DELAYING PAYMENT FOR IMPORTS

PROBLEMS OF ATTRACTING FOREIGN CAPITAL

THE recent reduction in the United Kingdom Bank rate might have some slight significance for India's foreign exchange position. It could, for instance, help towards the rather ambitious scheme for importing a larger proportion of this country's requirements of capital goods against medium-term credits. Much will depend on what is meant by "medium-term". It must be admitted right away that seven-year facilities will take a good deal of negotiating. But whatever the final figure agreed upon, the reduction in Britain's Bank rate will mean that India's largest supplier will now be able to grant more favourable credit facilities than it could a month ago. That is always provided it is prepared to do so. If India were to offer some reasonable guarantee of repayment, many British concerns might be attracted, although the recent examples set by certain Continental suppliers, especially the West German, have been far from promising, in spite of the lower interest rates prevailing there. The new scheme offers certain competitive opportunities for the enterprising supplier, especially to the public sector. For purchases for private industry some sort of Government-backed guarantee scheme might prove of great assistance. It is important to realise, whatever the tone of announcements from New Delhi, that there is as yet little recognisable incentive for the overseas manufacturer in the new scheme. If it is seriously intended to use this method to relieve India's foreign exchange position, then that, together with a reasonable measure of security, are the first things which should be arranged.

The same lack of any new attraction can be seen in the proposal for increased foreign participation in developing private industry, at least to the extent of the exchange required. It is true that Indian buyers will have to pay more for capital goods secured in this way, and that the overseas supplier will find some incentive and considerable scope for competition, in that. But, presumably, it has not been price which has limited foreign participation in Indian industry hitherto, so much as uncertainty about repayment or terms of co-operation. There is still much thinking to be done on this point. Government policy, whatever it might now become under the stress of present difficulties, has not always been accommodating in the past. A feeling has been allowed to develop among many would-be foreign investors that India strikes too hard a bargain considering the uncertain prospects she has to offer for the future. Whether this is true or not, it is damaging to any scheme for increasing foreign participation in either the public or the private sector. On the whole, therefore, it is difficult to see what success the Government expects from its new schemes for meeting exchange difficulties while they are in their present uncertain form. It appears, on the face of things, to be asking too much and offering too little. Whether there will be many takers is doubtful, unless this is merely a prelude to a complete change in Government policy on foreign capital. But there is no sign of this yet. At the moment, there is nothing permanent about a wave of enthusiasm caused by what it is hoped will be a temporary shortage of exchange. The Government has not been kept short of advice on this point in the past. But a change has never been more obviously necessary or urgent than it is now.

The foreign exchange position might become even worse than it is at present. Foreign capital is, therefore, the only answer and it is no use ignoring the fact that the rate of economic development will be directly related to it for as far ahead as can be safely forecast. There is nothing new in this fact; it is remarkable that it has taken so long for New Delhi to grasp it. A number of points will now have to be considered. The first is how far the Government is prepared to go to meet the new need by granting special concessions to foreign capital. The field of opportunity already appears to have been widened to include consumer-goods manufacture. This should attract many foreign concerns into an essential branch of activity which would otherwise have to rely on the internal capital market for its resources.

An important matter which now calls for consideration is the length the Government is prepared to go to improve the lot of the foreign executive living in India. A start was made some time ago by allowing technicians two years in this country free of income taxes. This has been a big help to foreign firms trying to establish themselves here. The only comment on this concession is that its duration is too short. The erection and installation of modern machinery can take longer than two years and it is often an important aid to efficiency and smooth working if the man responsible for putting the plant together can stay for a year or two and organise its operations. Under the present arrangements this is not possible; the result is that an unnecessary break in continuity may occur just at the time it is most important to avoid it. The division of foreign technicians into two distinct classes, those who are tax-free and those who reside in this country and are therefore not, has caused understandable frustration among the less fortunate. These two types may be working side by side, but on vastly different rates of remuneration. It is generally appreciated that the tax-exemption principle cannot be extended to all resident technicians without causing discontent among other foreign executives whose designations cannot always be so clearly defined, and among corresponding Indian grades. But the question arises whether the present level of personal taxation in this country is not too high to attract the resident foreigner whether he is a technician or not. There is no doubt about the answer to that question, or the

fact that by taxing foreigners at prevailing levels India is losing more than in fact she is collecting. The principle of differential taxation is not always attractive, especially to a country like this one which is wedded to socialism. But the fact has to be faced that if India wants foreign assistance, she will have to accommodate the foreign residents who go with it. At the moment, there are few attractions for such people in a country which appears, at times, to be eager to eliminate all the essential appendages of modern western-style living with the least possible delay.

The great mistake when turning to foreign capital as one solution of the present exchange difficulties would be the opinion that all will be well if there is an official pronouncement on the matter. The foreign investor is likely to be far more impressed by facts, not intentions. It has to be remembered that India has now not only to live down her own previous lukewarm attitude to capital from overseas, but also the reputation

Without Prejudice

BANK EMPLOYEE ASKS FOR
COMPENSATIONINABILITY TO PROTECT FAMILY
DURING COMMUNAL RIOTING
(FROM OUR LEGAL CORRESPONDENT)

THIS is rather an out-of-the-way case, which is worth considering both from the viewpoint of the ordinary law of the land and that of the law under the Industrial Disputes Act. Sri Charan Das Saraf was clerk-in-charge, Imperial Bank of India, Fazilka, and the family disasters for which he sought redress, and which were the subject of decision by the Labour Appellate Tribunal of India reported in December 1956, took place as long ago as August 1947. His case was that he was clerk-in-charge of the Minwali Treasury Pay Office from 1st January, 1945, till the date of its closing down due to murderous communal disturbances. Minwali was a Muslim locality and from March 1947 it was not considered advisable to live there with one's family. Accordingly, the members of the family of this employee were living in Chiniot, his native place. Charan Das himself, with considerable pluck, stuck to his post. But as the communal riots spread, Chiniot too became dangerous to live in and his wife and family had to move out and seek shelter in a refugee camp. Greatly perturbed as to their safety, the employee, according to his own account, wired several times to his parent branch for leave to go to his wife and children and protect them. No heed was paid to these requests, which, therefore, it may be deemed, were refused if they ever reached headquarters, and the clerk-in-charge was impliedly ordered to remain where he was and protect the bank's interests. Charan Das did so. But his family, consisting of his wife, son and daughter, tried to escape into India by way of Lyallpur on 27th September, 1947. On the way, they were slaughtered one and all. His elder brother was also brutally murdered.

In the words of the Appellate Tribunal later: "The contention on behalf of the workman is that all this misfortune befell him because he stuck to his duties at the behests of the bank and looked after the bank's interests at the risk of his own life and of his dear one's lives. Ultimately he, with other members of the staff, reached Sargoda and handed over all the records to the agent. The contention on behalf of the employee is that he must be compensated for his misfortunes, which he would not have sustained but for his attempting to protect the interests of the bank. The contention on behalf of the bank is that they are

not responsible in any manner for the applicant's misfortunes and that they cannot justify his claims against the bank." The lower tribunal held that the employee was not entitled to any compensation but recommended sympathetic consideration by the bank. The employee appealed.

* * * *

The above is the sort of thing which might happen again in the course of rioting to any employee, high or low, so let us briefly consider the matter according to the common law of the land, apart altogether from industrial legislation. Assume a case—and it is a violent assumption—where an employee could prove that his presence with them in their danger would have saved his wife and children in all reasonable probability. Would a suit for damages lie? More than doubtful, one thinks. The employee could have lawfully disobeyed the implied order to remain at his post and could have left it and gone to the aid of his family without subjecting himself to any punitive measures. True it may be, and probably is, that in such circumstances the employers have no duty to an employee's dependants. But they have a duty to him, and that is not to expect him to obey orders which expose him to physical danger to his person. The employee could have walked out on the ground that the order to remain was unlawful in that by obedience to it he might reasonably apprehend injury to himself or even death. There is very little English case law on the point, for the simple reason that since the Gordon Riots of 1780 there has been nothing in the way of serious communal rioting in Britain. Nevertheless, there is one authoritative decision of the Privy Council, and curiously enough it is also a banking case, so we will cite it. It was heard in London in 1930. A young gentleman was employed as a bank clerk by the Ottoman Bank in Aidin. He stuck to his post during the "Young Turks" rioting right up to the fall of the town, when he was captured, tried and sentenced to death. He managed to escape and got to Smyrna, where he reported to the bank for service.

By this time, Kemal Pasha, head of the Young Turks, was dictator in Constantinople. With incredible naïveté, the bank posted the clerk to its Constantinople branch and ordered him to proceed there. He pointed out that he was well known there and that in Constantinople he would be of little use to the bank and none at all to himself since he would be hanged within a week of his arrival. He offered to serve in any branch anywhere but not in Turkey. The bank persisted in its order, and eventually he refused to go to Constantinople. The bank thereupon dismissed him, and he sued the bank for damages for wrongful dismissal. The writer well remembers the astonishment with which he read that the bank not

only defended the suit but let it go right up to the Privy Council. The bank clerk was awarded heavy damages, their lordships holding that the bank, having branches outside Turkey, could have easily sent him to one of them, and that no employee is obliged to obey a command, compliance with which would involve him in personal danger or which he reasonably apprehends might so involve him. Not so long ago—until the year of grace 1947, some might contend—the relationship of Master and Servant implied obedience, submission and respect on the part of the servant, but return the master, by necessary implication, had the duty of protection of his servant and of his servant's interests. And it does not need any Industrial Disputes Act to enable one to realise that to send an employee to work in a public office in the capital (where he is known) of a country in which he is under sentence of death by hanging is to confound the duty of obedience to a lawful order with submission to lunatic tyranny.

* * * *

But even with the slackened standards of today, to justify disobedience to an order to "stay put" or for transfer, there must be this element of personal danger or reasonable fear of it, and not necessarily from actual violence; a raging epidemic of cholera, for example, might justify refusal to remain or to go, as the case might be. Otherwise the duty of obedience still remains at common law. A pert and determined young housemaid who flourished 116 years ago, Miss Emily Turner by name, earned the disapproval of Chief Baron Alderson but gave us the leading case on the subject which is still the law. Her mother was ill, dying in fact, or so Emily said, and asked permission to absent herself for one night to visit the said parent. Her employer, disbelieving her story, refused permission, whereupon Emily "up and went", returning the next day to report for duty as usual. Her employer summarily dismissed her for absence without leave. The wrathful "young person", as she would have been termed in those days, consulted an attorney, who consulted a barrister, and the ex-housemaid launched a suit for damages for wrongful dismissal against her former mistress in the Court of King's Bench. From where she got the £200 or so to finance the suit, or whether her attorneys were of the "on spec" Dodson and Fogg type, is not disclosed. What is disclosed is that her claim was heard by the Lord Chief Baron Alderson, who dismissed it in words which constitute the common law as at this present, his lordship holding that she had disobeyed a lawful order and that the servant's moral obligation to her mother was not sufficient to excuse her from performing her legal obligation. The general law, under which we now live, of the matter was thus laid down by the learned Baron. "The general rule is obedience. The master is the judge of the circumstances under which the servant's services are required, subject to this, that he is to give only lawful commands. Commands, otherwise lawful may yet," he said, "be properly disobeyed, where obedience would lead the servant in good faith to apprehend danger to life or person or where from an infectious disorder raging in the house the servant might properly feel bound to leave it in order to avoid infection." One has a kindly feeling, somehow, for this fearless little housemaid, Emily Turner, who wrought more than she knew, not dreaming that she was laying down the law to be administered well over a hundred years later 6,000 miles away and throughout a Commonwealth.

* * * *

So it seems that Sri Charan Das Saraf could have left Minwali on account of the reasonable fear of danger to himself when the communal disturbances spread there. No doubt he was unaware of his legal rights, but that fact would not avail him. Ignorantia legis non excusat, and everyone is presumed to know the law; a remarkable presumption since a great part of the time of Appellate Courts is occupied in demonstrating that the judges themselves do not know it. The Appellate Tribunal had no alternative but to dismiss the appeal, saying: "(C. D. Saraf) has put forward the contention once again that because he stuck to his post in the interest of the bank, his entire family was wiped out and that he is entitled to compensation. We are not prepared to accept this contention. We can only sympathise with him in his misfortune. We fail to see how there is any legal obligation on the part of the bank to pay him any compensation. . . . The Bank is not responsible for the communal disturbances or the other events that occurred. . . . Nevertheless, the Labour Appellate Tribunal of India endorsed the recommendation of the lower one that "the case of this employee may be sympathetically considered by the bank"; and, no doubt, it has been, or will be, so considered.

[Charan Das Saraf and State Bank of India L.L.J. 1956. (Dec.) Vol. II. 529.]

*Turner v Mason (1845). 14. M and W 112.

THE last ten years have seen some significant changes in newspaper ownership in India but few important journals, so far as I can recall, have gone out of business altogether. Yet that unhappy process recently seems to have been accelerating in other parts of the world, and I would not care to say what might happen in India in twenty years' time under the impact of more and more socialisation of the means of production and distribution. To live and prosper, newspapers require circulation and advertisements, and the two are interdependent. Last month, two famous newspapers, in two widely separated countries, closed their doors because their proprietors could not continue to shoulder the heavy losses they were incurring. The Glasgow Evening News, made famous under the editorship of the late Neil Munro, the Scottish novelist, ceased publication because it could no longer stand the high cost of bidding for the support of that city's 600,000 potential readers against two other evening publications. A few days previously, the Melbourne Argus had also announced its closure. This was despite the fact that it had for some time past enjoyed the support of the powerful Daily Mirror group in London which evidently decided to cut its losses and quit before the Australian property sank into further difficulties. The unfortunate thing is that the casualties always seem to occur among the more responsible and reliable organs of opinion. Mr. Francis Williams of the New Statesman and Nation writes in his column "Fleet Street Notebook" that the circulation of that journal increased by 4,400 between July and December 1956. In the same time, the readership of the Spectator dropped by only a few hundred, while the "popular" weekly journals such as Picture Post, Illustrated and John Bull all showed heavy falls. The Manchester Guardian, the Observer and the Sunday Times are increasing their readership by the month. So there is still a demand for serious journalism. The trouble is that it cannot always keep pace with increasing costs of production.

I have been asked by a number of people whether the Capital cost of living index for Europeans went up in January. On page 252 of this issue they will find their answer. It certainly did go up—with a jump—and the reason, as everybody had of course expected, was the increased price of liquor. I cannot see the planners in New Delhi being excessively worried about this. No doubt they will want to remind Calcutta's Europeans that they are lucky to get liquor at all in Prohibitionist India. That is all very well. But to some people, and they are not necessarily addicts either, liquor is what an economist would call a "conventional" necessity. And I know a few European homes in Calcutta where this sharp rise in prices is regarded with considerable anxiety. I have no consolation to offer them. Their standard and mode of living, to say nothing of their tax-paying habits, fits them admirably for the rôle of tax-gatherer's milch cow, and that is likely to be true for as long as they choose to stay in India. I remember the speech given by Sir Alexander, then "Sandy" Sim, when he was President of the Bengal Chamber in 1955-56, where he compared the number of Europeans who paid surtax with the total of assesses. I was startled, and so were many others. There are no figures to show just how much of his income a European in India does pay out in taxes, both direct and indirect; it might prove an interesting statistical exercise to compile some. But it does not take a statistician to appreciate that a European far more than a working or middle-class Indian, is being squeezed not only by rising prices and increased indirect taxes, but by the lower ceiling of direct taxation as well.

A DITCHER'S DIARY

I know a few Europeans who are living on the hope that relief may be on the way. I know more who are looking forward to the threatened reorganisation of the tax structure with considerable misgiving. They know all about the need to catch the evader, but that they will believe when they see. In the meantime, bitter experience seems to have taught them that whoever is going to suffer from higher taxation, they can generally expect to be included whether in their standard of living now, or their expectations of the one they will be able to have when they retire.

A London correspondent writes: "With due respect to the pious memory of the Calcutta Scottish, the Calcutta Light Horse was, I suppose, the corps d'élite of the several A.F.I. regiments that at one time flourished on the eastern side of India. It is right and proper, therefore, that its long life prior to its being disbanded in 1947 should have been commemorated in an official regimental history compiled by a committee of Lighthorsemen, who have been assisted in an account of the early Volunteer movement in India by the researches of Sir Patrick Cadell, a former member of the Indian Civil Service. The commemorative volume is entitled Calcutta Light Horse A.F.I. 1759-1881-1947 and has been produced for the trustees of the regimental funds by Gale & Polden Ltd., of Aldershot, printers and publishers of many regimental archives. The book is a simple and compact record of the unit, with no pretensions to literary grandeur, but in every way worthy of a famous body of horsemen. Incidentally, it provides much useful information on the beginnings of the Volunteer movement which in pre-independent India, as in Britain itself, was the forerunner of those Territorial and Auxiliary forces which played notable rôles in two world wars. From this point of view, the historian of the future will find the story of the Calcutta Light Horse of more than a little value. But, of course, the book has been written primarily for old Lighthorsemen and their friends and, as such, it is an integral piece of the city of Calcutta's own story. The regiment was the direct lineal descendant of the Calcutta Volunteer Cavalry founded in 1759, which by 1857 had become the Calcutta Volunteer Guards (Cavalry). Through successive phases the cavalry existed primarily as the mounted unit of an infantry regiment and it was not until 1889 that it was hived off from the parent body (by then known as the Calcutta Volunteer Rifle Corps) and made a separate regimental command under the name of the Calcutta Light Horse. Of the many things of interest in this regimental saga, two may be noted here: the Light Horse always elected their officers from their own ranks, which must be rare if not unique in military annals; secondly, in the two great wars of our time it was as a pool of officer material that the regiment rendered its greatest service. Out of a total strength of 374 in 1914, 286 became officers with the three regular Services; in 1939-45 the number was 383." Among the regiment's imposing array of silver and trophies (whose permanent home is yet to be decided) are two pieces presented by the late Shirley Treemearne, founder and first editor of Capital. A matter of reasonable pride to this newspaper.

While carrying out my little sortie into the history of the Calcutta Light Horse, I was reminded that perhaps the oldest surviving institution in this city is now the tank in the middle of Dalhousie Square. If there is another, then I should like

to learn about it, because it seems the tank may not be with us much longer. I have not studied the plans for relaying the tram tracks inside the Square, so I do not know whether it has been decided to fill the tank in altogether. But I suppose they will differ little in essentials from those which have already turned the Maidan south of Esplanade into a miniature dust bowl and I cannot see the tank surviving long under conditions like those. I am well aware of the traffic situation in the Square; I have occasion to regret it more than most. But if its alleviation is going to mean losing the tank and those few square yards of greenery which go with it, then I must add my voice to the remarkably few that have been raised in protest. I am sure it must be most unhygienic to have an open stretch of water in the middle of a city like this; I would not dare to count the number of rats it must harbour. But I still think it is worth a better fate than to be filled in to provide a tram track. Besides, it might be interesting to know by how many degrees it lowers the summer temperatures in this oven-like city. As I remarked about the Maidan a fortnight ago, it is a pity Calcutta is busy disposing of her open spaces just when all efforts should be concentrated on preserving them.

Motoring around some of the more expensive residential areas over the week-end, I was a little shaken to discover the merry abandon which presides over the construction of new buildings in this city. Houses arising from the edge of a pavement three feet wide, which borders a fairly busy thoroughfare scarcely having room for more than two rows of motor-cars, are by no means uncommon. Private gardens, unkempt though they were, seem to be gradually disappearing. And, worst of all, perhaps, the trees which are the source of beauty in any city—in Paris and Rome, for instance—seem to be getting fewer and fewer each year. For a long time now, I think, we have been hearing the rumour that Calcutta, like all great cities, has its building regulations. But one wonders whether they serve any purpose other than to embellish official files which lie sandwiched between mountains of dust and nests of white ants. One is charmed by the conscientiousness and the vigour with which our city fathers discuss the award of pipeline contracts, and the piety with which they offer resolutions as an antidote against epidemic diseases. But one wishes that a system could be devised whereby the demands on verbal energy could be made just so much the less exacting as to enable decisions to take practical effect, instead of merely providing the opportunity for filling municipal pigeon-holes. It is time firm and positive direction were given to such enterprising souls as care to build these days despite the threat held out by the rent control laws. To me it seems there are two main lines along which expansion should proceed. One is that in the heart of Calcutta, or what you might call Greater Calcutta, it is necessary to conserve land for parks and roadways by making taller, multi-storied buildings—in other words, going in for "vertical expansion." The second is to improve our suburban road and rail transport in order to promote the growth of "garden cities" for the more sensitive souls whose nerves get frayed by metropolitan life. The idea of an underground railway has, I feel, too long diverted attention from the possibilities of improving surface transport. But now that our foreign exchange and general financial position is such that we know we cannot afford to sink so low as a Tube, we should perhaps aim at something which is more practical even if less spectacular.

THE DITCHER.

In recent years approximately 6,00,00,000 square feet of Shalimar Tar roofing materials, made in India, from Indian materials by Indian labour, have been used by Public Authorities, Industry and individual house owners, on the roofs of their properties—The demand increases yearly. Shalimar Tar have built and are now operating the only high speed continuous machine for manufacturing roofing felt in India.

STOCK MARKETS IRREGULAR
INDUSTRIAL AND GOLD SHARES
FAIRLY WELL MAINTAINED

London, 20th February.

THE stock markets have moved irregularly and within narrow limits during the past week, generally recording little material change on balance. There has been no further response to the reduction in Bank rate which, as mentioned previously, had been largely discounted by the recent rise, but a number of factors have adversely affected sentiment. These include the uncertainty on Wall Street, the Middle East situation, the January overseas trade figures and the Opposition victory in the North Lewisham by-election. The industrial and gold share markets have been fairly well maintained on balance, but gilt-edged securities have been irregular, with sentiment affected by the £300 million Funding issue and competition from other smaller issues. There has been little or no business in the new Funding stock, which has been quoted rather nominally around the issue price of £80. Foreign bonds and rails have attracted little attention and their movements on balance have been small. Dollar stocks have fluctuated with Wall Street and have been mostly easier. The industrial market has responded to small selective buying and recorded a modest advance on balance. South African gold shares have generally been little changed on the week, although there was a small demand for Free State issues at one time. Copper shares have fallen back under the influence of Wall Street and a lower world price for the metal. Oil shares have often been firmer, particularly

THOSE WHO COMMAND DEMAND...
QUEEN ANNE**SCOTCH WHISKY**

HILL THOMSON & CO. LTD. Edinburgh ESTABLISHED 1790

Would the top blow off?

It might...if there was an acute shortage of CAF (compressed asbestos fibre) Jointing. Not only would many engineers "hit the ceiling", but there would be "blown" gaskets everywhere, with disastrous results. But thanks to the new AM & FM factory at Ghatkopar, Bombay, the chances of this happening are remote. We make this vital material in sufficient quantities to meet the entire demand of Indian Industry.

CAF Jointing is used wherever a good, strong, efficient seal is needed—sealing flanged joints in pipe-lines, making cylinder head gaskets, boiler joints, etc. This jointing holds fast and remains leak-proof against steam, water and oil at varying temperatures and pressures.

This is just one of the many unobtrusive but important parts that this versatile raw material—asbestos—plays in our daily lives. We at AM & FM make a wide range of technical asbestos products to meet the varying needs of India's industry. The increasing use of asbestos is an index to India's industrial progress.

Where There's Industry

western hemisphere issues. Rubber shares have moved within narrow limits, but are better where changed, helped by the bumper dividend announced by Linggi Plantations. Tea shares have also attracted a small and selective demand and are better where changed.

The Money Market

Apart from Friday, money was tight throughout the past week. Supplies of credit were inadequate and the market had to pay anything from 3½ per cent to 4½ per cent. On Friday, large Government disbursements brought a complete change in the situation. There was a surprise element in the week's Treasury bill tender. It had been assumed in some quarters that there would be a further downward trend in the bill rate. The result of the tender, however, was the contrary, as due to the money position during the week, the market's bids moved against the Government and the average rate was approximately ½ per cent higher at 4½ 5s 6.04d percent. Other bids, however, were more competitive and the market got only about 10 per cent of its requirements. Applications for £190 million worth of 91-day bills totalled £347,980,000, of which £170 million were allotted at an average rate of 4½ 5s 6.04d percent against 4½ 4s 8.29d percent in the previous week. This week £200 million worth of 91-day and 63-day bills are on offer.

Activity on Wall Street

The recent forward drive in long-dated U.S. Government obligations which carried prices well above the December lows has halted during the past week. Federalists started to slip gradually early in the period, but gathered momentum following the news that the Treasury had requested Congress for permission to increase interest rates on savings bonds. This action dimmed hopes for early improvement in the tight money market which had been predicted in some bond circles in recent weeks. Investment quality corporates have also weakened following early steadiness. Rails have been mixed while convertibles have fluctuated irregularly over a fairly wide range. In the foreign department, Italians have been firm, with German Nationals showing little change. Inactive Czech 6 percents of 1960 have been higher by four points on small sales, while Japanese have ruled firm, with gains of a point or more. The Union of South Africa 4½ percents have lost some of their gains.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 12th February showed gold stocks unchanged at \$22,252 million. Foreign deposits fell by \$62 million to \$304 million, while foreign investments rose by \$75 million to \$3,745 million. The Federal Reserve sold \$190 million worth of bills, \$14 million of certificates, \$25 million worth of notes and \$10 million worth of securities held under repurchase agreements. Total discounts and advances fell by \$319 million to \$520 million, while the aggregate of excess reserves of member banks fell by \$500 million to \$172 million. Daily average excess reserves of member banks rose by \$56 million to \$434 million, while their daily average borrowings rose by \$101 million to \$176 million. Business loans of the New York city banks rose by \$90 million to \$11,090 million compared with a rise of \$74 million to \$9,922 million in the corresponding week a year ago.

Vegetable Oils Inactive

Inactive conditions have prevailed in most sections of the oil and oilseeds market, with prices tending lower towards the close, being further depressed by weaker opening advices from the United States. Only a mild buying enquiry has been noticed for Straits bulk coconut oil in the region of £93½ c.i.f., while re-sellers have been disinclined to go below £94. At the same time, business has been reported from the East in actual oil at the parity of £97½ to Northern Europe. Linseed oil has been fractionally steadier in near positions, but buyers have been disinclined to follow. Most of the short-covering in Nigerian groundnut oil, it was believed, was completed, with some traders preferring to default rather than pay the high level of around £155 currently asked for oil afloat. Continental brokers, it was reported, were trading Argentine groundnut oil down to the parity of £137 c.i.f., Rotterdam, whereas first-hand selling levels hardened to the range of £139 to £141 c.i.f. Buyers and sellers of copra have stayed well apart and groundnut has been generally featureless, with most sellers prepared to consider near bids. Moderate trading has been reported in East African castorseed on North Continental account, but dealer prices have tended lower. Old crop East African sunflowerseed, it was reported, have been traded down to £47½ c.i.f., February-March shipment, but this has lacked confirmation.

Rubber Market Dull

In contrast with recent weeks, price movements were small during most of the week ended 14th February. This was largely a reflection of dull trading. Factory orders on the U.K. and Continental account were small and mostly for off grades. Traders were chary of extending their commitments pending the settlement of the nical position in Singapore. Values failed to hold an early sharp advance and at the close, were about a 1d a lb. higher on balance with, however, the tendency uncertain. The sole crepe market was not unduly burdened with supplies and traders reported some increase in the offtake. Sellers were unwilling to shade prices and 43d was still asked for 1 inch smooth No. 1 on the spot, although some holders indicated their possible acceptance of 4d a lb. less.

Stocks and Shares

PRICES FALL SHARPLY ON SECURITIES
CONTRACTS ACT ANNOUNCEMENT

TRADING RESTRICTED BY TIGHTNESS OF MONEY

Wednesday Evening.

SENTIMENT has suffered badly in the stock market since the news arrived that the Securities Contracts (Regulation) Act was to come into effect from today. Prices have dropped all round, and the rate for Indian Irons at this afternoon's settlement was Rs. 27. The extreme tightness of money is affecting the general trend, especially as resources are being husbanded for a number of large new issues. It is believed that the regulation of stock exchanges, as proposed under the Securities Contracts (Regulation) Act, might not affect the system of trading for the time being; later, of course, bye-laws will have to be amended to conform with the new legal provisions. The Budget, which reports from New Delhi reiterate will be a "lame duck" affair, is nevertheless awaited with some uncertainty.

Individual industries have had little to report that is cheering. Coals remain depressed, now that colliery owners have given more details of the effects of the Appellate Tribunal's award; a feature here has been the small business in Burrakurs after a long period during which interested support has had them in the deep freeze. Teas are fairly quiet as the auction results have not been particularly encouraging. Jutes remain neglected since the decline in fibre prices has been virtually offset by the weakness of manufactured goods. Business in Government securities has been small.

Details of the week's trading follow.

The Government securities market ruled steady, but the volume of business was on a restricted scale due to a shortage of scrip. The 3% Conversion Loan recorded a sharp improvement of nine annas to Rs. 74-4, while 3% Non-Terminable Paper was nominally quoted around Rs. 73-6. In short-dated loans, 3% 1957 was asked for up to Rs. 99-12-6 and 3% 1958 was traded at Rs. 99-9 ex-voucher. Three percent 1959-61 was initially marked back to Rs. 97-10 ex-voucher but was later quoted one anna higher, while 3½% 1961 hardened to Rs. 99-7. In medium-dated loans 3½% 1962 was on offer around Rs. 93-15 and 3% 1963-65 was unchanged at Rs. 94-3; 3% 1964 continued in demand at Rs. 94-5 without attracting sellers, and 3½% 1964 was traded around Rs. 98-5. The 3½% 1962 had sellers over at Rs. 97-13 and 3½% 1965 remained quiet at Rs. 98-3. In long-dated, 3% 1966-68 was asked for at Rs. 92-4 and 3% 1970-75 was quoted higher at Rs. 87-3; 3½% 1974 was marked at around Rs. 98-8. State Loans were quoted unchanged and business was of a retail nature.

Among miscellaneous preference shares, Calcutta Electric met with heavy selling pressure and were marked down from Rs. 9-8 to Rs. 9. Associated Hotels were quiet at Rs. 59 and Bharat Collieries were placed at the previous quotation of Rs. 51. British India Corporation were reported at Rs. 118. Elgin Mills 8% were crossed at Rs. 125-8 and Hall and Anderson were reported after a long lapse at Rs. 70. Indian Iron and Steel were crossed at Rs. 103 and Metal Box at Rs. 92. New Victoria were reported at Rs. 4-15 and Rohtas Industries at Rs. 64-4. Shaw Wallace were crossed at Rs. 67 and Tezpur Tea at Rs. 12-4. In jutes, Bally were placed at Rs. 102, Reliance at Rs. 91 and Budge Budge at Rs. 102.

In the banking section, United Commercial were easier at Rs. 56-4 while Punjab National and Hind Bank were unchanged at Rs. 55 and Rs. 36-8 respectively. Bank of Bikaner were reported at Rs. 20-4.

In railways, the only share dealt in was Dehri Rohtas at the lower rate of Rs. 12-10.

Cotton textile shares moved to lower levels in sympathy with the general trend of the market. Cawnpore Textiles were easier at Rs. 7-12, as were Dunbar at Rs. 190 and New Victoria at Rs. 1-14. Kesoram reacted from Rs. 15-5 to Rs. 14-10. Elgin Mills were unchanged at Rs. 26-4.

The difficulties being experienced by coal companies because of increased costs were reflected in the prices of coal shares, which moved to lower levels. Here is a chart showing representative price movements:

	Opening 14-2-57 Rs.	Closing 20-2-57 Rs.
Amalgamated	18 10	18 6
Bengal	462	456
Dhemo Main	6	5 10
East Indian	27	26 8
Katras Jherriah	61	60
Seebpore	28	27 12

Burrakur improved today from Rs. 21 to Rs. 21-5. Business in jute shares was on a very restricted scale and selling orders were difficult to execute. Here is a chart showing representative price movements:

	Opening 14-2-57 Rs.	Closing 20-2-57 Rs.
Anglo-India	140	136
Bally	161	158
Barnagore	105	102
Delta	143	140
Howrah	19 2	18 12
Kinnison	148	145
Megna	77	75
National	20 11	19 8

Contrary to the general trend, Gourepore were steady at Rs. 226, Northbrook at Rs. 22-1 and Reliance at Rs. 9-12.

In electrics, Calcutta met with some selling pressure and closed easier at Rs. 12-14. Other issues in this section were unchanged, with Agra at Rs. 145, Jubbulpore at Rs. 14-4, Patna at Rs. 11-12 and United Provinces at Rs. 14-7.

The only steady feature in the sugar section were Ramnugger, which were slightly better at Rs. 25-6. Carew eased to Rs. 7-3, as did Cawnpore to Rs. 18-8. Anxiety over the Kashmir issue brought a fresh wave of depression and Indian Irons were hammered down from an opening price of Rs. 28-12 to Rs. 26-14, bear-covering at the close brought a slight recovery to Rs. 27. Braithwaite eased from Rs. 28-4 to Rs. 27-15 and Burn from Rs. 330 to Rs. 325. Jessop and Richardson & Cruddas met with selling pressure, and reacted from Rs. 27-12 and Rs. 20-10 to Rs. 26-4 and Rs. 19-4.

BRITISH TEXTILE REVIEW

HOPES AND DOUBTS IN

LANCASHIRE

SOME progress is being made towards the settlement of two of the British textile industries' overseas problems, import restrictions in Australia and the export of cheap cloth from India and Hongkong. However, Sir Cuthbert Clegg's mission encountered more difficulty in Hongkong than in India; and Hongkong, as the tireless Mr. Cyril Lord, wealthy cotton-textile manufacturer, has reminded Members of Parliament, is not only a source of indigenous manufactures, but also a channel through which Japanese materials are poured duty-free into the U.K. (Dramatically distributing wallets containing money of Japan, India, and Hongkong, Mr. Lord warned M.P.s: "One day this currency may be more valuable than our own.") In spite of the uncertainties of the U.S. quota tariff, the tempo of the wool-textile industry is unabated, and it would be quickened further if all the labour wanted were available. Some firms are confident enough of the permanence of this vitality to undertake the erection of new mills—their decisions being influenced, doubtless, by the prospect of a big trade in the European market. (However, the traditional markets are not being neglected: the National Wool Textile Export Corporation has announced new plans to promote sales in South Africa, already the U.K.'s second market for wool yarn and its third market for wool cloth abroad.)

The cotton-textile industry is firmly maintaining the improvement that began last year, but with less confidence in its permanence. There is no ground for complacency in the export figures for last year (while the decline in the quantity of yarn exported was checked, the quantity of piece-goods exported was again substantially reduced, and the value of yarn and woven goods exported slipped further from £97.7 to £88.7 million, compared with £112 million in 1954); and at home it is by no means certain that the expansion of orders in recent months represents more than an adjustment of traders' stocks. The dwindling of stocks when confidence is weak is usually gradual, but when confidence returns and prices begin to rise the volume of

orders expands rapidly. However, this expansion cannot be maintained unless consumers' demand increases correspondingly, and at this end of the trade, the trends are not all favourable.

Machinery for Home and Abroad

Any illusions built up in the past months must have been dispelled by the decision of the Bradford Dyers' Association to cease production at its Paisley works—or, rather, by the manner in which this decision was announced. The Paisley branch is small in relation to this group's total capacity, but there was an ominous undertone in the company's reference to "the serious excess capacity existing in all sections of the textile industry." Not everyone in the industry would accept so broad a statement, but it would be agreed that the process of concentration had not gone far enough. The wool-textile industry can evidently look after itself, but so far as Lancashire is concerned, this seems to be an opportune time for a thorough investigation of capacity in relation to requirements. The Government has been reorganised: Mr. Peter Thorneycroft, whom cotton-textile interests found unsympathetic as President of the Board of Trade, has become Chancellor of the Exchequer, being replaced at the Board of Trade by Sir David Eccles, of whom Lancashire has little experience. The change does not seem to bode much good for Lancashire's cotton and rayon textiles, but it could at least be the occasion for a clear assessment of the position of these textiles in the national economy.

It is calculated, roughly, that the cotton-textile industry has still been working, on an average, at no more than 70 percent of capacity, even though recently trade has received and over a longer period capacity has been reduced. Production of cloth is now approximately one-quarter less, that of yarn nearly one-third less than in 1951. Even if output can be stabilised on the present basis, it will be necessary to close some more of the less-efficient units and to continue re-organisation and re-equipment of the remainder. The machinery-making firms of Lancashire and Yorkshire should receive steady orders from their customers at home if these customers are to strengthen their power to compete. But the machinery-makers will look abroad for any appreciable expansion of trade. The value of shipments last year did not regain the peak of £50.4 million reached in 1950, but it advanced somewhat compared with 1955, from £43.3 million to 45 million. India, a strong competitor in textiles, was the principal customer

for machinery; Russia, concerned with domestic requirements, was second; even the U.S.A. was a substantial importer of British textile machinery. It should be mentioned, however, that textile machinery firms are increasingly interesting themselves in other activities—even nuclear engineering.

Rayon in the Cotton Mills

Lancashire is now using about 30 percent of man-made fibres (still mainly rayon) to 70 percent of cotton. The cotton mills are now taking considerably more than half of total deliveries of man-made staple fibre, whereas their proportion was still appreciably less than half in 1955; and they are also major consumers of continuous-filament yarns. That output of man-made fibres achieved a new record in 1956—482.6 million lbs, 2 percent more than in 1955—is attributable to the increase in proportions of these fibres used in both the cotton and the wool-textile industries. An increase in prices of filament viscose and acetate yarns in January, so far from disturbing this trend, served as a reminder of the remarkable stability of rayon prices. Those yarns had remained at steady prices since 1951; and even now viscose fibre, and the heavy-denier high-tenacity viscose yarns used for industrial purposes, are unaltered. Technical advances are likewise stimulating the use of man-made fibres. At a conference last month organised by the Leek and Macclesfield section of the Textile Institute, the potentialities of bulked and stretched yarns were particularly stressed. It was argued that more advanced machinery ought to be evolved, and it was pointed out that in applying the new techniques, the manufacturers and finishers of fabrics were lagging behind the processors of yarns. But Mr. W. T. Winterbottom, president of the Textile Institute, said of the development of bulked yarns: "It opens the doors of our industry wide to the scientists and will lead to the novel position... where scientists will be in charge of the mills." The textile industry could stop worrying about surplus capacity, he said, if it would keep abreast of the latest developments.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced by 0.4 percent to 427.3 during the week ended 2nd February, 1957, compared with 425.8 (revised) for the earlier week. The index was also higher by 2.3 percent and 13.3 percent respectively when compared with the corresponding week of the previous month and that of last year. The index for Food Articles went up further by 1.8 percent to 407.0 as a result of an increase in the prices of gram (+4%), rice (+3%), wheat, dal, arhar, tea for internal consumption and coffee (+2% each) and bajra (+1%). The price of tea for export fell by 3 percent. The index for Industrial Raw Materials declined by 1.3 percent to 527.0 due to a fall in the prices of manganese ore (average export price) (—18%), linseed, castorseed and lac (—6% each), copra (—4%), rapeseed (—2%) and raw cotton, raw jute and groundnuts (—1% each), although prices of cottonseed (+4%), mica (+3%) and gingellyseed (+2%) were marked up. Prices of linseed oil (—3%), coconut oil, gingelly oil and copper (—2% each) and groundnut oil, cotton yarn and gingelly cake (—1% each) were marked down while those of groundnut cake (+6%), copra cake (+5%) and timber (+4%) moved up and the index for Semi-Manufactures stood at 412.9, compared with 413.1 in the earlier week. The index for Manufactures worked out to 386.9, compared with 386.6 (revised) for the previous week; the price of foreign liquors advanced by 16 percent. Prices of black pepper and betelnuts (+1% each) moved up while cashewnuts (—2%) witnessed a fall and the index for the Miscellaneous group stood at 588.9, compared with 588.6 (revised) for the earlier week.

New Delhi

PROGRESS OF ROURKELA STEEL PROJECT

POSSIBILITY OF PRODUCTION STARTING BY END OF NEXT YEAR

(FROM OUR NEW DELHI CORRESPONDENT)

THERE is a possibility that the Rourkela steel plant will go into production by the end of 1958. On behalf of the Government of India, Indian-Gemeinschaft Krupp-Demag GmbH., a concern specially set up for this purpose, undertook the work of planning the location, lay-out, production basis (raw materials, energy supply, etcetera) and the production schedule of this plant. It also undertook to plan a new township providing housing accommodation for approximately 100,000 people, employees of the iron and steel works, and their families. In August, 1953, the Government of India formed Hindustan Steel Private Limited, as the owner and the managing body of the Rourkela steel works.

The new iron and steel plant will have an initial capacity of one million tons a year of steel ingots and approximately 720,000 to 750,000 tons a year of rolled products. The works will consist of three blast furnaces integrated with a coke-oven plant, a power plant, a steel-melting shop with four open-hearth furnaces (capacity 80 tons each), three oxygen-blowing converters (capacity 40 tons each), and a foundry. The steel produced will be processed by a continuous hot strip mill, a plate mill and a cold rolling mill, the hot strip mill being so designed that its production can later be increased to 1 million tons of rolled steel a year. Provision has also been made for the installation of a tinning line with an annual capacity of 50,000 tons a year.

The total plant and equipment ordered from the German suppliers is valued at approximately DM 850 million, while the total cost of erection, excluding pay and allowances for the erection personnel, amounts to roughly DM 160 million. To this is to be added the cost of auxiliary and civil engineering works by Indian contractors. In addition to the Indian labour, approximately 1,500 to 2,000 German engineers and erection personnel are employed in the construction of the works.

Participating German Firms

Some 22 German firms are taking part in the building of the Rourkela iron and steel plant, the major orders being shared by the following: Coke ovens, Dr. C. Otto and Comp. GmbH., Bochum; by-product plant, Heinrich Koppers GmbH., Essen; blast furnaces, Gutehoffnungshütte Sterkrade AG., Oberhausen-Sterkrade; gas cleaning plant, Lurgi Apparatebau-GmbH., Frankfurt/Main; power plant, Siemens-Schuckert-Werke AG., Erlangen; steel-melting shop, Arbeitsgemeinschaft Krupp-Voest Eisen-und Stahlwerke AG., Linz/Donau; blooming and slabbing mill, Sack. Maschinenfabrik GmbH., Düsseldorf; continuous hot strip mill, Demag AG., Duisburg; plate mill, Fried. Krupp, Essen; hot-dip tinning line, Demag AG., Duisburg; complete pressure water system for hot and cold rolling mills, Demag AG., Duisburg; cold rolling mill, Siemens, Siemens-Maschinenbau GmbH., Dahlenburg; and finishing equipment for rolling mills, Scholomann AG., Düsseldorf. Furnaces: (a) soaking pit furnaces, Westfalen GmbH., Wiesbaden; (b) pusher-type furnaces, Ofu, Ofenbau-Union GmbH., Düsseldorf; (c) roller hearth furnaces, Ofag, Ofenbau-AG., Düsseldorf; and (d) annealing furnaces, Matthias Ludwig, Industrie-ofenbau, Essen; gas, steam and water lines will come from Mannesmann-Seiffert Rohrbau GmbH., Düsseldorf.

All cranes will be furnished by Messrs Demag AG., Duisburg, Messrs Kampnagel AG., Hamburg, and Messrs Krupp-Ardelt GmbH., Wilhelmshaven. The electrical equipment will be supplied by Messrs AEG Berlin, BBC Mannheim, and SSW Erlangen. All structural steel work for the rolling mills will be supplied by a group of German structural fabricating firms. Civil engineering will be carried out under the supervision of a combine of German contractors, and the water supply and distribution system will be planned and supplied by another group of German firms.

Work on Bhilai Steel Project

The progress of the Bhilai steel plant is described by the Russians in the following words: "It is not by chance that Bhilai was chosen as the location of the plant. Iron ore will come from deposits only 100 kilometres away, and manganese ore from the Balaghat and Bhandara deposits. At the outset, the enterprise will consume some 2 million tons of iron ore and more than 30,000 tons of manganese ore. It is also intended to get the necessary limestone and dolomite from sources near the plant. The main source of coking coal for the enterprise is to be the Jharia and Bokaro deposits in Bihar. An additional source will be the nearby Korba deposits in the State of Madhya Pradesh, which will also supply the plant with producing coal. The enterprise will consume 1,782,000 tons of coking coal a year.

"The iron and steel works at Bhilai will have the following departments and shops: coke and by-product, agglomeration, blast furnace, open-

hearth furnace, rolling-mill, repair and auxiliary. The coke and by-product department will consist of three coke oven aggregates with 65 ovens in each. In the blast-furnace department there are to be three furnaces, each having a useful capacity of 1,033 cubic metres each. Six 250-ton furnaces will be installed in the open-hearth department. The equipment for the rolling mill department will include a blooming mill, soaking pits, a rail and structural mill, a continuous billet mill and a No. 350 bar mill. The enterprise will have its own heat-and-power plant and steam-blowing station, and there will be administrative, educational and utility service premises.

Size of Construction Job

"The construction job will involve a large volume of work: the excavation of 4,500,000 cubic metres of earth, the laying of 100,000 cubic metres of bricks, the building of 103 kilometres of railway spurs, the erection of 555,000 cubic metres of reinforced concrete and concrete structural units, the assembly of 100,000 tons of structural steel, etcetera. But before work could begin on the construction site, it had to be made ready: the Tandula Canal that cut across it had to be diverted; and electricity and water supplied. Last autumn the diversion of the canal was completed; a 25 kilometre high-voltage transmission line was built from the city of Raipur, and an electric sub-station was put up on the construction site. By the end of the year, construction of the premises for a 6,000 kW diesel-electric station had been completed; and a water-main for technical purposes had been laid from the Sonat river and another for drinking purposes from the city of Raipur. The diesel generators are now being assembled.

"To house the Indian and Soviet experts engaged on the job, a hotel and cottages have been put up in the neighbourhood of the construction site. Work has begun on the dwellings of the future city where the iron and steel workers are to live. A large number of qualified engineers, technicians and workers will be needed to run the plant in Bhilai. By agreement, training of personnel is proceeding along two lines: at iron and steel works in India and the U.S.S.R. At the Indian enterprises, Soviet specialists are acting as consultants for Indian engineers and technicians in line with a specially drawn up programme. In the period from 1956 to 1958, 189 Indian engineers and technicians and 497 workers will receive practical training at Soviet iron and steel works.

Designs for the Plant

"Some 12 Soviet designing institutes, with the State Institute for Designing Iron and Steel Works at the head, had a hand in drawing up the project for the iron and steel works in Bhilai. To make management more operative, the construction job itself has been sub-divided into seven building sectors: coke and by-product department, blast-furnace department, open-hearth department, rolling-mill department, auxiliary shops, heat and power plant, and steam blowing station. Each building sector is headed by an Indian engineer with a Soviet specialist acting as chief engineer. All general questions concerned with contractors fall within the competence of the Indian head, while the chief engineer decides all technical questions and questions concerning the organisation of labour, quality of work and building schedules.

"Other functionaries on the building boards are chief experts, with the posts filled by Soviet engineers. There are six such chief experts concerned with the organisation of work, assembly of electrical equipment, metal construction, technological equipment, underground wiring and piping, and highways and railways. The chief experts are responsible for quality of work and building schedules; they decide technical questions and make recommendations. The plant is to be put into operation in two stages. First to start producing in 1958 will be two coke oven aggregates, two blast furnaces, two open-hearth furnaces, the rolling mill, the heat and power plant, the steam blowing station, and all the auxiliary shops. The rest of the equipment—a coke-oven aggregate, a blast-furnace, four open-hearth furnaces, the rail and structural mill, the continuous billet mill—the No. 350 bar mill, and the agglomeration factory—will be ready to produce in 1959.

Climate-testing of Machinery

"Some 100,000 tons of structural metal will be required for the construction job, 60,000 tons of which are to be manufactured by the Soviet Union. The chief Soviet supplier is the Dniepropetrovsk Works. Various Soviet machine-building enterprises are to produce more than 110,000 tons of technological equipment. They include, among others, the Urals Heavy Machinery Works, the Irkutsk Heavy Machinery Works, the Dniepropetrovsk Metallurgical Equipment Works, and the Leningrad and Sverdlovsk plants. Many enterprises

of the U.S.S.R. Ministry of the Electrical Industry are supplying motors and cables. In view of the fact that the equipment being despatched to India must be suitable for service under tropical climatic conditions, special artificial climate laboratories for testing models of the machines have been set up at a number of Soviet enterprises manufacturing them."

East German Credit Offer

The East German Government has told the Government of India that some of its leading industrial and financial organisations are prepared to supply capital goods on the terms outlined by the latter. These terms are that a maximum of 20 percent will be paid cash down, and the balance will be repayable in not less than seven years after the arrival of the machinery in India. They apply to the private as well as the public sector, even in the case of projects which have been accepted in principle, but for which substantial plant and machinery orders have not yet been placed. The acceptance of such projects, therefore, will remain only "in principle," unless long-term credit on the lines indicated is available or the foreign exchange position improves. East Germany, it appears, has financial organisations which are prepared to supply capital goods on the approved terms to private individuals and to the Government. In the case of the private sector, the Indian Government will offer no commitment or guarantee beyond releasing the foreign exchange needed to repay the loan. The Secretary to the Heavy Industries Ministry, Mr. L. K. Jha, recently sent a circular letter to commercial bodies outlining the conditions for the import of capital goods under the new development programme. A similar letter has been sent to Central Ministries and State Governments, thereby placing new development programmes on an equal footing in both sectors.

West German Trade Mission

A West German trade delegation, headed by Dr. Warner von Bergen of the German Foreign Office, will arrive here early next month. It will discuss double taxation and flag discrimination problems. It might also discuss the supply of capital goods on a long-term credit basis.

COST OF LIVING INDEX NUMBER FOR EUROPEANS IN CALCUTTA

(Base: August, 1939)

THE Cost of Living Indices for Europeans, by groups, have been brought up to January, 1957. As compared with December, the January Index for Food and Drink indicates a rise of 18 points, while the indices for Clothing, Fuel and

Lighting, Miscellaneous and Rent remain unchanged at 397, 180, 254 and 131 points, respectively.

Correlating all the factors, the Cost of Living Index for Europeans in Calcutta shows that the cost of living advanced by 4 points during January, 1957.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to January, 1957. As compared with December, the January Indices for Food and Clothing show drops of 5 points and 3 points, while those for Fuel and

Lighting, and Miscellaneous remain unchanged at 268 and 283 points, respectively.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living declined by 3 points during January, 1957.

CHANCELLOR OUTLINES AIMS
OF ECONOMIC POLICYMEASURES TO INCREASE
INVESTMENT

(FROM OUR LONDON CORRESPONDENT)

THE Chancellor of the Exchequer provided his first summing up of the Government's economic policy for the present year in the course of an address to the National Production Advisory Council on Industry, a body covering practically all sections of the community concerned with trade and industry. He outlined four prior conditions for the raising of the country's standard of living, namely, enlargement and modernisation of our productive capacity by adequate investment by cutting down personal expenditure on consumer goods and on Government spending; the maintenance of competitive costs by seeing that incomes did not rise more quickly than output; the building up of overseas markets; and higher productivity in the factories. Last year, the country had done well as far as the first and third of these conditions were concerned, but had done badly on the second and fourth. This year extra efforts were necessary to set things right. There was no particular reaction to Mr. Thorneycroft's sober review of the situation and the outlook, but then his pleas for the building up of a satisfactory balance of payments position and the replenishment of the gold and dollar reserves are all too obvious essentials if further crises are to be surmounted. The meeting was given up to a comprehensive review of the industrial situation as a whole, and most of the reports considered were reasonably confident ones. Indeed Mr. Thorneycroft's was perhaps the least optimistic.

In some ways, figures which have been released subsequently help to justify the confidence which the various departmental Ministers displayed. The petrol and fuel oil outlook appears to be less serious than was expected a short while ago, and though there is no immediate possibility of rationing being lifted, at least the fears of even greater cuts may be discounted. Productivity in the coal mines so far this year has shown a most welcome increase, output being no less than 738,000 tons up on the same period of last year. The miners are responding so well that the National Coal Board has just announced its willingness to revise its earlier refusal to consider the men's request about the bonus shift payment and is prepared to grant this in return for help in recruitment of extra labour and the employment of Hungarians in the pits. Steel production also continues to grow, and following upon the recent levelling off in production in the steel-using industries, or rather in some of them, stocks have increased substantially and imports are being kept down to reasonable levels. On the other hand, about employment there may be a certain amount of anxiety, particularly in labour circles. The latest statistics disclose that unemployment last month showed an increase of 85,700 and the proportion of unemployed workers to the total working population was 1.8 percent, against 1.4 percent in December and 1.2 percent in January of last year. The total number of unemployed at 382,600, of whom 342,500 had no work at all, was larger than the number of notified vacancies. If this induces a more realistic attitude on the part of labour to wage claims and unofficial strikes, as it well might, it may not prove as disastrous as some may think.

Views of Mr. Cobbold

The economic debate in the House of Commons the other day was disappointing. The Chancellor of the Exchequer was in Paris dealing with the European free trade plan, and in his absence neither Mr. Birch nor Mr. Ian Macleod, who spoke for the Government, did much more than cover old ground. It must be admitted, of course, that they were not really called upon to do any more by the arguments of the Opposition. Departing from tradition, Mr. Cameron Cobbold, Governor of the Bank of England, contributed a speech which was read for him at the Coventry Chamber of Commerce in which he took the unusual step of explaining the recent cut in Bank rate. He confirmed that the reduction is a technical adjustment to market con-

ditions, with no implications of any change of basic policy, and indeed was originally considered last October. As far as the future is concerned, Mr. Cobbold mentioned two legitimate expectations: (1) to see policies formed which will keep expenditure within our means over the next few years; and (2) to see a first dividend from such policies in the coming financial year.

January Trade Figures

The full effects of the closing of the Suez Canal on Britain's overseas trade is made evident in the provisional figures for January, for the slowing down of imports in November and December is now disclosed as being due to diversion via the Cape route rather than to a fall in consumption. Imports, at £376.2 million in January, reached a post-war record. The highest previous import figure was £368 million, in August, 1951. With exports at £261 million and re-exports at £11.7 million, Britain's trade gap, as measured by the excess of imports over exports and re-exports, widened last month to £103.6 million. This is the highest figure since July, 1955. Last month's deficit compares with an average trade gap of £32.2 million in the last quarter of 1956. In December, the gap was £42.9 million. Imports in January were 9 percent more than in January, 1956, and 16 percent up on the monthly average for the last quarter of 1956. Last month's exports, at £261 million, were 1 percent more than in January last year but 7 percent below the monthly average for the last quarter. They were £7.3 million higher than in December. Shipments to the vital dollar markets were fairly satisfactory. At £34 million, they were £3.1 million up on December, but included a further instalment of £2.1 million silver bullion repayment to the United States. Excluding this special item, exports to North America, normally lower at this season, were 10 percent below the monthly average for the last quarter of 1956, but 22 percent higher than in January last year.

First Funding Operation

The Government's decision to launch a £300 million loan as the first move in its funding operations took the market by surprise. A move along these lines had long been expected, but not perhaps quite so soon. It represents an addition to the £143 million 3½ percent Funding Stock, 1959-2004, and the issue price was £30 to offer a flat yield of £4 7s 6d and a gross return to the final redemption of £4 11s percent. This is closely related to current market conditions and was aimed to appeal to insurance companies, pension funds and similar institutional investors, to whom it offers the attractions of a good rate over a long period. Lists were opened and closed last Thursday and it was oversubscribed, with up to £1 million receiving full allotment and over that 91 percent. It is obvious that the main object of this particular piece of funding was to replenish the authorities' heavily-depleted supplies of long-dated stock for subsequent re-sale through the tap to the market, and that the bulk was taken up by public departments. The official aim, following the Bank rate cut, is obviously to prevent a fall in long-term interest rates at this juncture. For this purpose, fresh supplies of ammunition are needed. Looking ahead, the authorities are doubtless hoping that events will develop in such a way as to permit a further but gradual easing of short-term rates, which would pave the way for an economical operation to deal with loan maturities before June. Meantime, the normal influences of the tax-gathering season are already having a perceptible effect in reducing the banks' liquidity ratios.

Report of Textile Mission

At a meeting of the Cotton Board Standing Consultative Committee on 8th February, the delegation which recently visited India and Hongkong under the leadership of Sir Cuthbert Clegg reported on its mission, which began on 9th January and ended with its return to this country on 3rd February. While in India, it had discussions in Bombay, Ahmedabad and Delhi. It left for Hongkong on 23rd January and stayed there almost a week, having talks with representatives of all the trading interests involved before returning to Bombay on 30th January for some final conversations there. In India, the delegation was able to carry through its discussions against a background of friendly

contacts with the leading members of the Indian industry extending over a long period. This was most helpful in establishing a better comprehension by each side of the views of the other. The Indian representatives finally expressed their willingness to accept the possibility of a ceiling for a period of three years upon their exports to the U.K., subject to the conclusion of satisfactory arrangements. There was no similar history of previous contacts with the industry in Hongkong for the reason that developments there are of such recent growth. Nevertheless, the delegation was received in the most hospitable and friendly manner, and though the two sides did not arrive at any understanding in their discussions, they hope that after the industry's representatives there have had time to give further consideration within their own bodies to the subject matter of the discussions, further exchanges and communications may lead to a favourable conclusion.

The delegation's report to the Standing Consultative Committee, therefore, was, in brief, to the effect that while it could not at this stage claim a final solution of the whole problem, it believed that very considerable progress had been made. The Consultative Committee, after a full discussion of the report, endorsed the belief of the services it had rendered to the industry. The Consultative Committee also agreed with the delegation that, as Pakistan was another Commonwealth country with a legitimate interest in these matters, it would be well to offer to make a personal visit there in the near future and bring all those concerned in that country into the present series of discussions. The Committee approved arrangements for detailed study to be undertaken at the Cotton Board of a number of practical issues which arise out of the work of the delegation. The President of the Board of Trade, Sir David Eccles, is to be asked to receive Sir Cuthbert Clegg and his colleagues so that they may report to him as they did to Mr. Thorneycroft before their departure. In view of the further activities which are considered necessary, the Consultative Committee does not propose to report in detail to the trade associations which have already agreed that the Committee should have authority to act for the industry in the matter. Similarly, there will be no more detailed public report by the delegation for the time being.

Value of Wholesale Stocks

Last August, Mr. Macmillan described stocks and capital expenditure as two of the most volatile elements in the company. He announced the Government's intention of trying to secure more accurate and up-to-date statistics to help in the planning of economic policy. Quarterly figures of capital expenditure were made available recently as part of the programme. The Board of Trade is now going a stage further and will invite about 1,200 companies trading wholesale to provide quarterly figures of the value of their stocks and capital expenditure. It is estimated the total value of the stocks in question will be about £1,000 million. It is emphasised that the information will be given voluntarily, and will be "treated in the strictest confidence." Government departments have information about the stocks of certain key commodities, but have at present no adequate information about changes in wholesale stock, which are nearly three-quarters of the total. The 1,200 companies now to be approached are thought to hold nearly half the total value of stocks in the wholesale trades covered by the enquiry.

Outlook for Jute Industries

In a brief statement with the annual report, Mr. W. G. N. Walker, Chairman of Jute Industries, says the company's productive capacity is being fully taken up and orders in hand are satisfactory. In some sections, however, profit margins are lower than at this time last year. On the sharp rise in raw jute prices which occurred after the close of the financial year on 30th September, Mr. Walker says that it is too early to predict how the current year's results will be affected. Stock profits were almost always exceeded by subsequent stock losses. In the group balance-sheet, stocks, which are valued at or under cost, are up from £2,385,352 to £2,638,036. The chairman will make a general statement at the annual meeting on 4th March.

Brevities

The official "cost-of-living" index (taking the price level on 17th January, 1956, as 100) was 104 on 15th January compared with 103 on 11th December. This figure is the highest since the new system of calculation was introduced. More precisely, the rise was from 103.4 to 104.4.

War risk rates for cargoes to China, Formosa and Korea have been halved by Lloyd's and other London marine underwriters. For South China ports, the rate goes down from 2s 6d to 1s 6d a ton. For North China, the rate is cut from 4s to 2s. The rate for Korea and Formosa was reduced from 2s to 1s.

Of the money invested in premium bonds since the scheme started in November, £120,000 has since been withdrawn, leaving more than £58 million still invested.

Discussions are taking place to eliminate differences in the requirements for British and U.S. airworthiness certificates. The exchange of aircraft between the two countries and the use of British engines in American aircraft have shown the need for simplifying existing requirements.

Imperial Chemical Industries is reducing the price of its wrought titanium and titanium alloy products by about 10 percent. This has been made possible by the expanding use of titanium in the aircraft industry, increasing efficiency, and the continuing decline in the price of I.C.I. raw titanium metal.

Bombay

RISE IN COTTON PRICES
CONTINUESE. I. C. A. IMPOSES STIFFER
MARGINS

(FROM OUR BOMBAY CORRESPONDENT)

THE cotton market continues to boom, with prices touching new high levels on fresh mill and speculative support. In accordance with a directive from the Forward Markets Commission, the East India Cotton Association has introduced a more stringent system of margins. A sliding scale will be operated and a deposit of Rs. 25 a bale will be collected if the Jarilla contract moves above Rs. 700 a candy and Vijay above Rs. 850 a candy. This will be increased to Rs. 35 a bale in case the two contracts touch Rs. 725 and Rs. 875 a candy respectively. The object, of course, is to arrest the upward trend, but the measure seems to have failed to serve its purpose. The futures market has risen. Jarilla has advanced to Rs. 695 and Vijay to Rs. 825 a candy. Normally, the new system of margins might have had some effect, but reports of unfavourable weather in the Vijay-growing areas and the expectation of a special export quota for China have helped to counter what was intended as a restraining factor. As it happens, the damage to the Kalyan, Surti and Vijay crop is now believed to be negligible and the 50,000-bale export quota of 25/32 inch cottons to China has not been announced. But the market continues to reflect an optimistic mood. The spot market is also bright, with most cottons now near the ceiling rates. This is somewhat surprising, considering that the mills and the trade both complain of accumulating stocks of cloth. Crop estimates have not been revised downward, while the production of cloth continues to run at a high level. The consumption of cotton during the four months ended last December amounted to 1,726,268 bales, of which 1,525,011 bales were domestic cotton. This compares with 1,704,448 bales and 1,518,895 bales, respectively, in the corresponding period of last season. The fact that the textile industry is maintaining its purchases at high levels despite the prolonged dullness of the cloth market suggests that it is expecting a revival.

Cloth Excise Duties

Demand hardly seems to have picked up and the general feeling is that the Government will revise its policy on excise duties in the near future. Last week, there was increased demand for superfine dhoties and poplins. Coarse and medium counts also attracted some attention. Delhi, Calcutta and Kanpur have been the major centres to show interest, while enquiries from the south have been limited. It appears that stocks at consuming centres are inadequate and dealers here expect fresh orders within the next few days. The Bombay market is well stocked and if new business is placed, it will not mean that the mills will be able to reduce their holdings. Despite expectations of business, prices of almost all varieties remain unchanged. There has been some activity in the export market. Britain has purchased grey cloth. The Sudan has shown some interest and East Africa has also accounted for a fair volume of business. It seems that Hongkong and Burma will also place fresh orders. The trade believes that export prospects will improve. A little over 35 million yards were passed for shipment in Bombay during the first fortnight of this month. The all-India export figure for January was 96 million yards, of which Bombay accounted for 90 million yards. This is better than the figures for previous months.

The yarn market remains inactive and the undertone is easy. This is mainly because of a stringency in the money market. Dealers and consumers have bought only for their immediate needs. Art silk yarn prices have declined despite a shortage of stocks. The market has moved irregularly, with staple fibre yarns particularly quiet. There have been some scattered enquiries for Indian cotton yarns, particularly from upcountry markets for coarse and medium counts, but the prices offered are considered too low in relation to the level of raw cotton. In rayon, 150 April tenderable qualities opened at Rs. 656 for April delivery but began to decline because of a lack of buying interest. The offtake of rayon cloth continues to be poor. Snia dull 120 for February delivery opened at Rs. 793 but dropped to Rs. 775 a case. Staple fibre yarns 2/40s opened at Rs. 652 for February delivery but dropped to Rs. 643 before closing at Rs. 644. April delivery was quoted at a premium of Rs. 7, but the outlook is unpromising.

Castor Futures Erratic

Castor futures have been somewhat erratic, mainly because of reports that the recent cold wave had damaged the crop. But the damage is not as serious as was thought, so prices dropped to quotation improved to Rs. 156-4. There has been a marked decline in arrivals at the recent lower levels. But as export houses have still to cover their contracted quantities, a sizeable recovery could occur. The position is somewhat complicated by the fact that American importers expect a further decline in the price of Indian castor oil, and are therefore holding off their purchases. It is true that the United States can buy from Latin America too, but it is doubtful whether adequate quantities will be available from there.

Uttar Pradesh

FEWER CANDIDATES FOR
U.P. ELECTIONSPROSPECTS OF CONGRESS
VICTORY

(FROM OUR LUCKNOW CORRESPONDENT)

UTTAR PRADESH, which has the largest electorate of any State, will go to the polls between 24th February and 8th March. As against 2,602 candidates who last time contested the elections to 430 seats in the State Legislative Assembly, the number this time is only 1,739. For 86 seats in the Lok Sabha there are now 323 candidates in the field. The Congress is the only party which is contesting all the Assembly and Lok Sabha seats. The pattern of distribution of the Opposition candidates shows that while the leftists are concentrating on the poorer districts of eastern U.P., the Jan Sangh is devoting its attention to the comparatively more prosperous districts of the west. Judging by the nomination figure of 256, the P.S.P. is making a bid for retaining its present position as the principal parliamentary opposition. The Socialist Party of Dr. Ram Manohar Lohia has set up 135 candidates for the Assembly and 17 for the Lok Sabha.

Training in the technique of sealing ballot boxes is being given to polling officials and arrangements for setting up 39,150 polling booths are being finalised. There has not been any organised insurrection on the part of disappointed ticket-seekers against the Congress, but the danger of sabotage from within is not ruled out. The Congress takes its stand on its past achievements whereas the Opposition directs its attack towards the Congress failure to fix ceilings on land, to introduce co-operative farming and to reduce the incidence of the sales tax. The Jan Sangh goes so far as to call for the total abolition of the sales tax. Out of 430 seats the Congress secured 390 seats in the first general elections, and no one doubts that the party will again be returned to power, perhaps with a slightly reduced majority.

Nationalised Road Transport

The State Government's expansion programme for nationalised road transport is now expected to go ahead without further hitch, following the High Court ruling in favour of the relevant legislation. Before the current financial year is out, 15 more routes are expected to be taken over by the State, bringing the total to 352. It may be recalled that the first five year plan had envisaged a mileage of 6,500 for passenger transport services run by the State. Actually the Government could achieve a total mileage of only 6,000 miles at the end of the first plan. The second plan has not fixed

any target for road transport, but a sum of Rs. 8,550,000 has been earmarked for the purpose. While the roadways have been a commercially profitable proposition for the State Government, the problem of offering alternative routes to the displaced operators admits of no easy solution. The operators in this State are drawn from the middle classes. According to reports, they may move the Supreme Court for a stay order.

Drop in Small Savings

Mr. K. S. Malhotra, National Savings Commissioner, who paid a visit to Lucknow early last week, said that collections in U.P. this year had been poor. The target for U.P. is Rs. 16 crores every year during the second plan period. According to Mr. Malhotra, the withdrawals from the savings banks had been very heavy but he could not give the reason. He admitted that rising prices could have had an adverse effect on savings. The results of a national sample survey showed that the offtake of precious metals like gold and silver in the rural areas was much less now than before. This, he said, showed that the money was being invested in national savings. Referring to the State Government's plea for a revision of the formula for assessing the share in the collections of respective States, Mr. Malhotra said that it could not be done this year in any case. The targets fixed for U.P. in the first plan period were on an *ad hoc* basis and many other States had been complaining that they were on the low side compared with the targets they themselves were expected to attain.

Birth Rate among Low Earners

According to a survey conducted by the Department of Anthropology, Lucknow University, on the problems of fertility and family planning in Kanpur, the birth rate is high among women belonging to families with an income of less than Rs. 50 a month. Fertility declines sharply in the next group of women with incomes ranging between Rs. 50 to Rs. 100, and then gradually increases again with rising incomes. The enquiry, which was financed by the Research Programmes Committee of the Planning Commission, revealed that an average woman gave birth to 6.66 children in the course of her maternal life. The survey also brings out a staggering rate of infant mortality. For every 1,000 children born, 249 die before their first birthday. Contrary to the common belief that Indian women, particularly among the poorer classes, had an attitude of resignation towards child birth, the survey states that a large number of them have a desire, however, vague, to limit the size of their families. Fifty percent of the 1,500 women covered expressed themselves positively in favour of family limitation, 33 percent did not want it, while 17 percent were not in a position to offer any definite reply.

ADMINISTRATION REPORT OF
CALCUTTA PORTBETTER WORKING RESULTS
IN 1955-56

THE total income for the financial year 1955-56 amounted to Rs. 9,96,93,011 against the revised estimate of Rs. 9,55,73,526, showing an excess of Rs. 41,19,485. The excess was mainly due to the additional traffic of 320,735 tons handled over the revised estimated figure and the changed pattern of trade which passed through the Port during the year. The various income heads which contributed to the excess were: Income from goods Rs. 30,44,780; income from vessels Rs. 3,48,723; income from land and buildings Rs. 85,326; income from railways Rs. 1,30,060; miscellaneous income Rs. 17,357; sale of unserviceable material Rs. 3,58,582; interest earned on deposits and investment of cash surpluses Rs. 1,51,797; special credits Rs. 3,148.

The total expenditure during the year amounted to Rs. 9,34,41,109 against the revised estimate of Rs. 9,21,02,050, showing an excess of Rs. 13,39,059.

The result of the year's working was better than what was originally anticipated. The estimated surplus according to the revised estimates was Rs. 34,71,476, but the year actually ended after providing for minor works chargeable to revenue with a surplus of Rs. 62,51,902 as follows: total income Rs. 9,96,93,011; total expenditure Rs. 9,34,41,109; surplus Rs. 62,51,902. This was due to the increase of 320,735 tons in the total traffic handled and the change in the pattern of trade passing through the Port. It is proposed to appropriate Rs. 42.5 lakhs of the surplus to the Revenue Reserve Fund, the resources of which have been depleted during the previous years in meeting revenue deficits and Rs. 20 lakhs to the Vessels Replacement Fund as the amount available in that Fund is below the net risk figure.

Revenue Reserve and other Funds

The balance in the Revenue Reserve Fund on 31st March, 1956, after transferring Rs. 42.5 lakhs out of the revenue surplus to that Fund, amounted to Rs. 4.24 crores. The Fire Insurance Fund had a closing balance of Rs. 65.79 lakhs on the same date, and the balance in the Vessels Replacement Fund on that date, after transferring Rs. 20 lakhs out of the revenue surplus, was Rs. 115.68 lakhs. The year opened with a credit balance of Rs. 99.18,471, of which Rs. 73,36,180 represented

money unspent out of Government loans received during the previous year. The Commissioners raised during the year a 4 percent 30-year loan of Rs. 90 lakhs and the proceeds of this loan were utilised for repaying the uncancelled debt of Rs. 97 lakhs of the 6 percent 1925-55-85 loan of Rs. 1.25 crores. For financing capital works mostly comprising projects covered by the first five year plan, the Commissioners borrowed from the Government two loans aggregating Rs. 2 crores carrying interest at 4 1/2 percent and repayable in 23 equated annual instalments, after an interest-free period of seven years. The expenditure during the year on capital works in progress amounted to Rs. 15,42,71,10.

Port Charges

There were no major increases in port charges during the year. The total expenditure incurred on the upkeep and maintenance of the Port including the cost of services rendered in connection with handling goods worked out to Rs. 11-10-2 a ton of cargo handled, against Rs. 11-12-3 during the previous year, thus registering a fall of Re. 0-2-6 which was mainly due to the additional traffic of 216,922 tons handled, compared with the previous year. The average income for the year from charges levied on goods alone was Rs. 1-4-9 a ton or Re. 0-12-5 more than the average expenditure incurred for handling goods, resulting in a surplus of Rs. 62,51,902.

The original budget estimates were framed on the assumption that the total traffic which was likely to pass through the Port would be 7,360,000 tons. The actual traffic handled during the year however amounted to 8,030,735 tons. A break-up of these figures in terms of the principal commodities handled is given below:

Imports.	Assumed figures.	Actual figures.
Salt	450,000	491,180
Foodgrains & Flour	300,000	205,896
Other cargo	2,000,000	2,711,986
	2,750,000	3,409,062
Exports		
Coal including bunker	2,140,000	1,945,642
Gunnies	920,000	936,054
Ores	800,000	867,740
Tea	200,000	145,424
Other cargo	550,000	726,805
	7,360,000	8,030,735

The total tonnage of import cargo discharged at this Port during the year was 3,409,062, compared with 3,240,436 during 1954-55. The principal increases were in betelnuts (6,616 tons), chemicals other than soda (15,894 tons), electrical goods (5,142 tons), iron and steel (193,918 tons), machinery (43,770 tons), manure (5,245 tons), oilman stores (6,104 tons), railway plant and material (49,285 tons), salt (36,387 tons), timber (54,593 tons), tinplate (13,673 tons), wire (23,970 tons) and sundries (140,986 tons). Decreases were recorded in bricks (5,986 tons), cement (28,933 tons), foodgrains (229,059 tons), lubricating oil (8,134 tons), metal other than iron and steel (8,512 tons), motor vehicles (5,424 tons), oils other than lubricating oil (6,966 tons), paper (5,354 tons) and sugar (152,231 tons). The net increase thus was 144,954 tons.

Export Cargo

The total tonnage of export cargo shipped from this Port during the year was 4,621,673, as compared with 4,573,377 during 1954-55. The principal increases were accounted for by the following: bones and bone meal (10,073 tons), bunker oil (5,826 tons), foodgrains (52,755 tons), gunnies (17,936 tons), hemp (5,160 tons), mica (5,316 tons), ores (311,384 tons), oil cakes (13,140 tons), scrap (45,046 tons) and sundries (60,477 tons). Decreases were in coal including bunker (452,255 tons) and tea (32,279 tons). The net increase was 42,579 tons.

Turn-round of Shipping

The average rate of discharge (in tons) a ship a day in the case of general imports was as follows with the corresponding 1954-55 figures given in brackets. U.K. vessels 261 (204.6); U.S. vessels 243 (169.9); Continental vessels 307 (199.3); Far Eastern vessels 298 (211); coastal vessels 265 (235); other vessels 321 (293.2). In the case of foodgrains the average rate of discharge a ship a day worked out to 711 tons against 704 tons during the previous year. The average rate of loading a ship a day in the case of general exports excluding coal was as follows (in tons) and the 1954-55 figures within brackets: U.K. vessels 318 (263.9); U.S. vessels 348 (284.2); Continental vessels 292 (224); Far Eastern vessels 333 (234.7); coastal vessels 305 (230.6) and other vessels 320 (334.8). In the case of coal exports, the average rate of loading a ship worked out to 848 tons against 1037.9 tons during the previous year.

Development Scheme

Due to the initial delay of over two years in starting work on the development projects covered by the first five year plan, the inclusion of certain large projects at a later stage and difficulties encountered in obtaining material and equipment such as cranes and vessels immediately against placement of orders, the progress made on the execution of the projects was not up to earlier expectations. Of the 30 projects included in the scheme, four have been completed, ten are in an advanced stage of completion, 15 are in active progress and only one project namely the River Training Work at Fulta-Hooghly Point Reach is still in the investigation stage. The number of projects to be carried over to the second five year plan for completion is 26 and the cost involved is approximately Rs. 8,5621 crores.

Calcutta Markets

DEMAND WEAKENS AT TEA
EXPORT SALE

RECOVERY IN DUSTS

AT Sale No. 34, held on 18th and 19th February, offerings at the Export auction consisted of 64,275 packages. There was a fair general demand which weakened as the Sale progressed. Tippy teas and a few bright liquoring invoices were well supported and were sometimes dearer, while well-made and stylish whole leaf grades were a strong feature. Commons, Mediums and C.T.C.'s were all 1 to 1 1/2 annas easier at the commencement of the Sale, but they weakened further as the Sale progressed and at the close, were fully 2 annas and sometimes 2 1/2 annas easier. The poorer leaf grades also shared in the general decline and there was less demand for Darjeelings.

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2 2 0	1 13 0
Plain B.P.	1 13 0 to 1 13 6	1 5 0
Medium Assam B.P.	1 14 0	1 7 0 to 1 8 0
Best C.T.C. Assam B.P.	2 6 0 (Nom.)	2 5 0 to 2 6 0

At the Internal Sale, Dust offerings amounted to 18,001 chests for which there was only a fair demand at the beginning, but this improved as the Sale progressed and although prices were easier early in the Sale, they showed some recovery later. The few bright liquoring C.T.C. Assams with a clean leaf appearance sold well, but the more ordinary descriptions showed a further decline. Leafy orthodox Assams opened 1 anna to 1 1/2 annas below last rates, but the powdery kinds were more popular and at the close, were selling at about valuations and were occasionally dearer. Commons and orthodox Dooras were a little irregular, but the clean black leaf types were generally firm to dearer.

Quotations

	1957 Rs.	1956 Rs.
Medium Dooras Dust	1 13 0	1 7 6 to 1 8 0
Medium Assam Grainy		
Dust	1 13 6	1 8 6 to 1 9 6
Medium Assam C.T.C.		
Dust	2 2 0	
Best Assam C.T.C. Dust	2 10 0 (Nom.)	2 7 0 to 2 9 0

Other grades offered amounted to 2,578 chests for which there was a fair demand, but prices showed a decline of about 2 annas.

FREIGHT MARKETS UNCERTAIN

BECAUSE of the American dock strike, there has been slackness in the past week's coal market and uncertainty about the reopening of the Suez Canal has also kept the market in check. Fixtures of ore March-April position from Bombay to Poland have been reported at 207s 6d via Cape or 157s 6d via Suez f.i.o.t. A small steamer of 2,600 tons was fixed Mormugao-Trieste at the rate of 147s 6d f.i.o. via Suez and Mormugao-Japan paid 127s 6d f.i.o. A fixture of 5,000 ten percent coals Calcutta-Chalna has been concluded at 52s f.o.b.o. In Pacific Coast-West Coast India grains, two ships have been fixed at the rate of 215s gross terms, and the charterers are open for further tonnage. Australian shippers paid 240s for bagged wheat for the Persian Gulf.

SUGAR MARKET WEAK

During the week ended 20th February, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 5,000 bags and stocks totalled 100,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31-3 for ordinary grain and Rs. 33-8 for big grain. The market weakened by 2 annas to 4 annas a maund.

HIDES AND SKINS STEADY

The market ruled steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 12th February and 18th February, 1957)
Cowhides: Wet salted (Slaughtered) 20,000 pcs. on the basis of Rs. 12 to Rs. 21.

Goatskins: Wet salted (Daissee, Killed) 58,200 pcs. on the basis of Rs. 230 to Rs. 245, Rs. 285 to Rs. 310 and Rs. 360 to Rs. 375; Assam-Dinajpur-Jalpaiguri 10,100 pcs. on the basis of Rs. 255 to Rs. 310; Purneah-Kissenganj 15,600 pcs. on the basis of Rs. 285 to Rs. 310; Pakur-Patna 9,500 pcs. on the basis of Rs. 235 to Rs. 250; Muzafferpore-Pakur 4,000 pcs. on the basis of Rs. 275 to Rs. 295.

Bazaar Stocks

(18th February, 1957)

Cowhides: Wet salted 2,98,000 pcs.

Goatskins: Wet salted (Daissee, Killed) 48,000 pcs.; Assam-Dinajpur-Jalpaiguri 69,900 pcs.; Muzafferpore-Patna-Pakur-Kissenganj 1,24,500 pcs.

LINSEED QUIETER

Quieter conditions have prevailed in the past week and prices have declined with smaller offerings from sellers; turnover has been very poor, in anticipation of a further decline when the new crop arrives. Dull conditions prevailed in the oil

section where overseas as well as local buyers were very bearish and sellers were offering further discounts to unload their ready stocks. Latest quotations were as follows: February Rs. 22-6 a maund and April-May Rs. 20-8 a maund.

SHELLAC MARKET STEADY

During the week ended 19th February, the market was quiet at the beginning and steady at the end. The range of quotations was as follows:

Pure Buttonlac	Rs. 95 value; 95, 98 buyers.
Lemon No. 1 Shellac	Rs. 95, 98 buyers; 99 done buyers.
Lemon No. 2 Shellac	Rs. 90 value; 90 to 93 buyers.
F. O. Std. 1 Shellac	Rs. 84-84-8 buyers; 86 done buyers; 87 buyers.
Pure TN Shellac	Rs. 80 basis done buyers; 82 buyers; 83 basis done buyers.
4% I.T.N. Shellac	Rs. 70 to 74 buyers.
No. 1 Kusmi Seedlac	Rs. 96-8, 95, 98 value; 100 done buyers.
No. 2 Kusmi Seedlac	Rs. 89, 87-8 90-8 value; 91 buyers.
Fine Bysaky Seedlac (Manbhumi)	Rs. 85, 82-8 to 87 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 78 done; 78-8 to 84-8 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 74, 72 to 77-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 67-8 value; 66 to 72-8 buyers.
Kireelac	Rs. 25 done buyers; 26, 24, 24-8 buyers.

Shipments during February until the 11th were 10,401 packages comprising shellac 6,322 packages, seedlac 2,775 packages, buttonlac 70 packages and others 1,234 packages.

A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

THE PREMCHAND JUTE MILLS LTD.

NOTICE is hereby given that an Extra-Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at No. 81, Sovabazar Street, Calcutta, on Wednesday, the 20th day of March, 1957, at 11-30 a.m. to consider and if thought fit to pass the following Resolutions:

- (As an Ordinary Resolution)—Resolved that the Company do hereby approve of and give consent to the variation in the Managing Agency Agreement so as to fix the remuneration payable to Messrs. Raja Janakinath Roy & Brother Private Ltd. with effect from 1st day of April, 1956, at a sum of Rs. 2,500/- per month, that is, Rs. 30,000/- per annum. Further resolved that the Directors be and they are hereby authorised to effect the variation in the Managing Agency Agreement.
- (As an Ordinary Resolution)—Resolved that Messrs. Raja Janakinath Roy & Brother Private Ltd. be re-appointed as Managing Agents of the Company for a further period of 10 years commencing from the 1st day of April, 1956, on the terms and conditions of the draft Agreement placed before the Meeting and for the purpose of identification endorsed by the Managing Agents of the Company. Further resolved that the Directors be and they are hereby authorised to enter into and execute the said Agreement.
- (As a Special Resolution)—Resolved that the Regulations and Articles contained in the Document submitted to this Meeting and for the purpose of identification endorsed by the Managing Agents of the Company be and are hereby approved and adopted with such modifications, if any, as may be agreed to at this Meeting as the Articles of Association of the Company as substitution for and to the exclusion of all the existing Articles of Association thereof.
- (As a Special Resolution)—Resolved that the Managing Agents do retain the Commission they receive from Messrs. Triton Insurance Co. Ltd. for Insurance of the Company's properties, goods and effects and from Messrs. Northern Assurance Co. Ltd. for Insurance of Jute-in-Transit agreed to be purchased by the Company and for Insurance of the Company's Cash-in-Transit.

A Member, who is entitled to attend and vote at the Meeting, is entitled to appoint a proxy to attend and vote instead of himself and that the proxy need not be a Member.

THE PREMCHAND JUTE MILLS LTD. EXPLANATORY STATEMENT BY WAY OF CIRCULAR LETTER TO SHAREHOLDERS.

For Resolutions Nos. 1 & 2.

Dear Sir/Madam,

At an Extra-Ordinary General Meeting of the Company held on 27th April, 1956, a Resolution was passed by the Shareholders of this Company that subject to the approval of the Central Government, the terms and conditions upon which Raja Janakinath Roy & Brother Private Ltd. shall continue to hold Office as the Managing Agents of the Company for 10 years from 1st April, 1956, shall be as set forth in the Draft Agreement produced at the said Meeting. The said Draft Agreement was then sent to the Central Government for approval. The Central Government has approved of the said Draft Agreement with the variation as stated hereunder. The said Draft Agreement as approved by the Central Government will now be placed for approval of the Shareholders in an Extra-Ordinary General Meeting of the Company to be held on 20th March, 1957.

We give below, abstract of the proposed variations to be made in the terms of the Managing Agency Agreement.

Abstract of the Remuneration of the Managing Agents under the Draft Managing Agency Agreement approved by the Shareholders at an Extra-Ordinary General Meeting of the Company held on 27th April 1956—

Clause 4: "Until the net profits of the Company determined in accordance with Sections 349 & 350 of the Indian Companies Act 1956, exceed the sum of Rs. 3,00,000/- per annum, the Company shall as from the 1st day of April, 1956, pay to the Managing Agents for their service as such a sum of Rs. 2,400/- per month i.e. Rs. 28,800/- per annum. When the said net profits of the Company exceed

Rs. 3,00,000/- per annum, the Company shall pay to the Managing Agents for their service as such a Commission of 10% of the net profits of the Company determined as aforesaid subject to a minimum payment of Rs. 50,000/- per annum in the case of inadequacy of profits".

Abstract of the terms of the Remuneration of the Managing Agents as now approved by the Central Government:—

"The Company shall, as from the 1st day of April, 1956, pay to the Managing Agents for their service as such a Commission of 10% on the net profits of the Company determined in accordance with Sections 349 & 350 of the Indian Companies Act, 1956, but in the case of no profit, or inadequacy of profits, the Company shall as from the 1st day of April, 1956, pay to the Managing Agents a sum of Rs. 2,500/- per month i.e. Rs. 30,000/- per annum."

A copy of Draft Managing Agency Agreement as approved by the Central Government is available for inspection at the Registered Office of the Company during usual business hours.

Memorandum specifying the nature of interest of Directors:—Sri Priya Nath Roy, a Director of the Company is a Member and a Director of Raja Janakinath Roy & Brother Private Ltd., the Managing Agents. None other Directors of the Company is concerned or interested in the above mentioned Managing Agency Agreement.

For Resolution No. 3.

Alterations are proposed to be made in the Articles of Association of the Company in conformity with the provisions of the Companies Act, 1956. A copy of the said Articles of Association proposed to be altered as also a note showing the alterations made in the Articles and for the purpose of identification endorsed by the Managing Agents of the Company are available for inspection during usual business hours.

For Resolution No. 4.

The Managing Agents receive Commission from Messrs. Triton Insurance Co. Ltd. for Insurances of the Company's properties, goods and effects. The Managing Agents also receive Commission from Messrs. Northern Assurance Co. Ltd. for Insurance of Jute-in-Transit agreed to be purchased by the Company and also for Insurance of the Company's Cash-in-Transit.

Special Resolution No. 4 is necessary in view of provisions of Section 359 of the Companies Act, 1956.

By Order of the Board,

COAL COMPANIES

O Po P and Dd indicate Ordinary Preferred Ordinary Founders' and Deferred shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE NEW IMPORTANCE OF BRITISH BUSINESS

BENGAL'S ATTRACTIONS AS A HOME OF INDUSTRY

THE words of any President of the Bengal Chamber always deserve careful consideration in the country's economic interests. This year, those of Mr. O. T. Jenkins at last week's annual meeting here in Calcutta had more than usual significance for future industrial progress. Since the acute shortage of foreign exchange ceased to be merely the economists' nightmare and became instead an inescapable restriction on the planners' designs, it has been clear that British business will have new responsibilities in the next few years. The connections which the Chamber represents are perhaps this country's main hope in the short period of increasing foreign participation in Indian industry and providing guarantees for the import of development equipment on long-term credit. Mr. Jenkins was able to pledge the Chamber's full support, and there is no doubt that this will be forthcoming. The British business community has proved its willingness to co-operate in every way with India's development plans, and will continue indefinitely so long as it is granted the indispensable facilities for doing so. What these consist of can be ascertained from the rest of what Mr. Jenkins had to say. They are, indeed, nothing more than is required for the smooth and efficient functioning of any kind of business in this part of the world, Indian or foreign.

In his criticism of Central Government policy, Mr. Jenkins confined himself to the effect of controls, and with special reference to the coal industry. No doubt he had in mind at the time, among other things, the casual reception which the case of the private collieries had received the same week in New Delhi. When a matter of life and death for such an important section of private industry, and eventually for the economy, can be treated in such a cavalier fashion, it is permissible to ask whether the controls on this industry are being used deliberately to strangle it. It is scarcely surprising that this should be so now it is clear that the comparative efficiency of public and private management is likely to be tested most rigorously in the coalfields. When controls can so easily be used to ensure that private industry cannot win when the State's own interests are involved, it is little wonder that its spokesmen oppose them. To represent this as being in any way obstructionist and unco-operative is to confuse the national interest indeed. Mr. Jenkins's humorous example of the difference between British and American ways of doing things need not be dismissed as a joke. It represents a serious fact, and one which has cost Britain a great deal of industrial strength since the war. No amount of talk about socialism or improving the lot of the ordinary people can obscure the fact that there is a wrong and a right way of doing things, and that in India the present controlled way is often the wrong one. If any proof is needed of this fact, there is no need to look further than the fate of the coal industry which is being held in a stranglehold to serve the interests of an out-of-date ideology which has absolutely nothing to do with the national interest.

What Mr. Jenkins had to say about West Bengal was no more than has already been heard in speeches from many sources during the past few years. On this occasion, however, it does appear to have inspired a qualifying statement from certain State Government quarters. The question is a vexed one, and a good many quite irrelevant claims have been made from both sides. It is useful to get the facts straight. As Mr. Jenkins said, "few industrialists or business men would today set up an enterprise in Bengal given equal opportunities elsewhere". There is no suggestion here that capital is leaving this region in force for other destinations, a fact which the State Government sources appear to have been at pains to deny, although there may have been isolated instances. But there is a clear allegation that with all its

long-acquired external economies, Bengal is not an attractive place in which to sink capital "given equal opportunities elsewhere" and no indignation or self-conscious denials will serve to contradict that. Mr. Jenkins later mentioned the lack of regard which is paid in Calcutta for the city's amenities. There is no need to consider this as a possible reason for Bengal's lack of attraction for capitalists although it may give a clue to the cause. Briefly, this reason may be summed up as the attitude which exists in this State to the responsibilities inseparable from economic progress. It is not the first in the world to have experienced difficulty in a process of adaptation. But that is no case against the necessary steps being taken without delay, and, most important, the reality and significance of the situation being recognised. Complacency is the greatest danger of all.

Most of the evils Mr. Jenkins mentioned would clear up of their own accord if two fairly simple principles were accepted. The first is that remuneration should bear some relation to effort and skill; the second, that discipline is more important to the economic health of the community than the current vague notions of social justice. Because these principles have been termed simple does not imply that the acceptance of them is an easy matter. But unless they are accepted, Bengal's difficulties are likely to persist long after the rest of the country is on the way to prosperity. Those industries which have already thrown in their lot with this State, and that includes the larger part of British business in India, can expect their fate to be decided accordingly.

The concern expressed by Mr. Jenkins about low productivity and indiscipline are genuine enough, and are common to all industrialists in Bengal. Incentives in the form of amenities have been known to help the situation. But it is still true that some of the worst records for labour

troubles are held by those companies which provide the best facilities for their workers' welfare. Many disillusioned British industrialists will no doubt consider that their money would have been better spent in paying tribute to self-seeking trade union leaders if their business methods and moral principles permitted it. The prevalence of a type of business man in Bengal who is interested in realising his investment and making quick profits, is an effect of the general malaise rather than a cause. He operates where honest business finds difficulty in competing and where trade union practices are corrupt. The most effective cure for this kind of industrial parasite is that he should be forced to hold his own in honest competition with sound business, and this will not be while the latter is forced to retain uneconomic labour and prevented from enforcing discipline. To say that, quoting a daily newspaper report, "there is a dearth of real investors in West Bengal" is merely to state the obvious. The real question is why there should be such a dearth. Until this question is answered satisfactorily the reluctance to site industrial establishments in this State will continue. Mr. Jenkins mentioned the case of the Life Insurance Corporation. When Calcutta's claims to the location of this institution were outlined in these columns some time ago, discretion forbade mention of the fact that what might, for various reasons, have been to the national advantage, was not necessarily in the interests of the efficient and economical working of the Corporation itself.

The struggle for productivity will be a serious one in this State during the next few years and Mr. Jenkins did well to point out its importance in agriculture as well as in industry. At this moment, the State's most important industry—jute goods—is losing money fast for no reason other than that the price of its raw material is kept up by out-of-date cultivation methods. Up to now, most of the concern for this matter and practically all of the effort taken to correct it, have come from the mill interests. But this alone is not enough. If the industry's competitive position is further endangered by the continued high price of jute, as it has already been through the imposition of an uneconomic labour policy, then Bengal will lose its largest source of livelihood and the

sion presumably will have to await once again an examination of colliery accounts, as they are now being affected by the Appellate Tribunal's award of January, 1957. One other feature of the proposed increase in prices deserves to be noticed. Of the figure of Rs. 1-8 a ton, only Rs. 1-2 a ton is being allowed to cover the extra costs resulting from the revised award (as against the colliery owners' claim for Rs. 1-12 a ton). The remaining six annas a ton is meant to compensate the industry for what it will have to pay out to its workers by virtue of the revised award taking effect from May last year. On both counts, therefore—in meeting current production costs as well as in meeting the retrospective liability—the higher prices the Government now proposes are inadequate in the light of the industry's calculations. The allocation of six annas a ton to cover the retrospective liability is particularly curious. Simple calculation shows that if, even accepting the Government's estimates, production costs have been raised by Rs. 1-2 a ton by the revised award for the last nine months, a price compensation of six annas a ton from now on will have to be given for roughly 27 months before the liability is fully recouped.

The Government might claim that the period for clearance will be less as production will rise. But the industry, on the contrary, could point to the serious financial loss it will suffer by having to pay out money to labour now which it will not recover for more than two years from the prices it charges to consumers. In any event, it is clear that the industry will take nearly two years, and probably a little more, to recover from the six annas a ton increase in the price what the Appellate Tribunal says it should pay away to its workers immediately. In that case, it would be interesting to know whether the Government intends that there should be no finality about the increase in coal prices for this period. The implied somnolence would be in keeping with its past attitude to the industry, but hardly suitable at a time when measures to increase coal supplies are urgently necessary. It would also be relevant to enquire whether colliery-owners have the ready money to pay workers their retrospective dues, which are estimated to amount to well over Rs. 42 crores under the revised award. With the Government preparing its scheme for the compulsory deposit of company reserves, and with the extreme tightness prevailing in the money market, some thought as to where such a large sum is to come from would not be wholly out of place. Producers whose financial resources have been depleted by the uneconomic working of recent years, and who have committed the little that remains with them for expansion plans or other essential requirements, can hardly be expected to raise liquid funds to meet sudden commitments of this size.

The recent treatment of the coal industry raises the question why the Government, in spite of its new-found devotion to the principles of auto-financing, chooses this particular industry to jettison even those principles. Auto-financing has been recommended especially for basic industries, among which coal is one of the most important. It is being promoted by new pricing policies, but there is clearly a strong contrast between those New Delhi has adopted for coal and those it has adopted for other industries. The results are painfully evident in the fact that the expansion of productive capacity in the former is much slower than elsewhere. If economic expansion is to proceed on balanced lines, more equitable treatment of the various industries will be necessary. We do not seek to suggest that official policies on auto-financing in basic industries are a model of rationality; they are not, because they are hampering the flow of new investment at the same time as they are depriving present shareholders of their rightful dues. All that is implied is that in the case of coal, New Delhi's decisions have been particularly irrational. The prospects of getting new investment are extremely slender under the prevailing conditions of working, as the state of coal shares in the stock market shows. In addition, coal companies are not being allowed scope to accumulate resources on their own. Costs continue to rise faster than prices, with the result that profit margins are being squeezed, where they exist at all, and resources which could be conserved for expansion are being given away to workers at the behest of tribunals which have chosen to become the self-appointed arbiters of the nation's economic policies. The Government will have to reconsider urgently the need for a more liberal pricing system for coal if the expansion of the rest of the economy is not to be retarded. To increase the productive capacity of the steel plants and the carrying capacity of the railways—two of the kingpins in India's development plans—may not be of much value if the supporting strength of the coal industry continues to be slowly and steadily drained away.

THE URGE TO EMIGRATE

BRITAIN'S ATTITUDE TOWARDS LOSS OF POPULATION

A CARTOON by Nicolas Bentley in the London *News Chronicle* recently portrayed a small boy looking up at a kindly old gentleman and answering him: "When I grow up? Goin' to be a emigrant, of course." The cartoonist's idea was not much exaggerated. Among the rather more mature, but still young, people of Britain there are many who regard emigration as the obvious first step to a promising career. Long queues outside the immigration offices of the dominion governments in London have this year provided daily evidence that such people's intentions are serious. The movement out of Britain is viewed from some quarters with alarm. Politically, it is no compliment to a government that plans to double the standard of living over 25 years and whose Chancellor of the Exchequer has lately designated Britain "the Opportunity State." Economically, it is approved by the people who believe that Britain cannot much longer properly support her 50 million population but deplored by those who believe that the loss of the most energetic and enterprising elements will make the task of maintaining the remainder more difficult.

The Government itself is not much perturbed. Looking at the matter historically, it perceives that without British emigration there would have been no British Commonwealth. Increasing numbers of non-British immigrants have been admitted into the sparsely-populated countries of the Commonwealth, where, it is argued, British interests must gradually weaken unless the flow of British migrants is maintained. The authorities do not admit that the recent interest in emigration reflects a sudden loss of confidence in Britain, nor that the numbers emigrating are even now excessive. Roughly 100,000 persons have been emigrating from Britain annually for some years past, and the current rate, though considerably higher, is still short of the figure of 200,000 a year which the British Government can contemplate, it seems, with equanimity. Nonetheless, the position is a little disturbing. It appears that the rationing of petrol last year was the deciding factor in the minds of many recent applicants. But few of these people, probably, were directly affected by the new restriction. It was symbolic. They had imagined that all such restraints had been permanently removed. But they had watched prices persistently rising; and they had waited with growing impatience for the reduction of taxation to which Chancellors of the Exchequer always aspired but which they seemed incapable of achieving. Moreover, the shortage of oil products, as a result of a few days' fighting in Egypt, suggested to many people that Britain would be hopelessly vulnerable in a major war. Undeniably, there has been some loss of confidence, some deterioration of morale.

Nor are the economic implications of this development altogether reassuring. Emigrants do not represent a cross-section of the population. Their average age is much less than the average age of the nation, and their average skill is much more than the average. In crude economic terms, children and old people have to be supported by the working population. The receiving countries want men and women with special skills (whether industrial or professional); and in any case it is questionable how many present-day Britons are both able and willing to do tough development work or farming in the outlying regions of the dominions. The argument advanced by the advocates of emigration, that British industry is not suffering, and will not suffer, from the loss of skilled personnel, is hotly disputed by many industrialists. They point out, for instance, that Britain is seriously short of engineering draftsmen, who are being enticed in increasing numbers to the industrially-developing dominions. It is now generally recognised that Britain is not doing enough to train technologists, and semi-skilled workers capable of applying the new techniques. Is she to lose every year an appreciable proportion of those she does train?

In that question we have, perhaps, the essence of the whole problem. This is not a new predicament: it has been familiar for years in the difficulty of satisfying at the same time the demands of overseas countries for capital goods and the needs of British industry for modernisation and expansion. We know now that the only satisfactory solution of this problem is to produce more of the wanted goods. We must recognise that a country with a pioneering emigrant tradition must train in greater numbers the kinds of people whom she and the receiving countries need. The truth is that Britain, even while turning towards the European market, can never afford to neglect the development of her trading partners in the Commonwealth. Even those—or especially those—which do not need large-scale immigration need technical assistance, and technicians "on loan" are temporarily lost from the mother country. The British authorities do not sharply distinguish between the foreign-currency

earnings of the U.K. and those of the other sterling countries. From their viewpoint, development of the overseas sterling area is vital to the health of sterling. For that reason, as well as to promote British export trade with the overseas sterling area, the authorities approve in principle the efflux of development workers. But the immediate effects of the efflux do not necessarily favour sterling. These workers could probably earn foreign exchange more effectively in the U.K. than abroad at this time; their absorption into the dominions causes some inflation there in the first place. But we must take the long view—and at the same time hope for such conditions in Britain as will confirm its place as a land of opportunity.

CURRENT COIN

Finance for Business.—A large part of Mr. R. L. Powell's presidential speech to the recent annual general meeting of the Upper India Chamber of Commerce was devoted to discussing the "mounting difficulties" of finance which industry and commerce experienced in 1956. Conditions in the money market remained generally tight throughout the year and there was a tendency for interest rates to rise and for credit to be restricted. At the same time, the increase in industrial production and the generally rising price levels of raw materials, stores and machinery, together with higher taxes, Mr. Powell said, meant that manufacturers and traders needed more working capital for running their businesses. This happened in spite of a steep increase in bank advances as the "exactions of tax gatherers grew, and all their demands have to be satisfied in cash." Mr. Powell enumerated the following causes of this shortage: Section 18 (A) of the Indian Income Tax Act continued to draw off large sums of money representing payment in advance of tax on profits which were frequently not represented by money receipts. Sales tax, excise duties, cesses and other impositions aggravated the drain on working capital. Their effect continued to be particularly damaging where the impost was so high that it could not be recovered in the selling price of a product, and operated as a direct tax on the producer, payable in cash when goods sold left his factory. Transport delays and bottlenecks continued to tie up large sums of money, and the delays were both internal and external—the latter due to the Suez Canal closure. The most powerful single factor however was the deficit on foreign trade account. The Governments at the States and the Centre were not prompt payers and Mr. Powell hoped that the State Trading Corporation, through which a growing volume of trade was to be channelled, would settle its debts "in accordance with the best commercial practice, rather than with the worst traditions of red tape." While reserving his comments on the measure in the last Union Supplementary Budget requiring companies to deposit with the Reserve Bank 25 percent of their past accumulated profits and reserves, together with a high proportion of current net profits, Mr. Powell felt that in practice, the long-term effects might prove worse than the short-term, for "in the short-term it may divert surprisingly little working capital from industry". The difficulties of obtaining risk capital were equally great. Mr. Powell said that due to the atmosphere of disillusionment in the stock market, the All-India Index for Variable Dividend Industrial Securities had fallen 10 percent by the close of the year to 118.7 from 131.7 in December, 1955, in spite of the rise in industrial activity and wholesale prices. The investor understandably preferred preference shares and loans; once again the root of the trouble was the injury which the Government's taxation policy and nationalisation of life insurance had done to his confidence. And the activities of the nationalised life insurance corporation, it was reported, had been only an inadequate substitute for the enterprise under private management. Mr. Powell has been succeeded by Mr. J. K. Srivastava, as president of the Chamber for the current year. Mr. K. M. Wilcox is the vice-president and the other members of the Committee are Messrs. A. H. Buckland, A. P. Gupta, H. Hill, P. A. F. Lugs, and P. K. Sahgal.

Foreign Exchange Shortage.—The shortage of capital, especially foreign capital, for development was stressed by Mr. K. P. Goenka while addressing the third quarterly general meeting of the Indian Chamber of Commerce in Calcutta last week. He said that industrial production increased in 1956, but serious problems had now arisen. The foreign exchange shortage threatened the prospects for new industrial development. The crisis was the result of insufficient realisation at the time the second plan was formulated that the huge development programmes might well be frustrated by the lack of external finance. Later, certain unrealistic decisions, such as to impose a ceiling on the output of the cotton mill industry

and to maximise revenue earnings from export duties, made it worse. The sterling reserves had been badly depleted and India had now been compelled to borrow from the International Monetary Fund, while steps had been taken further to tighten import controls. Simultaneously, efforts were being made to increase export earnings, but the limitations of the situation were pretty obvious and "it is a difficult proposition to build up an export market at short notice." Some benefits might be gained in the next two or three years if Indian goods were offered at competitive prices and the Government helped ensure that production costs were brought down. In the immediate future, however, the position would continue to be difficult. It was now the Government's policy to encourage foreign participation in new industrial ventures "to the extent of the capital goods requirements of the country." Greater emphasis was being laid on long-term loans for the supply of capital goods. Mr. Goenka thought this to be a step in the right direction. But he emphasised that in order to obtain external credit, conditions would have to be made sufficiently attractive for foreign capital. "The fact cannot be overlooked that capital is in great demand throughout the world and it would be attracted only to such countries as offer the most attractive possibilities to investors abroad", he pointed out.

Industrial Fair in Basle.—The 41st Swiss Industries Fair which is to be held from 27th April to 7th May this year in Basle is among the large industrial fairs in Europe in the spring. It will take place at about the same time as the fairs in Milan, Lyons, Hanover, Brussels and Birmingham. The Basle Fair offers a good opportunity for foreign visitors to become acquainted with Swiss industrial production. The exhibits are divided into 17 different groups covering applied art and ceramics; office and business requisites; paper, printing and advertising; textiles and clothing; footwear and leather goods; watch-making; furniture; sports goods; toys; music; chemical, pharmaceutical and cosmetic goods; household utensils; the electrical industry; gas, water and heating; machinery; industrial requisites of all kinds; transport; the building industry; and foodstuffs. The traditional export industries will be prominently represented. The main export groups at the 1957 Fair will be watches, textiles (with the special exhibits "Creation" and "Madame-Monsieur"), textile machinery, general engineering and the electrical industry. In Basle itself, the Fair's accommodation department arranges suitable accommodation for visitors.

Protecting Preserved Fruits.—Mr. K. R. Damle, chairman of the Tariff Commission, while opening the public enquiry on continuing protection for the preserved fruits industry last Thursday, discussed a number of problems which faced the industry. The current period of protection is scheduled to expire on 31st December. After giving an estimate of the current demand for all categories of preserved fruits which, according to the Agricultural Marketing Adviser, is 23,000 tons and is likely to increase to 40,000 tons by 1959-60, Mr. Damle quoted the Ministry of Food and Agriculture as having estimated the number of units licensed under the Fruit Products Order at 720 in 1955. Of these, only 121 were engaged in the manufacture of protected categories of preserved fruits. The chairman regretted that although the industry has been protected since 1946, a proper assessment of its capacity has not yet been made. This, he said, is partly due to the small size of the units and partly due to their wide distribution. The Agricultural Marketing Adviser has, however, estimated the capacity of the mechanised units at 14,000 tons a year for canned fruits and vegetables, of which the capacity for preserved fruits of the protected categories is about 5,600 tons. Mr. Damle discussed in considerable detail the position of raw materials and mentioned some of the outstanding complaints of the manufacturers. The points to which he has drawn particular attention are grading of fruits, location of factories, and the quality and prices of sugar, cans and bottles. Manufacturers state that the industry is now better equipped and is in a position to make superior products. But consumers and importers are generally of the opinion that the indigenous products are not as good as the imported ones. Mr. Damle said. It is agreed that the quality of the indigenous products has improved but much remains to be achieved. The Ministry of Food and Agriculture has estimated that about 1,000 tons of fruit products were exported from India during 1956, of which 200 tons were of the protected categories.

Textile Fibre Standards.—Some highly ingenious instruments have been devised to measure cotton fibre properties, and these are being used to an increasing extent both by merchants and by mills anxious to obviate any imperfections in the raw material used in the production of quality fabrics for special uses. A new move is now announced which will help to ensure that these

instruments all give the same results. Through the International Cotton Calibration Standards Committee, a set of standard test cottons will soon be made available for merchants and spinning mills throughout the world. This Committee, which developed the programme for establishing the standards, represents the American Cotton Manufacturers' Institute, the American Cotton Shippers' Association, the International Federation of Cotton and Allied Textile Industries, the National Cotton Council of America and the United States Department of Agriculture. Several hundred laboratories throughout the world are expected to use the standard cotton for calibrating cotton fibre instruments, so that when fibre instruments in, say, Memphis, Manchester and Frankfurt get the same results on their standard sample, they will be more likely to agree with each other in their commercial testing. The blending, preparation and distribution of the samples will be carried out by the Cotton Division, Agricultural Marketing Service, of the United States Department of Agriculture. The testing and certification of the standard cotton will be the responsibility of the five sponsoring organisations and their designated laboratories. At first, cotton calibration standards will consist of three samples, having high, medium and low readings in the Micronaire test for fineness, and the Pressley test for strength. Later, additional fibre property tests may be included in the programme.

British Plastics Exports.—The British plastics industry had another record production and export year in 1956, according to statistics released by the British Plastics Federation. Output, which has been more than doubled since 1950, reached about 335,000 tons, an increase of more than 10,000 tons compared with the 1955 total of 324,000 tons. The increase is at a slightly reduced rate compared with 1955, output for 1954 having been 274,000 tons. Thermoplastics materials, including P.V.C., polythene and polystyrene, were again responsible for more than 50 percent of the output. Expansion plans now in progress will mean still higher production capacity for various plastics this year and subsequently. Exports of plastics materials alone in 1956 amounted to nearly 98,000 tons, valued at over £26 million—a rise of nearly 13,000 tons, valued at over £3 million, compared with the 1955 figures, the previous highest. The increase in exports is at a slightly higher rate than in 1955 (1954 exports of over 73,000 tons were valued at £20½ million). The tonnage exported is approaching five times that for 1947 (21,000 tons) and more than 20 times that for 1938 (4,300 tons). The exported materials consist of moulding powders, resins, sheet, rod, tube, film and foil, but do not include finished components and parts, large numbers of which are used in finished products, such as domestic ware and parts for the aircraft, electrical and motor industries. Australia (with imports valued at over £2.75 million) remained the best market, and India (over £2 million), France (£1.6 million), the Netherlands (£1.5 million), South Africa (£1.4 million), Sweden (£1.3 million), Italy (nearly £1.2 million) and Denmark (£1 million) were other substantial buyers. India's imports totalled 8,400 tons, against just under 5,200 tons, worth some £1.3 million, in 1955.

GOVERNMENT BY MANDATE

IN dealing with the plague, the Government of India appears to be acting very much like the future Mrs. Awkins who "first she said she wouldn't, then she said she couldn't, then she whispered, 'Well, I'll see.'" For anything more vacillating than its conduct in this matter it is difficult to conceive, and had we an illustrated comic paper here we could suggest a somewhat similar cartoon to that which appeared in *Punch* some thirty years ago, when Mr. S. H. Walpole was in office, where an old lady, looking out of a four-wheeler, observed to the policemen, who were stopping her progress, that she was the Home Secretary. Nothing would have been simpler in view of the very strong and unanimous feeling upon the subject than for the Government to have published last Tuesday the notification regarding pilgrim traffic, which appeared in a *Gazette Extraordinary* on Saturday. The solution of the matter appears to us to be simple. We believe that on Tuesday last Reuter telegraphed that, as was the case, a requisition was being very influentially signed, calling upon the Sheriff to convene a public meeting upon this question. Following upon this came the question by Sir Seymour King in Parliament last Friday upon the subject of which, of course, Lord George Hamilton would have had notice; so that when the noble lord replied that he was in communication with the Viceroy and expected to hear very shortly from him, and that pilgrimage had altogether been suspended in India, he was giving publicity to a "mandate" which he must have sent to India. We are extremely glad to find that Calcutta is saved from what might have been a national calamity; at the same time we cannot say that this Government by clamour and mandate is either edifying or dignified.

Without Prejudice

JUDICIAL INTERPRETATION OF EXECUTIVE POLICIES

NINA AND THE FIFTEEN WORKERS
(FROM OUR LEGAL CORRESPONDENT)

IT is not often given to a judicial officer or magistrate, not of the standing of a High Court judge, himself to raise a point of very great constitutional importance to the litigants before him, to decide it and decide it wrongly. In this particular case, the judicial officer was the learned adjudicator of an industrial tribunal in Bhopal. Finding the point an interesting one, the writer has delved into the works of Professors Bryce, Dicey, Laski and Finer in the hope of finding some guidance in the way of judicial precedent on it, and has found none whatsoever for the simple reason that the tribunal's decision and its reasons for it seem to be entirely without precedent. Before dealing with the facts, however, we must ask the non-legal reader to bear with us in some preliminary observations. Firstly, in India, the commands of Parliament (consisting as it does of the President and the two Houses of the Legislature) can be expressed only through Acts of Parliament. Secondly, an Act of Parliament, once it has been passed into a statute, becomes subject to judicial interpretation and just as the judges in England exercising that function have always refused to interpret an Act other than by reference to the words of the enactment, the words and nothing but the words, so judges in India interpret statutes by the same strict method. A judge will take no notice of the resolutions of either House, of anything which has passed in debate (a matter of which officially he knows nothing), or even of the changes which a Bill may have undergone between the moment of its first introduction to Parliament and of its receiving the Presidential assent. Nor is the judge concerned with the policy of the Government in passing it into law, nor with what the Government intended to say, but only with what it actually did say in the words of the Act itself.

Thirdly, from the most junior subordinate magistrate to the Chief Justice of India's Supreme Court, the independence of the Bench must be inviolate. As Professor Laski puts it: "The independence of the judiciary from the executive is essential to freedom....For it is obvious that if the executive could shape judicial decisions in accordance with its own desires it would be unlimited master of the State. The interpretation of the law must, therefore, be entrusted always to a body of persons whose will cannot be bound by

the will of the executive. They must be able to call the executive to account." Thus, if a renowned and popular Russian sportsman walks into my shop and, confused by her lack of knowledge of my language and subsequent interrogation, walks out of it, or tries to, with a couple of my hats which she has not paid for, no power in the land from the Queen and Prime Minister downwards can prevent me from prosecuting her for theft, nor the local magistrate from trying the case though the entire Russian team may decline to participate in the Olympic Games and the Russian Ballet refuse to honour my countrymen with its visit in consequence.

"All this," as Professor Dicey puts it, though without reference, of course, to the particular case, "would greatly surprise many foreign legists and, no doubt, often does give a certain narrowness to the judicial construction of statutes," to which we might add that the surprised "foreign legists" would be not only, or even mainly, Russian ones. Professor Dicey says that our democratic allies and friends like France and Switzerland would be equally astonished. But not a single legist in the British Commonwealth. The plain simple fact is that if the Prime Minister of England tried to interfere, in such a case, with the magistrate, he would be out of his job, and his party in the political wilderness, within a month. Within a month almost to the day. For it has actually happened in our own time. Only once, since in William III's day, the right of arbitrary dismissal of the judges was taken away from the sovereign. The Prime Minister concerned was Mr. Ramsay MacDonald, at that time, a truly great man. The real founder of the Labour Party, he was in October 1924 the unchallenged leader and superior of a Cabinet including men like Philip Snowden, J. R. Clynes, Sidney Webb, George Lansbury, J. H. Thomas, Wedgwood Benn and the rest of a very strong team. In the particular incident which brought his flourishing Government crashing down, his intentions were unexceptional. They were to come to a real and lasting understanding with Russia and secure world peace. To do so he was trying to negotiate a treaty with Russia. At that delicate time, one J. R. Campbell, editor of the Communist Party's *Workers' Weekly*, was being prosecuted before a Stipendiary Magistrate on charges involving allegations of disloyalty by him and the British members of the Party. It was rather a paltry case but the Russian Government, just as their successors did 30 odd years later in the case of the lady dis-thrower, attached considerable importance to it. So Mr. MacDonald thought it would be a tactful and helpful thing if the Government resiled from the prosecution of the communist editor and accordingly ordered that it be dropped.

Now, in the eyes of all those "foreign legists" to whom Dr. Dicey refers, the Labour Government had, no doubt, done nothing blameworthy at all; on the contrary it had made a wise, politic and gracious gesture. But it raised a furor of amazed indignation throughout Britain. The Government had tampered with the Constitution by interfering in judicial proceedings. No one's liberties would be safe. The Government was defeated in the House of Commons on the matter, had to resign, by the end of the month was overwhelmingly defeated in the country, and the idealist Mr. MacDonald was replaced by the pipe-smoking, commonsense Mr. Baldwin. And the public was right. The common man had thus probably never heard of Professor Dicey, much less read his learned works. But it was saying in practice what he said in the printed word: "Parliament, though sovereign, has never been able to use the powers of the Government as a means of interfering with the regular course of law."

No, Parliament cannot interfere, but what about the judge himself? *Quis custodiet ipsos custodes?* Suppose that learned magistrate, learned in the best and real sense of the word, and not merely technically so styled—in the case of that Russian lady athlete, instead of formally finding her guilty as he had to do on the evidence, and then treating her as a bewildered young woman, an alien in a strange land and not knowing a word of its language, acquitting her with a few considerate words of mild admonition, suppose he had said something like this: "I consider the opening of this trial before me against public interest and contrary to the policy of the Government," and had then declined to try the case. "It is absurd and childish question," you may say. "It is unthinkable that such a thing could happen. Not quite unthinkable, perhaps. And that thought brings us back to the rather queer proceedings before the civil industrial tribunal of Bhopal arising out of a civil complaint made by 15 discharged workers on the ground that their dismissal or discharge was illegal and mala fide. It was an extremely serious issue from the point of view of the workers who had been arrested and detained under the Preventive Detention Act until they were released under the orders of the Bhopal High Court, and one of the questions to be considered by the tribunal was the question of the responsibility or non-responsibility of the workers concerned and the management of the mills for their continued absence of the workers caused by their arrest and detention. This was one of the issues framed by the learned adjudicator who had found for the workers on two other preliminary issues. "Is the opening of the present dispute before this tribunal against public interest and contrary to the declared policy of the Government as alleged in para 3 of the preliminary objections?"

"Yes," said the tribunal. "It is against public interest and contrary to the policy of the Government," and so holding, found that the workers were not entitled to any relief, or even a hearing on the merits and dismissed their application; which, while desiring to avoid overstatement and with all respect to the tribunal, one finds a most amazing decision. The workers appealed to the Labour Appellate Tribunal in Bombay, which had some pungent observations to make: "It is difficult to see how a reference duly made by the State Government under the Industrial Disputes Act of 1947 can be rejected by an industrial tribunal merely because in its opinion it is against the declared policy of the Government and presumably, clared policy of the Government and presumably, therefore, against public policy.... (There) can be no question of a court or other quasi-judicial tribunal, vested with the power to decide disputes according to the civil law or the principles of social justice, taking into account or basing its decision on any assumed policy of the executive Government instead of the merits of the dispute brought before it within its jurisdiction, as any such attempt to mould its decision in the light of any such policy must be taken to violate the fundamental principles of a democratic set-up of society.... (The learned adjudicator) was bound to decide (the dispute) on the merits, irrespective of any such extraneous consideration as the declared policy of the executive Government." The appeal was allowed and the case sent back to the tribunal to be tried on the merits.

SACKCLOTH AND ASHES

In *Capital* of 14th February, the writer, trying to illustrate the law of negligence and visualising himself struck and injured by a six hit by Mr. Umrigar in a Test match at the Eden Gardens, a writer being a spectator who had paid for admission, claimed that the batsman and the club would be liable 100 percent for the injury caused, and he instance the Sheedle cricket club case where a lady who "was not even a spectator" received damages through being hit.

A correspondent writes: "Surely it is the fact that she was not a spectator and was merely 'sitting herself' outside her own house adjacent to the ground that made the club concerned 100 percent liable," and goes on to suggest that the writer deliberately going into the ground and paying for his seat there the spectator is himself contributing to negligence, if any. Our reader—not a lawyer—is right and the writer was wrong; and is grateful for the correction.

A DITCHER'S DIARY

THE report that the army is to dismantle its Red Road "bustee", which appeared in the newspapers the day following Mr. O. T. Jenkins's remarks to the annual meeting of the Bengal Chamber, seemed just about the best postscript to the most forthright plea for the preservation of the Maidan that has so far been made in public. That is until one read further and learned that the camp is only to be shifted a few hundred yards away to another part of the Maidan. The move is welcome enough, but it is a pity it could not be more complete. Perhaps it will require more appeals from men like Mr. Jenkins, who have not allowed their business preoccupations to replace completely their civic consciences. It was good to hear his words of praise for the initiative private enterprise has been showing. The transformation of an unsightly dust patch into a pleasant garden is adequate consolation for the intrusive, although tasteful, notice naming the public's benefactor. I do not see why the principle could not be extended to the avenue of gold mohurs Mr. Jenkins mentioned, if some advertiser cares to take the job on—always provided, of course, that he did not do so at the expense of his budget for the Press. Besides, as Mr. Jenkins pointed out so slyly, the contrast between the efforts of private enterprise and those of the Government could have a wholly salutary effect on present economic thinking. Although I see the Czech Exhibition site is slowly returning to normal—given the help of another monsoon or two—the goings-on south of the Cathedral must be puzzling more than this inquisitive scribe. Why, if it is a building that is to be erected, has the surrounding wall been completed first? This is the kind of mystery which is not improved by the firm conviction that it is wrong that anything should be going up at all.

This seems to be an important week for civil aviation. To begin with, there is the first scheduled appearance on the London-Australia run of the world's largest airliner, B.O.A.C.'s Britannia, about which I hope to be able to say more in the not-too-distant future. At the moment, I am most impressed by its nickname—"The Whispering Giant", which may or may not have any relation to fact, but is certainly a heaven-sent gift to the publicity man. And secondly, there are the inaugural flights of Scandinavian Airlines' new trans-polar service between Copenhagen and Tokyo. I know that S.A.S. has been operating a successful schedule across the Arctic between Copenhagen and Los Angeles for some time now. But this is the first time the "Northwest Passage" route flying directly across the North Pole, has been used to Far East. It will cut the present time from 52 hours to 30 and the distance from 10,300 miles to 8,000. I see that if the north polar region goes on warming up at its present rate, there will be no ice to fly over in 1,000 years' time. That may seem too remote a possibility to worry about, but the climatic changes there, which have been going on since the beginning of the century, have already had one or two strange consequences. One is that seals have disappeared from the west coast of Greenland and have been replaced by cod, so encouraging the growth of a substantial fishing industry. Another is that the moose of Nova Scotia is being deprived of the mosses on which it lives and has developed a form of malnutrition which is affecting it mentally—it is becoming neurotic.

When I note that the phonetic alphabet Bernard Shaw had in mind contained 40 letters, I almost find it difficult to regret its loss. But at the same time, if the project had the enthusiastic support of such a master of the English language as Shaw

In decorating the home, I have usually been most impressed by those who have adopted three main aims—to be original, attractive and inexpensive. The first two, one is often told, are incompatible with the third. But a visit to the exhibition organised by the Bengal Home Industries Association in Artistry House, Park Street, last week shows that this is far from true. How many of us, I wonder, have thought of taking three lengths of metal poles, bending them at various angles and joining them at the waist to form an extremely attractive lamp-stand? And how many have thought of using those cheap but beautifully coloured textiles, produced by small-scale industries, as furnishing material, instead of only for blouses and skirts? This latter, I admit, is apt sometimes to bring embarrassment; now and then one is liable to hear of guests arriving for a Sunday morning beer in hawaiian shirts made of something which looked like the left-overs of the hostess's curtains. But the scope for novelty and attractiveness in one's acquisitions is still immense if one has the imagination and the energy to look for the products of cottage industries. The trouble is that one needs rather a lot of both. Some of the most striking exhibits at the Bengal Home Industries show are the ash-trays made of clay, the copperware and the metallic statuettes, not to speak of the intricate trinkets and jewellery. Exhibitions such as these leave the impression that the real shortcomings of our cottage industries lie not in the quality and methods of production, but in their distribution. It was a distinguished official of this province who said some forty years ago that "in discussing the decline of Bengal's industries, one feels as if one were passing through a large graveyard in the dark, with open graves waiting for the bodies of dying enterprises." That is less true now than it was then, and some of the credit for it must go to organisations such as the B.H.I.A.

It is sincerely to be hoped the Duke of Edinburgh's new title is neither a consolation for losing

the quarrel he is supposed to have had with the Queen nor a gesture to the public that all is now well with the Royal Family. For one thing, it should be a most popular decision. It does not take much imagination to appreciate just how difficult a job the Duke has been the husband of a woman whose duties, and whose devotion to them, must fit her for anything but the rôle of ideal wife. He has shown himself capable of playing his part with just the right combination of humour and self-effacement, and seems destined to make none of the mistakes which marred the record of Victoria's consort, Prince Philip deserves his promotion. But whether the Queen intends to pay greater heed in future to his views about the duties of an up-to-date constitutional monarch is another matter; the British Press, which as usual seems to have heard about the Royal quarrel long after the American newspapers, has had a fine time debating it though. Most commentators seem to have backed Philip against the rather stuffy ideas of the Queen's "Grey Eminence", Lord Salisbury. He is supposed, for instance, to have been opposed to the recent Royal visit to Portugal, and to believe, among other things, that the Queen spends too much time at the races. And the whole thing has been given twice the credence it deserves because the Palace saw fit to issue a formal denial that there has been any "rift" at all. Why the Duke's parting from his friend, Commander Parker, should have attracted so much attention from the Press, is a mystery. It was scarcely routine, but how it came to crowd the arrival in London of Mr. Bill Haley, High Priest of the Rock 'n' Roll, off the front pages will remain one of the more inexplicable of the many strange interpretations of what British newspapers think will interest the reading public. Only *The Times* appears to have maintained its sense of proportion, at the price of surprising a few of its admirers, by featuring Mr. Haley's arrival on the main news page, and omitting any mention of Commander Parker and his unfortunate matrimonial affairs altogether.

A general election is no occasion for unanimity. But the start of India's second one this week brings me a nervous reminder of the unanimity independent observers have shown in assessing the prospects for the Congress Party. This nervousness is due to a now somewhat hazy recollection of voters' unpredictability—and not just in the United States, where, some years ago, they baffled fashionable pollsters and a presumptuous Press by the opinions they expressed about the Presidential chances of Mr. Thomas Dewey. Still, I do not think our local political pundits are going to find themselves equally confounded by the events of the next few weeks. On the contrary, as they expected, the Congress seems to have made an encouraging start in the elections to the Lok Sabha as well as to State Assemblies. The prospects it has in West Bengal seem somewhat clouded at the moment. But inventing a forecasting technique which may not be less reliable than that of the distinguished Dr. Gallup, an enterprising acquaintance has conducted a random sample survey of the posters with which various candidates, in their kindly lavishness, have adorned some of the rather drab buildings in this city. The results, he says, are by no means discouraging for the ruling party. To his dismay, however, he has been struck during this survey by the occupational characteristics of poster-pasters other than the hopeful politicians. These others seem to consist mostly of such purveyors of hope as astrologers and palmists. One sincerely wishes that a similarity in the choice of advertising media does not always imply a similarity in the substance of audience appeal.

ANNUAL REPORT.

To be submitted to the Shareholders at the Fifty-First Annual General Meeting to be held at the Registered Office of the Company at Mahatma Gandhi Road, Fort, Bombay, on Thursday, the 7th day of March, 1957, at 4 o'clock in the afternoon.

Directors' Report for the year ended 31st December, 1956.

The Directors submit to the Shareholders the Balance-Sheet and Profit and Loss account for the year ended 31st December, 1956. The Auditors' Report is also annexed. The transactions for the past year including the balance brought forward from the previous year, Rs. 13,26,630-3-5, have resulted in a profit of Rs. 1,05,29,924 7 2.

An interim dividend was paid for the half-year ended 30th June, 1956, at the rate of 8 p. cent. free of Income-Tax on the Paid-up Capital of Rs. 2,50,00,000, which also included Rs. 15,00,000 0 0 Provision made for Income-Tax and Super-Tax for the year, Rs. 28,00,000 0 0 Bonus to Staff Rs. 13,75,000 0 0.

The Directors now propose—
To pay a final dividend for the half-year ended 31st December, 1956, at the rate of 10 p. cent. free of Income-Tax making 16 p. cent. for the year on the Paid-up Capital of Rs. 2,50,00,000, which will absorb Rs. 25,00,000 0 0.
To place to the Bank's Reserve Fund Rs. 8,00,000 0 0.
To carry forward to the next account Rs. 15,54,924 7 2.

Total Rs. 1,05,29,924 7 2.
The Bank's business continued to function satisfactorily. The Official Bank Rate remained stationary at 3½%. During the year the Bank celebrated its Golden Jubilee. To mark the event, the Paid-up Capital was increased from Rs. 250 lacs to Rs. 300 lacs by making a bonus issue to the Shareholders of 1,00,00,000 fully paid shares of Rs. 50 each from that part of the Reserve Fund representing premiums received on past issues of shares.

Under the provisions of Section 256 of the Companies Act, 1956, the following Directors of the Company retire by rotation but are eligible and offer themselves for re-election:—
Sir Cowasjee Jehangir, Baronet, G.B.E., K.C.I.E.
Mr. Bhagvandas Chumilal Mehta
Mr. A. D. Shroff.

Under the provisions of Section 260 of the Companies Act, 1956 the under-noted Directors, who have been appointed as additional Directors during the year 1956, will hold office up to the date of the Annual General Meeting, namely, up to 7th March, 1957. They stand for election in the manner provided by the Act.
Mr. Madanmohan Mangaldas.
Mr. N. K. Petigara.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

COWASJEE JEHANGIR, Chairman.
AMBALAL SARABHAI, JOSEPH KAY, DINSHA K. DAJI, RAMNIWAS RAMNARAIN, BHAGVANDAS C. MEHTA, K. M. D. THACKERSEY, A. D. SHROFF, MADANMOHAN MANGALDAS, N. K. PETIGARA, V. N. CHANDAVARKAR, Directors.
D. R. THOM, General Manager.
H. A. CURRIMBOY, Chief Accountant.

Bombay, 31st January, 1957.

BALANCE-SHEET AS AT 31ST DECEMBER, 1956.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS

We have audited the foregoing Balance-Sheet of The Bank of India Limited, as at 31st December, 1956, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated unaudited returns from all the Branches in India not visited by us for the purposes of this Report and the audited returns of all Branches outside India.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance-Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that—
(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory.
(b) The transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;
(d) The Bank's Balance-Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
(e) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance-Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

A. F. FERGUSON & CO., S. B. BILLIMORIA & CO., Chartered Accountants.

Statement pursuant to Section 212 of the Companies Act, 1956.

The Profit and Loss Account of The Bank of India Limited for the year ended 31st December, 1956, does not include any profit or loss of its subsidiary, The Bank of India (U.K.) Nominees Limited, a Nominee Company incorporated and operating in the United Kingdom, as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by The Bank of India Limited. The shares of the subsidiary are wholly owned by the Bank.

AMBALAL SARABHAI, JOSEPH KAY, DINSHA K. DAJI, RAMNIWAS RAMNARAIN, BHAGVANDAS C. MEHTA, K. M. D. THACKERSEY, A. D. SHROFF, MADANMOHAN MANGALDAS, N. K. PETIGARA, V. N. CHANDAVARKAR, Directors.
COWASJEE JEHANGIR, Chairman.
D. R. THOM, General Manager.
H. A. CURRIMBOY, Chief Accountant.

Bombay, 31st January, 1957.

THE BANK OF INDIA (U.K.) NOMINEES LIMITED.

Directors' Report for the year ended 31st December, 1956.

The Directors submit the Balance-Sheet for the year ended 31st December, 1956. The Auditors' Report is also annexed. No Profit and Loss Account is submitted as none has been prepared. No profit was made and no loss was sustained. The expenses of the Company have been paid by The Bank of India Limited, of which the Company is a wholly-owned subsidiary.

J. DONALDSON, S. H. BRADFORD, Directors.

London, 1st January, 1957.

COMMONWEALTH NEED FOR
DEVELOPMENT FINANCEHEAVY STERLING WITHDRAWALS
BY INDIA CRITICISED

INFORMAL consultations have been in progress between Britain and other members of the Commonwealth concerning financial arrangements within the group, especially those relating to long-term economic development. The emergence of the Gold Coast as the independent state of Ghana in March gives special point to the subject, as finance of the newly-independent territories is a problem requiring careful treatment. As a background, a survey of postwar investment is available in the work of Mr. A. R. Conan, economist of the Commonwealth Economic Committee, which has been published by Princeton University entitled *Essays in International Finance*. It confirms that the United Kingdom is still the main source of finance for the overseas Commonwealth (or, at least, has been so in recent years), though by no means the only source, as it was virtually before the war.

Mr. Conan's figures cover the period 1946-55. They show that the biggest importer of capital in the British Commonwealth was South Africa, absorbing a total of £750 million; of which Britain provided £500 million, the United States £100 million, the World Bank £100 million. Australia ranked next, absorbing £600 million; but, whereas in this case also the U.S.A. and the World Bank provided £100 million each, the U.K.'s proportion was smaller, £350 million. The other big outlet for American capital was India, and in this case the American proportion was much larger, again £100 million, but in a total of £250 million, while Britain's contribution was likewise £100 million. To Rhodesia, on the other hand, Britain provided

£250 million in a total of £300 million; to the colonial territories £450 million, in a total of £520 million. There have been, of course, important changes since 1955, most important, doubtless, being the acceleration of India's development. The heavy drawings on sterling balances to finance India's five year plan signify that India is relying on sterling sources for much of her requirements in this phase; but the money is her own, not Britain's. Nonetheless, the resources are from the sterling area, and it has been suggested by some critics in London that India has been receiving too large a share of the available resources of the area.

Inadequacy of Resources

Such matters are debatable, and it is proper that they should be debated. There is a good case for improving the means of consultation within the Commonwealth so that no member of it can feel dissatisfied—at least, that it has had no opportunity to object. On the one hand, it will be argued that the sterling system will collapse if every developing member of the sterling area takes as much as it can get out of the area; on the other hand, it will be argued that the system will disintegrate if members are not allowed to convert their own sterling balances into needed goods. However, the essential problem in this big task of development is not the means of distributing the resources available, but the inadequacy of those resources. In the first 10 years after the war, Britain was providing capital for the sterling countries of the Commonwealth at an average annual rate of roughly £170 million. Providing such capital, in addition to military commitments, she strained her external payments account; providing such capital, in addition to developing her own resources, she generated inflation. The payments surplus required to provide more or less adequately and without strain, funds for developing the Commonwealth has been estimated (one would think rather moderately) at £300-350 million a year, and the latest official estimate suggests that in the year to mid-1957 there will be no surplus at all.

There is, however, one important fact that is often overlooked in Britain; though it is really a matter of common sense. As territories develop, they generate their own means of further development. Some of the sterling countries' efforts at self-financing have been, admittedly, a little disappointing, but the long-term tendency is clear. Australia, New Zealand, South Africa, for example, have now internal debts far in excess of their external debts, whereas before the war the two forms of debt were of comparable size. Such countries are financing a large part of their development by borrowing at home, and their need for external finance is gradually diminishing. It will not be surprising if some of these countries become before long, in their turn, useful sources of finance for the development of other territories. In the meantime, two problems need consideration: the diversion of resources to the newly-independent territories, and the treatment of external capital in all the territories. These problems are related, insofar as treatment of capital in any area affects investment in that area.

Nationalisation Policies

An interesting development in the member countries' financing has been the attraction of external capital for ordinary commercial investment, with no disinterested, and possibly economic, motives. It is on this basis that American capital has moved into, for instance, Australia and South Africa; and British investment in the Commonwealth generally has tended to shift from official to private sources. But investment in a newly-independent country, whose policies have not yet taken shape, is obviously more speculative than investment in a mature country, whose line of development is approximately known. To lay down rules for treatment of external capital—specifying, for instance, that British enterprise may not be nationalised—would be contrary to the principle of non-interference and would certainly be resented. But it may be possible to get general agreement on compensation that would be provided in certain specified circumstances. Capital could be distributed according to economic principles, without serious political impediments. There some such assurance were forthcoming, remains, of course, for Britain the basic dilemma: that she cannot help to develop the overseas territories without sacrificing some of her own development and modernisation.

COMPANY FORMATION IN NORTHERN ZONE

Three public companies and 17 private companies with an authorised capital of Rs. 4.15 crores and Rs. 2.51 20,000 respectively, were incorporated during the month of January 1957, in the northern region consisting of Delhi, Punjab, Rajasthan and Uttar Pradesh. Of these, one public company and two private companies were registered with an authorised capital of more than Rs. 10 lakhs. One public company, having an authorised capital of Rs. 1 crore and seven private companies, having an authorised capital of Rs. 28,90,000 went into liquidation during the period under review. Names of nine public companies and 23 private companies with an authorised capital of Rs. 1 crore and Rs. 43,30,000 respectively, were struck off the register under Section 560 of the Companies Act, 1956. Prosecutions for default in repaying the Registrars were launched against eight public and eight private companies. Of the pending cases, six were disposed of in Punjab and Punjab. Six companies of Punjab and one of Punjab were convicted for their failure to file the statutory documents under the Companies Act, 1956, in a total fine of Rs. 775.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

CONDITIONS LESS STRINGENT

Wednesday, 27th February.

THE money market has been rather easier in the past week, although there has been no slackening in the demand for accommodation. Offtake of funds by the sugar and jute industries has increased, while that on account of grain and seed storage has been halted at a specified level by Government regulation. Cotton advances are still increasing. The reason for the rather less stringent conditions which prevail in the money market seems to be chiefly the cut in imports. Deposits have risen appreciably in the past few days. Conditions in the interbank market remain easy and business is reported at between 3½ and 3¾ percent.

It has been an extremely slack week in the bill market. Gunny bills have been almost absent, while those for tea have been generally small. Remittance has been moderate. After being at one time down to parity level, sterling has improved this week against both the dollar and Continental currencies. The reason is probably seasonal, although some attention has been attracted by the loan agreement which has just been signed in Washington.

Silver was quiet on fears that Tibetan coins might be arriving. The price dropped from the previous week's level of Rs. 182-8 to Rs. 179-6, quoted on Tuesday. The market was closed on Wednesday. The rate for the ready metal was Rs. 180. The London and New York prices were unchanged.

Gold was quiet in sympathy with silver. The price declined from Rs. 111 to Rs. 107-14. The sovereign, at Rs. 71-11, showed a loss of 7 annas.

During the week ended 22nd February, Government of India Treasury bills for Rs. 10,50,00,000 were sold in favour of the Reserve Bank.

A decline of Rs. 9.37 crores to Rs. 1,506.25 crores in active notes was the outstanding feature of the return of the Reserve Bank of India for the week ended 22nd February, 1957. The total note issue was Rs. 43 lakhs higher at Rs. 1,527.33 crores. Notes held in the Banking Department consequently increased by Rs. 9.80 crores to Rs. 21.08 crores. Deposits of the Central Government rose by Rs. 1.73 crores to Rs. 53.96 crores, while other Government accounts were Rs. 1.24 crores lower at Rs. 11.24 crores. Balances of commercial banks, at Rs. 56.48 crores, showed a rise of Rs. 4.89 crores. Balances held abroad declined by Rs. 7.08 crores to Rs. 113.43 crores. Other loans and advances declined from Rs. 120.33 crores to Rs. 112.66 crores, of which advances to scheduled banks against usance bills totalled Rs. 58.85 crores (Rs. 59.18 crores). Such advances amounted to Rs. 99.35 crores since 1st January, 1957. Ways and means advances stood at Rs. 7.72 crores (Rs. 6.73 crores).

The return of the State Bank of India for the week ended 15th February, 1957, shows a rise of Rs. 4.51 crores in total deposits to Rs. 265.01 crores. Investments in Government securities and other authorised investments are down by Rs. 1 lakh and Rs. 4 lakhs to Rs. 95.49 crores and Rs. 11.35 crores. Advances including loans, cash credits and overdrafts, and bills discounted and purchased, have increased by Rs. 1.05 crores to Rs. 173.51 crores. Cash and balances are, in consequence, shown at Rs. 18.04 crores, or Rs. 2.11 crores higher.

The statement of the position of scheduled banks for the week ended 15th February, 1957, shows Demand and Time liabilities at Rs. 682.75 crores (Rs. 6.36 crores on account of borrowings from banks) and Rs. 464.29 crores (Rs. 2.48 crores) compared with Rs. 676.24 crores (Rs. 6.72 crores) and the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.02 crores and Rs. 8 lakhs to Rs. 36.93 crores and Rs. 48.86 crores, respectively. There is a drop of Rs. 4.74 crores in investments to Rs. 356.20 crores. Advances and bills discounted, at Rs. 860.82 crores, show a rise of Rs. 4.57 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.5 percent and 75.0 percent, against 7.4 percent and 75.1 percent.

The Bank of India has made a profit of Rs. 92 lakhs for the year ended last December, against Rs. 85 lakhs in the previous year. Bringing in Rs. 13,26,130, there is a balance of Rs. 1,05,29,925. An interim dividend of 6 percent absorbed Rs. 16 lakhs. The taxation provision is Rs. 28 lakhs and fund gets Rs. 8 lakhs. The final dividend has been declared at 10 percent, making 16 percent for the year (same), leaving a carry-forward of Rs. 15,54,925. Deposits were Rs. 2 crores higher at Rs. 69.55 crores. Cash declined by Rs. 1.69 crores to Rs. 8 crores. Investments were Rs. 1.97 crores lower at Rs. 57.21 crores. The directors say that during the year under report the bank celebrated its Golden Jubilee. To mark the event, the paid-up capital was increased from Rs. 2.50 crores to Rs. 3 crores by issuing bonus shares to the holders of 100,000 "A" fully paid shares of Rs. 50 each from that portion of the reserve fund which represented premiums received on past issues of shares.

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to December, 1956. Compared with November the December indices for Government securities and preference shares indicate drops of 0.1 point and 0.7 point, respectively.

There were decreases in banks 2.6 points, cottons 13.6 points, coals 18.8 points, jutes 11.5 points, minings and oils 19.7 points, cements 7.3 points, engineering 27.6 points, teas 53.0 points, papers 82.1 points, sugars 9.3 points and miscellaneous 17.1 points.

Combining all the factors, the Capital variable yield securities index shows that the index for stock prices in these classes of shares declined by 21.4 points during December, 1956.

Stocks and Shares

MARGIN FIXED FOR INDIAN IRONS AFTER MARKET COLLAPSES

INVESTMENT SUPPORT COMPLETELY ABSENT

IT has been a week of near-panic conditions in the share market. Prices recovered fractionally from the levels to which they sank after last week's announcement about the Securities Contracts (Regulation) Act, but the trend did not survive the week-end. A sharp drop in speculative scrip occurred at the opening of the market yesterday, followed by a complete collapse today. The procedure of emergency clearing was once again resorted to and Rs. 3-a-share deposit margin is now required of those wishing to sell Indian Irons below the value of Rs. 24-12. At the interim clearing, the settlement rate was fixed at Rs. 25 a share. The complete collapse of the market appears to have been due chiefly to tax uncertainties, coupled with depressing advices from Bombay. Sentiment has shown no improvement since the market closed.

There has been little interest in investment scrip this week. Only tea shares have shown any life at all. Coal scrip have reacted only slightly to the increase in coal prices reported from New Delhi because it is felt in the industry that the increase in costs will still remain partly uncovered. Jutes have been duller in sympathy with the lower levels ruling in the gunnies market. The engineering and the miscellaneous sections have both been quiet.

Details of the week's trading follow.

The gilt-edged market continued steady, but the volume of business was restricted due to the absence of sellers. Three percent Conversion Loan 1986 was marked up from Rs. 74-4 to Rs. 74-6 and Non-terminable Paper was traded at the higher rate of Rs. 73-7. In short-dated loans, 3% 1957 met with good enquiry at Rs. 99-12-6 and 3% 1958 was asked for up to Rs. 99-9-6. Three percent 1959-61 was quoted at the higher rate of Rs. 97-12 and 3% 1961 was steady at Rs. 99-7. 2% 1961 had buyers over at Rs. 93-4 as did 2% 1960 at Rs. 96-6. Among medium-dated loans, 3% 1963-65 continued on offer at Rs. 94-3, but 3% 1964 hardened to Rs. 94-6 buyers; 3% 1964 was taken up to Rs. 94-6 while 3% 1956 remained weak at Rs. 98-3 and 3% 1967 was traded at around Rs. 98-8. In long-dated loans, 3% 1966-68 changed hands at Rs. 92-4 and 3% 1970-75 was marked up further to Rs. 98-6. 3% 1974 was quiet at around Rs. 98-8. State Loans remained dull and prices were unchanged.

Business in preference shares was on a limited scale. In jute, Agarpara were done at Rs. 99 and Anglo-India at Rs. 102. Chitavalsah were reported at Rs. 101 and Kamarhatti at Rs. 84. Lawrence changed hands at Rs. 102, Northbrook at Rs. 78 and Union at Rs. 102. Among miscellaneous preference shares, Calcutta Electric attracted attention at the lower rate of Rs. 9-2 and Elgin Mills 8% were crossed at Rs. 124-12. Indian Iron were depressed at Rs. 101 and Jardine Henderson were crossed at Rs. 61. New Victoria came to hand at Rs. 4-14 and Shaw Wallace had buyers at Rs. 67-8.

In the banking section, United Commercial was steady at Rs. 56-8 but Punjab National met with profit-taking and closed Rs. 2 lower at Rs. 53. Hind Bank were unchanged at Rs. 36-8 as were United Bank of India at Rs. 4-10.

The only share dealt in the railway section was Dehri Rohtas at Rs. 12-7.

Only two transactions were reported in cotton textile shares, namely in Kesoram at the higher rate of Rs. 14-10 and New Victoria at Rs. 1-15.

As the proposed increase in selling prices of coal does not altogether offset the recent increases in costs, little interest was shown in this section of the market and in most cases prices moved towards lower levels as will be seen from the following table.

	Opening 21-2-57 Rs.	Closing 26-2-57 Rs.
Bengal	456	445
East Indian	26 12	26 6
Equitable	24 12	24 4
New Beerbhoom	16 8	15 8

Contrary to the general trend, there was some enquiry for Western Bengal at Rs. 5-11 and there was some interested buying of Union Coal at around Rs. 14. Burrakur fluctuated narrowly around Rs. 21 with little business passing.

Enquiry for jute shares was virtually non-existent and business was on a restricted scale. The following chart illustrates representative price movements:

	Opening 21-2-57 Rs.	Closing 26-2-57 Rs.
Anglo-India	136	135
Birla	15 14	15 4
Ganges	56	47 8
Howrah	17 8	17 5
Kinnison	144	140
National	18 14	18 8
Northbrook	22 1	21 12
Reliance	9 8	8 12

Electric supply shares were a dull market and very few transactions were reported. Agra were marked down from Rs. 145 to Rs. 143. Benares from Rs. 18 to Rs. 17-12 and U.P. from Rs. 147 to Rs. 145. Calcutta Electric were neglected at Rs. 12-15.

In sugar, Belsund were marked down from Rs. 11-5 to Rs. 10-12, Cawnpore from Rs. 18-8 to Rs. 18-4 and Durbhanga from Rs. 20-12 to Rs. 20-6. In contrast, there were small buyers of Ramnugger at Rs. 25.

Continued bear raids brought a further decline in Indian Iron & Steel from Rs. 25-14 to Rs. 24-8, but as a result of corrective measures taken by the Committee of the Calcutta Stock Exchange Association to prevent large-scale bear sales, the shares recovered at the close to Rs. 25. Despite the announcement of a satisfactory distribution of Rs. 2 a share by Braithwaite & Co., the quotation was unchanged at Rs. 27-3. Burn & Co. were easier at Rs. 320 and there were sellers of Indian Standard Wagon at the lower rate of Rs. 182. Jessops and Richardson & Cruddas continued to meet with selling pressure and in the absence of support, prices were marked down to Rs. 24-14 and Rs. 17-14 respectively. Textile Machinery were comparatively steady at Rs. 19 as were Kumardhubi Engineering at Rs. 9-12. Guest, Keen, Williams after being sold down to Rs. 23-15 recovered at the close to Rs. 24-6.

Paper shares were featureless with the exception of India Paper Pulp which had buyers at Rs. 22-8. Titagur were shaded at Rs. 36-8 and

HINDUSTHAN GENERAL INSURANCE SOCIETY LIMITED

FIRE • MARINE • MOTOR MISCELLANEOUS ACCIDENT

Bengal were nominally quoted at the lower rate of Rs. 85.

In cement, Ashoka were unchanged at Rs. 10.5 as were Dalmia at Rs. 12.2 and Orissa at Rs. 12.8. Jaipur Udyog were marked at Rs. 11.15 and Sone Valley were offered at Rs. 7.3.

A solitary transaction was reported in the insurance section in New Asiatic at Rs. 4.

In shipping, India Steamship were steady at Rs. 10 and a small lot of India General Navigation was placed at Rs. 7.3.

Despite the excellent report published by Angelo Brothers Ltd., and the announcement of a total distribution of Rs. 2 a share, the quotation was unchanged at around Rs. 21. Balmer Lawrie were marked down from Rs. 160 to Rs. 156 and Britannia Biscuits were offered at Rs. 13.12. British Burmah Petroleum were depressed at Rs. 2.10 as were British India Corporation at Rs. 7.6. Clive Row were unchanged at Rs. 9.14 and Dunlop Rubber were slightly better at Rs. 25.2. Hindustan Motors were offered at Rs. 7.6 and Indian Aluminium were marked down further to Rs. 13.4 as were Indian Cables to Rs. 28.2. Indo-Burma Petroleum were easier at Rs. 33.12 and Metal Box receded under selling pressure to Rs. 26. National Insulated Cables were depressed at Rs. 19.12 while National Carbon were remarkably steady at Rs. 25.12. Rallis were easier at Rs. 36 while Shaw Wallace were better at Rs. 11.8.

In the mining section, Burma Mines provided the outstanding feature and buying on London

account lifted the price from Rs. 2.9 to Rs. 3.1. Indian Copper were depressed at Rs. 3.3 as were Karanpura Development at Rs. 13.4. Orissa Minerals were unchanged at Rs. 21.8.

There was selective buying of tea shares in restricted turnover. Bateli changed hands at Rs. 26.12 as did Brahmaputra at Rs. 7.2 and Dhela-khat at Rs. 21.8. Dejo Valley were wanted at Rs. 50.8 and East India improved further on interest buying to Rs. 25.4. Jullibari came to business at Rs. 25.8 and Methoni changed hands at Rs. 19. Hantapara were easier at Rs. 185 and Hasimara were sold down to Rs. 27.4. Rajabhat were crossed at Rs. 21.8 while Ranicherra were fractionally easier at Rs. 16.8. A small lot of Gungaram were crossed at Rs. 189 and Jay Shree and New Terai were transacted at Rs. 10.7 and Rs. 20.2 respectively. Pussimbina improved to Rs. 10, but Seeyok after being taken at Rs. 14.8 later had sellers at Rs. 13. Sungma were quoted at Rs. 9.12.

The profit of the ORISSA MINERALS DEVELOPMENT COMPANY was Rs. 57,000 lower at Rs. 333 lakhs for the half-year ended last June. Bringing in Rs. 118,635, there is Rs. 3,36,299. Taxation provision absorbed Rs. 1,80 lakhs (Rs. 1 lakh) and depreciation Rs. 82,805 (Rs. 88,323). Reserves are allocated Rs. 35,632, leaving a carry-forward of Rs. 1,00,667. Iron ore raisings amounted to 148,536 tons against 191,184 tons. Despatches were 143,521 tons, showing a considerable fall from the previous figure of 214,729 tons. Raisings and despatches were low because of the lock-out following a strike.

The steel works order was maintained at 40,000 tons a month. Manganese ore raisings fell from 2,146 tons to 13,525 tons. The directors say that the market continued to improve and the prices at which the various grades could be sold during the period under review were satisfactory. Progress continues to be made on the formation of a new company to develop the Bolani area.

There is use of Rs. 53,000 to Rs. 7.42 lakhs in the profit of ANGELO BROTHERS, LTD. for the year ended last August. Bringing in Rs. 3,45,960, there is a balance of Rs. 10,85,874. The dividend is the same at 20 percent, including an interim of 7 1/2 percent. General reserve is allocated Rs. 1 1/2 lakhs against nil. The carry-forward is Rs. 3,35,874.

Bombay Market

HEAVY SELLING PRESSURE DEPRESSES PRICES

CALL MONEY ON TATA RIGHTS ISSUE STILL UNPAID

Tuesday Evening.

DEPRESSED conditions prevailed on the Bombay stock market last week, and equity prices declined sharply on heavy selling pressure. Buyers

were scared and it was extremely difficult to negotiate offers which were coming forward. A number of adverse factors contributed to the weakness. Stringent money conditions, combined with uncertainties about taxation measures, unnerved operators. Although a number of equities appeared to have declined below their intrinsic values, buyers were hesitant to enter the market from fear that Indo-Pakistani relations might deteriorate further on the Kashmir issue. Lack of funds is illustrated by the fact that the call money on rights shares issued by the Tata Iron and Steel Co. and the Associated Cement Co. has not been paid yet in spite of imposing a penal rate of interest at 9 percent on default.

Tata Steels slumped to Rs. 167.4 and Indian Irons were lowered to Rs. 19.13. There is no evidence yet that the selling pressure has been halted. Other engineering issues were freely offered at lower levels without attracting any worthwhile support. Alcock Ashdown were transacted at Rs. 252.8, as were Premier Construction at Rs. 174.4. Tata Locomotives fell to Rs. 138.8. There was little interest in automobile shares, with Premier Automobiles coming to hand at Rs. 102.4. Hindustan Motors were available at Rs. 7.7.

Sellers predominated in the mill group and increased stocks of goods with mills continued to worry investors. Bombay Dyeing declined to Rs. 536.4, but Kohinoors were bought at Rs. 325 by knowledgeable quarters, as the company has maintained the distribution. Century, however, lost at Rs. 462 on the report that its rayon plant has not been working satisfactorily. Simplex were lower at Rs. 175 and India United Ordinary were bought at Rs. 10.7.

Miscellaneous shares slumped in sympathy with the general trend and buyers were difficult to find even at lower levels. Associated Cement declined to Rs. 165.8, as did Digvijay Cement to Rs. 145. Sugar shares were barely steady, with Belapur coming to hand at Rs. 227. Bombay-Burmah declined to Rs. 661.4 on adverse reactions to the chairman's address. National Rayon lost at Rs. 225.8 and Tata Chemicals declined further to Rs. 15.2. Mining shares were depressed and Sivrajpur Syndicate were offered at Rs. 93.8. Shares of steamship companies were rather steady on prospects of expansion. Scindia Steam were transacted at Rs. 18.11 and Great Eastern Shipping were dealt with at Rs. 18.4.

Turnover in banking shares was restricted, although quotations were fractionally lower. Bank of India were done at Rs. 141 and Central Bank came to hand at Rs. 53.8. Insurance shares lacked support, with New India being quoted at Rs. 42.3.

Scattered interest was taken in electricity supply shares and investors would like to await the decision of the Government about the revision of the standard return. Ahmedabad Electric were bought at Rs. 100 and Tata Hydro were done at Rs. 122.8.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations. Highest for the week. Lowest for the week. Closing Quotations—Quotations for the Corresponding Closing Date a Year Ago the last named being shown in parenthesis and will not be given where such a quotation is not available).

Bateli—Rs. 26.14—16.14—26.10—26.12—(25.4).
Bishnauth—Rs. 20.8—20.8—20.8—20.8—(37.6).

WHAT HAS HE TO DO WITH CEMENT ?

Cement builds his home. It is in the pavement on which he walks, the school in which he learns the arts of man, the hospital which he may need, the swimming pool, sports track and gymnasium that build his team spirit and his muscle. It is in the dams, power houses, factories, grain silos...

CEMENT—more and yet more cement—is the need of his future. The Associated Cement Companies Limited, which has doubled its output between 1948 and 1955, will double its production again during the next five years. The success of the Second Five-Year Plan and the future of India's youth both depend upon Free Enterprise.

The ACC is helping to build his India of tomorrow.

more homes every day...

Today India needs more homes—better homes—for her millions, calling for more cement and more steel. For the maintenance and expansion of cement production, components such as lining plates and grate plates are essential. Until recently these tough castings made of manganese steel were imported, but now they are made in India—by Mukand. We are equipped to manufacture, in increasing quantities, reinforced mild steel bars and rods, too, so vitally needed for the construction of buildings. With our expansion programme taking shape, we at Mukand, will help meet the nation's growing needs in Steel and Steel Castings.

MUKAND makes Progress in Steel

MUKAND IRON & STEEL WORKS LTD.,
KURLA, BOMBAY-37

Managing Agents: JEEWAN PRIVATE LIMITED,
51 Mahatma Gandhi Road, Bombay-1

Dalmia Products for modern homes and offices

QUALITY STONEWARE AND PORCELAIN PRODUCTS

STONEWARE PIPES (for underground drainage)

1 salt glazed, acid-resistant and tested to standard specifications.

2 DALMIA PORTLAND CEMENT for general construction

3 R.C.C. SPUN PIPES for irrigation, culverts, water supply and drainage, available in all classes and sizes.

4 PORCELAIN SANITARY WARES Indian and European closets, wash-basins, urinals etc.

5 INSULATORS AND ACID-RESISTANT TILES etc.

6 REFRACTORIES for all industrial purposes; firebricks, mortars, insulating bricks in all heat ranges and shapes.

STOCK MARKETS QUIET AND UNCERTAIN

DEMAND GENERALLY SELECTIVE

London, 27th February.

THE stock markets have continued to present an irregular appearance during the past week, and prices for the most part have moved within narrow limits. Business has been small and selective again, with interest restricted by the current political and economic uncertainties, and by the continuing activity in the new issue market. The general undertone, however, particularly in industrials, has been satisfactory. The erratic but generally lower trend on Wall Street has not been a helpful factor, although it has not had a great deal of influence on the London market. Business in the gilt-edged market has been very limited. The general trend was slightly easier until it became known that a further appreciable fall in the Treasury bill rate had taken place. This brought a recovery in prices and subsequently, there was talk of a further Bank rate reduction. The recovery eliminated the earlier small falls in and on balance there has been little change in prices. New issue activity has restricted business. Interest in foreign bonds and rails has been limited, but Japanese bonds have moved higher on small investment buying. Chinese issues, in contrast, have been dull. Selective buying has imparted a quietly firm appearance to the industrial market, which generally has been firmer on balance. Movements in most cases are small. Shipping shares particularly have been prominent, but steel shares have weakened on expectations of a very large issue of the Steel Company of Wales ordinary shares. South African gold shares have been depressed, and are appreciably lower, while coppers have lost ground under the influence of the falling world price of the metal. Other base metal issues have been easier. Oil shares have maintained their recent better trend and appreciable gains have been recorded among the leaders, in spite of the uncertain Middle East political situation. Rubber shares have attracted a selective demand, while a number of tea shares have improved.

The Money Market

Although discount houses had only a very small bill take-up due to their failure at the previous Treasury bill tender, conditions on the London money market during the past week have not been very comfortable and on one or two days, credit was very short. The average cost of money was around 3½ percent with up to 4½ percent paid during the most difficult phases of the week. Applications for £200 million worth of 91-day bills totalled £407,335,000 of which £200 million were allotted at an average rate of 82s 11.49d percent against 85s 6.04d percent in the previous week. This week £220 million worth of 91-day and 63-day bills are on offer.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 20th February shows that the gold stock increased by \$51 million to \$22,303 million. Foreign deposits fell by \$9 million to \$295 million, while foreign investments rose by \$19 million to \$3,764 million. The Federal Reserve sold \$143 million worth of bills, \$554 million worth of notes and \$74 million worth of securities held under repurchase agreements, but purchased \$447 million worth of certificates. Total discounts and advances increased by \$324 million to \$844 million, and the aggregate of excess reserves of member banks rose by \$438 million to \$610 million. The daily average excess reserves of member banks rose by \$71 million to \$505 million, but their daily average borrowings fell by \$164 million to \$552 million. Business loans of the New York city banks rose by \$67 million to \$11,157 million, compared with a fall of \$13 million to \$9,009 million in the corresponding week a year ago.

Vegetable Oils Still Dull

The vegetable oils market remained generally lifeless, with buyers and sellers still wide apart. Some short-covering interest for British East African castorseed developed in the March-April position with prices advancing £1½ a ton to £77½ a ton, c.i.f., but the ready value was no better than £76. With India continuing to pay good prices for both Ceylonese and Malayan copra, prices of coconut oil remained well out of line. During the past week, some 1,500 tons of English coconut oil were exported to the Continent in the region of £93 a ton, c.i.f., Rotterdam-Hamburg, compared with £94½ asked for Straits. Germany bought a small quantity of Argentine groundnut oil in the region of £140 a ton, c.i.f., for February shipment, but no interest was reported in Nigerian. Sudanese shelled groundnuts were offered in vain at £92 or £93 a ton to Italy for April-May shipment via Suez. Canadian linseed remained uncompetitive, with linseed oil May offered at a cheaper level, but it was too far forward for consumers to take active interest. In addition, reports that Uruguay is to release some 80,000 tons of new crop linseed for export from March onwards was considered a bearish factor. Nigerian soya beans were marked back £1 to £43 c.i.f., March-May without response, while the British East African sunflowerseed was similarly reduced to £46, but again buyers remained uninterested.

New Delhi

EFFECT OF COAL PRICE INCREASE ON INDUSTRIAL AND TRANSPORT COSTS

REPORT OF BRITISH MISSION ON HEAVY ENGINEERING PROJECTS

(FROM OUR NEW DELHI CORRESPONDENT)

BECAUSE of the Labour Appellate Tribunal's award, the price of coal has been increased by another Rs. 1-8 a ton, of which six annas a ton is meant to compensate producers for having to pay labour about Rs. 4½ crores forthwith to meet the retrospective part of the award. The total increase in labour costs due to the awards given by the lower tribunal and the Appellate Tribunal is calculated by the Government at Rs. 4-8 a ton. Even the latest increase is to be treated as an interim measure. The coal price committee is being reconstituted in order to appraise the real effect of the two awards on the cost of production of coal. The cost accountants have nearly completed their work.

The rise in coal prices will have widespread reactions. Roughly speaking, two tons of coal are needed for manufacturing one ton of steel, so the price of steel should go up by Rs. 9 a ton. The railways' fuel bill will also go up. They consume 12 million tons of coal a year, so their coal purchases should cost another Rs. 54 crores a year. This increase might have to be met either by raising freights and fares, or by reducing the railways' contribution to the general revenues. In fact, the costs of all industries using coal, including the fertiliser industry, will go up. Some of the important coal-using units which are promoting general economic development are cement and bricks, while those affecting the cost of living index are sugar and textiles. In addition to the rise in industrial costs because of the increase in coal prices, there will be a further rise on account of transport charges if railway and shipping freights are increased.

Heavy Engineering Industries

The Finance Minister, Mr. T. T. Krishnamachari, held a meeting of departmental heads dealing with production and heavy industries last week to discuss the Russian report on a machinery manufacturing plant and the British report on heavy engineering industries. One section of opinion preferred the British report, being opposed to "putting all the eggs in one basket". The Russians' report was not considered as good as their earlier one on the steel project. The meeting decided to set up a high-powered committee, with Sir J. J. Ghandy of Tatas as chairman, to examine the two reports and give an expert opinion to the Government. The committee, it is expected, will assemble here shortly.

The British heavy engineering mission, which was constituted under the aegis of the U.K. Government (as part of its contribution under the Colombo Plan) and the Federation of British Industries, with instructions to make recommendations to the Government of India on the expansion of heavy engineering capacity in this country, presented its report to the Indian High Commissioner in London on 4th February. The mission visited India in November 1956. It has recommended that in order to meet the requirements of heavy plant and machinery, the capacity for making heavy castings and forgings which has already been planned by the National Industrial Development Corporation should be supplemented by the establishment of: (a) a heavy structural fabricating works; (b) a heavy plate and vessel works; (c) a heavy machine shop to make heavy industrial machinery; and (d) a heavy machine tool works.

Independent Unit

Each of these, according to the mission's proposals, can be independent and self-contained units, which can be located in any part of the country considering the nature of raw materials needed and the likely centres of consumption. The mission considered that the heavy machine shop and the heavy machine tool works could best be located in close proximity to the National Industrial Development Corporation foundry-forge project, and that the heavy structural fabricating works would naturally be attached to a steel works. The report contains the broad outlines of each unit of the type recommended by the mission, as being less than Rs. 5 crores. The total number of units to be set up depends upon the technical and financial resources and the capacity for this stage. It is indicated that by setting up one machine tool works, two plate works, two machine shops and two structural bays, capacity would be created to provide, for example, the bulk of the machinery needed for six fertiliser plants of the size of Sindri and four steel works with a capacity of one million tons each in the third five year plan period.

The mission was also requested to consider requirements of mining machinery, although they did not all fall within the category of heavy engineering. It has recommended the setting up of a specialised factory for making mining machinery at an estimated cost of Rs. 3 crores. All the estimates given in the report are exclusive of capital, site purchase and work outside

the perimeter of the factory, such as housing for labour. The report contains recommendations for the technical training of the staff required to run the factories, and points out that for heavy engineering the proportion of skilled workers is inevitably high.

Heavy Structural Fabricating Works

The following is a summary of the proposals for the heavy structural fabricating works.

Capacity	Single Shift	Double Shift
Output	Rs. 1.07 crores a year	Rs. 2 crores a year
Tonnage	10,000-12,000 a year	18,000-20,000 a year
Scope		

All the heavier rectangular beams and columns beyond the rolling ranges.

Approximate cost	Rs. lakhs.
Plant	47
Factory buildings, complete with civil engineering work and services within the building	39
Ancillary buildings, including administration building, canteen and weigh-bridges	15
Services, including sub-station, water supply, drainage, roads and railways	8
	109

Addendum

Extension of each additional bay, complete with plant and civil engineering work within the building Rs. 70 lakhs

Estimated Number of employees, management staff and works

British standards	178 for single shift
	295 for double shift
	10 apprentices

Floor area

	Square Feet
Raw material open gantry, 80 feet by 440 feet	35,200
Production bay, 80 feet by 40 feet	3,200
Production bay, 80 feet by 800 feet	64,000
Finished goods open gantry, 80 feet by 440 feet	35,200
Administration block	10,000
Canteen	5,000
Transport and maintenance shop	10,000

Services required

Electricity load per production bay, 250 kVa. Rail and road facilities.

Water and sewage for domestic requirements.

Completion

About 2½ years after the approval of these proposals.

Heavy Plate and Vessel Fabricating Works

The following is a summary of the proposals for the heavy plate and vessel fabricating works.

Capacity	Single Shift	Double Shift
Output	Rs. 2.34 crores a year	Rs. 4 crores a year
Tonnage	10,000-12,000 a year	18,000-20,000 a year
Scope		

All types of heavy vessels, storage tanks and steel works equipment of pre-ignit stage.

Approximate cost	Rs. lakhs.
Plant	274
Factory buildings and services within the buildings	197
Ancillary buildings, offices, canteen and training school	24
Services, including sub-station, water supply, drainage, roads and railways	21
	Rs. 516 lakhs.

Estimated number of employees, management staff and works.

British Standards	725 for single shift
	1,275 for double shift
	70 apprentices

Floor Area

	Square feet
Heavy machine shop and tool room, One bay 80 feet by 520 feet	41,600
Press shop, coil manufacturing and blacksmith's shop: one bay 80 feet by 440 feet	35,200
Heavy and light vessel fabricating shops: two bays 80 feet by 440 feet=35,200 square feet	70,400

Stores and works offices serving fabricating shops on each side 40 feet by 440 feet	17,600
Heavy and light structural shops: two bays 80 feet by 440 feet=35,200 square feet	70,400
Pre-preparation and preparation bays: two bays, 80 feet by 440 feet and 80 feet 80 feet	41,600
Two open gantry stockyards: 80 feet by 320 feet, and 80 feet by 640 feet	76,800
	353,600

Administration and Ancillary Buildings

Administration block	20,000
Training school	10,000
Canteen	10,000
Transport maintenance shop	12,000

Services required

Electric sub-station, capacity 2,000 kVa. Rail access for incoming raw materials and outgoing finished products.

Water for domestic use and a small quantity for vessel testing.

Sewage disposal facilities, no effluent.

Completion

About 3½ years after the approval of these proposals.

Heavy Machine Shop

The following is a summary of the proposals for a heavy machine shop.

Capacity	Double Shift.
Output	Rs 3.31 crores a year.
Scope	

Rolling mill machinery and auxiliaries, hydraulic presses and equipment and general machining of heavy castings and forgings.

Approximate cost

	Rs. lakhs.
Plant and cranes	167
Buildings, foundations (excluding offices and external services) depending on site	134
Offices, welfare, training, canteen and weigh-bridge	18
Services, including sub-station, water supply, drainage, road and railways	12
	331

Floor Area

	Square feet
Bay 1. Heavy machine and heavy erection shop, 600 feet by 80 feet	48,000
Bay 2. Medium/light machine shop and light erection shop, 600 feet by 80 feet	48,000
Bay 3. Fabricating shop, 600 feet by 80 feet	48,000
Bay 4. Material handling and storage, 320 feet by 60 feet	19,200
Tool room, stores and sub-station bay 600 feet by 40 feet	24,000
Administration building (offices on two floors) 160 feet by 80 feet	25,600
Training school 112 feet by 80 feet	8,960
Canteen, 192 feet by 80 feet	15,360

Cranes

Three 50 ton electric overhead travelling cranes.

Three 20 ton electric overhead travelling cranes.

Two 10 ton electric overhead travelling cranes. Thirty-two 1 ton jib cranes, suitably mounted.

Services required

Electric power, 1,500 kVa.

Medium-Heavy Machine Tool Works

The following is a summary of the proposals for the medium-heavy machine tool works.

Capacity.	Single Shift.
Output	Rs. 2.70 to Rs. 3.30 crores a year
Tonnage	3,500 to 4,500 a year
Scope	

All types of heavy and medium heavy machine tools, with the exception of very large vertical boring machines and specialised machines such as gear hobbers.

Estimated Cost

	Rs. lakhs.
Plant, including cranes, machine tools and installation costs	246
Main buildings, including civil engineering works and services within the buildings	166
Ancillary buildings, including administration buildings, canteen, training school and weigh-bridge	25
Services, sub-station, water supply, drainage, roads and railways	9
	446

Floor Area

	Square feet.
1 and 2 Heavy machining and erection, two bays 560 feet by 80 feet=44,800 square feet each	89,600
3 and 4 Medium machining and erection, two bays 500 feet by 80 feet=25,000 square feet each	50,000

5 and 6 Light machining and unit assembly and tool room, two bays 500 feet by 40 feet—20,000 square feet each	40,000
	179,600

Stores and works offices serving heavy bay on one side and light bays and tool room on the other, not served by cranes:

	Square feet.
9 One, 320 feet by 20 feet	6,400
8 One 500 feet by 20 feet	10,000
11 and 12 Heat treatment, 125 feet by 80 feet	10,000
1 Paint shop 140 feet by 50 feet	7,000
10 Open-sided stockyard 300 feet by 80 feet	= 24,000 Sq. feet

Cranes and Bogies

Three 75 ton cranes with auxiliary hooks of 10 tons each, height under main hooks 35 feet.	
Two 50 ton cranes with 10 ton auxiliary hooks, height under hook 25 feet.	
Two 30 ton cranes with 10 ton auxiliary hooks, height under hook 25 feet.	
Two 20 ton cranes with 5 ton auxiliary hooks.	
Four 5 ton cranes, height under hook 15 feet.	
One 2 ton crane (heat treatment shop).	

One heavy bay will have a 15 feet pit which will allow 50 feet under the main hook of the 75 ton cranes.

Two 60 ton bogie cars.

Services.

Total connected load approximately 3,000 kVa

Mining Machinery Factory

The following is a summary of the proposals for a mining machinery factory.

Capacity.

Output	Double Shift
	Rs. 2.70 to Rs. 3.30 crores a year.

Scope.

Coal-cutting machines, conveyors, loading machines, shuttle cars, electric mine locomotives, pneumatic stowing machines, and spare parts.

Approximate cost.

	Rs. lakhs.
Factory buildings, complete with civil engineering work structure, cladding and services within the buildings	86
Ancillary buildings, including administration buildings, canteen, training school and weigh-bridges	31
Plant, including all cranes, machine tools, hand tools, vulnerable spares and installation costs	168
Services, including sub-station, water supply drainage, roads and railways	11
	296

Floor Area.

	Square feet.
Pattern shop, tool room and maintenance	13,000
Machine shops, including inspection and heat treatment, and saw shop	60,000
Electric motor switch shop and stores and test bed	10,000
Assembly shops and shipping area	45,000
Stores, including service stores and covered stock bay	30,000
Offices, canteen, training school and garage	52,000
	35,000
	245,000

Cranes

Eight 5 ton 40 feet span.	
Five 5 ton 60 feet span.	
One 10 ton with 3 ton auxiliary 60 feet span.	
One 20 ton with 5 ton auxiliary 60 feet span.	

Services required.

Electricity, water, etcetera
Anticipated maximum electrical load, 2,700 kVa

Export Risks Insurance Corporation

The Government has decided to set up an Export Risks Insurance Corporation, wholly owned by itself. The authorised capital will be Rs. 5

crores, 10 percent of which will be paid-up capital. The objects of the Corporation would be two-fold: (1) to remove the exporter's fear of losses resulting from circumstances which are beyond his control and which are not ordinarily accepted as insurance risks by insurance companies; and (2) to remove the importer's fear about the fulfilment of contractual obligations by the Indian exporter. The scheme will be voluntary. The Corporation will establish links with similar organisations in other countries.

Credit Facility for Burma Renewed

The Indian Government is not making any new loan to Burma but is renewing an old commitment. In October, 1955, the Government advanced a loan of Rs. 20 crores to Burma, which was repayable in seven years and carried 4 percent interest. It was a standby credit convertible into sterling and was available until 30th September, 1956. Burma, however, did not avail herself of this facility, and it has now lapsed. At the request of the Burmese Government, it is being renewed. It will be convertible into sterling and repayable in ten years, and will carry 4½ percent interest.

Credits from French Industrialists

The French Embassy in New Delhi has told the Indian Government that a number of French industrialists are willing to negotiate the supply of capital goods to this country on the terms indicated by the Government—20 percent cash down, and the balance to be paid in seven years after the plant and equipment have been received here.

Interest of Firestone in Synthetic Rubber

Firestone has entered the field for the manufacture of synthetic rubber in India. This company is one of the biggest consumers of rubber. Negotiations are proceeding.

More Sugar for Export

The Government has decided to permit the export of a further quota of 50,000 tons of sugar, having already allowed the export of 50,000 tons. Exports are made through trade channels, in this case through the Indian Sugar Mills Association. Two factors have helped them—a rise in world prices, and the refund of excise duty to exporters. In other words, foreigners get Indian sugar cheaper than do Indians.

Reorganisation of Finance Ministry

The Finance Minister has reorganised his Ministry. Mr. H. M. Patel has become Principal Secretary, and will be largely responsible for co-ordination and policy-making. Mr. B. K. Nehru, at present Joint Secretary for External Finance, succeeds Mr. Patel as the Secretary of the Economic Affairs Department. Mr. S. Ratnam, at present Financial Adviser on Defence, will succeed Mr. P. C. Bhattacharyya as Secretary of the Expenditure Department when the latter becomes Chairman of the State Bank of India. Later in the year, Mr. M. V. Rangachari, a member of the Finance Commission, will become Secretary for Internal Finance, as the Department of Economic Affairs will be bifurcated into External Finance and Internal Finance. When fully reorganised, the Finance Ministry will have a Principal Secretary, Mr. H. M. Patel, and four Secretaries, Mr. S. Ratnam for Expenditure, Mr. A. K. Roy for Revenue, Mr. B. K. Nehru for External Finance and Mr. M. V. Rangachari for Internal Finance. The Joint Secretary to the Finance Ministry, Mr. S. Jayashanker, will succeed Mr. Ratnam as Financial Adviser on Defence.

Swedish Trade Mission

The Swedish trade and goodwill mission has had a busy time in New Delhi. It has considered suggestions for collaboration with existing Indian units which would enable it to avoid creating problems of competition from foreign-owned concerns.

Several units in India, for example, are manufacturing domestic cooking stoves, which are inferior to the world-famous Primus stoves. Negotiations are in progress for Swedish-Indian collaboration to modernise the Indian stove and bring it to the level of the Primus stove, or to manufacture Primus stoves through one of the Indian units manufacturing cooking stoves. Similar negotiations are in progress for the manufacture of ball bearings. Swedish ball bearings are considered very good. Under the plan, Sweden will meet the requirements of foreign exchange, in addition to supplying equipment on a long-term credit basis.

Sweden like some other European countries, is worried about India's foreign exchange squeeze. The delegation has plans under which a change in the pattern of India's imports might make up for the recent import cuts. Another team is expected to visit India later in the year to study closely Indian products which could be exported to Sweden and help India in balancing her trade with that country. Sweden is not a tea-drinking country and her requirements come largely from Ceylon. But Indian tea blended in London is imported by her. She needs manganese ore, and can provide a market for some varieties of Indian textiles such as prints, poplins, towelling, bed-sheets and floor covering. She accords "most favoured nation" treatment to India, and her foreign trade is in the hands of well organised Indian business houses take advantage of the new facilities now offered for the expansion of their trade.

Indo-British Air Agreement

The Indo-British air agreement, a modification of which was negotiated last year, has been ratified for a period of two years.

London

LITTLE PROSPECT OF TAX RELIEF IN U.K.

SOCIAL SERVICES COST MORE

(FROM OUR LONDON CORRESPONDENT)

THE City has been having more second thoughts lately as a result of a better appreciation of the problems which still face the Government and a delayed realisation that the recent cut in Bank rate was, in fact, no more than a technical adjustment and certainly not an indication that the credit squeeze was likely to be relaxed. Indeed, it is now more generally accepted that the new Chancellor is not likely to relax the grip on domestic demand until the balance of payments looks a great deal healthier and the gold reserve has begun a convincing recovery. Budget reliefs, also, are not now regarded as being very likely, though these will depend largely on the extent to which defence expenditure can be reduced. The current Budget position has shown a further small improvement. Ordinary revenue totalled £183 million, and exceeded expenditure by £39 million. But Mr. Thorncroft's current surplus to date—£170 million—is £290 million below that budgeted for last April. At this time last year, there was a surplus of £396 million, which increased by a further £1 million to £397 million over the six final weeks of the financial year. The outlook is hardly encouraging, and since then Mr. Thorncroft has said that civil Government expenditure is to go up again by £110 million in the coming Budget year—or by £174 million compared with last April's original estimates. Most of this (£146 million) is due to the higher cost of social services, and this, in turn, is largely due to higher prices and wages. To offset part of this increase, he proposes reduced subsidies for welfare milk and school meals, and higher National Health contributions by employers and employees, to save £37 million in the first year and £57 million in a full year—and this has aroused vehement criticism and opposition, particularly in Labour circles.

So far, the Government has shown no signs of easing the burdens which, it is claimed, its economic policies are imposing. The real danger in the situation, as it has been all along, is the effect this more realistic approach to the inflationary spiral will have on wage claims. The engineers' claim for a 10 percent rise has again been rejected by the employers, while the shipbuilders' reply to a similar claim from their workers is due on 5th March. In a month's time, talks are due on the miners' application for an increase which will cost £15½ million, if granted. Many other claims are pending, and all are to be pressed with vigour.

Suez and the Trade Pattern

Detailed overseas trade figures for January help to clarify the effects of the closing of the Suez Canal and also to present a picture of the adjustments which would be called for if its elimination as a trade route became necessary in the future. It is apparent that there was some dislocation of trade with India and the Far East in the second half of November and the early part of December, especially in imports, as a result of the diversion of shipping. This was partly, if not wholly, made good in January. Imports of rubber rose from 22,000 tons in December to 30,000 tons in January. Imports of tea in January, at over 82 million lbs., were more than double those of January, 1956; in October-December. There was an increase of almost certainly as a result of the disturbance of shipping from India and the Far East. Imports all, were also at a seasonal high level in January in the case of wool, so that imports from the sterling area as a whole rose in January by 29 percent and were mainly responsible for the record total of all imports. Imports from non-sterling sources rose by only 8 percent.

In the case of oil imports from the Persian Gulf only has the Canal closure been serious, although the industry has displayed its flexibility by substituting supplies from other sources to minimise the effect. Imports of crude oil were the most affected, yet they reached 424,417,000 gallons, compared with 397,886,000 gallons in January, 1956. Imports of refined products were 108,797,000 gallons, against 124,092,000 gallons, and those of fuel oil and motor spirit were actually higher. The exports side is of petroleum products from the United Kingdom less than the £8,847,909 exported in January, 1956. Exports generally were not quite so fortunate, but the impact here was somewhat delayed and will take longer to adjust. Higher oil prices are reflected both in the export and import price indices for January. As both figures rose by one point, the exports index to 109 (1954=100), and the import index to 110, the terms of trade—the ratio of import to export prices—remained steady at 101.

Hire-Purchase under Control

The contrary swings of hire-purchase activities from month to month have given rise to some doubt about the effectiveness of the Government measures to control hire-purchase credit. That they have been very effective indeed is demonstrated by the latest figures of hire-purchase debt released by the Board of Trade. It is estimated that total debt fell in 1956 by £90 million. Repayments were in the region of £390 million while

new credit was only £300 million at the most. As a result, the total debt outstanding at the end of December was £361 million, of which £223 million was due to retailers (£127 million for furniture and £96 million for hardware, radio and electrical goods) and £138 million was due to finance houses, mostly relating to motor cars.

Apart from cars, hardware, radio and electrical goods have been most affected by the credit squeeze and other measures. Thus hire-purchase sales by shops selling all three were about 18 percent lower in the last quarter of 1956 than in the corresponding quarter of 1955. Hire-purchase sales of furniture in the last quarter of 1956 were about 9 percent below those of the same period of 1955, but independent retailers took the brunt of this fall, their credit sales being 13 percent down against a drop of only 4 percent in sales by multiple stores. Hire-purchase sales of cars fell away sharply when petrol rationing began, and a reflection of this was that advances by finance companies dropped by 25 percent between November and December. However, the January figures of car sales show a strong recovery, so that this kind of debt must now be expanding again. It is evident, just the same, that hire-purchase is particularly sensitive to governmental control, as the 20 percent cut in a year goes to show.

Trading with Burma

British trade with Burma showed a sharp drop after the war, and in the years since then it has not always been easy to trade in that market for one reason or another. The recent triangular operations under the American aid programme, however, has led to a revival of interest in the Burmese market, even though the methods by which imports are regulated are, to say the least of it, rather unusual. The India Section of the Manchester Chamber of Commerce, reporting recently on business during 1956, referred to the increasing proportion of the purchases of yarn and cloth made through the Civil Supplies Management Board, and to the formation by the Government and Burmese merchants of joint corporations for importing and distributing goods. The Board of Trade Journal now gives further details about the latter development and records that five of these joint venture corporations are being formed, the Government subscribing 52 percent of the capital of each body, and the remainder being open for public subscription in shares. Four of the corporations will handle tyres and tubes, textiles, hardware (including building materials), and foodstuffs, and the fifth will be concerned with raw materials and machinery for industry. Imports licences to the value of £1,200,000 have been issued to each of the first four corporations, the totals comprising £325,000 for textiles £450,000 for hardware, and £225,000 for foodstuff, and three of the corporations

have already called for offers. It is understood that exporters may submit offers either direct to the corporation concerned or through agents, and that contracts will be negotiated by the corporations and will be in their name. It is reported that some of this business has been under discussion in Manchester trade quarters recently.

Merger Scheme of Accountants

The Institute of Chartered Accounts appears to be overwhelmingly in favour of merging itself with the other main professional body in accountancy, the Society of Incorporated Accountants. At a meeting of the Institute, held last week in London, the voting was five to one in favour of the merger scheme. Since the scheme was made known about two months ago, there has been considerable opposition, mainly from chartered accountants themselves. This came to a head at the meeting. The main objection to the merger has been the allegation that the Institute would be lowering its standards by admitting accountants who have not been "articled" and who have taken only the Society's examination. It is said that this would not only let the public down but would also be a breach of faith with clerks at present articled.

Insurers Discuss Atomic Risks

Representatives from 12 European countries met last week in London to discuss the insurance of atomic risks. The British Insurance Association's Atomic Energy Committee, comprising representatives of the insurance companies and Lloyds, sponsored the conference. The Association explained that the insurance of nuclear reactors already planned would involve such high sums for material damage and third-party risks that they would strain the capacity of the insurance market of any one country. The situation called for collaboration between the insurance and reinsurance markets of the world. Although it was not the purpose of the conference to reach definite conclusions, it is understood the results were satisfactory. There are good hopes that sufficient understanding has been reached to ensure that atomic insurances will be handled by all the companies represented, in a reasonably uniform way. It will be remembered that the Association announced last May that, on the assumption that the cost of building a nuclear power station was £20 million, the material damage insurance would be well within the capacity of the British insurance market. Liability risk, however, posed problems for insurers which have yet to be solved.

Research on Cotton and Rayon

After discussions covering a period of two years, the Councils of the British Cotton Industry Research Association and the British Rayon Research Association have agreed to co-operate in all branches of research where possible.

"Where now the city stands,
there was once naught but the city's site." OVID

It was eight centuries before the birth of Rome. On the banks of the Jamuna, where the Purana Qila stands, the Aryans built the ancient city of Indraprastha, with their bare hands and primitive tools. Over the centuries, from amidst the brick and mortar ruins of ancient glory, has arisen a city of modern splendour woven round a framework of STEEL—thousands of tons of it.

"...and a bonus of goodwill to the management
—for installing the

'Tushar' WATER COOLER!"

QUICK DIVIDENDS in improved staff relations — and greater efficiency! That's what investment in a TUSHAR Water Cooler brings you.

The TUSHAR provides a constant supply of cool, hygienic drinking water for your staff and clients. It's easy to operate and most economical to run. Why not get in touch with Voltas Limited, and order a TUSHAR now?

With the TUSHAR you get

- A continuous supply of instantly-cooled water at the touch of a button — no unhygienic refilling or storing.
- A choice of two handsome models.
- Ease of installation.
- Economical to run.

'Tushar'
WATER COOLERS

A modern must for factories, offices, schools, hotels, hospitals and colleges

TEA CONSUMPTION IN CANADA INCREASES

PROMOTIONAL ACTIVITIES OF COUNCIL

DURING the first six months of 1956, tea consumption in Canada increased by 11.3 percent, according to the second annual report of the tea council of Canada. The Council's Tea Sales Index, which is based on the contributions of contributing packers, indicates that a low point in sales was reached in the summer of 1955. This drop in sales coincided with a sharp increase in the price of tea. When prices dropped again there was a gradual improvement in sales which accelerated during the early months of 1956. This had the effect of reversing, at least temporarily, the sharp downward trend in sales which took place a year ago. The task the Tea Council has set itself is to help maintain and ultimately increase the per capita consumption of tea in the country. To keep pace with Canada's rapidly expanding population tea sales must increase by something like 2.5 percent a year.

The beverage industry there is highly competitive, and tea's position cannot be said to be strengthening. Moreover, the industry's advertising and promotion activities in the United States overflow and influence the market in Canada. Since October, 1954, when Tea Council of Canada's advertising first appeared, television has remained its main advertising medium. The growth of television audiences has been spectacular. When the Tea Council first began its campaign, there were, it was estimated, 1,027,000 T.V. sets in use in Canada; by June, 1956, the number of T.V. sets had doubled to an estimated 2,100,000. Almost all T.V. homes, which comprise approximately 50 percent of all Canadian households, are reached by the Council's messages because it obtains blanket coverage by using good times over almost every station in operation. But inevitably, the larger audience justifies the charging of higher rates by the stations. So far it has been able to maintain its programme in spite of rate increases, but it is by no means certain that with the growth of the television audience this situation can continue indefinitely. Newspapers, originally occupying second place in Tea Council's campaign, were gradually replaced during this second year of the Council's operation by magazine and week-end papers. It became increasingly plain during the development of the 1955-1956 campaign that the more subtle and atmospheric type of messages which the Tea Council wished to use could be better conveyed by magazines and week-end papers which have more of a glamorous appeal than have newspapers.

Preliminary Research

During the latter six months of 1955, preliminary research was conducted by the Motivation Research Centre, Montreal, on consumer attitudes to tea. This type of research seemed likely to uncover factors which would be of value to the industry and the Tea Council authorised a full-scale research programme to be undertaken during the early part of 1956. Based on the findings of the preliminary research, an altogether new type

of campaign appeared in newspapers and in *McLean's Magazine* during January, February, and March, 1956. The research had suggested that the economy theme was not an appeal of great interest to a prosperous public and that the slogan "Relax with tea", which had been used since the inception of Tea Council of Canada, although containing a valuable idea, might be misunderstood. A new slogan, "What a pick-up! Yet it relaxes....that's the magic of tea" was subsequently approved. The new slogan, further testing showed, conveys the paradoxical but valuable idea (which had been amply substantiated medically) that tea is an excellent beverage in the mild states of both tension and fatigue which are the common lot in the modern way of life. At the same time, it steers clear of any association with illness, and, in the phrase "that's the magic of tea" gives the idea of tea being something special and out of the ordinary.

Motivation Research

The full report on the motivation research into consumer attitudes to tea was received in March, 1956. Its findings were extensive but may perhaps be summarised briefly. Tea is associated with the old fashioned, the feminine, with not being grown-up and a variety of similar concepts which militate against its acceptance in Canada, particularly by younger age groups—the most important potential market. A variety of competitive beverages enjoy the opposite, and favourable, connotations. It was recommended that future campaigns should aim at surrounding tea with a new, modern atmosphere. One method of achieving this would be through giving greater emphasis to iced tea—a beverage perceived by the public as more glamorous than hot tea. The motivation study also confirmed that there is a real need for education in the basic principles of tea-making but that direct, dogmatic instructions are not well received by the public.

Cups to the Pound Survey

A major piece of research was undertaken during the year by the Tea Council in co-operation with the Canadian Association of Consumers. The object was to discover the number of cups the average housewife is obtaining from a pound of tea or 120 two-cup tea bags, a quantity which had not previously been established by research. The principal finding of this study is that from both packaged tea and tea bags, the housewife is obtaining considerably more cups than had been supposed. It is clear that many tea drinkers consume a brew which is too weak for full enjoyment. Even without an increase in cuppage the drinking of stronger tea would result in a direct increase in the consumption of leaf. In addition, a more flavoury beverage should encourage the occasional tea drinker to drink tea more often.

COFFEE EXPORT QUOTA RAISED

The 1956-57 coffee crop is estimated at 37,800 tons. After providing for consumption in the internal market during 1957 and for a suitable carry-over for 1958, the Government of India has decided to allocate 11,050 tons for export out of the current year's crop. An export allocation of 7,900 tons was announced earlier, and an additional quantity of 3,150 tons of coffee is now made available.

TEA PRICE FALL IN LONDON AUCTIONS CHECKED

THE recent big fall in tea prices at the London auctions has been arrested. Low-price descriptions, in particular, were inclined to harden further and Plain Broken Pekoe was finally indicated at 49½d a lb. compared with 49d in the previous week. Some better qualities recorded declines again though this, it was reported, was mainly because of a continued fall in quality. The trade advanced a number of reasons for the generally stiffer tone of the market. The action of the Sales Regulation Committee in spreading available supplies over a long period undoubtedly did much to check a fall, say trade quarters. They also feel that prices might in any case have tended to react after such a sharp drop as 1s a lb. There seems to be a growing recognition that the surplus between world production and consumption may not be as big as hitherto anticipated. Some quarters reckon that the excess of production over consumption may not now be more than 10 million lbs. Consumption in the U.K. is said to have been very well maintained, while in India it still shows signs of steady expansion.

COCHIN TEA SALES

At Dust Sale E, 340,000 lbs of tea were on offer. There was a strong demand, particularly for Medium sorts which were ½ to 1 anna dearer.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing prices on 15-2-57 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.41	1.41
No. 2	1.38	1.38
No. 3	1.35	1.35
No. 4	1.11	1.11
No. 5	1.06	1.06
	Sheet cuttings 1	1.00
	Sheet cuttings 2	0.95
Crepe:		
Water White	—	—
R.M.A. No. IX	1.10/12	1.11
R.M.A. No. 1	1.04/08	1.07
	Crepe No. 2	0.98½
	Crepe No. 3	0.92½
Scrap Crepe:		
Sc. Crepe No. 1	.89 Nom.	.87½
Sc. Crepe No. 2	.85/88	.83½
Sc. Crepe No. 3	.73/83	.75½
Flat Bark	.65/68	.65½
	Sc. Crepe 3X	.80

To arrive at f.o.b. Colombo prices, add 53.53 cents a lb. for crepe other than scrap crepe and 31.53 cents for scrap crepe to the above market prices.

Jute

PROSPECTS FOR THE NEW CROPS IN INDIA AND PAKISTAN

SOWINGS MAY BE LESS THAN LAST YEAR

IT is rather soon to talk of prospects for the next raw jute crop, but sowing time in the early districts is close at hand and weather conditions have been favourable. There are many variations of the Bengali proverb about rain in the month of *Magh*, but the burden of them all is that it is good for *rajah*, man and beast. There was only a little rain towards the end of *Magh*, but with it a beginning could be made with ploughing in many districts. The present showers may be taken as the *Magh* rains, late by about a fortnight, and, from the peasants' point of view, they are just as welcome in *Falgun*. These gentle showers are also better than a heavy downpour, for the water gets a chance to sink into the ground and make it arable. During a downpour, it falls suddenly on baked earth, rushes into the ditches and gets carried away.

Sowing of the *churs* and riparian lands in the deltaic areas of Jessore, Khulna, Faridpur and so on will commence soon, these being the earliest starters in Pakistan. At one time, the first sowings were of mesta in the Madaripur area, and mesta harvesting used to start by the beginning of May. But the Pakistani Government has prohibited the growing of mesta, so jute will have to be sown. This makes one wonder whether an early mesta crop could be grown on similar lands on this side of the border. It would be an advantage to the jute industry if it had supplies of new crop mesta coming forward at the end of May or the beginning of June, and the ryots would have time to get an *aman* paddy crop off the same ground.

Enquiries about the probable extent of sowings indicate that in both India and Pakistan they may be less than in 1956. The reason given is that paddy prices are high, especially in Pakistan. It is also expected that fairly big stocks of jute will be left in the hands of growers in that country, because despatches overseas and to India are lagging behind those of last season. Stocks in the hands of balers and dealers are large and much capital is blocked, thus restricting buying power. Restrictions in jute-growing in Pakistan have been removed. The licence fee of Re. 1 an acre has also been abolished but it remains to be seen if these measures will offset the high price of paddy.

Position in India

In India, the position is very different. It is unlikely that there will be any carry-over worth talking about, and if there is, it will mostly be mesta. Scarcity of white jute, tossa and daissee is already making itself felt. There is now a difference of Rs. 5 a maund between the price of mesta and that of white jute, and of Rs. 8 a maund between mesta and daissee jute. One would expect that the prices obtainable for tossa and daissee would assure the sowing of a bigger crop of these fibres, but it is pointed out that paddy prices are rising and may offset any inclination to increase jute and tossa sowings. Besides, the present low price of mesta may discourage the cultivation of that fibre, though it is cheaper to grow because it needs less attention and has a heavy yield in suitable areas. Another factor which may affect the extent of sowings is the fall in prices which has taken place recently. It is well known that, in spite of the good prices obtained during the season, growers are much influenced by prices at sowing time. They take these as an indication of the prices they may expect to get for their new crop, while the prices they obtained for the previous crop are looked on as something of the past.

Altogether, then, the prospects for increased sowings do not appear to be very bright, but there is no reason for pessimism, especially if the Government's propaganda is thorough. Reports will come soon of *chur* land and *berm* land sowing. Normally these are good, because the soil is moist and does not need much rain, but it would be wrong to judge the probable extent of sowings by what is done on these lands, for there is little else the ryots can grow there.

THE JUTE MARKETS

Manufactured Goods: Selling pressure by bears and liquidation by bulls continued to depress the market in the early part of the past week. The fall was halted, however, when those who control the fatka markets decided that operators must make deposits with the committee if they sold either B Twills or hessian below certain minima. That appears to have put the brake on reckless selling and some covering was reported. There were reports of business with shippers, but it was not possible to find out how much was fresh business and how much was business which shippers had booked earlier and kept "under the counter". The market derived some support from raw jute, in which there were substantial dealings during most of the week at prices which tended to harden. On Monday, however, an easier tendency developed and it was accentuated on Tuesday when, it is said, some mills were trying to sell for near ship-

Quotations on Wednesday morning were as under:

	February	March	April-June
	Rs.	Rs.	Rs.
40in. 8oz.	33-4	33	32-8
40in. 10oz.	40-8	40-7	40-6
B Twills	107-12	108-1	109
Heavy Cees	112-5	109-12	109
A Twills	133	133	131-8
Liverpools	127	126	125
Cornsacks	110-8	111	110-8

Raw Jute: There has been steady buying by mills during most of the week, but activity slackened on Monday and Tuesday. Prices tended to harden and sellers were becoming more reserved in their offerings, but then the gunny market became weak and mills withdrew from the jute market. Sellers are not, however, inclined to reduce prices because they have sold enough recently to relieve the nervousness which has prevailed in the past week or two. They are also finding some resistance in the mofussil areas to lower prices and imports are decreasing. Business was reported in Daissee mesta at Rs. 23-8 to Rs. 24-8, Murshidabad mesta at Rs. 23 to Rs. 23-8, Purnea Desal mesta at Rs. 23 to Rs. 23-8, Jungli mesta at Rs. 21-8 to Rs. 23, Northern, Assam and Agartala mesta at Rs. 24 to Rs. 24-8, Northern, Kishanganj and Assam jute at Rs. 28-4 to Rs. 28-8, Purnea Desal jute at Rs. 27, Assam and Agartala jute at Rs. 28, Murshidabad Tossa at Rs. 30 to Rs. 30-8, Northern Middles at Rs. 30-8, Daissee and Tossa Middles at Rs. 33, Daissee jute at Rs. 30-8 to Rs. 31-8, and Daissee Middles alone at Rs. 34. Pakistani N.C.'s were done at Rs. 100 to Rs. 106 a bale. Except where otherwise stated, these quotations were for Bottoms in assortments.

Arrivals in Cossipore were only 389 wagons, the lowest for a long time, but in the absence of

much buying by mills, stocks again increased. There was a good deal of buying by dealers covering against previous sales to mills.

Quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms.	Shipment.
Northern	28	March-April
Assam	28	"
Murshidabad Tossa	30	"
Daissee Jute	31	One Month
Daissee Mesta	24	"
Murshidabad Mesta	23-8	March-April
Northern Mesta	24	"
Jungli Mesta	23	"
Northern ex Cossipore	27-8	One Month
Local Packing	26	"
Bimli	23 F.A.Q.	"

Mofussil: Prices are steady and buyers report difficulty in replacing jute sold in Calcutta. Imports are small and stockists are reported to be holding back because of the poor prices offered from Calcutta. More rain has fallen and ploughing is general.

THE PAKISTANI JUTE MARKETS

SMALL ARRIVALS AND BALER COVERING LIFT PRICES

(FROM A CORRESPONDENT)

MAINLY due to covering business by one or two of the larger balers, aided by extremely small imports, the Narayanganj market has steadied somewhat. Loose jute, when available, is unobtainable below Rs. 28 for B Bottoms, Rs. 26 for C Bottoms and Rs. 24-8 for X Bottoms. District Tossa, which is very scarce, is nominally quoted at Rs. 31-8 for Bottoms, 100 percent Dundee 2/3, Rs. 28-8 for Dundee 4, C Bottoms, Rs. 27 and Rs. 25 for Outport assortment and X Bottoms. Jat Tossa is quoted about 8 annas higher, but it appears that the Dacca crop of Tossa has been very small and this shortage is reflected in both pucca bale and overseas prices. The small lots of loose jute which are available are finding ready buyers, even though the moisture content has once again reached an unpleasantly high level. Fortunately, there is a certain amount of Northern jute available in the market in the form of mofussil kutcha bales.

oil comes to Visakhapatnam

Dredging operations now allow Visakhapatnam harbour's new oil berths to receive large ocean-going tankers. The first tanker carrying crude oil for the new Caltex Refinery arrived in February 1957, and pumps carried the oil through a mile-long pipeline to the Refinery's storage tanks. When processing begins, the Caltex Oil Refinery, a monument to free enterprise, will supply, by land and sea, the petroleum products so essential to India's progress.

OIL is the Lifestream of Progress

CALTEX PETROLEUM PRODUCTS

Upcountry sellers are not only resisting any further reduction in prices, but are showing very little interest in selling. They are at present preparing the ground and sowing. So far, conditions have been ideal, and indicate at least an early crop. It is, of course, far too early to make any kind of forecast.

Although it is quite impossible to estimate accurately the supply of jute even at this late stage in the season, there is no doubt that the equivalent of 1.5 million bales, at the very least, is still available in the market. Buying interest locally is limited to occasional bursts of short-covering. Under these conditions, it is hard to understand how upcountry sellers have been able to resist a further drop in prices. Their holding power has become an increasingly important factor and it appears that during the last two seasons they have built up financial reserves which will not weaken soon.

Comparisons of shipments and E.P.C. registrations up to the end of January indicate that by the end of February practically all outstanding sales will have been shipped, except, of course, those made during February. The shipping position is extremely difficult, and from the programmes of the shipping companies the indications are that there will not be ample freight available until after the first half of April. Overseas buyers, notably France and Dundee, have again come into the market and it seems that they will have to keep on buying unless their requirements this year are to be less than last year. It appears that some buyers are looking for a better shipping position during March because of the partial opening of the Suez Canal. Although the Canal will in all probability be navigable for many ships during March, there is still no certainty that the political obstacles will have been cleared, so that even during March and April, vessels carrying jute to Europe may have to continue to go round the Cape. If this happens there will once again be a premium for afloat unsold goods. The present indications of the overseas market are £99 for Export Firsts, £97 for Export Lightnings and £94 for Export Hearts, with a £3 premium for afloat goods. The local market in pucca bales stands a good deal higher than this, at Rs. 135 f.o.b. Narayanganj for Export Firsts, Rs. 175 for Export Lightnings and Rs. 165 for Export Hearts (that is to say, the equivalent of £103 10s, £99 and £95).

The Pakistani jute goods export trade is still being harassed by the new excise regulations, which are not fully understood even by those who are expected to enforce them. It does appear, however, that some semblance of order is appearing out of the initial chaos. The local market in goods has come down to the Karachi levels and mills are offering B Twills at Rs. 128, including excise duty but excluding sales tax, and 45in. 11oz. hessian at Rs. 56. Very little freight is expected for Karachi in the immediate future.

GUNNY SHIPMENTS DURING JANUARY

The following are the total net figures of manufactured jute goods shipped from Calcutta during the month of January, 1957 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian	Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	5,755.6	33,439.9	39,195.5	
Short Shipped	312.9	1,437.4	1,750.3	
January 1957 (Net)	5,442.7	32,002.5	37,445.2	
December 1956 (Net)	3,859.3	33,813.9	37,673.2	
November 1956 (Net)	5,430.4	41,962.5	47,392.9	
	Sacking			
Gross	29,082.3	2,297.6	31,379.9	
Short Shipped	2,046.5	26.4	2,072.9	
January 1957 (Net)	27,035.8	2,271.2	29,307.0	
December 1956 (Net)	29,766.5	1,851.9	31,618.4	
November 1956 (Net)	41,817.2	1,718.2	43,535.4	

THE FOREIGN JUTE MARKETS

FIBRE QUIET BUT STEADY

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market has remained quiet generally, but there is a very steady undertone and prices for some grades have been raised. Some shippers have been speculating in the lower qualities of white jute, such as Mill Hearts and grade Hearts, and offer to sell these much under the usual market terms. Mill Hearts are getting to be scarce, and also are grade Hearts, and those who were offering cheaply have disappeared. They probably had only a 250-bale lot to dispose of, but it provided a basis for quotation. Some time ago, Mill Hearts could be bought at £89 and grade Hearts at £85, but the rates now are £95 and £90 respectively, with Mill Firsts raised from £106 to £108 and even £110 wanted, and Mill Lightnings jumping from £95 to £98 or £100, c.i.f. U.K., March-April shipment. Dark jute has not shown much change at £100 for good marks of Daisiee-2/3 and £96 for grade, with grade Tossa-2/3 from £107 and grade fours from £98, up by £2 a ton. Several shippers are already adding 20s a ton to their terms against the rise in freight on all jute loaded on steamers sailing from 15th March. The actual increase on the basic freight rate is 21s.

It is believed that there is a shortage of jute in upcountry centres in Pakistan and imports have lately been very small. Some spinners here are still troubled with late shipments of their purchases of jute. There are actually 78,000 bales still to be shipped from Pakistani ports which

should have been moved some time ago. Even some September-October jute has not been received. The buyers, of course, can do nothing about this, as the jute has been bought at much lower rates than those ruling today, especially for white jute.

Calcutta goods have been very irregular, but weak, with sellers down to 60s 3d for 40in. 10oz. and 46s 6d for 74 oz. February, 60s 3d and 46s 3d March and 59s 6d and 45s 9d April-June. B Twills are at 164s lowest for February to June, f.o.b. Calcutta. Jute yarns and cloth here are more or less neglected at the moment, as buyers are awaiting further developments.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in January was fairly satisfactory. At an estimated 75 million yards, it was 3 million yards higher than in January of last year, and 3 million yards higher than for December, 1956. U.S. burlap stocks for January, overall, remained unchanged from December, 1956, with, however, an increase in spots and a corresponding decline in afloats. January's stocks consisted of an estimated 140 million yards spots and 127 million yards afloats, against 126 million yards and 141 million yards respectively at the end of December, 1956. Appearing below are two tables which include the January figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

U.S. Burlap Consumption (as reported to T.B.M.A.) (Million Yds.)	1957	1956	U.S. Burlap Consumption (estimated industry total) (Million Yds.)	1957	1956
Jan.	69	68	Jan.	75	72
Feb.	64	64	Feb.	68	61
Mar.	67	67	Mar.	73	69
Apr.	65	65	Apr.	69	69
May	69	69	May	73	73
June	59	59	June	62	62
July	59	59	July	61	61

U.S. BURLAP BUSINESS SLOWS DOWN

Burlap trade in New York during January 1957, was quiet, reports the *Jute Bulletin* of the Indian Central Jute Committee. Demand was on a much reduced scale and consumers were content to buy their immediate requirements only. After the heavy buying in the past three months as a result of the Middle East crisis, the slow-down of business during January did not take the market by surprise. Trade observers were of the view that the market undertone in the first quarter of 1957 would reflect the restraining influence of the over-bought position of consumers at all levels. In spite of the trade inactivity, prices for spots and afloats for practically all constructions commanded a substantial premium over early shipment prices. The single exception was 40in. 74oz. jute, continued on offer at about the same rate as, and often somewhat below, early shipment. Calcutta shipments of burlap to the U.S.A. in December showed a decline from the previous month and amounted to 72.4 million yards, which put the total for 1956 at 768.6 million yards, rise of 15.8 million yards over the shipments in 1955.

Mr. E. Parker, director, Imperial Chemical Industries (India) Private Ltd., has been elected president of the Bombay Chamber of Commerce and Industry for the year 1957-58. Mr. Parker has been connected with the Bombay organisation of the Imperial Chemical Industries since January 1945, and was appointed to the Board of the I.C.I. (India) in April, 1951. He served as a Member of the Committee of the Bombay Chamber of Commerce in 1952 and 1953 and again in 1956. He was awarded the O.B.E. in June 1954, and he has taken an active interest in several local organisations during his stay in Bombay.

LONDON INSURANCE LETTER

CAPITAL AND INCOME

By Air Mail.

THE present year was only a week or two old when the financial community in Britain convinced itself that its special monetary feature would be a reduction of interest rates. First of the big financial groups to act on this assumption was the insurance companies, which bought Government securities steadily and in considerable quantities. Their demand alone was sufficient to make a perceptible reduction of medium and longer-term interest rates, and, as the movement has since broadened its base, a welcome recovery of capital values seems to be in progress. The companies' experience last year was not comfortable. The depreciation of their huge portfolios of gilt-edged stocks was severe though not, of course, enough to cause the least anxiety. But the case for investment in ordinary shares was not strengthened by the relatively violent, and mostly downward, movements of such shares. Although faith in the stability of money is not yet restored, the companies are now inclined more to fixed-income than to equity investments. Both can benefit from a reduction of interest-rates, as such; but a reduction is permissible only if inflation is definitely ended, and without inflation ordinary shares lack much of their customary appeal.

Meanwhile, the companies are decidedly benefiting from the high rates at which they have been able to invest during the past year. The benefit accrues particularly to the non-life offices, since the interest element is not a factor in short-term business such as fire, accident and marine insurance, and the funds invested by the non-life offices are simply security for the policyholder, so that the income from these funds is, as it were, clear profit. A firm of stockbrokers circulated last month an analysis of 16 leading composite offices, emphasising the importance of investment income—primarily, of course, from the shareholder's point of view. It was well known that insurance companies did not rely on underwriting profits for payment of dividends, but it was rather surprising to be informed that, for these 16 companies, investment income alone covered dividends one and a half times last year, whereas before the war dividends were a little in excess of investment income. In the life offices the importance of this expanding source of income is increasingly recognised by policyholders, who are easily persuaded to participate in the office's prosperity.

Credit Insurance Active

Insurance against non-payment of debt developed a large turnover last year. On external account, the expansion of export trade and later the unsettled circumstances of trading combined to increase to a new peak the amount of shipments covered by policies with the Export Credits Guarantee Department. Due credit must also be given to the reduction of premium rates last April. Whatever the main cause, the increase in business was considerable, from £384 million in 1955 to £409.1 million in 1956. The domestic counterpart of E.C.G.D. is the Trade Indemnity Company—though the comparison is not exact, as Trade Indemnity is not a Government body. It appears, in advance of full figures, that the company continued last year the remarkable growth that has characterised its activities since it was formed in 1918. Even in 1955 its insured turnover was much more than double that of E.C.G.D., reaching £862 million. However, while export trade was expanding, internal trade was with difficulty holding its ground last year, and some of Trade Indemnity's policyholders were doing less business. As premiums are calculated on turnover, some, therefore, were reduced. On the other hand, financial conditions have on the whole, at least until recently, favoured new business in credit insurance. It has been argued that the credit squeeze has hastened the turnover of money, because it has forced creditors to press for prompt payment of debt. In many cases, however, it has worked the other way: because of financial stringency, debtors have been unwilling or unable to settle their accounts promptly. A new demand for insurance of these protracted credits has arisen.

New Risks

The acceleration of nuclear energy plans in recent months has broken down any reluctance that still existed in the insurance community to insure nuclear risks. This is obviously a new field of activity that will grow rapidly in the coming years and that must be insured. It is, moreover, obviously international in character. Both at home and abroad the British market is now prepared to insure privately-owned reactors and nuclear power-stations, and to do so with the minimum of formality and delay. Under the auspices of the British Insurance Association and Lloyd's, the British Insurance (Atomic Energy) Committee has been formed to provide overall cover for even such projects as power stations costing tens of millions of pounds. The British market is, not unreasonably, proud of the fact that it is able to welcome this new business without the reserve that has been noticeable in the United States. Experience could, of course, prove that the Americans' caution was wiser, but in the meantime, the British market has no intention of imposing a limit on individual claims corresponding with the limit of \$50 million which the American syndicates have fixed for any one disaster.

Engineering and Transport

THE PROBLEM OF REPLACING DAKOTAS

HIGH OPERATIONAL COSTS OF RUSSIAN PLANE

(FROM OUR NEW DELHI CORRESPONDENT)

A HIGH-POWERED committee which was recently appointed is now examining the economics of various aircraft in order to recommend a suitable replacement for *Dakotas* in the fleet of the Indian Airlines Corporation. Mr. Nilakantan is its chairman and it includes Mr. Ghatke and Mr. S. Ramamirtham. The *Fokker Friendship* is one of the aircraft being considered. The Russian aircraft *Ilyushin* is now completely ruled out, although the Union Minister for Communications, Mr. Jagjivan Ram, told Parliament some time ago that the Government had decided to buy the *Ilyushins* to replace *Dakotas*. There was hardly any reason to doubt the authenticity of his statement. But events have over-ruled the Minister. The Indian Airlines Corporation, which is still striving to manage its affairs on commercial lines, called for an examination of the economics of the Russian aircraft. A Russian team came and gave some data, on the basis of which the operational cost an hour of *Ilyushins* came to Rs. 1,000, compared with Rs. 450 an hour for *Dakotas*. On re-calculation, the Russians found that originally they had included the cost of overhaul of nine instead of one aircraft. Their revised operational cost came down to Rs. 800 an hour. The Russian report also showed that the life of an aircraft frame was 1,000 hours and that of an engine 2,000 hours with its overhaul after every 300 to 500 hours. The price of each aircraft being Rs. 30 lakhs, a minimum of six aircraft would cost Rs. 1,80,00,000 during the second plan period.

In view of this, the chairman of the Indian Airlines Corporation, Mr. Shankar Prasad, suggested a scheme of experimental purchases. Under this scheme, India was to purchase a couple of Russian aircraft on a purely experimental basis; the aircraft if they failed to come up to expectations, were to be returned after one year. The Russians insisted on an outright purchase. So the deal fell through. This, however, did not solve the problem of replacement, and the expert committee had to be appointed.

Foreign Collaboration

The future of Hindustan Aircraft Ltd. is also linked with the development of aviation, military and civil, in India. A minimum of 200 planes a year could make Hindustan Aircraft an economically self-supporting unit. A committee, however, is hardly the mechanism to serve this purpose. These committees are appointed to select an aircraft for civil or military service in India and as far as experience goes, their recommendations often become known to the interested parties prematurely with the result that technical collaboration for the local manufacture of these planes becomes difficult to obtain.

A similar committee with the Deputy Defence Minister on it, was recently appointed to recommend a single-engine aircraft for the Indian Air Force. The Indian Airlines Corporation, naturally, was not interested in this type of plane. With a preference for four-engine planes, Indian passengers are unlikely to favour one-engine planes. Meanwhile, the Indian Air Force was showing its preference for a Canadian aircraft the *DHC-3 Otter*, a single-engine general utility transport aircraft with a passenger capacity of nine to 14. It was decided to place an order for this aircraft. It was not, however, possible to secure the collaboration of its manufacturers to produce it in India.

Indo-Russian Air Talks

Indo-Russian air negotiations remain inconclusive. A Russian air mission came to India last year. As matters stand at present, there is hardly any air traffic between the two countries and an air agreement would be more advantageous to Russia than to India. Apart from traffic, there is a disparity in petrol prices; Russian petrol costs Rs. 2 a gallon against Rs. 8 a gallon in India.

Pilots for Viscounts

Thirty-six pilots are being trained for operating Viscounts in India. Their training will cost Rs 2 lakhs.

Trans-polar Flight

Two DC-7 Global Express airliners of the Scandinavian Airlines system passed each other over the North Pole on 24th February. One of the planes had taken off from Copenhagen at 10-30 (G.M.T.) and the other from Tokyo at midnight (G.M.T.) on an inaugural flight on the first polar route between Europe and the Far East. The new route across the North Pole will reduce the air distance between the two cities to 7,800 miles. It will mean a reduction of some 2,500 miles over the present route via India. Flights over the conventional routes amount to nearly 10,300 miles. The east-bound flight was scheduled to land in Copenhagen at 07-15 (G.T.M.) on 25th February, and the west-bound flight in Tokyo at 23-30 (G.T.M.) on 26th February. The latter flight will technically lose a day in crossing the international date-line.

The Copenhagen-Tokyo route will be the second transpolar passenger route sponsored by S.A.S., the airline having inaugurated the world's first service across the Arctic on 15th November, 1954. Some 20,000 passengers have made use of this 21-hour route in the first two years of its operation. The 360-mile-an-hour giant airliners will make the new

flight across the top of the world from Copenhagen to Tokyo and back in about 30 hours. According to the present programme of S.A.S., there will be two combination (tourist and first-class) flights a week in each direction. They will take off from Copenhagen on Tuesdays and Saturdays and from Tokyo on Tuesdays and Fridays.

The three Scandinavian Ambassadors have asked the U.S. State Department to consider granting S.A.S. permanent rights to operate its polar route between Scandinavia and Los Angeles. The present operation is being conducted under a temporary three-year certificate which is due to expire in November. When the temporary certificate was granted it was agreed that negotiations should be started before its expiry to determine whether a permanent certificate for the polar route would be justified.

Prospects for P.A.A. and T.W.A.

Pan American Airways and Trans World Airlines are both optimistic about traffic prospects for the polar route they are seeking to operate between the U.S. west coast and Europe. P.A.A. estimates it can carry 23,650 passengers during the first year of operation. T.W.A. counts on 29,960 trans-atlantic passengers and 6,500 additional inter-European passengers on its polar route schedules. The views of the two airlines are supported by the C.A.B. examiner who recommended that both be authorised to operate the Arctic route. His report notes that trans-atlantic travel to and from the west coast increased only by 28 percent and he says that 79,000 passengers on this route for the U.S. fiscal year 1957-58 is a "reasonable market to anticipate." The recommendation made allowance for the entry on the route of B.O.A.C. and Deutsche Lufthansa, which already have authorisations. B.O.A.C. has definite plans for polar services, but has not yet set a starting date. D.L.H. may begin services to Los Angeles or San Francisco when its gets its 1649As in October 1957, but may put the planes on the South Atlantic or other routes.

PROGRESS OF SHIPBUILDING

ACTIVITIES OF HINDUSTAN YARD

(FROM A CORRESPONDENT)

INDIA's shipbuilding industry, a key national industry in the public sector, has in the last four years of its existence made steady headway. As an entirely State-run organisation, it has certain advantages and the satisfactory progress of its working, in spite of the initial handicaps and difficulties it encountered due to the miscalculations of the French firm of consultants, *Société Anonyme des Ateliers et Chantiers de la Loire*, justifies optimism about the future of this industry. The consultants have also made amends for their miscalculations, and their high level expert, who made recommendations and gave advice which have enabled the shipyard to overcome its shortcomings and to go ahead with the development programme, both in the immediately important sphere of building ships and executing orders for them, and in the larger sphere of development of the shipyard and its efficient operation.

During 1956, the shipyard not only completed its scheduled programme of shipbuilding, but undertook additional orders which would keep it busy for most of the second plan period. An achievement, on which the shipyard can take pride is the completion during the year of the construction of the *State of Kutch*, the largest ship built there so far, in a record period of seven months. Three more ships were taken in hand during the year, one of which is a cargo-cum-passenger vessel—again the first of its kind to be built in India—and another is a vessel for the Navy. The shipyard has also been commissioned by shipowners to construct a complement of 11 more ships, of different sizes, which are expected to be completed during the remainder of the second plan.

Optimism about the smooth progress of the work is warranted by two or three factors. Of special significance is the elimination of delays and waste in planning and executing the programmes of construction and development, which has resulted from the implementation of the high-level French expert's recommendations. A strong team of nine French technicians has been drafted and the number of skilled workmen and supervisory staff has been augmented. The training of Indian technicians has simultaneously been taken in hand by deputing in the first instance, a team of nine engineers for training, in the A.C.L. shipyards, and following up their return by the deputation of another batch of four engineers and other employees of the yard for similar training. Side by side, and as a part of their agreement which now extends up to July, 1958 the French consultants have been deputing batches of their workmen to work in the shipyard and instruct the Indian workmen on the latest techniques and methods in shipbuilding. The assistance received in this form, computed up to the end of December, 1956 at 88 man-months, has the double advantage of ensuring the services of skilled workmen for construction work and of economising costs, as the French firm is responsible not only for the payments to be made to its workmen in France, but also for their allowances in India and their passage both ways.

Supervisory Personnel

For training technical and junior supervisory personnel for future employment in the yard, the establishment of a training school is contemplated. Under this scheme, trained personnel will be available not only for the immediate requirements

of the Hindustan Shipyard but also to serve as a nucleus of technical personnel for the second shipyard, which it is proposed will be started during the second plan period.

At one stage during the year under review, the construction work in the shipyard could have been stopped due to the shortage of essential raw materials like steel, but the difficulty was got over by standardising steel requirements for future ships and by placing a bulk order for about 30,000 tons of steel components with European countries and Japan. If deliveries of the material are received as scheduled they would meet the demands of the shipyard up to the middle of 1958.

The progress of development in other branches of the work, has been also satisfactory. During 1956, out of about Rs. 2 crores, sanctioned for development, Rs. 1.4 crores was received by the shipyard. A number of essential works were taken up, involving up to the end of March, 1956, an expenditure of Rs. 1.15 crores and of Rs. 1.22 crores up to the end of September. Of the development scheme taken in hand, the construction of berths No. IV and No. V were accorded priority, whose completion would contribute directly and materially to the increase in the shipyard's productive capacity. The output capacity was equal to about 2½ ships of the modern type (equal to four ships of the old type) in 1955-56 and it will be increased, as a result of these measures to about 4 ships (equal to 6 ships of the old type) of the modern type.

Dry Dock

One of the major items of the development programme is the construction of a dry dock. Preparatory planning on this Rs. 2.15-crore project has been made on the preliminary report of the consulting engineers, Messrs Rendel, Palmer and Tritton; detailed plans, specifications, the bill of quantities and other documents are expected to follow shortly. In the meantime, cement, sand, steel, etc., necessary for its construction are being stockpiled. The project is planned to be completed in 1959. It will be an important accessory to the shipyard, which will facilitate the work of cleaning and painting and other essential operations on ocean-going steamers and ships. The proposed dry dock will be 620 feet long, from inside of sill to head, 90 feet wide clear at the entrance and 24 feet deep below port datum.

An integral part of the shipbuilding work is the manufacture of machinery required for equipping ships, of which an important component is the propelling engine. The Government of India is considering a proposal to set up a factory in the public sector for the manufacture of marine diesel engines for propelling ships. The proposal, presently under the examination of an inter-departmental committee, will be finalised after considering the offers of technical collaboration received from a number of foreign firms.

It is realised that a vital and complicated industry such as shipbuilding needs advance planning for its establishment—in fact, a good deal in advance. Mr. N. R. Pillai, Secretary-General to the Union External Affairs Ministry and Chairman of the Board of Directors of Hindustan Shipyard Private Ltd., has indicated the directions in which such planning is required. The first relates to the standardisation of the specifications of the ships to be built at the yard, and the second to the need for determining this prices. Standardisation it is proposed will be achieved by limiting the types of ships to be constructed to three categories—two of which will be for ships engaged in coastal trade and the third for ships for overseas trade. By agreement with the Indian shipowning companies, this proposal is already being implemented, and four out of the eleven ships which will be employed in coastal trade and orders for which have been placed with the shipyard, answer to agreed specifications. The designs and plans for the overseas vessel, which it has been decided to standardise, are also under discussion with the shipowners and will be shortly finalised. From the standpoints of economising the costs of construction and procuring the necessary equipment and machinery for it, as well as that of formulating long-term plans for shipyard development, there is no doubt that standardisation is of great significance.

Price-Fixing Basis

The question of arriving at a satisfactory price for ships and of evolving a price-fixing policy, is a complex one. Currently, the practice is to fix prices of Indian built ships on the basis of U.K. costs of construction, but as Mr. Pillai has pointed out, "it has been extremely difficult to determine with any degree of accuracy United Kingdom parity prices" and, therefore, it will be much more difficult to determine world parity prices, which is the basis the shipowners want. The U. K. parity price has not been found to be a very satisfactory basis in any case, judging from the wide divergences between the estimates of costs received by the shipyard and those received direct by the shipowners from U.K. yards. A compromise solution suggested is that the prices of ships built in India should be fixed on the basis of either the percentage of the total cost of a ship or of the varying percentages of the different elements of the cost. This proposal has the advantage of obviating uncertainty by relating the amount payable by shipowners to actual costs instead of to hypothetical estimates. It is also advantageous

from the point of view of the shipyard because it represents the actual expenditure incurred by it.

Improved Labour Relations

On the labour front, the Hindustan Shipyard's anxieties are much less now than in the initial months, when labour troubles were somewhat frequent and idle labour was a disconcerting problem. When production commenced in right earnest, the idle labour problem was eliminated—and in fact, from April 1954, it has been practically non-existent. On the other hand, recruitment of labour—skilled, semi-skilled and unskilled—has been steadily on the increase, so that while its strength was 2,826 in October, 1954, it had increased to 3,529 in April, 1956, the average number of workmen on roll during 1955-56 worked out at 3,157. Labour-management relations have of the workers' union have been associated with also shown steady improvement, representatives of the committee which considers suggestions made by employees. The introduction of the "Cash Your Suggestions" scheme in 1954-55 has proved popular and during 1956, five workmen won prizes for making useful suggestions. Housing schemes for employees are now in hand. In the year's programmes, a scheme for constructing 355 two-roomed independent workmen's quarters, besides 44 staff quarters and four houses for senior officers, at an estimated cost of Rs. 21 lakhs was included.

Self-Sufficiency Prospect

Self-sufficiency in shipping tonnage is probably a distant prospect for India, not so much because of the financial outlay involved as because of the time consuming processes of training a sufficient number of technical and higher supervisory personnel and the acquisition by Indian technicians of the know-how of shipbuilding and of turning out the necessary machinery and equipment. For a long time—at least up to the end of the second five year plan, therefore, India will have to rely, in part at least, on foreign technical assistance and collaboration in the manufacture of ships. Yet self-sufficiency or near self-sufficiency is, however, the objective, because in the long run it is much more economical to have all the facilities for building ships within the country itself.

As a preliminary measure to building the second shipyard, the Government of India has invited a British team of experts under the Technical Assistance Scheme of the Colombo Plan to prepare a preliminary project report on the second shipyard, with special reference to its location, the cost of setting it up, the type of ships that could be constructed there and other allied matters.

CALCUTTA PORT TRUST BUDGET ESTIMATES

DEFICIT FORECAST FOR COMING YEAR

THE budget estimates for 1957-58 of the Calcutta Port Trust, together with revised estimates for 1956-57, were presented at a special meeting of the Commissioners on 25th February, 1957. The revised estimates for the financial year 1956-57 show income at Rs. 10,50,16,738, against the original estimate of Rs. 9,20,91,926, which was based on the assumption that the total cargo likely to pass through the Port during the year would be 7,570,000 tons. In the light of the actual tonnage figures available and the forecasts received about the probable trend of trade, it is estimated that there will be a net increase of 990,000 tons in traffic. The total seaborne traffic likely to be handled during the current financial year is estimated at 8,560,000 tons against the original estimate of 7,570,000 tons. The revised estimate of total expenditure, excluding the provision made for a contribution of Rs. 75 lakhs to "Capital" primarily for financing expenditure on capital works outside the five year plan and a portion of the expenditure on certain first five year plan projects falling under the Commissioners' sphere of assistance, is Rs. 9,52,34,052, or Rs. 25,16,807 more than the amount originally estimated, namely, Rs. 9,27,17,255.

According to the revised estimates, the financial year 1956-57 is expected to close after providing for a contribution of Rs. 75 lakhs to "Capital" with a surplus of Rs. 22,52,673, against a deficit of Rs. 6,25,329 foreshadowed by the original estimates. This is entirely due to the additional traffic of 990,000 tons likely to be handled during the year. It is proposed to appropriate Rs. 22,50,000 of the surplus to the Revenue Reserve Fund.

New Budget Estimates

Due to the restrictions imposed on the import of certain categories of goods, it is difficult to forecast with any degree of accuracy the probable trend of traffic during the coming year. On the basis of various assumptions, it is expected that the traffic passing through the Port during 1957-58 will amount to 8,400,000 tons and the income to Rs. 10,14,61,238. The total expenditure for the year is estimated at Rs. 10,52,58,700, and the financial year 1957-58 is expected to close with a deficit of Rs. 37,97,462 in the Revenue Account. This is mainly due to the slight fall in the volume of traffic likely to be handled during 1957-58, compared with the previous year, reduction in storage charges, provision of Rs. 70 lakhs made to meet the additional expenditure resulting from the introduction of the piece-rate scheme for labour and

some increases in expenditure under certain other heads.

The budget estimates for the year which foreshadow a deficit of Rs. 37,97,462 in the Revenue Account have been framed on a conservative basis. This is entirely due to the difficulty of correctly assessing the volume of traffic likely to be handled during the year, which will be influenced by two opposing factors, namely, (a) the curtailment of imports by the Government following the deterioration of the foreign exchange position and (b) the need for accelerating imports for the speedy execution of the projects covered by the second five year plan.

In view of the difficult budgetary position and the fact that all capital works outside the second five year plan and certain first five year plan projects falling under the Commissioners' sphere of assistance will have to be financed to the maximum extent possible out of revenue surpluses due to the difficulty of floating loans in the open market or obtaining them from the Government, it will be necessary to raise port charges for obtaining additional revenue if there is no improvement in the revenue earnings. In any event, it is only correct that the additional expenditure of about Rs. 70 lakhs a year which the Commissioners will have to incur on the implementation of the proposed datum scheme should be partly, if not wholly, covered by an appropriate increase in port charges for certain services rendered. This however is a matter to be reviewed when the datum (piece-rate) scheme for payment of wages to labour is implemented, but meanwhile, rigid austerity will have to be enforced on all items of port expenditure without impairing operational efficiency.

The budget estimates for 1957-58 have been prepared as in the last three years on an austerity basis, keeping in view the need for the speedy execution of the projects covered by the second five year plan involving large expenditure. The year opens with a credit balance of Rs. 76,50,718. The expenditure on works in progress and firm contractual commitments is estimated at Rs. 5,30,55,566. Of this amount, a sum of Rs. 4,99,56,828 is to be spent on projects covered by the second five year plan and the balance Rs. 30,98,668 on ordinary capital works. The expenditure on unsanctioned capital works is estimated at Rs. 82,50,000 including the lumpsum allotment of Rs. 10 lakhs made for this purpose. On this basis, it will be necessary for the Commissioners to borrow from Government Rs. 4,50,00,000 on a seven years' interest free basis and Rs. 1,00,00,000 on regular business terms. Provision has also been made in the capital account to raise a loan of Rs. 1,24,00,000 for repaying the outstanding debt against the 5 percent 1927-57-87 loan of Rs. 1.5 crores, one of the series of 60-year high-interest bearing loans floated during the years 1925-28 when borrowing was difficult. The capital account is expected to close with a credit balance of Rs. 17,75,652.

FOREIGN EXPERTS TO SURVEY AIR INDIA INTERNATIONAL OPERATIONS

Trans World Airlines' Regional Vice-President for the Middle and Far East, Mr. J. W. Letzkus, recently announced that two T.W.A. specialists would go to India as soon as technical details have been finalised, to conduct a survey of the operations of Air India International. Mr. Letzkus added that the survey was arranged at the request of the Indian Government under an agreement with the U.S. International Co-operation Administration. Similar assistance to airlines of other countries have been given by the U.S. aid agency. He explained that T.W.A. itself had already been offering technical assistance and advice to the airlines of the countries through which it operated such as the Saudi Arabian Airlines, Ethiopian Airlines, Italy's Liat, etcetera. Under the present agreement, two T.W.A. specialists will spend four to six months, studying operations, accounting, stores, administrative and management practices of Air India International, and will submit a report at the end of the period to Air India and the I.A.C.A., outlining proposals for future technical assistance.

INDIA PREFERS CANBERRAS TO RUSSIAN AIRCRAFT

One of the largest export orders yet received for British military aircraft has been announced by English Electric. India has placed a contract for 68 *Canberras* worth, with spares, more than £20 million for delivery to the Indian Air Force. The aircraft will be flown to their destination, at present undergoing training in the U.K. The order is made up of 54 Mark 8 bombers, 14 Air Force, eight Mark 7 photographic reconnaissance aircraft and six Mark 4 dual control trainers. Indian ground staff will be trained at English Electric's technical school in Salmesbury, at the factory and at the works of other suppliers of equipment for these aircraft.

Negotiations between the Indian Government and English Electric have been in progress for some time. *Canberras* were selected in preference to Russian *Ilyushin* aircraft and the order crowns this aircraft first flew. It has formed the backbone of the R.A.F.'s Bomber Command for five years and holds no fewer than 18 world records. These include two world altitude records in 1953 and

1955—the latter figures of 65,890 feet (20,083 metres) still stands—and two one-day double crossings of the Atlantic. One of the fastest was a Farnborough-Cyprus flight of 2,270 miles (3,653 kilometres) at an average speed of 650 m.p.h. (1,046 kilometres p.h.) in July 1954. Although designed and developed by English Electric, three other aircraft companies in Britain have built the *Canberra* as well as the parent company. It is constructed under licence for the Royal Australian Air Force in Melbourne and for the United States Air Force in Baltimore.

The American-built *Canberras* are powered by British Sapphire engines also made under licence, and possess a rotating bomb door in place of the usual bomb bay. The door, with the bombs attached on the inside, rotates through 180 degrees just before the bombs are released. *Canberras* also equip bomber squadrons of the air forces of Venezuela, Ecuador and Peru while France uses a number for special high altitude experiments at the French Air Force flight test centre. This versatile aircraft is also used as a flying test bed for turbojet and rocket engines. An impressive demonstration was staged at last year's flying display by a *Canberra* fitted with a Napier Scorpion rocket motor. It was announced recently that more than 500 *Canberras* have been built so far.

RUSSIAN REPORT ON MANUFACTURE OF COAL-MINING EQUIPMENT

THE setting up of a plant in India at an estimated cost of Rs. 132 million for the manufacture of 30,000 tons of coal-mining equipment has been recommended by the Russian team of experts which investigated the subject. The report of the team has been presented to the Ministry of Production. It refers to the organisation of, and the facilities for establishing, the plant for the manufacture of machinery, including some of the most important kinds of equipment necessary for coal-mining, such as locomotives, hoists, winches, ventilators and pumps. It points out that the plant suggested is designed to produce complete machines, though certain parts like transformers, ropes, electrical equipment and roller bearings will have to be secured from other workshops in the country.

In making its recommendations, the expert team has taken into account the requirements of the public and private sectors in fulfilling the targets of coal production for the next five, ten and 15 years, the level of mechanisation of mines and quarries for which the equipment will have to be utilised and the consideration that when set up the plant should be capable of producing all the important items of machinery required. It has been estimated that the total machinery needed will be about 170,000 tons and the annual demand about 30,000 to 33,000 tons. The capacity of the plant is designed to meet this annual demand. In preparing its report, the team had the benefit of suggestions made by the coal-mining industry and its engineering personnel. The final design for the plant was drawn up in consultation with them. The team did not make any suggestion about the location of the proposed plant but indicated the optimum requirements of the site which is selected.

NEW ROCKET TO PROBE STRATOSPHERE

A rocket designed to reach an altitude of 120 miles (193km), or about 630,000 feet (192,000m.), will soon be released at the Woomera Range in Australia. This device is 25 feet (7.6m.) long, 17½ inches (44.5cm.) in diameter and has been given the name of "Skylark." Power is provided by a "Raven" rocket motor built by Bristol Aircraft (Weston Division) in collaboration with the Royal Aircraft Establishment, Westcott. The "Raven" is 18 feet (5.5m.) long and will give a thrust of 11,500 lbs. (5,216kg.) for about half a minute. During these flights which, initially, will not exceed a height of 70 miles (112.5km.), experiments will be made to discover further information about the upper atmosphere with instruments now being constructed at several British universities under the general supervision of the Royal Society and the Royal Aircraft Establishment. Photo-electric devices will determine temperature and winds at heights of between 20 and 60 miles (32-96.5km.). "Window" (strips of tin foil) will be dropped and tracked by radar to check wind strengths. The rocket will have a jetisonable nose section containing instruments which will automatically take atmospheric readings.

The "Skylark" which is stabilised by three swept-back fins, will be fired from a 30-ton, 80 feet (24m.) long launching tower. It is hoped that the flights with special equipment provided by the British Royal Society will be made in Australia at the start of the International Geophysical Year next July.

INCREASING PRODUCTION OF TRAIN LIGHTING BATTERIES

Train lighting cells and spares, sufficient to equip 2,000 railway coaches, were produced for the Indian Government railways in 1956, at the Exide factory near Calcutta. This has meant a saving in foreign exchange of some Rs. 70,00,000 to Rs. 80,00,000, by cutting down imports. This was revealed by Mr. H. R. Gregson, Director and General Manager, Chloride and Exide Batteries (Eastern) Private Ltd., in the course of discussions at the recent All-India Exide Sales and Service Conference.

Commodity Markets

WORLD CONSUMPTION OF APPAREL FIBRES

F. A. O. STATISTICS SHOW RISING TREND

ACTIVITY in textile industries varies rather sharply between one country and another and between one period and another, and these short-term fluctuations sometimes tend to obscure the general trend. It is thus, perhaps, somewhat surprising to find that from 1952 to 1955, there was a steady growth in the world's total consumption of the principal apparel fibres and that indications so far available suggest that the expansion continued last year. There was a setback in 1952 compared with 1951, but a new high record was established in 1953, with another in 1954 and yet another in 1955. Figures collected by the F.A.O. give the world's consumption of cotton, wool, rayon and wholly synthetic fibres as 25,700 million lbs. in 1955, compared with 24,700 million lbs. in 1954. The total for 1938 was 17,700 million lbs., while that for 1956 is provisionally estimated at 26,500 million lbs.

The Monthly Bulletin of Agricultural Economics and Statistics says that a slight setback in wool gave way to recovery in 1955, when the quantity processed was closed to the peak of recent years. The steady expansion in cotton continued during 1955, while there were again relatively larger increases in rayon and the wholly synthetic fibres. Significant price reductions in wool in 1954-55 and in cotton in 1955-56 altered previous price relationships between natural and man-made fibres, and the disparity between the rates of increase of the two groups may prove to have been reduced since those changes occurred. The rising tendency of prices for rayon filament yarns in the United States and the advances in the U.K. recently may exert an important influence on the trend.

The Bulletin points out that the world's consumption of apparel fibres has grown more rapidly than world population in each of the last six years, but that there has been no increase in average consumption a head in the United States. There was some such increase in the early 1950s as a result of increased military requirements, but a continuous decline since then suggests that the region is close to saturation point. In western Europe consumption a head of the population showed signs of a similar decline until 1954. "Recently liberalised trade within the region and increased imports from without," the Bulletin says, "have no doubt resulted in more competitive prices which have stimulated consumption." Between 1952 and 1955, according to the F. A. O., the world's total consumption of apparel fibres increased by 3,700 million lbs., or 16.8 percent. The increase in the consumption of cotton was 1,700 million lbs., or 10.7 percent. The disparity between the rates of increase arose mainly because of the rapidity of the expansion in rayon and wholly synthetic fibres, as the following table shows:

TEXTILE FIBRE CONSUMPTION

(In thousand million lbs.)

	Cotton	Wool	Rayon	Synthetic Fibres
1951	16.1	2.3	4.0	0.2
1952	15.8	2.4	3.6	0.3
1953	16.6	2.6	4.1	0.3
1954	17.2	2.6	4.5	0.4
1955	17.5	2.6	5.0	0.6

Wool's share of the total has remained at about 11 percent for the last five or six years. Cotton's share, however, which was 71 percent in each year from 1950 to 1953, fell to 69 percent in 1954 and to 68 percent in 1955. In the latest year the combined share of rayon and wholly synthetic fibres was 21 percent, against 18 percent in 1953 and each of the two years before that.

WORLD COTTON CONSUMPTION LIKELY TO RISE

There have been some encouraging estimates on the raw cotton supply position from the International Cotton Advisory Committee. Partly because of controls applied by various Governments, total production in non-Communist countries this season is expected to be only 29.5 million bales, against 30.9 million bales in 1955-56. Consumption in the United States is likely to fall by 200,000 bales this season, but in the rest of the "free world" an increase of 1 million bales is forecast, so that total consumption will increase by 800,000 bales to 30.2 million bales—a new high record. There is thus reason to believe that, for the first time for some years, there will be a substantial reduction in the carry-over at the end of the season. In 1955-56 the carry-over increased by 1.5 million bales, to 22.1 million bales, but this season a decrease of 700,000 bales seems possible. On the basis of these considerations, the Committee suggests that the cotton situation is now more hopeful than it has been for many years. Production and consumption are gradually being brought to a more favourable relationship. World prices, moreover—of American-type cottons at any rate—have come down to more realistic levels, and its competition with the other textile fibres. On the other hand, wool prices are hardening again, and are appreciably higher than they were a year ago. There have been increases in the prices of continuous filament rayon yarns in many countries, but producers seem determined to keep rayon staple prices as low as possible.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939=100) declined by 0.2 percent to 426.2 during the week ended 9th February, 1957, compared with 427.2 (revised) for the earlier week. The index was higher by 1.2 percent and 13.3 percent respectively when compared with the corresponding week of the previous month and that of a year ago. A fall of 0.4 percent to 405.2 in the index for Food Articles was brought about by a decline in the prices of gur (-6%), tea for internal consumption (-5%), dal arhar and salt (-2% each) and rice in Calcutta, wheat in Hapur and bajra (-1% each), although the prices of rice in Patna (+3%) and gram and jowar (+2% each) exhibited advances. The index for Industrial Raw Materials moved down by 0.5 percent to 523.7 compared with 526.1 (revised) due to a decrease in the prices of cottonseed and lac (-6% each), linseed and castorseed (-4% each), raw jute and rapeseed (-3% each), and raw silk in Malda and groundnuts (-2% each); the prices of manganese ore (average export price) (+31%), raw cotton (+2%) and copra (+%) were, however, marked up. Prices of gingelly oil and linseed oil (-4% each), copra cake (-3%), groundnut oil (-2%) and coconut oil, zinc and copper (-1% each) went down while groundnut cake (+3%) rose, and the index for Semi-Manufactures fell by 0.1 percent to 412.5 compared with 412.9 for the previous week. A decline in the price of jute manufactures (-1%) was neutralised by an advance in the prices of chemicals (+2%) and dyestuffs (+7%) and the index for Manufactures remained stationary at 386.9. Higher prices of turmeric (+8%), cashewnuts (+3%) and betelnuts (+2%) raised the Miscellaneous group index by 0.3 percent to 592.9, compared with 591.0 (revised) for the previous week in spite of a fall in the price of tobacco leaf and black pepper (-1% each).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year Ended August, 1939 = 100)

NON-FERROUS METAL PRICES

THE year 1956 was a critical period for non-ferrous metals. The long rise in prices that started towards the end of 1953 reached its climax in the first quarter. The rest of the year was a time of retreat, relieved by a short rally over the Suez. In December prices were again on the defensive. Supplies of copper, lead and zinc were considerably greater than the demand and supplies of tin

were modestly greater. Yet while supply and demand patterns evolved similarly for each of the metals, prices behaved very differently. Copper was the most mercurial, starting the year at £397 a ton, rising to a peak of £436 in March, and ending at £267. Lead started at £118 and ended at £114 without important fluctuations. Zinc was equally stable, starting at £98 and ending at £96. Tin, true to character, had an intermediate pattern of its own, neither so volatile as copper nor so stable as lead and zinc. It started the year at £821 and ended at £766 after having had a Suez fluctuation rather greater than the others.

The British Metal Corporation has published its review of what has clearly been a most interesting year. The point that emerges most clearly is the control on prices exercised by the United States stockpile. Purchases by the stockpile were responsible for the stability of lead and zinc, and these markets will depend on further stockpile purchases if they are to maintain their stability in 1957. Copper, on the other hand, was left to its own resources, stockpiling having been a neutral factor in 1956, and the behaviour of this metal gives the most interesting clue to world industrial patterns in 1956. "The starry heights of March" were clearly a mistake of the kind often found in the closing stage of a long market rise. The point that matters is that world supplies at last overtook demand. World consumption totals were probably a little higher in 1956 than in 1955, but supply was markedly higher, having risen by 250,000 tons to 3,265,000 tons.

Stockpile Support

In assessing the future, the behaviour of the U.S. stockpile is still the key factor. A number of producers have options concluded several years ago to sell to the stockpile at 83 cents a lb. That is equivalent to £264 a ton, quite a bit above the latest London Metal Exchange price of £243 a ton. In copper the exchange is now dealing at prices well below what is likely to be the stockpile's support price when and if it decides to support this market.

RICE ACREAGE AND PRODUCTION ESTIMATE

The all-India second estimate of rice for the year 1956-57 puts the current year's area and production at 72,512,000 acres and 23,900,000 tons respectively, against the corresponding adjusted estimate of 71,886,000 acres and 23,515,000 tons for 1955-56, according to the Directorate of Economics and Statistics, Union Ministry of Agriculture. This shows an increase of 6,26,000 acres or 0.9 percent in area and 385,000 tons or 1.6 percent in production during the current year, compared with last year. The increase in acreage during the current year has been shared mainly by Uttar Pradesh and Andhra Pradesh and to a lesser extent by Madhya Pradesh, Madras and Bombay and has been generally reported to be due to favourable seasonal conditions at the time of sowing. This increase in area has been offset to some extent by the decreases reported mainly by Bihar and West Bengal due to adverse weather conditions which hampered the sowing of the crop in the States. The increase in production has been reported mainly by Bihar, Assam, Madras, Mysore and Orissa and has been reported to be due largely to favourable climatic conditions during the growing period of the crop. The increase is particularly marked in the case of Bihar. This increase in production has been offset to a large extent by the decreases reported in West Bengal, Madhya Pradesh, Uttar Pradesh and Andhra Pradesh, where the crop was affected by unfavourable climatic conditions particularly during the period of growth. Production estimates for Madras are based on the results of random sample crop-cutting surveys adjusted to accord with actual seasonal conditions during the current year, while, in the case of Assam, West Bengal, and U. P., they are based purely on the results of random sample crop-cutting surveys. This estimate generally covers the period up to the beginning of December 1956. Till then the condition of the crop was reported to be generally satisfactory except in parts of Uttar Pradesh and Andhra Pradesh where the crop was affected by heavy rains and floods. The crop was also reported to have been attacked by pests and diseases in Anantapur district of Andhra Pradesh and in parts of South Arcot, Tiruchirappalli and Tanjore districts of Madras. This estimate does not take into account the area sown to summer crop of rice and as such does not cover the entire area sown to rice crop during 1956-57. Past experience shows that the area at the second estimate stage forms roughly 95 percent of the area finally reported.

PROBLEMS FACING TIN BUFFER STOCK SCHEME

By the middle of March, the International Tin Buffer Stock scheme is scheduled to become a going concern, for all the members' contributions are due to be in by 15th March. With the price of tin at £770 a ton, however, it is not surprising that all the contributions have been made in cash, for any tin handed over had to be valued at £640. Thus the Buffer Pool starts its life with all cash and no tin. The question which is exercising the metal markets, therefore, is whether in these circumstances the scheme can function. The Buffer Pool aims at price stability. It must buy when the price is between £640 and £720 and is obliged to sell between £800 and £880. In between the top buying price and the bottom selling price, there is a neutral zone in which the Pool does not operate. The present tin price is in the neutral zone and the Pool's manager, Mr.

ting on £9 million in cash, can, it seems, only operate if the price falls, for if it goes up he has no metal to sell. It looks, therefore, like a Buffer which can only operate to raise prices. As is usual in these schemes, the consumer is the forgotten man. But there is one hope for him. The American Government's so-called strategic stockpile of tin is now around 375,000 tons and worth about £300 million. It represents about six years' American consumption. A 5 percent release from the U.S. stockpile could make the Buffer Pool look pretty helpless.

ESTIMATED INCREASE IN SUGAR PRODUCTION

The all-India first estimate of sugar produced directly from cane in vacuum pan factories puts the current season's production at 1,938,000 tons, against the actual production of 1,862,000 tons during the previous season, according to the Directorate of Economics and Statistics, Union Ministry of Agriculture. This shows an increase of 76,000 tons or about 4 percent in production during the current year, compared with last. The increase in sugar production has been shared mainly by U.P. (51,000 tons) and Bombay (23,000 tons).

MORE AREA UNDER WHEAT AND BARLEY

The all-India first estimate of rabi cereals (wheat and barley), for 1956-57, puts the current year's area at 38,772,000 acres, against the corresponding adjusted estimates of 36,015,000 acres for 1955-56, according to the Directorate of Economics and Statistics, Union Ministry of Agriculture. This shows an increase of 2,757,000 acres or 7.7 percent in area under rabi cereals during the current year compared with last year. This increase in acreage under the rabi cereals, compared with last year, has been shared by almost all the States, particularly Andhra Pradesh, Madhya Pradesh, Rajasthan and Delhi, and has been attributed generally to favourable climatic conditions at the time of sowing. The present estimates generally cover the period up to the end of December, 1956. Till then, the condition of the standing crops of rabi cereals was reported to be generally satisfactory, except in some parts of Chhindwara district in Madhya Pradesh, where the crops, it was reported, were affected to some extent by unfavourable seasonal conditions. The estimates do not cover the entire area sown to rabi cereals. Past experience has shown that the area at the first estimate stage forms roughly 90 percent of the area under wheat and 95 percent of the area under barley finally reported. The first estimate of kharif cereals for 1956-57 has already been issued. The overall position of cereals (kharif and rabi) for 1956-57 at the first estimate stage now indicates an increase of 3,025,000 acres or 1.7 percent in area, compared with 1955-56. The first all-India estimate for 1956-57 relating to wheat puts the current year's area at 30,502,000 acres, against the corresponding adjusted first estimate of 27,566,000 acres for 1955-56. The first all-India barley estimate for

1956-57 puts the current year's area at 8,270,000 acres, against the corresponding adjusted first estimate of 8,259,000 acres for 1955-56.

INCREASE IN GRAM ACREAGE

The all-India first estimate of gram for 1956-57, puts the current year's area under the crop at 22,937,000 acres, against the corresponding adjusted estimate of 22,269,000 acres for 1955-56, according to the Directorate of Economics and Statistics, Union Ministry of Agriculture. This shows an increase of 668,000 acres or 3.0 percent in area during the current year, compared with last year. The increase has been shared mainly by Andhra Pradesh, Madhya Pradesh, Punjab, West Bengal, Rajasthan and Delhi and has been attributed to favourable climatic conditions at the time of sowing. However, Bihar and Uttar Pradesh have recorded decreases in area due to adverse weather conditions at the time of sowing. This estimate generally covers the period up to the beginning of January, 1957. Till then, the condition of the crop was generally reported to be satisfactory except in some parts of Muzaffarpur district of Bihar, where the crop, it was reported, has been affected to some extent by unfavourable seasonal conditions. This estimate does not cover the entire area sown to the crop during the year. Past experience has shown that the area at the first estimate stage forms roughly 95 percent of the area finally reported.

the detection of the threat of disease in time

X-Rays are an indispensable adjunct to modern medical practice. With the help of X-Rays the presence of disease or illness is detected, its nature and extent assessed instantly and exactly. Treatment then becomes more definite and direct, cure more certain and rapid.

Today the eyes of X-Ray watch over the health of the nation. They probe and seek for signs of illness and infection, give warning to doctors to mobilise the means of meeting and overcoming the threat of disease as it appears.

Philips take pride in the fact that many of Philips X-Ray units are helping to cope with this great task in many parts of India. These units, already installed in hospitals and clinics, are giving true and valued service in the constant fight against disease and illness.

Books and Publications

EXPLORING THE MAZE

A Layman's Guide to the Indian Company Law. (Published by the Department of Company Law Administration, Finance Ministry, Government of India. 267 pages.)

The new company law has been badly in need of a layman's guide. Business men unaccustomed to legal jargon will, therefore, be grateful that at least this small mercy should be allowed after the great thud. The advantage of this book over many of its rivals lies in the auspices under which it is born; it is nice to know from the Finance Ministry which fathered the Companies Act, and from the Company Law Administration which is implementing it, what exactly they mean after the lawyers have gone on holiday. There is a useful appendix which lists the main changes that have been incorporated in the 1956 Act. One of the nobler purposes of the Act is to make company managers and proprietors less secretive; perhaps similar legislation could be introduced for official book publishers, for in this case there has evidently been some reluctance to state the price. It is a fair guess, however, that the Layman's Guide will be worth the money, especially if it can be charged to business expenses.

Practical Guide to Company Law. By A. K. Sur. (Published by the author, from 7 Lyons Range, Calcutta. Price Rs. 2.)

Mr. Sur explains the salient features of the Indian Companies Act in a booklet of about 100 pages. The important principles of company law have been clearly discussed with reference to case laws. The publication is likely to prove useful as a practical guide in dealing with subjects relating to limited companies.

RECENT ANNUALS

The Eastern Economist Annual Number, 1956. Edited by E. P. W. da Costa. Published by the Eastern Economist Ltd., 52, Queensway, New Delhi. (Price Rs. 7-8. Pages 163).

The Eastern Economist annual number, as its sub-title says, attempts to forecast India's political and economic evolution over the next 20 years. The inspiration for this has come from the report of the U.S. Materials Policy Commission. Its methods of forecasting the future supply of raw materials for the free world over the next few decades have been used to forecast the possible rate of India's economic growth. The data which have been used are basically the Planning Commission's, and the editor is frank enough to say in the preface: "This is not an exercise in astrology, nor indeed is it even an attempt to attract attention by journalistic daring. For one thing, the economic pattern of India in 1955 has already been set out in its bold overall co-ordinates in the official second five year plan. The Eastern Economist has had only to clothe with some substantial, though sober, detail the bare skeleton which the Planning Commission has set before the country. If there is astrology or daring in these overall figures, they belong to the Planning Commission."

The Number has been divided into three parts: (a) a political prologue, (b) an economic review and (c) "the changing challenge." The contents of the second part are substantially as follows. India's national per capita income will rise to Rs. 546 from Rs. 250 in 1949, an aggregate increase of 118.4 percent over a period of 25 years, which figure is higher than that of the 11 countries the journal's research section has studied; those countries include the U.S.A., Canada, Western Germany, Japan and Soviet Russia. The population will rise to 493 million. The figures relating to industrial and agricultural production and the value of services produced corresponding to this increased income, the rates of investment and savings required and the likely balance of payments have been worked out. The trends in the output and consumption of steel and power—barometers of industrial progress—over the period under study has been discussed at some length. The prospects of the jute and cotton textile industries, because of their obvious importance to the country's economy, have been similarly dealt with. The cynical may be inclined to question some of the assumptions, but the chief merit of this publication is that it starts an intellectual hare for others to chase and arrive at their own findings. Part C provides an intelligent discussion of the philosophical and cultural values as they may be affected by a programme of increasing industrialisation. Part A discusses the future of democracy in India as a great power.

Commerce, 1956 Annual Number. Edited by S. V. Rayan. Published by Commerce (1935) Ltd. (Price Rs. 7-8. Pages 216).

The Commerce annual number maintains its usually good standards by providing reviews of the activities of India's various markets, of its industry, of the trend of commodity prices and the cost of living—in brief, of the principal features of the country's economic activity. Besides, the added attraction this year is a large number of feature articles which cover a wide range, among the authors being Mr. A. D. Shroff who discusses the prospects of free enterprise and democracy in India,

Mr. Tulsidas Kilachand who deals with India's economic philosophy, Dr. V. K. R. V. Rao who writes on the rôle of private enterprise in the second five year plan, Professor B. R. Shenoy who stresses the indispensable need for foreign aid, and Mr. Asoka Chanda, Comptroller and Auditor-General of India, who writes on the functions of his own office.

COAL WASHING

Indian Mining Journal Special Number on Coal Washing in India. Edited by H. Ghosal. Published by P. K. Menon, 6/2, Madan Street, Calcutta. (Price Rs. 5. Pages 106).

The journal's special number contains papers read at a symposium on coal washing which the Fuel Research Institute organised in September, 1953. It has contributions on different aspects of this vitally important problem by men who are experts in the field. Judging from the increased interest now being shown in the washing of coal for India's metallurgical, especially steel, industry, the publication should attract considerable interest.

HIRAKUD PROJECT

Indian Journal of Power and River Valley Development—Hirakud Project Number. Edited by K. K. Sinha. Published by P. K. Menon, 6/2, Madan Street, Calcutta. (Price Rs. 6. Pages 142).

The Hirakud dam, which is the longest of its kind in the world, was recently inaugurated by the Prime Minister, Mr. Nehru. The project, which, it is generally assumed, holds out the prospect of changing the economic face of Orissa in the next few decades, has taken years of sustained endeavour on the part of several Indian engineers and workers, not to speak of the huge financial outlay that has been involved. So it is proper that the story of this enterprise should be told in the way the publishers of this journal have done.

NON-FERROUS METALS

The Eastern Metals Review. Edited by M. C. Gandhi. Published by K. C. Basu, 38 Strand Road, Calcutta. (Price Rs. 5. Pages 158).

The Eastern Metals Review which is a trade journal for the non-ferrous metals industry and trade provides a competent annual review of the metal markets in India and abroad, backed by a comprehensive range of statistical intelligence. There are also some articles on coal and steel and some purely technical ones on different aspects of metallurgy. The contributions which will be read with particular interest include those of Dr. D. N. Wadia, Geological Adviser to the Government of India, Department of Atomic Energy, Raw Materials Division, on India's potential in strategic and critical metals, of an anonymous author on the schemes for development of non-ferrous metals in India, of Dr. D. Swarup on some aspects of metallurgical development under the second plan and of Mr. L. H. Taring on metal market trends in 1956 and the prospects for 1957.

ECONOMIC MISCELLANY

Essays in Applied Economics. By Nabagopal Das. (Published by A. Mukherjee and Co. Private Ltd., Calcutta 12. Price Rs. 4.)

Dr. Das is an administrator and economist who has already written a number of studies of Indian economic problems. In this book, he explains to the general reader, in lucid language, many of the current theories and their practical effects. It is a welcome change from the works of ill-paid college lecturers who try to satisfy the examination requirements of under-graduates by writing on all sorts of topics ranging from co-existence to capital formation. There is no evidence of the passion for hair-splitting and circumlocution often found among professors who have acquired a smattering of economic jargon and terminology, which makes easy reading or correct understanding impossible. This book presents a fair amount of information in a readable manner. There are about 20 essays in it, covering a wide range of subjects such as American capitalism, Adam Smith, budgets and small-scale industries. In the last of these, Dr. Das criticises attempts to "make a fetish of stressing the advantages of labour-intensive methods of production in our country." This book will be useful for the general reader as well as for the student who may be preparing for a competitive examination.

Calcutta Markets

STRONG DEMAND AT TEA EXPORT SALE

GOOD SUPPORT FOR DUSTS

AT Sale No. 35, held on 25th and 26th February, offerings at the Export auction were 61,500 packages for which there was a strong and active demand. Broken grades received more support than Fannings and clean commons and low medium teas were generally 1 anna and sometimes up to 2 annas dearer. Any teas with bright liquors were well supported at 1 to 2 annas above last rates, while "teas for price" were also a strong feature being up to 2 annas dearer. Stylish and well-made whole leaf grades and the better B.P.S. grades were keenly competed for, but the poorer grades in these categories were easier. Medium Assam teas with declining quality were a weak feature and sold up to 2 annas below valuations. The cheaper C.T.C. teas sold well, but the best were again 2 annas easier and many of this type were withdrawn without a bid.

Quotations		1957	1956
		Rs.	Rs.
Clean Black Pekoe	2 2 0 to 2 3 0	1 13 0 to 1 14 0	
Plain B.P.	1 14 0	1 4 0 to 1 4 6	
Medium Assam B.P.	1 15 0 to 1 15 6	1 7 0	
Best C.T.C. Assam B.P.	2 6 0 (Nem.)	2 5 0 to 2 6 0	

At the Internal Sale, Dust offerings consisted of 17,000 chests for which there was a good demand, although prices for the majority of teas showed a decline. The few lines of bright liquoring C.T.C. Assams with improving quality were the strongest feature of the Sale, and these were keenly competed for at prices which were often as much as 3 annas to 4 annas above valuations. The remaining C.T.C. teas, however, again tended to be easier. Once again powdery kinds were more popular than

the leafy types and Commons, Dooars and orthodox Assams opened irregularly easier but eased further as the Sale progressed and at the close were up to 1½ annas lower.

Quotations		1957	1956
		Rs.	Rs.
Medium Dooars Dust	1 12 0	1 7 0 to 1 8 0	
Medium Assam Grainy			
Dust	1 12 6 to 1 13 0	1 8 6 to 1 9 0	
Medium Assam C.T.C.			
Dust	2 1 0 to 2 3 0		
Best Assam C.T.C. Dust	2 10 0 to 2 12 0	2 8 0 to 2 11 0	

Other grades offered consisted of 2,049 chests for which there was a good demand and the majority of the offerings were dearer by 1 anna and sometimes more.

COAL RATES FALL IN FREIGHT MARKETS

IN the freight markets, considerable weakness has developed in the Atlantic trades and coal rates have slumped as much as 10s a ton. Coal fixtures were arranged from Hampton Roads to the Continent at 89s, with charterers indicating 87s 6d for single voyages, while consecutive voyages were fixed from May to December at 86s 9d. A large number of cargoes were arranged from the north Pacific to India, particularly Bombay, at rates ranging from 210s for March loading down to 197s 6d for May, for grain. A fixture from Calcutta to Japan for coal was reported at 135s l.i.o. April loading and ore was done from Visakhapatnam to Northern Range at \$ (U.S.) 21 via Suez and \$ (U.S.) 24 via Cape for June readiness. Time charter rates eased slightly in sympathy with the general trend, with a Liberty ship accepting 52s 6d for the trip out to Indonesia with delivery Continent, against 57s 3d paid for similar business recently. The only firm spot in the market was for business from India eastwards, these rates not having risen to the same

extent as the Atlantic rates at the height of the recent boom.

SUGAR MARKET STEADY

During the week ended 27th February, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals a day were 2,500 bags and stocks totalled 100,000 bags. Rates for ready sugar ex-Kantapurkur delivery, were Rs. 31-8 for ordinary grain and Rs. 33-8 for big grain. The market was steady.

LINSEED BETTER AT CLOSE

A considerable decline in prices was noted early in the past week because of the withdrawal of buyers, but the downward trend was checked towards the close following a better demand from crushers. Activity on a small scale has been recorded for near positions only. In the oil section, some enquiries from shippers at appreciably lower rates have resulted in a very small turnover as sellers have been unwilling to make offers in anticipation of higher prices. Latest quotations were as follows: February Rs. 21-6 a maund and April-May Rs. 20-10 a maund.

HIDES AND SKINS STEADY

The market ruled steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 19th February and 25th February, 1957)
Cowhides: Wet salted (Ord.) 8,600 pcs. on the basis of Annas 9-6 to Annas 10: Wet salted (Ord.) 10,600 pcs. on the basis of Rs. 7-8 to Rs. 8: Wet salted (Slaughtered) 18,700 pcs. on the basis of Rs. 12 to Rs. 21-8.

Goatskins: Wet salted (Daissee, Killed) 72,660 pcs. on the basis of Rs. 180 to Rs. 330: Rs. 280 to Rs. 310 and Rs. 365 to Rs. 375: Assam-Dinajpur-Murshidabad 54,200 pcs. on the basis of Rs. 265 to Rs. 310: Pakur-Patna 4,150 pcs. on the basis of Rs. 235 to Rs. 245: Muzafferpore-Patna 3,750 pcs. on the basis of Rs. 275 to Rs. 295.

Bazaar Stocks

(25th February, 1957)

Cowhides: Wet salted 2,96,000 pcs.
Goatskins: Wet salted (Daissee, Killed) 31,000 pcs.: Assam-Dinajpur-Murshidabad 30,000 pcs.: Muzafferpore-Patna-Pakur-Purneah-Kissenganj 1,65,500 pcs.

SHELLAC MARKET STEADY

During the week ended 26th February, the market was steady. The range of quotations was as follows:

Pure Buttonlac	Rs. 100 to 104 buyers.
Lemon No. 1 Shellac	Rs. 100 to 103-8 buyers.
	Rs. 105 done buyers.
Lemon No. 2 Shellac	Rs. 94 to 98 buyers.
	Rs. 100 done and buyers.
F. O. Std. 1 Shellac	Rs. 88 done buyers; 89-4 to 91-8 buyers.
Pure TN Shellac	Rs. 84 to 86-8 basis done and buyers; Rs. 86-8 buyers; 88 basis done buyers.
4% I.T.N. Shellac	Rs. 76 to 79 buyers.
No. 1 Kusmi Seedlac	Rs. 100 done buyers; 100, Rs. 100-8 buyers.
No. 2 " " Seedlac	Rs. 92-8, 94, 95 buyers.
Fine Bysaky Seedlac (Manbhumi)	Rs. 90 done buyers; 90 to 92 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 85-8 to 88 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 79 to 89 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 73 to 76-8 buyers.
Kireelac	Rs. 25 to 27 buyers.

Shipments during February until the 19th were 20,103 packages comprising shellac 11,670 packages, seedlac 6,730 packages, buttonlac 322 packages and others 1,381 packages.

IRON ORE DISCOVERY IN PUNJAB

A two and a half-mile long iron ore band, containing an estimated reserve of over 2 million tons in Mohendragarh of the former P.E.P.S.U. State, has been traced by the Geological Survey of India. The investigation has revealed that the iron ore bands form the backbone as well as the flanks of a low ridge running north-south in Chhapri, Antri and Beharipur areas. At the north and south ends, the bands disappear under the alluvium and sands. An analysis of the samples of this ore carried out at the Geological Survey of India laboratory showed that the ore is good enough for conversion into pig iron. The iron ore bands are massive, sometimes joined, and have almost uniform strike and dip. They stand out very prominently along the crest of the ridge or along its flanks. The report, however, says that the Chhapri-Antri-Bharipur deposit is not enough to support a steel plant. A suggestion has, therefore, been made to investigate iron ore deposits in neighbouring areas, such as Dhanota-Dhancholi in Rajasthan to find out the nature of ore and the quantities to be expected. If these ores happen to be of the same quality and of similar physical character, iron ores from all these scattered deposits may perhaps support one steel plant with the aid of power from the Bhakra Nangal project. The bands west of Chhapri are at present being worked by a private lessee. The production from February to April, 1955, was 80,000 maunds, of which 5,000 maunds were despatched to rail head. The production cost was Rs. 80 a hundred maunds and the ore was shipped to Norway and Slovakia.

COMPANY AND PUBLIC NOTICES

THE ALKALI & CHEMICAL CORPORATION OF INDIA, LTD.

NOTICE TO MEMBERS.

NOTICE IS HEREBY GIVEN that the Twentieth Ordinary General Meeting of the Members of The Alkali & Chemical Corporation of India, Ltd., will be held on Thursday, 28th March 1957, at 3-30 P.M. at the Registered Office, 34 Chowringhee, Calcutta, to transact the following business:-

- (1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th September, 1956.

LARGE ELECTRIC OVERHEAD CRANE FOR TATA STEEL WORKS

A 275-ton electric overhead crane, claimed to be the largest in Asia, has just been brought into operation at the Jamshedpur works of the Tata Iron and Steel Co. Ltd. This U.K.-built crane will lift ladles containing 250 tons of molten steel. Another crane of similar size will be set up at a later date. These cranes are being installed as part of the major expansion now under way at the Jamshedpur works to double the output to 2 million tons of steel ingots. The main trolley of this crane has a hoist with a working capacity of 275 gross tons and an auxiliary trolley with two hoists of 60 tons and 20 tons. This four-girder crane will run on a gantry span of 68 feet 9 inches. In the trials carried out by Tata Steel, the test load assembly totalled 312 gross tons.

Can your car make a split-second stop?

As a responsible motorist you know that it should be able to. An emergency may arise any moment...it comes unannounced. So play safe. Among other things, see that you have a really reliable braking system.

Wise motorists all over the world have their brakes tested regularly and have them fitted with FERODO—the brake linings that make motoring safe. FERODO Brake

Lining are made with asbestos because they have a tough job to do. In an emergency, their unfailing efficiency can prevent disaster.

There are FERODO Brake and Clutch Linings for every type of vehicle in the country—but these are only a part of the wide range of technical asbestos products which we make at AM & FM to meet the needs of Indian industry. The increasing use of asbestos is an index to India's industrial progress.

Where There's Industry There's Asbestos

AM & FM

We supply:
•FERODO• BRAKE
AND CLUTCH LININGS
•FIREFLY• ASBESTOS PRODUCTS
SPRAYED •LIMPET• ASBESTOS
•NEWALLS• INSULATION MATERIALS
•PATTINSON'S• BRAND
MAGNESIA CHEMICALS
•SINDANYO• ELECTRICAL
INSULATING BOARDS

ASBESTOS, MAGNESIA
& FRICTION MATERIALS LTD.

(TURNER & NEWALL LTD.)

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

CREDIT RESOURCES FOR INDUSTRY AND TRADE

ROLE OF THE STATE BANK IN MONETARY MANAGEMENT

THE acute shortage of finance for industry and trade has been the outstanding feature of monetary activity during the past year or so. The supply of long and medium term funds remains far behind development needs, reflecting the inadequacy of savings in an economy where investment confidence has been undermined, where new resources have been diverted mainly into sectors in which the propensity to consume is great, where prices have been rising and where taxation is heavy. A development which is assuming increasing importance is the growing stringency of short-term finance as well. As the commercial banks' recent experience shows, new measures will have to be taken to alleviate it if an expansion in commercial activity is not to be hampered. The report of the Central Board of Directors of the State Bank of India for 1956, which was presented to shareholders at the annual general meeting last Thursday, spotlights the problem but does not offer any remedies. This may not be very surprising, firstly, because the reports of officially dominated banks are not often inclined to stray from well-worn facts and figures; and secondly, because the remedies are in any case to a large extent out of the State Bank's hands, despite the important rôle it plays in the country's monetary system. Although the remedies are closely inter-related with the Government's general economic policy, it is regrettable that a major banking institution should be reluctant to comment on those aspects which affect its own prospects and working. It is open to question whether the reluctance is likely to grow or wane with the recent changes in direction and management which have followed ministerial criticisms of the two biggest, State-owned, banks in the country.

thought, and the speech of the State Bank's chairman, Mr. H. V. R. Iengar, at the annual general meeting contains some indication of what might happen. He says that the State Bank would find it "quite easy" to increase its deposit rates still further if it were "to operate flat out as a commercial institution". But it has not done so because the "larger proportion" of the deposits which could come to it in this way would be diversions from other banks rather than fresh deposits. Similarly, if a few of the better-placed commercial banks were to increase their deposit rates, they would probably only attract funds away from their rivals, without substantially increasing the total of bank deposits in the country as a whole.

This clearly suggests that if the increase in deposits has been very slow, it is due largely to factors other than the returns offered to those who put their money in the banks. In this context, the Government would do well to reflect upon what happens to money savings when prices are almost steadily rising, as they have been doing for more than a year, and when the prospect is that they will go on rising. The fall in the value of money in inflationary conditions is a major disincentive to monetary saving, and therefore to bank deposits. People are unlikely to put by a larger proportion of their earnings into the banks, even if they are offered higher interest rates, when they feel that the erosion of their original capital in real terms is likely to be greater than the returns they will get. The need to evolve hedges against inflation, such as by linking deposits to an index of price changes, deserves to be closely investigated. The main reason why it has not been seriously examined so far is probably the fear that it might bring about a substantial increase in banking costs. But it is open to question whether savers alone should be made to bear the inflationary burdens of over-ambitious economic policies.

The State Bank is expected to play an important part in attracting more resources to the banking system, this being one of the reasons given for the nationalisation of the Imperial Bank. New branches are being established, particularly in rural and semi-urban areas, with the purpose not only

LESSONS FOR THE PLANNERS

Every prospect that if economic development proceeds according to plan, the situation will become steadily more acute each year. As the economy diversifies and expands, the traditional distinction between the busy season and the slack season will disappear. On the growing requirements of trade and industry will be superimposed the seasonal requirements of agriculture, producing probably even greater embarrassment than has been experienced during the past few months.

This is a problem for which only temporary remedies have so far been considered, and with remarkably little effect. There has been talk of liberalising the bill market scheme, of re-discounting import bills with the Reserve Bank, and of speeding up Government payments to suppliers and contractors. But in almost every case, the likely result will be that the banks will have to depend more heavily on the central banking institution. This cannot be a welcome development, it implies an erosion of their intrinsic ability to raise and use resources—an erosion that will take place steadily as their inadequacy in meeting credit needs becomes more obvious. If the soundness of the banking system is to be preserved, the main attack on the problem will have to consist of measures to increase deposits, by encouraging the growth of banking habits among the population. Here the move to raise interest rates on deposits is unlikely to be as fruitful as is sometimes

THE second five year plan will be completing its first year at the end of this month. Whatever the planners might write about it in their next annual progress report, the feeling has been growing that a period of more than five years will be needed for this over-ambitious programme of work. The course of the plan has been marked by disturbing inflationary pressures from the very outset, and subsequently, a serious foreign exchange crisis has developed in a way which confirms the persistent fear of critics that not enough careful thought has gone into the calculation of resources. In fact, it is proving to be a story of miscalculation in many directions. In his presidential address at the annual general meeting of the Employers Federation of India, held in Calcutta last week, Sir Homi Mody said just this. Sir Homi believes in the great industrial future of this country. He is also broadly in agreement with the economic objectives of the second plan. But he stressed that what was being questioned was not the objectives, but the manner and method of implementing them. The real issue, he said, was whether, in the process of achieving such a position, policies were to be pursued which would strain the economy to breaking point and "whether the fundamental liberties and democratic institutions which are ours today would remain intact and inviolate."

The planners are labouring under the belief that nothing of the sort will happen, and that democra-

of attracting savings from those who have hitherto not used banks but also of making advances to them. The State Bank directors' latest report contains a broad survey of the ways in which it is proposed to provide greater facilities to co-operative institutions, and to small-scale industry and agriculture. The Bank is undoubtedly in an advantageous position, as compared with other commercial banks, to undertake this work, with its special risks and liabilities. But two important considerations need to be borne in mind. One is that in no case should there be a relaxation of standards when risks come to be accepted; the bank's responsibility to depositors, tax-payers and shareholders is greater than its responsibility to small-scale producers. The other is that great care should be taken to ensure that the facilities normally available to trade and industry are not reduced by the obligations involved in nurturing co-operatives and small industrialists and agriculturists. The progress of schemes to extend banking facilities to rural and semi-urban areas will receive close attention from other commercial banks. If, as is expected, the State Bank is to lead the way, so that others may follow, it will need to demonstrate that initiative in branch expansion can be combined with efficiency in banking practices. It is to be hoped that its experience in these new activities will be more fully, and critically, examined in later annual reports. The success achieved in promoting and diversifying another line of activity—its foreign exchange business—is a happy augury for the future.

In his speech from the chair, Mr. Iengar was at considerable pains to emphasise that the State Bank has not taken undue advantage of its position either in competition with other commercial banks, or in meeting the needs of public enterprises at the cost of private undertakings. The assertion is open to question, but the fact that it has had to be made, pinpoints the ease with which the institution could become subservient to the Government, against the interests of Indian banking in general. This is a danger which will have to be guarded against conscientiously. New Delhi's fascination with its own arbitrary wisdom has been growing at a disturbing pace recently. A new mood for experimentation is abroad; it would be unfortunate if it came to swamp the pleas for economic stability which have been made with the best strength and authority by informed banking opinion. No small part of the progress India has achieved in recent years is due to the caution which has tempered initiative in the management of her monetary affairs. It is essential that this caution be maintained in spite of the pressures which have brought about recent changes in the direction and implementation of banking policies.

tic liberties are being strengthened by the action of the State. In fact, they call it democratic planning within the framework of a mixed economy. Sir Homi's address gives some examples of how the planners' idea of a mixed economy is itself mixed up. The official Statement on Industrial Policy, as announced in April 1956, said Sir Homi, displaced the private sector from a number of industries which were its legitimate sphere of activity, but it embodied some valuable assurances which had been sought. "We had the promise of adequate assistance in fulfilling the rôle assigned to free enterprise, and we had the assurance that there would be no precipitate encroachments on the private sector of the economy." But by executive fiat, the assurances were being broken and serious encroachments had been made on trade and commerce, which were "so essentially the province of individual enterprise." Here he gave the example of the internal trade in cement and other commodities, which has been taken over without any satisfactory reason being given. On the question of assistance to private enterprise, Sir Homi made the point that the measures taken so far have had the effect of only curtailing the resources available for it. "The recent imposition of fresh taxation of an unusual character and the proposal for compulsory deposit of reserves announced by the Finance Minister have created a crisis of confidence at a moment when all available resources need to be

employed in utilising, to the fullest extent possible, the productive capacity of the country."

The private sector is responsible for one-third of the second five year plan. Most of the employment which it is hoped the plan will provide will have to be in this sector. If it is to be denied the means by which it is to launch expansion schemes, how else can it fulfil its assigned rôle? As it is, the private sector has been hard put to it to find working capital, not to speak of the risk capital which is even more difficult to raise. The other day, Mr. R. Powell, enumerated these difficulties in the course of his presidential address to the Upper India Chamber of Commerce in Kanpur, and some leading business men in Calcutta have also spoken similarly. This is a matter which, it is reported, has caused some worry to the Union Finance Minister, as indeed it must, but to ease the tightness very little has apparently been done.

Muddled thinking is responsible for many of the vagaries of the Government's labour policy. New welfare burdens are being imposed on industry, regardless of their implications for economic growth or their inevitable cost to the consumer. The I.N.T.U.C. has been agitating for a 25 percent increase in the wages of workers in many major industries, on the ground that it will "enthusiasm workers in fulfilling their onerous responsibilities in implementing the second plan and promote the interest of industrial peace." Sir Homi was unable to understand either the claim or the reasons advanced in its support. The workers have a right to expect higher wages when their productivity and the profits of industry justify it. Sir Homi conceded this readily, but added that the problem was such that it had to be "looked at from many angles and cannot be arbitrarily disposed of." It requires close study, and Sir Homi urged that the Wage Boards which have been suggested for different industries should provide adequate opportunities for both sides to present their case.

Circumstances being what they are it is on the cards that the private sector will not be able to develop significantly in the current plan. As Sir Homi pointed out, the current import restrictions on capital goods are bound to have an adverse effect on the growth of private industry. With the plan outlay increased to Rs. 5,300 crores from Rs. 4,800 crores (in the public sector), the worst in taxation is yet to come. Inflation has already restricted the scope for deficit financing, while receipts from small savings and loans and other sources of revenue "would add up to a small amount." The Finance Minister's recent supplementary Budget is a straw in the wind. Sir Homi said that "taking into account the uncovered gap of Rs. 400 crores, which cannot be bridged by any other means except by fresh impositions, the total additional taxation which may have to be resorted to would reach alarming figures." Even after implementing all the proposals of the Taxation Enquiry Commission, additional revenue of such proportions "would be impossible to secure without disrupting the entire economy," he warned. It does not seem likely at present that the warning will have much effect. But if the planners who have been neglecting the lessons of the industrialised west, do not now learn from their own experience, they might do more harm than they have done already by the thoughtlessness of their actions.

COAL IN INDUSTRIAL COSTS PLEA FOR HIGHER SELLING PRICES

THE coal industry has decided to ask the Supreme Court for a stay order in connection with the recent award of the Labour Appellate Tribunal, under which workers would have to be given further large benefits in addition to those they secured since the award of the All-India Industrial Tribunal (Colliery Disputes) last May. The increase in production costs, to which both these awards contribute, is the most pressing of the industry's problems. It would be less serious but for the fact that the selling prices for coal have now, and for many years past, been fixed by the Government at very uneconomic levels. The burden of the address delivered by Mr. R. Maulik, chairman, at the annual general meeting of the Indian Mining Association in Calcutta last Friday (a fuller version of which appears on a later page) is that unless selling prices are raised to a more reasonable figure, the expansion plans of the industry will be hampered. Mr. Maulik accepted the contention that the return to the industry should be reasonable and not extortionate. He also agreed that since coal is an essential commodity, it is necessary to check, as far as is practicable, any increase in its price. But he strongly emphasised the inter-relationship between the commodity's selling price and the industry's development. As he pointed out, there are two other basic industries—steel and cement—in which the Government accepts that the price earned

should allow for a special element which contributes to the internal resources necessary for expansion.

The state of coal shares in the stock markets indicates that collieries are likely to face serious difficulties if they try to raise money from outside. Most of their development has in the past been financed by ploughing back part of the profits, but the serious depletion of resources which has resulted from the uneconomic working of recent years is unlikely to allow development to proceed on the scale planned. The Finance Ministry's scheme to make companies deposit a large part of their reserves with the Government will prove an additional handicap. Mr. Maulik pointed out that in the coal industry the reserves represent money which has long ago been transformed into expanded block or which has been used for production activities. A categorical assurance is, therefore, sought that the new deposit regulations will not be enforced where the reserves have clearly been set aside for development work.

Mr. Maulik gave an impressive reply to the argument that an increase in coal prices would be inflationary. He pointed out that if the increase is not allowed, coal production will not expand adequately, and that will be even more inflationary. Coal is sold more cheaply in India than anywhere else in the world. Mr. Maulik quoted some very interesting figures indicating the extent to which it contributes to general industrial costs. The cost of coal, expressed as a ratio of the gross ex-factory value of various products and by-products, is on an average 1.96 percent. In the case of other fuels and electricity, the relevant ratio is 3.45 percent. Coal and coke work out to 11.25 percent of the cost of steel, as against 12.7 percent in the case of other fuels. The corresponding figures in cement manufacture are 14.22 percent for coal and 16.28 percent for other fuels. Another indication of the

inexpensiveness of Indian coal is brought out by the fact that the cost element of coal in British steel is 40 percent, as against 11.25 percent in India. For cement, coal works out to 30 percent in the U.K., as against 14.32 percent in India.

EXPANDING INDO-BRITISH TRADE

THE level of trade between India and Britain reached a new high during 1956. The encouraging expansion noted in the previous two years thus continues. Figures compiled from the U.K. Trade and Navigation Accounts show that the increase in trade has taken place because India has bought more: the value of what she has sold to Britain has actually decreased. As a result, the balance of trade, which was favourable for India in both 1954 and 1955, has now become adverse. There is nothing surprising or regrettable about this. It is a natural response to the fact that India has to import more to meet her ambitious development needs. This is borne out also by the fact that capital goods predominate in British exports to this country. The need to increase Indian exports to Britain as well as to other countries is nevertheless urgent. Since tea predominates in what is sold to the U.K., there is a special need to frame realistic policies for this commodity—policies which take special note of consumer reactions. A fair portion of the fall in the value of Indian exports to Britain was accounted for by the drop in Indian (and world) tea prices. The importance of Indo-British trade is reflected by the fact that India is the fourth biggest market for U.K. exports and the sixth largest supplier of U.K. imports.

The total value of mutual trade between the U.K. and India in 1956 stood at £309 million. This figure was £20 million more than in 1955 and £46 million above the 1954 level. Total U.K. exports to India in 1956 were valued at nearly £168 million, recording an increase of 29 percent over 1955

(£130 million) and 46 percent over 1954 (£115 million). Total U.K. imports from India were to the value of £141 million—11 percent less than in 1955 (£159 million) and 4 percent less than the 1954 figure (£148 million). In 1956, India received 5.2 percent of total U.K. exports to all countries, as against 4.4 percent in 1955 and 4.3 percent in 1954. Machinery exports in 1956 were at a high level and accounted for 39 percent of total U.K. exports to India. The comparable percentage for both 1955 and 1954 was 37. Exports of iron and steel rose substantially from over £8 million in 1955 to nearly £16 million in 1956. Manufactures of metals increased from just under £7 million to £8 million. Railway vehicles increased from £3 million to £6 million. Non-ferrous base metals went up from £2 million to nearly £4 million. Increases were also recorded in chemicals (from £16 million to £18 million) and road vehicles and aircraft (from £10 million to a little under £12 million).

Britain's imports from India in 1956 accounted for 3.6 percent of her total imports from all sources, compared with 4.1 percent in 1955. India stood sixth as a supplier, although she ranked fifth in the preceding two years. Tea was, as usual, by far the largest item and accounted for 48 percent of total U.K. imports from India. At nearly £69 million, the value was 8 percent less than in 1955. In terms of volume, however, tea imports rose from 283 million lbs in 1955 to 299 million lbs in 1956. While imports of tobacco and its manufactures in 1956 (£8 million) were £1 million higher than in the previous year, those of leather and its manufactures declined from £12 million in 1955 to £11 million in 1956; cotton fell from £4 million to £3 million; and miscellaneous textile manufactures dropped from £14 million to about £12 million. Compared with 1955, animal and yarns and woven fabrics (£7 million), animal and vegetable oils, etcetera (£8 million), and metallic ores and metal scrap (£2 million) showed no marked changes. A slightly downward trend was reflected in the case of wool and other animal hair and tops (£4 million) and miscellaneous animal and vegetable crude materials (£4 million).

U.K. exports of machinery (electric and other than electric) to India in 1956 totalled £66 million—an increase of 30 percent over the previous year. India was an important market for U.K. exports of machinery. She topped the list for machinery (other than electric) and was a very close second for electric machinery, apparatus and appliances. She received 8.9 percent of total U.K. exports of machinery (other than electric) to all destinations, compared with 6.9 percent in 1955. The comparable figures for electric machinery were 9.6 percent and 8.3 percent, respectively. The largest individual machinery export items were textile machinery (nearly £10 million); electric cables, wires, strips and strands (insulated) (£5 million); converting machinery, transformers, switchgear and switchboards (over £4 million); generating sets and generators and motors (£3 million); and machine tools (over £2 million).

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, Capital's Index of Indian Industrial Activity shows a rise of two points during October 1956. Mainly contributing to the increase were steel ingots, pig iron, cement, coal and electricity. Notes in circulation and cheque clearances rose.

Alkali and Chemical Nose-dive.—The long-rumoured details of the terms of the rights issue which the Alkali and Chemical Corporation of India Ltd. proposes to make were announced this week. Shareholders have expressed what they think of them by knocking down the price of the ordinary stock from Rs. 18-2 to Rs. 13-10 over the past three days. While first reactions of operators have been adverse, there is considerable speculation about the extent to which the Controller of Capital Issues may have influenced the terms of the offer. The rights issue consists of 2.48 million "A" ordinary shares of Rs. 10 each. They are to be offered to those who are ordinary shareholders on 19th March, 1957, in the proportion of four for one, at par. Thus, for each ordinary share (par value Rs. 10) in Alkali and Chemical which anybody now holds, he will be asked to find Rs. 40 to take up four of the new ordinary shares. In view of the very tight conditions prevailing in the money market, it is open to question how many of the smaller shareholders will be able to raise enough money. (The principal shareholders have already agreed to take up their allotment of 1,753,072 "A" ordinary shares.) It is stated that Imperial Chemical Industries (India) Private Ltd. will subscribe to any shares which

are not taken up. Shareholders will be allowed to renounce their right to the new "A" ordinary shares in favour of their own nominees. It is worth noting that the first call of Rs. 5 a share as subscription to the new issue will be made before 27th April, 1957, and the remaining calls before 27th September, 1957—but the "A" ordinary shares will not be entitled to any dividend paid for the company's financial year ending 30th September, 1957. The money from the rights issue will be used for a project to manufacture polythene. The cost of the project is estimated at Rs. 3.93 crores, of which Rs. 2.48 crores will come from the share capital issue and Rs. 1.45 crores as loans from an industrial credit corporation, bankers, etcetera. The directors feel that the return on the project will be satisfactory, "but it must be realised that the capital invested during the construction period will earn no return." They add that "the company's profits should be maintained at not less than their present level, but this rate of earnings will have to be related to the old and new capital as from 1st October, 1957, until such time as the polythene plant comes into production, when an adequate return will be earned on the new capital invested and profits should rise appreciably." It is thought that the polythene plant will go into production in about two years' time.

Demand for Machine Tools.—Machine tool imports in 1956, it is thought, reached the highest figure for any postwar year. One estimate is that they were of the order of Rs. 10 crores. In 1955, they were valued at Rs. 3.29 crores, and in the previous year at Rs. 3.86 crores. This sharp rise reflects development needs. Indigenous production has been increasing, but not at a rate fast enough to catch up with demand. Mr. S. L. Kirloskar, president of the Indian Machine Tool Manufacturers Association, told the annual general meeting of the Association last week in Bombay that the private sector was worried that its "share of indigenous tools" in the country's current requirements "is still as low as 13 percent." The two State-owned units—the Hindustan machine tool factory in Bangalore and another in Ambernath—have already been commissioned. But judging on the basis of Press reports, Mr. Kirloskar thought that their output would not help reduce imports very substantially. The Hindustan machine tool factory produces only one type of tools of one size, while the other produces two or three types. The country needs hundreds of types. The solution, therefore, lies in developing private concerns with Government encouragement. Mr. Kirloskar suggested that one way of doing this would be to relax the rigidity of users' specifications, and find ways of utilising "to the maximum extent the tools that are already being made in the country." He asked the Government periodically to give the Association data on "the actual purchases made by Government departments of the various machine tools by classified and coded numbers." This, he said, would indicate the types of machines required and the purposes for which they were being used. The industry could then plan its future production. Mr. Kirloskar also suggested the appointment of an import advisory council to review the Government's machine tool import policy from time to time "and recommend measures for restricting imports of foreign machine tools comparable to the types manufactured in the country." The Government some time ago appointed a committee to survey the working of the industry. Its recommendations are yet to be published, but it is to be presumed that in formulating an import policy corresponding to the needs of a developing economy, the Government is being guided by those recommendations.

Importers in Difficulties.—Importers are inevitably feeling the pinch since the Government announced severe cuts in its import policy a couple of months ago. It is not surprising that anxiety should dominate the presidential address delivered by Mr. S. M. Shah at the annual general meeting of the All-India Importers Association in Bombay last Thursday. According to Mr. Shah, the import policy for January-June this year is so drastic that there will be a shortage of a number of raw materials and consumer goods. He is probably right, but, as he implicitly admits, the more important need is to conserve foreign exchange. While admitting this need, however, Mr. Shah complains that "cumbersome, irksome and complicated restrictions on the face value of import licences have not only been continued, but in some cases fresh restrictions have also been imposed." Mr. Shah's description of the restrictions is mostly correct; but it is not easy to appreciate how he can, on the one hand, urge the Government to save foreign exchange, and, on the other, ask it to liberalise restrictions on the face value of import licences. It is true that the new import restrictions are giving extra protection to many domestic industries, whether or not that protection is in itself justified. This protection, according to Mr. Shah, is being given in three ways. The first is that high tariffs are being maintained. The second is that the policy of controlled liberalisation of

imports which was introduced some years ago has been replaced by one of drastic cuts. The third is the restrictions on the face value of import licences. One agrees with Mr. Shah that domestic industries should be urged to be more careful about quality and price, and that in the case of certain individual commodities import restrictions can be liberalised. But in the general argument that foreign exchange can be conserved at the same time as imports are maintained in order to provide competition to domestic industries, it is hard to see where the reconciliation of these two aims lies. The import cuts have reduced the importers' business turnover and Mr. Shah complains that neither domestic industries nor the Government have given them much encouragement to enter the distributive trade for domestic products. There is no reason why importers should be spoon-fed in any way. It is for them to go to the domestic industries, and attract custom by convincing them that they are as good at marketing as the industries' present distributing agencies.

Suez Canal Uncertainty.—According to General Wheeler, the Suez Canal will be open to some traffic soon, and for all traffic by some time in May. That covers only the U.N. operations for clearing the canal of obstructions and perhaps a certain amount of dredging to overtake the lack of maintenance since the canal was closed. So far, however, nothing is known about the conditions under which ships will be allowed to use the canal or the extent to which the Egyptian operating company will be able to offer the necessary facilities. Most uncertain of all is the position of shipping belonging to Britain and France—and, of course, Israel, with which countries Egypt has no diplomatic relations. Efforts to find out just what the situation is by making inquiries at several Ministries in London failed to produce any clarification, and as the Chamber of Shipping of the United Kingdom pointed out recently, owners must start planning their summer schedules now. The canal should be cleared by the end of May, but officials do not yet know whether or not the Egyptian Government will then permit British ships and cargoes to pass through. It is unlikely that the Egyptians would permit the payment of dues into blocked accounts outside Egypt—accounts from which the Egyptian Government would not be able to draw. The British Ministry of Transport said that the instructions to British shipowners now in force laid it down that transit fees for the canal would be paid to the old company. The Treasury said that the situation was the same at it had been at the beginning of the Suez Canal crisis. The shipowners had been given "guidance" to pay their dues to the old Suez Canal Company in London or Paris. Discussion has already taken place in the Suez Canal Users' Association about arrangements for getting ships through the canal once it has been reopened. But such discussions between the canal users cannot lead to any final decision until the views of the Egyptian Government are known, and the Egyptian Government seems to be very coy about expressing its views. Mr. Hammarskjöld, the United Nations Secretary-General, has already taken up with the Egyptians the Anglo-French suggestions that there should be a resumption of private direct talks on this question, under his own chairmanship, between representatives of the three Governments. So far, however, the Egyptians have been unwilling to take part in such talks. The situation as a whole seems to be most unsatisfactory and the United Nations powerless to do anything to speed matters.

GOLD STANDARD FOR JAPAN

THE telegram which Reuter furnished from London yesterday, announcing that Japan had decided to adopt a gold standard from October next at a ratio of 32½ to 1 will not be understood until further particulars are published. The change has probably been prompted by the large gold payments received as war indemnity from China. It is said that the Japanese propose to remodel their currency on the Russian system, which is practically an inconvertible note issue, and it looks very much as if the finances of Japan were in a condition to need skillful manipulation. It may be noticed that a ratio of 32½ to 1 indicates 28d. per oz. as the price of silver. This is a ratio which will stagger European and American bi-metallists, but it is impossible to estimate what may be the effects of the proposed change on Japanese trade or on Eastern exchange until we hear whether the scheme implies a single standard, a double standard, or an inconvertible note issue. What will concern us most is whether it means the stoppage of the coinage of silver yens. Should this happen the demand for British dollars will be largely increased, as there is little prospect of China following the lead of Japan in currency matters.

HIRE-PURCHASE UNDER THE LAW

CLAIMS FOR OWNERSHIP OF GOODS

(FROM OUR LEGAL CORRESPONDENT)

IT would be difficult to find a more misleading expression by which to describe a transaction and a document disposing of the possession of goods than "hire-purchase agreement", or one more likely to lead to confusion and consequent litigation—civil and criminal—between the parties to it. Like other compound words, such as "Anglo-Catholic", it is really a contradiction in terms. Looked at from the point of view of the strict law of contract, it may be described as a form of purchase or intended purchase of goods on a system of extended credit. Except in isolated transactions between individuals, the agreement is invariably nowadays in writing, with a stipulation that the payments to purchase shall be by agreed periodical instalments. The agreement is, or is intended to be, virtually one of purchase, but in order that the vendor (rarely, by the way, actually so referred to, but by some such absurd cognomen as "lessor") may be able to recover the goods at any time on non-payment of an instalment, it is treated as an agreement to hire with the provisions that when the last instalment has been paid the goods shall become the property of the hirer. A clause provides that in case of default in the payment of any instalment or breach of certain other clauses in the agreement, all previous payments shall be forfeited to the "lessor" or "lender", who can take possession of the goods.

It would be unfair to say that the "lessor", firmly intending that the document which his salesman presents to the housewife for signature shall not confer on her or her husband the immediate ownership of the goods, has purposely had it so obscurely drawn that the housewife will not realise that fact. The majority of the great organisations specialising in hire-purchase business are scrupulously above board, and bring comfort and modest luxury within the reach of young householders

who could not, but for the system, aspire to them for years, whatever the social reformer may say about the temptation to reckless buying; as is proved by the fact that the bad debts incurred in this type of business in the United Kingdom are not more than 2 percent. But we are not concerned here about the bicycle, wireless or T. V. Set, gramophone, piano, refrigerator, or—to quote Cecil Chisholm in an interesting article on the subject—even the Bible which Mrs. Brown or Mr. Johnson are tempted to buy or hire. What we are concerned with is the document they are called upon to sign; and that it is suggested that of the four million or so Mrs. Browns and Mr. Johnsons who sign these documents annually in Britain, the majority are under the honest impression that the goods are their own property, though not yet fully paid for. And it often is so in actual fact. In a doubtful case, a judge will look to the true nature of the transaction, and a very difficult task indeed it turns out to be. And in particular cases of these documents of sale pretending to be a "lease" or of "lease" pretending to be a sale, judges have differed as to what they actually are ever since the confusing decision some 70 years ago in the leading case *Helby v Matthews*. The distinction is an important one all the same. If the so-called "hire-purchase" is in fact a sale, there can be nothing criminal in Mrs. Brown selling her suite of furniture or vacuum cleaner, her piano or her Bible (notwithstanding the moral injunctions to the contrary therein) though she may have paid only the first instalment on it, for the article is her property. On the other hand, if the document is nothing more than a hiring agreement, though Mr. Johnson may have paid every instalment, except the last one, which is in arrears, on his hired motor-cycle, there may be no criminal or even civil liability on the part of the "lessor" if he re-takes possession of the machine and re-sells it at a profit (previous payments being forfeited to him by the clause in the agreement dealing with the consequences of non-payment of any instalment) provided he re-takes possession lawfully and by due process.

In the case of the great retail trading houses, these documents are prepared by eminent lawyers with much care, and have stood the test of time and the law courts. But even with the big companies, and much more so in the case of compara-

tively small concerns, confusion as to the legal rights of the two parties to the agreement is quite frequent; and the reason is that it is a matter of some difficulty, even with the most expert legal assistance, to eat one's cake and have it too—for A to give lawful possession of his goods to B, who is under the reasonable impression contributed to by A that he, B, has bought them, whereas the lawful ownership remains with A. What, then, is A's remedy when hirer or hire-purchaser B sells the sewing machine or radio before he has paid for it in full? The answer, it is submitted, is for A to seek his remedy in the civil courts, but never or hardly ever in the criminal ones, especially in India, where the legal presumption that every accused is considered innocent until he has been proved guilty is much more strongly observed by the magistracy in general than it is in Britain, and where the courts, very rightly, will not readily impute to an Indian citizen awareness of the criminal implications arising from a complicated legal document printed in English. In nine cases out of ten, it will be impossible for A to prove that essential element of a criminal offence, *mens rea*, which we may roughly interpret as a guilty mind directed to a guilty purpose. B will say that he had certain rights in that sewing machine and that he honestly thought that those rights included the right to dispose of it, the ownership having passed to him. The disposal by B of the goods hired or "hire-purchased" before he has paid for them is putting the case about as high as it can be put from a criminal point of view, and if A should be wary about launching criminal proceedings in such an event, he should evince much more caution where his grievance relates to the breach of some other condition of the agreement.

The latest reported Indian case on the subject is instructive. The petitioner, referred to in the agreement by the incongruous term "the lessee", was charged with having committed criminal breach of trust in connection with a refrigerator and radiogram, in violation of hire-purchase agreements of which the principal terms and conditions were that he was to pay Rs. 100 as initial payment by way of hire and thereafter he was to pay Rs. 100 a month towards hire for 24 months. It was further stipulated that if any monthly hire was left unpaid, the complainant firm might terminate the agreement and recover possession of the article in question. It was also stipulated that during the currency of the contract of hire, the petitioner was to have no right of property or lien in the articles. The petitioner, it was further alleged, failed to pay the stipulated hire for several months, whereafter the contract of hire was terminated on a certain date; and as there was failure to deliver back the articles, the two complaints were preferred in court, charging the petitioner with criminal breach of trust under Section 406 of the Indian Penal Code. While these two criminal cases were pending against the so-called "lessee" of the refrigerator and radiogram before a Presidency Magistrate, Calcutta, he applied to the Calcutta High Court to have them quashed on the ground that even assuming the facts to be as alleged, the criminal charges were not sustainable.

"The agreement of hire," said Debabrata Mukherjee J., "is on the face of it a contract entered into between the parties evidencing an arrangement between them as respects hire of certain articles, which hire was, in the course of time, to ripen into purchase. The fact remains that the accused petitioner is treated as having certain rights. Whatever these rights may have been, he was entitled to keep and possess the articles which were the subject matter of the contract. But filled the other conditions of the contract, the lessor from the bundle of rights belonging to him and some sticks appear to have been taken away and the lessee is to be treated as a person having some rights under the contract of hire. The contract embodies certain conditions and it is the breach of some of the conditions that forms the subject-matter of the present criminal proceedings. It seems to me that mere failure to pay the instalments of hire will not make out a case of criminal breach of trust...the case of mere breach of hire agreement cannot possibly form the subject-matter of a criminal charge....(The) complainant has his remedy in the civil court. I am not suggesting for a moment that simply because there is a civil remedy available, the criminal court will be an appropriate case to be deprived of its jurisdiction. What I wish to say here is that the allegations point to a civil dispute between the parties and do not contain the kernels of a criminal case...That being so, I think the present proceedings are misconceived." His lordship, thereupon, quashed the criminal proceedings. (61, C.W.N. 21st January, 1957. P. 210).

"Instalment selling" by C. Chisholm, Editor of *System*.

NEW COMMITTEE OF BENGAL CHAMBER
The Committee of the Bengal Chamber of Commerce and Industry for 1957-58 has Mr. W. H. S. Michelmores as president (Bird and Co. Private Ltd.). The vice-president is Mr. D. F. Macmillan (Andrew Yule and Co. Ltd.). Other members are Mr. J. D. K. Brown (Jardine Henderson Ltd.), Mr. G. H. J. Clarke (Imperial Tobacco Co. of India Ltd.), Mr. N. D. Harris (Imperial Chemical Industries (India) Private Ltd.), Mr. R. R. Latimer (James Finlay and Co. Ltd.), Mr. J. Macfarlane (Macneil and Barry Ltd.), Mr. G. K. Macfarlane (Chartered Bank), Mr. A. T. Montgomery (Balmor Lawrie and Co. Ltd.), Mr. P. E. G. W. Parish (Gillanders Arbuthnot and Co. Ltd.), and Mr. H. M. L. Williams (Guest, Keen, Williams Ltd.).

A DITCHER'S DIARY

postpone it for some time. The first is the banning of hand-carts from the streets. This single reform would increase the speed of Calcutta's traffic considerably. I wonder how many cities with a population of over four million still permit such things to block their thoroughfares. Besides, it would end an evil which, to my mind, is worse than rickshaw pulling. Perhaps what Calcutta most needs is the determination to tackle her traffic problems before they get out of hand, something which London has obviously failed to do. Might I suggest that, as a start, a chair be created at the Calcutta University in that up-and-coming new science of Trafficology. That at least should throw some theoretical light on the subject.

Another interesting feature of western Europe's oil crisis, and the withholding of supplies of crude oil by Iraq and Saudi Arabia, is the new importance of Abadan. There, the refinery is reported to be working at about three-fifths of its pre-nationalisation capacity. For three years after Dr. Moussadeq's expropriation of the property, the refinery stood practically idle until the new agreement was made with the international consortium, and in those three years the pattern of the oil industry changed considerably. Far from collapsing when its property was nationalised, the Anglo-Iranian Oil Company, under its new name of British Petroleum, went from strength to strength as the price of its shares in the last couple of years has demonstrated. And what of Abadan itself? The famous refinery is now facing growing competition from new refineries built in Asia and Europe. Whereas before nationalisation three-quarters of the Persian oil output was refined at Abadan prior to sale abroad, now the market preference is for crude oil to be refined nearer the scene of its ultimate consumption. India, with its new refineries, is a good example of this trend. A factor likely to operate to Abadan's disadvantage is that it can only take tankers up to about 25,000 tons, whereas Bandar Mansur, further up the Persian Gulf, can take them up to 45,000. But although there is undoubtedly a movement towards larger tankers and to reducing the western world's dependence on the Suez Canal, navigational conditions in the Persian Gulf, which remains one of the world's chief sources of crude oil, may set a limit to their usefulness in the Middle East-European oil trade.

"A company's policy should be determined by its shareholders who subscribed to its capital. Such policy should stand on its own merits and on the convictions and conscience of its shareholders". I am sure that in the whole course of his distinguished career, Mr. Justice P. B. Mukherji of the Calcutta High Court has never spoken truer words than these. What struck me as being so strange is that he should have said them on the occasion of an application by the Indian Iron and Steel Company Limited for permission to devote a proportion of its funds to promoting the legitimate interests of precisely those shareholders he is so concerned about. If they had been addressed to the Government as fitting comment on its complete disregard for the interest of shareholders in steel firms generally, that would have been another matter. I agree entirely that, all other things being equal, it is not healthy in a democracy for companies to give money to political parties, although, of course, many do. But in India, other things are not equal. Far from there being any danger that the "voice of big business" will soon dominate politics, it is an ominous fact that, at the moment, it is scarcely heard at all. The result is that political parties

have to please only the trade unions and that proportion of the electorate dominated by self-seeking demagogues; shareholders, company managers and independent-minded voters are merely the victims of the subsequent share out. That is why I cannot agree with Mr. Justice Mukherji that it will be any worse for business and politics when companies can protect themselves and their shareholders than it is under the present conditions of complete official disregard for such interests. A company usually has better things to do with its resources than spend them on politics. It is only in the past year or so that the practice has been accepted among the more reputable as an essential investment in survival, and for this, the real enemies of democracy—the bad administrators, the vote-catching politicians and the "social-minded" labour tribunals—have only themselves to blame. The principle certainly has its dangers for fair competition between individual companies, although this is not something that should cause much heartache in a socialist society. But the regrets, if there are to be any, should be addressed to those whose contempt for the legitimate interests of private business have made such expensive self-protection an urgent necessity.

By now we must all be familiar with "Parkinson's Law" even if we do not agree that its anonymous discoverer is a Mr. Parkinson. Whatever his identity, there can be little doubt that the man is a genius and that the world is in urgent need of more of his investigations and recommendations. His latest discoveries, published in the *Economist* dated 16th and 23rd February, concern that interesting question—although perhaps not a burning one in a country like India where people retire early—at what age is the boss past his best, and how to get rid of him when it arrives. The retiring age is obtained by a complicated formula and for those requiring details my recommendation is that they read the article which appeared on the first of the dates mentioned above. It is the method of clearing the way that I found most interesting, and it is so simple I wonder why somebody has not thought of it before. It consists of two parts: air travel and the filing in of forms. As Parkinson says, "the high official who is given enough of each will very soon begin to talk of retirement". The opening step in the technique, so he points out, is to lay before the great man a programme of, say, a conference at Helsinki in June, a congress at Adelaide in July, and a convention at Ottawa in August, each lasting about three weeks. Whatever this kind of travel may do to broaden the great man's mind, it does nothing to cure his ulcers, soften his arteries, or titivate his liver. On no account is a sea trip permitted. For one thing it is too restful; for another, it does not involve enough form filling. About the forms, Parkinson's three requirements are that they should be obscure, lack space, and carry the heaviest penalties for incorrect completion. For bosses in India, note, air travel may not even be necessary. But I am beginning to feel like a critic who tries to obscure his ignorance of art by describing the picture. For those really interested there is the original. And should they feel they are conniving at their own removal, Parkinson has these words of comfort to say: "It will be obvious at once that our own case is entirely different from any other case we have so far considered. We do not claim to be outstanding in any way but it just so happens that there is no possible successor in sight. It is with genuine reluctance that we agree to postpone our retirement for a few years, purely in the public interest." I sincerely hope Mr. Parkinson has no thought of retiring yet.

THE DITCHER.

1956 DODGE

with
Jet-fin
styling

The 1956 Dodge with its new FORWARD LOOK and incorporating new features takes you to new standards of performance. Look at these features:

- * New 12-volt electrical system gives quicker, easier starting, longer spark plug life, plenty of current
- * Maximum vision with new horizon windshield wrapped around top and bottom
- * New safety door latch for passenger protection
- * Redesigned sealed beam headlights extend zone of lighting on left side by 80 feet
- * Independent hand brake provides real emergency brake function
- * Safety-rim wheels, tubeless tyres and many other features

New Pep with Increased Horsepower
The 6-cylinder engine is of proved dependability and economy.

TO THE PRESIDENT OF INDIA.

We, the undersigned Auditors of the State Bank of India appointed under Section 41(1) of the State Bank of India Act 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1956.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretary and Treasurer of the Local Head Office at Madras and by Branch Agents, which Returns have been incorporated in the above Balance Sheet and Accounts, and report (i) that in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (ii) that we have called for any explanation or information such explanation and information have been given to us and have been satisfactory; (iii) that the transactions of the Bank have been conducted for the purpose of our audit; (iv) that the Returns received from the Local Head Office at Madras and from the Branches of the Bank have been found adequate and correct; and (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (vi) that in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and (vii) that in our opinion, Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs S. B. Billimoria & Co. and Messrs. Ray and Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. B. Billimoria & Co. and at Calcutta by Messrs. Ray and Ray.

another German firm for setting up a newsprint factory are still in an exploratory stage.

Visit of Egyptian Trade Mission

An Egyptian trade delegation will arrive here shortly to discuss with the Government of India the question of Egyptian cotton prices and supply during 1957.

Delegation from Finland

A trade and goodwill delegation from Finland is arriving on a 15-day tour to explore the possibilities of expanding trade between India and Finland and to study the prospects for industrial development under the second five year plan. The delegation will be led by Mr. Leo Tuominen, Secretary-General of the Finnish Ministry of Foreign Affairs. It will include leading industrialists and business men and will visit Calcutta, Madras, Bangalore and Bombay before arriving in New Delhi on 17th March. India's exports to Finland in 1955-56 were valued at Rs. 3.4 crores, against Rs. 1.8 crores in 1954-55 and Rs. 1.3 crores in 1953-54. Her imports from Finland were worth Rs. 2.7 crores in 1955-56, Rs. 2.15 crores in 1954-55 and Rs. 1.9 crores in 1953-54. India's exports during the period April to October, 1956, were worth Rs. 2.6 crores, against imports worth Rs. 1.52 crores during the same period. The main items exported from here are spices, jute goods, coir and yarn manufactures, raw cotton and cotton waste. Imports from Finland consist mainly of paper, pasteboard and stationery, textile materials, wood and timber manufactures, and wood and timber.

Delegations to E.C.A.F.E. Meetings

The Joint Secretary to the Ministry of Commerce, Mr. K. B. Lal, will lead the Indian delegation to the E.C.A.F.E. meetings.

tion to the Trade and Commerce Committee of E.C.A.F.E. which is to meet in Bangkok. The Commerce Minister, Mr. D. P. Karmarkar, will lead the Indian team to the E.C.A.F.E. conference in Bangkok, to be held from 15th March.

Reports on Heavy Industries

The Jehangir Ghandy committee is examining the British and Russian reports on the practicability of establishing heavy industries in India. Meanwhile, the Russians have submitted a separate report on a project to manufacture coal-mining machinery. This report, in addition to the project reports on forges and foundries, has also been referred to the Jehangir Ghandy committee.

Programme for Rice Imports

The entire 60,000 tons of rice which it was agreed to import from China arrived last month. Future imports of rice, under the commitments already made, will be from only two countries, Burma and the U.S.A. (except for the balance of 400 tons which is being returned by Pakistan against the rice taken by her on loan). Under the Indo-Burmese agreement, India is to purchase 2 million tons of rice over a period of five years from 1956 to 1960. During 1956, it was proposed to import 300,000 tons. Only 20,000 tons were left over from this programme for arrival in January. For 1957, the programme is to import 500,000 tons of rice from Burma according to the following schedule: 40,000 tons in January, 50,000 tons in February, 60,000 tons in March, 60,000 tons in April, 60,000 tons in May, 60,000 tons in June, 60,000 tons in July, 60,000 tons in August, 60,000 tons in September, and 50,000 tons in October.

The total amount for rice under the recent agreement with the U.S.A. is \$26.4 million. This

is expected to buy about 190,000 tons. So far, 18 steamers for a total of about 166,000 tons have been fixed. Ten steamers have already sailed with 92,600 tons, of which four arrived in India in January with 37,189 tons. Eight steamers are expected to sail before the end of this month. The expected arrivals of these 14 steamers in India are as follows:

	February	17,919 tons
	March	46,497 tons
	April	64,400 tons
		166,006 tons

It is estimated that at least two more steamers will have to be fixed to utilise the entire amount of aid for rice. The total expected arrivals of rice from Burma and the U.S.A. will be:

	In thousand tons		
	Burma	U.S.A.	Total
February 1957	42.5	17.9	60.4
March 1957	72.5	46.5	119.0
April 1957	50.0	64.4	114.4

* (In addition, about 400 tons are expected from Pakistan).

Wheat Imports

India is at present getting wheat from only two sources—Australia and the U.S.A. The latest position may be outlined as follows: At the beginning of the year, a balance of about 156,000 tons (17 steamers) had already been authorised for purchase from Australia. This included the eight cargoes which were authorised in December, 1956. Of this 156,000 tons, about 67,600 tons arrived in January. Arrivals during February are expected to be approximately 25,800 tons, and during March about 62,600 tons. All the steamers, except five carrying approximately 49,400 tons, have already sailed from Australian ports. The remaining five are expected to sail before the end of this month. It can, therefore, be assumed that the entire quantity from Australia will have arrived by the end of next month.

The total aid for wheat from the U.S.A. under the recent agreement is \$200 million. Shipments began in September, 1956, and until 13th February, 1957, about 578,000 tons had been despatched. Of these, 267,054 tons had arrived by the end of January. The expected arrivals were 151,300 tons in February, and 165,900 tons in March. It is thought that the total quantity shipped during February may be about 200,000 tons, part of which will reach India in March. In fact, this quantity will be the largest so far shipped in a single month, as the following figures show:

	October 1956	86,465 tons
	November 1956	94,932 tons
	December 1956	155,530 tons
	January 1957	152,825 tons

The port-wise figures for the monthly arrivals of U.S. wheat up to the end of January 1957 are:

	Bombay	Calcutta	and Total
	lightening ports		
November 1956	36,968	1,733	38,701
December 1956	89,003	17,240	106,243
January 1957	100,167	21,943	122,110
	226,138	40,916	267,054

Total arrivals of wheat from Australia and the U.S.A. during February, March and April are expected to be as follows:

	Australia	U.S.A.	Total
February	25.8	151.3	177.1
March	62.6	165.9	228.5
April	nil	200.0	200.0

Visit of U.S. Trade Mission

The visits to New Delhi of the U.S. trade delegation and of Mr. John B. Hollister, Director of the International Co-operation Administration, have helped a great deal in clearing up the misunderstanding prevailing in the U.S.A. about India's economic policy in general and the Government's attitude towards the private sector in particular. The U.S. trade mission started its tour in a business-like manner. Discussions showed that the demand for consumer goods in the U.S.A. was on the increase and in India consumer goods were being equated with handicrafts. India, more over, was exercising an increasing influence on the fashions in the U.S.A. The mission studied the working of the private sector, particularly in trade. It saw how important it was for the Government to take the initiative in many fields. The private sector often does not take advantage of the facilities created for it by the Government.

A visit by the financial editors of some leading American newspapers is being discussed here.

Long-term Credits from Western Germany

Mr. Berthold Beitz, chairman of the executive board of Fried Krupp, Essen, is expected in New Delhi shortly. He will discuss with the Government the question of increasing collaboration on the basis of the latter's new long-term credit policy, which says that 20 percent of the foreign exchange part of the cost will be paid in cash, and the remainder in seven annual instalments starting from the plant and machinery has been received in India.

London

PROSPECTS OF U.K. PAYMENTS SURPLUS THIS YEAR

MEASURES TO INCREASE EXPORTS NECESSARY

(FROM OUR LONDON CORRESPONDENT)

THIS despatch will probably be carried to India by the first Bristol Britannia propeller-turbine airliner to go into regular service for B.O.A.C. on the London-Sydney route to show a saving of about 30 hours on the whole trip, due mainly to the elimination of the overnight stop in Singapore which had to be made by the Constellations. That will help speed the good news that the Treasury now takes a more optimistic view of the possibility that the balance of payments will be in surplus during the present calendar year. The latest Bulletin for Industry says: "The crisis in the Middle East has worsened the United Kingdom's balance of payments, chiefly through its effects on oil. More dollar oil has to be purchased at high prices; and less sterling oil has been shipped from the Middle East. So Britain's balance of payments surplus in 1957 will be smaller than it otherwise would have been." It goes on, however, to emphasise the urgency of our need for a really large surplus. A regular annual rise of some 4 percent in the volume of British exports is needed merely to maintain normal economic expansion in this country, the Treasury writer states. To achieve the surplus needed, an even greater annual increase in exports will have to be brought about. Last year, the volume of exports rose 6 percent. This included a large increase of shipments to France and to India which may not be repeated; and while the prospects in the dollar markets and in parts of western Europe are good, trade may be more difficult in parts of the Middle East. From this analysis, the Treasury writer draws a conclusion, which may well reveal what is at present in the minds of the policy-makers in Whitehall: "It must, therefore, continue to be a main aim of policy to keep an economic climate in this country which favours and fosters export expansion."

More Budget Advice

There appears to be little conflict of opinion that Mr. Thorneycroft's forthcoming Budget will play a major part in achieving this objective. The Trades Union Congress heads its list of proposals to the Chancellor with a request that the Government set up "an authoritative enquiry" into Britain's export trade. It also calls for measures to prevent industrial investment from falling and believes that the best way of accomplishing this would be for the Chancellor to make larger initial allowances for investment available to essential industries and services. These allowances should be granted on a selective basis to firms which most broadly represent the national interest. More generally, the T.U.C. takes exception to the Government's credit squeeze and other anti-inflationary measures as threatening both the maintenance of full employment and the raising of living standards. It says it is important that this year's budget should be used to restore people's confidence in the Government's "ability and willingness" to pursue those two goals. It favours credit concessions in taxation, some relaxation of credit policy and the cutting of defence expenditure, but opposes any reductions or limitations on the social services which would impair their efficiency. Finally, the T.U.C. reiterates some of its old proposals—the removal of purchase tax on kitchenware, household goods, clothing, footwear, textiles and furniture; income tax relief for the lower wage and salary earners and the introduction of a capital gains tax.

The Federation of British Industries naturally looks at the economic situation from a rather different viewpoint. It has asked the Chancellor of the Exchequer to give immediate tax relief to companies and individuals. While repeating that the country's troubles cannot be cured without a "deep and searching" reduction of Government expenditure, the Federation suggests that certain tax reductions can be made at once without risk of deficit financing and without risk of a general increase in personal consumption. Relief is asked for particularly at two "strategic points." The first is the burden which falls on company reserves. It is suggested that the two profit taxes should be combined into a flat tax of not more than 5 percent and that the investment allowances should be restored with effect from the time of their suspension. The second point is the restoration of incentives for people earning £2,000 and over. For the present, the Federation urges that there should be a considerable extension of earned income tax. Beyond these proposals for the coming Budget, the Federation makes yet another plea for a drastic reduction of the demands for economic resources made by the State. If only this Federation reform could be carried through, the Federation maintains that inflation would subside and productive activities would grow quickly to the point where the country's external position would be secure. Further reductions in the general level of taxation would then become feasible.

Industrial Production Index Static

There will probably be some disappointment that there is as yet no decisive evidence of a revival in industrial production, which has now remained at the same general level for over a year. The

Central Statistical Office states that the provisional index of industrial production for January is expected to be 137 to 138, which is one to two points below the figure for January 1956. The main change between these two months was a drop of 37 percent in the output of cars, and of 32 percent in commercial vehicles. Electricity generated was about 1 percent up and the production of sulphuric acid 3½ percent up. The index for December 1956 is estimated at 134, compared with a revised figure of 146 for November. Figures for the corresponding months in the previous year were 130 for December, and 147 for November. It is true that adjustment for seasonal factors and averaging out the three months' figures shows a fall of about two points compared with last year, but one must not forget the impact of the Suez closure on activity in certain industries. Allowing for this, production is probably holding up reasonably well. In some other respects, the news is definitely encouraging. According to the provisional statistics issued by the Ministry of Power, British miners dug 4,754,000 tons of coal during the week ended 23rd February. This was 24,800 tons more than in the previous week and 265,700 tons more than in the corresponding week of last year. Production so far this year, at 36,727,800 tons, is 1,244,200 tons higher than in the corresponding period of last year. Mr. Maundling has since reported most favourably on all aspects of the coal situation in the House of Commons, and it is evident the miners are doing a good job. If man-shift output could also be increased, our fuel difficulties would be over, but the labour situation generally is bedevilled by too many "ifs" and "buts." Good also is the news of the signing of an agreement with the Export-Import Bank of Washington, which establishes a \$500-million line of credit in favour of the United Kingdom. This will enable Britain to recoup a substantial part of the dollar expenditure on goods and services during the next 12 months. It will facilitate, for example, purchases of oil from the United States and Venezuela to make up for the fall in Middle Eastern supplies. Britain will pay interest at 4½ percent on any money drawn. When and how much to draw will be matters for Treasury judgment from time to time. "We are not pressed for this loan," the Chancellor told the House of Commons. "There is no immediate need for it." For every \$100 million borrowed, the Government will deposit as collateral \$120 million of British-held American securities. The interest on these will still accrue to Britain.

Trade Unions and Automation

Industrial disputes are on the increase despite the fact that unemployment is growing. In January, about 132,000 working days were lost—99,000 more than in the previous month and 49,000 more than in January last year. This is a serious matter in present circumstances, for the economy is still precariously balanced. With so many wage claims outstanding, and labour disturbed on a number of points while employers seem more inclined to adopt a firmer attitude in the face of declining profits and increasing competition, the prospects of a period of stability on the labour front are not exactly bright. It is significant that recent evidence of a better outlook for the motor industry, which was brought out in the Parliamentary debate on the motion for an enquiry into the working of that industry, did little to assuage trade union fears. The Briggs dispute has not helped matters either. The Government's handling of this problem, and Mr. Thorneycroft's policy as disclosed by his budget, may prove decisive factors. Trade unions throughout Britain are to take part in a series of discussions on the introduction of automation. They will meet at the invitation of the Trades Union Congress as groups according to the industries in which they are concerned. The T.U.C. General Council holds the view that automation can be considered to the best advantage within the framework of general technological development and in the light of social and economic changes. It believes that there is more to fear from automation being introduced too slowly rather than too quickly.

Bank of England Changes

With the easing of restrictions on foreign payments over the last few years, the exchange control department of the Bank of England has now

been reduced to a skeleton organisation, capable of being rebuilt if needed, but otherwise turning its attention to other matters. Exchange control is ceasing to be a separate department of the Bank and is becoming instead part of the responsibility of the Chief Cashier. In its place, a new "overseas" department is being created. There is still plenty of work on the overseas side. Apart from all the normal contacts between central banks, there is the provision of information to the Bank's own senior officials (as background to movements of foreign money and in the exchanges) and there is the growing field of advising the new central banks now being set up in the Commonwealth. The Bank of England is helping in forming the banks in the Gold Coast, Malaya and Nigeria. The head of the new "overseas" department is Mr. G. M. Watson, who recently led a mission to Malaya to advise on banking there, and his deputy is Mr. L. F. Creak, who is also much travelled and experienced in these matters.

Restrictive Practices Developments

Some of the price rings with which British industry appears to be riddled are crumbling. This is the first clear indication that the Government's new anti-monopoly legislation is doing its job. Trade associations are withdrawing or modifying some price agreements, to avoid registration under the Restrictive Trade Practices Act. Those industries which do register will be liable to justify their practices at law, before the new Restrictive Practices Courts. The Tobacco Trades Association has been abolished, the television tube makers claim to have abandoned their price ring, and the British Motor Trade Association is negotiating alterations in its agreements to make registration unnecessary. Other trade associations, however, are standing firm on their agreements and intend to register them, including the tyre industry, whose practices were condemned by the Monopolies Commission a year ago. A similar response may be expected from the electrical machinery manufacturers, on whom the Monopolies Commission has just reported. It has condemned as "against the public interest" the agreements governing the sale at home and abroad of heavy electrical machinery. In 1952, the last year for which the Commission quotes figures, 97 percent of the heavy electrical generating plant sold in Britain—most of it to the Central Electricity Authority—was supplied under agreements which "operate against the public interest in as much as they support the common price system." Replying to these charges, the manufacturers say the companies concerned do not intend to discontinue the condemned practices.

Shipping Tax Problems

In its annual report for 1956-57, the U.K. Chamber of Shipping devotes considerable space to "the astonishing disregard of the practical shipping issue" in all the discussions which have taken place in connection with the clearance of the Suez Canal. "Flags of convenience" competition also comes in for criticism, and this leads naturally to the vexed question of taxation of the shipping industry. The report makes the point that, although the investment allowance for ships has been maintained, the 20 percent still leaves a gap between the total capital allowances made for tax purposes and the current cost of replacing the annual wastage of the fleet. In face of tax and other handicaps, the size of the U.K. merchant fleet has been maintained and is now slightly increasing. The report points out, however, that the dry cargo fleet, especially tramp tonnage, has remained almost static, while the increase in U.K. tanker tonnage has not kept pace with the increased demand for oil.

Trade Agreement with Japan

New Anglo-Japanese trade and payments agreements were signed by Mr. W. D. Ormsby-Gore, Minister of State for Foreign Affairs, and Mr. Nishi, the Japanese Ambassador, last week. The arrangements cover the period of one year ending 30th September, 1957, and maintain, with minor exceptions, all the trade quotas previously available to U.K. exporters. They allow for some small relaxations in restrictions on Japanese imports, while additional facilities have been obtained for British trade in Japan. As a result, there may be a small expansion of trade in both directions.

The mariner and the marabou

WE have nothing against the *Leptopilus Marabou*. In fact, we can't but admire his magnificent detachment from the world's worries, his ability—if not to rise above it—at least to look above it.

But let's face it—a marabou is not a packageable item. Catch him with both legs on the ground, and you have some hope. Grab him when he's contemplating and you're faced with a sort of isosceles triangle, topped off with a lot of (very pretty) cotton wool. So we gulped a little when a Japanese naval officer asked us to send his latest acquisition after him. (Marabous hate sea voyages—the horizon keeps moving up and down.)

Maybe you are thinking of sending something to Japan? If you are, don't forget we fly twice a week to Tokyo—and whatever you send takes just 24 hours to get there.

Marabous and mica, mangoes, mice and machinery—Air-India International's Cargo Department handles them all. Let's hear from you.

Cargo by air:

- * saves money on insurance
- * gets goods on the market quickly
- * involves less tied-up capital

Uttar Pradesh

TEXTILE BONUS DISPUTE GOES TO TRIBUNAL

LIFE INSURANCE EMPLOYEES NOT GOVERNMENT SERVANTS

(FROM OUR LUCKNOW CORRESPONDENT)

THE U. P. Government has referred the Kanpur textile workers' claim for bonus relating to the year 1955 to the State Industrial Tribunal in Allahabad. Bonus disputes in Kanpur have been referred for adjudication each year since 1951. The trade unions in Ahmedabad and Bombay have, during the last two years, been able to arrive at agreements with their employers on bonus issues. One of the merits of these agreements is that the workers get some bonus without their having to go to an industrial tribunal. Certain labour leaders have initiated a discussion in the Press whether it would not be in the long-term interests of both labour and capital in Kanpur to arrive at some such agreement and on similar lines.

Handicap for Small Producers

The lack of capital and marketing facilities are the two great handicaps in the development of U.P.'s small-scale industry, according to a study conducted under the auspices of the Ford Foundation in a small U.P. industrial township and in the brassware industry of Moradabad. A judicious loan programme and the setting up of an integrated marketing organisation have been suggested for the development of small-scale industries. The study revealed that the small-scale craftsman is not illiterate, backward or downtrodden. He is alive to the new demands of the market, he is skilled and efficient and has energy and the industrial outlook. His main drawback is his poverty and lack of capital. According to the report, he is squeezed out of the market primarily due to the latter handicap.

Life Insurance Corporation in Law

The Allahabad High Court has held that the Life Insurance Corporation of India is a statutory body and not a department of the Union Government, and that, consequently, the employees of the Corporation are not employees of the Government. The Court gave this ruling while dismissing a writ petition from a member of a municipal board against another. The contention was that since nationalisation of life insurance, the latter had become a Government servant and could not, therefore, be a member of a municipal board. Rejecting the contention, the Court said: "Having regard to the provisions of the Life Insurance (Emergency) Act of 1956, it cannot be held that the employees of the insurer company became the employees of the Central Government. The Central Government does not become a substitute for the insurer company by the coming into force of this Act." The Court further declared that the Corporation is "a distinct legal entity, created by statute, and has a perpetual succession with a right to hold and acquire property."

Bombay

COTTON FUTURES RISE FURTHER

FIRM TREND IN SPOT PRICES

(FROM OUR BOMBAY CORRESPONDENT)

RENEWED speculative support has given fresh impetus to the cotton futures market and prices continue to soar. The resumption of business in the Jarilla May and Vijay June contracts has failed to act as a restraining influence, and the futures markets has touched a new high with the Jarilla March contract at Rs. 745 and Vijay April contract at Rs. 852 a candy. Both these contracts have now crossed the "safety limit", and the recently devised sliding scale of margins is now in operation. The newly instituted contracts, however, are about Rs. 50 a candy below the futures quotations. The tightness of the spot market is reflected in the fact that only 50 candies were tendered on the opening day of the Jarilla March contract. The soaring futures market has not caused any great upsets because spot prices are also at a high level, and as long as no payment difficulties occur, futures trading can safely be left to itself. But the danger arises that speculative activity may divorce the futures market from the spot market and forward trading may degenerate into plain gambling. In these circumstances, a situation could arise in which hedge facilities would almost cease to exist. At the same time, a controversy has arisen over the recent amendments to the Jarilla contract under which four categories of Jarilla cottons have been established and only Madhya Pradesh 25/32 inch staple accepted as a basis. Opinion is divided on this point. A section of the trade believes that this will hasten the separation of the futures market from the spot market while others believe that such a step will make for stability. The Sewri spot market has continued firm, but as mills are sticking to the policy of covering only their immediate needs, transactions were somewhat limited.

Fall in Egyptian Cotton Imports

Business in cotton imports has virtually ceased. Import ceilings for the current half year for sterling area cottons have already been reached and there seems to be little possibility of additional quotas being issued. There is also as yet no indication when American aid quotas will be released. But the cotton trade is interested in the activities of the Egyptian trade mission which arrived recently in this country. Imports of Egyptian cottons for this season totalled 17,128 bales on 9th February, against 112,530 bales in the corresponding period of last season. The high price of Egyptian cottons is largely responsible for this heavy fall in imports, and it is believed that India may be able to persuade the Egyptians to lower their prices to a more realistic level. Even if the Egyptian mission agrees to this, it is doubtful if India will place any large-scale orders immediately. Interest in Egyptian styles is somewhat limited.

and only moderate business has been reported in the new crop Sudans and Egyptian Karnak. Whatever interest there is, has been confined to spot lots of Sudans and some small quantities of East African growths. But a point in favour of the Egyptians is that the Sudan has decided to raise the export duty on cotton by 2.49d a lb. and this might turn Indian interest towards Egyptian growths.

The recent Japanese decision to liberalise the imports of raw materials has caused optimism here. Cotton exporters believe that substantial business may be possible with that country, but feel that Japanese importers will delay their purchases until the Bombay market settles down to a more reasonable level.

Low Offtake in Textiles

The cotton textile market continues to be slack. Offtake is low and stocks are piling with the mills and wholesale dealers. The demand for coarse goods has remained at a depressed figure for the past few weeks, but fine and superfine qualities have shown some improvement. It is generally believed that only a reconsideration of the excise policy will help restore confidence in the textile market. Reports have been current that the Government is, in fact, considering a revision. It has led to further uncertainty. It may be well for the Government to make an announcement of its intentions so that all concerned know where they finally stand. Export conditions are also unsatisfactory. Although shipments made recently from the Bombay port seem impressive, it must be remembered that they represent a backlog of orders which have now been cleared through Customs for export. Very little new business has been transacted, although enquiries have been received from Indonesia for bleached long cloth, dyed and bed tickings. With the exception of the Gold Coast, merchants in west Africa have been quiet. But it is believed that some business may result with Australia following a relaxation of import restrictions in that country. It seems that the Government-sponsored import corporations in the Government have now started functioning and it is possible that substantial enquiries may be received from them. Meanwhile, there has been a drop in India's export prices of cloth in most categories.

Yarn Market Improves

The yarn market has improved slightly, particularly for forward delivery. Buying on the spot market has been spasmodic, mainly because of the tight money market. But it seems that yarn stocks in consuming centres are now running low. Fresh demand is expected and it is likely that the spot market will improve within the next few days.

Better Prices for Castor Oil

The castor oil market is showing signs of brightening up. A fair quantity was sold to the United Kingdom and the Continent last week. Export prices of B.S.S. improved from £149 to £150 a ton. Some quantities have also been sold to the communist countries. Reports here indicate that a large part of the U.S. demand remains unsatisfied and American importers will have to enter the Indian market. They have held off because they thought that prices in this country would fall. It could be that they have waited too long, but the final price will depend on the total communist countries' demand which cannot be assessed at this stage. If the communist countries continue to this stage, prices may well increase further, but if their demand is not likely to be sizable, a reaction in the local market could occur. In these circumstances, Indian exporters, too, are taking a chance, but perhaps not as much as the American importer.

Jute

EFFORTS IN WEST BENGAL TO GROW BIGGER JUTE CROP

EXPANDING THE OUTPUT OF MESTA

IN some official quarters, there appears to be a tendency to disparage West Bengal's effort to contribute to India's self-sufficiency in raw jute. It has been pointed out, for instance, that while the total area under jute in India increased last year, the area in West Bengal fell to 720,000 acres from 780,000 acres in the previous year. These are official figures, which are never very accurate, but even if we accept them as correct, they give only half the picture. Few of the Government's publications on jute give the mesta figures, but if West Bengal's mesta figures are added to those of jute, it will be seen that this State's effort has not been so poor as one might be led to believe. It is true that the area under jute declined, but that under mesta increased by almost the same amount. So, on balance, the quantity of fibre was not much less than in the previous year. It has also been pointed out that the yield of jute per acre declined last year, whereas that of Bihar increased. The reasons for the lower yield in West Bengal were not under its control. They were entirely the result of the weather. In many districts in West Bengal, there was drought at the time when sowing should have started. When the sowing had been done, there was excessive rain, which in some places washed away the seeds and the seedlings completely, and in other places kept the young plants submerged so long that they became stunted.

What are the reasons for this switchover from jute to mesta? One is that mesta is a harder plant and needs less labour for its cultivation. Another is that it has a heavier yield, which compensates for the lower prices obtainable for it in the market. A third is that it is ready for harvesting earlier than jute and the ryots can get an aman paddy crop off the same land. Daissee jute is a late crop, and by the time it is harvested, it is seldom possible to get any rabi crop from the fields where it has been grown. It is possible, therefore, that there may be a further reduction in the area under jute in West Bengal this year and another increase in mesta. On the other hand, at current prices there is a disparity of about Rs. 7 a maund between Daissee jute and mesta, and Rs. 4 a maund between white jute and mesta. So jute may return again to favour. Another point which must be considered in the relationship between jute and mesta is the value of Daissee jute in facilitating the use of mesta. Most varieties of mesta are heavy rooted, and the root end is of such a nature that it requires more preparation before it can be used in the manufacture of cloth. Daissee jute, on the other hand, carries practically no root, and is therefore very useful in enabling mills to use up the root ends of mesta and of other rooty varieties of jute. It is this quality which explains the premium mills are prepared to pay for Daissee jute. This is another reason, too, why the cultivation of mesta in the Daissee districts at the expense of Daissee jute should be discouraged. Unless sufficient supplies of Daissee and other light-rooted varieties of jute are grown, it may not be possible for the mills to utilise all the mesta that is produced.

This brings us to the question of how much mesta mills can use without lowering the standard of their products. It is said that some mills are making their heavy sacking entirely from mesta but that the quality of the cloth is very low. It is, however, worth studying to what extent the cultivation of mesta should be expanded in order to achieve self-sufficiency in the production of fibre for the mills. The quantity of mesta grown has already become a very big factor in the attempt to reach self-sufficiency, but it would seem to be unwise to encourage the growing of mesta at the expense of the growing of jute lest, when self-sufficiency is achieved, there is also a state of imbalance. It is imperative that the growing of both kinds of fibre should be encouraged, but the campaign for the expansion of the mesta crop should be confined to areas where jute cannot be grown and the diversion of land from jute to mesta should be actively discouraged.

THE JUTE MARKETS

Manufactured Goods: For most of the week, jittery conditions have characterised the gunny market. There has been a lot of bull liquidation and the nervousness has been taken advantage of by the bears to hammer down prices. On Wednesday of last week, the B Twill fatka rate dropped by Rs. 2. During the past week, it has been as low as Rs. 104-14, after which it hovered round Rs. 105-12 or Rs. 106 most of the time. That the weakness was due to fatka activity was evident from the fact that there was probably more foreign business than had been reported for some time. Apart from a Government order for heavy sacking, there were purchases of cornsacks and woolpacks for Australia, sugar bags for the Far East and Liverpool for west Africa. The quantities were not large, but there was certainly more business than in previous weeks when the speculative market was not so weak.

Towards the end of the period, a better feeling began to appear. On Monday, after opening at Rs. 105-15, fatka closed at Rs. 107-4. On Tuesday,

it rose substantially to close at Rs. 109-1 with still higher quotations after the official hours. It is not clear what has brought about this reversal of sentiment, but it may have some connection with the raw jute market, where there has been resistance to further lowering of prices which were already above the parity of gunny prices.

Quotations on Wednesday morning were as under:

	Ready Rs.	March Rs.	April-June Rs.	July-Sept. Rs.
40in. 8oz.	33-10	33-6	32-4	32-8
40in. 10oz.	40-4	40-6	40-9	40-8
B Twills	108-6	110	110-12	110-12
Heavy Cees	113-8	112	110-12	110-12
A Twills	133-8	133-8	134	133
Liverpools	128	127-4	126	125-8
Cornsacks	112	113	112-4	112

Raw Jute: Mills continued to take small interest daily, and although no great volume of business was put through during most of the week, it was sufficient to prevent the development of the panicky conditions which were evident in the goods market. At the end of the period, activity became more brisk and buying more general. This improved demand met with reserve on the part of sellers. Offerings were small and sellers were inclined to hold for higher prices because of scanty imports and higher prices in the upcountry markets. The bulk of the business was in various varieties of mesta but Daissee jute, Tossa and white jute also came in for attention. Business was reported in mesta at Rs. 23-8 to Rs. 25 basis Bottoms according to district; Daissee jute at Rs. 30-8 to Rs. 31 basis Bottoms, and Rs. 32-8 to Rs. 32-12 for Middles alone; Murshidabad Tossa at Rs. 30-8 basis Bottoms; Northern ex agency and/or ex Calcutta at Rs. 27-8 to Rs. 28-8 basis Bottoms; Local Packing at Rs. 26-8 basis Bottoms; and Pakistani Cuttings at Rs. 101 to Rs. 105 for N.C.'s and Rs. 107-8 for S.N.C.'s.

On Wednesday morning quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms.	Shipment.
Northern and Dhubri	29	March-April
Assam	28-8	"
Murshidabad Tossa	31	"
Daissee Jute	31-8	"
Daissee Mesta	25	"
Murshidabad Mesta	24-8	"
Northern Mesta	25	"
Purneah Mesta	25	"
Northern ex Calcutta	28	"
Local Packing	27	"

Arrivals in Cossipore during the week ended 5th March were 502 wagons, compared with 389 wagons in the previous week. The market was quiet, most mill buyers having withdrawn. There was, however, a fair amount of buying against previous sales to mills.

Mofussil: With general rain, the weather has been favourable for ploughing and sowing. No sowing has been reported, as it is still too early for Indian districts. Sowing has, however, been general on the chur and riparian lands in the deltaic areas of East Bengal where it is reported to be nearing completion.

THE PAKISTANI JUTE MARKETS

FIBRE STEADY ON TALK OF SCARCITY

(FROM A CORRESPONDENT)

THERE seems to be little doubt that at least 1½ million bales of raw jute still remain to be sold in East Pakistan. Yet conditions both in Narayanganj and in upcountry areas are such that one gets the impression that no jute at all is available. The market remains steady at Rs. 29-8 for B Bottoms loose jute, Rs. 28-8 for C Bottoms and Rs. 26 for X Bottoms. Even at these prices, it is very difficult to get jute. Tossa is still steadier at Rs. 34 for District Bottoms and Rs. 31 for District B Bottoms, 100 percent Dundee Tossa 4s. Kutcha bale prices are Re. 1 to Rs. 1-8 a maund higher. In pucca bales, prices have also steadied. Export Firsts are quoted at approximately the same price as afloat jute, which commands a premium of about £4 over shipment. The strength in the loose jute market and in upcountry areas is mainly due to the strong holding power of the big beparis. Their profits have been such that they can afford to resist any tendency which brings prices dangerously close to their original purchase levels in the early part of the season, which were about Rs. 26. Those growers who still have jute are not interested in selling at these prices, since they are too busy preparing the land and in some cases are actually sowing in chur areas. In Narayanganj, arrivals have been negligible, and it is reported that Adamjees, the biggest buyers there, were only able to obtain 400 maunds of loose jute and a further 600 maunds of kutcha bales last Thursday.

Under these conditions, it is not surprising to hear rumours that the crop was very much smaller

than had been indicated, and that little or no jute is now available. This is unlikely, to say the least, but it gives an indication of the sentiment in the market. But for the very tight money position, there is no doubt that there would be a great deal of inter-baler business, which would strengthen rates considerably. As it is, one of the largest balers has for the last three days been buying freely, and he has not always found it easy to make purchases as required. In most districts, the condition of the jute coming in is better, and it is noteworthy that a portion of the jute available is early crop, which indicates that it has been stored for a long time.

The overseas markets have also improved somewhat, and business is reported at £105 for good Export Firsts, with a premium for afloat jute. E.P.C. registrations in the first 15 days of February are the lowest yet at \$6,000 bales. Overseas buyers, although showing more interest, have apparently only been nibbling at selected marks, but it is probable that E.P.C. registrations during the second half of February will be considerably larger. The excess of afloat jute which was unsold must have almost disappeared and there are indications that the premium for this position will improve. Shipments of raw jute from East Pakistan during February are not expected to exceed 350,000 bales. Tonnage available during March at present is not expected to exceed 200,000, so in present conditions sales outstanding up to the end of January will only be shipped fully by the end of March. The Conference, however, is reported to be trying to divert ships to East Pakistan to carry a further 50,000 bales for the U.K. and Continent.

A conference has been going on in Karachi between the Ministry of Communications, representatives of Chittagong port and steamer agents. Both shippers and steamer agents have a very legitimate complaint about the working of Chittagong port. Quite apart from the chaos which exists in the administration of the railways at the port, another big obstacle is the very inefficient labour position. The Port Commissioners, who are supposed to work in co-ordination with the railway authorities, do not seem to be able to synchronise the placing of wagons with the berthing of ships. When wagons miss a ship for which they are intended, the baler or shipper is asked for diversion or detention charges regardless of whether or not he is to blame for the short shipment. Furthermore, there have been frequent cases of railway bookings being restricted to named steamers when the steamer had already sailed from Chittagong port. The loading of jute from wagons into vessels has slowed down considerably because reports indicate that the contract labour at the jetties consists of three gangs of boys for every gang of men. None of these factors help to relieve the congestion at the ports, which has grown to alarming proportions.

There has been a slight easing in the local jute goods market. B Twills are now quoted at Rs. 126 and 45in. 11oz. at Rs. 55-8. The spot market in Karachi is steadier. Because of the shortage of jute, there are indications that mills' stocks of the raw material are uncomfortably low.

THE FOREIGN JUTE MARKETS

ANXIETY ABOUT PROSPECTS FOR RAW MATERIAL

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute shippers are all very firm in their assessment of the outlook and the tendency has been to raise prices. Most of them quote at least £2 a ton more than a week ago, and several quote as much as £5 more. It is said that the market is dearer on account of a drastic fall in arrivals from the upcountry areas in Pakistan. There are rumours that a scarcity of jute is probable at the end of the season, but the industry finds it hard to believe this. Reports state that food prices have been so high in Pakistan and India during the past year that cultivators are being discouraged to grow anything but rice. On the other hand, it has for some time past been reported that attempts are to be seriously made to extend the acreage under jute in both countries for the next season. One reason for the smaller imports just now is that growers are too busy ploughing and preparing the ground for the new crop. With prices still well above the minimum fixed rates, there may be plenty of room for a fall before the new season begins.

Mill Firsts have been raised to £110 lowest to £113, Mill Lightnings to £102, Mill Hearts to £98 and Grade Hearts to £92, c.i.f. U.K., March-April. Some shippers want £105, £101 and £95 for the three last-named grades, on the present rates of freight. For the new freights, which take effect from 13th March, 20s has to be added to these quoted limits. The same applies to the quotations for dark jute at £104 for good marks of Daissee-2/3 and £100 for grade, with grade Tossa-2/3 from £100 and grade fours from £104, March-April, c.i.f.

The Calcutta goods market has been very irregular again, with a wide variation between the prices quoted. Hessian has shown little change on the week at 60s 6d for 40in. 10oz. and 46s for 74oz. March-April, and 3d less for May and June. B Twills have ranged from 167s down to 163s for the same shipments, all f.o.b. Calcutta.

Dundee yarns and cloth have attracted little interest, but prices are firm and unchanged. Spinnings are well booked up, but manufacturers would welcome more business.

VOLUNTARY SETTLEMENT OF
PLANTATION DISPUTEMADRAS TRIBUNAL AWARD
MODIFIED

(FROM A SOUTH INDIAN CORRESPONDENT)

THE wage dispute between the planters of Madras State and their workers has been settled amicably out of court. It may be recalled that the Tribunal appointed by the State Government gave an award in October, 1956, enhancing substantially the wages of workers and staff with retrospective effect from 1952. As the wages recommended by the Tribunal had no relation to those in other States, and were beyond the capacity of the industry to pay, the planters took the issue to the Supreme Court, where it is pending. At the suggestion of the parties, the Madras Minister for Agriculture and Labour conducted negotiations with the representatives of the management and labour, which have led to an agreement.

According to the agreement, workers will, on an average, get an increase of 3½ annas in their daily wages, a rise in the employer's contribution to provident fund to 8½ percent with effect from January, 1957, and retirement gratuity benefit at the rate of 15 days' wages for each year of service, subject to a maximum of 15 months. The increased wages will be paid from 24th October, 1953—the date on which the Tribunal gave its award. The management will not press the appeal before the Supreme Court and workers will not press their claims for benefits under the award. The agreement will be in force for the second plan period.

The significance of this agreement to the industry can be appreciated from the fact that, as against a rise of 13 annas in daily wages recommended by the Tribunal, the additional cost under the new agreement will be of the order of only 3½ annas. On a rough estimate, this will raise the cost of production of a pound of tea only by about an anna, against 4 annas under the Tribunal award. The most important relief under the agreement is the cancellation of the retrospective character of the award which would have meant for the industry a liability of Rs. 13 crores to Rs. 16 crores, and which most of the estates would have found impossible to meet. So the implemen-

tation of the award would have completely paralysed the industry. According to the new agreement, the enhanced wages need be paid only from 24th October, 1956, the date on which the award was given. Another welcome feature of the settlement is that it rules out the possibility of further wage disputes between planters and their employees for the next four years. The share market has received the settlement well. There has been a rush for plantation shares and most of the scrip have made a substantial recovery. It may be recalled that following the Tribunal's award, there was a landslide in plantation shares in the south.

Provident Fund Benefit

With the extension of the Provident Fund Act, 1952, to plantation workers, the wage bill of the plantation industry in the south, it is thought, will go up by another Rs. 60 lakhs a year. The Act will apply to all tea, coffee, rubber, cardamom and pepper plantations employing more than 50 workers. This means that coffee estates of an area of up to 100 acres, rubber estates up to 200 acres and cardamom estates up to 400 acres will be exempted. Application of the Act irrespective of the size of estates would have removed the cause for heart-burning among the plantation workers concerned.

Uncertainty in Pepper Market

Uncertainty characterises the pepper market again. In spite of the lower prices quoted (Rs. 537½ a candy of 6 cwt.) American dealers are showing much interest in Malabar Black; they are demanding further concessions, and as American demand is still the deciding factor in the market, anxiety has been prevailing. Russia, it is reported, has almost covered her requirements and market circles do not expect her to make any substantial purchases for the time being, unless on her own terms. Enquiries from east European countries and China are not big enough to provide support. Arrivals in the terminal markets have not shrunk to the extent expected and stocks are not moving fast enough.

Singapore, it is reported, is anxious to liquidate her stocks before new arrivals begin from Sarawak. The Sarawak crop will be available early this year. The immediate outlook for Malabar Black is considered obscure by the trade. Prices are likely to decline further unless substantial orders flow in from abroad, especially from the United States. In their absence, Indian growers may resort to distress selling, fearing competition from Sarawak and Indonesia. Better home demand might, however, prevent a crisis. The growing

uncertainty about the future of the pepper trade, it is stated, was the most important reason for the closing down of the pepper department of Messrs. Volkart Brothers in Cochin. The firm had been doing pepper export business for over a century on the west coast.

Coffee Export and Storage

The Indian Government has made a further export allocation of 3,150 tons of coffee from the 1956-57 season's crop. This will raise the official quota for the season to 11,050 tons. The official estimate of the current season's crop is 37,800 tons. The Coffee Board is likely to face serious difficulties in curing and storing the large volumes of coffee that are likely to be received in its pool. Last year, when the stock exceeded 16,000 tons, it encountered a lot of difficulties. The godowns at its command were found incapable of holding such large stocks. The current season's crop is 4,000 tons to 5,000 tons more than that of the last season. Therefore, the problem is likely to be more acute this year. It may be still more serious next year when the crop is expected to rise to 50,000 tons, unless fresh godowns are in the meantime constructed.

Pool agents and curers who collect the crop, cure it and keep it on behalf of the Coffee Board, are threatened with elimination, in view of the recommendations of the Plantation Enquiry Commission. Therefore, they are unlikely to expand storage facilities to cope with the increasing coffee crop.

INDIAN TEA EXPORTS IN 1956 RISE

India exported about 516 million lbs of tea in 1956, the value of which was about Rs. 140.6 crores. The total quantity exported as well as its value were an all-time record. The total exports of tea in 1955 were 363.8 million lbs, valued at Rs. 112.7 crores. Indian tea exports in 1956 more than recovered the ground lost in 1955. The value of the exports in 1954 was over Rs. 131 crores and the total quantity exported was about 456 million lbs. The increase in the exports in 1956 was shared by all the principal markets for Indian tea. The exports to the United Kingdom were 366.5 million lbs, against 248.9 million lbs in the previous year. The total value of the exports was about Rs. 100 crores, compared with Rs. 73.3 crores in 1955. Exports to the United States also increased considerably. The total estimated exports were nearly 28.5 million lbs, against 23.7 million lbs in 1955. The exports to Canada rose from 16.3 million lbs in 1955 to 22.6 million lbs in 1956. The value of the exports rose from Rs. 5.4 crores to about Rs. 6.5 crores. Exports to Egypt showed a marked increase, from 12.9 million lbs to 21.6 million lbs during 1955 and the value rose from Rs. 3.9 crores to Rs. 5.9 crores. Exports to Australia increased to 9.4 million lbs from 6.1 million lbs in 1955 and the value increased by about Rs. 66 lakhs over the previous year's figure of Rs. 2.05 crores. Production of tea during the year amounted to 663.6 million lbs against 667.6 million lbs in the previous year. But it might have been higher than that of the previous year but for the voluntary restriction on crop by producers' associations in north east India.

COCHIN TEA SALES

At Sale No. 5, 1,400,000 lbs of tea were on offer. There was a fair demand, but prices were generally 4 annas to 6 annas lower all round. Fannings were the weakest feature of the Sale.

NO CHANGE IN TEA EXPORT DUTY

The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty, at Rs. 3-6-1 a lb. against Rs. 3-15 a lb in force from 1st February, 1957. So there is no change in the existing rate of export duty of 6 annas a lb.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 22-2-57 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.41	1.41
No. 2	1.38	1.38
No. 3	1.35	1.35
No. 4	1.11	1.11
No. 5	1.06	1.06
	Sheet Cuttings 1	98
	Sheet Cuttings 2	93
Crepe:		
Water White	—	—
R.M.A. No. 1X	Rs. 1.09/12	1.11
R.M.A. No. 1	Rs. 1.04/09	1.06½
	Crepe No. 2	.97½
	Crepe No. 3	.94½
Scrap Crepe:		
Sc. Crepe No. 1	.86	.85½
Sc. Crepe No. 2	.82/85	.81½
Sc. Crepe No. 3	.70/80	.73½
Flat Bark	.65/68	.64½
	Sc. Crepe 3X	.77

To arrive at f.o.b. Colombo prices, add 53.53 cents a lb for crepe other than scrap crepe and 31.53 cents for scrap crepe to the above market prices.

Commodity Markets

WHOLESALE PRICE INDEX
FALLS

THE official wholesale price index (base: year ended August, 1939=100) declined by 0.4 percent to 424.4 during the week ended 16th February, 1957, compared with 426.2 for the earlier week. At this level, the index showed almost no change when compared with the corresponding week of last month, but was higher by 12.1 percent than that of last year. The index for Food Articles advanced by 0.6 percent to 407.7 as a result of an increase in the prices of wheat in Hapur (+3%), and rice and tea for internal consumption (+2% each), in spite of a decline in the prices of tea for export (-3%), wheat in Amritsar, bajra, dal arhar, coffee—Plantation P.B. and gur (-1%). Prices of lac (-10%), rapeseed (-7%); linseed (-4%), raw jute (-3%) and gingellyseed in Jhansi and groundnuts (-1%) each exhibited a fall while those of gingellyseed in Bombay (+2%) and castorseed in Bombay and copra (+1% each) witnessed an advance. Consequently the index for Industrial Raw Materials went down by 1.2 percent to 517.3 compared with 523.7 for the earlier week. The index for Semi-Manufactures also fell by 1.2 percent to 407.6 because of lower prices of gingelly cake (-13%), cowhides (-8%), mustard oil in Calcutta (-7%) and in Kanpur (-2%), linseed oil (-5%), goatskins (-4%), buffalo hides, sheepskins and copra cake (-3% each) and groundnut oil, zinc and cotton yarn (-1% each); prices of groundnut cake (+3%), coconut oil (+2%), castor oil in Calcutta and mustard oil in Patna (+1% each) were, however, marked up. Lower prices of jute manufactures (-3%) and chemicals (-1%) brought down the index for Manufactures by 0.3 percent to 385.6, although prices of glass and dyestuffs moved up by 1 percent each. A decline of 2.7 percent to 576.5, compared with 592.8 (revised) for the previous week in the index for the Miscellaneous group was caused by a decrease in the prices of chillies (-6%), tobacco leaf (-5%), turmeric (-4%) and black pepper (-3%). The price of cashewnuts (+2%), however, showed an increase.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: Year Ended August, 1939=100)

Groups and Sub-Groups	16-2-57	9-2-57	19-1-57	18-2-56

WORLD SUPPLY OF SUGAR IMPROVES

There are signs that the sugar shortage is nearly over. According to a leading firm of U.K. sugar merchants, there should be sufficient sugar available between now and the beginning of the European beet crop next autumn to meet normal world demand. Moreover, the extremely high level to which the price has risen recently has attracted more sellers than usual into the market. Such countries as Turkey, Italy, India and Argentina, none of which exported sugar last year, are all reported to be offering it now. Another factor leading to increased supplies is that the quotas restricting exports which are laid down by the International Sugar Agreement cease to be operative when the world price is above 4 cents (United States) a lb. This point was passed in the middle of November and the present price is equivalent to around 5 cents a lb. Prices on the London terminal market have already started to reflect the slightly improved supply position. Most forward contracts are now around 52s a ton, compared with a peak of 60s in the middle of January.

SUGAR PRODUCTION AND DESPATCHES

The production and despatches of sugar from indigenous factories amounted to 1,003,000 and 850,000 tons up to 15th February, in the current season against 896,000 and 445,000 tons respectively in the corresponding period of last year.

Calcutta Markets

STRONG DEMAND AT TEA
EXPORT SALE

DUSTS WEAK AT CLOSE

AT Sale No. 36 held on 4th and 5th March, offering at the Export auction consisted of 63,000 packages for which there was a strong and active demand. "Tea for price" was again the strongest feature and advanced by as much as 2 annas. Clean Commons and Low Mediums were generally 1 anna dearer, while medium B.P.'s shared in the general advance and were selling at ½ to 1 anna above valuations. Fannings grades were generally not as strong as Broken and were at times slightly easier. Stylish, well made whole leaf grades were keenly competed for and sold well, but the more ordinary descriptions were about steady at last week's rates. C.T.C. teas were generally of a poor quality, but received good demand and were often dearer.

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2 2 0 to 2 3 0	1 5 0
Plain B.P.	1 15 0	1 4 6 to 1 5 0
Medium Assam B.P.	2 0 0	1 7 0 to 1 7 6
Best Assam C.T.C. B.P.	2 4 0 (Nominal)	

At the Internal Sale, offerings amounted to 18,993 packages. At the start of the Sale, there was a good general demand and prices were about firm on last rates. As the Sale progressed the demand, however, weakened and at the close, the market was about 1 anna easier. Once again the few lines of bright liquoring C.T.C. Assams were a very strong feature while the remaining offerings in this category were easier. Orthodox descriptions from Assam showed a further improvement in quality and opened at about last rates, but towards the close were ½ to 1 anna lower. Commons and Doors were barely steady early in the Sale and closed a full 1 anna lower. Powdery kinds were once again more popular than the leafy types and a few lines of flavoury Darjeelings sold very well.

Quotations

	1957 Rs.	1956 Rs.
Medium Doors Dust	1 11 0	1 7 0 to 1 8 0
Medium Assam Grainy Dust	1 12 0 to 1 12 6	1 8 6 to 1 9 6
Medium Assam C.T.C. Dust	2 1 0 to 2 3 0	
Best Assam C.T.C. Dust	2 12 0	2 12 0 to 2 14 0

There was a fair general demand for the 4,080 chests of other grades on offer, but an easier tone prevailed and most kinds were selling up to 2 annas below last rates.

BETTER LINSEED PRICES

Quiet conditions prevailed throughout the earlier part of the past week, but due to an acute shortage of ready goods an advance in prices was noted towards the close. Arrivals from the centres have been very scarce, and activity has been very limited for ready as well as forward deliveries. The oil market has been rather dull and some small trading was recorded following a few local enquiries; overseas prices have been considerably out of line. Latest quotations were as follows: March Rs. 22 a maund and April-May Rs. 21 a maund.

SUGAR PRICES RISE

During the week ended 6th March, sugar sales in the Calcutta market averaged 5,000 bags daily. Arrivals a day were 2,000 bags and stock totalled 80,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 31-15 for ordinary grain and Rs. 33-4 for big grain. The prices moved up by 2 annas towards the end of the week due to the fall in arrivals.

SHELLAC MARKET STEADY

During the week ended 5th March, the market was steady at the beginning, quiet at midweek and again steady at the close. The range of quotations was as follows:

Pure Buttonlac	Rs. 105 buyers; 103 value; 102 buyers.
Lemon No. 1 Shellac	Rs. 105 buyers; 103 value; 101, 103 buyers.
Lemon No. 2 Shellac	Rs. 100, 98 value; 93, 96 buyers.
F. O. Std. 1 Shellac	Rs. 91 to 88 buyers.
Pure T.N. Shellac	Rs. 87-8, 85 buyers; 83 basis done and buyers.
4% I.T.N. Shellac	Rs. 79, 75, 76-8 buyers.

Ordinary Bysaky Seedlac (C.P.)	Rs. 74-8 to 68, 69 buyers.
Kireelac	Rs. 27, 26-8 buyers.

Shipments during February until the 23rd were 23,587 packages comprising shellac 13,744 packages, seedlac 7,305 packages, buttonlac 362 packages and others 2,176 packages.

HIDES AND SKINS FIRM

The market in skins was firm and prices showed an upward tendency. Stocks were less than in the previous week.

Bazaar Sales

(Between 26th February and 4th March, 1957)
Cowhides: Wet salted (Ord.) 56,000 pcs. on the basis of Rs. 6-6 to Rs. 9-6; Wet salted (Slaughtered) 21,600 pcs. on the basis of Rs. 13 to Rs. 21-8.

Goatskins: Wet salted (Daissee, Killed) 46,900 pcs. on the basis of Rs. 225 to Rs. 235, Rs. 280 to Rs. 315 and Rs. 360 to Rs. 370; Assam-Dinajpur 28,100 pcs. on the basis of Rs. 245 to Rs. 265; Purneah-Kissenganj 23,600 pcs. on the basis of Rs. 265 to Rs. 285; Pakur-Patna 3,100 pcs. on the basis of Rs. 240 to Rs. 250; Muzafferpore-Patna 5,600 pcs. on the basis of Rs. 270 to Rs. 290.

Bazaar Stocks

(26th February, 1957)

Cowhides: Wet salted (Daissee, Killed) 5,900 pcs.; Assam-Dinajpur-Jalpaiguri 38,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 92,000 pcs.

PRELIMINARY WORK ON LIGNITE MINING PROJECT

The programme of work on the preliminary stages of the integrated lignite project in Neyveli, Madras State, scheduled for 1957-58, is expected to be implemented according to plan. Adequate provision has been made by the Ministry of Production of expenditure on the execution of the mining part of the project for the next year, in spite of the need for conserving foreign exchange resources. The Government of India has sanctioned the purchase of conventional earthmoving machinery and special earthmoving equipment at a total cost of Rs. 5.5 crores. While the shipment of the first unit of the specialised equipment is expected to begin about January 1958, the conventional machines are being delivered in batches and the delivery is expected to be completed by the middle of 1957. To keep to the target date of mining lignite, that is the beginning of 1960, conventional machinery in hand and machines that might be available in the course of the year are being commissioned for work on removing the over-burden. Operations for this purpose in the area selected for the inauguration of the first mine cut will commence in the near future.

FIRST SHIPMENT OF CRUDE OIL FOR
CALTEX REFINERY

The first tanker carrying crude oil for the new Caltex Oil Refinery reached Visakhapatnam recently. The tanker *Caltex Saigon*, arriving from the Middle East, was received at the Visakhapatnam port's new oil wharf from where the crude oil was pumped to the refinery through a mile-long pipeline. The vessel, a T2 tanker, with a capacity of 120,000 barrels, is the first of 45 such tankers that will annually feed the refinery. It is estimated that about one tanker a week will be required to supply the refinery with crude oil. To cope with the new tanker traffic, two large oil berths have been newly constructed at the Visakhapatnam port. When the Caltex Oil Refinery goes on steam this year, it will annually process 675,000 tons of crude oil yielding 13,500 barrels a day of refined products such as motor petrol, kerosene, diesel oil, jet fuel for aircraft and heavier types of fuel.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to October, 1956. Compared with the preceding month, there were increases in steel ingots 3.7 points, pig iron 3.0 points, cement 8.2 points, coal 3.9 points,

wagons loaded 7.3 points and electricity 1.9 points, while decreases occurred in cotton consumption 7.4 points, jute manufactures 6.8 points and paper 6.4 points.

The indices for cheque clearances and notes in

circulation rose by 1.7 points and 2.5 points respectively.

Correlating all the factors, the Capital Index of Indian Industrial Activity advanced by 2.0 points during October, 1956.

	Industrial Production						Total Number of Wagons Loaded (T)	Finance, Statistics	Trade, Foreign & Coastal		General Monthly Index

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY (1935)

COMPANY AND PUBLIC NOTICES

NEW INDIA SUGAR MILLS LTD.

NOTICE.

NOTICE is hereby given that an Extra-ordinary General Meeting of the Shareholders of the New India Sugar Mills Ltd., will be held at 8, India Exchange Place, Calcutta on Friday, the 29th day of March, 1957 at 12 Noon to consider and if thought fit to pass with or without modification the following resolutions:

AS SPECIAL RESOLUTIONS:

1. Resolved that:

(i) the approval of the Central Government having been received for variation in the Managing Agency Agreement the Company do hereby approve of and consent to the variation of the Managing Agency Agreement so as to (i) fix the remuneration payable to the Managing Agents, The Cotton Agents Private Ltd. with effect from the 1st day of April, 1956 at a commission of 10% of the net profits of the Company as calculated in accordance with the provisions of the Companies Act, 1956 subject to a minimum remuneration of Rs. 25,000/- per annum in the event of absence or inadequacy of profits; (ii) fix the term of appointment upto 15th August, 1960 and (iii) provide for the powers and duties of the Managing Agents in accordance with the provisions of the said Act.

(2) the draft agreement embodying the revised terms as aforesaid and placed before the meeting and for the purpose of identification endorsed with the signature of the Chairman of the meeting be and is hereby approved and the directors be and are hereby authorised to execute engrossment thereof in duplicate.

(3) the terms of the Managing Agency Agreement will have effect notwithstanding any provisions to the contrary in the Articles of Association of the Company.

2. Whereas the American East India Corporation, an associate of The Cotton Agents Private Ltd., the Managing Agents of the Company, maintain an office at New York in the U.S.A. for purchase and sale of goods including stores and machinery and also have dealings and business connections with parties all over the U.S.A. and their operations are on a large scale and whereas their expenses of maintaining their office, as assessed, amount approximately to \$30,000/- per annum and whereas expenses, which can be attributed to the work expected to be done for and on behalf of the Company, would depend on work expected to be done for and on behalf of the Company, would depend on the value of purchases effected through the said Company in relation to its total turnover in each year it is hereby resolved that the American East India Corporation be appointed as Agents for the Company to purchase for and on behalf of the Company, stores and machinery for a period of three years and their commission for purchase of stores and machinery at the rates mentioned below, be paid by the Company to the Agents, viz. the American East India Corporation in the manner sanctioned by the Directors of the Company.

- For ordering stores:
5 per cent of the invoice price.
- For ordering machinery:
2 1/2% of the invoice price on the first \$50,000/- worth of goods or less.
2% of the invoice price on the second \$50,000/- worth of goods or less.
1 1/2% of the invoice price on the third \$50,000/- worth of goods or less.
1% on anything above \$1,50,000/-.

N.B. (1) Orders placed with different manufacturers or on different occasions with the same manufacturers will not be compounded for the purpose of calculating the commission due to American East India Corporation.

- \$20,000/- will be the maximum commission payable to American East India Corporation in respect of a single order, irrespective of the amount calculated on the percentage basis.
- Where the American East India Corporation receive any commission or discount from the manufacturers or other suppliers of goods ordered by them for the company, they will not be entitled to retain the commission or discount so received and will duly account for the same to the company.

If anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India as the case may be the same will not be done unless such permission is obtained.

AS ORDINARY RESOLUTION:

Resolved that the Registers, Books and documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act, 1956 and particularly under sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301, 302, 303, 304, 307, 356-360, 362, 372 and Schedule VIII of the Act be kept open for such

inspection by the persons entitled thereto under the aforesaid provisions to the extent, in the manner and on payment of fees, if any, specified in the aforesaid provisions at the registered office of the Company on all working days between the hours of 10-30 A.M. and 12-30 P.M. (I.S.T.) except when the registers and books are closed under the provisions of the Companies Act, 1956 or the Articles of Association of the Company upon 24 hours' written notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected, provided, however, that the register required to be maintained under section 307 of the Companies Act, 1956 shall be open for inspection of the members of the Company at the place and between the times above-mentioned during the period prescribed by subsection 5 (a) of section 307.

By Order of the Board,

THE COTTON AGENTS PRIVATE LTD.,
Managing Agents.

"India Exchange",

Calcutta-1, the 18th February, 1957.

N.B.:

- A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

2. EXPLANATORY NOTE:

Special Resolution No. 1.

Under the provisions of the existing Managing Agency Agreement the Managing Agents are entitled to an office allowance of Rs. 750/- per month, 1 1/4% commission on sales and 7 1/4% commission on net profits, but in accordance with the provisions of section 348 of the Companies Act, 1956 the remuneration payable to the Managing Agents cannot exceed 10% of the net profits of the company to be computed in the manner laid down in section 349 and 350 of the Act. In order to bring the remuneration of the Managing Agents in conformity with the provisions of the Companies Act, 1956 approval of the Central Government has been obtained for fixing the remuneration of the Managing Agents with effect from 1.4.1956 at 10% of the net profits to be computed in the manner laid down in the said Act with a minimum remuneration of Rs. 25,000/- per annum in the event of absence or inadequacy of profits.

The term of the Managing Agents under the present agreement expires on the 26th December, 1961. But section 330 of the Companies Act, 1956 provides for the expiry of the term of office of all Managing Agents on the 15th August, 1960. Accordingly the term of the Managing Agents has been fixed upto the 15th August, 1960.

In view of the various changes in the provisions of the Companies Act, 1956 relating to the Managing Agents, it is considered advisable that the present Managing Agency Agreement be replaced by a fresh agreement incorporating the revised remuneration and the term of office as also other provisions affecting the Managing Agents. As it is proposed to adopt a new set of Articles keeping in view the provisions of the Companies Act, 1956, necessary changes in the Articles of Association of the Company relating to the Managing Agents are not being made at present. Pending such wholesale revision of the Articles of Association, the provisions of the new Managing Agency agreement shall prevail notwithstanding the present provisions of the Articles of Association of the company affecting the Managing Agents. The draft Managing Agency Agreement, proposed to be entered into with The Cotton Agents Private Ltd., a copy of which is being sent to the shareholders in term of Section 302 (3) of the Companies Act, 1956 can be inspected on any working day during business hours at the registered office of the company at "India Exchange", Calcutta-1.

Special Resolution No. 2.

It is proposed to appoint the American East India Corporation, New York, an associate of The Cotton Agents Private Ltd., the Managing Agents of the company as buying agents for and on behalf of the company in the United States of America on the terms and conditions stated in the resolution. Memorandum specifying the nature of interest of Directors in respect of Special Resolutions No. 1 & 2:

UPPER GANGES SUGAR MILLS LTD.

NOTICE.

NOTICE is hereby given that an Extra-ordinary General Meeting of the Shareholders of the Upper Ganges Sugar Mills Ltd., will be held at 8, India Exchange Place, Calcutta on Friday, the 29th day of March, 1957, at 2-30 P.M. to consider and if thought fit to pass with or without modification the following resolutions:

AS SPECIAL RESOLUTIONS:

1. Resolved that:

(1) the approval of the Central Government having been received for variation in the Managing Agency Agreement the Company do hereby approve of and consent to the variation of the Managing Agency Agreement so as to (i) fix the remuneration payable to the Managing Agents, The Cotton Agents Private Ltd. with effect from the 1st day of April, 1956 at a commission of 10% of the net profits of the Company as calculated in accordance with the provisions of the Companies Act, 1956 subject to a minimum remuneration of Rs. 45,000/- per annum in the event of absence or inadequacy of profits; (ii) fix the term of appointment upto 15th August, 1960 and (iii) provide for the powers and duties of the Managing Agents in accordance with the provisions of the said Act.

(2) the draft agreement embodying the revised terms as aforesaid and placed before the meeting and for the purpose of identification endorsed with the signature of the Chairman of the meeting be and is hereby approved and the directors be and are hereby authorised to execute engrossment thereof in duplicate.

(3) the terms of the Managing Agency Agreement will have effect notwithstanding any provisions to the contrary in the Articles of Association of the Company.

2. Whereas the American East India Corporation, an associate of The Cotton Agents Private Ltd., the Managing Agents of the Company, maintain an office at New York in the U.S.A. for purchase and sale of goods including stores and machinery and also have dealings and business connections with parties all over the U.S.A. and their operations are on a large scale and whereas their expenses of maintaining their office, as assessed, amount approximately \$30,000/- per annum and whereas expenses, which can be attributed to the work expected to be done for and on behalf of the Company, would depend on the value of purchases effected through the said company in relation to its total turnover in each year it is hereby resolved that the American East India Corporation be appointed as Agents for the Company to purchase for and on behalf of the company, stores and machinery for a period of three years and their commission for purchase of stores and machinery at the rates mentioned below, be paid by the Company to the Agents, viz. the American East India Corporation in the manner sanctioned by the Directors of the Company.

(a) For ordering stores:

5 per cent of the invoice price.

(b) For ordering machinery:

2½% of the invoice price on the first \$50,000/- worth of goods or less.

2% of the invoice price on the second \$50,000/- worth of goods or less.

1½% of the invoice price on the third \$50,000/- worth of goods or less.

1% on anything above \$1,50,000/-.

N.B. (1) Orders placed with different manufacturers or on different occasions with the same manufacturers will not be compounded for the purpose of calculating the commission due to American East India Corporation.

(2) \$20,000/- will be the maximum commission payable to American East India Corporation in respect of a single order, irrespective of the amount calculated on the percentage basis.

(3) Where the American East India Corporation receive any commission or discount from the manufacturers or other suppliers of goods ordered by them for the company, they will not be entitled to retain the commission or discount so received and will duly account for the same to the company.

If anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India as the case may be the same will not be done unless such permission is obtained.

AS ORDINARY RESOLUTIONS:

1. Resolved that the Registers, Books and documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act, 1956 and particularly under sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301, 302, 303, 304, 307, 356-360, 362, 372 and Schedule VIII of the Act be kept open for such inspection by the persons entitled thereto under the aforesaid provisions to the extent, in the manner and on payment of fees, if any, specified in the aforesaid provisions at the registered office of the company on all working days between the hours of 10-30 A.M. and 12-30 P.M. (I.S.T.) except when the registers and books are closed under the provisions of the Companies Act, 1956 or the Articles of Association of the Company upon 24 hours' notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected, provided, however, that the register re-

quired to be maintained under section 307 of the Companies Act, 1956 shall be open for inspection of the members of the Company at the place and between the times above-mentioned during the period prescribed by sub-section 5(a) of section 307.

Ordinary Resolution No. 2

Resolved that the appointment of M/s. Nagar-mal Radheshyam, Bhagalpur and M/s. Payal Private Ltd., Delhi as sole selling agents for the areas allotted to them for sale of the products of the Birla Laboratories (Chemical Department) owned by the Company be and is hereby approved.

By Order of the Board,

THE COTTON AGENTS PRIVATE LTD.,
Managing Agents.

'India Exchange',

Calcutta-1, the 18th February, 1957.

N.B.:-

(1) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(2) EXPLANATORY NOTE:

Special Resolution No. 1

Under the provisions of the existing Managing Agency Agreement the Managing Agents are entitled to an office allowance of Rs. 1,000/- per month, 2% commission on sales and 10% commission on net profits, but in accordance with the provisions of Section 348 of the Companies Act, 1956 the remuneration payable to the Managing Agents cannot exceed 10% of the net profits of the company to be computed in the manner laid down in Sections 349 and 350 of the Act. In order to bring the remuneration of the Managing Agents in conformity with the provisions of the Companies Act, 1956 approval of the Central Government has been obtained for fixing the remuneration of the Managing Agents with effect from 1-4-1956 at 10% of the net profits to be computed in the manner laid down in the said Act with a minimum remuneration of Rs. 45,000/- per annum in the event of absence or inadequacy of profits.

The term of the Managing Agents under the present agreement expires on the 15th day of March, 1962. But Section 330 of the Companies Act, 1956 provides for the expiry of the term of office of all Managing Agents on the 15th August, 1960. Accordingly the term of the Managing Agents has been fixed upto the 15th August, 1960.

In view of the various changes in the provisions of the Companies Act, 1956 relating to the Managing Agents, it is considered advisable that the present Managing Agency Agreement be replaced by a fresh agreement incorporating the revised remuneration and the term of office as also other provisions affecting the Managing Agents. As it is proposed to adopt a new set of Articles keeping in view the provisions of the Companies Act, 1956 necessary changes in the Articles of Association of the Company relating to the Managing Agents are not being made at present. Pending such wholesale revision of the Articles of Association, the provisions of the new Managing Agency Agreement shall prevail notwithstanding the present provisions of the Articles of Association of the company affecting the Managing Agents. The draft Managing Agency Agreement, proposed to be entered into with The Cotton Agents Private Ltd., a copy of which is being sent to the shareholders in terms of Section 302(3) of the Companies Act, 1956 can be inspected on any working day during business hours at the registered office of the company at 'India Exchange', Calcutta-1.

Special Resolution No. 2:

It is proposed to appoint the American East India Corporation, New York, an associate of The Cotton Agents Private Ltd., the Managing Agents of the company as buying agents for and on behalf of the company in the United States of America on the terms and conditions stated in the resolution. Memorandum specifying the nature of interest of Directors in respect of Special Resolution No. 1 & 2:

Shri K. K. Birla, Chairman of the Board of Directors of the company is a Director and shareholder of the Managing Agents, The Cotton Agents Private Ltd.

Ordinary Resolution No. 1:

The resolution has been proposed to fix the time for and mode of inspection of various registers, books and documents required to be maintained and kept open for inspection of the members and other persons keeping in view the administrative convenience.

Ordinary Resolution No. 2:

It is proposed to get the appointment of the sole selling agents for the sale of the products of the Birla Laboratories (Chemical Department) owned by the Company, approved in the General Meeting as required under Section 294 of the Companies Act, 1956.

BHARAT SUGAR MILLS LIMITED

NOTICE.

NOTICE is hereby given that an Extra-ordinary General Meeting of the Shareholders of the Bharat Sugar Mills Limited, will be held at 8, India Exchange Place, Calcutta on Friday, the 29th day of March, 1957 at 11 A.M. to consider and if thought fit to pass with or without modification the following resolutions:

AS SPECIAL RESOLUTION:

1. Resolved that:

(1) the approval of the Central Government having been received for variation in the Managing Agency Agreement the Company do hereby approve of and consent to the variation of the Managing Agency Agreement so as to (i) fix the remuneration payable to the Managing Agents, The Cotton Agents Private Ltd. with effect from the 1st day of April, 1956 at a commission of 10% of the net profits of the Company as calculated in accordance with the provisions of the Companies Act, 1956 subject to a minimum remuneration of Rs. 25,000/- per annum in the event of absence or inadequacy of profits; (ii) fix the term of appointment up to 15th August, 1960 and (iii) provide for the powers and duties of the Managing Agents in accordance with the provisions of the said Act.

(2) the draft agreement embodying the revised terms as aforesaid and placed before the meeting and for the purpose of identification endorsed with the signature of the Chairman of the meeting be and is hereby approved and the directors be and are hereby authorised to execute engrossment thereof in duplicate.

(3) the terms of the Managing Agency Agreement will have effect notwithstanding any provisions to the contrary in the Articles of Association of the Company.

2. Whereas the American East India Corporation, an associate of The Cotton Agents Private Ltd., the Managing Agents of the Company, maintain an office at New York in the U.S.A. for purchase and sale of goods including stores and machinery and also have dealings and business connections with parties all over the U.S.A. and their operations are on a large scale and whereas their expenses of maintaining their office, as assessed, amount approximately to \$30,000/- per annum and whereas expenses, which can be attributed to the work expected to be done for and on behalf of the Company, would depend on the value of purchases effected through the said Company in relation to its total turnover in each year it is hereby resolved that the American East India Corporation be appointed as Agents for the Company to purchase for and on behalf of the company, stores and machinery for a period of three years and their commission for purchase of stores and machinery at the rates mentioned below, be paid by the Company to the Agents, viz. the American East India Corporation in the manner sanctioned by the Directors of the Company.

(a) For ordering stores:

5 per cent of the invoice price.

(b) For ordering machinery:

2½% of the invoice price on the first \$50,000/- worth of goods or less.

2% of the invoice price on the second \$50,000/- worth of goods or less.

1½% of the invoice price on the third \$50,000/- worth of goods or less.

1% on anything above \$1,50,000/-.

N.B. (1) Orders placed with different manufacturers or on different occasions with the same manufacturers will not be compounded for the purpose of calculating the commission due to American East India Corporation.

(2) \$20,000/- will be the maximum commission payable to American East India Corporation in respect of a single order, irrespective of the amount calculated on the percentage basis.

(3) Where the American East India Corporation receive any commission or discount from the manufacturers or other suppliers of goods ordered by them for the company, they will not be entitled to retain the commission or discount so received and will duly account for the same to the company.

If anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India as the case may be the same will not be done unless such permission is obtained.

AS ORDINARY RESOLUTION:

Resolved that the Registers, Books and documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act, 1956 and particularly under sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301, 302, 303, 304, 307, 356-360, 362, 372, and Schedule VIII of the Act be kept open for such inspection by the persons entitled thereto under the aforesaid provisions to the extent, in the manner and on payment of fees, if any, specified in the aforesaid provisions at the registered office of the company on all working days between the hours of 10-30 A.M. and 12-30 P.M. (I.S.T.) except when the

registers and books are closed under the provisions of the Companies Act, 1956 or the Articles of Association of the Company upon 24 hours' written notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected, provided, however, that the register required to be maintained under section 307 of the Companies Act, 1956 shall be open for inspection of the members of the Company at the place and between the times above-mentioned during the period prescribed by sub-section 5(a) of section 307.

By Order of the Board,

THE COTTON AGENTS PRIVATE LTD.,
Managing Agents.

'India Exchange',

Calcutta-1, the 18th February, 1957.

N.B. (1) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(2) EXPLANATORY NOTE:

Special Resolution No. 1

Under the provisions of the existing Managing Agency Agreement the Managing Agents are entitled to an office allowance of Rs. 1,000/- per month and 10% commission on net profits. No office allowance can, however, be paid from 1-4-1956 vide section 354 of the Companies Act, 1956. Further the commission of 10% has to be computed in the manner laid down in Sections 349 and 350 of the Act. In order to bring the remuneration of the Managing Agents in conformity with the provisions of the Companies Act, 1956 approval of the Central Government has been obtained for fixing the remuneration of the Managing Agents with effect from 1-4-56 at 10% of the net profits to be computed in the manner laid down in the said Act with a minimum remuneration of Rs. 25,000/- per annum in the event of absence or inadequacy of profits.

The term of the Managing Agents under the present agreement expires on the 26th day of December, 1961. But Section 330 of the Companies Act, 1956 provides for the expiry of the term of office of all Managing Agents on the 15th August, 1960. Accordingly the term of the Managing Agents has been fixed upto the 15th August, 1960.

In view of the various changes in the provisions of the Companies Act, 1956 relating to the Managing Agents, it is considered advisable that the present Managing Agency Agreement be replaced by a fresh agreement incorporating the revised remuneration and the term of office as also other provisions affecting the Managing Agents. As it is proposed to adopt a new set of Articles keeping in view the provisions of the Companies Act, 1956, necessary changes in the Articles of Association of the Company relating to the Managing Agents are not being made at present. Pending such wholesale revision of the Articles of Association, the provisions of the new Managing Agency agreement shall prevail notwithstanding the present provisions of the Articles of Association of the company affecting the Managing Agents. The draft Managing Agency Agreement, proposed to be entered into with The Cotton Agents Private Ltd., a copy of which is being sent to the shareholders in terms of Section 302(3) of the Companies Act, 1956 can be inspected on any working day during business hours at the registered office of the company at 'India Exchange', Calcutta-1.

Special Resolution No. 2.

It is proposed to appoint the American East India Corporation, New York, an associate of The Cotton Agents Private Ltd., the Managing Agents of the company as buying agents for and on behalf of the company in the United States of America on the terms and conditions stated in the resolution.

Memorandum specifying the nature of interest of Directors in respect of Special Resolution No. 1 & 2:

Shri K. K. Birla, Chairman of the Board of Directors of the company is a Director and shareholder of the Managing Agents, The Cotton Agents Private Ltd., and Shri B. P. Khaitan, a Director of the company is a co-sharer in the Managing Agency remuneration received by The Cotton Agents Private Ltd., from the company.

Ordinary Resolution No. 1.

The resolution has been proposed to fix the time for and mode of inspection of various registers, books and documents required to be maintained and kept open for inspection of the members and other persons keeping in view the administrative convenience.

MARTIN BURN LIMITED

NOTICE.

The Annual General Meeting (being the Eleventh Ordinary General Meeting) of the Shareholders of Martin Burn Ltd. will be held on Friday, 29th March, 1957, at 12 noon at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:-

(1) To receive and adopt the Audited Accounts for the year ended 30th September, 1956, and Directors' and Auditors' Reports thereon.

(2) To declare a Dividend and Cash Bonus.

(3) To appoint Directors in place of those retiring.

(4) To appoint Auditors and to fix their remuneration.

(5) As special business to consider and if thought fit to pass the following resolution, namely:

"That the Books, Registers and other documents required to be maintained by the Company and kept open for inspection under the provisions of The Companies Act, 1956, and particularly under Sections 49, 118, 144, 163, 196, 301, 302, 304, 307, 362 and 372 of the said Act, shall be available for inspection at the Registered Office of the Company by the persons entitled thereto to the extent and in the manner and on payment of the requisite fees, if any, specified in the aforesaid provisions, between the hours of 10 a.m. and 12 noon on each business day. Provided, however, that the Register required to be maintained under Section 307 of the Act, shall be open for inspection of the members or holders of debentures of the Company between the times above mentioned only during the period prescribed by sub-section 5(a) of Section 307."

The Ordinary Share Registers of the Company will be closed from 22nd to 29th March, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,

MARTIN BURN LTD.,

A. G. GIDLEY,

Secretary.

Calcutta, 4th March, 1957.

NOTE—The Dividend and Cash Bonus, if sanctioned, will be paid on or after 30th April, 1957, to those Shareholders so entitled whose names appear in the Company's books on the 29th March, 1957, or to their mandatees. No application for dividend warrants will be necessary.

Explanatory Statement as Required by Section 173 of The Companies Act, 1956.

Item No. (5)

With reference to the resolution relating to inspection of Books, Registers and other documents, referred to in the accompanying notice, The Companies Act, 1956, provides that the Company may impose reasonable restrictions on such inspection but so that not less than two hours in each day are allowed for inspection, and the resolution is moved accordingly.

The Directors of the Company have no interest in the business represented by the foregoing resolution other than in their capacity as shareholders.

KAMARHATTY COMPANY, LIMITED.

NOTICE is hereby given that the One Hundred and Fifty-seventh Annual General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 11-15 a.m. on Saturday, the 30th March, 1957, for the following purposes:-

(1) To receive and consider the Audited Accounts for the half-year ended 30th June, 1956, and the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.

(2) To appoint a Director in place of one retiring.

(3) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 22nd March to 30th March, 1957, both days inclusive.

By Order of the Board,

JARDINE HENDERSON, LIMITED,

D. FORDWOOD,

Secretary.

Managing Agents.

4. Clive Row,

Calcutta-1, 1st March, 1957.

NOTE: A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

</

THE CENTRAL BANK OF INDIA LIMITED

NOTICE is hereby given that the Forty-sixth Annual General Meeting of the Shareholders of The Central Bank of India Limited, will be held at the Registered Office of the Company, in the Central Bank Building, Mahatma Gandhi Road, Fort, Bombay, on Thursday, the 28th day of March, 1957, at 4 P.M. (S.T.) to transact the following business:—

- To receive and consider and adopt the Report of the Directors and the Audited accounts for the period ended 31st December, 1956.
- To declare a dividend.
- To appoint a Director in place of Sir Jamsetjee Jejeebhoy, Bart., who vacates his seat as a Director under Article 84 of the Articles of Association and who is eligible and offers himself for re-appointment.
- To appoint a Director in place of His Highness Sir Jiwajirao Madhavrao Scindia, C.C.S.I., C.I.E., who vacates his seat as a Director under Article 84 of the Articles of Association and who is eligible and offers himself for re-appointment.
- To appoint a Director in place of Mr. Dinshaw D. Romer who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956 and is eligible for re-appointment and to consider, and if thought fit, to pass the following resolution of which a special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed hereto as required by Section 173 of the said Act:

"RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Mr. Dinshaw D. Romer who has attained the age of 81 years and who retires by rotation under Article 92 of the said Articles of Association read with Section 256 of the Companies Act, 1956, be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

- To appoint a Director in place of Mr. Chimanlal B. Parikh, who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and who is eligible and offers himself for re-appointment.

- To appoint a Director in place of Mr. Framroze J. Gazdar who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and who is eligible and offers himself for re-appointment.

- To appoint Auditors and to fix their remuneration.

- To consider and, if thought fit, to pass the following resolution required by Section 293 of the Companies Act, 1956, an explanatory statement in respect of which is annexed hereto as prescribed by Section 173 of the said Act:

"RESOLVED that the consent of the Company under the provisions of Section 293(1) (d) of the Companies Act, 1956, be and is hereby granted to the Board of Directors of the Company to borrow from time to time for the purposes of the Company such sum or sums of money as they may in their absolute discretion think fit notwithstanding that the moneys so borrowed may either by themselves or together with the moneys already borrowed by the Company and remaining outstanding (other than temporary loans obtained from the Company's Bankers in the ordinary course of business) may be in excess of the aggregate of the paid up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose.

RESOLVED further that the Company hereby ratifies and confirms all borrowings made by the Board of Directors after 1st April 1956, which together with the amounts previously borrowed by the Company and remaining outstanding have been, during any period since the said date, in excess of the aggregate of the said paid up capital and free reserves of the Company."

- To consider and, if thought fit, to pass the following resolution the relative explanatory statement concerning which is annexed hereto as prescribed by Section 173 of the Companies Act, 1956:—

"RESOLVED that the Registers, Books and Documents of the Company

required to be maintained and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301-304, 307, be kept open for such inspection by the persons entitled thereto under the aforesaid provisions to the extent in the manner and on payment of the fees, if any, specified in the aforesaid provisions at the Registered Office of the Company between the hours of 11-30 A.M. and 1-30 P.M. (S.T.) on any working day except Saturdays and between the hours of 11-00 A.M. and 1-00 P.M. (S.T.) on Saturdays, except when the Registers and Books are closed under the provisions of the Companies Act, 1956, or the Articles of Association of the Company. Provided, however, that the Register required to be maintained under Section 307 of the Act shall be open for inspection as aforesaid of the members of the Company between the times abovementioned during the period prescribed by sub-section 5(a) of Section 307."

By Order of the Board,
N. K. KARANJIA,
General Manager.

Bombay, 1st March, 1957.

Note:

A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

- The Transfer Books of the Bank will be closed from Wednesday, the 6th day of March, 1957, to Thursday, the 28th day of March, 1957, (both days inclusive).

- Dividend Warrants for the half-year ended 31st December, 1956 will be posted to the Shareholders at their registered address on and after the 29th day of March, 1957. Shareholders are requested to intimate the Bank their change of address, if any, immediately.

ANNEXURE TO THE NOTICE.

Explanatory Statement as required by Section 173 of the Companies Act 1956.

To,

The Shareholders of
The Central Bank of India Limited.

Dear Sir/Madam,

In conformity with the Companies Act, 1956, which came into force on 1st April, 1956, the following Explanatory Statement, as required by Section 173 of the aforesaid Act, sets out all material facts relating to items 5, 9 and 10 mentioned in the accompanying Notice dated the 1st March, 1957.

2. In respect of Item No. 5, it is notified that Mr. Dinshaw D. Romer who retires by rotation and is eligible for re-appointment, has attained the age of 81 years and hence he cannot be re-appointed a Director of the Company except by a resolution in respect of which special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out in the said Item No. 5. Mr. Romer has been a Director on the Board of this Company since 1931. He is an eminent Solicitor and has wide and varied experience of banking and commerce and during his long period of association with the Company he has rendered very valuable services to the Company. It is in the interest of the Company that it should continue to receive the benefit of his services as a member of the Board.

3. As to Item No. 9, it is proposed to meet the requirements of Section 293(1) (d) of the Companies Act, 1956. The Bank has had since 1st April, 1956 and may hereafter have occasions to borrow in excess of the limits prescribed by the said Section and it is, therefore, necessary to ratify such previous borrowings and to give the necessary powers to the Board for such future borrowings, the same being necessary and expedient for the purposes of the Company's business.

4. In respect of Item No. 10, it is notified that under the relevant Sections of the Act, the Company in General Meeting is entitled to impose reasonable restrictions on keeping the said registers and documents open for inspection by the persons entitled thereto so that not less than two hours in each day are allowed for inspection. The hours of inspection sought to be prescribed by the said Resolution are reasonable and convenient from the administrative point of view.

By Order of the Board,
N. K. KARANJIA,
General Manager.

Bombay, 1st March, 1957.

BHARAT SUGAR MILLS LTD.

NOTICE is hereby given that the Twenty-fifth Annual General Meeting of the Bharat Sugar Mills Ltd., will be held at 8, India Exchange Place, Calcutta on Friday, the 29th March, 1957 at 11-20 A.M. or so soon thereafter, as the Extra-ordinary General Meeting of the Company called to be held on the same day at 11 A.M. is over, for the following purposes:—

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

INDIAN TEA IN A BUYER'S MARKET

IMPORTANCE OF INTERNATIONAL REGULATION: EXPANDING INTERNAL DEMAND

THE report which Mr. J. P. H. Bent, Chairman of the Indian Tea Association, made to members last Friday was by no means as dismal as the one presented by his predecessor. The tea industry did not have a particularly prosperous year in 1956, at least not such as could be compared with 1954. But it did manage to hold its own in a world which appears chronically to possess more tea than it can drink. And the chief reason, according to Mr. Bent, was the success of the voluntary restriction scheme introduced towards the end of the season. It is reassuring to learn that the industry did manage to ensure its salvation by its own efforts. But it is also clear that the means, because they applied to the Indian industry alone and were not shared by its competitors, must be accepted as a temporary expedient only. The very success of the scheme indicates the need for some permanent method of controlling world output, or for vigorous measures to increase internal consumption. Mr. Bent put the position clearly enough, and the prospects. It now remains for the industry and the Government to work towards these two main goals.

The chances of a renewal of the International Tea Agreement on lines similar to those existing previously, are remote enough. It appears that the prospects of any system of international regulation improve only when the world markets are diminishing. Except for common teas, of which India is of course the chief producer, there are few signs of that happening while international prosperity continues to increase at its present rate. The main hope, as Mr. Bent suggested, is that the two largest producers, India and Ceylon, will recognise their common interest in some form of regulation and that the rest will eventually be persuaded to follow when times are not as good as they are now. The main difficulty is to overcome the reluctance of Ceylon, whose output is likely to find a more ready market under present conditions than is that of India. For this, some form of demand stringency enforced by market circumstances, would seem to be indispensable. For all its virtues, it is doubtful if last season's voluntary restriction scheme helped to push Ceylon any further towards an agreement. While the Indian growers are pre-occupied to curb their own output, especially of quality teas, there is no obvious reason why any other producer should take the trouble. The figures Mr. Bent suggested as export quotas, 400 million pounds for Ceylon against 560 million for India, shows the former's competitive strength and the comparative ease with which it would be able to overhaul India's contribution to world demand. Unless Ceylon can be induced to enter some sort of agreement, the kind of unilateral crop restrictions which existed last season may be disastrous for the Indian gardens in future. The prospects of the other producers seem to be as remote as ever. Indonesia's need to export tea is such that only the possibility of anything involving restrictions. Anyway, its output is already considerably lower than its quota under the previous agreement and it is doubtful whether it would permanently accept anything less. As for Africa, as Mr. Bent pointed out, its output may possibly double in the next ten years. With its low costs and unimpeded access to the London market, there is no obvious reason why it should accept restrictions at all. In fact, under present circumstances, an international agreement would serve chiefly to benefit India whose quality and prices are probably the least competitive of all the major producers. This is a state of affairs which will be rectified only if the Indian gardens pay, or are permitted to pay, greater attention to these two factors in future.

rather than diminish so long as high taxes and unrealistic welfare burdens continue to erode India's competitive position in world tea markets. The present consumption of one half-pound a head for this country is small enough, especially when it is appreciated that tea is the ideal drink for a hot climate where intoxicants are being officially discouraged. The limit, of course, is set by

percent; but in doing so he omitted to mention that this figure is high because of the U.S. Government's exceptional defence commitments rather than its strictly economic obligations. The basis for comparison with a country like India, therefore, does not exist.

The case of the private sector in India has always been that it can do much more than it has already done, if it is allowed the freedom and the facilities for expansion. As might be expected, Mr. Patel denied that the Government's policy is "unduly restrictive of private initiative and enterprise". He pointed, for instance, to the financial assistance which it has given to private industry. The Planning Commission has estimated that over the first plan period this assistance has amounted to Rs. 44 crores—a sum which Mr. Patel said is somewhat larger than the total amount realised by private industry from the capital market through new issues. The implication seems to be that the private sector has little strength of its own and is only limping along on crutches supplied by the Government. But, as a recent Reserve Bank survey showed, investment by private industry has been much greater than is indicated merely by new capital issues figures; resources have been conserved and ploughed back into expansion on a scale far exceeding any assistance obtained from official sources. If it has not been possible to raise more money through new issues, the fault is primarily the Government's, because the general effect of official policy has been to scare away potential investors.

Mr. Patel did not ignore the fact that private industry has made sizeable investments out of its own resources in recent years, but he wondered if this "would have been possible without the generous tax rebates and tax exemptions granted by the Government.... I venture to think that not a small part of the internal resources of companies consists of the tax saved as a result of the concessions allowed by the Government for development." It might, however, have been more fruitful to enquire whether a less burdensome taxation system would not have increased further the resources available for expansion in private industry. Rebates and exemptions have had to be granted precisely because taxation is so high that it does not leave enough money with companies or individuals who wish to invest. If taxes were reduced, there would be need neither for direct Government financial assistance, nor for special rebates and exemptions. Potential savers would automatically find themselves with enough to devote to investment in an expanding economy, without any extraordinary measures being necessary. Nor can Mr. Patel fairly argue that in India taxation is low enough since it amounts to only 7 or 8 percent of the national income, whereas in many other countries it amounts to 20 or 30 percent. In poorer countries, the proportion has inevitably to be lower than in the more developed. What is unfortunate is not that the ratio of taxation to national income is low, but that too high a proportion of the former is collected from those sections of the community which would contribute most to economic development voluntarily. It is unfortunate that Mr. Patel chose not to mention this aspect of the problem at all.

His interpretation of the Government's policy on nationalising old industries, and on starting new ones, is liable to cause many eyebrows to be raised. As Chairman of the Life Insurance Corporation, he is entitled to feel that the two important nationalisation measures (involving the Imperial Bank and life insurance) are now "more fully appreciated". It would, however, be surprising if such fuller appreciation is shared by former stockholders who have been inadequately compensated, by present policyholders whose claims and correspondence tend inexplicably to vanish from insurance offices, or by private firms who have been missing the investment support they previously got from life insurers. Evidence of similar wishful thinking is to be found in another of Mr. Patel's assertions—that "any misgivings that the Constitutional amendment might be used as an instrument of confiscation have been set firmly at rest...." Turning to the starting of new industries, he explained that basic industries require large amounts of capital and entail a high degree of risk. On these grounds, he explained, "it is doubtful if their development on the scale required could have even been attempted without the effective participation of the State". To producers of coal and steel at least—two of the most basic of all commodities—this must seem as a rather curious and thankless return for the initiative they showed in pleading for expansion long before the Government ever thought of it.

ECONOMIC RECOVERY IN BURMA

INSECURITY AND INFLATION

SEVERAL experts have written recently about Burma's strenuous efforts towards economic recovery and the success she has achieved over the past year. But they generally agree that she still has a long way to go. Security is a major problem in many areas. Economic inflation is another, but it would be less serious if the Government discarded some of its misconceived policies. In his presidential address at last week's annual general meeting of the Burma Chamber of Commerce, Mr. C. A. McDowall threw some interesting light on the nature of the economic problems. He also made some constructive suggestions which deserve careful notice.

The Burmese economy depends heavily on exports. If the overseas markets for its primary products, such as rice, timber and minerals, are weak, it suffers badly. The Government has often been seriously worried in recent years by Burma's inability to dispose of her rice surplus. When the rice export trade revived in 1956, one of the major worries passed away. A surplus was achieved in the balance of payments, and foreign exchange reserves rose. Mr. McDowall said that the reserves at the end of the year amounted to K 53 crores, against K 43 crores a year previously. This unexpected transformation, as Mr. McDowall called it, was due to the "re-emergence of India as a buyer of rice"—a country which has been Burma's traditional market.

Mr. McDowall's survey also recorded the marked improvement in timber and mineral output, and in the transportation system which carries teak logs to Rangoon. Arrivals, he said, improved by

50 percent over the year. Unfortunately, exports did not keep pace, but during the current year "Burma should reap fuller benefit from the efforts of the State Timber Board to restore the teak industry to its rightful place in the country's economy." The mineral industry saw the emergence of a joint venture in which the Government and British mining concerns are collaborating. Mr. McDowall thought it possible that similar developments might take place "elsewhere before long". This is a happy augury for the future of the industry, but the lack of security in the mining areas remains the biggest enemy of progress. The oil refinery in Sriyam has been opened and "the oil industry is showing heartening results in its efforts to meet the needs of Burma's expanding economy." These instances are not exceptional, they more or less make the rule, and the Chamber President described his survey as "a story not merely of consolidation but of progress and vitality, though at times the record of achievement is tempered by a note of frustration."

This qualification Mr. McDowall illustrated with facts, largely concerning the treatment of the resident Briton who has gone to Burma with British capital. He pointed to the remittance difficulties which foreigners have been facing. While not questioning the Government's right to demand the information it wanted, he impressed on the Deputy Prime Minister, who was present at the meeting, that it should always be made clear what information is required. Most of the difficulties arise because foreign residents are not clear on this point. Mr. McDowall pointed out that if Burma is to expand her economy and at the same time satisfy the legitimate aspirations of her people for a higher standard of living, she would have to get capital from abroad. But foreign capital would come only if it found conditions for investment attractive. The Government has said that it welcomes foreign capital for investment in industry and plantations. But assurances are needed that the existing deterrents, such as remittance difficulties, high income taxation and insecurity, would be removed. Emphasising the need for technical skill which Burma will also have to import, he declared that capital goods by themselves would be able to do nothing unless there was the operating skill to go with them.

CURRENT COIN

The Monetary Stringency.—The past year has been an embarrassing one for the banks because of the steadily growing shortage of funds. The chairman of the Bank of India said at the annual general meeting last Thursday (a fuller version of his speech appears on a later page) that "it is a long time since a credit-worthy customer could be so doubtful of getting an advance from his bank as he is today." It seems unlikely that the situation will ease soon. On the contrary, "with the sustained and effective—I might almost say preferred—demands for finance for the projects of the second five year plan", it might actually worsen. Heavy taxation is making matters more difficult. Industrial concerns can meet "the peremptory demands of the tax-gatherer" only by giving away the money they need as working capital or for plant rehabilitation and expansion. They are then obliged to ask banks for the funds which they have had to pay away in taxes. Where these demands cannot be met, business suffers. The chairman pointed out that the ratio of advances and bills discounted and purchased to the deposits of all scheduled banks is now 75 percent—the highest level touched since the Reserve Bank began publishing figures in 1935. "Interest rates on deposits have risen to levels not seen for many years.... The rates of interest on advances do not rise proportionately to the rise in deposit rates." The chairman felt that since Bank rate has been kept at 3½ percent while money rates have been rising in recent years, it has to some extent lost its character as the standard of interest rates. The Reserve Bank has virtually admitted as much when it raised the rate payable on borrowings against Government and other eligible securities, without raising Bank rate. The Bank of India's foreign exchange business has expanded, and the chairman felt that there was "an assured future for India as a foreign exchange market." But it was necessary to see that the value and the reputation of the rupee are maintained.

Sugar Exports.—When it was recently decided to export a certain quantity of sugar, the main aim was to earn foreign exchange. The domestic surplus available for export was not large, but even so, many doubted whether India would be able to achieve much success in selling it. The international demand and supply position, and the home industry's efforts, have however falsified these fears. Mr. S. S. Kanoria, president of the Indian Sugar Mills Association, in a Press statement claims that deals have been negotiated with foreign countries, particularly the U.K., which is one of the biggest importers of white sugar. "A part of the quantity sold," says Mr. Kanoria, "has already been shipped" to Britain, and this "appears to be no mean achievement". U.K. buyers have made their purchases after having satisfied themselves about quality and packing by a personal visit to India. Under its agreement with the Government of India, the Association has to sell appreciable quantities of sugar to Malaya, Middle Eastern countries, East Africa, Ceylon and Burma. These areas are the natural markets for Indian sugar and the Association's representatives have already visited most of them. Mr. Kanoria says that the Indian Sugar Mills Association is very keen to establish a good reputation for Indian sugar and is following the highest business standards. It is taking special care to ensure that quality is up to the specifications of consumers. It has employed some foreign experts to exercise strict control, both at the mills and at ports of the shipment, over the packing and quality of the sugar exported. Mr. Khaitan observes that India's decision to export sugar has created "a certain amount of stir" among her competitors, and he is confident that she will be able to compete with other nations.

The Nationalisers in Ceylon.—The storm raised by the proposal of the Ceylon Minister of Food and Agriculture to nationalise foreign-owned tea estates, after paying paltry sums as compensation, has now died down. Like many recent ministerial pronouncements in that country, it had no Cabinet sanction. It is interesting to note that the form of the proposal—if not the idea of nationalisation itself—met with strong opposition from the Ceylon Press. The papers evidently realised that it would in no way contribute to the aim of developing a backward economy. Ceylon depends heavily on her three main crops—tea, rubber and coconut. There is a vital need for more industries so that her economic structure can be diversified. But her economy will remain insecure if State action is limited merely to taking over going concerns. When the need is for an increase in production and in the capacity to earn foreign exchange, it is surely wiser to create new enterprises rather than take over old ones. When the take-over happens to be

high-handed and arbitrary, it is difficult to see who gains. Colonel Nasser may have been provoked by the withdrawal of aid for building the Aswan Dam, but his own dreams about the dam have not come any nearer reality as a result of the action he took. In the case of tea, experience has shown that in both Ceylon and India, foreign-owned estates are usually the best run and the most productive. How long this will be the case if the present feeling of uncertainty and insecurity continues, is open to question. If estates are to be nationalised, it is in the interests of the countries concerned as well as of the owners that such plans should be made known well in advance, with full Governmental authority. It is unreasonable to keep present owners in a state of doubt about their future. Irresponsible utterances such as the recent one in Ceylon have undesirable effects in that they only serve to frighten away foreign capital from Asia generally. In this sense, the Ceylon Minister, Mr. Philip Gunewardena, has hurt not only his own country but others as well. The previous Government, headed by the United National Party, tried hard to attract foreign investment but without much success. The creation of such bodies as S.U.N.F.E.D. might help relieve the shortage of investment in many countries, but private foreign capital will still be necessary and beneficial. The tea nationalisation proposal in Ceylon has made the prospect of that flow gathering momentum still more remote.

Changes in Labour Policy.—Placating workers appears to be the main feature of the Government's labour policy. The Industrial Disputes (Amendment and Miscellaneous Provisions) Act, 1956, and the Industrial Disputes (Amendment) Act, 1956, are two recent examples. Employers have expressed concern over some of their more important provisions, such as the abolition of the Labour Appellate Tribunal, the amendments in lay-off compensation and retrenchment, and the new definition of "workman". Mr. E. F. G. Hunter, chairman, speaking recently at the annual general meeting of the Employers Federation of Southern India, said that in abolishing the Appellate Tribunal, which at the time of its appointment was welcomed by both labour and employers, the Government has acted under "persistent pressure from labour". The allegation that employers take every award to the Appellate Tribunal in order to delay its implementation is wholly unfounded. A major achievement of the Appellate Tribunal, according to Mr. Hunter, is that it has checked, if only partially, "the fanciful ideas of social justice followed by some tribunals". By another amending Act, employers have been made liable to pay lay-off compensation for the whole period during which a workman is laid off. This is contrary to the agreement reached in July 1953, which provided that "the duration of the benefit shall be restricted to a period of 45 days in a year". The new measure is unjustifiable because lay-off often results from circumstances over which employers have no control and which make it impossible to resume production for several months. The imposition of such a heavy financial burden may delay the reopening of factories, Mr. Hunter said. Criticising the amendment of the definition of "workman", he said that the new definition brings within the scope of the Industrial Disputes Act even supervisory staff getting salaries of up to Rs. 500 a month. If supervisory personnel are to belong to the same union as the workmen they supervise, the maintenance of discipline will not be easy. "Even now," as Mr. Hunter urged, "it is not too late for the Government to examine this aspect of the matter and consider the desirability of further amending this Section". Mr. Hunter regretted that whatever welcome provisions the Acts have—such as the amendment of Section 33 of the Industrial Disputes Act—are, in most cases, rendered ineffective by the Government's hesitation in enforcing them.

U.S. Business Conditions.—The overall measures of U.S. business activity have shown little change in February, according to the latest monthly letter of the First National City Bank of New York. The steel, automobile and petroleum industries have maintained output at high rates, and department store sales have been 5 percent larger than in February last year, which was not particularly a good month. From all indications, general business indices for the month will be about the same as in January, when non-farm employment, retail sales, and non-residential construction were all at record levels on a seasonally adjusted basis. Industrial production was the greatest for any January on record, although the moderate increase over December was not fully up to seasonal expectations. The Federal Reserve Board's index declined by one point to 146 (1947-49=100). February also usually brings a modest seasonal rise in output, after allowance for the shorter month. It remains to be seen whether this has been realised. In any event, it seems clear that general measures of activity have not slipped appreciably, if at all. While the statistical reports are good, however, it is common observation that business sentiment is less buoyant. Optimism has been tempered in recent weeks by a disposition to stress uncertainties and

to express caution and misgivings. For some persons, the reason behind these doubts may lie no deeper than the sag in stock market prices. Thoughtful observers, however, are concerned with the significance of current soft spots and the potential weaknesses in an economy which has been running at top speed for a long time. The shift of sentiment is appearing in the commodity markets as well as in stocks. While wholesale prices and consumer prices—the cost of living—have risen to new record levels, prices of basic industrial materials, on the average, have been easing slightly for some time. Along with this go reports that purchasing agents in some cases are shortening commitments. Where this is so, it reflects inventory accumulation, ability to obtain quick shipments, and a general feeling that inventories are a less attractive speculation than they were a few months ago. In the lighter steel lines for example, fabricators' inventories have been replenished since the strike last summer: with shortages disappearing, the inducement to build stocks further is disappearing also, despite the firm to strong outlook for prices. Copper and aluminium are two other metals in which markets are no longer tight. In some manufacturing lines also excessive inventories have appeared. Changes of this nature reduce the flow of orders to producers even though final consumption is maintained.

Outlook for the Fan Industry.—Speaking at the annual general meeting of the Fan Makers Association of India on Tuesday, Mr. D. A. S. Clark, chairman, expressed cautious optimism about the future of the electric fan industry. Availability of cheap electricity in new areas and more electricity in areas already electrified, increased industrial activity necessitating the construction of new factories, staff quarters, offices, etcetera, improvement in living standards—all these suggest that the demand for electric fans will rise in coming years. The Planning Commission's estimate of demand for 600,000 fans at the end of the second five year plan against the first plan's calculation of 330,000 by 1955-56, therefore, seems justified. Mr. Clark, however, cautioned that all the industry's attempts to increase production may prove fruitless in the long run due to the unsatisfactory supply of essential raw materials. Inadequate supply of important raw materials like pig iron, electrical steel sheets and ball bearings was mainly, though not wholly, responsible for what he called the "tame tone" at the end of the first plan. Production was as low as 287,600 fans in 1955-56 against the target of 320,000 to 350,000. Five years ago the industry depended for 50 percent of its total raw material requirements on foreign supplies. Today the supply position has improved to such an extent that about 80 percent is available from local sources, and efforts are being made to produce the remaining 20 percent. But difficulties remain because prices of indigenous materials are much higher than those of imported ones. As an example, Mr. Clark mentioned the case of ball bearings. He listed a number of other difficulties, such as the delay in granting rebate on import duty paid on raw materials used in the manufacture of fans for export, as provided under law, penalty clause and imposition of liquidated damages for late delivery of stores, security and tender deposits and inspection. The Government being the biggest buyer of electric fans, the payment of bills should be made as promptly as possible, Mr. Clark said.

MUNICIPAL NEGLIGENCE

WE see it stated in a daily paper that the condition of the North Barrackpore Municipality is extremely insanitary, and our readers are aware that Dr. Vaughan has reported that the Serampore Municipality, just opposite, is in about as insanitary a condition as it is possible to conceive. If this state of things continues we shall probably find the Government of India declining to come to Calcutta at all, because, no doubt, the Viceroy considers his life much more precious than those of the millions confided to his charge. We would, therefore, urge upon Sir Alexander Mackenzie that, unless he wishes his name associated with the permanent location of the Government of India at Simla, he should bestir himself to see that the surroundings of Government House at Barrackpore are such that a Viceroy can live there. We have heard that His Excellency would have remained in Calcutta but for the fear that the plague may make its appearance on the dirty condition of the Municipalities around his suburban retreat. We do not know how far there is any truth in this report but we look to Sir Alexander Mackenzie to give us something a little stronger than resolutions of the Government of Bengal are good ones, but this is the kind of article which paves the way to other regions. We again repeat that the people of this country, including such Europeans as come here, are prepared to run the ordinary risks inseparable to the climate, but they are not prepared for the new disease which Municipal negligence has introduced.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

RISE IN COSTS WORRY MANUFACTURERS

(FROM A SPECIAL CORRESPONDENT)

BRITISH industrialists blow neither hot nor cold in discussing the situation in industry as it is at the moment in the United Kingdom. They have expressed mildly optimistic views upon such isolated matters as the petrol shortage and the satisfactory nature of some of the overseas trade figures. Little importance has been attached to the lowering of Bank rate, and although the decision to proceed with the Western Europe Customs Union has been welcomed, substantial results from this are not expected in the near future. Perhaps the most significant factor to the more thoughtful is the fact of continued rising costs revealed in the majority of industrial companies' reports issued over the past month. As nearly every principal type of company is represented, it is evident that this is a widespread and fundamental trend. A number of companies, too, have stressed that it is utterly beyond their power to effect further economies in manufacturing or trading expenditure. This state of affairs may be partly responsible for the issue of a memorandum by the Federation of British Industries, in which it is stated that no measure yet announced by the Macmillan Government is adequate to deal with the existing inflationary tendencies, which are, in fact, growing stronger every day.

It is generally agreed that the current level of industrial production is lower than it was a year ago, and some authorities estimate the decline at as much as 3 percent. The Government indices, which cover the year 1956, show that the production rate for the whole of that year was much the same as for the previous one, which at least shows a failure to gain pace. The Imperial Tobacco Company admits that there has recently been "a slight fall in sales of cigarettes and tobacco." The company has for so long enjoyed a continuous expansion of business that this cautious acknowledgment received larger headlines than would otherwise have been the case. It is beyond question that the continued issue of medical reports (none contradicting the other) establishing a connection between smoking and cancer of the lung has reduced the consumption of cigarettes. Casual conversation among one's own acquaintances alone indicates that—with women most inclined to disregard the specialist's warnings. Search is now being made, with the help of funds from the

tobacco companies' themselves, for the discovery and isolation of the irritant substance which induces a state of malignancy. We shall one day have available the new cigarette free from anything noxious. Meanwhile, public apprehension will continue to grow (since the cancer incidence a year shows no sign of check) and the tobacco industry is likely to have to continue to contend with the hitherto unfamiliar phenomenon of a diminishing number of patrons.

Controversy over Automation

The industrial lecture season in Britain, which runs from September to early April, followed by conferences in May which attempt to gather up some of the chief points made, is now well past its full flood. It is interesting to note that this season, various lecturers have thought it desirable to insist that you cannot do away in industry with the dependence upon the skill of the individual operator. Probably, this attitude is a reaction against the excessive claims for automation which have been made in some quarters. The reaction is natural enough, and is as justifiable a use of the critical faculty as it is in the realms of literature, the cinema or the theatre. It is coincident with a rather similar intellectual movement elsewhere (to which we have made reference on a previous occasion) namely, declarations by headmasters and others that technical subjects must be taught side by side with those of the humanities, and not be looked upon as all sufficient for the modern need. The rise of these inconsistencies can be largely explained by the fact that the Briton admires the robot while at the same time he has an innate distrust of the character of that gentleman—if he can be so-called. That suspicion still survives the clamorous propaganda of our time, with its constant call to bow down and worship the Mechanical with a capital M. Therefore, those who call for the exercise of more systems by the operative as a means of temperate industrial advance are gaining as attentive audiences as those other speakers whose one theme is the marvel of the machine and the power thereof. The student of history may recognise in this one of those endeavours to compromise for which the British are noted, and in all directions, not excluding the most unpromising. The unfriendly will in this development see only a shameful weakness raising its unworthy head; the generously disposed will discern the British genius trying to find a new expression more fitting to their hopes and fears. To the detached observer, neither in love with compromise nor averse to that expedient, it would appear as though it is only in some industries, and those not the largest, that the operative can hope

to initiate and maintain a human connection with his daily work. As is well known, in a number of industries, producing a mathematically standard part within an allotted span of time (as brief as possible) is the operative's sole function. This is especially true of the motor car manufacturing industry, and it may account for the unrest of the workers so engaged. In spite of very high financial rewards, unease among that body of workers seldom seems far away. Rest intervals, sports facilities and the like still leave some deep-seated need unsatisfied. It has been argued that if only the operative can remain conscious of his triumph over the machine, and not feel that he is being mastered by it or by his employer through the aid of the machine, then the maintenance of industrial peace would be assured. That the answer to this problem is not to be found in terms of cash alone is plain from the large number of absences from work recorded last year, when wages were at a record high figure and working hours at a record low. The United States provides a more striking example, for there the number of working days lost through absenteeism or disputes was much higher in proportion, allowing for the greater population. The fact is that modern industrial operatives, as a whole, are not deeply interested in their work.

Synthetic Fibres

The tenth anniversary of the commercial emergence of nylon has been celebrated by a nylon trade fair in London. The anniversary would have been celebrated in any event, because no progressive industry today can neglect any excuse for getting an advertisement. But, as it happens, nylon has special reasons for wishing to keep well to the front in display. These come from the demand of other man-made fibres to be given public attention. A dozen or so new acrylic fibres are expected to reach commercial production during the next few years, all of them claiming the already attained large-scale output, of which the most notable so far is Orlon. This is the man-made fibre nearest resembling wool, and for that reason is a competitive material for dress-making purposes. One of its chief successes has been for the making of artificial furs. While animal fur will always have a market among those who wish to or must appear glamorous or luxurious, there is a large public which prefers a synthetic fur on the humanitarian grounds. It might be said that the synthetic fur cannot compare with the natural, which, in a sense is true, although it may not always be so. But it could also be said that furs made of a blend of Orlon and Dynel (another acrylic fibre) have much to commend them in appearance and service, and, of course, they are a fraction of the cost of animal furs. Orlon, but a fraction of the cost of animal furs. The Dynel furs are in keen demand in Britain. The fact that over two million have been sold in the United States during the past year or so must be regarded as particularly significant, since American women exact high standards in dress requirements.

Handbook on Textiles

The seventh issue of the Textile Institute's standard work *Review of Textile Progress* has just been published. It consists of abstracts of articles from journals, research documents, etcetera, relating to fibres and textiles, the extracts being chiefly of a technical nature. Most of the matter reaches no farther than to the end of 1954, and this limit must be counted rather a drawback in these years of rapid discovery and invention. However, the industrialist and research worker who is eager for his information to be quite up-to-date can remedy the deficiency by subscribing to technical journals which will give a fair amount of later news. Equipped with the volume and the journals, a remarkably comprehensive survey of textile activity becomes available for the investigator. Dr. Venkataraman of the University of Bombay is the contributor on Colouring. Jute, as a subject, is accorded only three pages out of a total of 570 pages. It is true that there are also a number of scattered references to jute on other pages, but the impression remains that the subject deserves more extensive treatment than it has received.

Air-flow Measurement

Airflow methods for the measurement of the weight and maturity of fibres is a subject which soon leads to elaborate mathematical calculations. Nevertheless, the subject is of considerable importance to the wool and cotton industries and is being given prominence in the British, Continental and United States technical press. It is in the matter of States that most has been written on the manufacture and American firms are active in the manufacture of the necessary instruments. In Britain the Wool Industries Research Association and the British Cotton Industries Research Association have also instruments available. The latter's Fineness Meter for cotton is said to have an advantage in its relative simplicity. Laboratory methods for the measurement of fibre weight and maturity by the combined stapling test are too slow and tedious for comprehensive routine testing in the mill. Airflow methods are much more rapid and render representative samples of cotton (or wool) before processing is invaluable for securing uniformity of blend.

The committee of the Indian Mining Association for 1957 has Mr. D. Hogg as chairman and Mr. W. D. Forrest as vice-chairman. The other members are Mr. L. K. Karnani, Mr. R. Lal, Mr. R. Maulik, Mr. B. Mitter, Mr. R. H. Mody, Mr. H. B. Mondal, Mr. A. Selkirk, Mr. K. C. Thapar and Mr. A. S. B. Yee man.

March 14, 1957.

LAST week, I quoted Parkinson—if that really is his name—of the *Economist* as saying that air travel is one of the best ways of "getting rid of the boss". Since then I have had occasion to doubt that he might be right, although the second recommendation—plenty of form-filling—still stands unchallenged as far as I am concerned. The doubts arose when I settled into a comfortable seat in the spacious cabin of B.O.A.C.'s largest and newest aircraft, the Bristol *Britannia*, on its inaugural flight from London to Australia, and were complete by the time I arrived in Sydney. The fact that I am now back at my desk, and in at least as fair a condition as when I left it, must be accepted as a tribute to the plane, its crew, and the thought which B.O.A.C. gives to its passengers' comfort and convenience. What complaints I have are all to do with Mr. Parkinson's second recommendation—the forms, and the various customs, immigration and health authorities who must insist on their being filled in, even if they themselves do sometimes forget to collect them all. For the aircraft, I have nothing but respect. There was often no more sensation of movement than might have been felt in a stationary railway carriage. As for the noise and vibration, that was no greater than if the same carriage had been in motion. The name "Whispering Giant" may be a fortunate publicity tag, but after more than 10,000 miles without so much as a hum in my ears, I can realise what it means for the traveller who likes to arrive bright and fresh as well as punctual. I am told the *Britannia* embodies a number of technical innovations. The two that impressed me most were the reversible-pitch propellers, which slow the aircraft's landing speed at a rate which should reassure anybody who is afraid of some day over-shooting the runway and landing upside down in a ditch, and the "search radar" which shows the pilot the best way through the kind of storms a plane is likely to encounter in these latitudes, as well as giving him a picture of the ground over which he is flying, should he want it. This latest box-of-tricks, apart, I imagine, from paying for itself eventually in terms of unspilt whisky and unused cardboard receptacles, must add considerably to the peace of mind of any aircraft captain who has the odd million pounds' worth of machinery, plus a few score human lives, in his hands. I know that B.O.A.C. is setting great store by its latest acquisition, especially after the disappointments it incurred with that ill-fated, much-before-its-time aircraft, the *Comet*. It seems to me it is backing a winner. If it isn't, it will certainly not be from want of trying, because the *Britannia* ranks as the most-tested aircraft in the world, and has been under constant development since the prototype first flew in 1952. I enjoyed my trip to Sydney and back, and that was because the "Whispering Giant" is the perfect host: courteous, considerate and obliging—as well as being softly-spoken.

A question I have heard asked is: "Have aircraft propellers got a future?" On the face of it, it does seem strange that the *Britannia*'s designers have chosen to use its modern turbine engines to drive old-style airscrews instead of the more fashionable jets. This, of course, is over-simplifying things. Jets are not superior to propellers in the same way as, for example, the turbine is to the reciprocating engine. It is a question of requirements, or, what is the same thing in civil flying, of prices and costs. Jet planes are faster, but this is only important for very long stretches such as the non-stop north Atlantic run. Over the more normal stages of, say, the London-Johannesburg or London-Sydney routes, where far too much time has to be wasted at airports anyway, the propeller-driven plane is likely to remain cheaper to run. Another factor these days is the length of runways.

CAPITAL

A DITCHER'S DIARY

Jet planes need long ones, and any airport authority which intends to accommodate them has to be prepared to foot a heavy bill for alterations and extensions. That is something very few are eager to do. The choice of airscrews is one of the reasons why the *Britannia*, and its smaller brother, the *Viscount*, are economic aircraft for both the airline companies and airport authorities and are, therefore, likely to be flown in increasing numbers on all but the world's longest non-stop air routes. Jets may eventually, of course, provide an alternative service for those in a hurry who do not mind paying a little extra. But propellers themselves are not as old-fashioned as we sometimes tend to believe; they have been touched by technical development just like everything else, and nowadays there is a size and shape to suit every need. The days of the long-bladed airscrew are probably over because, as engine power rises, propeller speed increases and a large diameter may mean that blade-tips are travelling faster than sound. This causes noise and losses efficiency. I have seen the *Britannia*'s propellers described as paddle-shaped and certainly they looked different from any I had seen since the days of the old *Spitfire* Mark V, of which that indestructible war-time character Pilot Officer Prune once said: "I like it because its propeller-blades are five inches shorter—I can fly lower". B.O.A.C. assured me they had no such idea in mind with the *Britannia*. The reason why this particular shape has been chosen is that it cuts down noise without reducing efficiency. In fact, it is one of the reasons The Giant whispers.

The amalgamation of Grindlays Bank with the National Bank of India, which for some years past has owned the whole of the Grindlay share capital, effects a final fusion between two of the oldest banking concerns in the East. The Chartered is the oldest of the British exchange banks, being founded in 1853. The National Bank of India (1863) comes next. The Hong Kong & Shanghai was founded two years later in 1865 by British merchants in Hong Kong. After the fairly hectic development of the 1850's and 1860's there was a pause in new development. The Mercantile Bank of India was launched in 1892, though its origins go back to two banks founded some forty years before. The Eastern Bank was started in 1909 and Lloyds entered the Indian field in 1923 when they acquired the business of Cox & Co., and Henry S. King & Co. These had been started in 1758 and 1858 respectively. It was to this exclusive fraternity of private banks and army agents that Grindlays originally belonged, having begun operations in India in 1828. The private bankers carried on a specialised kind of business mostly confined to military stations and cantonments and to their largely civil and military residents. This was pretty much the position until the late 1920's or early 1930's, by which time profit margins had begun to shrink under the stress of increasing competition and, both at home and abroad, private banking concerns sought to strengthen themselves by absorption and amalgamations. The National Bank, the senior partner in the amalgamation announced last week, was originally registered in Calcutta as the Calcutta City Banking Corporation Ltd. Soon after, it established itself in London under the name by which it has ever since been known. Presumably the move was made to ensure ready access to the London money market. In 1866 the National absorbed the Indo-Egyptian & London Bank Ltd, taking over the latter's Bombay premises and other branches. The expansion into East Africa, largely to meet the needs of the Indian merchant community which was trading or had settled there, began

in the 1890's. The new merger is expected to be complete effective from 1st January, 1958, and the name of the amalgamated bank will be announced before then.

I see the number of millionaires is on the increase in Britain. At least, there were more in the financial year ended 31st March, 1956, than in the previous one. Whether this represents a trend or not is a question which the 100th report of the Commissioners of Inland Revenue for the U.K. should help to answer. But for that we must wait another year; in the meantime I can recommend the 99th report as an item of interesting bed-time reading. It gives forty as the number of people in Britain with gross incomes exceeding £100,000 a year—the unofficial definition of a millionaire—compared with 38 the year before. And this in spite of death duty payments during the period on ten estates of between £1 million and £2 million, and on one above that figure. Since the war, the number of people paying surtax has almost doubled, although a fair proportion of the increase must be accounted for by the general inflation of incomes rather than any rise in national prosperity. The number of cases of tax dodging went down to 16,116 compared with 19,663 in the previous year. But the penalties charged rose slightly to £8.49 million, from £8.42 million. More was paid out in back taxes—£22.7 million against £20.6 million. In addition to these, district inspectors settled more than 35,000 cases and raised £1 million in doing so. The figure for cases settled locally has decreased sharply since 1953 (136,000), but before that it was negligible: only 1,600 in 1951. That rather suggests an increasing honesty on the taxpayer's part, because it must be remembered that it was the Finance Act of 1951 which gave the Inland Revenue authorities power to obtain information from banks and other sources about those to whom interest is paid.

The East Pakistani Government has shown an interesting piece of originality by proposing a new tax on jute along with one on marriages in its 1957-58 Budget. The one is two annas a maund, the other fifteen rupees a time. Simple calculation shows that, as far as its Exchequer is concerned, one hundred and twenty maunds of jute will be much the same thing as one marriage. Whether this is meant to imply that the burdens can be directly equated is, of course, difficult to say. The decision to give misogyny in East Pakistan an official and fiscal status is, however, a development of great sociological interest. It would be interesting to know what has suddenly prompted the move. Cynics say the Finance Minister might have grown nervous about doings in his own domain since he read a Lucknow University survey report that married women in Kanpur have an average of 6.65 children each. Others feel that his reason may be more philosophical; over a century has gone by but nobody yet bothers over-much about Herr Schopenhauer's commendably sound warning that marriage on'y halves one's rights and doubles one's responsibilities. But I doubt if a warning of this sort will work even if it is reinforced by a penalty of fifteen rupees. There is no sign yet, but ultimately I expect the marriage tax will meet with strong opposition. It has not been clear whether the levy will fall on hopeful maidens or their reckless admirers, and with dowries already providing the occasion for hot argument among prospective in-laws, the question who is to pay the new tax will only make for more trouble.

THE DITCHER.

the tyre with
BUILT-IN PEACE OF MIND

Now from Firestone comes the modern safety tyre—the New DeLuxe Champion Tubeless Tyre. It gives you and your family protection never before provided in any tyre at any price. It's the first and only tyre with built-in peace of mind.

Firestone New DeLuxe Champion
TUBELESS TYRE

Blowout Safe

No longer any fear of dangerous blowouts—this tyre is fitted with an airtight Safi-Inner Liner instead of a tube. There is nothing to rip, tear or explode.

Puncture Safe

The Safi-Inner Liner of the New DeLuxe Champion Tyre tightly grips puncturing objects and slows down the loss of air—so there's no more fear of having to change tyres on a busy road.

More Mileage

The New DeLuxe Champion Tyre gives longer mileage because the tough tread compound wears more slowly, and because its flatter tread wears more evenly.

commercial life of India. The Budget is ordinarily introduced at the end of February. This year it is being postponed to a date in March or April due to the Government's desire to give the public time to realise the Elections. I do not think that Government caused any inconvenience the postponement not to interfere with the Elections in such a way as causes doubt of the Budget. The uncertainty for the introduction of the Budget. The uncertainty that the delay causes where, I fear, inclined members of the Government, and not always to look to their own anxiety due to the delay has that of the public. The rumours set afloat by irresponsible members of the Government may not have any foundation. The Government in the future. Private enterprise can only thrive on credit and confidence. We are already possibly the highest taxed country in the world and rumours of still higher direct taxation shake the confidence of the public.

As an indication of the money situation I may bring to your notice that the ratio of advances and bills discounted and purchased to the deposits of all scheduled banks is now 75 per cent. This is the high-

Rise in Business

Your Directors propose to place to the Bank's Reserve Fund the sum of Rs. 8 lakhs, making the Reserve Fund Rs. 310 lakhs.

A final dividend of 10 per cent., free of income-tax, is proposed, absorbing Rs. 25 lakhs, and making with the interim dividend of 6 per cent. paid last August, a distribution of 16 per cent. per annum, or Rs. 40 lakhs for the year, free of income-tax. The carry-forward is Rs. 15½ lakhs against Rs. 13 lakhs last year.

THE NATIONAL BANK OF INDIA, LIMITED

PROPOSED AMALGAMATION WITH GRINDLAYS BANK

MR. J. K. MICHIE'S REVIEW

The annual general meeting of The National Bank of India, Ltd., will be held on March 26 at 24, Bishopsgate, London, E.C.

The following is an extract from the statement by the chairman, Mr. J. K. Michie, circulated with the report and accounts for the year to December 31, 1956:

Before turning to the Accounts I have a matter of more than ordinary interest to report.

Ever since we acquired from the National Provincial Bank Ltd. the total capital of Grindlays Bank Ltd. the interests and managements of Grindlays Bank and ourselves have naturally grown more closely together and it has become increasingly clear as experience accumulated that to ensure the full benefits of this association a physical fusion of resources and staff must be the ultimate step. The Boards of both Banks have now decided that the time is ripe for an amalgamation and the necessary preliminaries have been set in motion. It is hoped that the fusion can be effected as from 1st January, 1958 and every effort will be made to achieve this. Opportunity will be taken to make a change in our name and, despite the long and honourable associations attaching to the present titles, there are a number of good reasons for doing this. Until certain legal formalities are completed it is not possible to announce a name but it is hoped to preserve in the one adopted associations with both now in use.

What is important to our shareholders is that the two Boards are strongly and unanimously of the opinion that taking this action will solidify and strengthen our structure and enable us to progress both more soundly and more rapidly than would otherwise be the case. A public announcement of our intentions will be made at the earliest possible date. Any necessary resolutions will be put before you in due course.

The Accounts

Our consolidated Balance Sheet total at £163,635,741 shows the contraction anticipated in my last Statement, the comparable figure a year ago being £168,653,013.

Our Net Profit figure is somewhat larger and after full provisions for taxation, bad and doubtful debts and other necessary reservations comes out at £432,835 against £421,839 the previous year. Dividends declared are unchanged at 15% for the year. £100,000 has been transferred to Premises Account against £75,000 and £75,000 to Contingencies Reserve Account against £85,000 in 1955. The balance carried forward is increased by £11,888.

The fall in the value of Sterling Securities was arrested before the end of 1956 and an upward movement has since taken place. As I have previously reported all temporary depreciations in our holdings have been fully provided for ex interest reserves.

India

All Indian economic activity is being dominated by the Second "Five-year Plan" which has recently been widely commented on in the financial press and our own Quarterly Review published in January carried an interesting article on the subject.

Despite legitimate mental reservations as to the timing and correlation of certain sections of the plan and some doubt, having regard to the country's apparent resources—the significant reduction in their sterling balances has to be taken into account—whether too much is being attempted too quickly; it is generally agreed that the plan is imaginative and certainly reflects a dynamic outlook and determination on the part of the Government. All people of goodwill will wish the plan the greatest possible success.

Larger Calls on Banks

In such circumstances of stretched resources it is inevitable that larger calls are made on the banking system of the country. But Banks, while assisting their customers to the greatest possible extent, have the mundane and paramount duty of maintaining a reasonable liquidity and that can be achieved only by finding more deposits or by restricting their lendings. While the total of deposits with the Banking system in India showed a moderate rise over the year most recent figures available show that aggregate advances stand at over 70% of deposits; and in spite of an unchanged Bank rate money commands about 1% per annum more than a year ago. On this showing Banks can hardly be accused of under-lending, particularly in comparison with the ratio of lendings to deposits in the United Kingdom. Perhaps both reflect exaggerations of opposite policies.

This situation has been created partly by the Government's policy and partly by circumstances. To take the second first, the blocking of the Suez Canal automatically meant and still means that shipments have to be financed for considerably longer periods than normal, while a great deal of capital imports eventually are paid for by Government departments whose machinery for so doing works slowly. Secondly, there is so much pressure on the private sector of industry to expand that its reserves previously built up are rapidly being spent, plus very large additional sums, and that at a time when Government is keeping an extremely tight rein on the capital market as well as on money rates. The proposal that part of Company reserves should be deposited with the Reserve Bank would mean a depletion of ordinary banking deposits.

Tax Burdens Increased

Commerce and industry have recently had their tax burdens materially increased and there have been

NOTES

- There are commitments in respect of Confirmed Credits, Forward Exchange Contracts and Guarantees, including Guarantees to Government Departments in India. Securities to the nominal value of £302,550 (1955-£205,000) have been deposited as security for Government and other accounts. There are contingent liabilities on Bills re-discounted amounting to £210,594 (1955-£240,004), of which £137,743 has run off at 23rd February, 1957.
- Liabilities have been incurred in respect of building contracts for new premises amounting to approximately £285,000 (1955-£485,000).
- The rupee in India, Pakistan and Ceylon and the kvat in Burma have been converted into sterling at 1/6d. and the East African shilling at par. Other currencies have been converted at the rates of exchange ruling on 31st December, 1956.

REPORT OF THE AUDITORS TO THE MEMBERS

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet which is in agreement with the books of account and returns. In our opinion and to the best of our information and according to the explanations given to us the said Balance Sheet gives a true and fair view of the state of affairs and of the profit or loss of the Bank for the year ended 31st December 1956, and on such basis, the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December 1956.

We have also examined the annexed Consolidated Balance Sheet and consolidated Profit and Loss Account of the Bank and its Subsidiaries dealt with thereby with the audited accounts of those Companies. In our opinion such Consolidated Balance Sheet and Consolidated Profit and Loss Account have been properly prepared from such accounts in accordance with the provisions of the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on this basis, the Consolidated Balance Sheet and consolidated Profit and Loss Account give a true and fair view of the state of affairs and of the profit or loss of the National Bank of India, Limited.

official indications that these possibilities are considered not yet to be exhausted.

It is true that industrial profits are good but the atmosphere of doubt about Government's intentions towards the private sector is very adversely affecting Stock Exchange values, in other words public confidence.

India's food production is being wonderfully well maintained but it is still the largest single problem which the Government has to face and will continue to be so in the foreseeable future. Other major cash crops, e.g. Jute, tea and cotton, all enjoyed reasonably good years, tea prices particularly having made a very good recovery since December 1955.

It is satisfactory to see that a fresh trade agreement between India and Pakistan has just been signed which should facilitate the natural transactions between the two countries. For the benefit of both it is to be hoped that this trade will steadily expand.

Pakistan

The recently published Budget for 1957-58 indicates that Pakistan expects to finish this financial year with a favourable trade balance of just under £1,000,000 against a surplus of £24,000,000 in the previous year.

The prime cause of this change was the food shortage in East Pakistan. Indeed as the Budget statement admits food production against the background of a rising population is the greatest weakness in the country's economy and the one perhaps which has had less than its need of attention. Tax relief is given to the lower income groups but surtax is raised by 6 1/2% and a wide range of tax increases is imposed on articles of consumption including tobacco, jute, cloth and oil. In other words in the main increases in direct taxation have been eschewed.

Ceylon

Economically Ceylon's experience in 1956 was a satisfactory one and in the year ending 31st October, 1956, her accumulated surplus rose by £6,500,000 to nearly £90,000,000. Money rates were easy, tea prices were good and rubber prices moderately so. Her efforts to grow more food continue to expand.

Burma

Throughout 1956 rice prices and demand both remained very steady and previously accumulated crop balances were largely disposed of, exports reaching nearly 1,950,000 against an estimated exportable surplus of 1,500,000 tons. This year's exportable surplus is estimated at 1,575,000 tons.

In these respects the position is sound and the country's financial resources have benefited. At 31st December, 1956, her sterling balances stood at £39 1/2 against £32 millions a year earlier.

East Africa

Since I last addressed you we have opened three Branches and sub-Branches in these territories and have closed one.

Kenya

It is good to be able to report that the Mau Mau problem has now reached the constructive stage of rehabilitation, the destructive force of the movement to all intents and purposes being exhausted. The Government of Kenya is to be congratulated on the enlightened way it has planned and is tackling the all important question of the resettlement of those who were involved in Mau Mau and even more on the success of their efforts.

Grindlays Bank Ltd.

I have already dealt with our proposals for the fusion of this business with our own. I am glad to report another successful year's operations which is reflected in the profit figure shown in their accounts attached to this report and as you will see the growth in the volume of the Bank's deposits has been well maintained. As in our own case all necessary provisions have been internally made, including any depreciation on the Bank's holding of Government securities.

During the year two further Branches have been opened in the Rhodesias and results of operations there show a considerable improvement and are encouraging.

Our Finance & Development Corporation again operated at a profit which is being retained in the business.

General

When I last addressed you we had just had a rise in the Bank rate of 5 1/2% in a further attempt to curb inflationary tendencies. The situation was apparently improving when the economic results of the Suez crisis fell upon us. By dint of calling up our reserves the critical phase has been by-passed and money has been plentiful enough to justify an adjustment of the Bank of England rate to 5%. I say adjustment advisedly for on the authority of the Governor of the Bank of England that it is all it is and we shall have to work hard for any further improvement in our monetary situation, whether expressed in gold and dollar balances or interest rates, and obviously they go together.

This is no time to attempt prophecy; the imponderables are too many and certainties too few but as has been said before no one owes this country a living and it can only be through the wisdom of our Government and the efforts of all our people that our present economic difficulties will be resolved; and surely there is nothing insurmountable about them so long as we do not spend as if we still had a large unearned income behind us.

Last year I remarked on the disparity between interest rates in London and those current in certain other countries. This gap has since been narrowed but in to-day's relative circumstances it is in some cases still too wide. Supply and demand will doubtless have their way in due course.

As to our own prospects, given reasonable operational conditions I feel sure our forward progress will continue.

THE MERCANTILE BANK OF INDIA LIMITED

SIR KENNETH W. MEALING DISCUSSES SECOND FIVE YEAR PLAN

The 64th annual general meeting of The Mercantile Bank of India, Ltd., will be held on March 26, in London.

The following are extracts from the statement by the chairman, Sir Kenneth W. Mealing:—

The expansion recorded last year in the Bank's general business continued during 1956. The Balance Sheet total at nearly £75 millions is higher by £3 millions. Deposits are higher by £2 1/2 millions whilst on the Assets side there are increases of over £5 millions in Loans and Advances and nearly £1 million in Bills Receivable. These higher figures indicate the increased share we are taking in World trade with the East and are in part responsible for the decrease in our holding of Government Securities by nearly £3 million.

The net profit of £236,484 is slightly higher than the previous year and your Directors recommend a final dividend of 7 per cent. If this recommendation is approved the dividend for the year will be 14 per cent., the same as last year. From the balance the usual allocations have been made to the Officers' Pension Fund, Premises Account and Contingencies Reserve Account leaving the balance carried forward at £224,521 against £219,372 from the previous year.

During the year the Board authorised the transfer of £250,000 from Inner Contingencies Account to the Reserve Fund, which now stands at £2,000,000.

In Britain the Government's fiscal policy was beginning to be effective without resulting in unemployment, but the events in the Middle East checked the progress anticipated and the change in Government in January, 1957, resulting from the Prime Minister's illness and the re-entry into World affairs of the U.S.A. following the Presidential Election, may be expected to open a new era of Anglo-American co-operation and economic prosperity throughout the Western World.

India

One of the principal events of the year in India was the introduction of the States Reorganisation Bill which after some modification, resulting from troubles in Bombay and Bengal, came into effect throughout India on the 1st November, 1956. Under this new Act the State of Bombay becomes one of the largest in India and with the final extinction of the Princely States the map of India takes on a rational and logical appearance such as it has never had in the past. Sir Chintaman Deshmukh, the Finance Minister, disagreed with the Government over the States Reorganisation Bill, insofar as it affected Bombay, and resigned his post in the Government. After an interregnum Mr. T. T. Krishnamachari became the Finance Minister and Mr. Morarji Desai, lately the Prime Minister of Bombay, went to the Centre as Minister of Commerce and Industry.

Mr. Krishnamachari introduced a surprise Autumn Budget which among other things included the re-introduction of a Capital Gains Tax, increases both in direct and indirect taxation, a proposal to siphon off reserves in private enterprise for the benefit of the public sector, and steps to bring the banking services under closer control by the Reserve Bank of India. A motion to nationalise all Banks in India was heavily defeated in the Lok Sabha.

The Foreign Policy continued to be directed by the Prime Minister, Pandit Nehru, who continues to maintain his policy of neutrality and non-alignment. During the Suez crisis he was under much pressure to sever India's connection with the Commonwealth, but stoutly refused to do so. During the year a British Consortium signed a contract with the Government of India for the erection of a steel plant at Durgapur. This plant is designed to produce ultimately a million tons of steel per annum and is the third such plant, the other two being respectively German and Russian, to be under construction in India at this time.

The second Five Year Plan to which I referred last year is already rapidly getting under way and is estimated to have a total cost of some 5,300 crores of Rupees. Inevitably this vast project will have repercussions on many aspects of Indian life. Initially it is almost inevitable that degree of inflation and high taxation must be anticipated and indeed is already taking place. It must be hoped that the ultimate effects of the great production and employment that this plan is hoped to produce will justify this great undertaking.

Towards the close of the year some anxiety has been caused regarding the country's economy following a continued rise in price levels, continued substantial dwindling of foreign exchange resources and the monetary stringency in the Banking system. It is unfortunate that at this time the Indian Jute trade, which is one of India's principal earners of foreign exchange, is passing through a time of economic crisis and heavy losses. The tea and cotton industries have both had a fairly successful year and on the whole labour relations throughout India have been reasonably harmonious.

Pakistan

In May, 1956, a draft five-year Plan was published envisaging the expenditure of Rs. 800 crores in the public and Rs. 360 crores in the private sectors, estimated to increase National Income by 12 per cent., foodgrain production by 13 per cent., provide employment for two million people and increase in electric output, irrigation, etc. The Plan relies upon foreign aid for some Rs. 300 crores of finance. It is regarded as being moderate and realistic and has been well received in the country but it has been criticised as putting far too little emphasis on agriculture and communications including port facilities.

Industrial development of East Pakistan is now receiving urgent consideration and may be greatly helped by the discovery of a gas field in Uchh. The jute industry now has some 7,750 looms and plans by 1960 to have an output of jute manufactures capable of Pakistan's export trade in raw and manufactured jute and cotton, but the necessity of importing and distributing very large quantities of foodstuffs particularly in East Pakistan has proved a major headache and resulted in much suffering in that State last year. No less than 883,000 tons of food were imported into East Pakistan and 600,000 to West Pakistan. The value of these food imports was in the neighbourhood of Rs. 80 crores which, had it not been for American aid would have seriously affected Pakistan's foreign exchange position. There is no doubt that Pakistan will continue to need foreign aid for some time to come notwithstanding the strenuous efforts she is making, by severe restrictions in imports at the expense of some degree of inflation, coupled with an industrial programme designed further to reduce imports and to increase her income from exports.

Ceylon

Economically the year 1956 proved less prosperous for Ceylon than the preceding year. This was largely due to circumstances outside Ceylon's own control. Adverse weather conditions, including the severest drought in 50 years, caused deterioration in the quality of tea and a falling off in coconut production. Delays in Colombo due to dock labour unrest and towards the end of the year the diversion of shipping round the Cape all had adverse effects on Ceylon's balance of trade. The Port development scheme was completed and ships are now able to go alongside for loading and discharging cargo. Given freedom from labour disputes, Colombo Harbour should regain efficiency and cease to handicap the Island's trade as it has for recent years.

Burma

There is not very much change to report in regard to Burma during the past year.

In the financial field it is satisfactory to report that Burma's foreign exchange reserves which at the beginning of the year stood at K.405.5 million rose by the end of December, 1956, to K.569.6 million. This improvement is most welcome and is largely due to the strict limitation of imports. During the financial year which ended on the 30th September, 1956, 1,932,000 tons of rice and rice products were shipped. Out of the total 459,000 tons were on account of barter agreements despite which the total foreign exchange earnings were in the neighbourhood of the equivalent of K.96 crores and practically none of the 1956 crop has had to be carried over into the new year unsold. This in comparison with previous years when there were large carry-overs of unsold rice stocks is indeed satisfactory. On the other hand, only a fifth of the petroleum was produced in 1956 than was produced in 1953 and only a quarter of the teak and silver. Burma's potential export of her natural resources therefore is very great provided that transitional conditions could be brought about throughout the country.

During the year Agencies of the Bank were opened in The Pethah, Colombo, and in Temerloh, Pahang, Federation of Malaya.

During the year our numerous Branches and Agencies throughout South East Asia and the Far East continued to render efficient services in every department of Banking to a wide variety of industry, trade and commerce. Our thanks are due to our large staff, British and Asian for their good work. I must also express our thanks to Mr. Drake our Chief Manager, Mr. Hawkins our Deputy Chief Manager, and to the Managers and Staff in London.

SPENCER & COMPANY LIMITED

MR. Z. R. IRANI REVIEWS DEVELOPMENTS

Addressing the Ordinary Shareholders of Spencer & Co. Ltd. at their Fifty-ninth Ordinary General Meeting which was held on 9th March 1957, at the registered Office of the Company at Madras, Mr. Z. R. Irani, Ag. Chairman of the Company said :—

Gentlemen,

I very much regret that Mr. Edwards cannot be with us to-day as he is on home leave. In his absence, my colleagues have appointed me to the proud and privileged position of taking the Chair and I welcome you most cordially to the fifty-ninth Annual General Meeting of the Company.

You will observe from the published Accounts that there have been considerable changes in their presentation. Much time has been taken in re-analysing heads so as to conform with the provisions of the Companies Act 1956 and the result is a more voluminous document. It has, however, not been possible to show comparative figures for the year under review and the previous year since to have analysed the previous year's figures would have taken more time than could be afforded. Although the compiling of the Accounts has led to a delay in the holding of our present meeting, the pattern having been established, I have no doubt that future annual meetings will be held earlier in each year.

There is little comment I can make on the Accounts as they give full information and present satisfactory reading. Trading has been consistent though profit margins slightly lower than previously. I shall be happy later to answer to the best of my ability any questions that you put.

The Board has had to bid farewell recently to Messrs. J. Grievson, S. J. Knights and H. B. Toothill.

SITUATION VACANT

Well established Company has vacancy for suitably qualified Chartered Accountant, preferably with overseas experience. Good salary and prospects for the right man.

N. M. CHOKSHI, General Manager.

I would like here to pay a tribute to their loyal and valuable services to which, in fact, the Company's present financial position is in no small measure due. I am sure you will join with me in placing on record our appreciation of their help and wise counsel during the many years that they have been associated with the Company and to wish them every success in their new spheres of activity.

Cut in Imports

Imported lines have always constituted a considerable part of the business of the Company but of late years we have had to reconcile ourselves to a steady tapering off in this activity of ours. This is a sacrifice which in common with other importing concerns we have had to make in the national interest. The successful implementation of the two five year Plans have made it imperative that the Country conserve its foreign exchange resources. These have been considerably depleted; exports, which are current exchange earners, have nearly always been smaller than the size of the payments that have had to be made for imports. Capital goods naturally have precedence and consumer goods from abroad have been allowed to come in steadily shrinking volumes because there have been large gaping deficits in our foreign exchange budgets. For the first five year Plan, a total foreign exchange deficit of about 700 crores was estimated; the actual deficit was even higher. For the second Plan an average annual deficit of about Rs. 200 crores is anticipated. The axe naturally will fall heavily on consumer goods; even capital goods will not escape and in fact an order of priority has been introduced, first for capital goods required to maintain economy at present levels with those required for development schemes only ranking after. India's sterling reserves have been used up to an extent that the balance is just a little more than is required and must be preserved for the Country's currency backing. In these circumstances, even the automatic basic two year quota of £750 allowed unconditionally to each person going abroad has had to be withdrawn. Higher import duties have been imposed with a view to discourage imported goods by making them costlier to the consumer, nevertheless indigenous displacement of the vacuum is even now not of the same standard of quality or consumer preference as the foreign goods imported formerly.

In such a situation, the Company is having to fill up the ground lost in import business by a shift to industrial activity, a trend which is likely to continue in greater measure in the coming years. It is not for us to criticize the Plan schemes as a little too optimistic and somewhat too ambitious for the Country's rated optimum capacity. But the private sector has to keep on adjusting itself to national policies which create conditions where traditional and established business has to be conducted in the manner possible under Governmental policies. The outlook however is not by any means discouraging. The Plans are creating more purchasing power. Theorists may say that present conditions may lead to a depression in business which may act as a corrective to the transitional maladjustment. In a controlled economy however, trade cycles of booms and depressions do not have natural play; artificial stabilising factors such as monetary policy, production cum import policy, etc., absorb many of the shocks with the result that a violent disturbance of the normal economy is avoided, but controls to be effective must be imposed from every angle and direction, and not just one or two, thus making the economy one of severe regimentation—a state of affairs to be shunned by all who have the free commercial instinct, inherent in every one of us.

Wages and Costs

Strictly speaking, all commodities emanate from the good earth and an analysis of their costs, whatever the nature of the commodity, whether raw produce, machinery or manufactured articles, will show that the value of the material content is negligible and therefore costs can be said to comprise cumulative stages of wages and remuneration for capital employed. An increase in the standard of wages will necessarily increase costs and it can be argued in theory that increased wages produce increase in production and that the consequent rise in production absorbs the increased wages leaving costs reasonably constant. I don't wish to digress into a treatise on economics, but, briefly, in practice what apparently evolves is the reverse in that costs rise in an ever mounting spiral. We are in this process to-day and I know of nothing to cause the spiral to topple save the impact of a trade depression. I sincerely hope and trust that the Country is not heading for this with its attendant ills of wage cuts and unemployment and I have every right to believe that our able Administrators will watch for and prevent such a circumstance arising.

I have no doubt that you are desirous of knowing what effect the impact of current import restrictions will have on our trading. It is fortunate that the Company has other irons in the fire and has the means of promoting other interests. Whilst the pattern of our activities will always include import trade as a major one, you may rest assured that your Board is studiously probing and pursuing openings which will be of benefit to the Country and the Company. I am not at liberty in this stage to tell you much about our endeavours, but I am reasonably sure of giving you good news in fuller detail when we meet next year.

Before I conclude, I must express our thanks to all grades of our staff for their loyal endeavours which have resulted in the satisfactory position now before you.

The Balance Sheet as at 30th June, 1956, was unanimously approved and adopted. A further and final dividend of 10 per cent free of income-tax on the Ordinary Shares as recommended by the Directors was declared making in all a total dividend of 15 per cent free of income-tax for the year.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting which will be sent separately to shareholders.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

RECORD ADVANCES FOR JUTE

Wednesday, 13th March.

OVERALL demand in the money market has remained high during the past week. The sugar and the jute industries have maintained their offtake, and the requirements of the jute mills are still running at record levels. Accommodation against cotton storage has decreased slightly, but that on account of grains and seeds in upcountry areas shows little change. Money has remained easy in the inter-bank market with the call rate unchanged at 3½ percent.

Once again, little business is reported from the export bill market. Remittance has been good. Sterling has remained slightly easier during the past week, but the undertone continues steady. Continental rates have moved slightly against the pound.

Silver improved as arrivals were poor and support was forthcoming at lower levels. The price increased from the previous week's level of Rs. 175.4 to Rs. 178.12, quoted today. The ready rate was Rs. 178.15. The London and New York prices remained as before.

Gold increased in sympathy with silver. The price advanced from Rs. 106.12 to Rs. 107.4. The sovereign, at Rs. 70.4, showed a gain of 4 annas.

During the week ended 8th March, Government of India Treasury bills for Rs. 50,20,00,000 were sold in favour of the Reserve Bank.

Increases of Rs. 14.95 crores to Rs. 1,525.91 crores in active notes, and of Rs. 8.91 crores to Rs. 1,535.45 crores in the total note issue, were outstanding features of the return of the Reserve Bank of India for the week ended 8th March, 1957. Deposits of the Government of India declined by Rs. 3.22 crores to Rs. 51.88 crores, and other Government accounts fell by Rs. 95 lakhs to Rs. 2.75 crores. Balances of commercial banks were Rs. 1.01 crores lower at Rs. 52.24 crores. Balances held abroad fell by Rs. 3.99 crores to Rs. 98.89 crores, and investments at Rs. 56.22 crores showed a small decline. Other loans and advances dropped from Rs. 108.12 crores to Rs. 106.58 crores of which advances to scheduled banks against usance bills totalled Rs. 55.92 crores (Rs. 58.84 crores). Such advances amounted to Rs. 122.93 crores since 1st January, 1957. Ways and means advances stood at Rs. 11.40 crores (Rs. 7.63 crores).

The statement of the position of scheduled banks for the week ended 1st March, 1957, shows Demand and Time liabilities at Rs. 700.73 crores (Rs. 9.22 crores on account of borrowings from banks) and Rs. 462.75 crores (Rs. 1.62 crores), compared with Rs. 694.53 crores (Rs. 7.15 crores) and Rs. 467.08 crores (Rs. 1.69 crores) in the previous week. Cash has increased by Rs. 1.20 crores to Rs. 37.97 crores, while balances with the Reserve Bank have decreased by Rs. 1.72 crores to Rs. 50.20 crores. There is a drop of Rs. 1.33 crores in investments to Rs. 350.25 crores. Advances and bills discounted, at Rs. 862.26 crores, show a rise of Rs. 4.80 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 7.4 percent and 75.8 percent, against 7.6 percent and 73.8 percent.

The return of the State Bank of India for the week ended 1st March, 1957, shows a rise of Rs. 4.46 crores in total deposits to Rs. 276.01 crores. Investments in Government securities are down by Rs. 4 lakhs to Rs. 95.27 crores, while other authorised investments are up by Rs. 18 lakhs to Rs. 11.54 crores. Advances including loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 1.99 crores to Rs. 172.66 crores. Cash and balances are, in consequence, shown at Rs. 17.32 crores or Rs. 5.42 crores less.

The net profit shown in the consolidated profit and loss account of the NATIONAL BANK OF INDIA LTD. is £432,635 for the year ended last December, after providing for taxation and making other adjustments. The first interim dividend of 7½ percent has been declared. Notable allocations include reserve premises account £100,000 and contingencies reserve £75,000. The balance of unappropriated profit in the National Bank of India amounts to £275,360, while that of subsidiary companies is £118,823,564 to £317,979,702.

At the annual general meeting of stockholders on 3rd April, the directors of the CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA will recommend a final dividend of 7½ percent actual, subject to income tax, making 15 percent for the year 1956. Not-

able allocations include pension fund £125,000, widows and orphans fund £20,000, bank premises £200,000 and contingencies £150,000. The carry-forward is £409,368.

The profit of the INDIAN OVERSEAS BANK is Rs. 28

Our City Cable

STOCK MARKETS QUIET AND UNCERTAIN

INDUSTRIALS AND GILT-EDGED

FALL

London, 13th March.

QUIET and uncertain conditions have prevailed in the London stock markets during the past week and prices in most sections have lost ground following the by-election results with their reduced Government majorities, and the news that snipyard workers have threatened to strike. There have been a number of other adverse influences including the lower trend of Wall Street, the developments concerning the Suez Canal and the Gaza strip and the current activity in the new issue market, particularly the £40 million Steel Company of Wales issue. Business has been small throughout and the decline in prices reflects a lack of support rather than an actual selling pressure. The recent talk of lower interest rates has died down and prices in the gilt-edged market have fallen back steadily in the absence of demand to close with extensive losses compared with the previous week. Short-dated stocks have resisted the trend and have been unaffected by the modest rise in the Treasury bill rate on Friday. Foreign bonds and rails have remained subdued with little change. The activity in the new issue market and the various adverse influences mentioned above combined to bring lower prices in the industrial market which has recorded an all-round decline on the week. Shipbuilding shares have been among the chief sufferers on the strike news while shipping shares have fallen back on the continuing fall in tramp freight rates. South African gold shares have been fairly well maintained on a selective demand. Copper shares have improved, but tins have been easier. Oil shares have reacted from their earlier firmness, but the leaders are higher on balance. Western hemisphere issues have receded. Quietly irregular conditions have prevailed in the tea share market. There was dullness during the latter part of the week following the setback at the auctions, and although there was no pressure to sell, buyers were reserved. So prices have moved to lower levels. However, Tara Tea have advanced strongly on the advice to shareholders not to sell their shares. Rubbers have been quiet but the tone is firm with interest centred on shares considered likely to attract bids. Sapong is particularly strong for this reason while North Hummock has also advanced sharply on bid hopes.

The Money Market

The outflow of funds to the Revenue Department on account of the seasonal tax payments

has continued to be on a large scale and has affected the short-loan position on the London money market. There has been a good demand for money with very stringent conditions arising on Thursday and the rate for day-to-day accommodation has touched a high of 4½ percent under the acute shortage which has developed. Mostly money is on a 3½ percent to 4 percent basis, but even so, the rate is high and gives the market but marginal scope in its take-up of new bills. In view of the difficult week, the market revised its ideas for last Friday's tender and lowered its bids and brought a small increase in the average rate for the week's take-up.

Activity on Wall Street

Long-dated United States Government securities inclined higher at the outset, but eventually met with mild selling and then went steadily down to register their biggest losses in a fortnight. Trading during the period was slow. Investment quality corporates eased slightly, while rails were generally mixed. Most convertibles were higher in sympathy with the recent firmness in the security market. In foreigners, German nationals showed only minor changes. Italians gained fractions to one point with most other Europeans unchanged to a shade higher. Japanese issues were firm. The Union of South Africa 4½ percents lost a fraction on sale of a couple of bonds.

Hongkong Gold Firm

The past week in the Hongkong gold market finished on a firm note following the depreciation of the sterling abroad. The market had earlier ruled steady reflecting low stocks of gold available for delivery locally and higher European prices. Carry-over charges were 52 cents a 10 tael in favour of buyers. The official offtake was 11,500 taels and unofficial 13,400 taels. Arrivals in Macao were 50,000 ounces, while forward contracts were done at \$ (U.S.) 37.73.

Vegetable Oils Featureless

The vegetable oil market has presented a lifeless appearance with little of buying interest. In the groundnut oil section, sellers of Argentine, United States and Nigerian have not been pressing for business, although lower bids would be acceptable in most instances. Indian castor oil has continued to weaken as sellers contrive to find a trading level, although rates from the origin are still relatively dear. Coconut oil is in a stalemate with sellers generally repeating last Friday's rates, while only weak buying interest has been noted in the region of £92½ c.i.f. at the best. Both cotton and soyabean oils have presented a featureless market with most prices repeated largely for want of a serious test. Week-end reports from Singapore intimated that a moderate quantity of Indonesian copra had come to hand and hopes of Singapore re-entering the export market are said to be a little brighter. The general structure of

groundnut prices is unchanged with no worthwhile activity, apart from a week-end sale of Nigerian for April-June shipment to Italian ports at £75½ c.i.f. Castorseed has tended easier on the slackening of speculative activity. However, others from the origin have been still sparse. Most other oilseeds have been featureless.

Little Change in Rubber

An improving trend in Singapore during the early part of the week ended 7th March, raised values by a 1d a lb, but dull and easier conditions ensued and most of the gain was lost. The early firmness was aided by covering against Polish orders, and buying interest was stimulated by renewed disturbances in Indonesia. A fair volume of trading was reported at the higher level to which New York advices gave encouragement. Later, selling orders on Dutch account and liquidation in Singapore found buyers somewhat unresponsive, although fair acceptances were eventually made. In the closing stages, the market was very thin with prices fluctuating unduly under small buying or selling orders. The modest demand for sole crepe was about equally balanced by stock arrivals, and prices were little changed on the week after business on the basis of 42½d to 93d a lb. for 1/8th inch smooth No. 1, on the spot.

World Sugar Supply and Demand

A communique issued after last week's meeting of the International Sugar Council in London said that the Council's Statistical Committee had confirmed its overall estimate of free market requirements for the current calendar year at 5,650,000 metric tons raw value. The Committee estimated supplies available from countries inside and outside the Agreement at about 6,300,000 metric tons raw value. The communique warned, however, that the estimated supplies included sugar which would not be available until later this year and that the acreage and yield of best sugar could not be accurately forecast at this stage. The Council adopted further measures to secure maximum sugar supplies for the free market during the period when quotas are inoperative and agreed on a method for restoring quotas and other limitations on exports under the agreement when the price falls below 3.90 cents. The next meeting of the Council is scheduled for 2nd July.

A. T. T. Shares

The directors of the American Telephone and Telegraph Company have opposed a shareholders' proposal that the Company should split its stock on a four-for-one basis. The object of the proposal is to reduce the price of the shares so as to broaden the base of ownership, says the initiator, the Grand Street Boys Foundation. The directors oppose the split on the ground that it would add nothing to the basic value of the shares, and say that a split unaccompanied by an increased dividend might lead to damaging speculation.

Stocks and Shares

REDUCED TURNOVER IN SHARES

TEAS PROVIDE BEST SECTION

Wednesday Evening.

ACTIVITY in the share market has tapered off this week. Conditions are now quiet with little business passing. The undertone is dull, although operators themselves are already working up a holiday mood. There has been little movement in speculative counters and Indian Irons have moved narrowly with little business transacted. The rights price is moving around Rs. 5-8.

Engineering shares have tended quiet in sympathy with Indian Irons. Jute and coal scrip have been neglected. Among miscellaneous issues, Alkali and Chemical have improved to Rs. 15 from last week's trough of Rs. 13-11 reached after the four-for-one rights announcement. The share will be quoted ex-rights, ex-dividend from 18th March. The only section which has shown signs of buoyancy in the past few days' trading has been tea, where prices have been marked up in a number of cases. The reason appears to be the expectation that there will be no carry-over of teas into the coming season. Government securities have been quietly steady.

Details of the week's trading follow.

The Government securities market ruled steady, but business was on a mediocre scale. Three percent Conversion Loan 1966 continued in demand due to the approach of the interest payment date (15th instant) and the price was up to Rs. 74-10, but at the close there were sellers rather than buyers. Three percent Non-terminable Paper had sellers at Rs. 73-8. In short-dated loans, 3% 1957 was offered Rs. 99-12 but 3% 1958 had buyers at Rs. 99-9. Three percent 1959-61 was fractionally easier at Rs. 97-12 and 3% 1961 was offered at Rs. 99-7; 2½% 1961 was steady at Rs. 93-5 and 2½% 1960 had buyers at Rs. 96-7. Among medium-dated loans, 3% 1963-65 changed hands at around Rs. 94-3, 3% 1964 was quoted at Rs. 94-6, 3½% 1964 was taken lower at Rs. 98-6 and 3½% 1965 was traded at around Rs. 98-4; 3½% 1967 was marked at around Rs. 98-8. In long-dated issues, 3% 1966-68 was unchanged at Rs. 94 and 3% 1970-75 was supported at Rs. 87-6; 3½% 1974 changed hands at Rs. 98-8.

There was rather more business in State loans during the period under review but prices were quotably unchanged. Four percent U.P. 1968 was marked at Rs. 97-15 and 4% West Bengal 1968 was quoted at Rs. 99-9.

Business in preference shares was on a very restricted scale with sellers rather than buyers. In the miscellaneous group, Bharat Collieries were done at Rs. 51 and Bathgate at Rs. 42. Calcutta Electric were offered at Rs. 9 and F. & C. Osier were reported at Rs. 50. Indian Iron & Steel changed hands at Rs. 100-8 and Indian Aluminium were done at Rs. 69-12. Jardine Henderson were crossed at Rs. 61 and Rallis India were marked at Rs. 62-8. National Tobacco 1st and 2nd Preference were crossed at Rs. 69 and Rs. 63 respectively. Kettiewell Bullen 2nd Preference were sold at Rs. 56 and Karanpura Collieries at Rs. 55. In jute, Bally were easier at Rs. 101 and Barnagore were depressed at Rs. 38. Hastings came to hand at Rs. 85.

In the banking section, United Commercial were slightly better at Rs. 57 while Punjab National and Hind Bank were unchanged at Rs. 52 and Rs. 36-8 respectively.

The only share dealt in among railway scrip was Delhi Rohtas at around Rs. 13-2.

In cottons, Bowreah lost three and a half points and closed at Rs. 116-8 while Dunbar gained five points and closed better at Rs. 190. Elgin Mills were easier at Rs. 24 against an opening price of Rs. 24-8 and Kesoram were shaded at Rs. 14-12.

In electrics, Calcutta were quiet at Rs. 12-15 while other shares in this section were unchanged at last week's levels.

In the engineering section, Indian Iron & Steel fluctuated narrowly around Rs. 20-4 ex-rights and the volume of business was on a reduced scale. It is understood that the last date for payment of the application money of the rights shares is 15th April, 1957. Until the rights have been taken up, operators believe that the shares are likely to continue to fluctuate narrowly. Indian Galvanizing were slightly better at Rs. 20 while Jessop & Co. and Richardson & Cruddas fell back again to Rs. 25 and Rs. 18 respectively. Textile Machinery were easier at Rs. 19-10 while Kumardhubi Engineering were fairly steady at Rs. 9-13. Indian Standard Wagon met with small selling pressure and closed lower at Rs. 176. Guest, Keen, Williams kept fairly steady at around Rs. 24-15.

Dull conditions obtained in the jute section and prices where changed were lower than those prevailing at the beginning of the period under review. Here is a chart showing representative price movements.

	Opening 7-3-57 Rs.	Closing 12-3-57 Rs.
Agarpara	9 5	9 0
Alliance	100 0	98 0
Anglo-India	136 0	134 0
Barnagore	94 0	93 0
Howrah	17 12	17 8

Kinnison	137 0	134 0
Lansdowne	95 0	93 0
National	19 4	18 14

Contrary to the general trend, Reliance were fairly steady at Rs. 9-8 on interested support. Except for Bengal, Union and New Manbhoom which met with some enquiry and closed better at Rs. 450, Rs. 14-4 and Rs. 9-14, the rest of the shares in the coal section were depressed, as will be seen from the following table of prices:

	Opening 7-3-57 Rs.	Closing 12-3-57 Rs.
Amalgamated	18 0	17 12
Central India	6 10	6 7
Karanpura Collieries	98 0	95 0
Katras Jheriah	58 0	56 0
Western Bengal	6 2	5 15

In paper, Bengal were shaded at Rs. 90 while India Paper Pulp on the announcement of a distribution of 7% were steady at Rs. 23. Orient were easier at Rs. 31-14 as were Titagur at Rs. 37.

In shipping, India Steamship were unchanged at around Rs. 10-7 as were India General Navigation at Rs. 72. Port Shipping, however, improved from Rs. 16 to Rs. 16-12.

In cement, Sone Valley were unchanged at Rs. 7-3 while Dalmia were slightly easier at Rs. 12. Orissa were steady at Rs. 13-5 but Assam Bengal were depressed at Rs. 6.

In insurance, there was a marked fall in Ruby General from Rs. 5-14 to Rs. 5-6. New Asiatic and Triton were unchanged at Rs. 4-3 and Rs. 145.

Among miscellaneous Industrials, Alkali & Chemical recovered from Rs. 13-11 to Rs. 15 cum-divi-

"...and a bonus of goodwill to the management
—for installing the

'Tushar'
WATER COOLER!"

QUICK DIVIDENDS in improved staff relations — and greater efficiency! That's what investment in a TUSHAR Water Cooler brings you.

The TUSHAR provides a constant supply of cool, hygienic drinking water for your staff and clients. It's easy to operate and most economical to run. Why not get in touch with Voltas Limited, and order a TUSHAR now?

'Tushar'
WATER COOLERS

A modern must for factories, offices, schools, hotels, hospitals and colleges

With the TUSHAR you get

- A continuous supply of instantly-cooled water at the touch of a button — no unhygienic refilling or storing.
- A choice of two handsome models.
- Ease of installation.
- Economical to run.

a new look for an ancient land

The barren land that for centuries has looked out over Visakhapatnam harbour now gives way before the might of man and machine — strange new shapes of steel and concrete rise into the sky. The new Caltex Refinery is rapidly taking shape to provide India's petroleum needs. Irrigation and power projects... improved transport... increased agricultural output... new industries... all these need oil. And Caltex, yet another symbol of free enterprise, will supply it.

AIR INDIA INTERNATIONAL SERVICES TO LONDON

FREQUENCY TO BE INCREASED TO SEVEN A WEEK

(FROM OUR NEW DELHI CORRESPONDENT)

AIR India International will increase the frequency of its India-London service from six at present to seven, with effect from 1st April. In other words, from next month there will be a daily India-London service which will operate through Beirut, Cairo, Rome, Prague, Zurich, Geneva, Paris and Dusseldorf.

Italian Airport Tax

The Italian Government has levied airport charges for all passengers embarking at Italian airports for journeys other than domestic flights. This tax is similar to the ones in force at the State-owned British and French airports. At Ciampino airport, Rome, the charge is 700 lira. At all other Italian airports, it is 500 lira.

Stamp Tax in Brazil

The Brazilian insurance tax has now been abolished, but in its place a stamp tax has been imposed; this applies only to tickets issued in Brazil, the charge being 101.50 cruzeiros irrespective of the journey to be undertaken.

Changes in Austrian Levy

Since the announcement of the Austrian Government tax, certain modifications to the conditions of its application have been made. It will not apply to all passengers embarking at Austrian airports, but only to those who have their tickets issued and purchased in the country. Thus the return half of a ticket issued in other countries will not be subject to the Austrian tax.

Changes in Fares

The following is a summary of the principal

ANALYTICAL

Consulting and Technical Chemists
Soll, Water (Including Bacteriological), Minerals,
Oils, Fertilizers, Shellac, Foods and Drugs—Gold
and Silver assayers.
Sampling by arrangement

R. V. BRIGGS & CO. PRIVATE LTD.

16, Old Court House Street,
(West End Watch Co., Top Floor).

changes in air fares on international routes which will become effective on 1st April.

First-class trans-atlantic fares will be reduced by \$(U.S.)40 between gateway points and to other cities in Europe and fares to and from the Caribbean area by \$(U.S.)30. Fares from north and central America via the Atlantic to and from points in the Middle East and the Far East will be reduced, but by smaller amounts varying according to the distance.

De-luxe class services will begin on 1st April and the extra charge for the use of a berth or sleeper chair by de-luxe flights will be \$(U.S.)50 one way and \$(U.S.)90 for round trips irrespective of the distance. It should be noted, however, that the de-luxe class fare will only apply to the routes to and from north America and passengers whose destination is in the Caribbean area, but who nevertheless travel via New York, will not pay the extra amount even though they use de-luxe accommodation.

Uniform Tourist-Class Fares

Tourist-class fares between Scandinavia and the west coast of north America will, from 1st April, be the same whether the travel is by the polar route or via New York; there are at present differences between the charges for the two routes. Fares between India, Pakistan and Ceylon on the one hand, and Europe and the western hemisphere on the other, will be slightly increased with effect from 1st April.

Order for Fokker Friendship

The Australian Department of Civil Aviation has ordered a Fokker F. 27 Friendship aircraft from the manufacturers in Holland for delivery in July, 1959. Announcing this, the Minister for Civil Aviation, Senator Paltridge, said that the aircraft would be used for regular flight tests of all Australian air, radio, navigation and safety aids and for flight checking of commercial airline pilots. It is important that for these continual checks, the Department's Division of Flying Operations will be using an aircraft contemporary with those in regular commercial use. At present the Department operates specially equipped DC-3s to check a network of flying aids that covers 3,500,000 square miles. Test equipment, weighing about one ton, will be installed in the new aircraft. An order by Trans-Australia Airlines for six Fokker Friendship aircraft to replace DC-3s was placed last April. These aircraft will be delivered early in 1959.

Faster Qantas Services

Qantas Empire Airways' new service between Sydney and Hongkong has reduced travelling time on the route to less than a day. The existing once-a-week service is the first regular Lockheed Super-Constellation service operating to Hongkong. It leaves Sydney on Mondays and Hongkong on Tuesdays. The General Manager and the chief executive of Qantas, Mr. C. O. Turner, who announced

the new service, said that the introduction of Super-Constellations on the Hongkong route had been made possible by the recent delivery of two new aircraft. Qantas now has 14 Super-Constellations serving its main line routes and another two would be delivered in 1957. The service will leave Sydney every Monday at 4.30 p.m. and arrive in Hongkong on Tuesdays at 11.25 a.m. Departure from Hongkong will be at 4 p.m. each Tuesday, arriving in Sydney on Wednesdays at 4.30 p.m. Routing will be through Darwin and Manila. Provision has been made for 45 tourist-class and 23 first-class passengers. Mr. Turner also announced that new Kangaroo route schedules were to be introduced by Qantas and B.O.A.C. They would cut the Sydney-London travelling time by almost one-third.

T.A.A. Sets New Passenger Record

Trans-Australia Airlines carried 773,144 passengers on scheduled flights to 94 cities and towns throughout the Commonwealth during 1956. This was an Australian airline record, and a 33,361-passenger increase on T.A.A.'s 1955 total. The passenger miles performed were 374,576,033, a 7 per cent increase, and the average passenger flew 484.5 miles. Passenger traffic increased on all routes during the year, and the nine Vickers Viscounts operated by T.A.A. carried a total of 400,000 passengers with an 85 per cent passenger load factor. Ordinary air cargo in 1956 totalled 36,007,922 lbs. (36,967,633 lbs. in 1955), but consignments under the "Air Express" service rose by 158,897 lbs. to 1,334,240 lbs. T.A.A. has now unduplicated routes totalling 31,391 route miles. Two new Viscounts were delivered last month.

Fourth Trans-Tasman Route

Tasman Empire Airways Ltd's fourth trans-Tasman route opened in February, when a new weekly service was inaugurated between Auckland and Melbourne. The new service provides Auckland and Christchurch with air connections to Sydney and Melbourne.

First-Class Fares Increased

First-class inter-capital fare rates charged by Australia's two major airlines—Trans-Australia Airlines and Australian National Airways—have been raised by 5 per cent. Tourist fares charged by these operators remain unchanged. So do the one-class fares charged by Ansett Airways and Butler Airways. The increases came into force on 1st November. In spite of them, the first-class fare rates on Australian major inter-capital routes remain among the lowest in the world. The average cost of this form of transport is now 5.34d a passenger mile.

Integration of French Companies

Sud-Est Aviation and Ouest Aviation, France's two big State-owned airframe companies, are now merged under the name Sud Aviation. One reason for the decision to combine the two, it is reported, is to produce Caravelle, a Sud-Est aircraft for which Ouest builds the primary wing structure. The merger of the two firms leaves only one other nationalised airframe company, the Nord, which produces the Noratlas twin-engine cargo plane, and it is predicted that Nord, too, will eventually be absorbed into the new firm.

Air France has opened a new service between Dakar and Atar, Mauritania via Saint Louis and Adjuait. There are three flights weekly. Air France has inaugurated a new six-times-a-week cargo service between Paris and Marseilles.

Japan-Brazil Air Agreement

Japan and Brazil signed an air transport agreement in Rio de Janeiro on 14th December, providing for the opening of direct air services between the two countries. Japanese Airlines has operated a series of special flights to Brazil, but has had no authorisation for a regular service. No Brazilian carrier has flown to Japan, but Real-Aerovias is expected to make a test flight to Tokyo soon. The routes and dates of inauguration of services between the two countries are still under discussion.

Japanese Plans for World Service

Under a ten-year expansion programme the Japanese Airlines plans to serve Peking, Moscow, London, New York and other distant points by 1965. The new programme envisages a European route with a terminal in London, and when normal diplomatic relations with communist China are established, a route to London via Peking and Moscow. By 1965, the route would include New York, Seattle, and Tokyo and thus become a round-the-world service. With the delivery of its four DC-7Cs in 1958, the Japanese Airline hopes to start once-a-month flights to Sao Paulo, increasing frequency to once-a-fortnight in 1959, and to once-a-week in 1961. The Airlines' officials emphasise that the ten-year blueprint drawn up by the Transportation Ministry represents merely what the Japanese Airline "would like to do," since the difficulties to be overcome are numerous.

Flight Records

Pan American and B.O.A.C. have created new records for commercial flights across the Atlantic. One of P.A.A.'s DC-7Cs made the New York-Paris trip in 9 hours 18 minutes clipping two minutes off the old record set in October 1955. B.O.A.C.'s new DC-7C on a proving flight made the London-New York crossing in 11 hours and 20 minutes, cutting the previous record by two hours.

American Carries More Passengers
Pan American carried a record of 221,240 passengers during 1956. The airline said it carried about one-third of all trans-atlantic passengers in both directions. The trans-atlantic traffic increased by 23.5 per cent over 1955, largely as a result of increased migrations to the U.S.A.

New Delhi

FURTHER DETAILS OF BRITISH HEAVY ENGINEERING MISSION REPORT

RECOMMENDATIONS OF JEHANGIR GHANDY COMMITTEE

EXPECTED BY END OF MARCH

(FROM OUR NEW DELHI CORRESPONDENT)

THE Jehangir Ghandy Committee assembled here last week for preliminary discussions about the Russian reports on the heavy machine-making plant and coal-mining equipment, and the report of the U.K. heavy engineering mission. The Committee's own report is expected here by the end of this month. The director-general of the Federation of British Industries, Mr. Norman Kipping, is arriving here on 20th March, and is expected to discuss the U.K. heavy engineering mission's report with the appropriate authorities. This report has followed the logical course by referring to the general scale, type and character of the services it is intended to provide for industrial expansion. It says:

"We might now consider more specifically what services or contributions heavy engineering, in the context of our terms of reference, can provide—in other words, what are the basic attributes or activities which characterise heavy engineering? Essentially, they are these:

"1. Machining large and heavy castings and forgings.
"2. Fabricating heavy and bulky structures from heavy structural members.
"3. Fabricating heavy and bulky plant and vessels from thick metal plate.

"Without this sort of capacity, there could be no heavy engineering. With it, the foundations of heavy engineering have been laid. Such capacity is not specialised, capable of performing only a few specialised operations, nor does it constitute a line of production, but is of the nature of heavy jobbing capacity serving many and varied industries or users. The product is normally made to customers' individual orders. But such capacity would be useless unless there existed also a capacity to produce the heavy castings or forgings, or the thick plate and rolled sections on which it can operate. The plate and sections will be provided by the new steel works, but we must add the basic requirement of heavy castings in steel or iron, and of heavy forgings. Although the production of such castings and forgings is not necessarily heavy engineering in itself, it is an essential foundation for it. By the same token, a heavy machine shop or structural shop needs heavy machine tools to do its job, and the manufacture of such tools is another essential foundation for heavy engineering. To make them in turn (and many other things), alloy steels are also required.

Basic Requirements

"So the basic requirements for establishing heavy engineering capacity in India (or any other country) are:

"Foundations: (1) heavy structural members; (2) heavy plates; (3) heavy castings in iron and steel; (4) heavy forgings; and (5) alloy or special steels.

"Basic heavy engineering capacity: (1) shops or works for making heavy structural fabrications; (2) shops or works for fabricating heavy plant and vessels from thick plate; (3) shops or works for building heavy duty industrial machinery, e.g., steel works mechanical plant; and (4) works for building heavy duty machine tools which may be used in any of the above.

"At this stage, it would be convenient to describe in each case what we mean by 'heavy'. We do not seek to define the term—for it is not definable on any generally accepted basis—but to indicate how we think the term might be interpreted in the context of this report, and related to India's present stage of industrial development and present needs. The following may be a useful guide in the matter:

"Castings: those over one or two tons in weight.
"Forgings: those normally requiring a forging hammer of five tons and upwards, or a forging press.

"Heavy Machinery: those machines containing one or more component parts weighing more than one ton.

"Heavy structures: the manipulation of 18 in. joists and over.

"Heavy plates and vessels: the bending or forming and assembly of plates from $\frac{1}{2}$ in. upwards in thickness.

"Machine Tools: these vary too widely to be defined by weight, but it might be taken that radial drilling machines capable of drilling in steel a hole of 3 in. diameter and upwards, a horizontal boring machine with a spindle of, say, 5 in. diameter and upwards, a centre lathe with a 36 in. swing and upwards, and a planing machine with a 4 ft. by 12 ft. table and upwards, can all be considered as within the heavy duty range.

Flexible in Character

"In conclusion, the above analysis led us to the view that the type of heavy engineering capacity

which the Government should install should be non-specialist and flexible in character so that it can contribute to a wide field of industrial expansion. This is the character and role of heavy engineering in other highly industrialised countries. Capacity of this nature, in adequate quantity and properly balanced, can cater for the heavy components for steel works, cement works, chemical and petroleum plant, earth-moving equipment and so on, provided always—and this must be emphasised—that it is fully complemented by medium and light engineering capacity of various types.

"We must next consider how such heavy engineering capacity should be provided in India. Later in this report the scale on which it might be established is discussed. Our recommendation is that this capacity should be created and built up in standard units of economic size and of the widest general utility. The types of units we recommend are:

"1. Heavy structural fabricating works.
"2. Heavy plate and vessel works.
"3. Heavy machine shop to make heavy industrial machinery.
"4. Heavy machine tool works.

"In the first place, each of these units or works, except the heavy structural works which, as will be seen, has a special character of its own, requires a high proportion of skilled personnel and skilled supervision, and with rigid inspection at all stages of production. Jobbing or general purpose work of this kind requires more versatile and individually higher technical skill than does repetitive work on a line of production. If a worker makes an error in, say, finishing a large forging weighing many tons on which several thousands of pounds may have already been spent in casting, forging and machining, it may have to be scrapped, and the piece has to be made again from the beginning—with consequent serious loss. At all stages, the skilled men have to be reliable and responsible, and supervision and inspection have to be meticulous. Errors or miscalculations are very expensive whether to the heavy equipment employed or to the parts being manufactured. Experience in the United Kingdom and elsewhere shows that for this class of work a factory with a maximum of 750 to 1,000 operatives is the largest satisfactory size for proper managerial control and economic production. There is no merit at all in mere 'bigness' in this kind of installation. Two-shift working is advisable (except in the case of the heavy machine tool works) in order to make economic use of expensive plant but three-shift working is not recommended.

Rate of Expansion

"Secondly, each such unit can readily be multiplied individually as required, each duplicate or multiple unit being then appropriately directed towards a more specialised group of products. The rate of expansion of heavy engineering capacity as a whole in India can also be thus readily nourished and controlled. For it can be expanded in a balanced manner as and when it is convenient to do so, either in accordance with the available capital resources of the Government from time to time. But even one such unit of each type will make a substantial contribution to India's industrial development.

"Thirdly, the geographical distribution of heavy engineering capacity over the great sub-continent of India will be of increasing importance as time goes on. Over-commitment and over-concentration in size or locality should be avoided from the outset, and deployment should be left flexible. Units of the size we recommend (except the heavy structural works, which should be attached to a steel works) can be located in the future where best suited to the developing pattern of India's industrial expansion, so as to be near the industries or the customers they will serve. The strain on the transport services will also be minimised.

Structural Steel Fabrication

"The very large industrial development contemplated in India will give rise to an enormous demand for structural steel fabrication. The demands for the heavier structural sections will not be restricted to the basic industries of steel production, chemicals and the like, but will also arise from the growth of other industries, many of which will require structures to carry heavy cranes. In this branch of engineering also, there are no clear dividing lines between heavy, medium and light work. In fact, most fabricated buildings or structures are a mixture of these. Any organisation or firm intending to undertake complete projects must, therefore, provide flexible capacity in its shops. Nevertheless, certain organisations direct their production to projects containing heavier work, while others avoid the heavier work and handle solely the medium and lighter varie-

ties. If firms contract to erect the whole structure, however, they must be able either to make themselves, or to procure from elsewhere, all the necessary structural sections from light to very heavy.

"We are concerned with the heavier structural only. It would be easy to suggest the creation merely of additional fabricating works of conventional style planned towards the heavier type of work, but such an approach might well be better implemented by further extensions of existing capacity and by enlarging the capacity which is scheduled for the new steel works. The proposal we advocate comprises a works planned and equipped to manufacture parallel flange sections for use as beams and columns by welding together plates. This works will not undertake structural projects itself but will provide a service to the structural industry by supplying semi-completed or completed sections or members resembling rolled sections, but generally beyond the scope of rolling mills to meet orders and drawings submitted by firms in the structural industry. If so required, the fabrication of individual members could be completed by the inclusion of stiffeners, cutting to dead length, drilling the appropriate holes, preparing ends for inter-connection and generally making the unit complete for delivery direct to site ready for erection. If not so required, the sections need only be completed to profile.

Advantages of Proposal

"The advantages of such a proposal are:

"(a) It can cater for a large part of the expanding requirements of the structural industry—namely, the requirements for rectangular heavy sections—and the output of the industry is increased without superseding proposals of the industry itself for its own general expansion.

"(b) Since the fabrication of the heavier rectangular work will be concentrated, the need for it can be directly met with a minimum of capital investment.

"(c) Because of its particular production, such a works can be planned with a positive production flow and thus lends itself to a relatively high degree of mechanisation.

"(d) It is a type of production which can be easily and considerably expanded before becoming unwieldy.

"(e) It offers the greatest degree of flexibility to the structural industry in that individual plates of varying sizes and thicknesses can be selected so that on joining together the most economical structural unit is made for any particular purpose.

"(f) The essential elements being plates, the fabrication is dependent upon only one source of supply, namely, a plate mill, and not on a variety of sources producing angles, joists, channels, etcetera as well as plates.

"(g) The cost of manufacture will be economical and should lower the overall cost of fabricated steel structural work in general.

"(h) Because of its very nature, the works will not deal with design and hence will not require a drawing office, other than a small one for possible development of details and tools.

"(i) If a works is attached to a steel works rolling plate section, there will be an appreciable saving in transport, bearing in mind that, if required, the heavy sections can be completed and despatched direct to the site ready for erection.

Estimated Output

"The works of one bay planned for the fabrication of completed plate members is capable of an output of 10,000 to 12,000 tons a year valued at Rs. 1.07 crores on single-shift working, and 18,000 to 20,000 tons a year valued at Rs. 2 crores on double-shift working. The total cost of the works, excluding working capital, site purchase and all work outside the perimeter of the works, would be approximately Rs. 1.10 crores, and the staff required would be 125 altogether. It can be readily expanded on the site to many times this size by simply adding identical bays. Each additional bay would cost about Rs. 70 lakhs and would give the same output as above with similar manpower. As the scheme develops, future bays would be set aside for the manufacture of sections completed only to profile. Such bays would be shorter in length and would cost only Rs. 55 lakhs a bay.

"Much of the work involved in constructing an integrated steel works up to the stage of the production of the ingot, and in constructing a fertilizer or other heavy chemical plant, calls for the bending or forming of steel plate of thicknesses between $\frac{1}{2}$ in. and 1 $\frac{1}{2}$ in. inclusive. No fabricated vessels of wall thickness greater than 1 $\frac{1}{2}$ in. are required for either purpose. India's programme for the further expansion of her steel industry will require blast furnaces and allied plant items such as stoves and gas-cleaning plant, hot metal mixers and ladles, gasholders and ingot bogie frames, to quote but a few. In expanding the heavy chemical industry, the demand will be for liquid containers, pressure and other vessels, and pipes fabricated from plates. There will be a demand for a proportion of vessels in stainless steel. In addition, other industries such as electric power stations, gas producing plant, and the field of nuclear energy require the same sort of service.

Heavy Plate and Vessel Works

"We, therefore, recommend the setting up of one or more heavy plate and vessel works of the following type to meet requirements up to and including 1 $\frac{1}{2}$ in. thickness. Works of this kind, although planned essentially for the manufacture and assembly of plate work, must include adequate machining capacity, and, in particular, fabricating capacity to make the supporting structures which

become integral with the vessels. Our unit provides for this and is thus largely—and essentially—self contained, but it will nevertheless subcontract for the supply to it of items originating as castings or forgings requiring a lot of machining. If, however, more than one unit were to be established, it would be advisable to consider some degree of specialisation, and this would also afford a saving in capital expenditure. For example, the fertiliser and heavy chemical industry is likely to be more widely dispersed than the steel industry. The growth of the former may well call for additional fabricating capacity which can be set up locally and directed to vessel manufacture. Units planned towards expanding the chemical industry will not require the same machining capacity as units required primarily to undertake the construction of the pre-ingot stage of a steel works plant.

Capital Costs

"The capital cost of the unit proposed, excluding working capital, site purchase and all work outside the perimeter of the works proper would be of the order of Rs. 5.20 crores. This would include all civil engineering and structural work, administration and amenity buildings, services within the perimeter and plant. Its annual output would be 10,000 to 12,000 tons with a value of approximately Rs. 2.35 crores on single-shift working, or 18,000 to 20,000 tons valued at Rs. 4 crores on a double-shift. Based on British standards and including skilled staff for assembling on site, it would require about 800 employees for a single shift and about 1,350 for a double-shift, including management and administration. Out of a works staff of about 650, some 400 would be craftsmen and 70 would be apprentices. Initially, it would require a minimum of seven skilled men from overseas to supervise it.

"Completion of the works would take some 3½ years from the time of calling for a detailed project report, assuming present-day availability of materials and labour and early transport facilities to the site, and provided that it does not take longer than three months to give a decision on the project report. Provided that housing, power and water are available at the site, the programme of execution could be somewhat as follows: after 21 months, training school in operation; after 33 months, works building erected and clad and cranes in operation; after 42 months, plant installed and production commencing in all shops.

Heavy Machine Shop

"The heavy machine shop we recommend will provide capacity for the purpose as its primary objective, including medium and light capacity for the auxiliary equipment. Nevertheless, it will be a general purpose heavy jobbing shop, flexible in its lay-out, capable of machining to the finished state any castings and forgings which will be produced in the N.I.D.C. foundry-forging project, and of building them into any completed units which may be required. It will be equipped also for the cutting of simple gears and for the fabrication of such weldments as would enable it to produce complete fabrications of a straightforward nature but which require accurate machining. It can also manufacture the mechanical parts of winding engines and other surface machinery for coal mines.

"It will be capable from the outset of handling and machining single pieces of a weight of up to 50 tons. This is the maximum weight of castings and forgings which the foundry-forging project will be initially equipped to produce. This is a sensible limit at this stage, for there will be very

few castings required even of that weight, and heavier single weights will be so rare that it will not be justifiable on economic grounds to cater for them as yet. Nevertheless, this machine shop can readily be expanded and arranged to accommodate heavier cranes to enable single pieces of over 50 tons weight to be handled. Complete units for exceeding 50 tons in weight can, of course, be manufactured—the weight limit only applies to individual pieces of metal. The capital cost of the works including buildings and plant, but excluding working capital, site purchase and all work outside the perimeter of the works, would be in the neighbourhood of Rs. 3.30 crores, depending upon the site selected and the availability of the essential services, such as gas, water and electricity. The annual output would be of the order of Rs. 3.30 crores a year, based on two-shift working.

Medium-Heavy Machine Tool Works

The capital cost of the project, excluding working capital, site purchase and all work outside the perimeter of the works would be of the order of Rs. 4 crores to Rs. 4.70 crores, depending on the site, and would include offices, welfare, training and other services. Its annual output would be from 3,500 to 4,500 tons of machine tools to a value of between Rs. 2.70 crores and Rs. 3.30 crores on a one-shift basis. In a works such as this which employs a very high percentage of skilled workers, it is not practicable to work two full shifts at least for some time, but there is no reason why any temporary out-of-balance machine loading should not be corrected by double shifting a limited number of machines as occasion requires. By British standards, it would require about 850 employees and 150 apprentices for one shift, of whom over 600 would be skilled production workers. It would require a minimum of seven highly qualified men from overseas to supervise it in its earliest years. It would take about 3½ to four years to complete from the time of calling for a detailed project report, provided that a decision on it is reached within three months. It would get into production roughly as follows: first year Rs. 33 lakhs; second year Rs. 67 lakhs; third year Rs. 2 crores; and fourth year Rs. 2.70 crores.

"Very heavy machine tools are only built one at a time against a customer's order, but some machines in the medium range can safely be built in small batches of three or more for stock. It is suggested that though the plant is capable of manufacturing all but a very few types of very heavy machine tools, it should be started on small batches of machines in the medium-heavy range, if necessary against Government orders for stock, before machines in the heavy range are commenced. It is possible that some of the machines produced might have to be stockpiled for a year or two, but we see no other way of getting a medium-heavy machine tool works into production from scratch, as it is only by building machines which can be inspected by customers that confidence will be created and orders secured for the 'one at a time' machines in the heavy range. The types of machines in the medium-heavy range which are considered suitable for the first small batch production are: (1) vertical boring machines 5 ft. to 6 ft. table; (2) planing machines 6 ft. by 4 ft. by 12 ft.; (3) planing machines 6 ft. by 6 ft. by 16 ft.; (4) radial drills 3½ in. diam. in steel 6 ft. arm and over; (5) five or 10 cwt. air-operated hammers; (6) roll turning lathes suitable for 25 in. diam. by 8 ft.; (7) roll turning lathes 33 in. diam. by 12 ft.; (8) table type horizontal boring machines 3 in. or 4 in. spindle diam.; and (9) floor type horizontal boring machines 4 in. or 6 in. spindle diam. All these are very useful general purpose machines for which a ready sale could be expected. The plant we recommend could be expanded on the same site by two additional bays 500 ft. by 80 ft. (80,000 sq. ft.) i.e., by 33½ per cent of capacity with special reference to the heavier tools.

Coal Mining

"The second five year plan provides for an increase in output from about 38 million tons to 60 million tons annually, the increase of 22 million tons being allocated as to 10 million tons from the private sector and 12 million tons from the public sector. It is expected that about 7 million tons of the public sector contribution will be obtained from open-cast workings. The third five year plan calls for a further increase of coal production to 100 million tons annually. It is expected that the additional 40 million tons a year will be provided almost entirely by the public sector, and that approximately half the increase will be obtained from open-cast workings and half from deep mines. We can now list the types of machinery likely to be needed for the new open-cast workings and deep mines, confining our attention to those items within our terms of reference as extended by the Government. The lists are not, of course, complete lists of all the machinery required for new colliery undertakings.

"For open-cast workings: (a) mechanical shovels (heavy duty); (b) haulages (heavy duty); and (c) conveyor drives (heavy duty).

"For deep mines: (a) winders, reduction gears, drums, etcetera (electric drive is assumed); (b) headgear pulleys and driving pulleys for ropeways (classified as heavy structures); (c) headgears (light and heavy duty); (d) haulages (light and heavy duty); (e) conveyor drives (light and heavy duty); (f) shafts (including crankshafts) used in wagon tippers and larger size mine car tippers, and also in some screens used in screening and washing plants; (g) crushers (especially for large coal) used in preparation plants and for

preparing material for pneumatic stowing or hydraulic stowing where sand is not available; (h) components of filters, thickeners, and centrifuges used in washeries; (i) coal cutters; it is suggested that two types of coal-cutting machines should receive priority, namely longwall/shortwall (suitable for either longwall or room and pillar systems of mining), and arewall (for room and pillar systems or development of longwall faces); (j) loading machines; (k) conveyors, belt, scraper chain and shaker; (l) shuttle cars; (m) mine locomotives (battery and trolley); and (n) pneumatic stowing machines.

"The capital cost of the factory, excluding working capital, site purchase and all work outside the perimeter of the works, would be in the region of Rs. 3 crores, depending on the site selected and the facilities available. The annual output would be of the order of Rs. 2.70 crores to Rs. 3.30 crores, based on two-shift operations. Certain conditions must, however, be fulfilled if the proposed factory is to give the best results and have the greatest usefulness. These are:

"1. Early decisions would need to be made by the Government on the types and makes of machines (cutters, loaders, conveyors, shuttle cars, locomotives, etcetera) to be manufactured in the new works. This could be done in consultation with experienced mining engineers in India and is important for two reasons. First, the proposed factory could not be designed in detail without such decisions, and second, negotiations with the present makers of the chosen equipment (for licensing arrangements and the like) will be necessary and will take time.

"2. The factory would have to be built and put into production not later than the end of the second five year plan, and should be used at full capacity as soon as possible after proof of the success of its products in practical use, even if considerable numbers of the various units are put into stock. By this means, the machines necessary for the new collieries should be made available when needed, and at the end of the third five year plan the new collieries should be fully equipped. The capacity recommended for the proposed works is such that it could equip and maintain the new collieries only if it is used in this way from the start. Otherwise there could be a lack of manufacturing capacity just at the critical time when many collieries would be coming into production.

"3. The factory has been designed to provide spare parts for the units made in it (a reasonable stock of which could also be built up with advantage) and also for other machines at present employed in the field. Here again, arrangements for servicing existing machines would have to be made with their makers."

Loans from World Bank

The Secretary to the Ministry of Finance, Mr. B. K. Nehru, will head a small mission, consisting mostly of railway experts, which will leave next month for Washington to negotiate a loan with the World Bank. The Bank's experts will by then have made their report on the working and requirements of the Indian railways. While in Washington, Mr. Nehru will also open negotiations with the Bank for loans to finance India's port development plans. Meanwhile, Mr. Basch of the World Bank will reach Bombay on 11th March and arrive here on 16th March for discussions with the Government on these loans.

Iron Ore for Japan

A five-year agreement for the supply by India of 7.2 million tons of iron ore to Japanese steel mills was finalised last week. The ore will be supplied by the State Trading Corporation—1.3 million tons in 1957-58, 1.4 million tons in 1958-59 and the remainder at the rate of 1.5 million tons a year over the following three years. The contract becomes effective from 1st July, 1957, and will be examined in Tokyo. During the negotiations, the possibility of Japanese interests collaborating in providing facilities in the minor ports on the east and west coast of India to enable the supply of larger quantities of iron ore to Japan, was also discussed. These discussions are expected to continue.

Indo-Egyptian Trade

A six-man Egyptian trade delegation had discussions with the Government last week, when the present position of Indo-Egyptian trade was examined. This trade depends heavily on the import of cotton from Egypt. During the discussions, the Indian side, it is believed, referred to the high price of Egyptian cotton and suggested that it be reduced. In the seven months ended October, 1956, imports of Egyptian cotton were 5,755 tons, compared with 13,480 tons during the same period in 1955. In terms of money, the seven months' imports were valued at Rs. 3,67,46,070, compared with Rs. 7,79,19,961 during the first seven months of 1955. The value of exports from India to Egypt during the first seven months of 1956 was Rs. 7,42,74,587, compared with Rs. 5,47,75,152 during the same period of 1955.

Loan to Burma

The Finance Minister, Mr. T. T. Krishnamachari, has signed an agreement on behalf of the Indian Government giving a loan of Rs. 20 crores to the Burmese Government. The loan carries 4½ per cent interest, and is repayable in 24 half-yearly instalments starting from 1st April, 1957. Burma has been given the option to transfer part of the total to any other sterling area country.

London

TASKS BEFORE THE CHANCELLOR OF THE EXCHEQUER

LESSONS OF RECENT BY-ELECTIONS

(FROM OUR LONDON CORRESPONDENT)

THE Chancellor of the Exchequer, Mr. Thorneycroft, will open his first Budget in the House of Commons on 9th April, and he will certainly have to produce something exceptional if he is to satisfy the wants of his numerous unofficial advisers. He has also to do something to restore national confidence in the Government's policies generally, not merely in its economic policy, for the results of recent by-elections, and especially that in Warwick and Leamington (Sir Anthony Eden's former constituency), have demonstrated a measure of unpopularity which the Government cannot afford to ignore merely because of the safe Parliamentary majority it now enjoys. Before the Budget, the annual Statement on Defence is expected in the last week of this month—probably the most important factor in budgetary planning; the first series of Civil Estimates for 1957-58 are expected this week; the "Economic Survey and White Paper on National Income and Expenditure" also in the last week of the month, and the "White Paper on Balance of Payments" in the first week of April. Not until the Budget is presented, can the overall policy be dealt with, but Mr. Macmillan is due to make an important speech in Avon on the Friday after the Budget day, and it will be surprising if he does not define in detail the policy his Government intends following. Meantime, he is assured of the support of the Conservative backbenchers, having apparently satisfied the 1922 Committee that unpopular measures will not be shirked, and in the long run the party's achievements will overcome current setbacks.

A New Approach

Of one thing there can be no possible doubt—the Government is certainly approaching the country's problems from a fresh angle and with a greater sense of urgency, without departing from the basic features of the policy it has followed throughout. Also, it is not allowing itself to be put off by temporary difficulties or disappointments. The full impact of its new thinking on defence expenditure has yet to be disclosed, but last week Sir Percy Mills, Minister of Power, disclosed new programme to treble the nuclear power plan under which 18 or 19 stations are to be built over the next nine years at a cost of £742 million to generate a quarter of U.K.'s needs of electricity. According to Sir Brian Robertson, chairman of the Transport Commission, the plan to bring British railways up-to-date has also been accelerated and more than £400 million of the £1,200 million to be spent on modernisation has already been allotted, including £92 on electrification, £66 million on diesel locomotives and trains, and £46 million on track reconstruction. These are impressive developments calling for heavy investment, which will have to be matched in the private sector to provide the necessary equipment and materials.

The only unanswered query is where all the capital is to come from. So far the market has found little difficulty in meeting a regular spate of new issues, which the forthcoming Steel Company of Wales offer will raise to an aggregate sum of about £150 million. In these circumstances, not a little surprise has been occasioned by the latest monthly statements of the London clearing banks, made up to 20th February, which certainly indicate some easing of the credit squeeze. It discloses an unexpected rise of £59.5 million in advances, which lifts the loan total to £1,923.5 million. This has taken place during a period in which the borrowings of the nationalised industries from the clearing banks have dropped by £37.6 million to £57.5 million. This implies that the banks' loans to the private sector have risen by as much as £97 million. The answer may turn out to be that the increased calls on bank accommodation have come mainly from the heavy industries, especially those connected with the nuclear power programme, and from companies expanding their export trade. Purchase Tax demands are also seasonally high in February. Another feature is a sharp reduction in liquidity ratios, which, taking the clearing banks as a whole, are down from 37.45 per cent to 33.5 per cent in the month. This is due partly to the success of the Treasury's funding operations before Bank rate reduction, when heavy sales of bonds were made in the market through the "tap." The banks' holdings of investments are up by £19.1 million to £2,011.3 million, mainly as a result of purchases by Barclays and the Midland. Gross deposits have dropped by £343.4 million to £6,189.9 million—mainly a seasonal movement. Lloyds Bank's index of net deposits, which adjusts for seasonal variations, is down from 106.8 to 106.2.

Rise in the Reserves

On the basis of the figures alone, the gold and dollar reserves in February showed their first genuine increase since last July, but it is obviously too early yet for optimism on this score. According to the Treasury, there was an increase of \$63 million which, following the \$49 million drop in January, looks distinctly satisfactory, especially since no recourse has yet been had to the Export-Import Bank to help meet the considerable cost of the February increase had the help of the \$59 million drawing by India on the I.M.F. and that over January was not nearly so impressive. U.S. Defence aid last month amounted to \$4 million, \$20 million was received from the E.P.U. in settle-

ment of the January surplus, and \$3 million was paid to E.P.U. creditors in bilateral settlement. Allowing for these debits and credits and ignoring the Indian drawing, there was a residual surplus of \$42 million in February, against a comparable deficit of \$33 million in January.

Last month's E.P.U. surplus of £8 million following the January surplus of £9 million can be regarded as encouraging. Broadly, it seems fair to describe the February outturn as a whole, as reasonably satisfactory. It confirms the January evidence that the speculative pressure against sterling has been effectively stemmed but brings little indication that "short" positions in sterling have yet been covered on any substantial scale. On the other hand, the reserves ought to benefit from the proposed revision of the agreements covering the U.S. and Canadian loans by permitting the postponement of up to seven instalments of both principal and interest, by extending the repayment period beyond 2000, instead of claiming a waiver or cancellation of interest payments under certain conditions. U.S. Congress is not expected to prove difficult, so the reserves in March ought to be credited with at least the interest payment for 1956 which is now lying in a special account.

Strike Threat in Shipbuilding

Developments in other spheres of business activity are less easily explained. The labour situation, with the rejection of the shipyard workers' wage claim and a threat of strike action this week, is as uncertain and precarious as ever, though the improved conditions in the motor industry have had the effect of reducing both unemployment and short-time working in the four weeks ended 11th February and, no doubt, have gone even further since then. The shipbuilding strike would affect some 200,000 workers, but if the engineering industry follows the same line, the numbers affected would jump to almost 3 million. The workers' argument that these industries are prospering, with overfull order books, is certainly true, but it is equally true that in the face of severe foreign competition profits are more apparent than real, while any increase in prices might well mean loss of markets and disaster in future.

Problems of Jute Industry

Mr. W. G. N. Walker, Chairman of Jute Industries Ltd., gave a realistic review of the industry's progress and problems when addressing the recent shareholders' annual meeting. He raised several pertinent points of interest to a wider circle than those concentrated in Dundee. For instance, it is three years since the Government announced that public trading in imported jute goods would continue until appropriate measures to safeguard the British manufacturers under conditions conducive to efficiency could be worked out and in-

troduced, while in July, 1955, it was stated that official policy on this matter was unchanged. So far, however, no "appropriate measures" appear to have been devised. Meanwhile, Mr. Walker asked how participation in a European free trade area could be reconciled with the present arrangements for jute manufacturers without disturbing Commonwealth relations, and also, how the Restrictive Trade Practices Act will affect the present price structure in the jute industry and trade? Serious long-term effects on the jute trade could come also from the suggested establishment of a Jute Marketing Corporation by the Pakistan Government. Any central direction additional to that already exercised by the Pakistan Export Control might well disrupt present commercial relations between buyers and sellers. In contrast, at this end, the Jute Control remains the sole purchaser of imported Asiatic goods. Mr. Walker is not alone in being concerned about any developments which may disturb the smooth working of existing arrangements.

Prospects of Ralli Brothers

Any encouragement that shareholders of Ralli Brothers may have drawn from last year's rise in profits is likely to be nullified by the comments of the president, Mr. Jack Vlasto, on the outlook for the current period. He reports that although subsidiaries' profits should be higher, overall prospects are disappointing. In the merchanting section, a bad start was worsened by the effects of the Middle East crisis. The diversion of shipping round the Cape put an added burden on costs, and after some recovery the trend of results is again unfavourable on account of the recent decline in commodity prices. Mr. Vlasto states that since their Alexandria branch was taken over by the Egyptian Government in November, they have had no knowledge of what has been done there. On the other hand, the Indian associate company has done better. Orion Insurance continues to do well and the Jute Mill in East Pakistan has earned a profit in spite of labour difficulties. From Japan also there is good news in the agreement over compensation for the Osaka associate, even though this is in blocked yen which will take some time to find its way into the accounts.

Brevities

Air India International, India's international air line, is borrowing \$16.8 million to finance the dollar costs of three Boeing long-range jet passenger planes. Five U.S. commercial banks have granted a credit of \$11.2 million and the World Bank has lent \$5.6 million.

In the window of the Indian tourist office in Cockspur Street is a model of a jungle from which a leopard is emerging with bared fangs. With this display, points out "Peterborough" in the Daily Telegraph, is a card saying: "India welcomes you."

LOWER PRICES FOR EGYPTIAN COTTON

DULL TREND IN PIECEGOODS CONTINUES

(FROM OUR BOMBAY CORRESPONDENT)

THE reported Egyptian decision to reduce prices of cotton exported to India has been welcomed. It is possible that business will result if the Indian authorities issue a fresh import quota. The ceiling fixed for sterling area cotton has already been reached and no import licences are available. But trade circles believe that the Government of India may reconsider the question in order to take advantage of the offer of long-staple growths at reduced prices. An 18 percent discount is offered if payment is made in U.S. dollars and 12 percent if West German marks or Swiss francs are tendered. Egypt needs these currencies to bolster her economy following the Suez Canal crisis. It is true that she is also compelled to look to India for a selection of consumer goods but she could ordinarily balance this trade by cotton exports. Indian mills have so far refrained from buying Egyptian cotton because of the high price level and also because the internal and export demand for superfine cloth has fallen off considerably. This demand still shows no sign of reviving and in the circumstances it is possible that business with Egypt at the reduced prices may be only of a token nature. The possibility emerges that Indian purchases may not be enough for Egypt to build up an adequate rupee fund with which to finance her

imports from this country. A stalemate could arise. India can ill afford to stockpile cotton merely to enable Egypt to import consumer goods from here, particularly when the cotton would have to be paid for in West German marks and Swiss francs which India herself urgently needs.

Exports from India

Indian exports of cotton are practically at a standstill. It is reported that Japanese buyers are interested but they are continuing to hold off in anticipation of a fall in prices. Meanwhile, the futures market here continues to soar on fresh support. Tenders against the Jarilla March contract have been negligible. On the first day, only 50 bales were tendered. The contract reached a new high of Rs. 745 but declined later on profit-taking. The Vijay April contract shot up to Rs. 845 a candy and Vijay June was quoted at Rs. 802 a candy. The spot market remains firm despite offtake being at a low level. Mills are cautious and show no interest in buying more than is necessary for current needs. The premium of staple styles has remained unchanged. Arrivals have been moderate and latest reports indicate that the total crop might not exceed 4.9 million bales.

The piecegoods market is still listless. The expected demand from upcountry centres has not materialised and business is negligible. The trade believes that the slackness is because of the approaching Holi festival and that demand will brighten within a couple of weeks or so. There is no apparent reason to support such optimism. The seasonal demand should have revived long ago. The fact that it has not done so indicates that general trading conditions are difficult. The enhanced excise duty, the stringency in the money market and the high price level have all contri-

buted to the shrinkage of trade. It is curious that despite the lack of offtake and piling stocks with mills and dealers, prices continue to be steady.

Textiles for Burma

There has been hardly any export demand. A few desultory enquiries have been received from East Africa, the Sudan, Hongkong and Singapore. Britain has purchased moderate quantities of grey sheeting. But the fall in overseas sales has been sufficient to cause a drop in export prices. It is reported that representatives of the new corporations set up in Burma will arrive in this country to negotiate for fresh textile supplies. When this occurs, Indian merchants believe substantial business will be transacted in the popular varieties. Burma has become a major buyer of Indian textiles, but it must be remembered that this is a temporary market because she is now developing her own cotton industry in collaboration with Japanese interests. The cotton yarn market is equally depressed. Prices are easy despite the firm trend in cotton. Spinners, however, are reluctant to sell because they believe that demand will broaden after the Holi festival.

Conditions in the rayon fabrics market present a depressing picture. The offtake has been unusually poor and stocks are now beginning to accumulate with mills and dealers and production continues to run at a steady level. There have been no enquiries from Calcutta or Delhi while the local market is listless. There has been a further break in the prices of grey linen which have dropped by about half an anna a yard to 12 annas 3 pies. Ninons and georgette remain steady at lower levels. The former are quoted at 10 annas 9 pies to 11 annas 3 pies, and the latter between Rs. 1-1-6 and Rs. 1-6 a yard, according to quality.

Madras

COMFORTABLE VICTORY FOR CONGRESS

POOR SHOWING BY COMMUNISTS

(FROM OUR MADRAS CORRESPONDENT)

POLLING in Madras State is over. The returns announced so far suggest that the Congress will have a comfortable majority and most sitting M.L.A.s will be re-elected. The Chief Minister won easily from the Sattur constituency. He has disclosed that support offered him by the Dravida Kazhagam at public meetings was unsolicited. The elections here are regarded as a personal triumph for the Chief Minister who has kept a tight control of the party organisation from 1945. The re-organisation from the bottom has paid off handsomely and the "revolt" in some districts has fizzled out. Wherever Mr. Kamraj personally commended candidates, they achieved success.

In Karaikudi, Mr. Muthiah Chettiar, the Congress nominee defeated a dissident Congressman, but it was a close contest all the same, with all groups opposed to the Chief Minister, making it a point to vote for Mr. Muthiah Chettiar's opponent. Mr. Muthiah Chettiar was an interim Minister in 1937 and his adherence to the Congress is recent, and there is now the possibility of his becoming a Congress Minister. The last Justicite, Mr. P. T. Rajan has lost his seat in the Assembly. The Dravida Munnetra Kazhagam that campaigns for communal justice has done fairly well. For a new party it has polled well in all districts. In Kancheepuram, its leader, Mr. Annadurai, defeated the Congress candidate chosen specially for his local connections and influence. In Madras city the D.M.K. is in a fair way to annex some Assembly seats without difficulty. So it acquires a new standing as the main opposition to the Congress party, first, because it has Leftist leanings and, secondly, because communal antipathy is still a factor in politics here. It is noteworthy that the D.M.K. candidate opposing the Union Finance Minister, Mr. T. T. Krishnamachari, in Madras South secured such a substantial backing that Mr. Krishnamachari had to secure the personal support of Mr. Kamraj. Furthermore, the Neiveli project is making satisfactory progress, and there is a hope that the Parambikulam project will take shape as the Planning Commission is prepared to let Madras have the use of Kerala waters.

Loss of Communist Grip

If the elections have shown that the D.M.K., a local party opposed to the so-called control of the Hindi-speaking north, is no negligible quantity, they have also proved that the Communists have lost their grip on Tanjore. Agrarian reforms have helped the Congress bag both Assembly and Lok Sabha seats and it is presumed that differences, especially over Kashmir, will prevent the Communists from making common cause with the D.M.K. in the Assembly. The loss of Congress is likely to be inconsiderable. The election news might not be so reassuring to investors who fear higher taxes, but Mr. Krishnamachari's success is taken as a guarantee both for the second plan going through and for the survival of the private sector. Madras business leaders sponsored his candidature with an appeal which highlighted the need to maximise the State's efforts for the plan, as well as the need for capitalists to place their confidence in the Congress.

Of the new Congress M.P.'s only Mr. Pattabhiraman is new to politics. The son of Dr. C. P. Ramaswamy, he was an easy winner with Congress backing. The Chief Minister predicted an 80 percent majority for the Congress, and the actual results have proved him thoroughly correct. The poll in most of the districts was heavy. The arrangements were satisfactory. In the Nilgiris, the Badagas took a last minute decision at a caste gathering to vote for the Congress.

Politician Teachers

The Madras Government's order against the teachers of aided schools entering active politics is a necessary measure. In Kerala, most school teachers have gone over to Communism and experience has perhaps inspired the Madras Government's decision that a teacher must resign if he wishes to participate in a political campaign. As a voter, a teacher is free to express political likes and dislikes, but he cannot become a campaigner on behalf of another. Teachers are represented in the Legislative Council, but those elected to the legislature must resign if their employers insist. The order which is regarded as salutary for making teachers efficient and reliable proves that only a school that can do without Government grants can afford to employ active politicians on its staff. It also is suspected that Tamil teachers have become ardent supporters of the D.M.K., and the Government felt that a curb on their activities was called for.

Handloom Output and Sales

The "Handloom House" opened by Mr. T. T. Krishnamachari last week in the main shopping area is an imposing addition to the drapery shops. Help given over four years to weavers has been justified. The Finance Minister, too, thought so. The Central Government is still ready to find

money for the benefit of the handloom industry, but it hopes that the industry would outgrow the need for "feather-bedding". Thanks to the co-operative organisation handloom production is rising but the problem of a steady market remains. In the last two months Madras goods met with keen competition from Japan in West Africa. The superiority of handmade fabrics is admitted, but the export trade is languishing. If a new market has been found in the U.S.A. for handloom fabrics, an old one has been lost. Whether the State Trading Corporation will start a drive in Nigeria for recovering the market is not yet certain. It is also becoming clear that the market in East Pakistan served through Calcutta has been lost. The domestic market for luxury fabrics is steadily shrinking and the handloom industry must adopt improved methods to reduce costs. Advantages have been granted in taxation, yarn supplies and finishing facilities. The Government-aided society has been induced to buy for stock and release for export, but a steady sale depends on demand at home. So emporia in Bombay and Calcutta are contemplated. The only important point Mr. Krishnamachari added was that the use of powerlooms would be encouraged by the Government as part of its policy for raising cloth output.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939=100) declined further by 0.6 percent to 421.6 during the week ended 23rd February, compared with 424.2 (revised) for the earlier week. The index was lower by 1.0 percent when compared with the corresponding week of the previous month, but was higher by 10.6 percent than that of last year. The average for the month stood at 424.8 compared with 422.3 (revised) for January, 1957, and 378.4 for February, 1956. Lower prices of tea (-8%), gram in Hapur (-4%), gur (-2%) and wheat in Hapur, bajra, dal arhar and sugar (-1% each) brought down the index for Food Articles by 1.2 percent to 403.0. The index for Industrial Raw Materials declined by 0.6 percent to 514.5 as a result of a fall in the prices of linseed (-7%), rapeseed in Calcutta (-3%) and in Bombay (-1%), cottonseed and raw jute (-3% each), raw silk, groundnuts and copra (-2% each), and castorseed in Bombay (-1%), in spite of an advance in the prices of lac (+6%), rapeseed in Kanpur (+4%), and raw cotton (+2%). The index for Semi-Manufactures also fell by 0.5 percent to 405.4. Items which exhibited significant variations were: linseed oil (-6%), gingelly oil (-5%), groundnut oil (-3%), coconut oil and mustard oil (-2% each) and copra cake (+2%). Prices of jute manufactures (-3%), witnessed a fall while those of soaps (+4%) and chemicals (+1%) advanced; the Manufactures index went down by 0.2 percent to 384.1, compared with 385.0 (revised) for the earlier week. Higher prices of chillies (+9%) were responsible for an increase of 0.3 percent to 579.4, compared with 577.7 (revised) for the previous week, in the index for the Miscellaneous group in spite of a decline in the prices of black pepper in Cochin (-4%).

CALCUTTA TEA AUCTIONS IN FEBRUARY

FAIR GENERAL DEMAND BUT PRICES EASE

THE offerings were a little smaller than in the previous month and averaged about 64,500 chests a week. Demand continued to be good and fairly general though the majority of the offerings were disposed of at lower rates, say Messrs Carritt Moran & Co. Private Ltd. in their monthly tea market review. Tippy teas, stylish whole leaf grades, and any bright liquoring kinds with autumnal flavour were well supported, but prices for all other kinds declined by about 1 to 2 annas in each of the first three sales of the month. C.T.C. teas and Darjeelings shared in the general decline. In Sale No. 35 plain and low medium teas, especially the broken grades, were generally 1 anna and sometimes up to 2 annas dearer. "Teas for price" were also a strong feature and were often up to 2 annas dearer, but medium Assams with declining quality were a weak feature and often sold up to 2 annas below previous rates.

The first two sales of the month contained some useful autumnal Darjeeling teas of fair appearance. In the last two sales leaf appearance became much browner and the majority of the offerings were typical end-of-season teas. With very few exceptions, Assam teas of C.T.C. manufacture showed a further marked decline. Teas of orthodox manufacture showed an improvement in cup quality, but stalk and fibre were more in evidence. Doars cup quality generally was of quite a useful description, but a seasonal decline in leaf appearance was evident. Cachar leaf appearance was much above average for the time of year, but the majority of liquors were rather plain in character.

Quotations

Sale No. 35 " " "	1 14 0	1 5 9

Internal Market

There was a total of approximately 9,300 chests of leaf on offer and demand for the reduced number of chests was well maintained. The majority of the teas were of a stalky description. The few cleaner leaf teas were well supported, but tended to be easier. Dust offerings consisted of approximately 72,300 chests. There was a good general demand but prices for the majority of the descriptions tended to be slightly easier. Quality showed some improvement and the brighter liquoring kinds sold well particularly the few bright invoices of C.T.C. Assams. Interest in black leafy types suitable for the Middle East was not maintained and prices declined accordingly. Of the very few lines from Darjeeling on offer, only those with flavour met with keen competition.

Quotations

	1956-57	1955-56
	Rs. As. P.	Rs. As. P.
Sale No. 32 Clean Common Dust	1 13 6	1 7 3
Sale No. 33 " " "	1 13 3	1 7 6
Sale No. 34 " " "	1 13 0	1 8 0
Sale No. 35 " " "	1 12 6	1 7 3

Export sales up to No. 34 totalled 1,794,362 chests at an average price of Rs. 2-7-7 against 1,652,709 chests at an average price of Rs. 2-2-5 in the corresponding period of the 1955-56 season. Internal sales at 55,417 chests of Leaf and 588,714 chests of Dust at an average price of Rs.1-10-10 and Rs.2-2-11 go against 80,948 chests of Leaf and 510,137 chests of Dust (Rs. 1-4-7 and Rs. 2-0-2) in the same period of the previous season.

The price of export quota declined in the first week from 44 pies to 33 pies a lb., but rose steadily thereafter to 60 pies, easing on the last day of the month to 57 pies a lb.

On 20th February, an additional allotment of 10 million lbs. of Export Quota was announced and this now brings the total amount released to 63.1 percent of a garden's best crop figure.

Arrivals in Calcutta warehouses (in chests) during the period 24th January, 1957 to 23rd February, 1957, with the corresponding figures in parentheses, were: by steamer 198,050 (370,453), by rail 47,963 (87,318), by air 10,347 (13,448), making a total of 256,860 (471,219) chests. From the beginning of the season, 1st April, 1956 to 23rd February, 1957, arrivals have been: by steamer 2,985,760 (3,209,340), by rail 1,049,805 (876,213) and by air 160,293 (190,635), making a total of 4,195,858 (4,276,188) chests.

NORTH INDIAN TEA CROP REPORTS

The following is the summary of the crop and weather telegrams received from different districts for the month of February:

Upper Assam: The weather is variable, there has been some evenly distributed rainfall in Dibrugarh, but in Sonari, Doom Dooma, Panitola and North Lakhimpur it is unusually wet, and in places cold. The crop is coming forward more quickly than usual in Sonari and Panitola and an early season is expected generally.

Central Assam: The weather is seasonable in Jorhat with generally favourable crop prospects; in Nazira rainfall is much above normal to-date, and a very early season is expected.

Lower Assam: The immediate prospects in Bishnath are good, with the rainfall being much above normal for the season; in Borsitola the weather is seasonable with growth ahead of normal.

North Cachar: The prospects are now brighter, good rain having fallen generally, in places being above normal for the season; blister blight is prevalent in North Cachar district.

South Cachar: The weather is seasonable with good rainfall in Chutlabheel and the prospects are now brighter; blister blight is prevalent, and is severe in Hailokandi; in Chargola the immediate prospects are good, and an early season is expected.

Eastern Doars: The weather is seasonable, blister blight is negligible, and the immediate prospects are fair; an early season is expected.

Central Doars: The weather is dry and cold in places, and blister blight is lifting.

Western Doars: The weather is seasonable and the immediate prospects are fair; in Oodlabari rainfall is much above normal for the season, and an early season is expected; the crop prospects are favourable, though blister blight is severe in some districts; the season has closed in Chulsa, and is expected early in Dam Dim; Nagrakata is in need of rain.

Darjeeling: Weather conditions in most districts are normal for the time of the year; red spider blight is prevalent in some places.

Teral: Weather is seasonable with some light rain.

CASHEW FACTORIES LIKELY TO REOPEN SOON

ORDER DECLARING INDUSTRY

NON-SEASONAL QUASHED

(FROM A SOUTH INDIAN CORRESPONDENT)

THE Kerala High Court has quashed the Government notification which some time ago declared the cashew processing industry as non-seasonal. The facts of the case are as follows. The South India Cashew Manufacturers Association of the Quilon had requested the Government to treat the cashew processing factories as seasonal for the purpose of industrial disputes. The Government, after making enquiries and discussing the matter with the representatives of management and labour, issued a notification on 31st July, 1956, to the contrary. In the judgment, it is stated that the Government has, apparently, taken this decision in pursuance of sub-section 2 of section 25A of the Industrial Disputes Act, 1947. The court had no doubt that the Government was labouring under a misconception about the procedure to be followed in arriving at such a decision which was quasi-judicial, in character. When the decision is quasi-judicial, the Court has pointed out, the rules of natural justice have to be observed. Mr. Justice M. S. Menon, who gave this judgment, however, made it clear that the quashing of the notification and nothing in his judgment will, in any way, preclude the Government from coming to "any decision it deems fit in any dispute under section 25A of the Industrial Disputes Act, provided that decision is preceded by a quasi-judicial enquiry."

Thus the cashew processors have got their case accepted. They are expected to reopen the factories immediately. The Government has also done something to expedite reopening. It has agreed to give certain assistance to the owners of the largest group of factories which have remained idle for the last six months. The industry has apparently got out of a crisis—the biggest, in fact, in the 30 years of its existence.

Uncertain Prospects

Prospects for cashew in 1957 are rather uncertain. Demand for cashew may not be so keen this year as it has been in the past two or three years because the world almond crop is again back to normal. With the build-up in almond stocks, prices are coming down and cashew, which is likely to be a substitute for almond in the west, is likely to suffer a setback. But crop prospects, in both India and Africa, are considered exceptionally bright. The Indian crop has started to move into the market and is estimated at over 60,000 tons. The African crop is expected to touch an all-time peak of 80,000 to 90,000 tons. But in the light of prospective demand conditions, the manufacturers may not make full use of the likely abundant supply. The processors in Quilon may have to face yet another difficulty. Following some disagreement with dock labour, a steamer which brought cashew nuts from Africa was diverted to Cochin. According to one report, its agents have decided not to unload in Quilon. If a settlement is not eventually reached between the steamer agents and the dock workers, the processors will have to take raw nuts all the way from Cochin.

Need to Raise Pepper Output

India's pepper production should be increased in order to maintain the export markets and leave enough for domestic consumption. With the output steady at the present level, it is doubtful whether India would be able to maintain her market abroad in view of the large domestic needs. The Government should help the growers in raising their output. This is the suggestion of Mr. Vallabhdas Mariwala, chairman of the Pepper and Ginger Merchants Association of Bombay. While appreciative of the activities of the Export Promotion Council for the industry, he suggests that private delegations be encouraged. Mr. Mariwala wants a cut in freight rates, which he claims is justified by the steep decline in pepper prices.

COCHIN TEA SALES

At Dust Sale F, 450,000 lbs of tea were on offer. There was a good general demand, but prices were irregularly 1 to 2 annas lower, particularly for best liquoring and highgrown sorts. Medium descriptions which were steady were the best feature of the Sale.

Jute

THE SUPPLY OF FERTILISERS TO JUTE GROWERS

STATES ASKED TO MAKE ARRANGEMENTS IMMEDIATELY

DOUBTS having been expressed about the arrangements for the distribution of fertilisers to jute-growers for top dressing, a communication on the subject has been addressed to jute-growing States by the Central Ministry of Agriculture. The States have been asked to make immediate arrangements for moving supplies out of their share of the Central pool to the jute districts, and to organise distribution so that growers have no difficulty in obtaining them. The Ministry has said that it should be informed if difficulties arise in getting wagons. The West Bengal Government has been authorised to utilise stocks already in hand in case supplies do not reach it in time. These stocks will be replenished later. While the distribution of fertilisers over a large area is a very big operation, it should not present any serious difficulty. Sowing does not take place simultaneously in all the States, nor even in different districts in the same State. For instance, sowing in Assam and some areas of north Bengal may be expected to commence any time now, if it has not already commenced. But in the southern districts of West Bengal, it will not commence until May. In the case of the early districts, the fertilisers should be on the spot now. For later districts, they will be in time if they arrive within the next two months. The movement of these fertilisers should not, therefore, place any strain on the transport system or the organisation for distribution. It is, however, satisfactory to know that something is actually being done in the matter.

By the use of fertilisers, it is hoped to increase the yield of the crop in the current year by 20 percent. It is not known whether or not the figure includes mesta, but assuming that it does, and that last year's yield of the two fibres was 5.5 million bales, it would make India more than self-sufficient in the supply of raw material for the mills. There are, however, other factors which could easily offset to a large extent the lavish use of fertilisers. There is also the disadvantage, in this method of increasing the crop, that it involves a huge increase in the production of waste matter. Taking the fibre produced last year as 5.5 million bales, the green weight of the crop would be about 20 million tons. An increase of 20 percent would mean 4,000,000 tons of green plant, of which approximately 200,000 tons would be fibre and 3,800,000 tons would be of no commercial value. For a short-term policy, this cost may not be too high, but ultimately, to put the increase on an economic basis, it must come from the development of varieties giving more fibre per plant.

Consumption of Raw Jute

On the basis of the reported output of manufactured goods, it is estimated that mills in February consumed 467,600 bales of jute, making the total consumption for July-February 4,001,600 bales. In February 1956, they consumed 576,900 bales, and the total consumption for July-February, 1955-56, was 4,086,300 bales.

Cancellation of Dealer Licences in Pakistan

Reports from Dacca state that the licences of a number of jute dealers have been cancelled, but the exact number is not yet known nor are the reasons given, though it is rumoured that it is because of non-fulfilment of contracts made early in the season. One report states that those who have had their licences cancelled will be allowed until the end of April to complete shipments against their contracts. At the time of writing, most of the reports are vague and some are conflicting.

THE JUTE MARKETS

Manufactured Goods: The publication on 7th March of the I.J.M.A. stock figures gave the manufactured goods market a boost which lasted for almost a week. What seemed to please it most was the reduction of 5,900 tons in heavy goods. After the stock figures became known, there was a good deal of bear covering in the fatka market. Covering by shippers was also reported, there being enquiry for Liverpool, plain Cees and cornsacks. Rumour said that the Government of Burma had called for tenders for a further 15,000 tons of heavy goods. Mills were at first reluctant to sell, but when prices rose, they were reported to be more willing. This willingness was in fact, week-end and continued on Monday. On Tuesday, confidence was restored and prices in the fatka market rose quickly.

On Wednesday morning quotations were as follows:

	March	April-June	July-Sept.
	Rs.	Rs.	Rs.
40in. 8oz.	33-10	33-4	32-14
40in. 10oz.	40-10	40-13	40-14
B Twills	111-12	112-6	112-4
Heavy Cees (Plain)	113	112-8	112-4
A Twills	133-12	134-12	134-8
Liverpools	128	127-8	126-8
Cornsacks	114	113-12	113-8

Raw Jute: With a firmer tendency in the gunny market, sellers regained confidence and buying

interest from mills met with some reserve. There was not much movement in jute prices but mesta prices rose as stocks were much depleted and imports upcountry were very small. Business was done in various kinds of mesta at Rs. 25 to Rs. 26, and even Rs. 26-8 was reported to have been paid. A fair amount of business was done in Northern and Desal Middles at Rs. 31-4 and Rs. 31-8. Mesta Middles alone were done at Rs. 28-8 and Daissee Middles at Rs. 33. Pakistani N.C. Cuttings were done at Rs. 108 to Rs. 113, and Indian Mill Firsts and Lightnings at Rs. 210 and Rs. 195, respectively. On Monday, the market was easier in sympathy with the gunny fatka. But on Tuesday there was renewed buying and fair business resulted, though the quantity was restricted by mills' unwillingness to pay the prices asked by sellers. Mills paid Rs. 30-12 for Northern Middles alone, Rs. 25 to Rs. 25-8 for Daissee Mesta and Rs. 29 and Rs. 29-4 basis Bottoms for Northern, Pakistani Export Firsts were sold at Rs. 225 and Indian Mill Firsts at Rs. 220.

On Wednesday morning quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms.	Shipment.
Northern, Dhubri and Assam	29-	March-April
Purneah Desal	28-8	"
Jungh	27	"
Murshidabad Tossa	31-8	"
Daissee	32	One month
Daissee Mesta	25-8	"
Northern Mesta	26	March-April
Desal Mesta	26	"
Northern ex Calcutta	28-8	One month
Local Packing	27-8	"
Bimbi	24 F.A.Q.	"

Mills have been more active in the local bazars. Arrivals have increased and there were 648 wagons last week.

Mofussil: Off-season conditions are prevalent everywhere with growers more interested in ploughing and harrowing than in marketing jute. Imports into the upcountry centres are very small and markets are steady.

THE PAKISTANI JUTE MARKETS

LABOUR TROUBLE IN DAULATPUR AREA

(FROM A CORRESPONDENT)

THE apparent scarcity of jute remains the most important factor in this market. Prices have improved locally, and the little business that is being done is at Rs. 31-8 for B Bottoms, Rs. 29-8 for C Bottoms and Rs. 27 for B Bottoms. Tossa prices have increased by Re. 1. It is interesting to note that most of the small quantity of jute which is coming now is appearing from the jat districts. As it is arriving mostly in the form of kutcha bales packed in the mofussil areas, one assumes that it represents reluctant releases from the godowns of upcountry stockists, who are converting a small percentage of their jute into ready cash for making early advances to the growers. There has been a very slight increase in arrivals over the last two days, probably due to the better prices which are once again tempting stockists. Pucca bale prices have also increased. Export Firsts are quoted at Rs. 200, Export Lightnings at Rs. 190 and Export Hearts at Rs. 175. Interest is mainly in Lightnings. Cuttings have improved and business is reported at Rs. 87. At this price, there has been some inter-baler business but sellers are reluctant.

Reports from overseas indicate better prices, and mention £108 done for Export Firsts and £104 for Export Lightnings. Overseas buyers are apparently showing selective interest in white jute at prices approximately £3 a ton below local rates. There appears to be very little interest in Tossa, and price indications are about £5 a ton below local costs. If, despite these high prices, more jute was available, balers and shippers would be more interested in offering and selling short, in the reasonable expectation of lower rates later when reports of sowings start coming in.

As expected, E.P.C. registrations have been larger, and for the last 13 days of February amounted to 184,000 bales. Contrary to previous reports,

I.J.M.A. STOCK FIGURES FOR FEBRUARY

The Indian Jute Mills Association reports the total stocks of jute goods at the end of February, 1957, as follows:

Description	28th February, 1957	31st January, 1957	Increase over (+) or decrease from (-) last month	29th February, 1956
	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons
Hessian Cloth and Bag	9.29	25.2	8.83	23.8
Sacking Cloth and Bag	14.84	61.8	16.09	67.7
Others		10.6	11.7	
Grand Total				
(000 Tons only)		97.6	103.2	-5.6

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

Burma only bought 14,000 bales. But India has suddenly stepped up her purchases to 59,000 bales. She was the biggest buyer in this period, and the quantity was in fact the largest purchase she has made in any fortnight since November.

In the local market, there has been very little enquiry for B Twills so they have eased to Rs. 124; 45in 11oz remains unchanged at Rs. 55-8 and it is understood that there are heavy freight bookings from East Pakistan for Karachi but little freight is offering. Pakistani mills have in the past few weeks sold fairly heavily to South Africa at approximately 195s 10-6 for Liverpools. Good business has also been reported in hessian to the American market but this was done at lower prices than prevail now.

There has been a certain amount of labour trouble in the mills in the Daulatpur area. All of them have either been on strike or declared lock-outs since 1st March, but not all have announced this. The disturbances started because labour wanted Shaheed Day as a holiday over and above its quota of 10 days a year. The mills have refused to pay for this and are maintaining their position with Government backing. There is no doubt that if the matter goes to court, the mills will win. But this looks like being one of the worst strikes in Pakistani mills and will have repercussions, especially since labour in Khulna is particularly unstable and the P.J.M.A., which is a fairly young body, is not yet strong and united enough to take bold action.

THE FOREIGN JUTE MARKETS

(FROM OUR LONDON CORRESPONDENT)

THE raw jute markets have been so erratic that little fresh business has been done in any section of the trade. A very firm undertone prevails in the fibre market and, since the last report, there has been a rise of anything from £3 to £6 a ton, according to grade. The advance from the bottom points touched this season is now pretty considerable

Calcutta Markets

LESS DEMAND AT TEA EXPORT SALE

SUPPORT FOR GOOD DUSTS

AT Sale No. 37, held on 11th and 12th March, offerings at the export auction consisted of 53,857 packages. There was less demand than in recent weeks and the majority of the offerings were 2 annas easier at the beginning of the Sale, but as the Sale progressed, the market weakened and at the close was generally up to 3 annas easier. The strongest features of the Sale were the few bright liquoring Assam teas and stylish Whole Leaf grades which were well supported and were at times dearer, while for the few tippy teas on offer there was again a keen competition. All other descriptions showed a decline of 1 anna to 3 annas, especially the poor liquoring teas, but B.P.'s were generally in more demand than Fannings, except in the case of clean, black Fannings suitable for the Middle East. The majority of the C.T.C. teas on offer were of poor quality and these were a very weak feature, being fully 3 annas to 4 annas easier, and many lines were withdrawn.

Quotations	1957		1956	
	Rs.		Rs.	
Clean Black Pekoe	2 2 0		1 14 0	
Plain B.P.	1 12 6		1 8 0	
Medium Assam B.P.	1 14 0	to 1 14 6	1 9 0	
Best C.T.C. Assam B.P.	2 2 0	(Nominal)		

At the Internal Sale, Dust offerings amounted to 17,227 chests and the market was again easier for most descriptions, but the demand improved as the Sale progressed. The best bright liquoring C.T.C. Assam were keenly competed for and were generally dearer, but the more ordinary C.T.C. descriptions weakened and were sometimes as much as 2 annas easier. Commons, Doonars and orthodox Assams opened at about 1 anna below last rates, but as the Sale progressed, advanced slightly and at the close, were only 1 anna easier. The black leafy exportable kinds suitable for the Middle East and the small powdery types were stronger features than the remaining offerings.

Quotations	1957		1956	
	Rs.		Rs.	
Medium Doonars Dust	1 10 6	to 1 11 0	1 10 0	to 1 10 6
Medium Assam Grainy				
Dust	1 12 0		1 10 6	to 1 11 6
Medium Assam C.T.C.				
Dust	2 0 0	to 2 3 0		
Best Assam C.T.C. Dust	2 12 6		2 14 0	to 3 0 0

Of other grades, there was a total of 5,090 chests on offer for which there was a good general demand. Prices were generally irregular, but except for C.T.C. Fannings and the few green teas, the rest were generally dearer.

FALL IN ATLANTIC COAL FREIGHTS CONTINUES

FREIGHT rates in the Atlantic coal trade continue to slide down rapidly. Fixtures have been reported at 6s 6d for April, with charterers talking the rate down to 6s 6d. While this has caused a sympathetic decline in other American markets and in the time charter section, the effect on eastern and Far Eastern business has not been marked. Markets in this area did not respond much to the Suez crisis and when the American transatlantic coal rate was 7s 4d, the ore rate to Japan was 12s 5d f.o. from Mormugao. In view of the sale of 1,300,000 tons of iron ore to Japan for July 1957-March 1958 shipment, combined with increased enquiries for coal to Japan, it is likely that rates will rise in this area.

Representative fixtures include Black Sea-West Coast India, metals, 137s; Whampoa-Colombo, rice, 83s; Burma-Colombo, 78s 9d; Madras-France, ore, 200s via Cape, 150s via Suez; Visakhapatnam-U.S.N.H. \$23 via Cape, \$20 via Suez. A Liberty type accepted \$5.50 for six months' time charter, and an 8,670-ton motorship 47s 6d for the trip out to India with prompt delivery Hamburg.

HIDES AND SKINS STEADY

The market in skins ruled steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 5th March and 11th March, 1957)
Cowhides: Wet salted 55,000 pcs. on the basis of Rs. 6-6 to Rs. 9-4; Wet salted (Slaughtered) 21,500 pcs. on the basis of Rs. 12-4 to Rs. 21.
Goatskins: Wet salted (Daissee, Killed) 60,100 pcs. on the basis of Rs. 245 to Rs. 265; Rs. 280 to Rs. 315 and Rs. 360 to Rs. 375; Assam-Dinajpur 30,300 pcs. on the basis of Rs. 260 to Rs. 330; Purneah-Kissenganj 16,500 pcs. on the basis of Rs. 285 to Rs. 310; Pakur-Patna (Ord.) 34,100 pcs. on the basis of Rs. 240 to Rs. 255; Muzafferpore-Patna 70,800 pcs. on the basis of Rs. 290 to Rs. 300.

Bazaar Stocks

(11th March, 1957)
Cowhides: Wet salted 3,32,500 pcs.
Goatskins: Wet salted (Daissee, Killed) 19,000 pcs.; Assam-Dinajpur-Murshidabad 17,500 pcs.; Muzafferpore - Patna-Pakur - Purneah-Kissenganj 1,48,100 pcs.

COMPANY AND PUBLIC NOTICES

THE ALEXANDRA JUTE MILLS LTD.

NOTICE is hereby given that the 102nd Annual General Meeting of the Members of THE ALEXANDRA JUTE MILLS, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 15th day of April, 1957, at 4-15 O'clock in the afternoon for the following purposes:—

1. To receive and consider the Profit and Loss Account for the half-year ended 30th June, 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare dividends.
3. To appoint Directors in place of Messrs. R. G. Edwards and A. B. Kingsley, the Directors retiring by rotation at the Meeting.

And in this connection to consider, and if thought fit, to pass the following resolutions which will be proposed as Special Resolutions in conformity with the provisions of Section 261 of the Companies Act, 1956.

- (i) "That Mr. R. G. Edwards be and is hereby appointed a Director of the Company liable to retirement by rotation."
- (ii) "That Mr. A. B. Kingsley be and is hereby appointed a Director of the Company liable to retirement by rotation."

Special Notice dated 9th March, 1957 of the intention to propose the foregoing resolutions as Special Resolutions in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956 has been received by the Company where-in it is stated that Messrs. R. G. Edwards and A. B. Kingsley are "associates" of the Managing Agents within the meaning of the Act by reason of their being Directors of the Company which is a subsidiary of the Managing Agents' Company, and that, therefore, they can only be appointed by special resolutions as Directors of the Company liable to retirement by rotation.

4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following Resolution which will be proposed as a Special Resolution:—

5. That the Articles of Association of the Company be altered in manner following:—
 (a) Articles 82 and 83 shall be deleted and the following new Article substituted therefor:—

82. In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956, and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors. Such General Meetings shall be called "Annual General Meetings" and shall be specified as such in the notice convening the meeting. All other meetings of the Company shall be called "Extraordinary General Meetings."

- (b) Article 87 shall be deleted and the following new Article substituted therefor:

87. The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring by rotation, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business.

- (c) In Article 121, line 1, the words "Ordinary Meeting in every subsequent year" shall be deleted and the words "Annual General Meeting to be held in every year" substituted therefor.
- (d) Article 175 shall be deleted and the following new Article substituted therefor:

175. At every Annual General Meeting the Directors shall lay before the Company a Balance Sheet and a Profit and Loss Account made up in accordance with the provisions of Section 210 of the Companies Act, 1956, and such Balance Sheet and Profit and Loss Account shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the said Act, so far as they are applicable to the Company, but, save as afore-

said, the Directors shall not be bound to disclose greater details of the results or extent of the trading and transactions of the Company than they may deem expedient.

- (e) In Article 179, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.

- (f) In Article 180, lines 1 and 2, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing, shall be deleted and the words "Annual General" substituted therefor.

The Share Transfer Books of the Company will be closed from 1st to 15th April, 1957, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
 McLEOD & CO. LTD.,
 A. T. DOIG,
 Managing Director,
 Managing Agents.

3, Netaji Subhas Road,

Calcutta, 18th March, 1957.

Note: Payment of the proposed dividends, if declared, will be made on or after 30th April, 1957, only to those members whose names are registered in the Books of the Company on 15th April, 1957, or to their Mandatees. Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

Explanatory Statement in respect of Special Business

In order to comply with the Articles of Association of the Company, the Company's Accounts have been closed and audited half-yearly and a Profit & Loss Account in respect of each half-yearly period ending on the 30th June, and the 31st December in each year and the Balance Sheet as at each date, have been laid before the Company in General Meetings held twice in every calendar year.

Under the provisions of the Companies Act, 1956, each such half-yearly period has to be regarded as a "financial year" and as a result, the usual half-yearly General Meetings will each be deemed to be an "Annual General Meeting" within the meaning of the Act, thus resulting in two "Annual General Meetings" in each calendar year. Having regard to the obligations imposed on a Company by the Act in respect of every Annual General Meeting, viz. retirement of Directors by rotation, appointment of auditors, and filing of an Annual Return, etc., and the work and expense attending the preparation of the Accounts to be laid before members in conformity with the provisions of the Act, your Directors recommend that the Articles of Association of the Company be amended to provide that the Company's Accounts be closed and audited annually and laid before the Company at an Annual General Meeting in each calendar year. The proposed amendments are set out in Resolution 5 of the convening notice. If this resolution is passed as a Special Resolution, your Directors propose closing the Company's Accounts annually on 31st December in each year, which hereafter will be the closing date of each financial year of the Company. The next Annual General Meeting will, therefore, be held to consider the Accounts for the half-year ended 31st December, 1956, and thereafter the Accounts for a full financial year ending on 31st December will be placed before every subsequent Annual General Meeting.

The foregoing changes will not result in any financial benefit either to the Directors or to the Managing Agents of the Company, and interim dividends may, subject to trading results in a current financial year, be declared by the Directors under Article 161.

TIDE WATER OIL CO. (INDIA) LIMITED.
 THE Board of Directors has today decided to recommend to the forthcoming Annual General Meeting of Shareholders a dividend of Twelve Annas per share without any deduction in respect of taxation payable by the Company for the year ended 31st October, 1956.

By Order of the Board,
 ANDREW YULE & CO., LTD.,
 Managing Agents.

Calcutta, 6th March, 1957.

INDIA PAPER PULP COMPANY LTD.
 THE Board of Directors have today declared an interim Dividend in respect of the year ending 31st March, 1957 at the rate of 7 per cent without any deduction in respect of the taxation payable by the Company.

By Order of the Board,
 ANDREW YULE & COMPANY LIMITED,
 Managing Agents.
 Calcutta, 6th March, 1957.

CHITAVALSAR JUTE MILLS COMPANY LIMITED.

NOTICE is hereby given that the 60th Annual General Meeting of the Members of Chitavalsar Jute Mills Company Limited will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday the 15th day of April, 1957 at 3-30 o'clock in the afternoon for the following purposes:—

1. To receive and consider the Profit and Loss Accounts for the half-year ended 30th June, 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare dividends.
3. To appoint a Director in place of Mr. H. J. Silverston, the Director retiring by rotation at the Meeting.

And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956.

"That Mr. H. J. Silverston be and is hereby appointed a Director of the Company liable to retirement by rotation."

Special Notice dated 9th March, 1957 of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956 has been received by the Company where-in it is stated that Mr. H. J. Silverston is an "associate" of the Managing Agents within the meaning of the Act by reason of his being a partner with Mr. A. D. Vickers in the firm of Messrs. Orr, Dignam & Co., Mr. A. D. Vickers being a Director of the Managing Agents' Company, and that, therefore, he can only be appointed by special resolution as a Director of the Company liable to retirement by rotation.

4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

5. That the requirements of Articles 82, 83, 87, 121, 174, 178 and 179 of the Articles of Association of the Company be not complied with in respect of the half-year ended 31st December, 1956.

6. That the Articles of Association of the Company be altered in manner following:—

- (a) Articles 82 and 83 shall be deleted and the following new Article substituted therefor:

82. In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors. Such General Meetings shall be called "Annual General Meetings" and shall be specified as such in the notice convening the meeting. All other meetings of the Company shall be called "Extraordinary General Meetings."

- (b) Article 87 shall be deleted and the following new Article substituted therefor:

87. The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring by rotation, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business.

- (c) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor.

- (d) Article 174 shall be deleted and the following new Article substituted therefor:

174. At every Annual General Meeting the Directors shall lay before the Company a Balance Sheet and a Profit and Loss Account made up in accordance with the provisions of Section 210 of the Companies Act, 1956, and such Balance Sheet and Profit & Loss Account

shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the said Act, so far as they are applicable to the Company but, save as aforesaid, the Directors shall not be bound to disclose greater details of the results or extent of the trading and transactions of the Company than they may deem expedient.

- (e) In Article 178, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.

- (f) In Article 179, lines 1 and 2, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing, shall be deleted and the words "Annual General" substituted therefor.

The Share Transfer Books of the Company will be closed from 1st April to 15th April, 1957, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
 McLEOD & CO. LTD.,
 A. T. DOIG,
 Managing Director,
 Managing Agents.

3, Netaji Subhas Road,

Calcutta, 18th March, 1957.

Note: Payment of the proposed dividends, if declared, will be made on or after 30th April, 1957, only to those members whose names are registered in the Books of the Company on 15th April, 1957, or to their Mandatees. Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

Explanatory Statement in respect of Special Business

In order to comply with the Articles of Association of the Company, the Company's Accounts have been closed and audited half-yearly and a Profit & Loss Account in respect of each half-yearly period ending on the 30th June and the 31st December in each year and the Balance Sheet as at each date, have been laid before the Company in General Meetings held twice in every calendar year.

Under the provisions of the Companies Act, 1956, each such half-yearly period has to be regarded as a "financial year" and as a result, the usual half-yearly General Meetings will each be deemed to be an "Annual General Meeting" within the meaning of the Act, thus resulting in two "Annual General Meetings" in each calendar year. Having regard to the obligations imposed on a Company by the Act in respect of every Annual General Meeting, viz. retirement of Directors by rotation, appointment of auditors, and filing of an Annual Return, etc., and the work and expense attending the preparation of the Accounts to be laid before members in conformity with the provisions of the Act, your Directors recommend that the Articles of Association of the Company be amended to provide that the Company's Accounts be closed and audited annually and laid before the Company at an Annual General Meeting in each calendar year. The proposed amendments are set out in Resolution 6 of the convening notice. In respect of the half year ended 31st December, 1956, it is proposed that the Accounts be not separately prepared and laid before members but that they be embodied in consolidated accounts for the period commencing the 1st July, 1956. Special Resolution 5 in the convening notice suffices to effect this proposal. If Special Resolutions 5 and 6 are passed, the accounts of the Company will be closed on a date subsequent to 31st December, 1956, of which members will be advised later, which hereafter will be the closing date of each financial year of the Company.

The foregoing changes will not result in any financial benefit either to the Directors or to the Managing Agents of the Company, and interim dividends may, subject to trading results in a current financial year be declared by the Directors under Article 160.

MARTIN BURN LIMITED.

NOTICE is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5% per annum for the half-year ending 31st March, 1957. The Preference Share Registers will be closed from the 1st April to the 16th April, 1957, both days inclusive. Payment will be made on or after 16th April, 1957, to those Preference Shareholders whose names appear on the Company's Registers on the 31st March, 1957, or in accordance with their instructions.

By Order of the Board,
 A. G. GIDLEY,
 Secretary.

12, Mission Row,
 Calcutta,
 11th March, 1957.

THE EMPIRE JUTE COMPANY, LIMITED

NOTICE is hereby given that the 88th Annual General Meeting of the Members of THE EMPIRE JUTE COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 15th day of April, 1957 at 4 O'clock in the afternoon for the following purposes:—

1. To receive and consider the Profit and Loss Account for the half year ended 30th June, 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint a Director in place of Mr. M. R. C. Thomas, the Director retiring by rotation at the Meeting who, being eligible, offers himself for re-appointment.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

5. That the requirements of Articles 82, 83, 87, 121, 176, 180 and 181 of the Articles of Association of the Company be not complied with in respect of the half-year ended 31st December, 1956.

6. That the Articles of Association of the Company be altered in manner following:—

- (a) Articles 82 and 83 shall be deleted and the following new Article substituted therefor:

82. In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors. Such General Meetings shall be called "Annual General Meetings" and shall be specified as such in the notice convening the meeting. All other meetings of the Company shall be called "Extraordinary General Meetings."

- (b) Article 87 shall be deleted and the following new Article substituted therefor:

87. The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring by rotation, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business.

- (c) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor.

- (d) Article 176 shall be deleted and the following new Article substituted therefor:

176. At every Annual General Meeting the Directors shall lay before the Company a Balance Sheet and a Profit and Loss Account made up in accordance with the provisions of Section 210 of the Companies Act, 1956, and such Balance Sheet and Profit & Loss Account shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the said Act, so far as they are applicable to the Company but, save as aforesaid, the Directors shall not be bound to disclose greater details of the results or extent of the trading and transactions of the Company than they may deem expedient.

- (e) In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.

- (f) In Article 181, lines 1, 2 and 3, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing, shall be deleted and the words "Annual General" substituted therefor.

The Share Transfer Books of the Company will be closed from 1st April to 15th April, 1957, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend

and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
MCLEOD & CO., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3. Netaji Subhas Road,
Calcutta, 18th March, 1957.

Note: Payment of the proposed dividends, if declared, will be made on or after 30th April, 1957, only to those members whose names are registered in the Books of the Company on 15th April, 1957, or to their Mandatees. Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

Explanatory Statement in respect of Special Business

In order to comply with the Articles of Association of the Company, the Company's Accounts have been closed and audited half-yearly and a Profit & Loss Account in respect of each half-yearly period ending on the 30th June and the 31st December, in each year and the Balance Sheet as at each date, have been laid before the Company in General Meetings held twice in every calendar year.

Under the provisions of the Companies Act, 1956, each such half-yearly period has to be regarded as a "financial year" and as a result, the usual half-yearly General Meetings will each be deemed to be an "Annual General Meeting" within the meaning of the Act, thus resulting in two "Annual General Meetings" in each calendar year. Having regard to the obligations imposed on a Company by the Act in respect of every Annual General Meeting, viz. retirement of Directors by rotation, appointment of Auditors, and filing of an Annual Return, etc., and the work and expense attending the preparation of the Accounts to be laid before members in conformity with the provisions of the Act, your Directors recommend that the Articles of Association of the Company be amended to provide that the Company's Accounts be closed and audited annually and laid before the Company at an Annual General Meeting in each calendar year. The proposed amendments are set out in Resolution 6 of the convening notice. In respect of the half year ended the 31st December, 1956, it is proposed that the accounts be not separately prepared and laid before members but that they be embodied in consolidated accounts for the period commencing on the 1st July, 1956. Special Resolution 5 in the convening notice suffices to effect this proposal. If Special Resolutions 5 and 6 are passed, the Accounts of the Company will be closed on a date subsequent to 31st December, 1956 of which members will be advised later, which hereafter will be the closing date of each financial year of the Company.

The foregoing changes will not result in any financial benefit either to the Directors or to the Managing Agents of the Company, and interim dividends may, subject to trading results in a current financial year, be declared by the Directors under Article 162.

THE KELVIN JUTE COMPANY, LIMITED.

NOTICE is hereby given that the 98th Annual General Meeting of the Members of The Kelvin Jute Company Limited will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 15th day of April, 1957 at 3 O'clock in the afternoon for the following purposes:—

1. To receive and consider the Profit and Loss Account for the half-year ended 30th June, 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint Directors in place of Mr. Gobind-lall Banerjee and Mr. H. J. Silverston, the retiring Directors.

And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956.

"That Mr. H. J. Silverston be and is hereby appointed a Director of the Company liable to retirement by rotation".

Special notice dated 9th March, 1957 of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956 has been received by the Company where-in it is stated that Mr. H. J. Silverston is an "associate" of the Managing Agents within the meaning of the Act by reason of his being a partner with Mr. A. D. Vickers in the firm of Messrs. Orr Dignam & Co., Mr. A. D. Vickers, being a Director of the Managing Agents' Company, and that therefore, he can only be appointed by special resolution as a Director of the Company liable to retirement by rotation.

4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

5. That the requirements of Articles 82, 83, 87, 121, 176, 180 and 181 of the Articles of Association of the Company be not complied with in respect of the half-year ended the 31st December, 1956.

6. That the Articles of Association of the Company be altered in manner following:—

- (a) Articles 82 and 83 shall be deleted and the following new Article substituted therefor:

82. In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors. Such General Meetings shall be called "Annual General Meetings" and shall be specified as such in the notice convening the meeting. All other meetings of the Company shall be called "Extraordinary General Meetings".

- (b) Article 87 shall be deleted and the following new Article substituted therefor:

87. The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Report of the Directors and of the Auditors, to elect Directors in the place of those retiring by rotation, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business.

- (c) In Article 121 line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor.

- (d) Article 176 shall be deleted and the following new Article substituted therefor:

176. At every Annual General Meeting the Directors shall lay before the Company a Balance Sheet and a Profit and Loss Account made up in accordance with the provisions of Section 210 of the Companies Act, 1956, and such Balance Sheet and Profit & Loss Account shall comply with the requirements of Sections 210, 211, 212, 215 and 216 of the Schedule VI to the said Act, so far as they are applicable to the Company but, save as aforesaid, the Directors shall not be bound to disclose greater details of the results or extent of the trading and transactions of the Company than they may deem expedient.

- (e) In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.

- (f) In Article 181, lines 1 and 2, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing, shall be deleted and the words "Annual General" substituted therefor.

7. That this meeting approves of lending to the Company of money by McLeod & Company Limited, the Managing Agents of the Company, and the guaranteeing by McLeod & Company Limited of loans made to the Company by any other person, the material terms being as follows:—

- (i) McLeod & Company Ltd. shall, from time to time, when requested by the Company, notify the Company of the rate of interest at which it will lend money to the Company or the rate of guarantee commission in consideration for which it will guarantee a loan made to the Company by any other person specified by the Company, as the case may be, of any limit on the amount which it will so lend or guarantee and of any special terms and conditions as to security or otherwise upon which it will so lend or guarantee on the terms so notified;

- (ii) McLeod & Company Ltd., will then lend to the Company or guarantee the loan to the Company by such other person specified as above, as the case may be, on the terms so notified at any time up to the date so specified, such sum or sums as the Company shall specify within the limit, if any, notified as above;

- (iii) With immediate effect and without prejudice to the foregoing the payment to McLeod & Company Ltd. of a commission of one-half-of-one per centum per annum on the maximum amount guaranteed in any year by

McLeod & Company Ltd. at the request of the Company be and is hereby approved;

- (iv) these arrangements shall not prejudice the right of the Company to borrow money from any person other than McLeod & Company Ltd. and to secure the guaranteeing of a loan made to it by any other person willing to guarantee the same; and

- (v) it is hereby expressly declared that any interest or guarantee commission received by McLeod & Company Ltd. from the Company on or in respect of a loan or guarantee made pursuant to such contract shall not be treated as remuneration paid by the Company to McLeod & Company Ltd. as Managing Agents of the Company.

The Share Transfer Books of the Company will be closed from 1st to 15th April, 1957, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
MCLEOD & CO., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3. Netaji Subhas Road,

Calcutta, 18th March, 1957.

Note: Payment of the proposed dividends, if declared, will be made on or after 30th April, 1957, only to those members whose names are registered in the Books of the Company on 15th April, 1957, or to their Mandatees. Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

Explanatory Statement in respect of Special Business

In order to comply with the Articles of Association of the Company, the Company's Accounts have been closed and audited half-yearly and a Profit & Loss Account in respect of each half-yearly period ending on the 30th June and the 31st December, in each year and the Balance Sheet as at each date, have been laid before the Company in General Meetings held twice in every calendar year.

Under the provisions of the Companies Act, 1956, each such half-yearly period has to be regarded as a "financial year" and as a result, the usual half-yearly General Meetings will each be deemed to be an "Annual General Meeting" within the meaning of the Act, thus resulting in two "Annual General Meetings" in each calendar year. Having regard to the obligations imposed on a Company by the Act in respect of every Annual General Meeting, viz. retirement of Directors by rotation, appointment of auditors, and filing of an Annual Return, etc., and the work and expense attending the preparation of the Accounts to be laid before members in conformity with the provisions of the Act, your Directors recommend that the Articles of Association of the Company be amended to provide that the Company's Accounts be closed and audited annually and laid before the Company at an Annual General Meeting in each calendar year. The proposed amendments are set out in Resolution 6 of the convening notice. In respect of the half year ended the 31st December, 1956, it is proposed that the accounts be not separately prepared and laid before members but that they be embodied in consolidated accounts for the period commencing on the 1st July, 1956. Special Resolution 5 in the convening notice suffices to effect this proposal. If Special Resolutions 5 and 6 are passed on a date subsequent to the 31st December, 1956, of which Members will be advised later, which hereafter will be the closing date of each financial year of the Company.

The foregoing changes will not result in any financial benefit either to the Director or to the Managing Agents of the Company, and interim dividends may, subject to trading results in a current financial year, be declared by the Directors under Article 162.

In the course and for the purpose of the Company's business manies have to be borrowed and it is often necessary as well as expedient to borrow from McLeod & Company Ltd. the Managing Agents of the Company or from banks or other persons, such loans being guaranteed by the Managing Agents. That the Managing Agents should be entitled to interest on money lent by them and remuneration by way of a commission on the loans guaranteed by them is only right and proper. The Companies Act, 1956, provides that a Managing Agent is entitled to receive additional remuneration for services rendered otherwise than as such Managing Agent provided certain formalities are complied with. The services proposed to be rendered by McLeod & Co., Ltd., the Managing Agents, to the Company may be deemed to be a "service" as contemplated in Section 360 of the Act. This Section requires that the arrangements have the approval of the Company in general meeting recorded by special resolution. Special Resolution 7 in the convening notice sets out particulars of the proposed arrangement and your Directors commend its adoption in the interest of the Company.

THE UNITED COMMERCIAL BANK, LIMITED

Registered Office: 2, India Exchange Place, Calcutta-1.

NOTICE

NOTICE IS HEREBY GIVEN that the FOURTEENTH ANNUAL GENERAL MEETING of the Shareholders of THE UNITED COMMERCIAL BANK, LIMITED, will be held at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, on Thursday, the 18th April 1957, at 4 P.M. to transact the following business:—

1. To receive and adopt the Report of the Directors and the Audited Balance Sheet as on 31st December, 1956, and Profit & Loss Account for the year ended 31st December, 1956.
2. To declare a dividend.
3. To elect four Directors in the place of

Shri G. D. Birla
Shri M. R. Ruia
Shri G. D. Kothari
Shri Yogindra N. Mafatlal

who retire under Article 95 of the Articles of Association of the Bank, and being eligible, offer themselves for re-election.

4. To appoint Auditors for the current year and to fix their remuneration.
5. To consider and, if thought fit, to pass, with or without modification, the following resolution as a SPECIAL RESOLUTION:

"That the regulations contained in the printed document submitted to this meeting, and for the purpose of identification subscribed by the Chairman thereof, be and are hereby approved and adopted as the Articles of Association of the Company, in substitution for, and to the exclusion of all the existing Articles of Association thereof."

- Note:** 1. A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER. The instrument appointing the proxy shall be deposited with the Registered Office of the Bank not less than 48 hours before the time for holding the meeting.

2. (a) The transfer books of the Bank will be closed from Monday, the 25th March 1957 to Thursday, the 18th April 1957 both days inclusive.

- (b) The dividend, if sanctioned, will be payable on and after the 19th April, 1957, to those Shareholders whose names appear in the Register of Members on Thursday, the 18th April 1957.

- (c) Dividend warrants will be posted to Shareholders at their registered addresses or in accordance with their mandates. Shareholders are requested to advise change in their addresses, if any.

EXPLANATORY STATEMENT REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

(a) The item of Special Business to be transacted at the Annual General Meeting to be held on the 18th April 1957 is to consider and pass a Special Resolution adopting a new set of Articles of Association.

(b) The existing Articles of Association of the Bank were framed in 1943 when the Bank was incorporated under the Indian Companies Act, 1913. Since then, the Companies Act, 1956, has come into force and has effected considerable changes in the law and procedure relating to Companies. Further, the Banking Companies Act, 1949, has also effected other changes.

(c) Several of the changes which came into force as a result of the new Acts affect, and are in conflict with, some of the Articles of Association of the Bank which consequently require amendment to bring them into line with the amended provisions of the Companies Act, 1956, and the Banking Companies Act, 1949, and certain new provisions in the Acts for the regulation of companies need to be incorporated in the Articles for the guidance of members and the Directors.

(d) As the alterations are many it has been considered desirable to substitute a new set of Articles for the present Articles of Association of the Bank. The proposed alterations fall into the following categories:—

- (i) Alterations made to comply with the provisions of the Companies Act, 1956 and/or Banking Companies Act, 1949 where the present Articles are in conflict with such provisions;
- (ii) Alterations which, though not essential for removal of a conflict between the present Articles and the provisions of the Act, have been considered desirable as a result of such provisions.
- (iii) Alterations resulting in either improvement of language used or made with a view to bringing the existing Articles into line with modern practice.
- (iv) Alterations which relate to the position of Directors regarding their rights and obligations under the Act.

- (v) Deletion of obsolete Articles.

- (vi) A few alterations not falling under any of the above categories but considered desirable.

- (c) The Directors have no interest in any of the amended Articles except Article 87 which replaces existing Article 92 and clarifies that remuneration payable to Directors for attending meetings of Committees of the Board of Directors and defines the mode of payment for travelling and other expenses for attending meetings, which is the same as the basis on which they are being paid all along.

- (f) Copies of the draft of the proposed new Articles of Association and of the existing Articles of Association may be inspected by any shareholder at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, between the hours of 10 A.M. and 4 P.M. on any working day except Saturday and the hours of 10 A.M. and 12 Noon on Saturdays.

By Order of the Board,

S. T. SADASIVAN,
General Manager.

Calcutta 12th March, 1957.

THE SAMNUGGER JUTE FACTORY COMPANY LIMITED.

The Directors of this Company have declared:—

- (1) On the ordinary shares a dividend of 3% for the year ended 31st December, 1956; and
- (2) On the preference shares the dividend at the rate of 6% per annum for the half-year ended 31st December, 1956.

These dividends will be paid on 29th March, 1957, less Income Tax at 8/6d. per £ and the Transfer Books will be closed from 15th to 29th March, 1957, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December, 1956.

Preliminary figures for the year ended 31st December, 1956 show Trading Profit £37,620 (less £25,741), Income from Investments £20,113 (£30,045), Net Profit after Taxation £24,600 (less £9,139), net interim dividend on preference shares already paid £2,588, net dividends now declared £12,937, Depreciation written off £10,000 (Nil) and estimated carry forward £58,069 (£58,994).

P. WILLIAMS,
Secretary.

Dundee, 12th March, 1957.

THE VICTORIA JUTE COMPANY LIMITED.

The Directors of this Company have declared:—

- (1) On the ordinary shares a dividend of 3% for the year ended 31st December, 1956; and
- (2) On the preference shares the dividend at the rate of 6% per annum for the half-year ended 31st December, 1956.

These dividends will be paid on 29th March, 1957, less Income Tax at 8/6d. per £ and the Transfer Books will be closed from 15th to 29th March, 1957, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December, 1956.

Preliminary figures for the year ended 31st December, 1956, show Trading Profit £24,278 (less £16,091), Income from Investments £14,957 (£22,794), Net Profit after Taxation £14,864 (less £5,240), net interim dividend on preference shares already paid £2,588, net dividends now declared £9,487, Depreciation written off £10,000 (Nil), and estimated carry forward £73,290 (£80,501).

P. WILLIAMS,
Secretary.

Dundee, 12th March, 1957.

THE UNITED COMMERCIAL BANK LIMITED

NOTICE

Closing of Share Register & Transfer Books

NOTICE is hereby given that Register of Members and Transfer Books of The United Commercial Bank Limited will be closed from Monday, the 25th day of March to Thursday, the 18th day of April 1957, both days inclusive.

GROWING WORLD DEMAND FOR LONG-TERM CREDITS

INDIA'S PLACE IN THE QUEUE: NEED FOR FAIR TAX TREATMENT

A BRITISH banker has recently made some important observations on the subject of long-term credits for countries importing capital goods. Although his remarks were not directed at India or any other south-Asian country, they are nonetheless relevant to existing problems in this part of the world. Addressing the shareholders of the Bank of London & South America, the chairman, Sir Francis Glyn, a member of the historic banking family of that name, spoke of the prevalence of demand for capital as distinct from consumer goods in the twenty Latin American republics. This he pointed out, immediately raises the question of finance. It would be declared, be unreasonable to expect purchasing countries to pay for this category of imports as promptly as they are normally required to do for goods destined for immediate consumption. Capital goods, Sir Francis added, usually represent a long-term investment, the service of which can normally provide for its repayment only within a period which will vary according to the type of fixed asset in question but is likely to be a matter of years rather than months. Furthermore, a capital development programme may require a lengthy period before the resulting increased production capacity has accumulated enough foreign exchange to pay for the original cost.

Thus far, Sir Francis might have been speaking for one of the under-developed countries of south Asia. He might with advantage even have been at Mr. L. K. Jha's elbow when the latter drafted his recent directive to the Associated Chambers of Commerce and the Federation of Indian Chambers on the subject of financing the import of capital goods for the private sector. What he said furnished an admirable supporting philosophy for that document. And, perhaps more important, Sir Francis Glyn emphasised just how much conditions have changed since the days when importing countries could raise sterling loans in the London market to pay for capital imports. Long-term credits there have always been. They are not an innovation which has been thought up as part of the new twentieth century technique of economic planning, and Sir Francis Glyn was speaking of a part of the world which, unlike the south-Asian countries, is predominantly free-enterprise in outlook and capitalistic in practice. All that has happened is that nowadays long-term credits are being sought over a wider area in a somewhat different way and for different purposes than in the past. There is a queue, not of sponsors of loans wanting to enter the markets, but of seekers of privately negotiated long-term credits, in London, New York, Amsterdam and anywhere else where finance and capital goods can be obtained together.

Nor was this eminent banker prepared to accept the contention that the failure to raise as many long-term credits as required is due exclusively to the sins of omission or commission of would-be borrowers. He said: "It would be quite wrong for me to suggest that the blame can be attributed only to causes of political and economic instability that have made many of the republics of Latin America less welcome as borrowers than they were in the past. It is just as much the case that shortage of capital and the demands of the Commonwealth, which have hitherto been given priority, make it impossible for such loans to be placed in the London market even if the authorities were prepared to sanction them". It is not to be supposed that the chairman of the Bank of London & South America is unaware of the long list of defaults and repudiations which have given the government of the area a bad name as debtors. But he is still prepared to attest to the creditworthiness of the south-Asian countries, which he regards as "remarkable both for the speed and the extent with which they can transform almost overnight their trading prospects" partly because of changes in the political climate make it possible

for them to reverse economic policies far more quickly than would be politically possible in slower moving democracies elsewhere". Government by palace plots, revolution and dictatorship is not, it would seem, without its own special advantages.

More seriously, there is a message for this country in the words quoted above. It is that other areas besides India and her south-Asian neighbours are competing strongly for a limited supply of long-term credit in the financial centres of the western world. There is a disposition to think that credit restrictions apply only in the United Kingdom and for that reason, therefore, London is the sole unwilling lender at the present time. Such an assumption is quite incorrect. Only recently the *Bank Deutscher Lander* announced that it was reducing the amount available for advances to the West German export finance banks from 600 million marks to 500 million marks from the end of April, thereby restricting the rediscount facilities available to exporters in that country. West Germany has perhaps the most thriving of all the European economies—a booming export trade and a currency which is "hard" in terms of the currencies of her main competitors. In such a context a decision deliberately to cut back export facilities seems difficult to understand. But the Adenauer administration has embarked on a series of measures which is deliberately calculated to restrain the boom in exports and, in consequence, credits are to be made less plentiful and more expensive. The Germans are, in fact, anxious to control inflation at home and some reduction of exports is a logical step to this end, especially exports of consumer goods, though doubtless the new edict will

THE UNITED COMMERCIAL BANK LIMITED

(Incorporated on 6th January, 1943.)

FOURTEENTH REPORT OF THE BOARD OF DIRECTORS.

The Directors submit to the shareholders the Audited Balance-Sheet of the Bank as on, and the Profit & Loss Account for the year ended, 31st December, 1956.

The net profit for the year, after providing for all known and anticipated charges and including Rs. 27,761-2-0 brought forward from the previous account, amounts to

The Directors have made the following appropriations out of the net profit:

Transfer to Reserve Fund 20,00,000 0 0

Provision for Taxes 16,00,000 0 0

Provision for Bonus to Staff 6,50,000 0 0

Balance 14,29,419 10 9

Out of the balance of Rs. 14,29,419-10-9 the Directors recommend to the shareholders the payment of a Dividend at Rs. 3-0-0 per share, free of income-tax, which will absorb Rs. 14,00,000/- leaving Rs. 29,419-10-9 to be carried forward to the next year's account.

The Bank's business continued to expand during the year and the profit showed a substantial increase as compared to the preceding year.

Demand for money continued unabated throughout the year.

The Bank Rate remained unchanged at 3½% but the rate of interest on both deposits and advances rose steadily throughout the period. After the turn of the year the Reserve Bank of India raised the rate of interest to scheduled banks on advances against Government Securities from 3½% to 4%.

The Bank's investments appear in the balance sheet at below market value. During the year branches of the Bank were opened at Kuala Lumpur in the Federation of Malaya and Rongkela.

The Directors are thankful to the shareholders and the clients of the bank for their continued support. They also express their gratitude to the Bank's advisers and advisory committees for their able help and guidance.

The Directors place on record their appreciation of the services of the General Manager and the officers and staff of the Bank during the year.

Under Article 95 of the Bank's Articles of Association four of your Directors—

Shri G. D. BIRLA
Shri M. R. RUIA
Shri G. D. KOTHARI
Shri YOGINDRA N. MAFATIAL

retire by rotation, and being eligible offer themselves for re-election.

The Shareholders are requested to appoint auditors for the current year and to fix their remuneration.

By Order of the Board,
G. D. BIRLA,
Chairman.

Calcutta,
12th March, 1957.

BALANCE SHEET AS AT 31ST DECEMBER, 1956.

31-12-1955				31-12-1955				PROPERTY AND ASSETS				
CAPITAL AND LIABILITIES				CAPITAL AND LIABILITIES				PROPERTY AND ASSETS

	Carried over											

by the Government in regard to the details are prompted by sound consideration.

Naturally, I have the Coal Industry in mind. The public sector in this industry has been in existence for quite a long time, but its output has always been a modest fraction of that of the private sector. In 1956 collieries in the public sector produced only 3 million tons against 35 million tons mined by the collieries in the private sector. Even with the very considerable expansion envisaged for it under the current Plan, its target at the end of the Plan period is 15 million tons against 45 million tons assigned to the private sector. But that, of course, is to be considered only as a beginning. In subsequent Plans the public sector will have a progressively increasing role assigned to it. That seems to be the firm policy of the Government and it is not for me to criticize the policy.

The fact remains however that the Coal Industry in both sectors has undertaken the vast commitment of providing the country with 60 million tons of coal at the end of five years of which one year has already gone without an appreciable increase in production owing, as I have already pointed out, to Government's shilly-shallying methods. Can we reach the target in the four remaining years? I can speak only for the private sector. It has received the green signal rather late. But that is a minor matter compared with the other handicaps under which it has to operate. For example, new mines have been declared out of bounds for the private sector. While collieries are expected to go all out for production it seems hardly a logical decision to ask them to confine their operations within a restricted area. The idea seems to be gradually to narrow the scope of the private sector and widen that of the public in pursuit of the policy of establishment of a socialist pattern of society.

Achieving Targets

But, socialism, after all, is to be achieved in stages and, at this particular stage, the entire energy of all concerned should be concentrated on the achievement of the target of 60 million tons of coal at the end of the current Plan period and 150 million tons at the end of the next. The plain fact is that you cannot have socialism or any other kind of economy without production, and of all the raw materials needed for industrial production, coal is absolutely basic. The private sector in the Coal Industry has made no small contribution towards promotion of industrial production in this country. Indian coal is the cheapest in the world, a fact which bespeaks the sound management of collieries on the economic side. The technical efficiency of colliery managements is borne out by the facts that the rate of accidents is the lowest in the world and that the percentage of loss in extraction is low considering the thickness of seams. These facts are not stated in an attempt to stake a claim to a place in the socialist El Dorado when it materializes, but just to stress the point that if in the very first stage of our journey, when we should be all set for production, there is any restriction placed on the scope and initiative of a sector of the economy that has already proved its worth, it would be difficult to reach the goal.

After all, the private sector in the Coal Industry is not nearly so private as many might imagine, being subject to a whole series of control measures exercised by the Mines Department and the Coal Board in regard to the methods of mining, the depth of mines and safety measures on the one hand and the Coal Controller on the other who is responsible for the entire business of distribution of coal. The public sector too is not entirely manned by public servants, it has to lean fairly heavily on contractors who work for a profit. My point is that the two sectors are not two different worlds. They are complementary rather than contrary. An integrated coal policy, covering all aspects of production as well as distribution, can therefore be fully implemented throughout the industry irrespective of the two sectors. But, unfortunately, it is not. Modest enough as the public sector's role appears to be in the present scheme of things, the principle of "weightage" still functions, as a heritage from the bad old days, in determining its "minority rights". This is borne out by the fact that it often gets an unduly large share of necessary facilities like supplies of iron and cement and, most important of all, transport. As you are aware, strong representations have been made by the industry, both in Calcutta and Delhi, against the favoured treatment in respect of wagons received by the Government collieries. What is most unfortunate in this connexion is that details of tenders and allotments to Government collieries asked for by the representatives of the industry on the Wagon Allotment Committee in Calcutta were never furnished.

It is the same sad story of unfair discrimination in the matter of sidings and new tracks. Instances can be cited of sidings not being available for the private sector even when coal is being mined after thorough prospecting and proving, while a new track has been laid and a siding provided to enable the public sector to open a mine in an area where even prospecting and proving operations have not been completed. This has actually happened in the Korba field where the Government seems to be in such a hurry to start mining operations that they have no

time to spare even for proper prospecting. So they must arrange for coal loading long before there is any coal to load. We have indeed in a topsy-turvy world!

Industrial Policy

The revised Industrial Policy Resolution of the Government, announced on 30th April, 1956, expressly declared that whenever there existed in an industry both privately and publicly owned units, it would continue to be the policy of the State to give fair and non-discriminatory treatment to both of them. I earnestly hope that in shaping its coal policy, the Government will be fully guided by the spirit of the above Resolution.

The Government should also keep in view the likely requirement of coal not only in the current Plan period but, also the progressively heavy demand made by the industries in an expanding economy under the third and subsequent Plans. If the industry is to cope with this demand, it must take in hand development work wherever there is any scope for it, not necessarily for extraction of coal in the immediate future but by way of preliminary spade-work so that when future Plans are put into operation, the industry may not be caught unprepared. Planning has come to stay; we must go on planning all the time; we can only cease to do so at our peril. Planning implies taking a long view; looking ahead, thinking ahead and acting ahead. That is why I strongly urge that all the existing units in the Coal Industry should be allowed as free a scope as possible so that they may not only maintain the chartered course of production, but be in a position to meet a sudden and unexpected rise in demand brought about by unforeseen circumstances. In other words, as I have already stressed, targets are always to be taken as flexible.

Let me give a concrete example. By the end of the current Plan period the railways will require about 16 million tons of coal per year which represents a rise of 4 million tons over their current level of consumption. They will require another 4.7 million tons for replacing the coking coal now being used by them. It is understood that a part of this additional tonnage is to be drawn from the Government collieries in the Korba field. But the Billai steel plant will need all of Korba's good coal while inferior coal from the 100 feet seam at Korba is hardly likely to prove suitable for the railways even after washing. It stands to reason therefore that the target for the private sector in the Central India Coalfields be so revised as to enable them to provide the railways with a substantial part of the additional requirement. My intimate knowledge of coal mining in this area entitles me to commend this as an eminently practicable proposition. Other such instances may occur as we go along; a shortfall in one particular area may have to be made up by production in excess of the target in another. This is how we should look at the Plan and be ready to fill gaps when they arise. That is why I consider it most unwise to tie down the units of production in an uncertain industry like Coal to static targets. Looking at planning in perspective, the Coal Industry faces a colossal task which can only be achieved by the joint efforts of the two sectors. You cannot very well ask the private sector to participate in this co-operative enterprise with full energy with its hands tied.

Gentlemen, there is one further reason why the private sector in the industry should have greater scope than what the planning authorities are inclined to allow it. The most difficult problem posed by the Second Five Year Plan is how and where to find the capital needed for the various projects in the two sectors. This applies as much to the Coal Industry as to the others. The public sector may be kept going by taxation or deficit financing. So far as the organized industries in the private sector are concerned, the Government's view, expressed at the time of the publication of the Plan, was that it should not be difficult for them to raise the resources needed in view of the increasing strength of the capital market and the fairly high rates of investment already achieved. The fact is, however, that the capital market in India in its present state is a frail reed to lean upon with the result that industrial units are left to their own resources. It is perfectly true however that the rate of investment so far in private industry has been fairly high and it follows, therefore, that the only logical course is to make it possible for industries to derive full benefit from the capital already invested, otherwise there cannot be sufficient accumulation of savings for ploughing back into the industries to enable them to carry on. Collieries therefore should be given every possible opportunity for making a fair return on the capital invested in installed capacity and land. This is a matter of crucial importance at a time when the public exchequer is being subjected to the utmost strain to find adequate resources to finance the Plan. There are considerable areas which are held on lease by the private sector, where coal has been proved after due prospecting but which have so far remained unworked owing to the sheer lack of transport facilities. It seems to be the Government's policy gradually to take over these and install its own mines there. Such a policy may or may not be justified on academic grounds. But what are its likely consequences? The private sector has already invested a huge amount of money in these properties and, with its experience, trained personnel and installed capacity, is in every way in a very advantageous position to

work them. The Government can take over areas held under existing mining leases only by causing a heavy drain from the public exchequer which will in all possibility let loose a disastrous flood of inflation and seriously damage the national economy.

Coal Prices

The question of finance naturally brings me to the question of coal prices. This subject has been dealt with very ably by my friend, Sri R. Maulik, in his speech from the Chair at the last Annual General Meeting of the Indian Mining Association held on the first day of this month. I endorse every word that he has said. The Government exercises a very high degree of control over both the production and distribution of coal which are no longer subject to the unpredictable forces operating in a free market. The statutory price of any commodity, that is subject to control, should allow a fair margin over the cost of production. For reasons I have already explained, this fair margin should, in the present circumstances of the country, must contain an element that will pay for development of the particular industry. In the case of coal two further facts have to be taken into account in fixing correct prices, namely, (1) that coal is a wasting asset and (2) that there is a considerable time-lag between production and actual despatch, for a part of the coal that comes out of mines, goes to pitsheads representing so much loaded-up stocks at pitsheads which interest is payable. The Government has chosen the principle of auto-financing for basic industries of which coal is the most important. A correct pricing policy for coal is therefore based on the above considerations; other-wise, shut out from the capital market on the one hand and, on the other, deprived of the opportunity to create its own resources for expansion, it will just wither away.

It is therefore very unfortunate that the Government is still pursuing a make-shift policy which is neither sound in principle nor uniform in practice. Thus, to give an example, while collieries in the Bengal and Bihar and the Madhya Pradesh fields have been granted an increase in price of Rs. 3/- per ton, an increase of only Rs. 2/- though the cost of production in the latter case is not lower than that in the adjoining Madhya Pradesh fields. It is a sound principle that prices should be related to cost, but there is a snag in it. If the Plan has any meaning, increase in production as well as improvement in quality should be encouraged by all possible means. It seems however that collieries who effect an improvement in the quantity and quality of their output, thereby reducing their cost of production, are liable to pay a penalty for their efforts because the cost accountants deputed to examine the cost sheets of collieries are assessing the cost of production at the lower level resulting from improvement in quantity and quality. It looks therefore that collieries who are unable to reduce their costs are entitled to a higher price for their products compared with the more efficient collieries. It is a strange order of things in which inefficiency wins a premium. If the Government persists in its policy or, rather, lack of policy, the private sector will be hard put to it to carry out its assignment. Perhaps that will give the fanatics of nationalization an excuse for raising the war-cry that the Government step into the shoes of the private sector. If that happens in the Coal Industry, real disaster, for the public sector, can be in a position to deliver all the coal that the country needs at the price at which the private sector can offer it now or in the foreseeable future.

Experience of Private Sector

The private sector has behind it several decades of experience in running collieries. Its trained personnel and its experience are now at the disposal of the whole country. But the public sector is so wrapped up in itself that it seems hardly aware of the existence of the private sector, being absolutely secretive about its plans and its methods of operation. The National Coal Development Corporation, which is responsible for the public sector, seems to be a very private affair, the one member, representing industry and trade on it being innocent of any direct experience regarding coal. The Coal Board, which has made itself conspicuous by its inaction, is a close preserve of officialdom. If the two sectors are to march together and march together they must if the objectives of the Plan are to be realized, the composition of both the Corporation and the meeting should be so widened as to make them the Review Committee should not also be exclusively concerned with the private sector; it should be entrusted with a periodical check-up of the operations of collieries in the public sector as well and the results of its review should be made freely available to both the sectors.

The public sector, which should serve as a measure of yardstick of costs and efficiency, will be of little use either to the public or the Government if it is given any special privileges. Treatment in the matter of allocation of import quotas for machinery and of quotas for iron, steel and cement must be equal. If the public sector is given more than what is its due, it would become entirely worthless as a yardstick to enable the public to measure the relative efficiency of the two sectors.

The very essence of planning is partnership and co-operation. It is up to the Government to accept or reject this thesis but I feel it my duty to warn it that the consequences of its action will be far-reaching.

Gentlemen, before I sit down it is my duty to thank my colleagues who elected me Chairman of the Federation. I have tried in my own humble way to follow in the foot-steps of my predecessors among whom were some of the pioneers who built up the Coal Industry in this country. It has been my particular good fortune to have come in personal contact with at least one of them, Sri M. N. Mookherjee who passed away during the tenure of my chairmanship. It is therefore with a sense of personal sorrow that I pay homage to his memory.

It would not have been possible for me to carry out my duties as your Chairman without the co-operation received from the Vice-Chairman and my other colleagues and also the members of the Branch Executive and Coalfield Committees and the Secretariat of the Federation. I take this opportunity to express my appreciation of their services and especially their keen realization of the fact that the Coal Industry has a key role to play in the promotion of the economy.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

POOR SHOWING OF BILLS

Wednesday, 27th March.

MONEY has continued in good demand during the past week with advances to the sugar industry showing some slight increase. Cotton mills have largely maintained their offtake, and the jute industry's requirements have been maintained at the same high level. In spite of restrictions on lending against rice and paddy, advances on account of grains and seed storage in upcountry areas have also shown some slight increase. There has been little change in the inter-bank market in the past seven days and the call rate is still quoted at 3½ percent.

Bills have, once again, been in short supply. A few on account of shellac and mineral exports have come to hand, but there has been little sign of any for gunny and tea. Remittance remains fair. After showing some signs of recovery following the announcement of a possible settlement in the U.K. shipbuilding, and engineering strikes, sterling has once again been marked down. On the week there has been a small improvement.

Bullion was steady on short-covering. The price of silver advanced from the previous week's level of Rs. 178-2 to Rs. 178-8, quoted today. The rate for forward delivery was Rs. 178-3. The London and New York prices showed no change.

Gold was firm in sympathy with silver and the price increased from Rs. 106-8 to Rs. 107. The sovereign, at Rs. 69-15, showed a gain of 3 annas.

During the week ended 22nd March, Government of India Treasury bills for Rs. 11,05,00,000 were sold in favour of the Reserve Bank. The correct figure for Treasury bills sold in favour of the Reserve Bank during the week ended 15th March was Rs. 66,85,75,000, and not Rs. 68,68,00,000.

A decline of Rs. 6.92 crores to Rs. 1,517.79 crores in active notes was the notable feature of the return of the Reserve Bank of India for the week ended 22nd March, 1957. The total note issue was Rs. 1,08 crores higher at Rs. 1,537.20 crores. Notes held in the Banking department increased by Rs. 8 crores to Rs. 19.41 crores. Deposits of the Central Government declined by Rs. 1.24 crores to Rs. 53.63 crores, while other Government accounts increased by Rs. 12.37 crores to Rs. 35.15 crores. Balances of commercial banks, at Rs. 51.10 crores, showed a decline of Rs. 93 lakhs. Balances held abroad declined by Rs. 5.02 crores to Rs. 125.21 crores. Ways and means advances stood at Rs. 5.81 crores (Rs. 9.64 crores). Other loans and advances increased from Rs. 108.87 crores to Rs. 124.73 crores, of which advances to scheduled banks against usance bills amounted to Rs. 73.20 crores against Rs. 60.18 crores. Such advances aggregated Rs. 154.21 crores since 1st January, 1957.

The return of the State Bank of India for the week ended 15th March, 1957, shows a rise of Rs. 1.92 crores in total deposits to Rs. 277.58 crores. Rs. 82 lakhs to Rs. 94.19 crores, while other authorized investments remain unchanged at Rs. 11.55 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 4.42 crores. Cash and balances are, in consequence, shown at Rs. 16.59 crores, or Rs. 1.61 crores less.

The statement of the position of scheduled banks for the week ended 15th March, 1957, shows Demand and Time liabilities at Rs. 706.72 crores (Rs. 9.92 crores on account of borrowings from banks) and Rs. 467.17 crores (Rs. 2.07 crores), compared with Rs. 706.01 crores (Rs. 8.99 crores) and the previous week (Rs. 1.72 crores), respectively, in crores to Rs. 35.66 crores, while balances with the Reserve Bank have increased by Rs. 1.03 crores to Rs. 51.59 crores. There is a drop of Rs. 44 lakhs in investments to Rs. 348.96 crores. Advances and bills discounted, at Rs. 876.71 crores, show a rise of Rs. 10.69 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.4 percent and 74.7 percent, against 7.5 percent and 74.0 percent.

The net profit of the CENTRAL BANK OF INDIA, LTD. has improved from Rs. 78.67 lakhs to Rs. 1,04,36,285 for the year ended last December. The dividend has been increased by 2 percent to 14 percent, including an interim of 6 percent. Important allocations include bank's investments Rs. 15 lakhs, taxation provision Rs. 13 lakhs and staff bonus Rs. 27½ lakhs.

The profit of the UNITED COMMERCIAL BANK shows an encouraging increase of Rs. 19.83 lakhs to Rs. 56.82 lakhs for the year ended last December. Bringing in Rs. 27,761, there is Rs. 56,79,420. The dividend has been increased from Rs. 2-12 to Rs. 3-8. Notable allocations include reserve fund Rs. 20 lakhs and taxation provision Rs. 16 lakhs. Bonus to staff gets Rs. 6½ lakhs, leaving a carry-forward of Rs. 29,420. The bank continues to expand and diversify its activities.

PRICE STABILITY IN WORLD BULLION MARKET

LONDON AGAIN BECOMING GLOBAL

GOLD TRADING CENTRE

THE annual review of bullion markets issued by Messrs. Samuel Montagu and Co. Ltd. suggests that 1956 was rather an uneventful year. Although conditions were largely back to normal peacetime standards, according to which the international free gold market could be regarded as a barometer of world political and economic conditions, the crisis following on Egypt's nationalisation of the Suez Canal last July caused little fluctuation in the price of bar gold delivery London as quoted against U.S. dollars in Europe. During 1956, the range of these quotations was only about 23 cents an ounce (less than ½ percent) compared with about 11 cents an ounce (slightly under ½ percent) in 1955—a year of comparative international tranquillity, and compared with fluctuations of \$12 in 1949 and \$6 in 1951. The extent to which central banking institutions are using the market as a medium for their arbitrage operations in bar gold, and the fact that the Bank of England is ever present as a potential seller of newly mined South African gold, together now exert a very stabilising effect. This is, of course, not at all conducive to private speculative buying. The market, however, continues to satisfy the normal demand of hoarders.

Sales of gold by Russia in 1956 were the largest since the war, but their effect on the market was not very noticeable, in spite of the extensive publicity they received. Turnover in world markets increased by at least 25 percent over 1955. The firm estimates that hoarding demand increased by about 10 percent, but it is difficult to determine this figure accurately due to the large purchases for delivery in Europe for Middle Eastern account, some of which were for monetary purposes. On the other hand, markets in gold coin registered very wide movements. Coin has a special appeal to the smaller hoarder, especially when there is a danger of war. The available supply of genuine coins tends to diminish as time goes on. Sovereigns and the other gold coins coveted by the hoarder are relics of a gold standard existing before the first world war. With one exception, no gold coins have been officially minted for circulation for some 30

years, although fairly passable imitations are produced from time to time in various places.

London as a Centre

The London gold market further consolidated its position as the centre of the world trade in gold. Fluctuations in the U.S. dollar-sterling exchange rates were responsible for a much wider range in price than those quoted in Continental centres for bar gold delivery London against payment in U.S. dollars. The highest price of the year at the London fixing was 252s 1d a fine ounce on 31st July, and the lowest 248s 11½d on 19th April. These two prices reflect the fluctuation in the dollar-sterling exchange rate and constitute a difference of about 1½ percent, compared with that of only about ½ percent between the mean quotations of gold against U.S. dollars on those dates.

Central bank operations in gold are now a well-established feature of the London market. During the year, buying orders continued to be received from debtor countries before the monthly settlements of the European Payments Union whenever prices ruled below the parity of \$35 an ounce. E.P.U. creditors have also figured as sellers, but these were far less in evidence. Other central bank selling was also noticeable, but the Bank of England was the largest seller, as it handles the South African sales.

The activity of central banks other than the Bank of England probably accounted for about a third of the total turnover in London. Most of the transactions were concluded outside the "fixing" and it is, therefore, evident that the fixing turnover was only a small proportion of the total. This does not in any way detract from its importance as the sterling price for gold which is "fixed" at 10.30 a.m. every day, and the U.S. dollar-sterling rate ruling at the time establishes the parity dollar price. This serves as a basis for dealings thereafter, which, with extremely rare exceptions, are all against U.S. dollars. Fluctuations in price after "fixing" are as a rule extremely small. It is the "fixing"

How banking helps the FISHING INDUSTRY

THE seas around India's 2,900 miles of coastline are rich in fish. In the South of India, particularly, fishing is an important industry. It supplies food and many valuable by-products, some of which are exported.

In South India alone, the fishing industry employs over 1½ lakhs of people, and its catches are worth about Rs. 3½ crores every year.

Banking has greatly helped the growth of the fishing industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the fishing industry.

We at Palai are proud that so many leading fishing firms, and indeed important firms in every field of business and industry in South India, employ the complete banking service we offer:

Current Accounts — Demand Drafts — Telegraphic Transfers — Investments — Letters of Credit — Bill Collection — Deposits — Loans and Overdrafts — Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office: PALAI, TRAVANCORE-COCHIN

Branches at: Madras, Cochin, Quilon,

Trivandrum, Alleppy, Mangalore, Bangalore,

etc. Also at: Delhi and New Delhi.

system in the market which determines the day-to-day selling policy of the Bank of England.

International Trading

At the beginning of last year, bar gold for delivery London was quoted at \$34.97 1/2 to \$34.97 3/4 an ounce. Stimulated by uncertainties in the French political situation, demand from Europe on private account, together with a very good offtake by central banks for the monthly E.P.U. settlements, and a fair enquiry from the Middle and Far East, prices hardened around \$34.99 1/2 by 10th January, which proved to be the highest quotation for the first half of the year. The turnover of business fell away sharply in February, but recovered somewhat in March, and after remaining at a fair volume for the succeeding two months, improved to the January level in June. During these months, the pattern of the market was uneventful.

During July, an increase in central bank buying and an active enquiry on private Continental account raised prices to either side of \$34.99. Thereafter, they improved more rapidly on a continuation of these demands until, when Egypt's sudden nationalisation of the Suez Canal Company was announced on 26th July, prices had passed the \$35.00 mark and were quoted around \$35.02, finally ending up the month with quotations of \$35.07 to \$35.09. After the blocking of Egyptian assets, there was a marked flight of capital from the whole of the Middle East, which resulted in considerable gold purchases from Switzerland, presumably on that account. In August, the volume of business fell away and so did prices, to \$34.98 1/2 to \$34.99 1/2 by the end of the month. Turnover in both September and October improved, and general buying brought prices again over \$35.00, until on 31st October, the date of the Anglo-French intervention in Egypt, \$35.05 to \$35.07 was quoted. At that time, there was a certain amount of selling by hoarders, and with the Middle East demand physically dislocated by the events in that area, and the sales by certain central banks—the latter said to be for the purpose of acquiring dollars to purchase oil—prices were forced down to \$34.87 to \$34.90 by the last week of the month. December recorded almost daily changes in prices, which ranged between \$34.86 and \$34.94, and ended on the last day of the year at \$34.91 to \$34.93.

Private Hoarding

Messrs. Samuel Montagu and Co. Ltd. estimate that private hoarders in Europe bought some 4 million ounces during 1956. The greater part of this gold eventually found its way into France. Large quantities were also sold in Switzerland, the purchasers being hoarders and, in some cases, for the official accounts of certain Middle Eastern countries. In the Middle East, they estimate that hoarding amounted to about 3 million ounces, the greater part of which was sent to Beirut for distribution in the area and in India. There is no doubt that some of this gold was used for the building up of reserves of local central banks and, therefore, used for monetary purposes. In the Far East, 2,251,000 ounces were imported into Macao in 1956. Again, this market acted as a distribution centre for the Far East. In Thailand, gold was imported to the extent of some half a million ounces. There was some demand from South America, mainly the Argentine and Uruguay, but quantities absorbed there were not very substantial. During the year 1956, they estimate that over 10 million ounces were diverted from world production sources for hoarding, in

addition to about 3 million ounces destined for the arts and industries.

Various free markets such as in Belgium, Canada, Western Germany and Greece were opened during 1956, but on the whole, although they may have had some local attractions, they never developed to such a scale as to become a factor in the international market.

Russian Sales in 1956

Total sales by Russia in 1956 amounted to some 4,300,000 ounces, the firm estimates. While, initially, sales in 1956 followed the usual pattern of 1954 and 1955, when about 2 million ounces were sold in the first half of the year, November and December saw a repetition of 1953, when substantial offerings were made. It will be remembered that the large sales of Russian gold towards the end of 1953, it was presumed, were made to finance the Russian payments for its large purchases of consumer goods. It is of interest that, in 1956, more than half the Russian gold sales were made on the Continental markets, principally in Switzerland, although, no doubt, the greater part eventually found its way to London. From reports from Continental centres, it would appear that the considerable offerings towards the end of the year were for the purpose of meeting the payments and difficulties encountered by Poland, Hungary and other countries. The amount of gold sold by Russia in 1956 is the largest known in any year since the war, although it probably amounts to less than one-third of its annual production.

In spite of its enormous potentialities as a seller of gold, Russian activities on the free market gave no indication of any inclination to flood the market. Indeed, as an important gold producer, Russia has a special interest in the maintenance of gold as a basis for the settlement of international balances, and on the subject the *Financial News Survey* of 10th February, 1956, issued by the International Monetary Fund refers to the views of two Russian economists as published in *Vnesheiaia Torgovlia*—an official Russian publication. The first points out that currency convertibility, as planned by the western nations, will lack a firm material basis, unless it provides for free convertibility of currencies into gold, will only be of limited duration. The second economist emphasises that gold is a world currency, and that it is being used by Russia as a foreign exchange reserve to restore equilibrium in its balance of payments. For this reason, Russia is accumulating reserves consisting mainly of gold.

The rising tendency in the premiums quoted for gold coins in 1955 continued during the past year. The main cause was the increased demand stimulated by the crisis over the Suez Canal and, later, the aftermath of the Anglo-French intervention in the Middle East.

Industrial Consumption of Platinum High

Although the industrial consumption of platinum last year continued at a very high level, so urgent competition for open market supplies, so prominent a feature of the closing months of 1955, and lapsed completely in the early days of 1956, and a much easier tone prevailed in the free platinum market throughout the whole of the year. The prospect of increased supplies from the expanding South African production and the cessation of U.S. Government stockpiling purchases may have contributed to the reticence of buyers, which persisted in spite of the fact that no fresh selling by Russia was in evidence during the first half of the year. The Suez Canal crisis had no hardening influence on the market, and quotations, after fluctuating between £37 and £37 1/2, finally dipped to either side of £36 towards the end of the last quarter.

In 1956 the demand for palladium on the open market was amply provided for by the freely available supplies from Russia, with the result that, after opening at £7 7s 8d to £8 an ounce, prices tended to ease slowly, and at the end of the year were quoted nominally at about £7 an ounce. The U.S. Government was reported to have acquired substantial quantities of palladium last year for stockpiling.

Large Silver Flow to America

The substantial flow of bar silver to the U.S.A. during 1956 provided the most noteworthy feature of a somewhat uneventful year for silver. The incidence of these shipments had no material effect on the course of market prices beyond, to some extent, influencing the difference between cash and forward quotations in the London market towards the end of the year. The greater part of these shipments—67,816,979 ounces—came from Britain and represented the largest annual movement of silver from the U.K. westwards since 1938. In that year no less than 382,350,000 ounces of silver were despatched to New York, of which some 200 million ounces similarly by-passed the open market being exports from China routed via England and ultimately acquired by the U.S. Treasury under the Sino-American agreement in force at that time.

Two opposing factors during 1956 more or less neutralised each other. One was the arrival in London of about 3,500,000 ounces of melted Saudi Arabian silver coin from the Middle East for re-refining and sale; to this should be added over 5,500,000 ounces shipped direct to the Continent, thus lessening to that extent potential enquiry from that quarter on the London market. The other was the almost complete cessation of those Russian sales of silver in London which had amounted to about 9 million ounces yearly in 1954 and 1955.

The highest fixed price for cash delivery in the London market last year was 81 1/2d quoted on consecutive working days from 20th November to 4th December, and the lowest, 76 1/2d on 1st, 2nd and

3rd February, giving an extreme range of 6 percent, compared with only a little over 1 1/2 percent in the range between the highest and lowest published New York prices for the same period, namely, 91 1/2 cents and 90 cents. Unfortunately, this much wider spread in London prices was not due to greater activity in that market. On the contrary, the overall offtake last year was some 4 million ounces less than in 1955, mainly due to a drop in export business, and it was the restricted size of the market that on many occasions made prices so sensitive to comparatively small amounts of buying or selling.

The Bank of England, although it did not recommence the general loan facilities which it had terminated in August, in a few cases granted short-term loans of silver to help alleviate the acute shortage of spot supplies until, early in December, some large delayed shipments arrived, and proved more than sufficient to meet the U.K. essential and Continental demands, which became much smaller at the approach of the Christmas holidays. The London fixed price for cash delivery moved rapidly downward from 81 1/2d on 4th December to 79 1/2d on 19th December and finally closed at 79 1/2d on the last day of the year, once again well below the parity of the New York price.

U.K. Imports and Exports

Australia easily maintained its position as the chief source of supply to the London market as, in addition to the 6,467,126 ounces shown as imported, another 3 million ounces of silver came from the same quarter in the form of concentrates for treatment in England and do not figure in the bullion imports. Imports of silver coin have been small. Practically all the imports derived from Saudi Arabian coin were melted before shipment from the Middle East and are shown as silver bullion. On the export side, about 800,000 Maria Theresia dollars were shipped last year to Aden and Persian Gulf ports. Last year, essential industries in the U.K. absorbed 12,400,000 ounces of silver and 800,000 ounces were used for export in fully or partly manufactured form, making in all just under 13,200,000 ounces compared with about 14 million ounces used for similar purposes in 1955.

Lend-Lease Silver

Last April the U.K. commenced shipping consignments of silver to New York in repayment of Lease arrangements from the U.S.A. and due for return by April 1957. The Board of Trade returns show that by the end of 1956, 67,816,979 ounces had already been shipped. As a result of the refining of U.K. demobilised silver coin, it is thought that the Bank of England's silver stocks were augmented by about 13 million ounces. There were no signs of any official purchases of silver in the market, and it can be assumed that the authorities have sufficient stocks in hand to complete the repayment of the U.K.'s Lend-Lease obligations by the due date. The Netherlands, continuing the 19,641,146 ounces during 1956 and Australia also repaid about 10 million ounces during the same period. The following table shows Lend-Lease obligations still outstanding after allowing for the movements mentioned:

	Ounces
United Kingdom	20,256,899
India and Pakistan	225,999,904

Netherlands	(approx.)	7,900,000
Saudi Arabia		22,347,431
Australia	(approx.)	1,800,000
Ethiopia		5,425,000
Fiji Islands		196,364

Approximate Total 283,925,000

No information is available as to the plans of India, Pakistan, Saudi Arabia, Ethiopia and the Fiji Islands for meeting their commitments. At the time of the original loans, special terms were made to Saudi Arabia and Ethiopia which allow a postponement of repayment for two years by mutual arrangement, and this concession also applied to 100 million of the original loan taken by India.

World Production and Consumption

The world production of silver during 1956, as detailed in the table at the end of the review, is estimated to have been about 225 million ounces, compared with about 221 1/2 million ounces in 1955. This improvement in production would appear to have been more than offset by increases in the world consumption of silver for industrial purposes and for coinage. Messrs. Handy and Harman of New York estimate that the arts and industries absorbed 204,300,000 ounces and coinage another 56,100,000 ounces in 1956, compared with 179,100,000 ounces and 43,300,000 ounces respectively in the previous year. However, in order to make a proper comparison between world consumption and demand, it is necessary to make due allowance for the U.S. Treasury's operations. That institution in 1956 under the authority of the Act of 31st July, 1956, purchased 15,600,000 ounces of newly mined U.S. silver and sold to U.S. industrial consumers some 3,700,000 ounces, thus siphoning off a net amount of 11,900,000 ounces of fresh production during the year. On the other hand, coinage operations by the U.S. Treasury do not absorb fresh production, but use supplies from the Treasury holding. Silver coinage by the U.S.A. used about 31,100,000 ounces in 1956. Thus the world production available to the open market in 1956 was: 225,000,000 ounces of total world production less 11,900,000 ounces of net purchase by U.S. Treasury = 213,100,000 ounces; which should be compared with 204,300,000 ounces of offtake for arts and industries + 56,100,000 ounces of offtake for silver coinage = 260,400,000 ounces. This less 31,100,000 ounces used in U.S. coinage is equal to 229,300,000 ounces. The balance of some 16 million ounces of the offtake was filled by supplies from non-production sources such as melted Saudi Arabian coin.

Future of the Market

The United States Treasury through the buying and selling powers conferred on it by the Act of 31st July, 1946, has firmly established itself as the major stabilising influence on the world silver markets, and Messrs. Samuel Montagu do not expect any drastic changes in 1957. The price in New York is not likely to vary much either side of the U.S. Treasury's buying and selling rates of 90 1/2 and 91 cents respectively, an ounce, unless some extraordinary heavy selling or buying develops. The Treasury is quite capable of taking up surplus U.S. domestic production or giving out supplies to U.S. domestic buyers to even out any wide price variations.

STOCK MARKETS RECOVER

INDUSTRIALS AND GILT-EDGED ADVANCE

London, 27th March.

THE sharp falls in the London stock markets which followed the start of the shipyard strike were recovered later, and on balance, prices have been higher during the past week compared with their previous levels. After the initial fall, the markets became steadier and then went slowly ahead until the end of the week, when rising hopes of the labour troubles being settled brought a sharp advance. The recovery gathered momentum after the week-end when a settlement, it was thought, was imminent, but was brought to a halt following the breakdown of the shipyard strike settlement talks. Nevertheless, the gains were almost fully maintained on the view, which was also responsible for the sharpness of the rise, that the wage concessions to railway workers and the probability of similar settlements in other wage disputes would have inflationary effects. Sentiment in the markets was assisted by the success of the Bermuda conference. In keeping with the general improvement, Government securities have tended higher. In the foreign market, Baltic and Greek bonds have improved on speculative buying, but there has been very little interest in rails. Dollar stocks have been irregular, with prices fluctuating somewhat in sympathy with Wall Street. Industrials have recorded a strong recovery after their fall and prices are higher on the week. South African gold shares have relapsed in the absence of interest and are now around their all-time lows.

Tins have responded to the news that the floor price under the International Tin Agreement has been raised, but other base metals have been subdued. Oils are higher in common with most other sections. As very little interest developed in the rubber share market, idle conditions have prevailed for most of the week. Bid possibilities were responsible for a number of firm spots, but Kapala eased on the lower dividend and profits. A firm undertone has been maintained in the tea share market, although there was very little movement of prices. Mogan improved on the reported oil finds while there were several other firm spots. The rejection by the Indian Government in Parliament of a move to nationalise tea estates has had little effect on the market.

The Money Market

Credit conditions have been more stringent in the money market during the past week. Expectations of easier conditions following Government disbursements failed to materialise, and the market was never able to recover from a bad beginning until the week-end. The shortage of credit was made acute by the absence of maturities in the hands of the banks because of previous operations by the authorities, while tax payments continued to run at a high level. On two occasions, the market had to borrow from the Bank of England and this was in spite of a large volume of assistance given by the authorities. The rate for money varied between $3\frac{1}{2}$ percent and $4\frac{1}{2}$ percent, with the average rate around $4\frac{1}{2}$ percent.

Activity on Wall Street

Foreign bonds were featured by the strength in German Nationals and Greeks which gained up to a couple of points or more. Norwegians were also firm but Italians, Danish and Serbs were shaded slightly. Japanese issues held steady at small

gains. A number of Brazilians were higher by one to two points on a very light volume. Chile 3 per cent held steady around the \$(U.S.) 45 $\frac{1}{2}$ level. U.S. Government securities fluctuated irregularly. Long-dated issues dropped sharply early in the period on a carry-over of selling which was prompted by the disclosure late last week that the Treasury was considering the issue of a new long-term bond. The pressure eventually lifted and the market turned firm on the stimulus of renewed buying interest. Top quality corporates moved ahead in active dealings with new issues in the forefront. Rails were mixed in quiet trading.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 20th March shows that gold stocks increased by \$1 million to \$22,305 million. Foreign deposits increased by \$8 million to \$300 million; but foreign investments fell by \$1 million to \$3,735 million. The Federal Reserve bought \$85 million worth of bills and \$45 million worth of securities under purchase agreements, but sold \$1 million worth of notes. Total discounts and advances increased by \$254 million to \$893 million, while the aggregate excess reserves of member banks increased by \$69 million to \$246 million. The daily average excess reserves of member banks rose by \$197 million to \$602 million, but their daily average borrowings fell by \$97 million to \$757 million. Business loans of New York city banks rose by \$376 million to \$11,817 million, compared with a rise of \$433 million to \$9,984 million in the corresponding week a year ago.

Hongkong Gold Weak

The Hongkong gold market was steady for most of last week, but eased latterly on settlement prospects of U.K. labour disputes. Prices reached their peak on Tuesday of the week after which they fluctuated narrowly until they declined on the following Saturday to close slightly lower on the week. Business was inclined to dwindle for lack of political incentives. Traders expect the market to follow closely the movements of sterling on foreign exchange markets. Carry-over charges totalled 90 cents in favour of buyers. The official take was 2,280 taels, and the unofficial 14,400 taels. Arrivals in Macao were reported at 40,000 taels. Forward contracts were done at \$(U.S.) 37.73 c.i.f., Macao.

Vegetable Oils Mostly Dull

Nigerian groundnuts were active in an otherwise dull market with business extending over last week-end mainly to north Continental ports, and in a smaller volume to Italy. Unconfirmed reports claimed that the bulk of the north European trade was on East German account, involving from 10,000 to 12,000 tons for shipments April-June to May-July from £72 on last Friday up to £74 c.i.f. on last Monday. The Nigerian Board also made further offers at £74 for May-July shipments. Other origins were relatively inactive, although the week-end business to Rotterdam included April-May Chinese groundnuts at £75 c.i.f. In the oil section, groundnut oil continued to weaken with Nigerian offered 10s a ton lower and afloat parcels of South African subject to a sharp reduction to £132 $\frac{1}{2}$ c.i.f. Rotterdam, without apparent results. Linseed oil softened slightly in a featureless market, while coconut oil was generally ignored except for possible Italian interest in Ceylonese for April-May shipments in the region of £102 c.i.f. Castor oil was rarely mentioned on a constructive footing with European sellers still sharply discounting the original levels. Japanese soyabean oil was more freely offered to the Continent with the general level down to £120 a metric ton, c.i.f. No offers of Uganda cottonseed were traced to U.K. ports, but it is understood that the local mills secured the bulk of the supply at a parity of around £36 $\frac{1}{2}$ c.i.f., U.K.

U.K. Sugar for Russia

Authoritative trade sources in London confirm the sale of a further 10,000 tons of British refined sugar to Russia. This deal—which, it is reported, was finalised over last week-end—now brings the total for shipment to Russia, spread over March to May, to 60,000 tons. The contract price so far remains undisclosed, although it is stressed by trade circles in London that the deal underlines the scarcity of sugar not only in Russia, but in other east European countries.

Heavy Tax on Malayan Rubber Industry

A plea to the Malayan Government to abolish rubber replanting rebates and return to a straight 5 percent export duty has been made by Sir John Hay, chairman of the Guthrie group of companies. In his statement to the shareholders of Linggi Plantations Ltd., he said that allowing for all rebates, taxation had taken 71.75 percent of the company's profits—a higher rate of tax than that was levied on any other Malayan industry. Reviewing rarely equalled in any other country. Reviewing the prospects for the Malayan rubber industry, Sir John said that the future was hopeful as he expected the 1957 output and consumption to balance each other at around 1.9 million tons. Referring to comparative prices of natural and synthetic rubber, he pointed out that in 1955 and 1956 nearly one-third of the world's production of natural rubber was sold to the U.S.A. where the supplies of synthetic rubber were readily available. This seemed to belie the unqualified statement, made too often, that there was a particular price at which natural and synthetic rubber came into direct competition and that any rise above that price would lead to a smaller demand. This, Sir John added, did not mean that there should be a complacent disregard of competition.

Stocks and Shares

SHARE PRICES CONTINUE TO FALL

JUTES AT NEW LOW LEVEL: FRESH TAXATION FEARS

Wednesday Evening.

SHARE prices have receded in restricted trading on the Calcutta market this week. Interest in all sections, including speculatives, has been at a minimum. Operators have been preoccupied with interpretations of last week's Union Budget; the general feeling appears to be that fresh taxation is inevitable. Indian Iron shares have sunk from Rs. 20.4 to a low level of Rs. 19.7. This evening's closing quotation is Rs. 19.12; there is little business at this price.

All the important investment sections of the market have been neglected. Jute shares reached some of the lowest quotations yet recorded. Coals have remained dull and sellers have predominated in tea shares. Only Government securities have remained reasonably steady. The directors of Guest, Keen, Williams have announced a final dividend of 15 percent "for 52 weeks ended 29th December, 1956".

Details of the week's trading follow.

The Government securities market ruled fairly steady and there was a good enquiry for most short-dated loans. In contrast to the general trend, 3% Conversion Loan 1956 was easier at Rs. 74.5 and 3% Non-terminable Paper was marked down to Rs. 73. In short-dated loans, 3% 1957 was traded at around Rs. 99.12, but 3% 1958 recorded a further improvement to Rs. 99.10; 2 $\frac{1}{2}$ % 1961 was also better at Rs. 93.8 and there was a good enquiry for 2 $\frac{1}{2}$ % 1960 at Rs. 96.7. Three percent 1959-61 had buyers at Rs. 97.12 and 3 $\frac{1}{2}$ % 1961 was asked for at Rs. 99.7 without attracting sellers. Amongst medium-dated loans, 2 $\frac{1}{2}$ % 1962 was on offer at Rs. 93.15 and 3% 1963-65 was easier at Rs. 94.3; 3 $\frac{1}{2}$ % 1964 had sellers at Rs. 98.7 but 3 $\frac{1}{2}$ % 1965 was in demand at Rs. 98.4. In long-dated loans, 3% 1966-68 continued on offer at Rs. 92.4, 3% 1970-75 was quoted lower at Rs. 87.5, while 3 $\frac{1}{2}$ % 1974 was unchanged at around Rs. 98.8. State loans continued dull with business passing at around the previous quotations. Four percent U.P. 1967 was traded at Rs. 97.13 and 4% U.P. 1968 changed hands at Rs. 97.15. Four percent West Bengal 1963 had buyers at around Rs. 99.15 and 4% West Bengal 1968 was marked at around Rs. 99.

Business in preference shares was once again on a restricted scale. In jute, an odd lot of Anglo-India was done at Rs. 100 and Chitavalahs were marked at Rs. 100. Kinnison were placed at Rs. 102. Among miscellaneous issues, Aluminium Corporation 5% and 6% changed hands at Rs. 74 and Rs. 94 respectively. Bengal Assam Steamship were done at Rs. 75 and London offerings of Calcutta Electric brought the shares down further to Rs. 8-14. Calcutta Tramways were depressed at Rs. 7-10 and Dalmia Cement were crossed at Rs. 94. Duncan Brothers were marked at Rs. 58. Equitable at Rs. 100 and Hall & Anderson at Rs. 67. Indian Iron & Steel were depressed at Rs. 99 and a small lot of Karanpura Collieries was offered at Rs. 54-12 at which price business was reported.

The only share transacted in the banking section was Hindusthan Commercial at around Rs. 10-6.

No business was reported in railway shares.

In cotton, Kesoram were slightly easier at Rs. 14.5 and Bowreah were unchanged at Rs. 120, as were Dunbar at Rs. 200. Jaysree Textiles were marked at Rs. 5-10 and New Victoria at Rs. 1-14.

Business in coal shares was on a reduced scale and prices tended to lower levels. Bengal were marked down from Rs. 450 to Rs. 444 and Borra from Rs. 19.8 to Rs. 19. Central India were easier at Rs. 6.3, as were Western Bengal at Rs. 5-11. East Indian were shaded at Rs. 26 and Equitable were offered at Rs. 23. Katras Jheriah reacted from Rs. 56 to Rs. 53-8. New Beerhoom were lower at Rs. 15-2 while Union were better at Rs. 14-14.

Jute shares, in the absence of support, touched new low levels and selling orders were extremely difficult to execute. Here is a chart showing representative price movements:

	Opening 21-3-57	Closing 27-3-57
	Rs.	Rs.
Agarpara	8 14	8 8
Anglo-India	132	130
Birla	15	14 8
Dalhousie	95	85
Delta	135	127
Ganges	49	46
Howrah	16 6	15 12
Kelvin	195	180
Kinnison	134	122
Megna	72	68
National	20 8	20
Reliance	9	8 4

In electrics, Calcutta were subdued at Rs. 12-13 and Jubbulpore were easier at Rs. 13-12. Benares and U.P. were unchanged at Rs. 17-4 and Rs. 142. Sugar shares were marked down in the absence of enquiry. Balrampur eased from Rs. 8 to Rs. 7-12. Belsund from Rs. 10-14 to Rs. 10-12 and Cawnpore from Rs. 18 to Rs. 17-12. Champaran were lower at Rs. 20-4 as were Ramnugger at

Rs. 24. Darbhanga improved today from Rs. 21-2 to Rs. 22-4.

In the engineering section, Indian Iron & Steel shares met with selling pressure and receded steadily from an opening price of Rs. 20.4 to Rs. 19.8; tonight's closing quotation is Rs. 19.12. Bhartia Electric Steel reacted from Rs. 15-14 to Rs. 15 and Braithwaites were easier at Rs. 25 ex-dividend. Burn & Co., were quiet at Rs. 318 and Jessops were marked down further to Rs. 24-10. Richardson & Cruddas were easier at Rs. 17-8 and Textile Machinery dropped from Rs. 19-15 to Rs. 19-7. Guest, Keen, Williams were shaded at Rs. 24-8.

Paper shares were marked down in sympathy with the general trend of the market. India Paper Pulp were quoted at Rs. 22 ex-dividend against Rs. 22-4 at the beginning of the week and Orient slipped back to Rs. 31. Titagur were easier at Rs. 35-4.

In cement, Ashoka were easier at Rs. 10-2 and Dalmia were marked down to Rs. 11-12. Orissa were comparatively steady at Rs. 13-3 while Sone Valley were neglected at the lower rate of Rs. 6-14.

A solitary transaction was reported in the insurance section. In Ruby General at Rs. 5-8.

In shipping, Calcutta Landing were unchanged at Rs. 12-2 and Calcutta Steam Navigation (Rs. 10 paid-up) shares were crossed at Rs. 15-4. India Steamship reacted to Rs. 10-5.

Among miscellaneous industrials, Alkali & Chemical Corporation Old shares had buyers at Rs. 11-4 ex-dividend ex-rights, while the rights to apply were mentioned at around 8 annas with few declared buyers. Aluminium Corporation were lower at Rs. 9-12 as were Angelo Brothers at Rs. 19-4. Britannia Biscuits were offered at Rs. 13-4 and British India Corporation were depressed at Rs. 7-8. Clive Row Investment were unchanged at Rs. 9-14 and Dunlop Rubber were shaded at Rs. 25-2. Imperial Tobacco had sellers at Rs. 13-14 as did Indian

PROBLEMS OF THE PRIVATE SECTOR IN A PLANNED ECONOMY

**F. I. C. C. I. URGES REVIEW OF POLICY ON
AGRICULTURE AND TAXATION**

(FROM OUR NEW DELHI CORRESPONDENT)

THE two-day annual session of the Federation of Indian Chambers of Commerce and Industry, held this week, was inaugurated by the Prime Minister Mr. Nehru. He dealt with things which appeared to be unconnected with the points raised in the outgoing F.I.C.C.I.'s President's address. No hope was offered either of lightening the burden of taxation or of changing the pattern of development. Mr. Nehru took notice of the Forum of Free Enterprise, and deprecated its activities.

The Federation adopted eight resolutions on the problems of commerce and industry. It is gravely concerned "over the stresses and strains which have developed in the economy during the past year or so. There has been a rise in prices, a rapid decline in our foreign exchange resources and tightness in the money market", it says. Another serious matter is "the continuous fall" in food-grains production over the past two or three years, necessitating large imports of foodgrains. In the present predicament, the Federation feels that all sections of the community must do their best. It strongly urges the Government to assist the people in a positive way so that they can contribute to economic growth. The Government has been requested to: (1) give increased weightage to the improvement of agricultural production and provide facilities for its implementation; (2) adopt a monetary policy which, while putting the appropriate restraint on non-essential expansion, speculation and consumption, encourages production of essential items; and (3) formulate the taxation policy so that it may encourage savings, thereby ensuring the creation of investment resources for the plan.

Foreign Exchange Crisis

The Federation has a 12-point plan to meet the foreign exchange crisis. In its opinion, "the action taken so far falls short of the vital need to assist industry and trade to make an all-out effort in the direction of augmenting foreign exchange resources. As the problem is multi-faceted, so also should be the solution. The import policy should be so modified as to conserve foreign exchange resources and export promotion should come to be regarded as a joint and national responsibility. Considering the magnitude of the deficiency in foreign exchange, we must be prepared for austerity in consumption of at least non-essential goods." Towards that end, the Federation suggests:

1. The import of consumer goods should be restricted further and steps taken to augment internal production to meet domestic requirements.
2. A liberal licensing policy should be followed for the establishment of new units and expansion of existing ones.
3. The recent restrictions on the import of capital goods need to be reviewed and priority should be given for the establishment of the industries which will help reduce imports or augment exports. Consequently, the scheme for importing capital goods on a deferred payment basis should be modified, taking due note of the desirability of exempting such imports where orders have already been placed, part payments made and effective steps taken for setting up the industries.
4. Suitable schemes for Government guarantees to back the import of capital goods on a deferred payment basis, as also to cover exchange risks should be formulated.
5. The concession of granting special import licences to exporters to replace the imported raw material content of the goods already exported should be extended further.
6. Steps should be taken by industry and trade, with the active help and co-operation of the Government, to diversify the export trade both in commodities and markets. Indian industries, particularly export industries, should be permitted and encouraged to adopt modern methods of production to improve their competitive position in world markets.
7. Manufacturers and exporters should pay greater attention to the quality of finished products and arrange for the inspection of goods before shipment.
8. The organisation of Trade Commissions abroad should be strengthened to ensure better publicity for Indian goods.
9. Further fiscal incentives should be given and the procedural formalities in connection with the grant of rebate or drawback should be simplified.
10. A review of the activities of the State Trading Corporation should be made so that private efforts to augment foreign exchange earnings are not supplanted.
11. Adequate and cheap transport facilities for the efficient handling and movement of goods at ports and en route should be provided.
12. A positive programme to increase the earnings on invisible account through the increased utilisation and development abroad of Indian bank-

ing, insurance and shipping should be evolved, and an imaginative drive for attracting tourist traffic should be launched.

Economic Growth

The outgoing President, in his address, said that "the most important condition for economic growth is the urge to improve material well-being, to consume more goods and services and to desire new and varied items of consumption. Age-old customs, particularly in India where a premium is placed on austerity, will not go with modern economic development." He also said that "in a competitive world market, what counts more than anything else, is quality, price and salesmanship." The Federation says that to make up the deficiency created by cuts in consumer goods imports, steps should be taken to increase internal production. Here two issues arise. First, what happens until home production is adequately augmented? The reply may be that people will have to consume less. But the bigger issue is whether the business community takes the responsibility that its members, during the interim period when home production is being augmented, will not take advantage of the scarcity and raise prices.

Quality and Prices

Presumably, the President's reference to "quality and price" related only to the "competitive world market." The policy of protection, and now the foreign exchange crisis, have reduced competition at home, where conditions are slowly assuming the characteristics of a seller's market. The case of automobiles illustrates the point. It is not the testimony of the Tariff Commission, but of the users of motor cars, which should have influenced the Government in the formulation of its policy. The Government could have ascertained the comparative durability, prices and servicing facilities now and before the introduction of its present policy.

Expanding Exports

The Federation in its 12-point plan has made

several suggestions to stimulate exports. The question asked here is: how many of its members have taken advantage of the facilities granted by the Government in the course of last three years? What is for example, the extent of the drawback in customs duties, relating to articles of Indian origin exported, that has been claimed by Indian houses? Some leading business men were taken to Scandinavian countries last year. Their report is still being awaited.

Two of the key resolutions, it is said here, might indicate why "free enterprise" is losing ground in India. First, competition is the sine qua non of free enterprise. And competition is increasingly disappearing from the Indian market. Second, with the exception of one provision which advises manufacturers to pay greater attention to the quality of exportable goods, the 12-point resolution is essentially a charter of demands on the Government.

Burden of Taxation

While recognising fully the need to increase financial resources for the second five year plan, the Federation views "with concern" the frequent attempts to raise additional resources by increasing the burden of taxation on both individuals and companies. With the shifts in thinking on taxation, its range as also the rates of levy are frequently being revised and raised. Such measures are likely to affect adversely individual as well as corporate enterprise. The Federation referred to the official emphasis on corporate savings, while increasing the burden of individual direct taxation which has already reached saturation point. Savings have to be effected both by individuals and by corporate enterprise. Its considered view is "that in all economies, especially in under-developed ones, the backbone of capital formation can only be the will to save and invest and the capacity to do so on the part of the individual. Individual taxation requires to be reduced more if the policy of the Government is to subject corporations to heavier levies.

In this context, the Federation invites the attention of the Government to the additional corporate taxes recently imposed, namely, the tax on dividends, the tax on bonus shares and the withdrawal of the rebate on undistributed profits by the Finance Acts of 1955 and 1956, as also to the scheme of deposit with the Government by companies of part of their profits and accumulated reserves. "These measures are likely to act as serious handicaps in the functioning of corporate enterprise. The scheme of deposits, in particular, would also act as a serious impediment unless the rules to be made in this behalf are such as to eliminate all possible difficulties." The Federation feels that

there is an urgent need for evolving a scientific tax structure.

On transport problems, the Federation urges the Government to: (1) pursue an integrated transport policy which will encourage private entrepreneurs, especially in road, coastal and overseas transport; (2) view road transport as an essential complement to the railways and co-ordinate the development of both to augment the overall transport capacity for short and long distance traffic; (3) make a detailed survey of the internal water transport system and provide facilities for the increasing use of internal waterways; and (4) develop the facilities available in the ports, the inadequacy of which is becoming a serious bottleneck to our development programmes.

Productivity

The Federation has a resolution on productivity, in the course of which it points out that the national income, as also the income of different sectors of the economy, can rise only if economic efficiency is increased. The resolution says: "Agricultural productivity in the country is proverbially low. So is the output per man-hour in industry and tertiary occupations. There is also the need to increase the productivity of investment by improving technology and organisation. Productivity in agriculture can be increased only by reducing the pressure of population on land and improving the age-old methods of cultivation. Similarly, unless there is an improvement in the techniques and organisation and an increase in the contribution of labour, no significant rise can be expected in industrial productivity. Incomes of various factors of production have also to be related to the pro-

ductivity of each. An increase in wages unrelated to increases in productivity can only mean a breeding ground for inflation which will nullify the advantages of a wage rise. Labour should be ensured of its fair share in the growth of productivity and in turn it should be the duty of workers to put in the effort required to attain a high level of efficiency. The Federation urges that it is the responsibility of all, in whatever capacity, connected with agriculture or industry, trade or transport, to exert their energies and improve their performance. This alone can make a real contribution to the economic advance of the individual as well as the nation."

It, therefore, emphasised the need: (1) to augment the facilities for technical education to provide for a regular flow of different categories of skilled personnel so essential for the plans of development; and (2) to encourage the adoption of modern and improved methods of production in agriculture as well as in industries, small, medium and large-scale, so that production is increased, quality improved and costs reduced for the benefit of consumers. In its resolution on sales tax, the Federation requested the Union Government to evolve, in consultation with State Governments, a model sales tax Act for adoption by the States. The Federation also appealed to the various State Governments to give their wholehearted co-operation to the Central Government in this matter.

Monetary Stringency

By another resolution, the Federation called the attention of the Government and the central banking authority to the hardship caused to trade

and industry on account of the stringency prevailing in the money market. "Demands for funds from various sectors of trade and industry have naturally increased, consequent upon the rising tempo of activity under the five year plan. The high level of industrial and commercial activity, particularly has absorbed a larger volume of funds, and the prevalence of higher prices for raw materials and semi-manufactured articles, coupled with the increase in costs of manufacture, has added larger rates of wages and emoluments of machinery, to the problem. Increased imports of machinery, capital goods, iron and steel, cement, etcetera, required on a large scale for developmental projects, further account for the absorption of a fairly big amount of available resources. While, thus, on the one hand, the demand for money has substantially gone up, there has been no corresponding increase in the available supply of money, with the inevitable consequence that certain sectors of trade and industry experience considerable difficulty in financing their current operations. The Federation feels that, if corrective measures are not taken in time, the situation created by the monetary stringency in the country will cause a setback not only in preserving the existing levels of trade and economic activity, but also in the smooth progress of the programme of development under the plan.

"The Federation is, therefore, of the opinion that it is quite imperative that suitable remedial steps calculated to ease the position and to impart an element of liberalisation in the present money market conditions are taken at an early date. In particular, it suggests:

"1. Further liberalisation in the policy and programme of re-discounting of bills by the Reserve Bank of India.

"2. The adoption of an active open market operations policy for Government securities.

"3. Relaxation in the procedure governing the payment of bills for the supply of stores and materials to Government and quasi-Government departments, with a view to expeditious settlement of accounts.

"4. A waiver or relaxation of the requirement in regard to deposits with Government and quasi-Government departments for securing due performance of contracts or execution of works for, or on behalf of, public authorities.

"5. Immediate payment of compensation on account of the nationalisation of life insurance as well as early payment of compensation for other properties acquired by the Central and State Governments.

"6. Evolving suitable proposals for the resources with the Life Insurance Corporation of India being available both to the private and public sectors for financing development schemes.

"7. Providing quicker remittance facilities to banks, thereby reducing the amounts of money in transit.

"8. The opening of branches in the rural areas by banks with the assistance of the central banking authority to mobilise rural savings.

Exports to South-East Asia

The prospects of expanding exports to four leading markets in south-east Asia, particularly for the products of the engineering industries, are considered favourable as a result of the discussions held by Mr. K. B. Lall, Joint Secretary to the Ministry of Commerce and Consumer Industries, with Government and business representatives in Rangoon, Bangkok, Singapore and Phnom Penh (Cambodia). Mr. Lall led the Indian delegation to the E.C.A.F.E. Committee on Industry and Trade, which recently met in Bangkok. He utilised this opportunity to explore possibilities of developing trade with these four countries. His discussions with official and trade interests were devoted to finding out ways and means of augmenting trade and assessing specific difficulties in the way of trade expansion. These discussions have shown the common desire to strengthen commercial ties among Asian countries. It has, however, been difficult to fulfil this desire so far because of trading communities in the region have remained isolated from each other, and do not have an adequate knowledge of the conditions in one another's markets. The first step, therefore, in the direction of developing trade is to break this isolation among business men. The discussions have also shown that traders in those countries are generally satisfied that, in quality, Indian products are as good as those of the traditional suppliers. But an improvement is needed in business methods. Particular attention has been drawn to the need for proper business relations between agents and exporters, an adequate guarantee for the quality of the product, after-sales service and safe and attractive packing. Some instances were quoted in which the machines arrived safe in the importing country, but the packing had broken loose. There are some import restrictions and foreign exchange difficulties in these markets. Methods of overcoming them are, however, being explored.

CORRECTION

In the New Delhi letter on page 406 of the issue of Capital dated 21st March, under the heading "Tube and Tyre Manufacture", it was wrongly stated that the Firestone Tire and Rubber Co. of India had "already been granted a licence to set up a factory in Madras State." This, of course, refers to the Dunlop Rubber Co. (India) Ltd., and

London

GROWING ANXIETY ABOUT U.K. LABOUR TROUBLES

PUBLICATION OF WHITE PAPER ON DEFENCE DELAYED

(FROM OUR LONDON CORRESPONDENT)

THE strike of 200,000 shipyard workers has been in progress throughout the past week. Work on between four and five million gross tons of shipping under construction or repair in more than 70 yards has been at a complete standstill. The costs to shipbuilders and ultimately to owners must run into several millions of pounds. But even more damaging will be the indirect repercussions on the economy as a whole. The minor run on sterling and the uncertainty on the Stock Exchange are indications of the lack of confidence that is developing. The threat of a progressive strike throughout the engineering industry, starting with one million workers in selected areas and extending to the total labour force by 6th April, and of similar action by the railwaymen in support of the N.U.R. rejection of the Tribunal's award of a 3 per cent wage increase, which it called "an insult", would prove crippling. In view of the uncompromising attitude hitherto adopted by both sides in the shipbuilding and engineering industries, the Minister of Labour and his officials have done well to get the employers first to agree to arbitration and, when the trade unions rejected that way out, to negotiate direct if the unions also accepted an investigation into restrictive practices. Peace in the shipyards is possible along those lines but the situation is "delicate." The engineering strike would probably be obviated along similar lines, while the Transport Commission is negotiating, with some hopes of success, with the railwaymen.

The Government's anxiety in the face of these dangers is understandable, and it is concentrating its main activities on fostering sensible solutions. At the same time, the Prime Minister and the Foreign Secretary, the former after a most successful defence of the Government's policy at a meeting in Leicester, have been busy in Bermuda striving to re-establish Anglo-American accord in the international sphere. Their Ministerial colleagues here are pressing forward with domestic measures, unperturbed by by-election portents of increasing unpopularity. They are confident the results will restore the party's fortunes before the next general election.

Budget Build-up

The approach to Budget day will be choked with documents now that the Defence White Paper has been delayed for about a week. It is due in the first week of April along with the Economic Survey, the Exchequer returns, the National Income White Paper, the gold and dollar figures for March and the Balance of Payments White Paper. The climax will be the Budget itself, which becomes more problematic the longer the defence bill is kept secret, though recent hints lead to an expert assessment that the defence estimates will total about £1,450 million. Meanwhile, the modest improvement in the outlook for the current year continues. With only two weeks remaining, the national accounts show an above the line surplus of £318.8 million. At this time last year, the surplus was £412.5 million. Below the line there is a deficit of £556.6 million, so that the overall deficit to 16th March is £237.8 million. At the corresponding date last year, the below the line deficit was £503.4 million and the overall deficit £117.8 million. The outlook is brighter than was expected a few weeks ago, but even so Mr. Thorneycroft is not expected to go very far in offering widespread relief in the face of the continued threat of inflation. Incentives are another matter, and help for those in real need, but no one would dare make predictions at this stage. Cutting expenditure is a difficult job, as the £14 million extra guarantee to farmers just announced goes to show, while the National Health Service doctors want a lot more if they are to join the lengthening strike queue in October.

Qualified Optimism

Sir Graham Hayman, President of the Federation of British Industries, said in Birmingham the other day that the objectives of the Government's restrictive measures—to overcome inflation and the weakness in the balance of payments—were as vital as ever. "We are still operating at the very edge of the margin. The economy appears to remain at a point of balance where the forces of restriction and expansion are fairly evenly matched. Any small but premature relaxation might well rapidly multiply its effect, and the most careful timing must be observed in giving reliefs if we are to avoid a fresh spurt to the inflationary conditions." This view leads Sir Graham to think that there is very little room for tax reduction in the coming Budget except in so far as Government expenditure can be reduced. He would like to see immediate changes limited mainly to the reintroduction of investment allowances and the removal of certain serious taxation anomalies. "This is a sensible view but it is not as widely held in the business world as it should be. On the outlook generally, however, Sir Graham was reasonably optimistic, as indeed were many of those who heard him, seeing that the number of workers in the Midlands on short time dropped from 34,470 on 23rd February to 23,000 on 16th March. He is also supported by the production figures for the motor car industry and by the detailed trade figures for February. Production of both cars and commercial vehicles is well up on January (47,640 cars against 41,598 and 20,147 goods

vehicles against 17,866) and exports of cars (28,400) are higher not only than in January (26,372) but also in February of last year (26,040). The total value of all road vehicles and aircraft exported last month was about £1 million down on February 1956. All the other staple export lines showed good increases—chemicals £3 million, iron and steel £4 million, non-ferrous metals and manufactures £4 million, machinery £7 million, electrical apparatus £2 million and ships £3 million. A notable feature of the import trade was a £4 million drop in iron and steel purchases. Oil cost £4 million more. For crude and partly refined petroleum, we paid £1 million less than in February 1956, but got only three-quarters of the quantity.

Costs of Suez Closure

The effects of the closure of the Suez Canal have varied so greatly that it will probably be some time before an overall assessment is possible, for even within the same industry experience has been different. Sir Colin Anderson put the cost of the closure to the Orient Line at some hundreds of thousands of pounds in lost passenger revenue from Colombo and the Mediterranean ports and through higher fuel oil prices. The Liverpool Steam Ship Owners' Association attempts to present a more complete picture as far as the shipping industry is concerned in its annual report. It enlarges on Sir Colin's point by showing that the extra mileage of the Cape route matters, particularly for the East African and Persian Gulf ports. But the loss that affects all routes which formerly passed through the Canal, including Australia, where the extra mileage is not great, is the revenue from cargo and passengers to and from the normal ports of call on the Suez route, which "contribute substantially to the financial result of the voyage as a whole." The loss to individual liner companies has undoubtedly been severe, but for the United Kingdom as a whole the impact of the Canal closure has been surprisingly mild and seemingly short-lived. Its course may be traced through the monthly trade and navigation accounts. Imports were affected first. In the words of the Liverpool Association, "all ships normally proceeding via the Canal had forthwith to be diverted via the Cape, and many of those on voyages at the time had to turn round and travel long distances before getting back on to the Cape route." Import arrivals in U.K. ports fell in November and December, showed a big jump in January when the diverted ships arrived in a bunch, and were more or less back to normal in February. The effect on exports was slower to develop and might have been expected to last longer, but here again the February figure cannot be far away from normal and it is well in excess of the average for the first quarter of 1956. No firm conclusion can be based on the experience of a single month, but it is surely surprising that only four months after the Canal had been closed the trade of the United Kingdom should have returned to its normal dimensions both in exports and in imports. The ports that have suffered most are not the terminal ports in Britain and in Europe, Australia and the Far East, but the intermediary ports in the Mediterranean, the Persian Gulf and East Africa. One must sympathise, too, with the liner companies whose services have been diverted round Africa but who are barred by local carrier agreements from competing for trade in the ports at which they are now obliged to call.

More Commonwealth Cotton

The reports and accounts of the British Cotton Growing Corporation show a decrease in earnings

which hardly seems to justify the recently announced decision of the directors to recommend an increased dividend of 12½ per cent, of which 6½ per cent is a bonus, against the 11 per cent which was paid in each of the two previous years. Cotton and other profits amounted to £198,323, against £250,868 in the previous year, and though the income from investments rose to £23,101, against £18,370, the net profit was struck at £293,530, against £119,264. A transfer of £10,000 is made to trustee securities reserve, against £45,000 transferred to contingencies reserve a year ago, and the carry forward will again be increased, this time from £299,506 to £349,002. A note on the balance-sheet gives outstanding commitments for capital expenditure as £57,492, compared with £261,711 a year previously. The report records further construction work, extensions and modernisation of ginning plants in Nigeria, where a new ginny in Kuru should soon be operating and new offices are to be erected at the headquarters in Zaria. There have been minor improvements to ginning plants in Uganda in conformity with recent legislation and the saw ginning plant at the Mbale ginny is to be replaced by roller-ginning equipment. A new high record, the report says, was established last year for cotton production in the Commonwealth (excluding India and Pakistan) and the Sudan. The total was given as 1,279,000 bales, against 1,222,400 bales in 1955, and 1,227,600 bales—the previous record—in 1954. Production rose sharply last year in the Sudan and Uganda but Nigeria had a setback. The crop in Aden increased further to 30,709 bales against 23,300 bales in 1955.

Brevities

Oriental Telephone and Electric Co. is to be placed in voluntary liquidation, enabling the liquidators to make an interim distribution to stockholders. The board states that negotiations have not yet reached a stage where it is possible to estimate when agreement is likely to be reached on the final purchase price to be paid for its nationalised telephone undertakings.

The board of Jorehaut Tea proposes to transfer ownership of the estates in India and the company's other interests to a new holding company to be called Jorehaut Holdings. Stockholders will be issued with an equivalent amount of shares and stock in the new concern in place of existing holdings. The present company will continue to work the Indian estates.

The European Coal and Steel Community is to raise \$35 million for the development of coal and steel industries in member countries.

The Board of Trade has for disposal from its strategic tungsten stocks about 500 tons metal content and has instructed British Tungsten to dispose of this quantity gradually as required so as to avoid undue disturbance of the market. Recent reports put the amount for disposal at upwards of 3,000 tons of tungsten ores.

With the import and export price index numbers both up by one point in February, the terms of trade were unchanged last month. The import price index rose from 110 to 111, mainly due to higher prices for fuels and for food, beverages and tobacco. The index of export prices rose from 109 to 110. The main influences were higher prices for manufactured goods, mainly in the engineering categories.

Carried any elephants lately?

WE transport some pretty fascinating stuff about the globe... take the case of the lovesick elephant that had an urgent date with a Zoo or someone in London. Then there was the ripe Gorgonzola, the film star wanted in a hurry, we were as keen to deliver it; you know how noisy a cheese can get! And of course, we're forever rushing merchandise from place to place — to make sure our customers get on the market before the other man does.

By the way, have you any cargo for any place? There are a thousand good reasons for sending it by Air-India International.

CARGO BY AIR is quick, convenient, saves money on transit insurance, gets you on the market first, brings you the goods when you want them, enables you to fulfil urgent contracts... we're out of breath, but you get the idea!

INDIAN MANGANESE ORE LOSES GROUND IN U.K.

COMPETITION FROM BRAZIL AND RUSSIA

(FROM OUR BOMBAY CORRESPONDENT)

INDIAN manganese ore has lost substantial ground in the U.K. market because of increased competition from Russia and South Africa. Total imports of manganese ore into the United Kingdom during the first 11 months of last year rose to 424,156 tons from 388,660 tons in the corresponding period of the previous year, but those from India recorded a decline of 36,340 tons. Supplies from India were placed at 82,254 tons, compared with 118,594 tons in the first 11 months of 1955. Imports from Russia and South Africa, on the other hand, rose to 146,439 tons and 57,441 tons from 109,576 tons and 34,937 tons respectively. The full implications of Russian competition are not yet known because that country's trade is often conducted on considerations other than purely economic ones, but the fact remains that she is in a position to influence the world's manganese business to a large extent. Global reserves of high-grade ore are computed at over 10,000 million tons, of which Russia accounts for nearly 48 percent. The Chiatara deposit in the Caucasus mountains is the largest single mine, being continuous for 14 miles. The second major Russian manganese ore deposit is located in Nikopol in the Ukraine.

India has, however, another formidable competitor in Brazil where the envisaged expansion of manganese production will reduce America's dependence on this country for supplies. Manganese deposits in the Amazon region are being explored jointly by Brazilian interests and the Bethlehem

Steel Company which holds a 49 percent interest in the undertaking. These deposits, with a manganese content of 45 percent, were discovered in 1946. Output from this region is likely to total 600,000 tons a year, of which 400,000 tons are to be shipped to the United States. With the help of an Export-Import Bank loan of \$67,500,000, a 120-mile-railway was built from the mines to the Amazon. A modern deep water port capable of taking ocean-going vessels has also been constructed with floating loading piers and capacity to handle 2,000 tons of ore an hour. Yet another potential competitor is Ghana where the African Manganese Company owns the largest single property of its kind in the world in Nanta, some 40 miles from the Takorach harbour. Now independent, Ghana is expected to make an all-out bid to develop her economy and manganese will be one of the commodities which she will seek to produce in increasing quantities for the export market. It would seem, therefore, that India will have to streamline and mechanise her manganese mining operations. The country should also maintain a flexible export duty policy if she is to retain her position in the export trade.

Brisk Trading in the Cotton Market

"King cotton continues to soar" is how a daily journal describes the local cotton market. Trading was brisk, both in the futures and the spot markets, with many popular varieties topping the ceilings. The Jarilla March and the April Vijay contracts advanced further on renewed bull support. The former touched Rs. 805 a candy while the latter was quoted at Rs. 879 a candy. Tenders against the Jarilla March contract totalled 400 bales. In sympathy, Jarilla May and Vijay June also touched new high levels at Rs. 696 and Rs. 840 a candy respectively. The spot market rocketed upwards following a scarcity in the popular varieties and renewed mill demand. The growths particularly affected are the new crop

Vijay, Surti and good Jarilla whose prices are about Rs. 30 to Rs. 50 a candy above the ceiling limits. The principal reason for this activity is that the cotton crop estimate now stands at 49 million bales, against the earlier estimate of 54 million bales. This is just adequate to meet domestic needs and a modest export quota. Mills have complained to the authorities that they are unable to obtain their needs of the popular varieties at reasonable prices. The authorities have declared that any sale or purchase of cotton above the permitted level is illegal. There is considerable nervousness in trade circles about the steps the Government might take to stabilise prices and ensure a steady supply for mills. It is believed that if the position does not improve, New Delhi may order the freezing of existing stocks and regulated sales to mills. Meanwhile, the mills are holding off purchases unless absolutely necessary.

Moderate Enquiry for Piecegoods

There has been some activity in the piecegoods market, moderate enquiries being received from upcountry centres. Interest is chiefly focussed on superfine qualities in cambrics, doria cloth, mulls and voiles. There have been some enquiries for medium counts also, but the coarse varieties have been neglected. Prices have ruled steady. Now that it is clear that there will be no change in the excise duty policy, the textile trade may come to normal as stocks in consuming centres are reported to be low. Fair business was done with the United Kingdom in medium greys. Burma also entered the market and West Africa showed some interest after a long period of inactivity. The Sudan also resumed purchases and modest business was reported. The yarn market continued to be easy on lack of buying support. Futures and spot prices declined as the post-Holi demand, which was expected earlier, failed to materialise. Weavers from Delhi, Surat, Malegaon and Banaras showed no inclination to make new purchases.

Uttar Pradesh

CONGRESS VICTORY IN UTTAR PRADESH

SCHEME TO REFORM AGRICULTURAL EDUCATION

(FROM OUR LUCKNOW CORRESPONDENT)

THE Congress has been returned to power with an absolute majority in Uttar Pradesh. With eight results yet to be declared, the party position in the 430-member Legislative Assembly is as follows: Congress 281, Praja Socialists 44, Jan Sangh 16, Communists 9 and Independents 72. Although the list of Independents includes 23 members of the Lohia socialist group, the number of non-party members who have been returned this time is impressive. Among them are many Rajas and zamindars whose local influence has carried them to victory. In the last general elections, the Congress received 47.9 percent of the votes cast but this time the percentage has gone down to 42.65. The P.S.P. has received 13.98 percent of the valid votes which compares unfavourably with its total poll of 17.8 percent in the last elections. The Jan Sangh's poll has gone up from 6.37 percent in 1952 to 9.59 percent. The Communist Party has improved its voting position, the poll in its favour having gone up from 0.93 percent to 3.6 percent. The Ram Rajya Parishad, which was the only State party recognised in U.P., has secured only 0.75 percent of the valid votes, against the 3 percent required for retaining its former status.

Election Surprise

The Opposition has increased its numerical strength considerably, getting almost three times the number of seats it occupies in the present House (47). Of the results declared so far, it has annexed 138 seats, and is likely to get two or three more. Of the 86 Lok Sabha seats, results have been declared for 62. Forty-nine seats have gone to the Congress and 13 to the Opposition so far. The biggest election surprise in the State was the defeat of the Planning and Industries Minister, Mr. C. B. Gupta, by the P.S.P. General Secretary, Mr. Triloki Singh, by an overwhelming majority of 12,000 in the Lucknow East constituency. Mr. Gupta had for many years been the "party boss" of Uttar Pradesh. It is, however, conceded that Lucknow East has voted not so much against the Congress as against Mr. Gupta personally. Mr. Gupta's refusal to admit defeat and his unilateral announcement that he will fight another bye-election has not enhanced his popularity. Another interesting feature of polling in U.P. is the Congress victory in three of the predominantly labour constituencies of Kanpur. This is all the more significant in view of the agitation that the defeated Suti Mill Mazdoor Sabha leaders have been carrying on against rationalisation in textile mills.

The results from east U.P., which suffers floods and drought, show that the Leftists did not have a walk-over as was expected. It may also be mentioned that some Leftist leaders like Professor Shibbanlal Saxena and Mr. Genda Singh were clearly defeated in Parliamentary contests although they were elected to the Assembly seats. Dr. Lohia is another prominent loser to the Congress. The electorate in the State has increased in size since 1952 from 31.7 million to 34.5 million. The percentage of polling has been as high as 70 in urban and 60 in rural areas. In double-member constituencies, the number of invalidated votes has been very high—15,000 to 20,000 in some constituencies. This is attributed to the confusion caused by the existing method of casting votes. An analysis of the voting figures, however, shows that in spite of the increased political consciousness of the electorate, caste and communal considerations still play a decisive rôle.

Survey for Magnesite Deposits

The Central Geological Department has recommended the survey of the Garhwal and Almora districts of Uttar Pradesh for discovering magnesite deposits in view of their importance for the expansion of the iron and steel industry. The survey has been recommended by a team of geologists which was deputed to collect about 10 maunds of magnesite bulk samples from the Almora area for detailed examination at the National Metallurgical Laboratory in Jamshedpur. The collection was made from an outcrop of the mineral near Doba and the adjoining areas. The team has suggested in its report that careful sampling and investigation may reveal the presence of large and good quality deposits and that it would be easy to utilise them if an easy electrical method of reducing magnesite metal from magnesite could be developed. It also states that if the electrolysis of magnesite could be perfected on a commercial scale, the numerous streams in this area could be harnessed for producing cheap electrical energy. In this connection, it is interesting to note that hydel power is already available in Bageshwar.

Food Production Department

The State Government is likely to set up a food production department for accelerating the pace of agricultural development through better co-ordination and supervision. Except in the N.E.S. blocks and the community project areas, agricultural development has been lagging behind targets. An overhauling of the present system of agricultural education is also engaging the attention of a high-level committee which will study the problem with

particular reference to the need for co-ordinating agricultural education with research. In the Government agricultural college in Kanpur—which is the premier institution of its kind in U.P.—there are two types of experts. One section is exclusively engaged in research. The other is engaged primarily in teaching, and in research when there is time. It is proposed to bring about a change in the functions of these experts as also to place the entire Kanpur district in charge of the agricultural college authorities.

The rising trend of food prices on the eve of the elections has now been reversed in the State. Wheat is now selling at 24 seers a rupee against 1 seer 14 chattaks a week ago. As the time for harvesting the rabi crop is drawing near, wheat and gram prices are expected to decline further. When wheat prices were soaring the State Government opened a chain of fair price shops where subsidised imported wheat was sold at the rate of 2 seers 12 chattaks a rupee.

Second Plan Programme

Mr. V. T. Krishnamachari, Vice-Chairman of the Planning Commission, paid a two-day visit to Lucknow. He had discussions with the State Government on the 1957-58 programme of the second five year plan. The Chief Minister, Dr. Sampurnanand, asked him to enable the State to go ahead with the first phase of the Yamuna hydel project in the coming financial year. He also pleaded for an

early revision of the formula for the division of the State's collection of small savings. Among the other points urged by the Chief Minister were the difficulty of the State in finding money to meet unforeseen contingencies and the unscientific nature of the present rigid division between a plan and a non-plan item of expenditure.

Training Facilities for Trade Unionists

Labour leaders in Kanpur have generally welcomed the Planning Commission's proposal to open colleges for "the right type of education in trade union leadership." They expressed their views to the Central Government's Labour Education Team which visited Kanpur last week. Mr. Arjun Arora, one of the labour spokesmen, admitted that most trade unionists were at present drawn from the educated middle class who were not actual workers. Mr. Surya Prasad Awasthi, another labour leader, agreed with the aims of the proposed education of workers; but the President of the U.P. branch of the I.N.T.U.C., Mr. Jagdish Chandra Awasthi, sprung a surprise by his statement that "if you teach the worker to be a trade unionist, he will be dismissed by the employer." Mr. Awasthi, however, suggested that the proposed Harihar Nath Shastri Memorial Institution in Kanpur should be converted into a trade union college. Another trade union leader, Mr. Ganga Sahai Chaubey, was of the view that the money for running such colleges should be obtained from the Government and employers.

Indian Airlines carry over 500,000 passengers every year

India's highway in the sky... —and it belongs to you!

Servant of modern India, her national airline covers over 20 million miles a year, operates 132 flights each day

EMPLOYING over 9,000 trained personnel, flying over 20 million miles every year and operating 132 daily flights — Indian Airlines Corporation is the largest internal airline in the East... and it belongs to the people of India!

Indian Airlines Corporation is a mighty organisation, doing a mighty job — and it is proud of its role in transporting goods and mails, conquering vast distances, bringing the peoples of India ever closer together.

INDIAN AIRLINES CORPORATION

4-Chittaranjan Avenue, Calcutta. Telephone: 23-5141 (6 lines)

"Our highways of to-morrow ...

can be built by
CATERPILLAR
to-day!"

Because India's expansion programme is in full swing many new industries are coming into existence and due to the 'Grow More Food' campaign more food is being produced. More and more goods are being carried by road transport.

To open up new areas, to take care of the increasing traffic, new roads must be built and old roads have to be improved.

Better roads can be built with Caterpillar equipment. You do not save time by stopping the clock. Neither do you save money by buying cheap equipment. Caterpillar equipment will save you both time and money by giving you better output with less downtime and more economical operating costs.

Invariably a first choice among Government engineers and leading contractors, CATERPILLAR will, no doubt, play a leading part in building India's future Highways.

The needs of road transport were stressed at the meeting of the Motor Vehicles Merchants Association, held on 22nd March. Import curbs were criticised, as it was felt that more vehicles were urgently needed. The amended motor vehicles Act was welcomed by the trade which argued that protection for the motor industry must be reinforced by a new liberal policy for road transport, permitting inter-State traffic. Road services to Kurnool and Bewdha have been started recently. The lorry traffic along the trunk roads now enables the carrying of oil in tanker trucks from Madras. The operators, however, need oil, spares and tyres and shortages affect efficiency, as the trade complains. The producers of accessories are in need of encouragement. While the cut in prices of trucks may help the haulage industry, the maintenance of the trade in spares demands a fair volume of imports.

BRITISH OVERSEAS AIRWAYS CORPORATION WITH QANTAS EMPIRE AIRWAYS LIMITED

That the operations of speculators in the fatka market are often responsible for the discounts at which heavy sacking has to be sold is evident from the daily quotations. It will be noted that at times B Twills, the fatka counter, for the fatka delivery period are at a lower price than heavy Cees for the same period, though it costs more to make a B Twill bag than to make a heavy Cees bag, and they are both the same weight. When this happens, it is due to selling pressure in the fatka market, which prevents mills from being able to sell at prices which will cover the costs of raw material and production. There are also times when the fatka-wallahs are bullish and push up prices without justification because, say, some operator is trying to organise a "corner". Even at these times, however, the fatka has little to recommend it.

Small sowings of white jute are reported in Assam and of mesta in the Daissee districts. The weather has been dry most of the week but some districts had showers on Monday night. More rain would be beneficial. In East Bengal, the weather was hot and dry most of the week but showers were reported on Monday. Sowing has progressed in the deltaic lowlands. Sowing in the midlands will go ahead wherever there is rain.

IMPROVED arrivals and reduced buying recently brought prices down to Rs. 29 for B Bottoms, Rs. 27-8 for C Bottoms and Rs. 25-8 for X Bottoms. But arrivals have again dried up in the past few days. Unfortunately, there has been little improvement in the jute itself, which is once again very moist. In the absence of an appreciable increase in prices it is found that sellers are reluctant to part with their jute. Pucca bale prices have declined considerably. There are sellers of Export Firsts at Rs. 190, Export Lightnings at Rs. 180 and Export Hearts at Rs. 168. Cuttings have weakened, but in general, little or no inter-baler business is reported. The only big buyers during the past week have once again been Adamjees, who have bought kutchra bales for April-May delivery totalling 40,000 maunds. More jute has been available in uncountry agencies, and it is noteworthy that both in Narayanganj and the mofussil, more and more of the early season jute is appearing. Many people read into this an indication that the crop has been much smaller than expected and sellers are "scraping the bottom of the pot." While there is every indication in the market that this could be a fact, it is very hard to believe the trade could have been so hopelessly wrong in its earlier estimates.

Overseas buyers, who paid as high as £110 to cover their requirements at the end of February, and early March, have now completely withdrawn. They are showing no interest even at £100 for Export Firsts. It is understood that even the spot and afloat positions command no premium and it can only be presumed that overseas buyers feel the Canal will open shortly and arrivals will be

Jute yarns and cloth remain quiet but firm. Calcutta goods have had a very steady undertone and quoted 61s 6d for 40in. 10oz. and 47s 6d for 74oz. TRADE here is very dull at the moment and very few transactions are taking place. The possibility of lower prices, judged by the easier trend of raw material values in Pakistan, naturally calls for caution on the part of buyers. Many purchased wisely when prices looked like advancing just about the time of the Suez crisis, and those

GO HAND-IN-HAND

The number of passengers traveling on U.S. domestic airlines will jump from the 42 million who flew in 1956 to 66 million in 1960 and 118 million by 1970, the C.A.A. predicts, in a new booklet entitled *Civil Aviation and Federal Airways Forecast*. U.S. international and overseas air passengers, it says, will rise from the 1956 total of four million to 6.2 million in 1960, 8.9 million in 1956 and 11.5 million in 1970. Other predictions for the U.S.A. are: air cargo will climb from 380

At the 24th annual general meeting of the Indian Coal Merchants Association, Jharia, held on 20th March, 1957, the following persons were declared elected as members of the Executive Committee: Messrs. D. N. Kakkar, Surinder K. Sikri, D. S. Thaker, M. K. Thacker, P. P. Joshi, Hansraj Thacker, Mohanlal D. Sonetta, Rafilal M. Dave, M. S. Shethia, Devchand Amulak Mehta, Chanrakant H. Worah, B. R. Dalmia and K. L. Dixit.

GOOD GENERAL DEMAND AT
TEA EXPORT SALE

MIXED TREND IN DUSTS

AT Sale No. 39, held on 25th and 26th March, export offerings consisted of 59,385 packages which were mainly end-of-season descriptions. There was a good general demand, but prices were generally 1 anna to 2 annas easier except for Whole Leaf grades and the few tippy teas on offer which were strong features. Clean, black leafed sorts were fully firm, while C.T.C.'s followed the general decline, although the smaller Fannings grades were about firm. Due to the poor selection of teas on offer, only plain B.P. is quoted this week.

Quotations

Plain B.P.	Rs. A.P.
110 6	

At the Internal Sale, Dust offerings were 19,298 chests. Middle East types were a strong feature and were frequently dearer while orthodox Assams sold well, particularly the black leafy kinds. Clean Commons and Mediums were well supported while non-wither Doonars were about firm. C.T.C.'s received less support and were sometimes up to 2 annas easier, while the dull fibrous kinds on offer were a weak feature and were often neglected.

Quotations

	Rs.
Medium Doonars Dust	110 0 to 111 9
Medium Assam Grainy Dust	111 6 to 112 0
Medium Assam C.T.C. Dust	2 0 0 to 2 2 0
Best Assam C.T.C. Dust	2 12 0

Of other grades there was a total of 4,009 chests on offer for which there was a fairly good demand and most descriptions were dearer.

FREIGHT MARKETS IMPROVE

THE freight markets in the past week presented a more favourable appearance to owners. A number of re-let American-Continental coal voyages were done at 72s, and the current single voyage rate for new business rose to 68s. Further activity in the grain trades helped bolster up rates, but there was a temporary weakness in the Indian market due to the weight of tonnage available after discharging grain cargoes in this area. A number of vessels were fixed from the Pacific Coast to Bombay at 170s for May-June loading. Unless there are last-minute changes in the destination, considerable congestion is likely to take place in Bombay from April to July in view of the large number of direct fixtures made during the last two or three months. Visakhapatnam-Northern Range showed a further decline of \$1.50 at \$18 for June-July and Madras-Yawata secured tonnage at 125s despite a delay of 10 to 14 days in obtaining a berth.

SUGAR MARKET INACTIVE

During the week ended 26th March, sugar sales in the Calcutta market averaged 5,000 bags daily. Arrivals were 2,000 bags a day and stocks totalled 80,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31-6 for ordinary grain and Rs. 32-6 for big grain. The market was inactive for the best part of the week.

LINSEED DULL

Better conditions have been noted during the past week, and prices have advanced to slightly better levels, following keener enquiries from crushers; a somewhat easier undertone, however, was displayed towards the close due to a fall in demand. With ready goods still very scarce, activity has been rather limited. In the oil section, shippers have been fairly active, chiefly for near positions, and prices have advanced to higher levels. Latest quotations were as follows: March Rs. 21-12 a maund and April-May Rs. 21 a maund.

HIDES AND SKINS FIRM

The market in skins ruled firm. Stocks were less than in the previous week.

Bazaar Sales

(Between 19th and 25th March, 1957).

Cowhides: Wet salted (Ord.) 24,000 pcs. on the basis of Rs. 6-8 to Rs. 9-8; Wet salted (Slaughtered) 18,500 pcs. on the basis of Rs. 12-4 to Rs. 22.
Goatskins: Wet salted (Daissee, Killed) 62,520 pcs. on the basis of Rs. 270 to Rs. 295; Rs. 345 to Rs. 355 and Rs. 370 to Rs. 385; Assam-Dinajpur 6,000 pcs. on the basis of Rs. 265 to Rs. 295; Purneah-Kissanganj-Malda 3,000 pcs. on the basis of Rs. 295 to Rs. 340; Muzafferpore-Patna 75,000 pcs. on the basis of Rs. 290 to Rs. 310.

Bazaar Stocks

(25th March, 1957)

Cowhides: Wet salted 3,08,500 pcs.
Goatskins: Wet salted (Daissee, Killed) 13,000 pcs.; Assam-Dinajpur 44,500 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissanganj 1,11,000 pcs.

SHELLAC MARKET STEADY

During the week ended 26th March, the market was dull at the beginning and steady at the close. The range of quotations was as follows:

Pure Buttonlac	Rs. 100, 102 value.
Lemon No. 1 Shellac	Rs. 102 to 104 buyers.
Lemon No. 2 Shellac	Rs. 95 to 98 buyers.
F. O. Std. 1 Shellac	Rs. 86-8 to 90-8 buyers.
Pure TN Shellac	Rs. 82 to 83-8 buyers; 85, 86 basis doing buyers.
4% I.T.N. Shellac	Rs. 71-8 to 75 buyers.
No. 1 Kusmi Seedlac	Rs. 90, 92 buyers.
No. 2 Kusmi Seedlac	Rs. 85, 87 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 84-8 to 86 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 81-8 to 84 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 76, 75-8 to 78 buyers.
Ordinary Bysaky Seedlac under 5% (C.P.)	Rs. 70 to 73 buyers.
Kireelac	Rs. 30, 31, 30-8 buyers.

Shipments during March until the 20th were 18,934 packages comprising—shellac 12,219 packages, seedlac—4,290 packages, buttonlac—465 packages and others—1,960 packages.

Plantation Topics

RAIN IN S. INDIAN PLANTATION
AREAS

(FROM A SOUTH INDIAN CORRESPONDENT)

AFTER about two months' drought, the plantation belt in south India is getting some scanty showers since the middle of February. These rains are beneficial for tea, rubber and almost all other plantation crops. Some of them, in fact, require more frequent rains to produce the best results.

The Coffee Board has released for export a further quantity of 1,500 tons of coffee from the 1956-57 crop. Tenders have been invited from registered exporters for this quantity. The total allowed for export by the Central Government amounts to just over 11,000 tons out of an estimated crop of about 38,000 tons. The crop estimate is due for revision in March. This is likely to be followed with a larger allocation for export.

Shipments to Russia

A steamer left Cochin on 17th March for Russia with 1,300 tons of pepper, about 8,000 packages of tea, some cashew kernels, coffee and cardamom.

Pepper Dull

The pepper market remains featureless on account of the lack of enquiries from abroad. The final size of the Indian crop is not likely to exceed 20,000 tons against the original estimate of about 24,000 tons as a result of the extensive crop failures in Tellicherry side.

Lemongrass Oil Prices Fall

With the approach of the new season, lemongrass oil prices are falling. Old stocks are now being sold at about Rs. 80 a dozen bottles in the Cochin market against Rs. 135 in the comparable period last year. Brisk trading in forward section is reported. The season usually begins in May in Kerala. Production in 1956 was estimated at the record figure of 1,200 tons to 1,400 tons. A total of about 180 tons of lemongrass oil was exported from Cochin during the first two months of 1957.

COCHIN TEA SALES

At Dust Sale G. 350,000 lbs. of tea were on offer. There was a good demand. The commonest sorts were firm to dearer. Mediums were irregularly 1 anna easier while best liquorings were lower.

INDIAN RUBBER PRODUCTION AND
CONSUMPTION IN FEBRUARY

Indian rubber output in February was 1,165 tons, according to the Rubber Board of India. Exports were 16 tons and 79 lbs. while imports were 539 tons. Consumption by manufacturers was 2,493 tons. Stocks with estates and dealers on the last day of February were 3,697 tons. Stocks with manufacturers at the end of the month amounted to 3,788 tons. Manufacturers also consumed 304 tons of reclaimed rubber of which they held a month-end stock of 537 tons, and used 257 tons of synthetic rubber, their month-end stock of which was 887 tons.

AIMS OF THE AUSTRALIAN
TRADE DELEGATIONPROMOTING EXPORTS IN NEW
LINES

THE first major Australian trade mission, consisting of 37 members, arrived recently in Calcutta. There are on it representatives of the following industries: wheat and flour; dairy produce; wool, wool tops and yarns; tallow; heavy and general engineering; diesel locomotives and railway rolling stock; earthmoving equipment; bulk handling and conveying equipment; cranes; road trailers; tipping hoists; cement making plants; flour milling machinery; boilers; automobiles; tractor and automotive spare parts and accessories; air conditioning and refrigeration equipment; factory construction; radio and telecommunication equipment (including air navigation and airport control aids); plastics. Also there are four executives from prominent Australian Import-Export houses and nine representatives from five Australian trading banks. The members of mission altogether hold briefs for over 250 manufacturers and traders.

Speaking at a Press conference, Mr. John G. Hurley, leader of the mission who is a prominent industrialist and President of the New South Wales Chamber of Manufacturers, pointed out that the mission, sponsored by the Australian Government, was representative of a wide field of Australian primary and secondary industries, banking, export and importing interests. He mentioned his country's "remarkable strides" in developing secondary industries in which factory output has doubled in the last two decades. Recent increases in Australian manufacturing production, had been of the order of between 5 percent and 6 percent annually, Mr. Hurley said. "I am confident that in the weeks to come many of our Indian friends will have the opportunity of learning about Australia's ability to supply a wide range of high quality goods at competitive prices," he added.

Changing Pattern of Trade

Mr. Hurley pointed out that Indian trade figures have already shown a downward trend in imports from Australia due mainly to reduced purchases of Australian wheat—and that, therefore, there was a need to "mitigate such developments which fit better with the new economic pattern of your country". Australian exporters had endeavoured to do this, as the rapid increase over the last four years in India's imports of Australian wool tops showed.

India would end the present financial year with a favourable balance of something like Rs. 6.5 crores. This is not however part of a consistent pattern. The tendency has been for "up and down" balances in Indo-Australian trade. It is encouraging to note, as Mr. Hurley acknowledged, that there has been an increase in Indian exports to Australia (now India's fourth customer) "taking mainly bags and sacks, cotton and hessian piece-goods, tea and linseed oil". In answer to a question he suggested that Australian imports of wool packs now amounting to 3.5 million could be anticipated as rising to 5 million if the present prosperity is maintained. Naturally Mr. Hurley mentioned the question of import and export control policy and expressed the hope that India will shortly be able to introduce a less restrictive import policy so that "Australian and other suppliers will be able to participate to a greater extent in your market."

Trade on Credit

He was however unable to give an encouraging reply to a question as to whether there was any likelihood of an increase in Indo-Australian trade being financed by means of a loan. It may be, of course, that trade can be boosted by means of long-term deferred credits, if not by a large increase in Indian exports to Australia. Mr. Hurley mentioned that plans were well advanced for the establishment of an export payments insurance corporation and that, therefore, before long Australia would be able to compete on equal terms with other exporters to the Indian market. This may have offered some consolation to one enquirer who asked whether among the goods for sale would be overdrafts from Australian bankers.

QUESTIONNAIRE ON MEASURES FOR
EXPORT PROMOTION

The Export Promotion Committee, appointed by the Government of India, has issued a questionnaire to chambers of commerce, business houses and other interests to elicit their views on the problems of increasing exports. The Committee has been asked to report on the nature of fiscal and other concessions to be granted, the nature and extent of the facilities required for the trade and the lines on which the export promotion bodies should function. It has also been asked to recommend measures for transport facilities and the simplification of commercial transactions. The questionnaire seeks the views of business associations and others on long and short-term measures to be adopted by the Government, industry and trade. Suggestions have been invited on the scope for the export of those commodities which have not figured in the country's foreign trade so far. The views of the trade have been invited on other questions such as export policy and procedure, particularly the quota system and export duty. Comments have been sought on the forms of fiscal incentives considered necessary for the purpose, the procedure for refunding excise duty and the import duty drawback. Information on shipping problems, especially cases of discrimination by shipping companies, if any, has been sought.

Commodity Markets

AGRICULTURAL OUTPUT AND
PROSPECTS

MEASURES TO STABILISE PRICES

THE Agriculture Ministry's summary report for 1956 says that in spite of adverse seasonal conditions which affected some crops, the higher tempo of production in agriculture set in since 1952-53 was well maintained during 1955-56. In certain lines however, there was a slight fall in actual yields compared with 1954-55. The overall production of foodgrains in 1955-56 amounted to 63.5 million tons which was 1.95 million tons higher than the target fixed for 1955-56 under the first five year plan. This was, however, less by 3.1 million tons than in 1954-55 due to excessive rains and floods in some parts of the country and drought conditions in others. The fall in production of foodgrains in 1955-56 was mostly accounted for by coarse grains; for the rice output at 25.5 million tons was a million tons more than in 1954-55 and wheat production at 8.4 million tons was only slightly less than in the previous year. On the other hand, the production of coarse grains declined from 22.4 million tons in 1954-55 to 19.5 million tons in 1955-56.

The production of commercial crops with the exception of jute and sugarcane also showed a small decline during 1955-56 compared with 1954-55. The production of oilseeds which touched the level of 6.2 million tons in 1954-55 declined to 5.6 million tons in 1955-56, even then the target of production fixed for 1955-56 under the first five year plan was exceeded by 100,000 tons. The output of cotton, estimated at 4.2 million bales during 1954-55, declined to 4 million bales in 1955-56. The production of jute, on the other hand, showed a marked increase from 2.9 million bales in 1954-55 to 4.2 million bales in 1955-56. Similarly, the production of sugarcane (in terms of gur) increased from 5.7 million tons in 1954-55 to about 5.9 million tons in 1955-56. The index number of agricultural production (with 1949-50=100) stood at 113.7 in 1955-56 compared with 116.4 in 1954-55. Even then it was about 19 percent higher than in 1950-51, the base year of the first five year plan.

The fall in production of some of the principal commodities which coincided with the stepping up of the development expenditure and consequent increase in money incomes, has had the effect of pushing up agricultural prices, particularly those of foodgrains, oilseeds and raw cotton. The Economic Adviser's index number of wholesale prices of food articles stood at 382 towards the close of December, 1956, compared with 331 during the corresponding period of the previous year, showing a rise of about 20 percent and the index number of industrial raw materials stood at 520, compared with 455 during the corresponding period of the previous year, showing a rise of about 14 percent. The increasing demand for food and raw materials likely to be generated by the implementation of the second five year plan, underlines the necessity for substantially stepping up agricultural production and as a result of discussions with the State Governments, the target of foodgrain production to be achieved by 1960-61 has been increased from 75 million tons to 80.5 million tons; that of oilseeds (in terms of gur) from 7.1 million tons to 7.8 million tons; of cotton from 5.5 million bales to 6.5 million bales and of jute from 5 million bales to 5.5 million bales.

Crop Prospects

Prospects for the current year's crop appear to be satisfactory though the floods in parts of Assam, West Bengal, Bihar and U.P. caused damage to the standing kharif crops particularly millets. According to the all-India first estimate of kharif cereals, the overall area under these cereals indicates an increase of 6.3 million acres or 0.2 percent over that of the previous year. The area under cotton, groundnut and sugarcane during the current year, has also recorded an increase over the last year. The jute crop for 1956-57 has been better than last year: the estimate of production being 4.22 million bales compared with 4.20 million bales in 1955-56. Preliminary crop reports indicate that the production of cereals will be slightly better than last year even though millet crops like jowar and bajra may not be better. The outlook for commercial crops is encouraging.

Food Policies

Giving further details of food production and policies, the Food Ministry's summary report for 1956 adds that in contrast with the two earlier years, namely 1954 and 1955, when steps had to be taken to protect the cultivators against a precipitate fall in the prices of foodgrains through purchases at certain fixed minimum prices, in 1956 the main efforts had to be directed towards protecting the consumer against rising prices. A separate Ministry of Food was established in October 1956, because it was felt that a strengthening of the machinery of food administration was necessary to deal with the situation. Production of rice, estimated at 25.5 million tons in 1955-56, was a million tons higher than that in 1954-55 and the production of wheat at 8.4 million tons was lower than that in 1954-55 by about 400,000 tons. The production of other cereals (jowar, bajra, maize, ragi, small millets and barley) witnessed a marked decline in 1955-56; the production estimated at 19.5 million tons was lower than that in 1954-55 by about 2.9

million tons. The total production of cereals during 1955-56, estimated at 53.4 million tons, was lower than the production of 1954-55 by about 2.3 million tons; still it was higher than the first plan target by 900,000 tons.

The Economic Adviser's index number of wholesale prices of cereals was at its lowest, since independence, in May 1955, when it stood at 311. After May 1955, prices started recovering slowly to more economic levels. The heavy damage to the 1955-56 millets crop led to a pressure of demand on rice and wheat and prices of cereals began to harden towards the close of 1955. The Economic Adviser's index number of wholesale prices of cereals rose from 385 in December 1955 to 572 in December 1956, showing an increase of 38 percent. During the same period, the rice index number rose from 436 to 596; the wheat index from 566 to 578; the jowar index from 133 to 328 and the bajra index from 241 to 370. The rise in prices was the cumulative effect of a number of factors, including the damage to the 1955-56 millets crop with its bullish repercussions on the prices of wheat and rice, speculative hoarding of stocks and increased

demand as a result of the increased tempo of development expenditure.

Bigger Imports

During the year as a whole, the total quantities of foodgrains imported amounted to 1,420,000 tons, valued at about Rs. 56.3 crores as against the import of 700,000 tons, valued at Rs. 33.1 crores during 1955 and import of 810,000 tons, valued at Rs. 47 crores during 1954. The Government of India became a party to the revised International Wheat Agreement of 1956 with the guaranteed annual purchases of 200,000 metric tons of wheat. The Government have also entered into an agreement with the U.S. Government for the import under P.L. 480 of wheat and rice of the value of \$226.4 million over a period of three U.S. fiscal years ended on 30th June, 1959. About 3.4 million tons of wheat and 190,000 tons of rice are expected under this Agreement. A quantity of 60,000 tons of rice was also contracted with the Government of China and another agreement was entered into with Burma for the import of 2 million tons of rice over a period of five years.

In view of the rising trend of prices, exports of rice and other coarse grains, like jowar and

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices by groups, have now been brought up to February, 1957. As compared with January, the February Indices for Food, Clothing, Fuel and Lighting, and Miscellaneous remain unchanged at 468, 543, 268 and 283 points, respectively.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living remained unchanged at 414 points during February, 1957.

The reliability and high efficiency in design, materials and performance associated with Weir Auxiliaries for steam installations are now being applied to Weir equipment for Nuclear Power plant.

Research, development, design and manufacture of the highest standard, maintain Weir leadership in the auxiliary field whatever the source of energy.

We invite consultations on all questions relating to design and manufacture of Pumps, Valves, Heat Exchangers and other Auxiliaries for Nuclear Power circuits.

In the rapidly changing field of power reactor technology, the expert assistance which we can give on such equipment is essential.

The ENGLISH ELECTRIC Company Limited, has been awarded contracts for the first five 200 MW steam turbo-alternator sets to be ordered and produced in the United Kingdom.

The Company is the first manufacturer to have on order at the same time units of all the standard ratings of the Central Electricity Authority, U.K., namely:—

200 MW,	2350 p.s.i.g.,	1050° F.	reheat cycle
120 MW,	1500 p.s.i.g.,	1000° F.	reheat cycle
100 MW,	1500 p.s.i.g.,	1050° F.	straight cycle
60 MW,	1500 p.s.i.g.,	1050° F.	straight cycle
60 MW,	900 p.s.i.g.,	900° F.	straight cycle
30 MW,	600 p.s.i.g.,	850° F.	straight cycle

and foremost

The Company supplied the generating plant for Drakelow Power Station and Stourport B.2 Power Station, which have recorded the highest thermal efficiencies of any central stations in England.

Manufacturers of the famous CANBERRA Jet Bombers

maize, were banned in January 1956. The Government practically stopped purchases of foodgrains in the internal markets. The Central and State Governments had to take steps to release stocks of wheat and rice at the main consuming centres during the course of the year. Towards the end of October 1956, about 18,000 fair price shops had been opened in different States. Wheat is being released at 14 a maund and rice at Rs. 16 a maund ex-central godowns or on a f.o.r. destination basis. The retail issue prices for sale of wheat and rice are fixed by the State Governments after allowing a reasonable amount to meet incidental charges and an element of profit to the retailer. During the year 1956, while the imports amounted to about 1.4 million tons, the Government releases through its depots and fair price shops amounted to about 2 million tons.

Outlook for Coming Months

According to present indications, the production of foodgrains in 1956-57 is expected to be slightly higher than in 1955-56. The all-India first estimate of kharif cereals for 1956-57 indicates an increase in acreage of 6.3 million acres or 0.2 percent over that of the previous year. The prospects for the rabi crop are encouraging. Prices of cereals, which fell at the beginning of January 1957 as compared with November 1956, again began to harden towards the close of the month. In view of this, the Government announced that no internal purchases of rice and paddy would be made for the purpose of building stocks. Further, restrictions on advances against paddy and rice, which were withdrawn in November 1956, were reimposed with effect from 11th February, 1957, to prevent hoarding and of large stocks by traders. The new wheat and gram crops, which are expected to be satisfactory, will start coming into the market in March and April 1957. It has been decided to construct permanent foodgrain storage godowns of the capacity to build a reserve of 2 million tons of foodgrains. Some of these godowns have been completed, some are under construction and the rest are at various preliminary stages.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced by 0.3 percent to 422.3 during the week ended 9th March, compared with 421.2 for the previous week. The index was lower by 0.9 percent when compared with the corresponding week of the previous month, but was higher by 10.2 percent than that of last year. Higher prices of gram (+5%), tea for exports (+4%), wheat (+2%) and rice (+1%) raised the index for Food Articles by 0.5 percent to 404.9 in spite of a decline in the prices of dal arhar (-1%). The index for industrial Raw Materials went up by 0.6 percent to 519.6 as a result of a rise in the prices of manganese ore (average export price) (+8%), gingellyseed in Jhansi and raw jute (+3%, each), rapeseed in Calcutta, groundnuts and linseed (+2% each), and lac (+1%), although prices of gingellyseed and rapeseed both in Bombay, raw cotton, raw wool and copra (-1%, each) witnessed declines. The index for Semi-Manufactures worked out to 402.8, compared with 403.2 (revised) for the earlier week. Items which exhibited significant changes were: brass, groundnut cake and gingelly cake (-3% each) and gingelly oil and zinc (+2% each). An advance in the price of jute manufactures (+1%) raised the Manufactures group index to 384.2 compared with 384.0 for the previous week. Prices of Calcutta pepper (-6%) and betelnuts (-2%) in Calcutta and turmeric (-4%) and bricks and tiles (-3%) showed declines while those of black pepper in Cochin and chillies (+2% each) and betelnuts in Bangalore (+1%) were marked up, and the index for the Miscellaneous group fell by 0.9 percent to 569.7 compared with 574.9 (revised) for the previous week.

COMPANY AND PUBLIC NOTICES

THE BOMBAY DYEING & MFG. CO. LTD.

NOTICE

THE Eighty-fifth Annual General Meeting of The Bombay Dyeing & Manufacturing Co., Ltd., will be held at the Registered Office of the Company, Neville House, Ballard Estate, Bombay, on Thursday, 18th April, 1957 at 4-30 P.M. to transact the following business:—

- To adopt the Directors' Report and the audited Balance Sheet and profit & Loss Account for the year ended 31st December, 1956.
- To sanction the declaration of a Dividend.
- To elect a Director in place of Mr. Maneklal Premchand who retires by rotation and is eligible for re-election and to consider, and if thought fit, to pass the following resolution, of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement is annexed hereto as required by Section 173 of the said Act:—
"RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Mr. Maneklal Premchand, who has attained the age of 67 years and who retires by rotation, be and he is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."
- To elect a Director in place of Mr. Pratap-sinh Mathuradas who retires by rotation and is eligible for re-election.
- To appoint Auditors for the current year and to fix their remuneration.

AND for the purpose of considering, and if thought fit, to pass with or without amendment as may be permissible the following Resolutions as Ordinary Resolutions and/or Special Resolutions as specified below:—

ORDINARY RESOLUTIONS

I. RESOLVED that each of the existing 1,00,392 Ordinary Shares of the face value of Rs. 250/- each in the Capital of the Company which have been issued and subscribed and each of the 2008 Shares of the face value of Rs. 250/- each in the Capital of the Company not issued so far be sub-divided into ten shares of the face value of Rs. 25/- each, such sub-division to take effect as from the first day of October, 1957, and that Clause 5 of the Memorandum of Association of the Company be altered accordingly.

II. RESOLVED that the Directors be and they are hereby authorised wherever deemed necessary by them to exchange fresh certificates for such Shares of Rs. 25/- each in place of the existing Share Certificates in the names of those Shareholders whose names stand on the Register of the Company as on 1st October, 1957, and that such fresh Certificates be ready for delivery within six months from 1st October, 1957.

III. RESOLVED that the Registers, Books and Documents of the Company required to be maintained and kept open for inspection under the provisions of Companies Act, 1956, and particularly under Sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301 to 304, 307, 356 to 360, 362 and 372 and Schedule VIII to the Act, be kept open for such inspection by the persons entitled thereto under the aforesaid provisions to the extent in the manner and on payment of fees, if any, specified in the aforesaid provisions at the Registered Office of the Company between the hours of 10-30 A.M. to 1 P.M. on all working days, except when the Registers and Books are closed under the provisions of Companies Act, 1956, or the Articles of Association of the Company. Provided, however, that the Register required to be maintained under Section 307 of the Act, shall be open for inspection of the Members or holders of Debentures of the Company, if any, as aforesaid between the times abovementioned during the period prescribed by Sub-section 5(a) of Section 307.

IV. RESOLVED that the Resolutions passed at the 82nd Annual General Meeting of the Shareholders of the Company numbered 1, 2 and 3 regarding exchange of areas, surrender by the Company of land held under leases of which the Lessors were the Executors of the late Sir Ness Wadia and sale by the Company of land to National Peroxide Ltd., subject to alterations in areas and prices resulting from joint surveys and the demands of the Municipal Corporation be and they are hereby confirmed and the proposed transactions approved.

V. RESOLVED that the Directors be and they are hereby authorised to exercise the powers of exchange, sale, conveyance, lease, assignment and other powers specified in Sub-clause IX of Clause 3 of the Memorandum of Association and Article 118(VI) of the Articles of Association of the Company as the Directors may from time to time deem necessary or desirable in the interests of the Com-

pany on such terms and conditions as the Directors may fix.

SPECIAL RESOLUTIONS

VI. RESOLVED that in place and stead of the existing Clause 3 of the Articles of Association of the Company, the following Clause be and the same is hereby substituted as from the first day of October, 1957, as Clause 3 thereof:—

3. The Capital of the Company is Rs. 2,56,00,000 (Rupees two hundred and fifty-six Lacs) divided into 10,24,000 (Ten Lacs twenty four thousand) Shares of the face value of Rs. 25/- each, with power to divide the Shares in the Capital for the time being into Equity Share Capital and Preference Share Capital and to attach thereto respectively any preferential, qualified or special rights, privileges or conditions.

VII. RESOLVED that in place and stead of the existing Clause 102 of the Articles of Association of the Company, the following Clause be and it is hereby substituted as Clause 102 thereof:—

102. Unless otherwise determined by a General Meeting the qualification of a Director shall be the holding of Shares in the Company of the total face value of Rs. 750/-.

VIII. RESOLVED that in place and stead of the existing Clause 133 of the Articles of Association of the Company, the following Clause be and the same is hereby substituted as Clause 133 thereof:—

133. Every Deed or other instrument to which the Seal is required to be affixed shall (except in the case of Certificates of title to Shares) be signed by two Directors, who shall sign their names at the foot of or elsewhere on the said Deed, instrument or document. Certificates of title to Shares may be so signed by one Director or by a person or persons duly authorised by the Directors in that behalf. The signature on such Certificates of the Director may be reproduced and affixed by mechanical means.

IX. RESOLVED that pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of a Contract being entered into between the Company and its Managing Agents, Messrs. Nowrosjee Wadia & Sons (Private) Ltd., in terms of the draft placed before the meeting, and for the sake of identification, initially by the Chairman of the Company, to be operative as from the date of this Meeting till one month after the date of the Annual General Meeting of the Company in the year 1960, in respect of purchases, sales or supplies of goods in which the Managing Agents regularly trade or do business in such as Rings, Ring Travellers, Lubricating Oils, Hair and Leather Beltings, and other Leather Goods such as Pickers, Picking Bands and Buffers, Shuttles, Sprinklers and Sprinkler Equipment, Machine Cloths, Ginning, Pressing and Delinting Machinery, Floor Polishing Machines, Homogenizers, Machinery and Machinery spare parts and Mechanical Handling Equipment or in respect of which they may trade or do business in as well as in respect of sales to the Managing Agents by the Company of sundry stores, petrol, tubular banding, soap, cloth and such other ancillary items and in respect of the supply or rendering of any service by either to the other, other than that of Managing Agents, including receiving loans or deposits at interest not exceeding the State Bank of India's rate of interest from the Managing Agents, subject to the conditions that all payments to be made to the Company by the Managing Agents shall be made within one month from the date of such transactions, and that the prices charged to the Company shall be as approved or confirmed by the Board, and shall be such as are not less favourable to the Company than the market rates, or which are otherwise reasonable, and the terms and conditions of the said supplies shall be sanctioned by the Board of Directors.

X. RESOLVED that pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of a Contract being entered into between the Company and Spin-Weave Textiles an Associate of the Managing Agents in terms of the draft placed before the Meeting, and for the sake of identification initially by the Chairman of the Company, to be operative as from the date of this Meeting till one month after the Annual General Meeting of the Company in the year 1960, in respect of purchases or supplies of Bobbins, Pins, Skewers, Wood, Wooden Cases, Wooden Articles such as Sleys, Hand Tops, Rollers, Picking Sticks, Leather Goods such as Beltings, Picking Bands, Pickers, Buffers, Loom Straps, Ram Rings, Castings and Machinery spare parts and other sundry mill stores, on the terms that the rates charged to the Company shall be approved or confirmed by the Board and shall be such as are not less favourable than the rates charged for similar items generally agreed to by other reputed firms in Bombay, or which are otherwise reasonable, and the terms and conditions of the said supplies shall be sanctioned by the Board of Directors.

XI. RESOLVED that the proposal to make available by way of Lease, License or otherwise in accordance with the law, for a period of ten years Block "Q" at the Company's Dye Works to a private limited company proposed to be floated

and registered under the name of or similar to Bombay Ring Travellers Company (Private) Ltd., in which Company the Managing Agents, Messrs. Nowrosjee Wadia & Sons (Private) Ltd., may hold more than one-third of the shares in the Capital of that Company, thus giving them not less than one-third of the total voting power in that Company and thereby making that Company Associates of Messrs. Nowrosjee Wadia & Sons (Private) Ltd., be and the same is hereby approved and the Directors be and they are hereby authorised to carry through such transaction on terms and conditions to be finally agreed upon between them and the proposed company when formed and to execute such documents and do all such acts as may be required for the purpose.

The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of items I to XI set out above is annexed to the Notice of the Annual General Meeting posted to all the Shareholders individually.

The drafts of the Contracts referred to in Special Resolutions Nos. IX and X are open for inspection by any Member at the Registered Office of the Company on working days except on Saturdays from 11 A.M. to 4 P.M.

THE NEW MONKHOOSHI TEA COMPANY LIMITED.

Circular Letter to Shareholders. EXPLANATORY STATEMENT

Dear Sir/Madam,

Your Directors consider that the present issued capital of the Company does not reflect the actual Capital position of the Company and that the Issued Capital should be increased. They recommend that a sum of Rs. 3,00,000/-, being a part of the amount standing to the credit of General Reserve, be capitalised and that this amount be utilised as Capital Bonus to be satisfied by an issue of 40,000 Ordinary Shares of Rs. 7/8/- each, credited as fully paid up, to the existing holders of Ordinary Shares on the 23rd day of April, 1957, in the proportion of one new Ordinary Share for every two issued Ordinary Shares held by them on the said 23rd day of April, 1957, the said new Ordinary Shares ranking in all respects *pari passu* with the existing Ordinary Shares, and participating in any dividend declared in respect of the year ended 31st December, 1956.

Your Directors recommend for your approval the resolutions which will be proposed in this connection and which are detailed in the Notice calling a General Meeting of Shareholders on the 23rd April, 1957.

The Directors and Managing Agents of the Company will be entitled to an allotment of New Shares in regard of their respective Shareholdings and to this extent they may be deemed to be interested in the above proposal.

The draft Agreement referred to in Resolution 1(c) of the annexed Notice convening the General Meeting may be inspected at the Registered Office of the Company on any working day during usual business hours, up to the date of the meeting.

Yours faithfully,

MACNEILL & BARRY LTD.,
J. H. G. WHITFIELD,
Acting Secretary,
Managing Agents.

HUKUMCHAND JUTE MILLS, LTD.

9, Brabourne Road, Calcutta-1.

NOTICE TO SHAREHOLDERS.

NOTICE is hereby given that the Directors in their meeting held on the 22nd March, 1957, decided to pay an Interim Dividend of Rs. 3-8-0 per share, free of income tax, on the Preference Shares, for the year ending 31st March, 1957. The dividends are payable after the 24th April, 1957, to the Shareholders whose names are registered in the Books of the Company on the 13th April, 1957.

The Share Transfer Books of the Company will remain closed from the 15th April to 24th April, 1957, both days inclusive.

By Order of the Board,
RAMDUTT RAMKISSENDASS,
Managing Agents.

Dated 23rd March, 1957.

Anamallais Ropeway Co. Private Ltd.,
Attakatti P.O., via Pollachi, S. India.

THE PREMCHAND JUTE MILLS LTD.

NOTICE.

NOTICE is hereby given that the Forty-eighth General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 81, Sovabazar Street, Calcutta, on Monday, the 22nd April, 1957, at 11-30 a.m. to receive the Directors' Report and to pass the following Resolutions:—

As an Ordinary Resolution:—

(1) To pass the Audited Balance Sheet and Profit & Loss Account of the Company for the Half-year ended 13th April, 1956.

As an Ordinary Resolution:—

(2) To re-elect Dr. N. N. Law, who retires by rotation, as a Director of the Company and also to appoint the remaining Directors.

As an Ordinary Resolution:—

(3) To re-elect Messrs. Lovelock & Lewes as Auditors of the Company on a remuneration to be fixed at the Meeting.

SPECIAL BUSINESS.

To consider and if thought fit to pass with or without modification the following Resolutions to be proposed as Special Resolutions:—

1. To resolve that the Age limit for Directors under Section 280 of the Companies Act, 1956, shall not apply to the Directors Dr. N. N. Law and Sri Priyanath Roy.

2. To resolve that from 14-4-56, the Accounts of the Company and the preparation of the Balance Sheet and Profit & Loss Account of the Company be made annually at the end of the Bengali month of Chaitra every year which corresponds to 13th or 14th April of every year.

Share Transfer Books of the Company will remain closed from 15th April to 22nd April, 1957, both days inclusive.

A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote in his stead. A Proxy need not be a member of the Company.

EXPLANATORY STATEMENT.

Sri Priyanath Roy, Director, nominated by the Managing Agents, has attained the age of 78 years and Dr. N. N. Law has attained the age of 69 years. In view of their long standing association with the Company and their intimate knowledge about the affairs of the Company, their services to the Company is considered extremely necessary. It is recommended, therefore, that a Resolution be passed to declare that the Age limit of Directors provided under Section 280 of the Companies Act shall not apply to the Directors Sri P. N. Roy and Dr. N. N. Law. Special Resolution No. 1 is intended to provide for it.

Article 124 of the Articles of Association of the Company provides for preparation of Audited Balance Sheets and Profit & Loss Accounts at least once a year. But the Company, in line with other Jute Companies, has been preparing Half Yearly Balance Sheets and Accounts ending 13th October and 13th or 14th April. The system of preparing Balance Sheets and Profit & Loss Accounts twice a year has given rise to difficulties under the provisions of the Companies Act, 1956. The Special Resolution No. 2 is intended to obviate the said difficulties and to empower the Company to prepare Annual Balance Sheets and Profit & Loss Account at the end of the Bengali month of Chaitra every year corresponding to 13th or 14th April of every year.

The letter of Messrs. Lovelock & Lewes dated 9th March, 1957, asking for higher remuneration, may be inspected at the Office of the Company during Office Hours.

By Order of the Directors,

THE PREMCHAND JUTE MILLS LTD.,
RAJA JANOKI NATH ROY & BROTHER
PRIVATE LTD.,
P. C. ROY,
Director,
Managing Agents.

81, Sovabazar Street,
Calcutta, the 15th March, 1957.

THE LAKSHMI COTTON MANUFACTURING COMPANY LIMITED.

NOTICE is hereby given that the Sixty-second Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 9, Wallace Street, Fort, on Monday, 15th April 1957, at 4-30 p.m. for the purpose of transacting the following business:—

(1) To adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1956.

(2) To sanction the declaration of a dividend.

(3) To appoint Auditors for the current year and to fix their remuneration.

(4) To confirm the appointment of Mr. E. S. Vernon-Jones as Director.

(5) To elect a Director in place of Mr. D. M. Khatau, who retires by rotation but being eligible offers himself for re-election.

(6) To elect a Director in place of Sir Chunilal V. Mehta, K.C.S.I., who also retires by rotation, Sir Chunilal V. Mehta, although otherwise eligible for re-election, having attained the age of 76 years

is not eligible for reappointment, unless his appointment is made or approved by the Shareholders in general meeting in terms of Section 281 of the Companies Act 1956.

Special Notice is hereby given that it will be proposed as an Ordinary Resolution that Sir Chunilal V. Mehta, K.C.S.I., be and is hereby appointed a Director of the Company and that it is hereby specifically declared that the age limit of 65 shall not apply to him.

By Order of the Board of Directors,

E. S. VERNON-JONES,
Chairman.

Bombay, 15th March 1957.

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT 1956:—

The Resolution in connection with the re-election of Sir Chunilal V. Mehta, K.C.S.I., which will be proposed as an Ordinary Resolution, under item (6) is as under:—

"RESOLVED that Sir Chunilal V. Mehta, K.C.S.I. who retires by rotation, be and is hereby appointed a Director of the Company, and it is hereby specifically declared that the age limit of 65 shall not apply to him."

Sir Chunilal V. Mehta has been a Director of the Company since January 1941, and his long and distinguished connection with the textile mill industry is well known. As a businessman of wide experience, he has rendered valuable services to the Company during his long association with it, and it is in the interests of the Company that it should continue to receive the benefit of his services.

NOTE: A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Company.

THE VISHNU COTTON MILL LIMITED.

CALCUTTA DINNER

THE 42nd Calcutta Dinner will be held at the Connaught Rooms, London, W.C.2 on Thursday, May 23, 1957. Mr. O. T. Jenkins will preside and the guest of the evening will be The Rt. Hon. The Earl of Home, P.C. For tickets, price £210.0d each (including wines as per menu), apply to H. C. Gotts, Honorary Secretary, Manor Cottage, Brighton Road, Horley, Surrey.

SUGAR PRODUCTION AND STOCKS

According to the Indian Sugar Mills Association, production of sugar during February 1957 was 352,629 tons, bringing the total production during the first four months of the 1956-57 season to 1,169,028 tons. The corresponding figures during the last season were 355,000 tons and 1,067,000 tons respectively. The offtake of sugar from factories during February 1957 was 177,000 tons, against 233,000 tons during the corresponding period of last season. The total offtake of indigenous sugar during the first four months of the current season comes to 635,000 tons, against the 598,000 tons during the same period of last season. The closing stock of indigenous sugar on 28th February, 1957, was 1,065,000 tons, against 880,000 tons on the same date of last season.

OUTSTANDING PROGRESS

31st December, 1956

Deposits Exceeded . . . Rs. 106 Crores

Working Funds Exceeded . . . Rs. 140 Crores

The P. N. B. secured 20% of the additional deposits of all scheduled banks in the country during 1956.

more food for more people

As mechanized farming brings more land under crops . . . as powerful bulldozers and other equipment labour day and night to build dams to water the thirsting earth . . . as roads and rails reach farther to bring food to the market place . . . so the need for oil—fuels and lubricants—grows. Caltex is irrevocably linked with the plans contributing to the well-being of India's millions. At Visakhapatnam the new Caltex Refinery is nearing completion—a tribute to free enterprise. Soon, from here, will flow Caltex quality petroleum products to accelerate India's progress.

OIL is the Lifestream of Progress

CALTEX PETROLEUM PRODUCTS

COAL COMPANIES

O. Po. F. and Dd. indicate Ordinary Preferred Ordinary. Founders' and Deferred shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE IMPLICATIONS OF BIGGER ARMAMENT PROGRAMMES

LESS CAPITAL FOR THE UNDER-DEVELOPED COUNTRIES

THERE was a time, after the thaw began in Russia, when it seemed likely that the great powers would be able to undertake a partial but still substantial measure of disarmament. This was the era of ostentatious demobilisation and reduced arms budgets. It was also the era—and this is the importance of this subject for India—of grandiose schemes for investment in under-developed economies. Russia was promising the earth to China, India and Egypt; the United States was moving to take up the challenge of peaceful economic competition for the soul of Asia; Herr Krupp was canvassing his Point Four-and-a-half; and M Pineau, who has precious little money of his own to invest, was devising grand plans to invest the money everybody else was going to save by disarming. The total stalemate reached after ten years of military effort had brought all the great powers face to face with the absurd prospect of suicidal hydrogen-bomb war; so war was unthinkable and at last everyone admitted it; so armies could be drastically reduced and only two super-great powers need even worry about stocking atomic weapons; so immense savings would be available for capital investment in Asia and Africa. This chain of reasoning was perhaps always too optimistic, and economists in particular would question whether money saved from the arms budget automatically becomes available for overseas investment. But there was more than a grain of truth in it. The world did seem to be moving to a situation where economies distended by a long armaments effort could begin to relax and give more attention to really ambitious projects for investment in backward countries.

the Russian message have never been confirmed and, although quite probable, they are no comfort, for bombers are no answer to missiles. Secondly, M Bulganin has made two other references to such missiles in the past few months, and the Russians have never been known to boast of having weapons they did not possess. The German Press has lately reported the supposed location of four bases in Bohemia (the western-most part of the Soviet glacis) whence missiles are ready to be despatched to London (750 miles away) and Paris (500 miles). And thirdly, three times in recent weeks the Americans have admitted that they have lost control of guided (sic) missiles over the southern Atlantic, suggesting that they have a rather insecure grip over the weapon that M Bulganin brandishes with such assurance.

M Bulganin's note did not create the new perspective, but revealed it; it is idle to say it should have been recognised before—it just was not, and if it had been, the Suez expedition would never have been undertaken. Up to November last year, the Western alliance rested on a coherent division of labour: the European countries supplied the classical arms (infantry, artillery, light aviation, etcetera), while the United States supplied modern protection (atomic and thermo-nuclear weapons). This was already a crushing burden for Europe, but at least it permitted a substantial volume of investment to continue in Asia and Africa. The Russian threat to use missiles for a minor purpose (the protection of a non-Communist colonel) opened a new question for Europe: how readily would the United States accept to commit suicide in order to come to the aid of an ally presented with a genuine Russian ultimatum? American reliability is not in question, as a Briton can see by asking himself whether Mr. Chamberlain's 1939 gesture in support of Poland would be repeated now in the new circumstances.

The answer to this question is simple and brutal. The only way for any country today to reply "No" to a missile-backed ultimatum is to be itself in the position to press the button of a missile-cannon without waiting for the necessarily doubtful concurrence of its greatest friend. Mr. Macmillan has drawn this inevitable conclusion and has accordingly decided, firstly, to begin a massive programme of missile manufacture (with hired American missiles to stop the gap until Britain's are ready) and, secondly, to cut British expenditure on conventional weapons, especially the Rhine Army. The first half of this reaction is correct, the second wrong. Britain's Atlantic allies, from the Americans down to the Dutch, have been insisting on how wrong the second decision is, and British action on this has had to be postponed. For it is clear that no European nation, however well provided with atomic missiles, can dispense with its classic weapons, because if the adversary undertakes a limited operation (suppose it is Yugoslavia next time and not Hungary) then one cannot reply with thermo-nuclear missiles.

The soldiers' conclusion is: missiles are essential and so are classical armies. The economists' conclusion is: this is impossible. The development and manufacture of thermo-nuclear weapons, just by themselves, costs more than the division now being maintained. To attempt to have both means to double the already crushing burden of arms, and this must entail economic suicide, stagnation, poverty and certainly an immediate cessation of investment in Asia and Africa. Faced with a necessity and an impossibility, how to choose? Capitulate right away? The possibility has been envisaged: Senator Jackson said in the U.S. Congress lately, "Suppose the Russians demonstrate before the Western military attaches a guided mis-

sile with a range of 1,500 miles. A few days later, M Bulganin could invite the foreign ministers of western Europe to a meeting and advise them to adopt a neutralist policy. It is highly probable that our allies would be obliged to obey". If we remember the fall of a certain British statesman now recuperating in New Zealand, we can see that Senator Jackson is merely talking sense. But we have not got to that yet.

If this is how the situation presents itself to Britain and the Continental powers, America's case is scarcely more reassuring. After much loose talk about the "ultimate, absolute weapon", the Americans now realise that this is a plain fact—and that it is the Russians who have it, not the United States. The Symington report and the Killian report are quite positive on Russian superiority in present achievement, while Professor Teller, who is the United States' chief H-bomb theorist, declares that Russian superiority in general scientific resources is irreversible for the next ten years, whatever the Americans begin to do now. The problem that faces the United States is not one of defence, for there is at present no hope of defence against missiles such as Mr. Duncan Sandys referred to lately, which attain speeds of 5,000 miles an hour and altitudes of 100 miles. The problem is to match Russian achievement by having such weapons in the United States.

Hence the Eisenhower "crash programme" just begun for missile construction. This is the most gigantic technical enterprise of American history, about three times the size of the Manhattan project that led to the building of the first atom bombs. It will conjure up several new townships as big and as secret as Los Alamos during the war, and will set in train technological revolutions in various industrial domains, from machine tools to refractories. General Electric, Remington, Bosch, Bell, Martin, Douglas, Convair and every other leading engineering firm must expand to shoulder its share of an immense task. Not all the resources of the United States suffice, and there is a crucial shortage of trained engineers and scientists (it takes 30 years to "build" a physicist) which can only be made good by co-operation with western Europe. A nation which for security reasons has been very unwilling to co-operate with the Europeans must now in its need consent to, indeed demand, every help Europe can give it to make good a gross shortage of skill compared with Russia. Indeed, the Americans have an excellent *quid pro quo*: the medium-range missiles, which are only of tactical value to the United States because they cannot reach Russia but which are of strategic value to Britain and France, from whose soil they can reach Russia.

So, barely a year after the optimistic discussions of 1956 about vast new aid projects to Asia, to be financed from the savings of disarmament, the Western world is engaged on a newer and more costly arms programme. That this must necessarily have important effects on all other forms of economic activity we can see from the Russian case. There is a close connection between the fact of present Russian superiority in new weapons and the fact that M Malenkov's "consumer" policies could not be implemented four years ago. To attain this superiority, Russia had also to limit investments in the satellite countries and demand sacrifices from them, and this led to the intolerable conditions that produced revolution in Hungary and Poland. Russia too has known the dilemma of choosing between a necessity and an impossibility. The Western democracies are in a position to demand sacrifices only from themselves; they have no satellites to bleed white. But they will find it as difficult as the Russians did to supply investment capital to their under-developed allies.

Any hopes formed last year in Asia about a vast flow of new capital from Russia and the West can now be abandoned. The much-advertised economic competition between the two blocs will no doubt continue, but on a much more modest scale than was once hoped. Asian countries, and especially India, must continue to plan their development on the firm assumption that outside capital will never become plentiful in the way envisaged by the architects of world development pools. There is less excuse today than ever for development programmes that leave vast uncovered

balances to be taken care of by generous foreign assistance, not because the will is lacking abroad but because the means are inadequate, even in the United States. The one comfort to be drawn from the case, and it is a considerable one, is that all fears of an economic recession beginning in the United States and spreading to the rest of the world can similarly be abandoned. Nations engaged on the greatest race of history are not going to fall into depression, and this means that although aid will be limited, trade will not suffer.

PROBLEMS IN BANKING EXPANSION

LAGGING DEPOSITS AND UNFAIR COMPETITION

THE working of the banks has shown a substantial improvement during the past year, reflecting the increase in economic activity. But the period has, nevertheless, not been without major embarrassments, in that their resources have not kept pace with the increased demands placed on them. Speaking from the chair at the recent annual general meeting of the Indian Banks Association in Bombay, Mr. C. H. Bhabha underlined the fact that the increase in deposits is not keeping pace with the increase in note circulation. During 1956, for instance, the note circulation rose by Rs. 104 crores, but the deposits of scheduled banks were only Rs. 79 crores higher. At the end of the year, the former totalled Rs. 1,466 crores, while the latter were only Rs. 1,102 crores. Some of the major difficulties banks have had to face spring from these facts. As economic development has proceeded, there has been a growing demand for funds from industry and agriculture, especially the former. Some of this demand has been met by borrowing more from the Reserve Bank under the bill market scheme, by running down investment portfolios, and by reducing cash balances. Some of it has been met by the acceptance of higher advance-deposit ratios; but these have reached a stage where they cannot be extended much further if stability is to be maintained. It is widely believed that the credit stringency is not likely to ease much when the traditional "slack season" sets in. Because the year-round demands of industry have been rapidly increasing, the seasonal demands of agriculture, on which the distinction between the busy season and the slack season was based, are having a much smaller impact. Therefore, towards the end of this year, by the time agricultural demands once again come to be superimposed on industrial demands, it is feared that an even more difficult situation than has been experienced in the past few months is likely to result.

If the banks are to continue to finance trade and industry adequately, more permanent measures than have been taken so far to increase their resources will be necessary. It is essential for their continued health and stability that the increase in their lending capacity should be based on a lasting increase in their basic resources. It is partly the responsibility of the banks to take steps in this direction; but, to an even greater extent, the diversion of resources into the banking system depends on factors which are outside its control. These factors are connected with the Government's general economic policies. If Mr. Bhabha chose to emphasise their effect strongly, in a highly critical speech, his observations are not any the less valid for that. Exhortations to fellow-bankers might also have served a purpose, for instance, if he were to tell them to reward their depositors more liberally when they could afford it. But in attacking the basic causes of the inadequacy of savings and deposits, his attitude can hardly be considered misplaced.

Among the most important points Mr. Bhabha made was the need to safeguard the value of the currency. He recalled that before the Reserve Bank Amendment Act was passed, in order to allow a reduction in the backing for the paper currency, the Government was warned about the harmful effects it might have. The warnings were ignored. But soon after the legislation was enacted, "the value of our rupee in the free markets of the world, measured in terms of free and sound currencies like the Swiss franc and the American dollar, depreciated appreciably". The depreciation has been accentuated by large deficits in external trade and by inflation at home. But firm measures will have to be taken to check it, especially if inevitable resources are to be attracted for industrial expansion. It has been widely reported, for instance, that one of the major doubts among those abroad who are thinking of giving India medium and long-term credits is how they can insure themselves against possible losses arising from variations in the exchange value of the Indian currency. At home, much the same anxiety often exists: people who fear inflation are less inclined to save the money which would go partially to swell bank deposits.

Doubts about the value of the currency being maintained are not the only handicap. Mr. Bhabha

mentioned that "with a maze of legislation, banking awards, unhealthy competition from official sources and frequent changes of policies and pronouncements bearing on trade, commerce and industry of our country, it is very difficult to spread banking with a rapidity which the country demands now". He gave specific and disturbing examples of official interference. "In the over-enthusiasm to show large figures for national savings and post office deposits", he declared, "a vigorous campaign appears to be afoot to snatch away deposits of commercial banks by pressing all those who have any connection with any of the local bodies or Governmental organisations to convert some of their fixed deposits or savings deposits with banks into post office savings deposits or national savings certificates". Mr. Bhabha referred also to the pressure which has been used to make banks subscribe to Government loans. A portion of these subscriptions would not have been justified on strictly economic grounds, as indicated by the rapid fall in the price of the new gilt-edged issues as well as of the old ones. Mr. Bhabha comments: "Such a situation was not witnessed for some years in the Indian gilt-edged market and does not redound to the credit of those concerned".

Another source of unhealthy competition with commercial banks is the State Bank. Mr. Bhabha's comments on this subject contrast strongly with the claims made by Mr. H. V. R. Iengar as chairman of the State Bank recently. Mr. Iengar devoted a major portion of his speech at the annual general meeting to explaining that the State Bank was not competing unfairly with other banks. But Mr. Bhabha points out that only eight of the 66 branches the State Bank opened between its inception on 1st July, 1955, and the end of 1956 were in places where no branch of a commercial or co-operative bank existed before. This does not say

much for the pioneering spirit behind the State Bank's branch extension scheme, and Mr. Bhabha says: "Direct and indirect official intervention is taking place with organisations and individuals to make them lend their support to, and to bank exclusively with, the State Bank of India even at a certain disadvantage to themselves". As for Mr. Iengar's claim that the State Bank's deposits have risen appreciably despite its having kept the interest rates on them lower than commercial banks have done, Mr. Bhabha made a significant remark: "This improvement in the deposits of the State Bank has been partly due to the forces to which I have already referred. . . . had it not been for these forces the deposits of the State Bank of India would not have improved to the extent that they have done and the deposits of commercial banks would have increased more than they have done". Mr. Iengar's speech showed that the State Bank is in so advantageous a position that it can, if it chooses, exploit those advantages and compete unfairly. The line of distinction between fair and unfair competition is thin enough for it to make frequent errors of judgment on how much scope it should leave for commercial banks. That, in itself, is a sign of the dangers its new powers hold for private banking in general. Mr. Bhabha's speech indicates that the dangers are not purely theoretical.

CONVERSION PROBLEMS WITH THE DECIMAL COINAGE

THE introduction of the decimal coinage in India began on Monday this week. The Government is trying to make the process of change-over from the old currency to the new as easy as possible. But in the remote areas of the countryside, peasants who are unaccustomed to handling decimal coins are liable to get into petty wrangles over small transactions. The small trader in the urban areas, too, will try to take advantage during the period of transition. So there will be no reason for surprise if the change-over does not turn out to be as smooth as has recently been pretended. The old currency will remain legal tender for three years; it will be convertible into decimal coins

on the basis suggested by the official ready reckoners.

India has for a considerable time been thinking of adopting the decimal system of currency. The change-over cannot be regarded as sudden, although many, even Government departments, have been too busy with their other affairs to prepare for it. The decision was finalised when the Indian Coinage (Amendment) Act, 1955, was passed by Parliament. The decimal currency and the metric system of weights and measures will, it is hoped, make calculation and accounting easier ultimately. The attractive simplicity of the new system might expand the market for calculating machines. But as with most changes, the new currency could prove unpopular in the initial phases with the common man. He might suffer at the hands of traders who choose their own conversion ratios or mark up prices to safeguard themselves against loss. Speculators hope to reap a windfall in exchanging the new currency and the old. Clerks at postal and railway booking counters, who are already not remarkable for their attentiveness or speed, will be found consulting ready reckoners while lengthening queues of impatient clients await their discoveries. After some early inconvenience, it is expected that the public will in course of time get used to handling the new currency. The confusion would have been less if public utility undertakings, such as the telephone services, had prepared a schedule of charges under the decimal system much earlier. Among Government departments, the post office should be well pleased with the windfall profit it is likely to get. Those who usually travel second class in trains may try to pay their fares in the old coins, being under the impression that they will travel cheaply if they pay three old pice, rather than five naye Paisa.

The Government, in issuing its ready reckoners, has coolly assured people that "there is no cause for worry". It has also produced the astonishing argument that everybody should be satisfied because "whatever be the loss, it will be lost to one person and consequent gain to the other". The prospect of disputes over small transactions seems to have caused it little worry; presumably, it is thought that everything will settle down to normalcy as the years pass. In order to reduce the scope for haggling and dislocation, it might, however, be necessary to withdraw the old coins more rapidly. There is a craze for novelty in India today which has its good as well as its bad aspects. New States, new currency and a new national calendar are among the far-reaching changes whose impact will show only gradually. Not all the changes have been popular immediately, nor can they be, since the people are traditionally conservative. The new currency will, therefore, have to prove its superiority in actual practice—by being seen to simplify calculations and by being easier to handle. Comfort is to be derived from the fact that India has fallen in line with three-fourths of the world by adopting a decimal currency. But the system will have to seek final justification on its own merits—as seen in daily life.

CURRENT COIN

Raising Coal Output.—Mr. Narendra Singh Singh's address from the chair at last week's annual general meeting of the Indian Mining Federation contained a well-argued plea for giving private collieries greater importance in the second plan. The public sector has been existing for quite a long time, but its output, Mr. Singh pointed out, has always been very small compared with that of the private sector. In 1956, State collieries produced only 3 million tons, against the 35 million tons mined by private collieries. Under the current plan, the output target for the latter is 15 million tons, against 45 million tons for the former. Explaining why the private sector should have greater scope "than what the planning authorities are inclined to allow it", Mr. Singh pointed to the difficulties of finding capital and technical and managerial personnel. The private sector has the experience and the resources to undertake expansion more efficiently than the public sector. Yet it is the Government's policy that the former should not start mines in new areas. Private collieries already hold leases over large tracts where the existence of coal deposits has been proved but which have not been worked due to the shortage of transport. The Government's policy seems to indicate that it wants to take over these areas so as gradually to open its own mines. Whatever the merits of the arguments on this question, Mr. Singh said, to practice the shortage of coal which might result would lead to serious inflation and would "damage the national economy". Ideological rather than economic considerations guide the Government's industrial policy, but they are ill suited to the requirements of a developing economy. Discussing coal prices, Mr. Singh said that although the Government apparently preaches the coal industry of auto-financing, it deprives the coal industry of the opportunity to create its own resources for expansion. The Industrial Policy Statement says

that in an industry in which private units exist side by side with State concerns, there will be no discrimination. But the experience of the coal industry has been to the contrary; where the allocation of raw materials and transport is concerned, State units are invariably given preference.

Reappraising the Plan.—Discussing the prospects for the second five year plan, Sir Homi Modi, chairman of the Central Bank of India Ltd said at last week's annual general meeting that a reappraisal of its workability is urgently needed (a fuller version of the speech appears on a later page). It has become clear that resources—internal and external—will not be adequate. The foreign exchange reserves have been run down by as much as Rs. 227 crores during the 11 months ended February 1957. This is because imports have far exceeded estimates. As the Reserve Bank Bulletin has stated, imports during 1956 ran at an annual rate of Rs. 953 crores against the plan budget of Rs. 783 crores. "The extent to which inflationary finance can be stepped up and foreign exchange can be secured," said Sir Homi, "is pretty well known." Government spokesmen have been promising that "there would be a process of adjustment from time to time" in response to changes in the situation. In this manner, they say, the hardship which the plan might impose on the community can be mitigated. But this may not be enough. Already it is becoming clear that the resources for the plan are not enough. It has run into many difficulties during the first year and these show the way things might go if the Government persists in working the plan in its original form. Unfortunately, the Government has given no indication of pruning the development programme, as the 1957-58 Budget figures of the Central Bank, Sir Homi said that 1956 has been another year of growth in resources and earnings. "Our gross earnings, which had received a setback in 1953, have since been progressively increasing, and there was a particularly marked improvement during the past year, which recorded a rise of as much as Rs. 86 lakhs." The bank's deposits rose by Rs. 10 crores to Rs. 138 crores, which he considers satisfactory in view of the 1956-57 plan. Advances rose by Rs. 18.56 crores to Rs. 90.76 crores, and the ratio of advances to deposits stood at 66 percent against the general average of 71 percent. The investment portfolio has had to be reduced due to the credit squeeze, and the ratio of investments to deposits has come down to 38 percent from 44 percent. The net profit figure crossed "the rupee one crore mark" after a lapse of three years, the ratio to gross income rising to 15.87 percent from 13.53 percent in the previous year.

Crisis in Textiles.—The textile crisis of 1953 seems to be repeating itself. Cloth stocks with bay correspondent reports on a later page, a number of units in Ahmedabad have given notice of shutters. Mills have been unable to dispose of stocks due to insufficient demand in the market. In his address from the chair to the Millowners Association of Bombay last week, Sir John Burns said that the reason for the crisis is primarily the loss of trade confidence due to the measures, including the heavy increase in excise duty, taken by the Government last September. Merchants and traders are not buying cloth because of consumer resistance to high prices, to which the levy has contributed substantially. "Today," continued Sir John, "excise calculated on the mill prices of a variety of representative qualities of cloth varies according to classification from 11.5 percent to 31.9 percent and averages 24.8 percent—an average increase of 11.2 percent over August 1956." In fact, in certain categories of superfine cloth it is as high as 38 to 39 percent. His calculations, however, are confined to representative qualities. Revenue from the excise duty on cloth comes to Rs. 75 crores a year, and Sir John urged that the heavy burden be properly appreciated. Quoting the White Paper on the Budget for 1957-58, he said that the index for cotton manufactures in 1956 had increased by only 4.3 percent. "This index would hardly seem to justify an increase in excise by an average of 11.2 percent over August 1956 and 14.8 percent over December 1955." What ever the mills' working results might have been up to August 1956, it is a fact that the prices of their cloth have declined considerably since then, while cotton prices have gone up, in many cases above the prescribed ceilings.

Central Sales Tax.—A Press Note issued by the Central Government announces that the Central Sales Tax Act, 1956, will come into force from 1st July, instead of 1st May, as previously notified. Section 15 of the Act has special relevance to inter-State trade or commerce. It lays down that no State is authorised to levy sales tax on inter-State sales or purchases at a rate exceeding 2 percent or more than one point in the series of successive sales. The goods which fall under this category are coal, including coke and all its forms, cotton, hides and skins, iron and steel, jute and

oilseeds. It has now been stipulated that every dealer will be liable to pay tax under the Central Sales Tax Act on sales made in the course of inter-State trade or commerce. There has recently been much confusion about the powers of State Governments to levy sales tax on inter-State transactions. Traders hoped that the question had been finally settled when the Supreme Court declared the levy of sales tax by States on inter-State transactions to be illegal. But State Governments were worried about the prospect of losing part of their revenues. This could be the reason why the Sales Tax Laws Validation Ordinance was introduced later. This ordinance, in effect, sought to legalise the levy of the tax on inter-State transactions. The National Development Council some time ago recommended the replacement of State sales taxes on mill-made textiles, sugar and tobacco by a surcharge on the Central excise duties. As earlier efforts to simplify sales tax legislation have proved fruitless, there is a clear need for an easily administered tax at low and uniform rates which may be levied by the Centre on all taxable commodities. The Central Sales Tax Act aims at removing the difficulties faced by traders in inter-State transactions, but is likely to prove inadequate in view of the limitations it contains.

Prospects for the Screw Industry.—The presidential speech of Mr. D. V. Virmani at the annual general meeting of the Screw Manufacturers Association refers to the manifold problems confronting producers. The output of wood screws has increased to 61 million gross and Mr. Virmani says that this is quite adequate to meet the entire demand of the country. With the rapid development of the engineering industries, there will necessarily be greater demand for screws. Mr. Virmani, however, says that the estimated demand of 12 million to 20 million gross a year appears to be "highly exaggerated." What is more, the installed capacity of the industry is almost double the estimated demand. The licensing of new units will, therefore, make the operations of the existing units uneconomical and it appears that the solution is to allow the existing units to utilise their installed capacity. Mr. Virmani compliments the Government on its decision to restrict the import of wood screws for the period January-June, 1957. "We welcome this action and would request the Government to continue a complete ban on the imports of wood screws in the future." The industry is facing a serious problem because of the inadequate supply of steel wire, which is the principal raw material. It also does not get wire of the exact specifications, and what is supplied is usually hard. Mr. Virmani, therefore, suggests that the Government should ask indigenous producers to make wire of the required specifications. Referring to the terms offered for the purchase of screws by the Government, Mr. Virmani says that contractors still experience considerable difficulty on account of the varying conditions offered by the purchase organisations of the State Governments and semi-Government departments. Mr. Virmani, therefore, recommends getting all stores in the country through a central purchasing organisation.

LABOUR FOR TEA GARDENS

WE observe that a well attended meeting of tea agency houses was held on Monday last to consider a scheme for the formation of the Central Tea Agency, when the following resolution was passed: (1) That this meeting approves of the scheme for the formation of a Central Agency for tea gardens and other concerns in the districts of Assam, Cachar and Sylhet, such agency to control both sirdari and arkattee recruiting. And with the object of furthering the interests of the sirdari system, the meeting also approves of the proposal to have a close time for arkattee recruiting which is suggested should be from 1st November to 28th or 30th February (both days inclusive). (2) That an agreement shall be drawn up and circulated by which all agency firms and all persons and all privately controlled concerns shall bind themselves to work exclusively through the Central Agency from such date as shall hereafter be announced by the Committee of Control as the date upon which the Agency is ready to commence operations. (3) That the foregoing resolutions of this meeting be communicated to Calcutta and London tea agency houses, managing directors of companies and all privately controlled estates, with a request that within two months from this date they will notify to the honorary secretary whether they approve of the scheme, and whether they are willing to abide by the terms and conditions by which it is proposed that it shall be worked. We trust that this meeting will lead to an improvement in the system of recruiting coolies for tea gardens; but everything depends upon the cordial co-operation of the tea gardens themselves, and from certain articles which have appeared in this paper there does not appear to be altogether that harmonious working which is so necessary and desirable. It is clear that if this scheme is to be a success there must be an end to coolie crimping.

PRODUCING THE SUPERSONIC AIRLINER

JOINT EFFORT OF INDUSTRY AND GOVERNMENT IN U.K.

THE British aircraft industry is to design and produce a supersonic airliner on a co-operative basis. In announcing this, the Ministry of Supply said: "The Ministry, in conjunction with the aircraft industry and the national airline corporations, have embarked on a research project with a view to the possible development of a supersonic airliner. Details of the project are not at present being disclosed." It was added that the following seven companies are concerned: Avro, the Bristol Aeroplane Company, de Havilland, Handley Page, Rolls-Royce, Short and Harland and Vickers-Armstrongs.

On 25th June last year, Mr. Reginald Maundling, then Minister of Supply, referred in the House of Commons to design studies that had been submitted by the industry for an airliner, although no reference was made to its intended supersonic capabilities. The Ministry says that once a design has been settled on, it will be handled by the design and production resources of one of the companies under a Ministry contract and not by any new co-operative body. Other companies will probably be utilised as sub-contractors and the Royal Aircraft Establishment in Farnborough will help in the preliminary research work. A project of this nature will probably take at least ten years to produce since a considerable number of problems will have to be overcome. In any case, this venture has yet to proceed beyond the "research project" stage, although every effort is being made to hasten its evolution. Speculation at this juncture is, therefore, profitless.

Great Difficulties

The difficulties inherent in the design and successful operation of a supersonic passenger-carrying airliner are great. Much depends on just how supersonic the first aircraft of this type is to be. If a speed of Mach 1.8 (some 1,100 m.p.h. at above 36,000 feet, or 1,770 km.p.h. at above 10,972 m.) is planned, special metals such as titanium or even stainless steel might have to be used to resist the heat (about 85°C at that speed and height) caused by air friction. On the other hand, an airliner designed for a speed of Mach 1.2 or less (about 800 m.p.h. or 1,287 km.p.h. at height) would not suffer from this disability. The wings themselves need not be designed for supersonic flight either. This apparently inexplicable fact is explained by the utilisation of acute sweepback. The airflow parallel with the fuselage over the wings would be supersonic, but at an angle of 90° to the leading edge—and this is what counts aerodynamically—the air would be achieving perhaps Mach.98. The advantages of subsonic wings in, at least, the first supersonic airliner would,

therefore, be reflected in range, economy and handling. There is much to be said for such an aircraft.

On the other hand, a wing designed for supersonic flight must be thin and knife-edged—quite a different configuration demanded for take-off, landing and subsonic flight generally. This is because air, when compressed, behaves rather like a crowd of people through which a car is attempting to pass. If it goes slowly, the people have time to get out of the way; but if it charges them, people do not have time to move. It meets a solid mass and great power is needed to make further progress. Thus, air molecules can get out of the way of a moving body provided it is advancing slower than the speed at which the pressure disturbance can "warn" the molecules ahead. At the speed of sound, this warning does not have time to operate and "compressibility" makes extra demands on engine power and, consequently, fuel consumption.

Preliminary Problems

The Mach 1.8 airliner, with a London-New York flying time of about three hours, will be able to undertake two double crossings of the Atlantic in 24 hours, a rate of utilisation which even the latest trans-Atlantic jet airliners cannot hope to attain. Indeed, there is speculation as to whether these aircraft will be able to complete one return trip in 24 hours, allowing for sufficient time for refuelling, maintenance, etcetera. If the supersonic airliner of the future could double this rate of utilisation, its great earning power would offset its very high running costs. Also the shorter elapsed time on the Atlantic route will enable much more practical schedules to be operated for the convenience of passengers. Yet the problems of supersonic commercial flight are great—electronics, powered controls, materials, air traffic control and passenger handling, to name but a few—and fulfilment of the British venture cannot be expected until the late 1960's.

MANAGEMENT OF STATE STEEL PROJECTS BY ONE COMPANY

THE Bhilai and Durgapur steel projects have hitherto been functioning directly under the control of the Ministry of Iron and Steel. Both these projects caused considerable negotiations with foreign governments. The planning of these projects and the essential preliminary work are now complete. Orders have been placed for the main plant and equipment and arrangements have been made for civil engineering works. Construction at the site is gathering momentum, and some plant and equipment have arrived. By a resolution of the Government of India dated 30th March, 1957, the management of these projects has been transferred to the Hindustan Steel (Private) Ltd. This company was formed two years ago to carry out the construction work of the Rourkela steel project. It is now wholly owned by the Central Government. Instead of creating new companies to manage the Bhilai and the Durgapur steel pro-

jects, the Government of India has preferred to provide for the management of all the three steel projects by one company. It is expected that the Board of Directors will be appropriately reconstituted in order to carry out this task. While larger questions will be dealt with by the Board of Directors, the day-to-day management is expected to be left with the local boards. All correspondence, therefore, should be addressed to the three projects as at present. By these arrangements, the Ministry of Iron and Steel hopes to be able to devote greater attention to the problems of further development of the steel industry.

BRITISH AERO-ENGINE DEVELOPMENT

OF the British aircraft industry's record export total of £104.5 million in 1956, 27 percent was accounted for by the sale of aero-engines. Moreover, nine overseas countries held manufacturing licences for 14 types of British engine—nine turbojet, three turboprop and two piston. Reports indicate that the development of new and existing engines is being pursued actively in the U.K. and that 1957 will see some notable advances in power and technique. Already, Bristol have announced the result of a recent Olympus type test. At 16,000 lbs. (7,257 kilogrammes), the Mk. 6 version of this proven turbojet, which powers the R.A.F.'s Vulcan delta bombers, is the most powerful type-tested engine in the world to be announced. During this test, a thrust of 17,300 lbs. (7,847 kilogrammes) was recorded. As a pointer to the future, it is significant that this remarkable performance was achieved in a new engine test building designed for engines of up to 40,000 lbs. thrust (18,144 kilogrammes). Other Bristol engine news concerns the new, big Orion turboprop which had, by the end of January, totalled 1,200 hours of running, and the latest mark of Orpheus, the 3, which is now leaving the factory. The power rating of the Orpheus 3 has not yet been published. The Proteus, powerplant of the Britannia, is now in regular service on the South Africa route and completes the round trip without the engine cowling even being opened. Already this engine has logged almost 56,000 hours, more than 34,000 of which are flying hours.

U.S.A. Building Saphires

Armstrong Siddeley say that well over 8,000 Sapphire engines have now been built under licence in the United States where it is fitted to eight types of bombers and fighters. In addition, rather more than 2,000 have been built in the U.K. It was announced in the House of Commons recently that the Jet Provost is being ordered for the R.A.F. Armstrong Siddeley have got this aircraft's Viper engine in full production. Now a "private venture" version, the Mk. 11, has been announced. It produces 2,450 lbs. (1,011 kilogrammes) of thrust for the same weight as the Mk. 10, which develops 2,000 lbs. (907 kilogrammes) for a weight of 570 lbs. (258 kilogrammes).

de Havilland are building the Super Sprite assisted-take-off rocket motor in quantity for Valiant bombers. Its spectacular effect on this large aircraft's take-off performance was demonstrated at the Society's flying display last year. Development of the large Gyron and the Gyron Junior turbojets and Spectre rocket motor is proceeding, and it is certain that these advanced powerplants will be subjects of progress reports during 1957.

Comet III

The "new" Comet III—nicknamed "1111"—is due to emerge soon fitted with detachable wing-tips (to simulate the Comet IVA) and new engines, Rolls-Royce Avon RA. 29's each of 10,500 lbs. thrust (4,763 kilogrammes). The second prototype Friendship has now been flown in Holland. This aeroplane is fitted with Dart 511 engines—the same as the Viscount's but with a different reduction gear.

The second week in March will be a notable one for Rolls-Royce. At that time, Darts will have accumulated no less than two million running hours in airline service. Until the beginning of February, when they were joined by Proteus, Darts were the only gas-turbine aero-engines in airline service. Napier say that negotiations are proceeding in the Americas on re-engining piston aircraft with Eland turboprops. It is possible that an announcement will shortly be made. Alvis, the only British aero-engine manufacturer producing only piston-engines only, recently opened a new test house for their engines. This company has carved a niche for itself in the markets of the world and, today, Alvis engines are in service in no fewer than 24 countries.

PRODUCTION AND IMPORTS OF STEEL DURING SECOND PLAN

Replying to a question in the Rajya Sabha, the Minister for Heavy Industries, Mr. Manubhai Shah, said that the production of finished steel in India in 1957-58 would be 1,385,000 tons and that 1,200,000 tons of steel would be imported during the year. This compared with the production of 1,335,000 tons of steel in 1956-57 and imports amounting to 1,850,000 tons. In 1958-59, the production of indigenous steel would go up to 1,510,000 tons and imports would be 600,000 tons. The production in 1959-60 will go up to 2,085,000 tons while imports will be 600,000 tons. In the last year of the plan, the production will increase to 4,080,000 tons while imports will be reduced to 200,000 tons.

Stocks and Shares

DULL CONDITIONS CONTINUE IN STOCK MARKET

TAXATION FEARS SUBDUED OPERATORS

Wednesday Evening. CONDITIONS in the stock market remain very dull, and the general tendency is for prices to sag. Operators seem unlikely to commit themselves extensively before the Budget is presented next month; even if the inclination were there, the tightness of money would prevent it from being fulfilled. Today's settlement has been conducted with Indian Iron at Rs. 19.8. From tomorrow, the Calcutta Stock Exchange will trade on the basis of the decimal coinage.

Jutes and coals are shaded. In engineering, about the only feature have been Guest, Keen, Williams. Little trading has taken place in teas. Details of the week's trading follow.

Government securities ruled steady and the enquiry for short-dated and medium-dated loans was maintained. The 3% Conversion Loan, 1986, however, ruled easier and the price was marked back to Rs. 74.4, while 3% Non-terminable Paper loans, 3% 1957 was traded at around Rs. 99-12 and 3% 1958 continued in demand at Rs. 99-10; 2½% 1961 turned sellers at Rs. 93-8 and 2½% 1960 hardened to Rs. 96-8. The 3% 1959-61 was marked at Rs. 97-12 and 3% 1961 had buyers at Rs. 99-7. In medium-dated loans, 2½% 1962 was on offer at Rs. 93-15 as was 3% 1963-65 at Rs. 94-3, but 3% 1964 was steady at Rs. 94-7; 3½% 1964 changed hands at Rs. 98-7 and 3½% 1965 was better at Rs. 98-5. Among long-dated loans, 3% 1966-68 was marked at Rs. 92-4 cum-voucher and later at Rs. 92-2 ex-selling pressure at Rs. 87-5. Very little business was reported in State loans and turnover was of a retail nature. The 4% U.P. 1968 was asked for at Rs. 97-15 and 4% West Bengal 1968 had buyers at Rs. 99. But 4% West Bengal 1967 was on offer at Rs. 99-6 without attracting buyers.

Business in preference shares was of a nominal nature and interest on the whole was lacking. In Jute, only three shares were mentioned, namely, Gouropore at Rs. 78, Lawrence 5½% at Rs. 69 and Standard at Rs. 70. Among miscellaneous issues, Calcutta Paper 7% changed hands at Rs. 128-8 and Calcutta Electric were depressed at Rs. 8-13. Calcutta Tramways were neglected at Rs. 7-12 and Navigation came to hand at Rs. 69 and Indian Aluminium at Rs. 68. India Steamship met with small enquiry at around Rs. 85 and Indian Iron and Steel changed hands freely at around Rs. 99. There were sellers of Indo-Burma Petroleum at Rs. 99. A small lot of Martin Burn was reported at Rs. 99 and Orient Paper were done at Rs. 96. Shaw Wallace were marked at Rs. 67-8.

In the banking section, Punjab National were unchanged at Rs. 50-8 and Hind Bank were quoted on an ex-dividend basis at Rs. 33-4, as were United Bank of India "D" at Rs. 4-7.

Among railways, small lots of Howrah-Amta and Howrah-Sheakhala were crossed at Rs. 49 and Rs. 37, respectively.

Cotton shares were extremely dull, particularly Cawnpore Textiles, which were marked back from Rs. 7-12 to Rs. 7-2. Kesoram fell from Rs. 14 to Rs. 13-12. Dunbar and Bowreah were unchanged at Rs. 175 and Rs. 118, respectively. New Victoria had sellers at Rs. 1-13.

Little interest was shown in coal shares, though there were a few price changes. Here is a chart showing price movements of a representative list of shares:

	Opening 28-3-58	Closing 3-4-57
Amalgamated	Rs.	Rs.
Bengal	17 8	17 4
Burrakur	440	438
Equitable	31 2	21 4
Seebore	22 8	22
Union	27 8	27
	15 4	14 4

Jute shares continued their downward trend with buyers conspicuous by their absence. The following table illustrates the more important price movements:

	Opening 28-3-58	Closing 3-4-57
Alliance	Rs.	Rs.
Auckland	80	77
Caledonian	88	86
Kankannarah	105	102
	58	56

Contrary to the general trend, Kinnison met with small enquiry at Rs. 123 as did Union at Rs. 19-10. National fluctuated narrowly around Rs. 19-10 to close today at Rs. 20.

Electric supply shares were featureless and the only one which was dealt in was Calcutta Electric at the lower rate of Rs. 12-6.

With the exception of Durbhanga Sugar, Dyer Meakin Breweries and Ramnugger Cane which were fairly steady at around Rs. 22-4, Rs. 6-2 and

Rs. 24-8, respectively, little interest was shown in sugar shares during the week. Cawnpore were easier at Rs. 17, while Carew were unchanged at Rs. 7-8 and Balrampur at Rs. 7-12.

Engineering issues were generally quiet. Indian Iron fluctuated narrowly around Rs. 19-8 and at one time reacted to Rs. 19-2; tonight's closing quotation is Rs. 19-8. The "rights" fluctuated during the week between Rs. 4-12 and Rs. 4-4; tonight's closing quotation is Rs. 4-8. Braithwaite were steady around Rs. 25 as were Burn at Rs. 314. Indian Galvanizing, however, were shaded at Rs. 19-4, as were Indian Standard Wagon at Rs. 166. Marshalls were depressed at Rs. 4-4. Both Jessop and Richardson and Cruddas continued to meet with selling pressure, the price at one time being marked down further to Rs. 23-6 and Rs. 16-8 respectively. Today, replacement buying brought a recovery in Jessop to Rs. 24-8 and Richardson and Cruddas to Rs. 16-12. Guest, Keen, Williams, on the announcement of a final distribution of Rs. 1-8 a share met with good enquiry and improved to Rs. 26. Textile Machinery idled around Rs. 19.

Paper shares were practically unchanged, but enquiry was limited. India Paper Pulp were quoted at Rs. 22 and Orient around Rs. 30-8. Titagur were marked at Rs. 35-4 cum-dividend.

In cement, a small odd lot of Dalmia Ordinary changed hands at Rs. 11-3 and the Deferred were done at Rs. 1-12. Jaipur Udyog were slightly better at Rs. 12-2 and Orissa were fairly steady at around Rs. 13-2. Sone Valley were crossed at Rs. 6-13.

In insurance, Hercules changed hands at Rs. 21-12 and Standard General were crossed at Rs. 3-12.

In shipping, India General Navigation were

UNCERTAIN CONDITIONS IN STOCK MARKETS

GILT-EDGED AND INDUSTRIALS LOWER

London, 3rd April.

THE labour strike and its possible effects on the stability of sterling have continued to dominate the London stock markets during the past week, and generally uncertain conditions have prevailed. The new account made a promising start on Wednesday of last week as widespread gains were recorded, except in South African gold shares. But thereafter, prices moved within narrow limits. Compared with the previous week's levels, they are a shade easier, although South African gold shares are quoted well above the lowest, following the recovery which developed after the week-end. The overall volume of business has been small. While the strike was the dominating factor, the approaching Budget, now less than a week away, also made operators cautious. Government securities responded strongly at one time to talk of cheaper money, but prices drifted lower subsequently under the influence of a decline in sterling and fears that the labour strike would have some more serious effects on sterling. In foreign bonds, the Baltic issues advanced on speculative buying while Greek issues responded to hopes of a settlement in Cyprus in spite of the fact that earlier gains were reduced on profit-taking. The industrial market opened its account with a sharp improvement in values, but this could not be maintained as uncertainty developed due to the belief in many quarters that settlements which might have been reached in the present wage disputes will have inflationary repercussions. South African gold shares lost ground prior to the week-end, but recovered sharply afterwards on nervousness

over sterling's future, and later in response to some satisfactory monthly mining statements. Base metals were generally maintained. Oil shares advanced to new levels, with western hemisphere, particularly Trinidad, stocks prominent. The market for rubber shares developed a firm trend on bids or prospective bids. Yield considerations also contributed to the general improvement. Tea shares remained dull.

The Money Market

Credit conditions in the money market last week, on the whole, were comfortable. The easier position was most evident during the first part of the week when the market was paying less for its bills and funds were in excess of requirements. The last of the heavy tax payments for the past financial year made conditions difficult, but after that was over the supply position returned to a more comfortable level, in spite of a heavy bill take-up last Friday. The market, on the whole, was able to obtain its week's requirements at an average rate of around $3\frac{1}{2}$ percent, with a high of 4 percent paid on last Thursday and a low of 3 percent when money was plentiful earlier on.

Featureless Trading in Oils

Most oils lacked features and prices showed no material alteration. Indian castor oil remained fully steady on firm advices from that country although buyers in London were still reticent. Buyers and sellers of linseed oil remained £1 to £2 a ton apart during most of the day with general selling levels mostly repeated at Friday's rates. Groundnut oil maintained the steadier undertone established at the close last week though greater buying support was not evident. The position for coconut oil was virtually unchanged, although following £1 a ton reduction in copra, offers of oil from Colombo came to hand at cheaper but still unattractive prices. Moderate trading was claimed in Malaysian palm oil for May-June shipment in the region of £97 c.i.f. north European ports, but cotton and soyabean oils were rarely mentioned from a trading stand-point. Nigerian groundnuts

were reportedly sold to the Continent for May-June shipment at £73½ c.i.f. It is understood that Chinese groundnuts were sold to Rotterdam over the week-end at £76 to £76½ c.i.f. for March-April shipment. American soyabeans were more active, with 2,000 tons of new crop sold to Liverpool for October-November shipment at £34½ c.i.f.

Bullish Undertone in Hongkong Gold

In the Hongkong gold market buying interest revived with a bullish undertone due to the British labour strike. Bullion merchants said that they expected gold prices to be maintained, though the improvement in Britain's industrial situation could bring a bear market. The price opened at \$(H)269½, rose to \$(H)269½ and reacted on profit-taking to \$(H)268½. It steadied and closed at \$(H)269½ after touching \$(H)269½. Carry-over charges totalled 160 cents a ten taels in favour of sellers. The official offtake was 158 taels and unofficial 15,400 taels. Arrivals totalled 42,000 ounces, and forward contracts were done at \$(U.S.) 37.83 c.i.f. Macao.

West German Gold Imports

The West German Economic Ministry has announced the liberalisation of gold imports from O.E.E.C. countries. It says that in future also certain firms will be given import licences for gold against dollar payments. The restrictions on the use of gold imported under these licences will be maintained while gold imported from the O.E.E.C. area can be used freely.

Official Rate for Roubles

Premiums ranging up to 150 percent will be paid from 1st April on conversions of foreign currency into roubles, of a non-commercial character, it was announced from Moscow. This will chiefly affect the costs of foreign Embassies, foreign correspondents and visitors and tourists. The new transfer system will not affect the official rate as far as trade and other exchanges are concerned. The official announcement said that the premiums would make sterling worth 27.6 roubles instead of 11.2 roubles and the U.S. dollar worth 10 roubles instead of 4 roubles.

Rubber Steady

Although thin, the rubber market was fairly steady during the early part of the past week, with values quickly responding to a temporary upturn in Singapore. The industrial unrest, however, was the cause of continued uncertainty and dealers were not, therefore, disposed to add to their commitments. The Study Group figures of consumption and production were about as expected, and together with the U.S. consumption estimates for March, were largely disregarded as influencing factors. Prices were marked down sharply on the receipt of lower Singapore advices. The decline was extended under selling pressure, especially from the Continent, when shorts came into cover in shipment as well as landed positions at the lower levels. The declining trend was checked and reversed, but factory interest was small and patchy with overall business insufficient to hold any recovery. Values fluctuated a little in thin trading near the close and there was a net decline of about 1½d a lb on balance. Demand for sole crepe was only moderate but enough to absorb small supplies of top grade coming forward. Prices were steady on the basis of 42½d a lb for 4th inch smooth No. 1 on the spot.

U.S. Rubber Consumption

Consumption of natural rubber, excluding latex, in the United States during February totalled 39,991 long tons, compared with 45,637 long tons (revised) in January, according to the U.S. Department of Commerce. Consumption of latex totalled 6,756 tons against 6,994 tons (revised). Stocks of natural rubber, excluding latex, on 28th February totalled 90,309 long tons against 89,902 long tons at the end of January, while stocks of latex amounted to 9,924 tons against 11,512 tons. The U.S.A. used 22,853 tons of reclaimed rubber in February compared with 24,053 tons (revised) in January. U.S. consumption of synthetic rubber was shown at 77,943 long tons against 85,490 long tons (revised) in January, while production was put at 85,234 tons in February against 94,284 tons in January.

P. and O. Balance Sheet

The consolidated balance sheet as at 30th September, 1956 of the Peninsular and Oriental Steam Navigation Company shows total assets at £228,025,859, compared with £207,867,112 in 1955. Current liabilities total £36,182,560 (£31,591,312). There were capital reserves of £57,628,907 (£55,029,152) and revenue reserves of £38,873,962 (£36,720,931). Further expenditure to complete ships under construction is shown at £10,658,481 (£11,589,700) and for net tonnage ordered but not laid down £27,900,107 (£9,887,500).

Loan Stocks of Distillery Companies

Holders of preference and ordinary stocks in subsidiaries of the Distillers Company are invited to exchange their holdings into 5½ percent consolidated unsecured loan stock of the parent company. The amount of the loan stock involved is £9,910,870. The subsidiaries concerned are Booth's Distilleries, Buchanan Dewar James Buchanan and Company, John Dewar and Sons, John Haig and Company, Manchester Chemical Company, United Yeast Company, John Walker and Sons and White Horse Distillers.

Polish Cement for India

Poland will deliver 100,000 tons of cement to India by May this year under a contract signed with the Indian State Trading Corporation, Warsaw radio has reported.

April 4, 1957.

New Delhi

ECONOMIC CO-OPERATION BETWEEN INDIA AND W. GERMANY

GOVERNMENT CLARIFIES CAPITAL GOODS IMPORT POLICY

(FROM OUR NEW DELHI CORRESPONDENT)

THE growing economic and technical co-operation between India and Western Germany was emphasised by the presence in the capital during the past fortnight of Dr. von Brentano, West German Foreign Minister. Herr Berthold Beitz, chairman of the executive board of Krupp and one of the foremost German industrialists, and the official trade delegation led by Dr. von Bergen. In addition to the hundreds of scholarships and technical apprenticeships, the supply of equipment as well as senior staff for a higher technological institute from Western Germany, the Foreign Minister offered on behalf of his Government to assist in the setting up of a prototype training workshop for the technical staff needed for the development of small and medium scale industries in India.

The occasion of Dr. von Brentano's visit, it had been expected, would be utilised for announcing the location of the third higher technological institute, as well as the details of German assistance in equipping and staffing it. But the announcement was not made. Of the four regional institutes it is proposed to set up during the second plan, the eastern one is already functioning in Kharagpur. The western one is being established in Bombay with Russian assistance, which is being channelled through the United Nations. There has been no offer of foreign aid for the fourth institute yet. Progress on the third one has been delayed by a squabble over the location. Madras and Kanpur were recommended by the All-India Council of Technical Education some time ago as possible sites for the southern and northern institutes. It is now practically certain that the third institute will be set up in the north; Delhi and Allahabad are now mentioned as the possible site for it. The decision will be taken shortly.

During his visit, Herr Beitz met the Prime Minister and the Finance Minister. He also met senior officers of the Economic Affairs Ministry. The talks were significant in view of the many projects in which West German collaboration has been offered and is possible. It is understood that Herr Beitz expressed the view that the British Heavy Engineering Mission's recommendations are more economical and practical than those of the Russian experts.

Indo-German Trade

Some hard problems are involved in Indo-German trade. Its striking increase in recent years provides an apparently satisfactory background to the trade talks which last week began at an official level. The Government appreciates the fact that in spite of pressing home demands, Western Germany has increased supplies of steel to India from 10,170 tons in 1954 to 29,067 tons in 1955 and 141,450 tons last year. The anticipated supply during the current year is 150,000 tons. As against this increase in West German exports, its imports from India has not kept pace. In 1952-55, India's imports from Western Germany amounted to Rs. 22.5 crores while exports were worth Rs. 10.6 crores only. She thus had an adverse balance of Rs. 11.9 crores. Im-

ports from Western Germany rose to Rs. 60.3 crores in 1956-57, while the Indian exports improved to Rs. 14.9 crores. During the period April to November, 1956, India had a big adverse balance with Western Germany, exports amounting to Rs. 9.5 crores and imports to Rs. 58.3 crores. The trade delegation, it is expected, will consider the problem of narrowing this gap by increasing West German imports from this country. The second problem concerns West German manufacturers of machinery who find themselves burdened with products valued at Rs. 15 crores, which they produced for the Indian market without there being any firm commitment from India. They, it is reported, have urged the Indian Government to allow this machinery to be imported. But New Delhi seems to be firmly against the relaxation of import control, since it will encourage similar pleas from other quarters.

Visit of Japanese Banker

The prospects of India securing capital goods on long-term credit from Japan will be discussed at the talks which Mr. H. H. Kano, vice-president of the Japanese Export-Import Bank, will hold with officials and representatives of Indian industry during his forthcoming visit to India. Established after the second world war, the Japanese Export-Import Bank is a statutory body which has two functions: to advance credit to cover deferred payments over a maximum period of five years; and to advance working funds to Japanese industry to aid the production of exportable goods. The Bank has already assisted the supply of Japanese capital goods to India through the second method. The exploration of the scope for adopting the first method is obviously indicated by India's pressing need to conserve foreign exchange resources. A few years ago, Pakistan availed of a credit offer from the Japanese Export-Import Bank.

The itinerary of Mr. Kano—who was to have visited India last September with the Japanese industrial mission led by Mr. Takasugi but was prevented by an accident—is an indication of Japan's concerted effort to develop the Asian market. From Bangkok, where he acted as an adviser to the Japanese delegation to the recent E.C.A.F.E. trade conference, Mr. Kano visited Burma and will proceed, after his Indian tour, to Karachi. Indonesia is already the best Asian customer of Japan. Earlier this year, the Japanese trade mission visited Malaya. A personal representative of the Japanese Prime Minister recently went to Singapore to discuss trade promotion with the authorities there.

Overseas Capital Investment

A report from the Indian Commercial Secretary in Tokyo says: "In 1957, Japan's machinery industry will explore the possibilities of investment in the under-developed nations of south-east Asia and the Near and the Middle East to promote the export of industrial equipment to these nations. The contemplated investments are reportedly aimed at keeping Japan abreast of Western Germany, the

United Kingdom, the U.S.S.R. and other nations in the investment of capital in economically backward areas, to encourage the latter to import plant and machinery. Since the war, Japan's exports of heavy equipment have been generally limited to ships. The Japan Export Plant Technical Association, an organisation of machinery manufacturers, has planned a basic survey for the fiscal year 1957 overseas investment possibilities. The Ministry of International Trade and Industry has received a 20 million yen subsidy request from the Association to finance the survey. The report also says that the Japanese Ministry of International Trade estimates the value of Japanese plant and equipment exports during the 1957 financial year at \$ (U.S.) 53,526,000 marking a decrease of \$ (U.S.) 51,950,000 from the 1956 estimate. "The decrease," the report goes on to say, "is mainly accounted for by a possible drop in the export capacity of the shipbuilding industry during the period. Exports of machinery as a whole are not expected to show any considerable rise because of the active demand from domestic industries. But exports of other products belonging to the category of machinery will double the figure for the current (1956) fiscal year as a result of a possible increase in shipments to India and Brazil."

Capital Goods Imports

The Government's clarification of its capital goods imports policy, as contained in the announcement of the Import Trade Control last Sunday, is calculated to allay the misgivings of industry (expressed recently at the F.I.C.C.I. annual session), about the possible effects of the stipulations on deferred payment, which were outlined in Mr. L. K. Jha's circular. The announcement mentions cases in which it will not be necessary for importers to arrange for deferred payments. These include: (a) where the total value of imported plant and equipment to complete a project is less than Rs. 5 lakhs; (b) where the equipment is 10 percent or less in value of the machinery already installed or covered by an import licence or available from indigenous sources, and is essential for the completion of such plant; (c) where the equipment is required for replacement or maintenance; (d) where the total value of the equipment to be imported is less than the amount of fresh foreign capital coming in for the project; and (e) where the equipment is needed for constructional purposes like earth-moving equipment and excavators. Applications under these heads will be considered on their merits and in accordance with the import policy in force, as well as the priority to be attached to the projects. In cases where importers must arrange for deferred payment, applications will be considered under one of the following alternative sets of terms: (1) total payment prior to shipment is not to exceed 20 percent of f.o.b. value of the plant and equipment, and the remaining 80 percent to be paid in seven more or less equal annual instalments thereafter; (2) the initial payment is to be limited to 10 percent and the balance to be paid after production has started, and in instalments which should not exceed the net saving in, or the earning of, foreign exchange which the project will achieve thereafter. For purposes of consideration under the second alternative, the item to be produced must be one which is of sufficient importance to justify its continued import in spite of a tight exchange position, or it must be readily capable of earning foreign exchange by being exported. To calculate the saving in exchange, credit will be given for the production of items which save or earn foreign exchange, but a deduction will be made on account of the raw materials and semi-finished items which the project will need to buy, unless they can be produced without additional strain on the foreign exchange resources of the country.

OUR LIGHTING EQUIPMENT IS EVERYWHERE

The Benjamin Illuminating Engineering Service offers—freely and without obligation—expertly planned lighting schemes for industrial and commercial requirements in all parts of the world. Working in close co-operation with on-the-spot consultants, all the resources and experience of our vast organisation are made available to you. Final specifications are designed to provide a complete and truly economical answer to your own particular lighting problem. The service operates through your Benjamin Distributor. Please ask him for further details.

U.K. INDUSTRIAL STRIKES
CALLED OFFADJUDICATION COURTS TO
ENQUIRE INTO DISPUTES
(FROM OUR LONDON CORRESPONDENT)

THE strikes in the shipbuilding and engineering industries have been called off. Some 200,000 men in the former and about one million in the latter were idle for a fortnight and a week, respectively. A further half million men in the engineering works in and around Greater London stopped work last Saturday. The strikes were called off by the workers on the appointment of courts of enquiries by the U.K. Ministry of Labour. In view of the nature of the disputes, it will be interesting to learn what the enquiry courts have to say on the economics of the matter. The strikes would have already had an adverse effect on industrial output—which is particularly unfortunate for the statistics so far made available justified the hope that the levelling off which took place last year might be altered in 1957, and an upward trend reintroduced. The index number of industrial production (1948=100), prepared by the Central Statistical Office, is estimated provisionally at 137 for January, compared with a revised figure of 133 for December. The figure was 139 for January 1956, and 138 for December 1955. For February, a provisional figure of 142-143 is given, against 142 a year earlier. The overall figure for both these months were affected by the motor industry slump and a fall in electricity generation occasioned by the mildness of the winter. Car production showed drops of 37 percent and 31 percent and commercial vehicles of 32 percent and 24 percent in January and February, respectively, compared with 1956. In most other industries the February figures show increases, such as coal five percent, bricks four percent and cotton spinning three percent. With the recent revival in the motor industry, and many new and improved factories completed during the past year making a fuller contribution to production this year, the period of stagnation may well be at an end.

On the other hand, the outlook for profits is less rosy. The state of company reports announcing larger turnover but smaller profits is by no means confined to the depressed consumer goods industries. Within the past few days, it has been

the same story from the Brush Group, British Oxygen, David Brown, and Reyrolle, apart from Ford and British Motor Corporation. It may well remain difficult for many companies to pass on higher costs, even in the home market, let alone abroad. It is in labour's refusal to accept the fact that not all the units in industry are doing well enough to meet inflated wage claims of a comprehensive nature that the real danger lies.

Revenue, Expenditure and Savings

In contrast to normal experience, the Exchequer returns have continued to show improvement. The penultimate week produced a revenue surplus of £25 million, of £19 million more than in the same week a year earlier, to raise Mr. Thorneycroft's potential Budget surplus to £344 million. This falls short of the 1956 surplus of £418 million, as well as of the estimated figure of £460 million, but it seems unlikely that the final week of the 1956-57 financial year will call for quite as much adjustment on the expenditure side as was necessary in the previous year. The surplus then was cut back to £393 million. The overall position will be governed by the "below-the-line" deficit, which is still well below the £803 million anticipated a year ago at £656 million, in spite of a first advance under the Transport (Railway Finance) Act, 1957, of £52 million. Here also there could be substantial "last week" adjustments, but with the overall cumulative deficit running at £312 million, against an original estimate for the year of £243 million, the Treasury can be reasonably satisfied. The progress of the National Savings movement has been satisfactory. The accumulated savings figures showed a surplus of £117 million over withdrawals two weeks before the financial year closed. This compared with a deficit of £29 million at the same date in 1955-56. Of the total swing round of £146 million on the year, only £63 million is due to sales of the new premium bonds, so higher interest rates have clearly played the biggest part in this improvement.

Bank Loans Surprise

Outstanding in the latest monthly statements of the London clearing banks made up to 20th March is a further sharp rise of £52.9 million in advances, which raises the loan total to £1,976.4 million. This rise has taken place in spite of a reduction in the borrowings of the nationalised industries from the clearing banks. Between 20th February and 20th March, these borrowings dropped by £17.7 million to £39.8 million. This implies that bank lending to the private sector of the economy rose by as much as £70.6 million. It is doubtful, however, whether this reflects any easing of the credit squeeze to private borrowers. The main increase in bank loans must doubtless

be attributed to the expanding requirements of essential industry.

P. and O. Fights Rising Costs

No longer can the P. and O. Steam Navigation Company be criticised for failing to give sufficient information to shareholders. The latest accounts, to 30th September, 1956, and therefore excluding any consequences of the closure of the Suez Canal, are comprehensive. With group reserves at over £96 million, of which £57.6 represents capital reserves and the balance the revenue reserve, the great financial strength of the group is evident. Current assets have risen almost £13 million to £83.6 million, including £40.4 million mainly in dated gilt-edged stocks and almost £19 million divided equally between cash and Treasury bills, so that liquid resources exceed current liabilities by £47.4 million, and seem adequate to cover a substantial capital investment programme of £38.5 million for new ships, excluding tanker tonnage needed for the proposed expansion of the company's activities in that sphere. The overall capital programme is expected to be around £90 million, but will, of course, be spread over a number of years. Immediate needs are certainly well covered. The operating profits for the year rose by £1.3 million to a total of £24.2 million, and the group's net profit, after tax, from £5.6 million to £6.2 million. In relation to the real resources employed these profit margins may be deemed low, but a striking table of costs featured in the report shows that in point of fact, they represent a tribute to good management.

The table shows how unrelenting must be the battle against inflation and rising costs. On the basis of an index number of 100 for the year 1938, shipbuilding costs increased to 319 in 1956 and ordinary ship running expenses increased to 254 in 1956 and 308 last year. For upkeep and repairs, the index rose to 435 in 1956 and 1,715 in 1956. As to the current year's outlook, the report sounds a note of warning in that the dislocation and increased costs of fuel and diesel oil resulting from the closure of the Suez Canal are having "a most serious effect on operating results of a number of group companies." For a fuller assessment of the current year's probable earnings, stockholders must await Sir William Currie's review at the annual meeting on 17th April. Not all of the group's shipping is affected by Suez and satisfactory tramp earnings will again help offset reduced profits in other sections.

Accountancy Merger

Members of the Institute of Chartered Accountants of England and Wales have voted by the necessary two-thirds to accept integration into the Institute of members of the Society of Incorporated Accountants. The result of the Institute's postal ballot was: for amalgamation 10,242; against 4,340. About 4,500 members did not vote. There will be a confirmatory meeting of the Institute on 17th April. Then application will be made to the Privy Council to amend the supplemental Royal Charter. The scheme is also subject to vote of the members of the Institutes of Chartered Accountants of Scotland and Ireland. The results of their ballots on amalgamation are expected about Easter. If they and the Society approve the scheme, Society members will be admitted to one of the three Institutes, according to where they were trained or now practise. The amalgamation would give the three Institutes a total membership approaching 38,000.

International Tin Scheme

An increase in the floor price of tin under the International Tin Agreement was more or less inevitable. It was announced on 23rd March, and the only surprise occasioned was that it should be as much as £90 to raise the level to £730 a ton. Buffer stock purchases will now be possible within the limits of £730 to £780 a ton, whereas formerly the pool could only operate within a price range of £640 to £720 a ton. This raising of the buying limits is aimed at enabling the pool to acquire supplies to sell when the price reaches the upper limits, which have been amended to £830-£880, against £800-£880 previously. With the market price of tin around £770, or within the striking distance of the upper limit of the new buying range at that time, market people expected a rise—whether the buffer stock bought or not. The price did rise above £780, so the stock did not buy. Neither could it sell between £780 and £830. Further adjustment may prove necessary. The Council's decision must be viewed in the light of a changing statistical position. A world surplus of production is expected this year. The higher floor price will also encourage production, especially in Bolivia and Indonesia, where output has been falling in the last few years.

Brevities

The Board of Trade is further to reduce the wool stockpile in the year beginning 1st April. It is expected that between 80,000 and 100,000 bales will be sold, as before, by the British Wool Federation in varying quantities at each series of the London wool sales.

The first draw for Premium Savings Bonds is to take place in Lytham St. Anne on 1st June and will include Bonds sold in November and still in the hands of holders amounting to £48,500,000. Subject to further cashings, there should be about 23,000 prizes for the draw.

The Queen has approved the grant of a Royal Charter to the Institution of Chemical Engineers, which was founded in 1922 by industrialists, chemists and engineers "who had found that the design and operation of chemical plant needed its own engineering discipline", and which now has 3,500 members.

Bombay

CRISIS IN AHMEDABAD
TEXTILE MILLSHEAVY ACCUMULATION OF
STOCKS

(FROM OUR BOMBAY CORRESPONDENT)

THE textile crisis came to a head in Ahmedabad last week. It is reported that approximately 4 million bales of cloth valued at Rs. 40 crores have accumulated with the mills. The offtake is poor and there are no signs that these stocks will be taken up in the near future. The second threat to the Ahmedabad industry comes from a shortage of coal. More than a dozen mills have put up notices of closure while a mill in Broach has already suspended operations. Industrial circles allege that this situation has come about because of a scarcity of wagons. Normally, Ahmedabad mills use about 75 wagons a day for transporting coal and Mr. Jaykrishna, president of the Ahmedabad Millowners Association, stressed the gravity of the situation by declaring that the industry had coal supplies sufficient for no more than three days. The coal shortage need cause no undue alarm because it is likely to be of a temporary nature. There is no reason to believe that supplies will not be resumed before any serious damage is done. The really disturbing factor is that stocks of piecegoods should have rocketed to such a high level. These unsatisfactory conditions are not confined to Ahmedabad alone. The textile trade has been slack on an all-India basis for quite some time. In Bombay, too, mills and dealers have been complaining of mounting stocks. Trading has followed a familiar pattern with upcountry centres showing no more than a token interest. Last week, for instance, enquiries were received from Delhi and Calcutta and some south Indian centres for superfine qualities such as cambrics, poplins, mulls, longcloth and voiles. But these remained little more than enquiries and the actual business transacted was disappointing. Medium and coarse counts remained neglected.

Export Trade in Textiles

Of late, the export business has also been dull. Shippers report a fall in the export quotations of some varieties. Sassoon drill, for instance, is now being quoted at 12 annas 9 pies a yard against 12 annas 10 pies a yard recently. Although the drop is somewhat nominal, it is symptomatic of a trend. Although south-east Asia is an expanding market, competition has been on the increase. The Textile Export Promotion Council states that last year was marked by a substantial increase in imports into Malaya and Singapore from Japan, communist China, Czechoslovakia, Poland, the U.S.A. and West Germany. Two new exporting countries, Russia and Pakistan entered these markets for the first time. Russian prices are said to be attractive and it seems that this country has emerged as a permanent competitor. Russian exports are confined to printed goods in the cheaper price range and that country's sales of these varieties are supplemented by exports from the other communist countries. Quality goods seem to be the speciality of West Germany. Japan, the U.S.A., Switzerland and the U.K. India maintained her position as a supplier of grey cloth to the latter two markets, but her overall exports of all varieties were less. Much the same competition is being met in the African and West Asian markets. It is clear that both the Government and the industry will have to do some hard thinking to check the rot. It is fair to say that the slump coincided with the enhancing of the excise duty on cloth; but it would perhaps be unfair to hold that this alone accounts for the present stagnation. Note must also be taken of the somewhat erratic behaviour of the cotton market in recent months. Futures contracts have continued to touch new high levels each week while the spot market has remained firm with mills confining their purchases to current needs. It was only last week that the Vijay April and June contracts declined by Rs. 25 a candy following nervous selling based on the Government's intention of stepping in to safeguard the interests of the mill industry. The permission given to the Textile Commission by the Government of India to requisition cotton by directing stockists to make sales as specified by him resulted in the spot market losing about Rs. 20 a candy. But the situation remains somewhat confused as it is not known what changes may be made in futures and spot dealings. An added complication is that the new crop will be barely sufficient for domestic needs and a modest export quota.

Overproduction of Yarn

The yarn situation is equally unsatisfactory. Mr. K. G. Milne, chairman of the Kohinoor Mills Company Ltd., said at the annual general meeting that there was overproduction in yarn. He felt this was because the handloom industry had not been able to increase its production sufficiently to absorb the extra quantities of yarn turned out by spinners. Mr. Milne felt that the time had arrived for the Government to review its policy on the export of yarn and sewing thread. The yarn market continued depressed last week. Prices declined further and trading came almost to a standstill. Earlier expectations of a reduced supply following a reported 25 percent cut in electric supply in Salem did not materialise and prices of 40s and 30s fell by about two annas a bundle.

RECORD OF
ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business, ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

Plantation Topics

PLANS TO DEVELOP KERALA PLANTATIONS

MAJOR PROJECT FOR EXPANDING CASHEW CULTIVATION

(FROM A SOUTH INDIAN CORRESPONDENT)

KERALA'S second five year plan contains a number of development schemes for its minor plantation crops such as pepper, ginger, cardamom, cashew, coconuts and arecanuts. Many of the schemes were started during the first year of the plan. The State Government appointed a plantation crop specialist in February to supervise the research work on these crops. The appointment of a cashew development officer and his staff has been sanctioned. It is proposed to open new research stations for pepper, ginger, cardamom and tree spices such as nutmeg and clove. Administrative sanction for the research schemes on the first three has been granted and preliminary steps towards their implementation have been taken. One research station for pepper and another for ginger have been functioning in the Malabar area for over the past five years.

In the pepper research station, work on testing of varieties, propagation, manurial and cultural practices, breeding and control of pests and diseases is being conducted. Similar research on ginger is being carried out in the ginger research

station in Wynaad, Malabar. The venue of the new research stations for pepper and ginger is Thodupuzha in Travancore, and the cardamom research station will be established in the cardamom hills of Travancore. A development scheme for pepper, drawn up by the Government, is now under the consideration of the Indian Council of Agricultural Research. For the supply of quality seedlings of coconuts and arecanuts more nurseries will be opened in the State during the second plan period.

Cashew Cultivation

A major scheme for expanding cashew cultivation with a view to reducing the country's dependence on the import of raw nuts has been started in the State. The Forest Department has undertaken the implementation of a cashew afforestation scheme which envisages the planting of cashew trees on 20,000 acres of forest lands at an estimated cost of Rs. 32.5 lakhs during the second plan. Prospective cashew growers will be given financial aid for capital outlay in the form of loans up to Rs. 150 an acre. The Government thinks that about 5,000 acres of private lands can be brought under cashew cultivation. Government lands will be made available to prospective cultivators on lease for 20 years. The Cashew Research Station in Kottarakara is doing research work on the different aspects of cashew cultivation and propagation.

Pilot Scheme for Pepper

Besides these schemes of the State Government, the Central Government is financing a pilot scheme for pepper. This scheme was started in

1955 with headquarters in Cannanore, Malabar. The object of this project is manifold. It is to promote intensive cultivation in the existing pepper plantations and replace inferior vines with selected superior varieties in homestead gardens and other suitable areas. It will also establish a network of nurseries in pepper growing regions for the distribution of cuttings of superior vines, and collect and distribute seeds of standard trees as well as those of cover crops for pepper gardens. The scope and jurisdiction of the Cannanore project are now being extended to cover the entire Kerala State. Kerala produces 85 percent of India's output of pepper. 75 percent of cardamom, 60 percent of cashew and almost the entire quantity of exportable dry ginger.

Tea Output and Shipments

South India's tea crop for February is estimated by trade sources in Cochin at 7.5 million lbs compared with 6.6 million lbs in February, 1956. Production in January amounted to 7.4 million lbs or 0.3 million lbs higher than that of the same month last year. There have been a few showers in February and March, and if the region continues to get adequate rain, the year's output may be higher than that of 1956, which amounted to 126.9 million lbs. Severe drought in the early months of last year was responsible for the lower production. Tea shipments from Cochin amounted to 7.2 million lbs in February compared with 5.8 million lbs in the same period of last year. The total for the first two months of the year now stands at 12.4 million lbs, against 12.5 million lbs. in January-February, 1956. Exports to the United Kingdom amounted to 6.5 million lbs, to the United States 1.8 million lbs. Exports to Canada amounted to 1.4 million lbs, to Australia 700,000 lbs and to other countries 600,000 lbs. There was a slight improvement in tea shipments to other Indian ports at 1,100,000 lbs.

Rubber Production Falls

On account of the seasonal break in tapping on many estates, rubber production in south India has fallen from 2,190 tons in January to 1,165 tons in February, 1957. However it was 189 tons higher than the production in the corresponding month of last year. Manufacturers' offtake was also lower; it amounted to 2,493 tons, compared with 2,679 tons in January, 1957. Total stock, including synthetic rubber, amounted to 8,312 tons towards the end of February, against 8,982 tons on the last day of the previous month.

NO CHANGE IN TEA EXPORT DUTY

The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty at Rs. 2.27 a lb. against Rs. 3.38 a lb. in force from 1st March, 1957. There is no change in the existing rate of duty of 37.50 Naye Paise a lb.

COCHIN TEA SALES

At Sale No. 7, 1,500,000 lbs of tea were on offer. There was a fair general demand at much lower rates. Low Mediums and Mediums were irregularly 20 to 30 nP lower. Best grades were considerably easier. Fannings met with more enquiry at the close. Whole Leaf types were quieter.

U.K. TEA STOCKS

U.K. tea stocks in London and provincial warehouses on 22nd March totalled 127,659,840 lbs against 123,624,820 lbs in the previous week. The total amount to be landed on 22nd March was 26,985,770 lbs. Deliveries during the week totalled 10,231,980 lbs and landings were 14,267,000 lbs. Total allotment was 63,493,480 lbs, including from Calcutta 44,974,100 lbs, from Chittagong 997,590 lbs, from Cochin 1,800,290 lbs, from Colombo and other ports 2,887,000 lbs. The average price realised at auctions during the week was 45.60d against the previous week's 47.56d and 56.63d during the corresponding week of last year.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing prices on 22-3-57 (Rupees a lb.)	Average for the week (Rupees a lb.)
Sheet:		
No. 1	1.26	1.26
No. 2	1.23	1.23
No. 3	1.20	1.20
No. 4	.96	.95
No. 5	.91	.91
	Sheet Cuttings 1	.95
	Sheet Cuttings 2	.90
Crape:		
Water White	—	—
R.M.A. No. 1X	1.10/12	1.11
R.M.A. No. 1X	1.07/09	1.07½
	Crape No. 2	1.01½
	Crape No. 3	0.97½
Scrap Crape:		
Sc. Crape No. 1	.90/92	.90½
Sc. Crape No. 2	.87/90	.87½
Sc. Crape No. 3	.75/85	.79
Flat Bark	.70/72	.73
	Sc. Crape 3X	.83

To arrive at f.o.b. Colombo prices, add 53.53 cents a lb for crape other than scrap crape and 31.53 cents for scrap crape to the above market prices.

A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

Burmah Group of Oil Companies

ASSAM OIL COMPANY

Jute

THE PROSPECTS FOR JUTE GOODS

POSSIBLE TRENDS IN DOMESTIC AND OVERSEAS DEMAND

SOMEWHAT steadier conditions seem to have returned to the jute goods markets recently, but it is still too early to say whether they indicate a proper trend or whether they arise mainly from temporary fatka activities. The main bear factor, many think, may be a decline in raw jute prices; the time of year is approaching when the economists in Clive Row will be pushing fibre rates up or down according to the density and direction of the clouds passing over Calcutta. Signs of rain will tend to make prices cheaper; absence of them will make prices dearer. As far as the demand for gunnies is concerned, the market is looking forward a little more cheerfully than it did, say, a couple of months ago. According to one source, what the Argentine purchased from India last year was disappointing, but this year it seems quite possible that her offtake will return to the more normal level of 60,000 or 70,000 tons. Despite the poor figures for U.S. burlap consumption during February, the upward trend of demand in that country may be maintained, especially as there is no sign of recession in the American economy. Australia is an important buyer of Indian jute goods; she took much less last year than she has been taking, but her requirements are considered likely to rise. The growth of the internal market for jute goods has become a matter of first significance; according to a recent assessment, "India itself was the industry's second best customer" during the past year. As agricultural production and imports increase, the domestic demand for sacks should improve.

The broad outlook for the industry as a whole is not entirely rosy, however. Jute investors at least do not seem to think so, considering what they have been doing with their mill shares. Pakistani production is expanding, and growing competition may be expected from that quarter. A Pakistani Government hand-out states, for instance, that the jute manufacturing industry there has made further progress during the past year. So far, 11 jute mills with 6,500 looms have been installed and 1,250 more looms are being amounts to Rs. 18.50 crores, of which the P.I.D.C. has contributed Rs. 5.96 crores and the balance has been contributed by private investors. During the year, the production of jute goods has gone up by more than one-third. The total value of the output is over Rs. 18 crores, of which goods worth about Rs. 10 crores have been exported. An order has been placed for 250 looms for another jute mill. The Pakistan Government has also decided to participate in the installation of jute mills in foreign countries. This step has been taken not merely to promote economic co-operation with these countries, but also to create additional demand for Pakistan's jute. During the year 1956, a sum of Rs. 1.14 crores has been invested by the Government through the P.I.D.C. in jute mills in Egypt, Iraq and Turkey.

THE JUTE MARKETS

THE holidays on Saturday and Monday for the introduction of the decimal coinage caused a big gap in the middle of the past week. But business continued on a moderate scale throughout.

Manufactured Goods: It is reported that the fair quantities of hessian and that export business confirm these reports, but there seem to be some foundation for them and mills, it is said, have been able to sell fair quantities. The fatka market has not shown any great fluctuations and has tended higher. This is reported to be the result of operations by a prominent speculator but it may also be connected with the rumours of orders from overseas markets. On Tuesday afternoon, the fatka market eased because of clouds in the north-west—a reminder that we have now reached the season when the gunny market reacts probably more to rain or drought than to anything else.

Quotations on Wednesday morning were as follows:

	Ready Rs.	April Rs.	May-June Rs.	July-Sept. Rs.
40in. 8oz.	33.75	33.75	33.62	33.62
40in. 10oz.	40.94	41.31	41.50	41.50
B Twills	111.75	112.50	112.75	113
Heavy Cees (Plain)	111.75	112.50	112.75	113
A Twills	132	134	134.50	134.50
Liverpools	127.25	127.75	127.50	127
Cornacks	113.50	114.00	114.25	114.50

Raw Jute: Mills have been fairly active in spite of the official holidays. Early in the past week, a fair amount of business was done in Upper Assam white jute on the basis of Rs. 28 for Bottoms. Rs. 27.50 for Assam Mesta Middle alone were done at in mesta to Rs. 28, while business was done daily in mesta in assortment at Rs. 24.50 to Rs. 25 for Daisee Mesta, Rs. 25 to Rs. 25.25 for Desal and Rs. 25.50 for Northern. Murshidabad Tossa was sold at Rs. 32 basis Bottoms. Assam white jute at Rs. 28.50 to Rs. 29 basis Bottoms and Daisee jute at Rs. 31.50 basis Bottoms. On account of continued interest by mills and higher quotations in the manufactured goods market, sellers became

more reserved in their offerings and raised their quotations. But on Tuesday afternoon, there was a slight easing because mills refused to follow any rise and the gunny market fell. Business was, however, done in Daisee jute at Rs. 31.50 basis Bottoms, Daisee Mesta at Rs. 25 basis Bottoms and Forbesganj desal at Rs. 25.50 basis Bottoms.

Quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a md. Basis Bottoms.	Shipment.
Northern	28.50	April-May
Assam	28.50	"
Jungli	23	"

Murshidabad Tossa	31	"
Daisee	31.50	One-month
Daisee Mesta	25	"
Northern Mesta	26	April-May
Desal Mesta	25.50	One-month
Northern Jute (ex Calcutta)	28	"
Local Packing	27	"
Bimbi F.A.Q.	23	April-May
Pakistani N.C.'s	105 a bale	"

Arrivals in Cossipore were 458 wagons, against 316 the previous week. Quiet but steady conditions prevailed with mill buyers taking some interest, chiefly in mesta.

Mofussil: Except for Purnea and Western districts, where there were fair imports of mesta, arrivals were not much. There were small imports of white jute and Tossa in Assam and Tossa in Murshidabad, but in north Bengal they had practically ceased.

Scattered light showers have been reported but more rain is needed to enable progress to be made with sowing.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on the shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 25th March, 1957	1,843.1	20,111.2	21,954.3
1st to 25th February, 1957	1,422.0	18,925.5	20,347.5
1st to 20th January, 1957	4,057.0	23,048.7	27,105.7
	Sacking		
1st to 25th March, 1957	27,674.9	4,377.2	32,052.1
1st to 25th February, 1957	16,686.7	2,833.4	19,520.1
1st to 25th January, 1957	21,140.8	1,648.3	22,789.1

THE PAKISTANI JUTE MARKETS

OVERSEAS PURCHASES OF FIBRE RESTRICTED

(FROM A CORRESPONDENT)

DISCUSSIONS on the prospects for this season have centred on the size of the current crop and the possible size of the next crop. It has been taken for granted that total overseas purchases will be 200,000 or possibly 300,000 bales less than those of last season. This has now been accepted by all, both the bears and bulls, although they have juggled with crop figures to prove their own points of view. In actual fact, overseas buyers may not even consume as much as 4,200,000 bales. The trade seems to have overlooked the fact that not so long ago, 3 million to 3.7 million bales were the normal consumption for a year. If 3.8 million bales are shipped overseas, one million bales are consumed locally, and India, both through E.P.C.s and smuggling, takes 1.2 million bales, then even 6 million bales will be sufficient. Furthermore, there is every likelihood that stockists will continue to wait for buyers to come into the market, and before they have realised it, they will find the new season upon them and the new crop beginning to arrive. On this basis, one is inclined to think that whether or not the Suez Canal opens soon, overseas purchases will continue at the present low levels. With this policy of restricted buying, buyers can check any rising tendencies in the market, and at the same time, keep themselves supplied until the arrival of the new crop.

Both in Narayananganj and the mofussil, prices remain more or less unchanged with slight daily fluctuations. Loose jute is scarce and moist, but more and more kutcha bales from upcountry are available. The undertone in the loose and kutcha bales market is, therefore, weak. Although not much inter-baler business is reported in pucca bales, prices are about Rs. 5 cheaper and there are many more sellers. Sowings for the new crop are going well. Although a certain amount of rain is required, it is always better at this time to have

too little than too much of it. At present, therefore, there is no cause for worry about the new crop.

Overseas markets remain dull by a strict hand-to-mouth policy, foreign buyers have been able to cover their small requirements at unchanged prices varying between £101 and £103 for Export Firsts, with exceptional sales at £104. E.P.C. registrations during the first half of March amounted to 123,000 bales, India took 30,000 bales; the only other buyers over 10,000 bales were the U.K., France and the U.S.A. In spite of the small tonnage during March, it seemed as if vessels were going away from East Pakistani ports without the full tonnage, and the 350,000 bales of shipping space available for April may not be utilised in full.

The local gunny market has shown a considerable increase. B Twills are currently quoted at Rs. 129 including excise duty, but excluding sales tax, and Rs. 56 for 45in. 10oz. This is due to rumours that the Pakistani mills will work only one shift in future, partly due to the reduction of stocks held in Karachi, and partly due to delays in loading in East Pakistani ports and also at the mills. It is noteworthy that the delay in loading at the mills has been mainly because of obstruction by excise officers. The mills' threat to work only one shift may be an attempt on their part to get the Government to take some action in supplying rice to the workers.

THE FOREIGN JUTE MARKETS

FIBRE PRICES WELL MAINTAINED

(FROM OUR DUNDEE CORRESPONDENT)

AGAINST all expectations sellers of raw jute have been maintaining their prices well. Consumers of jute yarns and cloth in Dundee are purchasing merely their bare requirements. They have been lucky enough to be able to secure early despatch, especially in cloth and bags. Indeed, in the bag making trade, workers are being paid off and there is some short time. The large annual order for sugar bags has so far not been placed this year, and some manufacturers are short of orders for wide goods. Spinners keep on buying jute steadily in small lots affect and ex-warehouse, but very little for shipment. It is stated that those shippers in Pakistan, who had their licences cancelled, have only up to the end of March to despatch outstanding contracts, but if they are not allowed to export, the spinners in the U.K. and on the Continent will be badly let down. Shippers are very reluctant to make offers of new crop jute to this market, since a number of shippers had their licences cancelled.

Mill Firsts are offered at from £111 and Mill Lightnings from £101, Mill Hearts at £96 and grade Hearts at £92, good Daisee-2/3 at £104 and grade at £101, Grade Tossa-2/3 from £110 and grade Tossa-4 at £104, all c.i.f., U.K., April-May shipment, or May-June in one or two cases.

Calcutta goods have ruled very steady and no weakness has been shown. Sellers are asking 61s 6d to 62s for 40in 10oz. hessians and 47s for 7½oz. April to June, and B Twills are irregular at from 166s to 168s for same shipment, all f.o.b. Calcutta. Prices for yarns and cloth in Dundee are very firmly maintained.

An agitation is going on in the jute industry, and a deputation of trade union officials spent some time with the Minister of State in London on 27th March, discussing the possible effects of the European free trade plan on the industry. The trade, as a whole, is definitely not in favour of the project, and the Minister said that the Government recognised the special position of the jute industry.

For over 30 years "BEHAR" FIRE-BRICKS AND POTTERIES are being used by leading Iron and Steel Works, Cement and Glass Factories, Tea Industries, Sugar and Cotton Mills and other industries in the country.

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to February, 1957. Compared with January, the February index for Government securities shows a rise of 0.3 point, while that for preference shares indicates a drop of 2.0 points.

There were decreases in banks 18.1 points, cottons 11.9 points, coals 7.1 points, minings and oils 15.3 points, cement, 8.4 points, engineering 21.5 points, papers 63.6 points, sugars 3.0 points and miscellaneous 12.3 points, while jutes and teas increased by 3.6 points and 3.8 points, respectively.

Correlating all the factors the Capital variable yield securities index shows that the index for stock prices in these classes of shares declined by 14.3 points during February, 1957.

PROGRESS OF GLASS INDUSTRY

MANUFACTURE OF NEW ITEMS PROPOSED

WHILE addressing the annual meeting of the All-India Glass Manufacturers Federation in New Delhi, the Central Minister for Heavy Industries, Mr. Manubhai Shah, called upon the industry to co-operate with the Government to increase its productivity and to improve the quality of its products. The Minister said that the production of glass and glassware had increased by 65 percent in the last six years. The level of production had gone up from 87,270 tons in 1950 to 143,587 tons in 1956. The increase was more pronounced in sheet-glass. The glass shells for electric lamps, thermos flask and glass bottles. The industry has an installed capacity of about 340,000 tons at present and this is sufficient to meet the country's requirements of various kinds of glass and glassware during the second five year plan. Mr. Shah said that it might be necessary to set up additional capacity for manufacturing new products and special items if it was not possible to divert the existing surplus capacity for the manufacture of specialised items.

In this context, the Government had approved the setting up of 15 new factories and the expansion of the six existing units which would increase the capacity of the industry by 44,000 tons a year. The items to be manufactured were those which were not being produced in the country. The capacity of the industry would, therefore, increase to about 380,000 tons a year against the estimated demand of 200,000 tons by 1960-61. Mr. Shah said that the progress that has already been made in the glass industry in India are low as compared with standards in the more industrially advanced countries. There are too many factories producing the same item and the majority of them do not achieve a good standard. The Development Wing of the Ministry of Heavy Industries, Mr. Shah said, had, therefore, embarked upon a scheme to improve the efficiency and quality of indigenous production during the second plan. An ad hoc committee, appointed by the Ministry, had examined the working of the industry. It had recommended some measures. Mr. Shah said that he was glad to know that these recommendations had been well received and that most of them were being usefully implemented.

Technical Survey

A technical survey of the glass industry, the Minister said, had been conducted by four foreign experts and a Development Officer of the Ministry of Heavy Industries. The team had already visited more than 60 glass factories and had concluded its work. The report of the team would be discussed with individual factories and he was confident that the industrialists would implement its recommendations in order to improve the working of the factories. In addition to their survey work, these experts had also been assigned individually to 21 glass factories and their reports had been sent to a dozen more factories. "I hope that the efforts made by this team would go a long way in improving the working of the industry and I am equally confident that all of you would benefit from this," said Mr. Shah. In this connection, he pointed out that the Central Glass and Ceramic Research Institute, Calcutta, was also rendering very useful and valuable service to the industry. He hoped that the members of the Federation would continue to use the facilities offered by the Institute.

The Minister urged the industry to evolve a common production programme in which both the large-scale and small-scale factories could work together, supplementing each other's production and meeting the requirements of large and small consumers. He pointed out that the average capacity of a glass factory was about 200 tons a month. Against this, the largest unit in the country had a capacity of 1,800 tons a month and the smallest 12 tons a month. Furthermore, there was need to rationalise the production programmes, because the practice of manufacturing a number of articles in each factory, without due regard to the facilities available, was creating certain handicaps. In this connection, Mr. Shah commended the efforts made by some factories in south India to restrict their production to a few items. The Minister hoped that through the efforts of the Federation this experiment would spread to other groups of factories in the country.

New Manufactures

Referring to the progress made by the industry in recent years, Mr. Shah said that safety glass was produced in 1956 for the first time in India. So was sheet glass of certain thinner and thicker varieties. The industry had willingly reduced the price of penicillin vials to help the indigenous drug industry. Before the end of 1957, the production of glass building blocks, insulators, glass wool and synthetic stones was expected to start and the Methupalayam in south India, was likely to begin production in April. The Minister told the meeting that the preliminary report of the Russian team of experts on the setting up of an optical glass plant in the public sector, with Russian collaboration, was being examined by Government technical experts.

Mr. Shah stressed the need to develop export markets for Indian glass and glassware. He was

glad to note that India's imports of glass and glassware had gone down from Rs. 3.65 crores in 1947-48 to Rs. 1.63 crores in 1955-56. Last year the country exported glass and glassware worth Rs. 28 lakhs. Mr. Shah was of the opinion that this was a small amount considering the large surplus capacity in the industry. He, therefore, urged producers to try to develop a good export market. An Export Promotion Council for chemicals and refractories was being set up by the Government and Mr. Shah hoped that this would considerably help in promoting exports of glass and glassware.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) declined by 0.2 percent to 420.8 during the week ended 16th March, compared with 421.5 (revised) for the earlier week. The index was lower by 0.8 percent when compared with the corresponding week of the previous month, but was higher by 2.3 percent than that of last year. Prices of tea (+4%) and wheat in Hapur (+2%) showed a decline while jowar (+2%) and bajra and dal arhar (+1%) advanced and the index for Food Articles worked out to 402.3 compared with 402.4 (revised) for the earlier week. A fall of 1.0 percent to 514.1 compared with 519.3 (revised) for the earlier week in the index for Industrial Raw Materials was brought about by a decline in the prices of manganese ore (average export price) (-37%), rapeseed in Bombay (-12%), lac (-4%), gingellyseed in Jhansi and raw silk (-3% each) and linseed in Calcutta and copra (-1% each) although the prices of linseed (+4%) and gingellyseed (+2%) both in Bombay, rapeseed in Calcutta (+3%) and castorseed in Bombay and raw cotton (+1% each) were marked up. The index for Semi-Manufactures went up by 0.1 percent to 404.1 compared with 403.7 (revised) for the previous week. Items which showed noticeable changes during the week were: groundnut oil (+3%) and linseed oil (+2%) both in Bombay, buffalo hides and gingelly cake (+2% each), groundnut cake (-3%) and cowhides (-2%). The index for the Manufactures group stood at 384.5 compared with 384.2 for the earlier week; the price of jute manufactures (+1%) witnessed a rise while glass (-1%) went down. A decline in the prices of betelnuts in Calcutta (-2%) and black pepper, and chillies (-1% each) was responsible for a fall of 0.3 percent to 567.9 in the index for the Miscellaneous group.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year Ended August, 1939=100)

Calcutta Markets

DUST PRICES DECLINE

A T Sale No. 40, held on 3rd April. Dust offerings consisted of 22,511 chests. An easier tendency prevailed. In the early part of the Sale, most kinds except for the exportable types were up to 6 nP lower. As the Sale progressed, prices further declined and at the close were occasionally as much as 12 nP below last rates. Clean black exportable types opened about firm but eased as the Sale progressed. The plainer liquoring C.T.C. Assams were the weakest feature of the Sale and were as much as 20 nP easier but the few lines of good C.T.C.'s with bright liquors met with a good demand.

Quotations		1957		1956	
		Rs.		Rs.	
Medium Donsar Dust	1.58 to 1.62		1.11	0 to 1.12	0
Medium Assam Grainy					
Dust	1.70		1.12	9 to 1.14	9
Medium Assam CTC Dust	1.94 to 2.00				
Best Assam CTC Dust	2.75		2.14	0 to 3	0

Other grades offered amounted to 5,028 chests. There was a strong general demand but at irregular rates.

FREIGHT MARKETS QUIET

THE freight markets were quiet last week with rates somewhat irregular, although the trans-Atlantic coal trade remained fairly steady at 72s. Grain rates however fell 50 cents to \$11.75 for Gulf-Continent, but Pacific-Bombay rose by 10s to 180s. In the Indian ore trade, Mormugao-Continent was done at 117s and Mormugao-Japan at \$11.67. In the local coal trade, a small ship was fixed to Chittagong at 53s 6d and another to Madagascar at an undisclosed rate. In the sale and purchase market, a Liberty changed hands at £410,000 which shows a sharp decline from the peak price of £670,000 paid in December, 1956.

LINSEED INACTIVE

Somewhat quieter conditions prevailed during the past week and prices declined to slightly lower levels. Crushers were chiefly interested in ready and near positions, and trading was limited by the current shortage of goods. The oil market was rather dull, and shippers were reserved, despite lower offers from sellers. Latest quotations were as follows: March Rs. 21-10 a maund and April-May Rs. 20-12 a maund.

SUGAR DULL

During the week ended 3rd April, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 5,500 bags and stocks totalled 75,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31-4 for ordinary grain and Rs. 33-4 for big grain. The market remained quiet.

HIDES AND SKINS STEADY

The market was steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 26th March and 1st April, 1957)
Cowhides: Wet salted (Ord.) 26,500 pcs on the basis of Rs. 6-2 to Rs. 9-4; Wet salted (Slaughtered) 21,800 pcs. on the basis of Rs. 12-8 to Rs. 22.
Goatskins: Wet salted (Daissee, Killed) 66,000 pcs. on the basis of Rs. 310 to Rs. 320. Rs. 345 to Rs. 365 and Rs. 380 to Rs. 390; Purneah-Kissenganj-Malda 27,000 pcs. on the basis of Rs. 290 to Rs. 345; Pakur-Patna 18,400 pcs. on the basis of Rs. 260 to Rs. 271; Muzafferpore-Patna 54,200 pcs. on the basis of Rs. 290 to Rs. 315.

Bazaar Stocks

(1st April, 1957)
Cowhides: Wet salted 3,20,000 pcs.
Goatskins: Wet salted (Daissee, Killed) 4,20,000 pcs.; Assam-Dinajpur 50,400 pcs.; Muzafferpore - Patna - Purneah - Kissenganj 1,22,000 pcs.

SHELLAC MARKET STEADY

During the week ended 2nd April, the market was steady. The range of quotations was as follows:

Pure Buttonlac	Rs. 102, 101, 100 value.
Lemon No. 1 Shellac	Rs. 104-8, 103, 102-8 buyers.
Lemon No. 2 Shellac	Rs. 96-8, 95, 96 buyers.
F.O. Std. 1 Shellac	Rs. 90-8, 88-8 90 buyers.
Pure TN Shellac	Rs. 86 buyers; 85 basis done, Rs. 84 buyers; 85 basis done buyers.
4% I.T.N. Shellac	Rs. 75-8, 73-8, 74-8 buyers.
No. 1 Kusmi Seedlac	Rs. 92, 90 buyers.
No. 2 Kusmi Seedlac	Rs. 87, 85, 88 buyers.
Fine Bysaky Seedlac (Manbhumi)	Rs. 86, 84, 84-8 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 84, 81-8, 82-8 buyers.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs. 78, 75-8, 76 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 73, 70, 70-8 buyers.
Kireelac	Rs. 38 30 buyers.

Shipments during March until the 27th were 25,154 packages comprising shellac 15,858 packages; seedlac 5,960 packages; buttonlac 604 packages and others 2,702 packages.

COMPANY AND PUBLIC NOTICES

MARSHALL SONS & CO. (INDIA) LTD.

NOTICE is hereby given that the Thirty-third Annual General Meeting of the members of Marshall Sons and Company (India) Ltd. will be held on 30th day of April, 1957 at 10-00 a.m. at the Registered Office of the Company, No. 33/1, Netaji Subhas Road, Calcutta, to transact the following business:—

- To receive and adopt the Directors' Report and audited Balance Sheet and Profit and Loss Account for the year ended 30th June, 1956.
- To declare a dividend.
- To elect Directors.
- To appoint Auditors for the current year and to fix their remuneration.

5. As Special Business, to consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"That the regulations set out in the printed document submitted to this Meeting and for the purpose of identification subscribed by the Chairman thereof be and the same are hereby adopted as the Articles of Association of the Company in substitution for and to the exclusion of all existing Articles thereof."

The Share Transfer Books of the Company will remain closed from 16th April, 1957 to 30th April, 1957, both days inclusive.

As dividend warrants are sent only to registered shareholders or to their mandates shares on blank transfer should be submitted with completed deeds for transfer registration before the transfer books are closed.

By Order of the Board,

MARSHALLS (DIRECTION) PRIVATE LIMITED,
 Managing Agents,
 F. C. KRATY,
 Managing Director.

33/1, Netaji Subhas Road,
 Calcutta, 4th April, 1957.

The Dividend when sanctioned will be payable on and after 21st May, 1957 to those Shareholders whose names stand on the Register on 16th April, 1957.

EXPLANATORY STATEMENT.

Your Directors consider that it is desirable in the best interests of the Company that it should possess a set of up to date Articles of Association reflecting the numerous changes in the law relating to companies which have taken place since the existing Articles of your Company were framed in 1919. The new Articles now presented to you for adoption have accordingly been drawn up to conform to the present state of the law. They also include a section (Articles 130 to 134) defining the position of the Managing Agents in relation to the Company in the light of the Agreement recently submitted to and approved by the shareholders and later by the Central Government.

To the Shareholders of Marshall Sons & Co. (India) Limited and in particular to:—

Mr. Mark Burton, Mr. J. Hugh Marshall, Mr. L. F. Warren, Mr. Jeribhai Hormusji, Miss M. Reid, Mr. W. S. Watson, Mr. M. C. Dubash (decd.), Mr. P. J. D'Souza, Mr. F. C. Nelson, Mr. A. E. A Weekly Journal of Commerce, Industry and Finance

WITH WHICH IS INCORPORATED

THE INDIAN FINANCIAL REVIEW

69th YEAR OF ISSUE

CALCUTTA, APRIL 11, 1957.

Vol. CXXXVIII No. 3454

THE OUTLINE OF A RATIONAL TAXATION POLICY

PROVIDING INCENTIVES TO WORK, SAVE AND INVEST

THE next one year promises to be a crucial one for the formulation of India's taxation policies. The Finance Minister, Mr. T. T. Krishnamachari, has said that he proposes a drastic revision of the taxation structure, and that he hopes to complete most of it by March 1958. The mobilisation of more resources for development needs is to be the main aim of reforms. As the aim is not a matter of short-term expediency, but is intended to provide the basis for long and steady economic expansion, it is important that the more lasting aspects of the changes which are proposed should be properly appreciated. The Associated Chambers of Commerce of India have prepared an important and timely memorandum on the proper aims of a new taxation policy and the measures which should be taken to implement them. In it, the main criticisms are based on two long-standing defects in the taxation system: firstly, that large numbers of people who are not benefiting from the growth of the economy are not being asked to contribute fully to that growth; and, secondly, that because of this, far too big a share of the tax burden is falling on the limited numbers who are promoting productive enterprise, and who have shown their willingness to save and invest. As the Associated Chambers put it, tersely, "not only is a very small part of the increase of income in the country being taxed, but what is being taxed is excessively taxed."

Contributions and interest on provident fund balances should be wholly excluded from employees' total incomes; and relief on assesses' contributions and life assurance premia should be allowed for super-tax as well as income tax purposes. Furthermore, contributions made by the employer out of taxed profits to provide a pension for the employee should be exempt from assessment as income in the hands of the employee. The Associated Chambers feel that the Central Board of Revenue should be prepared to sanction applications for increased contributions to approved superannuation funds which may be required to provide for adequate pensions on an agreed basis and in line with current practice. These are valuable suggestions, for they are likely to improve the incentives for work and to promote an increase in savings. If it is feared that revenue might decrease, it should be borne in mind that the decrease is likely to be only temporary, considering the expansionary effect the adjustments will have on economic enterprise. Even in the immediate period, the advantages to be gained from an accelerated growth of productivity and incomes would far outweigh any relatively small decrease in revenue receipts.

The contradictions inherent in the Government's corporate taxation policies have become more sharply defined in recent months. In framing these policies, two broad aims need to be borne in mind. One is that companies should be left with sufficient net earnings to be able to plough back money for expansion schemes. The other—which is more important but which the Government seems almost to denigrate—is that returns on investment should be attractive, so that the capital market is buoyant and companies can depend on it for their requirements. Instead, the measures which have been taken have created a shortage of long-term finance as well as working capital for most concerns. The dividend supertaxes introduced last year have been particularly unjust in that they are based on the nominal value of capital which often has very little relation to the actual capital employed. If they are to be retained, the least the Government can do is to base their percentage application to the total capital invested in a company (that is, paid-up share capital plus premiums on shares issued plus all reserves, except those arising

SUGAR PRODUCTION AND EXPORTS

IMPORTANCE OF LOW DOMESTIC PRICES

THE conviction of Mr. A. P. Jain that the sugar industry is destined to grow in importance appears to be borne out by current trends. It is already the second largest industry in the country, being next only to cotton textiles. It is developing at a remarkable rate. Sugar exports are still something of a novelty and it is rather early to decide whether they can become a permanent feature of India's foreign trade. The balance between production and consumption has been precarious, or non-existent, for long periods in the past; as recently as 1954-55, imports of about 400,000 tons were found necessary. At present, an exportable surplus is available, and if production continues to grow as it has done in the last few years, the surplus might increase. Mr. S. S. Kanoria, in his presidential address at the annual general meeting of the Indian Sugar Mills Association, expressed his confidence that it will and that sugar is capable of making a substantial contribution to the depleted foreign exchange reserves. This is a worthy objective to pursue, but the common man will need to be reassured that, in doing so, sugar will not be diverted from the home market to such an extent as to cause a rise in the prices he pays.

Mr. Kanoria was at pains to dispel such fears. He pointed out that of the export quota of 100,000 tons sanctioned so far, 80,000 tons has already been sold, yet there is no sign that prices are hardening. On the contrary, sugar has been notable for its price stability in a period marked by general inflationary pressures. This is because production was unusually big in 1955-56, reaching an all-time record of 1.86 million tons; this figure represents an 86 per cent increase over the pre-plan average of one million tons a year, and exceeds even the revised target of 1.8 million tons set for the industry under the first five year plan. This is a splendid achievement, for which manufacturers deserve credit, but what is important is that the new level of output be maintained and even improved upon. Otherwise, as internal consumption rises, exports may have to stop, or the familiar round of shortages, high prices and recrimination will follow. The sugar industry's first duty is to the domestic consumer. Exports should be a secondary consideration—welcome as long as they do not disturb the home market, but not to be promoted at its expense.

Mr. Kanoria would probably agree. In fact, the burden of his argument for sugar exports was that they are necessary, but primarily for reasons other than the earning of foreign exchange, although that aspect of the matter is also of obvious importance. Selling abroad would enable a more rapid expansion of the industry than is possible if it caters solely to the home market. The beneficiaries would include labour, investors, cane-growers and the Government. In particular, home consumers would welcome the greater stability of sugar prices, because exports would serve as a safety valve to regulate an even flow of supplies for home consumption. This is a line of reasoning which should appeal to consumers and should go a long way towards countering the opposition to sugar exports. Mr. Kanoria is to be complimented on not advocating for India the policy followed by some sugar exporting countries—of keeping internal prices high in order to subsidise exports. At present, there is no need to subsidise exports from India, because world prices are high enough to enable sugar to be sold at a profit. The Indian Sugar Mills Association, which has been appointed by the Government as the sole agency for exporting sugar, is working on a no-profit basis; the profits currently earned are being held in a special fund which is to be used to meet possible losses on sugar exports later. If these losses do arise, Mr. Kanoria implied that the members of the Association would be willing to meet them, through a levy on the entire sugar output. This is expected to amount to four annas or six annas a maund, on the assumption that world sugar prices, when they decline, will settle at somewhat higher levels than before the present rise began.

This seems to be reasonable. Manufacturers have an obvious interest in exports, because they fear that as sugar production increases, it will outstrip consumption. Without export markets, the industry will then face over-production and slump. But they seek neither a subsidy from the Government nor higher prices from the consumer. They are apparently prepared to bear the loss themselves. The concessions they ask for—a rebate of cane cess on the sugar which is exported and special railway freight rates for the sugar which is carried to ports for export—are small. In the light of his experience as chairman of the Sugar Exports Division of the Indian Sugar Mills Association, Mr. Kanoria was confident that India's natural markets

in neighbouring areas will be able to absorb a good deal more than the export quota permitted so far. There are other markets farther afield, including even the United Kingdom, to which India has made small sales. As things stand, sugar can be sold, if it is available for export. Production is thus the key to the situation. Mr. Kanoria pleaded for a big expansion programme, based on export possibilities as well as steadily increasing internal consumption. Per capita consumption in India is very low by international standards and is certain to increase with rising incomes and prosperity. What is perhaps even more significant for the immediate future is the enormous regional variation in per capita consumption, which ranges from 34.66 lbs. in Saurashtra to 3.36 lbs. in Orissa. These local disparities are bound to become narrower in course of time, and the change could account for a very substantial increase in internal offtake. A trend which is already noticeable is the shift from gur to white sugar, and it is likely to gather momentum as incomes rise.

Unfortunately, plans to expand production do not appear to be adequate if consumption requirements and export possibilities are considered. The target of 2.25 million tons for production and 2.5 million tons for installed capacity under the second five year plan is relatively modest. The licensing policy appears to have been rather haphazard, in that it lays greater stress on setting up new factories than on expanding those which already exist, although expansion is quicker, cheaper and requires less foreign exchange. The regional allocation of new productive capacity, some claim, also seems to have been decided without adequately considering the consumption requirements of the regions or the availability of cane supplies. Mr. Kanoria asserted that the best results will be obtained by increasing the size of existing factories, in line with the trend towards larger units of production in other countries, and by bringing idle factories into use. At the same time, a vigorous drive for cane development is necessary. Besides efforts to increase the sucrose content of the cane supplied to factories and thus to raise the present low recovery percentage, it is possible to provide factories with cane supplies for a longer crushing season by a judicious selection of early, middle and late ripening varieties for harvesting at maturity.

Mr. Kanoria defended the industry against the charge of selling at high prices. He said that, contrary to popular belief, the Indian consumer actually pays less for sugar than buyers in most other countries. Leading sugar exporters deliberately keep internal prices high in order to subsidise exports. According to him, it is a remarkable achievement of the Indian industry that despite inferior quality cane, relatively low labour productivity and heavy taxation, it is able to sell sugar so cheaply. The technical efficiency of Indian sugar factories can stand comparison with that in most other countries. The Indian consumer of sugar will no doubt be glad to know that he is served better than his counterparts abroad. But human nature being what it is, he is not likely to thank Mr. Kanoria for telling him, in effect, that sugar is already as cheap as it is likely to be and that if the price changes, it is almost certain to change in an upward direction. Whether a certain price is cheap or not is a relative, not an absolute, judgment. What is cheap by British or Australian standards may be dear in India. That, of course, is no reflection on the efficiency of the domestic industry or the fairness of the price buyers here have to pay. It is a reflection only on the great poverty of the people. But, for them, it is a melancholy thought that to buy more sugar, they will have to wait for larger incomes, not lower prices—if that is what Mr. Kanoria was, by implication, saying.

THE GENERAL ELECTIONS IN RETROSPECT

(BY AN INDIAN CORRESPONDENT)

THE outcome of the general elections has on the whole been in accordance with expectations. The Congress Party has been returned to power at the Centre, and in all States but one. Its strength in the Lok Sabha has in fact increased. There have, nevertheless, been a few surprises. The major one is the victory of the Communist Party in Kerala. After the special effort which the Congress made to win the elections there, its failure has come as a grave disappointment. Even the Communists themselves had not expected as notable a victory as they have achieved. There was much confusion in their ranks after the debunking of Stalinism in Russia and after the Soviet atrocities in Hungary. With the growth of friendlier relations between Mr. Nehru's Congress Government and the Russian Communists, it was widely assumed that the chances of the Indian Communist Party were not particularly promising. The Communists owe their success in Kerala partly to the

political machinery which they have built there (and also in other areas such as Andhra and West Bengal). But a more important reason, it seems, has been the demonstration of ineptitude by the State's Congressmen and Praja Socialists in recent years; they had their opportunity to rule Kerala but dissipated their strength in petty squabbles which ignored the needs of an area where literacy is high and poverty acute.

The Communist victory in Kerala is not to be seen as an isolated event in India's political evolution. It may be the harbinger of a significant change in the pattern of political power. The Communists appear to have a poor following in areas other than Kerala and urban West Bengal, but that is not to be dismissed as inconsequential. The weakness of the Praja Socialists seems to have grown; they now have ten seats less at 195 in the Vidhan Sabhas. The defeat of Mr. Asoka Mehta by a big margin at the hands of a comparatively little known Congressman has done great harm to the prestige of the Party. In States such as West Bengal, where the P.S.P. has been able to make a better showing than before, it may be partly due to the support which it received from its "alliance" with the Communists and other leftist parties. Whatever the claims of its leaders, it seems to be losing its place as the second most important party. The rout of the Hindu Mahasabha and kindred parties is a tribute to the persuasiveness of Mr. Nehru's secular policies. Some thought that the renewed trouble between India and Pakistan over Kashmir would increase their appeal to the electorate, but this has not been so.

While the Communists have made some gains, speculation is going on about what they will do next to increase their strength. Many people are also confidently predicting that a clash between the Congress Centre and the Communist Government of Kerala will come sooner or later. The strongly critical speech of Mr. Shriman Narayan in Ernakulam, and many of the Communists' own statements, have lent support to this belief. The Communists have decided on a general reprieve for political prisoners in Kerala; although there are precedents for such a move, the Constitution imposes certain restrictions on lawlessness, and to the extent that they have condoned it, their action is insupportable. The Centre may have to act positively to discourage such practices. The Communists now threaten to carry out their election pledge of nationalising foreign-owned plantations; a few days ago, they had denied the intention. They choose to ignore the Central Government's finding that the interests of labour are frequently much better looked after in such plantations than in Indian ones, and talk of emulating President Nasser's compensation methods. If they persist in their threat, they will not only clash with the Centre, but will do immense harm to India's prospects of getting credit from abroad. The Central Government may need to declare itself unequivocally against such a step so that no mischief is done.

Reports from New Delhi suggest that the Congress is shedding much of its complacency, and it will not hereafter tend to take voters for granted. It has lost nearly 250 of its previous Vidhan Sabha seats. It has suffered reverses in areas which could have constituted a unilingal State of Maharashtra. In Gujarati-speaking areas, its losses have also been heavy, and the defeat of Mr. Khandubhai Desai in Ahmedabad is a blow to Congress as well as I.N.T.U.C. prestige. The Congress majority in the bilingual State of Bombay might be taken to imply support for the decision to keep Bombay as it now is, but there is a lesson in it for the Party to learn. The inability to win a clear majority in Orissa also points to the need to secure popular support for its policies. In this State, the Congress has come back to power, but in what is essentially a coalition Government which depends precariously upon Communist neutrality between the two major party-groups.

It is the Indian voter who has emerged from the elections with great credit. He has shown himself to possess not only sound commonsense, but mature and intelligent political judgment. This is a reassuring sign for the future of Indian democracy. But a good deal will now depend on the ability of the major parties, especially the Congress, to maintain Indian democracy as a going concern, by adopting a high standard of public morality and integrity, and by providing good Government. No praise can be too high for the labours of the Election Commission which, under the leadership of Mr. S. Sen, has carried out an enormous task with great efficiency and skill. It is estimated that 60 per cent of a bigger electorate voted this time, as against 51.2 per cent in 1952. There were 200,000 polling booths and 3 million ballot boxes. The impartiality and fairness with which the elections have been conducted is something which many of the world's older democracies may well envy.

CURRENT COIN

Outlook for Hindustan Lever.—Speaking at the annual general meeting of Hindustan Lever Ltd. last Thursday, Mr. A. J. C. Hoskyns-Abrahall, chairman, referred to the increase in the fiscal burden on private enterprise (a fuller version of the speech appears on a later page). The capital gains tax, the steeper scale of dividend supertaxes and the compulsory deposit of company reserves have proved onerous. Yet the Finance Minister has said that he has by no means exploited corporate taxation to the full. Mr. Hoskyns-Abrahall appreciates that the development of the country will cost money and that the private investor will be required to pay his share by way of taxes. Under the circumstances, he advises members not to hold any great expectations that future dividends will be higher than those forecast when the company offered its shares to the public some months ago. "However much we may be able to increase our sales turnover in the future, it does not necessarily follow that there will be a commensurate, if indeed any, benefit to shareholders." In spite of the increase in sales in 1956, the company's profits have not been of the same order as those earned in 1955. The chairman explains that this is due to the increase in costs of raw materials, of processing and of freight. He is not inclined to discount the possibility that the products the company sells might come to be considered costly by the low income groups. Hindustan Lever would greatly like to reduce prices since it would stimulate consumption. But this can only be possible if raw materials, particularly oilseeds, are available at reasonable prices. Referring to the recent import restrictions, Mr. Hoskyns-Abrahall says he is not sure whether some perfume ingredients, which are necessary to maintain the quality of products, will still be available. Hindustan Lever already finds 80 to 90 per cent of its raw materials from indigenous sources. It has also encouraged the local manufacture of some items which were imported before. There is an increasing reliance on Indian personnel for the management of its business. The number of Europeans employed has declined to 32 from a peak of 59 in 1952, and the places of the 27 who have gone have been taken up by Indians. This trend exists throughout the company's business, whether it is in the marketing, commercial or technical sections. A comprehensive agreement has been signed with the Bombay factory employees on wages, bonus and retirement provisions covering the whole period of the second plan. The chairman expresses his belief that business will continue to expand. "We are in fact conducting our operations in a rapidly developing country, inhabited by something approaching 400 million people, who by modern standards consume per head so little of the sort of products we manufacture, that an immeasurably greater consumption is bound to come."

Shree Gopal Preference Issue.—The Shree Gopal Paper Mills Ltd. has announced the offer of its second series of preference shares. (The detailed prospectus appears on later pages of Capital.) The issue consists of 75,000 cumulative redeemable preference shares of Rs. 100 each at par, and the shares carry an interest of 7 per cent tax free, which seems satisfactory in the light of prevailing market ideas. The shares are "approved investments" for the purposes of Section 27A of the Indian Insurance Act. They will be redeemed at par on 1st July, 1972, but the company reserves the option to redeem them earlier. The company has a Rs. 3 crore scheme for expansion, renovation and modernisation, and the proceeds of the issue will be utilised for this. A substantial proportion of the new capital investment will come from Shree Gopal's own resources. The first phase of the programme is due to be completed this month; it will raise production capacity from 13,500 tons to 17,500 tons a year. The annual rated capacity, it is expected, will increase to 32,000 tons when the second stage of the programme is completed by the end of next year. During this stage, a new pulp and paper mill will be built; the scheme for manufacturers of paper and pulp machinery. The factory has been located near the sources of raw materials. Apart from the paper mills, the company's interests include a hydrogenation factory, a tin can manufacturing and printing plant and a mechanised stationery department for producing stationery. It is stated that the total dividends on preference shares will be covered nearly four times by the earnings of the company.

Alkali and Chemicals.—Discussing the expansion programmes of the Alkali and Chemical Corporation of India, Ltd., Mr. N. D. Harris, chairman, described at the ordinary general meeting the progress of the polythene project. As the scheme will involve a total investment of Rs. 4 crore, the company has decided to raise extra resources by a rights share issue at par and by a public advance notice of the new issue, which is to be made in the proportion of four new "A"

ordinary shares for one old ordinary share held. They will have the right to renounce the "A" shares, and will shortly be informed of the procedure. Referring to the allocation of Rs. 13,64,000 to the dividend equalisation reserve, Mr. Harris said: "Your directors made this reserve in the knowledge that although the polythene project should ultimately prove profitable, capital invested during the construction period will earn no return. It is hoped, however, with the help of the dividend equalisation reserve to maintain a reasonable dividend, even on the higher capital." Polythene is said to be a tough, flexible and thermoplastic material with remarkably insulating properties. It is being increasingly used throughout the world, especially in the manufacture of packaging film, flexible pipes, submarine telephone cables, etcetera. Mr. Harris thought that the largest single use of polythene in India would probably be for packaging purposes, both as film and as coating on paper and jute. The year under review has been a record one for A.C.C.I.'s sales and production. "Demand for our products continues to increase and generally still exceeds our capacity, which is being expanded in most of our products," Mr. Harris stated. Production of chlorine and caustic soda increased by 21 per cent over the previous year. Output and sales of hydrochloric acid were about 10 per cent higher and plant to double the capacity has already been installed. Referring to the prospects for the future, the chairman said that there is an immense potential market for chemicals in spite of the fact that the industry is still in its infancy. "We hope to be in the forefront of this industry and have continuously in mind plans for further extension."

Problems for Paints.—The report of Mr. C. E. J. Crawford, chairman, at the recent annual general meeting of the Paint Federation in Calcutta, analyses many of the paint industry's current problems. Since December, the industry has been brought within the scope of the Industrial Development and Regulation Act. Referring to this, Mr. Crawford states that if the emphasis is on regulation rather than development, expansion is likely to be retarded. Any measures which add to the "unproductive burdens" of the manufacturer should be avoided under the present circumstances. There is an excise duty on linseed oil, and another on the paint in which it is used; this amounts to levying a double tax. The paint manufacturer who prefers to refine linseed oil for his own use is often treated as an "oil manufacturer." He is thus made to comply with rules which involve unnecessary paper work and waste time. Mr. Crawford feels that in formulating its import policy, the Government does not always consider properly the fact that local manufacturers are able to supply, "without exception, all the paint requirements of the country". The import of raw materials has now been restricted; some of them were formerly under O.G.L. and are not locally available. The Government, it is felt, should not have done this without consulting the industry. Mr. Crawford expects that India will emerge in the future as a considerable exporter of paints. Bearing this in mind, producers should strive not only to maintain, but to improve the quality of their goods. It is suggested that the Government prepare an export promotion scheme, based either on a system of "drawbacks" under Section 100A of the Sea Customs Act, or on a system of rebates. In the internal market, difficulties arise from the new condition which official purchasing agencies have imposed upon sellers. They have introduced a new arbitration clause in purchase contracts which makes them the sole judge in any dispute—a condition which contradicts the accepted principles governing "normal relations between buyers and sellers". The railway freight classification needs to be simplified. Mr. Crawford mentions a problem which might arise when the metric system of weights and measures is introduced. In switching over to it, the paint industry has to depend on the speed with which manufacturers of metal containers turn out the full range of their goods. During the transitional period, Mr. Crawford says, sales in both metric and gallon measures should be permitted.

Trade in Tractors.—Speaking from the chair at the recent annual general meeting of the Tractor and Allied Equipment Manufacturers and Importers Association Ltd., Mr. L. R. Patel has referred to the possibility of increasing the use of tractors in Indian agriculture. It is proposed to reclaim a million acres of land, and to take improvement measures in an area of two million acres through the Central and State tractor organisations, individual cultivators and other agencies. Referring to the ceilings fixed by some State Governments on land holdings, Mr. Patel has pointed to a census carried out by the National Development Council which has shown that there are about 45.3 million holdings of less than ten acres, 1.2 million of 10 to 50 acres, and less than 700,000 of more than 50 acres. Mr. Patel thinks that the limitation on holdings of more than 50 acres will affect agri-

SOUTH EASTERN RAILWAY TENDERS

The General Manager, S.E.Rly., Garden Reach, Calcutta-23 invites sealed tenders No. GM/7/Steel/57 for supply of the Steel Sections under the following categories: (1) R.S.Joists of sizes; (2) M.S. Angles of sizes; (3) M.S. Channels of sizes; (4) M.S. Rounds and Squares of sizes and (5) M.S. Sheets and plates of sizes.

Approximate quantity required is 2,000 tons. Earnest money is Rs. 1,000/-. The tenders will be opened on 29-4-57.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23, on remittance of Rs. 5/- per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S.E.Rly., Garden Reach, Calcutta-23 by local firms. The cost of tender forms is not refundable under any circumstances.

The tenders should be accompanied by a receipt from the Chief Cashier, S.E.Rly., Garden Reach for amounts towards earnest money as above for each tender without which the tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs. 1,000/- with the Controller of Stores need not pay the earnest money.

Firms who are not on this Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the Tender.

cultural efficiency in the long run, unless co-operative farming is introduced on a large scale. He criticises "the imperfect policy" adopted by the authorities on the import of spare parts; more often than not, the restrictions on imports interfere seriously with the operation of the imported machines. Another problem which worries importers is the attitude of the Customs authorities in classifying machinery spares under inapplicable serial numbers of the import schedule. Mr. Patel criticises the tendency of the authorities to remove items from the O.G.L. at extremely short notice. "In these days of lack of shipping facilities, an importer has to plan his indents much in advance and such planning is made impossible or futile by amendment of the O.G.L. without sufficient notice." Although the Government is a big buyer of tractors, the acceptance of a tender by it for the supply of an imported article does not automatically mean the granting of an import licence. This often leads to practical difficulties in supplying machines. Mr. Patel refers to the refusal of Central Government departments to meet their liability to sales tax on purchases. He hopes that they will change their attitude and pay the tax; two high courts have held they are legally bound to do so.

U.S. Business Conditions.—The business picture continues to show both soft and strong spots, says the National City Bank of New York in its latest monthly letter on U.S. business and economic conditions. Industrial production in March has not made the usual seasonal gain, steel output is down, housing construction is still sluggish, and

automobile sales are not showing the increases hoped for. Cutbacks in production to check inventory accumulation continue in some lines. On the other hand, employment, buying power, and consumption are firmly sustained. Scattered lay-offs in consumer goods industries have been getting much publicity, but employers in 90 percent of the nation's leading industrial centres reported to the U.S. Department of Labour late in March that they anticipate moderate increases in employment through mid-May. Backlogs in the capital goods industries hold at high levels, and even where new orders have slowed, the pressure for more output and quicker shipment—as in structural steel—is still insistent. On balance, the strong sectors in business offset the areas of weakness. They are producing a generally sideways trend. This is particularly true when the overall economy, including services and trade rather than industrial production alone, is considered. There is no evidence that the rise in the gross national product has halted; certainly, it has not turned down. Business sentiment has seemed, if anything, a little better than it was in February. This does not imply that people have suddenly become bullish again, or that buyers have started speculating or covering ahead once more. However, less talk is heard about the dangers of an imminent recession, and the security and commodity markets have behaved better than they did earlier in the year. Confidence was bolstered during the month by official reports that business men were planning to maintain expenditures for new plant and equipment at about the present record rate during the remainder of 1957. In another highly regarded survey, consumers reaffirmed their optimism and

willingness to buy. The fall in industrial output—moderate though it is—is the principal soft spot in the overall situation. Industrial production had been on a plateau prior to last month. In the five months from last October through February, the Federal Reserve index (seasonally adjusted, 1947-48=100) held steady at 146, except in December when it was 147. In March, however, steel mill operations declined and automobile output levelled off at a season when normally both should be increasing. Other industries also adjusted production schedules. The upswing in production of petroleum and other items probably will be insufficient to offset these losses, and a moderate downturn in the production index is likely.

West German Export Credits.—The Bank Deutscher Lander is cutting credit for exports. The re-discount facilities which the bank gives to the Ausfuhrkredit, the special export finance bank, are to be reduced from 600 million marks to 500 million marks before the end of April. This is the latest in a series of financial moves calculated to make export business less attractive for West Germans. Last year, the differential interest rates for export credit were abolished. In August, "Hermes", the body which insures export credits, reduced its maximum coverage from 90 percent to 80 percent in the case of transfer risks. The Ausfuhrkredit followed by reducing the proportion of credit it would give on an export order from 80 percent to 60 percent. Now the facilities available to the Ausfuhrkredit are to be reduced, so that West German export credit will become the less plentiful as well as less attractive. The reasons behind these moves are difficult to understand. One could be to stop inflation at home, but speculation has also linked them with the need for consolidation before further expansion or the desire to be well placed to take full advantage of the common market when it comes into being.

U.S. Foreign Trade and Investment.—U.S. exports during 1956, by trade and tourism, resulted in a balance favourable to other countries of \$1,000 million. The U.S. Commerce Department's March survey of current business states that other countries paid the United States \$24,500 million in 1956 and received from her \$25,500 million. The favourable balance has added to the gold and silver holdings of the other countries. The survey notes that U.S. payments to other countries for goods and services totalled \$19,800 million, more than 10 percent greater than in the previous year. Of this total, imports of merchandise comprised \$12,800 million. Payments connected with international transportation amounted to \$1,400 million. Private U.S. investments abroad resulted in an outflow of \$2,750 million to other countries—a new record and more than twice the amount for 1955. Net U.S. Government disbursements to other countries through grants, excluding transfer of military supplies, and capital transactions, were \$2,300 million in 1956, a little higher than the year before. More than half of these Government disbursements last year involved the transfer of reserve agricultural products. In the last four and a half years, other countries have built up their gold and dollar reserves by about \$7,500 million. At the end of 1956, the gold and liquid dollar holdings of other countries and international institutions amounted to about \$33,000 million.

PARLIAMENTARY ORATION

THE more we think of the extraordinary performance of the members of the Legislative Council devoting some eight hours to reading written speeches to each other, the more we are struck with the absolute absurdity of the whole proceeding. If it had been desired to turn the Legislative Council of India into a farce and to bring it into thorough and complete contempt, no better means could have been devised than the fiasco of Friday. We are informed that these so-called speeches are circulated among the members beforehand, so that if any remarks are made, while the Lieutenant-Governor would be called upon to answer, the written speech is sent to him beforehand, and all the effusions are submitted to the Viceroy to enable him to sum up the situation at the end. To people ignorant of this tomfoolery, the Budget debate would seem to be a masterly performance and the Viceroy to be a politician of the first class, inasmuch as he could listen for six hours to a volley of speeches and then get up at the end and reply at length to everything which concerned him. We do trust that on the next occasion the members of the Council will rise above parochial considerations; and if it is considered desirable that there should be these written speeches, let them by all means be written out, printed and circulated, and then the proceedings be some discussions on them. The proceedings at the last Viceroyal Council were too utterly absurd for words.

A DITCHER'S DIARY

Communist apologies. Nor is an explanation unduly difficult to find. Ideologies or political ends play a much lesser rôle in our behaviour than we usually concede. "The ends are ape-chosen, only the means are men's"; and all your political extremists, for all their superficial animosities, are friends under their skin precisely because they believe in the same means. It was natural that Tom Driberg should have been Beaverbrook's biographer, to say nothing of Burgess's: as natural that Beaverbrook should find in Bevan a man after his heart.

Mr. Nehru's plea, made before a literary forum organised by All India Radio last week, that more people should learn more languages is unexceptionable—at least in theory. Nothing breeds stagnation, conceit and parochialism more easily than insularity, especially intellectual insularity of the sort that is implied in people limiting their interests to a language which is not widely used, or which has failed to adapt itself to the needs of a changing society. Some of the more harmful consequences of the parochialism which narrow linguistic attitudes give rise to were seen in India only a few months ago; and Mr. Nehru no doubt had these in mind when he made his plea. But the real trouble, I fear, lies, familiarly enough, in how the pious aim is to be put into effect. Mr. Nehru is quite right when he says that when new languages are to be learnt, the beginning is best made when one is a child. Apart from the physiological reasons he mentions, such as the organisation of the brain cells when one is very young, that is the time when one's receptivity to new modes of speech and to new ideas is probably the greatest, even if it is not particularly discriminating. It is also the time when speech organs adapt themselves most readily to the new convolutions which may be required of them. What worries me, however, is whether the attempt to diversify linguistic interests in early childhood might not later go much the same way as that renowned phenomenon of Indian history, the *Vana Mahotsava* campaign—whether the linguistic saplings planted in early life may not be left to decay and die in later years? I suspect they would, easily, unless high school and university education were also reformed in such a way that these interests are preserved and nourished. However, with our educational institutions already overcrowded and short of facilities, it might be an error to make curricula more burdensome. Looking at the proportion of college students who spend the greater part of their day patronising coffee houses, you might suspect that their time would be better spent learning Hindi more thoroughly, or taking up Persian or French. But the reason, I feel, why they do patronise the coffee houses is that they find lectures singularly unfruitful, because overcrowding prevents the opportunity for that intellectual give-and-take between teacher and student which is the essence of education. Unless the surfeiting of our educational machines with an indiscriminate selection of raw material is ended, the finished products are not likely to show much improvement or diversification—whether the labels they carry pertain to languages, the arts or the sciences.

Self-criticism is so rare a phenomenon in Indian journalism today that I am glad Reuters have cabled back to this country an Indian editor's contribution to the International Press Institute's

monthly bulletin in Zurich. Mr. S. N. Ghosh, editor of the *Pioneer of Lucknow*, may be justified in saying that the Indian Press has lost its sense of mission, but I am less sad at its disappearance than I am at the lip-service some of us continue to pay it. I would not mind at all the journalists trying to improve their working conditions if they bring with it a certain insistence on professional efficiency. But they frequently do not, and then seek Government assistance, although they must know that such assistance is given to traditional critics only at a price. That the Government has not so far abused the extensive powers it possesses to restrict the freedom of the Press is no argument at all why they should be there; many of our legislators might appreciate this better if the Kerala Government, for instance, tinkered around with a Congress newspaper in that State. Nor are these the only deficiencies of the Press. There is at the bottom of it all a strange lack of the spirit of competition, which is as necessary for a free economy as it is for a free Press. Do we see any aggressive efforts to increase circulation? No. One only hears of various attempts to inflate the A.B.C. figures. Finally, I am by no means certain that the increasing number of journalists and newspaper proprietors contesting elections on Party tickets is an additional way of ensuring the freedom and independence of the Press.

The Indian Administrative Service probationers, who were launched into professional life with a flourish of speeches last week, cannot complain of poverty in at least one item—good advice. They may, however, have occasion, later in their careers, to complain of poverty in another item—the opportunity to put good advice into practice. Dr. Rajendra Prasad, who many have been reassured to see retaining the official eminence from where exhortations have a guaranteed, if sometimes limited, audience, told the new generation of administrators to cultivate impartiality and judiciousness, and to "remain impervious to undue pressure from political groups and parties." Some of his audience may, I suspect, be posted to Kerala; impartiality and judiciousness would then, I suppose, demand that they adapt themselves to policy somersaults executed at the rate of three times a week. Some others may go to Bombay, and there learn that it is not "undue pressure", but only good-hearted persuasion, which is used in preventing Government servants from bibbing the alcohol which can be absorbed with such pleasant results in West Bengal. Yet others may find themselves in certain community project areas, where, a friend tells me, putting people to work whenever "window-dressing" is required for visiting dignitaries is as much an official's job as pigeon-holing files is. But perhaps I am being too cynical. If so, it is only because I feel that the advice should be offered less often to the administrator than to the gentlemen who obstruct or influence his work. These latter are often people who cannot be as easily persuaded by the civil servant as by Dr. Prasad and Pandit Pant (who spoke later in a similar vein)—persuaded, that is, to refrain from using their influence to serve their own petty, and often political, ends. Many officials are by now well familiarised with the spectacle of politicians in proletarian dress jumping over their heads—into the welcoming and extended arms of their superiors. Unless civil servants can be assured of full support when they do their duties sincerely and honestly, impartiality and judiciousness are likely to remain subjects for verbal dissertation alone.

THE DITCHER.

CAT

MOTOR GRADERS

All over India on the big construction projects with municipalities; state farms; and with the leading contractors, you can see Caterpillar Motor Graders hard at work.

Building or maintaining existing roads, ditches, shaping banks, there is no tool like the profit making Caterpillar Motor Grader.

All over India, and throughout the world successful contractors and project engineers give Caterpillar their first choice. The main reasons for this preference are the proved low cost, high production and long-lived performance of these famous machines.

Ensure the job gets done to time by using a Caterpillar Motor Grader. There are three models the No. 12, 112 and 212. One of these, or more, is the answer to your problem.

CATERPILLAR*

*Caterpillar and Cat are Registered Trademarks of Caterpillar Tractor Co., U.S.A.

The White Paper on the Budget for 1957-58 comments on this stability of sugar prices at a time of inflationary pressure. I hope that these facts effectively dispel the wrong notions about sugar industry. The Tariff Board has already said that the technical efficiency of Indian Sugar factories compares favourably with those in other countries. You have also kind enough to say that the industry has been able to stand under a rigid cost structure. The legislation to Australia and Indonesia has already established that cost of production in India is much lower as compared to those countries. I, therefore, consider it a remarkable achievement that in spite of the heavy taxation, inferior quality of cane and with lower productivity of labour, we are still able to export sugar.

to supply our consumers sugar at a price lower than many other countries.

By-Products

No industry can develop which does not make a profitable use of its by-products. This side of the sugar industry has not so far received the attention which it deserves. Proper utilization of by-products will help to lower the cost of production of sugar, it will stimulate the growth of other industries and even holds possibilities of earning foreign exchange through exports.

One of the most important of these by-products is molasses. By the end of the Second Plan, production of molasses is expected to amount to 8 to 9 lakh tons. The industry will be faced with a serious problem in disposing of this surplus. At present the price of molasses permitted to Indian factories is much lower than in other parts of the world and there is an urgent need to raise this price suitably. The principal consumer of molasses is the power alcohol industry which is not in a position to pay a higher price on account of heavy taxation and the high mixing costs allowed to oil companies. Some relief to the power alcohol industry, in these matters, seems necessary, as a rise in the price of their products should be allowed. Other uses of power alcohol such as the manufacture of DDT, acetate rayon, polythene, synthetic rubber and others are developing. But, allowing for all this, a surplus of molasses will remain and I wish to urge that the possibilities of its export regularly should be examined. There is a good demand in foreign markets and if facilities such as railway transport by tank wagons are made available, I am confident that export trade of a fair size can be built up. I understand that already a beginning has been made in this direction and sales of about half a lakh tons of molasses almost finalised.

Another important by-product is bagasse. I am glad that the possibilities of using bagasse as a raw material for manufacturing paper are now being realised and I welcome the decision to establish a factory for the purpose at Shakarnagar. The development of the paper industry under the Plan may result in a shortage of bamboo. Bagasse would be the answer to this problem.

Cane-trash could be utilised as a fuel, and wax could be extracted from sulphitation press mud. The possibilities are great and I think an expert committee should survey the field and examine the possibilities of economic utilisation of all the by-products of the sugar industry.

Labour

I firmly believe that good relations between labour and management are vital to the efficiency and progress of any industry. The year under review was marked by an agreement on payment of bonus to workers in U.P. involving a sum of about Rs. 1 crore 50 lakhs. In addition, Provident Fund facilities have been introduced for the benefit of the workers in the sugar industry. At present, the industry is facing a demand for an increase in wages. I would be in-

clined to view such a claim with sympathy. I am convinced that a strong case exists for wage increases, but only on certain conditions. One of these is that the workers must be willing to respond to the higher wages with efforts to raise productivity. Our workers have still a long way to go before they attain productivity standards comparable to those of other countries. In Australia, the average quantity of sugar produced per worker is 144 tons and in Java it is 40 tons. The corresponding figure for India is only about 10 tons. So I say, the industry will be happy to pay higher wages, if the labourer proves worthy of his hire. My second condition is that wage increases must proceed parallel with rationalisation. If employers are reluctant to adopt improved techniques of production because of the fear that they would be burdened with surplus labour, it is surely evident that eventually everyone is worse off labourers, employers, consumers and Government.

While on this subject, I feel it necessary to draw attention to the decline in standards of discipline, the tendency to resort to go-slow strikes and adopt coercive methods. Unless these dangerous tendencies are halted, I fear that our efforts to raise production and develop the country industrially will get a set-back.

Lastly, I hope I shall not be accused of an attempt to make Jack a dull boy through all work and no play, if I suggest that we have far too many holidays in this country. The number of man hours we lose and the resulting loss in production, will, I am sure, be a staggering figure, if some one took the trouble to calculate it. But I seriously feel that for an undeveloped country, where increase of production is of paramount importance, we should work a little more, even if that means playing a little less.

I.S.M.A.

Before I conclude, gentlemen, it is fitting that I should say a few words about this organisation of ours. The Indian Sugar Mills Association is the only all-India body representing the industry. It was started immediately after the grant of tariff protection to the industry, and in the twenty-four years of its life, it has built up an undisputed position of leadership of the industry. I believe we can look back with pride on the work of the Association in these years. I take this opportunity of acknowledging the good work being done by our several branches in U.P. and Bihar and the valuable co-operation we have been receiving from the various regional Associations affiliated to it, the South Indian Sugar Mills Association, the Deccan Sugar Factories Association and the Madhya Bharat Sugar Mills Association.

Publication of the journal "Indian Sugar" is proceeding satisfactorily, and it is developing into a useful organ of opinion and information on matters relating to the industry.

The past year has been memorable in the history of this Association because of the great responsibility conferred on it by our appointment as the sole agency through which sugar exports would be carried on. This was an entirely new activity for this Association, but we went ahead and built up a Sugar Exports

Division absolutely from scratch. I believe, in all modesty, that our performance has been creditable and once again, I express to you, Sir, our deep sense of gratification at your acknowledgement of appreciation of our activities. We shall continue to strive to be worthy of your trust. I personally believe that sugar exports have a great future and I shall always regard it as a particular privilege to have been associated with the initiation of this development.

This year the Association also set up a separate division to deal with the problem of factory farms. The work is expanding and has already borne fruit, in the matter of land ceilings. We are also going to set up a branch in the Punjab shortly, where a number of new factories, mainly co-operatives, are coming up. We are legitimately proud that our membership is open to all and almost all the co-operative factories which are coming into production are finding it useful to become our members.

Gentlemen, I have taken up much of your time, but I shall not detain you much longer. I thank you for your presence here today. To you, Sir, I wish to say one final word of appreciation and gratitude for your constant attention to our problems and difficulties and your sympathy and readiness to consider our difficulties whenever we had occasion to meet you. To the members of the committee of the Association, I say a very special word of thanks. As the youngest member of that body, I have had to rely heavily on the experience, wisdom and judgment of my distinguished colleagues. Whatever I have been able to accomplish in my capacity as the President of the Association, would have been impossible but for their generous and unstinted co-operation. The Secretary of the Association, Mr. Mehta, has won my deep appreciation by his unflinching readiness to carry out his onerous duties. I have drawn heavily on his time, his energy and his patience, and he has never let me down. The staff of the Association have also worked cheerfully and willingly. I thank all of them.

I would like to end on a personal note. This year, as President of the Indian Sugar Mills Association, has been, for me, an exciting and enlightening experience. I consider it a rare good fortune to have been honoured with such a high office and grave responsibility, while yet comparatively young. What I shall treasure most is the awe-inspiring sense of participating in the efforts for economic regeneration of the country which, I am convinced, will be regarded by future historians as one of the most momentous chapters in the history of our country. I am acutely conscious of the fact that the system of private enterprise, of which we are a part, is at the cross-roads, of which it will take the road leading downwards to decline and extinction or upwards to higher levels of national prosperity, depends largely on us. I, for one, look to the future with faith; faith in the capacity of our leaders, both political and economic to help this country to accomplish successfully its great mission of planned economic development through democratic institutions.

I request you, Sir, to inaugurate the twenty-fourth annual general meeting of our Association.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

CHAIRMAN THE HON. C. BLAKER'S REVIEW

The One Hundred and Fortieth Ordinary Yearly General Meeting of Shareholders of The Hongkong and Shanghai Banking Corporation was held on 15th March, 1957, at the Head Office of the Corporation, No. 1, Queen's Road Central, Hongkong.

The following is an extract from the statement by the Chairman, The Hon. C. Blaker, M.C., E.D. :-

Ladies and Gentlemen,

The investment in an Associated Company, which is a new item in the balance sheet, represents our one-third interest in Bowmaker (C.A.) (Private) Limited in which we are equal shareholders with Bowmaker Limited and Tover, Kimsley and Millbourn Limited. This Company was incorporated on the 29th May, 1956 to trade in Central Africa, including the Rhodesias and Nyasaland, but for the present it will be mainly concerned with the granting of hire-purchase facilities in these territories.

I should like to say a little more about the rise in advances and trade bills which, as you have seen, has resulted in a drop in the total of cash, call money and government treasury bills. This rise is to a large extent due to the growing industrial and commercial expansion in South-East Asia but that is not the only reason. It was not until the end of 1955 that the credit squeeze in the United Kingdom began to make itself felt, but during 1956 the shortage of credit to a greater or lesser degree became a matter of increasing concern to merchants and bankers alike. This was aggravated in our case by the fact that some concerns which had previously obtained a large part of their finance in London now turned to us, while on the other side, depositors took advantage of the high rates obtainable in the United Kingdom to transfer some of their funds there.

Governments also were not slow to follow suit and as a result the banking system in a number of territories was deprived of substantial sums at a time when the demand for advances, mainly for productive purposes, was very active. Even from a purely revenue producing angle I wonder whether this action was wise. Has not the lure of higher interest rates caused them to lose sight of the increased taxation that would have accrued to them through the high rates obtainable in the United Kingdom to transfer some of their funds there.

I am afraid that as a result of the increasing demand for credit the standing of the borrower and the security offered are not the only considerations which have to be taken into account by our managers when approached for new facilities. The necessity to turn away business, which at other times would be most suitable, has, I am afraid, been forced on bankers in many parts of the world and we could hardly expect to escape. Nevertheless it is not a pleasant task and I hope that many of you in this room will realise—to quote a saying from our school days—"that it hurts me more than it hurts you". In the interests of depositors and shareholders alike it would be most imprudent not to maintain a suitable degree of liquidity and, spread as our activities are over so many territories, this liquidity should, in our opinion, be higher than may be considered necessary by bankers whose interests are mainly confined to one single country. At 31st December, 1956 the ratio of the Bank's readily realisable assets to its total liabilities, was just under 45% and while your directors are satisfied that this is a safe margin, the drop over the last few years is a reminder that our ability to finance the capital and current requirements of our customers and friends must of necessity have some limitation.

Since the time of the formation of the Bank the shareholders have been liable in the event of the Bank being dissolved, for the full amount of the notes issued by the Bank; and have also been liable to contribute to the Bank's debts to the extent of the nominal value of each share. At that time such a liability was a usual condition for the establishment of a new bank in the Colonies in order to afford protection to the holders of notes and to the depositors. The growth of banks since these days has made such a protection unnecessary and recently in a number of instances arrangements have been made to do away with such a liability. In our case an amendment of the Ordinance is necessary and we have recently made representations to the government that this should be done. In fact, although there is provision for a small fiduciary issue of under \$7 millions, the note issue is fully covered by Certificates of Indebtedness and approved securities, while the depositors are protected by the very substantial reserves which have been built up.

HONG KONG

The competition which the United Kingdom cotton industry is facing from imports of piece-goods from India and Hong Kong has been the subject of numerous statements in the press and questions in the House of Commons. Led by Sir Cuthbert Clegg, a Hong Kong at the beginning of this year to discuss this problem. It was proposed that the local industry should voluntarily agree to a limitation of exports of cotton cloth to the United Kingdom at an agreed figure and this suggestion is being examined. Even if certain sections of the industry are willing to co-operate, however, there seems little chance of bringing the garment-making industry into the scheme. This is very much of the cottage type of industry with no organised form of association and this makes any limitation unworkable. In view of the publicity that has been given to the competition from Hong Kong it is, I think, worthy of mention that the spinning industry here comprises just over three hundred thousand spindles while in the United Kingdom there

is temporary it may be a sign that demand is beginning to press where it can do most harm. Interest rates continued high but bank advances have steadily increased, resulting in a rise in the level of borrowing from the Bank of Japan.

Shipbuilding in particular has been extremely prosperous and, aided by their early delivery dates, the industry has taken advantage of the world demand for shipping, particularly tankers, and Japan last year turned out 1,746,000 tons of ships and the previous years total. Output of textiles also increased and exports have been rising which has not been welcomed by the competing industries in the importing countries, particularly in the United States of America. As a result of protests from that country the Japanese have agreed to a voluntary limitation of textile exports to 235 million square yards per annum. An interesting innovation to encourage exports has been the floating fair of Japanese machinery which is moving round various ports in South-East Asia. This fair is housed on board a freighter which will spend a few days in each city.

The demands of industry caused a higher level of imports, mainly of raw materials, but helped by another good rice crop and a world demand for her exports, it was still found possible to maintain a favourable balance of payments. As usual this was mainly due to invisible items as payments for exports and imports were almost in balance at U.S.\$2,400 millions but the foreign exchange surplus was just under U.S.\$300 millions as opposed to U.S.\$500 millions in 1955.

In spite of Japan's favourable overall balance her holdings of sterling have shown a considerable drop during the year and negotiations, which have been in progress in London since October, have recently concluded with the signing of a new trade agreement. It seems that the delay in reaching this agreement was caused by the different approach of the two governments. Japan considered the drop in her sterling holdings as justification for requesting increased imports by the sterling area of her goods; but the United Kingdom argued that, as sterling could now be used for many types of payment outside the sterling area, balanced trade with individual countries was a relic of bilateralism and was out of date. In the same regard the United Kingdom does not want to enter into a new payments agreement.

THAILAND

The cautious optimism I expressed last year regarding the future of Thailand appeared to be borne out by events in 1956. There were signs of more political stability and the differences between rival personalities, which had in the past hampered the administration, seemed to be less marked. Unfortunately the elections, which were held at the end of last month, resulted in a certain amount of unrest as it was necessary to declare a state of emergency. These disturbances seem to have been brought under control but the fact that they occurred shows that "caution" is necessary in any appraisal of events in this country. Economic conditions were satisfactory and the operation of the Stabilisation Fund ironed out excessive fluctuations in exchange rates while the over-stocked condition of the consumer goods markets showed considerable improvement. The balance of trade, however, was slightly adverse during most of the year as imports continued at a high level, which had a beneficial effect on the revenue. This was considerably higher than expected and resulted in income exceeding ordinary expenditure in the revised estimates for 1956, while a small surplus is estimated for 1957.

FEDERATION OF MALAYA

The Alliance Government has now been in office for over a year and steady progress has been made, both in the conduct of the day to day administration and in the movement towards full independence, while many of the changes agreed upon at the Constitutional Conference in London last year have already been brought into force.

As a result of this preparatory work the scene is now set for the transference of power on 31st August and the Federation of Malaya will then take its place as a self-governing member of the Commonwealth. On the whole their future prospects look favourable. The Alliance Government retains the support of the majority of the population and the economic outlook seems bright with a continuing world demand for their primary products. The Emergency continues as a dark cloud on the horizon as, although much success has been achieved, the terrorists remain active and the cost continues to be a heavy drain. Other problems spring to mind, such as the adjustment of racial interests and the relations between the Federation and Singapore, but the present government has built up a considerable store of good-will which should provide tolerance is shown on all sides, enable them to get off to a good start.

The present position of the finances of the Federation was dealt with clearly and concisely by Colonel H. S. Lee, the Minister of Finance, when he introduced his first budget. The estimates showed a prospective deficit of M\$145 millions for 1957 which would reduce the realisable general revenue balance to M\$136 millions by the end of that year. This was considered to be below the safety margin and, for this reason, changes in direct and indirect taxation were brought into force. Briefly these covered increases in income tax in the higher income brackets, new taxation affecting motor cars, the raising of certain import duties and an excise duty on locally grown tobacco. This increased revenue was expected to reduce the deficit to M\$110 millions. The estimates for capital projects already approved show that a little over M\$200 millions will be required in 1957 with not far short of M\$400 millions thereafter. This finance is being provided at present by advances from the treasury but a funding operation will require to be undertaken sooner or later. Many other schemes for development are in course of preparation and it was in the light of this heavy expenditure that the financial discussions were held in London concurrently with those on defence which I mentioned above. It was agreed that the United Kingdom Government would provide some financial assistance towards the continued cost of the Emergency and would help in the expansion of the armed forces. These arrangements, although perhaps on a smaller scale than was hoped for, should assist the Federation in their development plans and, before leaving London, Tenzin Abdul Rahman stated that "every encouragement would be given for the flow of foreign capital to Malaya to help the country's economic development".

Achilles' heel

The wonder hero of the Trojan War, Achilles, was invulnerable—except at the heels.

In these days of power propulsion, 'wheels' rather than 'heels' are the symbol of speed. And when they say that our Plan for prosperity rides on the railway wheels, it is not mere rhetoric. The wheels must not be allowed to clog if the Plan is to succeed.

Indian Railways' 2,50,000 wagons must work their wheels faster and harder to carry more goods.

UNLOAD TODAY—NOW

KEEP THE WAGONS MOVING

EASTERN RAILWAY

This is a very welcome statement as foreign capital investment and, what is perhaps more important, the technical assistance which is likely to come with it, will be essential to the Federation for many years to come.

Tin and Rubber

In the first six months of the year the price of both these commodities moved gradually downwards but this trend was halted in July due to developments in the Middle East. For the rest of the year there were considerable fluctuations with a sharp increase in both prices during November and December. This rise has, however, not been maintained.

The International Tin Agreement came into force on 1st July, 1956 and contributions have already been made by members, all of them so far in cash. At the meeting in December of the International Tin Council it was agreed to review the present floor and ceiling prices and a report is expected to be submitted to the next meeting which will be held this month. While the introduction of this scheme should, on the whole, have a stabilising influence, to operate efficiently the buffer stock should hold both cash and tin but, as the manager of the buffer stock is not permitted to buy until the price is below £720 per ton, there is little prospect of acquiring any tin at the present time. From 31st January, 1957 the buying of tin by the United States Government for stockpile purposes ceased and the smelter in Texas was sold to a private concern.

Tin production in Malaya increased by a little over one thousand tons compared with 1955, while exports were the highest since 1950.

The rubber replanting scheme, which is so vital for the future of the industry, is making progress although the smallholders are moving slower than the estates. This is understandable as to quote from the Federation of Malaya Annual Report for 1955 "to the smallholder, lacking mechanical aids, the task of replanting calls for hard and sustained physical labour" and considerable publicity with sufficient inducements is necessary to encourage the smallholder to undertake this work. Production was slightly below the high level of 1955 and exports at 983,000 tons showed a drop of about 1%.

SINGAPORE

The conference to decide the future constitution for Singapore was held in London in April but in spite of three weeks of negotiation it was found impossible to reach agreement. The main issue on which the discussions foundered was the extent of the powers to be retained by the British Government to enable them to discharge their responsibilities for external affairs and defence. After his return, Mr. Marshall resigned in June and Mr. Lim Yew Hock became Chief Minister. His task seemed a far from enviable one as there was considerable disappointment over the failure to reach agreement in London, although in many quarters there was a feeling of relief that a period of quiet on the political scene seemed likely. In September the Chief Minister obtained a unanimous vote of confidence in the Legislative Assembly, which greatly strengthened his position, and enabled him to take stronger measures to stamp out subversive activities. One of these was an order dissolving the Chinese Middle Schools Students Union. For some time past many of the pupils in these schools had become extremely unruly and neither their teachers nor their parents seemed to have any authority over them and evidence was obtained which showed the extent of Communist infiltration in the union. The determined stand taken by the government unfortunately resulted in serious riots but no further disturbances have taken place since and there is every indication that the power of the Communists in the union has been severely weakened, if not entirely broken. This is an important achievement and particularly significant when it is remembered that over half the population is under twenty-one years of age. On the whole the position in Singapore at the for some time and, with the added authority which this improvement gave him, Mr. Lim Yew Hock paid a visit to London to discuss the agenda for the resumption of the constitutional talks this month. Although it is always dangerous to prophesy there seems ground for hope that this time he will not come back empty handed.

The estimates for 1957 showed a deficit of M.\$36 millions but new taxation similar to the Federation's reduced this figure to under M.\$20 millions. On the whole this is not an unsatisfactory state of affairs but the calls for capital development are heavy and are expected to amount to M.\$750 millions for the period 1958 to 1962, of which projects totalling M.\$570 millions are considered essential. To meet this heavy expenditure it is intended to increase revenue over the next three years to yield at least an additional M.\$50 millions and to mobilise local capital resources to the full. A bill was introduced imposing a tax "at wholesale level on any luxury goods which it may be decided to tax in the future". This proposal has been severely criticised as likely to endanger Singapore's free port status and the bill has been referred to a Select Committee. The necessity to maintain a suitable climate for investment, in the face of mounting expenditure for social services, is the difficult problem which faces Singapore's government and a suitable balance will not be easy to find.

MALAYA

It has always been the practice in these statements to include comments on developments in the Federation of Malaya and Singapore under the same heading but, with the recent constitutional changes, this seems no longer suitable and this year I have tried as far as possible to separate them. Geography and their complementary economies, are facts which cannot be ignored whatever the political differences may be, and it is no more the case to draw a line between the two territories in our summary of events than it is for one territory to ignore the effects on the other of the policy they adopt. Before I leave this peninsula, therefore, I wish to touch on a few matters of general interest to the area as a whole.

One of the recommendations of the International Bank Mission was the establishment of a central bank and last year the two Governments requested Mr. Watson of the Bank of England and Sir Sydney Caine to make an examination of the present position and to submit a report on what form that central bank should take. Under their terms of reference they were required, among other things, to advise on the desirability of separate central banks as opposed to

one for both territories. This question is linked with that of the currency for the two territories, the Governments of Sarawak, North Borneo and the State of Brunei having decided to adopt a currency of their own, and the report favours the continuance of one currency, which pre-supposes a joint central bank. This is a conclusion with which we agree but the efficient working of a joint central bank would only be possible—to quote from the report—"if the two Governments co-ordinated their policies in the fiscal, monetary and economic fields". Other recommendations cover the retention of the sterling link and the desirability of banking legislation.

The importance of the provision of low cost housing as a deterrent to Communism is as great in Malaya as it is elsewhere and I am glad to be able to report that the Malayan Borneo Building Society, formerly Federal and Colonial Building Society Limited, for which, as I mentioned two years ago, we are providing finance, has made considerable progress. Already this society has assisted many families throughout Malaya to purchase their own homes and its activities are being extended to Borneo.

The Malayan trade figures showed a favourable balance of M.\$13 millions as against M.\$335 millions in 1955. This considerable reduction was mainly due to the large increase in imports while the level of exports was about the same. The total value of external trade was higher than in any other year except 1951.

INDIA

India in recent years has built up for herself a position of considerable influence in world affairs and this is particularly so in Asia where many of the smaller countries look to her for leadership and watch with anxious eyes to see how her industrial development is proceeding—a development they are all trying to emulate to a greater or lesser degree. In particular her declared policy of neutrality is one which many others wish to follow and, although the dispute over Kashmir has soured relations with her near neighbour, and may, as a result of recent events, lower her own prestige, the interest in her progress is unlikely to be much diminished. The second five-year plan has, in particular, attracted considerable attention with its emphasis on heavy industry. In India this is considered vital to enable her to improve, or perhaps only to maintain, the standard of living of her growing population and all reports indicate that the government is determined to achieve the targets even if this is not found possible within the stipulated period. China, as we have seen, is also moving in the same direction, although under a very different form of government but with the same emphasis on speed. Whether either will be successful in this rapid move towards industrialisation, the future alone can show but the success of one over the other would be viewed by many as a triumph for that form of government. The determination of India to retain her parliamentary institutions can be seen from the elections recently held—a massive piece of organisation in which it is estimated that 200 million people have had an opportunity to vote at 200,000 polling booths. Success in her economic aspirations would strengthen such institutions not only in India but in many other countries as well, and these aspirations are at the moment centred round the second five-year plan.

This plan has been the subject of much comment and criticism both in India and abroad and fears have been expressed that the dangers of inflation have not been sufficiently guarded against. Many doubt whether there are large enough resources have been allocated to raise the level of production of food and cloth to meet the increased demand and the adequacy of the transport system and power facilities is questioned. The plan is considered to be unduly optimistic and this has already resulted in a more general realisation of the necessity to attract foreign investment, but the present treatment of the private sector the way to achieve this? These are some of the criticisms levelled at the plan and recent developments show that there is a good deal of substance in them.

During 1956 sterling balances dropped by about £150 millions, the wholesale price index rose by 13% while the cost of living went up by about 10%. These were danger signals that could not be ignored and an interim budget was introduced in November. This imposed a tax on capital gains, increased super tax on dividends and gave the government control over the reserve funds of the government control they "are put to uses which promote industrial development in accordance with the plan". Customs duties were also raised. To protect the external balances sumer goods, and a ceiling was fixed on foreign exchange expenditure for the next six months. New projects in both the public and private sectors, which involve expenditure in foreign exchange, were postponed if no commitment had been made.

These and other measures, which there is not space to mention here, should have their effect but it has to be seen whether they will be sufficient to change reserves without any major adjustment of the plan. Meanwhile the International Bank is considering making loans for a number of projects and a survey of transportation is being carried out by a mission from that bank while arrangements have been made to purchase U.S.\$200 millions from the International Monetary Fund.

These difficulties, which it is only proper I should mention, do not detract in any way from the considerable progress that has already been made or the magnitude of what is being attempted. Recently, for example, the Hirakud dam was opened which, claimed to be the longest in the world. This dam, about three miles with dykes on the flank to a total of thirteen miles. For the future it is hoped to increase steel production during the period of the plan by four million tons a year which will mean doubling the capacity of two existing plants and building three new ones. Construction of heavy machinery is also planned and a mission from the United Kingdom has recently visited the country to advise on what is required.

These are only a few of the many interesting developments that are taking place but before I leave there are two matters of interest to our offices Reserve Bank of India (Amendment) Act 1956 which gives that bank power to vary the cash reserves which

scheduled banks are required to maintain with it. The second is the Banking Companies (Amendment) Act 1956, which inter alia requires the appointment of managers of banks to be approved by the Reserve Bank of India. Although I understand that the power given under both these measures are only intended to be held in reserve, they are none the less disturbing. Circumstances change and policies with them and a very recent example of this is the State Trading Corporation. This was set up to carry on trade with the Communist countries, where a government organisation was considered advantageous, but the corporation is now competing to quite a large extent in imports from other countries which were formerly handled by the private sector.

BURMA

In Burma the elections in April resulted in the expected victory for the government party although the size of the opposition vote was greater than expected. The government was faced with a considerable number of problems, of which the most important was to establish and maintain law and order, and it is disappointing that very little progress seems to have been made in stamping out insurgency. Economically the misgivings I expressed last year regarding the success of the disposal of rice under barter agreements were unfortunately proving only too well founded; and the failure to maintain a level distribution of commodities was evidence of the weakness of the administrative machine. There has been some improvement since then as rice shipments, on which so much depends, have increased, which combined with continued restriction of imports has resulted in the foreign exchange reserves rising by about 25%. Unfortunately there has been a disturbing increase in the cost of living which rose sharply by 20% in the first six months of the year but has since come back to about 10% higher at the end of the year. In an effort to improve the distribution of essential goods five import corporations, with capital subscribed jointly by the government and the public, were set up towards the end of the year. Four of these corporations will be issued with import licences for general consumer goods while the fifth will concentrate on the requirements of industry. The expenditure was considerably reduced during the year and was limited to carrying out projects which were already started and it was estimated that the deficit would be only half of what was originally expected, while a small surplus is hoped for in the coming financial year. A long-term loan of U.S.\$25 millions was recently made by the United States of America which will be used in various ways ranging from the establishment of a medical centre to the expansion of the local air line and funds obtained from the International Bank will assist in the rehabilitation of the port of Rangoon and the railways. On the whole Burma seems to have overcome the difficulties caused by the fall in the price of rice since the end of 1953 and the over-ambitious development projects which were planned in the anticipation of a high price continuing. An improvement in internal security and a reduction in the cost of living are two important problems that still remain.

During the year a number of discussions took place with China regarding the line of the frontier between the two countries. This has been a subject of dispute for many years as the exact line of demarcation has never been settled. A joint statement issued in December indicated that no decision had been reached although it seems likely that the Chinese will withdraw from the Wa States in return for the cessation of three villages in the Kachin States.

CEYLON

The general elections held in April resulted in a sweeping victory for the People's United Front and Mr. Bandaranaike became Prime Minister of a government which was pledged to institute a Ceylonese Republic and to adopt a socialist programme including nationalisation of certain industries. So far the government has proceeded slowly and no very drastic steps have yet been taken. Discussions on the British bases were held during the year and in the House of Commons in December it was announced that "the United Kingdom Government will hand over the bases of Trincomalee and Katunayake to Ceylon in 1957 on a date to be agreed between the two governments". At the end of the year the People's United Front suffered a defeat in the Colombo Municipal elections and last month Mr. Dudley Senanayake, who has considerable popular following, announced his return to active political life. These developments can be considered as a sign of a swing back to the United National Party although it is true to say that the People's United Front have relied to a great extent for their support on the rural areas. The Official Language Bill was passed in July prescribing Sinhala as the official language of Ceylon and this has resulted in considerable dissension among the Tamil community. In this controversy I hope that the recent remarks made by the Indian Prime Minister on the importance of the English language are not being overlooked.

The favourable balance of trade has shown a considerable reduction over the record surplus obtained last year but external assets were little changed at the end of the year from 1955. A further agreement with China to supply rubber in exchange for rice was signed in December and Ceylon will continue to receive a price above the average monthly Singapore market price, although the premium is a little lower.

The budget presented in July brought out some minor changes in taxation comprising rises affecting those in the higher income brackets and a small increase in company rates of taxation. It appears that the development programme I referred to last year has not been found acceptable to the present government and a National Planning Council has been formed to prepare a new overall plan for economic development. This will inevitably result in delay as it is not so much in the planning that the weakness lies as in the lack of technical personnel to carry out the tasks. It was stated in June by the Minister General that two-thirds of the funds put up by Commonwealth countries under the Colombo Plan remain unused which seems to bear out this contention.

On the whole the emergence of a government with such different views from the previous one has resulted in a period of reflection with so far little change.

General

Sterling is still the medium for the finance of a large part of eastern trade and for this reason our office in London plays an important part in all our activities. Business there continues to increase and

HINDUSTAN LEVER LIMITED

CHAIRMAN MR. A. J. C. HOSKYN-ABRAHALL'S REVIEW

The Annual General Meeting of Hindustan Lever Limited was held in Bombay on 4th April, 1957. The following is the text of the speech made at the meeting by the Chairman, Mr. A. J. C. Hoskyns-Abrahall.

It gives me great pleasure to welcome our new shareholders to this Annual General Meeting of our company in its new form and under its new name. The report and accounts have been in your hands for some days and by your leave I will take them as read.

Less than five months have passed since we announced Unilever Ltd.'s intention to offer a part of our shares for sale to the public. At that time we made certain forecasts about our business and expressed certain intentions about the distribution of our profits. In the short time that has elapsed since then there has been no sudden boom in our business or any sort of windfall, but our final figures, as you have been somewhat conservative. We are therefore recommending to you a higher final dividend of 75 paise, at the same time coupling with that recommendation the caution that our outlook and policy have not thereby undergone any essential change. In the light of recent events we would not like you to build up any great expectations that future dividends will be higher than we forecast those few months ago.

In this connection I would remind you that the ink on our Offer for Sale documents was barely dry and the lists had not even been opened, when the Finance Minister sprang his surprise interim Budget on the country, with its capital gains tax, its increased scale of super tax on dividends and its compulsory depositing of a large part of companies' reserves. Tell us that, the Minister has also thought it right to plan, he has by no means yet exploited corporate taxation to the full. In this sort of context I feel increase our sales turnover which we may be able to do, it is not a very suitable measure. That our profits in 1956 were mainly due to increases in costs of our raw materials, of processing and of freight.

We are far from complacent about this upward trend in costs, which seems to be fairly general among household necessities, or near necessities, into which our products fall. In a community emulating so many people with very low incomes, our products run the risk of being too highly priced, and we should greatly like to make reductions, with all the stimulus they would give to increases in consumption. Unfortunately the prerequisites are lacking. We are vitally interested for instance in Government's Second Plan target of more than 71 million tons of oilseeds, representing a 30% increase in production. That oilseeds, and particularly groundnuts, are of prime importance to our business, to say nothing of their significance for export and foreign exchange purposes, but we cannot yet detect any great progress towards hitting this target. Transport is another vital sphere where unrestricted availability at moderate prices is essential, but at present its inadequacy is constantly giving rise to costly delays and, on the top of that, freight rates are tending to increase. These are but two indications of what I have said is a general trend.

While the rising national income will generally be absorbing some of the shock of higher prices, we do of course provide what counterblast we can in our own operations. Through nearly all the media we are steadily mounting educational efforts, by habit-forming instruction in better washing and ironing methods is imparted to the public. In the countryside particularly our large and still growing fleet of demonstration, cinema and other vans is carrying this service farther afield every year.

Import Restrictions

Another matter affecting us is the recent tightening of import restrictions and some of you may well be asking to what extent we rely on imported materials for the pursuit of our business. You will already know that we find between 80 and 90% of our raw materials from within this country, since that fact was stated in our Offer for Sale. That does not mean however that there are not certain key items, such as perfume ingredients for instance and certain chemicals imported by us without which—although they may be small in volume—we should be unable to maintain the quality, or what you might call the personality, of our products. We hope to be allowed to continue to import such items as being actual users of them, but of that we cannot yet be sure. It is powerless to avoid, that such changes as we are going to have to make, and we do not expect to have to ask our consumers to accustom themselves to any serious departure from our normal products. You should know more of that as exporters we are already useful earners of foreign exchange and greatly sought after commodity.

Vanaspai and Soap were worth rather more than Rs. 76 lakhs, and they went to places as far apart as New York and Fiji with many destinations in between. When we seek to make imports, our record as exporters should be allowed to stand to our credit.

It is however, and has long been, our policy to buy Indian materials so far as we possibly can. In the past few years we have been encouraging with some success the local manufacture of items which previously were imported. Bleaching earth, paper

and board are recent instances, where we have been able increasingly to switch our buying from foreign to local sources. We are also increasingly relying on Indian sources for the management of the business. It may interest you to know that from a peak of 53 in 1952 the number of Europeans we employ has already fallen to 32, the places of the 27 who have gone having been taken by Indians. This trend extends throughout our business whether it be in the marketing, commercial or technical sections.

Our staff have worked well throughout the year. We are glad to say that we have signed a comprehensive agreement with our Bombay factory employees covering the whole period of the Second 5-year Plan. It embraces wages, bonus and retirement provisions for about half our employees, as well as production incentives. A similar agreement with the rest of our employees all over India is now on the point of being signed and we therefore have good reason to look forward to a period of steady consolidation of the goodwill already existing on both sides.

Welfare of Employees

While on this subject, I might add that we try to look after the welfare of our employees, not only by giving them congenial working conditions, but more particularly by providing them with good medical services and good factory canteens. We have canteens in all our factories except the one at Sharnagar near Calcutta and there a newly built canteen is due to be opened ten days from now. Moreover we are not satisfied with our Bombay Soap Factory in this respect and propose to build there a new canteen at a cost of about Rs. 6 lakhs, as soon as we can finalise our plans and secure the necessary cement and steel. Providing this facility for our office staffs is by no means an easy matter, but we propose to include a modern canteen with recreational facilities in the new Bombay Office building, on which we hope to start work this year. So far as medical services are concerned, we have full-time doctors and nursing sisters on the staff in our Bombay and Calcutta factories, while in our smaller factories we have part-time doctors who attend daily and full-time dispenser-dressers. All factories have consulting rooms and properly equipped dispensaries. Arrangements to deal with medical emergencies occurring outside general duty hours vary from place to place, as in Bombay factory we have dispenser-dressers on duty in all shifts; in our other factories we have staff spe-

cially trained in first-aid. In our offices we have arrangements for doctors to be on part-time duty or we pay them retainers, so that facilities for free consultation and treatment are available to the employees concerned. In the past few years these medical services have, generally, and particularly in Bombay, reduced the time lost through illness and accident.

I would like to end this review by giving you one good reason why this business should continue to expand, lest you should think that I have listed difficulties but little else and hear little but the rattle of chains. We are in fact conducting our operations in a rapidly developing country, inhabited by something approaching 400 million people, who by modern standards consume per head so little of the sort of products we manufacture, that an immeasurably greater consumption is bound to come. Moreover it is entirely for the good of the country that it should come. On this satisfactory base we expect to go on building. As for the difficulties, they are or are likely to be largely of a type common to most consumer industries at the present time, and it is probably fair to say that our business is as well equipped as most others to meet their challenge.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

HONGKONG AND SHANGHAI BANKING CORPORATION—(Contd. from page 510)

a further enlargement of our premises is becoming necessary. This we shall do by taking over the second floor of our building when the present lease expires.

New York office has naturally benefited from the increasing use of United States dollars in world trade since the war and has greatly extended its operations in recent years.

Our office in France was transferred from Lyons to Paris in 1953 at the time when the economy of Indo-China relied to a large extent on trade with France. This is no longer the case and with the dwindling of the traditional business, which had been previously handled, it was necessary to explore other avenues. In this I am glad to say we have been quite successful and I hope that this office will continue to build up satisfactory connections on its own.

Germany's increasing trade has been reflected in the turnover of our Hamburg office which continues to prove a most valuable link for our offices in the east.

To turn to our subsidiaries, the Hongkong and Shanghai Banking Corporation of California has made a good beginning and I hope that it will be able very shortly to contribute to the profits of the bank as a whole. The possibilities in the west coast of America are so extensive that the directors have decided to open also in Los Angeles and permission to do this has recently been obtained from the American authorities.

'ENGLISH ELECTRIC' RAIL TRACTION IN INDIA

Manufactured or building for India are:—

- ★ 2,500 Vulcan Steam Locomotives..
- ★ The seven most powerful electric locomotives in service each rated at 3,600 H. P.
- ★ Electric equipments for a total of 111 motor coaches.
- ★ Twenty four Electric three-car articulated units
- ★ Twelve 3,120 H. P., 3,000v electric locomotives.

'ENGLISH ELECTRIC' manufacture in their own organisation:—

- ★ Complete diesel-electric locomotives including the diesel engines, electrical equipment and mechanical parts
- ★ Complete AC and DC electric locomotives including the electrical equipment and mechanical parts
- ★ AC and DC electrical equipment for multiple unit trains.

THE ENGLISH ELECTRIC COMPANY LIMITED

ALKALI & CHEMICAL CORPORATION OF INDIA, LIMITED

REVIEW BY MR. N. D. HARRIS

The Twentieth Ordinary General Meeting of the members of The Alkali & Chemical Corporation of India, Limited was held at the Registered Office of the Company, 34, Chowringhee, Calcutta, on Thursday, the 28th March, 1957.

Mr. N. D. Harris the Chairman presided.

Gentlemen,

The Audited Accounts and Directors' Report for the year ended 30th September, 1956 have been in your hands for some time and with your permission I propose to take them up.

I am pleased to report that the year records further increases in production and sales. The net profit for the year, after providing for depreciation amounts to Rs. 29,80,327/-. The total profit available including the balance from the previous year of Rs. 1,19,168/- is Rs. 30,99,495/-. compared with Rs. 22,93,168/- for 1954-55. A sum of Rs. 13,04,000/- has been transferred to Dividend Equalisation Reserve, and I shall refer to this unusually large transfer later. After this allocation and the others referred to in the Directors' Report and the payment of the Preference Dividend, a dividend of 8% free of income tax is recommended on the ordinary shares. If you agree to this a balance of Rs. 92,495/- will be left to be carried forward.

I referred at the last General Meeting to our plans for the manufacture of Polythene at Rishra, and I am glad to say that we have received a licence from Government to proceed with this project. In fact, substantial progress has already been made on the site. As I told you, Imperial Chemical Industries Ltd., London, your technical advisers, have agreed to supply their process and continuing "know-how" on very favourable terms. Polythene was discovered by I. C. I. Ltd., who now manufacture large quantities in the United Kingdom and have licensed its manufacture in several other countries. The production, actual and projected, and consumption of Polythene throughout the world have during recent years increased to a remarkable extent, and give every indication of continuing to do so.

The process will be that used by I. C. I. in the manufacture of the well-known "Alkathene" brand of Polythene. The use of "Alkathene" in India has been developed by I. C. I. (India) Private Ltd. who have operated a plant at Calcutta for the manufacture

of film from imported granules since 1953. Polythene is a tough, flexible, thermoplastic material with outstanding electrical insulating properties. Many thousands of tons are used every year throughout the world in the manufacture of packaging film, flexible pipes, submarine telephone cables, radar equipment and moulded domestic articles, to mention only some of the major uses. The largest single use of Polythene in India will probably continue to be for packaging purposes, both as film and as coating on paper and jute.

The project will involve a total investment of about Rs. 4 crores, which it was decided to raise by a substantial share issue at par and by borrowing. All ordinary shareholders have now received the circular letter dated 4th March which gave advance notice of the new issue of shares in the proportion of four new "A" ordinary shares for one old ordinary share held. Shareholders will have the right to renounce and they will shortly receive a letter describing the procedure. The rights are saleable on the stock market as recently announced by the Calcutta Stock Exchange Committee.

Dividend Equalisation Reserve

I referred previously to the large allocation of Rs. 13,04,000/- to the Dividend Equalisation Reserve. Your Directors made this reserve in the knowledge that, although the Polythene project should ultimately prove profitable, capital invested during the construction period will earn no return. It is hoped, however, with the help of the Dividend Equalisation Reserve to maintain a reasonable dividend, even on the higher capital.

Some of you may wonder why we have had to issue a different class of ordinary shares. The reason is that we hope this part of the capital of the Company will qualify for relief under Section 56(A) of the Indian Income Tax Act, and that dividends received by companies on these shares will be exempt from super tax.

Our principal shareholder, I. C. I. (India) Private Ltd., will take up their new "A" shares to the extent of Rs. 1,75,30,720/- and it should be noted that this represents a substantial additional British investment in India by Imperial Chemical Industries, London through I. C. I. (India) Private Ltd.

I. C. I. (India) Private Ltd. are also agreeable to buy any "A" shares not taken up or disposed of by shareholders.

I shall now give you a brief review of our activities. The year has been a record one for both sales and production. Demand for our products continues to increase and generally still exceeds our capacity which is being expanded in most of our products.

Production of chlorine and caustic soda was 21% higher than in the previous year, and you will be interested to know that we consumed 30% of our total production of chlorine in the manufacture of other products. As there is still an unsatisfied demand we have applied to Government for permission to increase this section of the plant.

Production and sales of hydrochloric acid were about 10% higher and plant to double the capacity has already been installed.

The plants for the production and formulation for our "Gammexane" Benzene Hexachloride (B.H.C.) products also had a successful year, and extensions were completed during the year. An interesting development in this sphere was the first large purchase by Government of B. H. C. water dispersible powder for use in their National Malaria Programme. It is expected that substantial supplies will be taken by Government during the next few years.

Our "Duro" and "Dulux" paints and our range of allied products continue to be very popular. The allied products referred to at the last General Meeting were almost completed during the year, although some delay was caused by the blocking of the Suez Canal. It is now apparent that, although these extensions will increase our capacity considerably, they will still be inadequate to meet demand and you, the Directors are now considering further extensions. Increasing demand for metal pre-treatment products, produced and marketed under the name of A. C. P. resulted in your Directors installing a plant for their manufacture.

As I said earlier, a start has been made on the Polythene project; the site is being developed and construction has begun. Every effort is being made to ensure that this plant goes into production in the shortest possible time.

Last year I was happy to pay a tribute to the technical and sales staff of our Selling Agents, I. C. I. (India) Private Ltd. They have again earned our special thanks as they have matched with record sales, the record productions achieved at Rishra. Considerable competition was faced, particularly in the sale of Paints and "Gammexane" products which they were successful in meeting. I look forward with confidence to similar co-operation in marketing our "Alkathene" brand of Polythene when this factory goes into production.

The chemical industry in India is relatively in its infancy, and your Directors are aware that there is an immense potential market for chemicals for India's growing industrialisation. We hope to be in the forefront of this industry and have continuously in mind plans for further extension.

I do not intend to enter the worn-out controversy concerning the roles of the public and private sectors in industry, because I believe that both can function side by side, and the efficient working of both is essential to the success of India's plans. Certain spheres of industrialisation are not appropriate to private enterprise which, however, can be justly proud of its achievements to date and of its plans for the future. While I think that Government really take the same view of private enterprise's important role nevertheless some recent legislation and decisions in the fields of labour and taxation are not easily reconcilable with it.

Labour Tribunals

One hopes that Labour Tribunals are doing a real service to the country, but one wonders whether those who sit on them really understand the long-term implications of their awards. Government is becoming a large employer of industrial labour, and I believe there will result a better appreciation of the private employer's point of view; also that in both the public and private sectors yardsticks to be used in wage rates, allowances, bonus, etc., will not widely differ.

In the field of taxation, it is well known that the burden of corporate tax—and that in India is amongst the heaviest in the world—the recent legislation requiring the deposit with Government of a part of profits, the penal tax on dividends, the heavy personal tax on management personnel have all contributed to the growing feeling of uncertainty and unrest.

One of India's greatest needs today is industrial capital, and the developments I have referred to above must inevitably deter the investment of capital from abroad.

A special word of commendation is due to our staff and workers for the excellent results achieved during the year and I am sure you will wish me to convey to them our sincere thanks. Our relations with them remained good throughout the year. We are endeavouring to introduce new and improved terms of service at the factory, based upon a scientific appraisal of the value of each job. Unfortunately, due to difficulties arising as a result of our having two Unions in the factory, we have so far been unable to reach an agreement which will enable us to introduce these new terms but we hope that the current year will produce a solution to this problem.

Your Board is alive to the need for trained management and technical personnel and have followed a progressive recruitment policy. A number of young Indians have received training in I. C. I. and other factories in the U. K. and more will be going when the Polythene plant is nearing completion. Indian engineering recruits are receiving practical training in workshops and factories in and around Calcutta and a "school" for fitters and mistries is in operation at Rishra.

The Directors retiring by rotation are Sir Birendra Nath Mookerjee, Sir Bijoy Prasad Singh Roy and Mr. P. M. G. Hutton and I have great pleasure in recommending their re-election.

The Auditors, Messrs. Lovelock & Lewes also retire and you are requested to re-appoint them for the ensuing year at a fee of Rs. 7,500/- which is the same as that of last year.

This document does not purport to be a Report of the Proceedings of the General Meeting.

A copy of this Prospectus has been delivered to the Registrar of Companies, West Bengal, for registration, together with the necessary documents which are required by Section 59 of the Companies Act, 1956.

"CONSENT of the Central Government has been obtained for this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent, the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any statements made or opinions expressed with regard to them."

The subscription List will open on 10th April, 1957 and will close on 22nd April, 1957 or earlier or later at the discretion of the Directors.

SHREE GOPAL PAPER MILLS LIMITED.

(Incorporated on 5th of November, 1935 under the Indian Companies Act, 1913).

SHARE CAPITAL

AUTHORISED CAPITAL:—

7,500—6% (Income-tax free) Cumulative Participating 1st Preference Shares of Rs. 100/- each	...	...	Rs. 7,50,000/-
75,000—7% (Income-tax free) Cumulative Redeemable 2nd Preference Shares of Rs. 100/- each	...	...	Rs. 75,00,000/-
12,55,625—Ordinary Shares of Rs. 10/- each	...	...	Rs. 1,25,56,250/-
			Rs. 2,08,06,250/-

ISSUED, SUBSCRIBED & PAID-UP CAPITAL:—

7,500—6% (Income-tax free) Cumulative Participating First Preference Shares of Rs. 100/- each	...	...	Rs. 7,50,000/-
*12,54,907—Ordinary Shares of Rs. 10/- each	...	...	Rs. 1,25,49,070/-
			Rs. 1,32,99,070/-

*Note:—These include

- 29,938 Ordinary Shares of Rs. 10/- each issued for consideration other than cash in part payment of the purchase price of the mill in 1936;
- 5,00,629 Ordinary Shares of Rs. 10/- each issued as fully paid up to the existing shareholders, as on 1st January, 1955, in proportion of one Ordinary Share for each Ordinary Share held by them on 1st January, 1955, by capitalization of Reserves.

The rest are for cash. Rs. 40,00,000/-

DEBENTURE LOAN CAPITAL:—

- 51% Registered Mortgage Debentures of Rs. Ten lacs divided into 1,000 debentures of Rs. 1,000/- each secured by Trust Deed dated 14th July, 1937 and supplemental Trust Deeds dated 14th August, 1944 and 1st September, 1954 ... Rs. 10,00,000/-
- The principal amount is repayable on 16th July, 1965 with option to the Company to pay off on or after 15th July, 1962 by giving six months' notice of its intention so to do.
- The interest is payable half-yearly on the 15th January and 15th July, each year.
- 3,000 6% Registered Mortgage Debentures of Rs. 1,000/- each secured by Debenture Trust Deed dated 27th June, 1955 ... Rs. 30,00,000/-

The interest is payable half-yearly on 16th February and 16th August each year. 600 debentures of this series will be redeemed by the Company at par on 16th February, 1961 and on each 16th day of February of the years following till the whole of the said debentures shall have been redeemed or paid off. The particulars of debentures to be redeemed will be determined by draw.

Both the above series of Debentures are secured by fixed mortgage charge of the Company's lands, buildings, plant and machinery, both present and future and a floating charge on other assets (excepting raw materials, stores and stock-in-trade), such floating charge not hindering or preventing the Company from leasing, charging or otherwise disposing of or dealing with the other assets, and the Company may charge such other assets and such charge may be made specific or floating and may be made to rank in priority or *pari passu* with or after the floating charge in favour of the holders of these Debentures.

The mortgage charge with respect to both these series of Debentures rank *pari passu*.
Note: (The Company has a Cash Credit limit, etc. for Rs. 53 lacs with Allahabad Bank Ltd., secured by floating charge on moveable assets of the Company, such charge ranking in priority to floating charge in favour of holders of above debentures.)

PRESENT ISSUE

75,000—7% (Income-tax free) Cumulative Redeemable Preference Shares of Rs. 100/- each at par ... Rs. 75,00,000/-
These shares carry 7% (income-tax free) cumulative preference dividend and subject to the provisions of Companies Act, 1956, shall be redeemed at par on 1st of July, 1972 with option to the Company to redeem them at par earlier at any time after the 30th June, 1969 on giving six months' previous notice of its intention so to do. A redemption fund is proposed to be created by setting apart Rs. Ten lacs every year out of the annual profits from the year 1963 onwards till full Rs. 75 lacs is made up.

The shares will rank for dividend next after paying or providing for payment of cumulative preferential dividend at 6 percent per annum (income-tax free) on the capital for the time being paid up on the existing Preference Shares of the nominal value of Rs. 7½ lacs of the Company but in priority to the Ordinary Shares of the Company. For return of capital, these shares will rank next after the existing Preference Shares but in priority to the Ordinary Shares, but shall not be entitled to any further participation in profits or surplus assets.

This issue of 75,000 Second Cumulative Redeemable Preference Shares of Rs. 100/- each is offered for public subscription.

The amount payable in respect of these shares is as follows:—

- Rs. 50/- per share with application, and
- Rs. 50/- per share on allotment.

Applications must be made for a minimum of five Preference Shares or multiples thereof.

The Company is advised that the Preference Shares now being issued are "Approved Investments" within the Meaning of Section 27A of the Indian Insurance Act, 1938.

PROSPECTUS

Objects

The Company was incorporated on 5th November, 1936. Objects for which the Company was formed are as set out in the Memorandum of Association and in particular to acquire the paper mills belonging to Punjab Pulp and Paper Mills Limited (in Liquidation) with 51 acres of freehold land, situated in Jagadhri, and to carry on business of manufacture of pulp and papers of all kinds, and articles of all kinds for manufacture of which pulp and paper is used.

The Company has since then progressively expanded both in its volume of production and its range of products. The Company's Factory at

Yamna Nagar (Jagadhri Rly. Station) now stands in an area of nearly over 350 acres of land with a fully equipped Research Laboratory and an extensive staff and labour colony. The original annual rated capacity of the Mills was 7,500 tons of finished paper inclusive of wrapper. With the additions and alterations so far made, its present annual rated capacity stands at 13,500 tons of paper including wrapper. In addition to the Paper Mills, the Company has got a Hydro-generation Factory, a Tin Can Manufacturing and Printing Plant and a mechanised Stationery Department for manufacture of stationery. The cost value of the block in 1936 when the Factory was purchased was Rs. 25,58,618/2/- . On 30th June, 1956, it stands at over Rs. one crore fifty lacs showing additions of about Rs. one crore twenty five lacs during this period. The present market value of block, i.e. Plant and Machinery, equipments, building's land, etc., of the Company should be about Rs. 3 crores.

Development

The Company is at present engaged in Expansion, Renovation and Modernization Programme of about Rs. 3 crores to be completed by the end of the year 1958. It is a two-phased programme. The first phase consists of the modernization and renovation of the existing three paper machines. The major portion of the equipment has already been reached the site and has been erected or is in course of erection. This first phase is expected to be completed by April 1957 when the production of the existing three machines would go up from 40 tons to 53½ tons of paper per day i.e. the annual rated capacity would go up from 13,500 tons to 17,500 tons.

With the TUSHAR you get

- A continuous supply of instantly-cooled water at the touch of a button—no unhygienic refilling or storing.
- A choice of two handsome models.
- Ease of installation.
- Economical to run.

MADRAS-NEW DELHI-BANGALORE-COCHIN-AHMEDABAD-SECUNDERABAD-INDORE-JAIPUR-NAGPUR-COIMBATORE

SHREE GOPAL PAPER MILLS LIMITED.—Cont'd.

The second phase of the Programme is Expansion programme which consists of putting up a new Pulp and Paper Mill. Orders for both the new Pulp and Paper Mill Soda Recovery unit and other items of the machinery and equipment required for this programme have already been placed and advance payments of over Rs. fifty-one lacs have already been made. The shipments of the new Paper Machine and the new Pulp Mill consisting of 2 streets—one for the manufacture of pulp from wood and bamboo and another for the manufacture of pulp from bagasse grass, etc. are expected to be completed during the current year. The first consignment of equipment relating to the new Paper Machine has already arrived in India.

The scheme has been drawn up in consultation with Messrs. Escher Wyss GmbH, Ravensburg and Messrs. Krauss-Maffei Imperial GmbH, München 13, of West Germany, both of whom are reputed manufacturers of paper and pulp machinery. The scheme envisages in addition to the installation of pulp and paper mill—

- (a) setting up of a new modern soda house consisting of soda recovery boiler, re-aqueousing unit and modern evaporator and an electrostatic precipitator, under technical supervision of E. J. Hanson of Sweden.

Note: The Suppliers guarantee caustic recovery of 95% as against present recovery of about 65%. This should result in considerable saving to the Company in cost of chemicals used in manufacture.

- (b) Addition of another turbine of 6250 KW and two boilers to our existing electrical unit to provide additional load of electricity and additional process steam.

With the completion of this Expansion and Modernization programme, the Mills' rated capacity would increase to 90/100 tons per day (i.e. about 22,000 tons per annum against the present rated capacity of 13,500 tons per annum) of finished

paper, consisting of all kinds of writing and printing papers including Banks, Bonds, Ledgers, Air-mails and Manifold, etc.

Object of this Issue

The total cost of this Renovation Expansion and Modernization programme is estimated at approximately Rs. three crores, of which over Rs. 86 lacs has already been spent on renovation and modernization of existing paper machines and as advance payments against orders placed for machines and equipments for the 2nd phase of the programme. Rs. 70 lacs would become available from the Company's liquid resources in hand, including conversion of part of the investments of the Company. Rs. 65 lacs would become available from protective resources of the Company, i.e. provisions for depreciation, development rebate and undistributed profits between now and end of 1958, by which time the second and final phase of the scheme would have been completed and the new plant put into commission. This leaves an uncovered balance of about Rs. 75 lacs, which is proposed to be made up by the present issue of Second Preference share capital.

Raw Materials

Raw materials so far used are Sabai grass and rags. The Company obtains its requirements of Sabai grass from Nepal, Punjab and Himachal Pradesh forests for which they are holding leases for various terms. Bamboo, spruce and other coniferous woods and bagasse will be the additional raw materials for the new Mills. Arrangements have been settled for 15 year lease of the bamboo forests of the new Punjab State. The government have also plans in hand to augment further the yield of grass and bamboo of their forests. Himachal Pradesh has also agreed to grant lease of their bamboo forests to the Company. For spruce and other coniferous woods, the Company is negotiating with the Punjab, Himachal Pradesh and U. P. Governments for leases. So far as bagasse is concerned, there are a large number of sugar factories in and around the Mills, and as such no difficulty is anticipated in obtaining sufficient quantities of bagasse as may be required.

Prospects and Profits

Per capita consumption of paper in India is amongst the lowest in the world, being 2 lbs. per annum as compared to 400 lbs. in U. S. A. and 100/200 lbs. in European countries and 50 lbs. in Japan. With the progressive industrialization of the country and spread of literacy under the Second Five-Year Plan, the consumption of paper, the paper boards and newsprint is estimated by the Planning Commission to go upto 5,00,000 tons per annum by the year 1960-61. During the first Five-Year Plan period, i.e. from the year 1951 to 1955-56, the indigenous production has gone up from 1,14,000 tons to 2,02,000 tons. The consumption of paper in the meantime has also gone up to 3,17,000 tons. In due to increase in the demand in the country, in order to fill up this gap between production and consumption, the country has been importing considerable quantities of foreign paper every year. The Company's modernization and extension programme coupled with the continued growing demand for paper in the country leads your Directors to believe that (in the absence of some unforeseen circumstances beyond their control) the modernisation and expansion programmes coming into fruition according to schedule (the former by the end of April 1957 and the latter by the end of 1958), the profits of the Company should show considerable increase commensurate with the extended capacity of the mills. C. putting on the revised price levels, it may well be hoped that the trading profits of the Company should be twice as much in the year 1959 compared to the present profits.

Dividend Cover

On the basis of the present annual net profits as disclosed by the Auditor's Report hereunder appended the dividend payable on the first and second Preference Shares is covered by present earnings nearly four times over.

FINANCIAL INFORMATION

Auditor's Report

The following is a copy of the report of the Company's Auditors, Messrs. Price, Waterhouse, Peat & Co., Chartered Accountants:

Calcutta, 28th March, 1957.

Messrs. Karam Chand Thapar & Brothers Private Ltd.
Managing Agents,
Shree Gopal Paper Mills Ltd.,
5, India Exchange Place,
Calcutta.

Dear Sirs,

We have examined the books and accounts of Shree Gopal Paper Mills Ltd., as kept in the Managing Agents' Office at Calcutta and at the Mills, in which are incorporated the certified Returns from the Oil Mills, Ginning Factory and Forests, for the four years ended 31st December, 1955 and the half-year ended 30th June, 1956 and report that the Profits of the Company are as set out below. The accounts for the half-year ended 31st December, 1956 have not yet been made up. These profits have been arrived at after charging all expenses of working and management including provision for Normal Depreciation on the basis allowable for taxation and after making such adjustments as are, in our opinion, appropriate.

Income.	Year ended 31st Decem- ber, 1952.	Year ended 31st Decem- ber, 1953.	Year ended 31st Decem- ber, 1954.	Year ended 31st Decem- ber, 1955.	Half-year ended 30th June, 1956.
Sales	Rs. 2,85,71,295	Rs. 2,54,09,796	Rs. 2,74,49,683	Rs. 2,91,69,366	Rs. 1,38,86,802

STATUTORY AND GENERAL INFORMATION

Directors

The Articles of the Company provide that

- (i) unless otherwise determined by a General Meeting, the number of Directors shall not be less than five nor more than eleven inclusive of ex-officio Directors and Managing Agents' nominee Directors.
- (ii) unless otherwise determined by a General Meeting, the qualification of a Director shall be the holding of Ordinary Shares of the Company of the nominal value of Rs. 5,000/- in his own name, but this shall not apply to Central or State Government Director, or Technical Director, or Managing Agents' nominee Directors.

(iii) Each Director shall be paid out of the funds of the Company by way of remuneration a sum of Rs. 200/- for each meeting of the Board which he attends. In addition to the remuneration payable to him as above, a Director if he is not a resident of the place where the meeting is held, will further be entitled to actual travelling charges not exceeding air conditioned class railway fare from his usual place of residence in India and back; in addition to third class fare for a servant if taken, and also Rs. 40/- per diem for the days necessary for attending and returning from the Meeting of the Board of Directors or any Committee thereof or general meeting of the Company or otherwise in connection with the business of the Company. Where the journey is undertaken by air, actual air passage shall be paid.

The Directors shall, subject to the provisions of Sections 198 and 309 of the Act, be further entitled to receive by way of additional remuneration a commission equivalent to 1% of the net annual profits of the Company, computed in the manner laid down in Sections 349, 350 & 351 of the Companies Act 1956. Such commission shall be divided equally amongst the directors on the Board on the last day of the financial year of the Company to which the commission relates, unless they decide otherwise.

(iv) If any Director, being willing, shall be called upon to perform extra services or to make any special exertions in going or residing away from Calcutta for any of the purposes of the Company or in giving special attention to the business of the Company, the Company may, subject to the provisions of Sections 314, 198 and 309

of the Act, remunerate the Director so doing either by a fixed sum or by a percentage of profits or otherwise, and such remuneration may be either in addition to or in substitution for his or their share in the remuneration as above provided for the Directors.

(v) The general control of the business of the Company is vested in the Board of Directors who, in addition to the powers and authorities by the Articles of Association of the Company or otherwise expressly conferred upon them, may exercise all such powers and do all such acts and things as may be exercised or done by the Company and are not by the Articles or by the Companies Act or any other statute expressly directed or required to be exercised or done by the Company in General Meeting, subject nevertheless to the provisions of the Companies Act and statutes and of the Articles and to any regulations from time to time made by the Company in General Meeting; but no regulations so made shall invalidate any prior act of the Directors which would have been valid if such regulation had not been made. The Directors shall be at liberty subject to the aforesaid provisions to delegate any of their powers to the Managing Agents or a Committee of Directors or a Director, or any other person.

Managing Agents

Messrs. Karam Chand Thapar & Bros. Private Ltd. are the Managing Agents of the Company. They have been reappointed as Managing Agents of the Company for a period of ten years from 1st January 1957. Sanction of the Central Government to their reappointment has been obtained. The Managing Agents are a private limited company with a Subscribed and paid-up capital of Rs. 25,00,000/-.

The Managing Agents are entitled to the management of the whole affairs and business of the Company, subject to the control and supervision of the Board of Directors.

The remuneration of the Managing Agents is a commission of 10% on the net annual profits of the Company computed in the manner as laid down in Sections 349, 350 and 351 of the Companies Act, 1956, subject to a minimum of Rs. 50,000/- in case of no profits or inadequacy of profits in any financial year of the Company. The said sum of Rs. 50,000/- is payable by the Company to the Managing Agents in equal monthly instalments, each payable on the last day of each month. Any remuneration due to the Managing Agents over and above the minimum of Rs. 50,000/- on the basis of 10% of net annual

profits as above, shall be paid by the Company immediately after the accounts of the Company for each financial year have been audited and laid before the company in General Meeting.

The Managing Agents are also entitled to charge and be paid all expenses on account of rent, postage, telegrams, printing, stationery, telephones, electricity, taxes and all salaries or wages or emoluments, bonuses, allowances, Provident Fund Contributions, commissions, etc. which shall be payable to the managers, agents, clerks, servants, advisers, engineers, experts, solicitors, auditors, workers, brokers, bankers, commission agents, dealers or other officers, employees and workmen retained by the Managing Agents for and on behalf of the Company at the office of the Company at Calcutta or at the Company's Works or at the office of the Managing Agents or elsewhere, and all expenses of manufacture and all other out-of-pocket expenses incurred on behalf of the Company, for carrying and conducting the business of the Company, including travelling and conveyance expenses etc. likewise incurred.

The Company shall also bear and pay such proportion of expenses on account of salaries, wages, allowances, Provident Fund contributions, commissions etc., of the officers, staff and workers etc. employed partly in connection with business of the Company and partly for the business of other companies or firms at Calcutta and/or elsewhere as also the office incidentals such as rent, stationery, telephone, electricity, travelling and conveyance expenses likewise incurred relating to such officers, staff and workers.

The Articles of Association provide that the Managing Agents shall conduct and manage the whole affairs of the Company subject to the control and supervision of the Board of Directors.

The Managing Agents are entitled to nominate not more than two directors where the number exceeds five and one director where the number does not exceed five.

Borrowing Powers

The Articles of Association of the Company provide that subject to the provisions of sub-clause (d) of clause (1) of Section 293 of the Companies Act, 1956, the Directors may from time to time at their discretion, raise or borrow or secure the payment of any sums of money for purposes of the Company from any persons, firms or companies including a director and Managing Agents. The shareholders by Special Resolution dated 19th January, 1957 have authorised the Directors to borrow for the purposes of the business of the Company amounts in excess of the aggregate of the paid-up capital and free reserves of the Company.

SHREE GOPAL PAPER MILLS LIMITED.—Cont'd.

Restrictions of Right to Transfer

Articles of Association contain no restrictions on the transfer of fully paid-up shares. The Directors may, however, decline to register any transfer of shares which are not fully paid up, and may also decline to register any transfer of shares on which the Company has a lien. The Company has a first and paramount lien upon all shares (not being fully paid-up shares) held by any member of the Company (whether alone or jointly with other persons) and upon all dividends which may be declared in respect of such shares for all moneys (whether presently payable or not, called or payable in respect of these shares, and for all debts, obligations, liabilities and engagements of such members solely or jointly with any other persons.

Voting Power

The Articles of the Company provide that

- (1) On a show of hands every member entitled to vote and present in person shall have one vote. Upon a poll the voting rights of members shall be as laid down in Section 37 of the Companies Act 1956. Provided that save as provided in Clause 21(a) of Section 87 of the said Act, a member of a Company holding any preference share capital therein, shall in respect of such capital have a right to vote only on the resolutions placed before the Company which directly affect the rights attached to his preference shares.

No member not personally present shall be entitled to vote on a show of hands unless such member is a corporation or a company present by a proxy or by a representative duly authorised in which case such proxy or representative may vote on show of hands as if he were a member of the Company.

- (2) No member shall be entitled to be present or to vote at any General Meeting either personally or by proxy or as a proxy for any other member or be reckoned in a quorum whilst any call or other sum shall be due and payable to the Company in respect of any of the shares of such member, or in regard to which the Company has, and has exercised, any right of lien.

Interest of Directors

Lala Karam Chand Thapar and Mr. Lalit Mohan Thapar are Directors of Messrs. Karam Chand Thapar & Bros. Private Ltd., Managing Agents of the Company and as such, are interested accordingly. Both of them are Managing Agents' nominee directors on the Board of the Company.

None of the directors have any interest in any property acquired by the Company within the two years preceding the date hereof or to the machinery and plant and equipment that may be purchased out of the proceeds of this issue.

Lala Karam Chand Thapar is a Director of Orient Engineering and Commercial Co. Ltd., through whom Order being No. 6 for machine drive has been placed on A. E. G. of Germany.

Miscellaneous

- (i) Redeemable Preference Shares.
The Company has not within two years preceding the date hereof issued any Redeemable Preference Shares. The present issue of capital is of Redeemable Preference Shares.
- (ii) The Company has not within the two years preceding the date hereof issued nor does it at present propose to issue any shares at premium.
- (iii) The Company has not entered into nor does it propose at present to enter into any contract or arrangement whereby any option or preferential right has been given or is proposed to be given to any persons to subscribe for any shares of debentures of the Company.
- (iv) No amount or any benefit has been paid to any promoter or any Officer within the two years preceding the date hereof, nor is any amount intended to be paid.
- (v) The Company issued:
(a) 5,00,750 Ordinary Shares of Rs. 10/- each as fully paid up to the existing shareholders as on 1st of January 1955 in proportion of one Ordinary Share for each Ordinary Share held by them on that date, by capitalisation of reserves;
(b) 2,52,875 Ordinary Shares of Rs. 10/- each as further capital for cash at par in January, 1955;
- (vi) The Company has not issued, nor agreed to issue within the two years preceding the date hereof any shares or debentures either for cash or as fully or partly paid up otherwise in cash.
- (vii) The Company paid an underwriting commission of Rs. 75,000/- to Messrs. Dhanuka & Co. for procuring subscription of the aforesaid debentures of Rs. 30 lacs. Beyond this, the Company has paid no other sum within the two years preceding the date hereof, nor is any such payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscription for any shares in debentures of the Company or as discount in respect thereof, nor is it intended that any should be paid in respect of the present issue.

Purchase of Properties

- (viii) Save as respects property purchased or D-JMW/3956 (Order Sr. No. 68) Dated 14. 8. 56

acquired or to be purchased or acquired being item No. (b) referred to under the heading 'Contracts' or the additional Turbine for which order is still to be placed, any property which the Company has purchased or acquired or proposes to be purchased or acquired which is to be paid out of the proceeds of this present issue or the purchase or the acquisition of which has not been completed on the date of the issue of the prospectus is property—

- (a) Contract for purchase or acquisition whereof has been entered into in the ordinary course of business of the Company the contract not being made in contemplation of this issue, or this issue in consequence of the contract; or
- (b) As respects which contract the amount of the purchase money is not material.

The property purchased or acquired or to be purchased or acquired under contracts as aforesaid is vested or will vest absolutely in the Company. There had been no other transaction relating to such property within two years preceding this prospectus.

- (ix) The Company does not propose to acquire any business nor does it propose to apply the proceeds of this issue in the purchase of any business or in the purchase of any interest in any business or in connection therewith nor the proceeds of this issue or any part thereof are intended to be applied directly or indirectly in any manner resulting in the acquisition by the Company of shares in any other body corporate.

Underwriting Arrangement

No underwriting arrangements have so far been made for this issue. The Articles of the Association of the Company permit payment of underwriting commission upto 25 percent (in addition to brokerage) on the value of the shares to person or persons subscribing or agreeing to subscribe or procuring or agreeing to procure subscription for any shares of the Company. Brokerage will be paid by the Company as hereunder mentioned.

Subscription

The object of this issue is as hereinabove stated. The minimum subscription, which in the opinion of the Directors is required, is provided in respect of each of the items mentioned in Clause 5 of Part I, Schedule 2 of the Companies Act 1956, is Rs. 36.25 lacs.

- (a) Price of property proposed to be purchased ... 35 lacs
- (b) Expenses on this issue ... 1.25 "
- (c) Repayment of any moneys borrowed in respect of foregoing matters ... NIL
- (d) Any other expenditure ... NIL

Short-fall, if any, and any additional working capital required will be provided out of such facilities including advance from Banks and/or Managing Agents as may be available to the Company from time to time, and/or long term deferred payment arrangements in respect of supplies of Machinery still to be ordered.

Modification of Rights

The Articles of Association of the Company provide that—

Whenever the capital is divided into different classes of shares all or any of the rights and privileges attached to each class may subject to the provisions of Sections 106 and 107 of the Companies Act, be modified, commuted, affected, abrogated or dealt with by agreement between the Company and any person purporting to act on behalf of that class, provided such agreement is (a) ratified in writing by the holders of at least three-fourths in nominal value of the issued shares of the class or is (b) confirmed by a Resolution passed at a separate General meeting of the holders of shares of that class and supported by four-fifths of those holders of not less than three-fourths of the issued shares of that class. This Article is not to derogate from any power the Company would have had if this Article were omitted.

Expenses of this Issue

Preliminary expenses including brokerage are estimated at under Rs. One lac 25 thousand.

Directors

Copies of the Memorandum and Articles of Association of the Company, the original Consent Order of the Controller of Capital Issues, the original sanction of the Government of India approving the reappointment of Messrs. Karam Chand Thapar & Bros. Private Ltd. as managing Agents of the Company for ten years from 1st of January 1957, and the Managing Agency agreement dated 11th Feb. 1957 made between the Company and Messrs. Karam Chand Thapar & Bros. Private Ltd., Managing Agents on their reappointment, and copies of the orders for purchase of machinery, plant and equipment and other contracts referred to above, the abovementioned Auditor's report and the copies of the Balance Sheet and Profit and Loss a/c. upon which the report is based can be inspected at any time during the usual business hours at the Registered Office of the Company for a period of fourteen days from the date of publication of this Prospectus or until the subscription list closes whichever is earlier.

Auditor's Consent

Messrs. Price Waterhouse Pelt & Company have given, and have not, before delivery of this Prospectus for registration withdrawn their written consent to the issue of this Prospectus with the inclusion therein of their report, set out above, in the form and context in which it is included.

The consent in writing of the Bankers and Solicitor of the Company to act in their respective capacities have been obtained.

Brokerage

Brokerage at the rate of Re. 1/- per Redeemable Preference Share will be paid by the Company on allotments made in respect of applications bearing the stamp of a recognised stock broker or a banker.

Application and Allotment

Application for shares which must be for five shares or multiples of five shares should be made on the accompanying form and will be refused if not so made. The application form together with the remittance for the full amount payable on application may be sent to any of the branches of the Company's Bankers, Messrs. Allahabad Bank Ltd. and Messrs. Oriental Bank of Commerce Ltd. The remittance if not made in cash should be made by cheque or draft drawn upon a branch of the Bank, to which the application and the draft or coupon in which there is a branch of any of the aforesaid Company's Bankers. If drawn on a bank elsewhere, bank charges at Rs. -/4/- percent must be included in the remittance.

Cheques or Drafts should be made payable to Messrs. SHREE GOPAL PAPER MILLS LIMITED and should for applicants' protection be crossed "Account Payee only". A separate cheque or draft must accompany each application form.

Allotment will be notified by despatch of an Allotment Letter but the Directors reserve the full and uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full, whole or any balance of the application money, as the case may be, will be refunded to the applicant by a cheque on Calcutta Branch of the Company's Bankers.

Share Certificates will be available for issue in exchange for the Letters of Allotment on or after forty-five days from the date of allotment letter and each successful applicant for more than 25 shares will receive Share Certificates in lots of 25 shares and such smaller denominations as is required to complete the total number of shares allotted, except when the applicants request Share Certificates in larger denominations. Such Allotment Letters and Share Certificates will be despatched by Registered Post.

Copies of the Prospectus and the Form of Application may be obtained from the Company's Bankers named above, at any of their Branches in India.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

GOOD DEMAND FOR CREDIT

Wednesday, 10th April.

DEMAND for money has remained good during the past week. Cotton and cloth advances show a small increase, and sugar interests have borrowed more. Jute advances, however, show little change. Easier conditions have prevailed in the interbank market, and the call rate is reported at 3½ percent, with lenders over.

The exchange market has been extremely dull. Only a trickle of gunny bills has been transacted, while remittance has been on a moderate scale. Sterling is steady against the U.S. dollar.

Bullion was quiet on profit-taking before the start of the Bengali New Year. Silver declined from the previous week's level of Rs. 178.75 to Rs. 178.50, quoted today. The ready rate was Rs. 178.50.

Gold declined in sympathy with silver. The price was shown at Rs. 106 against Rs. 106.75. The sovereign, at Rs. 69.50, showed a loss of 25 p.

During the week ended 5th April, Government of India Treasury bills for Rs. 80,26,50,000.00 were sold in favour of the Reserve Bank.

Sharp increases of Rs. 37.48 crores to Rs. 1,563.57 crores in active notes, and of Rs. 33.60 crores to Rs. 1,571.45 crores in the total note issue, were the notable features of the return of the Reserve Bank of India for the week ended 5th April, 1957. The currency expansion was covered by increasing rupee securities by Rs. 30 crores to Rs. 914.97 crores and rupee coin by Rs. 3.59 crores to Rs. 126.20 crores. Deposits of the Government of India declined by Rs. 3.98 crores to Rs. 60.59 crores, as did other Government accounts by Rs. 24.05 crores to Rs. 7.90 crores. Balances of commercial banks, at Rs. 60 crores, showed a rise of Rs. 2.23 crores. Balances held abroad declined by Rs. 1.49 crores to Rs. 112.82 crores and investments by Rs. 23.25 crores lower at Rs. 91.97 crores. Other loans and advances declined from Rs. 127.87 crores to Rs. 106.04 crores, of which advances to scheduled banks against usance bills amounted to Rs. 58.32 crores against Rs. 71.54 crores. Such advances totalled Rs. 173.79 crores since 1st January, 1957. Ways and means advances stood at Rs. 15.65 crores (Rs. 7.65 crores).

The return of the State Bank of India for the week ended 29th March, 1957, shows a rise of Rs. 20.06 crores in total deposits to Rs. 299.90 crores. Investments in Government securities are up by Rs. 3 lakhs to Rs. 94.18 crores, while other authorised investments are down by Rs. 1 lakh to Rs. 11.54 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have increased by Rs. 1.69 crores to Rs. 165.14 crores. Cash and balances are, in consequence, shown at Rs. 21.43 crores, or Rs. 6.64 crores higher.

The statement of the position of scheduled banks for the week ended 29th March, 1957, shows (Rs. 8.22 crores on account of borrowings from banks) and Rs. 473.16 crores (Rs. 1.97 crores), compared with Rs. 701.08 crores (Rs. 9.00 crores) and Rs. 466.86 crores (Rs. 2.18 crores), respectively, in the previous week. Cash has decreased by Rs. 2.62 crores to Rs. 34.28 crores, while balances with the Reserve Bank have increased by Rs. 2.20 crores to Rs. 54.54 crores. There is a drop of Rs. 68 lakhs in investments to Rs. 347.41 crores. Advances and bills discounted, at Rs. 897.78 crores, show a rise of Rs. 15.21 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.5 percent and 76.0 percent against 7.6 percent and 75.6 percent.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in the Indian Union during January 1957, amounted to Rs. 1,723 lakhs compared with Rs. 1,423 lakhs in the corresponding month of last year. The comparison in the subsequent paragraphs should be taken to refer to that of the period of last year. Of the total customs revenue collections, import duties accounted for Rs. 1,396 lakhs against Rs. 1,135 lakhs, export duties Rs. 296 lakhs against Rs. 263 lakhs and land customs and miscellaneous Rs. 31 lakhs against Rs. 25 lakhs. The total gross collection of Union Excise duties amounted to Rs. 1,797 lakhs compared with Rs. 1,351 lakhs. During the ten months of April Customs and Union Excise revenue realised was Rs. 30,014 lakhs compared with Rs. 26,032 lakhs during the corresponding period of last year. Of this amount, import duties accounted for Rs. 11,621 lakhs against Rs. 10,458 lakhs, export duties Rs. 2,515 lakhs against Rs. 3,093 lakhs, land customs and miscellaneous Rs. 297 lakhs against Rs. 174 lakhs and Union Excise duties Rs. 15,581 lakhs against Rs. 12,307 lakhs.

RISE IN STOCK MARKETS INDUSTRIALS AND OILS PROMINENT

London, 10th April.

THE London stock markets gave a good account of themselves in the week preceding the Budget. There was quite a vigorous response to the news that the engineering and shipbuilding strikes had been called off. Although conditions quietened down after the initial enthusiasm had been dissipated, the firm tendency was maintained. A further burst of strength developed on the eve of the Budget on the growing expectations that the Chancellor would have some tax concessions to announce. Interest was centred largely on industrial equities and oil shares, which recorded extensive and often substantial gains on the week. There has not been a great deal of change in other sections of the market. Business on the eve of the Budget reached a very high level with the number of bargains coming to 16,325, the highest recorded for any one day since July 1955. Gilt-edged securities were rather out of the picture and with irregular movement. There was very little change on balance in this market. Interest in foreign bonds and rails was limited, but Chinese issues were supported on prospects of the U. K. increasing its trade with China. The industrial market went ahead in response to the end of the strikes and advanced sharply again on renewed buying on the expectation of tax concessions in the Budget. Stores shares were outstanding while companies operating overseas were also prominent, the latter expecting tax relief on profits earned overseas. South African gold shares relapsed into idleness after an advance, due to nervousness over the position of sterling. Their prices were easier on balance. Coppers and other base metals, by contrast, were firm. Oils recorded numerous substantial gains, particularly among the western hemisphere issues, notably Trinidad. The demand for rubber shares broadened in anticipation of further bids, and a widespread list of gains was recorded. Anglo-Sumatra were particularly firm on this account.

The Money Market

Credit conditions in the London money market last week took a more difficult turn. It was hoped that with the main tax gathering season ended, easier conditions would prevail but the flow of funds continued to thin to the detriment of the market. Discount houses had a problem in financing their weekly take-up of bills. The authorities smoothed out difficulties by injecting sufficient funds to make up shortages for normal operations, although the market did borrow a little from the Bank of England. As a result, money ruled at a level of 3½ percent to 4 percent. The tightness of money was reflected at the week's Treasury bill tender. The average rate at which the bills were sold was approximately 1s percent higher at £4 2s 11.49d percent.

Activity on Wall Street

Long-dated U.S. Government bonds weakened fractionally in quiet dealings. The fall in values was attributed in some quarters to the renewed talk that the Treasury might offer long-term securities to holders of saving bonds. Top quality corporates also softened slightly after their rise in the previous two weeks. Rails were mixed, while convertibles pushed ahead with the stock market. In the foreign bond section, Greeks were among the most active issues. German Nationals generally showed minor changes either way, while Italians were higher. Norwegians and Polish issues were lower, but Union of South Africa 4½ percents were fractionally higher. Japanese issues were mixed.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 3rd April shows that the gold stock was \$1 million higher at \$22,306 million. Foreign deposits fell by \$96 million to \$249 million, but foreign investments were \$20 million higher at \$3,741 million. The Federal Reserve bought \$202 million worth of securities under repurchase agreements. Total discounts and advances increased by \$504 million to \$1,121 million, while the aggregate excess reserves of member banks rose by \$528 million to \$535 million. Daily average excess reserves of member banks fell by \$223 million to \$342 million, while their daily average borrowings rose by \$290 million to \$1,049 million. Business loans of the New York city banks fell by \$65 million to \$11,633 million, compared with a fall of \$248 million to \$9,705 million in the corresponding week of last year.

Rubber Prices Recover

The London rubber market has responded to improved Singapore advices in the past week. An advance in values was extended on small orders; but trading for the most part has been very quiet. Home trade and Continental business were patchy and prices have had a tendency to weaken in dull phases. Small orders were enough, however, to lead to a recovery in prices and the list showed an all-round advance of 1½d a lb. towards the close. Traders attributed the advance largely to Polish orders and covering against them in this market. When the more urgent business had been placed, sellers showed a little more inclination to meet the market demand, but there was a net gain of 1d a lb. on balance. Very little interest was shown in sole crepe with virtually no movement either way. Prices were nominally unchanged on the basis of 42½d a lb. for 4th inch smooth on the spot.

Stocks and Shares

ACTIVITY REMAINS RESTRICTED IN STOCK MARKET

MINOR RECOVERY TOWARDS CLOSE

Wednesday Evening.

ACTIVITY has again been very restricted in the stock market during the past week. The general tendency has been for prices to soften, with Budget fears and tight money conditions discouraging the purchase of stock. This evening, however, there has been a mild recovery on the rumour that the presentation of the Central Budget might be postponed by a month or two. How this story started, it is impossible to fathom; no indication has been forthcoming so far from any official source that it might be true.

The various sections of the market present a dull picture. Engineerings have been moving narrowly, but coals and jutes are easier. Miscellaneous shares are mostly lower where changed, but there has been some demand for occasional investment counters like Metal Box and National Carbon. Very little interest has been shown in teas, and one reason for this may be recent talk about the possibility of overproduction during the coming season. Gilt-edged are dull but steady.

* * * * *

Government securities ruled steady, though there was no increase in the volume of business. The 3% Conversion Loan 1986 met with enquiry and the price improved to Rs. 74.35 but 3% 1896-97 was unchanged at Rs. 73. In short-dated loans, 3% 1957 was quoted at Rs. 99.75 and 3% 1958 was better at Rs. 99.65. 2½% 1961 turned sellers at Rs. 93.50 and 2½% 1960 was easier at Rs. 96.47. The 3% 1959-61 had buyers up to Rs. 97.75 and 3½% 1961 was quoted higher at Rs. 99.50. Among medium-dated loans, 3% 1963-65 was traded around Rs. 94.20 and 3% 1964 was marked at Rs. 94.44. 3½% 1964 was easier at Rs. 98.40, but 3½% 1965 had buyers over at Rs. 98.25. The 3½% 1967 was quoted at Rs. 98.50. Long-dated loans were quiet, with 3% 1966-68 on offer at Rs. 92.12 and 3% 1970-75 at Rs. 87.25. State loans were dull but fewer sellers were in evidence; 4% U.P. 1967 was quoted around Rs. 97.95. 4% West Bengal 1968 had small buyers at Rs. 99.00 and both 4% Madras and Madhya Pradesh 1968 were on offer at the previous quoted rates.

Very few transactions were reported in the preference section. In jute, Auckland 5½% were done at Rs. 73.50 and Baily were crossed at Rs. 100. Belvedere came to hand at Rs. 97 and Caledonian at Rs. 102. Cheviot were crossed at Rs. 101 and a small lot of Lawrence was placed at Rs. 92. New Central were quoted between Rs. 102 and Rs. 100. In the miscellaneous group, a small lot of Burn 6% was sold at Rs. 110 and Calcutta Electric were depressed at Rs. 87.5. F. and C. Osler were quiet at Rs. 47 and Indian Iron and Steel were marked at Rs. 96.50 ex-dividend. Shaw Wallace were taken around Rs. 68.

In the banking section, Hind Bank were reported at Rs. 33.25 and Hindustan Commercial at Rs. 11.50. United Commercial were unchanged at Rs. 53.00, as were United Bank of India "D" shares at Rs. 4.51.

No transactions were reported in railway shares. Cotton shares were depressed, Bowreah being marked down from Rs. 118 to Rs. 116 and Elgin Mills from Rs. 22 to Rs. 21.50. Kesoram changed hands at the previous quotation of Rs. 13.75, as did New Victoria at Rs. 1.81.

Coal shares tended to lower levels in sympathy with the general trend of the market. Bengal Coal, which have now been sub-divided into Rs. 100 paid-up shares (formerly Rs. 200 paid-up) were quoted around Rs. 215. Bhalgora eased from Rs. 5.12 to Rs. 4.75. Burrakur fluctuated narrowly around Rs. 21.25 and Central India closed quiet at Rs. 5.75 against an opening quotation of Rs. 6. East Indian were marked down from Rs. 26 to Rs. 25 as were Equitable from Rs. 22 to Rs. 20.87. New Beerbhoom were shaded at Rs. 14.75 and New Manbhoom dropped Re 1 to Rs. 8. Contrary to the general trend, Union were better at Rs. 15 on interested buying.

In the absence of support, jute shares continued to fall away, the worst sufferer being Naihiti which slumped from Rs. 68 to Rs. 54. Here is a chart showing important price movements:

	Opening	Closing
	4-1-57	10-1-57
Auckland	Rs. 86	Rs. 81
Belvedere	90	85
Chitavalsah	11.37	11.31
Khardah	120	116
Nuddea	30	29
National	19.75	19.25

Electric supply shares continued to suffer from lack of interest and prices were depressed. Calcutta Electric were offered at Rs. 12.44 and business was reported in Dishergarh Power at Rs. 88. Mirzapur Electric were crossed at Rs. 5.50 and Shahjahanpur were reported at Rs. 6.50.

In sugar, Balrampur were unchanged at Rs. 6.50 while Belsund were steady at Rs. 10.87 and Shree

Krishna Gyanoday at Rs. 10.75. Dyer Meakin Breweries were slightly easier at Rs. 6.12 and Purbapore were marked at Rs. 16.50 ex-dividend. Durbhanga met with some enquiry at around Rs. 22.50.

In the engineering section, Indian Iron and Steel Old shares were at one time sold down to Rs. 18.64, but towards the close there was a slight recovery to Rs. 19.24. The rights were at one time offered at Rs. 3.75 but closed better at Rs. 4.12. Bhartia Steel were slightly better at Rs. 14.76 while Braithwaite were easier at Rs. 24.75 and Burn at Rs. 310. Guest, Keen, Williams were steady at Rs. 25.50 and Marshalls improved smartly from Rs. 4.25 to Rs. 4.75 following a 5 percent increase in the dividend to 20 percent. Jessops and Richardson & Cruddas met with heavy selling pressure and closed easier at Rs. 23 and Rs. 15.50. Textile Machinery were quiet most of the week around Rs. 18 but closed better at Rs. 18.25.

In paper, Titagur were slightly better at Rs. 34 ex-dividend and Sirpur were marked back from Rs. 9.12 to Rs. 8.87. Orient were depressed at Rs. 30.25 as were India Paper Pulp at Rs. 21.55. Shree Gopal, on the announcement of a new preference issue, were marked down from Rs. 16 to Rs. 15.44.

In cement, Ashoka were dull at Rs. 9.87 and Jaipur Udyog at Rs. 11.50. Some Valley were freely offered at the lower rate of Rs. 6.37. Dalmia Cement were unchanged at Rs. 11.25.

No transactions were reported in insurance shares.

In shipping, Port Shipping were marked at Rs. 16.50 and India Steamship closed quiet at Rs. 10.06, against an opening price of Rs. 10.22.

Among miscellaneous industrials, Alkali and Chemical met with some enquiry at Rs. 11.50 and business was reported in the rights at 25 nP Assam Saws were marked down further from Rs. 3.12 to Rs. 2.87 and Angelo Brothers were shaded at Rs. 18.50. A large parcel of British India Corporation changed hands yesterday at the lower rate of

1913—when 75 miles an hour was sensational!

Way back in 1913, Jules Goux, the racing motorist, won the famous Indianapolis 500-mile race on Firestone Tyres at the then sensational speed of 75 miles per hour. This result helped Firestone to produce better tyres and each successive year, the developments incorporated in Firestone tyres have been tested and proved on the race track for use on the highway.

Now, from Firestone comes a great contribution to safe motoring—the New DeLuxe Champion Tubeless Tyre. It gives you and your family protection never before provided in any tyre at any price. It's the first and only tyre with built-in peace of mind!

Firestone
 New DeLuxe Champion Tubeless Tyre
 with "BUILT-IN PEACE OF MIND"

FIRESTONE TYRE & RUBBER CO. OF INDIA, PRIVATE LTD.

Rs. 6.62; today there was a small recovery to Rs. 7. Dunlop Rubber were easier at Rs. 24.81, and Imperial Tobacco were lower at Rs. 13.37, as were Indian Aluminium at Rs. 12.62 ex-dividend. Indian Cables after being sold down to Rs. 23.75, recovered today to Rs. 25. Indian Rubber were firm at Rs. 26.25. Jardine Henderson were depressed at Rs. 75 and Rallis were offered at the lower rate of Rs. 29.25, with few declared buyers. Metal Box were remarkably steady at Rs. 22.25. National Carbon met with some enquiry at Rs. 26.62. Roshas Industries were easier at Rs. 16.62 as were National Insulated Cables at Rs. 19.37. F. and C. Osler were offered at the lower rate of Rs. 5.69.

In the mining group, Burma Mines closed lower at Rs. 2.44 while Western Stockholders Investment Trust were unchanged at 81 nP. Indian Copper were neglected at around Rs. 3.14.

Tea shares were neglected. Bishnauth coming to business at Rs. 19.12 and Dhelakhat at Rs. 21.37. Brooke Bond were lower at Rs. 18.25 and Jutlibari and Methoni were traded at Rs. 21.25 and Rs. 18.75 respectively. Tezpur had sellers at Rs. 20, as did Oodaleah at Rs. 13.25 and Banarhat at Rs. 275. Hantapara changed hands at Rs. 171, while Huldibari were in demand at Rs. 23.25. East India were reported today at Rs. 25.62.

The trading profit of MARSHALL, SONS and Co (India) Ltd. has amounted to Rs. 5.19 lakhs for the year ended last June. Providing Rs. 1.90 lakhs (Rs. 2 lakhs) for taxation, bringing in Rs. 1,12,618 and making other adjustments, there is a balance of Rs. 3,11,089. The dividend has been increased by 5 percent to 20 percent and absorbs Rs. 2.10 lakhs, leaving a carry-forward of Rs. 1,01,089.

Providing Rs. 47.35 lakhs (Rs. 42.32 lakhs) for taxation, the profit of the DUNLOP RUBBER COMPANY (INDIA) LTD. has amounted to Rs. 55.10 lakhs for the year ended last December, compared with Rs. 49.40 lakhs. The ordinary dividend has been maintained at 15 percent. General reserve is allocated Rs. 26 lakhs (Rs. 22 lakhs). The directors have made the increased allocation to provide resources for the expansion of business. The carry-forward is Rs. 13,24,595, against Rs. 11,71,685 brought in.

The INDIAN ALUMINIUM COMPANY has reported good results for the year ended last December. The profit has improved from Rs. 27.09 lakhs to Rs. 42.79 lakhs. The ordinary dividend is increased by 1 percent to 10 percent, including an interim of 5 percent. The taxation provision is Rs. 7 lakhs against nil. Sales at Rs. 4.25 crores showed an increase of 16 percent. Bauxite mining and alumina production operations, apart from meeting the requirements of the Alupuram smelter, were conducted satisfactorily with a view to reducing the imports which will be necessary when the Hirakud smelter comes into operation. The directors say that the first stage of the current expansion programme comprises the establishment of a new aluminium reduction plant with an annual production capacity of 10,000 tons in Hirakud, Orissa, and a relatively small expansion of the existing alumina plant in Muri to a production capacity of 18,000 tons of alumina a year. This stage of the programme is scheduled for completion by the end of 1958. Thereafter, the further

expansion of the Muri alumina plant to 30,000 tons capacity will proceed and it is expected to complete this by 1961. Fully integrated facilities in Muri, Alupuram and Hirakud are thus envisaged at the end of the programme for the production of 15,000 tons of aluminium a year. Although the aluminium reduction plant in Hirakud will, in the first stage, have an installed capacity for 10,000 tons of annual ingot production, it is being designed so as to permit the easy future expansion of capacity to 20,000 tons or more a year. A continuous study is being made of the availability of financial resources to enable the early expansion of the Hirakud smelter to 20,000 tons capacity.

The profit of the DURGAM SUGAR COMPANY has improved by Rs. 9.94 lakhs to Rs. 18.36 lakhs for the year ended last August. The dividend has been increased from 15 percent to 20 percent. Taxation provision absorbs Rs. 8.65 lakhs, leaving a carry-forward of Rs. 2,35,636. The company has a record cane crush, which amounted to 6,455,743 maunds. Recovery was shown at 9.91 percent. The directors observed that the company has taken over 630 acres of land in Pandaul and 106 acres near Lohat for propagating new seed in the areas which supply cane to the factories.

Messrs. Tata Industries Private Limited, managing agents for the TATA IRON AND STEEL CO. LTD., report that the total approximate production of iron and steel at the steel works in Jamshedpur during March 1957 was: pig iron 95,100 tons; steel ingots 93,200 tons; semis for sale 20,500 tons and finished steel 53,100 tons.

Bombay Market

PRICES FALL IN QUIET TRADING ANXIETY ABOUT TAXATION PROSPECTS

Wednesday Afternoon.
THE Bombay stock market was quiet during the past week, and prices declined on selling pressure. Operators were inclined to shorten their commitments in view of the prevailing uncertainties about the Central Budget. The monetary stringency also contributed to the lack of buying interest. The depression in the piecegoods market induced selling pressure in the mill group. Mining shares were freely offered on fears that the scope of the State Trading Corporation's activity in ore exports would be increased.

Tata Steels declined to Rs. 166.50 and holders were hesitant as they feared that the shortage of funds would make it difficult to pay the final call of Rs. 35 a share. Indian Irons were lower at Rs. 19.10 as the payment for the rights shares will have to be made shortly. Alcock Ashdown were freely offered at Rs. 257.50, and Premier Construction at Rs. 158.50. Tata Locomotives were available at Rs. 137. There was little interest in automobile shares. Premier Automobiles came to hand at Rs. 86 and Hindustan Motors were sold at Rs. 7.05.

Mill shares showed substantial declines, although replacement buying helped improve prices

slightly towards the close. Bombay Dyeing was transacted at Rs. 543.50 and Kohinoors were bought at Rs. 324 by knowledgeable quarters. Centur slumped to Rs. 448, as did Swadeshi to Rs. 216.5. Simplex were quoted at Rs. 173 and India United Ordinary realised Rs. 10.35.

Miscellaneous shares were subdued, but cement shares were slightly steady at the close on rumour of an increase in the price of the commodity. Associated Cement came to hand at Rs. 158 and Digvijay Cement were done at Rs. 141. Suga shares were barely steady, with Belapur making Rs. 223. Losses in the mining group included Shivrajpur Syndicate at Rs. 89.00 and B.B. Petro at Rs. 242. Steamship Company shares showed falls on balance. Scindia Steam were lower at Rs. 18.75 and Great Eastern Shipping were shaded at Rs. 17.60. National Rayon declined to Rs. 22 and the proposed issue of rights shares in the proportion of one for two at a premium of Rs. 25 a share had little effect. The proceeds of the issue are to be utilised for setting up a tyre cord plant. Tata Chemicals dropped to Rs. 15.80.

Routine turnover was transacted in banking shares. Bank of Baroda were done at Rs. 98.25 and Bank of India quoted Rs. 133.50. Sellers predominated in insurance scrip, and New India were offered at Rs. 39.25.

Scattered interest was taken in electricity supply shares. Ahmedabad Electric at Rs. 92.75 showed little variation. Tata Power were done at Rs. 118.5.

THE WEEK'S TRANSACTIONS
(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations. Highest for the week. Lowest for the week. Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago the last named being shown in parenthesis and will not be given where such a quotation is not available.)

MONEY ITS NATURE AND MANAGEMENT by B. T. Thakur

How can India guard against diminution in the purchasing power of money? What is deficit financing? What are the functions of Central Banks and the conditions for their healthy existence? What is the purpose of the Reserve Bank of India? These and other questions facing India today are dealt with clearly and comprehensively.

This book is the expanded version of Prof. Benoy Sarkar Memorial Lectures delivered by Mr. Thakur at the Calcutta University in 1956.

Here is a book which will be useful not only to Economists, bankers, administrators and politicians, but also to intelligent readers and students.

how far can a road reach?

It can reach right into the future... it can break down isolation... it can gain access to the inaccessible... it can bring economic uplift. But no modern road can reach far without oil! Oil to power construction equipment; bitumen to surface the road; fuels and lubricants for buses, trucks and cars. The Caltex Refinery, nearing completion at Visakhapatnam, will play a vital role in transport development by supplying India with Caltex quality petroleum products. It is a tribute to free enterprise.

OIL is the Lifestream of Progress

CALTEX PETROLEUM PRODUCTS

Mr. Cleetus said that on the basis of available information, he felt inclined towards the recommendations of the British mission. They were more balanced and had given more attention

Discussing the effects of the recent increase in the prices of coal as a result of the award of the Appellate Tribunal, Mr. Cleetus pointed out that it would release a chain reaction of higher costs all over the country. Ever-rising costs of production did not augur well for the second plan, for rising prices and increases in the cost of living

Turning to the problem of finance for expansion, Mr. Cleetus said that industries all over the country were faced with shrinking margins of profit. These margins had been insufficient to enable industries either to plough back money for expansion of the fixed assets or show a profit on record that would make it possible to raise fresh capital at reasonable terms. The Government, as one of the principal customers of the engineering industry, had a tendency to dictate prices or keep them down to as low a level as possible. Although this might be a justifiable buyer's attitude, it was short-sighted and harmful to the country in the long run. The industry on its part had pursued a sound financial policy—a good proportion of profits was ploughed back into the business, while dividends were maintained at levels which would attract the prospective investor to put his money into the industry. The issue thus was whether the industry would be permitted to make profits sufficient to provide for its future expansion. "When we ask for a wider margin of profit, it is easy for someone in Delhi to imagine that we are being greedy. We wish to make it clear that we are only thinking of the future of the industry, which we trust, is also a matter of vital concern to the Government," he said. Referring to depreciation allowances, Mr. Cleetus said that the insistence on historical costs was unreal and unhelpful. This was particularly so in the engineering industries, where technological advance and research accelerated the process of obsolescence. Again, the allowance made for interest on capital had no basis in the real costs of industrial units were obliged to bear at the high rates of interest currently prevailing.

Mr. Cleetus described the general labour situation in the industry in 1956 as an improvement on the previous year. He noted that there was an increasing tendency on the part of workers to negotiate directly with their employers. This was a happy augury for the future, since direct negotiations facilitated greater appreciation of each other's point of view. The country, he said, had paid dearly for its almost pathetic faith in a multi-layered conciliation and tribunal set-up. Lasting industrial peace, it was necessary to establish a common outlook and a common concept of the significance of the joint activities of employers and employees. That can be achieved only if we can get together around a table, he said. With the publication of the awards in the jute and coal industries, it was found that the basic rates laid down by the Engineering Tribunals of 1948 were, on paper at any rate, below the new rates prescribed in these awards. In actual practice, workers in the engineering industry were better off if the production and annual bonuses were taken into consideration. The Association was, however, not satisfied with this state of affairs and endeavoured to have the two issues of adjustment and dearness allowance referred to adjudication. The West Bengal Government agreed to this and broadly included in the reference to the Tribunal all engineering firms employing less than 250 workers or more. A few firms employing less than 250 workers had since approached the Association for inclusion in the reference.

Referring to the need for stepping up engineering exports, he said that the industry accepted the obligation to augment foreign exchange earnings as far as possible. There was, however, the difficulty that firms engaged in the production of items required for the completion of the second plan projects could not divert capacity until these essential orders were fulfilled. Outside the light engineering industry, there was no spare capacity available and exports would, therefore, have to wait until the needs were met.

Subsequent discussions with the State Government have led to an upward revision of the target to only 24.6 percent, which was announced last November. Plans for Government purchases of rice during the *khari* harvest season, in order to build up a reserve, were abandoned in January on account of the rising trend of prices. The estimated wheat crop now coming into the market, it is estimated, will be larger than last year's by about 500,000 tons. But the price level has not so far warranted Government purchases. The opinion prevails in the Union Ministry of Food and Agriculture that even the big contracts that have been made for the purchase of two million tons of rice from Burma and 3.5 million tons of wheat from the U.S.A., during the second plan period, will be largely absorbed by current consumption requirements. In contrast to the optimism of last year, the problem facing the country now is how to secure supplies during a period of acute foreign exchange shortage. A permanent reserve of one million tons was envisaged in 1954, but the Food Minister, Mr. A. P. Jain, said last year that the Government proposed to build up buffer stocks of one million tons each of rice and wheat.

The establishment of a fourth State-owned plant will be considered only after exhausting the first two lines of approach. If it is decided to set up a fourth new plant, it will almost certainly be in Bokaro. After the fourth plant, if and when that is set up, the development of the industry may not be sought through the establishment of large-scale units based on metallurgical coal. Less conventional methods, such as the use of lignite or electric power for smelting, are likely to be tried. The governing consideration will be the relative economy of different methods. If, for example, the cost of producing steel from the iron ore found in Salem and Bellary districts of south India, with Neyveli lignite or electric power, should be only slightly more than that of steel produced in north-eastern India, the difference may be treated as being largely offset by the saving on transport. Economic factors, however, can be sacrificed only up to a point.

Freed from the responsibilities of directly managing the Bhilai and Durgapur projects, the Ministry of Iron and Steel hopes to make a technical assessment, well in advance, of all the lines of the steel industry's development. Meanwhile, it is emphasised that the unification of the management of all the three State-owned steel projects by a private limited company does not mean a general policy decision in favour of this particular form of running Government undertakings. Hindustan Steel had to be formed as a company in any case, on account of the initial participation of private German capital, in the Rourkela project. In the case of Bhilai and Durgapur, on the other hand

F.A.O. Discussions

It is in this context that the discussions on the problem of surplus food stocks disposal by the F.A.O. Committee on Commodity Problems at its recent meeting in Rome becomes important. Twenty-four countries are represented on the Committee, and the delegates from certain exporting countries expressed the fear that the disposal of surpluses by the U.S.A. would affect their normal trade. The India-U.S. agreement was specifically cited. The Indian delegate pointed out that purchases under this agreement would be over and above India's normal imports. Both India and the U.S.A. desired that the sale of surplus commodities should not disrupt world prices and normal trade and the agreement, therefore, included a clause specifying the quantities of foodgrains that India would buy from other countries in the normal course during the period of three years.

The building of national food reserves was also criticised by certain exporting countries, for the same reasons as they opposed the concessional sale of surpluses. Burma's delegate cited India's feeling of rice to Pakistan on a replacement basis, to show that it was useful from a regional point of view to have national reserves in many countries. He pointed out that it would have taken Pakistan longer to meet the urgent requirement of rice from other countries. About the size of the proposed reserve in India, however, the Indian delegate thought to reassure the exporting nations by saying that it would not be so large as to be uneconomical. A food reserve not only involves cost on account of maintenance and wastage; it also entails the locking up of resources which a country engaged in planned development would like to keep to the minimum necessary.

As a side note, the speaker explained that the countries even opposed price support as an incentive for increasing food output. They did so on the ground that some countries were peculiarly well placed for specialising in agricultural production.

Talks were last week resumed between the representatives of the Assam Oil Company, led by Mr. S. S. Smith, assistant managing director, and an official team led by the Cabinet Secretary, Mr. Y. N. Sukhtankar on the formation of a rupee oil company. The Indian Government, it is proposed, will subscribe to one-third of the total capital. This must be regarded as the final round of the talks, which began in the middle of 1955, in view of the notice served by Mr. K. D. Malaviya, Minister for Natural Resources, that the negotiations must be completed by the end of this month. The outcome will be awaited with keen interest not only in the country but also abroad. In contrast to the annual output of about half a million tons of crude oil in Daboi, where the A.O.C. operates the existing oilfield, the new project will have a preliminary production target of 2.5 million tons. Allowing for the likely results of further prospecting in the Naharkatiya extension, Hubrijan and Moran, as estimated by the A.O.C.'s American consultants, the pipeline to the proposed refinery will be designed to carry 4.5 million tons ultimately.

The evolution in stages of the Government's new ideas probably explains why the clarification of the new capital goods import policy has come in dribbles. Official spokesmen have offered significant interpretations of the Import Trade Control announcement of 31st March. The picture which has finally emerged should reassure both the Indian importers and foreign suppliers. This is how the policy has been summed up by a senior official. The requirement of seven-year credits will be the exception, not the rule. It will apply only to machinery for power plants and similar projects which do not directly save foreign exchange. In the Government's thinking, the operative part of the deferred payments scheme is the shorter-period formula applicable to projects which will save or earn foreign exchange. Under this, the foreign supplier will not be asked to take the risks of an internal delay in the execution of the project. The Government will make a realistic assessment of the interval between the shipment of machinery and the start of production, the volume of production in the initial years, and the extent of savings in foreign exchange. On these assumptions, payments on specified dates will be authorised. The exporter's only responsibility will be his adherence to the shipment date, and the actual date when the project goes into production will be no consideration. If, however, the supplier asks for a postponement of shipment, the payment to him will naturally be deferred by a corresponding interval. Industries based on indigenous raw materials, such as cement and some heavy chemicals, will qualify best for deferred payment over periods of less than seven years. The exemption of a third category of capital goods from the deferred payments scheme does not mean that licences will be issued automatically. Replacement machinery and spares will naturally receive high priority, but applications for an item like earth-moving equipment will be strictly scrutinised since excavation can be done by human labour though at the cost of some slowing down of operations.

The American trade delegation, at the conclusion of its six-week tour of India, made several

1690, when Job Charnock stood on the banks of the Hooghly, he saw before him a depressing landscape of mud hovels, swamps, and paddy fields. On that very site has risen in the course of the years a pulsating city with heavy industry, modern transport and busy docks—a metropolis which could have made little progress but for STEEL—thousands of tons of it.

INCREASED EXPORTS OF COIR
AND TAPIOCACOMPLAINT OF TRADE
MALPRACTICES

(FROM A SOUTH INDIAN CORRESPONDENT)

INDIA exported 81,650 tons of coir goods in 1956; this fetched Rs. 9.6 crores in foreign exchange. Corresponding figures for 1955 were 74,550 tons and Rs. 9 crores respectively. An item-wise break-down of exports is given below with corresponding figures for the previous year.

Item	Quantity in tons	Value in Rs. 000	Quantity in tons	Value in Rs. 000
	1956		1955	
Coir yarn	62,600	65,196	53,750	57,635
Coir fibre	600	597	750	502
Mats and Matting	13,500	21,209	13,950	22,213
Rugs	4,900	8,824	5,350	8,735
Other sorts	50	124	750	1,459
Total	81,650	95,959	74,550	90,544

The problem of checking malpractices in the coir export trade is still troubling the Coir Board. Several complaints have been made from abroad, especially from the Middle East, alleging that the materials supplied by the Indian shippers were not up to the specifications on which contracts were made. The Chairman of the Coir Board in an appeal issued through Coir, the official publication of the Board, says: "Several instances of

shippers at this end supplying bad stuff to Basrah buyers against good samples, of refusing to agents there the commission that was legitimately due to them, of appropriating the letters of credit and making no supply, etcetera, have been brought to the notice of this Board. When pressed hard, such shippers have a tendency to go into voluntary liquidation and escape the situation. These people perhaps do not realise the irreparable harm they are doing to the Indian coir trade and the fair name of India. The Board has appealed to the trade to desist from such acts at once, to settle the legitimate claims of foreign buyers amicably and thus try to retrieve the losing reputation of our coir industry."

Control on Shippers

The Coir magazine has put forth two suggestions to stop these malpractices. First, there should be a strict control over shippers. Only licensed shippers should be allowed to export. The system of licensing should be accompanied by arrangements for the inspection of goods before shipment, the comparison of goods with samples and the issue of certificates. Secondly, buyers at the other end should be prepared to pay reasonable prices for quality goods. Trading should be invariably against samples, a set of which might be placed with some reputable trade associations at the source of supply for purposes of inspection and certification of goods before shipment. A thorough enquiry into the financial position and status of shippers before placing any order with them would also reduce the chances of fraudulent trade.

Exports to Middle East

Iraq is an expanding market for coir, which India almost monopolises. There is, however,

competition from other floor coverings and substitute materials and this may become formidable in the future. Mr. K. Gopalan, the F.A.O. marketing expert in Baghdad, advises Indian manufacturers and shippers to take note of this and devise measures to maintain and improve the quality of goods they supply to the Middle East. The Coir Board at the same time should supplement its efforts by initiating vigorous propaganda campaigns to stimulate the demand for coir goods. He suggests the setting up of an export promotion council to increase exports of coir goods to the Middle East. A basic factor with the sensitive East is that it is essentially a price take into market. Manufacturers will have to take into consideration this factor, when they produce coir goods for this market. Unless they can reduce prices by improved methods of production and change the marketing strategy, they may not be able to hold their own in the Middle East.

Larger Exports of Tapioca

The year 1956 was exceptionally good for tapioca, for it witnessed a big rise in exports. During the year, European countries imported 21,000 tons of tapioca from Kerala for purposes of cattle fodder. Prices doubled over the previous year. Two factors helped this: large exports and lower production. Exports of tapioca were not permitted until 1955 in view of the difficult food situation in the State. When controls on food materials were lifted and when rice was available in plenty, the demand for tapioca declined and prices fell steeply. Consequently, many people abandoned tapioca cultivation in 1954 and 1955, so the supply was below normal last year. But as the prices were attractive, there was again a revival of cultivation last year. Still more lands are now being brought under this crop; this would naturally bring down prices. In order to avoid overproduction, some control should be imposed on the expansion of tapioca cultivation. The Tapioca Marketing Expansion Board of Kerala made a recommendation to this effect, but no action has yet been taken.

Malpractices are also reported in the tapioca export trade. Fraudulent business practices and high prices spoil the reputation the country has gained. The Tapioca Board has therefore recommended the compulsory grading of tapioca before export. The Board has also submitted to the Government a scheme for the production of alcohol, acetone and butanol from tapioca. The Industries Department is working on a scheme to make dextrene and glucose from it. Another scheme for preparing starch, which can be used for bleaching purposes in textile mills, has recently been prepared.

COCHIN TEA SALES

At Dust Sale H 400,000 lbs. of tea were on offer. There was a good general demand, but prices were 5 to 10 nP weaker all round, except for Highgrowns which were up to 25 nP lower.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India for the weekly market report published by the Colombo Brokers Association:

	Closing prices on 29-3-57 (Rupees a lb.)	Average for the week (Rupees a lb.)
Sheet:		
No. 1	1.26	1.26
No. 2	1.23	1.23
No. 3	1.20	1.20
No. 4	.96	.96
No. 5	.91	.91
Sheet Cuttings 1		.95
Sheet Cuttings 2		.90
Crepe:		
Water White	—	1.104
R.M.A. No. 1X	1.10/11	1.074
R.M.A. No. 1	1.06/09	1.001
Crepe No. 2		.961
Crepe No. 3		.894
Scrap Crepes:		
Sc. Crepe No. 1	.88/90	.87
Sc. Crepe No. 2	.86/88	.80
Sc. Crepe No. 3	.75/85	.701
Flat Bark	.70 Nom.	.834
Sc. Crepe 3X		

To arrive at f.o.b. Colombo prices, add 53.53 cents a lb for crepe other than scrap crepe and 31.53 cents for scrap crepe to the above market prices.

TOBACCO ACREAGE INCREASES

According to the Directorate of Economics and Statistics, Central Ministry of Agriculture, the all-India first estimate of tobacco, 1956-57, puts the current year's area at 826,000 acres against the corresponding adjusted estimate of 809,000 acres for 1955-56. Thus, the current year's estimate shows an increase of 17,000 acres or 2.1 percent in area over last year. The increase in acreage during the current year has been shared by almost all the States. This increase has been particularly marked in Andhra, Madras, Rajasthan and Bihar, and has been attributed to favourable climatic conditions at the time of sowing. This increase has, however, been offset to some extent by decreases registered in Bombay and Uttar Pradesh. The information given in this estimate relates generally to the period up to the end of December, 1956.

Jute

LITIGATION OVER RAW JUTE AND
GUNNY CONTRACTS

CHANGES IN TRADING PRACTICES

IN the past few years, there has been more litigation over the interpretation of raw jute contracts, and probably gunny contracts also, than ever before. Some of the decisions have upset beliefs previously held and generally accepted in the trade by both buyers and sellers. Moreover, some of the court decisions have been such that it is impossible to comply with them in practice. In jute arbitrations, it used to be the custom that, when arbitrators gave the buyer the option to reject the jute delivered because it did not comply with the guarantees in the contract, they provided also for allowances to be paid on the bales opened for inspection and arbitration and retained by the buyer. A court decision given last year ruled that arbitrators could not do that. They could award rejection or allowances, but not both, and the buyer, if he exercised his right of rejection, must return all the bales, including those opened. Anyone with practical experience will at once see the difficulties which must arise from having to put aside and retain inspection bales until such time as disputes can be settled either amicably or by arbitration. The result is that this court decision has practically taken away the buyer's right to reject the goods unless the seller voluntarily agrees to pay the allowances on the opened bales and consent to their retention by the buyer. It is understood that alterations to the contract to get over this difficulty are being considered, but there is opposition from the sellers' associations.

Another decision which has upset previous notions is that a seller has not fulfilled his obligations until the goods are in the buyer's premises. Formerly it was believed that if a seller made over the goods to a common carrier, for instance, a railway company or a steamer company, and presented a clean railway receipt or bill of lading, his obligations concerning delivery had been fulfilled. In effect, there had already been decisions to that effect in courts in India but now ideas on the subject have to be changed. The position becomes more complicated when it is a question of delivering jute to a mill by country boat or lorry. The custom in the trade has been for the boatmen or lorrymen to go to the mill offices and report their boats alongside the mill jetty or the lorries at the mill gates and get an acknowledgment. That was accepted as proof that delivery had been made. Now it appears that legally, delivery has not been made until the goods are actually within the mill premises. It is easy to see the many complications which might ensue from the strict interpretation of this ruling, for lorries are often kept waiting at mill gates for days before they are allowed inside to unload their goods. In the case of boats they are often at the mill jetties for weeks. There is, however, the possibility that, in these circumstances, the custom of the trade might be pleaded but that is something which is very difficult to establish.

In the old days, references to courts about jute disputes were almost unheard of and even arbitration cases were few and far between. It is an indication of the fall in commercial morality that, nowadays, arbitrations are a daily occurrence and resort to legal proceedings on mere quibbles is quite common. The honest man going about his normal business of buying and selling seldom interests himself with legal niceties because he gets a fair deal and is not concerned with the law. Nowadays, however, he is more than likely to find himself out to take an unfair advantage of the obscurities of the law to evade his obligations. It would seem that the law as decided by the courts commands many loopholes. The mere business man, however, be excused for his lack of knowledge on the question of delivery of goods, for an eminent authority has said that there is no branch of the law of sale more confusing than that of delivery.

I.J.M.A. Stocks of Manufactures

Expectations in the bazar during the past week were that stocks of manufactured goods in the mills godowns at the end of March would show a decrease from those held at the end of February, and it was probably for that reason that the gunny market kept so steady. These expectations have not been fulfilled and the gunny market is easier. There is, however, no reason for any pessimism for the overall increase in stocks is only 300 tons. There was an increase of 4,600 tons in hessian stocks normally increase; the hessian position is very sound for the stocks, even with last month's addition, are equal to less than one month's output. The position of sacking is even more encouraging, for there was a reduction of 5,100 tons, bringing the total down to 56,500 tons, the lowest since March 1956. These figures, therefore, give ground for optimism.

THE JUTE MARKETS

Manufactured Goods: There has not been much change during the past week and prices in the fatka markets have moved within narrow limits. In the

early part of the week, it was reported that shippers were taking some interest, particularly in hessian, and that fair business had been placed with mills. Fatka operators were also optimistic that there would be a reduction in mills' stocks at the end of March and the bazaar was waiting for the I.J.M.A. figures. When these came out, they were looked upon as disappointing. The B Twill fatka dropped by about one rupee. It is noteworthy that the market has for some months been saying that demand for hessian has been good although it has been difficult to sell heavy sacking, but the mills' stocks of sacking have been declining for six months. There has actually been quite a good demand for sacking, even though the prices may not have been remunerative. For the present, buyers seem to have withdrawn from the market.

On Wednesday morning, the market opened dull and easier, and quotations were as follows:

	April	May	June	July-Sept.
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	33.75	32.50	33.50	33.25
40in. 10oz.	40.94	41.12	41.10	41.25
B Twills	111.37	111.62	111.75	111.75
Heavy Cees (Plain)	111.20	111.62	111.75	111.75
A Twills	134	134	134.50	134.50
Liverpools	126.50	126.75	126.75	127.25
Cornacks	112.25	112.75	112.75	112

Raw Jute: Until the last two days, there was steady buying by mills and a fair quantity of jute changed hands. Interest was again mainly in mesta, especially the Northern and Purnea qualities. Purnea Desal was the kind most in demand and Daissee mesta went out of favour because of the dark colour and poor quality of what was arriving at mills. It was reported, however, that this was not really Daissee mesta but stuff imported into the Daissee districts from jungli areas. While that is possible, it has to be remembered that the

Daissee mesta crop suffered badly last year from drought, followed by floods. Northern mesta is in demand but there appears to be little of it left. Assam and Purnea White jute have been bought, and so have been Daissee jute and Murshidabad Tossa. The price of Daissee is restraining some mills from buying it, but when the price is compared with that of, say, Assam jute, which carries heavy cutting while Daissee has no cutting, Daissee is not really dear. Some small lucky day business was done in New Crop at Rs. 27.25 basis Bottoms for Assam and Rs. 26.50 basis Bottoms for Purnea for August-September shipment. Business was reported in Assam and Northern at Rs. 28 to Rs. 28.50, Desal mesta at Rs. 25 to Rs. 26, Daissee mesta at Rs. 24.50 to Rs. 25, Daissee jute at Rs. 31 to Rs. 30, Murshidabad mesta at Rs. 25.25 and Murshidabad Tossa at Rs. 31, all prices being basis Bottoms. Northern Middles alone were done at Rs. 31 for shipment and the difference between Rs. 31 for April and/or May shipment and the difference between Middles and Bottoms was Rs. 2.50. Pakistani Northern Cuttings ex Calcutta were sold at Rs. 103. On Wednesday morning, quotations were as follows:

Indian Jute:	Landed at Mills	Rs. a mt. Basis	Bottoms.	Shipment.
				April-May
Northern	28.50			
Assam	28			
Jungli	25.50			
Assam Tossa	30			
Murshidabad Tossa	29.50			
Daissee Jute	30			One month
Daissee Mesta	24			
Northern Mesta	26			April-May
Desal Mesta	25.50			
Murshidabad Mesta	23.50			
Northern (ex Calcutta)	28			One month
Local Packing	26.50			
Bimbi	23	F.A.Q.		April-May
Pakistani NC's	103			

Arrivals in Cossipore were 491 wagons, against 458 in the previous week. Mill buying was rather less and stocks showed some increase.

Mofussil: Imports are poor, except in Purnea and other Bihar districts where a fair amount of mesta and jungli jute is still coming forward. In north Bengal, imports are negligible. Small imports are still coming in in Assam.

Apart from a few scattered showers, the weather has been hot and dry. General rain is now

L.J.M.A. STOCK FIGURES FOR MARCH

The Indian Jute Mills Association reports the total stocks of jute goods at the end of March 1957 as follows:

Description	Increase over (1)		or decrease from		31st March, 1956	
	31st March, 1957	28th February, 1957	1st March, 1957	1st March, 1957	Lakh Yds.	000 Tons
Hessian Cloth and Bag	10.86	29.8	9.29	25.2	1.57	4.6
Sacking Cloth and Bag	13.74	56.5	14.79	61.6	-1.05	-5.1
Others	11.4			10.6	+0.8	9.5
Grand Total (000 Tons only)		97.7		97.4	+0.3	95.0

N.B.—These figures are based on replies received and with estimates for three non-member mills. represent all members of the Association and Gagalbhui

urgently needed to enable further sowings to be done and also to help the young plants, which are not thriving except in the chur and riparian lands.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian		
	Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 31st March, 1957	3,030.3	32,415.7	35,446.0
1st to 28th February, 1957	2,054.4	27,761.0	29,815.4
1st to 31st January, 1957	5,755.6	33,439.7	39,195.3
	Sacking		
	Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 31st March, 1957	40,095.4	5,412.2	45,507.6
1st to 28th February, 1957	27,004.9	3,433.4	30,438.3
1st to 31st January, 1957	29,082.1	2,297.5	31,379.6

THE PAKISTANI JUTE MARKETS

ESTIMATES OF FIBRE SHIPMENTS

(FROM A NARAYANGANJ CORRESPONDENT)

IT is estimated that shipments of raw jute from Pakistan up to the end of March will be 3,550,000 bales. Of this, just over 400,000 bales will have gone to India. Assuming that the E.P.C. registrations will total 4,100,000 bales, this leaves a total of 550,000 bales to be shipped. Of this quantity, nearly 100,000 bales have been outstanding since October and November, and as shippers have made considerable losses, there is every possibility that this will not be shipped. Despite the fact that there is such a large quantity outstanding, most of which is naturally for April shipment, the Conference lines report that against their expected tonnage of 350,000 bales for April, they have not got full bookings. The fact that the port of Chalna is nearly clear and the port of Chittagong is no longer congested, substantiates this. This can be partly attributed to the fact that both barges and railway wagons are moving more freely and the turn-round is quicker. On the other hand, it also indicates that Pakistani shippers may well be going berish in the expectation that reports of large crop sowings will bring prices down.

The market in Narayanganj can only be described as "flat" and very little trading is reported. Pucca bales of Export Firsts are nominally quoted at Rs. 183. The bigger stockists and better balers are only sellers at about Rs. 3 to Rs. 4 higher. At the same time, business is reported at Rs. 178. It appears, therefore, that local stockists are withholding their offers, and are prepared to reduce prices when they find serious enquiries. The shippers, however, still have to do a bit of buying, but are holding off because of the indications of a weak market.

Loose jute prices remain at the comparatively low level of about Rs. 30 for B Bottoms 100 percent Export Firsts, Rs. 28 for C Bottoms and Rs. 26 for X Bottoms. Occasionally, jute can be had at 8 annas less, but very little loose jute is actually available, and most of it is comparatively moist. More kutcha bales from the mofussil have appeared, but being dry, a premium is being asked for them of about 8 annas a maund over loose. Despite the weakness in the market and comparatively little trading, prices show no inclination to go down or if they do, they do so very reluctantly. The primary sellers are obviously trying to gain strength from the fact that the rains are very late this year. It is well known that at the first sign of rains, the market will almost certainly drop to more economic levels. In fact, at the beginning of the month overcast skies brought prices down temporarily.

All sowings have been held up by the dry weather and the chances of an early crop are receding. Sowings so far have only been of the lowland crop and since jute is a very healthy plant, it is unlikely that this will be affected by the present lack of rains for some time. The dry weather, however, is stopping prices from falling.

For the last few days, reports have circulated that overseas buyers are paying better prices and there have been many offers in the £104 to £105 range for Export Firsts. In fact, most overseas buyers have been regularly in the market for selective marks in small quantities at these prices, and what has happened is that in the last few days, their purchases have increased in quantity but

not in price. They have been buying L.J.A. marks, since private marks have made restricted offers, and it is only because of this that reports indicate greater interest at higher prices. Having fulfilled their immediate requirements, the buyers will almost certainly sit out again and continue to purchase selective marks when available. This cautious form of buying has certainly helped them to ward off any increase in prices. It appears that the Jute Marketing Corporation, although fully authorised, is as yet without any staff. Even the director has not been appointed. Its intention to work, however, remains unchanged and it is now talking of exporting pucca bales to Europe as well as to India, and also, if necessary, of using pucca bales as a buffer stock to control prices in Narayanganj. A new Board is being set up, under the name of the Export Control Board, which is supposed to supervise and advise on exports of raw jute from Pakistan. While we have no official information, it appears that this Board will be duplicating the work of the Jute Board, which in itself is gradually fading away. Recently, the chairman was transferred to the Ministry of Food. He has not yet been replaced.

The Karachi jute goods market remains rather short of stocks and prices stand at Rs. 130 for B Twills and Rs. 56 for 45in. 11oz hessian. There are indications that ample shipping will be available in the next few weeks, which should bring prices down. The second part of the Burmese tender was recently completed. Of the 10,000 bales, 2,000 bales have gone to Pakistani mills.

Riots broke out in the Isopani Mill in Chittagong. The labour situation in the Daulatpur area remains delicate. There appears to be some disagreement between the P.J.M.A. and the civil supplies authorities over the distribution and supply of rice, and the price at which rice can be secured. The Pakistan jute industry is still enduring its prolonged "labour pains", and although the production of the mills is continuing and increasing, they are seriously hampered by labour troubles, lack of spares and lack of support from Government bodies. Recently the P.J.M.A. decided to separate itself from the Dacca-Narayanganj Chamber of Commerce and Industry, presumably, in an attempt to strengthen itself. One wonders whether this is a wise move, and whether the opposite will not be the result.

THE FOREIGN JUTE MARKETS

FIBRE PRICES STEADY

(FROM OUR DUNDEE CORRESPONDENT)

DURING the most part of the past week, the raw jute market has ruled with a steady undertone, but there is always the odd seller who is willing to accept 10s or 20s below his competitors. One firm of shippers has been depressing the position for a week or two, but now that they are back into line with others and offering forward with lower terms, the majority of the agents in Dundee are holding bullish ideas. They firmly believe that prices will not be allowed to go down to the minimum levels, as they did towards the beginning of the past two seasons. They say that shippers must have lost a lot of money by selling new crop early in the season at around minimum prices in fairly large quantities. Prices rose the rates at which they could not cover at anything like feature is that new crop jute has been sold at £102 for Mill Firsts and at £92 for Mill Lightnings. For the latter business at £93 and also £94, it was said, was done for July-August shipment, c.i.f. U.K. Prices are lowest at £111 for Mill Firsts, £101 for Mill Lightnings, £96 for Mill Hearts and £92 for grade Hearts, with crack Daissee-2/3 from £108 and grade at £100 and grade Tossa-2/3 from May-June, c.i.f. U.K. Only small business is passing in spot and afloat jute at round about these rates. Until there is more news on sowings of the new crops in both India and Pakistan, it will be difficult to forecast the future.

Calcutta goods were advanced sharply during the time of the change-over in the currency to the decimal system, but they have come back again May and 62s 9d June with July-September at 62s 9d and 70s at 47s 6d April to September. B Twills are quoted at 169s, 170s, 170s and 169s for the four respective periods of shipment, all f.o.b. Calcutta.

Jute yarns and cloth in Dundee are very quiet and unless there is some improvement in the course of the next month or so the industry is faced with short time or even curtailment of production. Meantime, prices rule quite firm all round, but the position is dull.

Commodity Markets

RAISING INDUSTRIAL AND POWER ALCOHOL OUTPUT

GOVERNMENT MEASURES TO STEP UP CONSUMPTION

THE Union Minister for Heavy Industries, Mr. Manubhai Shah, called upon the manufacturers of industrial and power alcohol to increase their production from 15 million gallons a year to 45 million gallons a year by the end of the second five year plan, while addressing the recent annual general meeting of the All-India Distillers Association. He said that with the co-operation of the industry, it should be possible to utilise the entire installed capacity and also to set up additional factories to achieve a three-fold increase in production. Every sugar factory in the country or even a group of adjacent sugar factories should set up an economic size distillery to convert molasses into power and industrial alcohol. A valuable product like molasses should not be allowed to go to waste, he stressed. The industry was of great national importance. Its development had been accorded high priority in the second plan. Power and industrial alcohol served as an important indigenous source of motor fuel and had even a greater importance as a raw material for several chemical industries.

Increase in Production

The industry, he said, had developed following the expansion of the sugar industry during the 'thirties. It received further impetus when, during the last war, due to the shortage of motor fuel, power alcohol began to be used as an admixture with petrol. The installed capacity has gone up from 6.2 million gallons in 1946 to well over 15 million gallons at present. Production has gone up during the same period from 2.4 million gallons to 10.2 million gallons—an increase of over 400 per cent. The production of industrial alcohol has also shown an increase though not to the same extent. The production of power and industrial alcohol is of the order of 15.5 million gallons a year at present, compared with 5.3 million gallons in 1946. The industry, as a whole, has, therefore, increased its output by 300 per cent in ten years.

While it was possible, the Minister went on, to use all the expected additional production during the second plan as motor fuel, a much better use of alcohol would be as industrial raw material for different chemical products. Some of these were acetic acid, plastics like polyethylene, cellulose acetate and polyvinyl chloride, several esters, some solvents like ether, and synthetic rubber. Power alcohol could be used for the production of such items because the alternative raw materials commonly used, namely, crude petroleum or natural gases, are not available to the extent necessary at suitable locations in India.

Second Plan Target

In this connection, Mr. Shah said that the Government had appointed a committee under the chairmanship of Dr. A. Nagaraja Rao, Chief Industrial Adviser, to examine the various issues and recommend steps to increase the production of alcohol and its rational use for industrial purposes. The committee had made valuable recommendations which were under the Government's consideration. The total production of power and industrial alcohol was about 15 million gallons a year against the installed capacity of about 30 million gallons. In the second plan, a target for the production of 18 million gallons of power alcohol and 12 million gallons of industrial alcohol, with a total installed capacity of 36 million gallons, had been fixed. Licences had been granted by the Government for the setting up of several factories and the expansion of the existing ones, which when completed, would raise the capacity to 36 to 37 million gallons.

More Raw Materials

The sugar industry has an ambitious expansion programme. With a target of production of 2.25 million tons of sugar a year, about 900,000 tons of molasses would be available every year for the manufacture of alcohol. On the basis of this increased availability of molasses, the industry could hope to produce annually about 50 million gallons of alcohol in the next three or four years. The Minister appealed to the industry to make full use of the additional production of molasses by setting up new factories and adding new distilleries to new sugar factories. He advised producers to diversify the output of alcohols like butyl alcohol, furfural, methanol, etcetera. As the country was committed to a policy of prohibition, the present level of consumption of alcoholic beverages was likely to decrease in the future. Mixed with petrol, more than 10 million gallons of alcohol were utilised every year, particularly in parts of northern India. This process of utilisation should increase as more power alcohol is available in different parts of the country.

Industrial Consumption

The Government had made a careful assessment of the scope for increasing industrial consumption. It had been considering several proposals for setting up industries based on industrial alcohol. When these industries were set up, consumption of industrial alcohol would go up from the present level of 4 million gallons a year to 30 to 35 million gallons a year by 1960-61.

The Minister stated that discussions for establishing a 20,000-ton synthetic rubber plant in Uttar Pradesh, which would consume 10-15 million

million gallons of alcohol every year, would be finalised soon. This unit would come into operation at an early date. Two factories for the production of polyethylene also had been licensed. These would require three to four million gallons of alcohol a year. The expansion of the manufacture of acetate rayon would need four to five million gallons, and substantial quantities of alcohol would be required for the production of acetic acid, ether, acetone, D.D.T., etcetera. There was more scope for the production of acetic acid, acetate rayons and other allied products throughout the country. At the same time, Mr. Shah said that it might be necessary to continue the use of power alcohol as motor spirit to the extent of 10 to 15 million gallons annually for several years to come. This would have to continue as a stop-gap arrangement to cover any lack of balance between the production and demand of alcohol in other industries in the country. There was also no reason, he said, why the use of power alcohol as fuel should not be permanently maintained in certain areas.

Indigenous Machinery

The Minister urged the industry to bring about an improvement in the production techniques so that costs could be reduced. He admitted that in order to increase the production of alcohol, the country would need more equipment and machinery. Instead of importing the required equipment and machinery, it should endeavour to manufacture them as much as possible. Quite a number of items like distillation columns, condensers, yeast vessels, etcetera, were already being produced at home. The Minister emphasised that as far as possible—and particularly in view of the need to conserve foreign exchange—India should not import any machinery and equipment for this industry. He assured producers that the Government would extend all help for plant fabrication and manufacture within the country. Referring to the suggestion made by the president of the Association for setting up a Development Council for this industry, Mr. Shah told the meeting that the Rao Committee had also recommended the same.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) declined further by 0.1 percent to 420.5 during the week ended 23rd March. The index was lower by 0.4 percent compared with the corresponding week of the previous month, but was higher by 7.1 percent than that of last year. The index for Food Articles moved down by 0.7 percent to 399.6 compared with 402.4 (revised) for the previous week as a result of a fall in the prices of tea (5%), gram in Hapur (-5%) and wheat, dal arhar and gur (-1% each). The index for Industrial Raw Materials advanced by 1.0 percent to 519.0 because of an increase in the prices of manganese ore (average export price) (+40%), groundnuts (+2%) and raw jute, each, although the prices of raw silk (-4%), copra (-2%) and linseed, castorseed in Bombay, (-1% each) were marked down. The Semi-Manufactures index stood at 403.8 compared with 403.9 (revised) for the previous week. Items which showed significant variations were: linseed oil (+6%), castor oil in Calcutta (+4%), gingelly cake (-2%), copra cake (-3%) and mustard oil, 0.2 percent to 383.9 in the index for Manufactures (-2%) in the prices of jute witnessed an advance of 1 percent. Lower prices (-3%) and black pepper (-1%) were responsible for a decline of 0.2 percent to 567.1 in the index for the Miscellaneous group compared with 568.4 for the previous week. The price of cashewnuts, however, moved up by 1 percent.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: Year ended August 1939=100)

STANVAC GIVES UP DUTY CONCESSION

Under the agreement between the Government of India and the oil refinery companies, the Government had agreed to grant to the companies, for a period of ten years from the date when full-scale operations commenced or until 31st December, 1956, whichever was earlier, a duty protection on motor spirit of 2 annas an imperial gallon. This protection has been given by maintaining an import duty on motor spirit of 2 annas a gallon higher than that of the excise duty on locally manufactured motor spirit. The concession was granted to encourage the oil companies to set up refineries in this country. The Standard Vacuum Refining Company of India Ltd. commenced operations in 1954 and attained full-scale production in October 1954. Following discussions with the Ministry of Production, the refinery company has agreed to surrender the duty protection of 2 annas a gallon on motor spirit produced by it with effect from 1st October 1956, and to refund the money already realised by it on account of this concession after that date. The surrender of this concession by the company will result in additional revenue to the Government of the order of Rs. 1.2 crores annually for approximately eight years. The Standard Vacuum Refining Company has also undertaken to increase its output and to manufacture certain new products which would also result in a saving of foreign exchange to the extent of approximately Rs. 1.2 crores a year from 1958. The increase in output will open further possibilities of earnings foreign exchange.

NEW MINERAL DEPOSITS IN ORISSA

Deposits of talc, iron ore and kaolin have been located by the Geological Survey of India in Keonjhar district of Orissa. The area which can be divided into the hilly tract west and south of Keonjhar and the undulating country to the east, is a plateau at a height of 2,000 feet. Scattered in four areas, the talc deposits have a 50 percent silica content. The important area where deposits occur lies south of Balaiah in a three-quarter of a mile long and two furlong wide patch. Another patch lies south and west of Keonjhar at a distance of two and a half miles. Two other deposits are minor in nature and are distributed in an area of 300 feet by 50 feet in the broad valley and south-west of Dalimpur. Large deposits of high grade iron ore are noted in south-west of Suakati north north-east of Upar Jagar and Ichanda. The deposits south-west of Suakati are one mile long and three furlongs wide; in Jagar they lie over a length of one mile and a width of two furlongs. In Ichanda, the deposit occurs as a thick float over an area of four-square furlongs. Good deposits of kaolin—a kind of clay—are found at several places around Keonjhar and several places in a zone extending over one mile west of Keonjhar.

MARKED RISE IN SUGAR PRODUCTION

According to the Directorate of Economics and Statistics, Central Ministry of Agriculture, the all-India final estimate of sugar, produced directly from cane in vacuum pan factories, puts the current season's production at 2,021,000 tons, against 1,862,000 tons during the previous season. This shows an increase of 159,000 tons, or about 8.5 percent in production during the current year, compared with that of last. The increase in sugar production has been shared mainly by U.P. (78,000 tons), Bombay (51,000 tons), Punjab (33,000 tons) and Madhya Pradesh (11,000 tons). In Bihar, however, a fall of about 11,000 tons is expected.

FURTHER EXPORT QUOTA FOR RAW WOOL

The Government of India has revised its export policy for raw wool and has decided to release a further quantity during the April-September 1957 period. Exports will be allowed by established shippers and new-comers as in the previous period. The details of the licensing procedure will be announced by the export trade control authorities.

Calcutta Markets

FAIR GENERAL DEMAND AT TEA EXPORT SALE

SOFTER TREND IN DUSTS

AT Sale No. 41, held on 8th and 9th April, offerings at the Export auction consisted of 54,633 packages comprising mainly end-of-season descriptions. There was a fair general demand with clean black leafed descriptions and well-made whole leaf grades being well supported and the strongest feature. The demand came mainly from the internal buyers and the remaining offerings were irregular and often weakened by 10 to 20 nP. As the teas on offer were not representative, no quotations have been given.

At the Internal Sale, Dust offerings amounted to 16,614 chests. The market was again easier, although clean orthodox Assams with bright liquors and black leafed Dusts were the strongest feature. The remaining offerings from all districts

were 6 to 10 nP lower. All C.T.C. Assams were a weak feature, particularly the brighter liquoring kinds, and were 10 to 20 nP easier.

Quotations

	1957	1956
	RS.	RS.
Medium Decans Dust	1.56 to 1.60	1.50 to 1.10 0
Medium Assam Grain Dust	1.45 to 1.50	1.10 to 1.12 0
Medium Assam C.T.C. Dust	1.86 to 1.90	
Best Assam C.T.C. Dust	2.00 to 2.10	2.12 to 2.14 0

Other grades offered were 3,237 chests. There was a fair demand. The general tendency tended to be dearer although irregular.

FREIGHT MARKETS QUIET

CONDITIONS in the freight markets have again remained on the quiet side over the past week. Trans-atlantic coal rates were weaker, with the fixture of a single voyage for April loading at 68s. There were rumours that tonnage had been fixed at 67s. Australian grain trade remains quiet with charterers seeking tonnage at 160s. for Western Australia-U.K. May loading, while an 8,000 tonner has been fixed Victoria-U.K. at 160s. A 500 tonner has been taken for three consecutive voyages Rangoon-Colombo with bagged rice at 77s 3d f.i.o.s. A motorship has been fixed Karachi-Chittagong with salt at 79s 6d f.i.o.s. No ore fixtures have been made, but there are enquiries for tonnage for sugar from Java and the Philippines to Colombo for early May shipment.

SUGAR QUIETLY STEADY

During the week ended 10th April, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 5,500 bags and stocks totalled 90,000 bags. Rates for ready sugar, ex-Kantapur delivery, were Rs. 31.12 for ordinary granular and Rs. 33.18 for big grain. The market was quietly steady.

LINSEED QUIET

Prices have remained more or less unchanged during the past week, and the undertone has been rather quiet. Arrivals have been very poor. Despite a fair demand from crushers, the turnover has been small. The oil section has been inactive because of lower price indications from overseas, and shippers have been very reserved. Latest quotations were as follows: Ready Rs. 21-10 a maund and April-May Rs. 20-12 a maund.

HIDES AND SKINS FIRM

The market in skins was firm and prices showed a higher tendency. Stocks were less than in the previous week.

Bazaar Sales

(Between 2nd April and 8th April, 1957)

Cowhides: Wet salted (Ord.) 15,600 pcs. on the basis of Rs. 6.56 to Rs. 9.25; Wet salted (Slaughtered) 18,500 pcs. on the basis of Rs. 12.50 to Rs. 22.00.

Goatskins: Wet salted (Daissee Killed) 54,700 pcs. on the basis of Rs. 315.00 to Rs. 330.00; Rs. 340.00 to Rs. 360.00 and Rs. 390.00 to Rs. 420.00; Assam-Dinajpur 2,700 pcs. on the basis of Rs. 225.00 to Rs. 310.00; Purneah-Kissenganj 11,200 pcs. on the basis of Rs. 300.00 to Rs. 360.00; Pakur-Patna (Ord.) 18,500 pcs. on the basis of Rs. 260.00 to Rs. 270.00; Muzafferpore-Patna 58,500 pcs. on the basis of Rs. 290.00 to Rs. 321.50.

Bazaar Stocks

(8th April, 1957)

Cowhides: Wet salted 3,03,500 pcs.

Goatskins: Wet salted 36,000 pcs.; Assam-Dinajpur-Murshidabad 29,600 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 10,80,000 pcs.

SHELLAC MARKET STEADY

During the week ended 9th April, the market was steady. The range of quotations was as follows:

Pure Buttonlac	Rs. 100.00 value; 100.00 buyers.
Lemon No. 1 Shellac	Rs. 102.50, 101.00 buyers; 102.00 done buyers; 102.00 buyers.
Lemon No. 2 Shellac	Rs. 96.50, 96.00, 96.50 buyers.
F.O. Std. 1 Shellac	Rs. 90.00 basis done; 90.00, 89.50 buyers.
Pure TN Shellac	Rs. 86.00, 87.00 basis done buyers; 86.00 buyers.
4% I.T.N. Shellac	Rs. 75.50, 76.50, 75.50 buyers.
No. 1 Kusmi Seedlac	Rs. 93.00, 96.00, 92.50, 95.00 buyers.
No. 2 Kusmi Seedlac	Rs. 89.00, 91.00, 90.00 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 86.00, 85.00 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 84.00, 82.50 buyers.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs. 75.00, 76.00, 75.50 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 68.00, 70.00 buyers.
Kireelac	Rs. 30 buyers.

Shipments during April until the 5th were 4,179 packages comprising

COMPANY AND PUBLIC NOTICES

WAVERLEY JUTE MILLS COMPANY LIMITED.

NOTICE is hereby given that the 78th Annual General Meeting of the Members of Waverley Jute Mills Company Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, the 8th day of May, 1957, at 4 o'clock in the afternoon for the following purposes:—

1. To receive and consider the Profit and Loss Account for the half-year ended 30th June, 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare a dividend on the Preference Shares.
3. To appoint Directors in place of Messrs. R. G. Edwards and A. N. Sil, the Directors retiring by rotation at the Meeting.

And in this connection to consider, and if thought fit, to pass the following resolutions which will be proposed as Special Resolutions in conformity with the provisions of Section 261 of the Companies Act, 1956.

- (i) "That Mr. R. G. Edwards be and is hereby appointed a Director of the Company liable to retirement by rotation".
- (ii) "That Mr. A. N. Sil be and is hereby appointed a Director of the Company liable to retirement by rotation".

Special notice dated 10th April '57 of the intention to propose the foregoing resolutions as Special Resolutions in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956 has been received by the Company wherein it is stated that Messrs. R. G. Edwards and A. N. Sil are "associates" of the Managing Agents within the meaning of the Act by reason of their being Directors of a Subsidiary of the Managing Agents' Company, and that, therefore, they can only be appointed by special resolutions as Directors of the Company liable to retirement by rotation.

4. To appoint Auditors and fix their remuneration.

As Special Business

To consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

6. That the requirements of Articles 82, 83, 87, 121, 175, 179 and 180 of the Articles of Association of the Company be not complied with in respect of the half-year ended the 31st December, 1956.

6. That the Articles of Association of the Company be altered in manner following:—

- (a) Articles 82 and 83 shall be deleted and the following new Articles substituted therefor:—
82. In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors. Such General Meetings shall be called "Annual General Meetings" and shall be convened by the notice convening the meeting. All other meetings of the Company shall be called "Extraordinary General Meetings".

- (b) Article 87 shall be deleted and the following new Article substituted therefor:—

87. The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring by rotation, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business.

- (c) In Article 121, line 1, the word "Ordinary" shall be deleted and the words "Annual General" substituted therefor.

- (d) Article 175 shall be deleted and the following new Article substituted therefor:—

Profit & Loss Account and Balance Sheet.

At every Annual General Meeting the Directors shall lay before the Company a Balance Sheet and a Profit and Loss Account made up in accordance with the provisions of Section 210 of the Companies Act, 1956, and such Balance Sheet and Profit & Loss Account shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the said Act, so far as they are applicable to the Company but, save as aforesaid, the Directors shall not be bound to disclose greater details of the results or extent of the trading and transactions of the Company than they may deem expedient.

- (e) In Article 179, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.

- (f) In Article 180, lines 1 and 2, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In subpara 3, the word "Ordinary" wherever appearing, shall be deleted and the words "Annual General" substituted therefor.

The Share Transfer Books of the Company will be closed from 22nd April, 1957 to 8th May, 1957 both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,

McLEOD & CO., LTD.,

A. T. DOIG,

Managing Director,

Managing Agents.

3, Netaji Subhas Road,
Calcutta, 12th April, 1957.

NOTE: Payment of the proposed dividends, if declared will be made on or after 15th May, 1957, only to those members whose names are registered in the Books of the Company as holders of the Preference Shares on 8th May, 1957, or to their Mandates.

Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT IN RESPECT OF SPECIAL BUSINESS

In order to comply with the Articles of Association of the Company, the Company's Accounts have been closed and audited half-yearly and a Profit & Loss Account in respect of each half-yearly period ending on the 30th June and the 31st December in each year and the Balance Sheet as at each date, have been laid before the Company in General Meetings held twice in every calendar year.

Under the provisions of the Companies Act, 1956, each such half-yearly period has to be regarded as a "financial year" and as a result, the usual half-yearly General Meetings will each be deemed to be an "Annual General Meeting" within the meaning of the Act, thus resulting in two "Annual General Meetings" in each calendar year. Having regard to the obligations imposed on a Company by the Act in respect of every Annual General Meeting, viz. retirement of Directors by rotation, appointment of auditors, and filing of an Annual Return, etc., and the work and expense attending the preparation of the Accounts to be laid before members in conformity with the provisions of the Act, your Directors recommend that the Articles of Association of the Company be amended to provide that the Company's Accounts be closed and audited annually and laid before the Company at an Annual General Meeting in each calendar year. The proposed amendments are set out in Resolution 6 of the convening notice. In respect of the half-year ended the 31st December, 1956, it is proposed that the Accounts be not separately prepared and laid before members but that they be embodied in consolidated accounts for a period commencing on the 1st July, 1956. Special Resolution 5 in the convening notice suffices to effect this proposal. If Special Resolutions 5 and 6 are passed, the accounts of the Company will be closed on a date subsequent to 31st December, 1956, of which members will be advised later, which hereafter will be the closing date of each financial year of the Company.

The foregoing changes will not result in any financial benefit either to the Directors or to the Managing Agents of the Company, and interim dividends may, subject to trading results in a current financial year, be declared by the Directors under Article 151.

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED.

NOTICE is hereby given that the 31st Annual General Meeting of the Company will be held at the Registered Office, "Dunlop House", 57-B, Free School Street, Calcutta, on Monday the 29th day of April, 1957, at 12-15 p.m. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1956, the Balance Sheet as at that date and the Reports of the Directors and Auditors of the Company.
2. To declare dividends.
3. To appoint Directors in the place of those who retire by rotation.
4. To appoint auditors and fix their remuneration.

Special Business:

To consider and if thought fit to pass, with or without modification, the following resolutions of which numbers 6 and 9 will be proposed as special resolutions:—

5. "That Mr. John Luckham be and is hereby appointed a Director and Managing Director of the Company upon the terms and subject to the conditions contained in the letter dated the 31st December, 1956, addressed to him by Mr. T. E. Peppercorn as the agent of the Company duly authorised in that behalf."

6. (As a special resolution): "That consent be and is hereby accorded to Sardar Hardit Singh Malik holding and continuing, with effect from the 1st January, 1957, to hold an office or place of profit under the Company, namely, as a salaried official on the terms and conditions of a letter dated the 30th day of January, 1957, issued by the Company and addressed to him."

7. "That Sardar Hardit Singh Malik be and is hereby appointed a Director of the Company."

8. "That the remuneration payable to Mr. P. N. Haksar, a Director of the Company, be increased with effect from the 1st March, 1956, from a salary of Rs. 2,900 per mensem to Rs. 3,200 per mensem with the corresponding increases in with the corresponding increases in and dearness allowance, bonus (if any) and the contribution by the Company to the Provident Fund."

9. (As a special resolution): "That the Articles of Association of the Company be amended in the manner following, that is to say:—

- (i) In Article 1 the definition of a "Managing Director" shall be deleted and the following shall be substituted therefor:—

"The Managing Director" and "the Deputy Managing Director" means the Managing Director and the Deputy Managing Director, respectively, appointed as such and holding office for the time being under the Company."

- (ii) In Article 116 after the words "Managing Director" insert the words "Deputy Managing Director."

- (iii) Article 121 shall be deleted and the following new Article substituted therefor:—

"121. At each Annual General Meeting (called "Ordinary Meeting" in these Articles) of the Company one-third of such of the Directors for the time being as are liable to retire by rotation, or if their number is not three or a multiple of three, then the number nearest to one-third shall retire from office."

- (iv) Articles 131 and 132 shall be deleted and the following new Article shall be substituted therefor:—

"The Directors may appoint any person to act as alternate director for a Director during the absence of the latter for a period of not less than three months from the Directors in which meetings of the State are ordinarily held and such appointment shall have effect and such appointee, whilst he holds office as an alternate director, shall be entitled to notice of meetings of the Directors and to attend and vote thereat accordingly; but he shall not require any qualification and shall ipso facto vacate office if and when the absent Director returns to the State in which meetings of the Directors are ordinarily held or the absent Director vacates office as a Director."

- (v) In Article 140 after the words "time appointed for holding the same," insert the word "senior-most."
- (vi) Articles 133 to 137 and the marginal notes shall be deleted and the following new Articles and the

marginal notes substituted therefor:—

133. The business of the Company shall be carried on by the Managing Director and Deputy Managing Director or Managing Directors and Deputy Managing Directors if and when appointed who shall subject to the superintendence control and direction of the Directors and the provisions of Article 135 be entitled to exercise the general and specific powers conferred by these Articles on the Directors collectively.

Subject to the provisions of Sections 316 and 317 of the Companies Act, 1956, the Directors may from time to time appoint one or more Directors to be the Managing Director or Deputy Managing Director or the Deputy Managing Director of the Company either for a fixed term or without any limitation as to the period for which he or they is or are to hold such office and may from time to time (subject to the provisions of any contract between him or them and the Company) remove or dismiss him or them from office and appoint another or others in his or their place or places.

135. Subject to the provisions of the Companies Act, 1956, and in particular to the prohibitions and restrictions contained in Section 292 thereof the Directors may from time to time entrust to and confer upon any Managing Director or any Deputy Managing Director for the time being such of the powers exercisable under these presents by the Directors as they may think fit and may confer such powers for such time and to be exercised for such objects and purposes and upon such terms and conditions and with such restrictions as they think fit; and they may confer such powers either collaterally with or to the exclusion of and in substitution for all or any of the powers of the Directors in that behalf; and may from time to time revoke withdraw alter or vary all or any of such powers.

136. Subject to Section 255 of the Companies Act, 1956, a Managing Director or a Deputy Managing Director may be appointed on terms that he shall not while he continues to hold that office be subject to retirement by rotation within the meaning of Article 121 but (subject to the provisions of any contract between him and the Company) each Managing Director and Deputy Managing Director shall be subject to the same provisions as to resignation and removal as the other Directors of the Company and he shall ipso facto and immediately cease to be a Managing Director or Deputy Managing Director if he ceases to hold the office of Director from any cause.

If at any time the total number of Managing Directors and Deputy Managing Directors not subject to retirement by rotation is more than one-third of the total number of Directors the Managing Director or the Managing Directors shall not retire and the Deputy Managing Directors who shall not retire shall be determined by and in accordance with their respective seniorities so that those who have been longest in office as Directors since their last election shall retire from office and in the case of those with seniority from the same day the Deputy Managing Directors to retire shall (unless they otherwise agree among themselves) be determined by lot.

Each Managing Director and Deputy Managing Director shall be deemed to be a salaried official of the Company for the purposes of Article 113 and each shall subject to the provisions of Sections 309, 310 and 311 of the Companies Act, 1956, receive such remuneration as may from time to time be fixed by the Company in General meeting."

That each of Messrs. A. W. Gillespie, F. G. W. Jackson and P. N. Haksar, Direc-

Business of Company to be carried on by Managing Directors and Deputy Managing Directors.

Power to appoint Managing Directors and Deputy Managing Directors.

Powers and duties of Managing Directors.

Managing Director and Deputy Managing Director exempt from retirement by rotation, etc.

Remuneration of Managing Director and Deputy Managing Director.

JESSOP AND COMPANY, LIMITED.

NOTICE is hereby given that the Directors have declared the payment, on 1st May, 1957, of the Dividend on the 5 per cent. Cumulative Preference Shares of the Company for the half-year ending 30th April, 1957, without any deduction in respect of Income Tax payable by the Company.

The Preference Share Transfer Register will be closed from 26th April to 30th April, 1957, both days inclusive.

Dividends will be paid only to Registered Shareholders or their Mandates.

By Order of the Board,

A. K. THAKUR,

Actg. Secretary.

63, Netaji Subhas Road,

COAL COMPANIES

O. P. F. and Dd indicate Ordinary Preferred Ordinary Founders' and Deferred shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

STABILITY AND PROGRESS IN ECONOMIC PLANNING

EXCHANGE BANK CHAIRMEN DISCUSS THE STRAINS OF INDUSTRIALISATION

THE surveys of south Asian economic and political affairs made by the exchange bank chairmen this year speak generally of considerable uneven progress in the countries where their interests mainly lie. Agricultural and industrial production has been increasing. The high level of output and trade in the world as a whole has kept up the demand for the primary products of these countries, on which their economies depend heavily. Plans of varying ambitions have been framed in order to guide and direct more positively the efforts towards prosperity. In many places, stresses and strains have appeared, due partly to domestic political uncertainties, partly to over-ambitious economic planning, and partly to international disturbances such as those which led to the closure of the Suez Canal. From India's point of view, the exchange bank chairmen's latest surveys are of especial importance. The second five year plan has been in operation for about a year, and they deal in considerable detail with the difficulties and the promise which have been born of it. As Mr. C. Blaker of the Hongkong and Shanghai Banking Corporation says, what is appearing in this country is of much wider significance than to concern only her. "India in recent years has built up for herself a position of considerable influence in world affairs, and this is particularly so in Asia where many of the smaller countries look to her for leadership and watch with anxious eyes to see how her industrial development is proceeding—a development they are all vying to emulate to a greater or lesser degree."

ment outlays based on created money will tend to push up prices. The real solution, it is generally implied, is to secure an increase in savings, and Mr. Michie pinpoints the harmful effect of the Government's policies when he refers to the undermining of confidence as reflected by the drop in stock exchange values. There are indirect references in the chairmen's surveys to the other possibility—cutting the size of the second plan by slowing down expenditure to a rate which can be supported by the available resources. It is still the fashion in New Delhi to deny this possibility, although the foreign exchange stringency has more or less brought it to the stage of established fact.

The shortage of investible resources has created serious problems for banks operating in India, including the exchange banks. Sir Oliver Franks, of Lloyds Bank, says for instance that "in India especially, with an economy expanding so rapidly, there is an incessant demand for bank accommodation which, owing to tightness of funds, banks do not always find easy to meet to the full." The inadequacy of long-term as well as short-term capital is becoming more acute. Mr. Michie explains that "there is so much pressure on the private sector of industry to expand that its reserves previously built up are rapidly being spent, plus very large additional sums, and that at a time when the Government is keeping an extremely tight rein on the capital market as well as on money rates." The situation threatens to become even more difficult when the scheme to compel companies to deposit part of their reserves with the Reserve Bank is introduced; further details of the scheme have just been announced and reports from New Delhi suggest that it is likely to be administered liberally, but even so its general effect will be to restrict the supply of resources. As far as the banks are concerned, the scheme has an important implication which has not so far been sufficiently stressed: Mr. Michie points out that it will lead to a depletion of ordinary banking deposits. This could have serious consequences; for, as practically all the exchange bank chairmen state, one of the outstanding embarrassments faced in India during the past year has been the inability to meet many sound demands for credit simply because the resources on which that credit would be based have already been somewhat stretched. The average ratio of advances to deposits remains well over 70 percent, and it can hardly be allowed to rise much further if liquidity is to be safeguarded. The exchange banks have sought some relief by borrowing more under the bill market scheme (as indeed have also the scheduled

IMPLICATIONS OF THE U.K. BUDGET

MAINTAINING THE STRENGTH OF STERLING

THE apparent relaxation in Britain's fiscal policies after the long period of restraint has created a considerable sense of relief. But it is easy to overlook that Mr. Peter Thorneycroft's first Budget, presented last week, actually continues the policy of restraint—indeed, one of the Chancellor's non-fiscal actions has been to tighten the control of bank credit. Much financial diplomacy is required to persuade people at home that a more liberal era is beginning and at the same time to convince people abroad that no laxity will be tolerated while sterling is convalescing. Mr. Thorneycroft has handled the delicate situation well, but an analysis of his proposals shows that sterling is his first concern and the concessions are as small as political exigencies will allow. That judgment is conditional, of course, on acceptance of the Chancellor's figures; and it must be said that they are a good deal more optimistic than the City had expected. Although last year's estimate of revenue was not fulfilled, the Chancellor has estimated a considerable increase in the year that began this month; and although last year's ordinary surplus was only £290 million, instead of the £460 million estimated, he expects that with no change in taxation the current year would have yielded a surplus of £560 million—only a small part of the increase attributable to a reduction of spending (and in fact experience shows that spending is nearly always in excess of the estimate).

This is the only part of the latest Budget that may appear rash. However, the business community's own assessment of this year's activity, made independently before the Budget (and reflected in a considerable advance of values on the stock exchange), is not out of line with the Chancellor's optimism. Out of that notional surplus of £560 million, the Chancellor is "giving away" £93 million in reliefs, leaving a prospective ordinary surplus of £462 million. This is the figure—certainly a strongly deflationary figure potentially—that is intended to fortify confidence in sterling abroad. Its significance could be diminished (according to present-day practice) by a large deficit in the capital account "below the line". But in fact a modest reduction in net capital spending is envisaged, and if he had made no change in taxation, the Chancellor would have expected to cover all but £27 million of his capital outlays with surplus revenue. On the new basis of taxation, he calculates an overall deficit of £125 million; this is much less than the estimate of £343 million a year ago or the actual outturn of £331 million which resulted from a surprising shortfall of net capital outlays below estimates in 1956-57.

A Budget must be viewed as an instrument of general policy and as an instrument of specific policies. The general policy is clearly in line with the deflationary policy of the preceding two years. The specific policies are more complex. The concessions, costing roughly £100 million this year (and about £130 million a year subsequently) are divided into three nearly equal categories, with a miscellaneous fourth approximately equal to each of the others. The miscellaneous items are special concessions to families with children to educate and to people of advancing years, also the reductions in the duty on petrol and in the taxes on entertainment—routine adjustments related to no particular policy. Of the main categories of beneficiaries, one is the householder (or his wife), whose furniture and furnishings and kitchen utensils will be liable to less purchase tax—an act of policy intended, it may be said, to placate the man-in-the-street. The need to placate him arises from the fact that one-half of all the concessions benefit the more affluent sections of the community—a quarter the man earning more than £2,000 a year (up to

£10,000), and a quarter to British-registered companies doing business overseas.

These two categories are the objects of Mr. Thorneycroft's new policy of incentives. This policy, worked out in that way, has aroused strong criticism from the opposition (both inside, and outside Parliament), but it has a firm—even, in a political sense, a courageous—purpose. Encouragement of the higher-salaried employee, and of the small business man who can do more business if he exerts himself more, is intended to put more life into that section of the community "in whose hands rests for good or ill much of the future". It is, doubtless, intended also to persuade the "valuable" elements in the community to stay in Britain. But skilled workers are also valuable, and they especially have lengthened the emigration queues. The concession to companies operating abroad can appeal to even fewer voters, but it is the most significant—though not the least expected—provision of the Budget. The exemption of these companies from income-tax and profits tax on their overseas earnings is intended to stimulate British enterprise in mining, oil-winning, planting (tea and rubber, etcetera), and to some extent general trading; and it is intended also to stop the applications of various companies for permission to emigrate. (It does not, however, apply to shipping companies, which have headed the emigration queue.) It is a serious attempt to reverse the declining tendency of British pioneering activities in a world where many nations are now willing to assist the development of others.

Is this Budget the beginning (or the consolidation of the beginning) of a new economic phase? That question will be answered when it can be seen whether the Budget consolidates the improvement represented in a surplus of £233 million in the external payments account last year, against a deficit of £79 million in 1955. If so, this year's (somewhat limited) policy of incentives to particular individuals and companies can be extended next year to broader incentives to individuals and to an important activity of companies that has been almost ignored this year—their investment in fixed assets. There is, however, an important reservation. Mr. Thorneycroft has tacitly acknowledged, in his buoyant estimates of revenue, that inflation is likely to continue, and he has reduced some taxes while incomes are still strongly rising. That big ordinary surplus may be more a result of inflation than an antidote to it. The deflationary policy has only partly succeeded, and it is to be hoped that the committee that is to be set up to investigate the working of the whole financial system will be able to recommend some combination of methods that will finally stop the depreciation of the nation's money.

CURRENT COIN

Closure of Standard Jute.—The uneconomic conditions under which the jute industry has been working seem to be producing a crop of casualties among its smaller units. The Standard Jute Mill is the most important of these so far. Manufacturers' profit margins have steadily narrowed with lower prices for jute goods and rising costs of production due to higher raw jute prices and bigger labour charges. In some cases, the margin has disappeared altogether. In Standard, for instance, the losses incurred during the past 18 months amount to nearly Rs. 14 lakhs (including depreciation). As there seems to be little prospect of improvement, it has been decided to close the mill. It has a total complement of 650 looms—367 hessian and 283 sacking. The actual number of looms in operation are 12½ percent less, this proportion being sealed under the I.J.M.A. Working Time Agreement. After the closure of the mill, its loom hours, it is authoritatively learnt, will be worked at the Kinnison Jute Company. It is intended to absorb as many of Standard's workers as possible at the Kinnison factory.

More About Dr. Kaldor.—Dr. Nicholas Kaldor's proposals for reforming the taxation system have had a mixed, but mainly unfavourable, reception. Most critics consider them not only administratively unworkable, but positively harmful for a developing economy. Yet the Government has already adopted one of the recommendations—for a capital gains tax. This tax was first imposed in the late Mr. Liaquat Ali Khan's 1946 Budget, and during the two financial years for which it remained in force, it did serious harm to the economy. By re-introducing the tax, the Government has ignored the lessons of the past. In his anxiety to reform the tax structure, it is feared that Mr. Krishnamachari might choose a few more Kaldorian tools. So it is time the Cambridge economist's "magic formula" for increasing Government revenues was discussed in sober detail in order to assess its strength and weaknesses. A pamphlet just published by the Employers' Association of Calcutta aims to do this. Entitled *Public Opinion*

on Kaldor's Proposals, it contains a selection of comments made editorially or otherwise in the Press, and by economists, both Indian and foreign. All these comments are based on one point—whether the implementation of Dr. Kaldor's scheme of taxation will be rational and whether it will serve the needs of an expanding economy. The general consensus of opinion is that it is by no means certain that it will. The authors of the pamphlet add their own views in the preface. They consider, in the first place, that the review by Dr. Kaldor of the Indian taxation system, coming as it did very shortly after the labours of the Taxation Enquiry Commission had been completed, was unnecessary. If a fresh review was needed, it should have been entrusted to some members of the Commission itself. Secondly, they point out, Dr. Kaldor is not himself sure whether such levies as the expenditure tax are administratively feasible. He recommended its adoption in the U.K., while serving as a member of the British Royal Commission on the Taxation of Profits and Income, but the Chancellor of the Exchequer thought it fit not to accept the suggestion. Dr. Kaldor now recommends the tax to India, along with such other levies as a wealth tax, a gifts tax, a modified income tax and a capital gains tax. Discussing the supposed virtues of these taxes, the authors point out that Dr. Kaldor's expectation of Rs. 20 crores from a wealth tax on individuals, Hindu undivided families and partnership concerns is based on wrong calculations. The proceeds will actually be insignificant, although there will arise many administrative difficulties. The tax on gifts, they say, will prove unpopular inasmuch as it will frequently go against the traditions of the people. "To put it in a nut-shell," the authors sum up, "Mr. Kaldor's suggestions amount to this: that is to say, if one makes an income he will be taxed by the income tax and may be also by the wealth tax; if he receives gifts he will be taxed by the gifts tax; if he spends he will be taxed by the expenditure tax; if he neither earns, nor receives gifts, nor spends, he may still be taxed by the capital gains tax. The result of all this would be that there would be no incentive for any kind of economic activity."

Prospects for the Plan.—A number of difficulties have developed recently which threaten to slow down the tempo of development programmes. A year ago, when the second plan was launched, the Finance Minister spoke of the improvement in the economic situation which had taken place during the previous five years, but it is open to doubt whether that rate of improvement has been fully maintained since. Speaking at the annual conference of the All-India Manufacturers Organisation in New Delhi on Saturday, Mr. S. N. Hajji, chairman, said that an imbalance is slowly creeping into the economy—an imbalance between the supply of consumer goods and the purchasing power of the people, between savings and investments, and between receipts and payments in transactions abroad. The Prime Minister, who delivered the inaugural address at the conference, agreed that the next few years "are likely to be difficult for us." But, he added, "we have to pull ourselves up during these two or three years," and the difficulties should be regarded as a measure of the advance the country is making. Mr. Hajji said that the private sector should be given more scope to develop. It does not seek a return to the laissez-faire of olden days; this is sought not even by the Forum of Free Enterprise which has recently drawn upon itself harsh criticism from certain quarters despite its clear-cut position adumbrated in its manifesto. Mr. Nehru gave the assurance that the private sector will be accorded an important place in the framing of economic policies. Some think that greater co-ordination between the private and the public sectors can be brought about if State corporations function under the democratic control of shareholders. Last year's Industrial Policy Resolution says that the Government may allow public participation in the equity capital of State enterprises. Mr. Hajji suggested that excluding the four industries which are to be developed as Government monopolies—arms and ammunition, atomic energy, railways and air transport—"the people, either as individuals or in corporate bodies, should be associated in financial participation through investment in shares up to 49 percent of the total share capital of these enterprises. This measure, besides being of financial help to the Government, will enable people to realise that both the sectors are working for the common good of the country." A similar recommendation has been made by the Estimates Committee before; to implement it, it will be necessary to convert State enterprises into public limited companies or corporations. Men of experience from the private sector can be invited to work on the boards of such enterprises. An important problem to which Mr. Hajji referred is the inadequacy of corporate savings in the private sector. It is necessary that the private sector should be allowed to plough back more resources into production. To overcome the shortage of foreign exchange, Mr. Hajji suggests that the Government help attract

foreign aid and foreign capital, either as loans and grants or as equity investment.

Suez Canal Uncertainties.—For all practical purposes, the Suez Canal is now open to traffic, provided shipowners are prepared to meet the transit conditions laid down by Colonel Nasser. Unfortunately, these do not conform to the six principles laid down by the U.N. Security Council or those agreed to by the Egyptian, British and French delegates following up the solution suggested by the Suez Canal Users Association countries and rejected by Egypt. The situation is certainly complex. In the circumstances, the Governments of Britain, the United States and Holland have advised their shipowners not to use the canal for the present, and the same applies to the canal for ships flying the French flag. So far, the Egyptians have done very well out of U.N. activity in connection with the canal—the Anglo-French withdrawal, the work of the salvage organisation under General Wheeler and the Anglo-French salvage operations earlier, to say nothing of time to recover from the defeat of their forces at the hands of the Israelis and, not least of all, the restoration of much lost prestige. Their attitude now seems to be one of untrammelled sovereignty and they do not seem willing to agree to any form of international supervision over the canal. With Egyptian sterling balances frozen, British and other ships will be allowed through the canal only if payment is made in a freely convertible currency out of a list chosen by the Egyptians. It has been suggested that two policies are open to Britain. One is to wait and see what other countries will do, but if it is the Government's intention to have the whole Suez situation cut and dried before permitting British ships to make use of the canal again, the industry may find itself in the absurd position of having to compete against foreign tonnage using the waterway while being itself confined to the long haul round the Cape. The alternative is to try to organise an international refusal to use the canal on Egypt's present terms. The prospects of holding together a Suez non-users' association, however, seem to be pretty doubtful. The West Germans have already announced that they have decided to use the canal on Colonel Nasser's terms, and there are other nations, such as Greece and Italy, ready to follow this example, apart from the shipping of Communist countries or sailing under the Panamanian or Liberian flags.

Assessing Soil Fertility.—Soil-testing laboratories are being established in different parts of India in order to help cultivators manure lands suitably and augment crop yields. To begin with, 24 such laboratories, 14 of which have already begun to function, are being set up under the U.S. Technical Co-operation Mission soil-testing project. Dr. Tamhane, special officer in the Indian Agricultural Research Institute, visited Hyderabad recently. According to him, it is proposed to organise and conduct a soil survey so as to determine crop patterns and fertiliser requirements, which vary from area to area. Maps indicating the fertility potential of the soil in each district will be prepared. Equipment for all the soil-testing laboratories is being supplied by the U.S. Technical Co-operation Mission, and the Central Government is providing the staff. The latter has agreed to meet the cost of the project for the first three years and then hand over the laboratories to the State Governments. The non-recurring cost of each laboratory is estimated at Rs. 20,000 to Rs. 25,000. In the Rajendranagar agricultural township, about 12 miles from Hyderabad city, a laboratory for rapid soil tests has been established to serve the needs of the Telengana area. Another laboratory is being set up at the Agricultural College, Bapatla, to serve the Andhra region of Andhra Pradesh. It is proposed to establish a third soil-testing laboratory for the tobacco-growing areas, either in Guntur or in Rajamundry. The staff working in the community project and National Extension block areas, as well as agricultural assistants and demonstrators in the State, have been instructed to obtain soil samples from cultivators and despatch them to the laboratories. It is proposed initially to conduct 1,000 tests in each laboratory every month. The soil-testing project is designed to cover the rural areas of the whole country. There is thus a unique opportunity for cultivators to obtain free and expert advice for manuring their lands and increasing crop yields.

Smoky Outlook for Biris.—Pakistan was once the main export market for Indian biris; but ever since her Government stopped their import, manufacturers in this country have only two major markets left—the one at home and another in Ceylon. Speaking at the annual general meeting of the Calcutta Biri Tobacco Merchants Association, Mr. Vrajlal Doshi, president, said that the Indian biri industry could explore markets in west Asia and Africa; the credit for pointing this out should go to the Tobacco Export Promotion Council and the Indian Central Tobacco Committee. The unrestricted application of the Factories Act has created a difficult problem for producers. As

Mr. Doshi describes it, "in many an area of biri manufacture, the out-worker system is being adopted. But this too is not unaccompanied with evil. Rolling under direct supervision keeps the quality of the product, whereas manufacture out of sight, however strictly checked, is likely to fall short of the standard." The heaviness of the Central excise duty has made it difficult for producers to reduce prices. Furthermore, the biri tobacco crop this year has been unsatisfactory. Mr. Doshi thinks that it will be difficult to dispose of the products unless prices and costs are reduced. He suggests, therefore, that the Government should study the situation and reduce the excise duty. Mr. Doshi criticises a notification issued by the Orissa Government. It says that the lessees of biri leaf forests in that State should surrender their right of exploitation as the State Government is thinking of setting up a State trading corporation to deal with this forest product in the future. The merchants offered large royalties on an assurance from the Government that the leases would remain valid for three years. The violation of its own terms speaks poorly of its attitude in these questions.

World Bank Loans.—During the first quarter of 1957, the World Bank has made three loans totalling \$85.6 million to India, Persia and Peru. This brings the number of loans since the start of operations to 166, in 44 countries and territories, and raises the gross total of loans to \$3,063.4 million. The loan to India is part of a joint operation whereby Air-India International Corporation is borrowing a total of \$16.8 million for the purchase of three Boeing jet passenger aircraft. The Bank's loan amounts to \$5.6 million and five U.S. commercial banks are together providing the balance of \$11.2 million. The credit from the commercial banks marks the first direct Indian borrowing in the New York market. A loan of \$75 million to Persia, the first the Bank has made to that country, will provide short-term financing required for the second seven year development plan. It will enable Persia to anticipate some of her future revenues and thus to proceed with programmes and projects which would otherwise have to be delayed. A loan of \$5 million has been made to the Banco de Fomento Agropecuario del Peru to help finance a programme of long-term lending for the development of agriculture. The Bank has engaged in one borrowing operation during the quarter. In January, a United States dollar issue of Bank bonds was offered in the New York market by an underwriting group. The issue consisted of \$100 million of 4½ percent, 20-year bonds of 1957, due 1977. In addition, the loan of 200 million Swiss francs from the Swiss Government to the Bank became effective on 1st January this year.

ECONOMIC FALLACIES

WE recollect some years ago seeing the late Charles Matthews, the comedian, give a humorous description of the method by which a variety of characters might be impersonated by one actor with a change of disguise in the wig only. The success of the performance resulted really from the individual cleverness of the actor and not from the change of wig, but some other aspirants to histrionic honours, believing that it was the latter that had drawn the applause of the audience, attempted to make fame by an exaggeration of the method exhibited. Unfortunately, when changing their wigs, they forgot to suit their voices and expressions to the change, and the result, although laughable, was not of that appreciative kind which a good artist should desire. In some critical essays, "An Occasional Correspondent" of the Englishman has quoted a number of extracts from casual speeches or writings of various persons, and instead of suiting his criticism to interpret them on their merits, he has interpreted them with the sole object in view of suiting bimetalism. In his anxiety to uphold bimetalism by criticising monometallists, he seems generally to have got the wig on hind part before, and the result, though amusing, is probably not that which he is desirous of producing. Much as we admire the industry and prolixity exhibited in these essays, we do not think it necessary to follow at any length in order to review them. Sir William Harcourt is quoted as saying: "An experienced friend of mine writes me that the fall in exchange rises from the fall in silver rather than the rise in gold." This is interpreted as "a fall in silver in relation to gold is something quite different from a rise in gold in relation to silver." We do not know whether this is the interpretation which Sir William Harcourt's friends would consent to, but it is certainly not that which is expressed in his words before us. But even if the interpretation were correct, we do not see what use our critic intended to make of it. It is seldom that any two commodities rise and fall simultaneously and in exact ratio one to the other, and we see no reason why gold and silver should not fluctuate on their respective merits just as any other commodity. If they did not fluctuate we might have bimetalism tomorrow. We always thought that the foremost object of bimetalism was to fix a ratio between gold and silver in order to prevent fluctuation.

COAL POLICY IN INDIA

By
Andrew Farquhar

This booklet consists of reprints of articles written by Mr. Andrew Farquhar, former Coal Adviser to the Tata Iron and Steel Co. Ltd., which have appeared in *Capital* in recent years. As expert analyses of India's coal problems and policies, they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

Without Prejudice

MAKING AN APOLOGY FOR MISTAKES

JUDICIAL RULING ON PRESS PRIVILEGES

(FROM OUR LEGAL CORRESPONDENT)

THIS case has to do with the law of libel by newspapers. But it also gives the writer a long awaited opportunity of lodging a protest against the constant use of a most irritating, common form expression in Governmental and, latterly, commercial correspondence. The expression is: "The error is regretted." That is the nearest approach bureaucracy will ever condescend to make towards an apology. Mr. Tite-Barnacle of the Circumlocution Office may have wasted your time and money for months through some blundering mistake in the correspondence and eventually he has to admit the fact. Then, at the end of his letter comes the famous phrase: "The error is regretted."

Suppose a man libels you. You write him, demanding the withdrawal of the allegations and an apology. He replies, withdrawing the charges, and concludes: "The error is regretted." Would you consider that an apology? It is nothing of the kind. It adds cool insolence to injury. A bland, patronising apostrophe addressed impersonally to the world at large, expressing vexation felt by some anonymous person or persons at a mistake having been made by someone who may or may not be himself or themselves. That is how a certain police officer of the Nagpur district looked upon it, and when, refusing to regard the expression as an apology, he sued for libel, the High Court supported his view, which view therefore we may assume that the ex-editor and printer of the *Hindustan Herald* now, albeit reluctantly and at some cost, share. The case was one in which the publication of a short, complete, manly apology would have settled the whole issue. Instead, the editor, while admitting that the story he published in his journal was untrue—and it was about as serious a libel on a policeman in his profession as could be—contented himself and expected the officer to be contented with the grandiloquent, impudent four-word expression: "The error is regretted."

This was the libel, headed "Alleged High-handedness of Police." "According to a Chhindwara report, Mt. Godubai, an 18-year-old married woman

who had attempted to commit suicide by drowning herself and was rescued by her father and brother-in-law, has made an application to the District Superintendent of Police, Chhindwara, alleging that for three days she was called to the police station and questioned as to whether her husband, Nathu Kumbi, had committed a theft or not. Every day she denied the charge against her husband. On the third day, it is alleged by her, when she denied the charge made against her husband, the sub-inspector assaulted her and raped her after forcing a piece of her sari into her mouth. The woman felt disgraced and later attempted to commit suicide to conceal her shame." The plaintiff, who had been the sub-inspector at the police station concerned, through his counsel demanded (1) a full denial and an apology and that this should be published prominently in three consecutive issues of the *Hindustan Herald*, and (2) disclosure of the identity of the paper's correspondent. The paper thereupon published, in three successive issues, the following: "Report of Alleged High-handedness of Police....We are now informed that the report is incorrect. The error is regretted." Not a very effusive "apology." The editor falsely accuses a responsible police officer of, while engaged in his official duties, violently raping a young woman little more than a child, causing her to attempt suicide by drowning herself, and then finding his accusations to be false, says so, and adds: "The error is regretted." Only that and nothing more.

The defence in the subsequent suit for libel was that the newspaper published the allegations as a news item because it was in the public interest to do so and they had believed it to be true in substance and in fact; and that as such, being written without malice, it was privileged. "These defences," said the Nagpur High Court later, "are based on the ground that newspapers have a moral and social duty to perform towards the public, and that if in the discharge of that duty they publish items of news which are defamatory of others and which turn out to be untrue, they have some kind of privilege not enjoyed by the ordinary citizen and that unless it is shown that the publication is actuated by malice, no liability can arise against those who are responsible for the publication."

Let us look into this matter of newspaper privilege. There is no doubt that the times have changed. Editors have been tamed. The great Mr. Pott, justly famous editor of the *Eastonwill Independent*, would have been astounded and aggrieved if, after he had styled his rival of the *Eastonwill Independent* "that vile and slanderous calumniator", the latter gentleman had sued him for

damages for libel. In those days, it was simply not done. The remedy was to retort in kind and call Mr. Pott "a false and scurrilous rascal." It was all in the day's work. Honour was satisfied. Both parties enjoyed it; and it sold the papers. Nor was Charles Dickens—himself an editor—exaggerating. Not in the least. If you turn up as the writer has often done, old files of *The Statesman's* predecessor, the *Friend of India*, or the *Ditcher's Diary* in *Capital*, of Pat Lovett's day, you will find therein scathing comments on High Court judges, Lieutenant Governors, Governors and Ministers which, published today, would not only land the editors in punitive damages for libel but in jail. Things are different now and have gone to the other extreme. And the reason is that the public would have no more of it. And now no one dare write even a work of fiction without proclaiming on the front page that he is not referring to any living person. Mr. Pott today would not dare call Mr. Randolph Churchill a "hack journalist." If he did, it would cost the *Eastonwill Gazette* £5,000. The common law is responsible for the volte face. John Citizen does not mind the Prime Minister or the Red Dean being defamed. In fact, he enjoys it. But when he sees his own individual peccadillo reported in his Sunday paper, he resents it and scrutinises every word with an eye on damages for libel.

And the judges have backed John Citizen up. The idea of special editorial privilege still persists. But it was exploded at least as long ago as 1914 when Lord Shaw in the Privy Council said: "Their Lordships regret to find that there appeared on the one side in this case the time-worn fallacy that some kind of privilege attaches to the profession of the Press as distinguished from members of the public. The freedom of the journalist is an ordinary part of the freedom of the subject, and to whatever length the subject in general may go, so also may the journalist but, apart from statute law, his privilege is no other and no higher. The responsibilities which attach to his power in the dissemination of printed matter may, and in the case of a conscientious journalist do, make him more careful; but the range of his assertions, his criticisms or his comments is as wide as, and no wider than, that of any other subject. No privilege attaches to his position."

There is no statute law in India governing libel, slander and defamation. The courts in India, therefore, apply to these subjects the common law of England. In the latter country, a recent Act of Parliament affords some protection to the Press where a prompt withdrawal and apology are published, but that enactment, of course, does not apply to India. To the excuse of the gutter Press that it supplies what the public taste wants, the courts give a vigorous answer and this is it: "The ground on which this privilege was claimed was that the business of newspapers was to disseminate useful knowledge among the people, to publish such matters relating to current events of the day happening at home or abroad as fell within the sphere of their observation and as the public curiosity or taste demanded, and that it was impracticable for them at all times to ascertain the truth or falsehood of the various statements...." Rejecting this argument, the learned judge sardonically observed: "Undoubtedly, it is desirable to pamper a depraved public appetite or taste, if there be any such, by the re-publication of all the falsehoods and calumnies upon private character that may find their way into the Press, but that is not the business of newspapers. The dissemination of these vile and defamatory publications, culled of these vile and defamatory publications, can be found for the irresponsibility claimance in the common law. (The common law) ranks the offence with that of the receiver of stolen goods, the perjurer, the disturber of the public peace and other offenders of like character.... If (the publisher) chooses to become the retailer of private scandal without taking the trouble of enquiring into the truth of what he publishes, there is no ground of complaint if the law, which is as anxious to protect the character as the property of the citizen, holds him to this responsibility. One is glad to note that it was judicially held in this case that to say 'the error is regretted' is not tantamount to an apology. But though the defendants did not apologise prior to the suit, they did, after the close of the case, come forward with a full and handsome apology; and this had its effect, no doubt, in the reduction of the amount of damages from Rs. 7,500 in the trial court to Rs. 1,000 and costs in the appellate court."

(A.I.R. (Nagpur) 1957, p. 19.)

PAINT MATERIAL FOR HOT SURFACES

The Indian Standards Institution has issued, for eliciting comments, specification for paint material commercially known as black Japan type C, for hot surfaces. The draft standard prescribes the requirements and methods of test for the material and is intended as a heat resisting paint for application on surfaces which become hot under service conditions as is obtained in the case of locomotives. This paint can also be used as a general purpose paint where heat resistance is of prime importance. This standard is one of a series of three Indian standards on such paint material. Comments on this draft standard will be received by the Indian Standards Institution, 19 University Road, Delhi 8, up to 13th May, 1957.

A DITCHER'S DIARY

bomb in the incalculable elements, and to estimate the amount of junk under turgid waters, so very little blame attaches to the prophets proved wrong. But, then, all I set out to say is that experts are fallible—even as we are.

The British newspaper reading public are great writers of "letters to the editor", the correspondence columns forming a substantial, permanent and inexpensive feature of most London and provincial newspapers. Not infrequently, great ideas are born over such familiar pseudonyms as "Pro Bono Publico" or "Disinterested". Inevitably, the Budget brings forth a spate of such letters, of which, I presume, only a fraction get into print; for apart from considerations of space, every newspaper receives a proportion that are quite unprintable. A point which has been taken up vigorously in connection with the latest U.K. Budget is the classification, for tax purposes, of income as earned and unearned. It is claimed that the term "unearned income" no longer has any real relevance and, in fact, gives an entirely misleading description of that part of a person's income which derives from the investment of past and present savings. It is argued that, as the years go by, death duties are extinguishing large inheritances and that for the most part investments and the income therefrom arise from savings which have been made (and therefore earned) in the lifetime of their owner. Thus, to describe such income as "unearned" merely panders to the illusion that there is still a large class of idle rich who live on the ill-gotten gains of their forefathers. So runs the argument, and the suggestion is that "investment income" would be a more accurate way of describing many heads of income that are now officially designated as "unearned", especially as the British Budget this year makes some tax concessions on earned income. Such a change in nomenclature would certainly be more in keeping with reality and with the broad Conservative philosophy of the Opportunity State. But a *rentier* by any other name will still be a *rentier* and many people will feel that his savings will not be any more protected from the ravages of inflation or taxation by calling their income investment or savings income, instead of "unearned" as now.

Bravely fighting off the strain of having been to a coffee party the whole morning and a mah-jong party the whole afternoon, a young lady scoffed at me wistfully before her cocktail party on Friday evening for suggesting that American women work too hard. Being unaccustomed to the quirks of feminine vanity, it was some time before I realised the cause of the offence—that for some members of the unfair sex, such as the young lady in question, a professional pride can attach even to social activities. But the basis of my remark, I explained, was a survey conducted by an independent research group in America, which shows that an average girl in U.S. schools today can be expected to hold a paying job outside the home for about 25 years of her life. This feminine imperialism in man's domain is something which not all of us would wholly welcome. But those who do not welcome it can at least have one consolation: the Americans make their women work more than one-fourth of the total hours, but pay them only one-fifth of the total wages. Of course, judging from this survey, there now seems to be hardly any occupation in America where the men can be

assured of being left to themselves. One-third of their opposite sex are still doing secretarial, clerical and sales work, but the remaining two-thirds have invaded "almost every conceivable kind of job"—which presumably covers nearly everything from scientific research on ant nutrition to writing learned theses on obscure European poets whose very existence may be doubtful. This is a trend which I expect will continue; and as men shrink and suffer, I dread to think of the ultimate consequences considering that husbands already, on an average, die about eighteen years before their wives. An interesting finding of the survey is that, compared with 1890, women in America nowadays leave school later, marry and have children earlier, live longer and are widowed later in life. It has long been something of a paradox to me that women seem to be found working hardest either in societies which are economically the most developed or in those which are the least developed. In the highly developed societies, such as America's, it is presumably the labour shortage which draws them out of their homes; in little developed ones, the driving force may be poverty, which creates the need to supplement the men's earnings. But in societies which are neither too rich nor too poor, curiously little seems to be demanded of women apart from their household chores—unless the régime is communist or matriarchal.

In one of those British comedies which made big money—by making British audiences feel how queer the foreigners were and foreign audiences how odd the British were—the famous cricketer hero scored a duck and was lustily applauded, to the complete bewilderment of an American tourist, who could not begin to understand this ovation to failure. It is by no means certain that Sir Anthony Eden's career will on a long view be considered as the *Daily Mirror* once put it, "a flop". When the dust of Suez has settled down, many of his decisions may be seen in a truer perspective than is possible today. But there is perhaps something characteristically British in the way all sections of the people are now in sympathy with the former Prime Minister, who in faraway Boston, Massachusetts, has recently undergone yet another serious surgical operation. Ill health may or may not have been the only reason why Sir Anthony relinquished office rather suddenly; few such decisions are taken for a single reason; but there can be no doubt at all that throughout his Premiership he subordinated the requirements of his health to his high sense of duty. There is not a Briton anywhere in the world who can withhold unstinted admiration for the fortitude with which Sir Anthony is bearing up his illness, aided not a little, we may be sure, by his brave wife. This astonishing strength of character may be regarded by many as a personal quality. It is, but we may be mistaken in under-estimating the relevance of personal character to political leadership. These who are now praying for Sir Anthony's early recovery include I am sure, many of his bitterest critics, and this too is a tribute to him.

Economy in the U.S. Government has long been advocated by the *Wall Street Journal*, published by Dow Jones and Co., Inc. Acting on this suggestion, the Treasury Department has made some cuts, including cancellation of its subscription to the Dow Jones news service at a saving of 1,800 dollars a year. The *Wall Street Journal* notes, according to *Reuter*, that "a little here and a little there can amount to a lot of savings in the end."

THE DITCHER.

...and YOU!

At 6,500 of us in Hindustan Lever, a small army of men and women, have something very important in common. For us, it is not enough to make soaps, toiletries and cooking fats—with each of our products we aim to give you what you need in unvarying quality, so that you—the families of India—may know and trust and use them.

For almost eighty years, we have grown with your growing needs. And, like a flowering plant, we have put forth new and exciting blooms—dynamic pioneering activities behind the actual manufacturing scenes. Our Market Research department—unique in this country—carefully studies your preferences, your habits and opinions, and guides production with its findings. Our Quality Control department carries

out strict tests on each product from the raw material stage to the finished article. The Datta Advisory Service and the Washing Information Service are there to help you make the best use of our products.

And what are these products? You know them well—Sunlight Soap, for instance... Lifebuoy... Lux... Rexona... Gibbs S.R. Toothpaste... Datta Vanaspati... and others that have become household friends. We are proud that so many of you have chosen to use them every day in your homes. At the same time we realise that your patronage lays upon us a duty, that of keeping steady our common aim, to offer the very best quality and value to our customers... to you!

THE PUNJAB NATIONAL BANK LIMITED

Established in 1895

Head Office: "SHREE NIWAS", 8, UNDERHILL ROAD, DELHI.

Directors' 110th Report to the Shareholders for the Year ended 31st December, 1956.

The General Board of Directors begs to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1956.

The transactions for the year under report have resulted in a profit of Rs. 90,20,272-7-8 (including Rs. 2,35,108-2-3 brought forward from the previous year's account). The following amounts have been appropriated for the undistributed purposes:—

	Rs.	A. P.
1. Transferred to Income-tax Provision	27,50,000	0 0
2. Transferred to Reserve Fund (Statutory)	27,50,000	0 0
3. Transferred to Bonus to Staff Account	13,00,000	0 0
4. Transferred to Charity Account	1,00,000	0 0
5. Transferred to Gratuity to Staff Account	1,00,000	0 0
6. Ad-interim Dividend at Rs. 2/- per share free of income-tax paid	7,00,000	0 0
Total	77,00,000	0 0

The Directors recommend that the balance of Rs. 13,20,272-7-8 be disposed of as follows:—

	Rs.	A. P.
(a) Dividend at Rs. 2/- per share free of income-tax making the total at 16 per cent per annum	7,00,000	0 0
(b) Carry forward to the next year's account	6,20,272	7 8

The Directors consider that the working of the Bank has been satisfactory.

By Order of the General Board of Directors,

S. P. JAIN,
Chairman.

March 12, 1957.

AUDITORS' REPORT

TO THE SHAREHOLDERS, THE PUNJAB NATIONAL BANK LIMITED, DELHI.

We have audited the annexed Balance Sheet of the Punjab National Bank Ltd., as at 31st December, 1956, and the year ended on that date, with the books and accounts kept at the Head Office in Delhi, in which are incorporated the unaudited returns of the Bank's Branches in Indian Union, Pakistan and Burma none of which were visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of Section 211 and sub-section (5) of Section 212 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are, therefore, drawn up in conformity with forms 'A' and 'B' of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank, which have come to our notice, have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of these books and proper returns adequate for the purposes of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and the Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion and to the best of our knowledge and information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner basis the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

UNITED BANK OF INDIA LIMITED

CHAIRMAN DR. N. N. LAW'S REVIEW

Extracts from the speech delivered by Dr. N. N. Law, Chairman of the United Bank of India Ltd., at the Annual General Meeting of the Bank, held at its Head Office, on the 15th April, 1957.

Gentlemen,

"Copies of the Accounts for the past year have been in your hands for sometime, and I hope you all share our pleasure in that the results depict another year of progress. The year's achievements generally have followed the pattern of most of the larger banks. The deposits of the Bank at Rs. 33.9 crores were

higher by Rs. 2.6 crores, i.e. 8.4% over the previous year's figure. This should be deemed to be very satisfactory considering that the average rise in deposits of scheduled banks for the year was 7.6%. Although our advances were correspondingly higher by Rs. 2.3 crores the increased revenue from this source was more or less absorbed by higher interest charges as also salaries and allowances resulting in a smaller rise in net profits.

Rising Trend of Interest Rate

"Despite further increase in money supply, the year under review witnessed persistent tight-money conditions. A large portion of the increase in money supply was in spheres beyond the reach of the organised banking system and the increase in bank deposits was disproportionately small compared to the increase in money supply. While this was the position in regard to banks' resources the demand on them for accommodation increased substantially, reflecting quickened pace of the economy. This resulted in a severe competition on the part of the banks for a shift in deposits from one bank to another, and the rate of interest for call and short-term deposits was forced up to a new high level. I would refer you to my observations made in this regard in my speech last year where I suggested that banks should make fuller use of existing associate facilities for making concerted efforts to combat the growing malaise of the increasing rate of interest on deposits. Although we still hold to that view, it is difficult for us to keep up a sustained resistance to a tendency which we feel not to be in our best interests.

"Very high rates of interest offered by most of the larger banks of the country have not attracted proportionately higher deposits to the banking system. That is an indication that deposits are not interest-sensitive to the extent they are supposed to be. If instead of diverting the spending power of those who have it, in the direction of payment of interest, the amount was spent in extending the banking organisation, better results could possibly have been obtained and foundation laid for ensuring a systematically rising trend in deposits. The point is a pertinent one because tight money condition and high interest charges threaten to be a permanent feature if the present pattern continues in a developing economy.

Bill Market Scheme

"With regard to the Bill Market scheme, only a few banks including ours are in a position to utilise the facility. The aggregate amount availed of by the banks is rather small compared to what the Reserve Bank is inclined to permit. It is of course for the banks to decide how far they will go. But I would like to mention here that if the intention of the 'scheme' is to provide funds to the trade and commerce and make it available at all levels, non-inclusion of a large number of banks in this facility limits the scope of its functioning. Since the bill against which such advances may be allowed would arise out of genuine commercial transactions, attempts should be made to bring in more of the banks, in so far as they otherwise qualify, within the purview of the scheme. Indeed the recommendation of the Shroff Committee was for inclusion of at least all the scheduled banks within the same scheme.

Bank Rate

"Coming back to the monetary situation which is considered paradoxical in that we have stringency of money concurrently with a rising trend in prices in certain sectors of the economy, I feel that the question of Reserve Bank's leading rate deserves more attention. It is not the money market alone which has got to be viewed in the determination of an appropriate monetary policy. In the context of an expanding economy, a higher Bank Rate, if anything, only hardens the cost structure and acts against developing a climate for investment or a favourable trend for export and also adds to the problems of resources. Therefore, stringency in the money market, under conditions of rapid economic development, demands graduated flow of less costly funds to the money market. This is not to deny the need for ensuring that such a flow does not lead to conditions of credit inflation. But such tendencies, when they persist in raising their ugly head, could be curbed by the application of qualitative control by the central bank of the country. In an economy serviced by a banking system limited in its scope both territorially and functionally, the controls would, in any case, be less effective. I, therefore, think that whatever may have been the circumstances leading to the raising of the Bank Rate, the issue demands re-examination.

Necessity of a Banking Plan

"The past year marked the initiation of the Second Five-Year Plan. Although the size of the Plan is about double that of the First Plan, it is a national endeavour and that too within the time schedule. It is also true that taxation measures, at least for some time to come, will have to be broad-based and tentatively with the social objectives. But, on the other hand, it is the duty of the Government to see that every economically active individual and organisation contributing to the Plan's fulfilment can retain a part with greater vigour and encouragement to make progressive better contributions. The whole hearted enterprise and risk capital is vital and necessary for the success of the Plan. If persistent attempts at liquidation of economic powers in the hands of the State and if the extensive measures of direct taxation are pushed to such a level as will substantially discourage the existing enterprise in the private sector, the success of the Plan will suffer from substantial limitation dissuading the entrepreneurs from being

adventurous enough to think in terms of taking upon themselves progressively larger risk of enterprise. The capital market is not in that mood.

"The need for resources in the State sector should very largely be met by borrowing, and the borrowing programme should be so geared as will make the need for various fiscal measures less urgent or necessary. But, left to the Government alone, such a programme is unlikely to produce a balanced result. In this regard the banking community can make its special contribution to the success of the Plan by ensuring that the necessary developmental climate has been created both for expansion and consolidation of banking structure. I say with all seriousness and with emphasis that this co-operative atmosphere must be brought about among banks so that they can bring in the untapped resources as grist to the economic mill and so aid the avoidance of an excessive and frustrating tax level by assisting the Government in getting larger funds through borrowings. The need for resources in the private sector is growing apace, which has to be met without much leaning on the Central Bank of the country. With these needs are again varied in pattern. With these in view, your Managing Director has tried to draw the attention of the banking community to the need for a 'Banking Plan' for the territorial and functional development of banking, in a brochure entitled 'Necessity for a Banking Plan—a tentative study'. I am glad to mention that the outlines given therein have so far been favourably received as a basis for discussion.

"At the end of 1955 there were only 1,670 places which have been covered by the offices of the commercial banks and of these only 646 places were served by a major bank including State Bank of India. It is also obvious that the need of the common man in smaller places cannot be suitably met by specialised central organisations or by larger all-India banks. It has, therefore, been further suggested in the said plan that this be taken care of through a two-pronged programme of quick extension of banking facilities by opening new offices at the rate of 1,000 per year in new places and by strengthening the existing ones, where necessary, and bringing into existence smaller unit banks set up in regions where independent units or organised and developed as independent units or as subsidiaries to the larger banks. The Union Finance Minister himself has also expressed the hope that a large number of banks will grow in the country to accelerate the rehabilitation of the unemployed. It has also been suggested that the relics of past failures should be removed quickly in a planned way and in due course positive indemnity to individual depositors will have to be arranged if deposit banking in the country is to grow as far as the economic and social requirements demand and that India, in this respect, should take a lesson from banking experience in the U.S.A. and draw up her own 'Rehabilitation of Bank Deposits'. Necessity of rehabilitation of the small banks is further emphasised by the fact that, whereas the major banks of the country were at the end of the year 1955 serving only about 2,15,000 customers by providing advances, the rest of the banks were serving about 12,00,000 customers. It is not the aggregate quantum of money advanced but the number of places and customers serviced that is important. Indeed, we are aware of a number of smaller banks in the South and elsewhere in the country which are rendering useful service by helping medium and small business and industries in their respective regions. The position with regard to employment and rehabilitation of the people can largely be improved by helping development of medium and small industries through proper and careful financing and here the necessity of rehabilitation and new growth of smaller unit banks is so acutely felt. In this regard I would further suggest that a statutory ceiling for the rate of interest that the major banks, including ours, may offer for deposits, as a measure of assistance in the growth and development of the smaller banks till they assume necessary credit maturity and immunity from neglect due to smallness in size through Insurance of Bank Deposits.

"So long as such regional banking organisations do not come into existence independently in large numbers, it is our view that it should be the duty of the larger banks to sponsor subsidiaries in different regions to be converted into independent units in due course. It has also been suggested in opening plan that the larger banks, in addition to regional new offices, should play their role in the regional development of banking by assisting the existing smaller banks in so far as that can be done with safety, in conjunction with the suggested Government sponsorship organisations. We are of the view that the able plan should be drawn up on the basis of the proposals made. Such a plan would go a long way in substantially increasing the flow of new resources into the banking system and this will in the ultimate analysis, apart from helping the lower-income group economy in general, benefit the banks in the country including this and other larger banks. It has been suggested that if the banking system is to evolve such a plan and work it out effectively, it may be useful to organise various associations amongst the banks both on the basis of regions as well as on the basis of size linked to a Federation of all such associations. As it is, the Indian Banks Association has a membership of only 39 whereas the total number of banking companies in the country is over 470. It is, therefore, felt necessary that if a bold plan like the one suggested is to succeed, participation of all the banks in the country should be ensured. Such associations and the Federation may also be found useful by the Reserve Bank of India in the matter of formulation of policies and its financial operations.

"In the matter of formulating a plan as envisaged in the brochure proposals have been made for holding, under the auspices of Indian Banks Association, a Convention of all the Banks with a view to sponsor the idea of forming a 'Banking Expansion Committee' and to appoint a 'Standing Plan Committee' of the Convention to maintain liaison with the proposed 'Banking Expansion Commission'. I fervently hope that the banking community as a whole and the leading banks in particular will be able to see the interest of their own institutions lies in the growth of the banking system as a whole and not in the attempts to acquire prosperity in isolation. I trust, therefore, that they will fully co-operate and contribute towards the formulation and working of a plan."

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

AUTOMOBILE PRODUCTS OF INDIA LIMITED

CHAIRMAN MR. M. A. CHIDAMBARAM'S REVIEW

Speech delivered by the Chairman, Mr. M. A. Chidambaram, at the Seventh Annual General Meeting of Automobile Products of India Limited held on 17th April, 1957 at the Registered Office of the Company at Agra Road, Bhandup, Bombay.

It gives me great pleasure to welcome you all to the Seventh Annual General Meeting of the Shareholders of the Company. The Report and Balance Sheet for the year ending 31st July, 1956 have been in your hands for some time and with your permission, I shall take them as read.

During the year under review, your Company earned a net profit of Rs. 4,73,393-1-5. After adding the previous year's profit of Rs. 91,112-9-3 and excess provision for Taxation written back of Rs. 89,681-4-0, a sum of Rs. 6,54,186-14-8 has been carried forward as Profit in the current year. Out of this amount, the Directors have transferred a sum of Rs. 90,000/- to Development Reserve and have proposed to pay the balance of the arrears of dividend on Preference Shares for the years 1953, 1954 and 1955. It is also proposed to pay dividend on Preference Shares for the year which ended on 31st July, 1956. Thus, no preference dividend will be in arrears. This year will absorb a sum of Rs. 3,60,000/- and a sum of Rs. 4,186-14-8 will be carried forward as balance in the Profit and Loss Account. I hope hereafter it will be possible for the Company not only to continue payment of dividend on Preference Shares, but also to resume payment of dividend to the ordinary shareholders.

Your Company's effort to extend its activity has met with considerable success and all the Schemes are progressing on sound lines. I shall now give you a resume of the various activities in which your Company is engaged.

Brake Lining Plant

The machinery was received towards the end of 1955 and was installed and trial operations commenced towards the close of the financial year. Normal production was established from the beginning of the new financial year and as regards quality, the product has been found comparable in every respect with the American product. Selling arrangements have been concluded with Messrs. Firestone Tyre & Rubber Co. of India Private Ltd., and our experience in the few months indicates that we will have a rising volume of demand and a substantial share of the market.

Lambretta

I have indicated in my speech last year that the marketing and distribution of the Lambretta Motor Scooter had been supported by a well-planned advertising and sales promotion programme. This helped us to establish a steady and rising demand for the vehicle, which has now been recognised in India as a very economical and reliable form of transport for commercial and industrial concerns. We had indicated to the Government that we would proceed to a steady demand for the new product in the country. Orders have been placed through our Associates in Milan for all the machine tools, jigs, small, standard approved tools to implement the 1st phase of our above manufacturing programme. Shipments of the equipment will be in India in good time. We have also concluded an arrangement with Messrs. Kirloskar Oil Engines Limited to manufacture the programme period. By this arrangement, a considerable responsibility, which should have normally rested on the Company, has been shared with Messrs. Kirloskar Oil Engines Limited with a well-known firm with considerable experience in the manufacture of Engines, Machine Tools and other similar products. This arrangement has the Government's concurrence.

Meadows Diesel Engines

The Assembly Line and Test House capable of assembling and testing 20 engines per day have been installed during the year. We have been negotiating with two Primary Manufacturers of Commercial Vehicles for fitting of Meadows 330 Engines as original equipment. One of them have accepted the Engines and Vehicles fitted with our Engines are currently under test with the other. Agreements will be entered into with the primary manufacturers as soon as the tests are over and the engines approved by them. As the Meadows is a recognised engine and vehicles as original equipment on such well-known vehicles as Guy, Scammell and other vehicles in U.K., we believe that the tests will be only a matter of formality since the engine is already a proven one.

Our Director, Mr. P. Matthen, was deputed along with our Chief Planning Engineer, to order the required machinery for the first and second year manufacturing programmes. Orders for machinery for a value of about Rs. 26 lakhs have been placed in consultation with our Associates and we have already received about 40% of the machinery, which is in the course of erection. I am glad to inform you that 19 out of 25 components to be produced in the first year are under manufacture. Your Company is confident of implementing to schedule the phased manufacturing programme it has submitted to Government. In fact, we are currently ahead of schedule.

More & Beck Clutches and Lockheed Brake Systems

During the visit to U.K. of Mr. Matthen, orders were placed for machinery for manufacturing Borg & Beck Clutches. This machinery is expected to be received in the course of the next few months. Meanwhile, we have started assembly of Borg & Beck Clutches out of C.K.D. components. Manufacture of the parts in the Lockheed Brake System was approved and samples have already been approved by our Associates in U.K. The machine tools for the

Tariff Commission's Report on the Automobile Industry

By a Resolution dated 6th August, 1955, the Government of India, Ministry of Commerce & Industry had asked the Tariff Commission to enquire into and recommend the fair ex-Works and selling prices of the automobiles under indigenous development. The Commission took the opportunity to make a comprehensive review of the industry since the time of its first Report in 1953. Your Company submitted a Memorandum to the Tariff Commission and appeared before the Commission at the Public Enquiry. We were also invited to a private hearing at which the programmes of the Company were discussed. We are grateful to the Chairman and the Members of the Tariff Commission for the patient hearing they gave to us and for the sympathetic consideration of our representation.

The Commission submitted its Report on 6th October, 1956. It has estimated that the annual demand for motor vehicles is likely to increase by 1960-61 to 40,000 commercial vehicles and out of this demand about 70 to 80 per cent is expected to be for the diesel-driven type. The Commission has also observed that for the effective implementation of the Second Five-Year Plan, the number of additional commercial vehicles required would be much higher, provided the various factors hampering the demand were removed. It has also recommended that priority should be given for the manufacture of commercial vehicles rather than passenger cars and out of the commercial vehicles, the maximum demand would be for diesel vehicles and every effort should be made to meet this demand and that additional capacity required for commercial vehicles should be installed in the existing units rather than new ones.

These recommendations of the Commission were accepted in principle by the Government. The Commission has also emphasised the importance to establish within as short a time as possible the complete manufacture of the Engine, Transmission, Rear Axle, Suspension and Chassis Members. The recommendations of the Tariff Commission should go a long way in establishing the complete manufacture of the commercial vehicle in India within the Second Five-Year Plan period.

I would like to take this opportunity of tendering our grateful thanks to the Ministry of Commerce & Industry and the Development Wing (Auto), Government of India, whose help, co-operation and advice have been invaluable.

Our thanks are also due to Mr. P. Matthen, his executives and all members of the staff and factory workers for the whole-hearted efforts that they have put in for the expansion of the activities of the Company.

In conclusion I earnestly hope that the Company will maintain its progress, and will become a leading manufacturer in the Automobile Industry.

BATTERIES are our business

For over 60 years Chloride have been making batteries and nothing else. Our products provide an unfailing source of power in Generating Stations, Sub-Stations, Telephone Exchanges, Industrial Factories, Railway Coaches, Aircraft and Exide Batteries are fitted on more motor vehicles in India, new and old, than any other make.

Industries, Electric Supply and Development Projects, Railways and Transport Operators depend on Chloride and Exide products as do India's motor vehicle manufacturers. They are thus assured of a quality product unequalled in performance and reliability and backed by an efficient and comprehensive Service Organisation.

Manufacturing more than 150,000 Storage Batteries per year of all kinds, the Exide Factory near Calcutta, is India's largest and foremost producer and ranks with the world's leading and best equipped Storage Battery Factories. Continuous research and development keep us consistently ahead of the times in all that is new in battery development.

**THE ALKALI & CHEMICAL
CORPORATION OF INDIA,
LIMITED.**

**PROCEEDINGS AT THE TWENTIETH
ORDINARY GENERAL MEETING**

The Twentieth Ordinary General Meeting of the members of the Alkali & Chemical Corporation of India Limited was held at the Registered Office of the Company, 34, Chowringhee Road, Calcutta on Thursday the 28th March, 1957 at 3-30 p.m.

Mr. N. D. Harris the Chairman presided.

Mr. M. Cariana representing the Secretaries, Imperial Chemical Industries (India) Private Ltd., having read the notice convening the meeting and the Auditors' Report, the Minutes of the Nineteenth Ordinary General Meeting held on the 7th March, 1956, the Minutes of an Extraordinary General Meeting held on the 2nd April, 1956 at 3-30 p.m. and the Minutes of a General Meeting held on the 23th September, 1956 at 3-30 p.m., were laid on the table having been already signed.

After the Chairman had delivered his speech, which has already been reported through these columns in the 11th April, issue of Capital, two Shareholders, Messrs. A. V. Seth and K. L. Mukerji, raised the following points:— About the proposed issue they said that since the Company had been formed, it had paid a lot of money on average dividend, whereas the market prices of the Ordinary Shares had ranged as high as Rs. 60/- and averaged about Rs. 30/-. Good profits were made by the company in 1956, but nevertheless a dividend of 8% was paid, a large transfer having been made to Dividend Equalisation Reserve; it was contended that this was unfair to Shareholders. In issue, Shareholders were faced with a lot of new shares having to be paid for over five months. This it was suggested was unfair on small

AUDYTOR'S REPORT ON THE INDIAN BRANCHES OF LLOYDS BANK LIMITED UNDER SECTION 30 OF THE BANKING COMPANIES ACT, 1949		
We have audited the Balance Sheet of the Indian Branches of Lloyds Bank Limited dated 31st December 1956 and above set forth and the annexed Profit and Loss Account for the year ended 31st October 1956 with the (Eastern Branches) Office, Calcutta, in which are incorporated and certified returns from the ten Indian Branches and also with the books and accounts kept at the Calcutta Branch.		
In accordance with the provisions of Section 29 of the Banking Companies Act 1949, read with the provisions of Sections 217(1), (2) and (3) and Section 277(5) of the Companies Act 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in the manner required by Schedule VI of the Companies Act 1956. The accounts are therefore drawn up in conformity with the provisions A and B of the Third Schedule of the Banking Companies Act 1949.		
We report that :—		
(a)	We have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit.	
(b)	In our opinion proper books of account as required by law have been kept by the Chief Managers' (Eastern Branches) Office and the Calcutta Branch so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the 9 Branches not visited by us.	
(c)	The Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the certified returns.	
(d)	In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Banking Companies Act 1956, in the manner so required for the purpose of such audit on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Branches as at 31st December 1956 and the Profit and Loss Account gives a true and fair view of the profit for the year ended 31st October 1956.

STOCK MARKETS RISE ON
BUDGET PROPOSALSINDUSTRIALS ADVANCE
ALL ROUND

London, 17th April.

THE Chancellor's Budget was well received in the London stock markets. Initially, there was a quick response to the tax concessions. Rubbers were outstanding. Tin shares and certain other mining issues, teas and many industrial companies with overseas interests also responded well. Calculations as to the exact effects of the overseas tax concessions will, however, have to await the publication of the Finance Bill which is shortly due. After an initial burst of enthusiasm, the markets quietened down, but maintained a firm undertone. Virtually all sections benefited from the Budget. Events in Jordan subsequently created uncertainty, particularly in oil shares, but had no great effect on the general tone of the markets. Business, however, contracted appreciably in view of the approaching holiday. The Government securities had nothing directly to assist them, and prices moved accordingly. Small persistent selling developed and prices steadily lost ground to show losses extending to about one point compared with immediate pre-Budget levels. A revival in new issue activity was an adverse factor. Chinese bonds advanced on hopes of expanding trade with that country, but other foreign bonds were subdued. Among foreign rails, Antofagasta issues were prominent. Dollar stocks were firm in response to the improvement on Wall Street. An all-round advance was recorded in the industrial market under the lead of companies with interests overseas, or operating overseas. Shipping shares were strong on the doubled investment allowance, while entertainment shares went ahead with the exception of cinemas, where there was some disappointment with the amount of their tax relief. British Celanese issues advanced sharply on the proposed merger with Courtaulds. South African gold shares tended higher in advance of the quarterly reports, but best levels were not maintained. In the oil share market, there was renewed strength in Trinidad issues, and Shell Transport reached a new peak following the dividend, but a reactionary tendency developed following the deterioration in the Jordan situation. The advance in rubber shares was stimulated by the Budget proposals on tax concessions to companies operating overseas. Tea shares were also buoyant, although it is believed that tea companies will not benefit to the same extent as those of rubber.

The Money Market

The Chancellor of the Exchequer's remarks in

his Budget statement that the credit squeeze is to continue was well borne out in the London money market last week. Tight credit conditions prevailed on most days, and invariably, the authorities had to intervene to provide funds to make up shortfalls in the banking system. Day-to-day accommodation ruled at the high level of 3½ percent to 4 percent, and the market was forced twice to borrow small amounts from the Bank of England. There was a fair offtake of bills from the market with the banks buying July maturities and those at 4 1/6 percent. Despite the continued tightness of money, and in view of the need to obtain as many bills as possible, the money market at last Friday's tender adjusted its bids sharply which resulted in a drop of approximately 1 percent in the Treasury bill rate to £4 0 9.36d.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 10th April shows that the gold stock was \$1 million higher at \$22,307 million. Foreign deposits rose by \$85 million to \$334 million, while foreign investments fell by \$42 million to \$3,699 million. The Federal Reserve sold \$46 million worth of securities held under repurchase agreements. Total discounts and advances rose by \$106 million to \$1,227 million, while the aggregate excess reserves of member banks fell by \$138 million to \$397 million. The daily average of excess reserves of member banks rose by \$207 million to \$549 million, while their daily average borrowings rose by \$156 million to \$1,205 million. Business loans of the New York City banks remained unchanged at \$11,633 million compared with a fall of \$57 million to \$9,648 million in the same week a year ago.

Hongkong Gold Rises

Values on the Hongkong bullion market firmed up, particularly towards last week-end, reflecting the easier trend of sterling in New York, together with sellers' difficulty in finding spot gold when buyers proposed to take delivery. The tightness of supply in the United States was also a factor. Dealers do not expect any appreciable movements this week—barring sizeable fluctuations in sterling—in view of the Easter holiday. The official offtake totalled 1,940 taels and the unofficial 19,500 taels. Arrivals in Macao were slightly over 20,000 ounces. Forward contracts were done at \$1(US)97.73 dollars c.i.f. Macao. Carry-over charges totalled 67 cents a 10 taels in favour of sellers.

High Price of Quicksilver

The London quicksilver market appears to have settled down at a higher level, after having recently attained £86 a flask, ex-warehouse, London. Supplies of physical metal on the spot are still by no

means plentiful, trade quarters say, although they add that so far as it can be ascertained, the apparently inadequate supplies have not caused any embarrassment to buyers. Within the foreseeable future, no worthwhile relief is expected as shipments to the U.K. from both Spain and Italy are likely to remain insufficient. The Spanish and Italian producers have still a well committed position. Thus no material change from the present price level is envisaged for the time being in spite of the availability of a certain amount of Mexican metal at between £83 and £84 a flask. Mexican metal at last Friday's tender has been offering to the U.K. has been well taken up and that most of Mexico's production is presumably scheduled for the United States.

Uruguayan Exchange Rates

The Uruguayan Government has announced that the exchange rate for linseed oil will be 411 pesos to the dollar, or its equivalent in other currencies, plus a subsidy of 397 centesimos a kilo. The exchange rate for linseed cake expeller and meal has been fixed partly at the official rate of 1,519 pesos to the dollar (85 percent) and partly at the free market rate (15 percent). The export of linseed subsidy for exports of linseed oil will also be effective until that date.

Egyptian Cotton Output

The Egyptian Ministry of Agriculture's fourth and final estimate of cotton production less scarto is 7,061,000 kantars, compared with 7,253,000 kantars in 1955-56 season. Details are as follows: cotton over 13 inch 2,961,000 kantars; cotton over 14 inch 1,318,000 kantars; cotton over 14 inch 2,782,000 kantars. Scarto production is put at 169,000 kantars.

Rubber Unchanged

Lack of sufficient demand early in the past week caused a fall in prices, but small orders later brought a quick reversal of the trend. Business was retarded somewhat by the usual pre-Budget hesitancy, and even when the Chancellor of the Exchequer's secrets were made known, dealers were still disinclined to trade except where they had orders to execute. Nevertheless, the market developed a steadier undertone which indicated the existence of short positions. An enquiry from Poland contributed to the steadiness. The smallness of home trade and Continental demand was indicated by the absence of any premium for near positions. At the close, values were about unchanged on the week. Dull conditions continued in the sole crepe market. Only a few parcels changed hands, but there was no weight of offers and no change was made in the quoted prices on the basis of 42½ d a lb. for ½ inch smooth No. 1 on the spot.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

LITTLE CHANGE IN
CONDITIONS

Wednesday, 17th April.

There has been very little change in the conditions prevailing in the Calcutta money market during the past week. Advances to cotton textile and jute mills are roughly around their previous levels. Sugar credit has increased slightly, but accommodation for grain and seed storage is more or less unchanged. In the interbank market, conditions have once again been easier, and the call rate quotes 3½ percent, with lenders over.

The exchange market has had a dull session. Hardly any gunny bills have been noticed, and such few documents as have been seen relate to miscellaneous shipments. Remittance has been on a moderate scale. Sterling is steady against the dollar and Continental currencies.

Silver recovered at the close on short-covering and the price increased from the previous week's level of Rs. 178.25 to Rs. 179, quoted today. The rate for ready metal was Rs. 179.25. The London and New York prices were the same as before. Activity in gold was restricted and fluctuations were narrow. The price was Rs. 106.75. The sovereign was quoted at Rs. 69.25.

During the week ended 12th April, Government of India Treasury bills for Rs. 82,19,50,000 were sold in favour of the Reserve Bank.

The total note increased by Rs. 9.59 crores to Rs. 1,581.04 crores, according to the return of the Reserve Bank of India for the week ended 12th April, 1957. Active notes were Rs. 10.85 crores higher at Rs. 1,574.42 crores. The currency expansion has been covered by increasing rupee securities by Rs. 9.93 crores to Rs. 924.90 crores. Deposits of the Government of India declined by Rs. 6.99 crores to Rs. 53.60 crores, as did other Government accounts by Rs. 6.36 crores to Rs. 1.54 crores. Balances of commercial banks, at Rs. 68.83 crores, showed an increase of Rs. 9.33 crores. Balances held abroad declined by Rs. 1.84 crores to Rs. 104.20 crores, while investments increased by Rs. 94 lakhs to Rs. 92.91 crores. Other loans and advances declined from Rs. 106.04 crores to Rs. 104.40 crores, of which advances to scheduled banks against usance bills amounted to Rs. 59.16 crores against Rs. 58.32 crores. Such advances totalled Rs. 180.70 crores since 1st January, 1957. Ways and means advances stood at Rs. 18.74 crores against Rs. 15.65 crores.

The return of the State Bank of India for the week ended 5th April, 1957, shows a rise of Rs. 1.57 crores in total deposits to Rs. 301.47 crores. Investments in Government securities and other authorised investments are down by Rs. 1 lakh and Rs. 29 lakhs to Rs. 94.17 crores and Rs. 11.25 crores, respectively. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have declined by Rs. 2.23 crores to Rs. 182.91 crores. Cash and balances are, in consequence, shown at Rs. 24.40 crores or Rs. 2.97 crores higher.

The statement of the position of scheduled banks for the week ended 5th April, 1957, shows Demand and Time liabilities at Rs. 725.89 crores (Rs. 7.86 crores on account of borrowings from banks) and Rs. 480.31 crores (Rs. 2.09 crores), compared with Rs. 708.45 crores (Rs. 8.22 crores) and Rs. 473.16 crores (Rs. 1.97 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 5.16 crores and Rs. 7.58 crores to Rs. 39.44 crores and Rs. 62.12 crores, respectively. There is a drop of Rs. 18 lakhs in investments to Rs. 347.23 crores. Advances and bills discounted, at Rs. 898.50 crores, show a rise of Rs. 72 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.4 percent and 74.5 percent, against 7.5 percent and 76 percent.

The Indian branches of LLOYDS BANK LTD. made a profit of Rs. 28.64 lakhs for the year ended last December. Deposits were shown at Rs. 39.93 crores. Investments totalled Rs. 12.68 crores and advances stood at Rs. 30.85 crores. Cash was shown at Rs. 3.69 crores. The profit of Lloyds Bank Ltd. has amounted to £541,783 for the year ended last December, after providing for taxation and making other adjustments. Total deposits stood at £1,198,863,143. Investments were £369,578,064 and advances totalled £336,878,350.

The working of the PUNJAB NATIONAL BANK for the year ended last December has produced satisfactory results. The profit has increased from Rs. 64.41 lakhs to Rs. 87.85 lakhs. A dividend of 16 percent has been declared, including an interim provision of Rs. 27½ lakhs, reserve fund Rs. 27½ lakhs and staff bonus Rs. 13 lakhs. The carry-forward is Rs. 6,20,273 against Rs. 2,35,108 brought in. Deposits were Rs. 16.27 crores higher at Rs. 106.39 crores. Cash has improved by Rs. 3.22 crores to Rs. 12.40 crores. Investments increased by Rs. 2.65 crores to Rs. 48.30 crores, as did advances by Rs. 12.84 crores to Rs. 54.86 crores.

GLASGOW . . . SCOTLAND

and

BLAIRS LIMITED

GLASGOW . . . SCOTLAND

Announce that as from 1st April, 1957 their offices in Calcutta have been closed and that they are now represented for the sale of their Specialities as follows.

IN SOUTHERN AND WESTERN INDIA

BINNY & COMPANY (MADRAS) LIMITED

Engineering Department

7, Armenian Street, Madras-1.

IN THE NORTHERN PART OF INDIA

PORT ENGINEERING WORKS LIMITED

8, Clive Row, Calcutta-1.

MANUFACTURE IN INDIA

Under licence from the Government of India. Binny's Engineering Works Private Limited will manufacture sugar machinery to the designs of Mirlees and Blairs, while Port Engineering Works Limited will work in close collaboration.

The following are some specialities of the two Glasgow Companies

Complete Cane Sugar Factories and Refining Plant

Remodelling and Extension of Existing Factories.

Evaporators and Vacuum Pans for Industrial Purposes

Vacuum Salt Making Plant.

Chemical & Alcohol Distilling Plant.

Steam Ejector Air Pumps and Vacuum Equipment for various Industries.

Water Distilling Plant.

Steam Condensing Plant with auxiliaries.

Centrifugal and Axial Flow Pumps.

Steam Turbines 4 to 800 BHP.

IMO Screw Pumps.

Automatic Stokers for All Heating Purposes.

Engineering and Transport

PROMOTING EXPORTS OF
ENGINEERING GOODS
CUMBERSOME RULES FOR
IMPORT DUTY REBATES

SPEAKING at the annual session of the Engineering Export Promotion Council on Saturday, Mr. D. N. Jalan reviewed the progress the Council has made since its inauguration in September 1955. He pointed out that a detailed survey of electric motors, fans, lamps, wires and cables, batteries, conduit pipes, transformers, bolts, nuts and rivets, lanterns, buckets, builders' hardware, agricultural implements, cast iron goods, sewing machines, abrasives, bicycles, oil ghanies, razor blades, pumps and diesel engines had been completed. The survey has brought to light a mass of useful data relating to the types of goods produced and the possibility of exporting them to foreign countries. Mr. Jalan said that the Council is collecting and compiling statistical data from different sources and is making them available to different engineering units in the country. It is conducting a survey of India's potential markets in the neighbouring countries. As a result of these surveys the industry now has a reasonably comprehensive picture of the prospects of developing export markets in the region. The Council sent two trade delegations—one to Burma and the other to

British East Africa, Ethiopia, Sudan and Egypt. Their visits have created an interest in Indian goods and enquiries are being received for a number of products. The Council is participating in exhibitions and showrooms in various countries. Mr. Jalan said that this is creating considerable interest in the engineering goods manufactured in India.

Arbitration

In order to settle disputes the Council has set up two Complaints Sub-Committees—one in Calcutta and another in Bombay. "We must ensure that only quality goods are exported and complaints brought to the notice of the Council are expeditiously dealt with," Mr. Jalan said.

The working of the Council for the last eighteen months has shown that the problem of export resolves itself into two divisions—one relating to internal arrangements and the other relating to activity outside the country. At present engineering industries, big and small, are engaged in a variety of work connected with Government orders, directly or indirectly. The programme of industrial development in the second plan is so huge that the engineering industries of every description have some work or the other for supply against Government orders. As a result of this, there is a general reluctance on the part of engineering industries to take risks in foreign markets. This reluctance on the part of the industry greatly increases the task of the Council because the problem is not one of only assisting the manufacturers to export their goods, but the more formidable problem of making them export-minded.

Surveys of Foreign Markets

The activities of the Council outside the country are varied. The survey of foreign markets has to be regularly and constantly pursued. Whatever survey work the Council has done is likely to be out-of-date with the passage of time, in addition to the new countries which have to be taken in hand. It is, therefore, necessary that markets should be explored and suitable machinery created in order that this work is constantly pursued. The Council has, therefore, decided in this year to create two organisations—one in the south-east Asian countries and the other in the Middle East countries. These organisations will fill an important gap and will help foreign buyers to purchase Indian goods with confidence.

Referring to the difficulties standing in the way of export trade, Mr. Jalan said: "The first and foremost difficulty is the availability of pig iron and steel. We very much appreciate the recent decision by the Minister for Heavy Industry regarding replenishment of 100 percent of steel quota and 200 percent of pig iron quota to the exporting industries. We also welcome the Government decision to utilise this Council for certification of the requirements of individual manufacturing units in regard to the replenishment quota. I have only in request that these decisions should be implemented at an early date so that a strong fillip is given to our export trade. I would also like to take this opportunity of expressing my grateful thanks to the Government for their decision to allow fan makers to import their requirements of ball bearings for export purposes. This help, however, will remain a dead letter if the difficulties connected with drawback of duty were not solved. We have repeatedly brought to the notice of the Government the difficulty which our industries are facing on account of the cumbersome rules framed for the grant of rebate of import duty on imported raw materials used in the manufacture of engineering products which are exported. These rules are so complicated that none of our member-firms have been able to secure the benefit. We only hope that Government would not allow procedural difficulties to stand in the way and, before long, a way would be found out for giving necessary relief to the industry."

Lack of Shipping Space

For some time past the export trade in engineering products has been experiencing great difficulties on account of the lack of shipping space to some of the neighbouring countries like Ceylon. As it is, the shipping companies are not inclined to accept heavy engineering items which are not so remunerative from the point of view of freight as are other items. As a result of this, exports of certain goods have been progressively dwindling and a stage has been reached when the export of such commodities like G. I. Buckets and C. I. Pans, Bolts, Nuts and Rivets, Fans, etcetera, has almost come to a stand-still. The industry apprehends that if suitable and timely action is not taken by Government, the export trade of the country established in Ceylon after persistent endeavour and at considerable cost would be lost to competitor countries. In order to remove this difficulty, Mr. Jalan has suggested that the Government shipping corporations should engage chartered services to such countries where Conference Lines are not interested in plying their ships.

K.L.M. SUMMER SCHEDULES

The main features of the K.L.M. summer schedules, which have just come into effect, are the addition of new aircraft to the fleet and increased frequencies on a number of routes. The popular west-bound service from Calcutta on Mondays is not only maintained but leaves 15 minutes earlier, namely at 12-25 p.m. via Karachi, Rome and Frankfurt to Amsterdam. The second west-bound flight departing from Calcutta on Wednesday at 5-50 p.m., and flying via Karachi, Cairo, Rome and Basle arrives in Amsterdam at 7-20 p.m. on Thursdays. The third west-bound flight from India, leaving New Delhi on Mondays at 8-15 p.m. and flying via Karachi, Beirut, Rome and Geneva, arrives in Amsterdam at 7-45 p.m. on Tuesdays.

New Delhi

PROSPECTS OF GETTING U.S. ECONOMIC AID

INDIA CONCERNED ABOUT EUROPEAN

COMMON MARKET SCHEME

(FROM A NEW DELHI CORRESPONDENT)

THE testimony given by the U.S. Secretary of State, Mr. Dulles, before a special Senate Committee on foreign aid, has attracted considerable interest in Planning Commission circles here. It seems to hold out the promise of bigger American loan assistance. A large loan at Governmental level from the U.S.A., over and above the normal development aid, has been expected by the planners for implementing India's second plan. The need for large-scale external assistance, particularly from the U.S.A., has been felt since the time the plan-frame was drawn up. The possibility of special American assistance for meeting the foreign exchange gap was discussed informally between the former U.S. Ambassador, Mr. Sherman Cooper, and the Deputy Chairman of the Planning Commission, Mr. V. T. Krishnamachari. But while the size of the gap has increased steadily with the progress of the plan and with the rise in world prices of machinery and equipment, there has been no signs of a corresponding increase in U.S. aid.

Late last year, when the Prime Minister, Mr. Nehru, visited the U.S.A., the need for a substantial increase in American economic aid was being felt more keenly. This was despite the Russian offer of Rs. 60 crores of credit, the prospects of greater World Bank assistance and the Indo-American agreement for the purchase of surplus U.S. commodities against Indian rupees. Great expectations had been roused by the Prime Minister's visit, so there was corresponding disappointment when as a result of the Nehru-Eisenhower talks, no special aid offer was announced. If the new scheme of foreign aid, which Mr. Dulles has commended to the U.S. Senate Committee and which is to be backed by a Presidential message to Congress, is accepted, the chances of a special loan to India will improve. The scheme cannot permit the advance of a loan, at one stroke, of the order of between \$700 million and \$800 million (which has been privately mentioned as the sum the planners would like to secure for the second plan's success). The annual rate of global lending suggested by Mr. Dulles is only \$750 million. But this may be a marked improvement. Development assistance offered by the U.S.A. on a loan-cum-grant basis has been running at a level of only about \$250 million a year. Of the latter sum, India has been receiving about one-fifth, largely in the form of long-term loans, repayable at India's option in rupees or dollars. Assuming that the share of this country remains more or less constant, she stands to benefit by the proposed increase in the U.S. loan assistance scheme for underdeveloped countries.

Economic Development Fund

The concept of a distinct economic development fund, now being canvassed in the U.S.A., has also been well received. Mr. Dulles urged Congress to "break away from the cycle of annual authorisations and appropriations" in favour of long-term loans which would "break foreign exchange bottlenecks and be a key factor in stimulating a country to a more effective development programme of its own." This agrees with the approach of Indian planners to the problem of industrial development. How Congress will treat the Dulles proposals finally remains to be seen. But apart from Mr. Dulles, a variety of non-official committees and institutions have made similar recommendations. The citizens' group on foreign aid headed by Mr. Benjamin Fairless, which visited India last January, has urged in its report to President Eisenhower that aid programmes should be on a two-yearly rather than annual basis. Another body, the International Development Advisory Board set up by President Eisenhower in 1955 and headed by Mr. Eric Johnston, has in its report, recommended the establishment of an international development fund to administer U.S. economic aid for Asia, the Middle East, Africa and Latin America.

Another feature of the development fund suggested by the U.S. Secretary of State is that its activities will supplement and not substitute those of the World Bank and the American Export-Import Bank. Some observers in India have wondered why the Government has turned almost exclusively to the World Bank and shown little interest in the U.S. Export-Import Bank. While the loan terms of the World Bank explain the preference, the fact is that little more of loan assistance can be expected by approaching both the institutions since their operations are regarded, as mutually balancing. The more a country draws from one institution, the less it is likely to get from the other. Only a new source of loan assistance with a more liberal lending policy, such as the proposed economic fund, can expand the scope for obtaining further U.S. credit.

European Common Market Scheme

The Union Cabinet considered the possible effect on India's foreign trade, present and prospective, of the European common market scheme proposed by France, Italy, West Germany and the Benelux countries and of the free trade area proposed by Britain (as a milder variant of the

scheme). The conclusions drawn, it is said, are tentative, since neither of the proposals has yet taken final shape. The move towards "the economic integration" of Europe, it is felt, is legitimate in principle, and is even likely to benefit world trade in so far as it promotes economic activity and raises the standard of living in the participating countries. Competing exporters from within the common market or free trade area will no doubt enjoy an advantage over outsiders, but this is conceded to be a natural concomitant of regional integration. Besides, it is open to countries in other regions to come together on similar lines. What has caused concern is the proposal to include the overseas colonial territories of the participating countries in the European common market scheme. This is inconsistent with the principle of regional integration, and will give rise to unfair competition against non-European nations, including developing countries such as India. The hope is entertained in official circles that this threat will be removed. It is also hoped that the implications of the European common market scheme or free trade area for the future of imperial preferences and G.A.T.T. will be examined, when the sponsors of the scheme discuss it with others at the next G.A.T.T. Conference.

India's concern about the African market is based on the immediate problems it will have to face, and not merely on its prospective ability to

export light machinery and industrial products. This was brought out during the talks, which opened last week in the capital, with the visiting Sudanese trade delegation, led by Sayed Mohamed Al Mekki Mustafa. India has an adverse balance of trade with the Sudan, which is one of her principal suppliers of long-staple cotton. The Sudan's exports to India during 1955-56 amounted to Rs. 12.68 crores, against imports from this country worth only Rs. 5.63 crores. Between April and December, 1956, the respective figures were Rs. 8.43 crores and Rs. 6.85 crores. In addition to the traditional items of export to the Sudan such as textiles, jute manufactures and tea, Indian lathes, agricultural machinery and bicycles are now available.

Plan Resources for States

The White Paper on the Union Budget for the current year placed the resources that are likely to be available to State Governments for their second annual plans at a total of about Rs. 415 crores. This included Rs. 140 crores which the States are expected to find from their own resources (including the additional taxation to be levied during the year), Rs. 70 crores of Central assistance on revenue account, and Rs. 208 crores as loans from the Centre on capital account. As against this, the States have drawn up second annual plans which will cost Rs. 435 crores. The figures for the 14 States are as follows: Andhra Pradesh Rs. 34.2 crores; Assam Rs. 11.1 crores; Bihar Rs. 35 crores; Bombay Rs. 72.8 crores; Kerala Rs. 17.5 crores; Madhya Pradesh Rs. 35.4 crores; Madras Rs. 32 crores; Mysore Rs. 28.2 crores; Orissa Rs. 19.1 crores; Punjab Rs. 34.8 crores; Rajasthan Rs. 21 crores; Uttar Pradesh Rs. 52.8 crores; West Bengal 34.8 crores; Jammu and Kashmir Rs. 5.9 crores. That the size of the State plans for 1957-58 exceeds the estimated resources by only Rs. 20 crores shows that the States' tendency to over-budget has been restrained in comparison with earlier years, but not fully curbed. Still, how much they will be able to raise from their own resources is problematical.

We know the drill...

for saving
India's
foreign currency

Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

**PERSONAL INCENTIVES IN THE
U.K. BUDGET**

**ENQUIRY INTO WORKING OF
MONETARY SYSTEM**
(FROM OUR LONDON CORRESPONDENT)

THERE just cannot be such a thing as a "good" Budget, for it is obviously impossible for the framers to satisfy all the claims pressed upon them. Mr. Peter Thorneycroft's difficulties were further complicated by the uncertainties of the economic outlook, the spate of pending wage claims facing the country, the revival of inflationary tendencies, and the clear warning of recent by-elections that support for the Government is waning and the repercussions that this has had on Conservative backbenchers. Keeping these difficulties in mind, the new Chancellor of the Exchequer can certainly be said to have made a promising, if not a particularly dramatic, start. Having decided that he could risk making concessions to a total value of about £100 million, he gives roughly half to the family man and to old people and the other half to surtax payers and certain sections of business. There is only one fresh imposition of any consequence, a £1 excise duty on television licences to bring in £6½ million.

What may be called the general reliefs include the halving of purchase tax from 30 percent to 15 percent on domestic kitchenware, tableware, cutlery, floor coverings and such furniture as now bears that rate at a cost of about £18 million; the abolition of entertainment tax on sport and the theatre and its reduction in the case of cinemas (which now produce about £28 million a year); the lifting of the 1s a gallon "Suez surcharge" on petrol; and income tax concessions, including an extended earned income allowance of two-ninths from the present level of £2,000 up to £4,000 and then at the rate of one-ninth up to £10,000 (cost about £17 million and applicable to about 230,000 people); increased children's allowances, at present £100, to £125 in the year in which a child becomes 12 and to £150 in the year in which a child receiving full-time education becomes 17; (applicable to about 4 million children, cost about £17½ million); increased age relief from an income limit of £600 to £700 for people aged 65 and over; and two special exemptions, for single persons, aged 65, of £250 for married couples where either husband or wife is 65 of £400 (cost £4 million).

Incentive Proposals

More purposeful than the above proposals, which will cost about £56 million in the current year, are the "business incentive" concessions on which the Chancellor expects to spend a further £48 million. The "room at the top" concession to surtax payers (Labour's main talking point) takes the form of relief for family men in that the married allowance and the child and housekeeper's and dependent's allowances shall rank for surtax as well as for income tax. Thus, for a married couple, the surtax starting point will be £2,100. For those with children, it will vary in accordance with the new scales of allowances for children of different ages. This will cost almost £10 million in a full year. Even more important, however, and less controversial, are the doubling to 40 percent of the investment allowance for capital expenditure on the construction of new ships, and the freeing of British firms operating abroad (though not banks or insurance companies) from income tax and profits tax on their trading profits overseas to help them to "plough back" profits. So far as general policy is concerned, the credit squeeze is to continue, with one measure for tightening it up. The Capital Issues Committee has been given more power over long-term borrowing from the banks, and a loophole for evading death duties has been closed. Finally, we have the long overdue decision for an enquiry into the whole monetary and credit system.

Of the Exchequer figures themselves, little need be said here. Even after reducing taxes by about £100 million, or 2 percent of the total revenue, the Budget estimates show a much larger surplus than was realised last year. It is large enough to finance the great bulk of the Treasury's capital outlay, such as loans to local authorities and advances to nationalised industries. Only £125 million is to be met by borrowing. On the face of it, therefore, the Budget seems unlikely to add to inflationary pressures or to burden the balance of payments. But there is another aspect to consider. The Chancellor assumes a large rise in the yield of income tax; and he says himself that this shows the effect of increased wages and salaries. Savings last year were good. Will they be still better this year, without further incentives for them? Mr. Thorneycroft obviously thinks his concessions will go that way, but it remains to be seen.

Money and Credit Enquiry

The decision that there should be an enquiry into the working of the monetary and credit system—a commission for which is being set up with Lord Radcliffe as chairman—is a move in the right direction. This has come in response to a growing volume of support for a reassessment of present-day needs. Bank rate, active participation by the Government in the Stock Exchange, all the paraphernalia of the credit squeeze, were part of an old machine which the Conservative Government gradually put back into operation from 1951

onwards. It was surprising that it worked as well as it did because it had not been used since 1932. The present enquiry will make it possible to bring it up to date and to relate it to the very different problems which the country faces now compared with those of the depression years.

The last report of this kind was produced by the "Macmillan Committee" in 1931 and was a model. But as the Chancellor said, the "problem then was how to find a way to pump more credit into the system." Now it is a matter of keeping the creation of credit down. The Chancellor also mentioned that the banks had become "less susceptible to monetary pressure." This is presumably a reference to the way the Government is continually having to undo the work of the squeeze by providing the banks with Treasury bills. As they have been working to a rule of thumb whereby these bills form at least 30 percent of their assets, an increase has meant that they could lend more. This has only been stopped by directives which are called "control." This is the kind of problem that the enquiry will have to deal with.

Exports Reach New High

It is only natural that the Budget should have got a mixed reception, according to whether the interest concerned has succeeded or failed in achieving the specific reliefs that it had sought. The real test of its value to the economy will depend largely on the accuracy of Mr. Thorneycroft's estimates, anticipating as they do that the recent period of economic stagnation is over; and the realisation of his obvious belief that the reliefs he has granted will boost savings and not personal expenditure, for the inflationary danger is becoming increasingly evident in the new wage claims and the revival of consumer demand apparent in increased hire purchase finance, the growth of bank advances, and the absence in the City this year of the usual pre-Budget caution.

Steel Output and Supply

First repercussions of the engineering strike come from the steel industry, which reports that output of about 20,000 tons of steel was lost in the last week of March as a result of it. The month's production was at a weekly average of 431,000 tons, against 432,100 tons in February and 425,700 tons in March last year. According to the Iron and Steel Board, production in the first quarter of this year was at an annual rate of 22,127,000 tons, compared with 21,651,000 tons in the corresponding period of 1956. Pig iron production in the first quarter of this year was at an annual rate of 13,856,000 tons, against 13,630,000 tons in the same period last year. There have been considerable changes in the pattern of steel supplies to consumers this year. Percentage changes between the first two months of 1957, and the first two months of 1956 included: Up: shipbuilding and marine engineering 15.6; coal mining 9.9; railways and rolling stock 8.7; building and constructional engineering 7.9; general engineering 4.9. Down: motors, cycles and aircraft 32; wire and wire manufacture 7.3; drop forgings, rivets, bolts and nuts 7.5.

Sterling Balances

The Balance of Payments White Paper, referred to briefly last week, throws some interesting light on the position of the sterling balances, which represent the "deposits" so far as Britain acts as an international banker. With the gold and dollar reserves still rather precariously placed, and serving the double purpose of a cushion for our own trade as well as the cash reserve for our bank customers, it is pertinent to remember that the end-1956 total of sterling balances of £4,094 million represents roughly the value of 15 months' exports from Britain. At the same time, the record of the past three years is not too bad. The total of the balances at the end of 1953 was £4,004 million—only 3 percent less than they are now (excluding the International Monetary Fund's holdings of sterling, the figure at the end of 1953 was £3,493 million, against £3,425 million at the end of 1956), although all sorts of divergent trends have operated. The Colonies have increased their deposits from £1,093 million to £1,286 million, while other countries, both within and outside the sterling area, have run down their balances. The real trouble is that in the last part of 1956, the picture was less healthy; customers withdrawing their balances from London outnumbered those who were putting in fresh money to the extent of a net drop in the total of £151 million. The fall in the foreign exchange reserves had a lot to do with this. We are faced with the question now as to whether this can be allowed to continue, and, if so, to what extent? Temporarily at least, the trends look as though they should cancel each other out: Australia and South Africa are increasing their balances, while countries like Ghana and Malaya are tending to run theirs down. A large part of the total sterling liabilities are not "quick assets" liable to sudden withdrawal but are fairly permanent fixtures. Sterling area currencies in particular have often kept their currency backing money and all sorts of miscellaneous funds here. But there are signs that this "hard core" may diminish. It is possible that countries like India, Ghana and Malaya may "dilute" the backing for their currencies and repatriate the money for development. Potential drains on London such as these will have to be offset by fresh deposits from elsewhere if there is not to be a strain on British resources or upon the foreign exchange reserves.

Bombay

**DOMESTIC DEMAND FOR
TEXTILES IMPROVES
EXPORT TRADE HOPING FOR
BUSINESS WITH BURMA**
(FROM OUR BOMBAY CORRESPONDENT)

A BURMESE trade mission is expected to visit India some time in May to negotiate the purchase of cotton textiles. Trade circles here expect that substantial business will result. This optimism is justified as cloth imports into Burma have been negligible recently pending the formation of the Government-sponsored trade corporations. Meanwhile, the possibility is there that trade with the Sudan will also be stepped up in the near future. It is believed that this country will be able to export printed and processed goods on a larger scale than she did before to the Sudan, in addition to the traditional grey varieties. Apart from these possibilities, export activity has been negligible of late and prices of popular varieties normally sold abroad have declined during the past fortnight or so. On the other hand, there has been a revival in domestic markets after a long period of inactivity. Moderate business has been reported and the centres which have shown interest are Calcutta, Delhi, Kanpur, Madras and Andhra. The demand for superfine qualities including mulis, and voiles has been good. Fine poplins and medium shirtings have also attracted attention while coarse counts have been neglected. Prices remain steady.

The cotton market has been steady, although operators adopt a cautious attitude. Both the futures and the spot markets moved within narrow limits. It is not likely that trading will resume its earlier briskness until the Government clarifies its policies on prices. The Cotton Advisory Board believes that there is likely to be a shortage of short staple growths. It has, therefore, decided to recommend to the Government that fresh import licences be issued for about 100,000 bales of American cotton falling within the 1½ in. and 1½ in. group. It has also suggested that 50,000 bales of cotton stapling 1½ in. and above and 25,000 bales of staple length above 1½ in. be imported immediately from the soft currency areas and an equal quantity at a later stage.

Cotton Crop Lower

The present situation has been brought about by the fact that the domestic cotton crop is now expected to be lower by 600,000 bales than the original estimate. A shortage of tenderable cotton and a reduction in the output of Surti and Vijay growths are now apparent. There have been suggestions that imports of American cotton corresponding to the Vijay, Surti and Jaydhar varieties should also be permitted and a subsidy of about Rs. 250 a candy be given on condition that the cloth manufactured from such cotton will not be exported. In the futures market, Jarilla May last week moved between Rs. 701 and Rs. 713 a candy, while Vijay April was quoted between Rs. 852 and Rs. 863 a candy. Operators were reluctant to push up prices in the fear that the Government would intervene and freeze stocks. Tenders against the Vijay April contract have amounted to only 1,700 bales so far. In the spot market, transactions were limited following the Textile Commissioner's advice to mills to confine their purchases to immediate needs only.

Yarn Market Inactive

The recent improvement in the offtake of rayon piecegoods has had no effect on the yarn market. The 120 dull cone April delivery contract last week moved between Rs. 800 and 807 a case and slightly closed at Rs. 806. The June contract fared Rs. 19. In the case of staple fibre, 40s were neglected while 20s continued to be in moderate demand. The 2/40 April delivery contract moved between Rs. 610 and Rs. 617, while June delivery commanded a premium of Rs. 5. The cotton yarn market was dull and in the absence of upcountry demand, 20s lost about 1 anna a lb while the higher counts were neglected.

Castor seeds Better

The oilseeds market was somewhat dull with the exception of castor seeds which showed a moderate improvement. Although export business in castor oil was small, it is believed that substantial new business is in the offing with communist countries. The trade seems confident that the U.S.A. will re-enter the Indian market shortly. Although the market opened the week at Rs. 171.75 for May delivery and rose to Rs. 177.50, it closed lower because operators preferred to take the immediate profit rather than wait for a further rise in the event of castor oil exports broadening. The spot section, too, was moderate and ready castor seeds improved from Rs. 33.14 to Rs. 34.2. Arrivals of the new crop were satisfactory and readily taken up by mills to fulfil outstanding orders for castor oil. Groundnuts moved in sympathy with castor seeds, but the improvement was not sustained because of the belief that the stock position of groundnut oil is satisfactory. The May delivery contract moved between Rs. 169.12 and Rs. 170.75. The linseed market was hit by large arrivals of the new crop and the absence of export demand. The May delivery contract moved between Rs. 29.87 and Rs. 29.19. Prices of spot linseed moved around Rs. 28.50, while linseed oil was weak at Rs. 14.75.

Madras

**COMMUNITY PROJECTS MAKE
POOR PROGRESS
INDUSTRIAL LOANS FROM STATE
FINANCE BODY**
(FROM OUR MADRAS CORRESPONDENT)

THE seminar on community development in Kodakanal agreed that the poor had got little benefit out of the Government's community development schemes. Higher production and better prices did not help those without property, and the "new life" did not extend any opportunity to the landless labourer—this was the opinion of Mr. M. Bhaktavatsalam, former Minister for Community Projects, Madras. It seems that village uplift by official pressure has failed to make much progress. What passes for popular co-operation is purely formal. Few cottage industries have sprung up; but the pathetic contentment of the masses with the existing state of their lives remains undisturbed. The Chief Secretary in his talk spoke about the need for self-reliant panchayats. He pointed out that in Madras, which has few industries and where agriculture depends largely on expensive irrigation, things would have to be put right not only by the Government, but by the people themselves.

There is a proposal to introduce mutual benefit funds in the villages to support a savings drive. There is also talk of social education to prevent the people relapsing into their old ways. Sir Malcolm Darling's visit to India to review co-operation efforts may yield some results. But, in any case, co-operatives in rural areas should take on a multi-purpose character. As women have to take a leading part in village development, they should mostly work as village level workers. The Madras Government has a welfare department to look after women and to provide part-time employment for them, but its work is concentrated in towns. It must shift its activities to the village.

Indo-Australian Trade

The Australian Trade Mission has been in Madras. Secondary industries in Australia may find a market in India, it is thought. The manufacture of automobile spares has made significant progress in Australia. The impression has been created that India could get supplies of automobile accessories from Australia rather than from the U.S.A. The fear that grain gifts from the U.S.A. might spoil the market for Australian wheat in India

has been voiced by the leader, Mr. Hurley. It is hoped, however, that India will buy more milk and dairy products from Australia in the future. The relaxation of import restrictions may increase the volume of trade between the two countries. The chances of half-tanned Indian leather finding a market in Australia are regarded as bright.

Aid to Industries

The report of the Madras Industrial Investment Corporation, for the year ended June 1956, suggests that it had to offer large loans to industries. The State Bank of India provided an advance to supplement its resources. Bonds have been issued and the Corporation has decided not to accept deposits for less than one year. The bonds issued at 4½ percent a year for Rs. 36,14,400 have enabled the Corporation to increase its loans. Further, the Government advanced the Corporation a sum of Rs. 20 lakhs on Bank rate terms. The Madras Corporation's resources were reduced by the division of assets. Andhra got its share of the capital to start its own Corporation. But the latter still owes the Madras Government a sum of Rs. 6.12 lakhs towards dividends due. The business of the Corporation increased as loans were sought by many new enterprises. For example, the Corporation advanced over Rs. 39.98 lakhs. The textile industry was the biggest client. Eight mills availed of loan assistance from the Corporation. Electric supply companies also relied on it for financing their expansion programmes. Small industries sought its help; a new paint factory got a loan for Rs. 50,000.

Leather Manufactures

The Central Leather Institute has been giving attention to the production of good leather from poor hides for use in footwear. At its recent discussions, mention was made of the need to step up exports to the U.S.A. and to produce tanning extracts from local barks. The cultivation of wattle is now well established in the Palni hills. The use of hair from hides for druggist-making is common in Andhra. A new use has been found for leather waste compressed into boards. Instead of being used as manure, it can be turned into board which, like split pieces, can be used for making fancy articles. Visiting trade delegations have made it clear that the demand for kips is not going up. The use of rubber for soles is now common in the U.K., which will have its effects on the export trade in this country. Better methods of flaying and dressing of hides are demanded by overseas buyers, so the points referred to in the Hides Cess Enquiry Report have acquired special relevance after the emergence of Pakistan as an exporter of hides and skins to Europe.

How banking serves the PLYWOOD INDUSTRY

TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the complete banking service we offer.

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office : PALAI, TRAVANCORE-COCHIN
Branches at : Madras, Cochin, Quilon,
Trivandrum, Alleppy, Mangalore, Bangalore,
etc. Also at : Delhi and New Delhi.

A LEADING BANK IN SOUTH INDIA

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

LABOUR DISPUTE AND INFLATION (FROM A SPECIAL CORRESPONDENT)

IN SPITE of the shipyard and engineering strikes, a favourable view continues to be taken by British industrialists. This is mainly so because it is believed that industry, as a whole, can stand quite substantial advances in wages without suffering a serious injury. It is an opinion which has received support from the disclosure that the shipbuilding industry has contracts in hand to keep it fully employed for five years, while, as is well known, the engineering industry can hardly keep pace with the work coming to it as an outcome of nuclear developments. The motor car industry seems to have fully recovered from its own labour troubles and the effect of the shortage of petrol. Indeed, the chairman of motor manufacturing companies have had little to say on these matters at the recent annual meetings, and their stories mainly related to the considerable orders which their salesmen were able

to collect from overseas while the strike was on, and of the now promising outlook in many directions. Surprises may be in store, and perhaps it might be as well not to forget entirely the Shakespearean warning that it is the bright day that brings the adder forth. But it is certain that current labour disputes stand in strange contrast with those which were so persistent in prewar days. Then, it may be recalled, two to three million workers were unemployed for a decade, and the atmosphere was bleak and bitter. The fight was to get some kind of a job at almost any wage. It is very different now, when the job is certain and the wages are high, and the question is simply whether the workers can extract the largest possible addition to add to an already generous share of industrial profits. The argument that the satisfaction of their demands means further inflation is still heard, as are also warnings that Britain must be reducing her power to compete in foreign markets. But there is no real conviction in the words. Foreign contracts are still being obtained—and the U.S.A. is wealthy and now once more a friend. Inflation has proved the truth of the adage that familiarity breeds contempt. Moreover, it has to be granted that with the surge of new wants and fresh ways

of meeting them, dangers of inflation seem inescapable.

Increase in Overdrafts

The revelation, in certain companies' balance sheets, that in spite of the "credit squeeze" policy substantial bank overdrafts have been granted during the past 12 months has led to the question of whether the policy is being thoroughly and equitably pursued after all. The answer given to criticisms has been that the increase in overdrafts has been only for the purpose of financing export trade, and has not in any way swelled the purchasing power of the home market. As some of the credit thus obtained must have gone for the payment of wages, this contention can hardly hold good. It would also seem probable that the necessity has had to be faced of providing foreign customers with long-term credit in order to get their orders—the actual borrowers for this purpose being British companies which have tendered. Banks still continue to receive communications from the Treasury reminding them to be stringent, and there is no doubt that, under protest, the banks reluctantly put pressure upon individuals and small firms. Nevertheless, the bankers appreciate that trade expansion is dependent upon credit expansion. Assured of the soundness of the object in view, credit facilities should be accorded without invidious distinctions between small and large, and home and overseas trade. In the modern world each type of trade reacts to the other's benefit and no protective measure can be as efficacious as a judicious inter-action of this kind.

Entertainment Tax

The entertainment industry is one of those where unemployment is in evidence. Proprietors of the theatres which have been the most severely affected blame the entertainment tax entirely. One young lady, now unemployed, shares their view; for she has imitated Lady Godiva's feat by riding in the West End of London (until interrupted by the police) similarly "tax" the tax will have to be modified, but the stubborn fact remains that home television is attracting audiences and this tendency will grow. Under these circumstances, the outlook is for more theatres to close. So far, the cinemas are much less affected, aided perhaps by their continuous programmes.

Metallurgical Courses

Metallurgy and metal working processes and equipment are among the subjects most frequently dealt with by British technical journals, as far present time inspiration being provided, as far the ferrous metals are concerned, by Britain's record output of iron and steel. Additional metallurgical courses are announced by the Birmingham College of Technology, where new gas-fired furnaces are being installed. The college, by now claims to be a pioneer, at least in Britain, by fuel having four women students of metallurgy. And the related subjects of heat and power are also prominent in the journals. Articles on nuclear engineering tend often to reflect much publicised official descriptions of reactors, and are recognisable as having emanated from the common source of Harwell. Electrical engineering, including "electronics", offers a wider range.

Technical Publication

The task of those who wish to build up files of articles to help develop their own contemplated industrial projects is not easy. So much that appears in the Press is superficial. A precaution that should be taken is to ensure that the articles selected are of a fair length. Articles of less than three pages (unless the journal has an exception—large page) can usually be ignored by the serious student, who is not interested in glorified news items or "write-ups." He should, of course, include in his subscription list either the patent journals or one which features summaries of patents bearing upon the industries with which he is closely connected. Articles on technical subjects in popular journals, with their undue stress on this or that, should be avoided, it being essential to cultivate a well-balanced and deliberate view. Some publications contain "abstracts" with but the barest details. It is better to have abstracts of a minimum length of 300 words or so, for then an assessment can be made of the probable merits of the original article and whether it is worth obtaining in full. It is wise to subscribe to a journal, although a little more expensive, where the abstracts are likely to be made by a person with knowledge of the subject than by one who can do little more than record an entry. Complaints are made by those who have formed research libraries during the past few years that they are unable to keep pace with the matter that comes to hand, and that they have anticipated the attempt a larger staff than was anticipated as necessary. This difficulty can be much reduced by exercising greater discrimination at an early stage along the lines indicated above.

New Electronic Device

Electronic engineering has scored a further notable success in inventing a machine for the sorting of letters. The machine is handled by an operator who uses code alphabetical letters which are related to various geographical areas, according to the addresses he reads upon the envelopes. The letters, thus controlled by the pressing of keys, disappear on to roller tracks and are approximately diverted into the different boxes appropriate to the various sorting divisions. The post office is experimenting with other electrical devices for stamps and parcels, and the news has given yet another fillip to the electronics industry.

Jute

POOR RAILWAY FACILITIES FOR JUTE TRANSPORT

MEASURES TO IMPROVE EFFICIENCY NECESSARY

FOR some months past, commercial offices have been receiving bulletins describing many phases of the activities of the railways and the innovations they are introducing. Now this is Railway Week and there is a flood of publicity in the daily Press and on the screen to enlighten us as to what the railways do for passenger and goods movement. Some of the things we are told about are quite impressive, but those who use the railways for the transport of goods would be more pleased to hear of what is being done to improve the handling of goods and the documents covering them. A great deal of time is wasted and much annoyance caused in jute offices by railway receipts not being properly made out, freight being wrongly calculated, goods being sent to wrong destinations, and consignments being mixed up. Much of the trouble probably arises from the low standard of education of the staff at upcountry stations but it is believed that a great improvement would result from better supervision.

One of the chief causes of complaint is the mixing up of consignments at points of transhipment from narrow gauge to broad gauge lines and on the ferries across the Ganga. The organisations there are so bad that it is seldom that a consignment of jute reaches a mill intact. Usually, bales of different consignments are mixed up in the same wagon and often a number of bales in a wagon belong to a consignment booked to a different destination. Frequently, bales arrive at mills without tickets. It is alleged that this is because, when a few bales of a consignment cannot be found to complete the loading of a wagon at a re-loading point, it is the practice of the station staff to put in any bales that may be at hand from any consignment, after removing the tickets from the bales. It is certainly true that a large number of bales reach the mills minus tickets. As the tickets will not accept bales without tickets, the bales must have been removed en route and the only places where that could have been done is at transhipment stations. Another frequent occurrence is that when wagons arrive at mills they are found to contain bales which do not correspond to the railway receipts. In these cases it usually happens that, after much trouble and delay the bales which should have been in the wagon are found to have gone to another mill. This is the result of the clerk responsible for labelling the wagons having got the labels mixed up. In other cases, wagons are sent to wrong mills or to wrong stations.

Then there is the question of calculation of freight. The percentage of railway receipts in which the freight has been wrongly charged must be very large, and much time is wasted on claims and counter-claims. The usual practice is that mills pay freight charges by the debit note system. When there is an undercharge, they are simply informed that their account has been debited, and they claim the amount from the seller who is responsible for payment of the freight. In many cases, however, the alleged undercharge is incorrect and the seller has to reclaim from the railway. This causes more trouble because the railways very often delay informing the mills of the debit until more than six months after the consignment was booked. When the seller makes his claim for a refund, the railway takes shelter behind a provision of the Railway Act which makes claims time-barred unless made within six months of the booking of the goods. Many sellers believe that this is a deliberate policy.

A somewhat similar thing happens when mills receive consignments short by one or two bales. Goods clerks are extremely reluctant to issue "short certificates", and this also results in such delay that when claims are made on the basis of the short certificates, the claimants are told that their claims are time-barred. These are some of the ways in which the railways are deficient in their service to the raw jute trade and which result in a great waste of man hours and of money. As this is Railway Week and the railways are busy claiming how well they serve the public, it seems appropriate to tell them how they could improve their service through more care, diligence and supervision.

THE JUTE MARKETS

All sections of the market, except Cossipore, have had a quiet week. Prices have been sustained. It would appear, mainly because of the lack of rain in the jute districts, which has held back sowings. It is true that sowings are behind those of 1956 but they are ahead of those of 1955 at the corresponding date. It should also be kept in mind that, last year, after early sowing because of early rain, there was a drought which retarded growth. Later, excessive rain and floods came which damaged the crop in many areas. Nor should we forget the old saying "late sown, well grown." which is based on generations of experience and the vicissitudes of climate. If, indeed, it is the lack of rain and nothing else which is keeping gunny prices up, we may look for a drop as soon

as rain comes, especially if it falls heavily in Clive Row!

Manufactured Goods: Very little business has been reported. Early in the period, some overseas business was done in sacking and there have been enquiries on a small scale for both hessian and sacking for early shipments. There has also been business in odd sizes and weights, but no large-scale business has been reported. In the middle of the period, the fatka market dropped under selling pressure by a large speculator and false reports of rain in the jute districts. On Tuesday afternoon, it was reported that there was an enquiry in the market for a fair quantity of heavy sacking.

Quotations on Wednesday morning were as under:

	April	May	June	July-Sept.
Rs.	Rs.	Rs.	Rs.	Rs.
40m. 8oz.	34	33.94	33.50	33.50
40m. 10oz.	41.37	41.62	41.69	41.75
B Twills	111.25	111.75	111.87	112
Heavy Coes				
(Plain)	111.90	111.50	111.87	112
A Twills	134	134.25	134.50	134
Liverpools	124	126	126	125.50
Cornacks	111.50	112.62	112.75	113

Raw Jute: Mills have not shown very much interest and the turnover has been small. But business has been enough and fairly widely spread to keep the market steady. Sellers tend to be reserved because of the delay in sowings for want of rain and because of the lack of imports in up-country markets. Business has been reported in Assam White at Rs. 28.25 to Rs. 28.75. Desal mesta at Rs. 25.50, Northern mesta at Rs. 26. Daissee jute at Rs. 30.50 and Murshidabad Tossa at Rs. 30, all basis Bottoms. Bimli has been done at Rs. 23.50 f.a.q. and New Crop Assam at Rs. 27.25 basis Bottoms for August-September. There are buyers at slightly under the quoted prices, and throughout the week, one group has been offering Rs. 29.75 basis Bottoms for Daissee and Rs. 24.75 basis Bottoms for Desal mesta, without being able to secure a substantial quantity. In Cossipore, mill buyers have been active and sellers report business at prices well above the parity of the prices for contract jute in Calcutta. Arrivals during the week have been 503 wagons, compared with 491 wagons in the previous week.

Quotations on Wednesday morning were as under:

Indian Jute:	Land-d at Mills Rs. and basis	Shipment.
Northern	28.80	April-May
Assam	28.50	"
Jungh	26	"
Assam Tossa	31	"
Murshidabad Tossa	30	"
Daissee Jute	30.50	One month
Daissee Mesta	25	"
Northern Mesta	26	April-May
Desal Mesta	25.50	"
Murshidabad Mesta	24	"
Northern ex Calcutta	22	One month
Local Packing	26.50	"
Bimli	23 F.A.Q.	April-May
Pakistani N.C's	102 a bale	"

Mofussil: Imports are scarce and, in some places, have practically ceased.

General rain is now needed to enable sowings to be made, but the weather has been hot and dry nearly everywhere. In a few districts, sowing is still being done in anticipation of rain, but reports say that where sowing was done some time ago in expectation of rain the germination will be poor if the rain does come.

I. J. M. A. Production

The March production of mills reporting to the I.J.M.A. was 84,700 tons, of which 36,000 tons was hessian, 43,100 tons sacking and 5,600 tons other kinds. The hessian output was 42.5 percent of the total, compared with 50.9 percent in February, while the sacking output was 50.9 percent compared with 49.4 percent. This is interesting as being the first time for some months that the hessian percentage has not increased. Does it indicate a reversal of the recent trend?

The total production for the nine months, July 1956 to March 1957, was 771,000 tons, of which 324,200 tons or 42.1 percent was hessian, 394,700 tons or 51.2 percent sacking and 52,100 tons or 6.6 percent other kinds. In the corresponding period in 1955-56, the total production was 800,500 tons, of which 299,300 tons (37.4 percent) was hessian and 451,000 tons (56.3 percent) sacking.

I. J. M. A. Consumption of Raw Jute

On the basis of the reported production of manufactures, the mills consumed in March 494,600 bales of raw jute, bringing the consumption up to 4,496,200 bales for the nine months July 1956 to March 1957. In the corresponding nine months of 1955-56, the mills consumed 4,663,200 bales.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment

from the port of Calcutta. These are gross figures based on shipping bills presented:

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 10th April, 1957	507.8	8,074.6	8,582.4
1st to 10th March, 1957	720.3	16,579.1	17,299.4
1st to 10th February, 1957	764.7	14,047.0	14,811.7
Sacking			
1st to 10th April, 1957	6,269.8	645.8	6,915.6
1st to 10th March, 1957	17,752.0	2,487.1	19,839.1
1st to 10th February, 1957	8,486.9	1,535.2	10,022.1

I. J. M. A. PRODUCTION FIGURES FOR MARCH

The Indian Jute Mills Association reports that the total production of jute goods during March were as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	2,176 tons
(b) Sacking	41,447 tons
2. Gunny Cloth	
(a) Hessian	33,847 tons
(b) Sacking	11,694 tons
3. Other manufactures	5,617 tons
4. Total production (above figures combined)	84,661 tons
(a) All kinds	14,014 lakh yds.
(b) Hessian (both bags and cloth)	14,014 lakh yds.
(c) Sacking (both bags and cloth)	10,130 lakh yds.

Summary		(000 Yds.)			(000 tons)		
		Mar. 1957	Feb. 1957	Mar. 1956	Mar. 1957	Feb. 1957	Mar. 1956
Hessian		14.01	13.50	13.50	36.0	35.0	34.8
Sacking		10.18	9.30	13.95	43.1	39.6	57.8
Others					5.6	5.6	6.7
Grand Total					84.7	80.2	99.3
Hours worked					200.5	192.0	206.0

N.B. These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

THE PAKISTANI JUTE MARKETS

FIBRE PRICES RISE AGAIN

(FROM A NARAYANGANJI CORRESPONDENT)

THERE is no doubt that the current season will go down in history as one of the worst which the trade has suffered, and as one of the best which the cultivator and the smaller middle man has enjoyed. With early sowings and good weather, and possibly, even an excess of it this season, there was every reason to believe that jute prices

The South East Asian market — a problem?

Businessmen interested in trade with South East Asia couldn't do better than to consult the Indian Overseas Bank. The bank has extensive experience in trade with South East Asian countries through its chain of branches strategically located all over South East Asia. Before you invest in trade in this area it would be wise to consult the Indian Overseas Bank.
