Rs. 500 will cost Rs. 500 to one man, Rs. 600, Rs. 700 or even Rs. 1,000 to others. These are far reaching changes in the basic pattern and economic life of our society and should not have been disposed off so lightly.

Savings

But this is only one side of the picture. It was contended that more savings will be placed on institutional and corporate savings than on individual savings in future. But the burden of taxes on companies has been increasing at no mean a pace. Thus the corporation and income taxes have been increased. Section 23A has been retained, excess dividend tax and bonus taxes have been imposed and wealth tax on companies has been introduced. To this array of taxes, has been added the new scheme for compulsory deposits of accumulated and retained profits and depreciation allowances.

In this connection I may suggest that the deposits of profits and depreciation should be constituted as a current fund for industry. The surplus funds should be lent to industry irrespective of the quantum of such deposits of individual units for legitimate industrial needs, medium and short term. This will at least check the loss of capital resources in a tight money market by this new scheme of deposits.

I will also suggest that the Government can introduce compulsory loans. Thus, the amount payable by the assesses in respect of expenditure tax and wealth tax may as well be collected in the form of loans. The basis of computation and collection will remain the same. That is, the assesses (including companies in case of wealth tax) will declare their expenditures and wealth and compute the tax payable on them. But they will pay this amount as loan subscribed to the Government against appropriate securities and not as tax.

This will have a tremendous psychological effect on the investment climate in the country. It will also give an opportunity to the tax-payers to borrow further capital against these securities and thus they will not be handicapped for lack of funds which is so essential for the fulfilment of the second plan.

Rise in Production

Coming to the affairs of the Company, as you will have seen, the working results of the company show that the steady improvement in production, which has been the keynote ever since this company came to the present management, has been maintained during the year under review. It has been raised to 1529.2 million cubic ft. from 1511.8 million cubic ft. in 1955 or an increase of 1.15%. The year's production was 27% higher than what it was in 1946. In order to refresh your memory, I would like to quote the yearly production statistics for 1946 and the recent years:—

Year	Total Gas Production (Cu. ft.)	Increase over 1946
1946	1,115,949,000	
1955	1,511,849,000	35.5%
1956	1,529,221,000	37.0%

Last year I had told you that the scheme for the expansion of the retort house had been taken in hand. I am now glad to report that this expansion has been completed within the scheduled period. Gas making on the new retort beds started in last December. With this increase in the capacity the production will reach a figure equal to about 60% higher than the production in 1946 after the new gas connections have been fully installed.

The Government were advised that the company was in a position to provide gas connections to additional 2,500 consumers. We have so far received sanction from the Government to give 960 connections as at 31st May, 1957.

In spite of this improvement in the working of the company, I am sorry to say that the financial results are rather disappointing. The surplus shown by the revenue account of the company has dropped to Rs. 1,16,227.00 from Rs. 10,98,667.00 in 1955. The main reasons for this steep fall in profits are not far to seek. The price of coal was raised by Rs. 3/- per ton from the 1st July 1956, which alone accounts for an increase in the expenditure by Rs. 1,04,481/- in six months. Another sum of Rs. 6,502/- is accounted for by the increase in the surcharge in freight at Rs. 1-6-0 per ton of coal from April, 1956, higher terminal tax at twelve annas per ton of coal from 15th October, 1956, and change in the rate of provident fund contribution under the Act passed by the Central Government from 81% on basic salary to 61% on basic salary and D.A. from October, 1956. Moreover, the company had to pay during 1956 bonus for the

years 1952 to 1955 and this took away another big slice of Rs. 3,92,331.00.

A major portion of the increase in the expenditure during 1956 is of recurring nature and its full impact will be reflected only in the accounts for the current year, as they have not been applicable to the full year in 1956. It has been estimated that the full effect of the additional burden on the yearly accounts when compared with the actuals in 1955 would amount to an approximate sum of Rs. 9,32,000.00.

Besides there would be additional expenditure on coal freight, diesel fuel, cement and sales tax on imports, estimated at about Rs. 1,80,990 annually, as a result of the budget proposals this year. A further increase in the price of coal at the rate of Rs. 2/- per ton is under active consideration on account of the impact of additional expenditure resulting from the Labour Appellate Tribunal's decision. The situation will, therefore, be all the more bleak for the current year, unless relief is granted to the company by a corresponding increase in the price of gas.

Revision of Price

We made an application to Government on the 12th September, 1956 for the appointment of a gas advisory committee to revise the price in accordance with the recommendations of First Gas Advisory Committee and in spite of our best endeavours it was not until the first week of May this year that we could get an assurance of the Government in the course of personal discussions at the highest state level that instructions had been issued to appoint the committee and the names of the personnel had been finalised. After about three weeks a complication has been brought in by making it a condition that the price at which we are prepared to accept the Sludge gas from the Municipal Corporation should be finalised. The question of Sludge gas has been under consideration and negotiation for a long time. The Sludge gas in the form, in which it is proposed to be supplied to us, will have to be reformed so that it can be mixed with the existing gas supply of the company. The capital investment involved is about 29 lakhs of rupees and this gas will be available to us partly by September, 1958 and fully not before December, 1960.

Gentlemen, the price of gas after the utilisation of Sludge gas and the price of gas as produced today are two different issues and cannot be mixed up at this stage, as the Sludge gas will not be available to us until late next year. While the price for Sludge gas is under negotiation, I am unable to see the correlation between the two, as our costs actually started going up about a year back. The appointment of the committee on our specific application against increase in costs, which cannot be disputed, ought to be a matter of routine, but it has already taken nine months. The committee itself has not yet been constituted and it may take a lot of time for such committee when appointed, to consider the issues before it and make the recommendations. This complication will further delay the whole matter for quite a considerable time and in the meantime the company will continue to lose heavily—loss which will not be compensated in any way as the gas price, when if revised, cannot possibly be put into effect retrospectively. We are continuing our efforts to make the Government agree to appoint the committee with instructions to recommend an interim increase in the price which is now overdue by about a year.

In the course of a meeting with the Minister in charge last year in February, 1956, we had been advised that the Company should undertake expansion and then the question of revision of price of gas would be considered. Apart from the fact that its costs have since increased tremendously through no fault of ours, we have also carried out the advice given to us last year. The revision of price, however, is still an issue and the matter is apparently being dealt with too lightly without consideration to the reasonable demands of the company and the effect on its finances resulting from their non-acceptance. This is evident from the fact that even the demand to appoint the Gas Advisory Committee to consider revision of price is not readily acceptable to the Government without attaching to it conditions which have no immediate relevance to the application of company for revision of price of gas on the increased costs which are being incurred for a year. I am really unable to understand the reasons for this. By having secured the control of the company, the Indian Management has caused no harm to anybody, but on the contrary it has saved an amount of Rs. 94,49,374/- which was remitted during the ten years immediately prior to the transfer of control to India and which, in fact, would have now amounted to a much higher figure.

The Oil refineries in Bombay are now selling Bursnah gas at an approximate price of Rs. 3.78 per therm as against Rs. 0.905 per therm which is the price of our gas. Thus on the one hand the Government of Bombay are so cautious and in fact extremely reluctant to revise our price in relation to the actual costs, they appear to have no objection to allow others to sell the gas at practically four times the prices allowed to us which in its turn is today lower than the price in 1926. Besides, the marketing of Bursnah is being allowed in spite of tremendous foreign exchange cost of the cylinders, at a time when foreign exchange is so scarce that it is not being made available even for the urgent needs of capital equipment for various industries.

I sincerely hope that the Government would take all these factors into account and now appoint the Gas Advisory Committee and revise the price in relation to costs so as to save this company from serious financial losses and thereby not retard its further development.

BRITISH INSULATED CALLENDER'S CABLES LIMITED

GROUP SALES £129 MILLION

MR. W. H. McFADZEAN'S REVIEW OF WORLD-WIDE ACTIVITIES

The Twelfth Annual General Meeting of British Insulated Callender's Cables, Limited will be held on 25th June, 1957 in London, England.

The following is an extract from the circulated statement by the Chairman and Managing Director, Mr. W. H. McFadzean, C.A., Companion I.E.E.:

Last December we appointed Mr. H. F. Akehurst to the Board and to the executive position of Director (Overseas Operations). This appointment not only emphasises the importance we place on our overseas activities, but is also a well-deserved recognition of Mr. Akehurst's ability and the outstanding services he has rendered to our Group, mainly overseas, over the last 27 years.

Profit on Trading at £9,322,544 shows a decrease of £2,530,308, but some £560,000 of this is due to the inclusion in the 1955 figures of the Trading Profit of the Indian Cable Company which ceased to be a subsidiary in 1956. On a strictly comparable basis Profit on Trading for 1956 is thus some £2,000,000 less than 1955 which was a year of exceptionally favourable

trading conditions we did not anticipate would be repeated in 1956.

The main reasons for the fall in Profit have been our inability to recover in full the substantial increases we have had to bear in salaries, wages, transport, fuel and many other costs and the intensified competition being experienced both at home and abroad. These adverse factors have to some degree been offset by the benefits being obtained from recent capital expenditure and by an increase in sales but, on balance, profit rates are appreciably lower.

The Balance Sheet is a strong one with Assets shown at very conservative figures and Reserves now totalling over £29,000,000.

Total Sales

Of the total Sales, some £82,000,000 (last year £79,000,000) represented sales in this country, and the balance of £47,000,000 (last year £40,000,000) represented direct exports from this country plus the turnover of our Overseas Subsidiaries. A further

feature of these figures is that our Overseas business in 1956 accounted for some 36 per cent. of our total sales as compared with 33 per cent. in 1955.

One of the main features of home business has been the work we have carried out on railway electrification. Stockholders will already be aware of the very large contracts entrusted to the B.I.C.C. Group by the British Transport Commission, and we are proud of the fact that we have been requested to prepare for the Commission the basic designs of the overhead equipment required. It is a tribute to our technical development work and to our reputation in the railway electrification field over more than forty years.

Notable overseas orders for oil-field cables have been received from British Columbia Electric Company for 230,000-volt cable; from the City of Bloemfontein for their first high-voltage pressure cable; and for 330,000-volt oil-filled cables for the Kariba Power Station in Rhodesia.

On the telecommunications side we have completed the installation of coaxial cable between Auckland and Hamilton to the entire satisfaction of the New Zealand Post Office.

Trading in 122 Countries

Our activities are certainly world-wide and during 1956 we traded in some 122 countries.

I was privileged last September to be present at the Official Opening in Victoria of the submarine power cables connecting Vancouver Island with the mainland of British Columbia. It was indeed a proud moment when the Premier of British Columbia, the Hon. W. A. C. Bennett, closed the switch, and the cables came officially into operation. For in the 2½ years since we received this order we had designed and built a new plant and manufactured, shipped and installed almost 100 miles of this unique cable, some in continuous lengths of 16 miles weighing 700 tons per length and all capable of operating at 138,000 volts 600 feet below water.

This is a job, like so many other jobs done overseas by other British Companies, of which Britain can be proud and can proclaim to the World.

In Pakistan I was glad to have the opportunity of seeing the new factory in which we and certain other Companies in this country, together with Pakistani Nationals, are interested. It is a fine unit which has made a good start.

During my stay in India I again visited the Indian Cable Company. This was a very small concern, the first of its kind in India—when we acquired control over 30 years ago, but, after several difficult years and the provision by us of much technique and human endeavour, it is today one of the largest wire and cable concerns in Asia with a good spread of activities and a Works we would be proud to be associated with anywhere.

Stockholders will thus readily appreciate the hard decision facing your Board before they decided in the early part of 1956 to reduce their holding, but the introduction of certain new Taxation Legislation by the Indian Government made it impracticable for us to retain financial control, both from our own aspect and in equity to the many Indian Shareholders who have been our partners, and our very satisfied partners, for many years.

We are, however, retaining a substantial shareholding in the Indian Cable Company, and are continuing as Consulting Engineers.

I was tremendously impressed on re-visiting Australia after only a few years to see the further developments.

Our largest investment and interest there continues to be in Metal Manufacturers Limited, a company in which we had the privilege to be one of the original five shareholders when it was formed in 1916 with an issued capital of £80,000. Today its issued capital is some A£5,600,000 and the long and close co-operation which has existed between B.I.C.C. and M.M. is one we value highly.

I particularly appreciated during my recent visit the meeting our Construction people engaged on the £5,500,000 contract for the electrification of the New South Wales Railway from Parramatta to Lithgow. The successful execution of this contract on time is a further great B.I.C.C. Group achievement with a very full tribute due both to our own personnel and to the splendid co-operation we have received from the New South Wales Railway Commissioner and his Staff.

In New Zealand I had most valuable talks with the Ministers and State Hydro-Electric officials on the Report we had just submitted at the request of Government on the possibility of a submarine power cable across Cook Strait to link the North and South Islands. The main conclusion of this Report is that such a cable link is thoroughly practicable but, as the matter is now under consideration by the New Zealand Government, no further comment can be made at this juncture.

Our own New Zealand Company, B.I.C.C. Construction (New Zealand) Limited, formed early last year, is already proving its value particularly through the close links and understanding it provides between our Representatives in New Zealand and our people at home.

I have written at some length on the countries I have recently visited personally, but there are, of course, others in which your Group have important investments and in particular Rhodesia and South Africa.

The Outlook

Having regard to the extremely disturbed conditions which have applied lately in this country and elsewhere, it is difficult to express definite views on 1957 prospects. All I feel I can say is that in total our orders received are up to our figures for the corresponding period last year: that the immediate trend of demand for some of our products is still uncertain; and that competition remains extremely keen.

From the longer term aspect I have every confidence.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

SLIGHT FALL IN ADVANCES

Wednesday, 12th June.

ADVANCES have decreased a little in the Calcutta money market during the past week. Accommodation for sugar and for grains and seeds is almost unchanged, but jute credit has declined. Cotton funds are at a higher level. In the inter-bank market, the supply of funds is plentiful, but the call rate remains at 3½ percent.

In the exchange market, there have been a fair number of gunny bills and a few on account of tea. Remittance has been on a fair scale. Sterling is somewhat steadier against the dollar and Continental currencies.

Bullion was quiet on lack of demand in the face of large arrivals. Silver has declined from the previous week's level of Rs. 182.25 to Rs. 181, quoted today. The rate for forward delivery was quoted at Rs. 180.75. There has been no change in the quotation in London and New York.

Gold was quiet in sympathy with silver and the price fell from Rs. 108.50 to Rs. 106.75. The sovereign eased from Rs. 72 to Rs. 71.75.

During the week ended 7th June, 1957 Government of India Treasury bills for Rs. 56,43,00,000 were sold in favour of the Reserve Bank.

Increases of Rs. 17.94 crores to Rs. 1,587.94 crores in active notes and of Rs. 8.24 crores to Rs. 1,604 crores in the total note issue were notable features of the return of the Reserve Bank of India for the week ended 7th June, 1957. The currency expansion was covered by increasing rupee securities by Rs. 9.94 crores to Rs. 949.81 crores. Deposits of the Government of India improved by Rs. 1 crore to Rs. 54.65 crores, while other Government accounts were Rs. 5.42 crores lower at Rs. 1.41 crores. Balances of commercial banks at Rs. 68.62 crores showed a rise of Rs. 38 lakhs. Balances held abroad diminished further by Rs. 8.60 crores to Rs. 33.95 crores, while investments increased by Rs. 6.10 crores to Rs. 170.49 crores. Other loans and advances declined from Rs. 111.27 crores to Rs. 109.11 crores, of which advances to scheduled banks against usance bills amounted to Rs. 58.42 crores against Rs. 59.65 crores. Ways and means advances to Governments stood at Rs. 24.30 crores (Rs. 19.89 crores).

The return of the State Bank of India for the week ended 31st May, 1957, shows a rise of Rs. 2.81 crores in total deposits to Rs. 306.90 crores. Investments in Government securities are down by Rs. 1 lakh to Rs. 94.09 crores, while other authorised investments remain unchanged at Rs. 11.51 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have risen by Rs. 2 lakhs to Rs. 189.19 crores. Cash and balances are, in consequence, shown at Rs. 27.56 crores, or Rs. 3.88 crores higher.

The statement of the position of scheduled banks for the week ended 31st May, 1957, shows Demand and Time liabilities at Rs. 730.86 crores (Rs. 11.82 crores on account of borrowings from banks) and Rs. 523.03 crores (Rs. 3.33 crores), compared with Rs. 727.87 crores (Rs. 11.31 crores) and Rs. 519.81 crores (Rs. 3.07 crores), respectively, in the previous week. Cash has decreased by Rs. 45 lakhs to Rs. 39.41 crores, while balances with the Reserve Bank have increased by Rs. 4.89 crores to Rs. 59.63 crores. There is a drop of Rs. 2.71 crores in investments to Rs. 340.63 crores. Advances and bills discounted, at Rs. 932.43 crores, show a fall of Rs. 7.44 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 7.9 percent and 74.4 percent, against 7.6 percent and 75.3 percent.

Provisional figures of foreign trade of India by all routes, that is, sea, air and land, on private and Government accounts, during March 1957, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding transit trade of Pakistan and other overland foreign countries, viz. Nepal, Tibet, Sikkim and Bhutan: Exports Rs. 5,060 lakhs, re-exports Rs. 41 lakhs, imports Rs. 7,951 lakhs; total trade Rs. 13,052 lakhs. Freight: Exports (including re-exports) of gold coins Rs. 36 lakhs, current coins (excluding gold coins) Rs. 1 lakh, others nil. Imports of others nil. Balance of Trade: The merchandise export figures are exclusive of the value of certain shipments of Government stores awaiting advertisement. Subject to this deficiency in import figures, the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs. 2,854 lakhs.

MIXED TREND IN STOCK MARKETS

INDUSTRIALS FIRM: GOLD SHARES RISE

London, 12th June. THE stock markets gave a rather mixed display for the best part of last week. A firmer tendency developed prior to the week-end, and this was subsequently maintained. The outstanding development of the week was the revival of interest in South African gold shares, which advanced strongly on a broadening demand to record widespread and often substantial gains. Interest in this market came mainly from professional operators, but there were signs of public buying during the latter part of the week. The revival was touched off by the May returns, and gained momentum after the excellent development news from Saint Helena. Oil shares, after early irregularity, moved sharply ahead and Shell Transport reached a new peak. Gilt-edged securities remained rather depressed, and although there was not a great deal of selling, lack of support was responsible for a further deterioration in prices. The end-May gold reserve figures created some disappointment while the fall in sterling in the foreign exchange market was an adverse factor. The feature of foreign bonds was the strength of the Chinese issues on further consideration of the relaxation in trading restrictions with China. Other foreign bonds moved within narrow limits. Dollar stocks made an irregular showing. Americans were mostly lower in sympathy with Wall Street, but Canadian issues advanced on renewed buying. The industrial market showed early irregularity, but developed a firmer tendency later in the week, helped by a number of good dividend statements. Quieter but fairly steady conditions prevailed in the rubber share market and a number of good features developed. Among these were Banteng, which were prominent on eastern buying. Tea shares were dull and numerous small losses were recorded, but Dickwells were a firm exception on persistent buying.

The Money Market

In contrast to the recent stringency of credit, conditions in the money market last week were comfortable. War loan and other dividend monies helped swell the funds available to the market, and on most days of the week, borrowers were able to satisfy their requirements quite easily with the rate for day-to-day loans falling to 3½ percent, and afternoon balances obtained down to 3 percent. Business in bills was fair with August and "hots" at 3 13/16 percent. At the weekly tender, the average rate for the Treasury bills at £3 18s 5½d percent was slightly against the market.

Vegetable Oils Weaken

In spite of quiet trading conditions before the holidays, prices were inclined to soften in some sections of the vegetable oil market. Following the sale of 690,000 bushels of linseed by the United States C.C.C. at 241 to 244 cents f.o.b. Minneapolis-Duluth, offers of B.S.S. linseed oil ex-tank, U.K., were reduced further by £2 a ton, with June delivery sold at £299½ and £293 wanted for September onwards. £291½ for August and £291 for September onwards. It is understood that a further two million bushels are this week due to for tender. Lack of demand forced groundnut oil lower with Nigerian offered 30s cheaper at £120 June-July. Argentine oil was also reduced by \$2 to \$338 c.i.f. June-July. Sellers offered Nigerian groundnuts, July-August, to Rotterdam at £66½, but there were no buyers while Nigerian palm kernels sold August-September recently at £49 c.i.f. net terms, with sellers over. The Continent bought July-August British East African sunflowerseed at £38 c.i.f., but a reduction in Argentine semi-refined sunflowerseed of \$10 to \$320 June-July found little response. The Sudan-Gazira Board is offering at this week's auction 15,000 tons of black cottonseed, 25 percent oil, in 5,000-ton lots, but little is expected to be taken by the U.K. or the Continent. Egypt recently paid an equivalent of £37½ to 37½ a ton, c.i.f. U.K. or some 20s a ton over European buyers' ideas. Ceylon coconut oil was easier, but there was little enquiry. A steadier undertone was noticed in Philippine copra.

Revaluation of World Currencies

The Financial Times expressed the view that a general revaluation of world currencies is now necessary. "The disinclination to have money in London must still be felt by international bankers," it declared. "One probable answer is that the whole relationship of currencies in the world is now out of gear. The sterling-dollar rate seems to be approximately a correct one, but there are certain other currencies, of which the deutsche mark is the most obvious example, which are clearly undervalued. The speculator who now holds D-marks rather than sterling has no incentive to change his bank, particularly as Germany also offers high rates of interest. The general position is, therefore, somewhat difficult, but not seriously or gravely so. It is, of course, complicated. The position does contain reasons for some disquiet about the trend of the balance of trade. A general revaluation of world currencies has now become necessary, in which sterling and the dollar might maintain a constant relationship, but in which a number of other currencies would be readjusted, the paper added.

Stocks and Shares

SHARP FALL IN MUNDHRA GROUP OF SHARES

TRADING GENERALLY RESTRICTED: INVESTOR SUPPORT LACKING

Wednesday Evening.

THE stock market has been in a nervous condition since the week-end. The main feature has been a sharp fall in the Mundhra group of shares, and this has revived rumours about the possibility of payments difficulties. Each of the shares affected—Jesops, Richardson and Cruddas, and British India Corporation—has recovered a little towards the close, but they are still well below last week's levels, and it would be an exaggeration to say that market fears have abated. Because of the general economic uncertainties, trading has been very restricted. Almost no investment support is forthcoming, although yields in many cases must be considered attractive.

Coal shares have been dull as usual, except that the Union have risen sharply on interested support. Corporate news has depressed jutes further. In the case of engineering, although earlier price falls have been partially recovered, the undertone remains hesitant. Miscellaneous industrials have mostly suffered. Gilt-edged are quiet.

Details of the week's trading follow.

The gilt-edged market remained quiet and the prices of medium and long-dated loans were marked back further. The 3% Conversion Loan 1966 reacted from Rs. 73.15 to Rs. 73, with sellers over, and there were no buyers of 3% Non-terminable Paper even at Rs. 73. In contrast, short-dated loans continued to meet with fair support and prices were maintained. The 3% 1957 was asked for at Rs. 99.75, while 3% 1958 was traded at Rs. 99.68; 3% 1959-61 changed hands at around 21½, 1961 was in demand at Rs. 93.50, as was 2½% 1960 at Rs. 96.50. In medium-dated loans, 2½% 1962 improved slightly to Rs. 93.84, but 3% 1963-65 eased to Rs. 93.80, as did 3% 1964 to Rs. 93.95. Both 3½% 1964 and 1965 met with sustained selling pressure and were marked back to Rs. 97.95 in each case, while 3½% 1967 closed easier at Rs. 98.35. There were virtually no buyers of long-dated loans and both 3% 1966-68 and 1970-75 were quoted lower at Rs. 91.50 and Rs. 86.65 respectively. The 3½% 1974 was marked down to Rs. 98.40.

Once again, very little business was reported in State loans but there was a slight recovery in one or two issues. For example, 4% Madras 1968 was better at Rs. 96.45 and 4% U.P. 1968 at Rs. 97.30. Among other provincials, 4% U.P. 1964 was marked at Rs. 98.75 and 4% U.P. 1967 changed hands at Rs. 97.94.

Preference shares continued to suffer from lack of support and business was on a very restricted scale. In the miscellaneous group, Associated Hotels were crossed at Rs. 60.25 and a small lot of Bharat Collieries at Rs. 51. British Ceylon Corporation were taken at Rs. 9.50 and India General Navigation were reported at Rs. 68. Indian Iron and Steel changed hands freely at around Rs. 99. Richardson and Cruddas were shaded at Rs. 96. R. and S. Industries "B" at Rs. 62.50. In jute, Mills changed hands at Rs. 56.50 and Hooghly were offered at Rs. 101, as were New Central at the lower rate of Rs. 98. Kinnison were sold at Rs. 98 and Northbrook around Rs. 72.

Bank shares were fairly steady, though little business was reported. Punjab National were quoted at their previous rate of Rs. 54 and United Commercial were taken at Rs. 54. United Bank of India "D" shares came to hand at Rs. 4.19.

In the railways section, Bankura-Damodar and Eastwah-Islampur registered a sharp decline following a forced sale, with the price of the former dropping from Rs. 57 to Rs. 31.75 and the latter from Rs. 52 to Rs. 31.75.

Cotton shares were dull with sellers over. Bengal Nagpur were reported at Rs. 7.12 against Rs. 7.30 and Bowreah at Rs. 105 against a previous quotation of Rs. 111. Cawnpore Textiles were asked at the lower rate of Rs. 5, as were Elgin Mills at Rs. 17 and Kesoram at Rs. 12.50.

There were few price changes to report in the section. The outstanding feature once again was support, which continued to meet with interest, and the price advanced further from Rs. 18.50 to Rs. 21.25. Bengal were fairly steady at Rs. 204 and Bhalgora were slightly better at Rs. 4.69. New Beerbhoom were marked at Rs. 22.25. There were no other price changes in the section.

The disappointing results recently published by the companies caused a fresh wave of selling, and in the absence of support prices continued to fall away. Here is a chart showing representative price movements:

tive price movements:

	Opening 6th June, 1957 Rs.	Closing 12th June, 1957 Rs.
Agarpara	7.75	7.25
Anglo-India	134	130
Auckland	78	73.50
Belvedere	80	75
Cheviot	120	115
Chandpary	112	102
Howrah	14	13.50
National	19.70	19.75
Northbrook	20	18.75

Only two shares changed hands in the electric supply section. Calcutta around Rs. 12.19 and Mirzapur at Rs. 7.25.

Sugar shares met with selling pressure and prices tended to lower levels. Here is a chart showing representative price movements:

	Opening 6th June, 1957 Rs.	Closing 12th June, 1957 Rs.
Balrampur	5.25	5
Belsund	10.37	10.06
Cawnpore	14	13.50
Champanan	16.50	14.75
Durbhanga	22.50	21.25
Purtapore	15	14
Samastipur	10.50	9.50
Ramnugger Cane	25	23.75

Your Income tax affairs need not worry you

Preparation of Income tax returns is a complicated matter these days. This need not, however, worry you.

You will find it to your advantage to place your Income tax affairs in the hands of your bank.

The State Bank of India will be pleased to undertake the preparation of returns, the checking of assessments and the submission of claims for refund of tax at moderate charges. The Bank will ensure that you obtain all the refunds to which you are entitled.

Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Calcutta, one of more than 555 offices waiting to serve you throughout India.

STATE BANK OF INDIA
Largest of the Indian Joint Stock Banks

Engineering shares moved in sympathy with the general trend of the market. Indian Irons dropped at one time to Rs. 18, against an opening quotation of Rs. 18.64; tonight's closing quotation is Rs. 18.36. Weak features were Jessops and Richardson and Cruddas which were marked down from Rs. 21.75 to Rs. 19.50 and Rs. 13 to Rs. 11.50 on nervous selling; covering purchases at the close brought a recovery to Rs. 22 and Rs. 12.75 respectively. Profit-taking at the higher level brought down the price of Guest, Keen, Williams from Rs. 28 to Rs. 26.50. Textile Machinery receded from Rs. 17.40 to Rs. 16.80. Braithwaite was shaded at Rs. 14.75, as were Bhartiya Steel at Rs. 14.75.

Paper shares were extremely quiet, the worst sufferer being Orient which dropped from Rs. 25.65 to Rs. 23.40. India Paper Pulp eased to Rs. 20.50 as did Titachur to Rs. 31.50. In contrast, Shree Gopal were fairly steady at Rs. 14.25. In cement, Assam Bengal were lower at Rs. 5.06, as were Dalmia at Rs. 11.25. Some Valley were almost unchanged at Rs. 5.69.

In insurance, Indian Trade and General changed hands after a long interval at Rs. 23.50 and Rubv General were reported at their previous level of Rs. 5.50. In shipping, Calcutta Steam Navigation closed at Rs. 9.84. Port Shipping were unchanged were marked at Rs. 17.50 and India Steamship were at Rs. 16.37.

Among miscellaneous industrials, Alkali and Chemical recovered further to Rs. 13.87 and Bengal Flour improved from Rs. 24.25 x.d. to Rs. 25. Elsewhere losses were widespread over the week, as will be seen from the following table:

Opening 6th June, 1957	Closing 12th June, 1957
Angelo Bros.	17.44
Assam Saws	2.31
Balmer Lawrie	14.4
Bararee Coke	16
B. I. Corpn.	5.55
Indian Cables	22.87
Dunlop Rubber	18.50
Indo-Burma Petroleum	26.25
Metal Box	24.60

National Carbon	23.50	22.50
Rohtas Industries	17.37	16.25

Mining issues were more or less unchanged, with the exception of Indian Copper, which reacted on profit-taking from Rs. 3.40 to Rs. 3.30. Karanpara Development were shaded at Rs. 11, as were Orissa Minerals at Rs. 19.

Market operators were extremely disappointed with the results of the first tea export sale of the new season and in the absence of support, tea shares drifted to even lower levels. Tukvar had sellers at Rs. 11.37, as did Jayshree at Rs. 9.06 and Birpara at Rs. 10.4. Bishnauth and Brooke Bond were somewhat better at Rs. 18.68 and Rs. 17, while Gohpur improved to Rs. 21. Lackatooah were traded at Rs. 20 and small lots of Patrakola and Gunearam were dealt in at Rs. 144 and Rs. 150 respectively. Banarhat changed hands at Rs. 265 but Hasimara suffered selling pressure and fell further to Rs. 19.50. Jaybirpara were done at Rs. 22.25 and Rydak were quoted at Rs. 33.50.

Providing Rs. 5.70 lakhs (Rs. 7.25 lakhs) for taxation and Rs. 2.29 lakhs (Rs. 3 lakhs) for depreciation, the profit of the RAMNUGGER CEMENT AND SUGAR CO. LTD. has amounted to Rs. 11.25 lakhs against Rs. 10.87 lakhs. Brining in Rs. 20,350, there is Rs. 11.44.858. The ordinary dividend is the same at 20 percent. Replacement and extensions reserve is allocated Rs. 4 lakhs (Rs. 5 lakhs). General reserve receives Rs. 1 lakh (Rs. 2 lakhs). Additional taxation reserve gets Rs. 1.20 lakhs, leaving a carry-forward of Rs. 1.25,739. The amount of cane crushed increased from 2,345,409 maunds to 2,602,900 maunds, but the recovery declined from 10.99 percent to 10.46 percent.

Meeting all charges and writing off Rs. 60,740 on account of properties and land acquisition, a loss of Rs. 57,521 has been incurred by the PUNJAB MINERALS CO. LTD. for the year ended last September. A debit balance of Rs. 1,34,821 is carried forward. There is again no dividend.

The BUDGE-BUDGE JUTE MILLS COMPANY has incurred a loss of Rs. 4.41 lakhs for the half-year ended last October, against a loss of Rs. 2.47 lakhs

in the previous half-years. There is again no ordinary dividend, but the usual preference dividends have been paid. Writing back provisions no longer required for anticipated losses on jute, transferring certain amounts from reserves and making other adjustments, there is Rs. 4,154 carried forward, against Rs. 1,336 brought in.

The profit of the NATIONAL COMPANY LTD. (jute) has declined from Rs. 1.91 lakhs to Rs. 22,302 for the half-year ended last October. Writing back provisions for anticipated loss on jute made during the previous half-year, there is a balance of Rs. 1.58 lakhs. Taxation provision is Rs. 35,600. Transferring Rs. 25,000 from dividend equalisation reserve and Rs. 14,600 from excess provision for taxation made in the previous half-year, the available balance is Rs. 1,62,410. The ordinary dividend has been declared at 37p a share against 6 annas a share. The carry-forward is Rs. 17,339, compared with Rs. 1,929 brought in.

Messrs. Tata Industries Private Limited, managing agents for the Tata Iron and Steel Company Limited, report that the total production of iron and steel at the steel works in Jamshedpur during May was:

Pig iron	...	...	91,300
Steel ingots	...	...	86,600
Saleable steel:	(Tons)		
Semis	...	16,200	
Finished	...	48,900	65,100

Bombay Market

HESITANT UNDERTONE IN SHARES

PROSPECT OF IMPORT CUT WORRIES OPERATORS

Wednesday Evening.

THERE were irregular fluctuations in the Bombay stock market during the past week. After the last named equity prices declined on selling pressure induced by slow trading in the piecegoods

...may have started Galileo thinking—but it took years of technical work and research to perfect the pendulum. So too, MOBIL products started in a small way—but have grown to leadership through 91 years of research and experience in the field of industrial lubrication.

Our experience and advice are available to you—FREE. Why not call us?

That swinging lamp...

STANVAC — the name that stands for progress

Bombay • Ahmedabad • New Delhi • Lucknow • Jaipur • Calcutta • Madras • Bangalore • Secunderabad • Madurai

market. The declaration of a lower dividend by Simplex acted as an important restraining factor. Fears of an increase in agricultural income tax tended to depress the price of Bombay-Burmah in particular. Steel shares were, however, relatively steady on institutional support, although they temporarily weakened on Monday because of strong selling pressure from Calcutta interests.

The undertone was hesitant and operators were cautious as the economic outlook was considered uncertain. A drastic reduction in imports in coming months, it was feared, might adversely affect industrial expansion.

Tata Steels recovered to Rs. 157.75 and Indian Irons were higher at Rs. 18.25. Tata Locomotive were transacted at Rs. 137.50, while Alcock Ash-down declined to Rs. 263.78 on selling pressure. Automobile shares lacked interest, and Premier Motors were talked around Rs. 8.75 without attracting support. Larsen and Toubro were done at Rs. 15.50. Premier Construction were shaded at Rs. 143.

Mill group shares showed losses all round and operators were not inclined to lengthen commitments. Bombay Dyeing fell to Rs. 512.50 and Kohinoor were sold down to Rs. 372. Century reacted to Rs. 880.50 and Simplex lost heavily at Rs. 155.50 on the declaration of a lower dividend. Svadeshi came to hand at Rs. 173.50 and India United Ordinary were placed around Rs. 9.25.

In the miscellaneous group, cement shares were steady, and Associated Cement improved to Rs. 153.50 on the belief that the company's collaboration with Vickers would be helpful. Digvijay Cement realised Rs. 141.50. Sugar shares were quiet on fears that a portion of the increased excise duty might have to be borne by the industry itself. Belapur Sugar were transacted at Rs. 214. Mining shares were soft, and Shivrampur Syndicate came to hand at Rs. 76.75. Long liquidation reduced Scindia Steam to Rs. 17.50, while Great Eastern Shipping were steady at Rs. 19.20. Bombay-Burmah backed away to Rs. 524.50 on fears of an increase in agricultural income tax. National Ravon fell to Rs. 211 and Tata Chemicals were idle at Rs. 16.15. Wimco were sold at Rs. 153.

Scattered interest was taken in banking shares. Bank of India were taken at Rs. 137 and United Commercial Bank were done at Rs. 54. There was little interest in insurance shares, and New India Assurance were quoted at Rs. 43.75.

Among electricity supply shares, Ahmedabad Electric were fractionally higher at Rs. 93 and Tata Power were done at Rs. 1.205.

THE WEEK'S TRANSACTIONS

In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Nais Paisa.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

REDUNDANCY OF LABOUR EXCHANGE STAFF

(FROM A SPECIAL CORRESPONDENT)

NO fresh event of outstanding importance has occurred in the British industrial situation since the last despatch was written a month ago, which is not to say that the period has lacked interest. The industrialist has welcomed the Government's steps to deal with the redundancy in the civil service, as, for example, of the labour exchanges, and also the promises of more reductions in armament expenditures, with a consequent lowering of taxes. The defence for a civil service of the present magnitude is mainly political, namely, that the goal being an increasingly socialist State, not one bulwark of nationalisation alone attained should be surrendered. But that argument appeals to the average trade unionist only when a specifically industrial prize is at stake. Therefore, no enthusiastic response has been forthcoming from the ranks of the wage-earners to the claim that drawers of salaries in the labour exchange administration should be allowed to continue undisturbed. The most extreme instance of the respectable practice of idleness is that of an exchange which has one unemployed person registered on its books and a staff of 30 to look after his welfare. But the overstaffing of exchanges of their superfluity is plain everywhere. Indeed, having regard to their declared function, this was inescapable in a long period of full employment. It could rightly be said that were unemployment to develop on only a moderate scale, the experience and organisation of the exchanges would be found valuable. But as the situation is at present, that potential virtue could not be accepted by any Chancellor of the Exchequer bent on economy as a convincing argument for keeping the exchanges wholly intact. There must be a closing down of some of them, and the official attitude to many allowed to remain open will have to be that of keeping them on a care and maintenance basis.

It is noteworthy that both the first and the last speeches at the annual conference of the Textile Institute were delivered by representatives of great multiple stores. The emphasis in each case was upon quality control. A few years ago, the British textile industry would not have tolerated these representatives at their gatherings; indeed, the insistence upon adherence to certain specifications in textile manufacturing standards which Marks and Spencer laid down were strongly resented in a number of quarters. But there is now a general recognition that the policy which this firm has pursued in raising the standards of value obtainable by the masses in return for moderate outlays has played a big part in lessening irrational factors in home consumption of goods. The policy, of course, has been helped to success by the continuity of wage levels made possible through the absence of spells of unemployment—so chronic in the prewar days. Nevertheless, wages would have been unwisely spent in many directions without the safeguarding of the consumers' interests that some of the leading stores have provided. Marks and Spencer maintain their own extensive research and testing departments, which check the quality of their own productions and also that of their own purchases for retail distribution. Moreover, any complaint made by a customer is immediately subjected to expert investigation. The textile industry is now prepared to concede that the multiple store at its best is a great exponent of scientific marketing, knowing every turn and phase of consumer demand and capable of leading it to the highest level. Consultations between representatives of the stores and those of the textile and other industries have become, in fact, an accepted feature of economic life. The interchange of views thus made helps to bring both order and mobility into the people's spending.

Electronics and Automation

The Electronics and Automation Exhibition yielded few surprises on the inventive side, most of the exhibits relating to counting or measuring devices already known, or to their logical further application. The complaint was heard that indus-

try is not responding sufficiently to what can be offered. It has to be borne in mind, as bearing upon this, that the charges for these innovations are often very high at present. To this, no doubt, the reply would be forthcoming that if the demand is increased, then the cost can be lowered, which is a familiar story of ancient lineage and in various directions. That there is anxiety on this point is understandable; for the exhibition revealed that some 200 firms have already entered the electronics or allied fields. If this area be divided into three, the immediate future of two of them seems assured.

Those who can definitely connect their activities with nuclear expansion can be certain of Government support, if necessary. Those who are out to supply shops and factories with the smaller types of counting machine or "computer" have a considerable market ready to hand which only requires exploiting by the usual methods of salesmanship. A step forward in this matter has been taken by Elliot Brothers Ltd., one of the first firms to engage in electronics, which has appointed the National Cash Register Company to foster the use of its machines among tradesmen—a task for which the company is uniquely well qualified. Electronics firms doing pioneering work in other than the spheres mentioned seem to have the prospect of limited, or, at any rate fluctuating fortunes, over some years ahead. This path is clearly one which would be left for pursuance by firms having a diversity of interests and who will not be wholly dependent upon revenues from a comparatively new industry.

Unused Inventions

The Mather Lecture in Manchester delivered this year by a prominent chemist, Mr. J. T. Marsh, raised once again the question of the apparently enormous extent to which man's inventive fertility, measured by the number of unused patent registrations, outruns his capacity to use them. It is undeniable that the number of patent registrations which are allowed to lapse is formidable. But whether the whole truth about them can be easily told, or even discerned, is not clear. A patent, although, so to speak, it never comes to life, has the possibility of surviving, if not in its own right, then in that of somebody else. Patents provide literary material for the study of ideas which, although not realisable in the form originally presented, may be modified to become so at near or far remove; they sometimes provide stimuli that lead to entirely new and better conceptions. Patentees who complain that their notions have been imitated or pilfered are a numerous race, and, admittedly some of them have a fair measure of justification for their grievances. But often whatever fault there is lies more in the nature of things than in the unscrupulousness of a person or company.

When looking at the lengthy patent lists one has to think not merely of inventors, but of the spirit of invention as a whole, whose engendering is from many sources, including these registration records. The invention which finds enduring and increasing expression is becoming much more than formerly the product of a number of minds acting in proclaimed or tacit co-operation through the medium of directed research. This may be in obedience to a law governing the form of industrial evolution in our own time. On the other hand, there may be scientific or technological problems for industry which only the flash of genius can illumine. To be able to believe in this latter, one must agree, would help the individual to be less despairing of his own worth.

Rubber in Engineering

The proceedings of the "Rubber in Engineering" conference have now been issued and can be obtained free of charge from the Natural Rubber Development Board, London. A volume of 160 pages, it is worth securing by those who have cause to be interested in the subject. The engineering use of rubber so far has been mainly empirical and developed, based, that is to say, upon trial and error rather than upon scientific design. The error position is now changing and new vistas for exploration are coming into view. The contents of the book range from a preface on using rubber correctly in manufacturing, through such matters as questions of the effect of strain and fatigue upon the raw material, to rubber in heavy engineering and in agriculture. The section on rubber in heavy engineering is the longest and refers particularly to ships and jetties, general engineering (including building) and railway engineering. The history of the use of rubber in these directions goes only about 20 years back, but has latterly become a full one.

It may be recalled that during the last two years, rubber bonded to metal seals has been used in the construction of a supersonic wind tunnel by the Royal Aeronautical Establishment. This engineering feat attracted considerable attention by reason of the new problems involved. It is obvious, as a result of the large-scale demands of modern civilisation that rubber will be called upon to fulfil an increasing task in the reduction of vibration. Rubber springs can now be made to carry up to 100 tons a spring, and double this amount for testing purposes. The speaker on rubber in agriculture observed that, without rubber, farm mechanisation would be unthinkable, contributing so much as it did to tractive power generally, to means of sowing and harvesting and to mechanised milking. A seemingly slight problem made progress in the last named direction much slower than was anticipated. This was in the provision of the teat cup which has taken nearly 50 years for efficient design.

June 13, 1957.

New Delhi

HIGHER MINIMUM PRICES FOR AGRICULTURAL PRODUCTS DISCUSSED

ECONOMIC TRENDS DURING FIRST YEAR OF PLAN REVIEWED

(FROM A NEW DELHI CORRESPONDENT)

A REVIEW of the economic situation issued by the Planning Commission formed the principal basis of the discussions at last week's meeting of the National Development Council. It is pointed out in the review that the increase in national income in the last two or three years has averaged only 2 percent to 2½ percent, mainly because agricultural output has not shown any substantial rise. While industrial production has increased steadily at the rate of about 8 percent annually in recent years, no such steady upward trend has been seen in agricultural output. In 1956-57, the production of rice is expected to be around 28 million tons, or 1.2 million tons higher than in 1955-56; and that of wheat will be about 8.6 million tons, as against 8.3 million tons in 1955-56. The output of coarse grains and pulses is not expected to show any material change. The production of cotton, it is estimated, has increased by 20 percent, from 4 million bales to 4.8 million bales, of groundnuts by about 6 percent, and of sugarcane by about 17 percent. The output of jute is fractionally higher at 4,221,000 bales, as compared with 4,197,000 bales in the previous year.

On the whole, it is thought, domestic agricultural production in 1956-57, taken together with the large imports that have already been arranged for, should be adequate for stopping a rise in prices. But difficult conditions prevail in parts of some States, and it is clear that the food situation in the course of the year will need to be watched carefully. Even in the case of industrial production, it has to be remembered that the increase which has taken place in recent years has added significantly to the pressure on the balance of payments, by necessitating larger imports of raw material and component parts. In view of the foreign exchange shortage, a cut in these imports is inescapable. Considering the large imports made during the last 12 months or so, there will be no immediate setback to industrial production, but the situation will have to be watched. The overall supply, in other words, taking agricultural and industrial production together, is one which will require the utmost attention during the rest of the plan period.

Expansionary Factors

While domestic supplies have shown only a moderate improvement, there has been a steady increase in the tempo of development expenditure in recent years. The outlay in the first year of the second plan is likely to have been of the order of Rs. 750 crores. A separate note on the first year's plan points out that although the outlay on the plan for 1956-57 was proposed by the Planning Commission in consultation with the Ministry of Finance at about Rs. 800 crores, the Central Ministries and State Governments budgeted for a total outlay of Rs. 830 crores. The proposed outlay at the Centre, after taking into account the supplementary grants of last August, was Rs. 394 crores, while the States budgeted for an outlay of Rs. 436 crores. However, the States were induced subsequently to cut their outlay down to Rs. 391 crores, inclusive of Union territories, while the revised estimates of the Central Ministries amounted to Rs. 370 crores, making a total of Rs. 761 crores for 1956-57.

The plan outlay during 1957-58, it was agreed at the last meeting of the National Development Council in December, should be around Rs. 900 crores. Actually, the Centre has budgeted for an outlay of Rs. 530.9 crores and the States for Rs. 434.6 crores, making a total of Rs. 965.5 crores. Simultaneously, expenditure outside the plan, particularly on defence, has been increasing. A considerable proportion of the additional revenues raised by fresh taxation last year and in the current year is expected to be offset by increases in non-plan expenditure. There has also been little increase in the volume of private savings mobilised by the Government. Collections under small savings, at Rs. 61 crores, in 1956-57 were about Rs. 7 crores smaller than in 1955-56, and were significantly below the target of an annual average of Rs. 100 crores mentioned in the second plan.

The net proceeds of market loans floated by the Centre and the States in 1956-57 amounted to Rs. 140.5 crores, as against Rs. 82 crores in 1955-56 and Rs. 111 crores in 1954-55. But a large part of the new loans floated in 1956-57 was not absorbed by the public and represented, in effect, a type of deficit financing. (Net borrowings of the Central Government from the market in 1956-57 were estimated at Rs. 78.1 crores. Gross receipts from the loans floated during the year exceeded the Budget estimate of Rs. 100.6 crores by about Rs. 57 crores, but because of the option given for conversion of the loan maturing in 1957-58, the cash subscriptions turned out to be considerably lower than the Budget estimate.) For the Centre alone, floating debt and the variations in cash balances, increased from Rs. 160 crores in 1955-56 to Rs. 216

ed to amount to Rs. 275 crores in 1957-58 (Budget estimates).

Private Investment

Developments in the private sector have contributed to the growing pressure of demand in the economy. Although precise estimates of private investment are not available, it is clear that savings have not increased in line with private investment, with the result that there has been a sharp increase in bank credit to the private sector. The credit advanced by scheduled banks rose during 1956 by Rs. 153 crores to a record level of Rs. 788 crores, and in the first four months of this year it has risen by another Rs. 119 crores. The deposit resources of banks have not gone up to a corresponding extent.

The growth of expansionary forces in the economy has also been reflected in monetary trends over the past year. During the year to 3rd May, 1957, money supply increased by Rs. 139 crores. Over the same period, the rupee securities held by the Reserve Bank increased by Rs. 314 crores—a factor which is clearly expansionary and which is largely in response to increased Government borrowing from the Reserve Bank. During the same period, scheduled bank credit increased by Rs. 161 crores, giving an indication of the extent of bank finance provided for private investment. The somewhat smaller increase in money supply in relation to the increase in bank borrowing by the Government and the private sector is explained by the fact that the large decline of Rs. 225 crores in the foreign assets held by the Reserve Bank during the period had a considerable disinflationary effect. The imbalance on external account, however, cannot continue for long on this scale. The pressure of additional demand on the economy, therefore, would be even greater in the months to come unless the flow of savings to the public and private sectors is increased.

The growing pressure of demand in the economy, combined with only a moderate improvement in production, has brought about a significant rise in prices. The overall index of wholesale prices (year ended August 1939=100) in recent weeks has been around 425 to 430, which is an increase of nearly 10 percent over the past year. Rice prices, at around 660, and wheat prices, at around 550, are nearly 20 percent higher than a year ago, whereas prices of manufactured products such as sugar and cotton textiles are only slightly above the levels reached last year. The indices for vegetable oils and cotton, at around 530 and 500, respectively, also show increases of 6 percent or 7 percent over the levels of a year ago. It is clear that the upward pressure on prices has been felt particularly in the case of foodgrains. In recent weeks, while wheat prices have eased somewhat on the arrival of the new crop in the market, rice prices have advanced a little and cotton and oil-seeds prices have maintained a firm tone.

Balance of Payments

The major impact of the expansionary trends in the economy has been on the balance of payments. For 1956-57, the deficit on current account (exclusive of official donations) is expected to be of the order of Rs. 345 crores, as against the plan estimate of Rs. 147 crores. During the 14 months ended May 1957, the draft on the foreign assets held by the Reserve Bank has been of the order of Rs. 335 crores. Since, during this period, a credit of Rs. 60.7 crores was obtained from the International Monetary Fund, the fall in the Reserve Bank's holdings has amounted to about Rs. 275 crores. In the first plan period as a whole, the corresponding decline in reserves was of the order of Rs. 138 crores.

The present level of reserves at around Rs. 470 crores, provides only a small margin considering the need to maintain the statutory minimum of Rs. 400 crores plus a working balance. Even if the requirements of a working balance are put at only Rs. 40 crores or so, our spendable foreign exchange reserves are now negligible. The standby credit of Rs. 34.5 crores obtained from the I.M.F., which is yet to be utilised, can provide only a brief relief. As against a decline in reserves of some Rs. 5 crores to Rs. 6 crores a week in February, March and April this year, the decline in May was at the rate of Rs. 9 crores a week.

The main factor responsible for the heavy strain on the balance of payments has been the phenomenal increase in imports—to some Rs. 1,000 crores in 1956-57. Exports, on the other hand, have remained virtually steady at around Rs. 650 crores for the year. The increase in imports is accounted for almost entirely by machinery, iron and steel and the raw materials and components required for sustaining the increase in industrial production. This, by itself, should provide some strength to the balance of payments in the months to come. But the immediate position is one which calls for the strongest efforts to be made to

remedial measures have already been taken. Briefly monetary policy has been tightened selectively so as to curtail inessential and speculative demands for credit while permitting expansion in essential sectors. A moderate increase in interest rates, including those on small savings, has been permitted so as to promote savings. In the field of fiscal policy, substantial measures of additional taxation have been introduced, and an attempt made to change the tax structure so as to make it more responsive to increases in national income. The import policy is also being tightened further. Finally, efforts are being made to obtain larger credits from abroad for investment in both the public and the private sectors.

Outlook for the Plan

Thus, the strain on resources, both internal and external, is great and there are clear indications that the fulfilment of the targets laid down in the plan requires: (a) considerably greater effort at raising domestic resources and (b) external assistance on a much larger scale than what has hitherto been in sight. The actual expenditure on the plan in the first two years is not likely to exceed Rs. 1,600 crores or so (allowing for shortfalls relating to both the revised estimate of Rs. 761 crores for 1956-57 and the Budget estimates of Rs. 965.5 crores for 1957-58). This is roughly one-third of the original outlay of Rs. 4,800 crores proposed in the second plan. A considerable increase in the outlay would thus be required in the years to come if the total of Rs. 4,900 crores is to be realised. At the same time, there has been an increase in costs all round and it has become necessary to make a substantially larger provision for defence. The combined effect of these two factors is to raise the demands on the Exchequer substantially. On the resources side, the indications are that the targets for market borrowing will be difficult to realise, and that it will be prudent to limit deficit financing to well below the level of Rs. 1,200 crores mentioned in the plan.

Drastic Cut in Imports

The foreign exchange situation in relation to the plan is under constant review. The position, as it appears at present, is that even if current imports are drastically cut and new foreign exchange commitments restricted to capital goods required for the "core" of the plan, i.e., the iron and steel projects, coal, transport and ancillary power, external assistance of about Rs. 600 crores beyond what has so far been promised would be required. This scale of assistance might or might not be forthcoming fully, nor can one be certain that it will materialise in time. It follows also that no fresh commitments of foreign exchange resources, on projects which are outside the "core" and against which no external assistance is forthcoming, can be made until the situation improves markedly. To carry through the projects in the "core" also, an all-out effort will have to be made to secure external resources. The steps to be taken from now onwards, apart from a continued watch over monetary and credit trends and increased efforts at raising foodgrains and other production, include mainly a greater fiscal effort at the States' level and further measures to protect the balance of payments. The import policy will need to be tightened considerably, and exports will have to be stepped up even at the cost of a reduction in domestic supplies.

Rising Prices

The National Development Council last week discussed the problems of rising prices and State's resources, while the foreign exchange shortage dominated the proceedings of the Import and Export Advisory Councils which met later. Curious as it might seem, the National Development Council's consideration of the rise in food prices resulted in a decision favouring the fixation of minimum prices. Members of the Council were evidently impressed by the argument of the Food and Agriculture Ministry, in a note urging the guarantee of minimum prices, that "the fact that the current level of prices is relatively high should strengthen rather than weaken the case for fixing minimum prices. It is when prices and costs are higher that the farmers are most apprehensive of the risk of a sharp fall, and require an assurance against undue loss".

The Food Ministry's case was that since agriculture is the largest part of the private sector in the economy, it is on the decisions of innumerable small producers that the volume of agricultural output depends. These decisions are influenced mostly by the incentives that are offered and insurance against risks that are provided. While the provision of technical aid and promotion of credit and marketing facilities enhance productivity and income from farming, and thereby induce the cultivator to adopt improved methods of cultivation, they are not a guarantee against fluctuations in farm incomes arising from fluctuations in farm prices. The very adoption of improved methods increases costs, and hence also the risk of loss, and is therefore largely conditioned by reasonable returns from farming. Agricultural price support is in the nature of an insurance measure analogous to unemployment insurance and minimum wages in industry, and as such has great economic and psychological value. No better example need be cited than that of cotton and sugarcane, where the guarantee of minimum prices has led to a substantial increase in production. On the other hand, in the case of a commodity like jute where there is no guaranteed minimum price, production has varied sharply with variations in prices.

Principle Accepted

The principle that minimum prices should be

"...and an aluminium house we'll build"

Aluminium houses are so light and easy to erect...no wonder our young friends feel that even they could do it.

Prefabricated aluminium houses and aluminium building materials are rapidly gaining popularity in India because they are light, strong, durable and

require no maintenance.

At Hirakud in Orissa, close to large resources of hydro-electric power and bauxite, Indian Aluminium Company is installing a new 10,000-ton smelter which will make more aluminium available for our homes, farms and factories.

Building a future in aluminium

Indian Aluminium Company Limited

A Canadian-Indian Enterprise

These were, however, fixed at a very low level with a view to avoiding extreme distress at a time of sharply falling prices. The prices fixed then have now become quite unrealistic, as will be seen from a comparison of the minimum prices fixed in 1954-55 with the minimum market prices in May 1957: rice, Rs. 11, Rs. 15; wheat, Rs. 10, Rs. 13.37; jowar, Rs. 5.50, Rs. 10; maize, Rs. 5.50, Rs. 12.12; and baira, Rs. 6, Rs. 11. The fact that the Government could purchase only 75,000 tons of wheat, negligible quantities of coarse grains and no rice at all at those prices even in 1954-55 shows that these minimum prices were too low. Since 1954-55, costs as well as prices have increased very considerably, and these minimum prices have become even more unrealistic. It is therefore proposed that minimum prices should now be fixed at reasonable levels.

Apart from foodgrains, minimum prices are at present being fixed for cotton and sugarcane. They will no doubt continue to be fixed, but when they are revised in future their inter-relationship with the minimum prices for the competing foodgrains, as proposed above, should be borne in mind. At present, no minimum prices are being fixed for two important crops, jute and groundnut. These crops are among the most important foreign exchange earners, and a high priority has been given in the plan for their production. If minimum prices are fixed for rice and jowar, which compete with jute and groundnut respectively, it seems essential that minimum prices for the latter should also be fixed at a suitable parity. Another point on which the views of the N.D.C. have been sought is whether there should be only one minimum price for the whole country or whether minimum prices should be fixed separately for different States or regions.

Groundnuts and Jute

It is understood that the members of the Council ruled out the fixation of a minimum price

for groundnuts, but were divided in their views on the question of a guaranteed price for jute. While some pressed for a floor price for jute in order to stimulate its production, others felt that the time had not yet come for such action. As for foodgrains, it is gathered that while a notional figure will be fixed as the national minimum price for various grains, the guaranteed price to be offered in each region will vary in accordance with the normal local prices. These are now being discussed with the different State Governments, and an announcement of the minimum prices is expected shortly.

Appointment of Committee

It has been decided to appoint a high-powered committee to examine what measures can be taken, consistent with the interests of the agriculturists and agricultural production, to arrest the rise in prices, if not to bring about a reduction. If it is desired, certain measures could, in the meantime, be considered, particularly to reduce hoarding by traders. In the course of discussion by the N.D.C. it was pointed out that prices had risen in recent months even in States which were normally surplus in foodgrains, because substantial quantities were being exported to deficit areas. This, many members said, called for appropriate action. The partiality for some measure of control in a period of shortages was illustrated by the virtually unanimous suggestion that a system of family identity cards should be introduced if the purpose of the fair price shops, which sell imported food at subsidised prices, is not to be defeated by traders.

The problem of States' resources for implementing the plan was considered by the N.D.C. in the light of their performance during 1956-57. Whereas the Central Government realised Rs. 53 crores from additional taxation imposed during 1956-57 and raised a total of Rs. 102 crores from current revenues—exclusive of the railways' con-

tribution of Rs. 42 crores—to meet the outlay (revised estimate) of Rs. 370 crores on the first annual plan in the Central sector, the States taken together raised only Rs. 6.9 crores from their current revenues towards the plan outlay of Rs. 391 crores in the State sphere. An increase in non-plan expenditure led to this result although otherwise the States realised Rs. 11.3 crores from additional taxation and secured Rs. 1.7 crores as their share of additional taxation by the Centre. Not receipts from market borrowings by the States amounted to about Rs. 62 crores. This compares favourably with the target of Rs. 265 crores for States' borrowing over the plan period, but their loan programme strained the market considerably and several State loans were quoted at sizeable discounts. Some of the State Governments had to renounce their own securities. (In view of this, the Reserve Bank has recently advised the State Governments against floating any open market loans this year.) All in all, the contribution of the State Governments towards their first annual plans works out to Rs. 100.5 crores. Central assistance for the State plans, and amount given as ways and means loans, are estimated at Rs. 235.5 crores. The remaining outlay of Rs. 55 crores appears to have been financed by drawings on cash balances, sale of securities held in reserve, and increase in floating debt (other than ways and means loans from the Centre).

State Finances in Current Year

For the second year's plan, amounting to a total of Rs. 434.6 crores according to the Budgets, the States have taken credit for Rs. 280.5 crores by way of Central assistance, whereas this is now expected not to exceed Rs. 265 crores. The States have also assumed a total of Rs. 53.5 crores as the net receipts from their market borrowings during 1957-58. Such borrowing will now either not take place at all or will be of only half that size. On the other hand, the likely receipts from additional taxation during this year by the States are now estimated at much less than the figure of Rs. 40 crores to Rs. 50 crores which was mentioned at the December meeting of the N.D.C. It is doubted whether the States will raise more than two-thirds of even the total additional taxation of Rs. 31 crores which they agreed to during the discussions on the second annual plan with the Planning Commission's Programme Advisers. Even taking into account the States' share of Rs. 15 crores out of the recent taxation at the Centre, it is obvious that the revenue deficit totalling Rs. 70 crores will not be filled. The urgency of the problem is evident from the fact that, since last year, several States have been running substantial overdrafts with the Reserve Bank for long periods, in spite of Central assistance for development schemes, assistance for scarcity areas, and ways and means assistance to cover the lag between expenditure and the collection of revenue. The overdrafts with the Reserve Bank are regarded by the Planning Commission as indicating a basic insufficiency of resources to meet the budgeted expenditure, rather than short-term difficulties.

Money for State Loans

At last week's meeting of the N.D.C., Dr. B. C. Roy, Chief Minister of West Bengal, blamed the difficulties experienced by the States in market borrowing on the directive issued by the Centre to the Employees' State Insurance Corporation, as well as to private limited companies coming under the employees' provident fund scheme, not to invest in State Government securities. He also said that the nationalisation of life insurance meant that the Centre had monopolised another source of money for State Government loans. Whatever the reasons might be for the poor outlook for market borrowing by the State Governments, the Centre has now offered a compensatory revision of the scheme for the distribution of small savings collections. Under the original formula, evolved at the Finance Ministers' Conference in 1952, targets were laid down for individual States and the Centre retained Rs. 45 crores. Although liberalised from time to time during the first plan period in the interest of the States, the formula, with its targets based on the trend of collections in 1951-52 and 1952-53, proved anomalous and inequitable.

For the second plan period, a revised formula was adopted under which the States were allowed 25 percent of their average collection during the three years ended 1955-56 and 50 percent of the excess. From about Rs. 2 crores in 1953-54, the States' share of small savings under this formula increased to Rs. 19 crores in 1956-57. But even the revised formula has not found universal favour since some States have received less than they would have under the original scheme. To meet this problem, as well as to stimulate during collections which dropped by Rs. 7 crores in the 1956-57 from the figure of Rs. 68 crores in the previous year, it was suggested to the Ministers of States at last week's meeting of the N.D.C. that each State should, in future, be allowed two-thirds of the amount collected within its territory on the understanding that the State would spend not less than 50 percent of its share of the collection from each district or other appropriate unit in that district or unit. The Chief Ministers were appreciative of the new formula, but did not want to give up market borrowing altogether this year. The size of the State Governments' borrowing, and the rate of interest to be offered by them, will be decided after an informal conference which the Union Finance Minister will hold with his State counterparts towards the end of the month.

London

WAGE CLAIMS BY U.K. LABOUR

RELATIONSHIP BETWEEN INCOME AND OUTPUT

(FROM OUR LONDON CORRESPONDENT)

Indeed, as is contended by the Opposition in Parliament and in its Press, the Government has forfeited its claim to an understanding attitude on the part of the trade unions by failing to stabilise prices and by passing social legislation to which they are strongly opposed, the economic outlook for the U.K. is indeed grim. It is certainly a fact that unless the inflationary spiral is stopped, and that soon, the brighter prospects which the relevant statistics suggest are "just around the corner" will eventually turn out to be rather bitter fruit. The attitude of the politicians is perhaps understandable, though even in their case the country's interests should come first; but if the trade union leaders are not to decide for themselves but only to follow a party line, the outlook is even grimmer. From this point of view, and in the face of the Prime Minister's recent warning—that full employment demanded a sense of responsibility, a measure of reasonable restraint, a recognition by all of the basic fact that to give oneself more money without producing more was to give nothing of any real or lasting value—the speeches and resolutions at the current round of union conferences just do not make sense. The shipping dispute still drags on, the engineers' holiday just accepted a wage increase "with strings" are already planning a fresh claim, other workers are seeking extra paid holidays or a shorter working week with no loss of earnings, and so it goes on.

On the other hand, the cost of living index at least remains steady in spite of individual price rises here and there. Retail sales are moving upwards as are sales of cars, television sets and other luxuries. During the first quarter of 1957, national expenditure on alcoholic drink rose to £196 million and on tobacco to £229 million, from £187 million and £214 million in 1956, while spending on beer is up from £112 million to £121 million. These facts and figures hardly justify the contention that living standards are being threatened by the Government's actions and that a class struggle is necessary. The Bank of International Settlements, which can at least claim some measure of objectivity, has recently warned Europe, with the U.K. receiving special mention, that the real danger to its recovery lies in wage-inspired inflation.

Incomes and Output

So far as the U.K. is concerned, the position has been succinctly stated by a writer in the latest *Bulletin for Industry* issued by the Treasury, who points out that the course of U.K. prices this year—and that forms the basis of trade union argument—will depend mainly on what happens to the relation between incomes and output, which last year was plainly inflationary. About nine-tenths of the rise in prices during 1956 was the result of increased home costs, a unit of output, caused by money incomes outpacing the growth of national output. Labour costs a unit of output rose by 7 percent compared with 3 percent for gross profits a unit of output. While output expanded by only 1½ percent, wages and salaries increased by 9 percent—about six times as fast—and gross profits by 4 percent—about three times as fast. Secondly, (the argument goes on), unit home costs rose faster last year than in 1955 (5 percent against 3 percent). This was because of a more rapid advance in wages and salaries a unit of output (7 percent against 6 percent), while the rise of 3 percent in gross profits was about the same as in 1955. The trend, as a whole, was even more marked in manufacturing industry.

Looking ahead, without attempting any definite predictions, the article says that no major change in the average cost of imports seems likely in the months ahead, while commodity prices and shipping freights have fallen back after Suez. The evidence of the last month or two suggests that a strong revival of production may be imminent. On the other hand, the recent wage negotiations make it likely that incomes will continue to rise vigorously. The *Bulletin* points out that wages have risen relatively slowly in recent months: from October to March, the index of wage rates rose by just under 1 percent, compared with 5½ percent in the same period of 1955-56, and nearly 4 percent in 1954-55. This slowing down has not lasted long, and the speed-up is not yet over. In a comparison of labour costs a unit of output in the United Kingdom, Western Germany and the United States, the *Bulletin* shows that between 1953 and 1956 these rose faster in the U.K. than in the other two countries.

This is the background against which the Chancellor of the Exchequer and the Minister of Labour are endeavouring to ascertain the views of both sides of industry to the establishment of a possibly impartial tribunal which could supervise "price stabilisation, productivity, and the standard of living." Two representatives each of the Federation of British Industries and the British Employers' Confederation last week met the Ministers and their Permanent Secretaries at the Treasury, and later two further meetings took place, first with the chairmen of the nationalised industries and then with the Chairman and General Secretary of the Trades Union Congress. The Government hopes that the talks will prepare the way for more practical discussions later about the establishment of an impartial body which could in effect keep an eye on the cost of living. Whether such a body

will come into being rests on the reception which will be accorded to these preliminary talks by the various parties concerned.

The idea was first put forward by a court of enquiry into a labour dispute in 1954, and was again suggested by the recent court of enquiry into the engineering and shipbuilding disputes, but it is believed that the discussions now proceeding are concerned with some original thoughts on the subject which the Government has been considering for a long time. The Government has its own ideas about how the suggested committee should do its work, but would like to hear what suggestions industry itself can make and whether there could be greater co-operation to ensure a larger measure of success. The only reaction so far is Sir Thomas Williamson's remark that he was sure the trade union movement would co-operate in anything that would keep prices down.

Poor Month for the Reserves

The welcome decision to extend the £100 travel allowance to North America, followed by increases in business dollar allowances, suggests that the Government does not feel particularly anxious about the immediate outlook for sterling. This confidence is all the more encouraging seeing that it is hardly justified by the small rise of \$25 million in the gold reserves during May, particularly as that was due entirely to the favourable E.P.U. balance of \$31 million in April; in that quarter the position is back to a deficit for May, and will probably continue that way for the period of the tourist season. The Treasury's announcement of the \$25 million rise to bring the sterling area's gold and dollar reserves at the end of May to \$2,345 million described it as "not very good but not specially bad." If account is taken of the \$34 million received from the April E.P.U. settlement, \$3 million paid to E.P.U. creditors in bilateral settlements, and \$1 million in U.S. defence aid (now so insignificant a factor as not to receive specific mention separately), the May residual figure was a deficit of \$7 million. This compares with a comparable surplus in April of \$14 million. The April surplus of £16 million with the E.P.U. has given place to a deficit of £7 million in May. This was due partly to further official clawing back of French commercial banks' balances abroad, but on the face of it, last month's trend was rather adverse to the sterling area unless, of course, there was a reduction in sterling liabilities.

Curiously enough, the foreign exchange market was unaffected by the announcement. It would seem that the position here for many months has not been good enough to attract new balances that might turn away; nor has it been bad enough to attract adverse speculation. Meanwhile, the U.K.

balance of payments in May was still burdened by heavy dollar oil imports, though not quite as heavily as before. It is some consolation that there was still no need to draw on either the Export-Import Bank loan or the stand-by credit from the International Monetary Fund.

Plantation Companies and Take-over Bids

Take-over bids for companies with large cash reserves have become so regular a feature of the operations of financiers that their less satisfactory effects are apt to be overlooked. This is not the case in the plantation industries, apparently, for Mr. K. W. Warren, chairman of James Warren and Company, has disclosed that both the Malayan and Indian Governments are to take steps to combat the "menace" so far as rubber and tea companies are concerned so as to "make such transactions unprofitable." The disturbance to both labour and managerial staff is the immediate difficulty, but industrial development is also hampered.

The problem was put into perspective by Sir John Hay in his statement to United Siam Betong stockholders the other day. Past disappointments and current political risks no doubt combine to induce caution, he says, but such considerations can hardly warrant share prices which are far remote from asset values and earnings. It is the continuance of this state which offers to the take-over bidder the opportunity for a quick profit, the realisation of which too often results in the disruption of an enterprise carefully developed for many years. In support of his argument, Sir John cited the case of an associated company whose £1 shares once commanded a market price of £15 on a 10 percent dividend. That company has since built up a strong financial position and pays dividends of 20 percent, yet its stock can be bought in the market at around par. "Past disappointments and present political risks" are spectacularly reflected in the movement of the yield basis from 4 percent to over 20 percent.

Whiteaway, Laidlaw Mystery

Steady buying of the £1 ordinary shares of Whiteaway, Laidlaw, drapers and merchants, has lifted the price from 24s to 30s 6d during the past 10 days, and is exciting a good deal of interest in the City. Jobbers report, and the company confirms, that there is a persistent buyer in the market who has forced up the price. On the other hand, an executive director of the company has said that the board has not been approached by the buyer, nor were they so far aware of any intention to acquire control. In each of the past five years, the company has paid a 10 percent dividend on the ordinary shares, but since 1954 the cover has been

SPW 159

slender. Under the chairmanship of Sir Harold Gillett the balance-sheet position has been gradually strengthened, some of the overseas properties having been sold. At 29th February, 1956, the balance sheet showed net liquid assets of just over £1 million. Fixed assets, apart from goodwill, were carried at a written-down figure of about £380,000. Allowing for the heavy preference capital, however, of £650,000, the attractions of the ordinary shares at the present price, which puts a value of £870,000 on the equity capital, are not readily discernible unless there has been a material improvement in the position during the past year.

Brevities

Although the outlook in the U.K. jute trade is described as "confused and difficult" in the annual report of Law and Bonar of Dundee, this jute and flax group did sufficiently well in the engineering division, particularly in Canada and South Africa, to show an increased profit, maintain its 13½ per cent distribution (covered nearly three times) and give shareholders a special cash distribution of 2½ per cent tax free.

Holders of more than 90 percent of the British Celanese capital having accepted the offer from Courtaulds, the merger plans have succeeded to make the group undisputed leaders of the rayon industry at home with valuable overseas interests as well as offshoots in plastics and chemicals.

A White Paper making a minor modification in the U. S. loan agreement, published last Thursday, extends indefinitely the provision, hitherto subject to time-limit, by which the U.S. Government can take up to \$50 million (£17,840,000) of the U. K.'s repayments in sterling. This will be a convenience to the U. S. Government in meeting payments for which sterling is required. It will also ease slightly the strain on the U.K.'s gold and dollar reserves.

The first premium bonds draw took place recently, when winning numbers for 96 prizes of £1,000 and 192 prizes of £500 were announced. The draw for the remaining 22,854 prizes, ranging from £250 to £25, continued over the next three days, and all winners were notified by post last week-end.

The Iron and Steel Realisation Agency has completed the sale to John S. Tregoning, in conjunction with Ductile Steels and Robert Benson, Lonsdale and Co., of all the issued share capital of the Bynea Steel Works, Swansea, for £680,000. Tregoning were large shareholders in Bynea before the company was nationalised in 1951.

A scheme of travel fellowships within the Commonwealth has been prepared by the Commonwealth Press Union's committee for the training and education of journalists. Its object is to enable young newspaper men to obtain first-hand knowledge of some part of the Commonwealth other than their home countries.

Bombay

SUPPORT FOR NEW OFFICIAL LOANS INVESTMENT OF LIFE INSURANCE FUNDS

(FROM OUR BOMBAY CORRESPONDENT)

THE Life Insurance Corporation is preparing to support the Government's forthcoming borrowing programme, according to authoritative sources. It is believed that substantial funds have been diverted to short-term deposits which will enable the Corporation to mobilise them when new Government loans are floated. The Corporation helped maintain the tone of the Bombay stock market immediately after the Central Budget proposals were announced. Some sections of the money market fear that if the Corporation were to support the new loans, it might mean that it will have to liquidate its industrial holdings. But authoritative circles point out that it will not be necessary to withdraw support from industry in order to subscribe to new official loans. The basis of such a conclusion is not clear, but it would seem that the Corporation's ability to support both industry and Government borrowing depends on its expected gross revenue over the year. The Corporation seems to believe that the average business of Rs. 5 crores a week will be maintained in 1957.

Based on this estimate of new business, it is computed that the Corporation will have an investible surplus of Rs. 30 crores to Rs. 40 crores a year. Of this, about Rs. 7 crores to Rs. 8 crores will be available for industry. It has been suggested that the Corporation may attempt to secure a hand in the working of companies in which it invests. But this has been refuted and it is pointed out that assurance has already been given that no such attempt will be made. It will perhaps be wise for the Corporation to make a further categorical statement to this effect.

Railway Overcrowding

The Central Railway Minister, Mr. Jagjivan Ram, in a speech here last Sunday, said he would request the Planning Commission to increase the railway allotment to Rs. 1,400 crores which is the sum the Railway Minister had originally asked for. Declaring Bombay's new Churchgate railway station open to traffic, Mr. Jagjivan Ram said: "I have been trying to secure more allocation from the Planning Commission and I have succeeded to some extent. I have been able to secure Rs. 200 crores more. I am sure that if we are in a position to utilise that money, we will be able to persuade and convince the Planning Commission to make more allotments to the railway. But the real difficulty today is the shortage of materials that are required for the railways. The materials are iron and steel and perhaps you are aware that we have sent a mission to the Continent for securing rails, sleepers and other steel materials. I am not quite sure how far we will succeed. All our development plans depend on the procurement of basic materials. So we are trying to increase our capacity as far as we can."

The Railway Minister emphasised that his Ministry would increasingly concentrate on expanding goods traffic facilities and warned that the country could expect no relief in passenger traffic congestion. He said: "I know that the allotment to the railways by the Planning Commission for creating additional capacity for passenger traffic is too meagre. I know that even if the original demand of the railways for which I am trying with the Planning Commission is restored, we will not be in a position to create capacity for passenger traffic to the extent which will reduce overcrowding in any appreciable measure, because with all the developmental works in the country and the extra money that is going to be injected into the pockets of the general public and the requirements of the public to travel more and more, we will not be able to create that capacity which will be commensurate with the demands of the general public. Therefore, the railways have never said that during the second plan period or at the end of it we will relieve overcrowding. As a matter of fact, I am not revealing a secret when I say that when I go into the statistics, I find perhaps that at the end of the second five year plan, we will be adding something to the overcrowding instead of reducing it."

INDIAN OWNED TONNAGE IN OVERSEAS TRADE INCREASES

Indian-owned tonnage employed in various overseas trades consisted of 43 vessels of a total g.r.t. of 289,273 on 31st March, 1957, against 36 vessels with an aggregate of 239,953 g.r.t. on 31st March, 1956. The freight and passenger earnings of Indian shipping companies in the overseas trade showed an increase in 1955-56, the figures being Rs. 10.49 crores in 1954-55 and Rs. 13.41 crores in 1955-56. On the India-U.K. continental trade, Scindias and India steamships employed by the end of March 1957, 30 ships of about 208,329 g.r.t. against 25 ships of about 173,000 g.r.t. employed at the same time in 1956. The Eastern Shipping Corporation was able to ply two ships in the India-East Asia-Japan trade against one ship employed by it during the previous year. The Indian-owned tonnage employed on the coast as on 21st March, this year consisted of 81 vessels of a total g.r.t. of 232,167. The net provision for shipping is only Rs. 37 crores in the second plan for shipping.

Madras

FOOD SHORTAGE IN MADRAS

PROBLEMS OF SECURING RICE SURPLUS FROM ANDHRA

(FROM OUR MADRAS CORRESPONDENT)

AN influenza epidemic has spread far and wide in the State. It has reached Cochin and industrial centres of Madras and Coimbatore. Absenteeism in factories and offices has increased and so have delays in the port. State health insurance facilities are strained. The Corporation has attempted to deal with the epidemic by mobile clinics and by the location of isolation hospitals well outside the city. The epidemic has proved that precautions are of little avail. Experiments in Coonoor on the virus have been stimulated and a new vaccine has been prepared, but the influenza epidemic should make it plain that the country needs modern medicines and a drastic cut in imports will leave it vulnerable to disease.

The food problem in Madras can be solved if the surplus from Andhra is procured for it. That will lead to more adequate distribution and a fall in prices. The supply of rice to Kerala by the Central Government from its imported stocks will reduce the demand from that State. The rise in prices has been checked, but hoarding by big traders cannot be checked by a mere directive to banks against advances on paddy. Only the power to take over stocks can provide a salutary measure. Madras is practically self-sufficient even after the transfer of Malabar, although supplies to Pondicherry impose a new strain. Mr. Jain's talks with the trade during the past week contained an assurance against procurement and rationing, but the new food subsidy will help only Kerala which has procured all its supplies from the summer harvest from Madras as well as Andhra. Prices for paddy and rice in more and more districts have been firming up.

Minimum Price

The minimum price of Rs. 15 a maund prescribed by the Union Government is widely viewed as a move to depress food prices after the Central Budget had forced them up. Mr. Jain during his visit pleaded for free trade in the zone, but only when the Zonal Council meets next month will it be possible to take concrete steps in the matter. The purchase tax in Andhra is raising the price, and putting merchants and millers in difficulties as ryots in Nellore are able to sell directly to Madras. The price now charged includes the tax of 3 nP in the rupee. Madras has put in a plea for an extra supply from imports. If part of the advance in prices reflects inflation, transport shortages are no less important a factor. Higher charges for carriage by road are reflected in prices. Supplies from fair price shops have made little difference to the ruling market rates. Great store is set by a report that prices in Andhra are now falling on account of the Government's measures against hoarding.

Tube Products of India Factory

While the opening of the factory of Tube Products of India in Avadi, the Maharaja of Mysore applauded the step taken to provide steel tubes of many types for export as well as for home consumption. The old Malayan emigration camp acquired by the company provides a large setting for the modern factory in which Tube Investments of Birmingham has a substantial interest. Association with T.I. is taken as a guarantee of efficient management, and security for the Indian capital invested. Sir A. Ramaswami Mudaliar acknowledged the help given for starting the tube factory which will make Avadi a real town. Mr. P. G. Carew, a visiting director of T. I., said that progress at the site had been rapid and Indian labour was proving adaptable to modern methods. The factory is viewed as a sign of faith in India's industrial future and a landmark in engineering expansion.

Depression of Shares

It is generally expected that Madras and Mysore will copy Kerala by raising agricultural income tax and super tax although the levy of a wealth tax on land is unlikely. The effect of lower dividends will be reflected in lower prices for shares. The selling pressure that developed last week is expected to continue. Minimum prices have been fixed again to arrest the fall in shares. The general retreat in textiles was due to the 20 percent dividend from Mettur. The lower dividend, the directors have pointed out, is the result of power cuts on production and higher excise which have naturally cut into the profit margins. In production occurred in Kerala and Mysore State, and has been attributed generally to the unfavourable weather conditions during the flowering and growing period of the crop.

BLACK PEPPER ACREAGE INCREASES BUT PRODUCTION FALLS

According to the Central Directorate of Economic and Statistics, Ministry of Food and Agriculture, the all-India final estimate of black pepper, 3,600 acres and 31,600 tons, against the partially revised estimate of 232,500 acres and 32,100 tons for 1955-56. This shows an increase of 1,100 acres or 0.5 per cent in area and a decline of 500 tons or 1.6 per cent in production over last year. The increase in area during the current year has been reported mainly by Kerala State. In spite of an increase in area, there has been an overall decline in the production of black pepper. The decrease

SOUTH EASTERN RAILWAY TENDERS

The General Manager, South Eastern Railway, Garden Reach, Calcutta-23, invites sealed tenders for supply of the following materials:

Tender No. CON/GM/20/65-CS/B for supply of 50 Nos. Officers Push Trolley B. G. complete. Earnest money is Rs. 1,000/-.

Tenders will be opened on June 27, 1957 at 12.00 noon.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs. 5/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Rly., Garden Reach by local firms.

The tenders should be accompanied by a receipt from the Chief Cashier, S. E. Rly., Garden Reach, for amounts towards earnest money as above without which the tender is liable to be rejected. Approved Contractors who have already made a permanent deposit of Rs. 1,000/- with the Controller of Stores need not pay the Earnest Money.

Firms not on this Railway's list of approved Contractors must enclose a valid Income Tax Clearance Certificate with the tender.

GENERAL MANAGER

CAT

MOTOR GRADERS

All over India on the big construction projects with municipalities; state farms; and with the leading contractors, you can see Caterpillar Motor Graders hard at work.

Building or maintaining existing roads, ditches, shaping banks, there is no tool like the profit making Caterpillar Motor Grader.

All over India, and throughout the world successful contractors and project engineers give Caterpillar their first choice. The main reasons for this preference are the proved low cost, high production and long-lived performance of these famous machines.

Ensure the job gets done to time by using a Caterpillar Motor Grader. There are three models the No. 12, 112 and 212. One of these, or more, is the answer to your problem.

CATERPILLAR*

*Caterpillar and Cat are registered trademarks of Caterpillar Tractor Co., U.S.A.

CAT MOTOR GRADER SPECIFICATIONS

	No. 12	No. 112	No. 212
Engine	Diesel, four-stroke cycle		
Blade range:	16"	15½"	14½"
Lift above ground	40"	36"	33½"
Side shift (right or left)	...	...	...
Maximum bank cutting angle	90°	90°	90°
Maximum shoulder reach (measured outside rear wheels)	7'4"	6'5"	5'

"Time proved features—Balance of power, weight and speed! Long-life Caterpillar Diesel Engine! Mechanical controls with built-in Long Life! Structurally strong Main Frame!"

with CALTEX RPM 20-40 SPECIAL

This motor oil combines all the properties of SAE grades 20, 30 and 40 in one power-producing, money-saving oil that saves up to 15% of petrol and 33% of oil... HERE'S HOW IT WORKS:

for easier starting

Every time you start, your engine needs a light, quick-flowing SAE 20 oil. Bearings are then instantly protected... petrol is saved and battery life conserved because there is less "drag" than with heavier oils.

as you drive off

As your engine warms up it needs an oil with more body — SAE 30 — to resist the increase in engine temperature. RPM 20-40 SPECIAL gives you SAE 30 oil performance when you need it.

for the open road

When your engine reaches correct operating temperature, it needs the full-bodied protection of an SAE 40 oil. This new RPM motor oil meets all engine requirements during all driving phases.

change to
CALTEX
RPM 20-40 SPECIAL

AND SEE HOW SHE GOES!

quantities of yarns and cloth are being bought to meet urgent needs. Mill Firsts were reduced by about £2 to £122, Mill Lightnings to £116, Mill Hearts to £112 and grade Hearts to £105, while grade Tossa-2½ was quoted at £120 and grade Tossa-4 at £115 and good Daissee-2/3 at £115 and grade at £112, c.i.f., U.K., June-July. New crop was tentatively offered at £104 for Mill Lightnings and £100 for Mill Hearts, September-October, c.i.f.

The Calcutta goods market is steadier, too, and the report comes from India that production of jute goods has been seriously affected in many of the jute mills as a result of an influenza epidemic. The Indian mills have been doing very well recently in the disposal of their output of cloth and bags, but dividend results are still considered disappointing. It is being hinted here often enough that Pakistan wants to create a monopoly of the whole industry, from the raw material to the finished article, but so long as jute goods are produced in India, Pakistan will not get away with very much. She is taking a short-term outlook of the situation to keep up prices for raw jute as high as they are. Many people are bound to turn to substitutes, of which there are many nowadays, if the cost of jute packaging becomes too dear.

Prices for local yarns and cloth are all very firmly maintained, although conditions are really dull and short time and unemployment are increasing alarmingly. Consumers of jute goods in the U.K. are complaining bitterly about local manufactures being so dear in comparison with imported goods. Some announcement is expected by the Board of Trade, but some time may elapse before it is known what is in store for the industry in this country.

Calcutta goods are rather firmer at 65s 6d for 40in. 10oz. hessian and 49s 6d for 7½oz., June, 65s 3d and 49s 9d July and 66s and 50s for August-September, with B Twills at 178s 6d, 179s and 178s 6d for the respective positions of shipment, all f.o.b., Calcutta.

PAKISTAN TO HELP BUILD NEW LEBANESE JUTE MILL

The Pakistan Industrial Development Corporation has entered into an agreement with the Lebanese firm of Jute National Industries, S.A.L., to expand the latter's mill of 50 looms to 100 looms, it is learnt. The P.I.D.C., in collaboration with the Jute National Industries, will also set up a new unit for the manufacture of jute goods which will incorporate preparatory, spinning and weaving machinery. The agreement has been ratified by the Governments of both Pakistan and the Lebanon. The total cost of the mill is estimated at £340,000 of which the P.I.D.C. will contribute 25 percent (£85,000) to be paid in the form of raw jute. The P.I.D.C. will also render technical assistance in the preparation of plans, purchase of machinery and its installation. Mr. F. Jabre, a leading Lebanese industrialist representing the Jute National Industries S.A.L., visited Karachi in March last, and discussed the proposals with the P.I.D.C. Then the scheme was submitted to the Governments.

SOUTH EASTERN RAILWAY TENDERS.

The Controller of Stores, Garden Reach, Calcutta-23 invites tender No. PB/5/57/COS/87/52/TLR (56) for supply of 1088 Nos. of Bracket Body as per item A of Drg. 525 C&W/KPA. Tender forms are obtainable from his office (P. B. Section) on remittance of Rs. 2/- per copy (not refundable) by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, Garden Reach, Calcutta, by local firms. Closing date is 9. 7. 57 at 12 noon. Firms not on the Railway's list of approved contractors must deposit Rs. 250/- in cash as Earnest Money with the Chief Cashier, Garden Reach, Calcutta, and enclose his Receipt together with a valid Income Tax Clearance Certificate with the tender.

Commodity Markets

RECORD RICE PRODUCTION EXPECTED IN INDIA

THE final estimate of India's rice production for 1955-57 indicates that a record will be achieved of 28,142,000 tons of milled rice (41,385,000 tons of paddy). At the same time, the crop in Pakistan is believed to be the largest since 1953-54. The Commonwealth Economic Committee's Rice Bulletin for May, just published in London, in reporting these trends, comments that world rice production promises to reach a high level in the current season. World trade during the first quarter of 1957 was at a high level, shipments from Burma being maintained while those from Thailand and the U. S. A. showed an increase. The estimated record output from India is well above the high turnout of 40,837,000 tons of paddy in 1953-54. The acreage under rice in India is 78.2 million acres. Pakistan's estimate of paddy production is 12,834,000 tons, and the area under cultivation has increased to nearly 22 million acres.

Crop Prospects in South-East Asia

In Cambodia, the main crop has been gathered in spite of some damage caused by unseasonable weather in December. Estimates are less hopeful than formerly, but outturn is still expected to exceed 1.2 million tons of paddy, the level reached in 1955-56. In Malaya, the preliminary estimate for 1956-57 of 643,000 tons of paddy is a little below the total for the previous year, in spite of the larger area planted. A larger sown area has been indicated for Australia for 1956-57, and an overall increase of some 10 percent is said to be probable in spite of such adverse factors as the depredations of bird pests. In the western hemisphere, the prospects for the crop being harvested in Argentina are now reported good as are also those reported from Mexico. In Peru, the rice crop has suffered from an extreme shortage of water, and the original estimates from Uruguay have now been revised downward. In Africa, reports from Nyasaland indicate that the northern Province has suffered from drought, while the southern province crop ranges from fair to good. An overall surplus production of 5,000 tons of paddy is expected. In Sierra Leone, the harvesting of upland rice has been completed, and yields appear good.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939=100) advanced further by 0.6 percent to 437.3 during the week ended 25th May, 1957, compared with 434.7 (revised) for the earlier week. The index was higher by 3.3 percent and 11.8 percent, respectively when compared with the corresponding week of the previous month and that of a year ago. The average for May 1957, worked out to 430.9 compared with 422.1 for April 1957, and 390.3 for May 1956. The index for Food Articles advanced by 1.7 percent to 430.9 due to the higher rate for sugar supported by an increase in the prices of gram (+3%) and wheat (+2%) both in Hapur in spite of a fall in the prices of coffee—Native Flat—in Mangalore (-8%) and rice in Calcutta and wheat in Amritsar (-1%, each). Lower prices of manganese ore (average export price) (-3%), linseed and raw hides (-2%, each) and raw jute and rapeseed (-1% each) brought down the index for Industrial Raw Materials by 0.3 percent to 539.2, although the prices of castor-seed, gingellyseed and copra (+3% each), lac (+2%) and groundnuts (+1%) witnessed advances. The index for Semi-Manufactures went up by 0.6 percent to 412.3. Items which showed noticeable variations were: kerosene oil (+10%), zinc (+7%), castor oil in Madras (+6%), coconut oil in Cochin and mustard oil in Calcutta (+3%, each), groundnut oil in Bombay (+2%), linseed oil and groundnut cake (-3%, each) and castor oil in Calcutta (-2%). An increase in the price of jute manufactures (+1%) raised the index for Manufactures from 390.4 (revised) to 390.7; the price of glass (-1%) was, however, marked down. The index for the Miscellaneous group moved down by 0.2 percent to 571.6 (estimated) compared with 572.9 (estimated) for the earlier week as a result of a fall in the price of turmeric in Calcutta (-9%) in spite of an increase in the prices of betelnuts and vanaspathi (dalda) (+3% each) and cashew-nuts in Quilon (+1%).

U.S.-DEVELOPED LOOM TO PRODUCE WATER AND WIND RESISTANT COTTON FABRIC

The U.S. Agriculture Department recently announced the development of a new loom device which will produce wind and water resistant cotton fabric. The resistance will last for the life of the fabric. The new development has been described as a boon to cotton growers and textile manufacturers since it has opened a whole field of new uses for cotton textiles. The new process will make possible the manufacture of a cotton fabric which will keep the wearer dry in the heaviest rain while, at the same time, he will remain comfortably cool since the fabric is porous enough to permit cooling air to circulate through it. Water resistance in the cotton fabric, the authorities say, cannot wear off because the resistance is due to the cloth's tight weave and not to external treatments which clog fabric pores and make the cloth uncomfortable in humid weather.

Engineering and Transport

STARTING NEW INDUSTRIES WITH FOREIGN HELP

ACTIVITIES OF N.I.D.C. REVIEWED

NEGOTIATIONS between the National Industrial Development Corporation and several foreign firms for their collaboration in major industrial projects in India have reached an advanced stage. The Corporation has completed the technical and economic examination of a large number of these projects which are designed to develop new lines of production. With the approval of the Government, it proposes to concentrate on projects relating to (a) the manufacture of industrial machinery, (b) production of the primary intermediates required by the drugs, dyestuffs and plastics industries and (c) some crucial raw materials such as aluminium and synthetic rubber.

Heavy Machinery

Detailed project reports have been received from four firms—one each from Czechoslovakia and the United Kingdom and two from Western Germany—for the manufacture of heavy castings and forgings required for the manufacture of heavy machinery. After the recommendations of the Russian team of experts and the British Heavy Engineering Mission were received, the Government recently decided to execute the following heavy machinery projects: a heavy machine building plant, a foundry forge project, a heavy plate and vessels and heavy structural work, a heavy machine tool works, and a mining machinery plant.

Negotiations are in progress with overseas firms, who have offered collaboration in the execution of the project for the manufacture of the more important intermediates, including primary intermediates required for the organic chemical industries like drugs, dyestuffs, plastics, etcetera. It is expected that a final agreement with one of them will be reached within the next few months. Most of the organic chemical industries in the country depend on imported intermediates. With the expansion of the steel industry, it has become possible to manufacture most of these intermediates by utilising the coke oven by-products and the coal tar available from steel plants. The Corporation has received preliminary reports for a project to produce special alloy and stainless steels required for the manufacture of industrial plant and machinery. These reports have been prepared by firms in Czechoslovakia, France, Italy and the U.K. Discussions are now in progress over the size of the project and the method of its implementation.

Aluminium Plant

Exports from a well-known metal corporation in the United States have prepared a report on the technical and economic aspects of a 10,000-ton aluminium plant. Based on this report, negotiations are now going on with a number of important manufacturing groups. The consumption of aluminium has been steadily rising and by the end of 1960-61, there will be a gap of 15,000 to 20,000 tons a year between production and demand. The country has abundant supplies of bauxite and cheap power will be available from hydro-electric projects.

An expert team sent by four well-known American firms has prepared a report indicating the technical feasibility of a project for making 20,000 tons of synthetic rubber a year. Negotiations are in progress with firms interested in collaborating with the N.I.D.C. in this field. Although efforts are being made to expand the production of natural rubber, there will remain a gap which can be filled by producing synthetic rubber, which is superior to natural rubber in many applications. The production of synthetic rubber will also offer an economic outlet for industrial alcohol.

Raw Film Project

For the project for manufacturing cinema films, X-ray films and photographic papers, negotiations are now being held. A team of experts invited from Eastern Germany has prepared a preliminary report on the technical and economic aspects of the scheme. The demand of the Indian film industry for cinema films is likely to increase from 300 million feet a year at present to 400 million feet a year by the end of the second plan.

Loan to Jute and Cotton Mills

For the rehabilitation and modernisation of the jute and cotton textile industries, the Corporation has so far sanctioned about Rs. 1.95 crores to six cotton textile mills and Rs. 55 lakhs to two jute mills. The loans given by the Corporation bear interest at 4½ percent a year and are repayable in 15 annual instalments. Two advisory committees have been set up for the scrutiny of applications for loans—for jute in Calcutta and for cotton textiles in Bombay. Applications for loans from 30 more units in the cotton textile industry and 14 units in the jute industry are being surveyed and will be considered as soon as the surveys are completed. The loans granted by the N.I.D.C. are earmarked in each case for the procurement of modern machinery to replace old equipment, and thus strengthen the position of the industry in export and home markets by increasing productivity and reducing costs. Of the new machinery to be installed, Indian manufacturers are supplying a large portion.

The Board of Directors met recently under the chairmanship of Mr. Morarji Desai, Minister for Commerce and Industry. The Vice-Chairman of the Corporation and Minister of Industry, Mr. Manubhai Shah, Mr. Ramaswamy Mudaliar, Mr.

Kasturbhai Lalbhai, Mr. G. B. Kotak and other directors attended the meeting.

Review of Progress

Progress achieved in the investigation of projects came under review and the lines of future work were chalked out. These projects included the manufacture of newsprint from sugarcane bagasse, in a new factory to be started adjacent to the sugar mill in Shakkarnagar, in Andhra Pradesh. The mill is already the largest single unit in the sugar industry and is to be expanded further shortly. It is anticipated that the newsprint mill will be able to draw a supply of 50,000 tons of dry bagasse every year which will be necessary for the manufacture of 100 tons of newsprint every day. Though bagasse has been used in the past for producing experimental lots of newsprint, the process then used required the use of chemical pulp, which resulted in an increase in the cost. The new mill to be established by the N.I.D.C. will utilise a special process which does not call for the use of expensive chemical pulp. With an assured supply of bagasse as raw material, it is expected that the mill will help meet a substantial part of the growing demand for newsprint in the country equal to 30,000 tons a year.

An important material, tungsten carbide, which is used for the manufacture of cutting and mining tools, is to be made in India with the technical collaboration of an experienced foreign firm. Details are still being worked out, but certain tentative targets have been set for the production and the time schedule to be followed. Assistance for the development of Praga Tools, Hyderabad, was also discussed. The Board considered proposals for extending financial assistance to units of the machine tool industry for balancing their production capacity in different sections.

COAL WASHERY TO MEET FUEL NEEDS OF STATE STEEL PLANTS

The coal washery to be set up in Kargali at an estimated cost of Rs. 2.5 crores is expected to pro-

duce 550 tons of coal an hour. The washery will wash the entire annual output of nearly 2.2 million tons of coal in the Bokaro and Kargali collieries. The coal washed in Kargali will meet the major portion of coal requirements of Rourkela and Bhilai steel plants. A contract for the value of nearly Rs. 1.73 crores was placed with a firm for the supply, installation and commissioning of the washery by January 1958. One fourth of the plant and equipment has so far been received at the site and the remaining portion is expected to be received within the next few months. Fifty percent of the structural work has also been completed at the site. Japanese engineers and technicians have arrived in Kargali to supervise the work.

PROGRESS OF EASTERN SHIPPING CORPORATION

The working of the Eastern Shipping Corporation Ltd. in 1955-56 has shown a net profit of Rs. 31,71,038. Out of this, the Corporation has repaid to the Government of India a sum of Rs. 17.11 lakhs which it had borrowed during the previous year to cover its loss under the term of the indemnity agreement between it and the Government. One of the vessels, for which the Corporation had placed orders with the Hindustan Shipyard, was delivered during the year bringing the total number of the vessels of the Corporation's fleet to seven. This vessel, *The State of Kutch*, is the largest ship built in the shipyard so far. It has an overall length of 488 feet, a gross tonnage of 5,296 tons and a trial speed of 14.9 knots. *The State of Kutch* has been put on the India-East Asia-Japan route. The Eastern Shipping Corporation has also placed orders with the Hindustan Shipyard for three overseas vessels of 9,500 D.W.T. each and one cargo-cum-passenger vessel of about 4,000 D.W.T. The management of the second-hand passenger-cum-cargo ship *Nicobar*, acquired by the Ministry of Home Affairs, has been entrusted to the Eastern Shipping Corporation. The ship is employed on the India-Andamans route.

The secret of Popular Poplin—Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label...but your customers don't know the 'behind the scenes' story that ensures the complete reliability of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for you!

Look for

on the label

Issued by Cluett, Peabody & Co., Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information 'Sanforized' Service, 25, Market Street, Bombay 2.

Serving Industry—which Serves Mankind

1901—the birth of Monsanto starting with practically sweet nothing—the manufacture of a single chemical—Saccharin. Today, Monsanto ranks among the greatest names in chemicals and plastics, serving industry which serves mankind. Today—hundreds of industries rely on Monsanto: Agriculture—Automotive—Aviation—Beverages—Ceramics—Chemical Processing—Cosmetics, Perfumes—Dental—Dyeing—Electrical—Foods—Insecticides—Leather Tanning—Lumber—Machinery—Mining—Packaging—Paint, Varnish, Lacquer—Petroleum—Pharmaceutical—Pulp, Paper—Plastics—Printing Ink—Radio—Rayon—Refrigeration—Rubber—Soaps and Detergents—Textiles.

To those of you who are concerned with any operation in any of these industries, we extend a personal invitation—"Come and consult us". We shall help you increase production... improve products... decrease operating costs... and increase your sales.

MONSANTO CHEMICALS LIMITED, London. • MONSANTO CHEMICAL COMPANY, St. Louis, U.S.A. • Monsanto Canada Limited, Montreal. • Monsanto Chemicals (Australia) Ltd., Melbourne. • Monsanto Chemicals of India Private Ltd., Bombay. • Monsanto Argentina S.A.I.C., Buenos Aires. • Monsanto S.A., Mexico. • Monsanto-Kasei Chemical Co., Tokyo, Japan. • Monsanto-Boussios, Paris, France. • Representatives in principal cities.

Efficiency goes up ...in premises cooled by Carrier self-contained air conditioners!

Your staff feels better, works better—in an atmosphere air conditioned by CARRIER. Efficiency goes up, so does production... and the initial cost of your CARRIER self-contained air conditioner is soon paid off!

Specially designed coils and filters make the CARRIER extra efficient, help it to cool better at lower cost. And the CARRIER removes gallons of moisture from the air while it cools—provides a cleaner, healthier atmosphere!

The CARRIER self-contained air conditioner is one of the best investments you can make. Write to us for further details—and remember, we offer unique service-after-sales, too!

Available in sizes varying from 3 to 15 tons, the CARRIER self-contained air conditioner eliminates outside noise, provides an even, dust-free, draught-free atmosphere

Calcutta Markets

POOR DEMAND AT TEA EXPORT SALE

DUST PRICES DECLINE

AT Sale No. 1, held on 10th and 11th June, offerings at the Export auction were 27,390 packages for which there was only a poor demand. The main support came from internal operators. Although a few exporters were active. Whole leaf and stylish B.P.'s were well supported and were the strongest feature of the Sale, and the few teas possessing early quality sold well. Buying was generally very selective, and teas without quality were difficult of sale. Fannings grades were neglected and withdrawals were heavy. The few flavoury Darjeelings on offer sold well, but the more ordinary kinds from this district followed the general trend of the market.

Quotation

Plain B.P. Rs. 1.75 (Nominal).

Because of the lack of representative teas, further quotations are not given.

At the Internal Sale, Dust offerings amounted to 19,782 chests of which 6,116 chests were of new season's manufacture. The quality of the old season's teas continued to be of an ordinary description and with rather less demand than in last week's sale, the majority of descriptions showed a decline. The very few new season's Darjeelings on offer and the best C.T.C. Assams sold well, but the remaining new season's teas generally sold below valuations.

Quotation

Medium Doors Dust Rs. 1.45 to 1.50 (nominal)

Leaf on offer amounted to 228 chests, of which 141 chests were of new season's manufacture. The market was irregular, but generally easier.

IRREGULAR TREND IN FREIGHT MARKETS

ONLY a very moderate amount of business was concluded in the freight markets last week. The general trend was difficult to discern. Trans-Atlantic coal fixtures were arranged at the unchanged rate of 47s. but an extra 6d was conceded towards the end of the week. Grain from the River Plate to Continent showed an improvement at 100s as did sugar from Cuba to the U.K. at 115s. In the Far East, however, conditions were very dull and rates to most destinations were reduced further. Dungun-Japan ore was done at 41s 6d, for Vizagapatam-Northern Range at \$(U.S.)14 for August loading. Mormugao-Holland was lower at 82s 9d on gross terms. Wheat from North Pacific to Bombay was fixed at \$(U.S.)17 for a 22,000-ton tanker while a Liberty type accepted 25s 6d for three to four months' American trading.

SUGAR STEADIER

During the week ended 12th June, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 2,000 bags and stocks totalled 80,000 bags. Rates for ready sugar, ex-Kantapur delivery, were Rs. 35-10 for ordinary grain and Rs. 36-4 for big grain. The market was steadier.

LINSEED MAINTAINED

Little change has been recorded during the past week. Crushers have been reserved. Arrivals have been poor, but despite a lack of buying support, prices were well maintained as sellers were rather reserved. The oil section has been very dull, and activity has been restricted to small local sales; overseas prices have continued to decline. Latest quotations were as follows: Ready-June Rs. 22-2 a maund; June-July Rs. 22-8 a maund and July-August Rs. 22-14 a maund.

HIDES AND SKINS STEADY

The market was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 4th June and 10th June, 1957)

Cowhides: Wet salted (Ord.) 20,000 pcs. on the basis of Rs. 7/75 to Rs. 8/50; Wet salted (Slaughtered) 21,600 pcs. on the basis of Rs. 13 to Rs. 21.

Goatskins: Wet salted (Daissee, Killed) 59,100 pcs. on the basis of Rs. 285 to Rs. 300. Rs. 325 to Rs. 350 and Rs. 385 to Rs. 400; Assam-Dinajpur-Murshidabad 7,100 pcs. on the basis of Rs. 285 to Rs. 350; Purneah-Kissenganj 1,200 pcs. on the basis of Rs. 310.

Bazaar Stocks

(10th June, 1957)

Cowhides: Wet salted 1,61,000 pcs.
Goatskins: Wet salted (Daissee, Killed) 6,000 pcs.; Assam-Dinajpur-Murshidabad-16,000 pcs.; Muzafferpur-Patna-Pakur-Purneah-Kissenganj 30,000

COMPANY AND PUBLIC NOTICES

SWADESHI COTTON MILLS COMPANY LIMITED, KANPUR

NOTICE

NOTICE is hereby given that the 36th Annual General Meeting of the shareholders of the Swadeshi Cotton Mills Company Limited will be held at the Registered Office of the Company at Swadeshi House, Civil Lines, Kanpur on 24th day of June, 1957 at 3 p.m. to transact the following business:—

1. To receive and consider the Audited Profit & Loss Account for the year ended 31st December, 1956 and the Balance Sheet as on that date, and Reports of the Directors and of the Auditors thereon.

2. To elect a Director in the place of Mr. G. D. Kehmani who retires by rotation but who offers himself for re-election, and to consider and if thought fit to pass the following resolution as a Special Resolution in respect of which a Special Notice has been received by the Company, as required by Section 261 of the Companies Act, 1956. (The reasons making the resolution necessary are being set out in the explanatory statement under Section 173 of the Companies Act annexed hereto).

RESOLVED that Sri G. D. Kehmani who retires by rotation from his office as a Director and who is an Associate of the Managing Agents, Messrs. Jaipuria Bros. Limited, be and is hereby appointed a Director of the Company.

3. To appoint Auditors in place of those retiring and to fix their remuneration.

4. To sanction the declaration of dividend.

SPECIAL BUSINESS

5. To approve pursuant to Section 261 of the Companies Act, 1956, the continued appointment as a Director of Shri M. L. Bazaz who was appointed a Director at the Ordinary General Meeting held on 30th September, 1955 and to consider and if thought fit to pass the following resolution as a Special Resolution in respect of which a Special Notice as required by Section 261 of the said Act has been received by the Company. (The reasons making the Resolution necessary are being set out in the explanatory statement under Section 173 of the Companies Act annexed hereto.)

RESOLVED that pursuant to the provisions of Section 261 of the Companies Act, 1956, the continued appointment of Shri M. L. Bazaz, as a Director of the Company who is also an associate of the Managing Agents of the Company be and is hereby approved.

6. To approve pursuant to Section 261 of the Companies Act, 1956, the continued appointment as a Director of Shri S. Jaipuria who was appointed a Director at the Ordinary General Meeting held on 30th September, 1954 and to consider and if thought fit to pass the following resolution as a Special Resolution in respect of which a Special Notice as required by Section 261 of the said Act has been received by the Company. (The reasons making the resolution necessary are being set out in the explanatory statement under Section 173 of the Companies Act annexed hereto.)

RESOLVED that pursuant to the provisions of the Section 261 of the Companies Act, the continued appointment of Shri S. Jaipuria as a Director of the Company who is also an associate of the Managing Agents of the Company be and is hereby approved.

7. To consider, and if thought fit approve the draft new articles which will be submitted to the meeting and in the event of the approval thereof, with or without modifications to consider and if thought fit to pass the following resolution as a Special Resolution:—

RESOLVED that pursuant to Section 31 of the Companies Act, 1956, the new articles as already approved by this meeting and for the purpose of identification subscribed by the Chairman thereof, be and is hereby approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of the existing Articles of Association thereof.

8. To consider and if thought fit to pass the following resolution with or without modification as a Special Resolution:—

RESOLVED that pursuant to Section 16(3) of the Companies Act, 1956, the Memorandum of Association of the Company be and is hereby altered in the manner following:—

"Clause 5 of the said Memorandum of Association be deleted and the following be approved and adopted as clause 5 in substitution for and to the exclusion of the existing clause 5:—

"The capital of the Company is Rs. 2,10,00,000/- divided into:—

(a) Preference Share Capital: 35,000 Preference Shares of Rs. 100/- each, 15,75,000 Preferred Ordinary Shares of Rs. 10/- each.

(b) Equity Share Capital: 1,75,000 Ordinary Shares of Rs. 10/- each,

with power to increase and reduce the Capital of the Company and to divide the same into different classes and to attach thereto respectively such preferential, qualified or special rights, privileges or conditions as may be deter-

mined by or be in accordance with the regulations of the Company and to vary, modify or abrogate any such rights, privileges or concessions in such manner as may for the time being be provided by the regulations of the Company".

Notice is also hereby given that the Transfer Books and the Register of Members of the Company will be closed from the 17th June to the 24th June, 1957, both days inclusive.

By Order of the Board.

M-Leod Road,
Karachi-1.

ANNEXURE TO THE NOTICE DATED 25TH MAY, 1957 CONVENING THE 36TH ANNUAL GENERAL MEETING ON 24TH JUNE, 1957.

EXPLANATORY STATEMENTS AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

1. Re: Item No. 2: Shri G. D. Kehmani retires by rotation from the office as a Director of the Company but offers himself for re-election. As Mr. G. D. Kehmani is an Associate of the Managing Agents, he can be appointed a Director only by means of a Special Resolution under Section 261 and, accordingly the Special Resolution under item 2 above, of which special notice has been received by the Company, is recommended for acceptance. Shri Kehmani has been long associated with this Company and is a businessman of repute. It is desirable that the Company should continue to be benefited by his experience and knowledge.

2. Re: Item No. 6: Shri S. Jaipuria is an Associate of the Managing Agents of the Company. His appointment as a Director can only be continued by a Special Resolution of the Company under the provisions of Section 261. A Special Notice has been received by the Company as required by Section 261 of the Companies Act, 1956, proposing that the appointment of Shri S. Jaipuria as Director be approved in accordance with the provisions of the said Section. As it is in the interest of the Company that it should continue to receive the benefit of his valuable guidance it is desirable that his continuance as a Director be approved by a Special Resolution in accordance with the provisions of Section 261 of the Act.

3. Re: Item No. 5: Shri M. L. Bazaz is an Associate of the Managing Agents of the Company. His appointment as a Director can only be continued by a Special Resolution of the Company under the provisions of Section 261. A Special Notice has been received by the Company as required by Section 261 of the Companies Act, 1956, proposing that the appointment of Shri M. L. Bazaz as Director be approved in accordance with the provisions of the said Section. As it is in the interest of the Company that it should continue to receive the benefit of his valuable guidance it is desirable that his continuance as a Director be approved by a Special Resolution in accordance with the provisions of Section 261 of the Act.

4. Re: Item No. 7: The existing Articles of Association of the Company were adopted at the time of the incorporation of the Company and from time to time have been amended in certain respects by special resolutions. The Companies Act, 1956 (hereinafter called the new Act) came into force as from 1st April, 1956, and has effected considerable changes in the law and procedure relating to companies. Reference to the Act herein made are to the Companies Act, 1956.

Several of the charges which came into force as a result of the new Act override or affect various

provisions in the present Articles of Association of the Company which consequently require amendment to bring them into line with the amended provisions of the new Act, and certain new provisions in the Act for the regulation of companies, need to be incorporated in the Articles.

As the alterations are numerous, it has been considered desirable to substitute a new set of Articles for the present Articles of Association of the Company. The proposed alterations fall into the following categories:—

- alterations made to comply with the provisions of the new Act where the present Articles are in direct conflict with such provisions.
- alterations which, though not essential for removal of a conflict between the present Articles and the provisions of the new Act, have been rendered necessary or desirable as a result of or to comply with such provisions.
- alterations resulting in either improvement of language used, or made with a view to bringing existing Articles into line with modern practice.
- deletion of obsolete Articles, and
- a few alterations not falling under any of the above categories but considered desirable.

5. Re: Item No. 8: The change in clause 5 of the Memorandum of Association with respect to Capital has become necessary because of the existing capital structure of the Company.

Draft of the proposed new Articles of Association initiated by the Chairman and a copy of the existing Articles of Association may be inspected at the Registered Office of the Company between the hours of 2 p.m. to 4 p.m. on any working day.

THE CASE FOR INCREASING COAL PRICES

DIFFICULTIES IN ATTRACTING INVESTMENT HAMPER EXPANSION

THE coal industry has long been subject to an extraordinary degree of regulation and control. As a basic industry which is of vital importance to the rest of the economy, it presents a crucial aspect of the problem inseparable from any sort of price control, that of reconciling the interests of consumers with those of labour and investors. Since 1947, costs of production have risen steeply as a result of successive labour awards and the generally inflationary trend of prices. But the industry's efforts to secure an increase in selling prices have met with meagre success. In consequence, profit margins have been squeezed to the point where it is extremely difficult to attract the capital needed to produce the additional 10 million tons which private collieries are expected to raise under the second five year plan. On the Calcutta Stock Exchange, coal shares are almost completely neglected and prices have been steadily falling. The index number of variable dividend industrial securities (base year 1949-50 = 100) shows a decline in coal shares from 84.5 in January 1956 to 74.8 in January 1957 and 69.4 in mid-June 1957.

The industry's case for raising selling prices from their present levels is strong. Colliery working costs have been rising steeply, under almost every major

director of the International Monetary Fund. Dr. Per Jacobsson, has warned that drawings from the Fund in excess of 50 percent of the quota should be for the purpose of supporting a currency "at a realistic rate of exchange"; thereby implying that countries which persist in maintaining an unrealistic rate cannot rely on assistance from the Fund. The U.N. Economic Commission for Europe, discussing the European free trade plan, has pointed out that the present pattern of exchange rates will most improbably be appropriate to the new structure of trade, and that the scheme requires some understanding that countries in chronic deficit will devalue, while countries in chronic surplus will revalue, their currencies.

The European trading plan will evidently not begin operating as soon as its sponsors hoped, and rigid realignment of currencies before then would be unwise. It is doubtful, however, if a once-for-all adjustment would lead to the right result in any case. In London, at least, there is a strong body of opinion in favour of temporarily "floating" rates for those currencies which are in process of adjustment; and this process could last many months.

It is recognised that any departure from fixed rates may be unsettling and that the number of variable rate currencies should be kept to the practicable minimum, assuming that the principle itself is accepted. On that reasoning, the currencies which should be allowed temporarily to "float" are the West German mark and the French franc. From time to time, irrespective of any general realignment, there has been talk of "floating" rates for sterling, but in the City of London, and certainly in the British Treasury, no such arrangement is considered necessary at this time.

It should be emphasised that, whatever may be the opinion of sterling abroad, observers in London do not believe that the currency is fundamentally overvalued. Its periodical weakness is caused by transfers of capital rather than by deficits on current commercial account; it is psychological rather than material and tends, therefore, to correct itself. Self-correcting also are the "leads and lags"—acceleration of payments due and delaying of collection of money receivable, with the idea that more favourable exchange rates will prevail in the near future. A big "short" position in sterling has been built up in the period of uncertainty, but it will doubtless be covered when international speculators perceive the benefits to sterling of the resumption of traffic through the Suez Canal. It is considered questionable whether all of the currencies linked with sterling are realistically valued, but sterling itself seems to be, fundamentally, in approximate equilibrium. It is, therefore, suggested in London—for practical reasons, not from any sense of pride—that sterling might be taken as the focal point of a realignment of European currencies, some of them being raised, some lowered, in terms of sterling, while the sterling-dollar rate remained unaltered.

CURRENT COIN

Chartered and Eastern Banks.—The Chartered Bank proposes to make an offer to acquire the whole of the issued share capital of the Eastern Bank, according to an announcement made jointly by the directors of the two banks in London last week. This offer is on the basis of £9 fully paid stock of the Chartered Bank for every two shares of £10 each (£5 paid) of the Eastern Bank. Full particulars relating to the offer will be set out in a circular letter from the Chartered Bank to the shareholders of the Eastern Bank which will be sent by 22nd June 1957, under cover of a circular letter from the chairman of the Eastern Bank. The offer will be expressed as being conditional upon its acceptance by the holders of 90 percent of the issued shares of the Eastern Bank or of such smaller percentage as the Chartered Bank may agree to accept. The directors of the Eastern Bank intend to accept the offer for their own beneficial shareholdings and will unanimously recommend that shareholders of the Eastern Bank do the same. The main advantages expected to result from the proposed merger of the two banks are improved opportunities of expansion and the establishment of a combined organisation to operate throughout the Middle East and the Far East. The directors of the two banks emphasise particularly that the proposed merger will in no way adversely affect the conditions of service (including pension rights) of their staffs and is not expected to involve any redundancy.

Trends in U.S. Business.—The tone of business reports has improved somewhat during May, although the adjustment of inventories and production is still under way, according to the latest monthly letter of the First National City Bank of New York on U.S. business and economic conditions. Steel mills note a slight quickening of new orders, while textile markets have had their biggest flurry of forward buying since last October.

Stock markets have been strong and commodity markets steady to firm. Business men find encouraging reading in many corporate earnings reports, particularly when the squeeze on profits proves not as bad as many had feared. Corporations are maintaining their high rate of capital expenditures, and increases in investment programmes far outnumber decreases. Retail sales and employment are holding steady at high levels. Reports like these effectively counterbalance the well-known soft spots and the slight sag in industrial output, which primarily reflects inventory adjustment. In some cases, inventories are being reduced and almost everywhere the rate of accumulation has lessened. In April, the Federal Reserve Board's production index (seasonally adjusted, 1947-49=100) edged downward to 145 from the plateau of 146-147 which had been maintained since last October. If the sag in the index continued in May, it did not go far. The end of the Suez crisis removed a major stimulus to crude petroleum and coal production but by May, output had steadied at a reduced level. Steel mill operations continued their downward drift during April and reached a low of 84.2 percent of capacity in mid-May; subsequently they recovered slightly and were scheduled at 87.8 percent in the week ended 2nd June. Automobile production appears to have levelled off at about 150,000 cars and trucks a week in mid-April and is scheduled at the same pace through midyear, in contrast to the sharp cutbacks during the second quarter of last year. In general, the output of non-durable goods rose to a new record in April. From all signs, the situation is one of continuing but not deepening adjustment. Nowhere are there convincing indications of a major change of direction in economic activity—either up or down—in the near future. During the past year and a half, output of manufactured goods has fluctuated within a fairly narrow range. At 145 in April, the index of industrial production was two points below the record set in December 1956 and two points above the level first reached in October 1955. During this period manpower needs for manufacturing production have actually declined. The number of factory production workers has dropped somewhat more than 1 percent since the second half of 1955 and average hours worked a week have been reduced about 3 percent. The moderate increase in aggregate output has been made possible by a gradual rise in productivity attributable chiefly to heavy investments in new factories and better machinery. In employment, as in production, smooth offsetting adjustments have taken place. From the viewpoint of the economy as a whole, job openings in trade, finance, Government and other growing service industries have more than offset the lessened opportunities in direct production lines.

U.N. Technical Assistance Programme.—The practical value of the U.N. technical assistance programme is widely appreciated; but the demand for facilities is so great that even if increased resources are available, they would not be enough. The latest report of the U.N. Technical Assistance Board to the Technical Assistance Committee says that it might be advisable to consider concentrating on the development of the countries and territories which need help most. Some readjustments in the geographical distribution of technical assistance have already been made, and the countries which have recently gained independence have received more benefits. Among the latter are Viet-Nam, Cambodia, Laos, the Sudan, Tunisia, Morocco and Ghana. The total amount of aid to be given to these countries this year will almost be double that given in 1956. In many underdeveloped countries, help is being offered for the development of administrative and technical services, since "the ability of a country to develop its resources and to take full advantage of technical assistance in any of the specialised fields is closely related to the stage of development of its basic institutional framework and of its administrative machinery." The report says that the year 1956 witnessed the implementation of the first annual programme which had been planned and approved in accordance with the new procedures laid down by the U.N. Economic and Social Council. It was in fact the largest annual programme since the expanded scheme was started in 1950. Referring to the financial prospects, the Board says that the resources for the programme continue to expand at a modest rate. Although 80 countries have promised to contribute funds to the extent of \$30.8 million and 30 countries have increased their contributions, resources fall far short of what is needed to meet the increasing demands from underdeveloped countries. "The Technical Assistance Board envisaged a conservative expansion of the annual resources of the programme to \$50 million over a period of years. This modest goal could now be reached in five years if the annual increases in pledges (which have averaged \$2.4 million) could be brought to \$4 million a year," the report says.

Rising Cost of Pensions.—The amount British taxpayers will have to find to finance the "gap" in

the national insurance scheme will grow from £5 million this year to more than £400 million by 1979-80. Taking this estimate made by the Government Actuary, the life offices, in a booklet recently issued, deal with recent suggestions for an extension of State pensions. These, it points out, give rise to three main issues: (1) whether it is in the best interests of the country that the State scheme should be extended beyond the level of basic need; (2) if it is extended whether the country should incur the additional burden that would result from including in the scheme the present pensioners and the older workers, and so granting them additional pensions well beyond the amount that could be financed by their own and their employers' additional contributions; and (3) whether the methods used in financing the present basic pension would be suitable for the entirely different level of pensions contemplated. The pamphlet is a useful contribution to a much discussed but little understood question, for it clears many misconceptions and goes on to offer some interesting suggestions. The most controversial of the latter is that a minimum standard of supplementary pension provision for each employed person (in addition to the State pension) might also be introduced. It is suggested that this might possibly be in graded stages over a period of years, bearing in mind the question of cost to the employer. There should be a minimum of disturbance to existing pension schemes. The pamphlet suggests that it would be better to solve a number of problems "before embarking upon a scheme for a wide extension of State pensions involving an incalculable increase in the ultimate burden on future taxpayers." For instance, "would it not be desirable to explore the possibility of linking any further advances in the amount of the basic pension with the raising of the normal pension age—a change that, in the light of the growing number of persons at the advanced ages and of improving longevity, must assuredly come in the next decade or so?"

Industrial Uses for New Textiles.—One object of the Cotton Board's stand at the recent Industrial Textiles Trade Fair at the Royal Albert Hall in London was to uphold and demonstrate the position of the cotton fibre as the predominant partner in the field of industrial textiles, and it certainly fulfilled that, writes our London correspondent. Nearly three-quarters of the textile products used for industrial and mechanical purposes are made from cotton, but the "partnership" angle was demonstrated in several very interesting combinations with other fibres. The latest evidence of this co-operation, and its importance in the future, is apparent in the agreement recently reached between the British Rayon Research Association and the British Cotton Industry Research Association by which it is intended to avoid overlapping and secure maximum results and efficiency by consultation and collaboration. The increasing use of synthetic fibres, some coated with forms of plastics, affords the main "talking point" of the general exhibit, to which some 60 individual firms contributed. Terylene coated with p.v.c., for instance, makes tarpaulins which are rot-proof, resistant to acid and to sunlight, and half the weight of ordinary tarpaulins. It also makes protective suits for research workers on the new propellant, high test peroxide, now being used for rocket motors. Fishing nets in nylon and Terylene have increased catches, and the whaling fleets use Terylene rope. Asbestos is reinforced with a core of glass fibre, and there are developments in the fire-proofing of various fabrics, notably a pleasant-looking cotton viscose drill for factory overalls. Experimentally the same process is being applied to miners' clothing, since the death-roll in recent disasters has been quite as much due to clothing catching fire as to the direct result of the explosions. A tough boiler-suit in silicone-proofed sateen has been designed for television riggers. For wear at sea Dunlop is bringing out a plimsoll with nylon canvas top. Synthetics have not quite swept the field, however. The special suits for workers in refrigeration depôts employ nothing more surprising than thick, tough and cheap-quality pure wool.

Cotton Which Looks Like Silk.—Finishers play an important part in the new fabrics now being offered to the public, especially those combining natural with man-made fibres. One of the few instances of a new cotton fabric in which the special characteristics arise before the application of the finishing processes is provided by "Shan-su", now being produced by Haslams, of Manchester, a section of the Amalgamated Cotton Mills Trust Ltd. This fabric is woven in such a way as to give it the appearance of wild silk, the effect being completed by finishing with the lustre of silk. Long-stapled Sudan cotton is used for spinning the yarn, and in the weaving process a two-fold warp is employed with a singles weft which is spun in variable counts, producing a slub effect without, however, the weakness usually associated with slubs. Patent protection for the spinning process has been applied for. The fabric, which is available in plain colours and in printed designs, is fully-shrunk, crease- and dirt-resistant and

wrinkle-shedding. It is quick-drying—it can be drip-dried if necessary—and requires little ironing. The general effect of the cloth is very similar to the eye and to the touch to that of shantung silk, though it can take brighter and clearer colours than those usually seen on that material.

Interim Statements by Companies.—The case for interim company statements was put with great cogency by Sir Richard Yeabsey, President of the U.K. Society of Incorporated Accountants, at that body's recent annual meeting. He had little doubt that public opinion, as reflected in the Press "and possibly in time in the regulations of the Stock Exchange" would demand publication in at least certain cases of appropriate information as to the trend of trading and the changes in the financial position that have occurred at intervals much shorter than a year. He also thought that such figures should be published at a date not far distant from that of the end of the period in question. Addressing himself to the problems raised from the accountant's standpoint, Sir Richard went on to pose the questions: (a) how often; (b) what should be given, e.g., sales, orders, profit, net current assets, etcetera; (c) on whose authority; (d) should the auditors be concerned; (e) should the figures for the last period in the financial year be given or merged in the annual accounts; and (f) what steps should auditors take if they find that the information published was incorrect to a material extent? He thought that accountants should face up to these questions and give a clear lead.

U.K. Textile Machinery.—As markets for Lancashire's textile products have dwindled with the development of local industries, there has been a compensating improvement in the demand for British textile machinery. This trend has been particularly noticeable over the last few years, but current figures and the experience of manufacturers suggests that the demand is levelling off. In the first three months of this year, British exports of textile machinery were valued at £11,311,000 for 377,000 cwt., against £12,632,000 and 467,000 cwt. in the same quarter of last year, and £11,096,000 and 425,000 cwt. in 1955. India is still the principal importer, but her offtake this year was no more than 90,000 cwt. against 116,000 cwt. at the same time last year. Russia was the second largest importer in 1956, but this year she has dropped well down the list and been replaced by Pakistan, which increased her offtake to 33,000 cwt. from only 14,000 cwt. in the first quarter of last year, while Russia's fell from 42,000 cwt. to only 13,000 cwt. Another big drop was in shipments to Egypt, down to only 600 cwt. against last year's 18,000 cwt. Most of the countries of Europe maintained their normal demand, with France and Portugal recording increases from 13,000 cwt. to 21,000 cwt. and 9,000 cwt. to 12,000 cwt., respectively. The United States is another developing market with first quarter totals of 18,000 cwt. this year, compared with 16,000 cwt. last year and 13,000 cwt. the year before that. A breakdown into categories shows that machinery for processes preparatory to spinning fell from 123,000 cwt. in the first quarter of last year to 95,000 cwt. this year, and there was a drop to 58,000 cwt. from 84,000 cwt. in spinning and twisting machinery. Automatic looms accounted for 16,000 cwt. compared with 28,000 cwt. last year, and other looms for 21,000 cwt. compared with 39,000 cwt. The high quality of British production is not proving enough to overcome the search for self-sufficiency in producing countries with a strong bias towards nationalism, but the increasing research aimed at producing better machines may help restore the position.

CORRESPONDENCE

REMITTANCE OF PROFITS BY FOREIGN FIRMS

(TO THE EDITOR OF "CAPITAL")

Sir,

May I seek some space in your valuable columns to reply to the comments of the Ditcher which have appeared in the issue of *Capital* dated 13th June, 1957, on a couple of suggestions made by Mr. Babubhai M. Chinai at the last meeting of the Import Advisory Council? The suggestions which have come in for caustic comment relate to cuts in import of raw films and the possibility of seeking the co-operation of foreign enterprises operating in India to see as to whether they can reduce their remittances abroad. The Ditcher has chosen with his felicitous pen to give to the readers an undignified and absurd cartoon of the suggestions and of the author of the suggestions; and the drawing starts with the hope that enough raw film would be left for making a cinematographic picture of the performance of Mr. Chinai at the Council meeting! In the final make-up of his own drawing, the Ditcher likens the recommendations of Mr. Chinai to those of communists, disbelieves Mr. Chinai's acquaintance with business, working, sizes him up as acutely jealous of foreign capital and

finally figures that the industrial delegation, which is being sponsored by the Federation to visit Europe and America, of which Mr. Chinai is a member, will stimulate illwill rather than goodwill. Obviously, the edge to his writing has been provided by a sense of indignation. And when one becomes indignant, he either wittingly or unwittingly obscures issues by introducing irrelevancies, exciting ridicule and arousing prejudice. What else can be the explanation, if not the reason the Ditcher himself gives in a parallel column that "it is essential for a journalist to be able to write quickly"? If indignation is added to speed, there can be most unfortunate results.

The suggestion of the President of the Federation about inviting the co-operation of foreign enterprises operating in India to consider as to whether the remittances abroad could be reduced has to be viewed in the context of the present foreign exchange difficulties faced by India. It is wrong to infer therefrom that either Mr. Chinai or the Federation is against foreign capital or jealous of it. On the contrary, the Federation has made it clear from time to time that it is in broad agreement with the Government's liberal policy in respect of foreign investments as enunciated by the Prime Minister in April 1949, and the subsequent elucidation of this policy by the spokesmen of the Government. The Ditcher has done not only a great injustice to Mr. Chinai, but also to the readers of *Capital*, who, by and large, are also foreign investors operating in India. I am, however, confident that these foreign investors would want the Indian economy to be placed on an even keel as soon as possible. That is the surest way of safeguarding and promoting investments, whether foreign or Indian. If any temporary

"A SURVEY OF HEAVY INDUSTRIES IN INDIA"

With next week's edition of *CAPITAL*, dated 27th June, will be published a 96-page Survey of Heavy Industries in India, containing articles discussing the problems, prospects and possibilities of industrial enterprise in one of the most vital sectors of the economy of this country today. The supplement will be supplied free to registered subscribers and will be available to others at Rs. 5 a copy (postage extra). Enquiries may be addressed to the Manager, *CAPITAL*, 5, Mission Row, Calcutta 1.

restraint is to be exercised on a voluntary basis to secure larger and permanent advantage, a prudent investor, unlike the Ditcher, will not cavil at it. Anyway, what Mr. Chinai has suggested is not the freeing of profits or legislation in this behalf.

I wish to end with the earnest hope that the Ditcher will not succeed in ditching foreign interest and sentiment in my country.

Yours etcetera,

G. L. BANSAL

Secretary-General of the F.I.C.C.I.

Calcutta, 17th June.

EARTHQUAKE IN CALCUTTA

WE have to be very thankful that Calcutta, though severely damaged, did not encounter the full severity of the shock. The reports from Assam and Eastern Bengal show that the force of the shock there greatly exceeded what we experienced in Calcutta. Had the earthquakes been greater or more prolonged in Calcutta, the City of Palaces would have been a heap of ruins, and where we should have all found board and lodging is quite painful to think of. Whether such a severe shock as is reported to have occurred at Shillong, among many other places, would have destroyed our more substantial buildings, it is impossible to say. But what we have to notice particularly is that in Calcutta only those houses which have been built of inferior material or old houses which have been badly and cheaply repaired, have been rendered uninhabitable. We may be thankful if this undoubted fact prompts the appointment of an independent and thoroughly honest house surveyor. We are aware that the Municipality employs a surveyor who can be called in by any one residing in a house which shows signs of collapse. But, we think, that is insufficient. A house surveyor should be appointed by the Lieutenant-Governor of Bengal, and should not in any way be dependent on the Municipal authorities. His duty should be, not only to make a survey when he is sent for, but to make himself constantly acquainted with the condition and material of buildings throughout the city. More especially, he should inspect exhaustively the materials employed in new buildings and in the repairs of the old ones. Free trade is no doubt an excellent thing in many ways, but surely no principle of trade can include the barter of human life for profit.

Without Prejudice

INTERPRETING THE GUILT OF LARCENY
DISTORTIONS IN MEANINGS
OF ORDINARY WORDS

(FROM OUR LEGAL CORRESPONDENT)

WE present another batch of English decisions and other matters legal reported in the past six months in the English legal Press, and particularly in the pages of that most lively of all law journals, *Law Notes*. London. We will begin with one of the moots periodically set by the learned editors for the majority decision of law debating societies throughout England. The facts are quite simple, but let us say at once that the question involved is a regular teaser, full of snags and one on which, if the lay reader put it to a legal friend, he would find that the wary gentleman would refuse to give a definite answer. Here it is: "A month after Roland had lent Oliver £5, they met in the street and Roland asked Oliver to repay the loan. Oliver, who had been celebrating a good win at the local races, took a bundle of notes from his pocket and asked how much he owed. Roland replied '£5' and Oliver handed him five £1 notes saying, 'May they be...y well choke you.' Three months afterwards, Roland received a letter in a sealed envelope properly addressed to him. At once he recognised Oliver's handwriting and thinking that the letter was likely to be a request for another loan, he put it in his pocket unopened. When Roland three days later opened the letter he discovered for the first time that it contained five £1 notes and a letter from Oliver stating: 'Here's what I owe you'. Roland then and there decided to appropriate the money and spent it on himself.

Assuming Oliver completely forgot that he had previously repaid the loan, is Roland guilty of larceny (i.e., theft) of the money contained in the letter?"

The moot is obviously based on and intended to cause discussion in the debating societies as to the rightness or wrongness of a decision of a strong divisional court reported some months previously. In that case a servant, a builder's labourer, obtained an advance of £6 19s 6½d on his week's wages of £7 3s 4d. Some three days later, the wages clerk, not knowing of the advance, handed to the servant a wage packet containing his full week's pay of £7 3s 4d. The servant who was unaware of the mistake until he opened the packet at home later the same day decided dishonestly to appropriate and did appropriate the whole sum to his use. Could he be convicted of larceny of £6 19s 6½d? "No," said the divisional court (Lord Goddard L.C.J., Hilbery J., Stable J., dissenting). The grounds were highly technical. At common law, a thief must have *animus furandi* (the mind to steal) at the time when he takes the property. The workman did not know of the mistake when he took the money; the wage packet and the whole of the money in it were intended to be handed and paid to him. When he accepted them, he had no mind to steal, and the property in the money seems to have passed to him, though by mistake, when he received it. All very dubious reasoning, you may think; and so does the writer: and so did Stable J.

To return to Roland's loan of £5 to Oliver. Of the nine societies debating the moot, five decided that Roland was and four (two of them by the chairman's casting vote) that he was not guilty of larceny. Nottingham won and the second prize went to North Staffordshire. But the judgment in the wage packet case stands and the lesson is that it may pay not to open letters until a day or two after they have been received. As

Molière put it: "Unreasonable haste is the direct road to error".

The amazing increase in Britain of the annual number of divorces has become a matter of disquiet even to lawyers who profit most by them financially. It is within the writer's recent experience that a petitioner's legal costs and expenses in an undefended divorce suit may amount to round about £180 to £200. One remembers the time when even in a great city like Liverpool a divorce was a very rare occurrence indeed. Judicial separations were 20 or 30 of them every Wednesday before the stipendiary magistrate. But divorces no: at a guess one would say not more than half a dozen or so every year. Now, again at a guess, one might estimate several thousand from any area of similar size and population in the course of a year. The average lawyer is not a sentimentalist nor is he at all inclined to turn away a fee of a couple of hundred pounds or so and more in the case of a defended suit. Nevertheless, even the lawyers of England seem to think that the time has come to cry a halt to the ever-increasing grounds for divorce. "Even the lawyers," one has said. But not in any derogatory sense. On the contrary, as one who has completely veered round to the view that the opponents of divorce on any ground "save for fornication," as the scripture bluntly puts it, have turned out to be right and the "extensionists" wrong the writer is proud to record the stout views of lawyers in a sort of Gallup poll submitted to them on a question wherein it was all to their financial advantage to take the opposite side.

This was the question submitted for debate and decision by *Law Notes* to the societies referred to earlier in this note: "Though neither spouse has committed a recognised matrimonial offence, are you in favour of a proposal that either of them may apply to the court for dissolution of marriage on the grounds that they have lived separately for a period of not less than seven years immediately preceding the application and that the marriage has completely broken down and that the court shall pronounce a decree dissolving the marriage where these grounds are established?" By a majority of five societies to three, the new proposal was rejected, and it is worth noting as showing the deep feeling which this matter of divorce *ad lib* arouses that the secretary of one society reported that "members stayed away because of the religious issues involved".

One of the reasons why some of us have changed our views on easier divorce is the enormous increase in juvenile delinquency and depravity which have accompanied and have been caused by the wholesale break-up of homes. Take a recent example. What are things coming to when the time of a divorce court judge is occupied in considering whether a little girl of 12 can be guilty of adultery? It was a case in the Cardiff divorce court before Judge Temple-Morris, Q.C., sitting as Special Commissioner, in which a wife was petitioning for divorce on the ground of her husband's adultery with her own sister, aged 12. The legal point was this, "Can an infant girl of 12 years be found guilty of adultery?" And the answer is "No, she cannot." His lordship reached that conclusion after comparing and analysing other legal rulings concerning the age of consent. Consent is an essential part of the definition of adultery and in the eyes of the law such a young child is incapable of consenting. The wife had also petitioned for divorce on the ground of cruelty by the husband whose conduct (for which he had been convicted after a criminal trial) with the child was held by the judge to be also cruelty to the wife who was granted a divorce.

Another reason for disquiet over easier divorce is the deliberate distortion by the judiciary of the ordinary everyday meaning of essential words. A strong case can be made out, no doubt, for divorce on the ground of persistent cruelty or desertion. To be guilty of cruelty means in its dictionary and colloquial interpretation to be desirous of giving pain, to be merciless, fierce, unrelenting; and to desert means to leave, to abandon, to forsake, to run away from. That is clear enough. But what do you make of this? A husband persistently stayed out late at night at a time when his wife was pregnant. Remiss, no doubt, careless, selfish, inconsiderate, especially as the wife was nervous. But would you call it cruelty or desertion? "It was both," held the divisional court. "Cruelty and constructive desertion, as the husband knew of its effect on his wife." Well, well! Extend it on a par with some of the States of America. But why all this sham and hypocritical humbug of twisting words out of their real meaning? Make the law clear that divorces are to be upon the penny-in-the-slot principle and that solemn marriage oaths mean nothing.

There is a certain amount of humour about these divorce forms. A person applying for free legal aid has to fill up a questionnaire. One of the questions is whether the applicant for relief has himself or herself committed adultery. An applicant recently omitted to state whether he had committed adultery or not. His solicitors wrote to him about this and he replied: "With reference to adultery. None. Sorry that I overlooked this."

June 20, 1957.

THE empiricism of the British in politics has its inadequacies, but there are reasons to question the currently fashionable insistence on a definition of everything. There are things delicate enough to defy definition; to attempt to define them is often to distort their very nature, leading to a denial of their existence. The scholar who got a bursary to study the Commonwealth received his best advice from an old India hand: "For God's sake, don't talk too much about the Commonwealth—the thing might cease to be." The reasons given by *The Times*, no organ of subversion, for deferring the Commonwealth Prime Ministers' Conference due to meet on Wednesday next are not all invalid; absenteeism will be high and proxies not a few. But once it is remembered that these conferences are not for the taking of firm decisions—which fact does nothing to detract from their value—there should be no need to apprehend that the consultations will be valueless because of the absence of a few members. Ghana, whose Prime Minister attends the conference for the first time, would certainly have been disappointed by a postponement. Britain, still the eldest sister if no longer the mother of the Commonwealth, will be there. So will be India, whose Mr. Nehru has always played a prominent part in these deliberations and will now be the seniormost member. Mr. Suhrawardy, fresh from his triumph in East Pakistan, can be trusted to ensure liveliness in the talks both at the conference table and in the informal parleys. My only contribution to the speculation now in progress as to what will or will not be discussed is this: Egypt will generate very little heat. An Indian hostess in London last November announced to her guests, "Let us agree on one thing: nobody shall mention Suez and we will all enjoy the dinner." I can see Mr. Nehru being as gracious, although Mr. Suhrawardy will probably insist on being told that Kashmir is as forbidden a subject.

The manner in which Reuters cabled to this country the honours awarded by Her Majesty the Queen on her birthday—a few names one day and a few more the next—probably reflects a decline in India's interest in the list which can no longer contain Indian names. There have, however, been several awards of interest and the wide range of achievements recognised remains admirable. The Companion of Honour to Sir Thomas Beecham is deserved honour to the harmonies he produces and just disregard of the discords of his speeches on public men and affairs. "Is It Justice?" the Arthur Rank Organisation has been asking in huge advertisements, referring to the entertainment tax. Its chief becomes a Baron now, with justice, for few men have done so much for the British film industry. The knighthood for Geoffrey Crowther, until last year the editor of the *Economist*, will give especial pleasure to financial journalists and so active is he still in half-a-dozen different fields that this is unlikely to be the last such honour to come his way. A very different kind of journalism is honoured in the knighthood to W. E. Carr, chairman of the *News of the World*. Journalism, Isaiah Berlin becomes a knight too; those who have read his *The Hedgehog and the Fox* or heard his broadcasts from the B.B.C. know what an original thinker and brilliant controversialist he is. Among the names I have been able to spot which are of special interest here is Mrs. Joyce Helen Galloway's; she gets an M.B.E. (civil division) for her social work. The 300 awards conferred on soldiers who took part in the Suez campaign may or may not be an indirect admis-

A DITCHER'S DIARY

sion on the part of politicians that the former were not responsible for what went wrong.

In spite of the thoroughness with which American intellectuals always like to dissociate themselves from Hollywood as an exponent of the American way of life, I cannot think of American films as something divorced from the country of their origin. *The Rainmaker*, a stage success now filmed, appears to me to represent a latent aspect of American life which her intellectuals may well be reluctant to emphasise. The fact that so many thousands of Americans went to see the play or the film certainly invests the story with considerable sociological significance. The story is not bad at all; it concerns a fake with what must be called faith, and faith pays in the end. Plain Jane—Liza here, brilliantly played by Miss Katherine Hepburn—gets her man, and it rains. It is not too far-fetched to deduce that many will see in the film something more than a mildly amusing comedy. If there is any way of making rain, Calcutta at least has not found it yet, notwithstanding the invocations of the meteorological department. But the sort of thing we see in the film—beat a drum and it will rain and Jane will find her man—always seems to me a retreat from reason, a return to that famous story of Sir Lewis Namier's in which somebody in Lisbon was selling anti-earthquake pills on the plea that there was nothing to put in its place. A much more sophisticated play, *The Madwoman of Chailiot*, was widely interpreted as a prelude to Fascism, as well it might be, for it did ridicule the imperfections of a rational approach to the human condition in a manner that might easily be used by the advocates of that pernicious philosophy. Am I taking a trivial film too seriously, too literally? No. I am only afraid that too many other people might.

Mr. Morarji Desai's moralising before the meeting of the Indian Society of Advertisers in Bombay last week seems to me to have been rather wide of the mark. Certainly, in advertising, as in most other things in life, the acceptance of at least some ethical standards is necessary. But I would not say that the violation of those standards by advertisers in this country is so frequent as to deserve the greater part of a busy Minister's speech. On the contrary, such advertisements as are clearly in bad taste are so, I think, merely because of professional incompetence rather than any deliberate tendency towards lewdness. Mr. Desai's objections to the increasing use of the feminine form in advertisements make me shudder; to say that the intention in doing so is to appeal to the baser human instincts really no more than reflects one's own reactions, which may not necessarily be the same as those of everyone else. In spite of what one often hears, I do not believe that advertising has much to do with art; the purposes of the two are almost entirely different. But objections to the portrayal of the feminine form in the one could quite easily be applied to its portrayal in the other, with the result that a rather good case could then be built up for throwing a substantial part of the cultural heritage of this country (and of most others) into the sea for puritanical reasons. The real trouble with advertising, I feel, lies not in its sexy vulgarity, but in the fact that neither producers nor consumers have in it the confidence which it deserves. With some notable exceptions, most producers fail to realise that the greatest benefits can be derived from it only if it is sustained; as Mr. Dharamsey Khatau

pointed out in his address from the chair at the Indian Society of Advertisers meeting, it "is not something that can be turned off and on like a tap". It has to be regarded as an investment, and because the results from it are often intangible, they are not any the less real for that.

The unseemly controversy which Assam has revived over the proposal to locate the new oil refinery in Barauni, Bihar, is a strange commentary on the blatancy with which political pressure can be used in trying to upset what should be strictly economic decisions. In declaring that on its assessment of the economic and technical considerations involved the refinery should be located in Assam, the Shillong Government is laying claim to an acumen in oil technology which has so far remained jealously hidden from everybody except itself. Personally, I have no pretensions to a similar acumen, and would not say whether the refinery is best located in Calcutta, Barauni, Assam or anywhere else. But the real issue, I feel, is a simple one; it is that if the Central Government goes to the extent of appointing an expert committee, it has some measure of obligation to see that the committee's recommendations are given proper weight. To throw them overboard merely because a group of local politicians happen to protest is hardly the best demonstration of the virtues of democracy in action. Recent attempts to re-direct the location of industry have been quite extraordinary. The Production Ministry's proposal to equalise coal and steel prices throughout the country has been an especially peculiar example; despite its obvious demerits, I do not recall West Bengal or Bihar having started loud clamour of the sort which Assam has done in relation to the oil refinery. Today's attempts are to re-locate industry; perhaps it would not be entirely silly to visualise tomorrow's attempts as being to re-locate agriculture. Andhra might then want to grow some of the tea which Assam now produces, on the plea that it is "under-developed"; whereupon Rajasthan would probably ask why the mere fact of being a desert should discourage it from trying to grow jute.

The new mood of optimism born of Tuesday's meeting between Mr. T. T. Krishnamachari and some leading Indian industrialists has, I confess, left me cold and rather baffled. If a quiet exchange of courtesies and complaints was the sole aim of the meeting, it probably fulfilled its purpose. But in none of the published versions of the proceedings is there an indication that the Finance Minister went beyond what he has often said. Indeed, one would have hardly expected him to, considering that one session of Parliament only recently ended and another will soon begin. It is, I think, a rather sad commentary on the state of business confidence that the mere absence of rude remarks from the Government is these days taken as encouraging. The optimists on Lyons Range find reason for cheerfulness in the belief that the pattern of taxation for the next four or so years is now more or less settled. Personally, I should have thought that the pattern matters just a little bit less than the level of taxation, on which latter aspect there has been little that is reassuring from the Finance Minister. The possibility that the Bills concerning the wealth tax and the expenditure tax might be amended by select committees can hardly be counted as a major discovery in the third week of June. It makes one sad to think that such are the crumbs of consolation on which the wisecracks of Lyons Range are nowadays reduced to feasting themselves.

IRREGULAR TREND IN STOCK MARKETS

INDUSTRIALS INACTIVE : GILT-EDGED FALL BACK

London, 19th June.

THE firm conditions which last week developed in the stock markets immediately after the Whitsun holiday were not fully maintained. Prices in most sections moved narrowly and irregularly in the absence of fresh incentives and in view of the approaching end of the account. In contrast, gilt-edged securities drifted lower immediately after the holiday and picked up later on small support, only to turn easier again and record very small price movements on the week. Renewed activity in South African gold shares at the beginning of the week was the main feature, although subsequent profit-taking in front of the end-of-account brought prices back, and this market was generally lower on balance. Gains in oil shares, established immediately after the holiday, were not fully maintained and considerably quieter conditions developed. Apart from a small amount of profit-taking in Chinese issues, there was no marked change in foreign bonds or rails. Dollar stocks were irregular with interest centred on Canadian issues. Only a modest business was transacted among industrials and price movements generally were limited to a few pence. Coppers were easier on the falling metal price. Other base metals were also lower. Rubber shares continued to respond to a selective demand and numerous firm spots developed. Eastern buying helped improvement. Indian tea shares were firm, but there were occasional dull spots among Ceylons.

The Money Market

After the previous week's comfortable conditions, short loan facilities in the London money

markets during last week became difficult again with the supply of funds uneven. The week was, of course, shortened by the Whitsun holiday; the displacement of funds caused by it and the absence of maturities resulted in a poor start for the market on the first day's operations. There was a spell of easy conditions on Wednesday of the week, but for the remaining period, supplies of credit were barely adequate. Even the repayment of Exchequer 5 percent and the funding of 23 percent War Loans failed to affect the credit situation, as only a very small proportion of the £400 and odd million was held outside Government departments. Besides the money which might have been available to the market was offset by oil payments. Day-to-day money generally ruled at 3 1/2 percent. Bill business was moderate with August and September bills changing hands at 3 13/16 percent, although on the reduction in Treasury bill rate on last Friday, the rate for September bills was 3 25/32 percent.

Activity on Wall Street

Long-term U.S. Government obligations continued to fall last week, partly reflecting selling by investors against purchases of higher yielding corporate and municipal issues. A couple of long-term issues reached new record lows, while others were near their lowest levels. Investment quality corporates and rails generally displayed a weak tendency on a small volume. Convertibles declined sharply at the outset following the news of President Eisenhower's illness but eventually rebounded with the stock market. Foreign dollar bonds were mixed. Italians added a point or so with Australians, Norwegians and German Nationals showing only minor changes either way. Greek 6 percents lost a point, while Poland 4 1/2 percents and 7 percent Serbs were unchanged. Japanese Government bonds were unchanged to a shade higher. Union of South Africa 4 1/2 percents dropped 3 1/2 points to 87 1/2 for a new low on the sale of five bonds. Chile 3 percents were shaded fractionally on the week to finish at 4 1/2.

Little Business in Vegetable Oils

Cilseed prices showed little change last week. Following overnight sales of only 200,000 bushels of U.S. C.C.C. linseed for export at 24 1/2 cents a bushel, ex-Duluth, out of the 2 million bushels tendered, Canadian linseed moved steadier for near positions, but lacked serious buying interest. News that U.S. linseed can now be shipped via St. Lawrence brought a weak tone to linseed oil on the Continent, although U.K. sellers were resisting declines for B.S.S. ex-tank oil with June at £103, July at £97 to £98 1/2 and August at £96 to £98 a ton. The Nigerian Board confirmed the sale of groundnuts to Italy and Northern Continent for prompt shipment to replenish run down, but stocks with only small tonnages still unsold, but full details were lacking. It is believed that 2,000 to 4,000 tons were sold for July-August at £65 1/2 c.i.f., or a shade less. Nigerian groundnut oil was offered 20s cheaper, July-August at £117 c.i.f., with bids invited at £115, but there was no response. Possible sellers of Straits bulk coconut oil were 5s cheaper at £39 1/2 July-August, but buyers were absent. In spite of a slight upturn at the origin, Indian B.S.S. castor oil dropped a further £2 a ton, with June-July at £156, drums, cost and freight, and commercial at £148. Further declines were anticipated. Philippine copra was sold at \$167 1/2 for June-August, but sellers were more reserved.

Rubber Prices Rise

Prices moved steadily upwards during the greater part of last week in the rubber market. A total advance of 1d a lb took values to their highest levels since March. Traders attributed the recovery to factory buying necessitated by depleted stocks. Buying orders revealed short positions among some dealers which had to be covered. New York and Singapore advices aided the firmer trend, and speculative interest was stimulated by the better market trend. Buying interest waned towards the close and cheaper offers emerged. There was a moderate volume of switching business and the inevitable profit-taking after the rise, but prices finished the week about 1d a lb higher on balance. Sole crepe continued to be a dull market with spot supplies slow to move. There was, however, a fair movement of afloat parcels to the Continent. Quotations were barely maintained on the basis of 39d a lb for 1/8 inch smooth No. 1, on the spot.

Withdrawal of Freight Surcharge

The East African Conference Lines have announced the withdrawal of the 5 percent freight surcharge on shipments between the U.K.-Continent and East African ports. This applies to ships at present loading, but cargoes loaded at previous loading ports will be subject to the surcharge. The Conference Lines loading outwards to Port Sudan have also removed their 5 percent Suez surcharge with effect from 17th June.

Aluminium Workers Strike

The strike at the Arvida smelter of the Aluminium Company of Canada Ltd. is costing the firm a production loss of 1 million tons of aluminium daily. The stoppage began on 17th May in support of the workers demands for higher wages and a master contract covering all the company's hourly paid workers in Quebec province. A company spokesman said that there had been no direct negotiations between the workers and the company since 17th May, but the Canadian Government mediation agency was mediating in the dispute and holding separate meeting with the management and workers.

Stocks and Shares

SUBSTANTIAL IMPROVEMENT IN MARKET SENTIMENT

LIFE INSURANCE CORPORATION CONTINUES TO BUY

Wednesday Evening.

SENTIMENT in the stock market has improved substantially during the past week. The proceedings at Tuesday's meeting between the Central Finance Minister, Mr. T. T. Krishnamachari, and a number of leading industrialists have been bullishly interpreted. From what has been published so far, it is hard to see why, considering that much of what was said by either side has often been said before. The market, however, takes the view that the reorientation of the taxation structure is now complete and that certain concessions are likely to be given in the case of wealth tax and the expenditure tax. The Life Insurance Corporation has made substantial purchases of various shares. This has improved the undertone of the market and the technical position is considered healthy.

Engineerings have been steady in sympathy with Indian Irons. Coals are neglected. In spite of the rise in gunny prices, jute shares are depressed because the trend in the fibre markets is firm. Teas have benefited from the better auction results obtained this week. Selected miscellaneous industrials have risen smartly, partly on investment buying and partly in sympathy with the general trend. Gilt-edged are mostly weaker.

* * * * *

The gilt-edged market ruled weak and prices of medium and long-dated issues suffered a further recession. However, the enquiry for short-dated loans continued and there were few sellers. Both 3% Conversion loan 1986 and Non-Terminable Paper were nominally quoted around Rs. 73. In short-dated issues, 3% 1957 was quoted at Rs. 99.75 and 3% 1958 was traded at Rs. 99.68; 2 1/2% 1961 changed hands at Rs. 93.50 and 2 1/2% 1960 was asked for at Rs. 96.50. The 3% 1959-61 changed hands around Rs. 97.75 but 3 1/2% 1961 was easier at Rs. 99.30. In medium-dated loans, 2 1/2% 1962 was steady at Rs. 93.84 but 3% 1963-65 was marked back further to Rs. 93.65 and 3% 1964 was quoted lower at Rs. 93.82 ex-voucher. Both 3 1/2% 1964 and 1965 weakened further under selling pressure to Rs. 97.70 and Rs. 97.75; 3 1/2% 1967 was quoted lower at Rs. 98.05. Long-dated loans were marked back in the absence of enquiry, with 3% 1966-68 at Rs. 91.40, 3% 1970-75 at Rs. 86.05 and 3 1/2% 1974 at Rs. 98.30. State loans were dull and trading was negligible.

Preference shares continued to suffer from lack of enquiry and transactions recorded were few and far between. Jute preference shares were externally difficult to sell and prices had to be lowered in order to attract buyers. Anglo-India were sold down to Rs. 95 and Gouropore were offered at Rs. 76. Hukumchand were reported at Rs. 95. In the miscellaneous group, Calcutta Electric were quoted at Rs. 9.03 and Indian Iron and Steel were taken at around Rs. 99. Richardson and Cruddas were sold down from Rs. 63 to Rs. 61 and Rohtas Industries "B" Preference changed hands at Rs. 63.

In the banking section, United Commercial were enquired for around Rs. 53.50 and Punjab National improved to Rs. 55. United Bank of India "D" shares were unchanged at Rs. 4.19.

No transactions were reported in railway shares.

Cotton shares were more or less unchanged. Basanti were reported at Rs. 5.31 and Bowreah were slightly better at Rs. 106. Kesoram were marked at Rs. 12.56 and New Victoria at Rs. 162.

In the coal section, Burrakur were quiet at Rs. 21.75. East Indian and Equitable, following forced sales, dropped from Rs. 22.50 and Rs. 22 to Rs. 21.25 and Rs. 20.50, respectively. Katras Jheriah were unchanged at Rs. 53.75 as were New Beerbhoom at Rs. 13.25. Union Coal continued to meet with interested support and improved further from Rs. 22 to Rs. 25. Bengal were comparatively steady at Rs. 204.

Jute shares stood at their lowest levels in the history of the industry. Sellers predominated and buying orders were practically impossible to execute. A further batch of disappointing reports was responsible for the apathy in this section. Here is a chart showing representative price movements:

	Opening 13th June Rs.	Closing 19th June Rs.
Agarpara	7.25	6.87
Anglo-India	130	127
Bally	135	130
Champdany	102	95
Cheviot	115	110
Delta	120	115
Lansdowne	70	60
National	19.70	19.70

Electric supply shares were once again a dull market with Agra dropping from Rs. 129 to Rs. 125. Calcutta were very quiet at Rs. 11.81, but Benares recovered slightly to Rs. 16.12. U.P. were unchanged at Rs. 130.

The outstanding feature in the sugar section was Champaran, which on cornering operations spurted from Rs. 14.75 to Rs. 20.75. Ramnugger were sold at Rs. 21.75 ex-dividend and Cawnpore were shaded at Rs. 13.25. Dyer Meakins Breweries were un-

changed at Rs. 6, without any business being reported.

In the engineering section, Indian Iron ruled steady throughout with the price at one stage improving to Rs. 19.16; tonight's closing quotation is Rs. 19.12. Braithwaite were easier at Rs. 24.75, as were Burn at Rs. 295. Guest, Keen, Williams recovered from Rs. 26 to Rs. 26.62. Jessop and Richardson and Cruddas were better at Rs. 23.12 and Rs. 13.37, respectively. Textile Machinery were steady at Rs. 16.90 ex-dividend and there were sellers of Indian Steel and Wire Products at Rs. 54 but no declared buyers.

The outstanding feature in the paper section was Orient, which recovered smartly from Rs. 22.30 to Rs. 24.80. Sibpur Paper were enquired for at Rs. 8.37 and Titaghar were slightly better at Rs. 32, as were India Paper Pulp at Rs. 20. Shree Gopal improved from Rs. 13.62 ex-dividend to Rs. 14.12 ex-dividend.

In cement, Dalmia were slightly better at Rs. 11.31 while Sone Valley were unchanged at Rs. 5.56. Jaipur Udyog were offered at Rs. 11.12 with few declared buyers, while Assam Bengal dropped further to Rs. 4.94.

In insurance, New Asiatic were lower at Rs. 3.75 while Ruby General were unchanged at Rs. 5.50.

In shipping, India Steamship recovered from Rs. 9.81 to Rs. 10.06 and India General Navigation were quoted at their previous rate of Rs. 65.

Among miscellaneous industrials, Alkali and Chemical continued to meet with enquiry and recovered further to Rs. 14. Angelo Brothers rose from Rs. 16.75 to Rs. 17.12 while Britannia Biscuits were shaded at Rs. 12.87. British Burma Petroleum were quoted at Rs. 2.25 and Clive Row were easier at Rs. 9.75. Dunlop Rubber were very steady at the higher rate of Rs. 19.75 and there were buyers of the "rights" at Rs. 4.75. Imperial Tobacco dropped from Rs. 14 to Rs. 13.75 while Indian Aluminium were better at Rs. 12.94. Indian Cables were better at Rs. 22.12, as were British India Corpora-

Vanguard of the

World's mightiest fleet of commercial airliners

Choose Pan American and you choose the airline that flies the largest commercial international air fleet in the world. This means you have more flights to choose from and more places to go than on any other airline. And you fly on the most modern, up-to-date equipment in the air, with courteous and efficient

crews backed by around-the-world experience. One Pan American ticket can take you all the way around the world and most places in between. Pan American is the only airline that has made over 60,000 trans-Atlantic crossings—and has completed more than 2,900 Round-the-World trips.

Let your Travel Agent arrange your trip—his services are free. Or call Pan American in:

Calcutta : 42 Chowringhee, Tel. 44-2651, 2652, 2653
New Delhi : Imperial Hotel, Tel. 48172, 48717
Bombay : Taj Mahal Hotel, Tel. 35304

Taxila

What looks like an oil pipeline is, in fact, part of a 9" earthenware pipe laid in Taxila sometime in the 2nd century B.C. It was originally encased in stone and appears to have been used for sewage disposal. The work of the unknown tubemakers of Taxila has withstood the ravages of time for over twenty centuries.

Indian Tube

The Indian Tube Company (1953) Limited
A Tata-Stewart & Lloyds Enterprise
41, Chowringhee Road, Calcutta-16

tion at Rs. 5.85. Indo-Burma Petroleum were quiet at Rs. 24 and there were sellers of National Insulated Cables at Rs. 20. National Carbon recovered from Rs. 22.50 to Rs. 23.50 and National Tobacco from Rs. 9.75 to Rs. 10. Rallis India dropped sharply from Rs. 34 to Rs. 32. Rohas Industries were quietly steady at Rs. 16.87.

In the mining section, Indian Copper were taken up at Rs. 3.44, while both Burma Mines and Western Stockholders Investment were unchanged at Rs. 2.30 and 94p respectively. Metal Corporation receded further to Rs. 6.75, while Kavanapura Development after going down to Rs. 10.31, closed at Rs. 10.50.

There was an improvement in sentiment in tea shares after the more encouraging auction prices this week. Tukvar were traded at Rs. 11.37 while Bateli eased to Rs. 24. Bishnauth were fractionally better at Rs. 18.75 and Brooke Bond were done around Rs. 18.50. Brahmaroobra and Dhe'akhat were quoted at Rs. 5 and Rs. 21.25 respectively, while a small lot of Tezpor were dealt in at Rs. 18.50. Hattikhira were crossed at Rs. 12.75, and a small lot of Patrakola were done at Rs. 130. Hansawa declined further to Rs. 24.50, but Jayshree improved to Rs. 6.50. Baradighi were traded at Rs. 92 as were Bhatkawa at Rs. 21.13 and Hasimara at Rs. 19. Small lots of Gokikhata and Nagasura were done at Rs. 160 and Rs. 144 respectively.

The results of the Andrew Yule group of jute mills for the half-year ended last November are published below. The CHEVIOT MILLS COMPANY made a loss of Rs. 2.20 lakhs against a loss of Rs. 1.81 lakhs. Transferring Rs. 50,000 from dividend equalisation reserve, bringing in Rs. 1,397 and making other adjustments, there is Rs. 75.465. The ordinary dividend has been declared at Rs. 2 a share against nil. The carry-forward is Rs. 8.565.

The loss of the DELTA JUTE MILLS rose from Rs. 1.39 lakhs to Rs. 1.58 lakhs. Transferring Rs. 20,000 from the dividend equalisation reserve,

bringing in Rs. 2,564 and making other adjustments, there is Rs. 1,57,047. An ordinary dividend of Rs. 5 a share has been declared, against nil, leaving a carry-forward of Rs. 4,547.

The ORIENT JUTE MILLS COMPANY incurred a loss of Rs. 1.07 lakhs (Rs. 1.03 lakhs). Making adjustments and bringing in Rs. 537, there is a balance of Rs. 60,918. The ordinary dividend has been doubled to Rs. 2 a share, leaving a carry-forward of Rs. 11,036.

The CALEDONIAN JUTE MILLS COMPANY made a loss of Rs. 2.30 lakhs (Rs. 1.93 lakhs). There is again no ordinary dividend. Bringing in Rs. 1,328 and making other adjustments, the usual preference dividends have been paid, leaving a carry-forward of Rs. 20,580. The directors state that hitherto half-yearly accounts have been issued by them but this is no longer practicable in view of the provisions of the Companies Act, 1956. So yearly accounts will be issued in future, commencing with those for the year ended 30th November, 1957. This will not preclude the payment of half-yearly dividends, subject to the companies' results permitting. It is the intention to consider the payment of interim dividends in the light of the companies' results up to 31st May each year.

Providing Rs. 18,000 (Rs. 20,000) for depreciation, the profit of the BARAREE COKE CO. LTD. has declined by Rs. 68,000 to Rs. 1.51 lakhs for the half-year ended last September. Bringing in Rs. 45,399 and making other adjustments, there is a balance of Rs. 2,31,236. The taxation provision is Rs. 80,000 (Rs. 1 lakh). The dividend is cut from 6 percent to 5 percent, leaving a carry-forward of Rs. 90,370. Coke output amounted to 29,481 tons (34,200 tons) and despatches totalled 30,538 tons (32,203 tons).

The estimated net profit of the BURMA CORPORATION (1951) LTD. has amounted to Rs. 6,421 for the quarter ended last March, making a total net

profit of Rs. 254,926 for the nine months ended last March. Gross revenue was shown at Rs. 2,066,018. The operating profit has totalled Rs. 669,428. The taxation provision is Rs. 363,517. Depreciation absorbs Rs. 50,985. The capital expenditure amounted to Rs. 93,413. The marketable products of the Corporation were as follows: refined lead 10,824 tons, refined antimony lead 157 tons, refined antimony silver 866,915 fine ozs., copper 321 tons, nickel 286 tons and zinc concentrates 10,641 tons.

Bombay Market

SHARE PRICES IMPROVE AT CLOSE

REPLACEMENT BUYING AT LOWER LEVELS

Wednesday Evening.

THE Bombay stock market closed steady after irregular fluctuations during the past week. At first, prices moved up or down on speculative manipulations. Slow trading in piecemeals caused a decline in share values. Later there was a smart recovery on short-covering and replacement buying. Substantial buying of selected scrip by the Life Insurance Corporation made the technical position healthier. The outcome of the conference between the Union Finance Minister and business men in Calcutta was interpreted bullishly. Operators thought that the prevailing prices were not justified by intrinsic values in the case of a number of scrip.

Tata Steels soared to Rs. 161.50 and Indian Irons were higher at Rs. 19.20 on strong support from Calcutta interests. Alcock Ashdown recovered to Rs. 262.50 and Premier Construction improved to Rs. 147 on buying from knowledgeable quarters. There was little interest in automobile shares. Premier Automobiles were transacted at Rs. 85 and

Hindusthan Motors were freely offered at Rs. 6.80. Tata Locomotive in the engineering section were a shade higher at Rs. 142 on replacement buying.

The mill group showed widespread gains on bear-covering. Bombay Dyeing improved to Rs. 525 and Century were higher at Rs. 391. Kohinoor were taken at Rs. 273 and Svadeshi came to hand at Rs. 179.50. Simplex rose to Rs. 157 and India United Ordinary were transacted at Rs. 9.25.

Miscellaneous industrials moved up in sympathy with the general trend. Associated Cement were higher at Rs. 156 and Digvijay Cement improved to Rs. 141. Sugar shares were selectively bought, and Belapur came to hand at Rs. 218. Renewed interest was taken in steamship shares, and Scindia Steam gained at Rs. 18.15. Great Eastern Shipping were maintained around Rs. 13.20. Mining shares attracted little attention, and Shivrampur Syndicate realised Rs. 78. Bombay-Burmah recovered to Rs. 544.50 on short-covering as it was believed that the increase in agricultural income tax might not affect the company as was feared some time ago. National Rayon were higher at Rs. 208 on short-covering and Tata Chemicals gained fractionally at Rs. 16.65. Wimco were done at Rs. 152 and Tata Oil realised Rs. 43.

Banking shares were steady. Bank of India were taken at Rs. 137.50 and United Commercial Bank were offered at Rs. 54. Routine business was done in insurance shares, and New India Assurance were transacted at Rs. 42.50.

Selective interest was taken in electricity supply companies. Ahmedabad Electric were a shade higher at Rs. 93.25 and Tata Power were taken at Rs. 1,203.75.

THE WEEK'S TRANSACTIONS

Branch Office: BOMBAY . CALCUTTA . MADRAS . NEW DELHI

1955-56 compared with 53 percent in 1950-51. These expenditure trends, and the corresponding growth of public receipts, are summed up in the table below:

	1950-51 (Accts.)	1951-52 (Accts.)	1952-53 (Accts.)	1953-54 (Accts.)	1954-55 (Accts.)	1955-56 (R.E.)
(Figures in Rs. crores)						
Non-Developmental expenditure:	505	634	549	521	642	634
(a) Revenue	476	516	522	532	547	586
(b) Capital	29	118	27	(-) 11	95	48
Developmental expenditure:	455	506	527	601	747	1053
(a) Revenue	241	252	265	300	334	435
(b) Capital	214	254	262	301	413	618
Total expenditure	960	1140	1076	1122	1389	1687
(a) Revenue	717	768	787	832	881	1021
(b) Capital	243	372	289	290	508	666
Total receipts	1018	1148	994	1045	1295	1394
(a) Revenue*	780	907	829	837	903	967
(b) Capital	238	241	165	208	392	427

*In the base year 1950-51, the revenue receipts formed 8.1 percent of national income (6.6 percent being accounted for by tax revenue and 1.5 percent by non-tax revenue). By 1955-56, the propor-

tion of revenue receipts to national income rose to 10 percent (7.9 percent tax and 2.1 percent non-tax).

Deficit financing over the first four years of the plan amounted to Rs. 241 crores. For the final year, the revised estimates show an overall deficit of Rs. 233 crores, but the actual deficit is estimated at about Rs. 180 crores, making a total of about Rs. 420 crores over the plan period. This works out to about 21 percent of the estimated actual outlay of Rs. 1,960 crores on the plan. Taxation and the surpluses of the railways contributed Rs. 752 crores, or 38 percent. Whereas the Centre raised about Rs. 175 crores over the plan period from additional taxation, exclusive of export duties which in their nature are variable, and the railways realised Rs. 100 crores from increases in fares and freights, the additional taxation introduced by State Governments during the period was of the order of only Rs. 80 crores against their target of Rs. 230 crores. The rest of the plan outlay was financed as follows: market borrowings, Rs. 205 crores (10 percent); small savings and unfunded debt, Rs. 364 crores (16 percent); other capital receipts, Rs. 91 crores (5 percent); and external assistance, Rs. 188 crores (10 percent).

The Planning Commission has cautioned against wrong conclusions being drawn from the fact that in spite of the deficit financing (and the accompanying increase in money supply by 10 percent over the plan period from Rs. 1,979 crores to Rs. 2,184 crores), prices were 13 percent lower at the end of the plan. It is pointed out that although the wholesale price index came down from 450 in March 1951 (mainly because of the American wheat loan and the bumper crops of 1953-54 and 1954-55) prices, in fact, registered a rise of 14 percent from July 1955 till the end of the plan. Moreover, the balance of payments position over the plan period was far more satisfactory than had been expected. The sterling balances were actually drawn down by only Rs. 138 crores instead of Rs. 290 crores as envisaged.

The review says: "The improvement in the food situation in 1953-54 made it possible to abandon food controls, and the satisfactory balance of payments situation almost continuously since the

second year of the plan enabled the investment programmes both in the public and in the private sectors to go through without causing any significant strain on the system. While this was a welcome development in itself, it has to be recognised that, in a sense, this situation prevented any testing out of the techniques or instruments for planned development discussed in the report on the first plan. It would be wrong to conclude that these techniques or instruments are unnecessary for planning. These problems arise only when the investment effort becomes large relatively to the resources available, and it is in such circumstances that strategic controls at certain points in the economy, to supplement the overall financial and monetary discipline implied in a plan of development, can be of material assistance in overcoming transitional difficulties."

Price Support Scheme Abandoned

The steps taken last week by the Government for arresting the rise in prices and for restraining domestic and foreign exchange expenditure are thus explained. In the first place, the curious decision taken by the National Development Council early this month, in favour of fixing minimum prices for foodgrains as an antidote to high prices, has been abandoned. In a Press note issued last Friday, the Government held out a general assurance to agriculturists that the prices of foodgrains and other agricultural commodities would not be allowed to fall below economic levels, but said that "when prices are running high, as they are at present, it is not necessary to fix and announce economic prices." Secondly, zonal restrictions have been imposed on the movement of wheat so that prices do not rise unduly even in surplus States on account of unregulated exports to deficit areas. A similar scheme for the creation of rice zones is being considered. The Governments of the principally rice-consuming States have been urged by the Central Food Ministry to issue a certain amount of wheat compulsorily along with rice from fair price shops in order to conserve the limited supplies of imported rice. The Centre's

closing stock of rice was only 85,000 tons at the end of 1956, 800,000 tons having been issued during the year. The rice import programme for 1957 is for 700,000 tons. Considering that 50,000 to 100,000 tons have to remain in the pipeline for distribution, and that it will be prudent to hold an equal quantity to meet emergencies, it is obvious that the total availability will be less this year. The Central Food Ministry has pointed that imported rice necessarily involves the expenditure of scarce foreign exchange, unlike wheat which can be had from the U.S.A. on a deferred payment basis in rupees and that even the availability of rice in the world market is limited.

Ministerial Standards of Living

In response to the criticism voiced by Congressmen at the recent A.I.C.C. meeting, against Ministerial good living at a time when the common man is being heavily taxed in the name of the second plan, all members of the Central Government have agreed to a voluntary cut of 10 percent in their salaries and allowances. The Prime Minister is moving from his present residence into a smaller house which is to be specially constructed, though he told the A.I.C.C. that this might cost the Exchequer more. Similar austerity gestures are under consideration at other high places, and are also being urged on the not-so-high.

Increasing Trade Deficits

By drawing last week the stand-by credit of \$72.5 million from the International Monetary Fund, India exhausts the whole of the credit line of \$200 million from that source which was obtained last February. The ban that has been imposed on the allowance of foreign exchange for travel abroad for health reasons, except in the case of diseases for which there is no treatment available in India, might be followed by yet more severe curbs on foreign exchange expenditure. Addressing the Export Advisory Council, Mr. Morarji Desai, Minister for Commerce and Industry, stated that India's trade deficit amounted to Rs. 210 crores during 1956 (or a monthly average of Rs. 17½ crores). This rate had now increased to a monthly average of Rs. 20 crores during January and February this year in spite of a higher level of exports. Since then, it has been announced that the excess of imports over exports during March rose further to Rs. 28.54 crores.

Indo-Afghan Trade

The reference to mutual advantage in the exchange of letters on the trade arrangement between India and Afghanistan concluded last week, is more than a courteous formality. Due to the shortage of foreign exchange, India has lately had to limit the quota of imports from Afghanistan, which amounted to Rs. 4.4 crores in value during 1955-56 and Rs. 2.9 crores between April and December 1956. The offer of facilities for the import of fruits (dry and fresh) and asafoetida to the value of Rs. 3.35 crores during 1957-58 assures Afghanistan of the Indian market for these products. India in turn stands to benefit from Afghanistan's acceptance of payment in rupees, which will be utilised for the purchase of a wide range of Indian products including light machinery and equipment. This should help increase Indian exports to Afghanistan, which amounted to only Rs. 2.1 crores during 1955-56 and Rs. 1.3 crores during April-December 1956. The arrangement closely resembles that concluded with Egypt some time ago.

London

DISCUSSIONS ON FORMATION OF ECONOMIC ADVISORY BODY

HIGH LEVEL OF U.K. EXPORTS

(FROM OUR LONDON CORRESPONDENT)

THE Government's proposals for setting up a high-level economic advisory body, about which it had discussions recently with representatives of employers, the T.U.C. and the heads of nationalised industries, were presented early last week to the representatives of the National Union of Manufacturers. That completed what was referred to as the "first round" of discussions. When the second round will take place has not yet been decided, but last week the T.U.C. Economic Committee considered the report submitted by its representatives for about three hours, and apparently came very near to rejecting the idea. Some members of the Committee, however, felt that because of their responsible positions they should give it further consideration, so it was agreed that further information should be sought from the Government on the functions, purposes and composition of the body, if and when it is appointed. The T.U.C. is far from enthusiastic, which does not promise much success for the Government's efforts.

Nevertheless, the Government's confidence in the economic outlook shows no signs of wavering, so it is instructive to examine the relevant indicators for some justification. Of one thing there can be no doubt whatever, and that is that production is again on the upgrade after the recent levelling-off period. Coal output showed a slight fall in the first week of June compared with the previous week's record, but this year's total is holding up well compared with last year. Steel output in May, on the other hand, reached the record figure of 443,200 tons a week against the previous best of 432,100 tons a week achieved in February. Over the first five months of the year, production is running at 4 percent above 1956. U.K. steel consumption in the first quarter of 1957 rose above that for the latter part of 1956, but is still 2.5 percent below the peak rate reached in the first quarter of 1956. This factor, together with a slower build-up of stocks, has enabled a substantial increase in the net export of steel to be achieved. The recent revival of unemployment has also been reversed and once again, unfilled vacancies at 233,000 are only slightly outnumbered by the wholly unemployed at 294,000. Unemployment is no more than 1.5 percent.

Trade Booming

The May trade and navigation accounts from the Board of Trade offer some encouragement as well as a warning. Exports reached the highest total ever recorded, exceeding the £300 million mark for the first time. Imports also were extremely high, and would have been a record but for the January "bunching" of ships diverted via the Cape which inflated the figures for that month. May exports, valued f.o.b., were £302,900,000 and well up on the £272,200,000 of April. The Board of Trade points out that the average for these two months is 3 percent more than the average for the first quarter, and 61 percent more than the average for April-May, 1956. But while exports have been growing at a pace that is respectable, the growth of imports has been alarming. May imports (valued c.i.f.) were £374,400,000, against £349,700,000 in April. The average for the two months is 23 percent more than the average for the first quarter, and 11 percent more than the average for April-May 1956. Thus the comparison of these two months in 1956 and 1957 shows that exports have increased by 6 percent and imports by 11 percent.

Re-exports in May were £11.8 million, leaving a trade gap of £59.7 million. This is better than the £68.9 million gap in April, but the average for the two months is still higher than the average for the first quarter, and is £21.5 million higher than the average for April-May, 1956. This is a measure of the deterioration in the visible trade position over the past year. There is some consolation in that exports to the United States and Canada continue at a high level, although the rate of increase seems to have slackened. The total to these two markets in May was £38.8 million against £44.1 million in April, and an average of £33.9 million in the first quarter.

Disappointing Stock Position

The deterioration in the visible trade balance is understandable at a time when production is rising, for imports must rise to meet stockpile requirements and do not find their way into exports until some time later. It is felt, moreover, that the balance of payments after allowing for invisibles on roughly the same basis as last year—and the position might well be even better—will show a steady credit. Some concern is being expressed on the other hand, about the rather curious features displayed by the present restocking process. Stocks in the hands of manufacturers have risen a little, but not by much. Their stocks of material and fuel, it is thought, are 1 percent higher in the first quarter, stocks of work in progress 3½ percent higher, and stocks of finished goods 6 percent higher. The increases were larger at this time of the year in both 1955 and 1956. It is disquieting that the improvement is confined to stocks in the hands of manufacturers and largely confined to stocks of finished goods and to work in progress. Stocks other than foodstuffs and fuel

held by importers and merchants fell, according to the official figures, by 13 percent in the first quarter of this year. To judge by the stagnation in the commodity markets lately, they may have fallen further since.

Capital Investment

Information from manufacturing industry received by the Board of Trade indicates that total expenditure on fixed assets during the first quarter of this year was about 10 percent higher than during the same quarter of 1956. This is a smaller increase than that during the final quarter of 1956, when fixed capital outlay was 17 percent higher than in the final quarter of 1955. Manufacturing capital outlay in 1956 was about 20 percent above 1955, and it has been forecast that the amount spent during the whole of 1957 will be about the same as in 1956. More detailed estimates will be published by the Board of Trade about the middle of next month. Expenditure on building work was nearly 25 percent higher during the first quarter of 1956. Outlay on plant and machinery was up by a little less than 10 percent, while expenditure on vehicles was about 10 percent down. It has been reported from other sources that industrial building activity is now at a record rate, because a moderate decline in contracts has made a speeding up of actual work possible.

Banks Ease the Credit Squeeze

A rise of £78 million to £2,078 million is shown in the latest quarterly analysis of bank advances. This compares with a figure of £2,189 million when Mr. Butler introduced the credit squeeze two years ago, and of £1,930 million to which it had been reduced by the banks themselves towards the end of last year. In which directions has the squeeze been eased and to what extent does it affect inflation? Between February and May, bank loans to the food, drink and tobacco industries rose by £18.3 million to £170.2 million and to the retail trade from £163.8 million to £174 million. Advances to engineering rose by £11 million to £240.8 million. After dropping during the preceding quarter from £30.6 million to £28.3 million, bank loans to hire-purchase finance companies have risen by £5.7 million to £33.9 million. Loans in the personal and professional group, the largest single category, were practically unchanged at £325.3 million, against £324.1 million. Farmers, badly hit by the squeeze, have borrowed another £10 million over the past six months to raise their outstanding loans figure to £325 million. Apart from the advances to engineering, and also to the iron and steel industry and to some extent the textile industry, both of which have raised their outtake but may be financing exports thereby, the other increases mentioned above are undoubtedly adding to the inflationary spiral to some extent. On the other hand, the banks must lose since have tired of saying "no" to potential borrowers.

Defence Bonds Conversion

Holders of 2½ percent Defence Bonds purchased between October 1947, and 31st March 1948, and which mature during the six months from 1st October this year, are to be offered conversion into 4½ percent Defence Bonds. Announcing this, the Treasury said the offer would also apply to holders of 2½ percent Defence Bonds (conversion issue) maturing on 1st November this year. Altogether, bonds worth £28½ million are involved. Holders who accept the offer will be paid the old rate of interest up to the date of exchange (which in the case of the former issue will be on the exact tenth anniversary of purchase), together with a premium of £1 for every £100 of bonds exchanged. This last payment will be made on 1st November. Full

details will be issued in a prospectus on 21st June and the list of acceptances will be closed on 22nd July. The Bank of England announcement that blocked sterling funds may now be invested in War Loan 3½ percent will be welcomed both in the City and by residents abroad. As War Loan is free of tax to residents abroad it has always been popular with foreign holders. It also has procedural advantages over other stocks, in that there are no affidavits to be signed. The current rule is that blocked sterling may be invested in sterling securities having a life of not less than five years. War Loan was presumably excluded as it could theoretically have been redeemed at any time since 1952. At its present level of £691, the possibility of redemption seems remote. The authorities, it appears, thus see no reason why they should not attract all possible buyers.

Peace in the Shipyards

In spite of the belligerency displayed by both sides in the shipyards wage dispute, commonsense has prevailed and a face-saving formula was devised at last week's meeting between the employers and the union leaders. In effect, the unions have accepted the same solution which the engineering unions agreed to earlier—an 11s a week rise with a 12-month wage freeze and negotiations to eliminate restrictive practices and to increase productivity—but it is conditioned by what the boiler-makers' leader Mr. Hill refers to as a "break clause", but which the joint statement calls "special factors may require a reconsideration of the position." It is evident therefore, that peace in the shipyards for the next 12 months depends on the spirit in which this settlement is implemented. Fortunately, for all the plain speaking in which both employers and union leaders in the industry usually indulge, basically, relationships are on a friendly footing. Order books are full at the moment, so any improvement in productivity will offer scope for expansion to the ultimate benefit of all concerned.

In these circumstances, it is questionable whether the shipbuilders here will be able to respond as much as they would perhaps like to do, to the rumoured intention of the Government of India to approach foreign shipyards for building ships during the second five year plan on a long-term credit basis. The rise in building costs has apparently resulted in the exhaustion of the Rs. 37 crores allotted for the purpose with the acquisition of only 180,000 tons against the 300,000 tons of coastal and overseas shipping which was the plan's target. It is understood that the credit basis suggested is one under which India would offer to pay 20 percent of the cost either on delivery or spread over four or five instalments during construction. The balance of 80 percent would be paid in instalments over a period of seven or eight years after delivery.

Brevities

Thos. and Jas. Harrison, Limited, and Thos. and Jno. Brocklebank, Limited, announce that the Harrison Line has transferred its interest in the trade between the United Kingdom and India, Pakistan and Ceylon to the Brocklebank Line. The first sailing was the *Makalla* from Birkenhead on 5th June.

A notice authorising the payment of the new scale of U.K. allowances for the business expenditure in the dollar area has been in the hands of banks and travel agencies since last Monday. The new rates of £18 and £12 a day are available to business applicants. The purpose for which the trip is made, and its dollar-earning potentialities as assessed by the Treasury, continue to be the criterion. The previous top rate had been £14.10s.

how far can a road reach?

It can reach right into the future... it can break down isolation... it can gain access to the inaccessible... it can bring economic uplift. But no modern road can reach far without oil! Oil to power construction equipment; bitumen to surface the road, fuels and lubricants for buses, trucks and cars. The Caltex Refinery, nearing completion at Visakhapatnam, will play a vital role in transport development by supplying India with Caltex quality petroleum products. It is a tribute to free enterprise.

OIL is the Lifestream of Progress

CENTRAL TAX PROPOSALS
CRITICISEDADVERSE EFFECTS ON
CAPITAL MARKET

(FROM OUR BOMBAY CORRESPONDENT)

THE Indian Merchants Chamber held an extraordinary general meeting here to discuss the implications of the recent Central Budget proposals. Addressing the meeting, Mr. G. P. Kapadia, vice-president, referred to the bold and ambitious nature of the second five year plan and stated that the strains and stresses imposed on the national economy, visible in the very first year, called for a realistic approach to the problem of implementing it. He pointed out that the overall burden of additional taxation already amounted to Rs. 175 crores and added that it was open to question whether it was within the capacity of the country to bear this abnormal burden without causing a serious dislocation in the economy. Briefly reviewing the resources available, Mr. Kapadia said that even after making due allowances for the possible increase in revenue and the fulfilment of the targets by the States of their respective contributions, there would be a substantial gap of more than Rs. 500 crores. This figure, he said, would be still higher if it is found necessary to increase the expenditure on defence. Considering the acute shortage of foreign exchange, the difficult agricultural situation and the trend of rising prices which add to the overall cost of the plan, Mr. Kapadia said that the obvious course would be to confine it strictly to development projects. He emphasised the need for the maximum possible economy and the avoidance of waste in public expenditure and for keeping non-developmental expenditure at a minimum level.

Recalling the repeated assurances given by the Government that the private sector had an important role to play in the country's development, Mr. Kapadia said that with heavier taxes, high and inflexible labour costs, restrictions on managerial discretion, excessive restraints and regulations on business and with the increasing displacement of normal trade channels, the private sector could not function efficiently. Referring to the adverse effects of taxation proposals on the capital market,

he stressed that at a time when there was a great need to nurse corporate enterprise and to encourage it, proposals of this nature had created a very difficult position since the sources of capital were drying up. Mr. Kapadia said that there was no justification for a wealth tax on companies in view of the Finance Minister's express desire to retain the bias in favour of corporate investment. He was of the opinion that the wealth tax on companies was a tax on productive capital which would not only divert productive resources from the private to the public sector but would also act as a damper on corporate investment. He, however, conceded that there might be some justification for imposing a wealth tax on unproductive capital. He submitted that since equity holdings were important in the economy, they should justifiably be treated as productive capital. He also referred to the anomalous position resulting from a duplication of tax by a levy on companies and again on individuals and families.

Taxation of Bonus Shares

In discussing the taxation of bonus shares, Mr. Kapadia pointed out that if the bias was to be in favour of corporate investment, there could be no justification for retaining the bonus issue tax. The simultaneous levy of a tax on excess distribution and on the bonus issue was unreasonable. On the question of expenditure tax, he held that before such a revolutionary measure was introduced, the country should have been given every opportunity to examine its implications and the difficulties involved in levying it. Mr. Kapadia welcomed the implied assurance by the Finance Minister in his Budget speech that he had outlined the tax structure for the plan period and that while there would undoubtedly be some adjustments in this structure from year to year, he expected that these adjustments would be relatively small and marginal in character. In the light of this observation, Mr. Kapadia stated that the business community should not only expect that there would be no further taxation but a categorical assurance could be sought to that effect. At the same time, an attempt should be made to obtain substantial modifications in the present proposals by seeking the total dropping of the expenditure tax, the wealth tax on companies, the elimination of the tax on bonus shares and the recognition of dividends as earned income.

Fall in Equity Values

Another member, Mr. Dhirajlal Maganlal, referred to the adverse effects of the taxation proposals on the capital market. He stated that during the

last few months investors had sustained a loss of about Rs. 200 crores as a result of the fall in equity values. Suggestions were made at the meeting that some of the other commercial organisations in Bombay should be approached and their co-operation sought in submitting a joint memorandum to the Government in seeking relief from some of the more burdensome provisions of the Budget proposals.

Cotton Futures Listless

The cotton futures market continued listless and the turnover last week was restricted to around 500 bales a day. The Vijay June contract remained steady at around Rs. 818 a candy with little support. There was a good demand for ready stock lots, but the volume of business was small because sellers were holding on in the expectation of better prices. Quality cottons are now scarce and some of the popular varieties have firmed. Cotton trade circles appear disappointed at the Government decision not to alter the floor and ceiling prices during the 1957-58 season. It was hoped that the floor price at least would be raised by Rs. 50 a candy.

The East India Cotton Association has asked the Forward Markets Commission to permit trading in the new crop before 25th June. There has been no response to this request so far, and it is believed that the Commission will not take any steps unless the scheme regulating delivery contracts in Sewree is finally drawn up. The Association has now ended the three-week old controversy about the Jarilla May contract by fixing the settlement price at Rs. 715 a candy. The dispute arose because on the closing day of the contract business was done at prices ranging between Rs. 680 and Rs. 750 a candy. The price now fixed by the Association represents a compromise. It is believed here that the Government of India will soon announce a 25,000-bale export quota for Bengal Deshi. This quantity is expected to be sold without difficulty to Japanese importers on the basis of present commitments. Meanwhile, on the trade is awaiting the announcement about the licensing procedure, contracting and shipping period concerning the 160,000 bales of U.S. cotton which India is importing under the Development Assistance Programme and P.L. 480. There has hardly been any trading in imported cottons because most of the mills are well stocked, while others are holding off purchases in the expectation that the prices of sterling area cottons will fall within the near future. So far, 422,476 bales have been licensed for import. Of these, 240,751 bales were from the sterling area and 181,725 bales from the dollar area. Of the sterling area cottons, 68,007 bales are from East Africa, 95,956 bales from the Sudan and 66,495 bales from Egypt.

Little Demand for Piecegoods

The cotton piecegoods market was quiet and demand from upcountry centres slackened. The situation is not expected to improve because the monsoon is traditionally a slack period. The trade fears that it will be hard put to it to dispose of present stocks. The mills, however, have fared somewhat better. Unsold stocks at the end of May are put at 261,000 bales against 292,000 bales at the end of the previous month. The output of cloth has improved and amounted to 2,285 million yards in the first five months of the year against 2,132 million yards during the corresponding period of last year. Yarn production increased from 665 million lbs to 753 million lbs. Although shipments of cloth are running at a satisfactory level, these pertain to business that was booked some time ago. There have been no fresh enquiries. The prices of some popular export varieties have dropped slightly.

Rumours about Rayon

Reports that the import quota for rayon yarn will be drastically cut for the next six-monthly period imparted some strength to the futures market, but prices failed to rise because of the poor offtake of rayon piecegoods. June delivery 120 dull cones moved between Rs. 802 and Rs. 807, but closed at Rs. 803. August delivery was quoted at a premium of Rs. 18. Staple fibre yarn improved following reports that domestic production was to be cut and that the Government was to encourage exports of the home product. June delivery 2/40 moved from Rs. 579 to Rs. 584 and August delivery from Rs. 580 to Rs. 586.

Oilseeds Fall

An all-round decline characterised trading in the oilseeds markets. The castor futures May contract opened at Rs. 178.75 and closed the week at Rs. 164.50. The spot market moved in sympathy which lost nearly Rs. 1.50 a cwt. BSS Castor oil dropped from Rs. 20.50 to Rs. 19.75 a quarter, while the commercial quality lost around 62 nP a quarter. This downward movement is attributed to the lower prices offered by U.S. importers. Indian commercial oil declined in the U.S. market from 19½ cents to 18½ cents and towards the end of the week, U.S. buyers were offering only 18 cents a lb. Groundnut futures moved in sympathy and the August delivery declined from Rs. 180.37 to Rs. 173.25. Arrivals of groundnuts and groundnut oil were somewhat slow because growers were hesitant to dispose of their stocks. Available quantities of both nuts and oils were readily absorbed by the vanaspati industry. Linseed followed the general declining trend, and the September delivery contract dropped from Rs. 30.56 to Rs. 30.44. Spot prices of linseed moved between Rs. 29.75 and Rs. 29.62, while the June-July position moved down from Rs. 30.25 to Rs. 29.62.

Uttar Pradesh

MEASURES TO EASE FOOD
SHORTAGESTEPS TO CONSERVE CEMENT
SUPPLY

(FROM OUR LUCKNOW CORRESPONDENT)

WITH the marking off of Uttar Pradesh as one of the three wheat zones in the country from which no export or import without permits is to be allowed, the State's claim to have achieved self-sufficiency in food will be put to a decisive test. It has been the State Government's contention all along that in spite of its increased production, the surplus is being drained off to Bihar. Latterly, traders from West Bengal and Bombay have also, it is reported, been operating in the prominent grain mandis. But so far as Bihar is concerned, it may be pointed out that inter-State trading in foodgrains has been a normal feature at all times, and in the absence of reliable data about Bihar's offtake from U.P., it is not possible to assess how far this factor alone is responsible for U.P.'s current food deficit.

Certain discrepancies have also been noticed in the figures of production put out from time to time by the State Government. Two years before the first five year plan was launched, food production of the State was officially estimated at about 9.5 million tons. But for the purpose of the plan, a different figure was presented. In the starting year of the first plan, namely 1950-51, the production was shown as 7.84 million tons. The earlier figure of 9.5 million tons was ignored and no word of explanation has been forthcoming till today. The production for 1954-55 has been given as 12.45 million tons, and it is stated that "this figure exceeds the plan target by nearly 3.63 million tons." In the following year, prices began to rise, partly on account of the sales tax on foodgrains. This led to a revision of production figures which were cut to 11.3 million tons in 1955-56 from 12.45 million tons in 1954-55. In the context of the current high prices, production figures have been scaled down still further and the State's Food Minister, Syed Ali Zaheer, recently went on record as saying that U.P.'s annual food production is only 10.1 million tons.

According to official sources, the State received last year 300,000 tons of foreign wheat from the Centre under the price stabilisation scheme. A claim for 25,000 tons of foreign wheat for the months of May and June is now pending before the Central Government, but whether it will be allowed in full due to the introduction of the zonal scheme remains to be seen. As part of the relief scheme in scarcity areas, the State Government is at present running 1,200 cheap grain shops in the eastern parts of U.P. Foreign wheat is sold in these shops at a subsidised rate of 2 seers 12 chattras a rupee. Although every grain market in the State has been reporting larger arrivals compared with last year, the post-harvest price of indigenous wheat remains higher than last year's by Re. 1 a maund.

Price of Churk Cement

The U.P. Government has made a renewed representation to the Government of India for a rise in the price of the cement produced at the State-owned factory in Churk, Mirzapur. It has also made a similar representation to the Tariff Commission which is now considering the question of whether a rise in cement prices is called for at the moment. The representation is backed by the plea that unless the price of cement is raised, it will not be able to operate the factory on an economic basis. When the factory first went into production in 1954, the ex-factory price of its cement was fixed at Rs. 63 a ton. In 1956, the price was reduced by the Centre to Rs. 56 a ton. In 1954-55, the factory made a gross profit of Rs. 14,95,054, representing a return of 4 percent on a capital investment of Rs. 4.33 crores. In 1955-56, when the factory worked for the full 12 months, the gross profits realised gave a return of only a little over 2 percent. The smaller return was mainly due to the lower output during the year. Whereas the factory produced 77,084 tons of cement within six months in 1954-55 at a cost of Rs. 34,46,713, for the full 12 months in 1955-56, the factory turned out 177,953 tons at a cost of Rs. 87,51,039. In other words, the cost of production in 1954-55 worked out to Rs. 44.7 a ton and in 1955-56 to Rs. 49.17 a ton. A return of 8 percent, it is claimed, is the remunerative level for such enterprises, and not 2 percent realised during 1955-56.

Meanwhile, economy measures for conserving cement supply have been launched. The Government has decided not to give cement for the construction of theatres, hotels and other luxury buildings. Hereafter permits for cement will be issued for these six categories: (1) construction of houses by the Government or co-operative societies; (2) construction of houses for residential purposes; (3) construction of houses by those whose houses have been demolished by the Government for development purposes; (4) local bodies and commercial establishments which are prepared to construct residence-cum-shop buildings; (5) construction of private residences and (6) private schools, hospitals and charitable institutions. Consequent upon the increase of excise duty on cement from Rs. 5 to Rs. 20 a ton, the f.o.r. destination price of ordinary Portland cement supplied to Uttar Pradesh by the State Trading Corporation has been

raised from Rs. 102.50 to Rs. 117.50 a ton, and that of rapid hardening cement from Rs. 115 to Rs. 130 a ton.

Secretariat Expenditure

There has been mounting criticism against the rising expenditure in the Secretariat in the last few years, in spite of numerous economy measures. The expenditure on the Secretariat (excluding that on the Head of State, Ministers and the State Legislatures), has increased from 0.683 percent of the total budget in 1946-47 to 0.9 percent in 1956-57. Between 1946-47 and 1956-57, the total budget expenditure of the State rose by about 240 percent, from Rs. 39,68,84,700 to Rs. 135,12,57,300. The Secretariat expenditure during this period rose by 350 percent, from Rs. 27,12,000 to Rs. 1,21,89,600. The cost of running only the Information Department (Rs. 35,07,800) exceeded the total Secretariat expenditure ten years ago. During this same period, the number of senior posts in the Secretariat has been nearly doubled. From 13 secretaries in 1946-47, it rose to 30 secretaries and additional secretaries in 1956-57. Half a dozen posts of joint secretaries have been created and the number of deputy secretaries has increased from 12 to 28. The Relief and Rehabilitation Department had more officers last year than in the year immediately

following Partition when the need for relief and rehabilitation was the greatest.

Re-organisation of N.E. Railway

The "divisionalisation" of the N.E. Railway in the ex-O.T. zone is likely to be held up pending the re-examination of the whole scheme by the Railway Board with special reference to the creation of four divisions instead of three in the Pandu region. The N.E. Rly. authorities in Gorakhpur declare that the "divisionalisation" will be enforced from 1st July as scheduled, but according to the general secretary of the N.E. Railway Employees Union, following a representation made by it, the Railway Minister has said that the whole scheme will be re-examined by an officer specially deputed by the Railway Board, and it will be held in abeyance pending such re-examination. The representation by the Union stated that the re-organisation of the N.E.R. was being contemplated in a manner as would cause hardship to employees and the people. A large portion of Assam would be joined up with certain portions of north Bengal in the Alipurduar division, a large portion of north Bengal with Bihar in the Katihar division and certain portions of Bihar with Uttar Pradesh in the Banaras and Lucknow divisions, necessitating a transfer of employees working in lower pay groups, from one State to the other.

Efficiency goes up ...in premises cooled by **Carrier** self-contained air conditioners!

Your staff feels better, works better—in an atmosphere air conditioned by CARRIER. Efficiency goes up, so does production... and the initial cost of your CARRIER self-contained air conditioner is soon paid off!

Specially designed coils and filters make the CARRIER extra efficient, help it to cool better at lower cost. And the CARRIER removes gallons of moisture from the air while it cools—provides a cleaner, healthier atmosphere!

The CARRIER self-contained air conditioner is one of the best investments you can make. Write to us for further details—and remember, we offer unique service-after-sales, too!

Available in sizes varying from 3 to 15 tons, the CARRIER self-contained air conditioner eliminates outside noise, provides an even, dust-free, draught-free atmosphere

PROTECTION FOR PLYWOOD AND TEA CHEST INDUSTRY VARYING ESTIMATES OF DEMAND

OPENING recently the public enquiry into the question of continuance of protection to the plywood and tea chests industry, Mr. K. R. Damle, Chairman of the Tariff Commission said that the scope of the enquiry covered, (i) plywood, including plywood panels for tea chests and (ii) battens for tea chests. Although many varieties of plywood are produced in the country, the one that is used for the manufacture of tea chests constitutes the bulk of production. Other varieties consist of commercial plywood, moisture resistant plywood, marine plywood, aircraft plywood, and decorative plywood used for panelling. Commercial plywood in its various uses has to face competition from certain substitutes, notably, hardboard, which is not at present produced in the country. The Commission, said Mr. Damle, had not received

sufficient information to gauge the extent of competition to commercial plywood from hardboard and other substitutes.

In 1953, the Commission estimated the then annual domestic demand for tea chests at about 5 million sets. During the present enquiry, various estimates have been received of the annual domestic demand, both current and future, for tea chests ranging from 5½ million sets to 7 million sets. The Development Wing of the Ministry of Commerce and Industry has estimated the current demand for tea chests of standard size at 5½ million sets. According to the Planning Commission, the annual consumption of plywood for tea chests based on imports and domestic production for 1955-56 may be estimated at 90 million square feet or about 5 million sets. The Tea Board has given a slightly higher estimate of current domestic demand at 6.25 million sets. The point to be noted at this stage, said Mr. Damle, was that the somewhat wide range of variation among these estimates arises not only from the estimated quantity of tea packed in a chest which is taken as the basis, but also on the estimates of production of tea with which the demand for tea chests is closely linked. The number of sets available for use on the basis of production plus imports has increased from about 3.5 million sets in 1953 to about 6.1 million sets in 1956. So far as future demand is concerned, the various estimates received also differ from each other. The Development Wing is of the view that the future demand may remain steady at the current level of 5½ million sets while the Tea Board estimates that it will rise to 6.55 million sets by 1960.

On the current demand for commercial plywood, the various estimates received range from 20 million square feet to 30 million square feet a year. The Planning Commission expects the future demand to range between 30 and 50 million square feet towards the end of 1960. The basis to be adopted in arriving at a fairly reasonable estimate of current and future demands for commercial plywood had to be ascertained, Mr. Damle said.

Progress of Industry

The industry has made good progress in recent years. In 1953, there were 67 units borne on the list of approved factories maintained by the Development Wing and their total rated capacity on single shift basis amounted to 145 million square feet or 8.2 million sets. The number of approved factories at present stands at 66, 14 of which are in Assam, 35 in West Bengal, 11 in Kerala, three in Mysore and one each in Bihar, Uttar Pradesh and Madhya Pradesh. The Development Wing has tentatively assessed the capacity of 65 units on a single shift basis at 152 million square feet or nearly 8.6 million sets. The total installed capacity of 65 units, from whom figures have been received, it appears, on a single shift basis is 211 million square feet or about 11.93 million sets.

Between 1953 and 1956, the production of plywood tea chests and commercial plywood more than doubled itself. The actual figures of production in 1953: plywood tea chests 2.82 million sets or 49.79 million square feet; commercial plywood 11.41 million square feet; total: 61.20 million square feet; 1956: plywood tea chests 5.56 million sets or 98.33 million square feet, commercial plywood 25.33 million square feet; total: 124.16 million square feet. It is encouraging to find that at present, the industry is utilising about 82 percent of its installed capacity against merely 42 percent in 1953. Self-sufficiency in plywood tea chest production, it can now be claimed, has been achieved. The amount of capital invested in the industry up to 1956 is estimated at about Rs. 3.5 crores and the industry gives direct employment to 6,425 workers a day against an estimated investment of Rs. 2.77 crores and an average daily employment of 5,653 workers in 1953.

Quality of Product

The Commission in its last report had recommended that the indigenous manufacturers should endeavour to improve the quality of their product by rigorously conforming to the standard specifications laid down by the Indian Standards Institution. Mr. Damle said, Indian standard specifications have been published for plywood tea chests and commercial and moisture-proof plywood. Under the scheme of compulsory inspection introduced by the Government in early 1954, no tea chest panels can be despatched by approved factories to the consumers unless they have been first inspected and stamped by the field officers attached to the Development Wing. The Tea Board has stated that, generally speaking, the quality of Indian tea chest is found to be not inferior to foreign tea chest. Some complaints have however been received about indifferent bonding, use of several pieces instead of one whole piece in the inside veneer and the use of unsuitable and unseasoned timber. So far as commercial plywood is concerned, this has been generally stated to be of the required quality conforming to the standard specifications laid down for the different types. Exports of tea are a valuable source of foreign exchange to India, and since packed tea has to travel long distances both within and outside the country, great importance attaches to the quality of tea chests.

Plywood including plywood panels for tea chests and battens for tea chests are assessed to duty at the rate of 31½ percent ad valorem in both the cases, which has been raised to 35 percent ad valorem by the new Finance Bill. The plywood industry has been enjoying protection for about ten years. During this period, the

industry has made considerable progress both in quantity and quality of production. It is claimed that there is sufficient internal competition in the industry, and the prices charged are reasonable considering the cost of manufacture. The industry, which is at present undergoing a phase of installation of up to date machinery has prayed for continuance of protection for a period of another five years in order to enable it to implement its modernisation plans.

NEW STATE TAXES ON KERALA PLANTERS

WORRIES OF COIR INDUSTRY

(FROM A SOUTH INDIAN CORRESPONDENT)

THE planting community in Kerala will be affected most by the taxation proposals in the State Government's Budget for 1957-58, introduced in the legislature on 7th June. Among the new taxes, those which affect the planters directly are the tax on agricultural wealth at the same rate as the wealth tax proposed in the Union Budget, the additional super-tax ranging from 1 anna to 4 annas for companies with agricultural income between Rs. 25,000 and Rs. 1,00,00,000, and the surcharge of 5 percent over agricultural income tax and super-tax. These taxes will be in addition to the agricultural income tax which has been in force in Travancore-Cochin, which will be extended to Malabar replacing the Madras Plantation Agricultural Income Tax Act. Under the Agricultural Income Tax Act of Travancore-Cochin, the planters in Malabar will have to pay more.

There has been a lot of talk about a crisis in Kerala's coir industry for the past two months or so. This is much ado about nothing. Neither the export figures nor the price movements show any serious crisis. It is understood that coir goods exports from India during March and April were fairly satisfactory. The average price of Anjengo Superior coir yarn, corresponding to which the prices of other yarns move, for the past three months was as follows: March 1957 Rs. 260 (a candy of 6 cwt.), April Rs. 257.50, May Rs. 248.50. Although these figures show a decline, it is not big enough to warrant the assumption of a slump.

The fact is that there is some sort of a temporary suspension of activity in the coir market. This has its origin in the Suez crisis. There was stockpiling in foreign countries during the Suez trouble, but since then, foreign buyers have not been placing substantial orders at the ruling prices. Once their stocks are run down, they are expected to start buying at the usual rate. Trade sources expect that they will do so, after about three months.

Government Intervention

In view of this, exporters have cut their prices. This has created some difficulties for those who depend on coir for their living. But that still does not justify Governmental intervention on an elaborate scale. The remedial measures the State Government proposes to take are inadequate to meet the situation. This is the opinion of a knowledgeable person in the coir industry. He does not think that any useful purpose will be served by convening big coir conferences such as the one held on 19th May in Trivandrum. The problems which face the coir industry require expert handling. In his opinion, the present slump, if it can be called a slump at all, is just a cyclical one. The coir industry is not unfamiliar with such occasional difficulties. It has weathered greater crises without Governmental assistance. Governmental interference and undue publicity may produce some adverse results. As long as the industry has to depend upon foreign markets, it will have to face such problems. There is a Coir Board functioning in India whose business it is to tackle these problems. The Board has not yet raised an alarm about the so-called crisis probably because the present situation is not very serious. It was only two months ago that the Chairman of the Coir Board gave an optimistic picture of the industry.

Big Supply of Cashew Nuts

Nearly 43,000 tons of raw cashew nuts from Africa have reached Cochin out of the season's estimated output of 85,000 tons. Another 15,000 tons are expected soon, which will bring the total of arrivals to 58,000 tons. The indigenous crop is estimated at the record figure of 70,000 tons. It is doubtful whether the factories in India will make a full use of this unusually large supply in view of their late beginning of work this season. The factories are working to full capacity now, although kernel prices have gone down to 47 or 48 cents a lb. Demand from the United States cannot be considered encouraging. The U.K. and France, other principal buyers, are keeping away from the market, waiting for further concessions in price. Larger supplies of almonds which enjoy a higher preference in European and American markets, are the principal reason for the lower demand for cashew kernel. As in the case of pepper, Russia and her allies in eastern Europe are placing larger orders for Indian cashew kernels.

COCHIN TEA SALES

At Sale No. 15, 900,000 lbs of tea were on offer. There was a good general demand. Low Mediums and Mediums were 5 to 10 nP easier. Black Leaf grades were fully firm. Best Liqueurings and Whole Leafs were stronger and dearer.

Jute

THE OUTLOOK FOR FIBRE SUPPLIES INACCURACY OF OFFICIAL CROP ESTIMATES

DURING May, 413,200 bales of raw jute and mesta arrived in Calcutta and at mills, including jute purchases. Of these, 386,300 bales were Indian jute and 26,900 bales were imported from Pakistan. These figures show a small but welcome increase of 37,700 bales over the arrivals in April. The arrivals from Pakistan were, however, down by 7,700 bales, while those from Indian sources were up by 45,400 bales. In May 1956, the total arrivals were 353,600 bales, of which 306,200 bales came from Indian sources and 47,300 bales from Pakistan. The total arrivals from all sources in the 11 months, July 1956 to May 1957 now stand at 5,899,600 bales, compared with 6,055,500 bales in the corresponding 11 months of 1955-56. Although the total arrivals so far in the current season are 155,900 bales lower than in the same period of last season, it is gratifying that this position has been achieved in spite of reduction of 835,800 bales in imports from Pakistan.

Government estimates of the outturn of the jute and mesta crops have now been exceeded by the arrivals and there is still one month of the season to go. There is considerable speculation as to where all this fibre has come from. Some are of the opinion that both the jute and mesta crops were under-estimated. That is quite probable as it is a notorious fact that practically throughout the history of the jute trade, Government forecasts have under-estimated the size of the crop. On the other hand, many think that the unexpectedly large arrivals are mainly due to the smuggling of Pakistani jute. An enquiry made in Pakistan some time ago showed a very wide divergence of opinion as to how much has been smuggled from Pakistan. This can easily be understood considering the length of the frontier and the impossibility of collecting statistics. Estimates can only be guesses, and that is borne out by the disparity in the estimates given by trade sources in Pakistan, which varied from 250,000 bales to 800,000 bales. An even higher figure was given by a member of the East Pakistan Government who put the figure at one million bales.

If the higher estimates are accepted, it would mean that India's efforts to increase fibre production and to become self-sufficient have gone for nothing and no one on this side of the border is likely to agree with that. The view generally accepted in India is that the increase has been mainly in mesta and that seems to be borne out by the fact that mesta has to some extent ousted jute in the Daissee districts and in Murshidabad. That is not, of course, a good thing but growers have found that, in spite of the lower price paid for mesta, it is a more profitable crop to grow. But it seems to be the general opinion that the biggest increase has been in Bihar, where both jute and mesta have been grown in areas where they were never grown before. This opinion is supported by the fact that, for some months, most imports into Cossipore have been from Bihar. Unfortunately, Bihar jute is not of very good quality and much of it is graded as jungli, but no doubt it will improve in time just as jute in other districts, formerly classed as jungli, has done.

What, then, are the prospects for supplies of fibre in the next few months? There are those who thought some time ago that, because the Indian crop had come forward quickly in unexpectedly large quantities, it would be exhausted sooner. So far that view has not been borne out and the fact that imports of Indian fibre were higher in May than in April does not lend it any credence. Naturally, imports tend to fall off at this time of the year. Last year, imports of Indian fibre in April were 383,000 bales, in May 306,000 bales and in June 254,000 bales. In July, they rose to 284,000 bales when the new crop began to come in. Because of the lateness of the sowing, we cannot expect much new crop in July this year and possibly not very much in August unless a rise in river levels enforces premature harvesting. But if we get this year even two-thirds of what arrived in these two months last year, the mills should be in a safe position. There does not, therefore, appear to be any ground for anxiety though there may be not much hope of lower prices.

THE JUTE MARKETS

Although there was a quiet spell at one stage during the past week, the markets on the whole have been steady and there appears to be a more optimistic tone. It is possible that this has resulted from the fact that the fall in prices, which many expected would occur when the rains came did not materialise. This has given the impression that the steadiness of the past month or so has not been entirely founded on the possibility of a late and short crop but has other support. Nor can it be said that the steadiness is due to bull speculation in the fatka markets for, though sentiment has been mainly bullish, there has been a bear element which has not, however, been able to exert much influence.

Manufactured Goods: After being steady up to Friday morning, the market fell on Friday afternoon and Saturday. The reason given for this was that overseas buyers were unwilling to follow any further rise in prices and that the higher prices

being quoted had checked business. Also mills showed some keenness to sell at the higher prices. On Monday morning, the market was still easy but it revived on Monday afternoon when there was good demand for hessian. The hessian position appears to be stronger than that of sacking and it is reported that, apart from overseas enquiry, there has been a good deal of covering by local shippers. Some people are inclined to the opinion that the firmness in the gunny market is due to the expectation of lower mill production in June because of the abnormally hot weather and the influenza epidemic combined with bigger shipments because of goods shut out last month being included in this month's shipment. Be that as it may, it seems more likely that foreign buying and shipper covering have been the greater influence.

On Wednesday morning, the market opened steady but eased off later. Quotations were as follows:

	June	July	July-Sept.	Oct.-Dec.
40in. 8oz.	Rs. 35.60	Rs. 35.75	Rs. 35.85	Rs. 35.55
40in. 10oz.	44.60	44.65	44.75	44.35
B Twills	117.90	118.10	118.25	117
Heavy Ceos (Plain)	119	119	119	118.25
A Twills	141	141.50	142	141.25
Liverpools	130.75	131.25	131.75	132
Cornacks	118.70	119.25	119.60	119

Raw Jute: After the buying which took place the previous week, the market was quieter on Friday and Saturday. Not much business was reported but sellers were not inclined to lower their prices. Small business was done on Thursday at Rs. 32 basis Bottoms for Assam and Northern and at Rs. 28.50 to Rs. 29 basis Bottoms for jungli white. Desai mesta was done at Rs. 31 basis and jungli mesta at Rs. 27 basis Bottoms. Pakistani Cuttings found buyers at Rs. 112 and Rs. 113. On Friday, mesta was bought at Rs. 32.25 and Rs. 32 basis Bottoms for Assam and at Rs. 29.50 to Rs. 29 for Bihar. Daissee mesta was also done at Rs. 29. The only business reported on Saturday was a small lot of new crop at Rs. 32.25 basis Bottoms for Assam jute for half August-half September shipment.

On Monday, business was done in half old-half new crop for June-July at Rs. 32 basis Bottoms, while old crop Middlewicks were done at Rs. 34.75 for white jute and Rs. 36.25 for Tossa. Deodar mesta was done at Rs. 32 basis Bottoms and Pakistani N.C.'s at Rs. 113. On Tuesday, a fair amount of business was reported in Daissee mesta at Rs. 30 basis Bottoms and in Northern white jute at Rs. 32.50 basis Bottoms. Mills continued to be active in Cossipore, where prices have been fully maintained. During the week ended 18th June, 404 wagons arrived, against 387 in the previous week and 484 in the corresponding week last year.

On Wednesday morning, the market opened steady with quotations as follows:

Indian Jute:	Landed at Mills Rs. a md. basis	Bottoms	Shipment June-July
Assam	32.50		
Northern	32.50		
Purnea Desal	32		
Purnea Jungli	25.50		
Daissee	34		One month
Assam Tossa	34		June-July
Murshidabad Tossa	33.50		
Jungli Tossa	31		
Northern ex Calcutta	32		One month
Local Packing	30.50		
Mesta:			
Assam	31		June-July
Northern	31		
Desal	30.50		
Daissee	30		One month
Murshidabad	29		June-July
Jungli	28.50		
Bimbi	F.A.Q. 29		
Pakistani N.C.'s	115	a bale	

Mofussil: Good progress has been made with sowing and it is still continuing, though the week just closing has been mainly dry. In many areas, sowing has been completed or is nearly so and the indications are that the final sowings in India will be about the same as those of last year. More rain is urgently needed.

In western districts, imports are good for the time of the year but elsewhere there is not much coming forward.

THE PAKISTANI JUTE MARKETS SUBSTANTIAL FALL IN FIBRE PRICES

(FROM A NARAYANGANJI CORRESPONDENT)

WHILE overseas prices remain more or less unchanged and the Calcutta market is fully steady in both jute and gunnies, prices in Narayanganj have fallen substantially and jute arrivals have, if anything, increased. This apparently happy state of affairs, however, does not help all sections of the trade, as might be expected. Lack of money handicaps many balers, and while buyers require jute, they are being very selective in their purchases since there is every reason to believe that many shippers will not be able to ship after

30th June. This, of course, is because no policy has been announced on jute licensing, and it is rumoured that firms, as opposed to limited companies, will not be permitted to export although they will be permitted to trade. Thus, buyers prefer to purchase from those shippers who, it is almost certain, will receive their licences. After a long time, it is now possible to do simultaneous and profitable business in the Narayanganj market. Although prices for cuttings have receded only very slightly, there is no market overseas but fair Indian demand. Export Firsts and Lightnings are required overseas and Export Firsts only are in demand here in Narayanganj. Export Hearts, however, seem to be in excess and are not required either locally or overseas. Inter-baler business during the last few days has been restricted to Export Firsts and cuttings.

New crop jute has been coming in increasing quantities and a fair proportion of it is no longer weeding but good, matured long jute. This is only chur land jute from the Dacca district, which has not suffered unduly from the lack of rains. It is highly probable that after July imports will fall off. Prices for loose jute in Narayanganj, both old and new crop, stand at Rs. 33 for B Bottoms, which are scarce, Rs. 31 for C Bottoms and Rs. 29 for X Bottoms. Kutcha bales from upcountry are still available at the same prices. In pucca bales, there are buyers of Export Firsts at Rs. 214, Export Lightnings at Rs. 203 and Export Hearts at Rs. 192. Cuttings remain at Rs. 87. Overseas prices are quoted at approximately £116 for Export Firsts, £112 for Export Lightnings and £106 nominally for Export Hearts. There is a fair demand for afloat jute at about £4 more. New crop has come down in price and sellers are offering August-September at £104. But there are few buyers.

The monsoon has undoubtedly started early this year, presumably in an attempt to make up for the earlier drought. This will undoubtedly be a great help but it is wondered whether it is not too late to be of much use to the northern areas. Fortunately, the rivers are maintaining reasonable levels. Shipments during May were extremely poor but they will be somewhat better during June. E.P.C. registrations for the whole of May amounted to 230,000 bales, which was fairly high for the time of year. Of these, more than 50,000 bales were for India, which probably reflects the short position of the mills. These figures are particularly impressive since it is fairly safe to say that none of the registrations are for shipment later than July.

The Karachi market is slightly easier, with B Twills at Rs. 131, but hessian is unchanged at Rs. 56-8. Stocks are fairly large and buying interest is limited. In the recent tender, which was for June-July-August delivery, mills have offered as far forward as October since their commitments to Karachi have been rather heavy.

Pakistani jute mills are suffering several handicaps in making overseas shipments. Buyers complain of late shipments caused by the severe shortage of inland water transport, particularly for Chalna, and by the lack of rail transport. It is surprising that rail transport should be short during the slack season for jute but empty wagons are apparently being despatched to Chittagong from Narayanganj to pick up foodgrains in preference to loading gunnies for export.

THE FOREIGN JUTE MARKETS

NO CHANGE IN FIBRE RATES

(FROM OUR DUNDEE CORRESPONDENT)

IN spite of reports that new crop prospects have been improved by rain in a number of districts where it was required, values of raw jute are remarkably well maintained. Many are now of the opinion that there is little hope of prices coming down until the new season is well on the way, but it only requires a spell of inactivity in the jute and gunny markets to make sellers change their idea. It is understood that there are several shippers who have still to cover in their sales of the fibre made some time ago and holders of the old crop jute are squeezing them. Once cover has been obtained and the new crop begins to come forward in any quantity, a reversion to lower price levels is likely.

Dundee is certain to have a long spell of quiet trading. It is expected that the President of the U.K. Board of Trade will make an announcement about the policy to be adopted to bring the prices for imported goods and those for Dundee goods nearer to each other, which, in effect, will mean that the latter will require to be reduced. At present, imported goods are only bought by the U.K. Control for distribution to consumers in the U.K., but, irrespective of the price paid, and the difference at present is very considerable, these goods are sold at the same level as that quoted for Dundee goods. Naturally, this obviates competition and gives the local producer a return which enables him to pay good wages to his workers, at least in line with those obtained by workers in other industries. It looks as if the only way in which the gap between the two prices could be lessened would be by reducing wages, to which the workers might or might not agree.

Mill Firsts are quoted at £122, Mill Lightnings at £115, Mill Hearts at £112 and grade Hearts at £105 with good Daissee-2/3 from £120 and grade £112 and grade Tossa-2/3 from £120 and grade Tossa-4 £115, June-July old crop, c.i.f. U.K. One seller is offering white jute for June-July, sellers' option old or new crop, at £1 less than those mentioned, while September-October shipment of the new crop is mentioned at £107 for Mill Firsts and £104 for Mill Lightnings. Yarns and cloth are quiet, but prices are unchanged all round.

COAL COMPANIES

O. Po. F. and Dd. indicate Ordinary, Preferred, Ordinary Founders and Deferred shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the month of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE OUTLOOK FOR NORTH INDIAN TEA

GROWING THREAT FROM EAST AFRICA: STRONGER EFFORTS TO BOOST HOME DEMAND

THE marketing season for the 1957 north Indian tea crop has made a disappointing start. Although prices have improved since the first of the new series of sales was held earlier this month (a sale, incidentally, which was featured by heavy withdrawals) they are still at levels which cannot be bringing much cheerfulness to the majority of producers. Overseas demand may be expected to broaden in coming weeks, particularly when second flush teas arrive in the markets. But, for the time being at least, the main thought in the minds of buyers abroad is that supplies will be adequate, if not surplus, throughout the year. The latest annual report of the Calcutta tea-broking firm of Messrs. J. Thomas and Co. Private Ltd., which has just been issued, nevertheless assesses the outlook with a measure of qualified optimism. It suggests that there may be few bullish factors in the immediate future, but "the supply and demand position is not quite so depressing as it might seem at first glance." While it would be unfair to deny that cheerfulness has its virtues, this assessment is one with which not everybody will necessarily agree.

The main feature of the supply situation at the moment is that overseas consumers are well stocked. In Britain, which is the major buyer of tea, stocks are substantially bigger than is normal for this time of year. This is a natural consequence of the heavy purchases made during the Suez Canal crisis. These stocks might well decline over the next few weeks, because most of the 1956 teas have already arrived in Britain while shipments of 1957 teas will not be large for some time yet. But the decline is unlikely to be so sharp as to eliminate the bearish influence which their present size is undoubtedly exerting. A similar situation prevails in other overseas markets, although, as Messrs. J. Thomas say, "it is unlikely that any country holds more than four or five months' uncommitted stock." This might strike most people as an estimate so large as to be positively disturbing; but Messrs. J. Thomas describe it as "certainly not in amount large enough to cause a slump but is rather a satisfactory cushion on which world markets may again stabilise themselves." The idea at large inventories in consumer hands promote price stability does not seem entirely sound; they provided the tendency of the market is bullish. But when it is not, as it certainly is not in the case of tea today, the effect of substantial stockpiles is invariably to depress prices. It is hard to share the optimism of Messrs. J. Thomas on this score.

While the stock position overseas is likely to have an important influence on market trends in the immediate future, the progress of the crops promises to become the more significant factor in the longer term. This is a point on which, as experience shows, firm predictions are not possible. Tea harvests in the main exporting countries so far this year have been running ahead of last year; north India and Pakistan have produced less, but the decline has been more than offset by the bigger output in south India, Ceylon and Indonesia. Production trends have been reflected in the markets, and are to a large extent responsible for the current anxiety about prospects for commoner grade teas. The progress of the crops is unpredictable; but, in spite of the latest statistics, Messrs. J. Thomas feel "it is unlikely that Ceylon will be able to advance her crop to any great extent over the large output she has been producing in recent years." The real danger, however, comes not so much from Ceylon as from East Africa. The latter has already increased its crop by over 25 million lbs. since 1954, and "the vast amount of young tea coming into bearing could easily mean a continual increase of 10 million lbs. to 15 million lbs. annually for several years to come." East Africa's greatest advantage is that its production costs are low.

This enables it to offer strong competition to common and low medium grades produced elsewhere, especially those going from India. If output in that territory rises from the present annual level of 85 or so million lbs. at the rate Messrs. J. Thomas indicate, hard re-thinking will be necessary on the part of the Indian Government and industry to ensure the survival of many gardens, especially in the Doonars and Cachar areas.

The threat from East Africa calls for the most urgent attention. Being a low-cost producer, it has much fewer worries than most of its competitors in disposing of its output at a profit. For this reason, it can afford also not to see any necessity for crop regulation schemes. Much of the success achieved in growing tea in East Africa can be ascribed directly to the Indian Government's policies. Welfare legislation has been raising labour costs in this country; taxation has been steadily increasing; and ill-considered policies have been adopted in other spheres, such as marketing. All these have enabled the East African producers to get off to a much better start than they could ever have hoped for in a competitive world market. A concerted effort will now need to be made by the Government and the industry of this country to hold down the cost of production if export markets for Indian tea are to be retained.

sterling countries will ultimately suffer most from their reluctance to enter into any more formal financing arrangements. If they use their sterling balances to finance their projects, these balances will soon be reduced—as, again, India's have been—nearly to the minimum required as a currency reserve, and if they have thereafter to seek satisfaction in the London capital market their credit will not stand high. Through an agency and a Bank, it is argued, they could expect a continuing flow of capital, though probably less than they would like.

The present system is quite unsuitable for the former colonies emerging as dominions; unless improved, it can, indeed, seriously impede their development. The British Government turned away some years ago from the method of financing by direct Governmental loan—whether to local authorities at home or to Governments abroad. It favours the more orthodox method of borrowing through the London capital market—though it enforces rigorous control of borrowing, as of share issues. Colonies can still get some money directly from the Government, or, if they borrow through the market, their stocks are privileged with the Government's guarantee. Dominions, on the other hand, must fend for themselves; and not many of them could expect a good reception in the London market in its present state. The British Government's long-term credit commands a rate of interest of 5 percent or more, because interest rates are high and because investors have little use for fixed interest investments in present conditions. If there is, additionally, some political risk involved, a loan can be arranged only on terms that impose a heavy burden on the borrower. Rightly or wrongly, it is thought that money incurs more risk in the young dominions than in the older ones—and even of the older dominions, South Africa (which has in recent years received more British capital than has any other country is no longer accounted a good risk. The borrowing power of other African dominions, of Malaya and of the West Indian Federation, will evidently be such as to discourage economic development unless the means of financing can be suitably adapted to their needs. And Mr. Adlai Stevenson's recent warning to South Africa that the United States has many demands for capital nearer home and is unwilling to incur needless risks must be read as a warning to these other countries, too.

At the other end of the scale are countries such as Australia, already exporting capital in modest amounts to south-east Asia—while remaining, of course, net importers of capital. The British Government has not concealed its hope that the more developed dominions will be able to play an increasing part in the development of the more backward members of the sterling community, and some such institution as a Commonwealth Bank would be helpful, even necessary, for the purpose. But it is not expected in London that any pressure would be applied to these more advanced countries, which must still put their own development first. Abroad, it is easy to overlook the fact that Britain, traditionally a big exporter of capital to all parts of the world, finds it increasingly difficult to satisfy her own need for capital. That is, of course, the reason why other sterling countries' requests for loans have been refused. Yet realists in London recognise that without facilities for borrowing in London, the younger dominions especially would leave the Commonwealth, which might then rapidly disintegrate. Britain is in a dilemma. She has to choose between the demands of the Commonwealth and the health of sterling; and neither can be sacrificed. Commonwealth conferences should surely be devoted to these fundamental economic problems rather than to political matters that are comparatively superficial. There would be no sense in discussing the external defence of a community that was disintegrating internally.

RAISING COAL PRODUCTION

A DISAPPOINTING START

COAL production in 1956 amounted to 39.4 million tons, against 38.2 million tons in 1955. Judged in the context of the second plan target of 60 million tons by 1961, the progress appears to be poor. Referring to this, Mr. D. F. Macmillan, chairman of the Bengal Coal Company Ltd. says in his speech to shareholders at the annual general meeting that two factors are mainly responsible for the disappointing start. First, the labour strike in the Raniganj coalfield last year caused a loss of 300,000 tons of coal. The second and more important reason is that the Government took a very long time in framing a settled policy about production in private collieries. The private sector was asked in January last year to submit urgently its plans for expanding output. But not until the second half of the year did the Government say that it did not contemplate according specific approval to individual plans, and "that producers could take all such plans as having general approval, except when specific approval was required under law as, for instance, in the

case of opening new mines". Considering the nature of the decision, many months were unnecessarily wasted.

Just when it appeared that the uncertainties had been resolved, a new element of doubt crept in about the field in which the private sector could work. Referring to the Coal Bearing Areas (Acquisition and Development) Bill, Mr. Macmillan declares that the statement of objects and reasons in it implies that the private sector may raise the extra 10 million tons required annually from the existing collieries and the immediately contiguous areas. But the operative part of the Bill does not fully conform to this statement. It empowers the Government, should it so desire, to take over any land falling within the scope of the Bill, "except the land in which coal mining operations or any process ancillary thereto are actually being carried on." Mr. Macmillan infers that this means that the protection offered to private producers "would exclude coal bearing land contiguous to working collieries in which no work is being carried on at present, that is to say, land constituting a reserve area for subsequent development." This might considerably restrict the capacity of private collieries to expand into contiguous areas. Giving the example of his own company, he says that in January 1956, production plans were submitted to the Government which included the opening up of four new collieries in its reserve coal bearing areas to produce about half a million tons a year of extra coal from 1960, as well as increased production of just under one million tons a year from more intensive development of the areas already being worked. The Government has refused permission to open up the proposed four new collieries because the areas to be developed do not conform with the Government's interpretation of contiguous areas.

Other difficulties of the private sector relate to the supply of basic materials such as cement and steel and insufficient allotment of railway wagons. On the basis of figures obtained from 125 of its members, the Indian Mining Association has calculated that in 1956, against 41,000 tons of cement applied for, only about 6 percent has actually been received in the collieries. "The situation has improved somewhat this year, but there is still a dangerous gap between requirements and supplies", Mr. Macmillan says. The supply of iron and steel is hardly any better and items like rails for tram lines are scarcely available. A basic industry like coal should be allowed to import its essential requirements in spite of the foreign exchange difficulties. Mr. Macmillan compliments the railways on their efforts to tackle the increased traffic but fears that after 1958, when the demands of the steel plants on transport will increase rapidly, there is a real danger that the situation may deteriorate steadily and affect the plan as a whole. A serious anxiety for the industry is the existing cost-price relationship. Costs have been going up steadily, but the price increases allowed recently barely offset them. The rise in costs is due chiefly to higher labour charges, but also to enhanced prices of steel, cement, machinery and timber, and to the implementation of new rules governing the operation of mines. Mr. Macmillan declares that as a result of all this, the long-standing problem of prices in relation to costs has now attained "new proportions of gravity and danger."

CHARTERED'S OFFER FOR EASTERN BANK SHARES

IN a circular letter to shareholders of the Eastern Bank Ltd., the Chartered Bank has stated the terms and conditions on which it is offering to acquire the issued share capital of the Eastern Bank. It is said that £9 fully-paid stock of the Chartered Bank will be issued in exchange for every two shares of £10 each (£5 paid) of the Eastern Bank. The offer is to be accepted on or before 31st July, 1957 (or such later date, not subsequent to 21st August, 1957, as may be notified by the Chartered Bank) by the holders of 90 percent (or of such smaller percentage as Chartered may elect to accept) of the issued shares of the Eastern Bank. The Chartered Bank stock to be issued in terms of this offer will rank in all respects *pari passu* with the existing stock of the Chartered Bank. It will entitle its holders to participate in full in all dividends and other distributions declared, paid and made on the stock of the Chartered Bank after the date of the letter (22nd June, 1957). If the offer is accepted and becomes unconditional, accepting shareholders of the Eastern Bank may expect, so far as the directors of the Chartered Bank can reasonably foresee, to receive dividends of not less than 15 percent a year on the Chartered Bank stock to be issued to them. The stock of the Chartered Bank and the shares of the Eastern Bank are officially quoted and dealt in on the London Stock Exchange. On the basis of their respective middle market quotations at the close of business on 12th June, 1957, the value of two Eastern Bank shares was £13 10s, compared with a value of £16 4s for nine stock units of £1 each of Chartered. On the basis of the dividends of 8 percent and 15 percent paid

respectively by Eastern and Chartered in recent years, the annual dividend (before deduction of income tax) from two shares of Eastern has amounted to 16s and from nine stock units of Chartered has amounted to 27s.

From the point of view of security for the future it is material that, in substitution for their direct interests in Eastern, shareholders of Eastern will receive interests in Chartered (of which Eastern will become a subsidiary), which is a considerably larger undertaking than Eastern and accordingly will afford broader cover for the earnings, and assets appropriate to their investment. The shareholders of Eastern who accept the offer will be relieved of the personal liability of £5 a share attached to the shares of Eastern, which liability will pass to Chartered. The paid-up capital of Chartered is considerably greater, and is more widely held, than the paid-up capital of Eastern, which means that, in future, if the present offer is accepted and becomes unconditional, shareholders of Eastern will have the advantage of a more active market and accordingly greater marketability for their investment.

Pointing to the advantages of the merger, it is stated that in recent years both the banks have expanded their branch organisations and could, no doubt, continue to do so independently of one another. Chartered, in particular, has for some time intended to open branches in the Middle East. It is clear, however, that in view of the rapidly increasing costs and the intense competition which has characterised banking business in the East since the second world war, quicker and more solid results can be achieved by a combination of the two banks than by independent action by each of them. Eastern has branches in the Middle East in territories where Chartered has none, and Chartered has a large and highly developed branch organisation in the Far East where Eastern is not established. So a merger on the terms proposed offers to the shareholders of Eastern the opportunity of participating in a much larger banking organisation with a very wide spread of branches across Asia from the Middle East to the Far East. The merger will enable the business already established by Eastern in the Middle East to be developed in co-operation and not in competition with Chartered. While no immediate change in the mode of operation of the two banks is contemplated, it is clear that, as time goes on, within the area in which they overlap there may be scope for adjustment in their respective branch organisations. It is emphasised that the main purposes of the present proposal are consolidation and expansion and not merely a saving of operating expenses.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, *Capital's* Index of Indian Industrial Activity shows an advance of 3.6 points for January 1957. Mainly contributing to the increase were cotton consumption, jute manufactures, pig iron and wagons loaded. Cheque clearances and notes in circulation improved.

Finance Minister in Bombay.—The borrowing programme of the Central and State Governments for the current year was discussed last week at a conference in Bombay presided over by the Union Finance Minister, Mr. T. T. Krishnamachari. According to Mr. Krishnamachari, the Central Government has decided to raise a market loan of Rs. 100 crores; this will include Rs. 32 crores in the form of conversion loans and the balance of Rs. 68 crores will have to be raised by cash subscriptions. The loan will be raised around the end of July or early in August. State Governments have been told that they are free to float their own loans if they so wish, but the Centre thinks they should raise the money they need through small savings. National savings certificates have been made more attractive by the offer of higher interest rates and this should help the States in getting money from non-institutional investors. State Finance Ministers have been informed that if they accept the Centre's suggestion, the share of the State Governments from the collection of national savings will be raised to 66-2/3 percent, the remaining 33-1/3 percent going to the Central Government. The share of the States out of the collection of national savings at present is 25 percent of the past year's average and 50 percent of any excess. The total amount of collections last year was Rs. 62.7 crores; this year, it is expected to be of the order of Rs. 83 crores. The Central Finance Minister has said that he is keen to raise larger resources through small savings, as this will help curb the under-current of inflation. He thinks that with the co-operation of the States, the total collection of small savings could even go up to Rs. 120 crores. India has not made any formal approach to the U.K. Government in connection with a big loan; but the Finance Minister has said that he might take up the question of securing foreign exchange during his visit to the United States in September. Referring to the direct taxation proposals, Mr. Krishnamachari says that his intention is not to "stifle private

enterprise but to make the idle wealth productive." The basic structure of the Government's taxation proposals consists of the capital gains tax, wealth tax, death duties and expenditure tax. Mr. Krishnamachari has said that the tax on excess dividends and the compulsory deposit scheme are just "temporary devices which the Government proposed to be in the next two or three years. These are, in fact, *ad hoc* remedies." With reference to the compulsory deposit scheme for company profits and reserves, the Minister says that funds will be made available for normal development purposes to increase industrial output. About rumours of the devaluation of the rupee, he says that the rupee is as strong as ever and there can be little justification for any such measure.

Tin Buffer Stock in Action.—Over the past two months, tin stocks in London have risen from 727 tons to 1,844 tons, yet the price of the metal on the Exchange has stayed remarkably steady. The only possible explanation, Messrs. Strauss say in their review of the market, is that the buffer stock manager has been buying metal. The market thinks that about half of the total stocks may be in his keeping. Evidently the policy of the buffer stock is to keep the tin price around its present level. The question remains whether its resources will be adequate. There will soon be an expansion in supplies: tin which used to go to the Texas smelter will be going to Europe. The U.K. Board of Trade will be selling its surplus stock. With the reopening of the Suez Canal, the backlog in supplies from the Far East is being delivered in London; and, finally, the Russians are still selling. Presumably, only the last is an unknown factor in the calculations of the buffer stock. The weight of the others can be estimated fairly closely, but the market would like to know how much the Russians are selling. Estimates vary between 3,000 tons and 10,000 tons a year. The situation was discussed at the meeting of the International Tin Council in Brussels recently. Afterwards it was announced that Canada is to sell 3,000 tons of tin from its strategic stockpile. With the 2,500 tons to be released by Britain, this makes an extra 5,500 tons

With this week's edition of *CAPITAL* is published a 96-page Survey of Heavy Industries in India, containing articles discussing the problems, prospects and possibilities of industrial enterprise in one of the most vital sectors of the economy of this country today. The supplement is being supplied free to registered subscribers, and will be available to others at Rs. 5 a copy (postage extra). Enquiries may be addressed to the Manager, *CAPITAL*, 5, Mission Row, Calcutta 1.

to be absorbed within about a year. The Council's examination of the market showed that even without these releases there will be a slight surplus of production in 1957. The British tin could be released at once, but the Council authorities understand it will not come on the market before September. The Canadian tin will not be released until December and it is to be liquidated gradually. Canadian delegates told the Council that their Government would not sell below the cost price, but did not say what this price was.

Expanding Tube Manufacture.—The Avadi factory of Tube Products of India Ltd., which was opened recently by the Governor of Mysore, represents a further stage in the growth of a young and important industry. One of Britain's leading steel tube producers, Tube Investments Ltd. of Birmingham, is collaborating in this venture, financially as well as by providing technical know-how. The factory involves a total capital cost of Rs. 1.5 crores, of which Rs. 1 crore has already been spent. The production of "Tru-wel" tubes which will be used largely for bicycle manufacture has already commenced, and the management hopes to be able to make them in large quantities soon. Mr. P. G. Carew, Director, Tube Investments Ltd., who represented his company at the opening ceremony, said that the Avadi factory would, in the early stages, concentrate mainly on the production of tubing for the bicycle industry, where there was a growing demand, and later tackle a wider field.

Rise in Food Prices.—A Press note issued by the Union Ministry of Food and Agriculture has announced the formation of a committee, with Mr. Asoka Mehta as chairman, to investigate the causes of rising food prices. The committee has been asked to submit its report within three months. Its terms of reference include a review of the present food situation and an examination of the causes of the rising trend in prices since the middle of 1955. It will also assess likely trends in the demand and supply of foodgrains over the next few years. In arriving at its conclusions, the committee will consider the steps taken by the Central and State Governments to increase food production. It will study the impact of development expenditure, increase in population and urbanisation on the demand for foodgrains and take into account the possibility of importing food in

the light of the foreign exchange position. On the basis of its findings, the committee will suggest measures "to ensure a level of prices which would provide the necessary incentive to the producer with due regard to the interest of the consumer, and the maintenance of a reasonable cost structure in the economy." Prices of foodgrains have increased sharply, the index of wholesale food prices having risen from 356.3 to 435.7 over the past year. Drought conditions have created shortages in some areas. But development expenditure has brought greater prosperity to peasants generally, and they are now able to hold larger stocks than they could before. In spite of the restrictions on advances against paddy and rice enforced by the Reserve Bank, the tendency to hoard food does not seem to have been adequately checked. One way to discourage hoarding is to demonstrate that there is little chance of prices rising further. Supplies can be increased by importing more, although here the limit is set by the foreign exchange shortage. The inclination of peasants and traders to hoard can be effectively checked if food prices are stabilised at a lower level. These are some of the issues which the new committee may be expected to consider.

Technical Literature.—One of the things which the under-developed countries have tried to do as an important adjunct to their plans for industrial expansion has been to encourage the dissemination of technical "know-how." There is no lack of literature available; indeed, the trouble is that there is so much that it is virtually impossible even for the most assiduous of readers to keep really up-to-date even if they confine their attention to one particular subject. That appears to be the case in Britain also, where industrial information is made available in more than 500 technical journals, without taking account of the publicity material issued by individual manufacturers. In the circumstances, it is difficult to keep track of all new writing on even a narrow subject, let alone fringe interests. Technologists are aware of this, and one of the results is a large number of rather uncoordinated abstracting and indexing services, some of them overlapping. A newcomer which hopes to be all things to all technologists is *The Index of Technical Articles*, published monthly by Iota Services Ltd., 38, Farrington Street, London, E.C.4. A high proportion of British technical publications are covered by it, as well as a few newspapers. Entries consist of author and title, plus a brief descriptive note where necessary. The scope of the classification is wide, including some economic subjects, in addition to technical ones. The monthly may prove a useful time-saver for the technician, and a money-saver too.

THE HONOURS LIST

EVERY commercial man in Calcutta will be delighted to see that Mr. Robert Steel has been created a C.S.I. He is a universal favourite, a man of thorough independence of view, esteemed and respected by everyone who has the good fortune to be acquainted with him. The commercial community will, we are sure, join with us in congratulating Mr. Steel. It was generally supposed that the Hon'ble Mr. Patrick Playfair would be knighted, or receive some kind of Jubilee decoration, and the supposition has proved correct. We have now two Jubilee Knights. We are extremely glad to see that journalism has at last been acknowledged in India, and that Mr. George W. Allen of the Pioneer has been created a Knight of the Indian Empire. Our congratulations are also offered to Sir George Cotton of Bombay, who has been one of the most energetic mill-owners there, and the Government have done well to confer a knighthood upon him. We cannot do better than conclude this article with the following extract from the *Saturday Review*. "In any list of Birthday honours or New Year honours one expects to see the name of at least one distinguished man. Provincial mayors, political martyrs who have sacrificed themselves for their party, faithful but obscure civil servants, army veterans and naval heroes, City magnates, millionaire bankers or brewers, Indian magistrates and colonial governors, all loom large on such occasions. Amidst the jumble of undistinguished recipients of Royal favour there is occasionally to be discovered a name that comes under none of the preceding categories; and such a name belongs invariably to one of two classes. Either it is the name of some Society man with no qualifications whatever beyond the favouritism of Court circles, or, more rarely, it is the name of some really distinguished man. To the class of the undistinguished belong half the men of distinction in the highest walks of life. When a man has for years been in his front rank of his profession, has served his fellows in art or science, letters, learning, or journalism, has even been president of his institute, and has won perhaps a more than European reputation, if then he is still ignored by the Court flunkies who regulate the lists of honours, there comes a time when for him it is the greater honour to remain untitled. Michael Faraday remained plain Michael Faraday to the last, and Mr. G. F. Watts declines the baronetcy which was offered him until he had passed fourscore years."

Without Prejudice

MEETING LIABILITY FOR DAMAGES

LAW LIMITS RESPONSIBILITY OF EMPLOYER

(FROM OUR LEGAL CORRESPONDENT)

"If a dog bites a man, that is not news; if a man bites a dog that is news." Thus the great C.P. Scott of the *Manchester Guardian* is said to have advised his reporting staff. The law courts are so cluttered up with claims by pedestrians against motorists that the Press scarcely ever bothers to report them. But a claim by a motorist against a jaywalker is news and the law upon such claims is worth considering. Bingham's *Motor Claims Cases*—worth buying, by the way, by those interested in third party insurance—cites a case where a jaywalker, his mind occupied with matters other than taking due care as to where he was going, suddenly without warning stepped off the pavement straight into an oncoming motor-cyclist. The motor-cyclist was carrying a pillion passenger. The pillion passenger was thrown off the motor-cycle and killed, and his personal representatives sued the pedestrian for damages caused by his negligent walking. Incidentally, they also sued the motor-cyclist, but we are only concerned here with the jaywalker against whom judgment was given with costs.

The legal principle is simple. Law Notes' puts it succinctly: "Every person using the highway owes a duty to take care as regards the persons and property of others at all events if such others are within the range of foreseeable impact and this duty is owed not only by the motorist but by pedestrians also. In fact, it is owed by everyone." Yes, the principle is simple enough. Why then do we see scores of claims against motorists and never or hardly ever one against a pedestrian? The answer lies in six words. "Compulsory insurance against third party risks". The plaintiff in a successful suit against a motorist is virtually certain of recovering his damages whereas the reckless pedestrian as often as not may be a man of straw. The motorist is compulsorily insured, whereas the jaywalking man of straw is not. And third party insurance being a statutory duty on motorists in India, recent decisions of the English

courts in this branch of the law are of interest and importance here. As Lord Goddard, L.C.J., put it: "The Road Traffic Act was aimed at the protection of the public, by providing that there should be a body of insurers behind every driver of a car."

But not behind every or any pedestrian, be he or she never so reckless. Wherefore attempts have been made to obtain damages against the pedestrian's employer where the pedestrian is in employment and when the injury caused by his negligence took place at a time when he was not engaged on his own account but in the course of his employment in the business of his master. In such a case the employer may be liable. One hopes that it is not stretching the general principle too far in stating it thus: The employer is bound to guarantee the public against all damage arising from the negligent acts of himself or his servants committed in the course of their work. That, one submits, is the underlying principle. But all sorts of difficulties arise when we begin to apply it, or try to. Here is one of the latest English teasers which the reader is invited to think out for himself.

A lorry driver engaged on a four-hour journey for his employers stopped in the course of his journey to obtain refreshment at a café on the other side of the road. This necessary practice of himself and other lorry drivers was known to his employers and impliedly sanctioned by them. After drawing up his lorry he turned himself into a pedestrian by walking across the road towards the café on the other side and negligently walked into a motor-cycle being driven by the plaintiff, injuring the latter and the motor-cycle. Were the lorry driver's employers liable for his negligence?

"No," said Pilcher J. "Though employed at the time on his master's business and permitted to do what he did in crossing the road to get refreshment he was not employed to do this and he was a stranger to his master from the moment when he left the lorry." "While an employer is, no doubt, vicariously responsible for the negligent acts of his servants committed in the course of their employment, he is not, in my view, necessarily responsible for the consequences of acts committed by his servants during the period of their employment, unless the particular act which is negligently performed was an act which the servant was employed to perform." A border line case. It was the hoped for cup of tea at the café that did it. His lordship added that it might have

been different if the driver had crossed the road in order to ask his way or to get a tin of petrol for the lorry.

It is the writer's habit, when confronted with a point involving the law of master and servant, generally to turn up Messrs. Barwell and Kar's wellknown work on the subject; and this he does not only to obtain a clear presentation of the law but also because Mr. Barwell could always be relied on to wander off in long forgotten highways any byways of history and emerge with some interesting titbit of general information. Did you know, for example, that the principle of the employer's non-liability for the negligence of his tea drinking motor lorry driver in 1937, and of all similar cases, is based on a decision of Baron Parke well over 100 years ago arising from the then universal public distrust of railway engine drivers and the new dangerous iron monsters that time, the beginning of the contest between them and the flourishing and seemingly imperishable stage coach. Most people, except eccentric cranks like George Stephenson, believed that the new monstrosity could not last. Baron Parke presiding in the Exchequer Court probably believed it too. Mr. Barwell tells us that "Baron Parke would remember the hearty laughter which greeted Stephenson's statement in the *Commons* that railway engines would ultimately pull a train at 20 miles an hour. He may well have heard the speech of the Duke of Wellington who 'saw no reason to suppose that these machines would ever force themselves into general use.' That was the atmosphere of prejudice and dislike in which the old judge sat down to try what is now the leading case of *Cox v Midland Counties Ry Co.* in which he was to deliver a classical judgement which tells us what the law is in 1957. For Baron Parke was about the most famous, practical and level-headed judge of his day and generation, and not one to be carried away by prejudice against or dislike of a new and perilous institution.

A passenger on the railway had been very dangerously injured by a moving truck. The station master of the railway station by which the accident occurred sent for a surgeon, Dr. Cox, who came on to the railway premises and examined the passenger and came to the conclusion—a right one, as was not denied—that an immediate operation was necessary and then there amputated the passenger's leg. The station master's promptitude and the surgeon's skill probably saved the patient's life. It is important to remember, however, that it was not proved, nor was it relevant to the case then before Baron Parke that the accident to the passenger was caused by the negligence of the railway administration or its servants. Dr. Cox, having in a great emergency, after being summoned by the station master, done a difficult job successfully, duly prepared his bill for professional services rendered and submitted it to the railway company for payment. The company repudiated liability, whereupon the doctor sued it for his fees. Baron Parke held that the company was not liable. It is fascinating to read the judge's actual words and to see in retrospect the wise, conservative, old mind at work.

Remember that many respectable citizens, especially in rural districts, at that time considered that you might as safely put a Bengal tiger on the road as a railway engine with its driver on the line. Borough councils in Wiltshire and Somerset refused to have railway stations within their borders. A cabinet minister had just been killed by a shunting engine. We see the veteran judge groping his way amid the precedents of stage coach and carriage accidents which were all he had to guide him and applying them to these new engines of destruction; and what is more, applying them rightly and telling Pilcher J. at Derby Assizes more than a hundred years later what he must decide in the case of that lorry driver going across the road for a cup of tea at a wayside café. "It is not easy," said Baron Parke, "to decide whether unforeseen accidents will occur more frequently in the carriage of passengers by locomotive power on railroads or in carrying the like number by coach on ordinary roads. Certainly there is no such difference as to make the duties of an engine driver and a coachman different as to the power of making such contracts as that in question, nor the duties of porters, clerks or other servants connected with the conveying department. Could it be maintained that a coachman from whose coach a passenger had fallen and broken his arm..... could bind his master by a contract with a surgeon to cure the injured person and oblige his master to pay the bill? We are of opinion that he could not. Though it might be a benefit to the master to have the damage diminished by a speedy cure, if he was really liable for that damage, it would be a prejudice to him to be bound to pay if he was not; and is the servant to decide whether his master is liable or not? We think the servant has clearly no such power."

This ancient case and the recent lorry driver's one are a useful reminder to many people who seem to suppose that injury by a servant is of itself enough to make the master responsible. Wide as the master's liability is and though it is being constantly extended by legislation, there is still a limit and the case of the Derbyshire lorry driver is an example of the fact.

A DITCHER'S DIARY

SOME of the shrewdest men I have known are chartered accountants, which makes it unlikely that their fraternity paid much attention to the lessons Mr. Morarji Desai gave them recently on how to do their job. (It is an occupational disease of Ministers to think that they know everybody's job better than the men who do it.) There was, however, a little more than the customary sermonising in Mr. Desai's speech. He seemed almost to speak for Mr. Krishnamachari when he called upon chartered accountants to help the Government collect the tax due to it. In doing so, the Minister also launched on a discussion of what is legal but wrong, and then suggested that chartered accountants should be guided by a sense of right and wrong rather than that of what is legal and illegal. Chartered accountants have their own very strict code of conduct, which is unlikely to be revised on the suggestion of the Commerce and Industry Minister. It is to be wondered still whether Mr. Desai, besides labouring the obvious, was not introducing some very ill-defined and hence dubious principle into the way a profession should act. The greatest of philosophers down the ages have sought to know what is right and what is wrong, and if I wanted to improve the ways of a group of mortals, I would set them a less difficult principle to follow. Less difficult and more precise. In spite of Mr. Desai, I would not, for instance, encourage a chartered accountant who, satisfied that it is wrong to pay taxes to a Government spending money on what he does not approve of, helped his clients to evade tax; nor would, I suspect, Mr. Desai. A surer way to get the taxes Mr. Desai thinks are the Government's due is to plug the loopholes in the law, improve the efficiency of income-tax officers, and so generally to run the administration as to remove the widely held impression that nobody gets out of the Government much in return for the taxes he pays.

There is nothing basically wrong in a Government restricting imports or exports for a period in order to save foreign exchange or conserve internal supplies. A very different thing is to develop an attitude to imports as though they were something unpatriotic. (Un-Indian is a term happily not used very often in this country.) Acharya Kripalani's recent description of India's import policy as a departure from what he called the *dharma* of swadeshi raised a matter of mundane economic policy to a vague spiritual level. The result can only be confusion. It is late in the day perhaps to talk about the virtues of free and unrestricted trade—which are none the less real for being unfashionable—but the political critics of India's economic policies will lose nothing by being reminded now and then that there are certain fundamental laws of economics. One is that a country with ambitions to expand its export trade cannot indefinitely shrink its imports: if you expect others to buy from you, you must be prepared to see what the other party wants to sell. Secondly, it is simply illiterate to think that imports impoverish an economy; much oftener they enrich an economy and almost always improve its efficiency. India could, for instance, save a considerable amount of foreign exchange by not buying the machinery it now wants from Europe and America. That will be one way of ensuring economic stagnation in the country. Mr. Kripalani is old enough to remember that swadeshi was forged as a political weapon, and in its time it was very effective too. To treat it now as an economic inviolable is to betray a sad incapacity to come to terms with the changing times. Although India is by no means the only country in which economic thinking is bedevilled by extraneous and irre-

levant considerations—even so acutely money-minded a people as the Americans have political obsessions—I doubt whether there is another country in which vague spiritual philosophies affect economic policies to the extent they do in India.

The ordinary newspaper reader, with no knowledge of what goes on in editorial conferences, must often wonder just what it is that is required to give a relatively minor complaint the magnitude and dimensions of a Cause. That the newly elected office-bearers of, say, the Serampore Newspaper Correspondents Association are treated more importantly than the new Government in Canada is understandable. The current storm over the Government of India's reported decision to sell off the coffee houses now run by the Coffee Board belongs to an entirely different category. Newspapers which never had an inch of space to spare for the coffee industry, of which the coffee houses are only a very small publicity effort, have been publishing lengthy reports and letters to the editor urging the Government to revise its decision. I am indifferent to what New Delhi may eventually decide. My interest is only in the proportions the agitation has achieved, simply because of the wholly fortuitous fact that some newspapermen probably patronise these coffee houses. And the result is that a flood of profoundly nonsensical remarks are finding their way into print. A group of gentlemen who view the possible closure of coffee houses with disquiet have written: "To us it is a matter of greater moment than the closure of the Suez Canal.....The coffee house has in the past decade offered a home to a large number of unanchored intellectuals.....The decentralisation of these intellectuals is likely to shake the moral foundations of our society." The coffee house had earlier been described as an institution, as a temple! I do not grudge the under-employed gentlemen, bureaucrats and journalists, their happy hour(s) in the Calcutta coffee house but, surely, something is wrong with our news values when the retrenchment of a hundred-odd waiters in coffee houses is considered more important than much bigger, similar, phenomena elsewhere just because "unanchored intellectuals" happen to be affected at the same time. It occurs to me that an anchor may not be the only thing missing in the equipment of the "intellectuals" they are talking about.

The vigorous "economy drive" which, we are told, is now afoot in the Government may leave many puzzled and somewhat sceptical. That there is considerable scope for reduction in expenditure, few, even in the Government, are any longer wont to deny. But those who are familiar with the results of similar "drives" in earlier years (a usual phenomenon when Budget and supplementary demands for grants come up for voting) will not perhaps be wholly confident about the success of the latest venture. Among the rather profound suggestions which the Central Home Ministry has made in a recent circular to sister Ministries and State Governments is one that Ministers and certain officials should not fly the national flag on their motor-cars. Just how much money it is possible to save by this means, I would not know; but one imagines that if some of our highly paid dignitaries use the Government's time thinking up suggestions of this calibre, better scope for saving may lie in retrenching them. An office I was acquainted with some years ago once invited its

senior personnel to recommend economy measures; almost the only proposal which emerged, and was seriously considered, was that envelopes be issued minus the gum on their flaps. The Home Ministry's recommendation about not flying flags on motor-cars seems to emanate from a kindred intelligence. Little things taken together sometimes add up to a lot, but that is a poor argument for sending one's sense of proportion on holiday, especially when the much greater economies which can be achieved by, say, the dispersal of Government offices away from New Delhi, remain largely ignored. Ministerial travel in flagless motor-cars is a poor substitute for failures elsewhere, even if the Government's aim be merely to nourish a pretension to austerity.

There is, perhaps, little satisfaction to be gained from the fact that the number of foreign tourists visiting India increased sharply last year; two entirely fortuitous circumstances—the Buddha Jayanti celebrations and the U.N.E.S.C.O. conference—might well, on analysis, prove to have brought a goodly proportion of the 75,000 or so that came. Circumstances this year may, I suspect, prove strongly adverse to the growth of tourist traffic, and thereby possibly temper the optimism which pervaded the discussion at a tourist advisory committee meeting in Simla last week. The improvement in facilities which tourists can reasonably expect when visiting this country seems to have been rather meagre. Hotels remain as costly as ever; and the Shipping Minister's suggestion that they should provide "typically Indian" decor, cuisine, music and entertainment may not necessarily be the ideal way of increasing their, at present limited, attractions. Such resources as they may be able to spare would probably be better spent on improving the comforts already offered rather than on attempting innovations which may not be easy to appreciate. The improvement of amenities still has a long way to go; and the quality of food, in particular, has deteriorated so dangerously as to have become quite noticeable now that few can afford alcoholic stupor before sitting down to dinner. The standard of the hotels is not the only handicap in encouraging tourism; the deficiencies of the transport network are perhaps even more serious. Facilities for travelling by road are notoriously poor, and there is little prospect that they will improve to the point where centres of tourist interest may become readily accessible. It may be soothing for one's optimism to hang posters advertising India's attractions in more and more foreign cities each year; but an important point not yet fully appreciated, perhaps, is that there is no worse publicity a country can get, as far as such traffic is concerned, than a disappointed tourist.

Orson Welles once turned up to lecture in a small Western town, with hardly anyone present to listen—not even the woman who should have introduced him. He introduced himself: "Ladies and gentlemen," he said, "I will tell you the highlights of my life. I am a director of plays. I am a producer of plays. I am an actor on the legitimate stage. I am a writer of motion pictures. I am a producer of motion pictures. I am a motion picture actor. I write, direct and act on the radio. I am a magician. I also paint and sketch. I am a book publisher. I am a violinist and a pianist." Here Welles paused, leaned towards the small audience and said: "Isn't it a shame that there are so many of me and so few of you?"

AIR FREIGHT

is cheaper than you think! It is usually held by most people that air freight is more expensive than surface transportation. But cost-conscious businessmen know that it is quite the contrary in many cases if the big savings on certain "hidden costs" are taken into account. For instance the savings on:

- * delivery time
- * packing and insurance
- * storage costs
- * documentation

plus the quick turnover of the capital invested! Moreover, when you send your goods by KLM, they are never out of expert hands.

Better by air... best by

BENGAL COAL COMPANY, LIMITED

CHAIRMAN MR. D. F. MACMILLAN'S REVIEW

Addressing the Shareholders of the Bengal Coal Company, Limited, at the Annual General Meeting held on 26th June, 1957, the Chairman, Mr. D. F. Macmillan, said:—

It is over a year and a half since members were addressed from this Chair when my predecessor reviewed the Company's affairs for the half-year ended April, 1955. With the introduction of the new Companies Act, the Accounts before you are for the year ended 31st October, 1956, and my review today will cover that period. You will see that the Accounts have been compiled in the form prescribed by the new Companies Act. It is for shareholders to judge whether the new form gives them a clearer picture than the form to which they have been accustomed in the past, and perhaps this will be revealed by any questions which may be put by shareholders on these Accounts and my ability to explain.

The year under review was a difficult one for the coal industry and your company had also to bear its share of the troubles. These have been referred to in the Directors' Report and I shall develop on them this morning. The trading results of the company for the year consequently compare somewhat unfavourably with those for the previous year, and it is an indication of the inherent strength of your company that your Board, after careful consideration, have been able to recommend final dividends which make the

distribution for the year the same as that for the year ended October, 1955. Since the end of the accounting period, the ordinary shares of the company, which stood at Rs. 200/- nominal, have been divided into twice that number of shares of Rs. 100/- nominal. Consequently, while the interim dividend was declared on the two hundred rupee shares, the final dividend will be paid on the one hundred rupee shares and I hope it is clear to shareholders that the total distribution for the year on the ordinary shares is at the rate of 17½%. As there appears to be a good deal of confusion of thought in otherwise well-informed quarters about dividends expressed as a percentage of nominal capital, it may be well for me to point out that shareholders have received a return of exactly 6% on the capital employed in this company's business.

Raisings during the year ended 31st October, 1956, totalled 2.32 million tons which fell short of production in the previous year by 189,000 tons. I have no doubt however that we would have been able to outstrip the preceding year's figure had not the company's collieries in West Bengal been affected by a strike which lasted for a period of about four weeks from the middle of September, 1956.

Tribunal Awards

The All India Industrial Tribunal (Colliery Disputes) which had been set up as long ago as 1954 and had been reconstituted a year later, after protracted deliberations and detailed examination of all the

issues involved, finally published its Award on the 26th May, 1956, and its terms became operative as from that date. Whilst the employers in the coal industry did not agree with all the conclusions arrived at in the Award, to promote general stability in the industry, they decided not to go on appeal and their decision was shared by a large section of the labour organisations operating in the coalfields. Some of the smaller Trade Unions however decided to appeal and, once they had done this, the other Unions also thought it advisable to join in. Consequently they also participated in the proceedings before the Appellate Tribunal.

Whilst the appeals were being heard and the entire subject was being argued afresh, production in a vital section of the Ranegunge field was brought to a standstill by a strike which was totally unwarranted and unnecessary. In addition to your company's collieries other large pits were affected, and it is estimated that as a result, the loss in output amounted to 300,000 tons at a time when every ton was needed to meet the growing industrial requirements of the country. Some of the repercussions of this ill-conceived strike are still in evidence about eight months after its termination. During the strike for instance, heavy rain caused the water level to rise rapidly in one of your collieries and efforts to rush additional pumping machinery to the pit were largely frustrated by the heat and passions of the prevailing situation. As a result the colliery workings were completely inundated. The process of rehabilitation which is now going on is a slow and laborious task, and it will still take some time before normal production levels can be attained again at that colliery.

I wish to pay a well deserved tribute to the company's staff who, from the most senior to the most junior, bore the strain of this strike, often under conditions of personal danger, with cheerfulness and absolute loyalty—may I say very simply that they served the company and the country well under most trying conditions.

It is unfortunate that at a time when the efforts of all should have been concentrated on increasing production, the emotions of labour were exploited in such a reckless manner. The Communist elements took full advantage of the situation and tried to utilise it for their avowed purpose of infiltrating into an area which, with its collieries, steel works, other industries and the growing industrial complex at Durgapur, is one of the most important industrial regions in the whole country. In view of this, it is particularly important that the responsible elements in the Trade Union movement should rise above their factional struggles for power, which have been such a marked feature in this area for many years, so that industrial stability can be achieved in this vital sector of the nation's economy.

The first year of the current Plan did not witness any dramatic spurt in raisings from the country as a whole, and against 38.2 million tons produced in 1955, the total output in 1956 amounted to 39.4 million tons. This was not due to any lethargy on the part of the producers. The strike which seriously dislocated production in the Ranegunge field was a contributory factor but an important reason was the fact that many valuable months were allowed to drift by before a clear indication of Government's policy was made known to individual producers who had been most urgently asked to submit their plans for increased raisings as early as January, 1956. Only in the second half of the year was it known that Government did not contemplate according specific approval to individual plans, and that the producers could take all such plans as having general approval, except when specific approval was required under law, as for instance, in the case of opening of new mines. Your company's productive efforts during 1956 thus got enmeshed in a tangle of red flags on one side and red tape on the other.

State Acquisition of Collieries

Just when the uncertainties had been resolved, a new element of doubt appears to have crept in regarding the field within which the private sector can work. Parliament has recently passed the Coal Bearing Areas (Acquisition and Development) Bill. In the Statement of Objects and Reasons attached to the Bill it was explained that since the use of the Land Acquisition Act, 1894, was no longer appropriate, this Bill was necessary for the acquisition of the rights of private lessees over unworked coal bearing areas which were found surplus to the requirements of the private sector. The statement went on to explain in this connection that out of the additional production of 22 million tons per year envisaged in the Plan, the public sector was required to produce 12 million tons, the balance being allocated to private industry for production from existing collieries and immediately contiguous areas.

This statement of Objects and Reasons does not however appear to have been reflected in the operative part of the Bill which empowers the Government, should it so desire, to take over any land falling within the scope of the Bill except land in which coal mining operations or any process ancillary thereto are actually being carried on. The protection offered to private producers would therefore seem to exclude coal bearing lands contiguous to working collieries in which no work is being carried on at present, that is to say, land constituting a reserve area for subsequent development. This might considerably restrict the capacity of private collieries to expand into contiguous areas.

It was after prolonged discussions throughout 1955 and the early months of 1956 that the private sector was given a definite place in the Plan, and it was clear that the success of the Plan would depend on full facilities being given to both the sectors so that each could attain its allotted target. It is unfortunate therefore that this new legislative measure should appear to restrict further the scope of collieries under private ownership which have such a responsible role to perform, and I hope an early opportunity will be taken to clarify the position.

It is vital that the mutually complementary roles of the two sectors should be fully accepted not only at the top where policy is formulated, but by Government representatives at all levels. The success of a policy is ultimately measured by its application in ordinary day to day decisions which have to be taken in such mundane matters as allotment of wagons as between State and private collieries, or in the allocation of steel and cement which are both in short supply. We are assured from time to time that no discrimination

is made in such matters against the private collieries, but this is not always apparent. I have always understood that one of the fundamental tenets of the administration of justice is that not only should justice be done, but that it should appear to be done. I would suggest therefore that full facts on matters of importance to the coal industry should be made known to all sections of it periodically so that the corroding effects of doubts and hesitations may not be allowed to detract in any way from the combined efforts of all to attain a new momentum in production.

Your company has for over a century been engaged in a continuous process of development—development to increase production and development to replace the wasting asset. It has today, as it has had in the past, the technical management, the experienced administration, and the resources to continue this tradition and to accelerate the process. The plans for increased production which were submitted to Government in January, 1956, included the opening up of four new collieries in our reserve coal bearing areas to produce new production of some half a million tons per annum from 1960, as well as increased production of just under one million tons from more intensive development of areas already being worked. Government have refused permission to the company to open up the proposed four new collieries because the areas to be developed do not conform with Government's interpretation of contiguous areas. They are, however, agreeable that we should accelerate exhaustion of our existing working areas by increasing production from them by nearly one million tons a year and this we shall do. Bearing in mind that the entire private sector is limited to an additional production ceiling of 10 million tons a year by the end of the present Plan, this company's plans to raise output by one million tons without breaching new ground bear testimony to our eagerness to participate at least as much as we are permitted in the industrial growth of the country. Shareholders of this company need not be concerned at the prospect of early exhaustion of existing workings, as I am able to tell you that the company's most recent development alone—the new Girimint and Chinakuri collieries—are designed and equipped to raise between them 100,000 tons per month for at least the next fifty years.

Supply of Basic Materials

The past year has seen almost a continuous state of anxiety regarding availability of materials which are essential for coal production. On the basis of figures obtained from 125 of its members the Indian Mining Association has calculated that in 1956 against 41,000 tons of cement applied for, only about 6% were actually received at the collieries. The situation has improved somewhat this year, but there is still a dangerous gap between requirements and supplies. The position regarding iron and steel is very similar and items like rails for tram lines are hardly available at all. In this connection the setting up of the Progress Review Committee a few months ago has been a move in the right direction. This Committee can render valuable service by keeping under constant scrutiny these and other allied matters such as the problems connected with Government's licensing policy. In a basic industry like coal there exists a strong case for relaxing the provisions governing imports, particularly in respect of essential items required for normal production. As regards additional items made necessary by new mining regulations, Government should consider postponing the implementation of such of these regulations as involve the use of foreign exchange.

Among your company's records there is a telegram sent to Calcutta by its representative at Ranegunge which reads "You say send coal I say send wagons—only seventeen arrived". This telegram, gentlemen, was sent on the 18th of June, 1957—almost exactly 100 years ago today! The fact that I have to refer now to the transport question bears a special testimony to the tenacity of a problem with which the coal industry has had to contend throughout its history in India.

Speaking the other day in the Lok Sabha when introducing the Railway Budget, the Railway Minister said that there was general recognition of the fact that transport capacity could not lag behind other developments envisaged in the Plan, and that the very success of the Plan would depend on the timely creation of the additional capacity required.

When the current Plan was drawn up it was estimated that by 1960-61 goods traffic would increase by about 61 million tons to a total of 180.8 million tons. To cope with this, as well as with the anticipated growth in passenger services, it was thought that an outlay of Rs. 1,480 crores would be needed. Provision could however only be made for Rs. 1,125 crores which was sufficient for an additional 42 million tons of traffic only. Of these 42 million tons, 25 million tons would be absorbed by the movement of coal and other raw materials for the new Steel Plants, 6 million tons by coal for all other purposes and 4 million tons for cement, leaving only 7 million tons for the general industrial and agricultural production of the country.

The first year of the current Plan has seen a significant increase in traffic and it is clear that the impact of the Plan has already made itself felt. The view is widely held that transport and communication should have been the prime objective of this Plan and that the allocation of funds to transport in the Plan is inadequate. Even given the full finance required, there is another limiting factor, namely Time. In this view there is a real danger that a steadily deteriorating transport situation will develop, which will assume serious proportions after 1958 when traffic arising from the new Steel Plants is expected to increase rapidly. Such a contingency will naturally react adversely on the Plan as a whole, and, in particular, on its coal segment which hinges so precariously on transport availability.

Within these overall limitations, however, the Railways are making commendable efforts to tackle the problems confronting them. Amongst these I would mention the remodelling of the Moghalsarai Yard which, over the years, had assumed a special notoriety as an embodiment of frustrated hopes in coal transportation; the electrification of 800 route miles including the Calcutta suburban area and the Main Line section from Burdwan to Gomoh; the possibility of further extending electrification from Kala to Moghalsarai and from Asansol to Rourkela; and the doubling of lines on many difficult sections including about 370 miles on the South Eastern Railway. The completion of these and other projects will materially assist in the movement of

coal but in the meantime many urgent transport problems remain with us.

The proceedings before the Tribunals to which I have referred earlier were closely concerned with the cost of labour since it constitutes the largest single element of cost in the coal industry. This naturally raises the general question of the industry's total cost of production in relation to its selling prices which are statutorily fixed.

Increased Production Costs

For a considerable time now this industry has been called upon to bear increased costs of production from within these fixed prices. As regards the labour element in cost, a price increase of Rs. 3/- per ton was allowed in the case of the West Bengal and Bihar collieries following the Award of the All India Industrial Tribunal (Colliery Disputes) in May, 1956. The price increase did not however become effective until the first week in July, and for a period of about five weeks the full impact of the Award had to be shouldered by the industry without any adjustment in prices. Since then the Appellate Tribunal has further increased the amounts payable to workers, and the issues are now pending before the Supreme Court. When these issues are finally resolved, the price structure will have to be examined afresh to ascertain the extent to which it corresponds to the labour costs ultimately fixed.

Apart from labour however, pressures on production costs have been exercised in an increasing degree by various other factors such as enhanced prices of steel, cement, machinery and timber and the implementation of new rules governing the operation of mines. As a result, the long standing problem of prices in relation to costs has now attained new proportions of gravity and urgency.

Any mention of the need to increase coal prices gives risk in certain circles to a somewhat undefined apprehension that it will have violent effects on industrial economy by distorting the structure of industrial costs. Similar apprehensions do not seem

to be voiced when prices of steel and cement go up although they are of as basic importance as coal. Between 1950 and 1956 the price of pig iron has increased by over 100%, of steel by over 90%, and of cement by over 50%, whilst the price of coal has gone up by only about 13%. Indian coal is said to be the cheapest in the world and a revision of Government's price policy is urgently called for so that the coal industry can receive a fair return on its enterprise and be able to revitalise its financial reserves. These reserves have to play a most important part in financing new developments not only to attain the target of 60 million tons under the Second Plan, but to pave the way for the more exacting demands of the Third Plan which some consider will call for substantially over 100 million tons. I am glad to see that this question is now under examination by the Coal Prices Revision Committee recently constituted to report on this particular problem. Its findings will be awaited with the utmost interest.

I have already paid a well merited tribute to your staff during the period of the strike. This crisis came upon the company at a time when your Chief Mining Engineer, Mr. Rosser, was on leave, and the top responsibility in the coalfields devolved upon Mr. Massmann, the Deputy Chief Mining Engineer, who worked tirelessly to overcome the special problems which the strike brought in its wake. Mr. Rosser is with us today and I would like to congratulate him and his staff on the speed with which production was brought back to normal after the problems immediately following the strike had been dealt with. Apart from the technical efficiency apparent in the working of the collieries themselves, I was impressed, on a recent visit, with the further advance in promotion of the measures for the education, training, housing, hygiene, health and general welfare of the workers to which the company has always attached great importance. In Mr. Rosser and his senior staff you have very able administrators and most capable technicians and our thanks are due to them for their sterling work on behalf of the company.

is
a road

Call it what you will—a kutcha track, a cattle-path. It is a road. It leads somewhere. It is a vital line of communication. Perhaps, where you live, roads stretch out straight and firm on every hand. Perhaps you take roads for granted. But it is not so everywhere. Over large tracts of India, there is a crying need for more roads, safer roads, faster roads. Roads are the arteries of civilised life. Without roads, the modern world couldn't tick. And without bitumen the road engineer of to-day would lose a tough ally. Bitumen, a petroleum product, is of immense value in road-making. It provides a smooth but tremendously durable

surface. Water rolls off it. Scorching sun and biting cold have little effect on it. Under the increasing loads and speeds of modern vehicles, bitumen flexes invisibly and recovers itself time after time after time. It is one of the world's most economical and practical construction materials. We make available many tons of bitumen each year to P.W.D. authorities and contractors up and down the country. We also make available the skill and experience of our bitumen engineers. Wherever you travel in India, you are pretty sure to be travelling at some time or other on bitumen supplied by Burmah-Shell.

BURMAH-SHELL... in India's life and part of it.

HEAVIER TAX BURDEN ON BUSINESS

REACTIONS OF INVESTORS TO RECENT LEVIES

(FROM A CORRESPONDENT)

THE kind of young woman who encourages advances, but slaps you in the face when you actually make them, sooner or later becomes well known for her habits. There is a name for her—a jilt—and it is with sincerity that one hopes recent financial policies do not earn this country a similar reputation. We have become accustomed to the background music of soothing noises which regularly accompanies the placing on the statute book of each new and unpalatable tax burden, the promises that it will be applied with moderation and broadmindedness, the assurances of a lightening in the load here or a concession there. But when it comes to the point and the well meaning measures fashioned by leaders are put into practice by their humbler brethren, we are tempted, through bitter experience, to behave like the firemen who listened to Matilda's screams: "and every time she shouted 'Fire', they only answered 'Little Liar'."

It was in March 1957 that the National Council of Applied Economic Research published a questionnaire which seemed to all who studied it to be an honest attempt to find out what were the various factors which might be acting as disincentives to potential investors in the industrial development of India. A great deal of hard work was done in compiling carefully thought out answers to the many questions in the belief that they would be heeded. One general factor which the answers stressed as being a strong deterrent was uncertainty—uncertainty about the future trend of taxation policy, about the imposition of new taxes and appropriations, about the possibility of retrospective measures being made law, rendering the already buried past as well as the future unsettled. In the face of the weight of responsible opinion represented by the replies to "Mr. Lokanathan's questionnaire," what do we find has happened in the field of taxation during the last 12 months?

First Shock

The first shock came with the publication of the Finance (No. 3) Bill of 1956. What the Gov-

ernment here says to the industrialist is in effect: "We cannot trust you to look after the funds representing your reserves and the depreciation which we have allowed you because you may use this finance for anti-social purposes. We will, therefore, relieve you of the responsibility of keeping them by asking you to deposit the amount with us for safe custody. You must make this deposit in the shortest possible time, and if by the date you have to make it our staff has not had time to consider your protest against having to do so, there is no excuse. Likewise, we will relieve you of the responsibility of having to look after a large part of profits which in future you decide not to distribute as dividends." These measures will affect both the Indian subsidiary of a foreign company and any foreign company trading in India.

The same Bill contained the capital gains tax. To the foreign investor, this probably means that he will be taxed at a high rate (31.5 percent) on any increase which may have occurred in the monetary value of his investment in India should he try to realise it. The tax ignores the fact that the value of money has steadily depreciated for a number of years and is worth considerably less now than when the original investment was made. The capital gains, as calculated, are largely illusory and may in fact represent a real loss. To be taxed at a high rate on an illusory profit is not the best way to encourage a flow of funds. One of the first things any investor asks himself is whether he can "get his money out" easily when he needs it, and realise any appreciation in value which his perspicacity and self-denial may have achieved. If, in addition to the hurdle of exchange control, the foreigner knows he is going to contribute nearly a third of any capital gain he may make to the Government in the form of a tax which will probably not be allowed as a set-off against liability in his own country, his reaction after looking at the proposition is likely to be "No, fears!"

Penal Taxes

Into the den of which hogsblossoms, indeed, can one get if one tries to follow the financial precepts recommended: you are encouraged to husband your reserves by declaring small dividends and retaining profits for expansion. If you do this, you may well find that you are what is called a Section 23A company, and that your income tax officer says that he must assess you on the basis of your having declared a very much bigger dividend than in fact you did; he helps himself accordingly. This may decide you the next year to declare a higher rate of dividend on your issued capital, but because this is relatively small, most of your finance being represented by accumulated reserves, the dividend percentage has to be high in order to distribute a fair proportion of the profits. Here again you get stung because there is a supertax on dividends above a rate of 6 percent, so you are thus punished for your conservative policy in the past. To put this anomaly right and at the same time rationalise your capital, you decide to issue bonus shares and to capitalise part of your reserves, so that future distributions of dividend may be at a lower percentage rate by reference to the bigger issued capital. You find, however, that there is now a 30 percent tax on any bonus shares issued, so that your well meant efforts in yet another direction have a douche of very cold water thrown over them. The well-intentioned industrialist is thus left, like a squirrel in a cage, seeking vainly for an avenue of escape for which he will not have to suffer the penal treatment which the Government metes out to those who try and build up an honest business by their own efforts.

Levy on Net Wealth

The worst bombshell of the lot, however, is represented by the new tax on wealth in the latest Central Budget. This tax originated in Professor Kaldor's proposals but Professor Kaldor himself never suggested that it should be applied to companies. While admitting this, the Finance Minister nevertheless said: "I consider it advisable not to exclude companies from the purview of this tax"; so a flat rate of half a percent on net assets above the exemption limit has been imposed. This tax not only affects Indian companies, but also companies which are not resident but are carrying on business in India. The tax is chargeable on "net wealth", and it is possible to imagine circumstances where a company having stocks, buildings, etcetera, but which for one reason or another is not actually trading, becomes liable to pay a large sum as wealth tax; likewise, companies making losses will also have to suffer this added burden.

It is difficult to think of any tax better calculated to deter foreign investment. It is a completely new type of tax and is in the nature of a capital levy. The way in which it will be calculated, especially for foreign companies trading in India, is not clear and it is impossible to see how its enactment can be reconciled with any policy designed to attract foreign capital. Considering the harm it is bound to do, it cannot be justified by its yield and, as Rajkumari Amrit Kaur herself said, it would be more than counter-balanced if Congress leaders were prepared to change their irrational policy on prohibition and also impose a salt tax.

There is a lot else besides, but we have said enough, we think, to make our point. We know that a healthy flow of funds from savings and from foreign sources is essential to support India's brave efforts at quick industrialisation, but let not the methods sought to obtain them be themselves the very cause of the sources drying up. The Finance Minister's task must always be one of balancing the immediate revenues raised against the long-term and short-term effects of the legislation whereby he raised them. With the utmost respect we would submit that many of the recent tax measures are likely to kill the goose that might lay the sorely needed golden eggs.

Our City Cable

DULL TREND IN STOCK MARKETS

INDUSTRIALS UNCHANGED: GILT-EDGED DECLINE

London, 26th June.

THE stock markets failed to develop any decided trend before the week-end but afterwards sentiment was dull and prices were generally lower. The dull conditions were mainly due to the absence of incentives, a persistent decline on Wall Street and the weakness of gilt-edged. The outstanding feature was the weakness of Government securities, which met with persistent selling pressure in a market lacking support. The industrial market presented a firm appearance for the opening of the new account and several good features developed on selective buying; but after the week-end, prices turned easier and recorded little change on balance, except in certain individual issues. Among foreign bonds, German issues were firm but Japanese bonds eased. Dollar stocks also eased, reflecting the lower transatlantic values. Oils went ahead on fresh buying but reacted sharply on reports of overproduction in the United States. Business in the London Kaffir market was small and widespread losses were recorded. Copper shares reflected the lower price of the metal while base metals eased. Rubbers encountered a good selective demand and several issues improved, particularly Anglo-Indonesian. Tea shares were irregular.

The Money Market

Although at times short-loan conditions were comparatively comfortable, the money market was never allowed much rein and the credit squeeze was very much in evidence. Government disbursements helped the position at mid-week when the weekly revenue payments had to be met. At other times, when the market was short, the authorities gave assistance, although on one occasion some discount houses were forced to borrow small amounts from the Bank of England at the full five percent Bank rate. On the other hand, there was a time when the supply of credit was such that small balances remained unlent. At that time, overnight loans were arranged at down to 2½ percent; but in the more difficult periods 3½ percent was conceded. Business in bills was on a fair scale and was done on the basis of 3½ percent for September dates and hots, although some changed hands at 3½ percent. The average rate for Treasury bills was very slightly lower at the weekly offering, at £3 17s 1.35d percent.

Activity on Wall Street

Foreign bonds were mostly lower in quiet dealings. Italians declined about a point over the week after starting higher. Australians, Norwegians and German Nationals were mostly fractionally lower. Japanese Government bonds were also on the soft side, declining by about two points. Chile 3 percents were down fractionally. Long-term U.S. Treasury bonds hit new lows and dealers said that the downward trend was reflecting efforts to get the issues more in line with yields on new corporate securities. Investment quality issues, after being easier, rose after the success of the Southern Bell Telephone \$70 million debenture issue yielding 4.85 percent which was sold out. Convertible and share privilege issues were easier. Railroads and municipal issues also quoted slightly lower.

Vegetable Oils Quiet

Generally quiet conditions prevailed in most sections. Indian castor oil was talked slightly dearer on firmer origin prices but apart from small dealer covering, demand was still negligible. Lively Continental covering was again noted in British East African castorseed and over the week-end Marseilles paid up to £79½ c.i.f. less one percent commission for June shipment. Improved U.K. enquiry was noted for Ceylonese coconut oil with bids mentioned up to £95 c.i.f. for forward shipments. As a result, the market was displaying a steadier undertone. Straits oil lacked attention but improved sympathetically. Linseed oil showed a further recession with enquiries few and far between and the trade was generally awaiting the results of the American Commodity Credit Corporation tender for linseed. The news that India was to license linseed oil for export free of quantitative restrictions until the end of the year caused no reaction in London since current price indications were about £15 to £20 a ton above general market values. Sellers of both groundnut oil and market values. Sellers of both groundnut oil and market values. Sellers of both groundnut oil and market values.

Decline in U.S. Copper Prices

Now that the U.S. domestic copper price has dropped to around 29 cents a lb., trade sources are speculating on how the market will be affected by the Government's scheme to increase stockpiling. These purchases as the prices fall below certain levels. These purchases are authorised under the provisions of the Defence Production Act. The U.S. Government has floor price contracts with certain domestic and foreign producers whom it financed to produce copper under the provisions of the Act. The copper division of the Business and Defence Services Division of the U.S. Department of Commerce estimated some time ago that if the domestic copper price dropped below 29 cents, a lb., about 4,000 short tons a month might be delivered to the Government under the provisions of the Defence Production Act. If the price dropped below 27 cents a lb., the total might rise to about 10,000 tons.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

FURTHER FALL IN ADVANCES

Wednesday, 26th June.

THERE has been a substantial decrease in advances in the Calcutta money market during the past week. Jute and sugar funds have been returning, but credit for grains and seeds has increased. Cotton accommodation is around the previous levels. In the interbank market, conditions are believed to be somewhat easier, but the call rate remains at 3½ percent.

More bills have been seen in the exchange market. The majority have been on account of gunny shipments, but a few on account of tea are also reported. Forward business in the remittance section has decreased while ready remittances continue on a moderate scale.

Bullion was quietly steady in routine turnover. After an initial fall because of rumours of imports of Chinese coins, silver rallied to Rs. 178.50 at the close. Gold was steady in the absence of offers and finished at Rs. 107.25.

During the week ended 21st June, Government of India Treasury bills for Rs. 6,11,00,000 were sold in favour of the Reserve Bank.

Declines of Rs. 21.32 crores to Rs. 1,559.24 crores in active notes and of Rs. 8.84 crores to Rs. 1,595.65 crores in the total note issue were the outstanding features of the return of the Reserve Bank of India for the week ended 21st June, 1957. The currency contraction was adjusted by diminishing rupee securities by Rs. 10 crores to Rs. 939.81 crores. Notes held in the Banking Department were Rs. 12.48 crores higher at Rs. 36.41 crores. Deposits of the Government of India improved by Rs. 99 lakhs to Rs. 53.45 crores, and other Government accounts were Rs. 1.11 crores higher at Rs. 2.30 crores. Balances of commercial banks increased by Rs. 6.69 crores to Rs. 71.51 crores. Balances held abroad declined further by Rs. 9.33 crores to Rs. 51.36 crores, while investments rose by Rs. 8.82 crores to Rs. 187.47 crores. Other loans and advances declined from Rs. 98.06 crores to Rs. 93.46 crores, of which advances to scheduled banks against usance bills amounted to Rs. 52.08 crores (Rs. 54.75 crores). Ways and means advances stood at Rs. 23.95 crores against Rs. 25.98 crores.

The return of the State Bank of India for the week ended 14th June, 1957, shows a rise of Rs. 14 lakhs in total deposits to Rs. 306.53 crores. Investments in Government securities are up by Rs. 1 lakh at Rs. 94.10 crores, while other authorised investments remain unchanged at Rs. 11.42 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have fallen by Rs. 1.73 crores to Rs. 186.39 crores. Cash and balances are, in consequence, shown at Rs. 25.29 crores, or Rs. 2.34 crores less.

The statement of the position of scheduled banks for the week ended 14th June, 1957, shows Demand and Time liabilities at Rs. 712.67 crores (Rs. 9.88 crores on account of borrowings from banks) and Rs. 544.13 crores (Rs. 3.44 crores), compared with Rs. 711.69 crores (Rs. 10.65 crores) and Rs. 538.11 crores (Rs. 2.60 crores), respectively, in the previous week. Cash has risen by Rs. 1.20 crores to Rs. 40.94 crores, while balances with the Reserve Bank have fallen by Rs. 3.95 crores to Rs. 59.78 crores. There is a drop of Rs. 5.34 crores in investments to Rs. 334.88 crores. Advances and bills discounted at Rs. 930.35 crores show a fall of Rs. 5.13 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.0 percent and 74.0 percent, against 8.3 percent and 74.9 percent.

LONDON FINANCIAL LETTER

U.K. RESTRICTIONS ON DOLLAR EXPENDITURE REDUCED

By Air Mail.
EARLY this month the British Government made the foreign travel allowance—basically £100 a year an adult person—available for the dollar area and increased the special business allowances drawable in dollars. Before the Suez crisis it was known that the Government intended to make this concession as soon as circumstances permitted; yet the City was not entirely prepared for it, and the move made, therefore, a distinct psychological impact. It is doubtful if many tourists will feel that the amount that they can buy with £100 in North America would justify the trans-Atlantic fares, but the concession is psychologically important, representing the abolition of one more discrimination against the dollar area. The announcement was made after the authorities had brought the rate for transferable-account sterling in the free markets almost into line with the rate for sterling exchanged officially in London, thereby nearly achieving the unity of sterling that would necessarily occur if sterling as such were formally convertible. The two moves, coinciding, have revived discussion of the whole subject of convertibility. It has been necessary to conclude, however, that there is no evidence of plans for a major change in the status of the currency.

Holders of sterling outside the sterling area are already well provided with facilities for conversion, and sterling can be, and is, used as a medium for converting other currencies into dollars. The transferable-account area covers nearly all the non-sterling world excepting the dollar area, and the holders of transferable-account sterling can exchange it freely with any European currency or, at a discount that is now not much more than ½ percent with dollars. (When the Exchange Equalisation Account in London extended its supporting operations to "free" sterling it improved the facilities for converting non-resident sterling into dollars by absorbing—without formal commitment to do so—some of the dollars offered.) Residents of the sterling area on the other hand have less facilities for converting their sterling into dollars than have the residents of Western Germany, Switzerland, and Belgium for converting their respective currencies.

The authorities are reluctant to commit themselves to formal convertibility of non-resident sterling, for, while the reserve is still inadequate, there may be again, as there were in the Suez crisis, circumstances in which it will be convenient to let part of a divided sterling slide in free markets where there is no obligation to support it. They are still more reluctant to allow the right of convertibility to residents of the sterling area, for in times of crisis resident sterling has been, by devious means, even without that right, converted in alarming quantities. But the concessions to tourists and business men imply, at least, that discrimination against goods and services that cost dollars is being gradually withdrawn.

An Anxious Phase

The truth is that, whatever the state of the reserves (and they are not being fortified as might

be hoped), the current position and prospect are not assured enough to permit experiments. Indeed, there must be no more experiments in convertibility, as in 1947: when it is undertaken again it must be permanent. The period of the year when sterling is normally strongest is ending, with the sterling-dollar rate well below the middle of its parity limits. There is naturally some anxiety lest in the period of seasonal pressure considerable quantities of dollars may be lost in holding the rate above the lower limit. For it appears that the Government's policy this year has been based on the assumption that there will be no appreciable increase in demands on the nation's resources, and that there will be, therefore, opportunities to add to the reserves; whereas in fact demands are already increasing rapidly.

There is undeniable evidence that a new inflationary phase has begun. It could probably be checked without much difficulty if the authorities had deflationary weapons ready to hand and were prepared to use them. The reluctance to reduce Bank rate as soon as the Suez crisis was ended is now criticised, not only because the Government's credit, as measured by the value of Government

stocks, has since been severely damaged, but also because it is tactically difficult to raise Bank rate from a level that is already abnormally high.

The extra demands are asserting themselves mainly in the private sector: in the public sector expenditure on fuel and power and transport is increasing, but the Government is slightly reducing its expenditure on defence. In the private sector both consumption and capital development are expanding; but current production, which could relieve inflation by providing more goods to absorb the flow of money, is lagging behind. In the first quarter of this year, compared with the same period of last year, consumption increased 7 percent in terms of money, 4 percent in terms of goods and services; and, as the main increase in wages has occurred in the second quarter, the rate of increase in consumption has probably risen further. The effects of this development have been partly concealed by the stocks of consumers goods accumulated previously; but producers have been encouraged to proceed with plans for increasing production, and their demands are inflationary until the plans bear fruit—mostly next year.

Competing with London

These developments may further delay the return to normal financial stability—if stability can be regarded as normal after so long a lapse! Meanwhile, London's status as an international financial centre, only partly restored in the postwar era, is being increasingly challenged. The City's financial institutions have not failed to notice the significance of the rapid progress made by Union Acceptances in Johannesburg in its first year of business. That an institution devised to mobilise local resources to provide short-term finance for local needs can develop so rapidly confirms a fact of which there were already hints from various centres in the sterling area, that London's facilities are not indispensable. No one here pretends to regard complacently the possibility that overseas financial institutions will increasingly use their reserves at home instead of sending them to London and that overseas commercial firms will increasingly satisfy their short-term financial needs locally instead of in London. If this tendency persists it will inevitably affect this country's earnings from international financial services, which are an important element in the nation's balance of payments. The tendency, which represents a natural development, can probably not be reversed; but London must obviously make itself as competitive as possible in order to resist decline. Adjustment of London's rates, to make them more competitive, becomes a matter of some urgency.

SOUTH EASTERN RAILWAY TENDERS.

The Controller of Stores, Garden Reach, Calcutta-23 invites tender No. CS/2/PC/57/WS/507/Gb4 for supply of 121 Cwts. Bar Round Phosphor Bronze Hollow (Cast) 2" x 1" x 24" to IRS Spec: No. N6-Class-I. Supply to be inspected and passed by D.O.I. Tender forms are obtainable from his office on remittance of Rs 2/- per copy (not refundable) by money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, Garden Reach by local firms. Closing date is 10th July, 1957 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender. A sum of Rs. 480/- as earnest money to be deposited with the Chief Cashier, S. E. Ry., Garden Reach and receipt to be attached with the Tender.

Efficiency goes up
...in premises cooled by

Carrier self-contained air conditioners!

Your staff feels better, works better—in an atmosphere air conditioned by CARRIER. Efficiency goes up, so does production... and the initial cost of your CARRIER self-contained air conditioner is soon paid off!

Specially designed coils and filters make the CARRIER extra efficient, help it to cool better at lower cost. And the CARRIER removes gallons of moisture from the air while it cools—provides a cleaner, healthier atmosphere!

The CARRIER self-contained air conditioner is one of the best investments you can make. Write to us for further details—and remember, we offer unique service-after-sales, too!

Available in sizes varying from 3 to 15 tons, the CARRIER self-contained air conditioner eliminates outside noise, provides an even, dust-free, draught-free atmosphere

Stocks and Shares

SUBSTANTIAL RISE IN EQUITY PRICES

SENTIMENT IMPROVES ON HOPES OF FINANCIAL AID FROM U.S.A.

Wednesday Evening.

EQUITY prices in the stock market have improved substantially during the past week. The technical position has become healthier and the bulla charges were moderate at today's settlement. Bears have been obliged to cover, especially in speculative issues, because of the shortage of floating scrip. Investment buying has broadened, and the Life Insurance Corporation, it is believed, has purchased large parcels of assorted stocks. Operators have been encouraged by the official reiteration that the private sector is expected to play an important rôle in economic development. The prospect of getting substantial financial assistance from the United States in the near future has lifted sentiment.

Steel shares have been prominent, and Indian Iron have crossed the pre-Budget price. The Mundhra group of shares have received attention on the rumour that the Life Insurance Corporation might buy a large number of them. Selected miscellaneous industrials have been supported, the more notable gains being reported by Dunlop Rubber, Indian Cable and Metal Box. Renewed interest has been taken in tea shares as auction prices have improved. Jutes remain neglected. Except for the limited enquiry for Bengal Coal, on an encouraging speech by the chairman of the company, interest in coal shares has been absent and no worthwhile movement is likely until the publication of the report of the Price Revision Committee.

In spite of restricted turnover, prices of gilt-edged stocks have been maintained. The decision of the Central Government to issue a loan of Rs. 100 crores, cash subscriptions to which will amount to Rs. 68 crores, has had a steadying effect. The prospect that higher interest might be paid on the new loan is unlikely to have any unsettling effect as prices have already discounted such an eventuality.

Details of the week's trading follow.

The announcement by the Central Government that it intends to float a Rs. 100 crores loan—Rs. 32 crores in the form of Conversion loans and Rs. 68 crores by way of cash subscriptions—left the gilt-edged market unaffected, as prices of existing loans had already adjusted themselves to the new yield structure. Although gilt-edged remained quiet, a slightly better tendency was noticeable at the lower levels followed by a certain amount of buying. The 3% Conversion Loan 1986 was traded at around Rs. 73 and 3% Non-terminable Paper was quoted nominally at the same rate. Short-dated loans were supported, with buyers of 3% 1957 at Rs. 99.75 and of 3% 1958 at Rs. 99.68; 2½% 1961 was fully steady at Rs. 93.50 as was 2½% 1960 at Rs. 96.50. The 3% 1959-61 came to hand at Rs. 97.78 and 3½% 1961 was unchanged at Rs. 99.30. In medium-dated loans, 2½% 1962 was quoted around Rs. 93.84 and 3% 1963-65 changed hands at Rs. 93.65; 3½% 1964 was easier at Rs. 93.75, while 3½% 1964 improved to Rs. 97.75 and 3½% 1965 was better at Rs. 97.80. Long-dated loans were again easier, 3% 1966-68 being offered at Rs. 91 and 3% 1970-75 at Rs. 85.70; 3½% 1974 was easier at Rs. 96.35. Little business was reported in State loans and prices were marked back. The 4% Madras 1968 was weak at Rs. 95.50 and 4% Andhra 1968 was offered at the same rate. Among other issues, 4% U.P. 1967 changed hands at Rs. 97.86 and 4% U.P. 1968 had sellers at Rs. 97.40.

Preference shares in most cases suffered from a lack of interest. In Jute, Belvedere were marked at Rs. 95 cum-dividend and Clive Mills "A" at Rs. 74. Among miscellaneous issues, British India Corporation were reported around Rs. 106 and Calcutta Electric were dull at Rs. 9.09. Dalmia Cement 2nd Preference changed hands at Rs. 34 and Indian Iron and Steel had sellers at Rs. 99. New Doars Tea were crossed at Rs. 121.50. Rohas Industries "B" Preference came to hand at Rs. 62.50 and Shaw Wallace were crossed at Rs. 67 with buyers over.

In the banking section, there was a good enquiry for United Commercial at the higher rate of Rs. 53.75 while both Punjab National and United Bank of India were unchanged around Rs. 55.50 and Rs. 4.12, respectively. A solitary transaction was reported in Allahabad Bank at Rs. 364.

The only share dealt in in the railway section was Dehri-Rohas at the higher rate of Rs. 9.40.

In the cotton section, Cawnpore Textile improved from Rs. 5 to Rs. 6 while Elgin Mills were unchanged at Rs. 17. Jayshree Textile were reported at Rs. 5.87. Kesoram were slightly better at Rs. 13.50 while New Victoria were unchanged at Rs. 1.69. Both Bowreah and Dunbar improved today to Rs. 108 and Rs. 150, respectively.

The outstanding feature in the coal section was Bengal which improved from Rs. 204 to Rs. 228, with further buyers at this rate. Burakur were maintained at Rs. 22, while East Indian and Equitable improved to Rs. 22.75 and Rs. 21.75, actively. The recent enquiry for Union Coal

shares appears to have petered out, with the price coming back from Rs. 25 to Rs. 23.

Investors showed no interest in jutes and business was on a very restricted scale. Here is a chart showing representative price movements:

	Opening 20th June, 1957.	Closing 27th June, 1957.
	Rs.	Rs.
Agarpara	6.87	7
Anglo-India	127	124
Birla	14	13.50
Chandpary	95	100
Kamarhaty	75	73
National	19.96	19.70

In the electric supply section, Calcutta recovered from Rs. 11.94 to Rs. 12.19. Other issues were unchanged with Agra quoted at Rs. 125. Benares at Rs. 16.12 and U.P. at Rs. 130. Mirzapur met with interested support and spurred from Rs. 6 to Rs. 9.

Sugar shares did not participate in the general improvement, except for Cawnpore, which recovered from Rs. 13.25 to Rs. 15.12. Champaran were steady at Rs. 22.25 and Belsund were slightly better at Rs. 10.62. Dyer Meakin Breweries were easier at Rs. 5.94 as were Ramnugger Cane at Rs. 21. S.K.G. were reported at Rs. 10.

The feature in the engineering section was the recovery in Richardson and Cruddas and Jessop from Rs. 13.37 to Rs. 14.62, and Rs. 23.12 to Rs. 25.12, respectively. Large parcels of these shares, it is reported, changed hands. Indian Iron shares went from strength to strength, with the price at one stage touching Rs. 20.50, against the opening rate of Rs. 19.57; tonight's closing quotation is Rs. 20.06. Another good feature was Indian Steel and Wire Products, which rose from Rs. 54.75 to Rs. 57. Marshalls were better at Rs. 5.25 as were Kumardhubi at Rs. 9. Braithwaite were taken at the higher rate of Rs. 25.25 as were Burn at Rs. 317. Textile Machinery were steady around Rs. 17.50.

We do business with the nicest people...

And we are deeply interested in these nice people: in you! That's why we have a special Market Research Department that devotes itself to finding out what you like and don't like, why you buy—or don't buy.

Our teams of interviewers travel all over the country, calling on families in city, town and village, and noting your growing needs and changing preferences. This fact-finding process enables us to introduce new products like Rinso, or change a familiar one in some way—the perfume of Lux Toilet Soap, for instance.

Many of our products are, perhaps, already your household friends, and you appear on the charts and reports compiled by our interviewers. But you are more, much more, to us than facts and figures... you are the very people we do business with. We spare no trouble in trying to meet your needs, in offering you the very best value for your money.

HINDUSTAN LEVER
serves the home

Guest, Keen, Williams were firm at Rs. 27.75.

In paper, Orient were active around Rs. 25 and Sipur improved from Rs. 8.37 to Rs. 8.75. Shree Gopal were at one time better at Rs. 15.12 and Titeghur improved to Rs. 33.

In cement, Dalmia were easier at Rs. 11.25, but Sone Valley recovered from Rs. 5.68 to Rs. 6.12. Assam Bengal were unchanged at Rs. 4.94.

In insurance, Concord of India were steady at Rs. 11.50. Hercules were crossed at Rs. 21 and Triton at the higher rate of Rs. 154.

In shipping, India Steamship were steady around Rs. 10.15 while India General Navigation were unchanged at Rs. 65. Port Shipping were reported at their previous rate of Rs. 16.50.

Among miscellaneous industrials, Alkali and Chemical were shaded at Rs. 13.75 but Aluminium Corporation were better at Rs. 9. Angelo Brothers met with enquiry at the improved rate of Rs. 18. Britannia Biscuit were higher at Rs. 13 and British Burma Petroleum improved to Rs. 2.53. British India Corporation were a good feature, recovering from Rs. 5.87 to Rs. 6.65. Clive Row Investment were unchanged at Rs. 9.81 as were Dunlop Rubber at Rs. 20.50. Eastern Investments were enquired for at the higher rate of Rs. 103. Imperial Tobacco improved from Rs. 13.87 to Rs. 14.25, as did Indian Aluminium to Rs. 13.87. Indian Cables rose smartly from Rs. 22.50 to Rs. 25.12. Indian Rubber Manufacturers were easier at Rs. 23.50 while Indo-Burma Petroleum were better at Rs. 25.25. Martin Burn were taken at Rs. 23.50, as were Metal Box at Rs. 25.50. National Carbon recovered from

Rs. 24.12 to Rs. 24.75 while F. and C. Osler were offered at Rs. 4.12. Rohas Industries were steady at Rs. 17.44, and National Insulated Cables at Rs. 20.19.

The announcement of a final dividend of 13½ percent, making a total of 20 percent for 1956, by the Indian Copper Corporation was received with disappointment and the shares initially slumped from Rs. 3.75 to Rs. 3.30; replacement buying brought a recovery at the close to Rs. 3.40. Burma Mines improved to Rs. 2.34 and Orissa Minerals to Rs. 19.87. Karanpura Development closed easier at Rs. 12.12.

Interest revived in selected tea shares and prices improved sharply. Sungma were crossed at Rs. 9.50 while Tukvar were traded at Rs. 11.25. Baghmari had buyers at Rs. 18.87 as did Bateli at Rs. 24.12. Bishnauth at Rs. 21.25 and Bormah Jan at Rs. 16.87. Brahmaputra came to business at Rs. 5.06 and Brooke Bond advanced to Rs. 19. Dhelakhat were steady at Rs. 22.25 and East India were taken at Rs. 22.25. Tezpur shot up to Rs. 20.25 while Hattikhira were traded at Rs. 13. A small lot of Teliapara changed hands at Rs. 125 and Belgachi were wanted at Rs. 62. Hansqua were easier at Rs. 24.50 and Jayshree were crossed nearly Rs. 2 higher at Rs. 10.25. Baradighi were traded at Rs. 21 and Bhatkawa changed hands at Rs. 20.44. Birpara advanced sharply to Rs. 114 and Hasimara were wanted at Rs. 20. Huldibari were easier at Rs. 18.50 and Killcott were crossed at Rs. 18.25. New Doars came to business at Rs. 255 and Rajabhat were crossed at the higher rate of Rs. 18.

The results of the Heilgers group of coal companies have been published. The raisings of the KARANPURA MINING SYNDICATE amounted to 155,892 tons for the year ended last December. The coal was downgraded in quality by the Coal Board and its was felt to be in the best interests of the proprietors that the raising and selling of the coal be placed in the hands of a managing contractor. The arrangement was completed towards the close of the year under review and it has been working satisfactorily.

Providing Rs. 55,064 for taxation, the profit of the ONDAL COAL COMPANY has amounted to Rs. 49,848. Bringing in Rs. 56,646, there is Rs. 1,06,494. A dividend of 7½ percent has been declared, leaving a carry-forward of Rs. 37,244.

The CHURULIA COAL COMPANY has made a profit of Rs. 11,111. Bringing in Rs. 2,129, there is a balance of Rs. 13,240. The dividend has been declared at 6½ p. a share, leaving a balance of Rs. 4,240 to be carried forward.

The SENDRA COAL COMPANY has incurred a loss of Rs. 7,337. Bringing in Rs. 7,503 and transferring Rs. 25,000 from general reserve, there is Rs. 25,166. A dividend of 2½ percent has been declared, leaving a carry-forward of Rs. 5,166. The directors say that the deed of sale of the colliery property has still to be completed although the buyers have paid the sums promised on completion of documents. It is hoped to finalise the matter shortly.

Transferring Rs. 5.04 lakhs as taxation provision and bringing in Rs. 1,34,493, the profit of WALFORD TRANSPORT LTD. has amounted to Rs. 4,09,749 for the year ended last December. The ordinary dividend is the same at 14 percent. Contingency reserve is allocated Rs. 1 lakh, leaving a carry-forward of Rs. 1,66,813.

The BELVEDERE JUTE MILLS COMPANY has incurred a loss of Rs. 1.21 lakhs for the half-year ended last December. Transferring Rs. 1.20 lakhs from general reserve, Rs. 24,500 from dividend equalisation reserve, bringing in Rs. 2,525 and making other adjustments, there is Rs. 25,830. The usual preference dividends have been paid but the ordinary dividend has again been passed over. The carry-forward is Rs. 1,330.

The profit of the METAL BOX COMPANY OF INDIA has increased by Rs. 3.22 lakhs to Rs. 66.05 lakhs for the year ended last March. The ordinary dividend has been increased from 16½ percent to 17½ percent, including an interim of 6½ percent. The taxation provision is Rs. 38 lakhs (Rs. 31 lakhs) and general reserve is allocated Rs. 61 lakhs (Rs. 10 lakhs). The carry-forward is Rs. 16,33,569 against Rs. 16,24,249 brought in.

The STERLING GENERAL INSURANCE COMPANY has earned a net profit of Rs. 1.04 lakhs for the year ended last December. The dividend has been declared at 4 percent. The taxation provision is Rs. 55,000. The carry-forward is Rs. 1,589 against Rs. 2,012 brought in. The gross premium of the fire department increased from Rs. 14.01 lakhs to Rs. 22.89 lakhs. After making all adjustments, a balance of Rs. 1,81,862 is transferred to the profit and loss account. The gross premium of the marine department amounted to Rs. 7.81 lakhs (Rs. 6.99 lakhs). The net loss of the department totalled Rs. 1 lakh. An amount of Rs. 47,082 was transferred to the profit and loss account by the miscellaneous department, which earned a gross premium of Rs. 57.52 lakhs (Rs. 42.09 lakhs).

Bombay Market

CHEERFUL CONDITIONS PREVAIL

NO NEW TAXES IN STATE BUDGET

Wednesday Afternoon.

CHEERFUL conditions prevailed in the Bombay stock market during the past week, and equity prices improved substantially on a broad front. Substantial buying of various shares by the Life Insurance Corporation helped relieve the market of floating stocks and bear operators were obliged to cover. This accounted for the nominal carry-forward charges at the last settlement. The absence of new taxes in the State Budget was interpreted bullishly. It was also believed that the wealth tax and the expenditure tax might be substantially modified during the select committee stage. The decision of the Central Government to raise a Rs. 100-crore loan, cash subscriptions to which are expected to amount to Rs. 68 crores, has been welcomed, and the money market is expected to take up the issue without much strain.

Tata Steels soared to Rs. 172 and Indian Irons gained at Rs. 20.15 on nervous bear-covering. Alcock Ashdown met with demand at the higher price of Rs. 277.50 and Premier Construction were bought at Rs. 159 by knowledgeable quarters. Tata Locomotive recovered to Rs. 146 on replacement buying. Automobile shares registered minor gains in sympathy. Premier Automobiles came to hand at Rs. 88.50 and Hindustan Motors improved to Rs. 7.

The mill group was dotted with a number of rises and the prospect of an improvement in the piecegoods markets in coming weeks assisted sentiment. Bombay Dyeing gained at Rs. 551.50 and Kohinoor were taken up to Rs. 267.50. Simplex realised Rs. 167 and Century were bought at

Rs. 428.50. Svadeshi were dealt in at Rs. 186.50 and India United Ordinary recovered to Rs. 10.40.

Miscellaneous industrials improved in sympathy with the general trend. Associated Cements gained at Rs. 158 and Digvijay Cements were taken at Rs. 145. In the mining group, the initial rise in Indian Coppers was not maintained as the final dividend was below market expectations. The price closed at Rs. 3.40 and Shrivajpur Syndicate were a shade higher at Rs. 81. Sugar shares improved and Belapur were quoted higher at Rs. 225. Bear-covering helped steamship shares. Scindia Steam rallied to Rs. 18.90 and Great Eastern Shipping met with support at Rs. 19.50. Bombay-Burmah recovered to Rs. 560 on replacement buying and National Rayon improved to Rs. 222.50 on the suggestion that restrictions on imports would help improve the prices of the commodity. Tata Chemicals were transacted at Rs. 17.40.

Banking shares were quietly steady in routine turnover. Bank of India came to hand at Rs. 139 and United Commercial Bank realised Rs. 54. Insurance shares lacked interest, and New India Assurance fell to Rs. 42.50.

Scattered interest was taken in electricity supply company shares, although prices showed little variation. Ahmedabad Electric were done at Rs. 98.50 and Tata Power were taken at Rs. 1,207.50.

THE WEEK'S TRANSACTIONS

In the following list of stocks and shares in which transactions have taken place during the past week, figures indicate Opening, Quotations, Highest for the week, Lowest for the week, Closing Quotations, Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paisel.

Angelo Brothers—Rs. 20/25—20/25

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to April 1957. Compared with March, the April indices for Government securities and preference shares indicate drops of 0.5 points and 1.3 points, respectively.

There were decreases in banks 6.1 points, cottons 16.1 points, coals 6.1 points, jutes 2.4 points, minings and oils 6.8 points, cements 3.0 points, engineering 2.0 points, teas 14.9 points, papers 55.0 points, sugars 1.7 points and miscellaneous 2.6 points.

Correlating all the factors, the Capital variable yield securities index shows that the index for stock prices in these classes of shares declined by 8.0 point during April 1957.

New Delhi

STERLING BALANCES MAY BE DRAWN DOWN FURTHER

NATIONALISATION THREAT TO PRIVATE COLLIERIES

(FROM A NEW DELHI CORRESPONDENT)

WHEN the Reserve Bank of India (Amendment) Act was piloted through Parliament last year by the then Finance Minister, Mr. C. D. Deshmukh, public attention was focussed more on the scope it afforded for deficit financing than on the power which the Government took to suspend for an indefinite period the statutory requirement of a foreign security reserve of Rs. 400 crores. The Government itself, judging from the statement of objects and reasons, attached primary importance to the expansion of currency. Justifying the revaluation of the gold reserve at the parity rate fixed by the International Monetary Fund, and the change in the requirement of gold and foreign security backing for the currency from 40 percent of the total to an absolute figure of Rs. 115 crores in gold coin and bullion and Rs. 400 crores in foreign securities, the statement said: "The existing provisions in the Reserve Bank of India Act concerning reserve requirements place a serious limitation on the ability of the Reserve Bank to regulate the expansion of currency to meet the requirements of the second five year plan. The process of planned economic development necessarily implies a certain amount of credit creation and a consequent increase in the note issue. At the same time, as a result of the same process of investment and development, foreign exchange reserves are likely to decrease. It is, therefore, necessary to vary the existing minimum currency reserve requirements."

During the year that has passed since the amendment, the foreign exchange position has so deteriorated that a reduction of the foreign security reserve, solely for the purpose of meeting the foreign exchange shortage, it is understood, is now being considered. Under Section 37 of the amended Reserve Bank of India Act, the Central Government is authorised to reduce the required reserve of foreign securities from 400 crores to Rs. 300 crores for as long a period as six months in the first instance, which can be extended by three months at a time. It is learnt that the Government prefers in this manner to draw on the country's holdings of sterling balances in London, (which have provided the foreign security reserve for the currency), rather than seek a loan from the British Government. No request for a loan has been made so far, contrary to British Press reports which have even cited figures, ranging from £200 million to £1,000 million.

The Indo-U.K. Financial Agreement of 20th July, 1953, which consolidated the provisions of all previous arrangements including those under the original agreement of 14th August, 1947, said in Article 7: "About the sum of £310 million transferred from the No. 2 Account to the No. 1 Account and held by the Reserve Bank of India as a currency reserve, it is the intention of the Government of India not to draw upon this sum and it agrees not to do so without previous consultation with the Government of the United Kingdom." But with the expiry of this Agreement at the end of this month, India will be free to draw on the sterling balances without any restriction. When the two Governments last reviewed the position and came to the conclusion that it was not necessary to replace the 1953 Agreement by a fresh one, it was expressly stated in the joint announcement of 30th October, 1956, that "the expiry of this Agreement does not in any way affect India's right and competence to draw upon her sterling balances. Nor does it affect the position concerning the treatment of remittances of savings and the voluntary repatriation of investments by U.K. citizens". It is conceded, however, that a substantial drawing down of the sterling balances will impose a strain on the U.K. comparable to that of a loan. As a fellow member of the sterling area "club", India will, therefore, inform and consult the U.K. before taking action, even though there will be no formal obligation to do so. Adequate time for consultations is available, as the drawing of the stand-by credit of \$72.5 million from the International Monetary Fund will enable India to tide over her foreign exchange difficulties during next few months.

Future of Private Collieries

As if the practical difficulties facing the coal industry were not enough, the threat of nationalisation has been revived in connection with the meeting of the Mineral Advisory Board in Simla last week. One of the items on the agenda is the proposal of the West Bengal Government that the terms of old coalmining leases should be comprehensively revised and brought into line with the Mineral Concession Rules of 1949. In opposing this proposal, the Union Ministry of Steel, Mines and Fuel, in a note prepared for the Board meeting, has relied mainly on the argument that the Government's policy is the ultimate nationalisation of all coal mines. The question of the revision of the terms of old coalmining leases has been discussed between the Centre and the States concerned for some time. In a communication to the Governments of Andhra, Madhya Pradesh, Orissa,

Bihar and West Bengal last November, the Union Ministry of Production pointed out that the Central Government had promulgated the Mining Leases (Modification of Terms) Rules, 1956, to bring mining leases—except those concerning natural gas, petroleum, coal, and minor minerals—in conformity with the Mineral Concession Rules framed under Section 7 of the Mines and Minerals (Regulation and Development) Act of 1948. The modifications that could be made were in relation to the period of the lease, the area of the lease, and the rate of royalty payable. The point to be considered, the Production Ministry said, was to what extent the modification of coalmining leases would serve the present coal production programme and policy.

The justification for it might be that many leases granted prior to the coming into force of the Rules were for unduly long periods extending up to 999 years, or that they covered excessively large areas, or fixed very low rates of royalty. After pointing out that, under the Industrial Policy Statement of 1956, all new units in the coal industry would be established in the public sector "save in most exceptional cases", private miners being allowed to increase production only from existing mines and contiguous areas, the Production Ministry referred to the legislation that was to be brought before Parliament for the State's acquisition of unworked coal bearing areas. "Further," the communication said, "the policy on coal is somewhat different from the policy followed for other minerals. It has been accepted that nationalisation of all coal mines is the ultimate aim of the Government. In this context it is not very material whether the area of existing leases is reduced to 10 square miles or the period reduced to 30 years". It was argued that the scaling down of the area covered by old coal mining leases would merely impose the burden of compensation on State Governments, without serving any purpose that could not be achieved by the State acquisition of whatever areas were actually required for work-

ing in the public sector. The letter concluded by saying that if all that the State Governments wanted was an upward revision of the royalty rates on old leases, the Central Government would consider a limited modification of the rules.

Demand for Higher Royalties

There was no reply from Madhya Pradesh. The Orissa Government said that it only wanted a revision of the royalty rates. The Andhra Government pointed out that most of the coalmining leases in the State were held by the Singareni Collieries in which the Government had majority control, and the question of modification did not, therefore, arise. Bihar, too, was interested primarily in the revision of royalty rates, but felt that they could be changed, under the Rules, only at the time of the renewal of leases, and that a modification of the period, though not the area, of old leases was, therefore, called for. Only the West Bengal Government expressed the view that a modification of the terms was necessary concerning the area, period and royalty.

While reiterating the Centre's stand against a comprehensive modification of the terms of old coalmining leases, the Central Ministry of Steel, Mines and Fuel has now advanced a new argument. This is that if the existing leases are modified so as to reduce the period to 30 years, "it may be understood as conveying a moral assurance that the Government would not nationalise for the reduced period of the lease. Such action would be misleading and unnecessary". The new Ministry has reaffirmed that "the ultimate aim of the Government being to nationalise coal mines, it is not very material if the period of old leases is reduced to 30 years...It has been accepted as policy that the nationalisation of all coal mines is the ultimate objective".

This is remarkable in view of the fact that the Government has not so far proclaimed the nationalisation of the coal industry as its long-term policy. It may be that all that is meant by "nationalisation" in this case is the automatic extinction of private enterprise when the existing privately operated coal mines and the contiguous areas are exhausted. But it is by no means certain that this is all that is intended. The need for a clear statement of the Government's policy is underlined by the fact that the senior Minister in charge of coal observed a silence that could be read as ominous, while his junior colleague showed a positively hostile attitude towards the private sector, when some members demanded nationalisation of the coal industry during the consideration of the Coal Bearing Areas (Acquisition and Development) Bill by the Rajya Sabha in the last week of May. Mr. Swaran Singh said nothing about the plea for nationalisation. But Mr. K. D.

MODERNISATION OF SCOTTISH JUTE INDUSTRY

The jute industry in Scotland had been spending £1 million annually on modernisation in the postwar period, said Mr. A. W. R. Kennedy, chairman of the Association of Jute Spinners and Manufacturers, at the annual meeting of the association in Dundee. This annual outlay, coupled with a new wage structure and the benefits of research had, he claimed, transformed a traditional Scottish craft into a vigorous and up-to-date industry. Reviewing the progress of work-study in the industry, Mr. Kennedy disclosed that enquiries had been received from many parts of the country on the methods adopted in the Scottish jute industry to base wages payment on scientific work measurement.

TECHNICAL PROGRESS IN THE DUNDEE JUTE INDUSTRY

IMPROVING PRODUCTIVE EFFICIENCY

RECORD progress in the postwar modernisation programme of the Dundee jute manufacturing industry is shown in the annual statistical survey carried out by the British Jute Trade Federal Council. The programme, which set out to rehabilitate the industry, was undertaken in an endeavour to improve quality, to lower production costs, and to make working conditions attractive to labour. Since 1945, the total sum which has been spent by the industry on re-equipment is £9,600,000—£7,800,000 on machinery and equipment, and the balance of £1,800,000 on buildings. This is a substantial degree of capital investment in relation to the size of the Dundee industry, and reflects a determined drive for productive efficiency. Last year the capital expenditure was a record for the postwar period. Spinning mills accounted for an expenditure of over £1,400,000—the highest figure since 1945 and 157 percent more than the amount spent in 1955. On the weaving side, the sum spent last year on buildings, machinery and equipment was over £500,000. This is also a postwar record, and is 59 percent more than was spent in the previous year.

Over the period, the installation of new and faster machinery has resulted in spectacular changes in technical methods, particularly on the spinning side. The survey shows that "old type" spinning machinery has virtually disappeared, and now accounts for only 3 percent of the total. The changes have resulted in a steady rise in labour productivity, which has increased 42 percent since 1949. In weaving, the number of automatic looms has been steadily rising, and now represents fully one-third of the total looms in operation. At least five concerns have special weaving sections equipped with circular looms. Parallel with the installation of new machinery, work study has been undertaken and labour has been "redeployed" on a considerable scale. The jute industry was the first in Britain to introduce (in 1952) a new wage structure based on job evaluation. The operation of the scheme has been jointly encouraged by the Association of Jute Spinners and Manufacturers and the textile trade unions. About 80 percent of the firms are at present operating "redeployment" schemes.

Shift Systems

Another interesting point emerging from the survey is that half of the yarn and over one-quarter of the cloth are produced on shift systems. These figures indicate a recognition within the jute industry of the need to make the fullest possible use of the new and expensive machinery. The survey also shows that the net running expenses for welfare and personnel were £116,000 in 1956, or 12 percent more than in the previous year. Expenditure under this heading has increased steadily year by year since 1945. The increase in 1956 over the 1945-49 average annual expenditure was of the order of 300 percent. Basic wages have increased 98 percent for men and 116 percent for women since 1945. The number of workers directly engaged in the industry in the city is 1,800.

Commenting on the survey, a spokesman of the jute industry said: "The progress made in transforming a traditional industry into a compact and efficient centre of production has been considerable. At present the industry is facing competition in a number of fields. The extent to which it is ploughing back its returns is a sign of its determination to maintain its place in the market."

PLANS FOR INTRODUCING BURLAP FEED BAGS IN U.S.A.

Plans for the introduction of 50-lb burlap feed bags in the U.S. market were announced at the "Open Industry" meeting of the National Burlap Bag Dealers Association's 24th annual convention held in New York recently. The 50-lb feed bag, it was emphasised, would find favour in the industry leading to a substantial increase in American consumption of burlap, as not all feed manufacturers were satisfied with the bulk method of shipment. The growth of the return bag programmes and the adoption of the 50-lb burlap potato bag were credited with being the major factors in limiting a wider use of bulk shipping and substitute packaging methods. Use of the new potato bag last year increased 18.6 percent over 1955. Mr. G. J. Gardner, North American representative of the Indian Jute Mills Association, stated that prospects for increased Argentine purchases of burlap were good since the indications were that there would be little burlap on hand by the end of the year. Consumers, he added, need fear no runaway prices for burlap should consumption increase, since the Indian mills, in an effort to keep burlap prices at competitive levels, were prepared to unseat additional looms and increase production if this were merited by the demand. Mr. John C. Daly, Vice-President of Stein, Hall and Co. Inc., New York, sounded a cautious note, pointing out that the 6.3 percent increase in burlap consumption in the United States last year "left much to be desired" in the light of the record-breaking rise in industrial expansion and gross national product. He suggested that the Indian mills appropriate additional funds to the Burlap Council in New York in order that it may better fulfil its mission.

Commodity Markets

SLIGHT FALL IN WHOLESALE PRICE INDEX

THE official wholesale price index (base: year ended August 1939=100) declined by 0.1 percent to 439.2 during the week ended 8th June compared with 439.6 (revised) for the earlier week. The index was higher by 2.4 percent and 11.8 percent respectively when compared with the corresponding week of the previous month and that of a year ago. A fall of 0.1 percent to 435.7 in the index for Food Articles against 436.3 (revised) for the previous week, was brought about by a decline in the prices of coffee (-8%), rice in Calcutta, dal arhar and gur (-1% each) although prices of jowar (+2%), wheat and gram in Hapur (+1% each) recorded advances. The index for Industrial Raw Materials moved down by 0.3 percent to 539.9 against 541.7 (revised) in the previous week, as a result of a decrease in the prices of manganese ore (average export price) (-13%) lac (-3%), groundnuts and castorseed in Bombay and linseed (-1% each); prices of raw silk (+4%), raw wool (+2%) and rapeseed in Bombay (+1%) were, however, marked up. The Semi-Manufactures group index went up from 413.5 (revised) to 414.5 during the week. Important fluctuations in the prices were: gingelly cake (+6%), zinc (+3%), linseed oil and copper in Calcutta (+2% each) and copra cake (-3%). The index for Manufactures worked out to 390.6 compared with 390.8 (revised) for the earlier week. There was a slight fall in the price of jute manufactures. Prices of black pepper in Cochin (+3%) and cashewnuts in Quilon (+1%) witnessed advances, while chillies were marked down in Patna (-2%) and the index for the Miscellaneous group remained stationary at 570.7 (estimated).

PROGRAMME FOR MANUFACTURE OF AMBAR CHARKHAS

The Government of India has decided that 180,000 more Ambar charkhas should be manufactured and brought into production during 1957-58. Out of these, 150,000 charkhas will be distributed to trained spinners for commercial production of yarn and 30,000 charkhas will be utilised for training more spinners. These 180,000 charkhas will be in addition to the 75,000 charkhas put into operation under the 1956-57 programme. A target of 65 million yards of cloth to be woven out of Ambar yarn has been fixed for 1957-58. Under the second plan, 300 million yards of cloth have been earmarked for production from Ambar yarn out of the total additional production of 1,700 million yards at the end of the plan. A total provision of a little over Rs. 10 crores has been made in the budget for the current year for implementing part of the programme. Out of this, the Government has released immediately Rs. 2 crores, Rs. 1.5 crores as a loan and Rs. 50 lakhs as a grant, to the Khadi and Village Industries Commission for going ahead with the programme. The programme for the current year has been approved after a review of the progress made in executing the programme in 1956-57, the first year of the Ambar charkha scheme.

Progress of the Scheme

Steady progress was made in the execution of the scheme during the first year. Against the target of 75,000 charkhas, the actual number manufactured was 76,784. Out of these, nearly 46,000 charkhas were distributed to trained spinners for production. The quantity of yarn produced was over 700,000 lbs against the target of 600,000 lbs. The Ambar cloth produced during the year was over 1.33 million yards: the target for this was 1.25 million yards. Commercial production

was organised in 258 production centres. The progress made in building up the organisation required for implementing the Ambar charkha programme was more marked. Against the target of 50 workshops for manufacturing the charkhas, 77 had actually been set up by the end of 1956-57. Twenty-eight training institutions had been started against the target of 30, and 303 training-cum-production centres were in existence against the target of 300. Over 2,500 instructors to train spinners in operating the charkhas had been trained against the target of 2,400. Carpenters trained in the production of the charkhas numbered 753—153 more than the programme envisaged. The number of spinners trained was nearly 49,000 against the target of 70,000.

ACREAGE UNDER LINSEED INCREASES

The all-India second estimate of linseed puts the current year's area at 3,052,000 acres against the adjusted second estimate of 2,765,000 acres for 1955-56, according to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture. This shows an increase of 287,000 acres or 10.4 percent in area compared with last year. The increase in acreage during the current year has been reported by all the linseed growing States except West Bengal and Punjab. This increase has been more marked in the case of Bombay, Madhya Pradesh and Bihar. The increase in acreage has generally been attributed to favourable weather at sowing time. The increase has, however, been offset to a certain extent by the decreases registered in West Bengal and Punjab. The information given in this estimate relates generally to the period up to the end of February 1957. Till then condition of the crop was reported to be generally satisfactory. This estimate does not cover the entire area sown to the crop during 1956-57. Past experience has shown that the area at the second estimate stage forms roughly 75 percent of the area under the crop finally reported.

ACREAGE AND OUTPUT OF DRY CHILLIES FALL

According to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, the all-India final estimate of dry chillies for 1956-57 puts the current year's area and production at 1,450,000 acres and 354,000 tons, against the partially revised estimate of 1,490,000 acres and 355,000 tons respectively for 1955-56. This shows a decrease of 40,000 acres or 2.7 percent in area and 1,000 tons or 0.3 percent in production over last year. The decrease in area and production of dry chillies during the current year has been shared by Andhra Pradesh, Bombay, Mysore, Punjab and Madhya Pradesh, and has been attributed generally to the unfavourable climatic conditions during the current year. This decrease has, however, been offset to some extent by the increases recorded by Bihar, Rajasthan and West Bengal.

COAL INDUSTRY TO ADOPT METRIC SYSTEM

The marketing of coal in India will change over to the metric system simultaneously with the booking of coal by the railways in metric tons. This was decided by the Coal Advisory Committee at its recent Calcutta meeting. About 35 million tons of coal are transported by the Indian railways annually. Weight of coal is done by the railways on railway bridges and, therefore, the programme for the adoption of metric system in the coal industry has to be co-ordinated with that of the railways. On the recommendation of the Indian Mining Association, the Committee agreed that the revised prices should be given on both systems, namely, the long ton and the metric ton, the metric ton gradually replacing the long ton. The revision of coal prices is being examined by a committee appointed by the Central Ministry of Steel, Mines and Fuel, and the fixing of the prices on both systems, it is expected, will facilitate the change over. Conforming to the programme al-

ready recommended by the Standing Metric Committee, the Coal Advisory Committee agreed that the plants and equipments in the new mines will be designed on the metric system. Conversion of drawings and specifications for the existing equipments will be decided in consultation with the Mine Managers Association to whom the Advisory Committee decided to refer the question. The Committee also accepted the suggestion that the survey of mining areas by the Chief Inspector of Mines should in future be on the metric scale. A conference of officers of the Survey and Land Records Departments of the various States recently decided to adopt uniform metric scales for survey work in future.

RISE IN WORLD RAW WOOL CONSUMPTION

"Total consumption of raw wool in the free world during 1956 is estimated to have been an all-time record and about 71 percent greater than in the previous year," stated Mr. Dr. Hamilton-Russell in a statistical report to the conference on the world wool textile industry. The report showed that world production of tops last year appeared to have been nearly 12 percent larger than in 1955, while yarn output rose by 6 percent, figures which in each case represented new records. Production of woven tissues was estimated to have risen some 5 percent. The country showing the greatest proportionate increase in activity was Japan, whose consumption of raw wool was around 40 percent greater than in 1955. Substantial improvements were also recorded by Belgium, France and Italy, but in the United States and Western Germany, there was a slowing down in the rate of increase. Consumption in the U. K., contrary to the general trend, remained at almost exactly the same total as in the previous year. The rise in wool consumption in 1956 was accompanied by a further growth in the industry's use of other raw materials, particularly manmade fibres, but the proportion of raw wool to other materials used was rather higher in 1956 than in either of the two previous years. The volume of international trade in raw wool and wool goods continued to expand in a generally satisfactory manner during 1956.

PRODUCTION, EXPORT AND RESERVES OF MANGANESE ORE

The reserves of manganese ore in India have been estimated at about 112 million tons by the Indian Bureau of Mines. The reserves which are of all grades, are chiefly found in Madhya Pradesh, its deposits estimated at 100 million tons. The remaining 12 million tons are scattered in other areas. Out of the total reserves, about 60 million tons are of high grade ore containing 45 percent and above of manganese. Manganese ore, which holds the second place in India's mineral production, occupies the first place in the list of minerals exported from India. The quantity of ore exported during 1955 was 837,000 tons. Of the total annual exports, nearly three-fourths consists of high grade ore containing 48 percent manganese. Exports of manganese, however, have been falling since 1953 when a maximum of 1.65 million tons were exported, earning foreign exchange worth Rs. 25.7 crores. The declining trend is attributable to a fall in U.S. off-take. The U.S.A. is the biggest purchaser of manganese ore in the world accounting for nearly 40 percent of India's annual exports. Competition from other producing countries, especially the re-entry of Russia in the European markets, has also been responsible. The production of the ore in 1955 was 1,583,538 tons compared with 1,413,068 tons in 1954. The domestic consumption is at present confined mostly to the iron and steel industry. The expansion programme of steel and the increasing attention being given to the manufacture of ferro-manganese and manganese chemicals in India will increase domestic demand. Under the second plan, a production target of 2 million tons and an export target of 1.5 million tons of manganese ore have been fixed. The output of ferro-manganese is also to be stepped up from 28,000 tons to 160,000 tons by the end of the second plan.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA (Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to May, 1957. As compared with April, the May Indices for Food and Fuel and Lighting show rises of 15 points and 6 points, while those for Clothing, and Miscellaneous remain unchanged at 544 points and 284 points, respectively.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living advanced by 8 points during May, 1957.

Engineering and Transport

PROJECT FOR ELECTRICAL EQUIPMENT SCHOOL TO TRAIN TECHNICAL PERSONNEL

THE foundation stone of the training school and workshop of the heavy electrical equipment project, a Central Government undertaking was laid last week at the site of the project four miles outside Bhopal city. The ceremony was performed by Mr. Morarji Desai, Central Minister for Commerce and Industry. This marks the beginning of the work on the first stage of this Rs. 40 crore project. By the middle of next year, the training school is expected to begin when the first 900 boys will be admitted for an 18-month training course to train them as production operatives. In the first few years, the training school and workshop will work on a double shift basis so that about 2,000 boys will be under training at one time. The training school and workshop are being set up two years in advance of the completion of the factory so that the factory's requirement of about 9,000 trained personnel during the first phase of development can be met. The training school will also admit about 72 graduate engineers every year for post-graduate training to equip them for supervisory posts in the factory. A batch of 40 engineers has been to the U.K. for specialised training in the design and manufacture of heavy electrical equipment. Their training is expected to last for three years. More batches of trainees are to be sent at six months' interval, according to a plan prepared in consultation with the technical consultants of the project, the Associated Electrical Industries of the U.K. The training facilities in the U.K. are being provided in the factories of A.E.I.

The heavy electrical equipment project will manufacture plant and equipment for hydro-electric projects, electric traction equipment for railways and equipment for power distribution. The items to be manufactured will include generators of the water wheel driven type, diesel generators, industrial motors over 200 h.p., water turbines, rectifiers, D.C. generators and motors, power transformers of high voltage and industrial control gear. The factory is expected to go into production by 1960 and attain full production gradually by 1968. The total annual output will be of the order of about Rs. 12.5 crores.

AUTOMOBILE PRODUCTION INCREASES

The production of automobiles in India increased by about 40 percent in 1956 compared with 1955. The total number of vehicles produced during the year was 32,138 against 23,084 in 1955. Production has been steadily rising in India since 1953 when the programme of progressive indigenous manufacture of cars and trucks was introduced on the recommendation of the Tariff Commission. Total production in 1955 was 13,926 and 14,462 in 1954. Under this programme completely built up automobiles are not allowed to be imported into the country. The programmes of the different vehicles under manufacture are based on a progressively decreasing percentage of imported components. All the vehicles produced in the country, therefore, include varying percentages of indigenous components. The break-up of the production figures in 1956 is: cars 12,989, station wagons 677, jeeps and similar vehicles 4,328 and trucks 14,144. The demand for cars and trucks in India has also been on the increase. As against 13,813 automobiles sold in 1954, 26,065 vehicles were sold in 1955. The sales in 1956 went up to 31,486. By 1960-61, the demand for cars and trucks is expected to rise to 65,000 a year. The six approved manufacturers of automobiles have between them a total capacity of 49,800 vehicles a year. The total capital invested in the manufacturing industry is of the order of Rs. 17.3 crores. The number of persons employed is about 10,300. The automobile industry has been recently granted protection for a period of 10 years. There was a remarkable increase in the production of motor cycles and scooters by approved manufacturers during 1956. The total number of motor cycles and scooters produced was 5,622 compared with 801 during the previous year. During 1956, 493 autorikshaws were also produced.

NEW AUTOMATIC RECORDER OF MACHINERY OPERATION

Working time, as opposed to idle time, is an important factor in better productivity, and is as applicable to machines as to men. Idle time during which machinery is not earning its keep can be a costly business. To maintain records on this, however, especially in large and complex factories is not simple, in spite of the use of instruments, and can only be put to real use if meticulously analysed, which is a laborious process. Most of these difficulties may be solved by an interesting new recorder recently developed by the Plant Engineering Division of the British Iron and Steel Research Association. This performance recorder—to be commercially manufactured by the Digital Engineering Co. Ltd.—uses automatic devices not only to provide a continuous watch on the operation of machinery, but to provide a condensed summary of its observations in a form that can be analysed quickly. It employs, as it were, two mechanical memories, one to remember running time and the other idle time. A clock mechanism sends out electrical pulses every one-thousandth of an hour

(3.6 seconds) and these influence either the running-time "accumulator" (or "memory"), or the idle-time "accumulator". In a rolling mill, according to a description by the Research Association, the recorder will keep track of running time when strip is being rolled and of idle time when the mill is stationary during production—for instance, threading new coils or changing screwdown and guide settings—and of stoppage time, when the mill cannot continue its operations for roll change, failure of plant or the absence of the operator. Each stoppage is allocated to any one of a number of possible causes, such as roll change, mechanical fault, electrical fault, operational defect, meal break, late start or even early finish. A code number is given to each order on which a machine is working, and all incidents from the recorder's memory can be transferred to tape by pressing a button. The characters on the tape can be read by eye, or transferred to punched cards, or printed out. The system is very suitable for detailed analysis by an electronic digital computer, which can be fed with information from recorders at a number of separate factories.

PLANS FOR FARNBOROUGH AIR SHOW

The U.K.'s annual air show, the eighteenth of its kind, which is being staged at the Royal Aircraft Establishment in Farnborough, Hampshire, in the first week of September, will be the biggest ever. Announcing this, the Society of British Aircraft Constructors (S.B.A.C.) says that more than 350 firms have booked space in the exhibition hall, housing part of the display, compared with the previous record of 338 last year. Guided weapons are likely to be prominent at the exhibition, and the aircraft industry hopes to obtain security clearance to enable it to give the public some indication of achievements in this field. Since 1948, when the public was first admitted, almost 1,750,000 people have paid to see these displays. Overseas interest in the show can be gauged from the press coverage. Last year, 40 overseas newspapers and periodicals in 17 countries published special Farnborough supplements or insets, while well over 200 other publications carried day-to-day reports. The display was attended last year by a record number of foreign guests, including missions several hundred strong from the United States (the industry's best customer in 1956), France, Germany, and the Netherlands. This year the international contingents are expected to be even bigger.

PROSPECTING RECOMMENDED FOR COPPER-BEARING AREA IN RAJASTHAN

The Geological Survey of India has recommended geochemical prospecting to assess the copper mineral content in the Khoh-Dariba area of Alwar district, Rajasthan State. The department investigated the area during the last two field seasons for determining the nature and extent of mineralisation and to prepare a scheme for exploration. There are old abandoned mines in the Khoh-Dariba area, about 40 miles south of Alwar town. The copper mine of Dariba has a long history. The presence of numerous shafts, pits, extensive underground stopes, large dumps of slag and mine-debris, and ruins of a once prosperous mine village point to a flourishing mining and smelting industry extending over a long period in the past. A very rough estimate based on the stoped area of the Dariba mine shows that about 400,000 cubic feet or 30,000 tons of copper ore were removed from the mine. The calculation has, however, been made on guess estimates of the total height of the stopes which in places are more or less filled with waste ore and are inaccessible.

MANUFACTURE OF COACHING UNDERFRAMES

The Railway Board has taken a major step towards self-sufficiency in railway equipment by developing capacity with firms in India for the manufacture of the entire requirements of coaching underframes planned under the 1957-58 purchase programme. The indigenous capacity for the manufacture of underframes has so far been insignificant and initial efforts by the Railway Board Development Cell to encourage manufacturers in India to enter the field bore no results. Global tenders were consequently invited for supply from foreign sources. Before placing orders with foreign suppliers, the Railway Board convened a meeting of indigenous firms, and as a result it was possible to locate capacity for the manufacture of underframes in the country. Five firms came forward to manufacture the entire pending requirements of underframes. The manufacturing capacities of these firms have therefore, been booked for a supply of 500 broad-gauge, 791 metre-gauge and 60 narrow-gauge bogie coaching underframes. This will save the country several crores of rupees in foreign exchange.

and heat for a community of 20,000 people—is now put at about £1,500,000, or £150 a kilowatt. These revised figures are based on European manufacturing costs. "Further reductions may be possible when detailed figures are available in a month's time," Mr. Congreve added. On the other hand, if you have between £15 million and £40 million to spare, the unique British exhibit at the Hanover Industrial Fair makes you a four-fold offer to back up models, blueprints and illustrations of no less than three types of atomic power plant based on the Calder Hall design which are supported on the stand by an army of technicians from the half a dozen British firms ready to start building them anywhere in the world to provide further details. The offer is to (1) construct, transport and erect complete power plants, (2) supply a "build-it-yourself" kit, if preferred, (3) supply the necessary plans and know-how where construction resources are available locally, and (4) supply the uranium to feed the plants in a form which cannot be used in bombs. It is reported that the queue of customers is already beginning to form with Japan and Italy heading the list.

WORK STARTED ON VANGUARD PROPELLER TURBINE AIRLINER

Work has begun on Vickers-Armstrong's first Vanguard propeller-turbine airliner at their Weybridge factory, Surrey. The 400-m.p.h. double-decked aircraft, 40 of which have been ordered, is expected to fly in the autumn of next year. The initial stage in the production programme involved setting up fuselage frames on special assembly jigs, the equivalent of laving the keel of a ship. A wooden mock-up of the fuselage had already been built to solve many of the construction problems. A Vanguard prototype, in the normally accepted sense, is not to be made. The first aircraft is being built from production plans on the standard production line, and will be kept by the makers for development flying. The company thus hopes to shorten the time between the first flight and the Vanguard's entry into service with British European Airways in 1960. Twenty Vanguards have been ordered by B.E.A. and a further 20 by Trans-Canada Air Lines.

PROBLEMS OF FLYING LARGE COMMERCIAL AIRLINERS

The introduction of new types of commercial aircraft, including supersonic airliners, will involve various difficulties, besides extending runways and aprons and adapting taxi-ways. The problems were comprehensively discussed by technical experts at the International Civil Aviation Organisation's headquarters in Montreal recently, and the report on these discussions which has now become available must surely be essential reading for all concerned with the provision of commercial air travel facilities. It discloses that the consensus of opinion is that the advent of new types of aircraft, such as the jet Boeing 707 and Douglas DC-8, and the propeller-turbine Bristol Britannia and Lockheed Electra, will result in a period of consolidation. This may last for a decade. Looking further ahead, a design study was made of three types: an 860-920 m.p.h. supersonic jet; 550 m.p.h. subsonic jet, and 460 m.p.h. propeller-turbine aircraft. It indicated that the direct operating costs of the

supersonic jet would be twice those of the subsonic jet and slightly more than three times those of the propeller-turbine plane. The design study of airfields suggested that runways of the following lengths would be required: supersonic jet, 4,000 yards; subsonic jet, 3,000; propeller-turbine plane, 2,500. The longest runway at the London airport is 3,190 yards. Large jets, fully loaded, will require runways longer than those at most international airports. Propeller-turbine and medium-range jet aircraft will be able to use existing runways. There was little optimism about the effects of silencing devices fitted to jet engines. Noise at airfields might be reduced by the positioning of runways and aprons, deflecting walls and other static ground devices. To stop noise inconveniencing people in airport buildings, aircraft might have to be parked or started up a long way away.

LIGHTER SHIPS TO CARRY MORE CARGO

A cargo liner which makes maritime history in the matter of her construction recently left London on her maiden voyage to West African ports. She is the Palm Line's motorship *Elmina Palm*, 5,700 tons, the first British-built cargo ship for British owners to be constructed mainly of welded aluminium. By careful design and the extensive use of aluminium it has been possible to achieve a weight-saving of 63 percent. At the same times, this enabled her to carry more cargo than would normally be possible up West African rivers, for their mouths impose a severe draught restriction. Not only is most of the midship structure of aluminium but as inspection disclosed so far are the funnel, the hatch covers over the five holds, the lifeboats and the accommodation ladders. And, for the first time in any ship, it is claimed, the deck awnings so essential in hot weather trades are made of aluminium rather than the conventional teak. This aluminium sheeting is very thin, but so strong that a 17-stone man danced on it without making any impression. The whole aluminium theme of the superstructure and certain fittings has resulted in a weight saving of about 74 tons. This allows a corresponding increase in deadweight tonnage over a similar ship of normal construction. The *Elmina Palm*, built at Swan, Hunters' Neptune Works, Newcastle-upon-Tyne, cost just over £1 million, and is the first of seven new ships ordered by the Palm Line, which plans to raise its fleet from the 16 vessels it had before the war (of which half were lost through enemy action) to 27 within the next few years.

NEW PLANT TO CONVERT FLY ASH INTO BUILDING MATERIAL

The use of waste products is valuable as a means of cutting production costs besides offering a useful source of additional revenue. In the case of thermal power stations ash from the furnaces, which has hitherto been a problem, may soon prove to be as valuable as the gold dust in the prospector's pan. That, anyhow, is the hope of Battersea Power Station in London, where a plant has just gone into operation to convert the residue from the furnaces known as "fly ash" into a useful building material. The quantities of fly ash arising at power stations have enormously increased with the use of low quality, pulverised coal. The ash is caught in the chimney stacks and precipitated. It must then be taken out and dumped either in disused quarries or in the sea. Only a small quantity has been used recently as a substitute for Portland cement. The new plant, which is to turn a costly nuisance into a useful product, is being worked by the Cementation Company under licence from the designers and patentees, Sinterite Limited. At a visit to the power station, it was made clear that the Central Electricity Authority has considerable hopes that this experiment may prove useful on a much larger scale. The disposal of fly ash is becoming increasingly difficult and is said to cost the electricity undertakings many hundred thousand pounds. At present about two million tons of fly ash emerges every year. By 1960, this is going to increase to four million, and by 1964 to six million tons.

Dr F. P. Somogyi, the inventor of the Sinterite process, explains that the new plant installed in Battersea can burn materials with up to 95 percent ash content at a temperature of up to 2,000 degrees Fahrenheit, and convert them into a lightweight building material which has already proved useful as an aggregate for concrete. The heat is produced by burning the carbon still contained in the fly ash, and in the process some surplus heat is produced which can be fed back to the furnaces if the carbon content of the fly ash is high enough. Another claim made by the inventor is that certain fly ashes which contain small quantities of iron can now be treated by magnetic separation in such a way that useful iron can be economically produced. "It is now possible," he said, "to recover from fly ash with an iron content of not under 15 percent at least half of the total quantity in the form of 65 to 80 percent iron oxides." This is not possible in Battersea, where the iron content of the fly ash is only 6 percent. But the new process might be applied to recover iron from the vast refuse dumps at collieries which are growing at the rate of 40 million tons a year and contain at least 25 percent of coal. It is claimed that a plant waste material and produce large quantities of heat and slag. By first grinding the material it could also be used for the production of building aggregate and, in many cases of iron. The heat needed for these operations would be obtained

from the refuse itself. Officials of the Central Electricity Board are still treating the Sinterite process as an interesting experiment, but it has certainly created a stir in the world of power.

GLASS FIBRE LIFEBOAT IN ONE-PIECE MOULD

The largest glass fibre lifeboat to be constructed in a one-piece mould was recently installed in the Orient Line's passenger vessel *Oronsay* for trial during the voyage to Australia. Some two years ago the Orient Steam Navigation Co. Ltd., London, gave thought to the possibility of polyester glass fibre lifeboats which, at that time, were not of sufficient size for use in passenger vessels. With the co-operation of British Industrial Plastic Chemicals Ltd. and Fibreglass Ltd., the Orient Line have now produced a craft capable of carrying 144 persons and which exceeds the M.O.T. statutory requirements. The boat was constructed by W. and J. Tod Ltd., Weymouth, who worked out the detailed design in conjunction with the Orient Line's naval architect. The main particulars of the boat are as follows: length 37 feet 6 inches; beam 12 feet 6 inches; weight (empty), 5.5 tons; speed loaded, 6 knots. The new passenger liner *Oronsay* (40,000 tons) now under construction for the Orient Line at the yard of Vickers-Armstrongs (Shipbuilders) Ltd., Barrow-in-Furness, will carry 20 of the new lifeboats, which are already on order from W. and J. Tod Ltd.

These boats will be slung in davits of a completely new design by Welin-MacLachlan Davits Ltd., and will be carried on the highest strength deck, the boat deck consisting of a bay occupying the height of two decks below the main promenade deck and running the necessary length to accommodate the required number of boats. Trackways will be connected to the underside of the deck above the boat deck and the winches will be mounted half way up the deckhouse side, thus giving full headroom under them on their embarkation deck. The boats will be suspended from cradles on the trackways and will be at a sufficient height above the embarkation deck to permit full headroom right across the deck from the deckhouse side to the ship-side rails. The cradles for lifeboat launching will travel on inboard, impelled by forces derived from track inclination and counter weights, thus meeting with M.O.T. regulations. The boats will be stowed with a slight angle of heel in order to preserve on the maximum view from the windows in cabins on the deck in between the boat deck and the promenade deck. The boat cradles will be in light alloy and the new davit, complete with counter weights, will be 15 percent lighter than the standard trackway type overhead gravity davit. This new davit can launch a boat against an adverse list of 25 deg. and a 10 deg. trim. This has been confirmed in tests carried out by the M.O.T.

SCHEME FOR STORING ELECTRICITY

The first major pumped-storage power station to be built in the U.K. in Ffestiniog, North Wales, is to be equipped by the English Electric Company under a contract just placed by the Central Electricity Authority. The equipment consists of four 105,000-horse-power water-turbines, governors, storage pumps and valves. Water will be pumped from a lower to an upper reservoir at night when surplus electric power is available to drive the pumps. The stored water will then be used to drive turbines during the day to generate extra power for peak-load demands. The storage pumps will be supplied under a sub-contract by Sulzer Brothers (London) Ltd. in association with Sulzer Brothers Ltd. of Switzerland.

COMPANY TO MANAGE NATIONAL INSTRUMENTS FACTORY

A Government-owned company, called the National Instruments (Private) Limited, has been registered to take over the management of the National Instruments Factory in Calcutta, which has been departmentally managed so far. The authorised capital of the company is Rs. 3 crores. The factory has been brought under the company form of management so that it can be run on commercial lines. Started as a mathematical instruments office in 1830, for the repair of precision instruments for the Survey of India, the factory has grown into an important industrial undertaking producing high precision survey, mathematical, drawing, optical and other instruments. Its production in 1956-57 was valued at over Rs. 23 lakhs and its sales amounted to slightly over Rs. 24 lakhs. Its large range of manufacture includes theodolites, microscopes, stereoscopes and projection instruments, survey instruments like theodolites, prismatic compass and clinometers, mathematical measuring instruments, instruments for measuring humidity, temperature and density, pressure gauges, vacuum gauges, barometers, drawing office equipment and nautical instruments. Under its expansion programme the factory will manufacture special types of microscopes, engineering and geological use and optical components for microscopes, clinical thermometers, pressure and vacuum gauges and medical diagnostic instruments will be the other items to be taken up for manufacture. Prototypes of pressure and vacuum gauges have already been manufactured and are being tested in railway laboratories. A batch production of 100 clinical thermometers has already been made and efforts are now being made to reduce the cost of production. Over 1,000 people are employed in the factory for which a new building has recently been opened in Jadavpur.

Plantation Topics

HEAVY TAXATION OF KERALA PLANTATIONS

PROPOSAL FOR STATE TRADING IN CASH CROPS

(FROM A SOUTH INDIAN CORRESPONDENT)

It is estimated that planters in Kerala will have to provide nearly 80 percent of the Rs. 232 lakhs the Finance Minister of the State proposes to raise through new taxes during 1957-58. This will be in addition to the agricultural income tax, estimated at Rs. 180 lakhs in the preliminary Budget, and the land tax they are already paying to the State Government. It is pointed out that this kind of indiscriminate taxation will compel some of the planting companies to go into voluntary liquidation. The severity of the new taxes and their demoralising effect on the investor can be assessed from share market trends in the past few weeks. The Madras Stock Exchange Association has been forced to fix floor prices for all ordinary planting shares in view of the steep fall in their values brought about by the Kerala Government's taxation proposals. It will be disastrous for Kerala to destroy its planting industry, which occupies an important place in Kerala's economy.

These additional taxes will raise considerably the cost of production of Kerala's cash crops which are being sold in foreign markets in competition with the same crops produced in other Indian States as well as abroad. Higher costs of production will price the former out of the overseas market at a time when there is a great need to increase exports.

The Kerala Finance Minister seems to be labouring under the wrong notion that planting companies are owned by the rich alone and they can afford to pay any new tax. As a matter of fact, middle class investors have a larger stake in many of the rupee companies in south India. According to one estimate, more than 50 percent of the investors belong to the middle class. Besides, planting is not as lucrative a business as it was a few years ago. Taxation at the State and Central levels, additional outlay for labour welfare and declines in the prices of many plantation crops have reduced considerably the margin left for the planter.

Plantations and Land Reforms

Plantation holdings will be exempted from the purview of the land reform Bill which is now being drafted by the Communist Government in Kerala. This was stated by the Finance Minister, Mr. Achutha Menon, in his reply to the Budget debate in the State Assembly.

There is a proposal in the Kerala Budget to set up a State Trading Corporation to ensure reasonable prices for the agricultural products exported from the State. The idea was first brought forward by a former Chief Minister of Travancore-Cochin, Mr. Panamilly Govinda Menon, in 1955, when the Central State Trading Corporation did not exist. To set up yet another Corporation at the State level implies duplication. The State Trading Corporation of India now exports some of Kerala's cash crops, such as cashew, pepper, tea and coffee to Communist countries where the scope for private trade is limited. It is doubtful whether there is sufficient scope for two State trading corporations, besides the usual private trade to operate in the small field of Kerala's cash crops.

As a matter of fact, the private trade is well developed. It is not its fault that the prices of Kerala's cash crops have fallen to the present low levels. The price situation is largely governed by demand from abroad over which traders can have no control. Production trends here as well as in other producing centres are beyond their control. For instance, taking the case of pepper, world production has recorded a very big increase in postwar years, outpacing the increase in demand. Excess production has been the principal reason for the decline in the prices of other crops such as ginger and lemongrass oil.

Trade Malpractices

It is true that adulteration and other such malpractices were common in the cash crop trade, and that has affected to some extent the reputation of these crops abroad. But compared with the other factors which have contributed to the present slump, the question of malpractices is of little importance. Prices have gone down to such an extent that it is no longer worthwhile to indulge in malpractices. The introduction of ag-marking etcetera has gone a long way in checking unwholesome trade practices. With a little more vigilance on the part of the Government, malpractices, if any, can be brought under complete control. Anyhow, stray cases of malpractices are not a good enough reason for the State Government to enter the trade.

Lawlessness in Planting Districts

The Plantation Labour Committee, which met in Trivandrum on 11th June with the Labour Commissioner of Kerala presiding, passed a resolution unanimously requesting the State Government to take immediate measures to improve the law and order situation in the planting districts of Kerala. The employer members on the Committee made several complaints to the effect that the law and order situation in many areas has deteriorated to such an extent that negotiations for the settlement of outstanding disputes could not be continued. Therefore, the meeting had to be postponed sine die after passing the resolution.

To the end of May, the Coffee Board has sold for export 7,975 tons of coffee out of the 1956-57 season's crop. This includes 725 tons sold to Russia. Another 1,500 tons have been reserved for export to Sweden, Finland, Australia and the United States. The estimated surplus for export out of the current season's crop is over 15,000 tons. The season's total output is estimated at 41,565 tons, the highest on record.

The chairman of the Central Travancore Planters' Association in the course of his speech at the recent annual general meeting referred to the proposed nationalisation of foreign-owned plantations in Kerala and requested the State Government to study carefully the record of nationalised industry elsewhere in the world so that it could consider for itself whether an industry so ill-suited to standardisation as plantations would continue to yield the same profits under bureaucracy. He added that the Government should first take steps to ascertain the extent of those "immense" profits which are now being remitted overseas and which it wanted to secure for the State Exchequer, in relation to the capital employed on foreign plantations.

Recalcitrance of Labour

Commenting on the labour situation, he said that the multiplicity of labour unions with conflicting political attachments was a great problem for the planters. It was in fact a stumbling block to the work of the Plantation Labour Committee. Giving an example of how difficult it has become to deal with labour even in implementing the Plantation Labour Act he said: "We are met with the stubborn opposition of labour to those sections with which they are not in agreement, and I would quote the section dealing with protection against the weather, otherwise cumbles (blanket). The Act required us to issue two cumbles, or their alternatives, to each labourer every year, and this association took early steps to comply with the Act. When we came to issue the cumbles, however, we were met with a blank refusal on many estates to accept them, on one ground or another, and as negotiations progressed, it became increasingly obvious that the only objection was that the majority of labourers did not want the cumbles, but the cash to which they have been accustomed in the past. The stage has now been reached at which cumbles, of the standard approved by the Chief Inspector of Plantations, have been offered and refused, and labourers on several estates went on strike on the ground that they could not work in the rain without cumbles."

He urged that the Government see the necessity of consulting the industry beforehand as to the practical working of such legislation as the Provident Fund Act in order to avoid unnecessary difficulties. He referred in particular to the mass of papers required to be submitted monthly by the management under that Provident Fund Act which is being extended to plantations. Of all the plantation districts in Kerala, Central Travancore produces the largest crop. Last year this district had a record harvest of 25.5 million lbs with an equally high yield an acre of 1,018 lbs.

Cochin Market Review

It was a record year for the Cochin tea market in 1956. For the first time since tea auctions started in 1947, 55.5 million lbs of tea, representing 43.7 percent of the south Indian crop, were sold through this market. Shipments from Cochin touched a new peak of over 80 million lbs. Out of this, 73 million lbs went overseas compared with 64 million lbs in 1955. The annual review for the year of the Cochin tea market issued by Messrs. Forbes, Ewart and Figgis states that Broken Pekoes were at a discount and far less of this grade of tea was manufactured during 1956. A true B.P. is now scarce in south India and it is doubtful whether it can continue to be used as a yardstick for market quotations. The most notable feature of south Indian teas during the year under review was the improvement in their quality. The report states that the cold weather teas of 1956 were the best that have been seen, in this region for some years. Another new feature was the support provided at export sales by internal buyers. The year was also notable for the general stability of prices, although the lowest average for the three years, 1954 to 1956, that is Rs. 2-3-8 a lb., prevailed during 1956.

COCHIN TEA SALES

At Sale No. 16, there was a strong general demand for the 950,000 lbs of tea on offer. Low Mediums and Mediums were irregularly 5 p dearer; best liquorings and whole leafs were considerably stronger and dearer.

EXPORTS OF INDIAN TOBACCO RISE

The first estimate for Indian tobacco acreage for 1956-57 is 826,000 acres—17,000 acres more than the corresponding adjusted estimate for the previous season. The Commonwealth Economic Committee, which gives this figure in its quarterly *Tobacco Intelligence* says that in Andhra Pradesh alone, which accounts for nearly all the flue-cured output, the area under tobacco has increased from 312,000 acres to 323,000 acres. Heavy shipments in the third quarter of 1956 brought the total of exports by sea of manufactured Indian tobacco in April-November 1956 to 80,300,000 lbs—9,200,000 lbs more than in the same period of the previous year. Consignments to the U. K. at 29,200,000 lbs were 5,100,000 lbs more than a year earlier. The U.K. in fact remained India's best tobacco customer, China being second. In the first quarter of 1957, India bought 42,000 lbs. of cigarettes from Britain—a turn of 15,000 lbs over the corresponding quarter of 1956.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to January 1957. Compared with the preceding month, there were increases in cotton consumption 4.2 points, jute manufactures 4.3 points, pig iron 1.1 points

and wagons loaded 4.1 points, while decreases occurred in steel ingots 1.9 points, cement 6.9 points, paper 1.6 points, coal 1.8 points and electricity 4.6 points.

The indices for cheque clearances and notes in

circulation rose by 7.7 points and 0.3 point, respectively.

Correlating all the factors, the Capital index of Indian Industrial Activity advanced by 3.6 points during January 1957.

	Industrial Production						Mineral Production	Total Number of Wagons Loaded (T)	Financial Statistics	Foreign & Coastal		General Monthly Index
	Indian Cotton Consumption	Jute Manufactures	Steel Ingots	Pig Iron	Cement	Paper				Exports	Imports

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY (1935)

Calcutta Markets

STRONGER DEMAND AT TEA EXPORT SALE

BETTER SUPPORT FOR DUSTS

AT Sale No. 3, held on 24th and 25th June offerings at the Export auction amounted to 17,362 packages. There was a stronger and more general demand than in last week's Sale, but any green First Flush teas tended to be easier. Bright liquoring C.T.C.'s and Medium Assams were the strongest features of the Sale and were dearer by as much as 40 nP. There was more demand for plain and medium B.P.'s which were 5 to 10 nP dearer, while Fannings grades in these categories received better support than in the previous week and were firm and sometimes dearer. Stylish leaf grades were again dearer, while tippy teas and flavoured Darjeelings were well supported.

Quotations

1957	1956
Clean Black Pekoe 2.40 to 2.50	1.13 0 to 1.15 0
Plain B.P. 1.65	1.7 0 to 1.8 0
Plain Fannings 1.65	
Medium B.P. 2.00 to 2.20 (nominal)	1.14 0 to 2.0 0
Medium Fannings 2.10 to 2.30 ()	
Best Assam C.T.C. 3.20 to 3.50 ()	3.0 0 to 3.8 0
Best Assam C.T.C. 3.40 to 3.80 ()	

At the Internal Sale, Dust offerings amounted to 5,045 chests of which 665 chests were of the old season's manufacture. There was a greatly improved demand for all descriptions, and C.T.C. Assams with bright liquors were keenly competed for, but earlier teas with ordinary liquors were barely steady. Orthodox Assams with bright liquors were a popular feature, while plain teas, Doars and the remaining orthodox Assams were dearer by sometimes as much as 10 nP. Once again the smaller powdery descriptions sold at higher rates than the leafier types and there was only a limited enquiry for the flavoured invoices from Darjeeling.

Quotations

1957	1956
Medium Doars Dust 1.50 to 1.55	1.6 0 (nominal)
Medium Assam 1.60 to 1.65 (nominal)	1.7 0 ()
Grainy Dust 1.60 to 1.65 (nominal)	1.7 0 ()
Medium Assam C.T.C. 2.70 to 2.90 (nominal)	2.6 0 ()

Only 150 chests of Leaf were offered for sale of which 34 chests were of the old season's manufacture.

RATES MOVE NARROWLY IN FREIGHT MARKETS

THE freight markets have fluctuated narrowly in the last two weeks with exchanges still in charterers' favour. A three years' contract for 180,000 tons of coal Hampton Roads-Continent was arranged at \$ (U.S.) 7.50 and single voyage rates varied from 46s 6d to 47s. There was a welcome revival in Calcutta of coal shipments with two cargoes fixed to Port Sudan at 90s, two to Hongkong at 77s 6d and a number to Karachi at rates varying from 75s to 72s 6d. There were also a number of prompt one charters arranged including M.S. Mathilda to U.S.N.H. at \$ (U.S.) 14.25 and S.S. Edison Mariner at 92s 6d, with 500 load to Yugoslavia. Meanwhile, the congestion at Indian ports continues to grow and there were not enough harbour masters at the Calcutta port to permit vessels to arrive on 26th June. Various excuses are tendered from time to time, but the basic problems of labour, equipment and planning of imports remain unsolved.

HIDES AND SKINS STEADY

The market continued steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 18th June and 24th June, 1957)

Cowhides: Wet salted (Ord.) 25,000 pcs. on the basis of Rs. 8.50; Wet salted (Slaughtered) 18,500 pcs. on the basis of Rs. 13 to Rs. 22.
Goatskins: Wet salted (Daissee Killed) 65,600 pcs. on the basis of Rs. 300 to Rs. 320. Rs. 335 to Rs. 360 and Rs. 380 to Rs. 400: Assam-Dinajpur-Murshidabad 18,100 pcs. on the basis of Rs. 285 to Rs. 345.

Bazaar Stocks

(24th June, 1957)

Cowhides: Wet salted 1,67,000 pcs.
Goatskins: Wet salted (Daissee Killed) 15,500 pcs.; Assam-Dinajpur-Murshidabad 16,000 pcs.; Murshidabad - Patna - Pakur-Purneah - Kishanganj 81,000 pcs.

LINSEED QUIETLY STEADY

There has been no material change during the past week, and the general undertone has been quietly steady. Trading has been very limited with buyers and sellers equally reserved. The

supplies of seeds from upcountry were barely sufficient to cover the diminished local demand. Prospects do not appear to be favourable, owing to possible restrictions on movements during the coming months. Turnover in the oil market has been negligible, but with the prevailing scarcity of stocks, prices have been maintained. Latest quotations were as follows: ready Rs. 22-10 a maund; July-August Rs. 22-12 a maund and August-September Rs. 23 a maund.

SUGAR QUIET

During the week ended 26th June, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 1,500 bags and stocks totalled 60,000 bags. Rates for ready sugar ex-Kantapurkur delivery were Rs. 36 for ordinary grain and Rs. 37 for big grain. The market was quiet but steady.

SHELLAC STEADY

During the week ended 25th June, the market was quiet at the beginning and steady at the close. The range of quotations was as follows:

COMPANY AND PUBLIC NOTICES

THE GANESH FLOUR MILLS COMPANY LIMITED, DELHI.

NOTICE is hereby given that the 65th Annual General Meeting of the Shareholders of the Ganesh Flour Mills Co. Ltd., Delhi, will be held at the Registered Office of the Company at Subzi-
mandi, Delhi, on Saturday the 27th of July, 1957, at 10-30 A.M. to transact the following business:—

- To receive, consider and adopt the Directors' Report and the Audited Balance Sheet and Profit and Loss Account of the Company for the year ending 30th September, 1956.
- To declare Dividends.

3(a) To elect a Director in place of Shri Chandu Lal who retires by rotation and is eligible for re-election subject to exemption of age limit as prescribed for a Director under Section 280 of the Companies Act, 1956, and to consider and, if thought fit, to pass the following resolution of which special notice, as required under Section 281 of the Companies Act, 1956, has been received by the Company from a Shareholder.

"Resolved that Shri Chandu Lal, one of the retiring Directors of the Company who retires by rotation and is eligible for re-election and who shall be 73 years of age next birthday, be and is hereby re-elected Director of the Company and it is hereby specifically declared that the age limit for a Director, as prescribed under Section 280 of the Companies Act, shall not apply to him."

(b) To elect a Director in place of Shri Rang Behari Lal who retires by rotation and is eligible for re-election subject to exemption of age limit prescribed for Director under Section 280 of the Companies Act, 1956, and to consider and, if thought fit, to pass the following resolution of which special notice, as required under Section 281 of the Companies Act, 1956, has been received by the Company from a Shareholder:—

"Resolved that Shri Rang Behari Lal, one of the retiring Directors of the Company who retires by rotation and is eligible for re-election and who shall be 68 years of age next birthday, be and is hereby re-elected Director of the Company and it is hereby specifically declared that the age limit for a Director as prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."

- To appoint Auditors for the year 1956-1957 and fix their remuneration.

N.B. Special notice as required under Section 225 of the Companies Act, 1956 has been received from a Shareholder that in the next Annual Ordinary General Meeting of the Company to be held on the 27-7-57 he shall propose a resolution "that M/s Khanna & Annadham, Chartered Accountants be appointed Auditors of the Company for the period beginning from the conclusion of the meeting to be held on 27-7-57 to the conclusion of the next Annual Ordinary General Meeting."

- To consider and if thought fit, to pass the following resolution:—

"RESOLVED that of the Capital of Rs. 75,000/- in the shape of 6,000 7½% Cumulative Preference Shares of Rs. 12/8/- each, eight such shares which have not been issued so far be and are hereby cancelled."

- To consider, and if thought fit, to pass the following resolution:—

"RESOLVED that of the Capital of Rs. 10,50,000/- in the shape of Second, Third and Fourth Cumulative Preference Shares of Rs. 12/8/- each bearing a fixed dividend of 4% per annum, 21,084 such shares (amounting in value to Rs. 2,63,550/-) which have not been issued so far be and are hereby cancelled."

- To consider and if thought fit, to pass the following resolution:—

"RESOLVED that of the Capital of Rs. 39,50,000/- in the shape of Cumulative Preference Shares of Rs. 12/8/- each, 2,50,754 such shares (amounting in value to Rs. 31,34,425/-) which have not been issued be and are hereby cancelled."

- To consider and if thought fit, to pass the following resolution:—

"RESOLVED that the Authorised Capital of the Company be increased to Rs. 1,00,00,000/- by the creation of 2,71,846 Cumulative Preference Shares of Rs. 12/8/- each (amounting to Rs. 33,98,075/-) to be issued bearing such fixed rate of dividend and subject to such terms and conditions as the Board of Directors may, subject to the provisions of the Articles of Association of the Company and of the Companies Act, 1956, decide at the time of issue."

- To consider and if thought fit, to pass the following as Special Resolution:—

"Resolved that new Articles of Association submitted to this meeting and for the purposes of identification subscribed by the Chairman thereof, be approved and adopted with such modifications, if any, as may be agreed to at this meeting as the Articles of Association of the Company in substitution for and to the exclusion of the existing Articles of Association of the Company."

By Order of the Board of Directors,
For THE GANESH FLOUR MILLS CO. LTD.,
DELHI.

KIPPA NARAIN,
Secretary & General Manager.

Delhi,
Dated 19-5-57.

N.B. (a) The Share Transfer Books of the Company will remain closed from 7th July, 1957 to 27th July, 1957, (both days inclusive).

(b) Members unable to attend are requested to send their Proxy forms (sent herewith) duly stamped, signed and witnessed in favour of a person attending the meeting. Forms not properly witnessed or stamped or received less than 48 hours before the meeting will be treated as invalid.

(c) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and that a Proxy need not be a member of the Company.

Explanatory statement in regard to the special business under items No. 3(a) & (b) 5, 6, 7, 8 & 9 of the Agenda set out above as required under Section 173(2) of the Companies Act, 1956.

Item 3(a). It is notified that Shri Chandu Lal one of the retiring Directors of the Company by rotation whose date of birth is October 1884 will be 73 years of age next birthday. Resolution that the age limit as prescribed under Section 280 of the Companies Act, 1956, shall not apply to him is necessary whereby he will be eligible for re-election as Director of the Company. Special notice of the resolution as marked 3(a) in the Agenda has been received by the Company from a Shareholder for specifically declaring that the age limit for a Director as prescribed under Section 280 shall not apply to him and that he be re-elected as a Director.

Shri Chandu Lal has been a Director of the Company since 1923. He is Bar-at-Law and has always taken a keen interest in its deliberations. It is in the interest of the Company that the Board should continue to receive the benefit of his advice as a member of the board.

3(b). It is notified that Shri Rang Behari Lal one of the retiring Directors of the Company by rotation and whose date of birth is 17-3-1880 and who will be 68 years of age next birthday. Resolution that the age limit as prescribed under Section 280 of the Companies Act, 1956, shall not apply to him is necessary whereby he will be eligible for re-election as Director of the Company. Special notice of the resolution as marked 3(b) in the Agenda above has been received by the Company from a Shareholder for specifically declaring that the age limit for a Director as prescribed under Section 280 of the Act shall not apply to him and that he be re-elected as a Director.

Shri Rang Behari Lal has been a Director of the Company since 1923. He is a Senior Advocate of the Supreme Court of India and a great legal luminary. He has always taken a keen interest in its deliberations. It is in the interest of the Company that the Board should continue to receive the benefit of his advice as a member of the Board.

Shri Rang Behari Lal has been a Director of the Company since 1923. He is a Senior Advocate of the Supreme Court of India and a great legal luminary. He has always taken a keen interest in its deliberations. It is in the interest of the Company that the Board should continue to receive the benefit of his advice as a member of the Board.

Items No. 5 & 6. In view of the fact that, by reason of the conditions attaching to subsequent issues of Preference Shares, the balance of the authorised First Cumulative Preference Shares Capital and the balance of the authorised Share Capital in the shape of Second, Third and Fourth Cumulative Preference cannot now be issued, it is considered desirable to cancel these shares which have not been taken up and it is therefore proposed to pass the Resolution under items 5 and 6.

Item No. 7. With regard to the Resolution proposed to be passed under item No. 7, it is pointed out that 65,320 Fifth Cumulative Preference Shares have been already issued subject to certain conditions, out of the further authorised capital of Rs. 39,50,000. As it is proposed to create fresh shares to take the place of those to be cancelled under Resolutions 5 and 6 it is considered desirable that, in order that all the unissued shares may be of one class, the balance of the total capital of Rs. 39,50,000/- out of which the Fifth Cumulative Preference Shares were issued, should also be cancelled and should thereafter form part of the fresh shares to be created.

celled and should thereafter form part of the fresh shares to be created.

Item No. 8. With regard to item 8, it is considered desirable to retain the authorised capital at the existing figure of Rs. 1,00,00,000/- and therefore it is necessary to increase the amount of the authorised capital by the aggregate value of the shares cancelled under the earlier Resolutions proposed.

Item No. 9. The existing Articles of Association of the Company were framed long ago. Since then the Companies law has undergone drastic changes. Several of the changes now made under the Companies Act 1956, over-ride or otherwise effect the various provisions in the existing Articles of the Company which consequently require amendment to bring them into line with the new Act. It is, therefore, desirable that a new set of Articles of Association in conformity with the Companies Act, 1956, be framed. A new set of Articles of Association as drafted in conformity with the law and procedure is sent herewith.

A copy of the existing Articles of Association as well as a copy of the proposed Articles duly signed by the Chairman for purposes of identification shall also be available for inspection of the members during business hours at the registered office of the Company on all working days from 7-7-57 to 27-7-57. Section 31 of the Companies Act, 1956, requires that changes or alterations in the Articles of the Company must be approved by the members in General Meeting and as such your approval is being sought by special resolution above for the adoption of these new set of Articles of the Company.

INDIAN COPPER CORPORATION LIMITED.

(Incorporated in England)
Dividend No. 31 (Final)

NOTICE is hereby given that at the Thirty-third Ordinary General Meeting to be held at the Royal Exchange Hall Royal Exchange, Calcutta, on Wednesday, the 11th September, 1957, at 11-30 A.M. the Directors will recommend payment of a Final Dividend (No. 31) for the year ended 31st December, 1956 of 13½% (3.2 pence, i.e. 17.7777 Naye Paise per unit of stock) free of Income Tax payable by the Company in respect of the Issued Capital of £1,371,300/-. Subject to confirmation of members, the dividend will be paid on the 20th September, 1957 to all members registered in the books of the Company at the close of business on the 20th July, 1957.

The Registers of Members will be closed from the 21st July to the 5th August, 1957 both days inclusive.

The nett profit for the year ended 31st December, 1956 was £272,157/- (against £416,758/- for previous year), after providing £175,000/- for Depreciation (£175,000/- last year), £885,027/- for Taxation (against £683,046/-), £175,000/- for General Reserve (against £200,000/-). With £117,083/- brought in from 1955, there is an available balance of £389,240/- (against £528,473/-). After providing £274,260/- for Interim Dividend (No. 30) of 6½% already paid on 15th April, 1957 and for proposed Final Dividend of 13½%, free of Income Tax payable by the Company (Dividends No. 28 (Int.) of 10% and No. 29 of 10% and Bonus of 25% free of tax last year—£411,300/-) the balance carried forward is £114,980/- (against £117,083/- brought in from previous year).

By Order of the Board,

G. A. CARVER,
Secretary.

Gillander House,
Netaji Subhas Road,
Calcutta.
Dated the 24th June, 1957.

TRITON INSURANCE COMPANY LIMITED

WITH WHICH IS INCORPORATED
THE EASTERN INSURANCE COMPANY

NOTICE TO SHAREHOLDERS

THE Board of Directors of the Triton Insurance Company Limited hereby give notice that the Annual General Meeting of Shareholders will be held at the Company's Head Office, 4, Clive Row, in the City of Calcutta on Wednesday the 24th day of July, 1957, at 11-30 a.m. to receive and adopt the Directors' Report and audited Accounts for the year ended 31st December, 1956, and the Balance Sheet as at that date, to declare a Dividend, to elect Directors, and to appoint Auditors and to fix their remuneration. A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy in his stead and such proxy need not be a Member of the Company.

The Share Transfer books of the Company will be closed from 8th to 24th July, 1957, both days inclusive.

By Order of the Board,
(Sd.) J. D. K. BROWN,
Managing Director.

4 Clive Row,
Calcutta 17th June, 1957.

THE SENDRA COAL COMPANY LIMITED

NOTICE is hereby given to the members of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Thursday, the 4th July, 1957, at 10-50 A.M. for the following purposes:—

- To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1956, and to receive the Directors' and the Auditors' Reports thereon.
- To declare the Dividend recommended by the Directors.

SHAW WALLACE & COMPANY LIMITED

Dividend on Preference Shares.

THE Directors have declared an Interim Dividend of 3%, less Income Tax, on the Company's Preference Shares in respect of the year 1957, payable to Members whose names appear in the Preference Share Register on the 15th July 1957. Warrants will be posted on or after that date to the addresses or in accordance with the instructions, recorded in the Company's books.

The Transfer Register of the Preference Shares will be closed from the 8th to the 15th July 1957, both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY LIMITED,
D. A. HOUGHTON,
Secretary.

4 Bankshall Street,
Calcutta 19th June, 1957.

THE BENGAL PAPER MILL COMPANY, LIMITED

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday, the Fifteenth day of July, 1957, at 11 o'clock in the forenoon, to consider and, if thought fit, to pass the following resolutions, namely:—

- (As a Special Resolution)—"That the requirements of Article 124 of the Articles of Association of the Company be not complied with in respect of the half-year ended 30th June, 1956."
- (As a Special Resolution)—"That the Articles of Association of the Company be altered in the manner following:—

(a) That Articles 54 and 55 shall be deleted and the following new Article 54 substituted therefor:—

"In addition to any other meetings, general meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956, and subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Board of Directors. Such general meetings shall be styled 'Annual General Meetings' and shall be specified as such in the notices convening these meetings. All other meetings of the Company shall be styled Extraordinary General Meetings."

(b) That Article 62 shall be deleted and the following new Article 62 substituted therefor:—

"The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Board of Directors and of the Auditors, to appoint Directors in place of those retiring by rotation, to appoint Auditors and determine the manner in which they shall be remunerated, and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business."

(c) That Article 124 shall be deleted and the following new Article 124 substituted therefor:—

"At every Annual General Meeting the Board of Directors shall lay before the Company a Profit and Loss Account made up to the 31st December in the preceding year and a Balance Sheet as at that date and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 20, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company, but save as aforesaid, the Board of Directors shall not be bound to disclose greater details of the result or extent of the trading and transactions of the Company than they may deem expedient."

(d) That Article 128 shall be deleted and the following new Article 128 substituted therefor:—

"The Company at each Annual General Meeting shall appoint an Auditor or Auditors to hold office until the next Annual General Meeting and their appointment, remuneration, rights and duties shall be regulated by Sections 224 to 227 of the Companies Act, 1956."

By Order of the Board,

BALMER LAWRIE & CO., LTD.,
D. MANSON,
Secretary.

Calcutta, 15th June, 1957.

Note.—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

COAL COMPANIES

O. Po. F and Dd indicate Ordinary Preferred Ordinary Founders and Deferred shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the month of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po. and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Stock Account	Reserve & Other Funds	Acreage under Tea	Outturn and Average Price per lb realised for crop				Estimate	NAMES	Accounts closed	Managing Agents	Net Profit including taxation	Dividends per cent.
