THE PROBABLE FATE OF S. U. N. F. E. D.

SEPARATING ECONOMIC AID FROM POLITICAL STRINGS

WITHIN the next few weeks the General Assembly of the United Nations is to discuss S.U.N.F.E.D., that charmingly named and ambitiously conceived project for a world development pool to whose elaboration the Government of India has been no stranger. It is surely a sign of the political innocence of the authors of this scheme that it should be brought for debate before an Assembly that has recently been the scene of violent verbal conflict between the proposed donors and the proposed beneficiaries. Most of the U.N. General Assembly's time in the past year has been given over to the quarrels of the under-developed countries with the "imperialists"—Egypt against Britain and France. Syria against the U.S.A., the Arabs in general against France, Hungary (or rather Hungary's friends) against Russia, Indonesia against Holland and the Afro-Asian group against all the trusteeship powers. It is into this stormy and envenomed tribunal that the sponsors of S.U.N.F.E.D. are now preparing to introduce a vast plan which not only presupposes a notable access of generosity on the part of the denouced imperialists of both blocs, but which requires that the sums thus generously contributed be removed in large measure from the control of national governments. For the capital pool accumulated by S.U.N.F.E.D. would be invested not bilaterally but multilaterally, under the control of an international organisation which to date has only approached unanimity on motions suggesting that the main subscribers of investment funds are a bunch of designing scoundrels.

But the political optimism of the proposal does not exceed the economic optimism on which S.U.N.F.E.D. is founded. It is assumed that, given the political willingness to subscribe, the funds required exist in the advanced countries, and notably in the U.S.A. and certain west European countries. This is extremely doubtful. Before ever *Sputnik* was heard of, it was argued on this page that "we are now entering an era where the burden of arms will be so great as to handicap even the industrial giants, Russia and the United States itself". And since then, the revelation of Russia's advance in the fantastically expensive domain of rockets and satellites has brought it home brutally to the sanguine American people that even their prosperous economy is faced with tasks that must set limits to their open-handedness abroad. Mr. Krishnamachari, for example, could have landed in Washington at no more unfortunate time to discuss assistance with a government whose public debt is already near the permissible limit, while *Sputnik* was circling in the heavens above. It is not suggested that the effort now required of the U.S.A. will make impossible all foreign economic aid, but calculations of what it cost the Russians to launch a satellite explain in retrospect why Moscow could afford to make no concessions to Hungary and her other dependents—much less indulge in the easier economic policies advocated by Mr. Malenkov.

*

These evident weaknesses of the scheme notwithstanding, the principle of S.U.N.F.E.D. was firmly approved by the Economic and Social Council of the U.N. at its session in Geneva last July. But principles are one thing, their application another. Nobody will challenge the principle of this scheme—aid is clearly needed by the under-developed countries for projects which are not immediately or quickly profitable, and which therefore cannot be financed by such institutions as the World Bank, which must work on the businesslike lines of all banks. It is the complaint of the backward countries that loans from bankers, or from institutions that must work on banking principles, necessarily go towards relatively fast-maturing investments while the "substructure" of the economy, where the return on investment is slow or incalculable, is neglected. Thus money can fairly readily be raised for an oil well or a steel mill, while nothing is available for education, public health and road transport. Of course this is true, and it is the whole weakness of the system of international assistance that has emerged since the war.

The exponents of this truth probably do not realise that they are restating the best apology that can be offered for 19th century imperialism, for it was only old-fashioned imperialism that was willing to make the immense and slow-maturing investments in public health and education that are scorned by the slicker politicians who have succeeded the imperialists in Russia, the U.S.A. and the United Nations. Fifty years ago, colonials accused the metropolitan powers of denying them industrial advance. The magnificent work performed by the imperialists in public health and the like was taken for granted as the necessary responsibility of political rulers. Today, the same colonials as free men complain that the only help they can get abroad (when they can get any) is for industry and its immediate adjuncts, while no one wants to finance the continuation of the imperialists' less spectacular but important work. S.U.N.F.E.D. is designed to constitute a sort of anonymous imperialism in which all the advanced nations pool capital for investments that neither provide a quick return nor entail the least political advantage.

*

A quite different attempt to meet this difficulty is seen in the case of France; the French are (after the Russians and Portuguese) the most conservative and least enlightened of imperialists and yet it is they who in relation to their national income, make the world's highest contribution to investment in backward countries. Most of this money goes to the economic "substructure" of the African territories, and they have rightly demanded that before their partners in the Common Market begin trading or making industrial investments in those territories they agree to share the burden of uneconomic "imperialist" development. And it is because the African political leaders recognise the wisdom of this policy that they have decided to postpone their demands for national independence, lest in a few years they find themselves "free" and in the same position as the Arab and Asian countries that are now urging the establishment of S.U.N.F.E.D.

The Americans, who would have to find the greater part of the capital needed for the scheme, have so far openly opposed it, and their opposition will not have lessened when discussion is opened at the U.N. next month. They have invoked three main arguments. Firstly, the American taxpayers' money cannot escape the control of Congress, as it would in the anonymous S.U.N.F.E.D. pool. Secondly, the projects put up for investment from S.U.N.F.E.D. have not been carefully studied and the most probable result of haste would be a grand waste of capital. Thirdly, the U.S.A. cannot afford large-scale multilateral investment until the burden of armament has been reduced by agreement with the Russians. The spokesmen of the hopeful beneficiaries have met this case not so much with contradictory arguments as with assertions of a different point of view. To the first point, they reply that the whole idea of S.U.N.F.E.D. is that investment capital *should* escape the control of national parliaments, because it is the political strings that always accompany bilateral aid that they find intolerable. As for the possibility of waste, the real source of waste, they say, is that the World Bank and similar institutions make investments in the "superstructure" of under-developed countries, whose real benefit is diminished by the primitiveness of the "substructure". The American attempt to link greater investment with disarmament is hardly taken seriously, for this seems to them a way of putting off the matter till doomsday.

In other words, the advocates of S.U.N.F.E.D. do not meet objections with rational argument, but simply with the exposition of an illusion. This is the illusion, widespread in one half of the world today, that there exists some sort of sacred right to economic development, just as there exists a right to political independence and self-determination. It is twelve years of sentimental palaver at the United Nations that has bred this illusion; the U.N. has created a problem that it cannot itself resolve. It is because so many people in the backward countries imagine there is a right to economic and social progress that the cause of S.U.N.F.E.D. will be pleaded next month in the General Assembly by the same politicians who have day before been demanding recognition of the right to freedom of the Algerians, Cypriots, Togolanders and others. The right to freedom no doubt exists, but the right to get richer is sheer fantasy. A shocking example of this mode of thought was offered by a New Delhi contemporary a few weeks ago when it wrote: "Since the developed countries have the capital while the under-developed countries have none, it follows as a logical principle in the regulation of investment that the developed countries will need to cut back their investment....." Now we in India are entitled to use all sorts of arguments to secure urgently needed financial help from abroad, but to proclaim "logical principles" of this order is simply to reveal total ignorance of the world in which we have to find such help.

*

There exists no logical principle requiring that the rest of the world help us develop, or help any other backward territory. To that extent, the S.U.N.F.E.D. scheme for a vast, silent, anonymous and universal charity is self-deception. What assistance we and other countries similarly placed can get will depend on friendship and calculation—and, since it is politics we are talking about, even the friendship will be political friendship. International economic aid will probably always remain both modest and bilateral. And it will never escape the servitude of some degree of control and supervision by the giver, whether this control be stigmatised as "political strings" or "banking principles". It is because the forthcoming General Assembly debate on S.U.N.F.E.D. will see a move to acknowledge these basic facts that it may, after all, have some interest. This move originates with a former Marshall Aid administrator, Mr. Paul Hoffman, and the French Government delegate, M. Abelin. They propose the creation of an "experimental fund" of $100 million from which investments can be made in backward countries only after projects have been approved by the contributors of capital.

This is a considerably more modest idea than the pipe-dreams of the artisans of S.U.N.F.E.D., but just because it is more practical it is more likely to bear fruit. Even if it were taken further, however, it would be a long time before credits began to flow, and they would have to be distributed over a wide field, in the first instance to the most backward among the backward nations. On all these counts, it would be of very little relevance to India's present need of foreign assistance—though that is no reason why India should not lend all her support in the U.N. to the attempt to salvage something from the ambitious S.U.N.F.E.D. scheme. At the present time, any funds she might receive under it would be a welcome relaxation of the burden on the resources needed for industrial development which are now ear-marked for social overhead

PAKISTAN'S SIXTH GOVERNMENT

NO PERMANENT ANSWER TO INSTABILITY

THE protracted elusiveness of the sixth Government of Pakistan in eleven years, after the fall of the fifth on what appears to have been a clash of personalities rather than of principles, was not the first indication the outside world had of something seriously amiss in the politics of that country. The subsequent installation of Mr. I. I. Chundrigar as Prime Minister is unlikely to find anything like a permanent answer to the problem, if only because his party enjoys no majority and is pathetically dependent upon the support of the Republican Party, hitherto a not wholly reliable political quantity. Mr. Suhrawardy, who has few tricks to learn from anybody in the game of politics, is certainly not to be written off as a political force and, if the long-awaited general elections are in fact going to be held next year, not a few surprises can be confidently expected. Behind these figures lie many forces less easy to identify; and above them all is President Iskander Mirza, whose concept of a "controlled democracy" has so far shown itself at least as much in control as in democracy. Those who prophesied in 1947 that Pakistan, at least its western wing, would go the way of all Middle Eastern governments have not been proved right, but the experience of the past twelve years has been far from a steady movement towards an established and democratic form of government.

If the record at the end of over a decade is unsatisfactory in parts, the cause thereof was in part inherent in the genesis of Pakisan. It was not a positive idea which led the Muslim League to demand a separate State. Its theoretical basis, the two-nation theory, was shot through with holes right from the beginning, not the least because of the large number of Muslims who were bound to stay on in India. For the rest, it was all a strong anti-Congress or anti-Hindu sentiment, and so negative a factor can be a rallying point only for a short period. The period has been longer than many had hoped, and even as some of India's difficulties are the direct result of her failure to evolve a more workable relationship with Pakistan many of Pakistan's uncertainties can be traced back to the fact that with her nearest neighbour she persists in remaining unfriendly. Mr. Chundrigar referred to the fact immediately on his assumption of office, which is no guarantee that he will be more successful than his predecessors in coming to terms with India. It should not be forgotten that, without a near-hostile attitude to India, Pakistan loses a part of her very reason for existence.

* * * *

The virtual disintegration of the Muslim League only a few years after the birth of Pakistan may well be the first cause of continuing instability. Other parties have emerged, many more than in India, but none with a national prestige comparable to what the League used to enjoy, and the fact that the victorious Awami League found its leadership sadly split almost on the morrow of its spectacular electoral triumph has since been the begetter of yet another party and some more confusion. The Republican Party consists of elements too heterogeneous to be single-minded on anything. This depressing, if somewhat hasty and incomplete, catalogue of Pakistan's political diseases should be a surprise to nobody acquainted with the background of Muslim politics in India. The community came into the game late, and the masses came later. That there has not been a single general election yet in Pakistan continues to keep the masses out; and leaders, unchastened by public opinion and factious by habit, are too busy jockeying for positions to give national interests the primacy they deserve.

In a way very different from India's, pre-occupation with foreign affairs has done not a little to contribute to internal instability. It is for Pakistan to decide whether she will have military alliances and with whom, but unequal partnership with vastly richer and more powerful nations often tends to distort the pattern of a country's internal politics, and some of Pakistan's ailments are clearly attributable to this factor. However invisibly, every potential Prime Minister looks more to a foreign power for sustenance than to his own people. Finally, there is the unresolved conflict between the east and the west of Pakistan. It has already been demonstrated that the unifying capacity of Islam was grossly exaggerated, although the Muslim League's renewed attempt to revive separate electorates probably hopes to profit from the new communal tensions which are sure to develop in consequence. The profit may be more the Party's than the country's.

* * * *

To what extent economic distress is responsible for Pakistan's political uncertainty it is almost impossible to measure. That there is a causal connection between the two can scarcely be doubted. Political extremism has often been used as a cover for economic failures, and not in Pakistan alone. The adventitious gains from the refusal to devalue when everyone else did so, did not last long, and industrialisation has been slower because of a variety of circumstances. There have been reports of food shortages, and it has been alleged that many of the Hindus, and some Muslims, have been coming away from East Pakistan more for economic reasons than for any actual threat to their security or religion. Nor is it wholly surprising. A stable political structure is an essential condition of economic progress, and this Pakistan has not yet been able to provide for herself. There has been impressive progress in a sector or two—jute is an instance—but political complications, internal and external, have so far stood in the way of that dedicated application to the economic problems of the country without which success is impossible.

However precariously composed, the Chundrigar Government has an opportunity of doing much to remove the weaknesses listed above. There would be no need for behind-the-scene "deals" either on joint electorates or the one-unit scheme if there was a reference to the people. Manoeuvres are necessary only because no party has a national mandate. Pakistan does well to remember that her demands for immediate self-determination elsewhere are not strengthened by the fact that her own people have not had a general election yet. The second need will be to put some sincerity into a new effort to improve Indo-Pakistani relations, at least in economic matters. It is a strange paradox that both India and Pakistan are co-operating with Britain and the United States on an increasing number of projects but there is very little acting together between the two themselves. Recent history is enough to dispose of the naive notion that India and Pakistan could be friends on the day after partition; even solution of the Kashmir and canal waters disputes tomorrow would not guarantee that but the time has clearly come for Karachi to see that conflict has paid about all the dividends it could and a better gambit now would be a businesslike relationship with India. Friendship may follow as a priceless by-product.

REPERCUSSIONS OF THE BANK SETTLEMENT

LESSONS FOR LABOUR POLICY

THE fact that the bank strike was wholly irresponsible and based largely on political motives emerges more clearly now that a settlement has been reached. Those who sought to weaken still further the West Bengal Government's control over the labour position in the State could hardly have chosen a better means of achieving their aims. Great credit is due to the bankers that the results of the strike were not more serious. But the indirect effect of the steps taken—more to placate the strikers and to avoid further difficulties than with any thought for the future repercussions—is likely to be damaging enough and it is doubtful whether the implications have yet been fully realised.

The view is widely held that, had the strike been allowed to run its course, it must inevitably have broken within another ten to fifteen days—a period which should not have proved fatal for the economy. Had this happened there is little doubt that the effect on the State Government's control over the trade unions and labour generally would have benefited. Not only would the Government's arm have been strengthened but some encouragement might have been given to the hard-pressed private sector as well. It is unfortunate, therefore, that Government action should have shown such a marked desire to placate at any price rather than to take positive steps towards settling a deteriorating situation once and for all. And it is doubly unfortunate that this should happen when Governments generally are becoming large-scale employers and are beginning themselves to experience the labour difficulties which have beset the private sector for many years.

* * * *

When the strike was declared illegal, many hopes were raised that at last positive steps were being taken to control the irresponsible elements in the unions. Subsequent events have not supported this view. A show of strength is useful only where there is the determination to press it to its logical end. Now, by backing down, the Government appears to have strengthened the hand of the unions immeasurably. To say this is not to condemn the intervention of the State's Chief Minister and his reasonable desire for a solution to what must have been a difficult problem. His motives were of the highest and his efforts, in many respects, amply rewarded. But this does not vitiate the point that the results of the intervention may not be entirely what were expected.

With a strike of serious proportions, the only remedy open to the employer—public or private—is that of getting it declared illegal. This involves not only the prosecution of strikers, but other steps which directly affect their pockets, thus bringing home forcibly the true effects of faulty leadership. Such powers must be used sparingly. But they do nevertheless provide a strong deterrent to any action which might threaten national security or the economy, provided it is clearly known that they will be rigidly enforced.

This deterrent would not have been prejudiced by the negotiated settlement, had it not been for the subsequent dropping of the prosecutions on the ground "that it would not be in the public interest to proceed further", and for that part of the compromise which conceded a month's pay in advance. One must assume that the main reason for the withdrawal of the prosecutions was the desire to avoid further awkward repercussions and to prevent the strike from breaking out afresh. It is here that the greatest damage has been done, because it has taken much of the sting out of declaring a strike illegal. In future, such a declaration is unlikely to carry much weight; strikers will feel that if the Government has backed down in one instance it will do so again if they persevere. Furthermore, the advance of a month's pay appears to have achieved nothing except possibly to lay the foundations of future disputes and dissatisfaction. The unions have already announced that they do not intend to repay it, and to insist might well create another explosive situation.

* * * *

That the strike was irresponsible is amply borne out by the action of the unions in withdrawing from the proceedings of the Merchant Tribunal on the pretext that their application for an adjournment had not been granted. It was pointed out by the Counsel for the bankers that one of the requirements of an Industrial Tribunal is that it should deal expeditiously with complaints and that its decision should be binding. To withdraw from proceedings merely indicates that the unions have no real desire to come to any settlement at all and are, in effect, prepared to go to any length to postpone a final solution. Their grounds for withdrawal—that they wish the Central Government to amend the terms of reference to the Tribunal drawn up by the State Government—have no force since the very wording of the State Government's reference places their complaints before the Tribunal quite adequately.

It may well be felt that the way this matter has been handled by the Government has prejudiced the chances of a gradual improvement in labour relations generally. Until this can be achieved the development of industrialisation is bound to be affected. If ever there was a time when firm steps should be taken by Governments throughout this country to prevent any further deterioration in the labour position, it is now. If they fail to do so it will be those Governments as well as the private sector who will suffer.

GOOD ADVICE ON ROAD TRANSPORT

PROGRESS in the development of road transport seems so far to have been confined largely to the holding of conferences and the appointment of committees, followed invariably by the shelving of most of the recommendations they may happen to make. Theoretical exercises of this nature provide a fascinating spectacle for students of governmental sloth, but the precise contribution they make to the practical aspects of improvement in road transport remains doubtful. The All-India Conference of State Transport Commissioners and Controllers, meeting in the bracing autumn air of Mussoorie a few days ago, has produced a series of recommendations, the majority of which, for their cool realism, are commendable. But cynics might perhaps be forgiven for wondering how many of these recommendations are likely to be translated into official policy in the near future. State Governments, brooding over their recent bumper crop of deficit Budgets, are striving for more and more of the revenue which comes from mulcting road transport. Financial considerations apart, enthusiasm for nationalisation schemes has not waned since the discovery that few enterprises excel State transport undertakings in providing profitable opportunities for well-connected sinecurists.

The Mussoorie conference has urged the authorities to declare that there will be no further nationalisation of goods transport until the end of the third five year plan. Uncertainty about nationalisation plans has seriously hampered the growth of road transport in many States, and such a declaration would undoubtedly offer a welcome security. It is questionable, however, whether even the nine-year "moratorium" now proposed is sufficient. Considering that no State Government has the money to spare, there is a strong case for dropping ideas of road transport nationalisation altogether and for announcing the fact openly. The Mussoorie conference's recommendations about changes in the taxation of road transport have the virtue of simplicity, and could provide a useful follow-up to the announcement of a moratorium on nationalisation. It is suggested that the sales tax on motor vehicles, spare parts, tyres and motor fuel be levied at the source by the Centre, which should then guarantee the present takings of the State Governments. The States, in turn, should levy only one consolidated tax on motor vehicles. Subventions may be given by them to local bodies at least to the extent of the revenue which the latter collect in the form of octroi, wheel tax and terminal taxes, etcetera. Local bodies should also be allowed to benefit from the progressive increase in the consolidated tax collected by the State Governments. The conference has endorsed the principle of single-point taxation and agreed on a ceiling of 75 percent of the total taxes on motor vehicles in Madras.

The urgent need to expand road transport capacity may be appreciated from the conference's view that the number of public carriers should be increased by at least 50 percent over the next three years; the present number is 125,000. This can be done by helping in the formation of viable units, by granting permits more liberally, and by suspending for five years the code of principles for the operation of motor transport. The usefulness of truck-trailer combinations is to be explored, and the question has been referred to the Technical Committee of the Transport Advisory Council. The conference has served a useful purpose in that it has highlighted some of the major problems which are restricting the growth of road transport, and suggested concrete solutions for them. But whether the suggestions will receive a warm welcome in State Finance Ministries is greatly to be doubted. It is by the final results rather by pigeon-holed recommendations that the value of such deliberations can ultimately be judged.

COAL POLICY IN INDIA

By

Andrew Farquhar

This booklet consists of reprints of articles written by Mr. Andrew Farquhar, former Coal Adviser to the Tata Iron and Steel Co. Ltd., which have appeared in *Capital* in recent years. As expert analyses of India's coal problems and policies, they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

Calcutta 1.

CURRENT COIN

Case for Higher Tram Fares.—Tram fares in Calcutta are still the same as they were before the war. The number of people travelling has increased considerably, so the earnings of the Calcutta Tramways Company have risen. But the cost of running the services has risen to a proportionately greater extent. Speaking at the latest annual general meeting of the company, Mr. D. E. Webb, chairman, tells shareholders that wages have gone up by approximately 300 percent, the cost of power by 80 percent and the cost of steel rails by 328 percent. (A fuller version of the speech appears on a later page.) The "working surplus" for the 12 months ended 31st December, 1956, has come down to £257,000 from £312,000 in the previous year. The company has to find money for plans to improve and extend its services. Mr. Webb refers to the view that the finance required for improvements or extensions should be borrowed, and not raised from the company's internal resources. But he points out that if money is borrowed from the Government or from banks to finance an extension at present-day costs of materials, fares will have to be increased at the same time. Otherwise, the surplus arising from the operation of that extension will be insufficient to meet the interest charges on the new money raised, and any allocation for replacement or obsolescence will be impossible. "If, again, new money be raised to improve our fleet of cars, or the capacity of our sub-stations or the layout of our track, any increase in revenue would be negligible and, once more, there would be insufficient additional receipts to meet the interest charges". In the case of Calcutta Tramways, it is suggested that the company should borrow for its modernisation schemes and for extensions. But if the fare structure is not radically altered, "both could end in financial loss. Moreover, when a company such as ours resorts to borrowing for the financing of modernisation schemes which will merely bring up to date what was there before, then every rupee so borrowed is assuredly spent in the pursuit of inflation". Mr. Webb refers to the appointment of a tribunal by the West Bengal Government which is at present examining the fare structure and also a conversion table for fares which the introduction of decimal coinage has necessitated. The company has claimed before this tribunal the right to increase fares, so that it "may pay its way as it has in the past and give to Calcutta the transport system it requires".

* * * *

Transport for Manganese Ore.—The Bharat Chamber of Commerce has complained to the Government of India that the wagon allotment for private manganese ore exporters has been seriously curtailed in recent months. The complaint relates to the specific case of manganese ore movements from Barajamda to K.P. Docks, over which section iron ore consignments are also sent by the State Trading Corporation for export. Since July this year, iron ore exports have been reserved exclusively for the Government trading body, and a large quota of manganese ore exports has also been given to it. The Chamber feels that this may be the reason for discrimination against private exporters of manganese ore, "ostensibly to prop up the export of iron ore by the State Trading Corporation from Calcutta Port". Figures of wagon supplies have been furnished in support of this contention. The Chamber points out that the number of wagons allotted for moving only manganese ore was 3,802 during two and half months in July-September 1956, but in the corresponding period this year it has fallen to 1,929, or a decline of roughly 50 percent. On the other hand, the target for ore exports from Calcutta for the year, July 1957 to June 1958, has been stepped up by 44 percent over that of the previous year. The Chamber wonders how a 44 percent increase in exports can be achieved when the wagon supply has been cut down by 50 percent. The fact that preferential treatment is being given to the movement of iron ore is clear from the wagon supply figures. Until May this year, the allotments were about even for both manganese ore and iron ore, but since June the supply for the latter shows a marked increase which is quite out of proportion to the percentage increase in the iron ore export target. "There is a strong feeling among exporters that such an increase for movement of iron ore in the face of only some 9 percent increase in the export quota could not materialise but for the fact that the iron ore quota was held wholly by the State Trading Corporation and the manganese ore quota largely by private exporters", the Chamber says. It urges that the contractual relationship between exporters in India and foreign buyers should receive equal treatment no matter whether it is the Government body or private trade that is exporting ore. Equal facilities should be given for fulfilling export contracts. Iron ore exports have been made the monopoly of the State Trading Corporation on the ground that it has, among other things, secured better terms. Private exporters will be blamed if they fail to fulfil their obligations to foreign buyers because of the discriminatory allotment of wagon supplies, which, says the Chamber, is obviously no fault of theirs. Private exporters have been given a bigger quota of manganese ore this year, so they have tended to assume that wagon supply facilities would be at least as much as in the previous year. They have entered into export contracts and some have

* * * *

Industrial Expansion in U.P.—The second plan of the U.P. Government proposes a total outlay of Rs. 253 crores, out of which an allocation of about Rs. 16.43 crores has been set apart for industrial development in the public sector. Licences have been granted to private entrepreneurs to establish a rayon yarn filament factory, a factory for the manufacture of textile machinery parts, wagon-building units and a structural works in Kanpur, and a unit for the manufacture of soda ash and ammonium chloride in Varanasi. Two industrial estates have been started—one in Agra and the other in Kanpur; a third is being set up in Naini. Speaking at the half-yearly general meeting of the U.P. Merchants Chamber, Mr. Sitaram Jaipuria, president, has said that the announcement made by the Central Government about establishing two heavy industrial units (for synthetic rubber and aluminium) in the public sector in U.P. under the second plan still remains to be implemented. "We are not aware whether formalities connected with preliminaries in this connection have been undergone. Further, no announcement has been made by the Government whether the recommendations of the Fact Finding Committee (Large-scale Industries) have received their consideration, and, if so, what are their decisions on the main recommendations." The cotton textile industry in the State is in difficulties. Of the 29 textile mills there, only 13 are functioning and the remainder have had to be closed down because of uneconomic working. The Fact Finding Committee has recommended that at least 500,000 additional spindles and 12,000 looms should be installed in the State during the next five years, so as to increase the supply of cotton piecegoods for internal consumption. The number of spindles and looms has decreased from 664,844 and 11,896 in 1952 to 609,762 and 11,751 in 1956. Heavy taxation is affecting the working of the mills. Mr. Jaipuria complains that the Central excise levy on cotton cloth, being at a flat rate, ignores the cost structure of the different categories of cloth produced in the State; U.P. sales tax on cotton cloth is at the inordinately high rate of 6¼ percent; and there is a 20 percent levy of electricity duty. Cloth stocks have been growing since April 1956, when sales tax on cotton cloth was increased to 6¼ percent. The trend has gained further momentum since September 1956, when the Central excise duty on medium and coarse varieties was raised substantially.

* * * *

Wheat for the Flour Mills.—The demand for wheat products in West Bengal has been steadily increasing because of the growth in population, improvement in the standard of living and the influx of refugees. Flour mills in the State are anxious to produce more, but the inadequate supply of wheat has prevented them from making adequate use of their installed capacity. For a period of 14 years, that is, from 1943 to September 1956, the allocation of wheat to mills was made on the basis of installed capacity; this was fixed after a thorough enquiry conducted by Mr. Justice Braund and Mr. Cooke. In his presidential speech at the annual general meeting of the West Bengal Flour Mills Association, Mr. K. L. Jatia has said that this procedure worked quite well, but in September 1956 the Government "arbitrarily" revised the allocation of the wheat quota and "this decision was taken without consulting the mills." After a representation was made to the State Minister for Food, the quota was partially revised. But the quantity of wheat allotted at present is hardly sufficient to enable mills to utilise their installed capacity fully. The additional quantity of 200 tons of wheat a day which the Government of India has recently decided to give to West Bengal should be allotted entirely to flour mills. It has already been suggested to the Food Minister of West Bengal that out of the additional 200 tons of wheat, the curtailed quota of member firms of the Association should be restored immediately and the balance should be distributed *pro rata* among all the flour mills in Calcutta. Mr. Jatia points out that since 10th September, 1957, members of the Association have decided to increase the extraction percentage of *atta* from 30 to 40, and they have also increased the number of retail shops attached to the mills. It is proposed to supply additional quantities of flour and *atta* to fair price shops approved by the Government. But unless mills are given certain new powers, they cannot check irregularities, if any, among retailers. The Government of West Bengal gave an assurance as early as December 1956 that a committee would be appointed to re-examine the installed capacity of flour mills in the State, but so far no action has been taken. Referring to the recent order issued by the Government of India about the licensing of roller flour mills, Mr. Jatia says that it vests the Government with enormous powers and will interfere with smooth working. "I appreciate that the Government should adopt prompt measures in order to check malpractices in any trade or industry but I submit that the vesting of such vast powers in the hands of officials is likely to cause unnecessary harassment to flour mills."

* * * *

Jute Brokers and Mills.—Raw jute production in 1956-57 increased to 4,221,000 bales from 4,197,000 bales in the preceding year. But it was still not sufficient for the requirements of the jute industry, although imports declined from 1,280,000 bales in 1955-56 to 520,000 bales in 1956-57. In his presidential address at the annual general meeting of the Jute Brokers Association, Mr. D. Kuthari has asked the Central and West Bengal Governments to ensure that vigorous efforts are made to increase the production of raw jute and to improve its quality. A major problem which has worried the Association in recent months is how to secure sufficient business for member brokers. "I am glad to say that some of the more important mills have been sympathetic to our request and are willing to utilise the services of our members in obtaining their requirements of raw jute". Another problem which has caused concern is the delay in obtaining payment from jute mills for fibre supplies. Recently a conference was held at the premises of the Jute Balers Association, which was attended by the representatives of different associations of jute dealers. Since then, there has been some improvement, but it is still necessary for mills to pay promptly for the supplies they get from brokers. Mr. Kuthari also complains about delays in making payments against brokerage bills as well as for claims for short weight put up by mills.

* * * *

Training for Small Business Men.—As part of the Government's programme for the development of small-scale industries, the Small Industries Service Institute, Calcutta, has started a four-month course in business management for owners of small plants and their employees. The classes are held at 16, Theatre Road, twice a week (on Mondays and Fridays). The hours are between 6-30 p.m. and 7-30 p.m. The course is covered by 32 classroom lectures, study visits and film shows. The syllabus is fairly comprehensive, and for such business men as do not have the advantage of some academic training, it should provide a useful theoretical introduction to the field of business management. For those who have, it may be useful as a refresher course. The subjects have been classified broadly under five heads: (1) industrial finance and planning; (2) business management; (3) financial and cost accounting; (4) industrial finance; and (5) industrial legislation. Under the first group, some of the subjects covered are planning for small plant management, principles of planning, theory and practice of market analysis and the object and utility of industrial co-operation. Lectures on the problems of small-scale industries and their development programmes, supported by a technical and commercial analysis of individual units in the chemical, ceramic, leather and small engineering industries, are included in this group. The subjects under "business management" include factory organisation, factory lay-out, production control, purchasing, marketing and advertisement, standardisation, testing and quality control, terms and documents used in commerce and personnel management. Lectures under other groups of subjects cover various methods of cost and financial accounting, the sources of industrial finance and the terms and conditions of obtaining loans from them. The latter will be of some practical value, in view of the fact that although business men in small-scale industries already know the sources, some of them have found it difficult to obtain loans in time because they are not familiar with the prescribed rules. Finally, there are lectures on the Factories Act and industrial legislation, including the enactments on the employment of labour. It is often said that the best school for business men is business itself. That is largely correct, but it is also true that a certain amount of theoretical knowledge helps increase efficiency. The next course will commence in January 1958, and those industrialists wishing to join it will have to apply in the form prescribed for admission.

* * * *

Tea Exports Disappointing.—The trend in tea exports from north India this year has been disappointing; they have amounted to only 114 million lbs, against 151 million lbs in the same period of last season. Apart from the serious decline of approximately 33 million lbs in the offtake of the U.K., many other countries have imported less of Indian teas. Among these countries are the United States, Canada, Australia and West Germany. The significance of the decline becomes clearer when it is realised that total imports of tea into both Britain and the United States have been rising, which implies that other countries are selling more there. Speaking at the annual general meeting of the Calcutta Tea Merchants Association, Mr. M. K. Sinha, president, has said that the problem of export promotion needs more sustained attention than has been given it so far. "Promotion efforts through Tea Councils, and the support of credit guarantee concerning risks not normally insurable can touch this problem to a certain extent, while the potential of our trade with such countries and areas as eastern Europe, Morocco, Chile and others is yet nebulous. Our old-established connections with the U.K. and with other members of the Commonwealth such as Canada, Australia and New Zealand are, therefore, still the first we should tap and develop in an endeavour to strengthen sterling to which we are wedded so much while the United States and West Germany would also be valuable fields for a developing effort." The success of efforts to increase exports is governed to some extent by overall trends in world production and consumption, so Mr. Sinha suggests that not merely the export policy but the sales policy as well should be carefully chalked out to meet the demands of a changing situation.

* * * *

Industrial Estates in Andhra.—The foundation stone of the first of the five industrial estates it is proposed to establish in Andhra Pradesh has recently been laid. The 50-acre estate is being located in a suburb of Hyderabad city. Mr. N. Sanjeeva Reddy, the State's Chief Minister, urging closer collaboration between heavy and small industries, has said that the establishment of industrial estates should encourage producers to pool their resources and start new industries. Under the Nizam's *régime*, an industrial town was started some years ago, where the Allwyn metal works and units for the manufacture of such goods as asbestos, cement and laminated products were located. The industrial estate for small-scale enterprises is located near these big factories, which have already been provided with facilities for transport, electricity, etcetera, and scope for developing ancillary industries. An industrial township has sprung up in the vicinity. Similar industrial estates are to be started in Vijayawada, Visakhapatnam, Samalkot and Nandyal. The expansion of the Sanathnagar industrial estate is estimated to cost Rs. 30 lakhs, which includes the cost of acquisition of land, development, construction of roads and 30 work sheds, besides such facilities as dispensaries, labour welfare centres, *crèches*, a post office and a railway siding.

SILVER AND STERLING EXCHANGE

WE may take it for granted that the two great desiderata in Indian currency are: (1) that sterling exchange may remain fairly stable, and (2) that the rupee may approximate to its metallic value. Suggestions have been made from time to time to unite these two proposals, and the best it appears to us is that which provides for a sliding scale of import duty on silver. The difficulty which first occurs to us in considering the adoption of such adjustment is the latitude to be allowed for fluctuation. We think it would be found inconvenient to allow for no fluctuation in the sterling value of the rupee, but at the same time it would be necessary to fix a minimum. It would be necessary also, we think, that all silver imported should pass through the mints, because, if this is not done, the bazar price, whatever the duty might be, would generally be such as to render imported silver cheaper than Council Bills, and this, of course, is what has to be avoided in order to retain the power to fix a minimum of exchange. The Government would in that case coin all silver imported into rupees, and the demand for silver ornaments would have to be satisfied by melting down the rupees. Ornaments or ingots of silver paid into the mints would receive in return as before about Rs. 106 per 100 tolahs fine, less mint charges, and our currency would be upon a pure metallic basis and unexposed to the risk of false coining. We certainly are of opinion that the first step which ought originally to have been taken in support of the present scheme was to make the import trade in silver a Government monopoly. This need not mean that the public shall be deprived of the means of acquiring silver if they want it, but it would probably knock out many of the gambling dealers and reduce the trade to ordinary supply and demand. The mints might, if necessary, hold a certain quantity of silver in bars in reserve to be sold to the public at 4 annas to 1 rupee over mint outturn rate, just as the Exchange Banks used to do before the mints were closed.

A DITCHER'S DIARY

THIS time of the year is distinguished by the arrival of two notable events—and I do not include the green fly. It is, in fact, *Capital's* birthday. We are now entering our seventieth year of publication. Congratulations are certainly in order, and I should like to impress upon our admirers that if they care to express their appreciation in monetary form we will not be in the least embarrassed. That is, provided they send their cheques, postal orders, or large envelopes containing cash marked *Capital* Christmas Toy Fund. And that, of course, is the second of the noteworthy events: the beginning of our annual appeal for donations to help bring a little joy into the hearts of some poor children at Christmas time. I must make the usual apologies for raising the question of money at a time when the tax authorities are pressing as they have never pressed before, and when the general gloom and despondency in business circles is such that we might all be threatened with bankruptcy tomorrow. I can only submit that there are those who are still innocent of such matters, and would not understand even if they were reminded of them through having to miss their Christmas toy. In spite of last year's fall on the stock market and the November interim budget, we did manage to collect a sum which was only about Rs. 7 lower than that of the year before (although 1955 was no bed of roses either). We were, however, able to spend on toys some Rs. 630 more; that was because people remembered our request to send their contributions in good time. The account for 1956 is published at the end of this week's Current Coin. We would not like to have to cover fewer children this year, or to spread our resources more thinly. It all depends on you. I do not think I need remind anybody that we make no distinction of race, colour or creed. The only qualifications that the recipients of our toys must have are that they be young and poor. Even under the welfare State, I am sure you will agree, there are still far too many of these to choose from. Please send all you can to *Capital* Christmas Toy Fund, 5, Mission Row, Calcutta. You may mark the letter "Urgent".

* * * *

Others abide our questions, Zhukov is *not* free And so the world's curiosity about just what led to the Soviet Defence Minister being relieved of his post will remain unsatisfied beyond what the Kremlin condescends to tell us in the next few days. Confident assertions that Zhukov was the man behind Khrushchev (which have not been disproved) when the latter was challenged by such formidable rivals as Molotov, Kaganovich, Malenkov and Shepilov were not followed this time by other firm interpretations. Commentators exercised great caution, and the odds were even for many hours whether Zhukov would go to another post or to the bourn from where no man returns. Gratitude in politics is a rare thing anywhere; in totalitarian régimes it is just unknown; so that if Mr. Khrushchev has now decided to get rid of his saviour of a few months ago, it should occasion very little surprise. Articles in *Pravda* would appear to indicate that, having survived its own internal dissensions with the help of the Army, the ruling clique or individual in the Communist Party is now strong enough to put the Army back in its place. If there is anything at all to this speculative version of what may have happened, it does not seem a wholly undesirable development. After all, civilian control of a country's armed forces is the accepted form in democracies. (I shall not go into the question whether, in our time, a soldier of Zhukov's temperament is necessarily less trustworthy with the cause of peace than a megalomaniac in civies like Mr. Khrushchev.) Whatever happens to Zhukov, many will regard the recent manoeuvres as further evidence of a continuing struggle for power in the Kremlin. They may even be right: who was it that said we have no knowledge of the Soviet Union, but only varying degrees of ignorance? But there may be an alternative line of enquiry. Can it be that, despite all the strains and stresses, all personal and sectional rivalries, the Soviet society and its institutions—government, army and everything—have by now acquired a degree of solid inner strength which enables the machine to go on regardless of sudden arrivals and departures at the highest level of leadership?

* * * *

It is reassuring to find that more sense is being talked in high places about the future of English in India than at any time since Independence. If that meant the language issue generally was becoming less dangerous and easier to solve, it would indeed be gratifying. Unfortunately, it does not. I am sure that, after the first flush of new nationhood had worn off, there were few people with any claim to intelligence who seriously considered that the constitutional provisions on Hindi could be carried out to the letter. There must have been even fewer who believed that English could be dispensed with altogether. It is all to the good, therefore, that more people are now beginning to express that view in public. I see that the latest advocate of retaining English is the former Indian Army C-in-C General K. M. Cariappa. He is quoted as saying: "If we neglect the study of English, we will find it hard to keep up our rightful place in the commercial, intellectual, cultural, international and economic worlds of today". How right he is, although I think one must attribute his suggestion that basic English might be sufficient in most cases to the soldier's love of the "short course" method of instruction. This is precisely the view about maintaining English to which I have subscribed on many occasions. All the same, I am wondering whether the move away from Hindi, now that it is really making progress, is not gaining momentum for the wrong reasons. The trend now is towards making the regional languages into "national" ones. I am not myself sure what this means. But what its advocates seem to have in mind is that each State should conduct its affairs exclusively in its own language and should use the one common language, be it Hindi or English, only for communication among themselves and with the Centre. This seems to me the quickest way which could possibly be devised of breaking the nation into linguistic pockets and thus destroying that sense of being "Indian". It would be a pity if the feeling spread that English should become India's national language, not because of its obvious benefits and intrinsic usefulness, but because it is more convenient than Hindi for presiding over the eventual break-up of this country into exclusive and parochial portions.

* * * *

It has been my sad lot in the past few years to write the obituary of more than one serious-minded publication, which, but for the change in the habits of the British reading public, might still have been a credit to English-language journalism. Increased costs have usually been given as the reason for the demise. But the case might just as well have been put the other way round; revenue has shown itself to be inelastic in a world where educated people have progressively less time and money to spend on the better things in life. In fact, these two commodities seem to have passed into the hands of an entirely new kind of reader—namely, the women of what Gilbert might have called "The lower middle classes." That is the only reason I can think of to explain the fact that, in these hard times, the publishing firm of Odhams can cheerfully spend a large fortune on launching a new women's weekly. In spite of its attachment to the *Daily Herald*, Odhams is not a charity institution; it expects this new magazine to pay. Judging from the success of its other venture in the same field, *Woman*, with a circulation of three and a half millions, there seems no good reason why it should be wrong. Eight and a half million copies of Britain's four main women's journals are at present being sold every week. I cannot see why Odhams' modest estimate of a one-million circulation for its new publication should not be accommodated. I have nothing against women's journals. They have done a great deal to brighten the person and broaden the outlook of the ordinary British woman. If, at the same time, they have helped perpetuate some of the more nauseating snobberies and pruderies of British life, then they are probably no more reprehensible than any other supplier who can claim that he only gives the public what it wants. What is chiefly to be regretted is that social change has produced an army of new readers who prefer glossy pictures to heavy print and trashy romance to serious literary effort. The only consolation is that the readers of these fine examples of popular modern journalism are unlikely to come to any mental harm. In my limited experience of them I have never once come across a novel idea, unless it was in the realm of fashion, nor a single suggestion that the reader might possibly have a mind worth exercising.

* * * *

Christian Dior's death last week may have been viewed by a few husbands with less than inconsolable sorrow, but many more must be the women who were personally grieved. In the past ten years this rather unassuming man has held a sway over feminine tastes in clothes the world over which earned him the title of a dictator, although a very amiable one. The stoutest male heart should hesitate before pronouncing upon the merits of the late Dior as a *couturier*, for the subject is something of a mystery to most men, but the international reputation he enjoyed could scarcely have been the result only of deft publicity or just plain feminine daftness. He must have been one of France's biggest single dollar earners, which does little to confirm recent claims by Seventh Avenue that New York is now the fashion capital of the world. The truth probably is that in *haute couture* tradition is an important thing, and while America has many things others have not, France has got a thing or two America has yet to possess. Natural elegance in clothes may be one of them. I am told that there are at least half-a-dozen other designers in Paris who are not inferior to Dior, but the *mystique* around his personality was rather unique. When his New Look burst upon a gaping world, not a little of the furore I found slightly difficult to explain, for the newness of the look was certainly exaggerated. I remember thinking of Chesterton who had once said that, in fashion and many other things, it is our mothers who are old-fashioned while our grandmothers are the latest thing. Quiet revivals are often the noisiest novelties, although no blame attaches to Dior for exploiting the truth of this. With the passing of Dior, will the supremacy of Paris in this department be seriously threatened? I doubt it, for Paris not only has undoubted skill but also great "snob value" which has held itself rather better than the franc. In any event, the capital is unlikely to shift to Moscow, where I understand fashions are now almost encouraged by the State. This, however, is no reflection on Russian *couturiers* who, it will be conceded by all fair-minded men, have to deal with "fuller figures" (charming euphemism) than in the decadent West and, in consequence, cannot give their imagination full play. Inter-Continental stylistic missiles may yet remain a monopoly of the free world.

NEED FOR ALTERATION IN FARE STRUCTURE

MR. D. E. WEBB ON COST OF IMPROVEMENTS

The Annual General Meeting of The Calcutta Tramways Company, Ltd., was held on 22nd October, 1957 at 30, Cursitor Street, London, E.C.

Mr. D. E. Webb, Chairman of the Company, who presided, said :

Gentlemen,

Before starting my review of your Company's activities for the past year, I would call your attention to the presence on our Board to-day of Sri Anandi Lall Poddar, M.L.A. On your behalf I extend him a hearty welcome as the first Indian Director of our Company and also as a most helpful colleague. I will tell you more of Sri Poddar when we come to the re-election of Directors. At the same time, I must refer to the absence of Mr. Cecil Webb. Advancing years have, unfortunately, started to curtail Mr. Webb's activities and it was with real regret that your Board agreed to his wish that his name should not go forward for re-appointment. He has been a Director for 24 years and the Company has never had a greater friend or wiser counsellor. I know that you would all wish him great health and happiness in his retirement.

The accounts before you cover the twelve months to the 31st December, 1956. The period was one of comparative calm, although traffics were affected to a small degree by various stoppages of short duration for one reason or another. Traffic receipts fell short of the record figure of the previous year by only four thousand pounds, whilst advertising and sundry receipts were up by five hundred pounds.

If a study of the accounts were confined to the credit side of the Revenue Account one might consider that the Company had had another successful year, but when the expenditure is examined it becomes apparent that all is not well with the Company. Increased expenses amounting to some £50.000 have not been offset by a proportionate increase in earnings. Of the increase in expenses the staff in India received an additional £24,000. It seems probable that wages, materials and cost of Power will continue at a high level.

As a result of the above the working surplus was down from £312,000 to £257,000. After charging Office Expenses, Development Expenditure, and setting aside £80,000 for Renewals and Replacements, there is a balance of £157,000 to be carried to the Appropriation Account compared with £206,000 in the previous year. Provision for Indian Income Tax absorbs £61,000 and Debenture Stock Interest requires £23,000. A sum of £87,457 has once more been placed to the credit of Shareholders' Account, and the deficit of £14,257 has been charged to the Special Reserve Account. From the balance on Shareholders' Account after charging Debenture Stock Redemption allocations and the dividend on the Preference Shares, the Directors once more recommend the payment of a dividend on the Ordinary Shares of 8½% free of tax.

Decreasing Liquidity

Turning to the Balance Sheet, there is little that calls for individual comment. It is, however, the overall picture of decreasing liquidity that is disturbing. Shareholders will recall that our liquid resources were seriously depleted in 1953 as a result of the unrest in July of that year. From that time your Board has made great efforts to restore the position and, until this year, had met with a fair measure of success. The reversal of that trend which is now shown is the result of the continuously increasing costs in a year when receipts have not increased, and emphasises once more the necessity for increasing fares.

Since the close of the year, the running of the undertaking has followed very much the same pattern. More people are travelling by tram than ever before and, as a result, receipts have increased. At the same time expenditure is still increasing more rapidly.

A Coinage Complication

There has been an additional complication this year. In April Government implemented a decision to convert the Indian currency to a decimal coinage. For the future there are to be 100 naye paise to the rupee where, in the past, there have been 64 old pice. Moreover, for the next five years both naye paise and old pice will be legal tender. It can well be imagined that few of our fares could be converted into the new currency exactly and it was necessary to decide whether the fractions should be adjusted up or down. As we were unable to reach agreement the matter was referred by Government to an independent tribunal appointed to decide upon the conversion table.

In the meantime an interim basis is being worked and great credit is due to our staff, both the executives and the actual conductors, that the introduction of the new currency has worked so smoothly. One can well imagine the problems of a conductor being offered old pice for a naye paise fare and the resultant calculation on the question of how much change, if any, and in what currency. Our staff have cooperated wholeheartedly and have dealt with a situation which might well have led to ill-feeling with the public in a thoroughly sensible and competent manner.

Tribunal Examining Fares

The same tribunal has been instructed to examine and advise on the whole question of the fare structure, not only of the trams but of the State-run and privately-owned buses The Company has claimed before this tribunal the right to increase its fares to provide funds for the constantly increasing cost of running and maintaining the undertaking

It must seem strange to the people of Calcutta that the only expense they have to meet which has shown no increase since pre-war is the cost of local transport. Whilst one cannot comment on the facts of the case before the tribunal, it may nevertheless be opportune to reflect on the past attitude to a rise in fares.

Finance for Improvements

In brief, there is a view that where improvements or extensions to the undertaking are contemplated, the money required for such projects should be raised outside the Company and should not be forthcoming from the reserves of the Company.

If it is intended that money should be borrowed from government or the banks to finance an extension at present-day costs of materials, then unless an increase in fares is put in at the same time, the surplus arising from the operation of that extension will be insufficient to meet the interest charges of the new money raised, and any allocation for replacement or obsolescence will be impossible. If, again new money be raised to improve our fleet of cars, or the capacity of our substations or the layout of our track, any increase in revenue would be negligible and, once more, there would be insufficient additional receipts to meet the interest charges.

Such propositions are neither sound finance nor even intelligent speculation. They may well have been born in the aftermath of war when it was essential to re-equip industry with modern plant in order that it should stand a chance in the competitive post-war world. There was no time for companies to accumulate reserves out of which such re-equipment could be financed. Moreover, in many cases, the profits earned were sufficient to make such expenditure worthwhile. It was the age of the overdraft and credit trading. Any Company putting off modernisation schemes for lack of funds was looked upon with apprehension in that it would not survive in the competitive battle.

Governments have encouraged this attitude by retaining the high rates of wartime taxation and removing from industry the sums which were required for re-equipment. These sums should have been returned to industry where the necessity for them could be shown. Instead they were spent largely for revenue purposes.

And so, once more, industry was thrown back on the public, the banks or, in the last resort, governments, to finance them when before the war they would have regulated the speed of expansion to the capacity of the individual company to accumulate reserves.

As long as these schemes of modernisation and expansion earn profits sufficient to cover wear and tear and a reasonable return on the capital employed, all is well. But as soon as production falls or production costs rise without a corresponding increase in the selling price, the capital invested in that project loses its value. Whether that capital has emanated from a credit granted by a bank or from the savings of the public, the result is a reduction in the wealth of the country and a step taken along the road of inflation.

In the case of this Company, it is suggested that we should borrow for our modernisation schemes and for our extensions, and yet, as stated above, unless our fare structure is radically altered, both could only end in financial loss. Moreover, when a company such as ours resorts to borrowing for the financing of modernisation schemes which will merely bring up to date what was there before, then every rupee so borrowed is assuredly spent in the pursuit of inflation.

Need for Increase in Fares

We seek a reasonable increase in fares so that this Company may pay its way as it has in the past and give to Calcutta the transport system it requires. The public of Calcutta must indeed be amazed at still being able to travel on public transport at pre-war cost. There is no other item in the cost of living that I know of which has a like record. Our wages have increased by approximately 300 per cent the cost of power by 80 per cent and the cost of steel rails by 328 per cent.

I hope sincerely that when the result of the tribunal is known, we shall be in a position to carry on with the modernisation of this great undertaking.

In the meantime we are satisfied that the system is well maintained and our staff are well looked after. I visited Calcutta with Mr. Perkins last December, and we were both impressed by the enthusiasm and keenness shown on all sides in endeavouring to find ways and means of helping the travelling public and making our undertaking work still more efficiently.

We are fortunate, indeed, in our executive staff, both European and Indian, and, although some have only been with us a comparatively short time, they all work together as a seasoned team. Our Agent, Mr. Blease, is to be congratulated wholeheartedly on his running of the undertaking.

In proposing the re-election of Sri Anandi Lall Poddar, M.L.A. to the board the chairman said that he had known the Company for many years and had also had great experience in the transport world. The board looked forward to many years of close association with him.

The report and accounts were adopted.

The above statement is published for information and does not purport to be a report of the proceedings of the Annual General Meeting referred to.

THE CALCUTTA MONEY MARKET

BETTER WEEK FOR BILLS

Wednesday, 30th October.

CONDITIONS have remained fairly steady in the money market this week. The total of deposits has tended slightly upwards, but advances to sugar and iron and steel companies, and on account of wheat and grain storage, have all fallen. There has been a sharp increase in the requirements of the jute industry. There is still little obvious sign of the onset of the busy season. The interbank market is ruling firm and the call rate is quoted at 4¼ percent.

It has been a rather better week for bills of exchange, and a fair number of tea and gunny documents have come to hand. Remittance has been satisfactory. Sterling has weakened slightly on the world's markets against European currencies and the dollar. The present quotation for the pound is slightly below parity with the dollar.

* * * *

Silver was quiet on lack of support and the price declined from the previous week's level of Rs. 179 to Rs. 178.12, quoted on Tuesday for both ready and forward. The market was closed on Wednesday.

Gold was slightly steadier and the price advanced from Rs. 109 to Rs. 109.75. The sovereign gained 25nP at Rs. 71.50.

* * * *

During the week ended 25th October, Government of India Treasury bills for Rs. 93,23,00,000 were sold in favour of the Reserve Bank.

* * * *

A rise of Rs. 2.39 crores to Rs. 1,486.20 crores in active notes was the notable feature of the return of the Reserve Bank of India for the week ended 25th October, 1957. while the total note issue was Rs. 38 lakhs lower at Rs. 1,513.97 crores. Notes held in the Banking Department consequently declined by Rs. 2.77 crores to Rs. 27.77 crores. Deposits of the Government of India increased by Rs. 2.53 crores to Rs. 52.55 crores and other Government accounts were Rs. 4.17 crores higher at Rs. 11.02 crores. Balances of commercial banks rose by Rs. 6.44 crores to Rs. 106.91 crores. Balances held abroad declined further by Rs. 3.40 crores to Rs. 15.39 crores while investments increased by Rs. 22.04 crores to Rs. 241.84 crores. Other loans and advances declined from Rs. 68.83 crores to Rs 67.87 crores, of which advances to scheduled banks against usance bills amounted to Rs. 27.63 crores (Rs. 26.81 crores). Ways and means advances stood at Rs. 49.92 crores against Rs. 51.08 crores.

* * * *

The return of the State Bank of India for the week ended 18th October, 1957, shows a drop of Rs. 1.69 crores to Rs. 353.35 crores in total deposits. Investments in Government securities are up by Rs. 1 lakh to Rs. 141.57 crores, while other authorised investments remain unchanged at Rs. 10.26 crores Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 1.50 crores to Rs. 162.64 crores. Cash and balances are, in consequence shown at Rs. 54.44 crores or Rs. 9.89 crores higher.

* * * *

The statement of the position of scheduled banks for the week ended 18th October, 1957, shows Demand and Time liabilities at Rs. 730.15 crores (Rs. 25.64 crores on account of borrowings from banks) and Rs. 627.44 crores (Rs. 10.28 crores), compared with Rs. 729.07 crores (Rs. 24.56 crores) and Rs. 624.50 crores (Rs. 8.16 crores), respectively, in the previous week. Cash has declined by Rs. 63 lakhs to Rs. 42.04 crores, while balances with the Reserve Bank have increased by Rs. 12.68 crores to Rs. 96.03 crores. There is a drop of Rs. 1.19 crores to Rs. 384.96 crores in investments. Advances and bills discounted at Rs. 853.24 crores show an increase of Rs. 63 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 10.2 percent and 62.8 percent, against 9.3 percent and 63.0 percent.

* * * *

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land Customs revenue collected in the Indian Union during July 1957, amounted to Rs. 1,663 lakhs compared with Rs. 1,177 lakhs in the corresponding month of last year. The comparison in the following should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total Customs revenue collections, import duties accounted for Rs. 1,505 lakhs against Rs. 1,028 lakhs, export duties for Rs. 129 lakhs against Rs. 124 lakhs and land Customs and miscellaneous for Rs. 29 lakhs against Rs. 25 lakhs. The total gross collection of Union excise duties amounted to Rs. 2,063 lakhs compared with Rs. 1,441 lakhs. During the four months, April to July 1957, the grand total of gross Customs and Union excise revenue realised was Rs. 14,189 lakhs compared with Rs. 10,701 lakhs during the corresponding period of 1956. Of this amount, import duties accounted for Rs. 5,559 lakhs against Rs. 4,314 lakhs, export duties for Rs. 532 lakhs against Rs. 703 lakhs, land Customs and miscellaneous for Rs. 131 lakhs against Rs. 95 lakhs and Union excise duties for Rs. 7,967 lakhs against Rs. 5,589 lakhs.

UNSETTLED CONDITIONS IN STOCK MARKETS

INDUSTRIALS EASE: GILT-EDGED FOLLOW STERLING

London, 30th October.

UNSETTLED conditions persisted in the stock markets throughout the past week, and prices continued to fluctuate within fairly wide limits. Yet there was not a great deal of change in values on balance. The performance of Wall Street was the main unfavourable factor, but there were also many others. These included the mounting wage claims, Courtaulds' reduced interim dividend and warning of lower profits, and the parliamentary by-election in Ipswich. Underlying all these factors was the uncertainty over the effects on the U.K. economy of the recently increased Bank rate, and the Government's measures to fight inflation and strengthen the pound. Many observers considered that some slowing down of business activity in the U.S.A. was to be expected and there was naturally nervousness about its effects on the U.K. and world economies. Sterling moved erratically in foreign exchange markets; this unsettled gilt-edged securities, which lost their earlier gains. However, a better tendency later developed in response to an improvement in sterling. Foreign bonds and rails were dull, but dollar stocks fluctuated widely and were mostly higher, reflecting the short-lived boom which followed the President's speech. Industrials were easier on balance after a week of mostly small movements. Gold shares drifted lower and diamonds fell back on the news that the General Electric Company of the U.S.A. is ready to mass-produce man-made diamonds. Coppers recovered after drifting, but other base metals were inclined easier. Oils were higher on the week, but well below the best levels. Rubbers were quiet, but some small gains were seen on a selective demand. Seaport and Horscote were firm on their higher dividends, while other good features included New Columbia, Bagan Serai, Sungei Rinching, Malakoff and Batang Consolidated. Teas were firmer, reflecting the improvement in auction prices, and there were some firm spots, while Rangalla were strong.

The Money Market

The money market during the past week moved out of the period of easy money into one of tight credit. One of the main factors for the change was that there was £30 million of new money to be found to finance the weekly take-up of new Treasury bills, and, in addition, the halt in demand for sterling following the recent bear-covering reflected a contraction of short-term funds from foreign exchange operations. A fairly wide gap developed between supply and demand, with the authorities intervening on most days to make good the deficiency, although several houses were forced to borrow a small amount from the Bank of England. Towards the end of the week, Government departmental disbursements brought some relief. With money in keen demand, the rate for day-to-day loans varied between 5⅞ percent and 6⅛ percent, while that for January bills was firm at 6⅛ percent. The average rate was practically unchanged.

Activity on Wall Street

Foreign bonds were highlighted by erratic changes in Greek issues. German nationals were mixed with a few issues showing gains and losses of a point or so. Several Italian issues eased at first but eventually steadied. Japanese bonds were mostly lower, with Government 5½ percents of 1975 off a major fraction. Chile 3 percents declined about a point to sell at a new low for the year. U.S. Government obligations and investment quality corporates pushed forward in more active dealings with larger demand because of the news from Washington that the U.S. Federal Reserve system had decided to ease its tight money policy. Rails and convertibles were dominated by the rest of the stock market.

U.S. Federal Reserve Return

The latest U.S. Federal Reserve return shows that the gold stock rose by $3 million to $22,668 million. The Federal Reserve's holdings of U.S. Government securities fell by $84 million, of which bills accounted for $31 million and securities held under repurchase agreements for $53 million. Total discounts and advances rose by $57 million to $646 million, while the aggregate excess reserves of member banks rose by $134 million to $326 million. The daily average of excess reserves of member banks rose by $73 million to $552 million, while their daily average borrowing fell by $387 million to $598 million. Business loans of the New York city banks fell by $147 million to $11,650 million, compared with a decline of $89 million to $10,785 million in the corresponding week of last year.

Firm Tone in Hongkong Gold

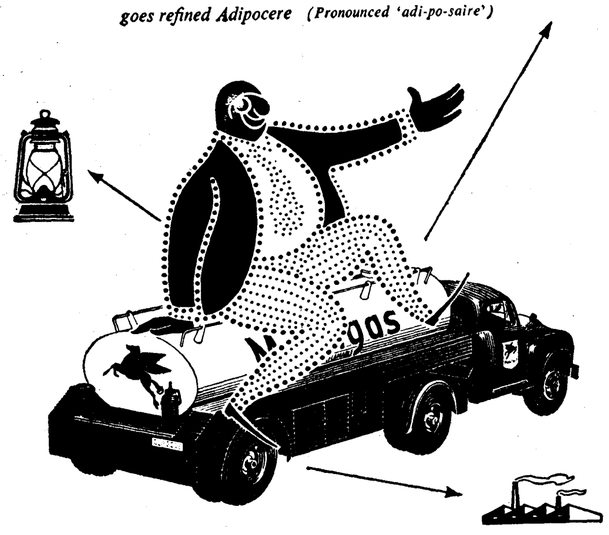
Values in the Hongkong gold market last week attempted an upward move, but without much success. The tone, however, was described as firm. Bullion dealers, who are closely watching the Middle East situation and fluctuations in sterling, found little incentive in either factor, with the result that most of the large traders were on the sidelines. Gold eased slightly at first, but then advanced until mid-week. Subsequently, some profit-taking ensued. Carry-over charges totalled 308 cents in sellers' favour. The official offtake was 2,260 ounces and the unofficial 12,200 ounces. Arrivals totalled 35,000 ounces. Forward contracts were done at $(U.S.) 37.89.

Rise in Paris Gold

The failure of the former Conservative Prime Minister to form a Government carried gold prices on 21st October to a five-year record level in an active and widened market. The kilo rose by 23,000 francs on the day to close at 544,000 francs and the Napoleon rose by 180 francs to 4,030 francs. During the rest of the past week, there was a gradual decline from these levels as the Socialist leader, M. Guy Mollet, seemed close to success in his efforts to form a Government. The week closed with the ingot at 534,000 francs against 521,000 francs, and the Napoleon at 3,940 francs against 3,850 francs quoted last week. Bullion dealers were unwilling to predict the future course of prices although M. Mollet's fiscal and financial policies were generally considered to be bullish. But London reports of the possibility of further Russian gold sales inspired caution. Russian sales in eastern Europe in the first half of this year were estimated at 200 tons—some 50 percent larger than in the whole of 1956.

Vegetable Oils Dull

Trading in most sections of the vegetable oil market was slow to get under way with buyers generally hesitant. Very few enquiries circulated for groundnut oil and Nigerian bulk oil was generally offered 10s a ton cheaper, with November-December quoted at £121 c.i.f. On the other hand, the Nigerian Board wanted 10s a ton more for groundnuts at £68 for January-March, reflecting a better enquiry, although no business was claimed. Some resellers were willing to take it down to £66½ c.i.f., for December-January shipment. Indian B.S.S. castor oil was inclined to weaken with buyers rarely above £150 c.i.f., November-December in drums, and it was thought that resellers of near oil might be likely to trade at that level. In turn, British East African castorseed fell back further with forward shipments from £1 to £1½ cheaper, but a response was again lacking. Generally dull conditions prevailed for coconut oil and linseed oil, with prices virtually unchanged. Over the week-end, the Indian Government removed the export duty of approximately £15 a ton on both nigerseed and kardiseed oils and lower price offers appeared for forward shipments, but buyers were uninterested. Indian nigerseed oil was clipped to £124 c.i.f., December-January, and kardiseed oil to £127 c.i.f., January-February. Chinese semi-refined cotton oil was offered £1 cheaper at £117.



Rubber Prices Lower

The resumption of an easier trend in rubber prices during the past week was attributed mainly to a Press report that the United States was contemplating a reduction in the stockpile. Further falls were registered in sympathy with the declining prices in Singapore. Russian demand, which was mainly for No. 1 R.S.S., October and November shipment, was a steadying factor but the market lacked incentives with U.K. trade and European factory interest negligible. The market was very susceptible to outside influences. Traders watched the steep fluctuations on Wall Street and prices partially reflected the movements there. After touching the lowest levels since last June, prices rallied by about ¼d a lb, but finished ¼d lower on the week in quiet trading. Limited supplies of sole crepe were more than sufficient for the offtake and prices eased by ¼d a lb to the basis of 34½d for ⅛ inch smooth No. 1 on the spot.

To market, to market

goes refined Adipocere (Pronounced 'adi-po-saire')

After being refined into various petroleum products, stored in tanks and taken for a ride in trucks and wagons, I am brought to the market. But this is not the type of market you are thinking of.

The word is used by oilmen to describe my movement from the refinery to you, the consumer. My destiny is worked out by a highly organised group which has been supplying India with quality petroleum products for well over sixty years.

Stanvac have distributed to Indian consumers millions of gallons of Kerosene, Gasoline and Industrial fuel.

And how do they market me? Well, I'll tell you later in the columns of this paper.

STANVAC—*the name that stands for progress*

STANDARD-VACUUM OIL COMPANY—Incorporated in the U.S.A., with Limited Liability

Stocks and Shares

A BETTER FEELING IN THE STOCK MARKET

MR. KRISHNAMACHARI'S HOMECOMING BRINGS NEW HOPE

Wednesday Evening.

THERE has been more interest in the share market this week. The reason appears to be the expectations arising from the Finance Minister's visits to Washington, London and Bonn. There is some hope that assistance will be forthcoming over the next few months to salvage the plan, and also that the Government's attitude towards private industry generally will be softened by the necessity to attract foreign capital. Time alone will prove whether these hopes are justified. But in the meantime the market is showing its first sign of life in many months.

The feature of the week's trading have undoubtedly been jute shares. There have been rises throughout this section on the general expectation that the industry's fortunes are improving and that this will eventually be reflected in dividends declared. There has been a rather better feeling in coal shares, largely due to the fact that present prices are providing an attractively high yield. Other sections have held their own or, as in the case of engineering and miscellaneous issues, have advanced slightly. The market's speculative leader, Indian Iron, has met with considerable bull support, while other speculative counters, especially those in the Birla group of shares, have moved in sympathy.

Details of the week's trading follow.

* * * *

The Government security market was firm and there was a further improvement in prices. After a considerable lapse of time some interest was shown in 3% Conversion Loan 1986 and the price improved to Rs. 71.10. In short-dated loans, 3% 1958 was marked at Rs. 99.75. Three percent 1959-61 continued in demand to improve further to Rs. 98.55 with buyers over, 2½% 1961 was asked for at Rs. 94.15, 3½% 1961 was better at Rs. 99.50 while 2½% 1960 had buyers at Rs. 96.90 and there were no sellers of 2½% 1962 even at Rs. 94.15; 3½% 1962 changed hands at Rs. 97.50. In medium-dated loans, 3% 1963-65 hardened to Rs. 93.33. Three percent 1964 had buyers over at Rs. 93.65, 3½% 1964 was steady at Rs. 97.55, 3½% 1965 changed hands at Rs. 97.27, 3½% 1967 was quoted nominally at Rs. 97.55 and 3½% 1967 had buyers at Rs. 99.47 with sellers asking Rs. 99.50. Among long-dated loans, 3% 1966-68 met with enquiry and improved to Rs. 99.13 and 3% 1970-75 turned buyers at Rs. 86.10, while 3½% 1974 was on offer at Rs. 98.25 and 4% 1972 was asked for at Rs. 99.94. Little activity was noticed in State loans and business was of a retail nature. Four percent U.P. 1968 was marked at Rs. 96.10 and 4% West Bengal 1968 was offered at Rs. 98.90. As a result of a forced sale, 4% Orissa 1968 was marked down to Rs. 95, but there were buyers later at Rs. 95.25.

Business in preference shares was on a reduced scale as is usual when there is a revival in the equity market. In jutes Birla 7½% were marked at Rs. 75 and Empire were done at Rs. 88.50. Among miscellaneous issues, Bengal were lower at Rs. 11.31 and British India Corporation at Rs. 104. Dalmia Cement Rs. 100 paid-up were done at Rs. 82 and the Rs. 40 paid-up at Rs. 32.75. A small lot of Dunlop first was crossed at Rs. 116 and Gielle Tea were marked at Rs. 60. Indian Iron & Steel were easier at Rs. 94.50 and business was reported in Indo-Burma Petroleum at Rs. 84. National Tobacco first were reported at Rs. 69 and New Victoria Cotton changed hands at around Rs. 3.62. Richardson & Cruddas were offered at Rs. 58 and Shaw Wallace were crossed at Rs. 66.

In the banking section, Punjab National rose from Rs. 60 to Rs. 62 and Hind Bank from Rs. 33 to Rs. 33.25. United Commercial were unchanged at Rs. 55.75. United Bank of India "D" shares were sold at Rs. 4.

In railways, Dehri-Rohtas changed hands freely at around Rs. 10.

In cotton textiles, Kesoram were slightly better at Rs. 12 while Cawnpore and Elgin Mills were quiet at Rs. 5.25 and Rs. 15.12, respectively. Dunbar Mills were marked at Rs. 125. A new share was added to the Calcutta Stock Exchange official list this week, namely, Century Spinning & Manufacturing, and business was reported in them at Rs. 383.

Coal shares were slightly better and prices of most issues were higher at the close as will be seen from the following table:

	Opening 24th Oct.	Closing 30th Oct.
	Rs.	Rs.
Bengal	216.00	240.00
Central India	5.81	6.12
Equitable	22.75	23.37
New Beerbhoom	12.62	13.00
Western Bengal	5.81	6.00

Contrary to the general trend, Burrakur were dull at Rs. 22 and South Karanpura had sellers at Rs. 10.87.

Jute shares provided the best section of the [illegible] stored a good recovery after a long interval. Here is a chart showing representative price movements:

	Opening 24th Oct.	Closing 30th Oct.
	Rs.	Rs.
Anglo-India	136	148
Auckland	85	95
Bally	145	155
Barnagore	83	91
Belvedere	69	84
Champdany	101	120
Howrah	16	16.56
India	107	126
Kamarhatty	94	100
Kelvin	185	205
Kinnison	122	137
Megna	83	88.50
Naihati	65	74
National	18.70	19.30
Union	101.50	120

Very little business was reported in electric supply shares but the outstanding feature was Calcutta which met with good investment enquiry with the price improving from Rs. 12.50 to Rs. 13.06. United Provinces were Re. 1 better at Rs. 119.

In sugar, there were very few features, among which were Balrampur which recovered to Rs. 6.25 and Samastipur to Rs. 11. U.P. changed hands at Rs. 12.62.

In the engineering section, Indian Iron & Steel met with strong bull support and the price recovered smartly from Rs. 17.58 to Rs. 18.66; tonight's closing quotation is Rs. 18.52. Bhartia Steel were better at Rs. 13.50 as were Burn & Co., at Rs. 323 and Guest Keen Williams at Rs. 28.37. Jessop & Co., were weak at Rs. 24.25 and there were sellers of Richardson & Cruddas at Rs. 9. Textile Machinery improved from Rs. 16.50 to Rs. 17.10, but profit-taking at the close brought the price down to Rs. 17. Indian Steel & Wire Products Ordinary shares were enquired for at Rs. 57.50.

In paper, India Paper Pulp improved from Rs. 18.19 to Rs. 19 and Orient Paper, after being done up to Rs. 24.50, closed easier at Rs. 24.10. There was some investment enquiry for Sirpur at Rs. 8.19 and Titaghur at Rs. 32.12.

In cement, Sone Valley were steady with the price improving from Rs. 5 to Rs. 5.50. Dalmia were easier at Rs. 9.81 but Orissa Cement were slightly higher at Rs. 12.69. Jaipur Udyog improved to Rs. 12.31.

In shipping, India General Navigation were slightly better at Rs. 62.50 and India Steamship met with good investment enquiry following the announcement of a 10% dividend and the news that the company has applied for the issue of bonus shares to ordinary shareholders in the proportion of one for ten. The price recovered from Rs. 11.19 to Rs. 11.62.

Slightly more business was reported in the miscellaneous section. Alkali & Chemical were easier at Rs. 13 as were Angelo Brothers at Rs. 17.25. Balmer Lawrie improved to Rs. 148 and Bengal Flour to Rs. 27,25 while Clive Row Investment recovered from Rs. 8.75 to Rs. 9.12. There were buyers of Dunlop Rubber at Rs. 19.87 and Indian Aluminium at Rs. 12.87. Hindustan Lever were unchanged at Rs. 20 as were Indo-Burma Petroleum at Rs. 24. Jardine Henderson were a good feature and improved from Rs. 72 to Rs. 75. Martin Burn were slightly better at Rs. 23 but Metal Box were shaded at Rs. 25. National Insulated Cable improved from Rs. 23.50 to Rs. 23.87, but National Carbon were quiet at Rs. 23.25. Rohtas Industries improved from Rs. 18 to Rs. 18.44. There was a good enquiry for Sodepore Glass at around Re. 1. National Tobacco were better at Rs. 10.

In the mining section, Indian Copper recovered from Rs. 2.78 to Rs. 2.91 as did Karanpura Development from Rs. 8.69 to Rs. 9.87.

Tea shares revived in sympathy with the higher prices realised for the commodity at the auctions. Bateli were traded at Rs. 26.25 while Bishnauth recovered to Rs. 19. Brahmapootra had buyers up to Rs. 4.06 but Brooke Bond were difficult to place at Rs. 17. Dhelakhat were quoted at Rs. 22 and Dimakusi changed hands at Rs. 19.75. East India improved to Rs. 19.62 and Gohpur were traded at Rs. 21.25. Grob "A" and Grob "B" had buyers at Rs. 24 and Rs. 12.50 respectively, while a small lot of Hoolungoree came to business at Rs. 162. Ledo advanced to Rs. 18 and Methoni had buyers at Rs. 18.50. New Samanbagh recovered to Rs. 20 and Patrakola attracted buyers up to Rs. 142. Belgachi were done at Rs. 68.50 as were Banarhat at Rs. 298 and Birpara at Rs. 135.

* * * *

Providing Rs. 13.34 lakhs (Rs. 12.34 lakhs) for depreciation and Rs. 70.65 lakhs (Rs. 40 lakhs) for taxation, and transferring Rs. 9.68 lakhs (Rs. 2.67 lakhs) to taxation contingency reserve, Rs. 1.03 lakhs (Rs. 5.15 lakhs) to development rebate reserve, Rs. 10½ lakhs (same) to works reconstruction and expansion reserve and Rs. 14 lakhs to the Niwar project reserve, the profit of BURN AND COMPANY has amounted to Rs. 18.58 lakhs for the year ended last April, against Rs. 18.77 lakhs.

TRAYOPHANE *The new name for TRAVANCORE TRANSPARENT PAPER

stops the eye – starts the sale!

THE TRAVANCORE RAYONS LTD

Factory: Nayanpuram P.O., Kerala State.

Sales Office: 2/6 Second Line Beach, Madras.

Bringing in Rs. 1,12,719 and paying the usual preference dividends, there is Rs. 17,89,676. The ordinary dividend has been maintained at 20 percent, leaving Rs. 1,09,676 to be carried forward. In their report for the previous year, the directors mentioned the conclusion of negotiations for the purchase of the interests in India of the Magnesite Syndicate Ltd. of the United Kingdom. The agreement which the company entered into with the vendors was subject to certain conditions. The key condition was that the mining leases held by the vendors should be transferred to the company. This was possible only with the Government's consent, which has so far been refused. The Government of Madras wants to carry on all operations in the mining of minerals within that State. The directors have not, however, abandoned hopes of effecting considerable savings in the manufacture of magnesite but it is possible that there may be some modification of the original plan and further consideration on this basis is now proceeding. They feel that with the large expansion of the steel industry, the opportunities for an increase in the manufacture of refractories are obvious. For some time, the company has been engaged in preliminary surveys connected with developing a new works site in Madhya Pradesh for the manufacture of silica bricks. Land with rail, road, water and raw material facilities has been secured in Niwar, and it is proposed to proceed with this venture as finance and conditions permit.

* * * *

The profit of TATA CHEMICALS LTD. has improved by Rs 8.68 lakhs to Rs. 24.92 lakhs for the year ended last June. The ordinary dividend has been increased by ½ percent to 8 percent. The taxation provision is allocated Rs. 7.97 lakhs. Depreciation gets Rs. 26.57 lakhs against Rs. 25 lakhs, leaving a carry-forward of Rs. 9,567 (Rs. 34,425). The directors state that the period under review ended with further increases in the production of soda ash, sodium bicarbonate and caustic soda. Sales increased from Rs. 2.38 crores to 2.66 crores and "would have attained a still higher level were it not for transport difficulties and congestion at the ports. While the prices of chemicals were maintained at the previous year's level, increases in fuel prices, railway freights and wages affected the profits for the year." The expansion schemes will involve an estimated expenditure of Rs. 4.24 crores, which is to be raised partly from retained earnings, partly from borrowings and partly from an increase in the issue of capital. The directors have decided to recommend to shareholders an issue of 1,120,000 ordinary shares at par, to be offered in the first instance to the existing ordinary shareholders. An application has been made to the Controller of Capital Issues for an increase in the capital.

* * * *

The BROOKE BOND ESTATES INDIA LTD. has increased its profit from Rs. 13.64 lakhs to Rs. 16.06 lakhs for the year ended last June. The taxation provision is Rs. 7.85 lakhs. Bringing in Rs. 5,15,711 and other miscellaneous receipts, there is a balance of Rs. 13,01,150. The ordinary dividend has been increased from 12½ percent to 17½ percent. The carry-forward is Rs. 5,44,800. The crop decreased from 3,607,458 lbs to 3,437,309 lbs. The average sale price rose from Rs. 1.94 to Rs. 2.12 a lb. The directors state that "the reason for the higher market level was the dislocation of the movement of teas to the United Kingdom and other world markets caused by the Suez crisis. So far this season, our teas have realised satisfactory prices, but in the last few weeks there has been a generally easier trend in the market." They mention that the company's strong financial position is a matter for satisfaction in view of the future capital expenditure programme. New machinery and additional withering space will be required in order to handle the increased crop which the company will manufacture.

Bombay Market

TEXTILE SHARES LEAD IN EQUITY PRICE RISE

NEW LOANS FOR T.I.S.C.O ANNOUNCED

Wednesday Evening.

THE Bombay stock market closed on a steady note after remaining idle for the greater part of the past week. Equity share prices improved substantially on short-covering combined with fresh support. Hopes of a reduction in excise duty generated keen bull activity in textile shares. The report that the Tata Iron and Steel Company would be given further loans by the World Bank to finance expansion plans helped improve sentiment.

Tata Steels soared to Rs. 165.50 and Indian Irons improved in sympathy to Rs. 18.48. Calcutta interests were reported to have bought large parcels. Premier Construction attracted attention at Rs. 153 and Tata Locomotive gained at Rs. 133 on replacement buying. Automobile shares were fractionally better, and Premier Automobiles improved to Rs. 88. Hindustan Motors were transacted at Rs. 6.20, but Alcock Ashdown were freely offered at Rs. 230.

Mill shares scored substantial gains on a wide front. Bombay Dyeing recovered to Rs. 52.20 and Century were higher at Rs. 394.50. Svadeshi increased to Rs. 172.50 on bear-covering and Kohinoor were bought up to Rs. 264. Simplex changed hands at Rs. 159 and India United Ordinary were quoted higher at Rs. 10.20. Apollo realised Rs. 2.06.

Bombay-Burmah were a strong feature in the miscellaneous group and improved substantially to Rs. 544. National Rayon gained at Rs. 212 and Tata Chemicals were quoted fractionally higher at Rs. 15.52. Steamship shares were steady on prospects of increased freight. Scindia Steam were quoted at Rs. 17 ex-rights and India Steamship gained further at Rs. 11.68 on reports of a bonus issue. Great Eastern Shipping were taken at Rs. 21.75. Sugar shares were quietly steady, and Belapur came to hand at Rs. 234.75. Phalton were transacted at Rs. 137.50. Cement shares were steady, and Associated Cement were done at Rs. 152.25 while Digvijay Cement were bought at Rs. 130.75. Mining shares were idle, and Shivrajpur Syndicate were available at Rs. 80.

Routine business was transacted in banking shares and fluctuations were narrow. Bank of Baroda made Rs. 100.50 and United Commercial Bank were done at Rs. 56.50. Insurance shares were steady and interest was taken in New India Assurance, the scrip of which improved to Rs. 49.25 on reports of a bonus issue to be made by capitalising premium reserves.

Investment interest was seen in electricity supply undertakings, and Ahmedabad Electric improved to Rs. 96. Tata Hydro were transacted at Rs. 113.50.

NEW WINGS TO SERVE INDIA!

Smoother, faster, quieter, so much more comfortable— a whole new experience of air travel awaits you, as Indian Airlines Corporation brings you... the Vickers VISCOUNT!

INDIAN AIRLINES CORPORATION ADDS TURBO-PROP VICKERS *VISCOUNTS* TO ITS FLEET

ABOVE-THE-WEATHER SMOOTHNESS: Powered by four mighty Rolls-Royce turbo-prop engines, the *Viscount* flies *above the weather* at 20,000 feet... while you relax in the fully-pressurised cabin as comfortably as in your own home. The swiftest, smoothest flying you've ever known!

A PERFECT VIEW FOR EVERYONE: There's no vibration, no noise in a *Viscount* flight. You can speak softly, be heard clearly. Luxurious, adjustable armchair seats invite you to r-e-l-a-x; and the world's largest air windows ensure you a perfect view... no matter where you sit!

THE FIRST—AND THE FINEST: Makers of the world's first turbo-prop airliners, Vickers are proud to be supplying India with new wings to fly in her service. Fly by *Viscount*—and join the thousands all over the world who've discovered *how wonderful* air travel is!

FACTS ABOUT THE I.A.C. *VISCOUNT*

- *The VISCOUNT has a cruising speed of 320 m.p.h.*
- *The VISCOUNT has a carrying capacity of 44 passengers over ranges of up to 1,250 statute miles*
- *The VISCOUNT is powered by four Rolls-Royce Dart turbo-prop engines*
- *The VISCOUNT is in service with 18 passenger airlines throughout the world*
- *The VISCOUNT has logged over 500,000 airline hours*
- *The VISCOUNT was the world's first turbo-prop airliner— and is still the world's most preferred*

INDIAN AIRLINES CORPORATION

VICKERS-ARMSTRONGS (AIRCRAFT) LIMITED

Represented in India by:

Vickers India Private Limited, Killick House, Home Street, Bombay 1

A CONTINENTAL VIEW OF THE COMMON MARKET

THE SIGNIFICANCE OF A FLEXIBLE APPROACH

(FROM A WEST GERMAN CORRESPONDENT)

IN an article entitled "The European Common Market and India's Foreign Trade", which appeared in *Capital* on 8th August, 1957, the ratification, by the parliaments of the Federal Republic of Germany and France, of the treaty instituting the European Common Market is described as a "jump in the dark". Particular reference is made to the elements of uncertainty inherent in the scope of the treaty, the multiplicity of escape clauses and dispensation possibilities and to the inclusion of overseas territories.

Admittedly, it was not easy for the members of both the French and German parliaments to deal with a comprehensive and complicated treaty of this nature. They undertook this examination, however, with great thoroughness and, in addition, have discussed the individual provisions in detail with officers of their respective Governments. The same happened in Italy before the Italian Chamber of Deputies voted on the treaty. One result of this careful study which deserves to be stressed, is the fact that in Germany not only the Government parties voted in favour of acceptance but also the members of the largest opposition party, the Social Democrats. All the members of parliament realised that although the effects of the economic union of the six member countries of the European Economic Community, Germany, France, Italy and the three Benelux countries, cannot as yet be predicted in all detail, the development of the common market should raise the standard of living of the peoples of that Community. The very reason for the flexibility of the treaty was the impossibility of foreseeing all its economic effects; and that is why there are protection clauses the application of which, however, is dependent on the approval of the institutions of the Community.

Thus, it is scarcely correct to speak of "a jump in the dark". The States signatory to the treaty have given unequivocal expression to their desire for close economic co-operation. They see in it a step in the direction of their common goal of European political unity.

Benefits to the Community

The European Economic Community will lead not only to a rise in the living standards of the population of the contracting parties but also to an expansion of their trade with third countries due to increased consumption within the Community. In particular, the demand for products from tropical and sub-tropical regions can never be satisfied by the overseas territories of the member States of the Community alone. Nor do the contracting parties pursue any such objective. In this context attention may be drawn especially to the provisions relating to agriculture; they establish explicitly that the traditional currents of trade are to be taken into consideration when long-term agreements or contracts are concluded.

The fears that the establishment of the common market will result in higher customs rates are also unfounded; the rates of the common tariff can be altered by customs negotiations with third countries. In the treaty the member States have explicitly declared their readiness to contribute to the development of international commerce by concluding reciprocal agreements directed to the reduction of customs rates below the general level admitted under the provisions of G.A.T.T. The common tariff thus constitutes an initial position from which to start negotiations with third countries, the membership of such liberal minded States as the Benelux countries and the Federal Republic of Germany providing a guarantee that a reduction of the common tariff will be aimed at.

On the question of West German capital export it may be mentioned that, as a result of the establishment of the European Economic Community, more capital should be available from year to year; and in any case capital will flow to wherever the most favourable opportunities of investment are to be found. The European Economic Community is vitally interested in trade with third countries; indeed it is dependent on it.

In the above-mentioned article the other efforts of the European States to achieve unification in Europe seem not to have been properly appreciated, nor seen in their proper perspective. The treaty establishing Western European Union, for example, is not a "unity plan" containing "precise stages" for the co-ordination of currencies, economies, social systems and culture in western Europe. Rather it sets forth, in the interests of European integration, certain principles of a political, economic, social and cultural nature. Nor have its provisions remained a "dead letter".

Thus, two important institutions were created by virtue of the treaty, i.e., the Armaments Control Agency and the Permanent Armaments Committee. The former has a particular significance, for it could serve as a model for armaments control on a broader, world-wide basis. The W.E.U. also co-operates in the solution of important political problems—such questions are dealt with once a week in London by the W.E.U. Permanent Council which consists of the London ambassadors of the member States. Another feature worth mentioning is the parliamentary assembly of W.E.U. which meets once a year in Strasbourg in order to collaborate in creating bases for a joint European policy by means of objective and detailed discussion of the political problems falling within the scope of W.E.U.

There is also very little merit in terming the North Atlantic Treaty Organisation (N.A.T.O.) a "hollow shell". Such a definition mistakes the principles and methods which apply within the scope of N.A.T.O. for establishing the requirements of western defence and its adjustments to progressing military developments. Moreover, the "hollow shell" assertion fails to recognise the importance of those functions of the Atlantic Community which go far beyond the purely military sphere.

Military plans such as were drawn up in 1952 having regard to circumstances then, cannot be compared with figures of military strength today. That would give a completely false picture; for, after all, modern armaments development is advancing at an unprecedented rate and plans must be adapted accordingly. These military figures as planned in 1952 are out of date today largely because of technological developments and the resultant considerations of military strategy and tactics.

Furthermore, it would not be doing justice to the importance of the North Atlantic Treaty Organisation as a global political factor if its weight were to be measured solely by the number of divisions contributed by its members. Realising that the defence of the N.A.T.O. members and of their political and moral values cannot be carried out by military means alone, the contracting parties have been concentrating increasingly in recent years on co-operation in the political, economic and cultural spheres. Thus political consultation in the N.A.T.O. Council in all important questions requiring a common attitude has become a significant fact.

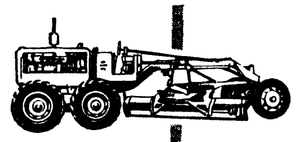
The Work of O.E.E.C.

The Organisation for European Economic Co-operation (O.E.E.C.) is active in all economic spheres and not only in that of so-called liberalisation. Thanks to the co-operation of the European countries in the O.E.E.C., considerable advances were achieved among other things in the liberalisation of both capital and invisible transactions, in the reduction of artificial aids to exports and in the promotion of freedom of movement for workers. Furthermore, an essential part of the O.E.E.C. is the European Payments Union from the existence of which India benefits too, as payments with countries of the sterling bloc are also settled *via* the E.P.U. Almost 60 percent of total world trade and nearly three-quarters of German export trade are settled through the E.P.U.

On the subject of the reduction of quantitative import restrictions, it may be mentioned that by 1st June, 1956 a level of 86.6 percent had been reached. Further progress is, however, only possible if customs duties are reduced simultaneously, as the countries with a low customs tariff can point out with a certain amount of justification that the higher customs level of other countries may also have restrictive effects. The importance of the O.E.E.C. is best seen in connection with the present suspension of liberalisation by France owing to a crisis in her balance of payments. Permission to suspend liberalisation is by no means granted unconditionally or without limit by the Organisation. The country concerned undertakes to submit a comprehensive rehabilitation programme and to agree to the periodic examination by the Organisation of its economic situation and the measures taken by it. This is, so to speak, the price it pays for the maintenance of liberalisation on the part of the other member countries of O.E.E.C. But for international co-operation within the O.E.E.C. there would be a danger that the other countries on their part would revert to a restrictive policy which would make it all the more difficult for the country concerned to overcome the crisis in its balance of payments.

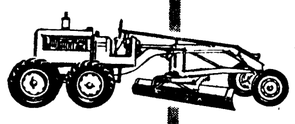
The conclusion of these reflections is that all the efforts made so far to arrive at a closer co-operation among the States of Europe have prepared the ground on which the European Economic Community will be able to function in the near future.

CAT



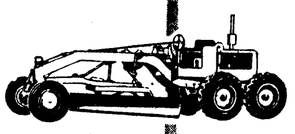
MOTOR GRADERS

All over India on the big construction projects with municipalities; state farms; and with the leading contractors, you can see Caterpillar Motor Graders hard at work.



Building or maintaining existing roads, ditches, shaping banks, there is no tool like the profit making Caterpillar Motor Grader.

All over India, and throughout the world successful contractors and project engineers give Caterpillar their first choice. The main reasons for this preference are the proved low cost, high production and long-lived performance of these famous machines.



Ensure the job gets done to time by using a Caterpillar Motor Grader. There are three models the No. 12, 112 and 212. One of these, or more, is the answer to your problem.

No. 12—115 HP

No. 112—75 HP

No. 212—50 HP

CATERPILLAR*

*Caterpillar and Cat are Registered Trademarks of Caterpillar Tractor Co. U.S.A.

CAT MOTOR GRADER SPECIFICATIONS

	No. 12	No. 112	No. 212
Engine	Diesel, four-stroke cycle		
Blade range :			
Lift above ground	16"	15½"	14¼"
Side shift (right or left) ...	40"	36"	33¾"
Maximum bank cutting angle ...	90°	90°	90°
Maximum shoulder reach (measured outside rear wheels) ...	7'4"	6'5"	5'

"Time proved features—Balance of power, weight and speed! Long-live Caterpillar Diesel Engine! Mechanical controls with built-in Long Life! Structurally strong Main Frame!"

SHORTAGE OF FOOD FEARED NEXT YEAR

ADDITIONAL IMPORT REQUIREMENTS ESTIMATED AT TWO MILLION TONS

(FROM OUR NEW DELHI CORRESPONDENT)

A NEW danger to the second five year plan has cropped up in the shape of a possible food crisis. Speaking recently at a Press conference in Patna, the Union Minister for Food and Agriculture, Mr. A. P. Jain, has indicated an immediate revision of India's food import policy "to ensure considerably larger quantities of food from abroad in view of the current deficits in Bihar, Orissa, Uttar Pradesh and parts of West Bengal. Food imports in the coming months will have to be considerably larger. In spite of our present stocks and arrangements of supplies, very soon our building up of stocks will come to an end. By the end of January we may start eating into our reserves." The Food Ministry's estimate of additional imports is 2 million tons. Stocks with the Central and State Governments and the trade are placed at 1 million tons, and the contracted imports at 1.5 million tons.

The following figures of imports of foodgrains since independence are taken from a recent blue-book issued by the Ministry of Food and Agriculture:

Year	Quantity in Thousand Tons.	Value in Lakhs of Rupees
1947	2,334	9,399
1948	2,841	12,972
1949	3,706	14,460
1950	2,125	8,060
1951	4,725	21,679
1952	3,864	20,907
1953	2,003	8,595
1954	808	4,702
1955	700	3,311
1956	1,420	5,634

The peak year for imports was 1951, the year of the first general elections, after which the late Mr. Rafi Ahmed Kidwai was appointed as Food and Agriculture Minister in the Union Cabinet. His unorthodox technique rather than official policy was largely responsible for the abolition of controls, which was followed by a rapid decline in foodgrains imports. Soon after Mr. Kidwai's death the picture changed.

According to the blue-book, the Planning Commission had placed the target for additional food production during the first five year plan at 7.61 million tons. The actual achievement, at 5.16 million tons, fell short of this target by 1.45 million tons. The following is the break-down (in million tons) of the targets and the results achieved.

	Target	Actual achievements
Through major irrigation works	2.01	0.95
Through minor irrigation works	2.38	2.16
Through land reclamation and development	1.51	1.16
Through manures and fertilisers	1.15	0.58
Through improved seeds	0.56	0.31
	7.61	5.16

The present food crisis is traced to drought and inadequate rainfall. Irrigation is supposed to make up for the rainfall deficiency wherever the facilities exist, but the table shows that irrigation facilities were not utilised to the full.

Fertiliser Supply and Demand

Earlier this month, opening the Srinagar session of the State Food Ministers Conference, Mr. A. P. Jain said that "the demand for nitrogenous fertilisers for the 15 months from January 1957 to March 1958 is 1,341,000 tons in terms of ammonium sulphate. By indigenous production and imports, we will be able to meet the demand only to the extent of 1,035,000 tons, thus leaving a deficit of 306,000 tons. The estimated requirements of the States for the 12 months, April 1958 to March 1959, come to about 1,450,000 tons in terms of sulphate of ammonia. As against this, the availability from internal manufacture is expected to be 540,000 tons. Thus, a deficit of 910,000 tons has to be covered by imports, but so far foreign exchange has been permitted only for an import of about 300,000 tons. The net deficit, therefore, is 610,000 tons, which would mean that we would have to effect a cut of 42 percent in the requirements of the States. This would affect not merely the production of foodgrains but of commercial crops also."

The speech should not encourage State Ministers of Food to sit back and do nothing until and unless adequate foreign exchange is allocated to import nearly 1 million tons of fertilisers. The Union Food and Agriculture Ministry has admitted that the increased production of local "manures and fertilisers" has fallen short of the target by 570,000 tons.

According to official estimates, the following are required to achieve additional production in the manner indicated below:

Irrigation schemes	0.2 ton	an acre
Sinking of new wells	1 ton	"
Repairs of new wells	0.5 ton	"
Installation of Persian wheels	1.5 ton	"
Tubewells	100 tons	"
Pumping installations	50 tons	"

The grow more food campaign was launched in 1943-44. It will be interesting to know the exact number of new wells sunk and old wells repaired since that year. On the one side, attractive booklets are produced to publicise the achievements of the campaign and, on the other, India still remains at the mercy of rainfall and imports.

Creating Confidence

There is yet another aspect of this food crisis. Enquiries made from the Union Food Ministry do not show that the food position is desperate. First, it is stated, recent rains have partially retrieved the crop position in almost all the areas affected by drought. Secondly, Orissa and Madhya Pradesh are normally surplus areas. At its worst, the surplus would be wiped out. The Government is confident of finding ways and means of feeding the drought-affected areas in Uttar Pradesh and West Bengal. So far as Bihar is concerned, the Food and Agriculture Minister has already explained its position. It is asked whether the alarming statements made by responsible Ministers are not likely to create panic, a psychology of scarcity, leading to hoarding and high prices. Mr. Kidwai won the food battle by always maintaining that he had enough stocks of foodgrains to flood the market. The need of the hour now is to create similar confidence by asserting that the Government has enough foodgrains in reserve to feed the drought-stricken people. Two million tons of foodgrain imports are bound to strain the foreign exchange reserves. Imports from Australia are ruled out because of a drought in that country. Moreover, the area under drought in India is a rice-eating area. In other words, imports should be more of rice and less of wheat. The alarming statements are, therefore, likely to raise prices in the affected areas. The "hard core of the plan" requires Rs 700 crores of foreign exchange. The revision of the food policy for importing 3.5 million tons—1.5 million already contracted for plus the extra 2 million now demanded by the Food Ministry—should make the implementation of even the "hard core" doubtful. It is time that some definite decision was reached on the implementation of the plan, it is thought here. A decision on food policy is urgently called for.

Capital Goods Imports from W. Germany

The following is a list of the various types of capital goods and accessories which have been imported and orders for which have been placed in Western Germany both by the Government of India and the private sector:

	In Thousand Deutschemarks				
	1950	1953	1954	1955	1956
Machinery	21.457	88.972	105.001	163.835	220.695
Power-driven machinery	4.881	26.131	30.642	40.715	35.912
Boilers	770	12.307	14.843	20.899	19.395
Combustion engines	4.111	9.767	11.280	18.381	14.616
Metal working machinery	3.979	14.604	23.513	29.132	39.656
Building and construction machinery	10.026	46.052	46.159	89.770	133.928
Conveyors	119	6.248	6.657	8.258	11.591
Textile machinery	2.118	4.328	8.236	9.710	17.026
Other machinery	1.793	22.157	17.714	48.074	69.116

Increase in Coastal Freight Rates

Some of the major recommendations of the Rail-Sea Co-ordination Committee have been accepted by the Government, it is learned. As recommended by the Committee, the Government has agreed to an enhancement of freight rates in the coastal trade by 5 percent for general cargo and 10 percent for coal, the latter to have retrospective effect from 1st April, 1956. This is over and above the increases already announced. The Committee had recommended a general enhancement of 15 percent over freights in force prior to 15th October, 1955. The Committee's recommendation for the enhancement of freight rates for salt up to the level of those for coal in the reverse direction has not been accepted. The rates recommended were: from Saurashtra ports to Calcutta Rs. 37-12 a ton, and from Tuticorin port to Calcutta Rs. 28-8 a ton. Another recommendation to vest in the Government the right to vary rates has been partially accepted. The Coastal Shipping Conference has been given the right to enhance rates up to 7½ percent. Any increase over this ceiling will require the prior approval of the Director-General of Shipping.

Iron Ore Exports to Japan

Discussions between an official delegation from Japan and the Ministry of Commerce and Industry on the question of the supply of additional quantities of iron ore to Japan on a long-term basis commenced during last week. The discussions cover Japan's need for additional supplies of iron ore and the question of Indo-Japanese collaboration in railway and port development, which the additional supplies would necessitate. In March this year, an agreement was reached between the State Trading Corporation and the representatives of the Japanese steel industry for the supply of 7.2 million tons of iron ore to the latter over a period of five years from April 1957. During the negotiations for this agreement, it was also agreed that the question of Japanese co-operation in improving transport facilities should be discussed at a later stage, should Japan want to buy more iron ore from India than the quantity specified in the agreement. After discussions in New Delhi, the Japanese delegation is likely to visit some of the ports. It is led by Mr. Makoto Watanabe of the Japanese Ministry of International Trade, and consists of port and railway experts and representatives of the steel industry.

Mining Leases for Private Parties

The Government of India has suggested to State Governments to grant mining leases to private parties for isolated patches of mineral ore reserves. These patches must be ascertained first as unsuitable for State exploitation as proposed under the Industrial Policy Resolution. The step has been taken by the Central Government in view of the extreme urgency of increasing India's foreign exchange earnings. State Governments have been requested to expedite action on pending applications, especially for iron and manganese ore. The minerals included in the Industrial Policy Resolution are coal and lignite, mineral oils, iron ore, manganese ore, chrome ore, gypsum, sulphur, gold, diamond, copper, lead, zinc, tin, molybdenum and wolfram. Coal and mineral oil are excluded.

Move to Raise Productivity

Principles on which a national movement for productivity in India should be based will be laid down at a two-day seminar convened by the Ministry of Commerce and Industry on 1st and 2nd November in New Delhi. About 100 representatives of national organisations of labour and employers, Union Ministries, the Planning Commission, State Governments as well as experts connected with the productivity movement will attend the seminar. At a meeting of experts drawn from different interests, held in the middle of last month, certain guiding principles were recommended. It was agreed that the productivity drive should aim at increased production by improved techniques, proper utilisation of different resources, raising of the standard of living of the people and improving the working conditions of labour.

Increased productivity, the experts' meeting recognised, would ultimately expand employment rather than reduce it, by stimulating the expansion and development of industry and the economy as a whole. The benefits of productivity should be equitably shared by capital, labour and the consumer. The importance of co-operation between management and labour in making a success of the productivity movement was yet another principle accepted at that meeting. At the forthcoming seminar, representatives of different interests will examine and finalise these principles.

Among the other important points for decision at the seminar will be the constitution of the proposed National Productivity Council to direct and co-ordinate a national movement for productivity and the relation of the National Council to the local productivity councils. On the latter will fall the burden of taking effective action to inculcate productivity-consciousness. The seminar will also decide whether the productivity movement should be confined in the initial stages to the industrial field or should also cover other fields of economic activity such as agriculture, fishery, forestry, etcetera. The seminar will be inaugurated by the Union Minister for Industry, Mr. Manubhai Shah.

National Productivity Council

On the constitution of the National Productivity Council, the experts' meeting was of the view that its membership should be restricted to national organisations of employers and labour and of technicians. There is, however, another view that the membership should be thrown open to industrial units, associations and organisations of industries, employers and labour and to others interested in promoting productivity, to make the movement broad-based. In the latter case, the members enrolled by the local productivity councils will automatically become members of the National Productivity Council. The experts' meet-

ing however rejected this idea on the ground that the membership would become unmanageably large. It felt that industrial units, local labour organisations and other interested in productivity, should become members of the National Productivity Council.

Expanding Capacity in Private Sector

A recent survey of private industry has shown that there is considerable scope for expanding existing units as well as for setting up new ones. The power and distribution transformer industry has 14 units with a licensed capacity of 1.537,000 kVA. Additional capacity aggregating 663.000 kVA is now required to meet the growing demand, for which extra units to produce 509.000 kVA have been recommended. Total capital requirements to create the additional capacity are estimated at Rs. 15 to Rs. 20 lakhs. Schemes for a total capacity of 532.000 kVA are being considered by the Government. There are at present 14 units manufacturing electric motors of up to 250 horse-power. Their licensed capacity is 996.870 horse-power. Three units of 30.000 horse-power to 40.000 horse-power have been suggested as the extra capacity to meet the country's entire demand of 253,000 horse-power. The capital requirements are estimated at Rs. 20 to Rs. 25 lakhs. Seven units manufacture 89,000 motor starters. Three units with a capacity of 10.000 motor starters have to be set up to meet the additional demand for 30,600 motor starters. Rs. 8 lakhs is the capital requirement. Ten units at present manufacture 536 million core yards of V.I.R. and P.V.C. cables and wires. The additional capacity required is estimated at 64 million core yards a year. to manufacture which one big or three medium-sized units have been recommended at an estimated cost of Rs. 50 lakhs. Some large schemes are being considered for the manufacture of 160 miles of paper insulated power cables, 1,640 miles of which are already being locally manufactured.

Foreign collaboration, it is suggested, is necessary for units to manufacture X-ray equipment, cinematographic equipment (33 millimetre), 16 millimetre projection and sound equipment, electrical measuring instruments, electrical railway signalling equipment, solvent extraction plant, weighing machines, tea machinery, stone crushers, I.C. engine valves, electric horns, shock absorbers, thin-walled bearings, diesel engines (stationary), below 50 horse-power, blowers and fans (industrial type) high horse-power, low and medium speed engines, earth-moving equipment, agricultural tractors, dashboard instruments for the automobile industry and wire cloth and screens required by the paper industry.

There is no manufacturing capacity at present for cinematographic equipment, but the demand is placed at Rs. 60 lakhs worth of equipment a year, for which one big or two medium-sized units have been suggested at an estimated cost of Rs. 20 lakhs. There is no unit manufacturing 16 millimetre projection and sound equipment. The demand is placed at 1.000 units a year, to manufacture which one or two units have been recommended at an estimated cost of Rs. 10 to Rs. 15 lakhs. There is one unit manufacturing 24.000 electric safety lamps. Their additional demand is placed at 26.000 lamps, for which two units at an estimated cost of Rs. 15 lakhs have been recommended. The present capacity of the three firms manufacturing electrical measuring instruments is 70.000 units. The demand has grown for an additional 30.000 instruments, for which two units at an estimated cost of Rs. 15 lakhs have been suggested. The existing licensed capacity for electrical railway signalling equipment is placed at Rs. 15 lakhs worth of equipment. Its demand has grown to Rs. 45 lakhs worth of equipment, for which one or two units at an estimated cost of Rs. 15 lakhs will have to be set up

Solvent Extraction Plant

One unit to manufacture Rs. 12 lakhs worth of solvent extraction plant is suggested at an estimated cost of Rs. 8 lakhs. There is no manufacturing capacity for this article at present. Six new units have been suggested to manufacture Rs. 115 lakhs worth of weighing machines. There are already five units manufacturing Rs. 25 lakhs worth of them One unit with a capital cost of Rs. 30 lakhs, it has been recommended, should be set up to produce Rs. 1 crore worth of tea machinery. There are two units producing Rs. 110 lakhs worth of tea machinery at present. There are four units which turn out 320 stone crushers at present. One more unit capable of manufacturing 180 units has now been recommended at a capital cost of Rs. 19 lakhs. Some 720.000 I.C. engine valves are manufactured by three units at present. Four more units at an estimated cost of Rs. 10 lakhs have been recommended to manufacture 3.280.000 additional valves. About 6.000 electric horns. 211,900 shock absorbers, 300,000 thin-walled bearings and 540 blowers and fans are manufactured at present. The additional demand is for 94.000 electric horns. 188,100 shock absorbers and 700,000 thin-walled bearings. The additional demand for blowers and fans is placed at Rs. 2 crores worth of goods a year. Two additional units each to manufacture electric horns, shock absorbers and thin-walled bearings and blowers and fans are recommended.

There are 17 units manufacturing a total of 221.690 horse-power diesel engines. The additional demand is for 50.000 horse-power. One more unit has been recommended.

There is a Government factory which manufactures high horse-power low and medium speed engines. One more unit capable of manufacturing 25,000 horse-power has been recommended. There is no plant to manufacture earth-moving equipment, dashboard instruments or wire cloth and screens, the estimated demand for which is as follows: (1) earth-moving equipment Rs. 5 crores worth, (2) dashboards 70,000 sets, and (3) wire cloth and screen Rs. 40 lakhs worth. One unit each to manufacture earth-moving equipment and dashboards and two units to manufacture wire cloth have been recommended. Two units to manufacture 2.000 agricultural tractors in different ranges have been recommended, their existing manufacturing capacity being 4,800 in the 20 to 30 horse-power ranges.

Two units of industrial air-conditioning equipment and refrigeration plant have been recommended to meet the demand for Rs. 125 lakhs worth of equipment a year. Some 20,000 cameras are manufactured in India. But the demand is for 100,000 cameras, so two more units have been recommended. Rs. 7 lakhs worth of conveyors are produced at present. Demand is estimated at Rs. 243 lakhs worth of conveyors. Ten additional units have been recommended to meet the additional demand. One unit to manufacture Rs. 12 lakhs worth of dairy machinery has been suggested, as also two units to manufacture 1.000 concrete mixtures. 1,032 of which are already being manufactured every year.

High-level negotiations between private and foreign firms are in progress to set up two units to manufacture printing machinery platon, flat-bed, proof and press, at an estimated cost of Rs. 1.5 crores. A special committee is examining the capacity of the installed units for paper machinery, the excess demand for which is placed at Rs. 5 crores. Foreign collaboration is preferred. The existing licensed capacity for fuel injection equipment manufacture is 10,000 units, for pistons 300.000 units, and for automatic jacks 14.400 units. One unit each to manufacture 25,000 fuel injection equipment sets and 400.000 pistons, and two units to manufacture 65,600 automatic jacks, have been recommended. Chemical and mining pumps are manufactured at present against orders. The additional demand is for Rs. 1 crore worth of pumps. Two additional units have been suggested. The demand for electric starter motors and generators has gone up from 7.000 units to 70,000 units. One more unit has been suggested. The demand for petrol-kerosene engines, similarly, has gone up from 7,200 [illegible]

DEBATE ON THE NEW ECONOMIC POLICY

PROFITS, WAGES AND FULL EMPLOYMENT

(FROM OUR LONDON CORRESPONDENT)

THE long-term as opposed to the short-term prospects of the Government's new anti-inflationary policy are gradually being clarified. On Tuesday and Wednesday the House of Commons debated the economic situation, which gave the Chancellor of the Exchequer his first opportunity to explain just how much the capital investment programme has to be cut back as a curb against inflation and to furnish the public with a more detailed account of his intentions than he has yet given. Last week he took the unusual step of attending the regular meeting of the National Joint Advisory Council, the body which advises the Government on labour and allied subjects, in an effort to secure co-operation from all sides of industry in furthering the objects which the Government's measures "already in operation and others to be announced shortly" were aimed to secure. Far from damaging the policy of full employment, he explained, they were essential to its preservation, but he stressed that they would have their effect on both profits and wages. It is understood that there was some plain speaking from all sides in the discussion which followed, that Mr. Thorneycroft finally commented on each of the points raised and all present promised to give consideration to them, but the T.U.C. spokesmen made their disagreement with the Government's approach to the problem quite plain and apparently saw little prospect of wage claim restraint.

Official spokesmen continue to emphasise that there is no question of seeking a "showdown" with the unions, but at the same time make it abundantly clear that without some form of voluntary restraint on all sides the economic outlook is far from bright. It is not without significance that the independent Council on Prices, Productivity and Incomes, which has begun its series of discussions by talks with experts from the Treasury, the Ministry of Labour and the Bank of England, in its letter inviting such talks proposed that among aspects of the problems worth considering were monopolistic and restrictive labour practices, productivity, and voluntary restraint on wages, profits and dividends. The T.U.C. has more or less shelved the invitation for a month by referring the matter to its Economic Committee, but some of the General Council members were in favour of an immediate refusal. Meantime, fresh wage claims continue to be put forward, the series of negotiations on those already made started last week with consideration of the railwaymen's claims and will no doubt continue throughout the winter seeing that they cover either the wages or working hours (the 40-hour week is being demanded more widely) of more than 5 million workers already.

Better Terms of Trade

The dangers inherent in this situation are being obscured by the continued fall in commodity prices and the consequent cheapening of Britain's import costs, which is helping to slow down the inflationary effects of the wage-price spiral. The Board of Trade index of import prices has fallen from 110 in January to 104 in September, while the index of export prices has risen from 109 to 112. The terms of trade index was 101 in January and has come down to 93 in September (1954 average=100), to show another one point move in Britain's favour for the fourth successive month. Lower prices for raw wool, raw cotton, copper and petroleum, and a fall in the unit price of imported manufactured goods were mainly responsible for the latest improvement. Over the first three-quarters of this year the fall was most marked in the import prices of fuels, where the slump in freight charges and the return from dollar oil to the cheaper Middle East oil reduced costs heavily, but many other raw materials have been cheapening in the last few months and the average cost of imported "food, beverages and tobacco" has also dropped. On the export side, on the other hand, there has been a steady rise ever since 1954. Since then the index for the cost of exported engineering products has risen by 14 percent, nearly half of this rise occurring in the past 12 months. Taking all exported goods together, the price index for September was just under 3 percent higher than for January of this year. The trouble is that these benefits may not last, for the raw material producing countries are running down their reserves and already beginning to restrict their imports. If prices weaken further additional restrictions might well start affecting Britain's exports.

The full details of overseas trade in September show that U.K. exports are still doing well, though they have grown more slowly than world exports. For the first nine months of 1957 exports have been 7 percent up in value and about 3½ percent up in volume over the same period of 1956. For the year 1956 the increase in value over the previous year was 10 percent and in volume 6 percent. The rate of growth has slowed down but it has been carried into the fourth successive year. The Board of Trade points out that the recent slackening in the rise of imports was due entirely to the sharp fall in import prices. "The underlying growth in the volume of imports is, if anything, accelerating a little." Import volume is now running 4 to 5 percent higher than a year ago in line with increased production and consumer spending.

Bank Advances Down

The first returns from the clearing banks for October—the first month since the rise in Bank rate and the Chancellor's further request for the limitation of loans—have just become available, and in each case there has been a moderate reduction in advances. There seems little doubt that when the full figures become available they will show that the total advances of the London clearing banks will have been reduced to a level well within the ceiling which the Chancellor set for them. Fears that the increased Bank rate will lead to a higher rate for house loans have not been realised. The Building Societies Association, to which most of the main building societies other than the Halifax, belong, decided at its Council meeting earlier last week not to recommend any increase in interest rates on house mortgages at present. The advice is not binding, but most members are expected to comply. A warning was added, however, that if a higher general level of long-term interest rates became established the building societies might be forced to increase theirs.

The Governor of the Bank of England has addressed a letter to the British Insurance Association inviting the attention of insurance companies to the need, which is greater than ever in present conditions, for keeping a close scrutiny on transactions involving the sale of property freeholds and their subsequent re-purchase, the seller becoming the tenant of a financial institution. They were originally warned about this in March 1956 by Mr. Macmillan when he was Chancellor of the Exchequer.

Need to Reduce Tea Output

In view of the present trend in the commodity markets, most producers are giving serious consideration to the question of cutting down surplus output. One of the exceptions is tea, although production has exceeded demand for some years. It is estimated that a surplus of something like 100 million lbs already overhangs the market and this might well be increased if the 1957 estimates prove accurate. The main trouble is that the financial resources of dealers are inadequate to increase stocks to anything like this level, and the credit squeeze does not make the situation any easier. In consequence, there would be little surprise in Britain if prices, which are now in the region of 3s a lb for plain tea, were to fall to even lower levels. African producers could probably break even at prevailing rates, but it is evident that producers in India, Pakistan and Ceylon cannot do so and in fact have been losing money. The only answer, it is thought here, would seem to be at least a temporary spell of output reduction. That, however, raises an even more difficult problem namely, how is it to be arranged?

This month's review of the National Bank of India contains an article which suggests that what is needed is a return to the International Tea Agreement, but with the inclusion of the African producers. For all its limitations, that agreement was effective in keeping surpluses down to manageable proportions whenever this was necessary both before and after the war, and perhaps it was unfortunate that it was allowed to lapse in 1955 when the heavy demand rendered it more or less unnecessary. It would be useful now, but it will certainly not be easy to restore it. These things are much better arranged when everybody is making money. If the East African producers are excluded they will profit from the cutbacks in Asian output; yet they have no incentive to join while they continue to make a profit. This difficulty, as is pointed out, may only be temporary as prices may fall below African costs. There seems to be a case for international consultation before conditions deteriorate.

Trade Mission from China

A Chinese technical and economic mission of 20 members who are senior technical experts, under the leadership of Dr. Ch'i Chao-ting, has been sent to Britain by the Government to take a look at what has been achieved in British research and design since the war, with particular reference to machine tools, precision instruments, electronic equipment, automobiles and chemical engineering plant. The first fortnight of a visit which is expected to last for four to six weeks will be spent in looking at research establishments, after which they plan to visit individual firms. The interest shown here is evident from the fact that about 1,500 firms have invited members of the mission, for it is believed that China's needs of machinery of advanced design are very great and that the approval of a product by the mission might well lead to large orders provided the embargo list on exports to China permits them.

Brevities

The cost of living index went down by three-tenths of a point in September compared with August, but is recorded as standing at 106 on 17th September, the same figure as on 13th August (17th January, 1956=100). The rises in the prices of tobacco and cigarettes were offset by reductions in some foodstuffs.

The International Bank has made a second railway loan to Pakistan for the equivalent of $31 million advanced in various currencies and carrying interest at 6 percent. The pre-loan was for $27 million in 1952, and altogether the Bank has now made seven loans to Pakistan amounting to $108 million, but not all in dollars.

Foreign currency allocations for tourists are to be unchanged in the year starting on 1st November. Adults are again to be permitted to spend £100 and children under 12 years of age £70.

Bombay

INCREASED EXPORTS OF PEPPER

NEED TO DEVELOP THE U.S. MARKET

(FROM OUR BOMBAY CORRESPONDENT)

PEPPER exports are being maintained at a satisfactory level according to trade circles here who are optimistic about the future prospects. Exports during the last financial year are estimated at approximately 14,800 tons, compared with 13,127 tons during the previous 12-month period. But the 1956-57 figure is only slightly in excess of the 14.778 tons exported in 1954-55. Production has increased from 26.000 tons to 32.000 tons during these years, but the increase in exports has been made possible not because there has been an appreciable rise in the offtake of India's regular customers but because of spasmodic buying by the communist countries. Russia, for instance, purchased 675 tons in 1954-55, and 3.950 tons in 1955-56. But as far as can be ascertained, it seems that Russian purchases were down to a little over 1.100 tons in the last financial year. These variations would appear to be significant. They indicate that no reliance can be placed on Russia for a steady offtake and while each deal is welcome, it would be wiser to concentrate on maintaining and developing regular markets like the United States. The United States is a market in which Indonesia, a major pepper producer, is keenly interested. The other communist countries which have shown interest in Indian pepper recently are Czechoslovakia, Poland, Bulgaria, Rumania and Eastern Germany. In that order their purchases last year amounted to 517 tons, 295 tons against only 40 tons in 1955-56; 135 tons, against 41 tons; 100 tons; and 15 tons. It is too early to say whether trade with these countries will follow the same erratic pattern as with Russia.

An encouraging sign is that Switzerland and Denmark emerged as buyers for the first time during the 1956-57 financial year. Their imports amounted to 4 and 16 tons, respectively. Although these figures are not impressive, they indicate that potential markets exist in these two countries which can be developed. The second five year plan has fixed a production target of 36.000 tons. This increase will mainly be achieved by means of improved methods of production. It is reasonable to hope, therefore, that this country will be able to offer keen competition to Indonesian producers, particularly when the Indian product is of superior quality.

Dull Trading in Cotton

Reports of heavy accumulation of cloth stocks with mills and certain sections of the trade helped depress the cotton market. Traditional transactions conducted to hail the new year were disappointing and amounted to no more than token deals. The Jarilla March contract dropped from Rs. 710 to Rs. 695 a candy. The spot market was also listless and daily transactions amounted to around 2,000 bales. Most of the popular varieties dropped by about Rs. 10 a candy. The new cotton crop is now being marketed and the quality is reported to be satisfactory. Gujerat, Saurashtra and Madhya Pradesh have had some more rain and it is possible that the damage to the crop in these areas may not be as serious as it was expected earlier. There has been no export activity because both France and Japan have currency problems. The quotation for Bengals has dropped by Rs. 25 a candy while the official premium for export quota has dropped to Rs. 30 a candy. Shippers here believe that Japan may be interested in supplies at this low level and some business may be done with that country in the near future. Meanwhile, the trade has greatly welcomed the Government of India's announcement of a fresh import quota for Egyptian and Sudanese growths. Applications for licences far exceed the ceiling limit of 15,000 bales. Payment will be made in sterling for the Sudan qualities and in rupees for the Egyptian growths.

Decline in Piecegoods

New year trading in cotton piecegoods showed an improvement over last year. The turnover in the local market was estimated at 60,000 bales, against 50.000 bales last year. Although the volume of business was larger, prices showed a tendency to drop. Coarse and medium qualities were down by 3 percent while fine and superfine qualities dropped by around 6 percent. Stocks are still mounting with mills and it is reported that the Government of India is thinking of measures to deal with the situation. The export market was also dull except for some enquiries for greys from U.K. buyers. East and West Africa also showed some interest. It is hoped that fresh orders will be forthcoming from Burma. Although Indonesia announced that cloth imports from Japan would be severely curtailed, there is no indication that this business will revert to India.

Staple Yarn Prices Improve

Although there was little interest in art silk yarn, staple fibre improved considerably. The 2/40 October delivery contract gained Rs. 30 and increased to Rs 577. But there was profit-taking at this high level and the market closed at Rs. 574. The December delivery contract was steady at Rs. 554. In the art silk section, the 120D October delivery contract moved within narrow limits and closed at Rs 802. The December delivery contract, however, commanded a premium of Rs. 16. The additional export quota for cotton yarns failed to stimulate the market and it continues to stagnate. Yarns of fine and superfine counts declined somewhat in price. There was no overseas demand while domestic buyers seemed uninterested even at the lower levels.

Uttar Pradesh

SCHEME FOR OLD AGE PENSIONS

NEW MINERAL DEPOSITS DISCOVERED

(FROM OUR LUCKNOW CORRESPONDENT)

A SCHEME for granting old age pensions "to all poor and destitute persons of 70 years age and over" has been announced by the U.P. Government. The first of its kind in India, the scheme aims at providing some measure of security to the aged and the destitute. It is to come into force on 26th January, 1958. The details of the scheme, which have been subsequently released, have, however, come as an anti-climax. A destitute has been defined as a person "without any source of income, who has no relatives of 20 years of age or over in the categories specified in Para 2." Para 2 stipulates that to be a destitute, a person should not have "any son, son's son, son's wife, real brother, real brother's son, real brother's wife, married daughter, daughter's son, husband, wife, husband's real brother, married sisters, sister's son and father's real brother's son." Very few people, it is thought, will fulfil this qualification. Beggars and mendicants and persons maintained free of cost in poor houses will not be considered as destitutes. On the basis of the 1951 census, about 600,000 people would now be over 70 years of age, and the vast majority of them would be entitled to the pension which is fixed at Rs. 20 a month. The amount earmarked in the Budget for the scheme is, however, only Rs. 25 lakhs. Therefore, it seems that the rules have been made so stringent that large numbers of them are disqualified. Under the new definition, it is expected, not more than 60,000 people will benefit. Even on the basis of 60,000 pensioners, the cost of the scheme may well mount to about Rs. 1.5 crores, and it has not been stated where this money is to come from. Every destitute entitled to a pension under the scheme is required to submit an application in duplicate to the *tehsildar* of the area in which he resides. The *tehsildar* will make an initial scrutiny and send it to the District Magistrate, who will make his recommendations to the Labour Commissioner (the sanctioning authority). All pensions will be paid quarterly and the amount will be remitted by money order.

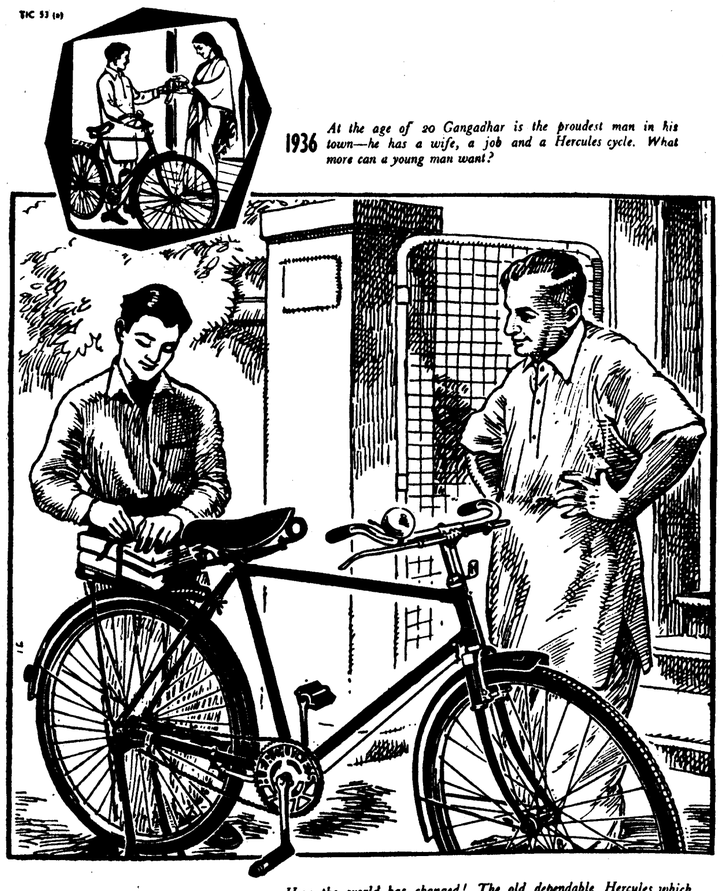
Mineral Resources

The view that U.P.'s industrialisation will be accelerated was expressed by the Chief Minister, Dr. Sampurnanand, at a recent Press conference in Mussoorie when he displayed samples of the minerals collected by the Directorate of Geology and Mining. The most important of the "finds" are the coal deposits in the Mirzapur district over a 16-mile area which, in the opinion of the Directorate, would be sufficient to meet the requirements of both Uttar Pradesh and Punjab if exploited. According to the Geological Survey of India, a second-class colliery can be started in the district which has a deposit of 2 million tons of coal. The State Department of Geology is of the view that the deposits are even larger. Possibilities of striking oil in the Gonda district have also been mentioned, and it is stated that the structural strata ascertained by the Canadian magnetometer survey are encouraging. A quartz-vein containing copper ore has been located in Almora district, and a shallow trench dug across the quartz-vein has yielded good samples. Old copper mines, incidentally, are known to have existed in the hill district of Kumaon at a number of places along an 80-mile belt in the old days when mining was done with primitive equipment. Native sulphur has been found in the Roopganga valley in Garhwal district. A vein of asbestos has also been located in this region. According to the Geological Survey of India, this asbestos can be used in the manufacture of asbestos cement and also in the insulating industry. Magnetite, an important ore in the extraction of iron and in the manufacture of steel and other alloys, has been found in small lenses in the Garhwal district where, it is believed, iron was mined in the days of the Gurkha rulers. The State Department of Geology has estimated considerably larger deposits of gypsum than the 200,000 tons estimated by the Geological Survey of India. Lead, marble, china-clay and limestone deposits have been located by the Department in the northern districts of the State. Estimates of china-clay have been placed at 3.5 million tons and of marble at 3 million tons. The limestone deposits of about 30 million tons can be used not only for cement production but in many other chemical manufactures due to its high quality.

Industries for U.P.

The State Government, it is understood, has been informed by the Centre of its decision to locate two important industries, namely, synthetic rubber and aluminium, in Uttar Pradesh. The synthetic rubber plant, which is likely to be located in Bareilly, may be put up by a U.S. firm, and negotiations in this connection, it is believed, are in an advanced stage. The factory will cost about Rs. 15 crores and will produce 20,000 tons of synthetic rubber annually. One of the basic materials for the synthetic rubber, synthetic wax, will be obtained from the coke-oven plant of the Rourkela steel project. Considerable capacity exists for obtaining butabdan from alcohol in the State. In the war years, when the manufacture of synthetic rubber was first attempted, it was found that it took about 70 million gallons of alcohol to make 80,000 tons of rubber.

The aluminium plant, the estimated cost of which is Rs. 23 crores, has been entrusted to Birlas, who are expected to go into partnership with the U.S. firm which is now collaborating with Tata Steel—Kaisers. The capacity of the plant, which will be 10,000 tons initially, will go up to 25,000 tons. The site of the aluminium plant will be near the Rihand dam. The Chief Minister, Dr. Sampurnanand, has reiterated the Government's determination to push through the Rihand dam project at all costs. The main objection of the Centre to this dam, which is estimated to produce 900 million kilowatt hours of electricity, seems to be that there is no feasible account of how this colossal amount of energy is going to be utilised. It may also be recalled that the Centre wanted the works to be done in stone and not cement which has been chosen by the U.P. Government. Not only in the Rihand dam, but also in Bundelkhand, the State Government has preferred mechanisation, disagreeing with the Centre which wanted the work to be carried on as far as possible with human labour. While the ultimate fate of the Rihand dam hangs in the balance, the Yamuna hydro-electric project has been threatened for another reason besides the shortage of foreign exchange. This scheme, it is now feared, may have to be abandoned if the Centre approves of the construction of a dam in Konch to protect Delhi from the recurring Yamuna floods. The Central project, which is estimated to cost Rs. 90 crores, is to be executed through the agency of the Punjab Government. The site of the Yamuna hydel project will be completely submerged by the reservoir which will be formed as a result of the 330-foot high dam in Konch.



Metric System of Weights and Measures

The U.P. State Metric Committee has asked the Union Government to postpone the introduction of the metric system of weights in the State from April 1958 to October 1958. The Committee has suggested that the full cost of the introduction of the metric system, about Rs. 2 crores, should be borne by the Centre as the State cannot spare the amount during the second plan period. In his evidence before the Committee, the Finance Secretary, it is understood, has suggested a phased introduction of the metric system. The first phase should be from October 1958 to March 1959 and the second from April 1959 to March 1960. The Regional Food Controller's organisation is to be utilised for the enforcement of the scheme.

UNILEVER CHAIRMAN VISITING INDIA

The chairman of Unilever Limited, Lord Heyworth, is visiting India from 17th October to 14th November, 1957. He is accompanied by Lady Heyworth and Mr. R. H. Siddons, a director of Unilever Limited. During his stay he will visit not only the factories and other establishments of Hindustan Lever Limited, in which Unilever holds substantial shares, but also a number of other important enterprises in the public and private sectors. He hopes to meet many persons in

TIC 53 (a)

1936 *At the age of 20 Gangadhar is the proudest man in his town—he has a wife, a job and a Hercules cycle. What more can a young man want?*

TODAY *How the world has changed! The old dependable Hercules which carried Gangadhar to his office is now taking his 20 year old son to the college!*

Hercules is more than a cycle, it's a lifetime companion

Ask the man who owns one. He'll tell you that HERCULES lasts a lifetime. Backed by the experience of people who have made top quality cycles for nearly 50 years, this precision-built HERCULES cycle is *now* made in T. I. Cycles' ultra modern factory. You'll admire its streamlined beauty, its smooth, effortless drive. HERCULES is the finest cycle you can buy, and yet it is so moderately priced.

Your cycle is an investment—HERCULES is the best value for your money

Manufactured in India by: T. I. CYCLES OF INDIA LIMITED, Madras

Jute

STEADY TREND IN RAW JUTE CONTINUES

POOR ARRIVALS FROM GROWING AREAS

THE general trend of the raw jute markets this year has not so far conformed to the pattern confidently predicted by operators some months ago. It was believed that prices in general would be much lower by this stage of the season, and many were looking for a fall of Rs. 3 to Rs. 4, as took place in 1955. (Last year, of course, the Suez crisis was mainly responsible for an increase in rates.) But the current season finds raw jute prices again at an unusually high level. The reasons for this are numerous, although it is generally agreed that the delay in the monsoon was primarily responsible for the bullish tendency in its initial stages. Jute was late in coming forward, creating a temporary shortage which most people predicted would not last long. Mills' calculations were upset, and in the hope that prices would fall they followed a hand-to-mouth buying policy in the opening months of the season. They fully expected that when the full weight of the crop was felt, as it usually is about this time of year, lower prices would result. Unfortunately, transport difficulties due to flooding, and the smallness of imports in most areas, have prevented a price fall. Thus mills are not able to improve their stock position, and at the present moment are only interested in quick delivery jute. Current demand far exceeds supply and there appears to be no immediate prospect of an improvement.

Arrivals in upcountry stations during the past few weeks have been very disappointing, and the opening of mill agencies in many centres has done nothing to relieve the situation. A sellers' market has developed in these areas, and operators are deliberately holding back fibre in the knowledge that the mill representatives will have to buy it from their own agencies and will eventually pay the high prices asked. The effect of this is being felt in the Cossipore markets, where imports are not being allowed to go to stock, but are taken up immediately on arrival, with representatives bidding vigorously against each other for each parcel. Other mills have resorted to buying over-the-jetty and at mill gates to alleviate their present plight, in spite of its accompanying malpractices, which are almost impossible to detect. Many have tried this method previously and rejected it as impracticable, so it is surprising that the present participants are not prepared to benefit from the experience of others.

The mills generally are fortunate that gunny rates at present are giving them a reasonable profit. Prices have been maintained in spite of some bearish tendencies. The rumour about the unsealing of looms is heard much less now. The U.S. burlap consumption figures for September, however, have given the market much food for thought. U.S. consumption from January to September 1957 has been 17 million yards less than during the same period last year, while September's consumption is the lowest in five years for that month. The stock figures, at 227 million yards in September, are the lowest since November 1954. The inference drawn from this is that the United States, in common with many other overseas buyers, considers the current price of gunnies too high.

THE JUTE MARKETS

Manufactured Goods: Overseas buyers showed very little interest in the Calcutta goods markets during the past week, although local shipper covering against previous contracts was at one time thought to be fresh business. There was very little change in the prices of most fabrics, except in the ready positions, where speculators continued to dominate proceedings. This was most marked on Tuesday when near delivery B Twills came in for a great deal of interest on account of end-of-month *fatka* settlements. With America out of the market, hessian was neglected, and price movements in this section were purely in sympathy with sacking. On the whole, trading was dull, but in spite of this mills were reported to be asking for higher prices against shipper enquiries. They have only small balances for sale in the ready position and many claim to be well sold at favourable rates in the 1958 positions also.

Opening quotations last Thursday for B Twills showed very little change, the near and forward positions dropping by 25nP to Rs. 118.50 and Rs. 113.75, respectively. Slight interest in forward shipment in the opening sessions caused January-March prices to advance by 25nP but other deliveries recorded small losses. Hessian also, after a quiet opening at Rs. 42.69 for 40in. 10oz., showed a small advance on Friday, but by Saturday all gains had been offset. Over the week-end, rates fell, and on Monday morning ready B Twills at Rs. 117.50 were Re. 1 below the week's opening, but were still at a premium of Rs. 3.75 over forward shipment. The difference between the near and forward delivery dates for hessian was negligible, amounting to only about 40nP. With the approach of *fatka* settling day, conditions improved. Tuesday's opening saw B Twills advance to Rs. 119, a jump of Re. 1.50, and January-March shipment to hessian 40in. 10oz. rose to Rs. 42.92 in sympathy.

On Wednesday morning, the market was steady and opening quotations were as follows:

	Ready	Nov.	Dec.	Jan-March
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	35	34.70	34.45	34.20
40in. 10oz.	42.75	42.90	42.85	42.35
B Twills	119	117	116	114.50
Heavy Cees (Plain)	117	117	115.75	114.25
A Twills	141	140.50	140	138.50
Liverpools	131	130.50	130	129.25
Cornsacks	117.25	117.50	117	115.50

Raw Jute: Mills bought a fairly large quantity of jute. Business was done daily, and in most cases full market rates were paid. Sellers seemed reserved as the majority of buyers were seeking quick delivery jute. Prices upcountry were above the parity of those quoted in Calcutta, this being due to the small imports and heavy demand. Many sellers also were keen to buy jute for immediate shipment against October contracts, and in Cossipore heavy covering activity took place. More interest was shown in Daissee and there were ample supplies of this fibre to satisfy the demand. Reports about quality and condition remained favourable and deliveries were well up to time. Supplies of other fibres were not so readily available and prices were being well maintained due to the heavy demand, both in the local markets and in the agencies. The price of jute showed very little variation, and moved between Rs. 29.25 and Rs. 29.50 a maund for Northern-Assam Bottoms for October-November shipment.

During the week, mills paid Rs. 29.25 to Rs. 29.75 for Northern-Assam jute for one month and November shipment, and Re. 1 a maund higher for Tossa. Western Tossa from the Murshidabad districts was done at Rs. 29.50 to Rs. 30, while selected agencies passed at Rs. 30.50. Prices paid for Daissee varied from Rs. 30.50 to Rs. 31.25 for deliveries ranging from 15 days to one month. Small lots of Daissee Middles free from samla were done at Rs. 35 to Rs. 36 a maund. Northern and Assam mesta was done at Rs. 27 to Rs. 27.25, while Daissee mesta changed hands at Rs. 26.50. Pakistani cuttings came in for interest and prices paid ranged between Rs. 82 and Rs. 84.50 a bale for N.C.'s and T.C.'s.

In Cossipore, the markets were very steady with the majority of sellers reluctant to do business at the present rates. Prices varied within narrow limits. Large quantities of Daissee arrived during the week and good business was done in this category of fibre. Arrivals of other types of jute from upcountry areas were better and compared favourably with last year. A total of 800 wagons was reported, as against over 900 wagons in the corresponding week of last year, the latter figure being above average. At the close, quotations in Cossipore were based on Kishenganj jute at Rs. 28 a maund for garsat quality.

Opening quotations on Wednesday morning were as follows:

THE PAKISTANI JUTE MARKETS

FIBRE PRICES FALL

(FROM A NARAYANGANJ CORRESPONDENT)

FOR the past two weeks, it has been a rather confused market. On the whole, however, prices have generally come down. There appears to be a premium locally for District Tossa, whereas overseas the premium is for Jat Tossa. White jute recently slipped back by about a rupee, but is now steadier. The quantity of Tossa coming in is at last quite normal, and in spite of the steady market, prices are unchanged or, if anything, slightly lower. The quality of Tossa has continued to deteriorate and it will be difficult to get the higher grades in any quantity. Moisture is more apparent in District Tossa than in Jat Tossa. This, added to the fact that the Jat crop has produced on the whole a lower grade of fibre this year, points to a scarcity of better District Tossa, which explains the premium for the Grade 2/3s over Dacca Tossa 5. The cuttings percentage is also higher than usual.

There are indications, which are not very apparent at present, that soon there might be an improvement in the quality of white jute arrivals. This may be due to the fact that the stockists are releasing their better quality jute which they have been holding back. Probably, they are beginning to realise that in spite of every effort, they cannot hold up the market for very long. The trend this season has consisted of rises and falls in the market, with the rises never lasting very long. This frequently has meant losses for stockists. They hold back their jute for the rise, despatch it to Narayanganj as soon as prices begin to go up, but by the time their jute has reached the baling centre by country-boat, the market has once again fallen.

Shipments during October, according to latest reports, have been good. There are, of course, far more steamers than are necessary for the quantity of jute offering. It is interesting to note that although one of the larger I.W.T. companies has been affected by a strike for some time and the railways are not working at 100 percent efficiency, the other I.W.T. company says that it is not carrying to its full capacity. This is rather hard to explain since the E.P.C. registrations during September were satisfactory. Of the various strikes expected, the posts and telegraphs strike has been called off. The strike at the largest jute mill is at last over, but this has cost the country a considerable amount in foreign exchange. The stevedores strike seems to have fizzled out and the jute labour strike has been postponed.

The local market has been steady over the past few days. This is partly due to increased interest from the Continent as well as rumours of purchases by Russians, Chinese and Poles, to say nothing of the various other unusual destinations which are also nibbling. In the case of the Chinese, it is improbable that they are now buying, and almost certainly they are here merely to arrange the shipment of their purchases of about 11,000 bales made nearly a month ago. The jute is to be diverted to Hungary and Rumania and only a small portion will be going to China. Since these sales have almost certainly been covered, it is unlikely that there will be any heavy covering against Chinese business. This business was concluded at £96 for Export Firsts and £92 for Export Lightnings. The Poles have been buying small quantities and the Russians, as usual, are an enigma. In this steady market, however, there is every likelihood that they will withdraw and wait for a quieter period. The Continent has bought fair quantities, and it is reported that £103 has been paid for Export Firsts, £112 for Dacca Tossa 5s, £96 for Outport Tossa 2/3s and £84 for Export Hearts. As usual, the buyers withdrew after making a few purchases. Considerable inter-baler business, mostly speculative, has been reported in the local market. Some business has also been done in cuttings and there is a report that the U.S.A. has bought 80,000 bales. This is rather a large quantity even for a cotton bagging mill. Stocks in Narayanganj in balers' godowns now stand at about 900,000 bales, of which about 40 percent is cuttings. The proportion is high and gives no indication of a rise in the market but rather the opposite.

The International Jute Conference is going to be held in Narayanganj on 25th November. It is reported that although many have agreed to come they have received no information other than the invitation, and the agenda has only just been drawn up. The aim is to get spinners, consumers and suppliers together under the auspices of the Pakistan Jute Association. The move has been sponsored by the Pakistani Government in order to create better understanding and to find a solution for the problems which may exist. It is thought, however, that the real reason for the conference is for the Pakistani Government to take advantage of the present negotiations between the European Jute Association and the London Jute Association over contracts, to amend the L.J.A. contract to the benefit of Pakistan rather than to the benefit of sellers.

The Jute Marketing Corporation continues to function reasonably although the volume of overseas business is not as large as previously. Buying in the border is going well, and stocks of *kutcha* bales are pouring into Narayanganj. As the standard is rather high, one can understand the complaint of growers in the border

the Jute Marketing Corporation has sold large quantities at reasonable prices. Thus, involuntarily, it has helped check the speed of the rise in prices.

THE FOREIGN JUTE MARKETS

BETTER BUSINESS IN YARNS AND CLOTH

(FROM OUR DUNDEE CORRESPONDENT)

FEARS of higher prices for yarns and cloth brought about a fair increase in the volume of business last week. As a result, both spinners and manufacturers are in a better position. Each year, consumers usually come into the market in August and September for supplies, but this year there has been a delay and it is only now that stocks require to be urgently replenished. Some manufacturers are still in need of orders for many widths and weights. Jute yarns and hessian descriptions are fully steady at 15.72d a lb for 8lb C.H.W. cops and 16.29d for 8lb medium spools J.C.H. The finer yarns, of the Rio grade, are firm and seem likely to advance because of the firmness of good quality white jute. Cloth prices are well maintained.

Values of raw jute have advanced by 10s or £1 a ton. Mill Firsts are now lowest at £117 and Mill Lightnings at £102, each being £1 up from a week previously. But Mill Hearts are more or less unchanged at £92 and grade Hearts at £81, c.i.f. U.K., October-November. Dark jute is slightly higher at £100 for good marks of Daissee-2/3 and there is not much of this offering. Grade Daissee-2/3 is lowest at £93, while there are a few sellers of grade Tossa-2/3, lowest at £106 and quoted up to £110, and of grade Tossa-4 at £100 to £103, same shipment, c.i.f. Spinners have bought only small quantities of fibre around these rates. Mill Firsts were done on several occasions at £116, £116 10s and £117 for October-November. Continental spinners are buying fairly steadily. There appears to be enough business in Pakistan to absorb all arrivals and maintain prices, which, it is still thought, are far too high. At over £20 a ton above the one-time minimum fixed prices, the industry is not getting much of a chance to compete with substitutes.

Imports of jute fabrics into the U.K. during the first nine months of this year were 102,374,000 square yards (506,833 cwts.), valued at £3,474,713, compared with 124,914,000 square yards (621,574 cwts.) at £3,866,527 over the same period last year. Imports of new sacks and bags were 231,530 cwts. (£1,325,347) and 271,884 cwts. (£1,525,418), respectively. Most of these imports, of course, came from India.

KERALA PROPOSAL FOR COIR EXPORT CORPORATION

BIGGER OVERSEAS DEMAND FOR INDIAN PEPPER

(FROM A SOUTH INDIAN CORRESPONDENT)

THE Government of Kerala has a plan to set up a corporation to take over the export trade in coir products. This, according to Mr. P. K. Nair, the new Director of Coir Industries, is necessary because the State Government thinks that the marketing of coir can be fully developed only if it has sufficient control over the export trade. The move might cause irreparable damage to the industry. The slow-moving Government machinery will be a poor substitute for the well-established private trade which has got century-old connections with buyers abroad and a thorough knowledge of the marketing problems of coir. The Government has not been able to implement its relatively simple scheme for purchasing coir yarn to render relief to the small producers who were affected by the recent slump, although six months have elapsed since that announcement. Yet it is now thinking in terms of controlling the entire export trade. The industry will suffer badly if the export trade passes into the hands of the State Government, it is thought.

Reorganising Co-operatives

Certain drastic changes may be made in the coir co-operative scheme now working in Kerala. The new Director says that the Government has decided to launch a vigorous membership drive so as to bring more people within the fold of these societies. The reorganisation of the societies to improve their working and to provide more financial assistance for them is being considered. Small societies may be integrated with bigger ones, and in some cases smaller ones will be replaced by bigger ones. Political rivalry is the real motive of the proposed changes. The ruling Party wants to control the existing societies through some underhand methods such as the reorganisation scheme now proposed. Similarly, the proposal to set up a corporation for the coir export trade is seen as a move to deprive foreign firms, which hold a predominant position in the coir export trade, of their business, in spite of the fact that they have been responsible, to a very large extent, for developing Kerala's coir industry to its present status.

Annual Report of Coir Board

The Coir Board's annual report for 1956-57, which has just been issued, shows that the Board spent over Rs. 1.6 lakhs for propaganda out of a total allotment of Rs. 3.7 lakhs during the year under review. Coir yarn prices remained fairly steady and exports were larger both in quantity and value, compared with those of the previous year. According to the census of coir spindles and industrial establishments conducted by the Board, the total number of spindles used in Kerala is 30,658, including 717 non-working units. The total number of people engaged in the spindle-spinning sector, both as self-employed and as hired labour, works out to 184,387. This figure includes people engaged in spindle-spinning, the beating of husks and extraction of fibre and other operations directly connected with the preparation of coir, but does not include retting and other preliminary operations. Spindle-spun yarn amounts to 70,000 tons out of a total of 106,000 tons of coir yarn produced in Kerala every year. Coir mats and mattings are woven on wooden looms which are similar to those used in the handloom cotton textile industry. There are 792 such manufacturing establishments in the Travancore-Cochin area and five in Malabar. Out of this, large establishments with 20 looms or more number only 98. It was found by the Board that only 55 percent of the production capacity for mats and 38 percent of the production capacity for mattings, rugs and carpets was actually utilised in these establishments. Plant and equipment were much in excess of demand. It was also found that of about 15,400 workers employed in the industrial establishments, a considerable proportion were partially employed.

Development of Coir Industry

The Union Minister for Industries, Mr. M. M. Shah, told a special conference of the Coir Board held in Ernakulam on 26th October that the Central Government had accepted the Coir Board's proposal to set up a central coir research institute near Alleppey with a branch in Calcutta. The Reserve Bank had agreed to consider the inclusion of coir under the scheme of assistance for small industries, and in this connection, a study team of the Bank would be visiting coir-producing centres soon. Mr. Shah dealt with various other aspects of the development of the coir industry, particularly export promotion and quality control. The Industries Ministers of the coir-producing States of Kerala, Mysore, Bombay, Orissa and West Bengal, the Chief Minister of Kerala, and the Union Deputy Minister for Industries, Mr. A. N. Thomas, attended the special meeting.

Mr. Shah said that it was the responsibility of the State Governments concerned to look after small industries, including coir, and added that the Coir Board could only assist them by advising and carrying out research programmes. Referring to the need for organising the coir industry on co-operative lines, Mr. Shah said that the present number of societies should be raised by three or four times. The Minister appealed for effective propaganda for increasing the internal demand for coir, and for maintaining the quality of coir products in both internal and external markets.

Budget Estimates of Coir Board

The Coir Board, at its meeting on the previous day, passed the Budget estimates for 1958-59 amounting to Rs. 23.6 lakhs. This includes provisions for the establishment of research institutes, showrooms in Bangalore and Jullundur and development schemes to be implemented during the third year of the second five year plan. The Board passed a resolution stressing the need for developing the internal market for coir products in order to reduce the industry's dependence on an uncertain foreign demand. As a first step in this direction, the Board requested the State and Central Governments to supply coir mats and rugs to all workers' quarters, prisons and new buildings under the Government's building programme.

Co-operative Marketing

The Board appointed a five-man committee to study in detail the possibilities of organising a central co-operative marketing board for coir mats and mattings as suggested by its *ad hoc* committee on marketing. It also requested the Kerala Government to appoint a committee, consisting of the representatives of the Government, employers and employees, to go into the question of introducing minimum wages in the coir industry in Malabar.

Enquiry into Kerala Plantation Troubles

The Kerala Government proposes to appoint a court of enquiry, presided over by a High Court judge, to investigate allegations of lawlessness in the plantations. The scope of this enquiry, as indicated by the Labour Minister of the State who announced this decision immediately after his return from the State Labour Ministers' Conference in New Delhi, is very limited. It will be confined to a representative estate selected by the State Government, which holds the view that there is no serious threat to law and order in the estates and that the planters' complaints are exaggerated versions of isolated labour troubles. An enquiry conducted in this manner cannot establish the truth of the planters' complaints. As it is mere eye-wash, the planters are not expected to show any interest in it. From Kerala's 1,300 plantations, 84 cases involving violence, coercion and intimidation have been reported so far. Out of these 17 cases were reported after the visit of the Union Labour Minister.

Pepper Exports

Pepper exports from India during the season ended October, might well exceed 14,000 tons. According to the latest available figures, exports amounted to 13,170 tons to the end of August (the first 10 months of the current season), showing a lead of 1,342 tons over that of the previous corresponding period. With the fall in prices, internal consumption has been increasing faster than in production, with the result that the quantities available for export have been decreasing. This year, for instance, the trade estimate of internal consumption is as high as 10,000 tons, compared with 7,000 to 8,000 tons two years ago. This leaves only about 14,000 tons for export out of the season's total estimated crop of nearly 24,000 tons. This rise in internal consumption, especially when India requires more for export to increase her foreign exchange earnings, is unwelcome. Officials have started thinking even in terms of curtailing home consumption to provide more for export. An objection to the plan has been voiced by producers for, as in the case of all other agricultural crops, a home market is more dependable than an unsteady foreign market. Pepper is a commodity which has had to suffer a lot on account of its heavy dependence on the foreign market. For the last four or five years, it has been gradually losing its hold on the foreign buyers, in the face of increasing competition from other producing countries in the Far East. Prices have gone down to the uneconomic level of just over Rs. 500 a candy of 6 cwts. from the peak of Rs. 4,000 in 1951. Prices would have gone down further had it not been for the increased internal consumption. Foreign buyers have become highly price-conscious and unless India is in a position to offer her pepper at a more competitive price or there is a world shortage, she will not be able to increase her exports to any appreciable extent.

At the present level and standard of production, growers in India can hardly afford to sell their crop at a lower price than the ruling rates. It would, therefore, be unwise to take measures to curtail home consumption before getting the assurance that there will be better demand from abroad for Indian pepper at an economic price. It does not appear that India can expect any such assurance under the present conditions. In the long-term interest of the pepper industry also, it will not be advisable to restrict home demand. A wide market at home is a better assurance against a crisis of over-production or a shrinkage of demand from abroad. The right step to take would be to increase production through Government assistance. This assistance is essential now, in view of the absence of the price incentive. The assistance which the Central Government proposes to extend during the second five year plan is not proportionate to the huge sums it has got as export duty, and the foreign exchange the country could earn from exports.

COCHIN TEA SALES

At Dust Sale V, there was a very limited demand. Prices eased irregularly by 10nP or 15nP fully firm.

Commodity Markets

WHOLESALE PRICE INDEX UNCHANGED

THE official wholesale price index (base: year ended March 1953=100) remained stationary at the previous week's revised level of 108.7 during the week ended 12th October, 1957. The index was lower by 0.7 percent when compared with the corresponding week of last month but was higher by 2.0 percent when compared with that of last year. The index for Food Articles fell by 0.2 percent to 107.0 compared with 107.2 (revised) for the previous week due to a decline in the prices of milk in Calcutta (-20%), oranges in Shillong (-14%), rice in Sainthia (-12%), in Vijayawada (-8%), in Nellore (-7%) and in Kalyan (-6%), ragi in Ghoti (-12%), potatoes in Farrukhabad (-12%) and in Kanpur (-7%), fish in Cuttack (-8%), arhar in Patna (-6%), wheat in Khagaria and bajra in Anakapalli (-5% each), cloves (-3%) and urd, mustard oil, coconut oil, gur and chillies (-1% each), although the prices of fish in Tirur (+26%), potatoes in Delhi (+10%), rice in Gaya and wheat in Kotah (+9% each), mung in Bombay and cardamoms in Mangalore (+5% each), maize and meat (+4% each), gram and groundnut oil (+3% each), jowar and onions (+2% each) and barley, ghee, gingelly oil and coffee (+1% each) showed advances. There being no change in the prices of Tobacco, its index remained unaltered at the previous week's level of 93. The index for the Fuel, Power, Light and Lubricants group also remained stationary at 114.5, the previous week's level. Higher prices of groundnuts in Cuddalore (+6%), raw silk in Banaras (+5%), lac (+4%), copra (+2%) and raw cotton (+1%) raised the index for Industrial Raw Materials by 0.7 percent to 115.0 compared with 114.2 (revised) for the earlier week notwithstanding a decline in the prices of bamboo (dry) (-11%), rapeseed in Kanpur (-6%), gingellyseed (-3%) and linseed (-1%). The index for Intermediate Products stood at 106.6 against 106.7 in the earlier week. The prices of zinc (-6%), brass (-2%), rayon yarn (-1%) and linseed oil (+1%) showed variations. The prices of glass (+2%) and bicycles (+1%) showed a rise while oilcakes moved dwon (-1%) and in the result, the index for Finished Products remained unchanged at the previous week's level of 109.0.

PRODUCTION AND DESPATCHES OF SUGAR

According to the Indian Sugar Mills Association, the total sugar production up to 30th September during the season 1956-57 was 2,023,000 tons (excluding 16,000 tons produced by Mandya factory for the season 1957-58) against 1,862,000 tons last season. The offtake of sugar from factories during September 1957, was 142,000 tons, against 154,000 tons during the corresponding period of last season. Total despatches of indigenous sugar during the 11 months of the current season come to 1,943,000 tons (including despatches for export), against 1,598,000 tons during the same period of last season. The total closing stock of sugar with factories on 30th September, 1957, was 619,000 tons, against 680,000 tons on the same date last season.

ABOLITION OF EXPORT DUTY ON NIGERSEED AND KARDISEED OILS

The Government of India has decided to remove the export duty of Rs. 200 a ton leviable each on nigerseed oil and kardiseed oil and of Rs. 230 a ton leviable on groundnut oilcake, with effect from 27th October, 1957.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to September 1957. As compared with August, the September Indices for Food and Clothing show rises of 5 points and 4 points, while those for Fuel & Lighting and Miscellaneous remain unchanged at 281 and 284 points, respectively.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living advanced by 3 points during September 1957.

Middle Class Cost of Living Index Number for Calcutta. Prices in August. 1939 = 100.

Engineering and Transport

BUSINESS THROUGH I.A.T.A. CLEARING HOUSE

INTERNATIONAL airlines' business transactions settled through the I.A.T.A. Clearing House in London increased by more than 30 percent for the first six months of this year, the International Air Transport Association has reported. The total turnover for the period exceeded $281,649,000 (£100,849,000), against a turnover of $216,346,000 (£77,100,000) for the first half of 1956—an increase in interline revenue accounts that reflects a marked expansion in international air travel. Clearance facilities through the Clearing House were provided for 60 of I.A.T.A.'s 78 member airlines and for 19 non-I.A.T.A. carriers in the United States *via* inter-clearance arrangements with the Airlines Clearing House in Washington. Clearances with the A.C.H. are up 31 percent over the comparable period of a year ago for a six-month total of $11,918,000. The monthly turnover of interline accounts set successive new records for the Clearing House in each of the last three months of the half-year when two-way settlements totalling $47,730,000 (£17,113,000), $51,809,000 (£18,561,000) and $55,256,000 (£19,801,000) were achieved for April, May and June, respectively. The previous monthly record—a turnover of $47,603,000 (£17,091,000)—was established in October 1956. Offsetting the credit against the debit accounts of members eliminated the necessity for payment of 89 percent of accounts cleared through I.A.T.A. during the period ended 30th June. In 15 cases during the first-half year the monthly offsets of individual members exceeded 99 percent. In April one airline was able, through the Clearing House, to settle accounts with 57 different carriers totalling $1,440,406 with a cheque for $2,506, an offset of 99.8 percent. The offset arrangement settles—by means of a single payment in dollars or sterling—an airline's individual debits and credits between airline accounts with Clearing House members on a worldwide basis in as many different currencies as there are countries involved.

NEW BRITISH STEEL FOR AIRCRAFT CONSTRUCTION

The British steel industry has developed a new type of steel which is expected to solve one of the major problems faced by aircraft designers—that of getting aircraft or missiles safely through the heat barrier. Firth-Vickers Stainless Steels Ltd., Sheffield, has given details of the new-type steel it is now producing. The new steel combines many of the properties hitherto found in individual steels, a manufacturer's spokesman has said. It is suitable for airframes and "skins" as well as for many industrial purposes. Its principal characteristics are that it is high-tensile and fatigue-resistant; resistant to stress, corrosion, and cracking; weldable; that its thermal expansion is equal to that of mild steel; and that in service it has a 500 degrees C ceiling temperature.

PROTECTION TO MACHINE SCREW INDUSTRY EXTENDED

The Government of India's resolution on the Tariff Commission's report (1957) on continuing protection to the machine screw industry has been published in a *Gazette of India Extraordinary*. The Government has accepted the Commission's main recommendation that protection to the industry should be continued for a further period of two years that is, till 31st December, 1959, at the existing rate of protective duty, namely, 50 percent *ad valorem* or 60nP a gross, whichever is higher. The Government has also taken note of certain ancillary recommendations made by the Commission for assistance to the industry and will take suitable action to implement them.

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUSTS SUPPORTED WELL

AT Sale No. 19, held on 28th and 29th October, offerings at the Export auction consisted of 59,205 packages. There was a good general demand. "Teas for price" and clean black Fannings were often 4nP dearer, while clean common teas met with quite useful support although prices were sometimes 4nP easier. Medium B.O.P.'s showed a decline of as much as 20nP and sometimes more, but medium B.P.'s were generally steady. There was a much stronger enquiry for useful C.T.C. Assams and the B.P.'s in this category appreciated by 20 to 40nP. Medium C.T.C.'s with ordinary liquors, however, declined by 10 to 15nP and the Fannings grades generally received less support than broken grades. Legge-cut teas also met with an improved enquiry and opened at generally dearer rates, although at the close, prices were 4 to 8nP easier. Whole leaf grades sold well at about last rates, but Pekoes were often dearer. There was a good enquiry for tippy teas and these sold at about last rates, while Darjeelings, sold well at slightly easier rates

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2.25 to 2.30	2 1 0
Plain B.P.	1.60	1 13 0 to 1 13 6
Plain Fannings	1.68 to 1.70	
Medium B.P.	1.70	2 1 0 to 2 2 0
Medium Fannings	1.70 to 1.74	3 0 0
Best Assam C.T.C. B.P.	3.20 to 3.40	(Nominal)
Best Assam C.T.C. Fgs.	3.00 to 3.10	do.

At the Internal Sale, Dust offerings amounted to 18,283 packages. There was again a good general demand. Black leafy exportable types from all districts met with fair support, but prices were sometimes up to 6nP easier. The smaller orthodox kinds from Assam with useful liquors met with keen competition and were frequently dearer, while commons and Dooars tended to be easier. The better liquoring C.T.C. Assams were well supported, especially the best grainy kinds, but the plainer liquoring, unattractive types were generally easier, particularly the larger grainy grades. The few invoices from Darjeeling with flavour were a strong feature and sold well.

Quotations

	1957 Rs.	1956 Rs.
Medium Dooars Dust	1.64 to 1.68	2 2 0 to 2 3 0
Medium Assam Grainy Dust	1.68 o 1.72	2 3 0
Medium Assam C.T.C. Dust	2.25 to 2.40	2 8 0 to 2 7 0
Best Assam C.T.C. Dust	2.60 to 2.90	2 14 0

A total of 2,291 chests of Leaf was on offer, and although the leaf appearance continued to be of a fibrous description, there was a better demand and prices were generally dearer.

TIME CHARTER RATES RISE IN FREIGHT MARKETS

THE improved tone of the American coal market was not maintained and the trans-atlantic rate slipped to 31s with rumours of 29s having been accepted for a spot ship, in the freight markets during the past week. However, the impetus given to other markets by the brief rise was exemplified in the payment of 72s 6d for grain Pacific-India, an increase of 2s 6d, and a rise in time charter rates. In the latter section, a *Liberty* type secured $(U.S.)2.45 for 12 months and a 9.860 d.w. oil burner secured $(U.S.)2.50 for a similar period. Local markets have been very quiet, although a 9,500 tonner was taken for iron ore from Kakinada to Japan at 58s 6d. Recent statements in the Press about congestion in Calcutta and Madras have been most misleading, and it should be emphasised that at no time has Calcutta been clear of congestion. On 30th October when a leading newspaper front-paged the report that no vessels were waiting for import or export berths excepting four neaped ships at Sandheads, there were a number of vessels in the port awaiting export berths. The improvement effected has been excellent, but statements of this nature can only tend to mislead those not immediately connected with the port's working into relaxing efforts, which must be maintained if the congestion is to be cleared.

HIDES AND SKINS

The market in skins was firm and prices showed an upward tendency. Stocks were less than in the previous week.

Bazaar Sales

(Between 22nd October and 28th October. 1957)

Cowhides: Wet salted (Ord.) 3,500 pcs. on the basis of Rs. 8.25 to Rs. 10.75; Wet salted (Slaughtered) 18,600 pcs. on the basis of Rs. 12.50 to Rs. 21.

Goatskins: Wet salted (Daissee. Killed) 70,540 pcs. on the basis of Rs. 335 to Rs. 360 and Rs. 380 to Rs. 395; Assam-Dinajpur 31,100 pcs. on the basis of Rs. 250 to Rs. 360; Purneah-Kissenganj 8,000 pcs. on the basis of Rs. 365 to Rs. 380.

Bazaar Stocks

(28th October, 1957)

Cowhides: Wet salted 87,700 pcs.

Goatskins: Wet salted (Daissee, Killed) 29,000 pcs.; Assam-Dinajpur-Jalpaiguri 20,000 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissenganj 3,23,000 pcs.

COMPANY AND PUBLIC NOTICES

BURN AND COMPANY LIMITED

NOTICE

NOTICE is hereby given that the Annual General Meeting (being the Sixty-third Ordinary General Meeting) of the Company will be held on Friday the 22nd November, 1957, at 11 a.m. at the Registered Office, 12, Mission Row, Calcutta, to transact the following business:

1. To receive and adopt the audited accounts for the year ended 30th April, 1957, and the Directors' and Auditors' Reports thereon.
2. To declare a dividend. The Dividend if declared will be paid on or after 27th November, 1957, to the Shareholders whose names are on the Company's Register on the 22nd November, 1957, or to their mandatees.
3. To appoint Directors in place of those retiring. In this connection notice is hereby given that a Special Notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Sections 261 and 281 of that Act to move the following resolution as a Special Resolution at the meeting:—

   "That Sir Josna Ghosal having attained the age of 86 years be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him".
4. To appoint auditors and fix their remuneration.
5. As special business to consider and if thought fit to pass with or without modification the following resolution of which Special Notice has been received.

   "That the age limit specified in Section 280 of the Companies Act 1956, shall not apply to Mr. T Leslie Martin and this meeting hereby approves any appointment of Mr. Martin as a director of the Company which may hereafter, whilst this Resolution remains in force, be made by the Managing Agents pursuant to Article 109 of the Company's Articles of Association."

The Ordinary Share Register of the Company will be closed from the 15th November. 1957 to 22nd November, 1957, both days inclusive.

A Member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board.
MARTIN BURN LIMITED,
S. GUPTA,
Director,
Managing Agents.

Calcutta,
28th October, 1957.

INDIAN COPPER CORPORATION LIMITED.
(Incorporated in England)

Ore treated	S/Tons	107623
Average grade of ore treated		2.127
Refined Copper produced	L/Tons	1945
Rolled Brass produced	,,	1806
Y.M. Circles produced	,,	86
Rolled Copper produced	,,	3.10

The results of development work carried out on the properties of the Corporation during the quarter under review are as follows:—

	Footage Developed.	Footage Sampled.	Footage Payable.
Mosaboni	2553	2195	1499
Badia	247	247	155.5

By Order of the Board,
GILLANDERS ARBUTHNOT & CO. LIMITED,
Managing Agents.

Gillander House,
Netaji Subhas Road,
Calcutta.
The 16th October, 1957.

LINSEED FIRM

The shortage of supplies was the predominant factor during the past week. Upcountry markets remained firm and despatches were very limited. Local crushers were keen to cover supplies of ready goods but negligible quantities changed hands. The rise in prices did not allow crushers a workable margin. The oil market, on the other hand, did not show a corresponding advance, due to the absence of buying interest: oil prices were well above overseas parities. Latest quotations were based on October-November at Rs. 22-12 a maund.

THE CHAMONG TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of The Chamong Tea Co. Ltd. will be held at the Registered Office at No. 4, Mangoe Lane, Calcutta, at 11 o'clock in the forenoon on the 28th day of November, 1957, for the following purposes:—

AS ORDINARY BUSINESS:

(1) To consider the Revenue and Profit and Loss Accounts for the year ended 31st December, 1956, the Balance Sheet as at that date and the Report of the Directors and Auditors and to declare a Dividend.

(2) To reappoint a Director who retires by rotation.

(3) To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS:

(4) To consider and if thought fit to pass with or without modification the following Resolution which will be proposed as a Special Resolution:—

"That Mr. A. B. Kingsley be and is hereby reappointed a Director of the Company."

Special Notice dated 21st October, 1957, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that the notice is given to satisfy the requirements of Sections 190 and 261 (1) (c), (2) and (3) of the Companies Act, 1956, for the reason that Mr. A. B. Kingsley, a Director and Member of the Company (who having been appointed an additional Director during the year and holds office until the next Annual General Meeting) is a Managing Director and a Member of J. Thomas & Co. Private Ltd., which customarily acts as Brokers for the teas produced by the Company which may be construed as an office or place of profit under the Company. Having regard to the fact that the Managing Agents have a right to appoint a Director to the Company, and to the provisions of Sections 261 and 314 of the Act, a special resolution reappointing him as a Director of the Company is considered requisite.

The Share Transfer Books and Register of Members of the Company will be closed from the 22nd November to the 28th November, 1957, both days inclusive

THE CHAMONG TEA COMPANY, LIMITED.
By Order of the Board,
WILLIAMSON MAGOR & CO., LTD.,
P. H WILLIAMSON,

Managing Agents.

Calcutta, 29th October. 1957.

Note:—A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a Member of the Company.

THE BURRAKUR COAL COMPANY LIMITED

This Notice is issued in supersession of the Notice issued on 7th October, 1957.

NOTICE is hereby given that the One hundred and twelfth Ordinary General Meeting of the Company will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Tuesday, the 19th November, 1957, at 10-30 A.M. for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the half-year ended 31st December, 1956 and to pass the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 5th to the 19th November, 1957, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Calcutta, 24th October, 1957.

NOTE:—

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 26th November, 1957, to those members so entitled, whose names appear in the Company's books on 19th November, 1957, or to their mandatees. No application for Dividend Warrants will be necessary.

THE ALEXANDRA JUTE MILLS LIMITED

NOTICE is hereby given that the One Hundred and Third Annual General Meeting of the Members of THE ALEXANDRA JUTE MILLS, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 25th November, 1957, at 3 O'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the half-year ended 31st December, 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint Directors in place of Messrs. A. N. Sil and B. L. Bajoria, the Directors retiring by rotation at the Meeting.

   And in this connection to consider, and if thought fit, to pass the following resolutions which will be proposed as Special Resolutions in conformity with the provisions of Section 261 of the Companies Act, 1956.

   (i) "That Mr. A. N. Sil be and is hereby appointed a Director of the Company liable to retirement by rotation".

   (ii) "That Mr. B. L. Bajoria be and is hereby appointed a Director of the Company liable to retirement by rotation".

   Special Notice dated 15th October, 1957, of the intention to propose the foregoing resolutions as Special Resolutions in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Messrs. A. N. Sil and B. L. Bajoria are "associates" of the Managing Agents within the meaning of the Act by reason of their being Directors of the Company which is a subsidiary of the Managing Agents' Company, and that, therefore, they can only be appointed by special resolutions as Directors of the Company liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 11th November to 25th November, 1957, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
Per Pro McLEOD & CO. LTD.,
W. URE,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 25th October, 1957.

NOTE:—Payment of the proposed dividends, if declared, will be made on or after 30th November, 1957, only to those members whose names are registered in the Books of the Company on 25th November, 1957, or to their Mandatees. Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

KUMARDHUBI FIRECLAY & SILICA WORKS LTD.

NOTICE is hereby given that an Annual General Meeting of KUMARDHUBI FIRECLAY & SILICA WORKS, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta on Friday, the 29th November, 1957, at 10-30 A.M. for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1956, and to receive the Directors' and Auditors' Report thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint a Director in place of the retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 15th November to 29th November, 1957, both days inclusive.

NOTICE is hereby given that the Annual General Meeting of the Members of The Bor Pukhuri Tea Co. Ltd., will be held at the Registered Office at No. 4, Mangoe Lane, Calcutta, at 11 o'clock in the forenoon on the 29th day of November, 1957, for the following purposes:—

AS ORDINARY BUSINESS:

(1) To consider the Revenue and Profit and Loss Accounts for the year ended 31st December, 1956, the Balance Sheet as at that date and the Reports of the Directors and Auditors and to declare a Dividend.

(2) To reappoint a Director who retires by rotation.

(3) To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS:

(4) To consider and if thought fit to pass with or without modification the following Resolution which will be proposed as a Special Resolution:—

"That Mr. A. B. Kingsley be and is hereby reappointed a Director of the Company".

Special Notice dated 21st October, 1957, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that the notice is given to satisfy the requirements of Sections 190 and 261 (1) (c), (2) and (3) of the Companies Act, 1956, for the reason that Mr. A. B. Kingsley, a Director and Member of the Company (who having been appointed an additional Director during the year and holds office until the next Annual General Meeting) is a Managing Director and a Member of J. Thomas & Co. Private Ltd., which customarily acts as Brokers for the teas produced by the Company which may be construed as an office or place of profit under the Company. Having regard to the fact that the Managing Agents have a right to appoint a Director to the Company, and to the provisions of Sections 261 and 314 of the Act, a special resolution re-appointing him as a Director of the Company is considered requisite.

The Share Transfer Books and Register of Members of the Company will be closed from the 20th November to the 29th November, 1957, both days inclusive.

THE BOR PUKHURI TEA COMPANY LIMITED.
By Order of the Board,
WILLIAMSON MAGOR & CO. LTD.,
P. H. WILLIAMSON,
Managing Director,
Managing Agents.

Calcutta, 30th October, 1957.

Note:—A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote in his stead. A proxy need not be a Member of the Company.

THE SOOM TEA COMPANY LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of The Soom Tea Co., Ltd. will be held at the Registered Office at No. 4, Mangoe Lane, Calcutta on 28th day of November, 1957, at 11-15 a.m. for the following purposes:—

(1) To consider the Revenue and Profit and Loss Accounts for the year ended 31st December, 1956, the Balance Sheet as at that date, the Reports of the Directors and Auditors and to declare a Final Dividend.

(2) To reappoint a Director who retires by rotation.

(3) To appoint Anditors and to fix their remuneration.

(4) As Special Business to consider and, if thought fit, to pass with or without modification, the following Resolution:—

"That Mr. P. H. Williamson be and is hereby appointed a Director of the Company."

The Share Transfer Books and Register of Members of the Company will be closed from the 22nd November to the 28th November, 1957, both days inclusive.

THE SOOM TEA COMPANY LIMITED.
By Order of the Board,
WILLIAMSON MAGOR & CO., LTD.,
P. H. WILLIAMSON,
Managing Director,
Secretaries.

Calcutta, 29th October, 1957.

Note:—A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote in his stead. A Proxy need not be a Member of the Company.

Explanatory Note under Section 173:

Mr. P. H. Williamson is the Managing Director of Williamson Magor & Co. Ltd., the Secretaries who are the "Managing Agents" of the Company within the meaning of the Companies Act, 1956. The Secretaries do not have the right as Secretaries to appoint a Director, but it has been found very useful to have a nominee of the Secretaries on the Board. The Directors consider it to be in the interests of the Company that Mr. P. H. Williamson be elected to the Board.

THE DUFFLAGHUR TEA COMPANY LTD.

NOTICE is hereby given that the Annual General Meeting of the Members of The Dufflaghur Tea Co. Ltd. will be held at the registered Office at No. 4, Mangoe Lane, Calcutta, at 11-30 a.m on the 28th day of November, 1957, for the following purposes:—

AS ORDINARY BUSINESS:

(1) To consider the Revenue and Profit and Loss Accounts for the year ended 31st December, 1956, the Balance Sheet as at that date and the Reports of the Directors and Auditors.

(2) To Declare a Final Dividend.

(3) To reappoint a Director who retires by rotation.

(4) To appoint Auditors and to fix their remuneration.

The Share Transfer Books and Register of Members of the Company will be closed from the 19th November to the 28th November, 1957, both days inclusive.

THE DUFFLAGHUR TEA COMPANY LIMITED.
By Order of the Board,
WILLIAMSON MAGOR & CO., LTD.,
P. H. WILLIAMSON,
Managing Director,
Managing Agents.

Calcutta, 29th October 1957.

THE NILPUR TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of The Nilpur Tea Co. Ltd. will be held at the Registered Office at No. 4, Mangoe Lane, Calcutta, at 11-30 a.m. on the 29th day of November, 1957, for the following purposes:—

AS ORDINARY BUSINESS:

(1) To consider the Revenue and Profit and Loss Accounts for the year ended 31st December, 1956, the Balance Sheet as at that date and the Reports of the Directors and Auditors.

(2) To declare a Dividend.

(3) To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS:

(4) To consider and if thought fit to pass with or without modification the following Resolution which will be proposed as a Special Resolution:—

"That Mr A. B. Kingsley be and is hereby reappointed a Director of the Company."

Special Notice dated 21st October, 1957 of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that the notice is given to satisfy the requirements of Sections 190 and 261 (1) (c), (2) and (3) of the Companies Act, 1956, for the reason that Mr. A. B. Kingsley, a Director and Member of the Company is a Managing Director and a Member of J. Thomas & Co. Private Ltd., which customarily acts as Brokers for the teas produced by the Company which may be construed as an office or place of profit under the Company. In accordance with the Company's Articles of Association Mr. A. B. Kingsley retires by rotation and having regard to the fact that the Managing Agents have a right to appoint a Director to the Company, and to the provisions of Sections 261 and 314 of the Act, a special resolution reappointing him as a Director of the Company is considered requisite.

The Share Transfer Books and Register of Members of the Company will be closed from the 25th November to the 29th November, 1957, both days inclusive.

THE NILPUR TEA COMPANY LIMITED.
By Order of the Board,
WILLIAMSON MAGOR & CO., LTD.,

BANKS

H indicates that Share capital is half paid. O C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TRADE WITHOUT THE STERLING BALANCES

THE CONSEQUENCES OF INFLEXIBILITY

BEFORE there can be any useful discussion on whether the cut in the foreign security backing of the rupee is a wise move or not, it must be accepted that anyway it had become inevitable. Bearing this fact in mind, it is quite irrelevant to point out that other countries do not find it necessary to have their currencies backed in this fashion, or that the effect of a cut of this size will be merely "psychological"—as if that were something of no importance whatever in money matters. The real questions to ask, therefore, are: Will a reserve of Rs. 85 crores of foreign securities be enough under the circumstances; and is the virtual disappearance of the sterling balances going to have any effect on India's future earning capacity?

To the first of the two questions, the Finance Ministry itself appears already to have provided an appropriate answer. It is: "No"; otherwise there would not be any significance in the further provision that even this minimum can be suspended for periods of six months at a time, with an additional extension of three months as long as the gold reserves do not fall below Rs. 115 crores. It is true that the object of this could be to provide some flexibility when working on the narrow margin of foreign exchange which is all that will be available in a few weeks' time. But it is also a tacit admission that a minimum of Rs. 85 crores is unlikely to be enough, given the volume of imports contemplated. It would be as well to accept right away that this country will soon have to conduct its trading affairs without any sterling balances at all. If there is any doubt about this, a quick look at the appropriate figures should be enough to dispel it. At the moment the foreign exchange reserves total round about Rs. 320 crores. At the current rate of withdrawals, the former statutory Rs. 300-crore minimum for foreign security reserves is expected to be passed before Parliament reassembles; the remaining Rs. 215 crores should then take eight months or so to disappear. There is no point in arguing that when all this has gone there will still be a reserve large enough to accommodate a further three months' drain of the present size. This tiny margin will be called upon to accommodate the variations in a flow of exports and imports which has already shown itself, on the basis of original estimates, to be unpredictable to the extent of something like Rs. 230 crores in the first eighteen months of the plan period. Improvements in import policy and statistical calculation notwithstanding, it is clear that a minimum reserve of about Rs. 85 crores, for as far ahead as it is possible to see, will simply not be enough. At some stage we must expect to find the reserves disappearing altogether, and it would be as well if speculation about the future were based firmly on that contingency.

*

What, then, might be expected to happen if the sterling balances drop to zero? Recent statements from the Reserve Bank appear to suggest that the answer is: "Nothing at all". The point has even been made in public discussion that by showing a readiness to meet all outstanding obligations, whatever the consequences for the sterling balances, India has actually strengthened confidence in the rupee. Both these views reveal what is probably an insufficient grasp of the truth. If there is anything in them, the question arises, why was a reserve of Rs. 400 crores considered the irreducible minimum when the plan was originally drawn up? And why do so many other large trading nations consider it essential to have a large balance of gold or foreign securities to back their currencies? To point out here that India's new minimum provides a reserve roughly proportionate in size to that of the sterling area itself, is surely not very helpful; it has been Britain's case for years that these resources are too low for comfort and, indeed, their small size is responsible for the frequency with which devaluation is mentioned every time Britain's balance of payments shows deterioration. The fact is, of course, that the appropriate size for a foreign exchange reserve is a difficult thing to gauge and, in India's case, Rs. 85 crores may indeed be a more suitable size than the original estimate of Rs. 400 crores. But it must be faced that this was the sum once laid down as an "irreducible" minimum, and nothing that has happened since suffices to change the meaning of that word. Some consequences must have been expected to follow should the figure fall below this floor; there is no reason to suspect that they will not happen now.

*

One of the main effects of an inadequate foreign exchange reserve for a trading nation is a loss in payment flexibility. This means that the watch on the progress of imports and exports has to be a close one. It may be true that India's vigilance in these matters is now much stricter than it was a year or six months ago when the drain on the sterling balances was building up. But if past experience is anything to go by, she has some way to go yet. Trade under these conditions approximates closer to pure barter the nearer a country's reserves approach the zero level. When they finally arrive at that point—and from the preceding discussion it has been deduced that India's will—then trade ceases to be multilateral and assumes a bilateral pattern, with all that means in terms of rigidity, a falling level of transactions, and the risk of political intrusions. This stage can be postponed by the "off-shore" variety of foreign aid, although it remains unaffected by the granting of export credits such as India is seeking under the new regulations governing the import of capital goods and equipment. A little more trouble in managing imports is, however, probably a small price to pay for the use of a large foreign security reserve in building up industrial potential; the important thing is the effect on export trade. It has been suspected already that import restrictions are hampering the all-important growth of exports. If the sterling balances disappear altogether, this side of the country's trade may suffer badly; in any case, it is likely to make nonsense of the aims behind the recent recommendations of the Export Promotion Committee. India's needs, and the inability under bilateralism to choose the best markets for earning the resources to match them, may well lead to a situation which would amount to nothing less than a *de facto* devaluation of the rupee. It is more than doubtful whether this would be a good thing for the economy at the present time. It would, for example, mean that a progressively larger volume of exports would be required to pay for the imports under the plan, and that these would become considerably more vulnerable to the changing conditions of world markets. Bilateral trading is an inefficient and wasteful business for a country which is economically weak. Short of securing aid from abroad, India might find it well worth while to maintain an adequate foreign security reserve, whatever the immediate consequences for imports.

There remain two further points to be considered. The first is India's ability to stand the strain of a world recession, should one develop, now that payment flexibility is being reduced to the minimum. This is, of course, merely the problem already discussed, but rendered rather more acute by adverse international conditions. Economic opinion is still divided on the question whether or not there will be a serious slump, but it seems fairly unanimous in the opinion that there must be some fall in overall activity in the free world. This will certainly affect India's staple exports; it may already be doing so with jute goods and tea. But the impact on the other items this country sells abroad is likely to depend on the extent of the reaction which occurs in all countries experiencing balance of payments difficulties—the urge to export more. This would mean more competition for India's products; together with the weaknesses inherent in bilateralism, it could involve a disproportionate fall in their prices and earning power. There is no way of avoiding this difficulty. It is merely unfortunate that this country should have found it necessary to circumscribe its own trade flexibility just at the time when it may be needed most.

The second point concerns the effect on sterling of India's decision. It may be argued that no responsibility is involved here; but this is scarcely true. Membership of the sterling area bestows certain important advantages which cannot be guaranteed without the co-operation of all parties. This point need not be pressed too far—India's need is great and there is nothing in the unwritten code of behaviour for sterling-area members to state that she cannot protect herself. Nevertheless, it is important to realise that the closer India moves towards bilateralism the more she loses the advantages of her membership of the sterling group and the greater the embarrassment caused to those who remain inside it. Such a fact could affect her future reputation as a trading partner. It is significant for instance that the *Financial Times*, while welcoming the reduction in Britain's indebtedness through a running down of the sterling balances, regrets the mismanagement of India's affairs that has made this necessary at an embarrassing moment for the sterling area, and points out that one of the reasons India was refused a loan by the United Kingdom last summer was because it would have been an addition to, and not a substitute for, a run on the balances.

When all these points have been reviewed, it is still true that India has had no choice under the circumstances. The value of the foregoing discussion is merely to show that the complacent official pronouncements are about as valuable as those which have accompanied every other emergency measure taken recently to undo damage already done. The sooner facts are faced and officials and Ministers cease their light-hearted attempts to make virtue of necessity, the sooner there will be implanted in the public mind that degree of economic realism which is indispensable if the true causes of India's difficulties are ever to be properly tackled.

A DEADLINE ON REHABILITATION

WEST BENGAL itself could do with some relief and rehabilitation after the upheaval of the war, after the mass slaughter of August 1946, and after the dislocation of Independence and partition a year later. Instead, the truncated and still bleeding State found itself saddled with an unknown number of refugees from East Pakistan and an unknowable number of refugees still to come. The rest of the story is known, and the recent Darjeeling conferences refreshed public memory with the details. They also served to remind the people of what they already knew, that the failure of the Government to begin to make a dent in the problem of resettlement—the magnitude of which is not to be minimised—was bigger than many realised or admitted. Right from the outset there has been a dilemma between relief and rehabilitation, yet unsolved. Although nobody said so in as many words, the real meaning of the recent discussions was that the mind of the Government was at last moving in the direction of saying that it cannot solve the problem and, after a date to be announced later, it will not even entertain it. This is the nearest point to which discussions went towards a decision.

*

It is not at all surprising that even this tentative move has already generated not a little resentment. This again is understandable, and it is not necessary to ascribe it all to political motives. The relief operations of the past ten years, inefficient as they were, gave succour to many. And human nature not being what planners think it should be, the easy relief was not necessarily an incentive to enterprise in most cases. The sudden stoppage of this relief, which has been drying up anyway, would hurt many, and that the affected would blame the Government entirely for it, and not themselves at all, is in conformity with what has been said about human nature. If, in spite of the recent tendency to show a measure of firmness and to eschew sentimentalism, the Government should later decide not to decide (many are the decisions

so describable), that too should not surprise many. There is a point, easily reached, beyond which democratic governments cannot be firm.

* * * *

The imponderables in the situation are not to be ignored either. As we are beginning to find out about the second plan, there are factors which just cannot be planned. World prices, for instance. Although many speakers at the Darjeeling conferences gave, for the first time, a picture of the internal conditions in Pakistan vastly different from what they themselves had said earlier—and would probably say again at an Indo-Pakistani conference—this is a matter on which any speculation on this side of the border is bound to be hazardous in the extreme. Even if it is economic distress, rather than communal tension, which sent more Hindus to West Bengal, it may not be easy to treat them as ordinary immigrants. The West Bengal Government knows why, and if it does not, the Opposition will tell them soon enough after their arrival at Sealdah. Will the announcement of a date be a deterrent? That is doubtful too. There are many deterrents already in existence, and yet they come.

It is to be doubted still whether the drift of the past ten years can be allowed to continue indefinitely without permanent damage being done to the Indian economy. There have been suggestions recently, chiefly at the sentimental level, that the refugees are not liabilities—but assets. On a theoretical view, this may well be partially true, even as it can be argued that India's large population can make up for her deficiencies in physical and financial resources. The Government still advocates family planning, against which the only criticism is that it is not pursued more vigorously. Similar realism will be necessary in approaching the refugee problem, and it may even be necessary to tell some refugees that they are liabilities and no more. To tell the refugees that they are assets, that their misfortunes all stem from governmental inefficiency, or worse, is to gain a mean political advantage from a difficult problem and thus to make its solution doubly difficult.

* * * *

It is also time to recognise that, although partition has brought the sore to the surface, many of the refugees would have been exposed to the same sort of misfortune even if there had been no partition. They were being sustained on a kind of society in East Bengal which was dying anyway. If there has been any substantial, though temporary, solution of the refugee problem, it has undoubtedly been accomplished by the joint family system, in whose seemingly bottomless pit have been settled more refugees than the Government will ever know. On the other hand, this strain itself may prove to be the death blow to the system. Not a few families are visibly breaking up under the impact, and the process is likely to continue. When the break-up is complete, West Bengal—and India—will have its real problem, that now hidden behind the so-called refugee one. It does not make much difference whether A is a refugee from East Pakistan or from a disintegrated joint family in Calcutta or Malda. The basic problems are poverty and unemployment, and to say that refugees must be settled in a manner different from that applicable to the others is to take a wrong approach from the start.

It is against this background that it is no longer difficult to explain the failure of the Government to do much with the refugees, and the fixing of a time limit on the entry of further refugees will be a further futile action. In the matter of immediate relief perhaps there was a case for making a distinction between a refugee and a West Bengali, but the question of resettlement, except in respect of housing, can be tackled only when the problem has been attacked in its totality. More jobs, more land—these are what Bengalis need, East or West. If this analysis of the basic problem is correct, it should also explain why most of the short-term schemes of rehabilitating refugees with small or cottage industries have failed so sadly. The future of small industries is one problem, and an industry started by a refugee has no greater hope of survival than one started by somebody in South India. That the latter's future is precarious is admitted by most people. The mistake was to think that a refugee's chances were better.

There may be reasons why relief will have to be continued for some time yet, but if this is not to be unduly burdensome a good deal of the present sentimentality will have to be jettisoned. Miss Naidu's reference to India's debt of honour was a magnificent gesture, but the debt should be clearly defined as far as possible. Then will come the time for recognising misery, poverty and hardship for what they are—with less of the current, increasingly academic, distinction between a refugee and a non-refugee, which only breeds resentment in the latter. The Darjeeling deliberations did not begin to think on these lines. That would perhaps have been beyond their brief. The late Ernest Bevin once said that his first step towards a solution of what then was the Indian problem would be to abolish the India Office and transfer India to the Commonwealth Relations Office. Something similarly drastic may work here too. The refugee problem will be seen in its proper light only when it loses its special name and is known by the proper —the problem of human misery to be relieved by resolute action to expand the country's economic opportunities.

PROBLEMS IN EXPORT PROMOTION

NEED FOR NEW FISCAL POLICIES

FOR a country as desperately short of foreign exchange as India is at present, the report of the Export Promotion Committee, released this week, is a document of major importance. It highlights the fact that at a time when world trade as a whole has been growing, this country's exports have been relatively stagnant. The disappointing trend cannot be ascribed wholly to the inherent weaknesses of an under-developed economy—to the fact that the number of export commodities is limited, and that they consist mainly of primary and intermediate products for which demand varies sharply. Many other countries and territories whose economies are almost as narrowly based have a better record to show. If the steady rise in world production and trade in recent years has not brought commensurate benefits to India, the blame lies partly on the Government, and partly on trade and industry.

The overall export target recommended by the Committee is modest in relation to requirements, but it will not be easily achieved without a far-reaching reorientation of fiscal and other policies. Suggesting that exports should be increased to Rs. 700 crores or Rs. 750 crores a year from now on, the Committee declares somewhat optimistically that if appropriate steps are taken, this should not be too difficult to attain. The most important determinants of exportability are price, quality, terms of delivery and salesmanship—all factors for which Indian marketing has come in for a great deal of criticism abroad. Few will dispute the Committee's emphasis on the need to reduce prices as a first step in any export promotion programme. It rightly says that this cannot be done merely by devaluing the currency, because the advantages of devaluation would be far outweighed by the disadvantages, especially at a time when the demand for India's main exportable commodities is relatively inelastic and when imports are continuing on a large scale. A reduction in prices is to be secured primarily by a reduction in costs, and this can be done only by recognising, as a first step, the "extreme importance" of maintaining agricultural production at a high level.

An expansion in agricultural output is necessary not only to keep down the general price level while development outlays are increasing; it is necessary also for ensuring a bigger and cheaper supply of industrial raw materials such as oilseeds, cotton and jute. The Committee draws attention to other measures by which costs can be reduced, such as using modern methods of production to make processing cheaper, cutting down overheads, increasing labour productivity, bringing down transport charges and making transport more efficient. None of these recommendations will be new to industry or the Government, but the fact that they have had to be made again indicates that the Committee intends an implicit criticism of the inadequacy of the policies which have hitherto been followed.

* * * *

Among the major factors contributing to the rise in production costs, and therefore hampering exports, is taxation. The point might well have been made that unless the general level of corporate taxation is reduced, both industrial expansion and foreign trade will suffer. The Committee, however, seems to have concerned itself mainly with the taxes which affect exports directly, and in this limited field it has produced a number of useful recommendations. It urges the Government to keep export duties low and not to change them too frequently; it also suggests that goods which are exported should be completely exempt from excise duties and sales tax. In order to provide tangible incentives to exporters, it is recommended that they be given a measure of relief from income tax, the extent of the relief depending on the actual increase in exports, the total business turnover of the exporter and the total income tax he has to pay. At a time when sanction for foreign exchange expenditure is especially hard to get, the trade may also respond favourably to the suggestion that a small percentage of any increase in earnings from the export of a non-quota item be allowed to the exporter for importing any goods he likes (subject to the import control policy then in force).

Taxation apart, the Committee makes other useful and detailed recommendations on ways of increasing exports. These concern banking, credit, insurance and shipping facilities; publicity; and methods to ensure that quality and standards are maintained, while commercial morality is improved. First reports give the impression that the Government's reaction to many of the recommendations has been lukewarm. If this proves to be the case, it would be a pity, for quick and effective measures are necessary if export earnings are to be increased. With the worldwide recession in commodity prices, the outlook for the main exports of the primary producing countries is deteriorating. It is doubly unfortunate that this deterioration should be taking place at a time when India is moving towards the peak of her expenditure on imports. The diversification of the export trade may be a longer-term necessity, but the exigencies of the economic situation demand that efforts be concentrated first on improving the prospects for the traditional exports, mainly jute goods, tea and cotton textiles. Unless the Government is prepared to reduce fiscal burdens, allow rationalisation and modernisation to proceed freely, and help ensure cheaper supplies of raw materials, the value of export promotion measures (also, perhaps, the value of export promotion committees) will be doubtful.

BRITISH TERMS OF TRADE IMPROVE

LARGE CURRENT SURPLUS EXPLAINED

ONE of the surprising features of the British monetary scene in the recent difficult period has been the strength of the current payments position. Late last year it was officially estimated that in the year to mid-1957 the current account would approximately balance; in fact it showed a surplus of £211 million. Though trade in general and the oil trade in particular were disturbed for many months after the Suez crisis, a surplus of £125 million was achieved in the first half of 1957. A partial explanation of this good result can be found in another set of figures, showing the terms of trade. These figures carry the story further, through the third quarter of 1957, and, in conjunction with the figures for visible trade to which they relate, they suggest that the improvement in the payments position will be maintained through the second half-year. At the same time, they point a warning. The terms on which Britain has transacted her external trade have improved remarkably this year. The index of prices compiled by the Board of Trade shows for the period January to September a fall in import prices from 110 to 104 and a rise in export prices from 109 to 112. The index of the terms of trade (which is favourable when low) was brought down from 101 to 93.

The relation between imort and export prices is of great importance to Britain, as to any country whose external trade is a substantial part of its total trade. In the 1930s Britain benefited, and the primary-producing countries suffered, from the decline in commodity prices relatively to manufactured prices. In the Korean war the steep rise in commodity prices was nearly catastrophic for Britain. When that rise had been reversed Britain's terms of trade became again reasonably satisfactory (though much less favourable than in the 1930s), and they varied little thereafter until the present year. Now, at a peculiarly opportune time—when the campaign against the rise in prices needs support at home and the nation's balance of payments is closely watched abroad—import prices have fallen and the terms of trade have improved again. This development is, as we said, opportune for Britain this year, but (assuming that it lasts) it will not necessarily be beneficial even to Britain over a longer period. Both the fall in import prices and the rise in export prices are beneficial in themselves, but both have implications apart from the immediate standard of living. The cheapening of commodities which has reduced the cost of imports has also reduced the earnings wherewith commodity producers can pay for their imports—which might be Britain's exports; and raising export prices in this situation—not because demand is strong but because costs, especially of labour and fuel, have risen—is a distinctly risky procedure.

* * * *

So far this year Britain's export trade has made good progress. In the first three-quarters of the year, compared with the same period of 1956, exports increased 3½ percent in volume and 7 percent in value. In domestic trade 1956 was not an easy year, but—partly for that reason—it

was a year of expanding exports, which increased 6 percent in volume and 10 percent in value compared with the total for 1955. The rate of growth has been less this year than last year; rather less, too, than the rate of increase in international trade in manufactures generally. But in the figures so far published there is no sign of the troubles that may befall exporters if other countries have to reduce their imports. Already some countries have restricted imports as such, others have restrained demand by restricting credit; and some firms and persons will necessarily buy less imported goods because their incomes are reduced. The difficulties of these countries would be similarly aggravated, of course, if Britain's trade and industry went into reverse; for Britain is still a very important market for many primary goods. In the first three-quarters of this year, compared with the same period of 1956, the physical increase in British imports was at the same rate as the physical increase in British exports, 3½ percent; and, because most of the trade was done at prices above those ruling at the end of the period, the value of imports increased 6 percent. As some such pattern has emerged in other importing countries also, it can be understood why the decline in commodity prices has not yet seriously affected international trade. It is, however, apparent that much worse effects could develop.

Britain could not, anyway, enjoy the full benefits of low prices for commodities, even if they had no adverse effect on her exports. For Britain is the financial centre of the sterling area, and the sterling area, however its individual parts may have developed their industries, has still immensely important interests in commodities. Financial opinion abroad will not be impressed by an improvement in Britain's standard of living arising from the improvement in the terms of trade if the commodity producers' problems are causing the central reserve to dwindle. For these various reasons, the improvement in the terms of trade (which is exaggerated, anyway, to the extent that the fall in shipping freight rates is reflected in the index of import prices but not in the index of export prices) cannot be seen as an important factor in the long-term recovery of sterling. It will help to provide another good balance of payments for the current half-year and will thus assist sterling both psychologically and materially. But we should be forewarned that the benefits are temporary and, in a sense, illusory. If low values for commodities persist, it will be the more necessary to bring down British export prices: and that movement would, of course, affect the terms of trade adversely.

At the same time Britain has to economise on imports. She has to rely on imported materials for much of her industry, but she has still much wealth of fuel that is not properly used. It should never be necessary for Britain to spend foreign currency (mostly dollars) to buy coal. As the Chancellor of the Exchequer has pointed out, efficiency in the use of fuel is essential to the achievement of the required balance of payments surplus of £300-350 million a year.

CURRENT COIN

Housing Ambitions.—Addressing the second Housing Ministers Conference in Mysore, Mr K. C. Reddy, Central Minister of Works, Housing and Supply, has said that about 1.9 million houses, it is expected, will be built in the public and private sectors during the second plan period; 1.3 million units were built during the first plan. He thinks that the Rs. 105-crore provision for Government-aided urban housing will help in the construction of 306,000 units. In addition, the Union and State Governments will build about 769,000 houses for their own employees, while the private sector is expected to put up 800,000 urban houses with an investment of about Rs. 800 crores. The shortage of houses in 1951 was 2.5 million; taking into account the new requirements, and the demolition and replacement of old houses, the shortage in 1961 is expected to be about 5.7 million units, or twice what it was when the first plan was initiated. There is no reason to argue against Mr. Reddy's suggestion that greater stress should be laid on urban housing since the increase in population in urban areas is likely to be about 20.6 million during 1951-61. National sample surveys were recently made in 53 towns and in the four big cities of Madras, Delhi, Calcutta and Bombay. These showed that nearly one-fourth of the houses had plinths, walls and roofs made of mud. A large number were just slum dwellings (a sum of Rs. 20 crores has been earmarked during the second plan for slum clearance). While allocations and plans for housing look admirable on paper, it is doubtful whether enough building materials are available. Without considering this important aspect of the problem, Mr Reddy has gone on to stress the need for rural housing schemes. There are 558,089 villages, with a population of 295 million and about 54 million houses to accommodate it. Nearly 50 million of these houses need to be rebuilt or substantially improved. It is arguable that such an ambitious programme will involve a huge amount of expenditure which is likely to be inflationary. At a time when many second plan projects are being rephased and pruned, the launching of the rural housing programme might be inappropriate. It is proposed that each State Government should set up a rural housing cell to conduct and guide rural housing schemes, but it is difficult to say whether many of them have the resources to do this. The establishment of housing finance corporations in States is unlikely to be of much practical value unless the funds at their disposal are sufficient. The whole problem hinges on the availability of money and building materials, so large portions of the housing programme will have to be deferred. It might be useful if official speeches on housing in future conformed to reality.

* * * *

Boosting Exports to West Germany.—The setting up of a trade promotion body in West Germany by Indian organisations interested in the export of various commodities to that country has been suggested by a delegation which went there recently. The delegation was sponsored by the Government of India and went on the invitation of the West German Government. Led by Mr. Bharat Ram, it investigated the factors impeding the free flow of goods between the two countries. It has observed that the trade and public in West Germany are generally unaware of the type of goods India can offer because there are no proper contacts. India has no effective and continuous means of studying market conditions and opportunities there. Furthermore, this country has not been able to take full advantage of fairs and exhibitions which are important means of exploiting the market. The delegation, therefore, says that the proposed trade promotion organisation will be a useful way of promoting trade relations between India and West Germany. It can offer representative samples of the principal items of exports, provide commercial intelligence, promote business and help build a network of agencies for Indian products. The delegation is impressed by the keenness shown by officials and business men in West Germany for developing trade with India, but in spite of this it believes that the exploration of the market will need a great deal of effort and enterprise. While in West Germany, it took the opportunity of studying the organisation of trade fairs and exhibitions, the working of chambers of commerce, the export facilities offered at free ports and bonded warehouses, methods of export promotion and the com-

mercial intelligence organisation. There are prospects for increasing the export of manganese and iron ores, handicrafts, tea, coffee, tobacco, leather, cashewnuts and black pepper. As for textiles, there is considerable scope for pushing exports of hand-made fabrics, both silk and cotton, but the market for mill-made piecegoods will need to be developed by supplying better quality fabrics in the required specifications. In the delegation's view, Indian mill products in some lines are not competitive with piecegoods from other countries. It has accordingly recommended that more attention should be paid to quality and finish especially in the medium and superfine varieties.

* * * *

National Rubber Manufacturers.—An announcement is expected shortly from National Rubber Manufacturers Ltd. about an offer to the public of 5,000 6 percent tax-free preference shares of Rs. 100 each and 210,000 ordinary shares of Rs. 10 each at par (50 percent payable on application and the balance in two calls). The company was incorporated in Bengal as a private limited company in 1946 to carry on the business of rubber manufacture and was recently converted into a public limited company. It makes cycle tyres, transmission and conveyor belting, V-belts and fan belts, rubber hoses, rubber sheeting, rubber flooring, automobile rubber parts, vacuum brake hoses, buffer springs and other railway rubber fittings. The company has entered into an agreement for technical collaboration with the Goodyear Tyre and Rubber Co. of India Private Ltd., for the manufacture of transmission and conveyor belting, V-belts, rubber hoses with braided reinforcement, oil industry hoses, rubber dock fenders, etcetera, according to Goodyear's specifications. Technical information, know-how and assistance is being given by Goodyears. The object of the forthcoming issue is to provide additional capital for the expansion of business.

* * * *

Philips as a Public Limited Company.—Philips India Ltd., the public limited company which has just been formed out of Philips India Private Ltd, will shortly be offering for public subscription 500 000 ordinary shares of Rs. 10 each at a premium of Rs. 2.50 a share. It is expected that the subscription list will open later this month. The increase in the company's ordinary share capital is intended to help finance an expansion programme. Manufacturing facilities in Calcutta are being increased; and, in addition, a plot of land has been purchased in Loni, near Poona, where a factory will be set up to manufacture metal-ware components from early 1958. The Government has agreed to release enough foreign exchange for the plant, machinery and equipment which has to be imported. The expansion plans will make the company less dependent on imports, and will thus save foreign exchange. In producing radio apparatus, radio components, lighting fittings and accessories, public address equipment and other electrical articles, Philips India Ltd. will benefit from the technical and research experience of N. V. Philips Gloeilampenfabrieken of Eindhoven, the Netherlands.

* * * *

Technical Education.—Facilities for technical education in eastern India have steadily expanded. The five engineering colleges and 12 polytechnics there have now been able to accommodate 728 more students for the degree course and 1,430 more for diplomas with an increased grant from the Central Government. About 40 percent of the total grant given for technical education on an all-India basis is allotted to eastern India. To expand facilities in educational institutions, the Central Government has so far spent Rs. 2.67 crores as non-recurring expenditure, besides making loans and grants for hostel buildings. Reviewing the progress of studies and the steps taken to increase educational facilities at the recent meeting of the Eastern Regional Committee of the All-India Council for Technical Education, Sir Jehangir Ghandy, chairman, has said that the establishment of two new engineering colleges and eight polytechnics to accommodate 400 students for graduate courses and 1,440 at the diploma level has been recommended. The Committee's proposals are being studied by the Government and it is hoped that approval will soon be forthcoming. When the new institutions are set up, the eastern region will have fulfilled the targets recommended by the Engineering Personnel Committee for the expansion of technical education facilities in the area. But Sir Jehangir emphasises that most institutions are under-staffed, and grades of teachers' salaries vary. In many instances, the academic qualifications of the staff are inadequate. Some States have not yet taken steps to provide a full complement of teachers to the colleges and polytechnics in their charge. They need also to revise salary grades so as to attract better teachers. A mere extension of facilities is not enough. Standards of training will have to receive the attention of the authorities. State Governments have set up boards of technical education, but Sir Jehangir feels that separate directorates of technical education, complete with inspection and examination staff, should be set up in the States. These latter, working under the boards, should supervise education not only in the basic engineering subjects up to the national certificate level, but should also look after all other technological studies, such as in textiles or communications. About facilities for the practical training of graduates and diploma holders, Sir Jehangir says that 90 percent of the places have been availed of "because the employment position this year is brighter than in the past." The regional Committee has now been enlarged with the representatives of the Union territories of Manipur, Tripura and the Andaman and Nicobar Islands.

* * * *

Progress of Co-operatives.—The co-operative movement has made fair progress during 1956-57, not only in the traditional line of agricultural credit but in many new directions as well. Marketing societies in West Bengal have sold agricultural produce and distributed fertilisers. In Punjab, they have even participated in the export trade by selling 2,200 bales of cotton to Japan. Madras and Andhra societies have exported onions to Ceylon, and those in Mysore, Punjab, Madras, Andhra and Bombay will be exporting chillies, pulses and potatoes to that country soon. In Punjab, labourers have formed themselves into co-operative labour and construction societies and executed works to the value of Rs. 1.3 crores. In the distribution of fertilisers throughout the country, co-operatives have played a prominent part, accounting for nearly 60 percent of the total quantity of fertilisers sold to farmers. The overall picture of progress is equally good. Several large societies, and primary and regional marketing societies have been set up. Nine co-operative sugar factories and 13 other processing societies have been established. A noteworthy feature in this field is the launching of a comprehensive plan of development of co-operative sugar factories. The amount of short-term agricultural credit provided by village primary societies and larger-sized societies during 1956-57 totals Rs. 55 crores, or Rs. 4.82 crores more than in the previous year. The Industrial Finance Corporation has granted loans amounting to Rs. 3.24 crores to eight co-operative sugar factories. Of great significance to the movement is the establishment of the National Co-operative Development and Warehousing Board, under the Agricultural Produce (Development and Warehousing) Corporations Act. Under the same Act, the Reserve Bank has set up the National Agricultural Credit (Long-term Operation) Fund, and the Central Warehousing Corporation has been brought into being. This latter body has acquired buildings for warehouses in Amravati, Gondia, Sangli, Gadag and Devenagere, and it is expected that agricultural marketing societies will benefit considerably. To popularise the movement, a "co-operative week" has just been organised by the All-India Co-operative Union.

* * * *

Road Transport in Madras.—Transport operators in Madras have complained that Andhra Pradesh's decision to go ahead with the nationalisation of road transport conflicts with official policy. They point out that private operators have served the public well and have helped relieve the burden on the railways, but are treated as rivals of the latter rather than as essential parts of the transport system. Road transport companies in Madras have to suffer heavy taxation and stricter regulation than elsewhere; this is particularly unfortunate at a time when there is a need for large fleets with efficient management. The Government is reorganising the transport authorities. A single official is to be entrusted with licensing but provision for appeal is made in the new law now before the legislature. It is claimed that private operators have done better than the State transport undertakings so far, and the private sector has already made an effort to secure labour participation in management.

* * * *

Textile Industries Fair.—A textile industries fair is to be held in Bombay from 7th December until 6th January. The products of the cotton, jute, rayon and silk industries will be on display. The textile machinery industry will be represented by its goods, and a host of mill stores which are now being produced within the country will be shown. The handloom industry will have a special pavilion for exhibiting its products. The cotton textile sector, which is the major component of the textile industry, has of late been beset with many difficult problems such as an abnormal accumulation of cloth stocks with mills. The annual value of India's industrial output, covered by the Census of Manufactures, is Rs. 1,123 crores, of which the value of cotton textile mill production alone is Rs. 395 crores. Its contribution to the Central and State exchequers through taxes and levies amounts to well over Rs. 100 crores a year. The labour force employed in the industry is over 800.000, which is nearly 30 percent of the total industrial labour of India. The annual wage bill comes to nearly Rs. 100 crores, and the average annual earnings of a textile worker are estimated at Rs. 1,600. at least five times the *per capita* national income. The textile machinery industry has also been making steady progress. The value of the different items of machinery, it is estimated, has increased to Rs. 11 crores in the period 1951-56 from only Rs. 4 crores in the previous five-year period. Ancillary enterprises supplying mill stores have expanded appreciably. Industrial fairs are an important method of attracting public interest to various sectors of the economy. The textile industries fair should serve this purpose well.

* * * *

Rayon Rationalisation.—Indications are now appearing of the extent and nature of the modifications which are being made in the undertakings of Courtaulds Ltd. and British Celanese Ltd. after the merger which was carried out in the interests of rationalisation and improved efficiency. Courtaulds Ltd. announces that it has been decided to combine the company's acetate division with British Celanese Ltd., which will be responsible for the production and marketing of acetate yarns, fibres and kindred products of the group, using its own existing trade marks as well as those of Courtaulds. In due course the yarn sales organisations of the two companies will be combined, but meanwhile British Celanese will retain its existing sales offices. In export markets Lustre Fibres Ltd., the distributors overseas of Courtaulds' yarns and fibres, will act in a like capacity for British Celanese. It has been agreed that the fabric divisions of the two companies shall be amalgamated and a new textile division set up which will be responsible for the production, dyeing and finishing of all knitted and woven fabrics for the group. A joint selling organisation will be established which will use the existing trade marks of both companies. As already announced to the trade, British Celanese will in future use Courtaulds' "Tested Quality" mark in place of its own former mark. It is also understood that the group's production of spundyed acetate yarns will be concentrated at the Courtaulds factory at Little Heath, Coventry. When Celanese has completed its present programme it will cease to produce these yarns in its works at Spondon, near Derby.

"CAPITAL" CHRISTMAS TOY FUND

We acknowledge, with thanks, the receipt of the following donations to the 1957 fund.

Rs. 75

J. Charanjiva.

Rs. 50 each

R. H. Watson, "Anon".

Rs. 25 each

R.J.S.F., G. C. Fletcher, J.R.C.

Rs. 20 each

F.R.B., "Anonymous", "Anonymous Donor".

The fund now totals Rs. 871.55, including a carry-forward of Rs. 561.55.

GOVERNMENT CASH BALANCES

IT is very desirable, we think, that the Government should take into early consideration the question of their Cash Balances, because, according to the statement recently published, they have gone down to a remarkably low point, being very little over, on the 30th of September, 7½ crores of rupees. On the 26th of March, 1896, in the course of his remarks on the Budget statement, Sir Patrick Playfair drew attention to the question of minimum cash balance and enquired whether, in view of the increased balances of the Savings Banks estimated in the Budget of 1896-97 to amount to Rs. 11,862,618, it would not be necessary to retain a higher Cash Balance in the future than had been the case formerly. Sir James Westland, in replying, said that the difficulty raised was one felt, not only by the Government in this country, but by the Government at Home. The only security that the Government had against the sudden withdrawal of the Savings Bank balances was that the amounts were all extremely small, so that it would require a very large combination of depositors to make a demand upon the Government which they could not immediately meet. So that the Government had as little danger of a run upon them as an ordinary bank would have in respect of the calls of its depositors. It must be borne in mind, however, that most well-managed banks are in a position to meet the calls of depositors of floating deposits, and as regards fixed deposits, of course they know exactly when they will become due. The Government, it seems, is trading on the fact that its depositors are not likely to call up their money, and they are absolutely at the present moment in this position that they would not be able to pay more than about 60 percent of the Savings Bank deposits, if a sudden call were made upon them by the whole body. Speaking on the subject of the amendment of the Indian Paper Currency Act on the 17th of December, 1896, Sir James Westland remarked that it is a peculiar feature of the money market of India that it is very closely connected with the Government balances. Practically almost the whole of the available current capital used in commerce is composed of the Government balances. Now it is quite clear from the above that the Government in their policy of contracting their balances are placing themselves first in a position that they may not be able to meet their engagements and secondly are starving the trade of the country

FROM

CAPITAL

4th November, 1897

I HAVE not heard the term "managerial disease" before and neither, I suspect, have most of my readers. But there must be few of us who do not know what it is, or are without a fair idea of what causes it. In fact, I would not be surprised if a statistical survey (were it possible to take one) revealed a higher proportion of sufferers among my readers than among those of any other newspaper in India. That is a sobering thought and, I feel, must place a heavy responsibility on my shoulders—thereby, incidentally, increasing the chances of my being stricken as well. It is, then, as much for my own sake as for anybody else's that I am recommending here the findings of one Professor Göpfert of Heidelberg University's Institute of Physiology, whose work on the problems of "tension" may eventually save more human lives, if we but knew it, than all the research which is at present going on into the causes of cancer. Fatiguing physical exercise is what the Professor prescribes for relaxing those taut muscles and, strangely enough, for dispelling that "worn-out feeling". As one whose only form of exertion is pounding a typewriter, wagging a chin and (all too occasionally these days) bending an elbow, this is a piece of advice to which I myself am giving careful consideration. But this is only the treatment for the symptom: the Professor's best recommendations concern the cause. Here, the golden rule seems to be 'take it easy"—do not worry, forget all ambition and above all, learn to relax. There is no denying the price we pay for living in the modern world, so the more help we can give our bodies by running them (literally of course) to a standstill and refraining from getting ourselves emotionally worked up, the better. But here I have noticed a serious gap in the Professor's investigations: I refer of course to the absence of any view on the prophylactic properties of moderately administered alcohol. As my friends never fail to remind me when the subject of my waistline comes under discussion, a peg of whisky contains an unconscionable number of calories. What, therefore, could be better for supplying the energy to oust fatigue? As for alcohol's relaxing properties—well, they should be fairly familiar to most of us. We have, therefore, an excellent treatment for nervous tension at our elbows—or would have if the price were not so high—and, incidentally, a most telling point against those who say that alcohol is bad for the health.

* * * *

Generals, it has been said, should be general. Nobody need quarrel with that but surely there should be men and agencies to take care of the particular without attention to which, general objectives are seldom realised. It would not be an unfair criticism of a part of the proceedings of the International Red Cross in New Delhi that more than once generalities and abstractions were more popular. That those of the Red Cross who carry out their curative functions so admirably should be anxious to turn their attention to the preventive aspects of what they might do is only natural. Appeals to countries for the avoidance of war, its more brutal forms in particular, were only to be expected. But, as some delegates did not fail to remind the more enthusiastic, the International Red Cross is not the United Nations, and it can work only by consent. This is not made the easier by wholly noble but equally unrealistic demands on nations in mortal fear of one another. Disarmament, for instance, is an objective cherished by most countries and peoples, but there is no reason at all to think that the Red Cross's contribution to its achievement can be great. Indeed, its efforts may lead to reactions entirely contrary to its objects. Russia's refusal to participate again in the U.N. Disarmament Commission and its sub-committees as they are constituted at present, for instance, is unlikely to be influenced by the Red Cross's desire to see early disarmament. Most international bodies have very ill-defined assignments. Not so the International Red Cross, and its delegates may serve the cause better by fixing their attention exclusively on the attainable and the practical. This, I am sure, is what is happening behind the public debates on issues like the admission of Formosa and the impermissibility of nuclear warfare. The Reds are a hard cross to bear for any international organisation, but the great humanitarian work of the International Red Cross will go on.

* * * *

I am old-fashioned enough to believe that women's aptitude and appetite for statesmanship has been much overrated since a few desperate British suffragettes won their right to enter this most disciplined and mature of professions by the somewhat paradoxical process of behaving like adolescent hooligans. But once the pass had been sold, I was never able to see why some political institutions should remain closed to women while others were not—unless it was that they were not worth the trouble of forcing an entry. That is why women in the Lords could prove to be a beginning—to the task of rehabilitating the Upper House to its rightful place as something worth while in the British Parliamentary system instead of as it is at present, a frequent obstructor of the democratic will, a butt for comedians and cartoonists, and only to a limited extent a forum for the expression of expert opinion. The trouble is, of course, that it has suited both political parties to have the Lords this way and I cannot imagine why one of them should decide it is going to do something about it now. But whatever the reason, there will be few to disagree with the modest reforms proposed, unless it is to condemn them as being too modest. There is no denying that the Upper House should be more representative, and that if it is ever to be that, women must be admitted, more "life peers" created and some curb placed on the hereditary principle. If there is any doubt on this last score, it should be quite enough to recall that unedifying business some time ago when the "backwoodsmen" turned out in their hundreds to vote against the progress and enlightenment embodied in the Commons' decision to abolish capital punishment. But it is only fair to recall that this incident also proved to be the vindication of the Upper House principle, because, regrettably, the will of the people was a long way behind the ideas of its reformist rulers.

* * * *

The rate of economic growth is something economists have not yet been able to work out very satisfactorily and, considering the multiplicity and variety of factors involved, not all of them economic either, it is not surprising. In a recent *New Statesman* article on the Soviet Union, Isaac Deutscher has pointed out the advantages accruing to late-comers in industrialisation. He shows how Germany started after Britain and was thus able to avoid some of the phases of development the latter, and France, had gone through. Japan's story is not basically different and, while recent Russian achievements rightly dazzle the world, the economic law behind it is the same. (The connection with communism is incidental.) Colin Clark and Peter Wiles fought hard last year over the present rate of growth of the Russian economy; whoever was right, the one thing certain is that it cannot be a stationary one. In spite of *Sputnik II*, in some sectors the rate is perhaps slowing down already, for some plans were revised recently. Deutscher says: "The October Revolution, it might be said, defied in its own way history's 'law of gravitation'." In an editorial article in this journal was once used the term "economic sound barrier." Between these two there may be an explanation for the backwardness of the backward countries and the fantastic progress of countries such as Russia. Up to a point your progress, your race for quick industrialisation, is held back by an economic law of gravitation—what is now happening in the under-developed countries like India. Then you still go ahead, and break through the economic sound barrier, and then there is no holding you back (as in Russia now)—until you reach a third point (where the United States may be today) at which the pace begins to slacken. I am too cautious a prophet to name a date on which India will be less subject to the law of gravitation, Russia more. All I suggest is that movements of nations in economic progress are governed by certain laws against which neither the Government of India (which tries hard with its regulations) nor the U.S.S.R. (which has its own way of calling old laws by new names) can go. If only we knew all these laws and their ways of operation! Alas, economics is not physics—not yet.

* * * *

If the Russians do not want to spoil the value of their latest miraculous achievement in the eyes of the Anglo-Saxon world, they had better get that animal back to earth alive—and fast. Surely it must be a psychological phenomenon comparable in strangeness with the physical one of putting a "flying dog-house" into orbit, that the first reaction of many people in Britain was to 'phone the R.S.P.C.A. to lodge a complaint on the dog's behalf. Now I am all for kindness to animals, but this is going too far. I should like to point out to these sentimentalists that *Limonchik* is getting a Press which any film star or politician would give his soul for. In Britain, if he is not eventually elected personality of the year in place of Mr. Gilbert Harding, I shall be very much surprised. Apart from that, he is qualifying for the gratitude of the whole human race; Lister, Captain Cook and even Henry Ford could not lay claim to more. Statues may be raised to him, and not only in the Soviet Union. His chest will be as heavy with medals as was Marshal Zhukov's. He may even finish up by being embalmed and laid to rest alongside Lenin and Stalin—and what more could any dog ask. In fact, no gallant soldier, no experimenting doctor, no fast-flying pilot and no worked-to-death journalist has ever risked his life in a better cause. But if there is anybody left who still feels that the distinction of being the first living being to leave the earth's atmosphere and go into orbit on his own is not worth a measure of risk, then I will volunteer myself to take the place of the dog on the very next *Sputnik* the Russians care to send up. Not only would I have the consolation of going down in history as the first human space traveller, but I could also be assured that when I returned to earth (and the way the Russians are doing things these days, the odds would seem to be very much in my favour) I would be able to live in financial opulence for the rest of my days on the proceeds of lectures, television appearances, advertisements, books, articles, and the memoires I would write for the Sunday newspapers. If you ask me that dog is on a good thing, whether he knows it or not.

This may shrink **This will not shrink**

That's why people look for 'Sanforized' on the label!

The Trade Mark 'Sanforized' inspires such confidence that people all over the world pick fabrics trade marked 'Sanforized' — knowing they bear this assurance: *This garment will not shrink out of fit — even after many, many washings!*

It adds value and prestige to your own label — enables you to sell with confidence — and assures the public that you take trouble to give them value.

People rely on you to serve them well — so serve them cloth labelled 'Sanforized'.

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements

UNCERTAIN CONDITIONS IN STOCK MARKETS

INDUSTRIALS AND GILT-EDGED EASIER

London, 6th November.

NERVOUS and uncertain conditions prevailed in the stock markets during the past week but the general appearance on balance was somewhat irregular. The main feature was the weakness of industrials, which reflected fears of labour troubles developing out of the current wage claims in the face of the Government's opposition and recent discouraging news from major companies. The performance of Wall Street was not a helpful factor although there was some satisfaction on its reaction to the news of Russia's launching of the second satellite. Gilt-edged securities drifted lower under the influence of the reaction in sterling but improved later following the end-October gold reserve figures and a recovery in the currency. On balance, prices, where changed, were slightly easier. Dollar stocks reflected the erratic course of Wall Street but were generally lower on the week. Very little interest developed in foreign bonds or rails, although the tendency was generally dull. There were some erratic price movements in oil shares, which showed very little change on balance. Copper shares staged a good recovery on a reported increase in demand for the metal in the United States but the best prices were not fully held. South African gold shares responded to investor comment on their attractiveness in a period of inflation if this should develop under the present circumstances. Subsequently, however, a reactionary tendency developed because of the lack of business, but one or two of the finance house issues recorded useful improvements. Leading shares went ahead but later reacted. Tin shares were out of favour while diamond shares recovered a part of their recent fall on small support. Rubber shares were generally dull, reflecting the decline in the prices of the commodity, but there were occasional firm spots. Tea shares ruled quiet.

The Money Market

The money market had a mixed appearance during the past week. Comfortable conditions prevailed during the first two days, with end-of-the-month factors subsequently producing stringent conditions and the position easing again on the turn of the month. The overall supply of credit, however, was only just about in balance with market requirements, and during the most difficult phase the market was forced to borrow a very small amount from the Bank of England. The cost of non-regular money varied from day to day, the average being in the region of 5⅞ percent to 5⅞ percent, while up to 6¼ percent was paid, with the rate dropping to 5 percent during easy periods. Business in bills was usually done on the basis of 6¼ percent for January and hot bills. There was a mixed offering of bills at last Friday's tender, a small proportion offered being for 63 days, the average rate for which was £6 12s 9.02d percent. But the average rate for the normal 91 days was slightly lower at £6 11s 10.53d percent.

Rise in Gold and Dollar Reserves

The sterling area's gold and dollar reserves rose by $243 million in October to stand at $2,092 million. In September, the reserves went down to $2,922 million. The United Kingdom had a provisional surplus of £9 million with the E.P.U. in October, against a deficit of £62 million in September. Excluding both the $258 million received from the Export-Import Bank, and the $133 million paid to the E.P.U. in September and on old accounts, the net inflow into the reserves in October was $126 million. This is the best figure since the $165 million in May 1954. Bringing in $16 million due from the E.P.U. in mid-November, in part payment of the October surplus, the true gain in October was $142 million.

Decline in Hongkong Gold

The Hongkong gold market showed a gradual but persistent downward trend during the past week. This was attributed to the easing of tension in the Middle East, and the continued strength of sterling. Another contributory factor to the market's uneasiness was the lack of demand for U.S. dollars throughout the week. The official offtake was 2,140 taels and unofficial 15,400 taels. Forward contracts were done at $(U.S.)37.88. Arrivals in Macao totalled 34,000 ounces. Carry-over charges were 360 cents a 10 taels in sellers' favour.

Rubber Prices Lower

Apart from some fresh orders for rubber on Russian account there was little in the market to retard the declining trend. Prices were adjusted downwards in line with the Singapore market, and minor rallying movements were short-lived. Business was featured by some nervous liquidation as well as the opening of accounts, but for the most part speculative activity was confined to the switching of positions. With factory offtake small, dealers were chary of taking offers on their books although in the latter part of the week further acceptances of nearby rubber were reported. Towards the close short-covering orders found sellers reserved and the close was quietly steady at ¼d a lb above the worst, although ¼d lower on the week. Continued slow offtake of sole crepe and an increase in the stocks of dealers brought out cheaper offers. Quotations declined by a further ¼d a lb to the basis of 34d a lb for No. 1 smooth fin. on the spot.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

SLIGHT FALL IN DEMAND FOR FUNDS

Wednesday, 6th November.

THERE has been a slight decline this week in the overall demand for money. The seasonal upturn appears yet to be some way off. The heaviest fall among the individual industries has been in the requirements of the jute mills probably due to their recent improved working. There has been a fall in the requirements on account of cotton stocks and a rather smaller drop in the accommodation against grains, wheat, gram and pulses. The requirements of the sugar industry continue to fall. The interbank market has shown a slightly easier tendency and the call rate is quoting 3 percent.

A fair number of tea and gunny bills has come to hand in the past week. Remittance remains satisfactory. Sterling showed early signs of weakness due to end-of-the-month considerations; the increasing number of wage demands in the U.K.'s economy and, in some small measure, the action of the Government of India in reducing its minimum foreign security reserves. There has since been some recovery from the lower levels due to October's improvement in the sterling area reserves.

* * * *

Bullion was steady on good spot demand. Silver advanced from the previous week's level of Rs. 178.75 to Rs. 179.75, quoted today for both ready and forward delivery. In London, the price was 78¼d and in New York it was 90⅜ cents.

Gold was firm in sympathy with silver and the price rose from Rs. 109.50 to Rs. 110. The sovereign improved by 25nP to Rs. 71.50.

* * * *

During the week ended 1st November, Government of India Treasury bills for Rs. 104,57,50,000 were sold in favour of the Reserve Bank.

* * * *

A decline of Rs. 15.76 crores to Rs. 1,486.20 crores in active notes was the notable feature of the return of the Reserve Bank of India for the week ended 1st November, 1957, while the total note issue was Rs. 59 lakhs higher at Rs. 1,514.56 crores. Notes held in the Banking Department consequently rose by Rs. 16.35 crores to Rs. 44.12 crores. Deposits of the Government of India increased by Rs. 1.26 crores to Rs. 53.81 crores, but other Government accounts fell by Rs. 1.42 crores to Rs. 9.60 crores. Balances of commercial banks at Rs. 108.77 crores showed a rise of Rs. 1.86 crores. Balances held abroad rose by Rs. 68 lakhs to Rs. 16.07 crores, while investments declined by Rs. 11.08 crores to Rs. 230.76 crores. Other loans and advances fell from Rs. 67.87 crores to Rs. 63.08 crores, of which advances to scheduled banks against usance bills amounted to Rs. 23.15 crores (Rs. 27.63 crores). Ways and means advances stood at Rs. 49.51 crores, against Rs. 49.92 crores.

* * * *

The return of the State Bank of India for the week ended 25th October, 1957, shows a rise of Rs. 13.65 crores to Rs. 367 crores in total deposits. Investments in Government securities are up by Rs. 2.36 crores to Rs. 143.93 crores, while other authorised investments remain unchanged at Rs. 10.26 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 3 crores to Rs. 165.64 crores. Cash and balances are, in consequence, shown at Rs. 62.59 crores or Rs. 8.15 crores higher.

* * * *

The statement of the position of scheduled banks for the week ended 25th October, 1957, shows Demand and Time liabilities at Rs. 755.41 crores (Rs. 23.17 crores on account of borrowings from banks) and Rs. 640.53 crores (Rs. 13.52 crores), compared with Rs. 730.15 crores (Rs. 25.64 crores) and Rs. 627.44 crores (Rs. 10.28 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 4.98 crores and Rs. 46 lakhs to Rs. 47.02 crores and Rs. 96.49 crores, respectively. There is a rise of Rs. 8.99 crores to Rs. 393.95 crores in investments. Advances and bills discounted at Rs. 867.93 crores show an increase of Rs. 14.69 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 10.2 percent and 62.2 percent, against 10.2 percent and 62.8 percent.

NEW PLASTIC CABLE FOR TROPICS BEING PRODUCED IN BRITAIN

A new type of plastic insulated cable designed for use in tropical countries is now in production in Britain. Announcing this in London on 29th October, an official of the manufacturing firm has said that tests show that a life of at least ten years can be expected for the new cable under the most severe tropical conditions. A quantity of this cable has gone to oilfields in the Persian Gulf area, and the makers are now considering the possibilities of the South American market. They claim that the cable is suitable for ambient temperatures up to a maximum of 165° Fahrenheit, and is rated to carry a full current up to 149° Fahrenheit.

Stocks and Shares

HIGHER SHARE PRICES ATTRACT PROFIT-TAKING

UNDERTONE REMAINS QUIETLY STEADY

Wednesday Evening.

THE recent upward surge in share prices appears to have halted for the time being and some profit-taking has been going on. Whether this is due entirely to settlement considerations is not altogether clear, but market observers are unanimous on the fact that there has been little fresh support since the week-end. In spite of the reaction of the past two days, Indian Irons closed 78nP above the quotation at the last clearing, and the comparatively small carry-over charge suggests a fairly healthy position. Operators have continued to base their expectations on a cut in the cloth excise duty, although disappointment has developed at the announcement not materialising. There is still a general feeling that the return of the Finance Minister will have brought some realism into official economic thinking. The undertone of the market remains quietly steady.

The jute section of the market has been quieter this week, possibly due to the prospects of higher prices for raw jute affecting the mills' trading position. Tea shares have been the feature, with widespread rises recorded. The reason for this is chiefly the better auction prices and the fact that the north Indian crop promises to be somewhat lower this year. Coal shares have been fairly steady, while a fair amount of activity has taken place in the engineering and miscellaneous sections. The resumption of deliveries in the Calcutta Stock Exchange kept brokers working in their offices to a late hour last night; this was the first delivery since the bank strike began on 18th September.

Details of the week's trading follow.

* * * *

On the whole the gilt-edged market was steady, but there was some selling at the higher levels and it was more pronounced in the case of long-dated loans. Three percent Conversion Loan 1986 turned sellers and the price was marked back to Rs. 71. Three percent Non-terminable Paper had small buyers at around Rs 71.10. Demand for short-dated loans continued with buyers of 3% 1958 at Rs. 99.75, and 3% 1959-61 at Rs. 98.55; 2½% 1961 had buyers over at Rs. 94.15, 3½% 1961 was asked for at Rs. 99.60, 2¾% 1960 was steady at Rs. 96.90, 2¾% 1962 had no sellers even at Rs. 94.15 and 3½% 1962 was traded at around Rs. 97.50. In medium-dated loans, 3% 1963-65 had buyers at Rs. 93.35, 3% 1964 continued in demand at Rs. 93.65, 3½% 1964 had sellers at Rs. 97.58 and 3½% 1965 was offered at Rs. 97.30; 3½% 1967 was marked at Rs. 97.55 and 3¾% 1967 had sellers at Rs. 99.50. In the long-dated group, 3% 1966-68 was offered at Rs. 91.15 and 3% 1970-75 eased to Rs. 86.05; 3¾% 1974 was traded at Rs. 98.25 and 4% 1972 turned buyers at Rs. 99.95. State loans were better, but enquiry was confined mainly to discount issues. Four percent U.P. 1968 was asked for at Rs. 96.12 and 4% Madras 1968 had buyers at Rs. 96.35. There was a good enquiry for 4% 1963 issues but in the absence of sellers, little business was reported.

Business in preference shares was on a restricted scale. In jute, a small odd lot of Alexandra was done at Rs. 86 and Alliance at Rs. 62. Birla were marked at Rs. 75, Budge-Budge at Rs. 88 and Empire at Rs. 88.50. Howrah "A" were reported at Rs. 92. In the miscellaneous group, Burn & Co. 7% were taken at Rs. 112.50 and Calcutta Electric at Rs. 9.87. F. & C. Osler were crossed at Rs. 45.50 and Indian Iron changed hands at around Rs. 95. Indian Standard Wagon were done at Rs. 114.50 and Indo-Burma Petroleum were depressed at Rs. 83.50. Richardson & Cruddas were offered at Rs. 57 and Smith Stanistreet at Rs. 64.50. New Victoria Cotton were placed at Rs. 4.06.

In the banking section, the outstanding feature was Punjab National, which spurted from Rs. 63 to Rs. 65.50. United Commercial were better at Rs. 56 as were United Bank of India "D" shares at Rs. 4.10.

In railways, Dehri-Rohtas changed hands at Rs. 9.87.

Outstanding features in the cotton section were Bowreah and Dunbar and their prices improved from Rs. 104 and Rs. 126 to Rs. 117 and Rs. 138 respectively. There were buyers of Kesoram at Rs. 12 but today the shares reacted to Rs. 71.81. Another good feature was Elgin Mills which rose sharply from Rs. 15.12 to Rs. 17 (after Rs. 18.00). Jay Shree Textiles changed hands at Rs. 6.44.

The recent recovery in Bengal Coal fizzled out during the week on stray selling with the price coming back from Rs. 240 to Rs. 224. Burrakur were unchanged at Rs. 22 but there was some enquiry for Central India and Western Bengal at Rs. 6.19 and Rs. 6 respectively. Equitable were crossed at the lower rate of Rs. 23.50. The outstanding feature was Karanpura Collieries which jumped from Rs. 90 to Rs. 100. Katras Jharia were enquired for at the higher rate of Rs. 50 and New Manbhoom slipped back to Rs. 9.37. South Karanpura were neglected at Rs. 10.75.

The recent enquiry for jute shares petered out and closing prices were lower than those prevail-

ing at the beginning of the period under review, as will be seen from the following table:

	Opening 31st October	Closing 6th November
	Rs.	Rs.
Alliance	91	87
Anglo-India	152	147
Auckland	96	93
Champdany	144	135
Howrah	17.12	16.60
India	128	121
Kinnison	140	133
Union	132	124

Contrary to the general trend, Nuddea were better at Rs. 35.25 and Reliance at Rs. 7.25.

In electrics, Calcutta were steady at Rs. 13.19, but other issues were unchanged. Agra Electric were crossed at their previous rate of Rs. 123.

In sugar, Ramnugger were easier at Rs. 20 but Balrampore were better at Rs. 6.75. Samastipur were taken at the higher rate of Rs. 12.

In the engineering section, Indian Iron & Steel were at one time reported up to Rs. 18.96, but a prominent bull operator unloaded some of his holdings on Monday last and the price came back to Rs. 18.44, to recover slightly at the close to Rs. 18.48. Bhartia Steel were higher at Rs. 14.12 while there were a few sellers of Braithwaite at Rs. 27. Britannia Engineering were taken at Rs. 13 and Guest, Keen, Williams at Rs. 28.50. Burn & Co., were shaded at Rs. 323. Jessop & Co., and Richardson & Cruddas met with selling pressure and eased to Rs. 24.50 and Rs. 8.69 respectively. Textile Machinery, after being taken up to Rs. 17.50, receded at the close to Rs. 17.10.

In the paper section, India Paper Pulp met with good investment demand and improved from Rs. 19.25 to Rs. 19.94. Orient were steady at Rs. 24.45 and Shree Gopal at Rs. 14.75. Sirpur were better at Rs. 8.62. In contrast, Titaghur Paper were slightly easier at Rs. 32.12.

In cement, Assam Bengal were easier at Rs. 4.25 as were Dalmia at Rs. 9.87, Orissa at Rs. 12.62 and Jaipur Udyog at Rs. 12.31. Sone Valley, after be-

The unique
HOLLERITH SERVICE

The accountant's visitor had come to see what sort of job Hollerith punched card machines were doing. "Tell me," he asked, "what sort of service did Hollerith give you?" This time the accountant looked surprised. "Did?" he queried, "Surely you know that one of the big things about Hollerith is the *continuous service*."

The two reports

In Hollerith installations your equipment is, as it were, 'hand-tailored'. Your problems are very fully studied before the first careful report is presented to you. No fee is charged for this service. The second report is a detailed working plan in which the flow of work—every facet of the operation—is set out in full.

First careful report

Consultant, guide and friend

The Technical Service Man sees your installation in. Trains your staff. Stays with you till you are absolutely at home with your mechanised office. The maintenance of your machines is now in the hands of the Field Engineer who is always very quickly available.

Responsible advice

Modern business, because its control is based on figures, points all the time to mechanisation. You may only need simple punched card equipment. You might even be ready for an electronic computer. An electronics specialist is available to discuss this with you. Why not send for him? No fee is charged.

Trains your staff

The Hollerith Type 550 Electronic Calculator

Footnote

Hollerith is a vast organisation with immense research facilities, a network of offices throughout India, and a very long experience of Indian business needs.

ıg crossed at Rs. 5.62, reacted at the close to s. 5.31.

In insurance, New Asiatic were marked at s. 4.06 and Ruby General at Rs. 6.12.

In shipping, India Steamship were better at s. 11.75 on the publication of an excellent report. dia General Navigation were neglected at Rs. 62.

Among miscellaneous industrials, Aluminium orporation met with enquiry and improved to s. 10.06 as did Angelo Brothers to Rs. 18. Britana Biscuits were taken at Rs. 13 and British India orporation were offered at Rs. 4.75. Dunlop ubber were slightly easier at Rs. 20.12, but ndustan Lever were steady at Rs. 20.25. Imperial bacco were easier at Rs. 12 as were Indian Rubr at Rs. 21.50. Indian Cables improved to s. 24.75 and Indo-Burma Petroleum to Rs. 25.50. dian Wood Products were wanted at the higher te of Rs. 41.50. National Carbon met with good quiry and steadied to Rs. 23.62. Rohtas Indusies on the other hand met with profit-taking d came back from Rs. 18.50 to Rs. 17.75. Indian uminium met with some enquiry at the lower te of Rs. 12.62 while Metal Box were offered at s. 25. Walford Transport were a shade better at s. 1.81.

In the mining section, Indian Copper were aintained at around Rs. 3, while Karanpura evelopment reacted to Rs. 9.75. Burma Mines proved from Rs. 1.90 to Rs. 1.94.

Tea shares were steady for the reasons given rlier. Among Assam shares, Baghmari had yers at Rs. 19 and Bateli improved to Rs. 27.62. shnauth were wanted at Rs. 19.75 as were Borah Jan at Rs. 16. Brahmapootra fluctuated beeen Rs. 4.12 and Rs. 3.62 on substantial selling d Brooke Bond came to business at Rs. 17. unseri were quoted at Rs. 13.75 and Grob "A" d Grob "B" changed hands at Rs. 25 and Rs. 12.50 spectively. Hoolungoree were traded at Rs. 163 d Methoni were done at Rs. 18.50. Of the Dooars ares, Banarhat changed hands at Rs. 294 as did radighi at Rs. 18.75 and Bhatkawa at Rs. 20.50. rpara were put through at Rs. 136 and Ellenrie were weak at Rs. 160. Hantapara were ne at Rs. 155 and Hasimara improved sharply on keen investment support to Rs. 22.50. New Dooars were done at Rs. 272 as were Rajabhat at Rs. 16.50 and Rydak at Rs. 27. Ranicherra were wanted up to Rs. 15.25. Of the remaining shares Pashok were done at Rs. 8 and Sungma came to business at Rs. 11.25. Eastern Cachar and Hattikhira were quoted at Rs. 3.75 and Rs. 10.50, and Rungamatee improved to Rs. 60.50. Dauracherra were quoted at Rs. 10.50 and Patrakola were traded at Rs. 145. Belgachi changed hands at Rs. 59 and Jay Shree were done at Rs. 9.50.

* * * *

REWA COALFIELDS, LTD. has improved its profit by Rs. 2.07 lakhs to Rs. 3.51 lakhs for the half-year ended last December. The ordinary dividend has been maintained at 7½ percent. The taxation provision is lowered from Rs. 2.56 lakhs to Rs. 1.16 lakhs. Contingencies reserve is allocated Rs 1.20 lakhs, leaving a carry-forward of Rs. 22,852 against Rs. 26,029 brought in. Raisings increased from 176,705 tons to 208 513 tons and despatches were higher at 207,326 tons against 180,614 tons. The directors mention that the improvement may not be maintained as the supply of wagons has not been commensurate with production. In fact, it has deteriorated considerably since the close of the half-year under report. The Umaria colliery is nearing exhaustion and "unless new areas are granted by the Government its life is short."

* * * *

The loss of the BARNAGORE JUTE FACTORY increased from £76,620 to £122,694 for the year ended last March. Providing £68,053 for depreciation and making other adjustments, there is a loss of £142,597. The debit balance to be carried forward is £156,293. The dividends have been passed over. The directors state that the trading loss of £121,539 has been aggravated by extremely heavy benefits and gratuities paid to retrenched workers, following the installation of modern mill machinery. Compensation paid in this manner has accounted for £55,000 of the loss, against which the benefit of a reduced labour force has not had time to accrue to the fullest extent. "But it is now possible to confirm that the estimates of future savings in labour wages, upon which the decision was made to install the new mill machinery, will be fully achieved. Though the full benefit has not yet been obtained, the past year's experience shows that the wage bill for the complement of labour now employed, as compared with the complement of labour on the books before the modernisation programme started to take effect, should show a saving of £122,000 a year, which is equivalent to over 20 percent of the normal wage bill." To take advantage of the new machinery installed, a decision was made, which became effective from the middle of March this year, to close down the South mill entirely and concentrate production on the East mill by triple-shift working of mill machinery with double-shift working of the weaving department. No decision has yet been reached as to the future of the South mill buildings.

The profit of the DISHERGARH POWER SUPPLY CO. LTD. has increased from Rs. 4.36 lakhs to Rs. 5,92,878 for the year ended last March. The ordinary dividend has been increased from Rs. 6 to Rs. 6.50 a share. Depreciation is lower at Rs. 2.29 lakhs. The taxation provision is Rs. 1.15 lakhs higher at Rs. 1.80 lakhs. Contingencies reserve is allocated Rs. 23,239. General reserve receives Rs. 1.28 lakhs. The carry-forward is Rs. 8.28,636 (Rs. 9.14.296). Units sold improved from 78.73 million to 83.76 million.

* * * *

The profit of the MACHINERY MANUFACTURERS CORPORATION LTD. has amounted to Rs. 2.76 lakhs for the year ended last March, after providing Rs. 5.96 lakhs for depreciation. The arrears of preference dividends up to 31st March, 1954, have been paid. There is again no ordinary dividend. The carry-forward is Rs. 1,07,848.

* * * *

The profit of the KRISHNABEHARI TEA CO. LTD. has fallen from Rs. 61,895 to Rs. 54,396 for the year ended last December. The dividend has been maintained at 10 percent. General reserve is allocated Rs. 10,000. The carry-forward is Rs. 7,534 against Rs 3,176 brought in. The crop declined from 314,374 lbs to 284,023 lbs, but the average sale price improved from Rs. 1-12-10 to Rs. 2-2-9 a lb. Estimates for the current year are for a crop of 320,000 lbs.

* * * *

There is an increase from Rs. 38.73 lakhs to Rs. 1.07 crores in the profit of the INDIA STEAMSHIP COMPANY for the year ended last March. The ordinary dividend is the same at 10 percent. Notable allocations include: taxation reserve Rs. 15 lakhs (Rs. 1.42 lakhs), general reserve Rs. 35 lakhs (nil), dividend equalisation reserve Rs. 23.75 lakhs (nil) and fleet replacement reserve Rs. 7.27 lakhs. The carry-forward is Rs. 2,70,984 against Rs. 25,920 brought in. It is proposed to increase the authorised capital of the company to Rs. 5 crores, and also to issue bonus shares by capitalising the premium reserves.

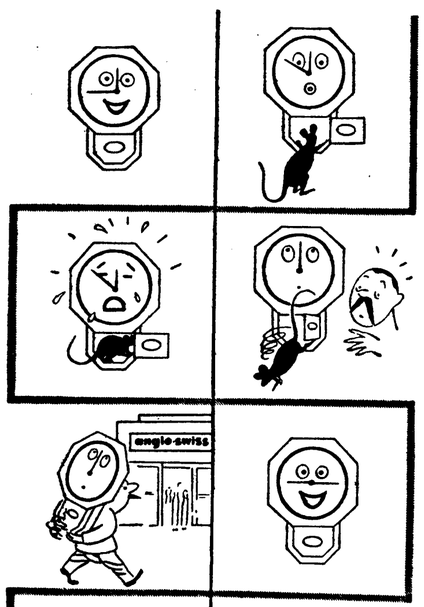
Bombay Market

HOPES OF CLOTH DUTY CUT HELP SENTIMENT

PRICES STEADY DESPITE STEEL PRODUCTION FIGURES

Wednesday Afternoon.

THE Bombay stock market closed on a steady note last week in spite of a mid-week dip following lower production figures of the Tata Iron and Steel Company during October. A number of factors helped boost sentiment. It is believed that the Government might reduce the cloth excise duty, especially on medium and coarse cloth in order to relieve the accumulation of stocks. Scattered investment support, especially from the Life Insurance Corporation, was regarded as a helpful factor.



Tata Steels closed at Rs. 164.25 and Indian Irons were quoted at Rs. 18.64. Alcock Ashdown improved to Rs. 230 and Premier Construction were higher at Rs. 153.75. Tata Locomotive gained at Rs. 131.50 on replacement buying. Automobile shares were quotably higher in sympathy with the general trend. Premier Automobiles came to hand at Rs. 87.50, while Hindustan Motors were freely available at Rs 6.28.

The mill group showed all-round gains. Bombay Dyeing recovered to Rs 51.10 and Century were higher at Rs. 390.50 on short-covering. Kohinoor were bought at Rs. 265.50 on investment account and Swadeshi improved to Rs. 173. Simplex were quoted at Rs. 159 and India United Ordinary improved to Rs. 10.04.

Sugar shares were prominent in the miscellaneous group, and Belapur Sugar increased to Rs. 244 on keen buying due to an increase in the dividend. Phalton Sugar were better at Rs. 141. Cement shares were steady, and Associated Cement were quietly absorbed at Rs. 151.50. Digvijay Cement changed hands at Rs. 130. Steamship company shares were strong, and Scindia Steam mounted to Rs. 16.76 on prospects of an increase in the distribution. Great Eastern Shipping were transacted at Rs. 21.40 and India Steamship improved to Rs. 11.68 on reports of a bonus issue by capitalising share premium reserves. Mining shares were quietly steady and fluctuations were narrow. Shivrajpur Syndicate were available at Rs 81. National Rayon were quiet at Rs 209.50 on fears of an increase in capital. Tata Chemicals were bought at Rs. 15.28.

Selective support was forthcoming in banking shares, and United Commercial Bank came to hand at Rs. 57. Punjab National were transacted at Rs. 63. Interest has been maintained in insurance shares, especially New India Assurance. The scrip was quoted higher at Rs. 48 on prospects of a bonus issue.

Electricity supply shares were steady and investment support was given to Ahmedabad Electric around Rs. 95.80. Tata Power were taken at Rs. 1,140.

Whether it's a clock or a watch that needs repair—bring it to *Anglo-Swiss* for reliable service at moderate charges.

Competitive Power from the Atom NOW

The APPR-1 is the first small nuclear plant in the free world to produce electric power for commercial use. It was designed and built by ALCO in less than 30 months.

It is the prototype of the standard reactor which Humphreys & Glasgow are now offering. The output of this standard reactor will be 174,000 lbs. of steam per hour at 400 p.s.i.g., thus giving a net electrical output of 10 MW.

Requirements for power combined with process steam can be provided by back-pressure or pass-out turbines.

The price of nuclear fuel is falling whilst the cost of conventional fuels is rising steadily; in most parts of the world the lines have already crossed.

Humphreys & Glasgow would welcome enquiries for either immediate installation or long range planning.

STATUTORY MINIMUM FOR PAPER CURRENCY RESERVE REDUCED

BRITISH COLLABORATION IN INDIAN INDUSTRIAL EXPANSION

(FROM OUR NEW DELHI CORRESPONDENT)

AN Ordinance was last week issued amending with immediate effect Sections 33 (2) and 37 of the Reserve Bank of India Act. The amendment is to the effect that the Issue Department of the Reserve Bank will hold a minimum reserve of Rs. 200 crores in gold and foreign securities. The Bank, however, will have the power to suspend this statutory requirement, with the previous sanction of the Central Government, for periods of six months in the first instance and for further periods of three months at a time, so long as the value of gold in the Issue Department is not allowed to fall below Rs. 115 crores. On 25th October, 1957, the total foreign assets held by the Issue and Banking Departments stood at about Rs 328 crores. At the rate at which it has been necessary to draw upon these assets in recent weeks, the minimum fixed under the Reserve Bank of India Act (Rs. 300 crores) might have been reached before the Act could have been amended by Parliament in its next session. It is for this reason that recourse to an Ordinance was necessary. "It is now generally recognised that foreign exchange reserves are necessary primarily for enabling a country to tide over temporary balance of payments difficulties. This objective can be served only to the extent that such reserves are available for use in times of temporary balance of payments difficulties and built up at other times when circumstances are more favourable. The present amendment, while retaining a minimum of reserve of Rs. 115 crores in gold, makes possible a degree of flexibility necessary for the implementation of the second five year plan," says the Ordinance. For the six months ended 31st March, 1958, India's expenditure of foreign exchange on commercial account excluding oil and iron and steel purchases is estimated at Rs. 203 crores. On the basis of the existing foreign exchange resources, known firm commitments of assistance from abroad and present firm commitments of payments to be made for imports, the "hump" of the foreign exchange difficulty will be reached in the period April 1958 to March 1959. In this period, the country will have to make foreign payments at twice the figure for the period April 1957 to March 1958. After March 1959, foreign exchange payments will be substantially less.

British Investment

Two sets of views have been expressed about Britain's rôle in India after independence. One set of views is expressed by some Britons in India who, on account of the changed pattern of trade, are forced to go out of business. Due to import controls, for example, certain departmental stores had to close down. The other set of views is expressed by some Indians, who are blaming Britain for her unhelpful attitude towards the second five year plan.

The Reserve Bank's last survey placed India's foreign liabilities at Rs. 1,036 crores. Foreign business investments at Rs. 419 crores constituted the bulk of the liabilities of the non-official sector, over 82 percent of which (Rs. 347 crores) were from the U.K. Nearly 86 percent of British investments were "direct", compared with similar U.S. investments of Rs. 31 crores. A survey made in October 1957 of the manufacturing concerns in India having U.K. financial or technical co-operation, shows that as many as 11 units manufacturing automobiles, commercial vehicles, components and accessories have British participation in them. The British firms include the British Motor Corporation of Oxford, the Standard Motor Company of Coventry and Leylands Motors Ltd. Two British companies are participating in the manufacture of trucks, seven in the manufacture of diesel engines and parts, five in bicycles and 18 in electrical equipment. In the last category are included Associated Electrical Industries Ltd., London, the English Electric Company, and the General Electric Company. In addition to heavy electrical machinery, the British companies have been assisting India in the manufacture of batteries, transformers, switchgear, meters, telephones and train lighting equipment. Ten British companies are participating in the manufacture of radios and their components, among which are Murphy Radio Ltd., the Marconiphone Company Ltd., the Gramophone Company Ltd. and the General Electric Company Ltd. There are nine British firms participating in the manufacture of textile machinery and accessories, five in the manufacture of general machinery and accessories, another five in the manufacture of paints and varnishes, eight in the manufacture of chemicals and dyestuffs and ten in the manufacture of pharmaceuticals, drugs and medicines. Important groups in the last two categories are Imperial Chemical Industries, May and Baker Ltd., Boots Pure Drugs Ltd., Glaxo Laboratories Ltd., and Burroughs Wellcome and Company.

As many as 57 British firms are assisting India in various other activities, such as oil exploration and refining and the manufacture of aircraft, aero-engines, locomotives, railway coaches, sewing thread, pens, inks, aerated waters, cigarettes, biscuits, chocolate and soap. Included in these categories are Parker and Waterman for pens and inks, Schweppes Ltd. of London for aerated waters, Huntley and Palmers Ltd for biscuits, Imperial Tobacco for cigarettes, Lever Brothers for soaps, Cadbury for chocolate, Dunlop Rubber for rubber goods, the North British Locomotive Company for locomotives, the Folland Aircraft Company for aircraft, the Bristol Aeroplane Company for aero-engines, Bacock and Wilcox Ltd. for boilers, Standard Telephones for cables, Waygood Otis for lifts and G.E.C. for refrigerators. In addition, the Associated Cement Company is being helped in the manufacture of cement-making machinery, and the Government of India is being assisted in setting up the Durgapur steel plant. This impressive array of names suggests that British business interests are not leaving and that they continue to assist India in her development plans. It is a pity that India's payments crisis has coincided with financial difficulties in the U.K. Moreover, no U.K. firm has such large financial resources as to entertain business on the basis that the first payment for its goods would be made in 1961. Jut as India invites global tenders to obtain the most favourable terms, so also foreign firms have to entertain business on terms comparable with those offered by other countries.

Canadian Food for India

The Canadian Minister, Mr. W. J. Browne, announced on arrival here that his Government had offered to give $7 million worth of wheat to India as part of that country's Colombo Plan contribution. Under this announcement, India would receive 3.7 million bushels of wheat. Canada's Colombo Plan contribution this year will amount to $34.4 million, of which India will get $15 million. The Canadian gesture will help in meeting her food shortage. India wanted at least $7 million more of wheat aid, but not a reduction in the normal Colombo Plan aid. Efforts are likely to be made to persuade Canada to treat the wheat gift as additional help.

The U.S. Secretary of Agriculture, Mr. Ezra Benson, speaking at a Press conference here, disclosed that his Government had under consideration an application from India for a further allocation of wheat, cotton and corn under what is commonly called the Public Law 480 programme. Public Law 480 is an Act of the U.S. Congress under which, for a period of three years, the U.S. Administration is authorised to dispose of $1 million worth of agricultural products such as wheat, cotton and corn. These commodities can either be sold for the currency of the buyer's country, or in exchange of goods, or can be given as gifts for distribution among needy people. Under this Act the U.S. Government in August 1956 entered into an agreement with the Government of India. Inclusive of the provision made for payment of half the shipping costs, the three-year agreement provided for a sum of $360 million for the supply by the United States of agricultural commodities to India, including $200 million for wheat, $26.4 million for rice, $70 million for cotton, $6 million for tobacco, $3.5 million for dairy products. Mr. Benson disclosed that shipments of these commodities were far in advance and would be completed within two years, instead of three, as originally provided. The $1 billion fund to dispose of surplus agricultural commodities had practically been exhausted, and the availability of finances being limited, the U.S.A. had a number of urgent requests from countries other than India. The U.S. Government is planning to ask Congress for a further allocation to this fund. While Mr. Benson mentioned the possibility of further aid under the Public Law 480, he suggested the examination of certain other ways of getting supplies from the U.S.A., such as agreements on a barter basis and supplies on credit under the U.S. Commodity Credit Corporation scheme.

Capital Issue Consents

Out of a total of 142 applications involving an amount of Rs. 62.73 crores, consent for which was given by the Controller of Capital Issues during the first half of 1957, 30 consents, each involving Rs. 50 lakhs and over, claimed an amount totalling Rs. 46.48 crores. This amount is made up of three types of issues, namely, initial issues for a sum of Rs. 16.84 crores, further issues totalling Rs. 11.30 crores and loans to be raised to the extent of Rs. 18.34 crores. The last amount, it is hoped, will be contributed by (i) the International Bank for Reconstruction and Development (Rs. 12.1 crores to the Indian Iron and Steel Company and Air-India International); (ii) the U.P. Government (Rs. 2.85 crores to Juggital Kamlapat Cotton, Lakshmiratan Engineering Works and New Central Jute); (iii) the Government of India (Rs. 2.13 crores to the India Steamship Company), (iv) the Madhya Pradesh Government (Rs. 90 lakhs to Ballapur Paper and Strawboard Mills) and (v) the West Bengal Government (Rs. 30 lakhs to Jankinath Cotton Mills).

Newly Registered Companies

Sixty-eight companies with a total authorised capital of Rs. 7.25 crores were registered during September 1957. Of these, seven are public companies and 61 private, with Rs 1.54 crores and Rs. 5.71 crores of authorised capital, respectively. Four large flotations, namely, Warner Lambart India (Private) Ltd., Johnson and Johnson of India Ltd., Colaba Textile Private Ltd. and Gangapur Sugar Mills Ltd., it is reported, have been registered with an authorised capital of Rs. 1 crore each.

Policy on Deferred Payments

The Union Minister for Industries, Mr. Manubhai Shah, making a policy statement here last week, stated that import licences would only be issued for capital goods and equipment intended for new industrial units or for substantial expansion of the existing units if the first payment for them was made after 1st April, 1961. It will, therefore, be inferred that no foreign exchange is available for new commitments during the second plan period. The new commitments

also include any project which, though included in the second five year plan, is broadly speaking outside the "hard core" of the plan.

In April this year, the deferred payments scheme was launched, according to which an initial payment of 10 percent was to be made. Within six months, the Government has discovered that it has no money to pay even 10 percent initially. It seems that there has been some faulty budgeting.

Terms of Russian Credit

It is learned that the much advertised Russian credit offer is only for five years and not for 20 years, as was originally anticipated. In other words, the repayment will fall due at the beginning of the third plan period. The Indian Government is trying to persuade the Russians to extend the repayment period. As against this, and following the visit of the Finance Minister, Mr. T. T. Krishnamachari, to Bonn, the West German Government has agreed to make arrangements for delaying the payments for the Rourkela steel plant, under commission by Messrs. Krupps and Demag. It is anticipated that payments for the plant will commence after 1961. The arrangements will be made without affecting the existing agreement between the Government of India and Messrs. Krupps-Demag. The Principal Secretary to the Ministry of Finance, Mr. H. M Patel, along with some senior officials, will shortly proceed to Bonn to finalise this deal.

The forge and foundry project also falls within the category of the "non-committed". It is to be worked in two stages. The first stage will have the production target of 17,000 tons at an estimated cost of Rs. 11 crores. The second stage will have the target of 45,000 tons at an estimated cost of Rs. 23 crores. In fact, both this and the heavy machinery project are being held up for want of foreign exchange. The Czechs who, along with British and Germans, have submitted project reports to the Government, have been asked to agree to the repayment scheme commencing after 1st April, 1961. Their reply is awaited.

Trade with West Germany

The West Germans are very keen to increase their trade with India, but the pattern of trade will have to be comparable with that in other countries. It is futile to imagine that capital will be attracted to India on the basis of the payment scheme announced by Mr. Manubhai Shah. The deferred payment plan has met with little or no response. So some *via media* will have to be evolved to attract foreign capital to India during the next 18 months to save at least the "hard core" of the plan. The Principal Secretary of Finance, Mr. H. M. Patel, told a Press conference last week that the volume of payments in foreign exchange in 1958-59 would be at least double of that of the current year. The West German gesture should provide some relief, but unless substantial foreign aid is available, India will have to cut down her imports further. This shows that even the "hard core" is in danger of being delayed. There are four countries which can help implement the plan. They are the United States, Canada, West Germany and Japan—all non-communist. The Finance Minister, by his visit to the U.S.A., Canada and West Germany, has created a very good impression. This needs a follow-up, for which purpose Mr. H. M. Patel has been deputed to visit West Germany and the U.S.A. Another senior official, probably Mr. B. K. Nehru, may be sent to Japan. The Indian High Commissioner in Canada has been entrusted with the job of securing Canadian credit. Mr Patel is expected to leave India by the middle of this month.

Textile Excise and Company Reserve Deposits

There is no truth in reports that the excise duty on cloth is being withdrawn, or that the company reserve deposit scheme is being abandoned. When the excise duty on cloth was raised, it was intended to bring down the prices of cloth to the 1955 level. Current prices of cloth have not touched that level yet. As far as the accumulation of stocks is concerned, it is largely traced to speculation following reports that the duty was being withdrawn.

Steel Import Policy

In view of the limited availability of foreign exchange, the Government has decided that for the licensing period, October 1957 to March 1958, licences for the import of steel will be issued for certain special categories only. Licences to importers who import for sale will be issued on the basis of their past imports. Certain actual users will be granted licences on the basis of their minimum requirements. The following categories of steel will be licensed to those who have imported these categories during at least two of the three years ended March 1955, 1956 and 1957: tin plate secondaries, steel wire, box strapping, industrial and rerollable scrap and tool, alloy and special steel. Importers who fulfil these conditions should apply to the Iron and Steel Controller, Calcutta, or the Deputy Iron and Steel Controller, Bombay or Madras, before 20th November, 1957, giving the necessary data. The following categories of steel will be licensed to actual users who import for their own use and have imported before as actual users: primary and secondary tin plates, terne plate, steel wire skelp, wheels, tyres and axles, forgings and tool, alloy and special steel. Actual users should apply through the sponsoring authorities concerned to the Iron and Steel Controller, Calcutta, or the Deputy Iron and Steel Controller, Bombay or Madras, before 20th November, 1957, giving the necessary data.

Lok Sabha Business for Winter Session

A Bill to extend the Preventive Detention Act is being put down for introduction and passing in the winter session of the Lok Sabha beginning on 11th November, it is learnt. Among the other measures which the Government is likely to press for adoption in the coming session are a Bill to provide for more effective control of the capitalisation of reserves; a Bill to give effect to the recommendatons of the Finance Commission; and a Bill to allow a higher rebate on the export of steel ingots; to extend the emergency powers of the Central Government to increase excise duties by notification; and to remove certain ambiguities in the definition of "cotton fabrics." Legislation will be sponsored to give effect to some of the recommendations of the Rice Milling Committee. The Parliament (Prevention of Disqualification) Bill is intended to declare certain offices as not disqualifying their holders from being members of Parliament. There will be a Bill to revise the jurisdiction and composition of the Railway Rates Tribunal; two Bills to include in the definition of "opium" poppy capsules, whether crushed or not, and to enhance punishment for certain types of offences relating to narcotics; a Bill to regulate the use of telephones by statutory rules instead of individual contracts; a Bill to amend the Coal-bearing Areas (Acquisition and Development) Act; the Indian Tariff (Second Amendment) Bill to grant or discontinue protection to certain industries; a Bill to impose a statutory liability on employers to afford necessary protection in civil employment to members of the Indian Reserve Force; a Bill to tighten up the anti-corruption law; a Bill to provide for pension, leave and other terms of service of judges of the Supreme Court and another Bill to provide for certain matters concerning the conditions of service of High Court judges consequent on the reorganisation of States; a Bill to provide for the release of offenders on probation or after due admonition; a Bill to provide for drawing rail fare in cash in lieu of identity-cum-rail passes by new members of Parliament in certain circumstances; the Coal Mines Provident Fund and Bonus Schemes (Amendment) Bill, to provide for the recovery of interest from outstanding dues to the Coal Mines Provident Fund and the regularisation of the application of the Coal Mines Provident Fund and bonus schemes to ancillary undertakings; and a Bill to amend the Employees Provident Fund Act to delete Section 16 (1) (A) of the Act which provides for automatic exemption to undertakings belonging to the Government or to a local authority.

A Bill to amend the Indian Electricity Act, it is proposed, will be introduced and referred to a joint committee. Another Bill to repeal certain laws in Manipur and Tripura relating to co-operative societies and money-lending with a view to extending certain other laws to these Union territories, has been proposed for introduction during the coming session.

With so many new Bills, apart from pending legislation, the session promises to be a heavy one. The list of new Bills now circulated is by no means final. Some may be postponed for want of time. On the other hand, new ones may be added to the list in the course of the session. The Government has also proposed a debate on the international situation; further discussion on the five year plan in relation to the current economic situation carried forward from the previous session; discussion and voting on supplementary demands for grants; discussion on the report of the Commissioner for Scheduled Castes and Tribes for 1955; and a debate on the food situation.

The controversy over some of the remarks allegedly made by the Finance Minister on the eve of his departure for the U.S.A. in a Press interview will have an echo in the House if the Communist Party has its way. The Party is planning to raise it in the House as an issue, among other things, of the collective responsibility of Ministers.

Deferred Payment for Ships

The Directorate of Shipping, Central Ministry of Transport, is trying to expand Indian tonnage in spite of the foreign exchange crisis. Two plans are being considered. Under one, it is proposed to mortgage some of the existing ships in order to make an initial payment, and then to pay the balance from the earnings of the newly-acquired ships. Japan, for example, is willing to sell ships on a deferred payment basis, the initial payment being 35 percent of the price. It is proposed, therefore, to raise foreign exchange equal to 35 percent of the price of a Japanese ship by mortgaging some of the existing ships in the dollar market, and paying the balance from the earnings of the new ship. The other plan is a "pay while you earn" scheme under which no initial payments are to be made and the entire price of the ship is paid from its foreign exchange earnings. The Government has accepted the principle of releasing the foreign exchange earnings of such newly-acquired ship for payment by instalments of its price. At least two ships have so far been acquired under the second scheme.

Exporting Low-grade Manganese Ore

The export of low-grade manganese ore is now posing a difficult problem for the Government, it is learnt. Till recently, it was in great demand because it was used in the manufacture of steel. But a recent invention has replaced low-grade manganese ore in the process of steel-making in a number of places, leading to a fall in demand and an accumulation of stocks. The State Trading Corporation is at present endeavouring to find new markets.

It's 1,000 miles across the room...

RATTLE, clatter, thump goes the toy engine at the little boy's heels... rattle, clatter, thump across the room. And, to him, it's a thousand-mile trip! So what's vital to him is movement and speed.

To us, at Hindustan Lever, speed and distance are no less important. For you, we cover thousands of miles every day — every inch of India's 35,000 miles of railroad, for instance.

But before our products are despatched, we must consider how they will travel. Plane or train? Road or waterway? Handcart, head-load or mule-train? The answer depends on a great many factors — for instance, on the *kind* of territory those goods must cross and how *soon* they must arrive.

But arrive they must — and arrive in the best condition. For people have come to trust the goods we make — things like Sunlight Soap and Vim, Rexona and Dalda Vanaspati. The need for these products is growing — everywhere, all the year round.

We take trouble to satisfy this need — and so add another service to the service that the goods themselves perform. We add the service of *regular supply*.

Hindustan Lever serves the home

London

COMMONS ECONOMIC DEBATE IN RETROSPECT

CUT IN HOUSING PROGRAMMES

(FROM OUR LONDON CORRESPONDENT)

IT is open to question whether anyone gained very much benefit from the two-day debate in the House of Commons on the economic situation, excepting perhaps the Opposition on the purely political plane. Neither the Chancellor of the Exchequer, nor the Minister of Labour, who were the principal speakers for the Government, made much use of the opportunity to bring home to the man in the street the gravity of the inflationary danger or to enlist co-operation in fighting the threat. They phrased their references to wage increases in such ill-chosen words as to precipitate what they have been so carefully avoiding for several months, namely, a clash with trade unions—aided and abetted, as one would have expected, of course, by all the speakers from the Opposition benches. As expected, Mr. Thorneycroft went into greater detail concerning the proposed slow-down in capital investment in the public sector. The bulk of the saving of between £300 million and £350 million over the next two years, which is expected from this, will come from the housing programmes of local authorities, which are to be cut by 20 percent. The power industries as a whole, including coal, electricity and gas, will have to reduce their proposed spending by about 10 percent by rephasing schemes over a longer period. Smaller savings are expected from the railways and the postal department by adopting a similar policy, but the roads, hospital and education programmes are to remain substantially unaltered. All Government departments have been instructed to reduce current expenditure by offsetting increased costs by reduced services or administrative economies.

Little exception has been taken to this aspect of the Government's plans to fight inflation, but Mr. Harold Wilson, for Labour, made a token protest about its possible impact on production and full employment. Nor was there any difference of opinion as to the seriousness of this situation, though the "Shadow" Chancellor would tackle it differently, by a four-point programme of which two suggested to seek assistance from the United States and West Germany among others and persuading other members of the Commonwealth to moderate their demands on the common pool, the maintenance of raw material prices at higher levels, and a return to the controls and restrictions which, in spite of the foreign aid then being received and the wage restraint then being exercised, failed to prevent the 1951 crisis. It was Mr. Thorneycroft's warning that to grant wage increases on the scale on which they were still being demanded would be a disaster to the country, to firms who gave them, and to men who got them which dominated the proceedings on both days, especially as he went on to state that the Treasury would not meet any additional deficit on the railways arising from the granting of current wage claims. The *Opposition* characterised this as a "declaration of war" and the trade union leaders have not been slow to take it in the same light, in spite of both the Chancellor of the Exchequer and Mr. Macleod, Minister of Labour, denying this, though making it quite clear that the Government has no intention of financing inflationary awards however they are secured and if there is serious trouble it will not hesitate to meet the situation. The claims by the railwaymen have an added interest as a result of the debate, and until the worst is known—for the demands could only be met by making economies in other directions—the economic outlook will continue to be rather obscure.

Production Trends

Although recent fears of a general slump in business materialising from a fall in world demand appear to have receded, this is a danger which cannot be entirely overlooked. It is to be expected that the 7 percent Bank rate will ultimately react on production in this country, but the September index of industrial production continues the recovery which has persisted since the spring. At an estimated 140-141 (1948=100), the adjusted index compares with 137 in the corresponding month of last year. The indicated rise of just under 3 percent is, however, rather smaller than has been recorded for July and August and may therefore reflect a tendency towards levelling off. The latest *Bulletin for Industry* issued by the Treasury provides a useful analysis of the contribution of the various sectors of British industry to this year's rise in output, which repays study as a possible guide to what Britain may expect in the months ahead. The figures show that the rise in the index has occurred almost entirely in manufacturing and mining, whereas in the previous year manufacturing output fell and was only partly offset by increases in building and public utilities. Within manufacturing, output of the engineering, shipbuilding and electrical goods group has continued to expand. There has also been a big recovery in the production of consumer goods, in a few cases above the level of the 1955 boom.

In some durable consumer goods, such as television sets and domestic refrigerators, the recovery began at the beginning of the year. But the revival of motor-car output did not start until after the end of the period of petrol rationing in May. This recovery although almost entirely in small cars, has been dramatic. By August output was at a level two-thirds higher than in August 1956. Output of chemicals, which rose 3½ percent last year, was more than 8 percent up in the first half of this year. Steel output, after a 4 percent increase in 1956, was 2 percent up on a year earlier in the first quarter of 1957, 7½ percent higher in the second quarter and 10 percent in the third.

Treble Shift-working

The *Bulletin* also offers some advice to industry on how to overcome any production setback which might arise from the Government's measures to restrict capital expenditure. An article which is referred to as a "factual note" on postwar practice in shift-working in Britain and the United States refers to the moral of the latter country's more radical approach. It is pointed out that double or treble-shift working, which is an established feature of a number of industries, expands output both for industries themselves and for the electricity industry. By staggering industrial traffic, it also eases the strain on the transport system. Less plant is needed for a given volume of output, and increased output can be obtained without extensive extension to factory accommodation. "It is clear that the working of shifts, and in particular of three continuous shifts, is an everyday characteristic of much of U.S. industry. It is not merely dictated by the nature of the process but widely extended by the desire to make full use of plant and to turn it over quickly. The wide extension helps, and is helped by, the general acceptance of the idea of shift work as normal, and by popular readiness to adapt shopping and eating habits to it."

Credit Squeeze at Work

The full statement of the London clearing banks made up to 16th October, to which a preliminary reference was made in last week's despatch, confirms that between 18th September and 16th October, there was a substantial drop in advances. The figure is given at £32.5 million less at £1,921.7 million, or over £20 million below the new ceiling to which they have been asked to conform by the Chancellor of the Exchequer. The size of this reduction has occasioned some surprise in view of the fact that the bank overdrafts of the nationalised industries over the same period are shown to have increased by £18.4 million, so that loans to the private sector must have been reduced by nearly £51 million.

It is against this background that a delegation of Indian industrialists has been visiting London in what they describe as "our search for means whereby private business men can get supplies of credit." The visit here was preceded by a stay in the United States where apparently it met with considerable success in relieving the minds of several U.S. capitalists of their doubts about investment opportunities in India. The rayon industry is to get substantial help from the Export-Import Bank in purchasing machinery, while the Kaiser company is understood to be willing to invest in the Indian aluminium industry. The delegation's experience in London has been rather different. They have met with sympathy and understanding in plenty, and a ready recognition of mutual interests; but when it has come to providing finance for new investments the invariable reply has been a reference to Mr. Thorneycroft's latest measures. The delegates have moved on to West Germany, where they hope to be more successful.

Training Indian Graduates

Three hundred Indian university graduates are to come to Britain in the next four years to be trained as supervisors for the steel works being built in Durgapur by a consortium of British firms. Travel costs and maintenance grants will be paid by Britain under the Colombo Plan's Technical Co-operation Scheme. The first 19 of these trainees of whom seven are already working in this country or on the Continent and the remaining 12 who are coming by air from India, will assemble in London over the current week-end to be briefed as to where they have to go and what they have to do. There will be three parties of graduates each year, and periods of training will vary from six to 12 months, according to each man's experience and the job for which he is being trained. Some will have had little or no experience in industry when they begin their training, but a few, who will take up senior posts at the Durgapur steel works, have had experience of management. Training facilities are being provided free by the British steel industry and by makers of the plant to be installed in Durgapur. The programmes will provide training in iron and steel manufacturing processes and experience in the construction of plant which the trainees will later operate and maintain.

INDIAN PARTICIPATION IN ETHIOPIAN VENTURE

RUMOURS ABOUT CHANGE IN CLOTH EXCISE DUTY

(FROM OUR BOMBAY CORRESPONDENT)

IT is reported here that Birlas have made an arrangement with the Ethiopian Government under which the former will act as managing agents of the proposed Indo-Ethiopian Textiles. The concern will have an authorised capital of $E4.5 million, equivalent to Rs. 85.71 lakhs. The issue will be divided into 45,000 shares of $E100 each. Of this, the Ethiopian Government will purchase 2 950 shares representing a holding of 51 percent. Shares valued at Rs. 6.61 lakhs have been reserved for the promoters, directors and their associates. The balance of the shares will be offered for simultaneous public subscription in Ethiopia and India. While applying for shares, an initial payment of $E 25 for each share will have to be made and the balance of $E 75 on demand by the company. The managing agents will be entitled to a payment of $E 30,000 annually for their services in addition to 10 percent of the profits of the new venture. It is further provided that 5 percent of the annual net profits, after deducting expenses and depreciation, will be credited to a reserve fund until this totals 10 percent of the company's capital. A dividend will be declared if there are surplus profits after providing for the reserve fund.

The Ethiopian Government has, however, agreed that the company's profits will not be subject to income tax for the first five years commencing from the date of actual production. It is further agreed that the machinery and equipment imported for the new mill will not be subject to Customs duty. The new mill will have 14,000 spindles and 300 looms and an output capacity of 12 million yards each year. It will be the most modern mill of its kind and will be fully equipped for bleaching, dyeing and finishing as well as spinning and weaving. Last year, Ethiopia imported textile goods and raw cotton valued at $E 53,503,000, with India and Japan among the leading suppliers. It is believed that with the opening of the new mill, imports from Japan will be seriously curtailed. Although Ethiopia already has three cotton textile mills, none of them is equipped with dyeing and bleaching facilities. The three units so far in operation have a total annual output of 6.5 million yards of cloth and 3,700 tons of yarn. Actual production last year amounted to around 6 million yards of piecegoods and 2,332 tons of yarn. One of the mills is in the capital, one is in Dire Dawa, about half way between Addis Ababa and the Red Sea port of Djibouti, and the third is located in Asmara, close to the port of Massawa in the north of the country. The Dire Dawa mill is the oldest, having begun operations in 1944. Ten years later, the Addis Ababa unit started production. The Asmara mill was established two years later and came into production at the beginning of this year.

Excise Duty on Cloth

The uncertainty over the Government of India's policy on the excise and export duties on cotton piecegoods and raw cotton had its effect on the cotton market. It was earlier reported that the Government was contemplating the lowering of the excise duty on cloth and the export duty on Bengal cotton. Accordingly, the Jarilla March contract was quoted at Rs. 718 a candy. But when no definite announcement was made, the Jarilla contract dropped to Rs. 706 a candy on nervous unloading. The unsatisfactory condition of the piecegoods market also affected the cotton market adversely. The turnover in the spot market was limited and business in the new season's crop was slow. Interest was confined to 197/3 Khandesh and Berar, Kalyan, Lakshmi and Jaydhar. In spite of the restricted demand, prices remained steady because it was believed that the offtake would improve as soon as the Government's decision about the duties was known. Of the imported growths, substantial business has been placed for Egyptian and Sudan cottons and for the A.R. Uganda new crop. Business in the latter has been done subject to import licences and for February-April delivery. Spot lots of American cottons were also purchased.

On the export side, France has purchased some 3,000 bales of Indian cotton, but there have been no enquiries from Japan, one of India's biggest buyers. The export demand is considered slack and the quotations for exportable cottons have fallen by around Rs. 20 a candy. In sympathy, the unofficial premium for export quotas has also declined. The same uncertainty over the excise duty on cloth also affected the piecegoods market. The trade will be reluctant to augment stocks until is is definitely known whether or not the excise duty on coarse and medium counts is to be lowered. Demand was restricted to immediate needs and related to the fine and superfine qualities only. There was an all-round decline in prices. On the other hand, the export markets were more active than recently. Indonesia is once again in the market for Indian textiles following a suspension of trade with Japan. Moderate business was booked in white cambrics, and shippers here expect that further orders will be placed shortly. The U.K. and west Africa both booked fair quantities of greys of medium counts. Hongkong purchased medium grey sheetings and Singapore booked bleached longcloth, mulls and grey sheetings. It is believed that Burma will once again be in the market for substantial quantities.

Rayon Yarn Improves

Dealers have taken delivery of 700 bales of stable fibre yarn and 300 cases of rayon yarn against the October delivery contract which has now matured. Trading in both yarns was brisk and the 2/40 staple fibre contract was quoted at around Rs. 580 a bale. The 120D cone contract increased to Rs. 811 a case, but dropped to Rs. 796 on reports that some dealers were unable to take delivery of their commitments. The staple fibre December delivery contract was quoted at Rs. 543 and the rayon December contract at Rs. 816. In the spot market, staple fibre gained about half an anna while rayon yarn was steady. The cotton yarn market continues listless with accumulating stocks and depressed prices. It was reported that one mill was prepared to dispose of its stocks at a rebate of 8 annas a bundle for all counts. Pakistan, Japan and now Communist China are offering keen competition in export markets and outpricing the Indian product.

MARKETING OF INDIAN GOODS IN THE U.S.A.

NEED FOR BETTER QUALITY AND SALESMANSHIP

(FROM OUR NEW DELHI CORRESPONDENT)

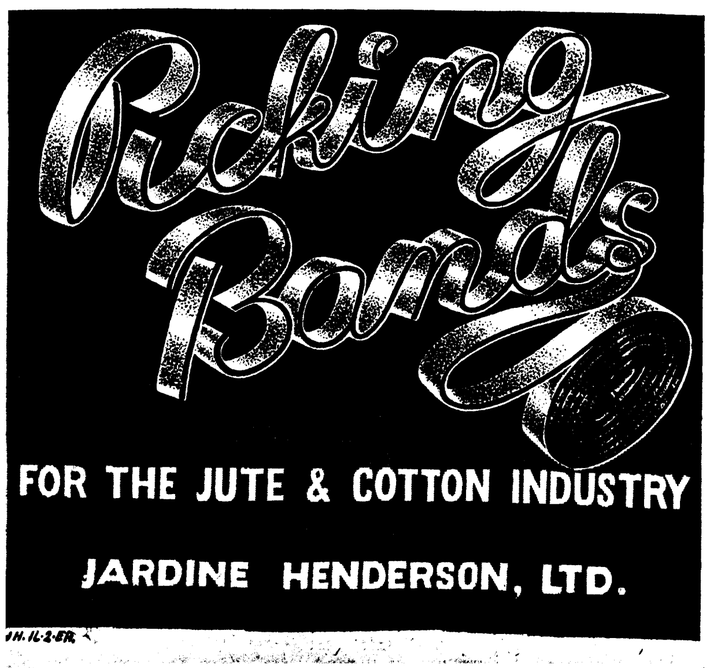
THE Government of India has decided not to participate in the 1958 Pacific World Trade Fair, which is due to be held in Seattle next April. Apart from foreign exchange difficulties, these trade fairs, showrooms and even trade commissioners' establishments abroad have not appreciably helped India in stepping up her export trade. Walking down Sutter Street in San Francisco, this correspondent saw some Indian sarees displayed in a shop-window. Equally prominently, ladies' slippers, Indian jewellery and Indian brassware were also being displayed. This indicated a demand for such varieties of Indian goods. In fact, one saw Indian goods being displayed all over the United States, from Honolulu onwards. But on a closer look, this correspondent discovered that with the exception of sarees, every article passed off as Indian was actually made in Japan.

San Francisco is an important centre of world commerce. India has a Counseller staticned there. Yet the fact that Japan was competing with India in Indian types of goods was not known beyond Sutter Street. San Francisco has an international centre within its harbour, where reference books from every country are kept. India was represented by the Commerce Ministry's journal. It was only two years old! Thus, beyond regularly producing finely printed reports, India's trade organisations have not yet attempted to develop markets for Indian goods. Indian traders use trade fairs largely to sell their own goods in a manner which would pay for their travels abroad.

Japanese Competition

In comparison, Japan has an aggressive trade organisation. After having ascertained that there is a growing demand for certain types of Indian goods, Japan started manufacturing them with better finish and at half the cost. Walking in the Chinatown of San Francisco, one noticed a similar thing, namely, at least 60 percent of the "Chinese" merchandise was made in Japan. Japanese commercial counsellors and trade representatives are among the world's best salesmen.

Advice of U.S. Trade Mission



The U.S. trade mission which visited India last March has observed that "the prime factor is selling and production, and in order to capture the U.S. market, India must go at it in the same way that a big manufacturer would after it. It does not come by itself; you have to go after it. The important thing that has to be developed for that field is the right kind of sales organisation that understands the demand in the United States so that it can be translated back to the Indian manufacturer." Another suggestion made is to hire an American merchandise expert, who will periodically come out to India, advise Indian manufacturers on the requirements of the U.S. market, and secure orders from U.S. firms on the basis of samples obtained from India. The Government of India is faced with an acute foreign exchange crisis, and is unable to implement either of the suggestions. It is likely to approach the U.S Government for assistance in setting up the sales organisation. One view here is that active trade promotion is more important than the policy of full employment. Having tested their usefulness, the Government should now consider whether its trade commissions should not be replaced by a sales promotion organisation. A market, like a constituency, has to be nursed. Thanks to the last war and the influx of a large number of Americans in India, a market for Indian goods in that country is developing. It needs careful nursing. Quality and the regular supply of goods has to be an integral part of any sales promotion plan. As matters stand, India is acquiring an undesirable reputation for the indifferent quality of her goods.

U.S. Methods of Agriculture

As in the case of trade, agricultural missions from India have been visiting several parts of the world. They submit reports, which in due course are placed in the national archives. This year has shown what progress agriculture has made in India. After almost 15 years of the "grow more food campaign", the food situation is again desperate. There is a Japanese way of rice cultivation. But the American way of cultivation is superior. First, farmers live on their fields, in their modern log-wood houses. Forty acres is the minimum economic unit. Of course, it is all mechanised farming. In the cotton belt, there are ginning mills everywhere. The staff of the ginning mills in the off-season advise the farmers on cotton cultivation. Alfalfa is grown as a rotating crop—three years of alfalfa to one year of cotton. It puts nitrigen back into the soil, and is a very good cattle feed.

JAPANESE MISSION TO SURVEY IRON ORE MINES

Japan's iron and steel industry is planning to send a large-scale mining mission to India shortly, according to a copyrighted report in the current issue of the *McGraw-Hill American Letter* (Indian edition). The group will explore six iron ore mines in Orissa, Mysore and Madhya Pradesh. The initial technical survey will be followed by another mission headed by the president of the Fuji Iron and Steel Company. This group will negotiate an agreement with New Delhi providing for Japanese financial and technical assistance in developing Indian mining properties.

Jute

REPORTS OF REDUCTION IN PAKISTANI JUTE OUTPUT LIFT PRICES

SIGNIFICANCE OF NEW CROP ESTIMATES EXAGGERATED

CONFLICTING reports from Pakistan about the current jute crop had a considerable effect on the Calcutta markets during the past week. Estimates showing that the crop there might not be as large as was expected earlier had a bullish influence. Prices of both fibre and manufactured goods advanced rapidly and speculators took full advantage of the situation. Press reports of the estimates, however, were very misleading, and tended to give the impression that the annual yield of the East Pakistani jute crop might be halved. This is far from true. According to the Government's own admission, made public in a Press note issued in Dacca, this year's crop *in the five-mile border belt* is not expected to exceed 250,000 bales, as against 450,000 bales in the previous season. This presents a very different picture from that conveyed by the newspaper headlines, the important phrase being "in the five-mile border belt". The jute grown in this section is only about 5 percent of the total crop, so the final reduction is not as large as might at first appear. The Press note goes on to say that the Jute Marketing Corporation (which is responsible for the purchases made in the five-mile border belt) has lifted about 400,000 maunds of jute from the border areas so far this season, the bulk of it having been taken during the last six weeks. This accounts for about half the jute available under the revised estimate, and the Corporation is fully confident that the remainder in the border belt will be lifted by the end of the year.

It is not very long since the Corporation's affairs came in for a great deal of criticism. Unrest and interference made it virtually impossible for the staff to carry out the duties allotted to them, with the result that growers lost confidence. The drop of almost 50 percent in the outturn of this area perhaps offers food for thought to those who have hinted that large-scale smuggling across the border is still going on. The Corporation's reply is that smuggling has been reduced to a "mere trickle", because drastic anti-smuggling measures have made it compulsory for jute growers in the border areas to account for the disposal of all the fibre they produce. There is very little chance, however, of verifying the amount of jute which, it is supposed, has been lost as a result of drought in the border areas.

Calcutta speculators quickly used the news of a reduction in the Pakistani crop to force up prices in an otherwise dull and featureless market. Neither overseas buyers nor local mills were keen for business. Any bullish factor, therefore, was emphasised out of all proportion to its real significance. The flurry of activity made little impression on the market in general, except in the near positions, where speculators were aided at first by local shipper covering, which they attempted to construe as fresh overseas business. After the initial excitement, however, gunny prices in the ready position fell rapidly. It was perhaps significant that while ready B Twills prices fluctuated through a range of Rs. 2.25, finishing about Rs. 1.25 lower than at the opening, January-February rates for the same fabric recorded only minor variations and actually finished about 50nP higher. In hessian, all deliveries showed a small premium on the opening rates.

There was a fair amount of activity in the fibre markets and daily purchases by mills kept prices steady. The announcement about the Pakistani crop probably had less effect in this section than in gunnies, and throughout the week price variations were on a very minor scale. Financial stringency in the trade is causing much concern. Many sellers have large sums of money outstanding with mills for jute which in many cases has actually been delivered and consumed. Mills have not the money to pay until they receive sums for their own outstanding gunny bills. The situation will eventually sort itself out, but it is obvious that the effects of the bank strike have not yet passed. Many sellers have been unable to fulfil their obligations to mills, being unable to buy fresh jute until payment is received for that already delivered. Consequently, they have applied for an extension of time, but the requests in many cases have not received sympathetic consideration from buyers, who are relying on that jute to keep their mills running. This has increased interest in ready delivery jute with a steadier undertone developing.

settling day at the close of the last session. Interest was revived, however, on reports from Pakistan hinting at a short crop, and speculators forced up rates, but the rise was short-lived. Towards the close, both sacking and hessian declined and an easier undertone developed.

B Twills recorded violent fluctuations at the opening, and ready prices dropped from Rs. 118 65 to Rs. 116.65 in the first two days. This was a reaction to the heavy speculative activity on last month's due date. Forward shipment over the same period lost about 75nP, falling from Rs. 114.25 to Rs. 113.75. Hessian was quiet and rates of 40in. 10oz. recorded small losses in sympathy with sacking, opening at Rs. 42.55 and losing 40nP in the first two days. After the week-end, all fabrics rose on reports concerning the Pakistani jute crop, and B Twills gained Rs. 1.25. The increase was only temporary, and by Tuesday the gains in all sections had been practically wiped out. Business was scarce and the market was weak at the close. Quotations on Wednesday morning were as follows:

	Ready	November	December	Jan.-Mar.
	Rs.	Rs.	Rs.	Rs.
40in 8oz.	34.50	34.50	34.25	34
40in. 10oz.	41.90	42.15	42.15	42
B Twills	116.25	115.85	114.90	114
Heavy Cees (Plain)	116	115.05	114.90	113.75
A Twills	139.75	139.50	139	138
Liverpools	129.50	130	129.50	128.50
Cornsacks	115.50	116	115.75	114.75

Raw Jute: Daily business throughout the past week helped maintain fibre prices at a fairly high level Individual purchases were small, but taken together they amounted to well over 500,000 maunds. Most of the business was done at or just below the generally quoted level, in spite of the fact that the majority of sellers represented them-

THE JUTE MARKETS

Manufactured Goods: There was very little interest in the Calcutta jute goods markets, and the past week was one of the dullest on record. Overseas buyers stayed out, reiterating their opinion that prices were still too high. Calcutta mills, on the other hand, continued to give higher indications against enquiries. This, it was thought, was mainly because they had very little on their books to sell, except for the forward positions. Local shippers attempted to cover previous sales, but met with little success. Speculators were inactive at first, following heavy operations on

selves as reserved. This was mainly due to a shortage of money, however, and as soon as funds became available fresh jute was put on offer. Daissee came in for a great deal of interest, and with the increase in imports business was done on most occasions at reduced rates. Opening rates last Thursday were based on Rs. 29.50 a maund basis Bottoms for November-December shipment. But by Saturday these had dropped to Rs. 29. The market rose after the week-end on the raw jute news from Pakistan, but the reaction in fibre was not as violent as in gunnies, and prices advanced by only 25nP. Even so, small business was still possible at a discount.

Prices showed little variation and Northern-Assam fibres, which constituted the bulk of the business, were taken up at Rs. 29 to Rs. 29.50 a maund basis Bottoms for November-December shipment. Tossa from the same areas also passed at Rs. 30.25 to Rs. 30.75 a maund for the same shipment. Small consignments of Purnea Desal were accepted at Rs. 27.50 and Murshidabad District Tossa from selected Agencies fetched Rs. 30.75. Large quantities of Daissee were taken up, both under contract and over-the-jetty, and prices varied from Rs. 30.25 to Rs. 31 a maund. Daissee mesta was done at Rs. 26.50 to Rs. 26.75 a maund. In the pucca bale section, mills paid Rs. 83 to Rs. 85.50 for Pakistan N.C.'s and T.C.'s.

The Cossipore markets were very active, and heavy business was transacted. Imports were smaller, a total of 700 wagons arriving at the sidings, but this compared very favourably with the corresponding week of last season, when 650 wagons were reported. Upcountry prices have advanced in recent weeks, but Cossipore rates have not shown much alteration, so there is little profit from the prices paid by mills. Agents and representatives are paying premium rates for good quality dry jute, and this fact has tended to keep prices high. At the close, quotations in Cossipore were based on Kishanganj jute at Rs. 27.75 a maund for garsat quality.

On Wednesday morning, quotations were as follcws :

Indian Jute :	Landed at Mills Rs. a md basis Bottoms.	Shipment

GUNNY SHIPMENTS DURING SEPTEMBER

The following are the total net figures of manufactured jute goods shipped from Calcutta during September after providing for short shipments. These figures include shipments to coastal ports.

	Bags (Tons)	Cloth (Tons)	Total (Tons)
Hessian			
Gross	3,460.3	31,666.7	35,127.0
Short Shipped	263.8	1,196.5	1,460.3
September 1957 (Net)	3,196.5	30,470.2	33,666.7
August 1957 (Net)	2,808.8	24,889.0	27,697.8
July 1957 (Net)	1,617.1	34,135.1	35,752.2
Sacking			
Gross	52,124.1	547.1	52,671.2
Short Shipped	6,168.7	4.0	6,172.9
September 1957 (Net)	45,955.4	542.9	46,498.3
August 1957 (Net)	37,684.4	1,235.2	38,919.6
July 1957 (Net)	40,280.7	1,800.6	42,081.3

THE PAKISTANI JUTE MARKETS

BIG FALL IN ARRIVALS

(FROM A NARAYANGANJ CORRESPONDENT)

PRICES are apparently steadier, but the dominant factor in the market has been a big drop in arrivals of jute and the withdrawal from the market of overseas buyers. The former is probably due to the very low river levels and due to growers harvesting other crops or preparing their lands. The fall is a seasonal occurrence, but has happened rather earlier this year. Moreover, the crop this year also came in rather late. As a result, prices have been maintained not only in Narayanganj but also in upcountry agencies. The quality, however, is improving, and as a fair quantity of northern jute from the border is being marketed, the availability of cuttings is less and this is proved by the slight increase of this grade in the market. There are, however, big holders of cuttings, who are only waiting for an opportunity to unload. There is thus very little chance of the cuttings market improving.

E.P.C. registrations have been large for the first half of October, France and India being among the biggest buyers. During the period, very good prices were paid. The Continent has withdrawn partly because of holidays, but also because of its policy of not buying as soon as prices show signs of increasing. The struggle, therefore, continues between the overseas buyer with limited stocks, doing his utmost to keep prices at a low level and at the same time purchasing his requirements, and the grower with more money than he has ever had, trying to push prices up. In between, the *beparis*, the balers and the shippers are bearing the brunt of it, and also much of the financial loss. It is very hard to say what the position of balers is today, but indications are that many are short of qualities which are not easily available for ready shipment, while they are long of unsaleable qualities. It seems, therefore, that there may well be yet another rise in the local market before prices come down to the level which buyers consider reasonable.

Most mills made purchases of Hearts and cuttings before the market rose, and as a result, are in a position to offer competitively with Calcutta in sacking. In fact, they are very keen to sell for the near positions. The Karachi market which at Rs. 143 for B Twills is the Calcutta F.A.S. equivalent of Rs. 113 is weak, with speculators offering forward at a discount. Speculators, unlike the mills, feel that prices for sacking will not be maintained. The Karachi hessian market continues unchanged, and very little business is reported for export. In spite of the fact that Karachi speculators are offering forward B Twills at a discount, it has to be remembered that the next few months cover the period when there is a heavy demand for bagging of seeds in West Pakistan. So Pakistani mills may well be out of the export market.

THE FOREIGN JUTE MARKETS

FALLING TREND IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market in Pakistan has of late been quieter. It gives the impression that a downward trend in prices is on its way. So far, this has not amounted to much, and values generally are down by £1 or £2 a ton. Offers of Mill Firsts have been more freely made, but the prices quoted have been very irregular, ranging from £113 to £120 a ton, most being in the region of £116, while Mill Lightnings could be bought at £100 and perhaps £1 less for a group for November-December shipment, c.i.f. Mill Hearts have come back to £90 and grade Hearts to £80, but these are the lower rates, and shippers are usually asking £1 to £2 more. Good marks of Daissee-2/3 are down to £99 and grade to £90 10s, with grade Tossa-2/3 from £106 and grade Tossa-4 from £100, all c.i.f., U.K., November-December. A few small sales have taken place in afloat and spot material, prices for which are much the same as those for shipment. A quietly steady demand exists for hessian yarns at prices which rule unchanged on the basis of 15.72d a lb for 8 lbs common hessian weft and 16.29d for 8 lbs "J.C.H." warp. Spinners are better situated than they were, but quick delivery can still be had from some. So long as consumers can buy, and this applies to cloth as well, on a hand-to-mouth principle, no doubt they will continue. They feel that raw jute must have reached its peak for the season. Four months of the season have already gone and imports from the upcountry markets have been considerably less in both India and Pakistan than usual. There must be a big increase some day and it is thought that this will inevitably lead to lower terms.

The Calcutta goods market has fluctuated only slightly, but there is a slight weakness noticeable in prices. Hessians are at 65s for 40in. 10oz. and 49s for 7½oz., November and December, and 64s 3d and 48s 9d January-March, with B Twills at 175s 6d, 174s and 172s for the respective positions of shipment, f.o.b., Calcutta. Enquiry for jute cloth in Dundee has improved and manufacturers are better employed. Prices continue firm and unchanged.

Some of the Dundee delegates to the world jute conference to be held in Dacca on 25th November, have been well chosen. They include Messrs. W. G. N. Walker, chairman of Jute Industries, Ltd., W. Ovenstone of the Buist Spinning Company, Ltd., H. B. Pirie, G. C. Stevenson and T. D. Bruce, and from the London Jute Association, Mr. R. E. B. Wilcox and J. W. K. Malcolm, plus another member yet to be appointed.

Plantation Topics

RECOMMENDATIONS OF TOBACCO EXPERT COMMITTEE

BASIS FOR ASSESSMENT OF DUTY

THE Government of India has accepted all the major recommendations of the Tobacco Expert Committee which was constituted under the chairmanship of Mr. K. Raghuramaiah, M. P. Its main recommendation concerning the criterion of assessment of non-flue-cured unmanufactured tobacco has already been implemented through the Finance (No. 2) Act of 1957. It has reported that accurate classification of tobacco fro purposes of assessment, on the basis of percentage of use for the manufacture of *biris* in specified areas, is not possible, and it has encouraged smuggling and given rise to malpractices. Restrictions on the movement of lower-rated tobacco from one area to another where it is assessable at the higher rate has resulted in flow of trade from higher-rated to lower-rated areas, causing hardship to traders of certain varieties of tobacco.

The Committee has, therefore, recommended that in order to provide a uniform and stable basis of assessment varieties of tobacco which, by reason of their physical form and characteristics, namely, tobacco cured in whole leaf form and tied or packed in bundles, bunches or hanks, or in the form of ropes, twists or coils, dust of tobacco, granules of tobacco not larger than 1/16 in. square in size (including similar granules of stems), and uncrushed stems larger than ¼in. in size which are incapable of being used in the manufacture of *biris*, should be assessed at the lower rate and all other tobacco should be assessed at the higher rate. As for methods adopted for estimating the produce of growers for purposes of accounting and assessment, it has reported that the present methods and scales of check are inadequate, and has recommended that checks of crop condition, of curers' produce and conduct of crop cutting experiments, should be done on a larger scale. It has also stressed the need for dealing more firmly with cases of underdeclaration of produce by curers.

Exemption from Excise Control

In order to secure the above objectives, it has been recommended that unproductive work should be reduced to the minimum by exempting producers who grow tobacco only for their personal and domestic consumption from excise control and by augmentation of staff and supply of equipment, where necessary. It has recommended that: (i) processing of tobacco into a form in which it could attract the lower rate of duty should be freely permitted in warehouses; (ii) the present statutory time-limit for storage of tobacco in curer's bonded store-rooms should have a provision for extension in deserving cases.

The Committee was set up in 1956 by the Government of India, Ministry of Finance, Department of Revenue, in pursuance of the recommendations of the Taxation Enquiry Commission. It was asked to review the working of the criterion of assessment of duty on tobacco other than flue-cured on the basis of its use or otherwise for the manufacture of *biris*, to consider generally the methods adopted for estimating the produce of tobacco growers for purposes of accounting and assessment and to examine other matters relevant to this investigation. It submitted its report to the Government on 31st March, 1957. The report has now been published and copies are available on payment from the Manager of Publications, Civil Lines, Delhi.

NO CHANGE IN TEA EXPORT DUTY

The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty, at Rs. 3.30 a lb. against Rs. 3.48 a lb fixed on 1st October, 1957. There is no change in the existing rate of duty of 38nP a lb.

COCHIN TEA SALES

At Sale No. 29, 1,800,000 lbs of tea were on offer. There was a better general demand, particularly for medium brokens which were dearer. Black leaf fannings were well supported, but others were very irregular and easier. Best liquorings were strong, while whole leaf grades were easier, particularly orange pekoes.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN SEPTEMBER

Indian rubber output in September was 2,712 tons, according to the Rubber Board of India. Imports totalled 2,025 tons and exports were nil. Consumption by manufacturers was 2,666 tons including 1,217 tons imported. Stocks with manufacturers at the end of the month were 3,456 tons. Stocks with estates and dealers on the last day of the month amounted to 4,439 tons including 369 tons in transit. Manufacturers used 249 tons of synthetic rubber and 297 tons of reclaimed rubber of which their month-end stocks were 967 tons and 527 tons respectively.

Engineering and Transport

NEXT I.A.T.A. SESSION TO BE HELD IN NEW DELHI

NEW PATTERN OF INTERNATIONAL AIR FARES

(FROM OUR NEW DELHI CORRESPONDENT)

THE next session of the International Air Transport Association will be held in New Delhi during 1958. Over 1,000 delegates and their *entourage* are expected to attend. It will be held almost immediately after the annual sessions of the World Bank and the International Monetary Fund in New Delhi. The booking of hotel accommodation has already commenced.

Agreement on the pattern of international air fares and cargo rates for the 1958-59 traffic year has been reached among the scheduled airlines at the traffic conferences of the International Air Transport Association held recently in Miami Beach. Mr. Gordon M. Bain, chairman of the conferences, has said that the airlines proposed to hold the price of air travel at the present levels over a large part of the world route network, but that increases of about 5 percent or less are required on some routes to meet the rising costs of operation. Most of the proposed increases, he has said, will be confined to first-class services. Tourist fares will be exempt from price increases wherever possible. At the same time, the airlines intend to bring in a new low-fare class of service across the north Atlantic next year; they hope to develop traffic in other areas by new tourist fares, group excursion discounts between north and south America and promotional fares elsewhere.

Certain aspects of the trans-atlantic fare structure and the pattern of fares within the eastern Caribbean area have been left over for further discussion between the carriers concerned.

A further session of the conferences in Paris on 19th November will deal with the details of the new low-fare service on the north Atlantic, and the related conditions and fare levels of the other classes of transport to be offered on the route.

Summary of Recommendations

Mr. Bain has summarised the recommendations of the conferences relating to the fares region by region as follows:

Western Hemisphere: Fares within and between the Americas will be subject to some minor adjustments. New tourist and excursion fares will be introduced to develop new traffic, chief among them being a special discount for groups of eight or more travelling together.

Mid-Atlantic: Tourist class fares between central America and Europe will remain unchanged. First-class fares will go up by $20.

South Atlantic: First-class and tourist fares between south America and Europe will be increased by 3 percent. Emigrant fares from some European countries will be introduced.

Europe, Middle East and Africa: Adjustments are proposed in individual fares resulting in some cases in increases of up to 5 percent. The present promotional excursion fare programme will be continued and some new items added.

Europe, India, Far East and Australia: Little or no change in fares between Europe and India. Increases of 4 to 5 percent on tourist class and 6 to 7 percent on first-class services between Europe and the Far East and Australia, but no increase on the direct Europe-Australia rates.

Asia, Australia and the Pacific: Generally unchanged, with some increases, largely on first-class services.

Trans-Pacific: Fares over the north and mid-Pacific routes unchanged. On the south Pacific route, no change in tourist fares, but a 5 percent increase on first-class services.

Round the world and polar fares: No change.

New turboprop airliners such as the *Britannia* and the *Friendship*, and jets such as the *Caravelle*, *Comet IV* and *Tu-104*, all of which will be operated by various I.A.T.A. member carriers during the 1958-59 traffic year, have been listed to carry tourist passengers, either exclusively or in combination with first-class.

Cargo Rates

General cargo rates will remain largely unchanged within the western hemisphere, throughout Asia and Australia and over the Pacific and polar routes, as well as on many routes within Europe and between Europe, India, Pakistan and Ceylon. On other routes, and between Europe and the Far East and many parts of Africa and Australia, as well as over the Atlantic, the rates in general will go up by 5 or 10 percent. In spite of the increase in the general cargo rates over the north Atlantic, no major changes have been made in specific commodity rates. This is expected to help air freight carriers and encourage the movement of cargo at these rates.

The conferences also approved a new commodity description guide which should substantially clarify and ease the rating of specific commodities. Minimum charges for air cargo shipments have been increased slightly to cover the costs of handling small parcels. Actual charges will vary according to the part of the world concerned. The new cargo rates, it is proposed, will take effect on 1st February, 1958.

B.E.A. Reducing Piston-engined Planes

The winter schedules of British European Airways show an almost total disappearance of piston-engined aircraft from the Corporation's international routes; it is expected that this change-over will be completed by next spring. The daily London-Vienna service, which has operated non-stop during the summer, will, for the winter, call at Munich on three days a week in each direction, the remaining four flights continuing without intermediate landing. The London-Zurich-Belgrade service will continue throughout the winter, but at a reduced frequency of one round trip a week, while the London-Venice service, which operated twice a week until 19th October, has been suspended for the winter. The tourist services from Manchester to Barcelona and Milan will not operate during the winter, that from Manchester to Palma and the thrice-a-week Manchester-Rome service *via* London have also been suspended. They will recommence on 1st March, 1958. There is little change in the route network of B.E.A. all-cargo services, although Stuttgart has been reinstated on the London-Germany section, but the substitution of *Viscounts* for *Dakota* will provide both increased capacity and shorter delivery periods.

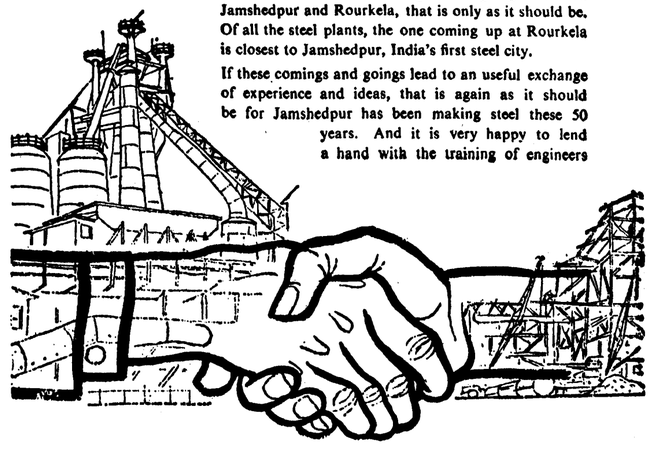
B.E.A. introduced on 6th October, a new twice-a-week *Viscount* service between London and Prague; the route is flown in pool with the Czech carrier, C.S.A. which provides a similar service to London using *Ilyushin 14's;* the flights of both carriers are timed to connect in Prague with the fast *Tu-104* service of Aeroflot to and from Moscow. Another new service has been provided by twice-a-week flights on the London-Milan-Athens-Tel Aviv route. There are some seasonal reductions in the services from London to Spain and Gibraltar, but regular services between London and Palma will be maintained throughout the winter. Scandinavian services have also been somewhat reduced, and night tourist flights have been withdrawn; there will be daily *Viscount* flights between London and Copenhagen and the daily London-Oslo-Stockholm service will be reduced to five flights a week for the four months from November 1957 to February 1958.

Viscounts on K.L.M. European Services

The introduction of *Viscount* 800's on many services is the highlight of K.L.M.'s winter time-tables for its European routes. The principal routes on which these turboprops will be used are from Amsterdam to London, Dublin and the Scandinavian cities. Otherwise, routes and frequencies remain little changed, although the flight numbers of many services have been altered. Several important changes have been made in K.L.M.'s inter-Continental network. All north Atlantic flights will now carry both first and tourist-class passengers, and the Amsterdam-Houston service continues to Monterrey and Mexico city. Considerable acceleration of the south American services has been possible by the introduction of *Douglas DC-7s* on this route, thus enabling the intermediate stop in Dakar to be eliminated. On the Far Eastern route to Djakarta, Budapest has been added as an intermediate stop. *DC-6B's* have replaced *DC-6's* on services to the Middle East.

BOMBAY PORT HANDLES MORE CARGO

PROGRESS OF DEVELOPMENT SCHEMES



THE cargo handled at the docks and bunders of Bombay port during 1956-57 amounted to 11,979,352 d.w. tons. This is a new record for the port, says the Bombay Port Trust Administration Report for 1956-57 issued by the chairman of the Port Trust. Compared with the traffic in 1955-56, the increase amounts to 1,673,553 d.w. tons.

The general account for 1956-57 closed with a surplus of Rs. 2.33 crores against a surplus of Rs. 1.42 crores envisaged in the revised estimates. The pilotage account showed a surplus of Rs. 6.78 lakhs, compared with the estimated surplus of Rs. 4.11 lakhs. The aggregate revenue on the general account, including surcharge, amounted to Rs. 11 crores in the year under review, compared with Rs. 9.62 crores in 1955-56. The total expenditure on general account amounted to Rs. 8.75 crores in 1956-57, against Rs. 6.76 crores in the previous year. The total revenue on general and pilotage accounts (excluding special receipts) for the year was Rs. 11.28 crores against Rs. 9.8 crores in the year 1955-56. The total expenditure on general and pilotage accounts (excluding special

From a Neighbour

If there is a lot of comings and goings between Jamshedpur and Rourkela, that is only as it should be. Of all the steel plants, the one coming up at Rourkela is closest to Jamshedpur, India's first steel city.

If these comings and goings lead to an useful exchange of experience and ideas, that is again as it should be for Jamshedpur has been making steel these 50 years. And it is very happy to lend a hand with the training of engineers

and technicians for Rourkela. There are nearly 150 of them at Jamshedpur—from key personnel to artisans.

Strengthening these ties of friendship are the surprisingly large number of old Jamshedpur faces that one sees at Rourkela. To them and their colleagues, Jamshedpur sends neighbourly greetings and good wishes.

Good Wishes to Rourkela

THE TATA IRON AND STEEL COMPANY LIMITED

TN 1000

expenditure) was Rs. 8.87 crores, against Rs. 6.89 crores in the previous year.

Working at Docks

The volume of imports rose from 2.36 million tons in 1955-56 to 3.53 million tons in 1956-57. There was, however, a fall of 277,000 tons in exports. The total traffic aggregated 5.39 million tons, against 4.5 million tons in the previous year. The principal increases in imports were in iron and steel, machinery, copper sheets, cement and wheat. The main commodities of which the exports decreased were cotton, waste cotton and wool, rice, grains other than rice and wheat, groundnuts and oilcakes. The port had to cope with imports of iron and steel aggregating 534,500 tons. In order to relieve the congestion caused by the large increase in the volume of imports of iron and steel, a dump was set up off Haji Bunder and some quantities of iron and steel landed at the docks were removed there for storage pending delivery. Other measures taken to ease the position were extension of the hours for delivery of general cargoes, deliveries of iron and steel even during the second and third shifts, amendments to the docks by-laws authorising the Docks Managers to move goods likely to cause congestion to suitable sites at the bunders and to force cargoes overside ships in docks for eventual landing at the bunders and the purchase of additional mobile cranes, fork lifts and tractors. The floating crane "Python" was obtained on loan from the Indian Navy.

Development and Modernisation

Further progress was made with the various development schemes carried over from the first five year plan including the scheme for the modernisation of the Prince's and Victoria docks (minimum scheme), reconstruction of transit sheds in the Prince's and Victoria docks and the labour housing scheme. All the four electrical cranes were in operation at Ballard Pier. In Alexandra Dock, the erection of the steel gantry was completed. The foundation work under stage II for the steel gantry was also completed.

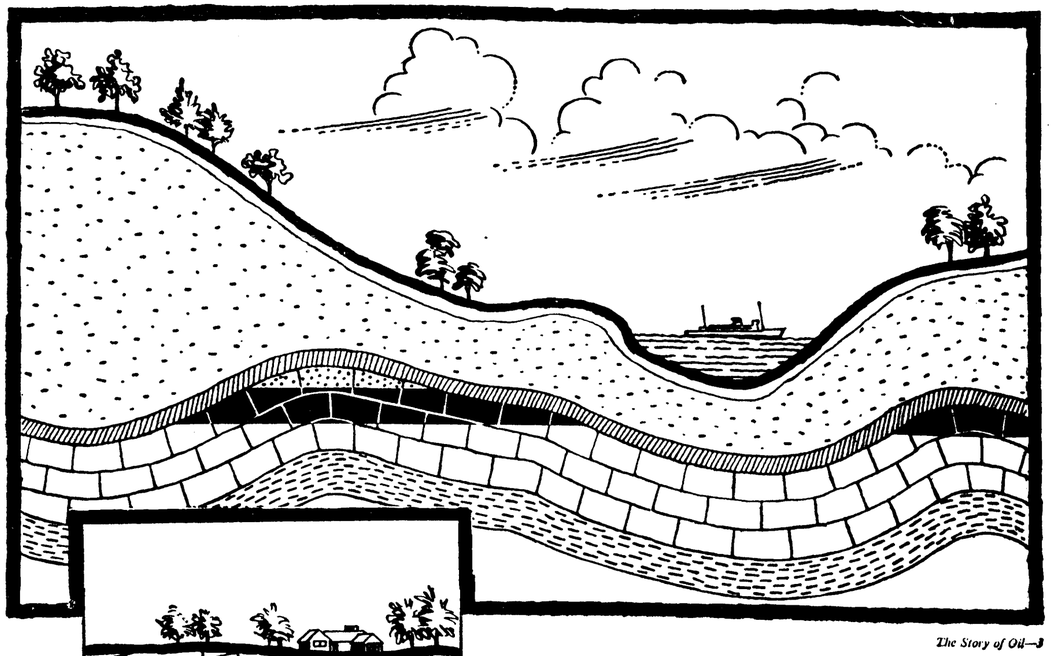
Marine Oil Terminal Project

The contractors for the main contract for deep water berths and allied civil works concerning marine oil terminal contract completed all their works during the year. Mr. N. N. Purandare, Consulting Engineer, was entrusted with the work of taking further measurements and observations of the cracks in the suspension arms of the gravity fenders. By June 1956 the laying of the crude and black oil lines and connections at berth No. 3 were completed. The berth was not commissioned till 28th February, 1957, in order to enable the contractors to erect without interruption the hose handling cranes, hose racks and to install electrical equipment at the Pier heads. The laying of the 8-inch water pipe-line was completed in July 1956. The Trustees sanctioned the proposals for positive segregation of pipelines, pier sectioning and the siting of the white flushing system in Trombay instead of in Sewri, which had been put forward by the oil companies and recommended by the consulting engineers. Most of the segregation work had been completed by the end of the year. The erection of the various oil and fire pumps was also completed by the contractors although none of the pumps could be commissioned for lack of electric power.

EXPANSION PROGRAMME OF ASHOK LEYLAND LIMITED

By the end of this year, it is expected that 30 percent of the value of Leyland Comet diesel-engined trucks being produced at the Ashok Leyland Limited factory in Ennore, Madras, will be of Indian manufacture, excluding Indian-made tyres and batteries. And by the end of 1959 the figure will have become 60 percent. This has been disclosed in a statement issued at the headquarters of Leyland Motors Limited in Lancashire in connection with the factory extensions now nearing completion, which will more than double the size of the existing plant in Ennore. The statement adds that the expansion envisaged indicates the technical progress which India is making. When the Government of India gave approval to the manufacturing programme under which Ashok Leyland Motors were to be builders and distributors in India of Leyland diesel-engined vehicles with a gross rating of 20,000 lbs and over, the factory in Ennore already consisted of modern, well-constructed ferro-concrete buildings which formed a sound nucleus for subsequent expansion. The lay-out and planning of the extensions was undertaken by Leyland engineers in joint consultation with the Indian company. The expanded factory has new administrative offices and separate works offices, a service department with a well-stocked spare parts store, jig and tools stores, maintenance workshops, a canteen which has been designed for use also as an entertainment hall, a rest room, a first-aid station, and a dispensary. Concurrently with the expansion of the factory buildings, the manufacturing facilities have also been developed, and machine tools, heat-treatment plant and other equipment—including jigs and fixtures to a value of £300,000—have been progressively installed. Excluding tyres, driver's cabs and batteries, which have been omitted from chassis exported to India by Leylands since 1950, 20 percent of the value of the Leyland Comet chassis is now produced in India. Leylands' investment is to continue in order to finance the installation of factory equipment to a value of £735,000. At the same time, Indian capital is being absorbed to bring the total investment to £1,500,000.

PROTECTION TO DIESEL FUEL INJECTION EQUIPMENT INDUSTRY EXTENDED



The Government of India's resolution on the Tariff Commission's report (1957) on continuing protection to the diesel fuel injection equipment industry has been published in a *Gazette of India Extraordinary*. The Government has accepted the Commission's main recommendations. These are that the existing protective rates of duty of 60 percent *ad valorem* on single cylinder pumps, and 60 percent *ad valorem* (standard) and 52½ percent *ad valorem* (preferential) on nozzleholders, should be continued for a further period of two years ended 31st December, 1959, and that these rates of duty should also be applied to elements, delivery valves and nozzles. The proposed protective duties on elements, delivery valves and nozzles have been brought into force with effect from 25th October, 1957, under notifications issued separately. The Government has also taken note of certain ancillary recommendations made by the Commission for assistance to the industry and will take suitable action to implement them as far as possible.

NEW MATERIAL TO PROTECT BOAT HULLS FROM TROPICAL PESTS

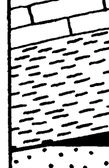
A new material which, when fixed to the hulls of *dinghies* and boats in the tropics, provides complete protection from borers and other tropical pests. It is now being used in craft manufactured by a British firm for its *Aquacraft* boats. The new material, called "Aquasheath", is a mixture of nylon and vinyl and can be fixed by means of resin glues direct to the wood. It has high abrasive resistance, is water-repellent, and is elastic.

BRITISH SHIPYARD MISSION ARRIVES IN INDIA

The British mission to India, which will advise on the site and lay-out of a new shipyard and the equipment which will be required to establish it and provide estimates of the capital cost of the shipyard, has arrived in New Delhi. The mission is to visit those sites on which it was not possible for the advance party to collect adequate data on its earlier visit. Sites in Calcutta, Cochin, Karwar, Kandla and Trombay will be seen (the last because the State Government has proposed a new site). The mission also intends to pay a short visit to the shipyard in Visakhapatnam and to see the Marine Research Station in Poona. The mission is led by Mr. James Lenaghan, director of Fairfield Shipbuilding and Engineering Co. Ltd. and of Lithgows Ltd. The other members are: Dr. P. W. Blythe, chief civil engineer of Constructors John Brown Ltd. (formerly Costain John Brown Ltd); Mr. W. G. N. Geddes, chartered civil engineer, a partner in Babtie, Shaw and Morton; Mr. D. L. Nicolson, director of Production-Engineering Ltd.; and Mr. R. F. C. English of Messrs. Deloitte, Plender, Griffiths and Co., chartered accountants (secretary). The advance party of the mission, which included Dr. Blythe and Mr. English, spent two weeks in India in July, when it carried out a preliminary survey. The visit of the mission has been arranged under the joint auspices of the Colombo Plan and the U.K. Shipbuilding Conference. After its return to the United Kingdom, the mission will consider all the information which has been made available by the Central and State Governments and on the basis of this will make its recommendations to the Government of India.

The Story of Oil—3

Buried power



'Rock Oil' is the literal translation of the Latin words 'petra' and 'oleum' which make up the name petroleum. Trapped underground in the cells and fissures of porous rock, petroleum is a raw mineral consisting of liquid crude oil and natural gas. These are usually found together, and between them they are a major source of power for the world today and the basis of thousands of commodities useful to mankind.

Petroleum is a mixture of substances called hydrocarbons. These are chemical compounds made up of the elements carbon and hydrogen (the former heavy, the latter light in weight). Hydrocarbons vary widely in nature and behaviour according to the different proportions of these two elements they contain. Most are liquids at ordinary temperatures, but some are gases and others solids like bitumen.

Despite popular belief, this petroleum does not collect in large underground pools. If it did, exploration and discovery would be comparatively easy. Instead it lies, usually with a quantity of salt water, in layers of solid looking porous rocks closed in by walls or caps of non-porous rocks which prevent it escaping. There are three main types of oil-trap — the 'anticline', an arch-shaped upward fold in the earth's rock layers; the 'fault', or fracture in the earth's crust whereby a non-porous layer has slipped to cut off a porous layer; and the 'stratigraphic' trap, where because of changes in the type of rock a porous layer becomes sealed off by non-porous rocks.

Thus, when geologists begin their search for oil, they start with the knowledge that certain types of rock formation are more likely to yield oil than others.

The drawing at the top shows the inside shape of an *anticline*. Compression has buckled up the earth's crust, squeezed it into these folds.
The other illustration is of a *fault*, a dislocation in rocks. Two sections of the earth have been forced in different directions until they cracked, slipped out of position, and upset the alignment of all the rock strata involved.
The black section indicates oil-bearing rock.

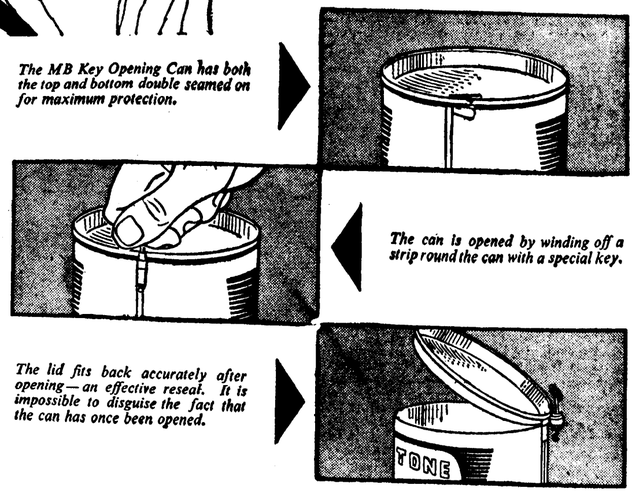
a pilfer-proof package

for every product!

The manufacture of Metal Box's range of pilfer-proof containers and closures is backed by an active Research Organisation. The Central Laboratory in Calcutta assists suppliers in developing improved printing inks, surface finishes and protective lacquers, and maintains strict routine tests for all incoming raw materials to the Metal Box factories; on the spot control of operations is carried out by Branch Laboratories. This ensures pilfer-proof containers and closures of the highest quality, superbly printed and finished. Expert scientific advice from Associates throughout the world is available to assist in solving customers' packaging problems.



A METAL BOX PILFER-PROOF CONTAINER

MB KEY OPENING CAN

The MB Key Opening Can has both the top and bottom double seamed on for maximum protection.

The can is opened by winding off a strip round the can with a special key.

The lid fits back accurately after opening—an effective reseal. It is impossible to disguise the fact that the can has once been opened.

BRITISH TEXTILE REVIEW

INCREASED PRODUCTION OF MAN-MADE FIBRES

LAST August (the figures were published in October), U.K. output of man-made fibres totalled 35.2 million lbs. On account of holidays, the figure is about 18 percent below July's, but it is about 5 percent above that of August last year. In the first two-thirds of this year, compared with the same period of last year, production gained about 3 percent. So much for the background. Within this slowly expanding industry, the emphasis is shifting, and big changes are being made in productive capacity. It has lately been announced that Imperial Chemical Industries will spend a further £20 million on expanding capacity to produce Terylene polyester fibre; and that British Nylon Spinners will spend £3 million to £4 million on extensions to its nylon factory in Doncaster. On the other hand, Courtaulds has surprised the textile community by announcing that it will close one of its four big rayon works—producing filament yarns—in Flintshire; and I.C.I. combined its statement on Terylene with an announcement that it would cease producing Ardil, the protein fibre made from groundnut waste.

It would be wrong to interpret these changes superficially. Broadly, they may seem to imply that rayon is contracting while "true" synthetics are expanding. Certainly, the huge proportional increase in capacity for Terylene represents a challenge to established fibres; and in a sense the fall of Ardil is a result of this challenge. for the chemical combine has decided to concentrate its efforts on its most promising fibre. But the closing of Courtaulds' plant must be viewed rather in the light of changes within the rayon industry, including the merging of Courtaulds with British Celanese. rather than as evidence that rayon itself is on the decline. Courtaulds' announcement was followed by the news that British Celanese was considerably reducing the staff (including technical personnel) of its big plant near Derby and would close one of its smaller mills in Lancashire. It is difficult to judge how far these various changes represent a policy of concentration following the merger, a shift of emphasis from filament yarn to staple fibre and a straight forward recession in some branches of the rayon trade.

Decline in U.K. Exports

That recession has played a part in these decision is not denied. British Celanese has stated in explanation that the trade in continuous filament yarns has not improved as it does usually at this season and that U.K. exports of rayon fabrics are now only about half of what they were six years ago. At the same time, it is the declared intention of the Courtaulds-Celanese group to eliminate redundant units within itself, and Courtaulds has stated in explanation of the closure of the Flintshire plant that it is being done "in the interests of greater efficiency, so that the manufacture of filament yarns shall be concentrated in as few factories as possible." Yet it is significant that this policy of concentration is being applied, at this stage, primarily to filament yarns.

Last August, for the first time in more than a year, output of continuous filament yarn exceeded that of staple fibre. It may appear that the relative growth of staple fibre—whose production has increased considerably in recent years, while that of filament yarn has changed little—is finished, and that the latter is regaining its ascendency. But the truth is that more filament yarn is being produced than can be readily consumed; the figures of production do not accurately reflect demand, although the tyre industry has considerably increased its offtake. Exports of staple fibre are being curtailed by the increase of production in Britain's main outlets, the United States and Canada, but there is a big new consumer in the U.K. tufted-carpet industry.

Increased Use of Terylene

Terylene seems to be the most dynamic element in the textile industries at present. Recent estimates have suggested that next year's world production of man-made fibres will amount to some 8,000 million lbs, comprising some 7,000 million lbs of cellulosic and 1,000 million lbs of chemical fibres, and of the latter, it is estimated, polyester (Terylene type) fibres will account for some 100 million lbs—1/10th of the chemical fibres. 1/80th of all man-made fibres, not to mention natural fibres. So it is necessary to keep this development in perspective. But the rate of expansion of Terylene is certainly startling, and the range of its uses is being equally rapidly broadened.

Terylene was developed by Calico Printers Association (which draws increasing royalties from it but as its latest figures show, would be quite capable of prospering without it) and taken up, in Britain, by Imperial Chemical Industries. Seven years ago I.C.I. decided on full-scale commercial production, and the first big plant, with a capacity of 11 million lbs. began producing in Wilton three years ago. Meantime, it had been decided to double that capacity; the second 11 million lbs plant began operating last year. Technical advances, as well as further physical expansion, are the impetus behind a planned increase in total capacity to 30 million lbs by the end of next year. Now there follows the latest development plan, designed to increase capacity by two-thirds, to 50 million lbs.

Nylon Production in U.K.

It is understood (no precise figures are published) that the U.K.'s production of nylon is at present around 30 million lbs a year. It, too, will be greatly increased by a new nylon polymer plant of I.C.I., due to operate soon at a rate of 22 million lbs a year. Nylon has been in use many years and is fully familiar; yet Terylene, it appears, will soon be roughly level with it, in terms of output. Nylon is particularly well established in women's wear. Terylene has achieved particular success, blended with wool, in women's skirts and men's suits, and blends of Terylene and cotton for shirtings and other such fabrics promise well; Terylene in the unblended state has also wide possibilities. But competition will be keen. Acrylic fibres will soon be in large-scale production in Britain and the older fibres (including rayon) have by no means reached the end of their technical development.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) rose by 0.6 percent to 109.3 during the week ended 19th October, 1957, compared with 108.7 for the earlier week. The index was lower by 0.4 percent when compared with the corresponding week of last month, but was higher by 2.3 percent than that of a year ago. Higher prices of oranges (+43%), milk in Nagpur (+17%), rice in Jagdalpur (+14%), in Ranchi and Kotma (+11% each) and in Sainthia and Nellore (+5% each), maize in Bahraich (+13%), cummin (+10%), jowar in Akola (+9%), potatoes and onions both in Delhi (+8% each), eggs in Bombay and fish (+7% each), mung (+5%), cardamoms (+3%), gur (+2%), wheat, gram, urd, groundnut oil, gingelly oil, coffee and betelnuts (+1% each) raised the index for Food Articles by 0.8 percent to 108.0, compared with 107.1 (revised) for the earlier week; the prices of jowar in Rohtak (−19%), milk in Delhi (−14%), in Bombay (−7%) and in Calcutta (−6%), rice in Balasore (−10%), and in Kozhikode (−7%), maize in Bhilwara (−10%), ragi (−4%), barley (−3%), bajra, bananas and meat (−2% each), ghee and mustard oil (−1% each), however, witnessed a fall. The index for Tobacco increased from 93 to 94 due to a rise in the price of Motihar tobacco in Calcutta (+6%). The index for Fuel, Power, Light and Lubricants stood unchanged at 114.5. The index for Industrial Raw Materials fell by 0.3 percent to 114.5 percent, compared with 114.9 (revised for the earlier week because of a fall in the prices of konnam bark in Madras (−16%), raw silk in Bangalore (−4%), rapeseed in Purnea and groundnuts (−3% each), raw cotton, castorseed and copra (−1% each), although the prices of raw silk in Malda, rapeseed in Kanpur and avaram bark in Madras (+6% each), cottonseed (+2%) and raw jute (+1%) showed advances. The index for Intermediate Products receded by 0.3 percent to 106.3, against 106.6 for the previous week. The prices of copper in Calcutta (7%), lead (−4%), zinc (−2%), cotton yarn and tin (−1% each) showed a fall while those of copper in Bombay (+5%), linseed oil and rayon yarn (+1% each), showed an increase. A rise in the prices of oilcakes (+3%), jute manufactures (+2%) and machinery and cycles (−1% each) resulted in an advance in the index for the Finished Products by 0.5 percent to 109.5, compared with 109.0 for the earlier week.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: 1952-53=100)

GOOD GENERAL DEMAND AT TEA EXPORT SALE

FAIR BUYING IN DUSTS

AT Sale No. 20, held on 4th and 5th November, offerings at the Export auction consisted of 55,368 packages. There was a good general demand. "Teas for price", which were again well supported, were the strongest feature of the Sale. Clean common teas generally showed a dearer tendency, particularly the black Fannings which were keenly competed for. Medium B.O.P.'s except for those with bright liquors, declined by 20 to 30nP with similar O.F. grades meeting with a restricted enquiry at easier rates. Leafy medium B.P.'s, however, sold well. Useful liquoring C.T.C.'s received quite good support, but the poorer descriptions met with less enquiry and there were some withdrawals. Legg-cut teas generally sold at dearer rates. Whole leaf grades were sometimes easier, but tippy teas sold well at about last rates. Darjeelings were well supported, but generally at easier prices.

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2.25 to 2.27	2 2 0 to 2 3 0
Plain B.P	1.62 to 1.64	1 14 0 to 1 15 0
Plain Fannings	1.72 to 1.74	
Medium B.P.	1.74	
Medium Fannings	1.76 to 1.78	2 3 0
Best Assam C.T.C B.P.	3.10 to 3.20	(Nominal) 3 0 0
Best Assam C.T.C Figs.	2.85 to 2.90	(do)

At the Internal Sale, 18,266 chests of Dust were offered. There was a fair demand for C.T.C. teas, but this weakened during the Sale and at the close prices were sometimes 25nP easier and there were some withdrawals. The plainer and fibrous descriptions were a weak feature, although clean brighter liquoring sorts showed a small decline. There was a strong and active demand for all black leaf teas. Smaller Dusts from Assam continued to be sought after, while leafy sorts from all districts were sometimes as much as 6nP dearer.

Quotations

	1957 Rs.	1956 Rs.
Medium Dooars Dust	1.70 to 1.74	1 15 0
Medium Assam Grainy Dust	1.74 to 1.78	1 15 0 to 2 0 0
Medium Assam C.T.C. Dust	2.20 to 2.30	2 6 0 to 2 7 0
Best Assam C.T.C. Dust	2.60 to 2.90	(Nominal) 2 11 0

There were 2,948 chests of Leaf on offer, and prices were about firm on last rates except for C.T.C. Assams which met with an improved demand and were sometimes dearer.

FREIGHT MARKETS UNCERTAIN

THE freight markets have been somewhat uncertain this past week. The trans-atlantic coal rate has fluctuated considerably within narrow limits. Some ore business was concluded from India, but the stemming position is very difficult. A number of time charter fixtures were made at undisclosed rates. Visakhapatnam-U.S.N.H. was done at (U.S.)$11.50 and two vessels were fixed Calcutta-Rijeka at 47s 9d. Koilthottam-New York was arranged at (U.S.)$10, and a *Liberty* ship was taken on trip time charter at (U.S.)$1.50 delivery Visakhapatnam, redelivery U.S.N.H.

HIDES AND SKINS STEADY

The market was steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 29th October and 4th November, 1957)

Cowhides: Wet salted (Ord.) 5,000 pcs. on the basis of Rs. 8.25 to Rs. 10.75; Wet salted (Slaughtered) 21,600 pcs. on the basis of Rs. 12.50 to Rs. 21.50.

Goatskins: Wet salted (Daissee, Killed) 58,550 pcs. on the basis of Rs. 315 to Rs. 320, Rs. 345 to Rs. 365 and Rs. 390 to Rs. 400; Assam-Dinajpur 4,800 pcs. on the basis of Rs. 315 to Rs. 345; Patna-Pakur 1,060 pcs. on the basis of Rs. 315 to Rs. 325; Pakur 600 pcs. on the basis of Rs. 375.

Bazaar Stocks

(4th November, 1957)

Cowhides: Wet salted 1,39,000 pcs.

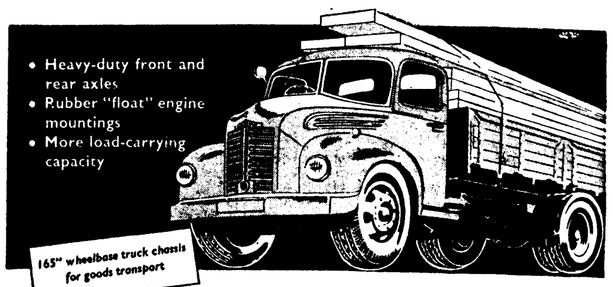
Goatskins: Wet salted (Daissee, Killed) 27,000 pcs; Assam-Dinajpur-Jalpaiguri 55,000 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissenganj 3,30,000 pcs.

SUGAR QUIET

During the week ended 6th November, sugar sales in the Calcutta market averaged 2,500 bags daily. Arrivals a day were 4,000 bags and stocks totalled 60,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 37-2 for ordinary grain and Rs. 39-4 for big grain. The market was quiet.

LINSEED RISES

There has been no improvement in supplies during the past week. The undertone has remained firm, while a further all-round rise has been registered in prices. With despatches from the centres being withheld, local crushers have been unable to obtain sufficient quantities for their daily requirements, and a few have been obliged to close down temporarily following the disparity between the prices of seeds and those of oil. The oil section has been dull; prices have advanced slightly in sympathy, but the offtake has been very poor. Latest quotations were as follows: Ready-November Rs. 23 a maund.



SHELLAC QUIET

During the week ended 5th November, the market was quiet at the beginning, steady at mid-week, and again quiet at the close. The range of quotations was as follows:

Pure Buttonlac	Rs 104.50, 102 value; 103 buyers; 102.50 value.
Lemon No. 1 Shellac	Rs. 106 done buyers; 104.50, 106 buyers; 105 done.
Lemon No. 2 Shellac	Rs. 101 buyers; 100 done buyers; 101.50, 100 buyers.
F. O. Std. 1 Shellac	Rs. 94 92.50 to 94, 91.50 buyers.
Pure TN Shellac	Rs. 88 buyers; 86, 87, 85 basis done and buyers.
4% I.T.N. Shellac	Rs. 78.50, 76 value; 76 buyers; 77.50, 74 value.
No. 1 Kusmi Seedlac	Rs. 92, 91.50 value; 92 buyers; 90 value.
No. 2 Kusmi Seedlac	Rs. 87.50, 87 value; 86 buyers; 87, 86 value.
Fine Bysaky Seedlac (Manbhum)	Rs. 85 buyers; 85 done buyers; 83.50 value.
Fine Bysaky Seedlac (C. P.)	Rs. 80 buyers; 82 done and buyers; 79.50 value.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 75, 76, 74 buyers.
Ordinary Bysaky Seedlac (C.P.) Kireelac	Rs. 70, 71.50, 69.50 buyers. Rs. 29.50, 28.50, 29 value.

Shipments during November until the 2nd were 3,330 packages comprising shellac 773 packages, seedlac 2,465 packages, buttonlac 25 packages and others 67 packages.

COMPANY AND PUBLIC NOTICES

THE INVESTMENT & FINANCE COMPANY LIMITED.

NOTICE is hereby given to the members of the abovenamed Company that the Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Friday, the 29th November, 1957 at 11-00 A.M. for the following purposes:

1. To consider and approve the Audited Accounts of the Company for the year ended 28th February, 1957, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 16th November, 1957 to 29th November, 1957, both days inclusive.

By Order of the Board,
BIRD & COMPANY (PRIVATE) LIMITED,
Secretaries.

Chartered Bank Buildings,
Calcutta, 1st November, 1957.

NOTE: (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 5th December, 1957, to those shareholders so entitled whose names appear in the Company's books on the 29th November, 1957 or to their mandatees. No application for Dividend Warrants will be necessary.

THE GENERAL INVESTMENT & TRUST COMPANY LIMITED.

NOTICE is hereby given to the members of the abovenamed Company that the Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Friday, the 29th November, 1957 at 11-05 A.M. for the following purposes:

1. To consider and approve the Audited Accounts of the Company for the year ended 28th February, 1957, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 16th November, 1957 to 29th November, 1957, both days inclusive.

THE GROB TEA CO. LTD.

THE Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Saturday, the 30th day of November, 1957, at 11-30 a.m. for the following purposes :—

(1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1956.
(2) To declare a dividend.
(3) To elect Directors in place of the retiring Directors In this connection Special Notice is hereby given of the intention to move the Special Resolution at the meeting, that is to say :—
"That Mr. P. Banyard who retires by rotation be and is hereby appointed a Director of the Company, such appointment to have effect as and from the 21st December, 1956."
(4) To elect Auditors for the ensuing year, and to fix their remuneration.
(5) To transact any other business that may be brought forward.

The Share Transfer Books of the Company will be closed from 23rd November, 1957 to 30th November, 1957, both days inclusive.

OCTAVIUS STEEL & CO. LTD.,
A. H. GALLOWAY,
Managing Director,
Managing Agents.

Calcutta. 1st November, 1957.

NOTE :—A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and on a poll to vote instead of himself and the proxy need not be a member.

EXPLANATORY STATEMENT.

In the Special Notice given by the Company to the Shareholders, under item 3 of the annexed Notice for Annual General Meeting, intimation has been given of intention to move a Special Resolution for the reappointment of Mr. P. Banyard who will retire in rotation at the meeting, Special Notice of such intention has also been given to the Company. Since Mr. Banyard is also a Director of Messrs. Carritt, Moran & Co. (Private) Ltd., who are the brokers of the Company for the sale of their tea. it is considered desirable that he should be appointed to the Board by Special Resolution.

The Special Resolution has been framed so as to have retrospective effect on and from the date of the last Annual General Meeting.

DHELAKHAT TEA COMPANY, LIMITED

NOTICE is hereby given that the Thirty-ninth Annual General Meeting of Shareholders of the Dhelakhat Tea Company, Limited, will be held at the Registered Office of the Company, No. 31, Chowringhee Road, Calcutta, on Wednesday, the 4th December, 1957, at 9 a.m., for the following purposes :—

1. To receive the Directors' Report for Season 1956.
2. To pass the Accounts for the year ended 31st December, 1956.
3. To confirm the Interim Dividend paid on 21st March, 1957.
4. To declare a final Dividend.
5. To elect Directors.
6. To elect Auditors for the current year and to fix their remuneration.
7. To transact any other ordinary business brought before the Meeting.

AS SPECIAL BUSINESS

8. To consider and, if thought fit, pass the following subjoined Resolution as a Special Resolution, namely :—
"That Article 130B of the Articles of Association of the Company be altered by deleting the letters and figures 'Rs. 42,000/-' wherever they occur therein and substituting in place thereof the letters and figures 'Rs. 30,000/-'.

The Transfer Books of the Company will be closed from 21st November to 5th December, 1957, both days inclusive.

By Order of the Board.

BANKS

H indicates that Share capital is half paid. O. C. and Dd indicate Ordinary Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE PROSPECTS FOR EXPORTS

BLEAK OUTLOOK FOR TRADE IN MANUFACTURED GOODS

IT is becoming difficult when discussing India's export problems to say anything which has not been said before—unless it is the current observation that the prospects are probably worse now than they have been since the war. The foreign exchange shortage has inevitably focused attention on the matter. So has the recent publication of the Export Promotion Committee's report—a document which, crisis notwithstanding, is unlikely to be received in official quarters with the respect it deserves. The danger now is that the important details of promotion and organisation with which the report deals, and such exhortations as that delivered by Mr. K. B. Lall in Calcutta last weekend, will be accepted as substitutes for the radical changes which are needed in this country's economy before it can hope to become a successful large-scale exporter. Details are important, especially in the period immediately ahead when India will probably find it difficult to maintain its present Rs. 600 crores or so of export earnings a year, let alone increase them to Rs. 750 crores. But they should not be allowed to hide the fact that this country's bureaucratic, high-cost, low-efficiency, economy is wholly unsuited to earning its living in a competitive world.

It is clear from all observations of the economic scene, both at home and abroad, that efforts to increase exports rapidly are likely to be met with disappointment. Indeed, it might be said that India could not have chosen a worse time to find herself heading for insolvency. World trading prospects are bound to be affected by the present drop in the United States' industrial activity. Already this recession, together with its impact on the economies of western Europe, has imposed a sizeable cut on the incomes of primary producing countries, and may soon be reflected in the demand for one of India's most important exports, jute goods. Whether it will prove to be as damaging for the level of world trade as the slump of the early '30s is doubtful. But most exporting countries must count themselves fortunate if they suffer less than a 10 percent fall in their earnings during the next twelve months. For India, this is going to come at a time when internal inflation will be causing anxiety and when the running down of the sterling balances is likely to be having a progressively damaging effect on the present multilateral trading pattern. When it is realised that this will also be a period of intensified competition in world markets, and one which may see the beginning of some kind of common market in Europe, including possibly some of the overseas dependencies of the countries participating, it is not difficult to appreciate that hard times might be ahead. This is not to say that nothing will be effective in increasing exports; there is certainly a great deal that can be done. But much of it is unlikely to show spectacular results immediately, and any disillusionment caused must not be permitted to interfere with the careful thinking which will be required before there can be any permanent long-term improvement.

*

The first point about export promotion in India which needs to be established is that it is going to be a very long-term programme indeed It is not necessary to go all the way with Mr. Lall and agree that the present foreign exchange crisis has come as "a blessing" because it underlines the importance of reorientating traditional ideas, to see that it does confirm that the country cannot afford to neglect its earning power even when development problems are receiving most attention. It is not only a question of earning enough to pay for current requirements; India has accumulated loans and liabilities which will have to be provided for eventually out of export proceeds. This will need a permanently larger volume of sales abroad than is the case at the moment. and Mr. Lall is quite correct in asserting that most of the increase will have to be made up from new types of export commodities. It is this fact which gives the clue to the first condition necessary for a larger export programme—the avoidance of inflation. The kind of goods Mr. Lall has in mind are peculiarly susceptible to the vagaries of internal demand; whereas inflation would be unlikely seriously to increase the offtake of, say, jute goods, it almost certainly would of, say, ceiling fans. Britain is the perfect example here; she has found that inflation at home can be a disastrous matter when it comes to selling more consumer goods abroad. These types of exports are also particularly sensitive to the internal cost level because they are usually the ones in which competition is most fierce. It is important, therefore, that those two regulators of any country's export performance—inflation and the level of internal costs—be given the attention they demand if India is seeking to increase earnings by developing manufactured, and more competitive, products.

*

In the meantime, much can be done to improve traditional lines. The same internal factors remain operative, especially with textiles and, say, sugar, but impressive medium-term results might be obtained by attending to such matters as taxation and labour policy now. There is no doubt, for instance, that the various burdens on tea have been responsible for much of the gain which India's competitors have made in her traditional markets; the ill-fated scheme for developing the Calcutta auctions promises to be another culprit. Tax and welfare impositions do not go well with export promotion The jute industry. although still hampered by the level of internal taxation, has of course been free of export duty since this was withdrawn a couple of years ago But its competitive position is still damaged by the official brake imposed on its programme of rationalisation and modernisation. Much the same can be said for cotton textiles. The cost burden imposed by the need to retain uneconomic labour and out-dated methods of production can only contribute to the eroding of India's position in the market for these commodities. It would be a good thing if, in future, such burdens were placed on other shoulders. It is probably too late to recall that this country once had an export trade in coal. The markets that have been lost are unlikely now to be regained even if the private collieries were to be released from their Government-imposed straitjacket tomorrow, unless, of course, the pace of economic development has to be slowed down for some reason. But if their export functions have now been damaged beyond repair, they still serve as a lesson on the permanent effects of official meddling and bureaucratic red tape. If the Government is really serious about earning more foreign exchange, it could do worse than investigate the possibilities of coal.

There is no need to go into the problems of each exporting industry to make the point that even those established in the business will not find it easy to expand their activities under present conditions. This in itself probably accounts for the stickiness which India's earnings have shown over the past few years, and it is almost certainly to blame for the fact that, as Mr. Lall pointed out, Calcutta's share of India's export trade has been declining. If any improvement is to be secured by shipping new types of goods, it will be important to make sure that they are not hampered by similar conditions of too-high taxes, expensive labour, and official interference. The recommendations of the Export Promotion Committee should prove useful in establishing markets for these goods. It will not be easy; India will have to make her way against competition from old-established practitioners whose ideas about price and quality are probably much keener than her own. Such devices as the recently-inaugurated export insurance scheme should help, but the Government will have to delve deeply into the Committee's recommendations during the next few years if it is to provide all the encouragement these new-type exports will need. There may be a place for schemes involving income-tax remission for exporters, exemption from excise duties and sales tax, customs duty draw-backs, concessional freight rates and the retention of a proportion of the foreign exchange earned. They should certainly repay some experiments if the Government could see its way to making them. On the question of the most suitable organisation for exporting, it is difficult to follow Mr. Lall when he states: "The way to progress is free competition and large-scale organisation." It is only fair to point out that other countries have found both competition and large scale in exporting rather wasteful; the prospects of combining the two are quite frightening. Many have not yet reconciled satisfactorily the extra bargaining power which comes from size with the greater efficiency of the smaller organisation. The ideal probably lies somewhere between the two, but it would be a mistake to dispense with old-established and well-connected organisations simply because they prefer to operate on a small scale, just as it would be to discourage efficient and reliable international companies because they are foreign owned and managed.

When all possible promotional methods have been investigated, and all unnecessary impediments removed, it remains true that the future prospects of India's exports depend upon the health of the internal economy. Simply because this country's need for foreign earnings is likely to increase permanently rather than diminish, it will be necessary to keep internal costs low, cork down inflation, and restrain officialdom from interfering in matters which do not benefit from its attentions. These are things which are so alien to the Indian economy as it is now, and as it appears likely to be in the foreseeable future, that the only outlook for exports which can have the slightest claim to realism is distinctly pessimistic.

THIRD VIEW ON THE FOURTH ESTATE

THE vast, far-flung and complex organisation of a modern daily newspaper has been likened to a huge orchestra—and aptly. The All-India Newspaper Editors' Conference, which recently met in New Delhi, made no effort at all to conceal what is no longer a secret, that the orchestra has of late been producing more discord than harmony. Of the orchestral organisation of a newspaper its editor is the conductor, and the conductors assembled in New Delhi seemed painfully conscious that theirs is a baton little heeded these days either by the members of the orchestra (who have their trade union) or by the proprietors (many of whom are sadly insufficiently acquainted with the spiritual mechanics of an industry which is not an industry)—or by that final arbiter of musical tastes in our time, Authority. The public, which pays but cannot call the tune, was not mentioned.

The anomalies of the A.I.N.E.C. are indeed many. Standing rather pathetically between the proprietors and the journalists, almost on no-man's land, this Conference can claim to represent nobody but itself. The "itself" is not a single, undivided, entity either, for while some of the members of the Conference can be fully identified with the owning interests, there are others who are employees and have taken out a second insurance policy with the Working Journalists Federation. The Conference is thus barely tolerated by the proprietors and openly repudiated by the trade unionists. Mr. Natarajan, the President of the Conference, seemed to think that there could be a third party doing something useful. With the Government of India so unappreciative of its rôle, the future of the Conference may be no brighter than that of a third force in the world. A position like the one desired by the Conference postulates its acceptance by the two polar parties, and that the Conference has not.

*

The changed metaphor, from orchestral music to international conflicts, is a measure of the mood now prevailing in the Indian Press. It would be a mistake, however, to imagine that newspaper owners and working journalists are poised for a fight with nobody else involved. There is Parliament, which has already passed the Working Journalists Act and it is now before the Supreme Court

with many of its provisions challenged. The Prime Minister, who addressed the A.I.N.E.C. on Friday, appeared to deplore the resort to courts by the proprietors. For this, however, his Government must take the responsibility. A Bill was rushed through Parliament, and those responsible for it now find themselves in the mildly ridiculous position of not knowing what to do about it. Mr. Nehru referred approvingly to a possible compromise or negotiated settlement. This has not been made easier by the Government, for it will be only human on the part of the journalists to leave it to Parliament now to see its own Act enforced, and this will not be conducive to a spirit of compromise. Proprietors are not wholly unjustified in nursing a sense of grievance that the weight of the Government has been thrown too much on the other side.

If trade unionism in Indian journalism today looks unduly militant, it is because, until recently, there was no trade unionism at all. The emergence of newspapers as industries, chiefly during and after the war, was not immediately accompanied by an all-round realisation of its implications in terms of employer-employee relations, and even the recent conference heard not a few out-dated references to the idealism there once was and now is no more. There is an element of idealism even in the most commercialised Press in the world, for nobody enters journalism just for money—of which there is more to be made in many other professions—but it is a very imperfect society in which idealism must remain ill-paid. And ill-paid the average Indian journalist is. If the journalists are today making demands the proprietors think unreasonable, one reason may be that in too many units their legitimate demands had been ignored for too long. Authority, that traditional adversary of the free Press, has been invited into what should have been settled between journalists and their employers, and all liberals must be concerned by the extent to which both parties now look to Authority. Both may have to regret the invitation sent in a moment of despair.

* * * *

It was appropriate that the New Delhi conference discussed in some detail the place of the editor in a newspaper organisation. There has been evidence of late that his importance may be threatened by thoughtless owners. The relationship between the two is not susceptible of a precise definition, but the one thing certain is that a good newspaper bears the impress of its editor's personality and this can assert itself for the good of the organisation only within the limits of his understanding with the proprietor. There is no reason at all why an owner should keep in his employ an editor with views diametrically opposed to his own, and in an economic set-up better than India's today no self-respecting journalist would serve an employer with attitudes vastly different from his. It is the widespread unemployment in the country which is at the root of many of the disputes in the Press today, and the point should not go unmentioned that, in demanding terms and conditions not yet accorded to other classes of employees, the journalists may put themselves in the wrong.

It is not easy to see how the present conflict may resolve itself or when. The Act—with Parliament's prestige involved—and proceedings in the Supreme Court will probably make a very small contribution to the eventual solution. In the final analysis, journalists will have to work with their employers and the latter can publish no newspapers without journalists. Secondly, the primary function of a free Press is to criticise Authority and, as the Home Minister told the editors on Monday, a subservient Press harms a democratic government in the long run. This makes it essential that the Government should take an early opportunity of withdrawing from the dispute.

* * * *

The Prime Minister said that the Indian Press was going through a phase of transition, which is indeed true. The transition is from a mission to what cannot be only a money-making proposition. It can scarcely be a painless operation. Some of the idealism of days gone by, which in any event was never entirely free from a certain amount of dross, will have to be discarded by all parties. Journalism must be a career good enough to attract talent, and in a money-based society this is not had for nothing. Proprietors of newspapers will have to learn what their compatriots in other fields have already learnt, that a well-paid and contented labour force pays dividends and that an ill-paid and hence unhappy worker is not worth even the little money he is paid.

While the giants grapple with each other in courts of law and on public platforms, the problem of smaller newspapers, for which the Prime Minister indicated a civilised preference, is rarely discussed. Yet, they have an important contribution to make to all that is good in journalism. Passions and sensations play no part, or very little, in the journals of opinion, and India has not got nearly enough of them. One question Mr Nehru could profitably ask himself is whether his Government's policies, such as they are, have made it easier for new and small newspapers to appear. They may soon be the only repositories of the idealism Mr. Nehru misses in the Press today.

A NEW USE FOR SURPLUS SHIPPING SPACE

LONG-TERM CHARTERING BY MOTOR-CAR FIRMS

LONDON'S Baltic Exchange, where shipping freights are negotiated, is a versatile institution. It has lately been transacting a new kind of business, known as "storage lay-up", which is a method of taking ships out of service without actually laying them up. Ships have been used for years to store surplus commodities in America, and they were used elsewhere a few years ago for storing grain. But the new business relates mainly to coal; and it is more formally organised, with rates settling—after preliminary fluctuations—around 5 shillings a ton. There are several points of interest in this development. It is a reminder that some of the coal brought over from America is not now easy to sell; and that the collapse of freight rates—in which the weakening of demand for American coal is a not unimportant factor—is compelling shipowners to consider any possible use, however modest, for their vessels, merely to cover minimum expenses. And it suggests wider possibilities of using ships for storage when they are not required for transport. Storage accommodation that could be moved (by the ebb and flow of values on the Baltic Exchange or elsewhere) wherever it was most needed could be a very useful asset—though not a very profitable one, from the owner's point of view.

Another piece of news from Britain makes a curious contrast. The British motor-car industry, which has lately regained from Germany the lead in the world's export trade in cars, is troubled by shortage of shipping space. This problem was familiar a year or two ago, when the motor trade was active and shipping generally was not too plentiful, but in the present state of the shipping market it is a tribute—however inconvenient—to the success of the industry's export drive. There are lessons to be learned from this development, too. One or two big motor-car firms on the Continent have been taking advantage of the decline in shipping rates by chartering ships for periods of some years. Some British firms, individually or together, have lately been chartering ships as the only means of obtaining enough space for their cargoes; but they have not, apparently, been looking years ahead, like their continental rivals. The cost of transport is a big item in the price of a motor-car sold abroad, and the British motor-car industry would be well advised to consider long-term chartering while it can be negotiated on favourable terms.

The present position is confusing, for both charterers and shipowners. In general, there is too much shipping available for the present volume of trade, and nobody knows how much trade will be seeking space a year or two hence. Only those who expect a general recession of trade believed that freight rates will fall much lower. On the other hand, the motor-car firms, for instance, cannot be sure that their own export trade will be as active in the next few years as it is now, and they are reluctant to be encumbered with chartered vessels that they cannot use. The shipowners are in a similar quandary: is it wise to place orders for new ships on the assumption that the freight market will have recovered when the ships are delivered, years hence?

* * * *

The long time-lag between ordering and receiving delivery of ships requires a long-term policy. Experience suggests that the time to plan expansion is when the market is depressed for this fluctuating market can rise as rapidly as it can fall. Around the "Korean boom" the rise and the fall, both of freight rates and of the value of tonnage, were roughly equal, in extent and in rapidity. After the slump, rates remained comparatively low for some two years. The rise that culminated in the aftermath of the "Suez crisis" late last year began more than two years earlier. The subsequent fall from that peak has been even steeper than the fall from the peak of the "Korean boom". Is there in prospect another period of relative stability, to be followed by a vigorous rise?

Shipowners cannot answer this question, even vaguely, until they can see more clearly whether the American economy is heading for recession—taking other countries, and international trade, on a downward course along with it. Meantime, other countries have incidentally depressed the shipping market by their restrictive actions. Some have imposed restraints on imports; others have raised the cost of credit, which is an important element in commodity trading; and in recent months the flow of money to Germany has made credit in other countries scarce. These monetary developments have unsettled the commodity markets and increased the cost of financing trade; so the freight market has suffered. An American recession would, of course, greatly aggravate the problems, and in that event shipowners would seriously reconsider their existing commitments for new tonnage. So far, it appears, only a few orders for new ships have been cancelled. It may be that the shipbuilding industry is insulated from the short-term troubles of shipping by the delay of years before any new orders for ships can be executed. But a general recession of trade would not be a short-term trouble. Modern economic stimulants could probably reverse the recession before it did serious damage to shipping, but in the course of even a brief recession a considerable number of ships, ordered years earlier, would be launched and made ready for service. The world's shipping fleet would be expanding while the world's seaborne trade was contracting, and some operators whose new ships were not yet building might well wonder whether they could be operated profitably even when trade was expanding again.

Besides the short-term and the medium-term factors, there are long-term factors suggesting caution in the shipping business. While there is no possible doubt that the economic development of the world will continue (excluding, of course, the possibility of an annihilating war, which would make all these calculations trivial), it is not equally certain that international trade will expand in proportion. As each country becomes more diversified so the world as a whole becomes more homogeneous; it may be that the great era of exchange of goods between primary-producing and manufacturing countries is coming to an end.

POOR OUTLOOK FOR SUGAR EXPORTS

INDIA'S foreign trade in sugar is sometimes in forward gear and sometimes in reverse. In the early years of the first five year plan, there was much talk about exporting sugar. But between 1953-54 and 1955-56, Rs. 43.55 crores worth of the commodity had to be imported to meet the growing domestic demand. The situation has changed once again, and Mr. Ajit Prasad Jain, Central Minister for Food and Agriculture, has called upon the industry to build a regular export trade so as to earn foreign exchange. Addressing the recent annual conference of the Sugar Technologists Association of India in Kanpur, Mr. Jain has stated that of the total quantity of 172,000 tons sold by the Indian Sugar Mills Association, 140,000 tons has already been shipped abroad without any loss. The substantial rise in world prices in November last year, partly because of the Suez crisis and partly because of the failure of the beet crop in Europe, has brought India fairly good prices. But during the last three months, there has been a considerable fall in rates and sugar can now be exported only at a loss.

According to a recent estimate, the exportable surplus in India during the new season might amount to nearly 400,000 tons (taking production as 2.2 million tons and consumption as 1.8 million tons). But international prices are so low that exports on this scale would result in a loss of nearly Rs. 12 crores. The decline in prices has taken place because the European beet crop is larger this year and supplies have again become available from Brazil. Part of the prospective loss from exports might perhaps be met from the special fund which the industry has created out of its profits on foreign sales during the past year. But the fund is unlikely to be large enough to meet the whole loss, so it has been debated whether domestic prices should be allowed to rise in order to help the industry recoup some of the likely losses on exports. A move in this direction would not, however, meet with general favour, considering that consumers have already sacrificed much for the development of the sugar industry. Also, a rise in the price of sugar would be inflationary, since it is an important item in household budgets. The main aim should be to reduce costs in order to enable the industry to compete effectively and economically in the world markets of today. This implies, firstly, a reduction in fiscal burdens; on this point, there has been an encouraging indication that the U.P. Government might consider favourably a suggestion about refunding the cess charged on sugarcane used for the sugar which is exported. It is hoped that this will be only a first step towards reducing its levies generally. Secondly, it implies improving and making cheaper the transport facilities which are available for moving cane and sugar. Thirdly, and most important, it implies a reduction in cane prices.

Mr. Jain says that sugar production during the past year has been at an encouraging level. When the additional manufacturing capacity of about 250,000 tons is installed during the new season, total production will come very near the target of 2.25 million tons fixed in the second five year plan. But in as much as the increase in production in the past two years has been due to a prolongation of the crushing season, he thinks the position is not a happy one. It is difficult to appreciate this point; the general impression is that a longer crushing season is essential if mills are to reduce overhead costs for each unit and thereby make their working more economical. The crushing season should, in fact, deliberately be lengthened by encouraging the cultivation of early and late ripening varieties of cane.

Mr. Jain is, however, right in suggesting that to make it economical for factories to crush cane even when there is a fall in its sugar content, the minimum price of the main raw material has to be reduced. Reducing its price is nearly as essential as improving its quality, especially since Mr. Deshraj Narang, president of the Sugar Technologists Association, has spoken with concern about the deterioration in the quality of cane, notably in Uttar Pradesh and Bihar. The Sugar Development Council has started a scheme of payment for cane on the basis of quality, and Mr. Narang is right in urging that the system should be introduced in the industry as a whole without delay. The extension service sanctioned by the Sugar Development Council is to be welcomed. Under this service, teams of experts will visit factories joining the scheme on payment of the prescribed fees and make recommendations to increase efficiency. Mr. Narang particularly mentions the difficulties of the Bombay mills in disposing of their molasses, and urges the Development Council to help find methods for the profitable utilisation of this by-product. The provision of better and cheaper cane supplies, along with the discovery of new uses for by-products such as molasses and bagasse, might well be the best ways of achieving greater economy in the sugar industry—an economy that is essential if it is to compete effectively in world markets.

CURRENT COIN

Equity Offer from Philips.—On a later page today there appear details concerning the 500,000 equity shares of Rs. 10 each in Philips India Ltd. which are being offered for public subscription at a premium of Rs. 2.50 each. The offer is of considerable interest to investors, and subscription lists will open on 19th November; the lists will close on 21st November, or later if the directors so decide. Applications will have to be made for 50 shares or for multiples of 50 shares. The proceeds of the issue are to be used for financing a large expansion programme which the company, a well-known manufacturer of electrical goods, especially radios, has framed; apart from helping in increasing and diversifying production, the issue will provide additional working capital. From the investment market's point of view, the first important consideration is the return that is likely to be earned on the new shares. The turnover and profits of the company during the first six months of 1957 have been larger than in the corresponding period of 1956. The directors feel that it is still too early to forecast the total profits for the full year to 31st December, 1957, but in the absence of adverse unforeseen circumstances, these should not be less than in 1956. There is, therefore, "every reason to hope that the results for the current year will enable them to recommend a dividend on the increased capital which will be more than commensurate with the length of time during which the new shareholders will have held their shares." As for 1958, "with a continuance of the present level of trading, a dividend of approximately 10 percent per annum may be anticipated." Comments have been made in market circles about the ambiguity of the dividend indication for 1957, a year which is nearing its end, especially in view of the more precise indication given for 1958, a year which has not even begun. It may be noted that for 1956, a dividend of 48 percent, free of income tax, was paid, absorbing Rs. 12 lakhs; but the paid-up capital then was Rs. 25 lakhs, and the profit for the year amounted to Rs. 22.78 lakhs, after taxation. The issued, subscribed and paid-up capital is now shown as Rs. 170 lakhs; and the profits during the first half of 1957, after taxation, amount to Rs. 11.82 lakhs. After the 500,000 ten-rupee shares now being issued have been allotted, Philips India Ltd. will not be deemed to be a company in which the Public is substantially interested, within the meaning of Section 23A of the Indian Income-Tax Act, 1922. Philips' sales policies have been vigorous and successful in recent years. As a result, the losses made by the private company, Philips India Private Ltd., in 1953 and 1954 have been turned into steadily increasing profits in subsequent years. It is to be hoped that this steady increase will be maintained in spite of the recent import restrictions, the rise in costs and heavier taxation. The expansion programme promises a helpful increase in turnover. The new undertaking in Loni, near Poona, will begin to manufacture metalware components from early next year, and the company's interests in other developments concerning electronic equipment, radios and lighting will also be promoted. The agreements with N. V. Philips Gloeilampenfabrieken of Eindhoven, Holland, for obtaining technical and research assistance should be useful in the manufacture of radio apparatus, radio components, lighting fittings and accessories, public address equipment and other electrical articles.

* * * *

Shares in National Rubber.—In last week's *Capital*, a preliminary indication was given about the preference and ordinary shares in National Rubber Manufacturers Ltd., which are to be offered for public subscription. Fuller details of the issue are now available, and they appear on a later page. The public offer involves 5,000 6 percent tax-free cumulative preference shares of Rs. 100 each and 210,000 ordinary shares of Rs. 10 each, both of which will be given at par (50 percent being payable on application and the balance in two calls). Subscription lists will open on 22nd November, and applications will have to be for a minimum of five preference shares and 25 ordinary shares. The company's issued and paid-up capital is Rs. 8 lakhs, divided into 80,000 ordinary shares of Rs. 10 each. The new issue actually consists of 10,000 6 percent, tax-free cumulative preference shares of Rs. 100 each and 420,000 ordinary shares of Rs. 10 each, at par. But firm requests for half the total number in each category have already been received from the directors, their friends, etcetera. It is the remaining shares which are to be offered to the public. The purpose of the issue is to help finance an expansion project. The cost of the project, including working capital, is estimated at Rs. 93 lakhs. Of this, Rs. 52 lakhs is to be obtained from the present share issue, Rs. 9½ lakhs as a loan from the West Bengal Financial Corporation (for 12 years, at 7¼ percent

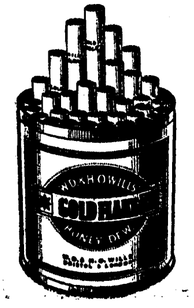
Korea



It is said that an ancient ruler of Korea, to stamp out all conspiracy against him, made the people wear very large hats. His reasoning was that if men cannot put their heads together, they cannot whisper, and therefore cannot conspire.

This tale may or may not be true, but the fact remains that Korea today has many elaborate hat styles.

Here is a Welsh style hat tied under the chin. The long loose kimona style coat covers baggy trousers, and the shoes are made of thick felt.

There is no end to the variety of costumes all over the world.

Wherever you go —they're good

per annum) and the remaining Rs. 31½ lakhs in the form of bank loans. The expansion project is intended to increase the output of bicycle tyres, bicycles tubes, V-belts, fan belts, transmission and conveyor belting, and other products such as vacuum hoses, buffer springs and rubber fittings for the railways. After the project has been completed, the directors expect that the turnover will be doubled from its present level. They feel that there will be no difficulty either in getting raw materials and trained labour, or in selling the products. As for dividend prospects, "the profits that the company has been earning so far and that it expects to earn after the additional plant and machinery go into production would, in the opinion of the directors, be sufficient to cover payment of preference dividend as well as an attractive rate of dividend on the ordinary share capital." For the year ended 31st December, 1956, a 20 percent dividend, free of income tax, was paid on the ordinary share capital of Rs. 8 lakhs. For 1955, the dividend was 15 percent.

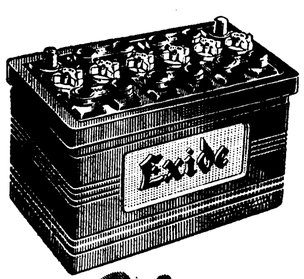
Mukand Iron Turns the Corner.—The Mukand Iron and Steel Works Ltd. has achieved a satisfactory level of activity during the year ended 31st March, 1957. The output of steel bars and rods in its steel re-rolling mills has increased by 35 percent from 23,610 tons to 32,123 tons. The proportionate increase in steel castings is greater—from 2,549 tons to 4,153 tons, or a rise of 63 percent. This improvement has been reflected in the financial results, and for the first time since partition the board has recommended dividends on ordinary and deferred shares. Mr. Kamalnayan Bajaj, chairman, has told shareholders at the annual general meeting held last week, that due to the political division of the country, the company lost its major assets in Lahore, and since then the management has been preoccupied with rehabilitation work. (A fuller version of the speech appears on a later page.) The corner has now been turned. Not only has the rehabilitation work been completed, but the company has reached its profit-earning capacity. It has expansion plans in hand, in addition to what has already been undertaken, to raise the output of steel castings. An application has been made to the Government of India under the Industries (Development and Regulation) Act of 1951 for sanction. A technical aid agreement has been signed with the British foundry firm of David Brown Industries Ltd. for a period of eight years, during which "the company will get technical guidance on problems relating to the steel foundry, including training facilities for the personnel of the company in the works of the British company". This agreement, Mr. Bajaj says, will enable his concern to plan its expansion activities on an efficient basis and to improve the existing working further. On the problem of power supply, which is a common difficulty for most industries in the Bombay region, Mr. Bajaj reports that the necessary additional power has since been sanctioned, and tariff rates have been lowered to some extent. The Tariff Commission is still studying the question of fixing conversion charges for the steel re-rolling industry "for converting steel billets into bars and rods." Its report is expected early next year. The Committee on Electric Furnaces, Steel Foundries and Steel Re-Rolling Mills, appointed by the Government in July 1955, has submitted its report; which is now being considered. The Commitee, says Mr. Bajaj, has recommended that sufficiently large quantities of billets should be allowed for import as the steel rolled by the industry "is needed for the projects which are part of the core of the national plan." It has also recommended that the existing rolling mills should be permitted to improve and modernise their plants for better and more efficient working, and steel foundries should be allowed to expand.

* * * *



Truth for the Hungry.—The food situation seems to be steadily deteriorating. The Central Food and Agriculture Minister, Mr. A. P. Jain, addressing the U.N. Food and Agriculture Organisation conference in Rome, has said that the contingency might well arise of India having to eat into her food reserves early next year. Large areas have suffered from severe drought because of the failure of the September-October rains. In the north-east especially, a region of 167,000 square miles, with a population of 79 million subsisting mostly on agriculture, is experiencing near-famine conditions. Mr. Jain declares: "The unexpected calamity is taxing all our energy and resources. While short-term and long-term measures for increasing agrining, and minor irrigation and labour-intensive works are being intensified with a view to increasing the purchasing power of the people, the known method of meeting such a sudden calamity is to increase imports. But since we are faced with an acute shortage of foreign exchange, the question of importing foodgrains from abroad becomes extremely difficult." Mr. Jain has unfortunately not explained why his Government has spent the foreign exchange which might intelligently have been retained as an indispensable insurance against food scarcity. As a result of the rice agreement with Burma and with supplies coming under Public Law 480 of the United States, a stock of a little over one million tons of rice and wheat has been built up, but the demands arising since the drought set in have halted the process of increasing the reserves. The difficulties are likely to last during the whole of 1958, so much so that with the present reserves and future imports under the two agreements, "we are likely to be left with no foodgrains" by the middle of that year. It is to be hoped that the people of this country will not then be invited to assuage their hunger by consuming the blast furnaces of the steel mills. A grim situation will arise unless enough food is available for the drought-affected population in the latter half of the year. Mr. Jain has for some months shown complacency over the food shortage, and used doubtful statistics to argue that it is not serious. Not many have accepted these statistics for more than they are worth, since prices remain high. The confession now that the prospects are really grim will, therefore, be welcome for its realism, although nothing else in it is welcome. It might not be wholly inappropriate if realistic confessions such as this are made in India itself, where the people will soon be asking Mr. Jain for food, rather more often than in faraway Rome, where Mr. Jain has been asking others for food. Truth does not fill empty stomachs, but it is not to be discarded for that reason.

* * * *

High Dams and Low Politics.—Mr. Lal Bahadur Shastri, Central Minister for Transport and Communications, has advised U.P. Congress representatives to be "more polite and to modify their approach" when asking the Central Government for more financial aid. In view of the speeches made by several members at a meeting of the U.P. Congress Committee early this month, in which they bitterly attacked the Centre for downgrading the priority of the Rihand Dam and the Yamuna and the Ramganga hydel projects, it seems the rebuke is merited. Speaking on the resolution, which was passed unanimously, calling upon the Centre to review its decision, the Chief Minister, Dr. Sampurnanand, has complained that important industries are not being located in the State because the power supply is not adequate, and power projects have not been completed because enough foreign exchange is not being given. Only Rs. 12 crores of foreign exchange has been allotted to U.P. and that, too, is for the private sector. The allotment, according to Dr. Sampurnanand, is meagre, considering that Rs. 28.3 crores has been given to Bombay, Rs. 20.9 crores to West Bengal, Rs. 34.9 crores to Madras, Rs. 10.23 crores to Madhya Pradesh, Rs. 10.41 crores to Punjab and Rs. 5.23 crores to Andhra. The *per capita* consumption of electricity in U.P., Dr. Sampurnanand points out, is the lowest in India next to Andhra. As against 62 units in Bombay, 61 units in West Bengal, 22 units in Madras, 8.7 units in Madhya Pradesh and 15 units in Madras, it is only 8.1 units in U.P. and 5 units in Andhra. Speaking specifically on the Rihand Dam, the Chief Minister says that Rs. 8.5 crores has already been spent on it and the foreign exchange component of the remaining stages is a mere Rs. 4 crores. As for the Matatila dam, Rs. 7.83 crores has been spent and only Rs. 55 lakhs more of foreign exchange is needed to set up the plant for power generation. About Rs. 1 crore of foreign exchange is necessary for the Ramganga project, but this is not yet in an advanced stage. Altogether the State's requirements of foreign exchange are estimated at Rs. 8.55 crores. Because the projects have not been implemented, industrialisation has suffered, and there has also—according to the Chief Minister—been an annual loss of Rs. 15 crores worth of foodgrains.

Dr. Sampurnanand's speech raises a number of interesting points. The most important, perhaps, is that the much-advertised "flexibility" of the second five year plan to some extent simply does not exist. It is a major weakness of over-ambitious planning that a multitude of projects are started and while many of them are still incomplete, resources to implement them fully just run dry. The construction of a dam, for instance, cannot be stopped half-way when the project has to be "pruned" or "rephased" on grounds of financial shortages; when that happens, the dam merely degenerates into a lump of bricks and mortar standing in the middle of a river, serving no useful purpose whatsoever. The same is true of many of the other heavily capitalised projects which the Government has started. If money cannot be found to complete them, a large proportion of the investment already made will be wasted. The country will then have reason seriously to contemplate the heavy loss of resources which it will have suffered through the inflated ambitions of its planners. But while Dr. Sampurnanand is right in pointing to the dangers of cutting allocations midway through the implementation of a project, the comparisons he makes with the advantages of other States are meaningless. There is no reason,

THIS IS 3 TIMES BETTER

NOT ONLY Exide plates with CB 95 alloy grids so long-lived that they needed a longer-lasting separator.

NOT ONLY Porvic microporous plastic separators, virtually *everlasting* in battery service.

BUT ALSO a container built of Hard Rubber—tough and shock-resistant to outlast Exide plates living their full life insulated by Porvic separators.

Recent discoveries, fully utilised for improvement in the Silver Exide, raise performance and length of life to a new peak.

Silver Exide

Still keeps going when the rest have stopped

At no extra cost

MADE IN INDIA ISI 395

EDSC-15B

for instance, why all States should get an equal allocation of foreign exchange; some have better projects to offer, and their needs must necessarily be given higher priority. This applies also to Dr. Sampurnanand's comparisons of *per capita* power consumption in various States. The fact that Andhra and Uttar Pradesh consume less power than Bombay and West Bengal indicates nothing—except that the latter two States have conditions which are more propitious for the use of power and that they have taken the trouble to expand facilities for producing it. If Rajasthan, for instance, were to complain that it had not been allotted a hydro-electric project the size of Bhakra-Nangal, and that the Punjab was therefore being favoured, Dr. Sampurnanand would be among those who would laugh it into silence. If power consumption in U.P. is low and if producing facilities are inadequate, the first reaction of the State Government might well be to re-examine its own electricity development policies. To make veiled innuendos about "favouritism" at the Centre can hardly be more helpful than some of the remarks which U.P. Congressmen have been making about the cut in financial allocations.

* * * *

Geology of Asia.—Asia leads the world in the production of graphite, mica, tin, tungsten concentrates, and probably antimony. She is also an important exporter of ilmenite and manganese ores. But so far no geological map has been prepared for the continent. The International Geological Congress produced geological maps for Europe and the Americas several years ago, and a map is now available even for the African continent. The deficiency in the case of Asia, however, will soon be removed. Senior geologists of the countries belonging to the E.C.A.F.E. area, meeting as a Working Party recently in Calcutta, have finalised a draft map. The delegates are returning with copies of the draft to their respective countries. After it has been scrutinised and returned to the E.C.A.F.E. Secretariat, the final map will be published some time next year. The geologists have urged that immediate steps be taken to prepare regional maps showing the distribution of mineral resources in Asian countries. Dr. V. P. Sondhi, Director of the Geological Survey of India, will be acting as co-ordinator for this purpose, with his Japanese counterpart as joint co-ordinator. The preparation of a tectonic map showing the structure of rocks has also been recommended. It has been pointed out that although the known mineral resources of Asia are considerable, actual production is still small. Few countries apart from Japan, India and China produce metals. The output of many minerals such as coal, iron ore, petroleum and natural gas reached a record level during 1956. According to a survey of mineral resources carried out by E.C.A.F.E., the production of aluminium, bauxite, copper, limestone, magnesium, mercury, nickel, tungsten and titanium increased appreciably in 1956. Petroleum and natural gas production are recent developments, but the survey points out the economic advantages which will accrue to the natural gas producing countries if they permit neighbouring countries to use the products. The E.C.A.F.E. Sub-Committee on Mineral Resources Development, which has been meeting in Calcutta, is considering specific issues of mineral development in the region, especially the problem of introducing the latest techniques of extraction. It is also surveying the mining legislation which has been undertaken by the countries. The survey will enable "foreign investors to obtain a better knowledge of the conditions under which they could participate in the development of mining in the region". It is thought that the U.S. investor will find it particularly useful, since the U.S.A. is the largest outside buyer of the mineral products of E.C.A.F.E. countries. A survey of radio-active mineral deposits and of low-grade coal, such as lignite, with a view to considering the development of these resources for the production of nuclear energy and pig iron, respectively, is being made by the Sub-Committee.

* * * *

Business Caution in the U.S.A.—October has been characterised by growing recognition that the autumn pick-up in business is not materialising to the degree hoped for, says the monthly letter of the First National City Bank of New York on U.S. business and economic conditions. While levels of production, trade and employment remain high, complaints are more common that incoming orders are insufficient to support production, that order backlogs are running down and inventories are still a problem. In this environment, additions to productive capacity become surplus, temporarily, and widen the area of soft spots in the economy. Reports are becoming more frequent of stretch-outs and postponements of expenditure programmes for new plant and equipment. In short, business sentiment inclines toward caution. Many industrial leaders, including corporation executives on the Commerce Department's Business Advisory Council, are now recognising the possibility that some moderate decline in general business activity may lie ahead. This change in the business picture, coupled with the disquieting implications of the Russian success in launching an earth satellite and new tensions in the Middle East, has registered sharply on the stock exchanges. Prices there had become vulnerable, being based on highly optimistic projections of continuously expanding business volume and profits. With the widespread discussion of the cost-price squeeze affecting profit margins and the uncertain prospects for sales in some industries next year, stock prices have had to come into line with more conservative appraisals of the outlook. The weakness in the markets has reinforced the caution in business circles. Up to September, the overall value of the nation's output of goods and services was still rising. According to the Council of Economic Advisers, the gross national product figures for the third quarter reached a new record annual rate (seasonally adjusted) of $439 billion. This was $4.7 billion greater than in the second quarter and some $22 billion more than in the third quarter last year. Rising prices, however, accounted for a major share of these gains. The increase from the second to the third quarter was almost entirely in the demand for consumer non-durable goods and services. Apart from State and local public works, the durable goods industries and construction have shown almost no rise since the first quarter of 1957. In fact, allowing for price increases, physical volume in these industries appears to have edged slightly lower. During the generally side-ways movement of industry in the spring and summer, many persons looked hopefully for a better-than-usual increase in production and trade in the autumn. Actually, on a seasonally adjusted basis, September fell below August in such varied and important business indicators as personal incomes, retail sales, total employment, industrial production, factory new orders and shipments, housing starts and wholesale prices. The size of the declines, which were mostly moderate, was not so significant as their preponderance over advances.

* * * *

Books by Big Brother.—In spite of protests from publishers and booksellers the Andhra Government has decided to take over the entire work of preparing text-books for primary schools. This attempt on the part of its intellectual pygmies to intrude into education in the style of Orwellian Big Brothers is strongly to be deplored. From 1958-59, only publications issued by the Government will be used in schools. The books are to be printed at the Government Press in Hyderabad and it is claimed that they will be better than those now in use. There is a threat that recognition will be withdrawn from elementary schools declining to use the State publications prepared to suit the syllabus. Religious instruction can be given from books not specified by the State, but all other subjects will have to be taught only from approved manuals. Books in languages other than Telegu must also be approved by the Director of Public Instruction for use in elementary schools. The main result of State monopoly will not be the elimination of patronage by local authorities, but the fall in quality resulting from the disappearance of reputable foreign publishers, who already find that the preference for Indian books and authors is affecting their trade. The authority of the text-book committee over secondary school books will also be increased and it seems that the aim is to get the independent trade out altogether. This is not surprising, but there is a fear that it will not be district educational officers alone who will have the major say in prescribing books, outside influences too will sway the choice. It may be added that pieces from Goldsmith's *Citizen of the World* are to be excised because of the fear that religious susceptibilities might be offended. The Osmania University has cut out two essays from the selections for the B.A. examination on the ground that they are "offensive".

* * * *

Increased Output of Chemicals.—The production of chemicals is maintaining a steady increase. There was a substantial rise in output last year, especially in such products as ammonium chloride, bleaching powder, chlorine and copper sulphate. The production of soda ash went up from 77,272 tons to 84,235 tons and that of caustic soda from 34,253 tons to 39,416 tons. A number of new items, such as hydrogen peroxide, D.D.T. and salicylic acid, were manufactured for the first time last year. Speaking at the annual general meeting of the Indian Chemical Merchants Association, Mr. M. L. Das, president, has said that when production and consumption are compared with the United Kingdom, United States, West Germany and Japan, it is found that the industry here will have to make a tremendous advance "before we can catch up with the progress achieved by these countries." Due to increased domestic production and also because of the shortage of foreign exchange, imports of several chemicals have been restricted. This has led to a shortage of such items as acetic acid, calcium carbide, magnesium carbonate and barium carbonate. These are important raw materials for a number of industries, and it is therefore necessary to ensure their regular supply. Mr. Das stresses the need for utilising the services of the trade for purposes of distribution, and he thinks that this will prove beneficial both to the Government and consumers. In recent weeks, the price of titanium dioxide has gone up abnormally. This item is sold in the retail market at Rs. 4.50 a lb. compared with the manufacturer's price of Rs. 1.25 a lb. Throughout last year, the price was seldom very high and supplies were readily available. "I have no doubt that if the distribution of this as well as other chemicals is done through the normal trade channels, it will be possible to bring down prices to reasonable levels," Mr. Das says.

Grand Total Rs. 1,709.55.

POLITICAL TUB-THUMPERS

THERE seem to be some points of similarity between our Aryan brother and the stump-orators of New York. In the *Review of Reviews* for last month there is a character sketch of Mr. Richard Croker of Greater New York. Mr. Croker was at one time what is known as the Boss of Tammany Hall, and he asserts that he does not remember ever having done anything that he ought not to have done, for he has done good all his life. This, we may add, is not exactly the description which other people give of him. In reply to an interview Mr. Croker stated that he had never made a public speech on a platform to a large audience in his life; that he could not do it; that he could not talk in that way, but in a homely fashion in committees he could discuss and put arguments before men. Of mob orators, for those whose eloquent words are able to wield at will the fierce democracy, Mr. Croker takes but little stock. They have their uses, no doubt. They are necessary. They receive their instructions, and being told what to say, are expected to say it, or the Boss would know the reason why; but it was evident he ranked them as standing very low in the scale of political importance. "Men," he said, "who run to tongue have often very little else than tongue to show. There is so-and-so and so-and-so," he went on, naming in succession many of the most eloquent stump-orators and spread-eaglers of the day; "they talk, but what else can they do? Nothing. For judgment, for wisdom and counsel for horse-sense, who would go to any of these men? Is not this a singularly good description of some of our tub-thumpers in the Calcutta Municipality?

COAL POLICY IN INDIA

By

Andrew Farquhar

This booklet consists of reprints of articles written by Mr Andrew Farquhar, former Coal Adviser to the Tata Iron and Steel Co Ltd., which have appeared in *Capital* in recent years. As expert analyses of India's coal problems and policies, they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

Without Prejudice

TAXING DIVIDENDS OUT OF ACCUMULATED PROFITS

CASE CONCERNING LIQUIDATION PROCEEDINGS

(FROM OUR LEGAL CORRESPONDENT)

THE editor of *Capital* has forwarded to the writer an interesting and informative letter from a well-known chartered accountant of Bombay containing some critical comments on a recent income tax decision of the Bombay High Court on the meaning of the word "dividend" as applied to the return of paid-up capital on the liquidation of a company. As a general rule, it is not our custom in this column to comment on newspaper reports of cases; they are usually but summaries and we find it advisable to wait for the full detailed judgments in the authorised law reporting journals. However, as the report which our correspondent has enclosed is virtually the judgment itself *verbatim*, and is from the reliable columns of the *Indian Express*, we have no hesitation in quoting it as a correct one. We must make it clear also, as does our learned correspondent in Bombay, in view especially of the possibility of the case going further by way of appeal, that we have no intention of commenting adversely on a decision which may still be *sub judice*. All we wish to emphasise is that if the High Court decision represents correct law, as the writer assumes it does, then the correct law requires statutory alteration.

The case related to an income tax reference made at the instance of Vidyutrai Y. Desai, an assessee. According to the report in the *Indian Express* of 2nd October, 1957, the assessment year under consideration was 1948-49, the previous year being the financial year 1947-48. The assessee was a shareholder of a private limited company, Desai Arrade Ltd., which was incorporated in 1943, and which carried on the business of the managing agency of the Barsi Spinning and Weaving Mills Ltd. The capital of the company was Rs. 5 lakhs, divided into 500 shares of Rs. 1,000 each. The assessee was a shareholder of 375 shares of this company in his own name and beneficial owner of five shares held in the name of one K. M. Oza. The company went into liquidation on 18th January, 1947. The liquidator realised the assets of the company, excluding 1,000 shares of the Barsi Spinning and Weaving Mills Ltd, of which the company was the owner, paid throughout the costs of liquidation and the liability of the company in full, and had a balance in his hands of Rs. 3,72,907, which was distributed among the shareholders.

The assessee's share of this distribution was Rs. 2,83,409. The assessee also received from the liquidator in specie 760 shares out of 1,000 shares of the Barsi Spinning and Weaving Mills Ltd. It was found by the Appellate Assistant Commissioner that out of the distribution of Rs. 2,83 409, a sum of Rs. 1,08,720 was paid out of the accumulated profits of the company. The total accumulated profits, according to the balance-sheet of the company at the date of the liquidation, were Rs. 1,68,867. This sum of Rs. 1,08,720 was taxed in the hands of the assessee as dividend within the definition of Section 2(6A)(c) of the Income Tax Act. It was contended before the tribunal by the assessee that since this distribution fell short of the paid-up capital of the company, and the assessee did not receive the full amount that he had paid up on his 375 shares, the portion of the distribution which was determined as having been paid out of accumulated profits did not attract tax.

This submission was negatived by the tribunal and the question that arose for their lordships' consideration was one concerning the taxation of dividend as defined by Section 2(6A)(c). The question was "whether on the facts and in the circumstances of the case, the sum of Rs. 1,08,720 out of the sum of Rs. 2,72,080 was a receipt of dividend within the meaning of Section 2(6A)(c) of the Indian Income Tax Act?" (The assessee had received the sum of Rs. 2,82,409 as follows: during 1947-48 a sum of Rs. 2,72,080, during 1948-49 a sum of Rs. 9,120 and during 1950 a sum of Rs. 2,209).

The High Court turned to the definition of "dividend" provided in Section 2(6A)(c). Under it "dividend" includes "any distribution made to the shareholders of a company out of accumulated profits of the company on the liquidation of the company." On behalf of the assessee, it was contended that under the company law, in liquidation proceedings the surplus resulting after realising assets and paying off liability was to be used in the first instance for repaying the capital and the balance, if any, was to be distributed *pro rata* among the shareholders. That position in law could not be disputed and the case of this company was further reinforced by a specific article in the Articles of Association, being Article 155.[1] Therefore, it was urged that until the capital had been fully repaid, there was no distribution to the shareholders which could attract tax.

* * * *

"This argument," said their lordships, "could not avail the assessee because when he was sought to be taxed under Section 2(6A)(c) he was not taxed on what was his actual income, but he was taxed on what was his deemed income for the purpose of income tax law. He might have made an actual loss by subscribing to the capital of the company and might have, in the distribution of assets in winding up, received much less than the capital subscribed; but the law prescribed that, in whatever form the distribution might have been made, to the extent to which that distribution was out of accumulated profits, it was a dividend and attracted tax as any ordinary dividend would under the income tax law." To illustrate the matter their lordships took an extreme case. There might be a company of which all the assets other than accumulated profits had been burnt down by fire or destroyed, but the accumulated profits had been deposited in a bank or had remained safe in some locker or safe. The distribution of such profits, although it might be a meagre percentage of the capital of the company, would nevertheless attract tax because in this simple case it was a distribution out of profits of the company accumulated in previous years and, in the particular illustration taken, kept apart during all those years as such.

In this connection, their lordships also looked at the definition of "dividend" contained in Section 2(6A)(d) which provides that dividend includes "any distribution by a company on the reduction of its capital to the extent to which the company possesses accumulated profits which arose after the end of the previous year ending next before the 1st day of April, 1933, whether such accumulated profits have been capitalised or not." (The object of this sub-clause is clearly to bring to charge a distribution of accumulated profits disguised as a reduction of capital.[2]) "In the case of a reduction of capital," their lordships observed that "the distribution was for the purpose of returning capital to the shareholder and yet, if there was a distribution which amounted to nothing more than a return of part of the capital to the shareholder.....such part of the distribution as arose out of accumulated profits had been rendered taxable."

In the High Court's (Tendolkar and S. T. Desai JJ.) opinion, there was no warrant for the proposition that the distribution in a winding up under Section 2(6A)(c) did not attract tax even if it was out of accumulated profits unless the capital had been repaid in full. The decision of the tribunal was upheld. And with the observation that this extremely important matter was decided by two eminent commercial judges after their lordships had had the advantage of hearing the arguments on behalf of the assessee of well-known counsel instructed by solicitors who, bearing the name of Kanga, are, as such, almost hereditary experts in income tax law, we will turn to our correspondent's letter which puts with great clarity and force an exactly opposite point of view which, right or wrong, is certainly a practical and commonsense one. We have not his permission to disclose his name but it is one entitled to professional respect.

* * * *

Prefacing his remarks, as the writer does also, with the observation that he writes "without the slightest intention to criticise a judicial decision", our correspondent says: "I feel that the judgment very vitally affects the interests in equity shares of companies. Already, thanks to the numerous Finance Acts, imposing capital gains tax, wealth tax, surcharge on dividends in excess of 6 percent, heavy surcharge on bonus share issues, increase in the income tax and corporation taxes on companies, the investors' shares are getting into the doldrums and investors are being scared away. The present decision that even the return of the paid-up capital on the winding up of a company is liable to be taxed, *less than 100 percent though the return be*, is a most untenable and inequitable interpretation by the income tax authorities.....Now, even a tyro in accountancy knows that a reserve fund and its investment in a particular form, created in a prosperous period of a company's working, ceases to have any meaning as such, if at a later stage a debit balance of the profit and loss account appears in the balance-sheet in excess of it due to losses accruing in a subsequent period. The reserve fund ceases to be reserve and the investment is liquidated and used up to write off the loss.

"It is also equally well known that whatever the balance-sheet value as a going concern may be, in the event of a liquidation, due to forced sale, the assets will fetch lower values. If, after meeting the creditors' liabilities, liquidation expenses and paying off 100 percent of the value of preference share holdings, if any, the surplus of assets is, *as in the case in point, less than the face (paid-up) value of the equity share capital*, the shareholders receive *no profit* but actually suffer a capital loss and, as such, where is the profit which can be taxed? If the assets realised are less than the liabilities, the creditors also will get less than 100 percent. Such *fractional part of the assets of a bankrupt company* is called in legal parlance 'dividend'. But, because of this phraseology, is the payment taxable? No. How does a shareholder receiving a part only of his capital from a bankrupt company differ from the above? What is the justification to tax it simply on the ground that the realised cash balance includes the amount of what was once *regarded as a surplus investment*, without taking into account that it had ceased to be such a surplus investment at the time of liquidation? Again, is not the recipient of such fractional return of capital, and who thus incurs *a loss*, entitled to a set off?"

Assuming the High Court's decision is sustained on appeal, our correspondent adds that "the interpretation of the income tax department is inequitable and.....if it is not reversed by an amendment of Section 2(6A)(c) of the Income Tax Act and/or the Companies Act, if need be, to remove all ambiguity, it will be driving an irremovable nail into the coffin of the already scared and drowning investor in the private sector."

* * * *

Well, there you have the respective views of two distinguished judges and a recognised professional expert of which, of course, the former must prevail as to the law. Between the two, the writer, who has no claim whatever to be deemed an expert, has hesitated to express any opinion. Nevertheless he will venture to say what he thinks from what he hopes is a commonsense point of view. To begin with, if one may be permitted to mix our correspondent's metaphor, in arguing that "the interpretation of the income tax department is inequitable," he is drawing a red herring across the path of the "already drowning investor" into whose "coffin an irremovable nail" is being driven. It is not an argument which will resuscitate the apparently drowned.

The Income Tax Act and the officers and judges in administering it have no concern with equity. They have to administer the Act as they find it. "It may seem hard," said Lord Sands in a leading case,[3] "that a concern should have to pay income tax upon its profits, when those profits are taken away from it and applied to a foreign purpose. *But income tax legislation knows nothing of hardship.*"

What bothers the writer about this clause (6A)(c) is that word "profits". "Any distribution .....out of accumulated profits." What is the meaning of the word "profit"? It means pecuniary gain, excess of return over outlay. It is not a condition of fixed, static, equilibrium, unchangeable like "the law of the Medes and Persians which altereth not." A company, being solvent today, may put Rs. 50,000 in the bank or in a safe and rightly designate it as "accumulated profits". But the concern may become insolvent within six months in which event, surely, that sum in the bank can no longer be correctly described as accumulated profits or profits at all. There are no longer any profits, any pecuniary gain. What were accumulated profits are now merely part of the assets of an insolvent concern to be applied towards payment of its debts as "dividend", if you like, in a technical sense but not, one would have thought, as dividend in the sense defined by clause 6(A)(c). As our more expert correspondent puts it, we think correctly, there is "no profit but.....a capital loss and as such where is the profit which can be taxed?"

"In every case the court has got to consider what are the real profits of the assessee and what are the apparent profits. It is only the real profits that attract the tax; and even though the language used in the material documents may be 'net profits', the court must look to the substance of the transaction and not to the form."[4]

A CORRECTION

In this column of *Capital's* issue of 26th September, 1957, the writer quoted an extract from a judgment of the Bombay High Court concerning settlements arrived at between employers and workmen in industrial disputes, to the effect that such settlements to be binding must be effected through the instrumentality of the conciliation officer. We are indebted to two correspondents from New Delhi and Dhanbad, respectively, for pointing out that because of the amendment of the Industrial Disputes Act, 1947, by Act 36 of 1956, this is no longer so, and that "settlement" is now defined to include a written agreement between the employer and workmen arrived at otherwise than in the course of conciliation proceedings where such agreement has been signed by the parties thereto and a copy thereof has been sent to the appropriate Government and to the conciliation officer.

A DITCHER'S DIARY

I NEVER knew why the Turks were singled out for being surprised by the advent of spring every year. Aren't we all—by the "unprecedented" severity of every English winter and by the cruelty of each Calcutta summer? But the one annual event that does take me by surprise—although it oughtn't because I know the date—is Mr. Nehru's birthday on 14th November. The calendar clearly says he is sixty-eight today. There are older men active. Dr. Adenauer is over eighty and Sir Winston Churchill, no younger, is still writing books and painting pictures. They both live in kinder climates, as Tagore once reminded an importunate correspondent who had complained that his missives to Shaw and Wells had brought prompter replies. Mr. Nehru is in an altogether different category. Every time someone comes and tells me that the Prime Minister is looking tired I look at his latest photograph in the papers and marvel how young he remains. Being Prime Minister of India is work enough, but Mr. Nehru is many things besides and in each capacity he does not do things mechanically but gives a bit of himself in whatever he does. The magnitude of the task he has set himself—to start and lead to success half-a-dozen different revolutions in this ancient and slow-changing country—is matched not merely by imagination, but inexhaustible physical energy. This last is an important point, and India is indeed lucky to have a leader of these dimensions. With becoming modesty Mr. Nehru has said more than once that he is honoured abroad because he represents India. This is only partially true, and the country knows to what extent India is important in the world today because of him. Yet he is becoming increasingly aware that the international prestige of a country can rest neither on a single mortal nor on some moral principles unbacked by a measure of material achievement. It is to this that Mr. Nehru now devotes most of his attention and, whatever the measure of his ultimate attainment may be in this department, the world will long remember the methods he adopted for his revolutions. They are gentle, civilised, human—exactly as the man is. India will need him longer than she will have him.

* * * *

One must permit Mr. Khrushchev his sneers at American cock-sureness and British sentimentality; those unused to success rarely wear it becomingly. But while Russia talks peace and proudly shows off her weapons of war, the lesson does not appear to be going altogether unheeded by the West. I would name the four most important results of Russian preening as, the temporary end of U.S. penny-pinching in defence matters; the focus on the inter-service rivalries in that country; the move towards co-operation between the western powers on scientific research; and the world-wide rehabilitation of the importance of pure science. Of the four, the one which should prove of greatest significance in the long run is undoubtedly the last-mentioned. It is not the fashion in this country just now to rate the theoretical above the practical; that is not surprising when there are so many unemployable theoreticians about. But the West has less excuse for the exaggerated importance it has been attaching to the "doer" in the past few years. The United States is largely to blame for this; Europe generally, I think, has retained a rather better sense of proportion. Now it looks as if the "egg-head" is on his way back to favour, even in the United States, and a great deal of good can come of that. The technicians of this world have been most successful in building practical things like motor-cars, aeroplanes, typewriters and stainless-steel kitchen units while the scientist has been busy with his theories. It has not been until now, when he has given the world some really spectacular proof that he has not been wasting his time, that the scientist is beginning to get the recognition his work deserves. The odd thing is that it has taken the scientists of a society which claims to be the world's most practical and materialistic to do this. It is easy to foresee a new interest in pure science among western countries, especially the United States, from now on. That might mean that we will soon have the solutions to some of life's more intractable problems which are unsolved at present largely because attention is concentrated too rigidly on them. If the Soviet Union has done this for the world, then it should be ample compensation for the red faces among some western statesmen which the appearance of the *Sputniks* has caused. There is nothing like being sneered at by a man of Mr. Khrushchev's calibre to teach the complacent a lesson.

* * * *

It is good to see an important American politician re-thinking on foreign aid, a subject prolifically productive of woolliness even in otherwise intelligent men. But Mr. Chester Bowles appears to me to have fallen a victim to twice the number of the fallacies he exposes. Let it be agreed first that never is aid given for only one reason, and of the piurality of motives inspiring it many cannot be menticned at all. Indeed, they should not be, for talking about them would defeat the very purposes of giving such aid. I have a suspicion that the State Department knows very well why it recommends aid for particular countries, and they are not all diabolical; but it never makes the mistake of telling Congress the right reasons, and Mr. Bowles should know why. Democracy is an excellent form of government, much better than any other devised by man, but international relations are a delicate business which is not run best by open, often ignorant, discussion. The U.S. Congress shares with all parliaments an innate reluctance to part with money, and it has to be cajoled, angered, frightened, even deceived, to make it pay for anything, especially if its effects are long-term and largely invisible. (It should not be forgotten that the wheat loan to India came with singular ill grace because of the preceding debate in Congress.) Why we have all this talk of "aid without strings" is because the United States made the strings too visible; all recipients know that there are strings even though they hate to admit it. If I remember aright the Suez Canal was bought behind Parliament's back, and in the days when Britain really made big and long-term investments abroad—to her profit and to the benefit of others—it was a very different kind of Parliament. It may seem a curious paradox that the operation of democracy in a country should be a hindrance to the sustenance of democracy elsewhere, but there it is And to do the right things, administrations may have to show many wrong reasons. The "useful lie" of Plato? Something very like it and Mr. Bowles, who I understand was in the advertising profession, should not be surprised that useful lies are still useful even today.

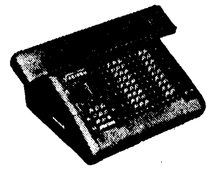
* * * *

I might not be able to recognise a lunatic if I were to meet one in the street—not unless he had straws in his hair, of course—but I am sure I would if I met him on the road. After all, like every road user in Calcutta, I get plenty of practice. If the reader thinks he can detect a hint of venom in the preceding lines then, of course, he will be perfectly right. And I lay any odds one likes to mention that I have his sympathy, because this "dicing with death" that goes on day after day is just about the surest introduction to stomach ulcers, heart failures and early graves. It was after a particularly narrow escape last week-end—from the homicidal proclivities of a bearded be-turbaned madman in a perambulating wreck of a lorry—that I remembered a suggestion I had read about some weeks ago for subjecting drivers to "psychological" tests. I pondered the word carefully at the time. I have heard of aptitude tests, and proficiency ones. But this was the first occasion I had seen it proposed that a driver should prove his psychological suitability. I am now convinced the idea has possibilities, although I am still rather vague about what exactly they are. Would it be necessary actually to prove sanity, or would it be a question of emotional maturity? Neither point would be easy to establish. It is my experience that the mere translation to the driving seat of a motor vehicle is sometimes quite enough to turn an apparently normal human being into a raving lunatic. Those who have watched the look of pure hate spread over the face of the driver who has just missed his second turn at the lights because the car in front has stalled again or has seen the fiendish smile of pleasure on the lips of one who sees the taxi which has just overtaken him on the inside held up by another taxi stopping suddenly for a fare, will know exactly what I mean. There is something about a motor vehicle which can make madmen out of us all, and I defy anybody to detect the fact from mere tests. I suspect that any psychological test, if one were introduced, would degenerate into one for the intelligence. That, I suspect, would definitely be on the wrong track. Some enterprising student on the lookout for a suitable subject for a Ph.D. thesis might consider this one worth his attention. He would earn the gratitude of Calcutta's road-using public if he could throw any light on it.

* * * *

The following letter was reprinted in a recent number of the weekly bulletin of the Federation of Civil Engineering Constructors. It was written by a bricklayer in Barbados to the firm for which he works. I would like to recommend it to all employers of labour for their consideration.

Respected Sir,



When I got to the building, I found that the hurricane had knocked some bricks off the top so I rigged up a beam with a pulley at the top of the building and hoisted up a couple of barrels of bricks. When I had fixed the building there was a lot of bricks left over. I hoisted the barrel back up again and secured the line at the bottom and then went up and filled the barrel with extra bricks. Then I went to the bottom and cast off the line. Unfortunately, the barrel of bricks was heavier than I was and before I knew what was happening the barrel started down, and jerked me off the ground. I decided to hang on and half way up I met the barrel coming down and received a severe blow on the shoulder. I then continued to the top, banging my head against the beam and getting my fingers jammed in the pulley. When the barrel hit the ground it bursted its bottom, allowing the bricks to spill out I was now heavier than the barrel and so started down again at high speed. Half way down I met the barrel coming up and received severe injuries to my shins. When I hit the ground I landed on the bricks, getting several painful cuts from the sharp edges. At this point I must have lost my presence of mind, because I let go the line The barrel then came down giving me another heavy blow on the head and putting me in hospital.

I respectfully request sick leave.

Personally, I think it might be managed, don't you?

THE DITCHER.

PROSPECTUS

A copy of this PROSPECTUS has been filed with the Registrar of Companies, West Bengal, for registration together with the necessary documents as required by Section 60 of the Companies Act, 1956.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard thereto.

Licences have been obtained from the Central Government for effecting substantial expansion of manufacturing capacity, of which copies are open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting these Licences the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard thereto.

Application has been made to the Calcutta Stock Exchange for permission to deal in and for official quotation of the Shares of the Company.

The subscription list will open at 10-30 A.M. on Friday, the 22nd November, 1957 and will remain open until Saturday, the 30th November, 1957 unless closed earlier or later at the direction of the Directors but not before Tuesday, the 26th November, 1957.

NATIONAL RUBBER MANUFACTURERS LIMITED—*Cont'd.*

HISTORY AND BUSINESS

The Company was incorporated on 18th December, 1946. Since then it has progressively expanded both in its volume of production and the range of its products. Its Factory now stands on an area of nearly 51 bighas of land. The Company purchased and installed new and up-to-date Machinery for the manufacture of its products. At present it is the largest Mechanical Rubber Goods Manufacturing Unit in India, with an annual output estimated at more than Rupees One Crore and Forty Lakhs. The Company specialises in the production of the following Mechanical Rubber Goods:

1. Transmission and Conveyor Belting.
2. V-belts and Fan Belts.
3. Cycle Tyres.
4. Rubber Hose.
5. Vacuum Brake Hose.
6. Buffer Spring and other Railway Rubber Fittings.
7. Automobile Parts.
8. Rubber Sheeting.
9. Moulded Rubber Goods, etc.

TECHNICAL SET-UP

The Company maintains a high-class technical set-up with a well equipped Laboratory for Research and Design of Products and has some of the best Technical personnel available in India. Its technical staff and research workers are engaged in production, technical design and control of products according to the latest American, British and Indian Specifications.

The Company entered into a manufacturing-cum-distribution arrangement with M/s. Goodyear Tyre & Rubber Co of India Private Ltd. An Agreement was entered into on 1st January, 1954 whereby the Company started manufacture of Transmission Belting, Conveyor Belting, V-Belts, Rubber Hoses with braided reinforcement, Rubber Dock Fenders, Oil Industry Hoses, Endless Cord Transmission Belt, etc., according to Goodyear Specifications. Necessary technical information and assistance are being rendered by Goodyear to permit production according to their Specifications. Goodyear also furnish necessary technical and production personnel. The arrangement has worked satisfactorily and is still continuing.

PERSONNEL

The total number of employees of the Company including the Management, Staff and Operatives employed at Calcutta and its Branches at Bombay, Delhi, Kottayam and Madras is approximately 1650. The Company has been operating and will continue to operate recruitment and training schemes for its executives and operatives for its own requirement. Selected personnel are sent overseas for special courses of instruction and for observation of advanced practises. The efficiency and continuity of management at all levels are maintained by promotion wherever possible from within the Organisation.

Labour relations have been very satisfactory and there is reason to hope that it will continue to be so. In recent years during which relations between employers and workers in many Industries have been subjected to severe strain and stress the Company has all along the privilege of being loyally served by its devoted team of workers and has on its part endeavoured to act progressively in matters relating to wages, conditions of work and other welfare activities. The workers have entered into an agreement with the Management wherein they have agreed, in consideration of reasonable incentive bonus, to ensure maximum production that is technically possible to achieve.

DEVELOPMENT AND EXPANSION

The Company contemplates development and expansion of its production on the following lines:

(a) Increase in the production of Cycle Tyres by 2,00,000 Nos. per month and Cycle Tubes by 1,00,000 Nos. per month as per Licence No. L/24/21/55 d/- 31.12.55. The Planning Commission recommended that the target for production of Cycle Tyres and Tubes by 1960 should be 12 millions each. The actual production in 1956 was—Cycle Tyres 6.31 millions and Cycle Tubes 6.27 millions. The production in the country has, therefore, to be raised by more than 5.70 million each in the course of 5 years. The Company has obtained permission from the Government to increase Cycle Tyre production by 2.4 million per year and Cycle Tube by 1.2 million per year. There will thus be no difficulty in selling this extra output. In fact to meet the present deficit between demand and supply the Government has to allow large imports of Cycle Tyres and Tubes.

(b) To expand its production of V-Belts and Fan-Belts from 30,000 per month to 80,000 per month as per Licence No. L/24/24/56 dated 20.7.56. The Planning Commission estimated that the capacity should be raised to 1.5 million. Production in the year 1956 was 0.9 million only. The capacity has, therefore, to be increased by 0.6 million.

(c) To set up another complete plant for Belting to increase the production of Transmission Belting by 2,62,000 ft. per month as per Licence No. L/30(4)/E-1/57 dated 25.3.57 and to manufacture other items such as Conveyor Belting, Flooring, Sheeting, Ebonite, etc. By installing another unit for Belting the Company will be able to meet the demand on it for Transmission Belting and Conveyor Belting.

(d) 25% Expansion in all other lines of manufacture such as Vacuum Hoses, Buffer Springs and other Rubber Fittings for Railways. Under the Second Five Year Plan Railways are likely to expand rapidly. Their requirement for Vacuum Hose, Buffer Spring and other Fittings is likely to increase by 25% even on a very conservative estimate.

The total turnover after achievement of expansion as envisaged above will be over Rs. 3 Crores per year. There will be no difficulty in selling all the products that will be manufactured as a result of such expansion. There will not be much difficulty about supply of Raw Materials; adequate trained Labour is also available. Part of the machinery and equipment required for the expansion has already arrived and some other units have been shipped. The Company's present production is worth about Rs. 12 Lakhs per month. After the expansion this will be doubled and the additional output will be mostly in respect of items that are at present being manufactured. The proposed expansion will be in accordance with the requirements anticipated by the Planning Commission.

PROCEEDS OF ISSUE

The whole of the proceeds of this issue and the expected loan of Rs. 9,50,000/- from the West Bengal Financial Corporation will be utilised in the development and expansion of the Factory and for the provision of the necessary Working Capital.

COST OF PROJECT

On the basis of quotations received from the suppliers of Plant and Machinery for which partial orders have already been placed as well as estimates regarding other expenses carefully prepared the Directors are of the opinion that additional financial requirement in respect of the expansion programme would be as under:

	Rs.
Land	8,00,000
Buildings	10,00,000
Plant and Machinery ...	34,00,000
Expenses of Issue (including brokerage)	1,00,000
Working Capital	40,00,000
	93,00,000

SOURCES OF FUNDS

The total sum is expected to be obtained as under:

	Rs.
Proceeds of the present Issue ...	52,00,000
Loan to be granted by the West Bengal Financial Corporation	9,50,000
Loan from Bank	31,50,000
	93,00,000

PROFITS AND DIVIDEND COVER

ESTIMATES OF PROFITS

Estimated profits calculated on the basis of past working but on estimated annual production of Rs. 3 Crores which will be achieved after completion of the expansion scheme are appended below:

Income			Rs.
Sales			3,00,00,000
Miscellaneous Receipt			2,75,000
			3,02,75,000
Expenses			
Consumption of Stores and Raw Materials			1,94,56,000
Salaries, Wages and Bonus			30,54,000
Rent, Taxes, Insurance, Interest and Miscellaneous Expenses			30,10,000
			2,55,20,000
	GROSS PROFIT		47,55,000
Less Appropriation	Rs.		
Depreciation	6,10,000		
Interest on Loan from West Bengal Financial Corpn. ...	68,875		6,78,875
			40,76,125
Less			
Tax payable on assessable profit	16,70,000		
Tax on Dividend in excess of 6%	1,30,000		18,00,000
	NET PROFIT		22,76,125
Sinking Fund for Loan			80,000
			21,96,125
Preference Dividend at 6%	60,000		
Ordinary Dividend at 20%	10,00,000		10,60,000
			11,36,125
Reserve Fund			8,00,000
Carried Over			3,36,125

PROFITS

On the basis of normal production after expansion of the Factory it is expected that the total sales will be over Rs. 3 Crores per year. The profit as worked out above is estimated at Rs. 40,76,125/- after providing Rs. 6,10,000/- for depreciation and the net profit after payment of taxes is expected to be Rs. 22,76,125/-. The increased rate of profit is due to the fact that the overhead and other expenses will come down considerably after the expansion thereby appreciably adding to the profit margin.

DIVIDEND

The profits that the Company has been earning so far and that it expects to earn after the additional Plant and Machinery go into production would, in the opinion of the Directors be sufficient to cover payment of Preference Dividend as well as an attractive rate of Dividend on the Ordinary Share Capital.

FINANCIAL INFORMATION

Auditors' Report

A copy of the report of the Company's Auditors—M/s. G. Basu & Co., is appended below, as required under clause 24 of Part I of Schedule II to the Companies Act, 1956.

The Directors,
Messrs. National Rubber Manufacturers Ltd.,
Leslie House, 19, Chowringhee, Calcutta 13.

Dear Sirs,

We have examined the books and accounts of M/s National Rubber Manufacturers Ltd., as kept in Calcutta in which are incorporated the certified returns from Madras Branch (for the year ended 31st December, 1954 31st December, 1955 and 31st December, 1956) and Bombay Delhi and Kottayam Branches (for the five years ended 31st December, 1956 and report that the profits of the Company are as set forth. These profits have been arrived at after charging all expenses of working, management and consultant's fees including provision for normal depreciation on the basis as allowable for taxation and after making such adjustments as in our opinion are appropriate.

	For the year ended				
Income	31.12.52 Rs.	31.12.53 Rs.	31.12.54 Rs.	31.12.55 Rs.	31.12.56 Rs.

Auditors.

STATUTORY AND GENERAL INFORMATION

MAIN OBJECTS

The main objects of the Company include the manufacture and sale of Mechanical Rubber Goods, Tyres and Tubes.

All the objects of the Company are in law main objects and therefore a copy of the Objects Clause of the Company's Memorandum of Association is annexed hereto and forms part of this PROSPECTUS

MINIMUM SUBSCRIPTION

According to the estimate made by the Directors a minimum amount of Rs. 5 Lakhs has to be raised by this Issue of Shares in order to provide for expenses under the following heads :

	Rs.	Rs.
(i) Purchase Price of property (Machinery, Equipments and Land)		4,00,000
(ii) Preliminary Expenses and Commission		Nil
(iii) Repayment of money borrowed in respect of the foregoing matters		Nil
(iv) Working Capital		Nil
(v) Any other expenditure :		
Brokerage	55,000	
Expenses of Issue	45,000	1,00,000
		5,00,000

OTHER PREVIOUS ISSUES

This is the first Issue of Shares to the Public ; no Shares were issued to the public during the two preceding years. No Share or Debenture was issued during the two preceding years for consideration other than cash.

No premium has been charged on any Share of the Company during the preceding two years nor is any to be charged on this issue.

OPTION TO SUBSCRIBE

No contract or arrangement has been or is proposed to be entered into whereby any option or preferential right of any kind will be given to any person to subscribe to any Shares out of this Issue, except as under :

In consideration of the supply of technical information under the Agreement as referred to in item (1) under the heading "Material Contracts" the Company has granted to Goodyear Tyre & Rubber Co. of India Private Ltd., 209, Lower Circular Road, Calcutta, an option, exercisable during the currency of the Agreement, to purchase up to 25% of the Company's Ordinary Shares at any time issued and outstanding, at an amount equivalent to the intrinsic value of such shares to be determined by two Chartered Accountants one being nominated by each party. The said option is subject to Government sanction if required under any Government law or valid regulation.

UNDERWRITING

The Shares now intended to be issued have not been underwritten but the Company will pay brokerage as indicated below—

BROKERAGE

Brokerage will be paid to Brokers and Banks @ 15 nP per Ordinary Share of Rs. 10/- each and Re 1/- per Preference Share of Rs. 100/- each on allotments made in respect of applications bearing their stamps. Messrs. Place, Siddons & Gough, 6, Lyons Range, Calcutta, are the Managing Brokers to this issue and will be in addition entitled to a commission of 6 nP per Ordinary Share and 50 nP per Preference Share on all Shares subscribed by the public. Brokeage is estimated at Rs. 55,000/- and will be payable by the Company.

No Share Commission, whether to any Underwriter, Subscriber or to any other person was paid by the Company within the two preceding years or is now payable to any promoter or officer.

EXPENSES OF THE ISSUE

The expenses of the issue other than brokerage are estimated at Rs. 45,000/- and will be payable by the Company.

PAYMENT TO PROMOTERS

No amount or benefit has been paid or given within the two preceding years or is intended to be paid or given to any promoters, director or officer of the Company apart from normal remuneration and reimbursement paid to such directors and officers.

The following Contracts not being contracts in the ordinary course of business which are or may be material have been entered into by the Company and may be inspected at the Registered Office of the Company at any time during office hours—

(1) Manufacturing-cum-Distributing Agreement with M/s. Goodyear Tyre & Rubber Co. of India Private Ltd., dated the 1st January, 1954 for 5 years with the right to extend this Agreement for an additional period of 5 years.

(2) Agreement dated the 21st February, 1957 with M/s. Gungadhur Banerjee & Co. Private Ltd., for sale of Cycle Tyres and Cycle Tubes.

(3) Letter dated 9th September, 1957, from the West Bengal Financial Corporation for a loan of Rs. 9,50,000/-.

(4) Agreement dated 21st February, 1957 with Mr. Kedar Nath Mookerjee appointing him as the Managing Director of the Company for a period of 5 years.

(5) Agreement dated 3rd July, 1956 for the purchase of 7½ bighas of land at 4, Paymental Garden Lane, Calcutta 15, at a price of Rs. 93,000/- entered into with Janab Ahmad Buland Akhtar.

(6) Agreement dated the 6th July, 1955 for lease in respect of Premises No. 15, Chingrighatta Lane, entered into with Sri Anil Kumar Sarkar, Sri Bimal Kumar Sarkar, Sri Kamal Kumar Sarkar and Sri Gour Hari Sarkar.

(7) Agreement dated the 22nd March, 1957 for lease in respect of Premises Nos. 12, 13 & 14, Chingrighatta Lane, entered into with Sri Anil Kumar Sarkar, Sri Bimal Kumar Sarkar, Sri Kamal Kumar Sarkar and Sri Gour Hari Sarkar.

(8) Agreement dated the 29th May, 1954 for lease in respect of 54/10, Chingrighatta Road, entered into with M/s. Dost Mohammed Estates Private Ltd.

ORDERS FOR SUPPLY OF MACHINERY AND EQUIPMENT

(1) Order No. 255 dated 27.3.57 on M/s. Hermann, Berstorff, Hannover, West Germany, for Extruding Machine, valued DM. 27,000/-.

(2) Order No. 277 dated 5.4.57, on M/s. Leonh, Herbert, Frankfurt, West Germany, for Cycle Tyre Equipments, valued £22,580/-.

(3) Order No. 281 dated 8.4.57, on M/s. Daido Machinery & Trading Co. Ltd., Kobe, Japan, for Cycle Tyre Press & Moulds, valued £8,668/-.

(4) Order No. 330 dated 29.4.57, on M/s. Technoexport (Foreign Trade Corpn.) Praha Czechoslovakia, for Banbury Internal Mixer & Mixing Mill, valued £24,600/-.

NATIONAL RUBBER MANUFACTURERS LIMITED—*Cont'd.*

(5) Order No. 893 dated 24.9.56. on M/s. Iddon Bros. Ltd., Leyland, Lancashire, England, for Bale Cutting Machine, valued £1,600/-.

(6) Order No. 894 dated 24.9.56. on M/s. Daido Machinery & Trading Co. Ltd. Kobe, Japan, for Heavy Duty Breaker Mill, valued £3,980/-.

(7) Order No. 895 dated 24.9.56. on M/s. Francis Shaw & Co. Ltd., Manchester, England, for Cycle Tyre & Tube Machine, valued £19,000/-.

(8) Order No. 896 dated 24.9.56. on M/s. Hermann Berstorff, Hannover, West Germany, for Spreading Machine, valued DM. 42,000/-.

(9) Order No. 393 dated 28.5.57. on M/s. Francis Shaw & Co. Ltd., Manchester, for Spares, valued £953/-.

DIRECTORS AND MANAGEMENT

The Management of the Company is vested in and exercised by Directors. The Company has no Managing Agents, or Secretaries and Treasurers. The Articles of the Company provide that :—

(i) Unless otherwise determined by a General Meeting, the number of Directors shall not be more than 15 or less than 3.

(ii) The qualification of a Director shall be the holding of Ordinary Shares of the nominal value of at least Rupees One thousand in the Company.

(iii) Unless otherwise determined by the Company in a General Meeting such Directors shall be paid Rs 100/- for attending every Meeting of the Board of Directors or any Committee thereof.

(iv) The Directors may from time to time appoint from amongst themselves one or more to act as a Managing Director or Managing Directors of the Company, for such time with such powers and on such remuneration as the Board may decide subject, however, to the limitation prescribed in Sections 198 and 309 of the Act.

MANAGING DIRECTOR

Mr. Kedar Nath Mookerjee is the Managing Director and shall hold office under an Agreement dated 21st February, 1957, for 5 years from 15th February, 1957 and shall be entitled to hold office on a monthly remuneration of Rs. 2,000/-. There is no provision for payment of compensation for loss of office.

INTERESTS OF DIRECTORS

Mr. Kedar Nath Mookerjee is the Managing Director of the Company and receives remuneration for his services as such.

Mr. Nirode Gopal Mookerjee, Mr Milan Kumar Mookerjee, Dr. Bireswar Mookerjee and Dr. Dasarathi Banerjee are employed by the Company as whole-time Directors and receive remuneration as such.

All the whole-time Directors and the Managing Director are entitled to remuneration as long as they hold office as such.

The above Directors and the Managing Director are not interested in the Company except as shareholders. Save as above no Director has any financial or any other interest in the promotion of the Company and in any other property acquired by the Company, during the preceding two years for proposed to be acquired by the Company.

M/s. Kedar Nath Mookerjee, Nirode Gopal Mookerjee, Milan Kumar Mookerjee and Dr. Bireswar Mookerjee are interested as Shareholders of M/s. Gungadhur Banerjee & Co. Private Ltd., who are Selling Agents for Cycle Tyres and Cycle Tubes of the Company and also as Members of M/s. Mookerjee Estates Private Ltd., who are the owners of the building in which the Registered Office of the Company is situated under a monthly tenancy. Mr. D. N. Kapur is interested as a partner of M/s. Place, Siddons & Gough, Brokers and Managing Brokers to this issue.

VOTING RIGHTS

The Preference Shares entitled the holders to receive notice of any General Meeting and to attend and speak thereat but do not entitle them to vote thereat unless either (1) the dividend on the Preference Shares or any part of such dividend has remained unpaid in respect of an aggregate period of not less than two years preceding the date of commencement of the meeting or (2) the business of the meeting includes consideration of a resolution for winding up the Company or for the repayment or reduction of the Share Capital of the Company or altering the provisions of the Memorandum and Articles of Association with respect to the objects of the Company or varying or abrogating any of the special rights attached to the Preference Shares. On a show of hands every member entitled to vote who (being an individual) is present in person or by proxy or (being a corporation) is present by a representative or by proxy shall have one vote. On a poll the voting rights in respect of the Ordinary and Preference Shares will be as specified in section 87 of the Companies Act, 1956. There are no special conditions or restrictions attaching to the Ordinary Share Capital of the Company. No member will be entitled to be present or vote either in person or by proxy at any meeting in respect of the shares registered in his name on which any call or other sums presently payable have not been paid or in regard to which the Company has and has exercised any right or llen.

VARIATION OF RIGHTS

The special rights attached to any class of Shares may be varied or abrogated with the consent in writing of the holders of three-fourths of the issued shares of the class or with the sanction of a Resolution passed at a separate meeting of the holders of those Shares and supported by the Votes of the holders of three-fourths of those Shares but not otherwise.

RESTRICTION OF TRANSFER OF SHARES

There are no restrictions on the transfer of fully paid Shares, but the Directors may decline to register any transfer of partly paid Shares to a person of whom they do not approve and may also refuse to register any transfer of Shares on which the Company has a lien.

CAPITALISATION OF RESERVES AND PROFITS

No reserves or profits of the Company have ever been capitalised.

REVALUATION OF ASSETS

Since the incorporation of the Company there has been no surplus arising from revaluation of assets as none has been revalued.

BORROWINGS

Subject to the restrictions imposed by Section 293 of the Companies Act, 1956, the Directors may exercise all the powers of the Company to borrow money and to mortgage or charge the undertaking, property and uncalled capital or any part thereof and to issue Debentures and other securities.

INSPECTION

Copies of the Memorandum and Articles of Association of the Company, Balance Sheet and Profit & Loss Account and Auditors' Reports, the original Consent Order of the Controller of Capital Issues, Licences issued by the Government of India permitting expansion of manufacturing capacity, copies of Contracts and Agreements can be inspected at any time, during the usual office hours at the Registered Office of the Company for a period of 14 days from the date of publication of this PROSPECTUS or until the subscription list closes whichever is earlier.

INDEMNITY

Every Officer or Agent for the time being of the Company shall be indemnified out of the assets of the Company against any liability incurred by him in defending any proceedings whether civil or criminal, in which judgment is given in his favour or in which he is acquitted or in connection with any application under Section 633 of the Act in which relief is granted to him by the Court.

APPLICATION FOR SHARES

Applications for Preference and Ordinary Shares should be made on the respective forms accompanying this PROSPECTUS and delivered before the closing of the subscription list. The application form together with the remittance for the full amount payable on application may be sent to the Registered Office or any of the branches of the Company's Bankers or to their Brokers. The remittance if not made in cash should be made by Cheques or Drafts drawn upon a Branch of the Bank to which the application and the Draft or Cheque is being sent. If drawn on a Bank elsewhere Bank charges @ 25 nP per cent must be included in the remittance Cheques or Drafts should be made payable to National Rubber Manufacturers Ltd. and should for applicant's protection be crossed 'ACCOUNT PAYEE' only. A separate Cheque or Draft must accompany each application form. Allotment will be notified by despatch of an Allotment Letter but the Directors reserve the full and uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full, the whole or any balance of the application money as the case may be will be refunded to the applicant by a cheque on the Calcutta Branch of the Company's Bankers.

Share Certificates will be issued in exchange of the Letters of Allotment. Such Allotment Letters or Share Certificates will be despatched by Registered Post. Further copies of the PROSPECTUS and Application Forms will be available from the Company's Bankers and the Brokers to the issue and also from the Company's Registered Office. The Shares when issued will be subject to the MEMORANDUM and ARTICLES OF ASSOCIATION of the Company, a copy of which may be inspected at the Registered Office of the Company during office hours.

This Notice is not an invitation to subscribe for shares but is issued for the purpose of giving information to the public concerning the Company. A formal Prospectus dated 5th November, 1957 has been delivered to the Registrar of Companies, West Bengal, for registration and copies thereof are obtainable from the Bankers and Brokers named below.

The Consent of the Government of India has been obtained to this issue by an order, a complete copy of which is available for public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A licence has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

Application is being made to the Calcutta Stock Exchange for permission to deal in and for an official quotation of the Equity Shares of the Company.

The Subscription List will open at the commencement of banking hours on the 19th day of November, 1957, and in accordance with the requirements of the Securities Contracts (Regulation) Rules, 1957, will close on the 21st day of November, 1957, or later at the discretion of the Directors.

PHILIPS INDIA LIMITED

(Incorporated under the Indian Companies Act, 1913.)

SHARE CAPITAL

Authorised

Rs. 5,00,00,000 divided into 50,00,000 Shares of Rs. 10 each.

Issued, Subscribed and Paid-up

Rs. 1,70,00,000 divided into 17,00,000 Equity Shares of Rs. 10 each.

LOAN CAPITAL

The Company has no debentures or other loan capital outstanding but has a bank loan and overdraft secured by hypothecation of stock-in-trade and book debts and also an unsecured bank overdraft.

ISSUE OF

5,00,000 EQUITY SHARES OF Rs. 10 EACH FULLY PAID AT Rs. 12.50 PER SHARE PAYABLE IN FULL ON APPLICATION.

After the shares now being issued have been allotted the Company will not be deemed to be a Company in which the public are substantially interested within the meaning of Section 23A of the Indian Income-tax Act, 1922.

The shares now being issued will rank for any dividend that may be declared in respect of the profits of the current year and of any subsequent years and in all respects pari passu with the Equity Shares of the Company already issued.

HISTORY AND DEVELOPMENTS:

The Company was incorporated in India in 1931, as a Private Company primarily for the purpose of carrying on the business of selling in India the great variety of articles manufactured from time to time by N. V. Philips' Gloeilampenfabrieken and their associated companies in the Netherlands under their trade marks. The Company was converted into a Public Company on the 31st October, 1957.

Since 1938, the greater part of the electric lamps sold by the Company has been manufactured in India by Electric Lamp Manufacturers (India) Private Ltd., Calcutta and since 1951, also by Hind Lamps Private Ltd., Shikohabad.

From the commencement the radio business developed satisfactorily and due to the excellent reputation which Philips radio receiving sets enjoyed with the public it was felt in 1947 that a sufficiently stable basis had been reached to start production in India. In compliance with the Government's policy gradually to reach self-sufficiency in as many industries as possible, it was decided in 1951 to start with the manufacture of radio components as well.

In support of these manufacturing activities agreements have been concluded with N. V. Philips' Gloeilampenfabrieken of Eindhoven, the Netherlands, whereunder the Company obtains the benefit of the research facilities and the vast technical knowledge which the said N. V. Philips' Gloeilampenfabrieken have and will have at their disposal in the field of the production of radio apparatus, radio components, lighting fittings and accessories, public address equipment and other electrical articles; pursuant to Licence Agreements concluded by the Company with N. V. Philips' Gloeilampenfabrieken licences in respect of such manufacture under patents owned by the said N. V. Philips' Gloeilampenfabrieken in India has been granted to the Company.

By a Registered User Agreement the Company has been granted the right to use trade marks owned in India by N. V. Philips' Gloeilampenfabrieken on all products made by the Company—or by third parties for the Company—in accordance with the specifications and on the basis of technical assistance granted by the said N. V. Philips' Gloeilampenfabrieken.

Having regard to the nature of the Company's main business it is evident that there is a close relation between the further electrification of the country and the sales possibilities of the Company.

Under the First Five Year Plan the electrification of the country increased by about 50%. During the same period the Company succeeded in expanding its business to a far greater extent due to the fact that, in full realisation of the increasing demand for electric and electronic articles, production facilities have been enlarged whilst modern, efficient and well organised regional or branch offices were established in Calcutta, Bombay, Delhi, Madras, Patna, Kanpur, Lucknow and Bangalore.

Moreover and mindful of the fact that in this line of business sales and service go hand in hand, nation-wide service facilities were made available to the public at reasonable cost.

All this, combined with the excellent quality for which the Philips' name has become world famous has led to a strong demand for the Company's products throughout India.

Under these circumstances it seems reasonable to anticipate that the Company's progress will continue during the Second Five Year Plan period in which a further substantial increase in the country's electrification is planned. Apart from the obvious influence of this further electrification on the Company's Light business, it should be noted that under the Second Five Year Plan the Government has decided to arrange for an ever-widening network of broadcasting stations which will result in a rapid increase of the market potential for radio sets.

It is on the strength of this favourable outlook that the Company decided to plan a second manufacturing centre at Loni, near Poona for which purpose the Company has entered into an agreement with The Imperial Tobacco Company of India Limited, dated the 1st December, 1956, to purchase a plot of land measuring about 60 acres for Rs. 4,00,000. Up-to-date manufacturing space at Loni to house metalware and electroplating departments has already been provided for. The production in these departments is due to start early in 1958, for which purpose imported modern machinery and equipment is being installed at present.

For these metalware activities at Loni the sanction of the Central Government has been received in terms of a Licence under the Registration and Licensing of Industrial Undertakings Rules, 1952, concerning which Licence the following statement has been included in the Prospectus:—

"A licence has been obtained from the Central Government for shifting a part of the undertaking from Calcutta to Poona of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it."

It is, however, emphasised that it is the Company's intention to maintain the output of the Calcutta factories at full capacity whilst the distribution of the Company's radio products will be possible from two centres. Apart from providing better service to its customers this will involve a considerable saving in expenditure.

The next step will be the construction of new premises to house the second manufacturing centre for radio components and the additional production of radio receiving sets from parts manufactured both in Calcutta and Loni.

New technical developments in the field of electronics are within the orbit of the Company's activities and will be vigorously pursued.

As a result of the progressive industrialisation of the country it may be expected that the demand for electronic equipment for industrial and scientific application available for sale by the Company will continue to increase.

Television, as and when introduced in India, will receive the Company's closest attention. Supported by the vast experience of N. V. Philips' Gloeilampenfabrieken with regard to television all over the world, the Company expects to play an important role in this respect.

The technical "know-how" accessible to the Company, its manufacturing experience, its trained technical staff, service and sales organisation will further strengthen the leading position of the Company not only in respect of its present activities but also in the new fields of electronic application mentioned above.

LAND PREMISES AND PLANT:

The Company's main factory premises in the Calcutta area are situated at 19, Convent Road, Entally, and 12A, Canal Street, Entally. At both the abovementioned premises the Company has established well equipped and up-to-date factories where the manufacture of radio receivers, radio components, amplifiers, lighting fittings and accessories, as well as servicing is carried on. The works are well equipped with plant and machinery of high quality and up-to-date design to ensure production in accordance with the latest production techniques. All the buildings, plant and machinery are well maintained.

Whilst the Canal Street premises are held under a tenancy arrangement at a monthly rental of Rs. 2,600, the Convent Road premises are the property of the Company. In order to be able to extend the factory and so increase the production a plot of land containing an area of approximately 1 bigha, adjacent to the Convent Road premises, was purchased in 1957 for Rs. 1,30,000.

In addition, the Company, as mentioned above, has contracted to purchase a plot of land at Loni in Bombay State measuring about 60 acres in area for the purpose of substantially increasing its production facilities. The Company already enjoys

PHILIPS INDIA LIMITED—*Cont'd.*

on this plot modern manufacturing facilities equipped with recently imported modern machinery for the production of metalware and for electroplating.

OFFICE BUILDINGS:

The Central Offices of the Company are situated at 7, Justice Chandra Madhab Road, Calcutta and 221, Dadabhoi Naoroji Road, Fort, Bombay.

Regional Offices have been established in Bombay, Calcutta, Madras and New Delhi and Branch Offices are situated at Bangalore, Kanpur, Lucknow and Patna.

For all the abovementioned office buildings the Company has entered into lease agreements.

GODOWNS:

The Company possesses a great number of godowns for storage of raw materials and semi-manufactured articles near the factories and for finished products all over the country.

OTHER PREMISES:

For the housing of staff personnel the Company has entered into lease agreements for residential flats in Bombay, Calcutta and Delhi.

MANAGEMENT AND STAFF:

The Chairman and Managing Director as well as the other Directors have been connected with the Philips organisation for years and their valuable experience and guidance in the Company's various fields of activity will be available. They are assisted by other able and experienced officials.

In connection with the rapid growth of the Company during the last few years and the necessity to increase the number of employees (nearly 100 per cent between 1951 and 1956) the training of staff both in the technical and commercial fields and in that of accounting has become an important part of the Company's policy.

Such training is organised in India as well as abroad. In the former case personnel attend—apart from training courses within the Company—Management Courses organised by Industry in India.

Training outside India is organised in co-operation with N. V. Philips' Gloeilampenfabrieken, the Netherlands.

OBJECTS OF ISSUE:

The objects of this new issue are to enable the Company, with the participation of Indian capital, to expand its production, to extend the range of its activities and to provide additional working capital.

FINANCIAL INFORMATION:

The following is a condensation of the Auditors' Report by the Company's Auditors, Messrs. Lovelock & Lewes, as published in the Prospectus.

Year ended	Sales	Profits before Depreciation and Taxation	Net Profits (after Depreciation & Taxation)
	Rs.	Rs.	Rs.
1952	1,70,49,141	16,55,751	7,53,508
1953	1,65,72,892	Loss 1,91,319	Loss 4,70,816
1954	2,03,66,666	34,094	Loss 3,14,855
1955	2,92,25,153	15,81,724	11,04,472
1956	4,22,64,729	47,37,997	22,77,721
6 months to 30-6-1957	2,35,70,707	27,90,770	11,81,881

ASSETS AND LIABILITIES as at 30th June, 1957:

	Rs.
Fixed Assets (at original cost less depreciation), Capital Expenditure in Progress, and Investments (at cost)	62,16,998
Current Assets	4,38,77,473
Total Assets	5,00,94,471
Less Liabilities	4,42,26,473
Net Assets as at 30th June, 1957	58,67,998

DIVIDENDS ON PAID-UP CAPITAL:

Dividends were 20% for the year ended the 31st December, 1951; 25% for the year ended the 31st December, 1952, and nil for each of the years ended 31st December, 1953, 1954 and 1955. For the year ended 31st December, 1956 a dividend of 48% was declared.

PAST TRADING:

During the years prior to 1953 the Company's activities were concentrated in the main cities of India and more particularly in Calcutta. Plans were made for a vigorous programme of expansion and in the years 1953 and 1954, as a first step and at considerable expense, a countrywide sales organisation was established. This expense, however, is already bearing fruit and it is confidently anticipated that the future will show that it was amply justified as the resulting India-wide sales organisation is in a position to provide the necessary facilities not only for a rapid increase of sales of products hitherto handled but also for the promotion of new products. The outcome of this policy is reflected in the Company's turnover figures as follows (1952=100).

	1952	1953	1954	1955	1956
Sales	100	97	119	171	248

This marked increase of the Company's turnover during the last few years has given rise to a corresponding increase in the production of the Calcutta factory and has rendered it desirable to expand further the manufacture of components and also to provide additional space in order to house machinery for metalware production and electroplating at the second manufacturing centre at Loni. By these means the Company will be rendered less dependent on importations from abroad and a corresponding amount of foreign exchange will be saved.

Because of these factors the results for the years 1952, 1953 and 1954 bear no relationship to those of the subsequent years. The profits for the year ended 31st December, 1956 and for the first half year of 1957 show clearly the fruits of the policy of the Company of extending their sales organisation all over India.

FUTURE PROSPECTS AND DIVIDENDS:

The turnover as well as the profits of the Company for the first 6 months of the current financial year exceed the relative figure for 1956 and whilst it is too early to forecast profits for the full financial year 1957, the Directors expect that in the absence of adverse unforeseen circumstances such profits should not be less than those for the year 1956. **The Directors, therefore, have every reason to hope that the results for the current year will enable them to recommend a dividend on the increased capital which will be more than commensurate with the length of time during which the new shareholders will have held their shares and that as regards 1958 with a continuance of the present level of trading a dividend of approximately 10% per annum may be anticipated.** With the additional finance now to be made available to the Company and with the Company's various plans gradually materialising it is confidently expected that profits of future financial years will show an increase consistent with the extension of the Company's activities.

GENERAL INFORMATION:

MINIMUM SUBSCRIPTION—The minimum amount which in the opinion of the Directors is required to be provided in respect of each of the matters mentioned in Clause 5, Part I of Schedule II of the Companies Act, 1956 is Rs. 50,00,000.

UNDERWRITING—The shares now intended to be issued have not been underwritten but the Company will pay brokerage as indicated below.

INTEREST OF DIRECTORS—Mr. P. C. Vink is the Managing Director of the Company and receives remuneration for his services as such.

Mr. D. P. Dunderdale is a partner in the firm of Messrs. Sandersons & Morgans, Solicitors to the Company.

Dr. P. K. Kapre, Mr. H. R. Vorstman and Mr. J. Zantman are full time employees of the Company and receive remuneration as such.

No Director has any financial or other interest in any of the property acquired by the Company within the two years preceding the date hereof or proposed to be acquired by it.

MANAGEMENT—The Management of the Company is vested in and exercised by the Directors. The Company has no Managing Agents.

BROKERAGE—Brokerage at the rate of 25 Naye Paise per equity share will be paid by the Company on allotments made in respect of applications bearing the stamp of a recognised stock broker.

Copies of the prospectus and Forms of Application will not be available at any of the Company's offices but can be obtained from the Bankers named above, at any of their Branches in India, and the following Brokers:

MUKAND IRON AND STEEL WORKS LIMITED

SPEECH OF THE CHAIRMAN, MR. KAMALNAYAN BAJAJ

The following is the speech of the Chairman, Mr. Kamalnayan Bajaj, delivered at the 19th Annual General Meeting of the Shareholders of the Mukand Iron and Steel Works Limited, held at Bombay on Tuesday, the 5th November, 1957.

Gentlemen,

I have great pleasure in welcoming you to this, the 19th Annual General Meeting of the Company, and in presenting to you for adoption the Audited Statements of Accounts for the year ended 31st March, 1957 and Reports of the Directors and Auditors thereon. As the Statements of Accounts and the Reports are in your hands for some time now, with your permission, I take them as read.

The working results of the year have been fairly satisfactory and we can say with renewed confidence that the Company has now definitely turned the corner in its march towards stability and progress. The production of steel bars and rods in the steel re-rolling mills of your Company has increased from 23,610 tons to 32,123 tons in 1956-57, an increase of 35%. The production of steel castings has shown a rise of 63% from 2,549 tons to 4,153 tons. The gross profit is Rs. 27.72 lakhs as against Rs. 16.09 lakhs for 1955-56. All this is indicative of the advance made by the Company in that direction.

It is a matter of great satisfaction to me and my colleagues on the Board that it has been possible for us this time to recommend to you declaration of dividends on ordinary and deferred shares. After the rude shock of partition in 1947 which involved the Company in a loss of its major assets in Lahore, the Shareholders of the Company have been patiently waiting for the last ten years for a return on their investment. I trust they would now feel that the confidence which they placed in the management of the Company all these years has resulted not only in rehabilitating this Company but also in bringing it to its present stage of development and profit-earning capacity.

Expansion Plans

With the growing industrialization in India the demand for steel castings in the country is increasing. The Company has expanded its activities to a certain extent by making improvements. It has further planned an expansion programme for steel castings for which an application has been made to the Government of India under the Industries (Development & Regulation) Act of 1951. It is hoped that the necessary sanction will be granted by the Government shortly.

In order to plan the expansion activities of the Company on an efficient basis and to further improve the existing working, the Company has entered into a technical aid agreement with the well-known British steel foundry, Messrs. David Brown Industries Ltd., England, for a period of 8 years during which the Company will get technical guidance on problems relating to the steel foundry including training facilities for the personnel of the Company in the works of the British company.

Labour Situation

Our relations with labour have, throughout the year, been cordial and happy. As you may have noticed from the chart published in the Annual Report, the average earnings per worker of your Company have increased by 57% over his earnings in 1950-51, while the cost of living index during this period has increased by 13%, thus giving a net increase of 44% in the real earnings of the workers. In the ultimate analysis, after a certain limit, the increase in the workers' earnings will have to be achieved only by increase in his skill and better application of his mind to the work allotted to him as would result in greater productivity.

In order to combat inflationary trends in the economy, of which wage increases are contributory factors, reduction in costs is necessary by increasing productivity. The quality of the products should also improve. For this purpose improvements and modernization in plant and equipment should continue to be made by the industry. I trust that the Government of India would give all necessary facilities to the industry for this purpose, and such foreign exchange requirements as may be essential would be given high priority.

To meet the increasing needs of the Company for finance, the Directors propose to issue new ordinary share capital. Sanction from the Controller of Capital Issues has already been received for Rs. 20,47,475.

Power Supply

In my address to you last year I had referred to certain difficulties. The question of increased power supply was one of them. I am glad to inform you that additional power has since been sanctioned to us by the Government of Bombay. Regarding the rates of electricity, the tariff has recently been revised by the suppliers and there is a slight reduction of rates though not to the extent we desired. The question of railway siding is still pending.

The Tariff Commission which has been entrusted with the work of fixing conversion charges for the Steel Re-rolling Industry for converting steel billets into bars and rods is at present seized with the matter. Its report is likely to be ready in the early part of 1958.

The need of the industry for rehabilitation and expansion was also referred to by me in my speech last year. I trust that the Tariff Commission as well as the Government of India would make, as in the case of the major steel producers and the cement industry, adequate provision in the costs payable to the industry so as to cover the industry's need for rehabilitation, modernization and expansion.

Committee Report

The Committee on Electric Furnaces, Steel Foundries and Steel Re-rolling Mills appointed by the Government of India in July 1956, to which reference was made by me last year, has submitted its report to the Government, which is now on the floor of the Parliament. The Government have not yet taken any final decision on the same. The report has made out a strong case for import of sufficiently large quantities of billets on the ground that the steel rolled by this industry is needed for the projects which are part of the core of the national plan. It has also recommended that the existing rolling mills should be permitted to improve and modernize their plants for better and more efficient working. In the matter of the steel foundry Industry also, the Committee has recommended that existing industries should be allowed to expand. I trust the Government would take a favourable decision on these recommendations at an early date.

The prosperity of the industry in which your Company is engaged, in fact the prosperity of the country as a whole, is linked with the success of the Plan, or rather the hard core of the Plan. We are now amidst the second year of the Second Five-Year Plan. The Plan is encountering difficulties, particularly in the availability of foreign exchange. These difficulties should not dishearten us. As our Prime Minister has repeatedly said, these are difficulties of progress, not of stagnation. The real cause for anxiety is, however, on the agricultural side. In spite of the emphasis on the industrial development in the Second Five-Year Plan, food remains the key to the success of the Plan.

I thank the Executives, Staff and Workers for the efforts made by them in improving the working of your factory, without which it would not have been possible to get the satisfactory results as disclosed in the audited Balance Sheet and Profit & Loss Account which you are going to consider this evening.

a ceiling to-day could be a shower tomorrow!

Don't let a situation like this develop. Act now before the monsoon, and ensure leak-proof roofs by specifying Shalimar Tarfelt. Shalimar Tarfelt is made in India from Indian materials to suit Indian conditions. You can't buy better roof protection.

Save your roof and you save your ceiling
Save your ceiling and you save money!

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

NO CHANGE IN ADVANCES

Wednesday, 13th November.

THE level of advances to trade and industry has remained practically stationary during the past week. There has been a slight fall in the requirements of the cotton industry, and those of the sugar mills are also down. Little change is reported in the needs of the jute mills, but some slight increase has been noted in accommodation against foodgrains. The interbank market is tighter and the call rate is quoting 3½ percent.

It has been a quieter week for bills. Most of the documents coming to hand have been on account of tea sales; gunny bills have been scarce. Remittance continues to be satisfactory. Sterling was stronger during the week due to speculative covering. The current quotations have improved against the dollar and against Continental currencies.

* * * *

Bullion ruled steady last week on good spot demand. The price of silver rose from Rs. 179.75 to Rs. 180.25 quoted today for ready delivery. Forward delivery was at a premium of 25nP. In London, the price was 78½d and in New York it was 90⅝ cents.

Gold ruled steady in sympathy with silver and the price improved to Rs. 110. The sovereign was quoted at Rs. 71.50.

* * * *

During the week ended 8th November, Government of India Treasury bills for Rs. 43,38,50,000 were sold in favour of the Reserve Bank.

* * * *

An increase of Rs. 20.54 crores to Rs. 1,490.98 crores in notes in circulation was the outstanding feature of the return of the Reserve Bank of India for the week ended 8th November, 1957, while the total note issue was Rs. 1.13 crores less at Rs. 1,513.43 crores. Notes held in the Banking Department consequently declined by Rs. 21.67 crores to Rs. 22.45 crores. Foreign securities were reduced by Rs. 9.94 crores to Rs. 301.77 crores and rupee securities were increased by an equivalent amount to Rs. 960.71 crores. Deposits of the Government of India rose by Rs. 1.05 crores to Rs. 54.86 crores but other Government accounts were Rs. 3.44 crores less at Rs. 6.16 crores. Balances of commercial banks declined by Rs. 13.97 crores to Rs. 94.80 crores. Balances held abroad increased by Rs. 3.35 crores to Rs. 19.42 crores. Investments dropped by Rs. 1.81 crores to Rs. 228.95 crores. Other loans and advances fell from Rs. 63.08 crores to Rs 61.75 crores, of which advances to scheduled banks against usance bills totalled Rs. 21.03 crores (Rs. 23.15 crores). Ways and means advances to the Government amounted to Rs. 51.32 crores, against Rs. 49.51 crores.

* * * *

The return of the State Bank of India for the week ended 1st November, 1957, shows a rise of Rs. 2.82 crores to Rs. 369.82 crores in total deposits. Investments in Government securities are up by Rs. 9.95 crores to Rs. 153.88 crores, while other authorised investments are down by Rs. 13 lakhs to Rs. 10.14 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have decreased by Rs. 4.55 crores to Rs. 161.09 crores. Cash and balances are, in consequence, shown at Rs. 56.16 crores, or Rs. 6.43 crores less.

* * * *

The statement of the position of scheduled banks for the week ended 1st November, 1957, shows Demand and Time liabilities at Rs. 754.61 crores (Rs. 19.77 crores on account of borrowings from banks) and Rs. 645.63 crores (Rs. 13.97 crores), compared with Rs. 755.41 crores (Rs. 23.17 crores) and Rs. 640.53 crores (Rs. 13.52 crores), respectively, in the previous week. Cash has declined by Rs. 7.16 lakhs to Rs. 39.86 lakhs, while balances with the Reserve Bank have increased by Rs. 8.62 crores to Rs. 105.11 crores. There is a rise of Rs. 9.93 lakhs to Rs. 403.86 crores in investments. Advances and bills discounted at Rs. 856.78 crores show a drop of Rs. 11.15 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 10.4 percent and 61.2 percent, against 10.2 percent and 62.2 percent.

* * * *

Provisional figures of India's foreign trade by all routes—sea, air and land—on private and Government accounts during July 1957, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: *Merchandise:* excluding transit trade of Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim and Bhutan: exports Rs. 5.544 lakhs, re-exports Rs. 35 lakhs, imports Rs. 8.104 lakhs, total trade Rs. 13.683 lakhs. *Treasure:* exports (including re-exports) of currency notes Rs. 11 lakhs, current coins (excluding gold coins) Rs. 1 lakh, imports of gold Rs. 2 lakhs, currency notes Rs. 451 lakhs, current coins (excluding gold coins) Rs. 2 lakhs. *Balance of Trade:* the merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustments. Subject to this deficiency in import figures, the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs. 2,527 lakhs.

a pilfer-proof package

for every product!

The manufacture of Metal Box's range of pilfer-proof containers and closures is backed by an active Research Organisation. The Central Laboratory in Calcutta assists suppliers in developing improved printing inks, surface finishes and protective lacquers, and maintains strict routine tests for all incoming raw materials to the Metal Box factories; on the spot control of operations is carried out by Branch Laboratories. This ensures pilfer-proof containers and closures of the highest quality, superbly printed and finished. Expert scientific advice from Associates throughout the world is available to assist in solving customers' packaging problems.

PRICES IMPROVE AT CLOSE ON FINANCE MINISTER'S SPEECH REPORT

MARKET UNDERTONE NOW STEADY

Wednesday Evening.

THE share market closed on a rather brighter note after one of the quietest weeks of the year. The speculative activity of the previous week was largely absent. Indian Iron rose to a peak of Rs. 19.14, from which they soon receded to Rs. 18.75. Today's speech of the Finance Minister has brought this evening's closing quotation back to Rs. 18.98 and the undertone of the market is now quietly steady. Other speculative issues have ruled fairly quiet throughout the period.

Investment support has been almost entirely absent from the market. Jute shares ruled quiet with prices steady. Coal scrip have met with little interest. There has been some limited activity in the engineering and miscellaneous sections. Tea shares have been the most active on the market and a number of counters were marked up. Two new issues have been launched this week, Philips India Ltd. and National Rubber Manufacturers Ltd. Both are reported to be finding good support.

Details of the week's trading follow.

* * * *

On the whole the Government security market continued steady with business concentrated in short-dated loans. There was evidence of selling in medium and long-dated issues. Three percent Conversion Loan 1986 was on offer at Rs. 71, at 3% Non Terminable Paper had small buyers at Rs. 71.15. In short-dated loans, 3% 1958 was asked for at Rs. 99.75, 3% 1959-61 hardened further to Rs. 98.65, 2½% 1961 was marked up to Rs. 94.20, 3½% 1961 had buyers at Rs. 99.63, 2¾% 1960 changed hands at Rs. 96.95, with further buyers at this price, and 2¾% 1962 was firm at Rs. 94.20 without attracting sellers; 3½% 1962 was marked up to Rs. 97.60 In medium-dated loans, 3% 1963-65 was in demand at Rs 93.40 and 3% 1964 was asked for up to Rs. 93.68. However. 3½% 1964 was easier at Rs. 97.58 and 3½% 1965 had sellers at Rs. 97.30; 3½% 1967 was marked at around Rs. 97.55 and 3¾% 1967 had small buyers at Rs. 99.50. Among long-dated loans. 3% 1966-68 changed hands at around Rs. 91.15, 3% 1970-75 eased further to Rs. 86, 3¾% 1974 was on offer at Rs. 98.25 and 4% 1972 was marked at Rs. 100. State loans were inclined to be slightly better and there was good enquiry for selected 4% issues. Four percent U.P. 1963 had buyers over at Rs. 98.25 and 4% West Bengal 1963 was asked for at Rs. 99.25. Four percent U.P. 1968 improved to Rs. 96.17 and 4% Madras 1968 was asked for up to Rs. 96.50.

Business in preference shares continued to be on a restricted scale. In jute, Hukumchand were done at Rs. 96 and a small lot of Khardah were reported at Rs. 75. Among miscellaneous issues, British India Corporation were better at Rs. 107. Dalmia Cement Rs. 100 paid-up were reported at Rs. 81.50 and Calcutta Electric met with investment enquiry and improved to Rs. 10.19. Indian Iron & Steel had buyers at Rs. 96.50 and there was some enquiry for Indo-Burma Petroleum at Rs. 84. A small lot of Kesoram second preference changed hands at Rs. 97. Moheema Tea were crossed at Rs. 7.85 and Richardson & Cruddas were offered at Rs. 56. Textile Machinery second preference were done at Rs. 60.

In the banking section. Punjab National were easier at Rs. 65 and United Commercial improved to Rs. 57. Hind Bank were better at Rs. 34 and Hindustan Commercial were sold at Rs. 8.25.

No transactions were reported in railway shares during the period under review.

Cotton textile shares were a dull market and very few transactions were reported. Cawnpore Textiles were marked at Rs. 5.25 and Elgin were unchanged at Rs. 17. Kesoram met with selling pressure and reacted from Rs. 11.75 to Rs. 11.12. Jayshree Textiles were fairly steady at Rs. 6.50.

In coal, Bengal recovered from Rs. 227 to Rs. 228 and Amalgamated from Rs. 15 to Rs. 15.50. Burrakur fluctuated narrowly around Rs. 22.12 and East Indian were dull at Rs. 21.50. New Beerbhoom were crossed at Rs 13.75 and New Manbhoom improved to Rs. 9.75. Central India and Western Bengal changed hands freely at around Rs. 6.25 and Rs. 6 respectively.

The recent enquiry for jute shares appears to have abated, but prices on the whole have kept reasonably steady. Here is a chart showing representative price movements:

	Opening 7th November	Closing 13th November
	Rs.	Rs.
Agarpara ...	8.62	8.50
Anglo India ...	147	146
Champdany ...	136	134
Ganges ...	58	57
Howrah ...	16.62	16.75
Kelvin ...	205	195
Nuddea ...	35.25	35
National ...	19.75	20

In electrics, good business was reported in Calcutta Electrics at around Rs. 13.12. Agra were slightly better at Rs. 124. Other issues were unchanged.

In sugar, Carew were better at Rs. 6.69 while most other issues were shaded. Belsund were marked down to Rs. 10.19 and S.K.G. to Rs. 9.12. United Provinces were unchanged at Rs. 12.87.

In the engineering section, Indian Iron & Steel were at one time taken up to Rs. 19.14, but later in the week a prominent bull operator decided to take his profit and the shares reacted to Rs 18.75, to recover again tonight to Rs. 18.98. Bhartia Steel were easier at Rs. 13.44 but Braithwaite were better at Rs. 27.12. Burn & Co. improved to Rs. 330 and Guest, Keen, Williams to Rs. 28.50. Jessop & Co. met with selling pressure and were marked down to Rs. 23.75, while Richardson & Cruddas sank to Rs. 8.31. Textile Machinery were at one time done up to Rs. 17.40, but profit-taking at the close brought the price down to Rs. 17.20.

In paper, India Paper Pulp were better at Rs. 19.75 and Orient, after being marked up to Rs. 25.20, reacted at the close to Rs. 25.10. Titaghur Paper improved to Rs 32.50.

In cement, Assam Bengal were reported at the lower rate of Rs 4.12 and there were sellers of Sone Valley at Rs. 5 against an opening quotation of Rs. 5.25. Orissa Cement were steady at Rs. 12.62 while Dalmia were unchanged at Rs. 9 87.

In insurance, Concord of India were taken at Rs. 11.62 and Ruby General changed hands at the higher rate of Rs. 6.25. After a long interval Standard General came to business at Rs. 9.50.

In shipping, India Steamship were easier at Rs. 11.81, but India General Navigation were slightly better at Rs. 62.50.

Among miscellaneous industrials, Alkali & Chemical Corporation were better at Rs. 13 and Aluminium Corporation were taken at Rs. 10. Angelo Brothers were slightly easier at Rs. 18.50 as were Balmer Lawrie at Rs. 146. Birds Investment receded to Rs. 13.12 while Clive Row Investments recovered to Rs 9. B.I.C. were sold down to Rs. 4.45. Dunlop Rubber were wanted at

P. P. PARTHASARATHY

Rs. 20-12 and Hindustan Lever were better at Rs. 20.37. Imperial Tobacco improved to Rs. 12.12 and Indian Cables to Rs. 25.50. Martin Burn were steady at Rs. 23.37 and there was a good enquiry for Metal Box at Rs. 25.62. National Insulated Cables were in demand at the higher rate of Rs. 24.50 while National Carbon were unchanged at Rs. 23.62. Rallis India were offered at Rs. 28.50.

In mining, Indian Copper were dull at Rs. 3.01 while Orissa Minerals were unchanged at Rs. 18.12 and Karanpura Development at Rs. 9.75.

There was a fair volume of business in tea shares but it was mostly of an inter-market nature. Mim were done at Rs. 200 as were Nagri Farm at Rs. 20. Sungma at Rs. 11.25 and Tukvar at Rs. 11. Baghmari were traded at Rs. 19.25 and Basmatia and Betjan came to hand at Rs. 25.12 and Rs. 24 respectively. Bishnauth had buyers at Rs. 20 and Brahmapootra and Brooke Bond were quoted at Rs. 4 and Rs. 18 respectively. East India were traded at Rs. 20.50 and Gohpur were wanted at Rs. 22.56. Grob "A" and Grob "B" changed hands at Rs. 26 and Rs. 14 respectively, while Kotamullai were called at Rs. 18. Tezpore moved up smartly to Rs. 19 and Central Cachar, Eastern Cachar and Hattikhira changed hands at Rs. 66, Rs. 4.31 and Rs. 11.5/6 respectively. Chundeecherra and Dauracherra were traded at Rs. 27.50 and Rs. 10.75 respectively, but Gungaram had small sellers down to Rs. 134. Jay Shree were quoted at Rs. 9.81 and Banarhat were done at Rs. 294. Baradighi were quoted at Rs. 19.62 and Bhatkawa advanced to Rs. 22. Birpara were better at Rs. 140 but Hantapara declined to Rs. 140 on publication of a disappointing report. New Doars were quoted at Rs. 271 and Hasimara were wanted at Rs. 22.50. Oodlabari were crossed at Rs. 15.50 and Ranicherra advanced sharply to Rs. 17.00

* * * *

The CENTRAL INDIA COALFIELDS LTD. has earned a profit of Rs. 2.48 lakhs for the year ended 31st March, 1957, as compared with Rs. 2.46 lakhs in the previous year. The dividend is maintained at 5 percent. Depreciation absorbs Rs. 5 lakhs (Rs. 3.97 lakhs). A sum of Rs. 8,401 is carried forward against Rs. 9,927 brought in. Raisings totalled 156,342 tons against 162,721 tons, and despatches were 155,456 tons against 154,307 tons.

* * * *

There is a drop of Rs. 6.67 lakhs to Rs. 19.63 lakhs in the profit earned by OCTAVIUS STEEL AND CO. LTD. for the year ended 31st December, 1956. The ordinary dividend has been reduced from 10 percent to 7½ percent, including a final of 5 percent. Investments reserve gets Rs. 78,000 less at Rs. 2.55 lakhs. General reserve is given Rs. 3 lakhs (Rs. 6 lakhs). A sum of Rs. 1,38,592 has been carried forward, against Rs. 1,25,910 brought in.

* * * *

The GROB TEA CO. LTD. has increased its revenue profit from Rs. 11.79 lakhs to Rs. 15.97 lakhs for the year ended 31st December, 1956. The dividend is 32½ percent, including a final of 22½ percent, compared with 25 percent for the previous year. Provision for taxation is up from Rs. 3.20 lakhs to Rs. 4.75 lakhs. Building and machinery reserve receives Rs. 2.50 lakhs against nil. There remains a balance of Rs. 93,367 to be carried forward, against Rs. 24,588 brought in. The crop amounted to 24,712 maunds compared with 24,559 maunds. The average sale price realised was Rs. 2-6-4 a lb, against Rs. 2 a lb. The estimates for 1957 provide for a crop of 24,350 maunds at an cutlay of Rs. 29.89 lakhs.

* * * *

There is an increase of Rs. 4.29 lakhs to Rs. 7.68 lakhs in the profit of the HANTAPARA TEA CO. LTD. for the year ended 31st December, 1956. The dividend has been declared at 7½ percent against 6 percent. Provision for taxation is Rs. 3.15 lakhs (Rs. 86,500), revenue reserve gets Rs. 1.75 lakhs (Rs. 1 lakh) and depreciation is Rs. 1.90 lakhs (Rs. 1.37 lakhs). There is a carry-forward of Rs. 1,82,614, compared with Rs. 1,75,407 brought in. The crops of Hantapara and Dumchipara amounted to 19,646 maunds and 16,232 maunds, against 19,982 maunds and 14,900 maunds respectively. The average sale price of the former was Rs. 2-1-6 a lb, against Rs. 1-13-5 a lb, while that of the latter was Rs. 2-4-0 a lb, against Rs. 1-12-5 a lb. The estimates for the current year provide for a total crop of 33,300 maunds at a cost of Rs. 51.64 lakhs.

* * * *

The dividend of the GOHPUR TEA CO. LTD. has been cut by 5 percent to 25 percent, including a final of 15 percent, for the year ended 31st December, 1956. The profit fell by Rs. 40 lakhs to Rs. 3.36 lakhs. Provision for taxation receives Rs. 1.60 lakhs (Rs. 70,000). After making adjustments, there remains a carry-forward of Rs. 99,712 against Rs. 87,696 brought in. The crop totalled 596,820 lbs, against 613,588 lbs. The average sale price rose from Rs 2-6-6 a lb to Rs 2-11-4 a lb. Estimates for the current year provide for a crop of 640,000 lbs at a cost of Rs. 1.76 a lb.

Bombay Market

TEXTILES FALL AS HOPES OF DUTY CUT VANISH

CLOSING UNDERTONE BETTER ON FOREIGN AID PROSPECTS

Wednesday Evening.

THE trend in the Bombay stock market was irregular during the past week, although towards the close sentiment improved on short-covering induced by hopes that India might get substantial foreign aid for her development plans. The earlier hesitancy arose largely from the Government's indication that it had no intention of reducing the cloth excise duty. The Export Promotion Committee's report was favourably received, but many doubted whether the Government would do much about it. Reports of labour unrest disturbed operators and the continuing credit stringency tended to restrict activity.

Steels were relatively subdued and Tata Irons closed at Rs. 164 after narrow fluctuations; there was some anxiety over the company's production trends. Indian Irons, after fluctuating irregularly on Calcutta advices, ended at Rs. 18.76.

Textile mill shares fell sharply on the indication that the cloth excise duty would not be cut, but subsequently there was an improvement on short-covering. Bombay Dyeing eased to Rs. 50.70 but Century rose to Rs. 395 on rumours of a bonus issue. Kohinoor were quiet at Rs. 257.50.

Miscellaneous industrials moved in sympathy with the general trend. Among sugars, Belapur rose to Rs. 247 on announcing a good dividend, while Phalton were wanted at Rs. 146 because of rumours of an increased distribution. Steamship company shares were fairly maintained on talk of bigger earnings, and Scindia Steamship rose to Rs. 17.16. Among other issues, Killick Industries were a strong feature at one time. National Rayon moved narrowly around Rs. 210, while Associated Cements were easier at Rs. 152. Banking and electricity shares were mostly steady.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations Highest for the week, Lowest for the week, Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paise].

What's the job going to cost!

Before you buy your earthmoving equipment find out the job-costs

It's the *total job cost* that should be considered and not *only the purchase price* of equipment. Get the best for your job – buy "Caterpillar" earthmoving machines. You will have less downtime, lower operating costs, better service and ready supply of parts.

Pushing, pulling or carrying, on tracks or rubber, "Caterpillar" will move more earth in less time at less cost per cubic yard than any other machine. The high efficiency of Caterpillar performance more than offsets the initial costs.

KEEP AHEAD OF SCHEDULE WITH

CATERPILLAR*

*Caterpillar and Cat are Registered Trademarks of Caterpillar Tractor Co., U.S.A.

LET US RECOMMEND THE RIGHT MACHINE FOR YOUR JOB

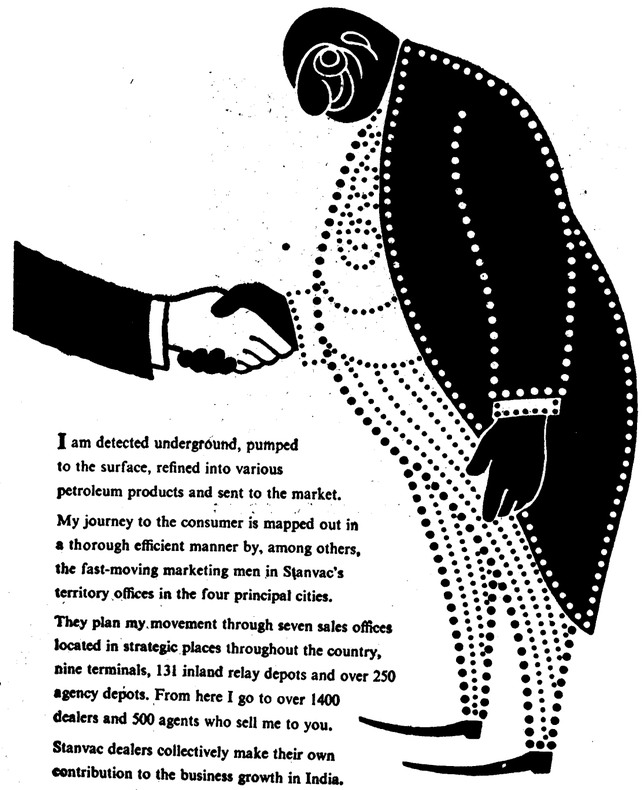
SOUTH EASTERN RAILWAY
TENDERS

Sealed tenders are invited for supply of the following items :—



Tender No. PB/7/57/GM/753B(57) for supply of 46,000 Nos. of Cast Iron Blocks Vacuum Brake for Carriage & Wagon to IRS Drg. No. W900, Alt. 3 and 13,000 Nos. of Cast Iron Brake Blocks for WP & WG Class Tenders to IRS Drg. No. L/BG 604, 606 and 607.

Tender forms are obtainable from the Controller of Stores, Garden Reach, South Eastern Railway, Calcutta-23 (PB Section) on remittance of Rs. 5/- per copy per tender (not refundable) by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta-23 by local firms. Earnest money against the tender is Rs. 3000/-. Closing date of the tender is 10-12-57 at 12 noon. Firms not on the Railways list of approved contractors must enclose a valid Income Tax Clearance Certificate along with the earnest money receipt with the tender.

GENERAL MANAGER

"I look forward to meeting you"

ocere (Pronounced 'adi-po-saire')

I am detected underground, pumped to the surface, refined into various petroleum products and sent to the market.

My journey to the consumer is mapped out in a thorough efficient manner by, among others, the fast-moving marketing men in Stanvac's territory offices in the four principal cities.

They plan my movement through seven sales offices located in strategic places throughout the country, nine terminals, 131 inland relay depots and over 250 agency depots. From here I go to over 1400 dealers and 500 agents who sell me to you.

Stanvac dealers collectively make their own contribution to the business growth in India.

I will tell you more about them later.

STANVAC—*the name that stands for progress*

SELECTIVE DEMAND FOR INDUSTRIAL EQUITIES

MODERATE POLICY EXPECTED FROM TRADE UNIONS

London, 13th November.

THE main feature of the stock markets during the past week was the recovery in industrial equities on small selective buying. Otherwise prices generally moved within narrow limits and recorded very little change on balance. Business throughout was small. The improvement in industrials was due mainly to selective buying based on the view that the sustained fall since the middle of the year had brought the prices of many issues down to attractive levels which largely discounted the present uncertainties. In addition hopes were rising that the trade unions would adopt a fairly moderate policy towards the Government's recent measures and pronouncements concerning wage increases. Favourable company results, particularly that from the British Motor Corporation, helped sentiment. Wall Street's performance continued to attract a great deal of interest but its effect on the London market was limited since there was no decided trend. Quiet conditions prevailed in gilt-edged throughout, but the tendency was satisfactory in spite of the news of a £3 million Nottingham Corporation issue. Japanese bonds were firm and gained further ground on reports of a plan to speed up the redemption of the external debt. Other foreign bonds and rails were subdued. Oil shares showed some erratic price movements. Sentiment was adversely affected by a survey of falling world prices, but on balance there was very little change. Mining shares were fairly well maintained, with South African gold shares assisted by the news of a rich gold strike on Western Holdings property. Coppers were better, helped by a more optimistic view concerning the price of the commodity. Rubber shares were generally irregular. Small losses predominated among tea shares. Ceylon issues, however, developed a hardening tendency following the Ceylon Government's decision to shelve indefinitely the plan to nationalise foreign-owned estates.

The Money Market

During the early part of the past week, conditions in the money market were difficult. An absence of bill maturities due to the August Bank Holiday three months ago and low cash balances brought money into keen demand, and up to 6¼ percent was paid for non-regular money. Borrowing from the Bank of England was undertaken on two successive days, while only on Thursday, when the market was taking up the majority of the 63-day Treasury bill—now part of the formal weekly Treasury borrowing—did the authorities provide advances to a large extent. Subsequently, credit conditions turned easier. At the weekly Treasury bill tender, the average rates for the two types of Treasury bills on offer were slightly less than in the previous week. For the 63-day bill, the rate was £6 12s 8.50d percent and for the 91-day bill it was £6 11s 8.42d percent.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 6th November shows that the gold stock rose by $32 million to $22,710 million. Foreign investments fell by $38 million to $353 million. The Federal Reserve's holdings of U.S. Government securities rose by $335 million, including an increase of $159 million in Treasury bills and $176 million in securities under repurchase agreements. Discounts and advances fell by $98 million to $689 million, while the aggregate excess reserves of member banks rose by $3 million to $233 million. The daily average excess reserves of member banks rose by $75 million to $423 million, while their daily average borrowings rose by $114 million to $817 million. Business loans of the New York city banks declined by $44 million to $11,601 million, compared with a rise of $80 million to $11,028 million in the corresponding week of last year.

U.S. Cotton Crop Forecast

The U.S. Department of Agriculture says that its November cotton crop forecast of 11,780,000 bales is 613,000 bales (or 5 percent) lower than the October estimate. The current crop, as on 1st November, is 11.4 percent less than last year's harvest. The yield an acre has declined to 413 lbs but this is still 4 lbs above the previous high in 1956. Department officials say that the decline since the October forecast is due to cool, rainy weather over most of the cotton belt which has delayed harvesting and slowed the maturing of the already late crop. It has laid the crop open to damage from the frost which began late in October. The extent of further losses will depend on weather conditions.

Tea Imports into Eire

The Eire Wholesale Tea Dealers Association has drawn up proposals for the formation of a tea importing company to replace Tea Importers Ltd., the State-supported concern set up in 1941. The new company will have the sole right of importing tea, and will act as a financing and importing agency for traders. It will be financed solely by the trade. The proposals are to be submitted to

New Delhi

PLANNING COMMISSION OPPOSES NEW SCHEMES USING FOREIGN EXCHANGE

ADDITIONAL EXCISE DUTY ON CLOTH TO STAY

(FROM OUR NEW DELHI CORRESPONDENT)

THE winter session of the Lok Sabha opened on Monday. The attendance was good, and the galleries were crowded with visitors. The first among the diplomats to arrive in the gallery was the U.S. Ambassador, Mr. E. Bunker. Question-hour was dull and unexciting. The problem of the Nagas and that of rephasing the second plan attracted some notice. On the rephasing of the second plan, the Deputy Minister in charge stated that the Planning Commission had suggested to State Governments and Central Ministries that no new scheme involving foreign exchange expenditure should be included in the 1958-59 plan. He added: "Where a substantial start has been made, State Governments have been requested to review the requirements of foreign exchange as strictly as possible. Schemes likely to be affected will be determined during the discussions which the Planning Commission proposes to hold with State Governments in December."

The statement of the Deputy Minister means, it is thought in informed circles, that a number of schemes included in the second five year plan will have to be postponed indefinitely, if not dropped altogether. The "rupee elements" of many schemes for which foreign exchange is required have already been raised by the Central Government through additional taxation amounting to Rs. 100 crores which is now in excess of requirements. It is disturbing to find that there is literally a race among certain Central Ministries to take advantage of this excess in internal resources. They have drawn up new "nation-building" schemes which are completely outside the plan. The Railway Ministry, for example, intends to open new hospitals, maternity wards and provide residential accommodation for its entire personnel. Financial commitments are also being made for the proposed three-year degree course in Indian universities, and for the improvement of secondary education. Although foreign aid might be available, a central institute for teaching English is being started at a cost of Rs. 5 lakhs. The pay structure of low-salaried Government servants will have to be upgraded, and it is estimated that at least Rs. 50 crores will have to be found for this. Thus the yield from additional taxation may be entirely spent on non-developmental expenditure, although the money has been raised ostensibly for development purposes. It has been suggested that the better course is to credit all surplus revenue into a development fund which will be later utilised for financing such projects as are now being postponed. Another course is to reduce taxation by not putting into effect those measures which have been enacted to raise additional internal resources. If the resources so raised are utilised for purposes other than development, it may be difficult later to step up the level of taxation in future when more finance will be needed for genuine development work.

No Reduction in Cloth Excise Duty

The Central Minister for Commerce and Industry, Mr. Morarji Desai, has made it clear that the Government does not intend to withdraw the additional excise duty on cotton textiles. He thinks that the stocks which have now accumulated with the mills are a normal feature of the textile trade.

Tea Prices in Europe

The Deputy Minister of Commerce has denied the communist allegation that the high price of tea in European markets is due to the large margin of profits obtained by British exporters. It is largely the high level of taxation on tea which is responsible for its high price in those markets, he states.

Agreement on Russian Credit

For the utilisation of the Russian credit of 5 million roubles (or Rs. 62 crores) an agreement between the Governments of India and Russia was signed last week. The credit, according to the agreement, will be used for establishing in India a heavy machine building plant, a coal-mining machinery plant, an optical glass factory, a thermal power station and enterprises for the mining and treating of coal. The combined cost of the heavy machinery building project and the mining machinery project is placed at Rs. 35 crores, including a foreign exchange element of Rs. 26.5 crores. The heavy machine building project will have an output of 45,000 tons of machinery in the initial stage capable of being expanded later to 80,000 tons of machinery a year. The principal items which it is intended to manufacture in the initial stage are coke ovens and by-product plants, blast furnaces, steel melting furnaces, ore-crushing and grinding equipment, cranes, rolling mills and spare parts. The estimated cost of the plant, excluding working capital, cost of township, etcetera, is Rs. 20 crores in the first stage which will have an output capacity of 45,000 tons of machinery a year. In due course, it will be possible to expand the plant to produce 165,000 tons of machinery annually. The mining machinery project will have a capacity for an output

crores, included in which is Rs. 85 lakhs of foreign exchange. All three projects are outside the second five year plan.

Developing Korba Coalfields

About Rs. 8 crores of the Russian credit will be utilised for the development of the Korba coalfields. In terms of foreign exchange, the cost of mining one million tons of coal by open-cast methods will be Rs. 2 crores, that of mining 1.5 million tons of coal from underground will be Rs. 3.2 crores, the washery to treat this coal will cost Rs. 2 crores and a central workshop will cost Rs. 80 lakhs. The total cost of the project is Rs. 12.92 crores, of which Rs. 4.92 crores is the rupee counterpart.

Outside the Russian-aided project, there are also plans to raise 1.6 million tons of coal from the Korba coalfields at an estimated cost of Rs. 4.72 crores, including Rs. 2.23 crores worth of foreign exchange, of which almost half has either been spent or is in the process of being spent.

Neyveli Lignite Project

The Neyveli thermal plant, it is estimated, will cost Rs. 20 crores, including Rs. 16 crores worth of foreign exchange, which is now being provided by the Russians. The Neyveli lignite scheme is an integrated project, estimated to cost Rs. 68.8 crores, the mining part of which envisages the production of 3.5 million tons of lignite a year at a capital cost of about Rs. 16 crores. The most important of the constituent schemes is the generation of 200,000 kW of electric power in a thermal power station, utilising lignite as fuel. Next in importance is the manufacture of fertilisers. The proposed fertiliser plant will produce fertilisers with a fixed nitrogen content of 70,000 tons a year in the form of urea at an estimated cost of Rs. 21 crores. The balance of the lignite, after meeting the requirements of the power house and the fertiliser plant, will be utilised for producing briquettes. It is proposed to set up a plant for the production of 714,000 tons of lignite briquettes, which on carbonisation will yield 380,000 tons of carbonised briquettes and by-products.

The Indo-Russian agreement has increased the importance of this project. Unless the mining project is completed, the thermal power station cannot be commissioned. The mining part of the lignite project requires Rs. 3.8 crores more of foreign exchange. Attempts are being made to obtain it on deferred payment terms.

The foundry-forge project, similarly, has to be taken up to provide heavy castings and forgings for the heavy machine building project. The capacity of the plant is planned as follows :

Steel castings	28,000 tons a year	up to 100 tons piece weight
Iron castings	30,000 tons a year	up to 100 tons piece weight
Forgings	27,300 tons a year	up to 100 tons piece weight

As already reported, negotiations for setting up this plant on a deferred payment basis, the first payment being in 1961, are going on with Czechoslovakia. Two other projects, recommended by the British heavy engineering mission, are still under discussion. They are a heavy machine tool project at an estimated cost of Rs. 5 crores, and a heavy structural and plate and vessel project at an estimated cost of Rs. 6.3 crores. Since the British mission's report, the German firm of Wagnar has submitted a project report on the heavy machine tool project.

Technical Training

The Indo-Russian agreement provides for training facilities in Russia for the Indian technical personnel required for these projects. The credit, bearing an annual interest of 2½ percent, is to be repaid in 12 equal yearly instalments, beginning from one year after the completion of delivery from Russia of machinery and equipment, for each enterprise. The credit will be used to finance the purchase of the equipment, machinery and materials, as well as for getting technical assistance. It covers all requirements of foreign exchange for these enterprises. Provision has been made for further credits if the amount now agreed upon for the purposes mentioned does not eventually prove adequate. The establishment of these large-scale and modern enterprises will enable India to organise for the first time the indigenous production of heavy machinery and equipment necessary for the further development of its key industries, in accordance with the targets of the second five year plan.

Iron Ore Supply to Japan

A broad understanding was reached last week between India and Japan to ensure the supply of

two generations at your service

WHEN Sven Wingquist founded SKF in 1907, he inaugurated right from the start a technical advisory service for users of SKF products. It offered them—as it has ever since—assistance with the selection of bearings, the preparation of complete bearing schemes, advice on mounting, lubrication and maintenance. For 50 years SKF has helped to ensure the use of the right bearing in the right place in machinery, vehicles, instruments and other applications of every conceivable kind throughout the world. It has carried out systematic research into bearing schemes and helped engineers everywhere to utilize bearings to the full, both technically and economically.

Innumerable bearing problems have been solved by SKF technicians ... and each solution has added to the vast storehouse of technical knowledge and experience available to every SKF engineer.

Today a new generation of specially trained SKF engineers is available in over 250 SKF offices throughout the world to solve the bearing problems of tomorrow. They are there to assist you in *your* progress. They are experts at their job — and they are backed by modern research departments. With the accumulated experience of the older generation at their disposal, they are ideally equipped to serve *you*. Why not put them to the test?

SKF 50 1907 1957 FIFTY YEARS OLD...AND LOOKING AHEAD!

THE SKF BALL BEARING CO. PRIVATE LTD.

iron ore to the latter on a long-term basis. Under the scheme. India and Japan will collaborate in developing iron ore mines and railway and port facilities. After the preliminary examination of technical and other issues, it has been found that it will be advantageous to take up the Rourkela-Visakhapatnam scheme for development under this project. The quantity which Japan will buy from India when the project is completed, it is expected, will be about 6 million tons a year, including 1.5 million tons of ore for which a contract was concluded between the State Trading Corporation and the Japanese steel industry in March. A technical mission from Japan is expected in India during December. India and Japan are likely to approach the U.S.A. for financial assistance for the project.

Losses of Air Corporation

Comments have been made on the interview which the Communications Minister, Mr. Humayun Kabir, recently gave to the Press. Mr. Kabir, it is reported, stated that the Government had ordered an enquiry into the affairs of the Indian Airlines Corporation. He also disclosed the Government's decision to sell the eight *Herons* which had cost the Corporation Rs. 800.000. He added: "If suitable customers are not available, the *Herons* might be used for carrying V.I.Ps." According to its 1956-57 report, the Corporation's loss for the year amounted to Rs. 1,08,78 859. In this connection, it will be recalled tat the former Communications Minister, by a stroke of his pen, has given away Rs. 52 lakhs a year by enhancing the wage bill of the Corporation. In 1956-57, the expenditure on salaries and allowances was Rs. 295.85 lakhs. excluding the Corporation's contribution of Rs 15.46 lakhs to the employees' provident fund. There is, thus, an increase of Rs. 21.85 lakhs under these heads, even though there was a slight fall in the strength of the staff during the year. "It is noteworthy" says the report, "that the total increase on this account since nationalisation is about Rs. 84 lakhs. The wage bill of the employees has not yet reached the degree of stability expected, as the latest demands are pending for adjudication before the National Tribunal appointed by the Government of India under the Industrial Disputes Act." If the increase of Rs. 84 lakhs is in the wage bill alone, the balance of some Rs. 25 lakhs can easily be explained. An enquiry is. however. called for on the purchase of *Herons*. They were supposed to develop the feeder routes. According to the 1956-57 report of the Indian Airlines Corporation, the average utilisation of *Herons* increased from 834 hours a year to 1,104 a year.

Rise in Clerical Employment

An era of austerity has begun in India because of the foreign exchange crisis engineered by an over-ambitious plan, on the one hand, and the food crisis following the drought conditions prevailing in certain parts of India, on the other. The Government has been emphasising the need for austerity in all walks of life. To enforce its plea, legislation such as the Wealth Tax Act and the Expenditure Tax Act was passed by Parliament during its last session. All new building projects have been postponed. The ministers have imposed a voluntary 10 percent cut in their emoluments. Imports, particularly of consumer goods, have been cut to the bone, if not banned.

In contrast, the employment of civilian personnel by the Central Government, excluding the railways, has maintained its upward trend, as will be seen from the following figures relating to clerks:

January 1957	...	...	216,798
February 1957	...	...	217.238
March 1957	...	...	217,536
April 1957	...	...	217.325
May 1957	...	...	220 280
June 1957	...	...	223,432

The total increase in only six months is 6,634.

Indians in Foreign Firms

An analysis of the returns relating to the employment of Indians in foreign firms in India, as on 1st January, 1957. shows that the level of their employment in these concerns on salaries of Rs. 1.000 and above has increased further. The position of Indians and non-Indians in these pay groups is shown below:

Year	Number of Indians	Number of Foreigners	Total
1947	504	5,844	6,348
1948	742	6,360	7,102
1949	1,085	6,709	7.794
1950	1,406	6,871	8.277
1951	1,784	6.953	8,737
1952	2,290	7.104	9,394
1954	3,346	7,008	10.354
1955	3,995	6.810	10,805
1956	4,685	6.566	11.251
1957	5,614	6,025	11,639

An analysis of the returns shows that the proportion of foreigners has recorded a decline over 1956 in all categories of companies, except automobile dealers and manufacturers. The number of Indians has increased almost 11 times over the last decade in foreign-owned and controlled establishments. The break-up of the salary groups of Rs. 1.000 and above shows that in the salary group of Rs. 1,000-1,500, Indians occupy 80 percent of the posts now. against 67.9 percent in 1956 and 61.5 percent in 1955. In the next salary group of Rs. 1,501-3,000, 40.9 percent of the posts are held by Indians, against 34 percent in 1956 and 27.4 percent in 1955. In the highest salary group of above Rs. 3,000, 11.4 percent of the posts are filled by Indians, compared with 10.6 percent in 1956 and 7.9 percent in 1955.

The number of categories of firms in which the proportion of foreigners is three-fourths or more in the salary groups of Rs. 1,000 and above, has also declined from three on 1st January, 1956, to two on 1st January, 1957. These two categories are jute mills and presses (79.6 percent); an plantation companies (79.5 percent). The proportion of foreigners has since declined in both.

Foreigners held 50 percent or more, but less than 75 percent, of the posts in the following seven groups of foreign companies on 1st January, 1957: banking 71.2 percent; transit and transport 60.7 percent; other minerals, etcetera 58.5 percent; managing agency 55.9 percent; automobile dealers and manufacturers 54.2 percent; other agents, merchants, etcetera 54 percent; and insurance 53.7 percent. The proportion of foreigners is less than half in the remaining 11 groups of foreign companies: sugar and breweries 48 percent; machinery, tools, equipment and engineering 45.1 percent; printing, publishing and stationery and allied trades 43.4 percent; cotton mills and presses 40.7 percent; metals, including iron and steel, 38.3 percent; chemicals and allied trades 35.2 percent; oil 33.1 percent; coal 31.2 percent; leather, rubber (trading and manufacturing companies) 28.5 percent; public utility 27.4 percent; and all other companies 49.3 percent.

Of the total of 6,025 foreigners employed in foreign companies on salaries of Rs. 1,000 or above, 88 percent are British; Americans constitute 3.6 percent. Ninety-six Swiss nationals were employed in 1957, against 108 in the preceding year. Italians, Austrians, Greeks, Hungarians, Irish, Australians, Pakistanis, Japanese, Czechs and Indonesians showed increases. whereas all other nationals were either unchanged or decreased during 1956.

Increasing Number of Jobs

It may be interesting to note that the volume of employment offered by foreign-owned and controlled industrial and commercial concerns in India, in the salary groups of Rs. 1,000 and above, has nearly doubled in the ten years since independence. This can be attributed to the coming into India of a number of new foreign firms, as well as the expansion of the activities of many of the existing concerns. For the same reasons, the number of foreigners has increased during the ten-year period—from 5,844 in 1947 to 6,025 in 1947. Besides, there is a considerable number of foreigners, particularly technical experts, employed in Indian-owned concerns.

The number of Indians employed in superior cadres in foreign-controlled and owned companies has increased nearly 11 times since 1947. The analysis of their employment in foreign firms in 1955 showed that in the salary groups—Rs. 300 to Rs. 400 and Rs. 500 to Rs. 999—the cadres had been almost entirely Indianised.

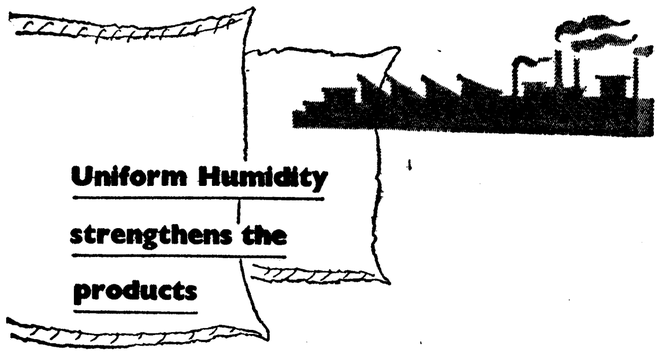
Foreign Travel

Some foreign airlines are exploring the possibilities of tourism in India. Air France is bringing a party of 15 tourist exports to conduct a survey. Pan American is likely to bring a similar party from Austria. The following figures (in crores of rupees) indicate the balance of payments on account of foreign travel for the first half of the current year.

January-March 1957	Credit	1.9
	Debit	1.3
Balance	(+)	.6
April-June 1957	Credit	0.9
	Debit	2.1
Balance	(−)	1.2
January-June 1957		
Balance	(−)	.6

Canadian Food Aid

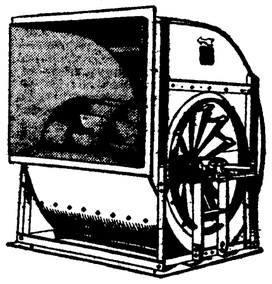
The Canadian assistance of $7 million worth of wheat to India, enquiries show. is outside. and in addition to. her normal contribution under the Colombo Plan. The Canadian decision has been welcomed.



Relieving Port Congestion

Three recommendations, it is believed, have been made by the British experts who visited India recently, to relieve the congestion in Indian ports. One is the installation of mechanical devices to handle bulk cargo such as ores and foodgrains. The second is that minor ports should be developed to divert traffic away from the major ports. The third is the development of Calcutta, Visakhapatnam and Madras into modern ports with up-to-date equipment. The recommendations are being examined by the Government.

Consumer Marketing Survey



A consumer marketing survey will shortly be undertaken by Ford Foundation experts. it is learnt. The aim is to advise India how best to increase her exports of consumer goods to the U.S.A. The survey will indicate the trends of U.S. demand and how Indian goods "can be adapted" to the requirements there. The survey is being undertaken following the visit of the U.S. Trade Mission early this year, which recommended the hiring of a U.S. merchandise expert by India for the promotion her exports to the U.S. market through an aggressive sales campaign. The Government of India has been unable to implement this suggestion due to foreign exchange difficulties.

OFFICIAL POLICY ON LABOUR RELATIONS

NO INTENTION OF INTERFERING WITH COLLECTIVE BARGAINING

(FROM OUR LONDON CORRESPONDENT)

FOR the present, so far as the economic situation is concerned, there is a general tendency on all sides to mark time and wait for some specific indication of the ultimate effect on labour relations of the Government's categorical declaration that the criterion for inflationary wage awards must be whether or not they are matched by increased production, and that for itself as an employer, it cannot finance inflationary awards. The rejection of a Whitley Council award of a 3 percent increase for certain employees in the National Health Service by the Health Minister has served to illustrate the Government's point, and in spite of the assurances of official spokesmen, including the Prime Minister, that there was no intention of interfering with collective bargaining or arbitration in the matter of wage and salary claims, this has been taken both by the Opposition as well as the trade unions as confirmation of the Government's intention to provoke a "showdown." It is significant, however, that although the anti-inflationary measures are still criticised and opposed, this is being done more circumspectly and with much greater caution than the initial outburst presaged. If the Prime Minister secured co-operation from the other side of industry as a result of his attendance at the Institute of Directors' dinner, as he might well do, concerning profit margins and dividends, any precipitate action by labour could well have an unfavourable effect on public opinion. The Gallup Poll, for all its limitations, still apparently has a considerable effect on Britain's political thinking.

New Parliamentary Session

Traditional ceremonial marked the opening of the new session of Parliament by Her Majesty the Queen last week, but the speech from the throne outlined a comparatively slight legislative programme without much that should prove unduly controversial. The intention, apparently, is to leave Ministers as free as possible to tackle what is considered the main task for the immediate future —curing the economic malaise. Only ten Bills are listed, with pride of place accorded to the one to raise national insurance contributions so as to enable a general increase in the various benefits, such as retirement pensions, widows', unemployment and sickness allowances, war disablement, industrial injury and disablement, maternity and death grants and National Assistance. Old age pension, with almost 5 million recipients, is raised by 10s a week, and the other benefits proportionately, to represent an improvement of 25 percent overall. Insurance contributions, which increase by 2s a week by the employee and 1s 11d by the employer, rise by as much as 30 percent. In addition, the free tobacco token scheme for old age pensioners has been abandoned. The immediate extra cost to the exchequer will be £35 million, partly offset by smaller savings on National Assistance and the tobacco token scheme, but the long-term liability will be increased substantially. Nevertheless, the Opposition has dubbed the increases as "niggardly" and it contends that the lower-paid worker will find the increased contribution too great a burden. The Government hopes to get the Bill through Parliament this month so that the increased rates may be paid from January.

Among the other Bills is one on import duties, to revise and codify existing legislation based on the Export Duties Act, 1932, the Safeguarding of Industries Act, 1921, the Ottawa Agreements Act, 1932, and various Finance Acts so as to clear the way for participation in the European free trade area; another establishes a conservancy authority for Milford Haven to permit of its development as a major European oil port; and two others relating to the conferment of full internal self-government to Singapore and the integration of Malta with the U. K.

Reserves Rise in October

A rise of $243 million in the sterling area's gold and dollar reserves during October to bring them to $2,093 million following as it does on falls in September of $292 million and in August of $225 million, obviously calls for some explanation. During the month $250 million was drawn from the credit arranged with the Export-Import Bank of Washington late last year. But for that there would, of course, have been a deficit. On the other hand, $133 million was paid to the E.P.U. for September and old debts. Neither of these items actually concerned transactions in October, and if they are excluded the reserves are shown to have gained a net sum of $126 million. According to the Treasury, the United Kingdom in October had a provisional surplus with the E.P.U. of £9 million. compared with deficits of £62 million and £63.5 million in September and August, respectively. When this is settled later this month, 75 percent, or $16 million, will be added to the reserves in gold or dollars. If we put this back where it belongs. the real net inflow to the reserves in October works out at $143 million—the best figure since the $165 million increase in May 1954, which reflected speculation on a rise in sterling. and might even. have been about $50 million more but for the temporary withdrawal of French private balances for the month-end.

The flight from sterling, which began in August and was brought to a halt on 19th September when the British Bank rate was raised to 7 percent, is at last showing signs of being reversed. It is estimated that about one-quarter of the money which then left London has now come back, which fits in with the view expressed by Continental bankers that only short-term speculation or overdue payments have been covered so far. The majority, who can apparently still afford to wait, are obviously holding back until they can see the outcome of the struggle over wages. Nevertheless, the $160 million or so of foreign exchange which would seem to have been skimmed off the market as a result of October movements represents a fair response to the Government's measures, even though Britain is still a long way off a full restoration of foreign confidence in the pound.

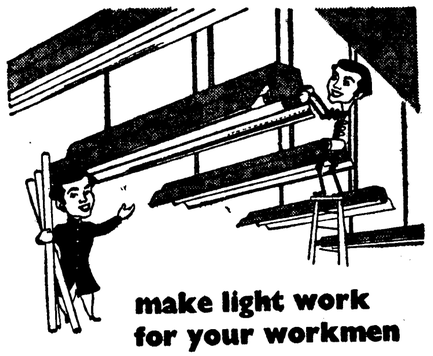
Car Hire-Purchase Sales Checked

One field in which the expansionary trend has been checked by the higher Bank rate is that of motor vehicle hire-purchase. Following the rise the major finance houses raised their charges by 1 percent on 1st October. In that month vehicle hire-purchase contracts, now reported by Hire Purchase Information, were only 665 higher at 82,945 compared with September. Last year there was a jump from 50,810 in September to 58,856 for October. A striking feature of the returns is a fall from 7,992 to 7,483 in contracts for new motor-cars, in spite of the incidence of the Motor Show. Last year they advanced from 4,217 to 5,570.

Mercantile Bank Capital Scheme

The Mercantile Bank of India is following the example of the "Big Five" by proposing to streamline its capital structure. It is proposed to cancel the uncalled liability of £2 10s on the "A" and "B" £5 shares, to capitalise £1,470.000 from reserves and make a one-for-one scrip issue after sub-dividing all shares into 10s units. All the shares will then be amalgamated into one class of £1 ordinary to provide a total capital of £3 million. The bank's existing issued capital consists of £1,500,000 in "A" and "B" £5 shares, all 50s paid, and £720.000 in "C" £1 shares fully paid. On a poll the "A" and "B" shares carry 67.6 percent of the total voting rights against 34.4 percent for the "C" shares.

Under the proposed scheme, the "A" and "B" units will be converted into ordinaries carrying 51 percent of the total vote, while the "C" will carry 49 percent. The Board, headed by Sir Kenneth Mealing, considers that the effect of the proposed elimination of the special rights and liabilities attached to each class should not involve any further adjustment of rights. If the scheme goes through, the Board will restore the published reserve fund to £2 million by a transfer from inner reserves. The Capital Issues Committee has approved the scrip issue. The new shares will rank for the full amount of any dividend declared after their issue, and the Board has forecast that for the current year the final will be 12½ percent, the same as the interim paid in August. Subsequent dividends, it says, must necessarily depend on results. It is proposed to change the name to Mercantile Bank, Limited.



Move for 40-hour Week

The trade unions may be expected to press their shorter week ideas with vigour now that the T.U.C. has accorded full support to the proposal, but there is no question as to how it will be regarded by employers. The majority of the latter will almost certainly conform to the views expressed by the British Employers Confederation, which points out in a statement just issued that in present circumstances the general adoption of a 40-hour week without loss of pay will add at least £1,000 million to the national wage bill in the course of a full year. A standard week of 44 or 45 hours is widely adopted in industry now, and a reduction to 40 hours without loss of pay will mean an increase of 10 percent in hourly wages. Taking into account the average of four hours' overtime at present being worked by men throughout the manufacturing industry, a reduction of the standard week to 40 hours will mean approximately eight hours' overtime at a rate based on the increased hourly rates. "The total effect of these increases in hourly rates and overtime pay will be to increase manufacturing costs by approximately 2s 6d in the pound, with corresponding increases in prices to the consumer. It is not possible to qualify the effect which these increases in manufacturing costs will have on overseas markets, but they will inevitably mean that we should be priced out of overseas markets to a substantial extent, with resultant unemployment in this country." The idea that working hours could be reduced to 40 a week and overtime abolished, adds the statement, is "completely unrealistic" in present circumstances.

Brevities

The former chairman of the Cotton Board, Sir Raymond Streat, has joined the Board of Simpson and Godlee.

Unemployment went up by 8,000 between mid-September and mid-October, bringing the total number of workless to 275,000, against 248,000 at the same time last year. The present level still only represents 1.3 percent of the total number of workers.

make light work for your workmen

ROLE OF BANKS IN ECONOMIC DEVELOPMENT

GREATER CONTROL OF MONETARY SYSTEM URGED

(FROM OUR BOMBAY CORRESPONDENT)

IN an address to the Rotary Club of Ahmedabad, Mr. N. V. Gadgil, vice-chairman of the State Bank of India, has said that there will be no immediate insistence on the nationalisation of private banks provided they continue to play their part in economic development. They must function within the framework of the economic policy which is to establish a socialist pattern of society. He says that banks are not meant to confine their activities to furthering the cause of capitalistic programmes; they also have a public service to perform. "There is no field of activity which is not influenced by money, and hence the necessity of planned management of money matters in any country which aspires to be progressive. What blood is to the body, the banking system is to the entire economic life of the country. Hence there must be greater control of the banks in India by the Reserve Bank and the banking business should be carried on less for profit and more for development, both industrial and commercial, of the country." Meanwhile, Mr. George Curran, vice-president of the International Banking Department of the Bank of America, has declared that the Indian banking system is sound but the main problem is the quantum of foreign exchange which India will earn over the next five years. He claims that his bank is a progressive institution which is not tied down to traditional banking practices. The Bank of America has given around $20 million in terms of short-term credits to various industries through the medium of Indian exchange banks. This is in addition to the $3.5 million advanced to Tatas and $2.5 million to Air-India International. His bank will be prepared to consider further advances if the need for additional short-term credit is felt. Requests for further long-term credits will also be sympathetically considered. Referring to the recent visit of the Indian Finance Minister to the United States, Mr. Curran has said that it has done a great deal of good and will produce results in due course. It is up to India to invite the U.S. investor who will be prepared to take a chance considering her vast productive potential.

Competition from China

Reports reaching here from Tokyo indicate that Japanese commercial interests are seriously perturbed at the growing competition from Communist China for trade in the south-east Asian countries. As some of the items concerned form part of India's traditional exports, it may well be that the latter will be faced with another serious competitor. The Japanese Foreign Office notes that the streamlining of China's organs handling trade with south-east Asia, its policy of undercutting prices and the extension of special loans to Chinese overseas merchants, have all gone towards making China's economic inroads into south-east Asia successful. Hongkong seems to be a key market for the Chinese. It is said that Japanese coal, which had a monopoly of the Hongkong market since 1955, has now been replaced by coal from China. Japanese cement, window panes and fountain pens have been the hardest hit. Shipments of white potatoes, fruits, mushrooms, dried cuttlefish, salt and dried fish are coming under increased pressure. While Japanese firms are engaged in an aggressive sales campaign, China is reported to have achieved a firm control over the market with the powerful backing of the Bank of China. Hongkong is now said to have become a major foothold for China for acquiring foreign currency. It is estimated to be earning the equivalent of about $200 million a month from Hongkong. China's exports to Indonesia have improved appreciably to cover foodstuffs, leaf tobacco, sheet glass, tiles, bar steel, iron nails and sewing machines, in addition to rice and textiles. The former is competing keenly with Japan in the export of textiles, iron nails, sheet glass and fountain pens. The Chinese Embassy in Djakarta is acting as a trade agency and the Bank of China there is providing Chinese traders with funds for the import of merchandise from their country.

Efforts in Malayan Market

Malaya has been described as Peking's second largest channel for acquiring foreign currency. It also serves as a base for opening up new markets in the south-east Asian region. Exports to Malaya are varied. Prices of Chinese textiles are cheaper than those of comparable Japanese fabrics. Competition for the textile trade in Malaya has stiffened between India, Japan and China. The increased volume of Chinese textile exports to Burma is considered by the Japanese Foreign Ministry to stem not only from Peking's desire to earn as much foreign exchange as possible, but to show its productive power in south-east Asia. Chinese exports to Burma last year, it is said, registered a sevenfold increase over the previous year. The Japanese Foreign Office has noted that China is now trying to strengthen its economic position in Cambodia on the basis of its trade agreement with that country. Active direct trading, however, has yet to begin on a large scale. China has purchased Cambodian rice and corn mainly, it is alleged, for political reasons. Chinese textiles, cement, iron and steel, foodstuffs, drugs and sundry other goods which have arrived in Cambodia have been imported *via* Hongkong although, China, which has an economic mission in Pnompenh, sent some cement, textiles, raw silk and iron and steel to Cambodia in June. As for Ceylon, China has concluded a new five-year barter agreement for the exchange of rice for Ceylon rubber. Peking has agreed to supply Ceylon, free of charge, with commodities equivalent in value to Rs. 15 million a year for improving the rubber plantations there. Trade between India and China is being conducted on the basis of a trade and payments agreement which covers some 100 items. The Japanese Foreign Office says, however, that not many items have been traded so far. About 90 percent of India's imports from China consist of industrial materials. The Chinese export outlook in India is said to be sluggish. The fresh threat to Japan is, however, that Peking is trying to increase its raw silk and paper exports to India.

Increased Activity in Spot Cotton

Although the Jarilla March cotton contract was quoted at Rs. 693 a candy, the volume of trade was somewhat larger following increased activity in the spot market. The new season's crop has started moving and it is reported that arrivals in the Punjab and Berar markets are somewhat in excess of 25,000 bales. Marketing has begun in Khandesh. Business in Gujerat will begin three weeks earlier than usual following satisfactory weather conditions. Exportable varieties remain neglected and prices have declined by around Rs. 10 a candy. This follows the currency difficulties of Japanese importers. In any case, the prices of comparable Pakistani and U.S. growths are lower than those ruling in India. Foreign growths are in favour and India has booked substantial quantities of Egyptian cottons including Karnak, Menufi and Giza 30. The special import quota of 10,000 bales of Egyptian cotton with a staple of 1.3/16in. has been taken up. Some business has also been done in Uganda's new crop. Of the 50,000-bale import quota covering the lower varieties of East African cottons, 21,000 bales have been licensed.

Piecegoods Dull

The piecegoods market was dull on uncertainty concerning the Government's excise duty policy. The trade is cautious and transactions are confined to immediate needs. On the export side, satisfactory enquiries have been received from the Sudan and Indonesia. It is reported that import licences will soon be issued to the joint venture corporations in Burma, and shippers here believe that India will be able to sell substantial quantities of cotton goods to that market. Mill production last month is estimated at 422 million yards bringing the total for the first ten months of the year to 4.445 million yards, against 4,397 million yards in the corresponding period of last year. Exports for the first ten months of this year from the port of Bombay amounted to 669.43 million yards, against 572.48 million yards in the corresponding period of last year.

Yarns Listless

The yarn market was listless following reports that stocks of rayon piecegoods were mounting. Some mills in upcountry centres are perturbed over the fall in offtake and are reported to be considering the suspension of production. The rayon 120D December delivery contract moved between Rs 808 and Rs. 816. The 2/40 December delivery staple fibre contract fluctuated between Rs. 539 and Rs. 545.

LONDON INSURANCE LETTER

INCREASE IN PREMIUMS FROM INDUSTRIAL LIFE POLICIES

BRITISH companies are watching closely for signs of the effects of the new economic trend on demand for life assurance. The trend itself may, of course, change, but on the assumption that the era of "easy money" is, in fact, ending it is reasonable to suppose that policies will become more difficult to sell. If the campaign against wage increases succeeds, or if wage increases are granted and cause appreciable unemployment because labour becomes too dear, the trend in favour of industrial life assurance will probably be reversed, for this "home service" is provided especially for wage earners. Figures published recently show that this branch of the industrial life offices expanded last year more than the ordinary branch in terms of premiums collected although less in terms of new sums assured. Industrial premiums increased £7.8 million to £162.5 million and ordinary premiums £5.5 million to £100.8 million. Industrial new assurances increased £12.9 million to £313.1 million and ordinary new assurances £25.6 million to £299.2 million. The industrial branch was still getting more business than the ordinary branch, though its predominance was not quite so marked as previously. The end-year fund, however, increased more in the industrial than in the ordinary branch: in the former £56.7 million to £1,137.4 million, in the latter £39.4 million to £745.6 million.

The chairman of the Industrial Life Offices Association, Mr. M. Wilcock Holgate, has pointed out that 1956 completed a decade in which the nation's small savings increased no less than £400 million through the medium of "home service" agents. On behalf of 24 offices they collect premiums from some 10 million British families. While wages have been good the business has increased in spite of the competing demands of increasing hire-purchase commitments in domestic equipment. For many families these commitments will be an unexpectedly heavy burden if the automatic increase in wages, to compensate for increases in the cost of living, fails to materialise, or if unemployment reduces incomes. In such circumstances the offices' industrial branches would naturally find their task more difficult.

Retirement Policies

Published also recently were the statistics of the Life Offices Association and the Associated Scottish Life Offices relating to 1956. As a whole, their business covers a different section of the community, whose incomes are higher. The figures show proportionately larger increases in some categories, in spite of the pressure of inflation on middle-class living standards; but in fact, the sturdier growth was in the business relating to salary or wage earning employees incorporated in schemes sponsored by employers. The special interest of this year's figures is in retirement pensions taken out by self-employed persons and others not in pensionable employment, for the Finance Act of 1956 exempted from income and surtax the premium payable on such policies, so allowing to such persons the same facilities as were available already to many employees. The new business did not, of course, get into full swing as soon as the act was passed; so the figures relate to only a few months of the year—with no basis for comparison with previous figures. The particular observer reacted to them, therefore, according to the amount of business that he had vaguely in mind. Some observers professed to find them encouraging, but more generally they seem to have been considered disappointing. The relevant yearly-premium contracts numbered 22,100, representing a total premium income of £3.3 million—not remarkably impressive, even for a start, when the new provisions had been so widely publicised. Perhaps the class so squeezed by inflation is largely unable to make proper provision for retirement.

However, ordinary life and annuity funds as a whole show that substantial saving is still being effected through the life offices. The increase in funds—broadly representing the year's savings through this medium—was £205 million last year (bringing the total to £2,832 million). It was a little less than for 1955 (£219 million), but more than for any year before then. The overseas business of the life offices does not appear so favourably. Particularly affecting it was India's nationalisation, whereby some £19 million of British offices' assets, and corresponding liabilities, was transferred to the Indian Life Insurance Corporation. However, new business elsewhere, especially in Australia and Canada, maintained new premium income satisfactorily.

An Insidious Hazard

To what extent the insurance market would have been involved in the misfortune at the Windscale plutonium plant if the risks there had not been borne entirely by the Government is problematical, but the episode adds emphasis to the importance of nuclear insurance, which the market here is fully prepared to undertake. It does, however, according to the experts, exaggerate the risks. The overheating of a pile at Windscale occurred, apparently, when the plant was devoted to military experiments for which it was never intended, and we are assured that a similar mishap would be impossible in a nuclear power station (such as nearby Calder Hall). It may be recalled, too, that the committee that investigated the problems of nuclear insurance was advised that the conditions in which a nuclear explosion could possibly occur did not exist in a nuclear power station.

Jute

NEW JUTE PURCHASING POLICY OF MILLS AFFECTS PRICES

STRONG DEMAND FOR GOOD DAISSEE FIBRE

THE current method of purchasing jute which has been adopted by many mills, combined with the heavy demand for all types of fibre, especially Daissee and Tossa, has tended to maintain raw jute rates well above the level expected at this time of the season. In former years, large consumers adopted the policy of entering the market quickly for a short time and making heavy purchases. Prices naturally reacted at first, but in a few days the incident was forgotten and they fell back. Now the mills seem to prefer to buy small quantities every day, which in normal circumstances should have little effect on prices. But when this method is adopted by several mills at once, all taking up 10,000 or 20,000 maunds a day, the total daily volume of business is perhaps greater, and has more effect than if they made separate sallies into the market for large quantities. An impression arises of demand being greater than it actually is, so rates rise. At the same time, there is increased demand in upcountry districts from mill representatives and agents purchasing jute on behalf of their agencies. Much of the jute taken up in this way would normally be despatched to Cossipore for sale, or would be available to sellers upcountry. That this jute is not being made available is obvious from the fact that in Cossipore imports and stocks are the smallest for many years. Consequently, local markets are very firm and sellers are reserved.

The increase in the production of mesta in most of the Daissee growing areas has already influenced the Daissee markets. At this early stage in the season, some of the smaller agencies report that the Daissee crop in certain districts has already been fully bought up. The practice is, therefore, increasing of delivering Tossa to the mills, much of it from inferior districts. The demand for good Daissee from districts that are clearly discernible as such, Sheoraphuli for instance, has increased tremendously. This has drained the Sheoraphuli reserves, and the market there is very firm in spite of other markets showing an easier tendency. One of the main problems appears to arise from the assortment of jute demanded by mills. Most buyers indicate a very low assortment, consisting mainly of Bottom quality fibre, whereas the crop consists of about equal quantities of Middle and Bottom quality. The demand for Bottoms thus far exceeds the supply, which is a further bullish factor in the Daissee markets. Reports on the Daissee delivered so far have been mixed. The quality is not as good as in former years, many parcels being a mixture of Tossa and Daissee. The Sheoraphuli districts, however, have received good reports, and in most cases the moisture content is much less than in previous years.

The jute goods markets have been very quiet, with overseas consumers still showing no interest. In the absence of business and also of bullish factors, the B Twill market has eventually found its own level. Ready goods are now showing a premium of only Rs. 2 or less, as against Rs. 7 or Rs. 8 a short time ago. This is a more normal difference between ready and forward goods, and will probably give overseas interests more confidence in the Calcutta markets than they have shown lately.

THE JUTE MARKETS

Manufactured Goods: Throughout the past week, the jute goods markets were quiet and practically no business was reported. The shipping statistics had a depressing influence, and heavy unloading by nervous holders in the fatka market caused a downward tendency. Overseas buyers were not interested although rumours of foreign enquiries were circulating, and Calcutta mills lost interest as rates declined. Speculative activity decreased towards the end of the week, and the gap between ready and forward shipment B Twills narrowed to only Rs. 2. Price movements were very small compared with earlier weeks, the largest fluctuations occurring in the forward section. Local shippers continued to cover right up to the end of the year, and for the first quarter of next year. Quotations for the April-June period were indicated for the first time after the week-end on account of small enquiries. B Twills opened Re. 1 below January-March, and hessians at a discount of about 10nP. Hessian quotations showed little variation and towards the close were back to the opening levels.

At the opening last Thursday, ready B Twills showed a drop of 25nP to Rs. 115.50 while January-March shipment lost Re. 1 at Rs. 113. Hessian 40in. 10oz. declined slightly to Rs. 41.60 and Rs. 41.70 for the near and forward positions, respectively, and for the rest of the week prices in this section only varied by 5nP or 10nP either way. On Friday, ready B Twills dropped by 50nP but the forward section showed an improvement on shipper enquiry. This phase was short-lived, however, and by Saturday forward shipment was back again to a Rs. 2 discount on ready goods. Over the week-end and on Monday, prices showed little change, but on Tuesday rates improved slightly and April-June quotations appeared for the first time.

At the close on Wednesday, the market was quiet and quotations were as follows :

	Nov. Rs.	Dec. Rs.	Jan.-Mar. Rs.	Ap'-June Rs.
40in 8oz.	34.10	33.80	33.60	33.40
40in. 10oz.	41.45	41.60	41.65	41.60
B Twills	114.60	113.50	112.50	112
Heavy Cees (Plain)	114.25	113.75	112.55	112
A Twills	137.75	137.50	137.35	136
Liverpools	129.75	129	128	127
Cornsacks	114	114	115.50	113

Raw Jute: There was brisk activity in the fibre markets early in the past week, and daily business was reported from several sources. As a result, prices were well maintained and the undertone was firm. Imports in the upcountry agencies remained small against increasing demand, so sellers began to look for higher prices. In spite of this, most of the business was done at the market level or just below. Daissee was again well to the fore in mill interest and good business was done both under contract and over the jetty. During the early part of the week, business totalled 400,000 maunds, but after the week-end buyers paused and only small transactions were recorded. Many sellers were still handicapped by the shortage of money, brought about by the slow payment of bills from mills. Quotations opened last Thursday on the basis of Rs. 29 a maund basis Bottoms for November-December shipment, but dropped by 25nP after the opening. General quotations remained at this level for the rest of the week, with minor fluctuations for individual fibres. Daissee opened at Rs. 31 basis Bottoms, but here too quotations dropped by 25nP.

Business in Northern-Assam fibres was based on Rs. 28.25 to Rs. 28.75 a maund for November and one month's shipment, and Tossa at Re. 1 higher. Murshidabad Tossa was done at Rs. 29 to Rs. 29.25 a maund. A fair quantity of jungli white was done at Rs. 22 a maund. Good business was done in Daissee and prices paid varied from Rs. 30.25 to Rs. 30.75 for one month's delivery. Daissee mesta was done at Rs. 26 to Rs. 26.50 for the same delivery.

The Cossipore markets were steady throughout the week with all imports finding ready buyers. Arrivals were slightly better, a total of 790 wagons being recorded. Prices upcountry still lead Calcutta rates by about 50nP and sellers are not showing much interest in sales direct to mills, preferring to sell to mill agencies, which are paying better prices.

On Wednesday morning, quotations were as follows :

Indian Jute :	Landed at Mills Rs a md. basis Bottoms	Shipment
Assam Northern	28.50	Nov.-Dec.
Purnea Desal	26.50	"
Daissee	30.75	"

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 5th November, 1957	1,144.3	13,036.6	14,180.9
1st to 5th October, 1957	327.3	6.048.0	6,375.3
1st to 5th September, 1957	905.8	10,781.4	11,687.2
	Sacking		
1st to 5th November, 1957	15,285.3	308.8	15,594.1
1st to 5th October, 1957	8,883.5	112.1	8,995.6
1st to 5th September, 1957	9.280.4	155.6	9,436.0

THE PAKISTANI JUTE MARKETS

FIBRE STEADIER: LABOUR UNREST

(FROM A NARAYANGANJ CORRESPONDENT)

THE important news of the past week is the strike started by a section of jute labour. In an attempt to get itself recognised, a labour union, which controls only a small number of the workers in Narayanganj, engineered a strike. By picketing they were able to stop work in most premises on one side of the river in Narayanganj. The strike is apparently being staged by the assorting labour, but as often happens, all workers in the jute factories have stopped work. The effect on the market, however, has not been so severe, as arrivals have been small and those premises which are still working are able to absorb the jute offered. It is understood that the Government is considering giving police protection to those workers who wish to return to work. In the meantime, the strike appears to be fizzling out, and one large company, it is reported, has arrived at a private settlement with its workers.

Due to the strike and a scarcity of arrivals, there has been a very dull market with prices if anything, slightly steadier. Some inter-baler business has been reported, and this, it is thought, may be due to the view in certain sections of the trade that this is the "top of the market," and they should now sell lest prices fall. The overseas buyer remains out of the market, making occasional bids at extremely low prices. He is, in fact, taking up some lots from speculators or balers who have to ship in order to keep on working.

Preparations are afoot for the international jute conference, and apparently it is being taken very seriously both by the visitors and the authorities in Narayanganj. The first delegates will be arriving on 22nd November. While there is an air of anticipation and goodwill which indicates that the conference will start in the right spirit, this correspondent fears that there is little chance of anything concrete resulting except perhaps an improvement in buyer-seller relations.

THE FOREIGN JUTE MARKETS

FIBRE PRICES WELL MAINTAINED

(FROM OUR DUNDEE CORRESPONDENT)

UNCERTAINTY about the future is still a big factor in the jute industry. Consumers seem to be under the impression that prices of raw jute are too dear and that there is the possibility of them touching a lower level, or at least that they cannot go higher. The method of purchase for some months has been of a hand-to-mouth character and buyers have become accustomed to obtaining their requirements practically "off the shelf". The industry is somewhat puzzled by the fact that prices for raw jute are so well maintained in spite of the belief that there are ample supplies to cover all requirements this season. The worst feature of the trade is the scarcity of decent quality fibre. For instance, the few quotations that are being offered for Crack Hearts range from £132 to £140 a ton, and there appears to be no such thing nowadays as Crack Lightnings. Even Mill Firsts are very irregularly quoted at from £115 to £122, in which spinners are showing no interest, while Mill Lightnings rule from £99 to £102. Mill Hearts from £90 to £93 and grade Hearts from £80 to £84, c.i.f. U.K., November-December shipment. Dark jute is of some interest where decent quality is being offered, such as good marks of Daissee-2/3 at from £98 to £103 and grade from £92, at which business has been done, to £94. Grade Tossa-2/3 is still lowest at £106 and fours are from £99 to £102, c.i.f U.K., November-December. Dundee spinners consider these prices too dear. They have not had the same opportunity of doing business at lower prices as they had last year before the Suez

I.J.M.A. STOCK FIGURES FOR OCTOBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of October as follows :

Description	31st October 1957 Lakh Yds.	31st October 1957 000 Tons	30th September 1957 Lakh Yds.	30th September 1957 000 Tons	Increase over (+) or decrease from (−) last month Lakh Yds.	Increase over (+) or decrease from (−) last month 000 Tons	31st October, 1956 Lakh Yds.	31st October, 1956 000 Tons
Hessian cloth and bag	10.82	29.4	10.91	30.3	− 9	−0.9	11.02	30.8
Sacking cloth and bag	9.22	37.8	9,47	39.1	− 25	−1.3	18.68	77.3
Others		9.0		7.6		+1.4		8.6
Grand Total (000 Tons only)		76.2		77.0		−0.8		116.7

N.B. These figures are based on replies received and represent all members of the Association and Gauribhai with estimates for three non-member mills.

crisis began. Nevertheless, some sales were reported in Mill Lightnings at £92 to £94 a ton, and it is pretty safe to say that sellers have not been able to cover at anything like these limits.

Prices of Calcutta hessians and sackings have dropped sharply during the past week. Hessians have come down to 63s 3d for 40in. 10oz. and 48s 6d for 7½oz., November and December and 63s and 48s for January-March, and B Twills to 173s 3d, 171s 6d and 169s 3d for the respective positions of shipment, all f.o.b., Calcutta. The Jute Controller has bought very little during the period.

I.J.M.A. PRODUCTION FIGURES FOR OCTOBER

The Indian Jute Mills Associaticn reports the total production of jute goods during October as follows:

Description	Quantity
1. **Gunny Bags**	
(a) Hessian	3,345 tons
	1,10.5 lakh yds.
	70.2 lakh Nos.
(b) Sacking	46,401 tons
	11,03.2 lakh yds.
	4,62.5 lakh Nos.
2. **Gunny Cloth**	
(a) Hessian	28,313 tons
	10,98.9 lakh yds.
(b) Sacking	678 tons
	13.8 lakh yds.
3. Other Manufactures	4,752 tons
4. Total production (above figures combined)	
(a) All kinds	83,489 tons
(b) Hessian (Both bags and cloth)	12,09.4 lakh yds.
(c) Sacking do	11,17.0 lakh yds.

SUMMARY

	(00,000 Yds.)			(000 Tons)		
	Oct. 1957	Sept. 1957	Oct. 1956	Oct. 1957	Sept. 1957	Oct. 1956
Hessian	12.09	12.87	13.17	31.7	33.7	34.7
Sacking	11.17	10.93	9.50	47.1	47.3	40.5
Others				4.7	5.0	5.2
Grand Total				83.5	86.0	80.4
Hours worked				192.0	200.5	203.5

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

THEY BUY WHAT THEY

Yes, customers prefer the product that's wrapped in Trayophane bags. Trayophane bags reduce waste, save time—because the contents are ready to be sold—wrapped, weighed and priced!

Economic! Hygienic! Convenient!

Why not get these colourful, eye-catching bags with your printed message, for an average cost of 6 pice?

Plantation Topics

FALL IN COFFEE PRODUCTION FEARED

RUBBER OUTPUT INCREASES

A WIDESPREAD occurrence of leaf diseases in Mysore and Coorg presents a serious threat to the current season's coffee crop. In the estimate of certain planters, the new crop may fall to 32,000 tons, against the Board's estimate of over 37,000 tons. The 1956-57 crop was 42,000 tons. This would bring disappointment to those investors who have been showing interest in coffee shares. On the basis of the weather conditions now prevailing, planters however expect a bumper crop next season. Certain estimates place that crop at 50,000 tons.

Natural rubber production in India touched a new peak at 2,712 tons in September 1957. This was 371 tons higher than in the previous month and 519 tons more than in September 1956. The principal factor responsible for the increased output was favourable weather. Production to the end of September was also the highest for that period in any of the previous years; it amounted to 15,594 tons, compared with 15,404 tons during January-September 1956. Manufacturers consumed 2,666 tons of natural rubber during September, including 1,217 tons of the imported product. The gap between indigenous production and manufacturers' requirements by the end of September amounted to 8,307 tons, against 6,295 tons at the corresponding time last year.

Outlook for Pepper Crop

The new pepper season has just commenced in Kerala. Unseasonal and irregular rain during the flowering period has done some damage to the new crop, and growers in south Kerala fear that the 1957-58 output may be smaller than in the previous season. The rain may delay the ripening of fruits. A preliminary estimate places the new crop at about 22,000 tons, compared with last season's 23,000 to 24,000 tons. With the heavy fall in the price of pepper, growers are not inclined to expand cultivation. The result may be a stagnation in production, if not a gradual decline. Pepper being a foreign exchange earner, this will hamper the country. In the absence of the price incentive, growers cannot be expected to raise production.

Rise in Ginger Exports

Ginger exports from India during the season which has just closed will be more than double the volume of the 1955-56 season. Figures up to the end of August show that exports amounted to 8,841 tons during the first ten months of the 1955-56 season. As in previous seasons, the Sudan, Aden, Saudi Arabia and other Middle East countries as well as the United States were the principal buyers. In spite of the big increase in exports, earnings are not likely to show any appreciable increase. The reason is that prices have fallen almost by half, because of a big increase in world production. The uneconomic price which prevailed throughout the last season has been a disincentive to growers, so the size of the new season's crop, it is expected, may be reduced.

Strike Threat in Kerala

The I.N.T.U.C.-led plantation workers of Kerala are planning a State-wide strike to force an immediate decision on their demand for higher wages and bonus. They are not satisfied with the work of the Tharakan Committee appointed by the State Government to examine the whole question of wages and bonus, and to recommend a formula for settling this question. The salary and allowance agreement reached recently between the United Planters Association of Southern India and the Estate Staff Union of South India has been formally ratified in both Madras and Kerala. The staff members get a general increment in their salary and allowance.

South Indian Tea Output

South Indian tea output figures during September amounted to 12 million lbs. compared with 9.7 million lbs in August and 9.6 million lbs in September last year. Now it is estimated that south India will produce nearly 135 million lbs of tea in 1957, against 130 million lbs last year.

COCHIN TEA SALES

At Dust Sale W, 600,000 lbs of tea were on offer. Demand was useful but prices eased irregularly by 10nP or 20nP.

CALCUTTA TEA AUCTIONS IN OCTOBER

GOOD DEMAND BUT LITTLE CHANGE IN RATES

ON account of the Puja holidays only three sales were held during October and offerings totalled 179,000 packages. There was a good demand with little change in rates which, on the whole, were in buyers' favour, especially for Broken grades, say Messrs. Carritt Moran and Co. Private Ltd. in their monthly tea market review. Black Fannings suitable for Middle East requirements appreciated in value and whole leaf grades were dearer on increased Turkish demand. Darjeelings sold well, particularly where leaf appearance was attractive or where any flavour was present, but Medium Assam B.O.P.'s were lower due to less active buying by Russian operators, and ordinary Assam Orange Fannings were a comparatively weak feature. Tippy teas, however, were well supported. C.T.C. Assams were again easier, although in the last sale of the month, there was a much better demand for any bright liquoring invoices, particularly for broken grades which frequently sold well above valuations.

Offerings from Darjeeling, although of rains manufacture, were extremely satisfactory both in leaf appearance and cup quality, and at the end of the month some invoices showed a slight seasonal improvement. There was little change to note in the appearance of Assam teas which continued satisfactory except for some of the less well-equipped estates where stalk and fibre became more noticeable, particularly in the case of C.T.C. teas. A fair quantity of tip was on offer. Cup quality, although of a rains description, was satisfactory, and a few C.T.C. invoices with improved liquors became available at the end of the month. Leaf appearance Dooars teas was much the same as last month and cup quality showed little change being generally of an ordinary rains description. A few invoices of Leggcut teas were a little brighter in cup although in many cases teas of this type were a shade duller and more fibrous in appearance. There was little change to note in the offerings from Cachar, both leaf appearance and cup quality being about average for the time of year

Quotations

	1957-58 Rs. nP.	1956-57 Rs nP.
Sale No. 17 Plain B.P.	1.64	1.77
Sale No. 18 " "	1.68	1.78
Sale No. 19 " "	1.60	1.83

Internal Market

A total of 8,417 chests of leaf was catalogued for sale for which there was only a limited demand, although some improvement was noticeable in the final sale when prices showed some advance. A total of 58,359 chests of Dust was offered during the month. Quality was typical of rains manufacture and buyers keenly competed for the few teas with useful liquors. The first sale after the Puja holidays met a strong general demand and prices were generally dearer particularly for the C.T.C. and orthodox grades which were suitable for export. In the following sales prices continued to be maintained, although dull and unattractive C.T.C. Assams were in little demand and were easier. Small grainy orthodox Assams with useful liquors were a strong feature and frequently realised high prices. Invoices from Darjeeling were a little irregular but the few with attractive flavour sold well.

Quotations

	1957-58 Rs. nP.	1956-57 Rs. nP.
Sale No. 17 Clean Common Dust	1.59	2.22
Sale No. 18 " " "	1.63	2.27
Sale No. 19 " " "	1.63	1.88

Export sales up to and including Sale No. 19 totalled 803,412 chests at an average price of Rs. 2.42 compared with 782,416 chests at an average price of Rs. 2.55 during the corresponding period of the 1956-57 season. Internal sales at 23,103 chests of Leaf and 272,737 chests of Dust (Rs. 1.49 and Rs. 1.90) go against 14,919 and 239,135 chests (Rs. 1.53 and Rs. 2.28) for the same period last year.

The estimated North Indian crop to the end of September 1957 was 373,175,428 lbs compared with 403,311,037 lbs to the same date last year. The average figure at this date for the three years 1954-1956 was 363,198,604 lbs. The price of export quota dropped from 29½nP a lb in the beginning of the month to 18nP a lb on 15th October. An increase in price was recorded later and business was transacted at 21½nP a lb on 28th October. On this date, a second release of 5 percent of each garden's crop basis was announced bringing the total percentage released to 55 percent of 393.25 million lbs. Prices reacted very slightly to this release and business was done at the close on 31st October at 21nP a lb.

Arrivals (in chests) in Calcutta warehouses during the period 24th September, 1957 to 23rd October, 1957 with the corresponding figures of the previous year in parentheses were as follows: by steamer 484,164 (296,795) by rail 96,623 (161,464) by air 20,762 (18,387) making a total of 601,549 (476,646). Since the beginning of the season 1st April, 1957 to 23rd October, 1957 arrivals have been: by steamer 1,585,247 (1,299,583), by rail 539,107 (404,817) and by air 112,292 (74,440), making a total of 2,246,647 (1,778,840) chests.

Commodity Markets

INCREASED OUTPUT OF COTTON YARN

WORLD TRADE IN MAN-MADE FIBRES EXPANDS

COTTON yarn production in the second quarter in those non-Communist countries for which regular figures are available, including all the principal cotton textile exporting nations, was seasonally less than in the first quarter. Compared with output in the corresponding period of 1956, however, an expansion of over 3 percent was recorded in the second quarter, as in the first quarter, according to the latest issue of the Cotton Board's *Quarterly Statistical Review*. Once again yarn production in the United States was well below the previous year's level, in sharp contrast to the experience of most of the other main cotton industries. The expansion in yarn output compared with a year ago has been especially great in the case of Japan and India, while the United Kingdom and the other main western European countries have also been producing at an appreciably greater rate than in the corresponding period of 1956. Apart from the United States, Canada and Hongkong are almost alone among important cotton manufacturing countries to have failed to share in the general expansion.

Exports of cotton piecegoods from the main non-Communist exporting countries declined moderately, probably seasonally, in the second quarter of this year. The volume of international trade in the first six months of 1957 was, however, approximately 12 percent greater than the volume exported in the first half of 1956. Japanese exports in the second quarter of this year were appreciably greater than in the first quarter and over 100 million square yards greater than in the second quarter of last year. Indian exports, too, though well below the first quarter's level, were greater than in the corresponding period of 1956, as were also exports from the United States, Hongkong, Portugal and, probably, Belgium and Spain. Shipments from the United Kingdom, France, West Germany and the Netherlands in the second quarter of this year were not significantly different from the quantities shipped in the same period of last year. World trade in fabrics of man-made fibres in the second quarter of this year was greater than in the first quarter but still below the record level reached in the final quarter of last year. In the first six months of this year, the volume of trade was about 9 percent greater than in the first half of 1956. Japanese exports continue to run at above last year's level, although the record figures recorded in the fourth quarter of 1956 have not been repeated. Exports in the second quarter from West Germany, the Netherlands and, probably, France and Belgium were greater than in the second quarter of 1956, but shipments from the United Kingdom and the United States have been running well below last year's level.

Britain Rebuilds Stocks

In the first half of this year, both the home market and the export offtake of cotton and rayon goods in Britain were much the same in total as in the first half of 1956. The fact that output has been maintained, and even expanded in certain cases, while imports have greatly increased, can be attributed to the fact that stocks were being run down last year whereas there has been a slight tendency for them to increase so far this year. In July a considerable volume of business was transacted as buyers attempted to forestall price advances made necessary by wage increases. As a result, order books at the moment are in a reasonably healthy state, producers of American-type qualities being more favourably situated than producers of Egyptian-type goods. In the weaving section, the rate of output has declined slightly since the early spring, more particularly on the man-made fibres side.

Recession in the U.S. Textile Industry

The recession in the U.S. cotton textile industry still appears to be continuing. Stocks of cotton cloth at the end of June were 15 percent higher than at the beginning of the year and 32 percent higher than at the corresponding period in 1956. Mill margins and profit rates continued to decline. In the second quarter of this year, spinning mills consumed 5 percent less cotton than in the same period of last year while the consumption of man-made staple remained the same, an increase in synthetic staple counter-balancing a slight fall in rayon staple. The production of tyre cord and fabric during the second quarter was 3 percent above the second quarter 1956 level. Within the total nylon tyre cord and fabric increased, chiefly at the expense of rayon, by over 20 percent compared with the previous quarter. The latest figures of cloth production relate to the first quarter of this year, when cotton cloth production was 9 percent lower than in the same quarter of 1956. The output of rayon cloth was over 20 percent lower than during the same period of 1956 (as much as 46 percent less in pure spun fabrics), that of nylon cloth was slightly larger, while cloth of other synthetic fibres registered an increase of 40 percent, mainly due to the increase in the production of dacron fabrics.

Exports of cotton piecegoods from the United States in the second quarter of this year were slightly below the first quarter's level but over 10 percent higher than in the corresponding period of last year. The largest increases over a year ago have been in exports to South Africa, Canada and the Philippines. The stabilisation of U.S. exports of man-made fibre piecegoods since the third quarter of 1956 at slightly over 50 million square yards a quarter seems to have continued in the second quarter of this year. The restrictions imposed by the Japanese Government on exports of cotton piecegoods to the United States have been so effective that the quantity imported in the first five months of this year was 51 percent below the 1956 level.

Japan Sets Up New Records

The production levels of cotton and spun man-made fibre yarns and of cotton and man-made fibre fabrics in Japan in the second quarter of 1957 were, with the exception of continuous filament rayon fabrics, postwar records. These high levels, however, are most unlikely to be sustained. Due partly to bad weather, domestic demand has been disappointing, credit has been heavily restricted, stocks have been increasing and prices and margins declining. In July it was announced that raw cotton imports would be sharply reduced because of the foreign exchange situation. This has been generally welcomed by the interests concerned as leading to a more favourable balance between supply and demand. From September the production of spun rayon yarn will be reduced. Fifteen percent of the 3 million spindles will be sealed, and daily working hours will be restricted to 16 with a maximum of 25 days monthly. The present curtailment of rayon staple output has been extended and the production of rayon filament yarn also curtailed. This is the first time since the war that the Government has recommended the curtailment of production to the rayon industry.

Japanese exports of cotton piecegoods totalled 361 million square yards in the second quarter of 1957 compared with 334 million square yards in the preceding quarter and 260 million square yards in the corresponding quarter of 1956. Exports in the first seven months of this year were 15 percent above the total for the same period of 1956. Large advances over the preceding quarter's trade were recorded in exports to the Philippines, Holland, West Germany, Australia and Burma. Substantial declines took place in exports to Siam (due partly to political uncertainty) and Indonesia. Exports to the United States so far this year are well below the levels recorded in 1956 and are in fact below the levels which quotas permit. Exports of rayon piecegoods in the second quarter totalled 303 million square yards compared with 276 and 287 million square yards in the first quarter of this year and the second quarter of 1956, respectively. Exports in July amounted to 120 million square yards, exceeding the exports of cotton piecegoods. Exports to West Germany, British East and West Africa and the Union of South Africa increased over the first quarter's levels, while exports to Indonesia and Iraq declined.

Mixed Experience of India

The production of cotton yarn in India during the second quarter was 9 percent above that recorded in the second quarter of 1956. In contrast, mill production of cotton cloth was about the same as a year previously. Part of the explanation for the different record of progress of the two sectors lies in the fact that the production of handloom cloth was well above last year's level. An export promotion body has been constituted to advise the Government on measures for developing exports of handloom cloth. In spite of the fact that the excise duty rebate on additional mill-made cloth delivered for home consumption has been extended to the end of March 1958, deliveries of mill-made cotton cloth to the domestic market in the first half of the year were slightly lower than in the corresponding period of 1956. The mills have increased their export deliveries by 26 percent over the same period. Nevertheless stocks of cloth at the mills have increased by 40 million yards since the beginning of this year.

SLIGHT FALL IN WHOLESALE PRICE INDEX

THE official wholesale price index (base: year ended March 1953=100) fell by 0.2 percent to 108.9 during the week ended 26th October, 1957, compared with 109.1 (revised) for the earlier week. The monthly average for October 1957, worked out to 108.9 against 109.5 for the previous month and 100.7 for October 1956. Lower prices of onions in Nagpur (−39%), milk in Calcutta (−17%) and in Nagpur (−14%), rice in Hailkandi (−11%), in Jagdalpur (−8%) and in Shimoga (−5%), barley in Hapur and gur in Muzaffarnagar (−7%), maize in Bhilwara and potatoes in Furrukhabad (−5% each), bajra and groundnut oil (−3% each), wheat, fish and cardamoms (−2% each) and gram, arhar and urd (−1% each) were responsible for bringing down the index for Food Articles by 0.7 percent to 107.0 compared with 107.8 (revised) for the earlier week. The prices of oranges (+25%), potatoes in Mandi (+22%), onions in Delhi (+15%) and in Calcutta (+14%), milk in Bombay (+12%), maize in Khagaria (+8%), rice in Vijaywada +6%), and in Sainthia (+5%), barley in Jaipur (+6%), tea (+3%), jowar, ragi, gingelly oil, eggs and meat (+2% each) and coconut oil, chillies, betelnuts and salt (+1% each) were, however, marked up. The index for Tobacco increased further by 1 percent to 95 due to a rise in the price of Pollah F.A.Q. (medium) tobacco in Calcutta (+3%). The index for Fuel, Power, Light and Lubricants stood unchanged at the previous week's revised level of 114.6. The index for Industrial Raw Materials rose by 0.8 percent to 115.4 compared with 114.5 for the earlier week due to an increase in the prices of lac (+5%), groundnuts (+4%), linseed, gingellyseed and raw skins (+3% each), ccpra (+2%) and rapeseed and tanning materials (+1% each) notwithstanding a fall in the prices of raw wool (−2%) and raw cotton, raw silk and raw jute (−1% each). The index for Intermediate Products rose by 0.7 percent to 106.6 compared with 105.9 (revised) for the previous week due to an advance in the prices of cotton yarn (20s) in Madras (+11%) and coir yarn (+1%), although the prices of zinc, brass, copper and lead (−1% each) showed a fall. The prices of jute manufactures (−1%) witnessed a fall while those of oil cakes (+1%) showed a rise and the index for Finished Products stood at 109.4 against 109.5 for the earlier week.

Engineering and Transport

MAIDEN FLIGHT OF FAIREY ROTODYNE AIRCRAFT

THE *Fairey Rotodyne*, the world's first vertical take-off airliner, recently flew for the first time at White Waltham airfield in Berks. Carrying up to 48 passengers, it ascends vertically as a helicopter and having gained height, flies horizontally as a normal fixed-wing airliner, at a speed of nearly 200 miles an hour. In it are realised for the first time, plans for the transport of passengers and freight from the centres of cities and from small unprepared spaces, combined with the ability to undertake the multifarious rôles that have hitherto been the preserve of the normal helicopter. It is essentially an orthodox twin-engined airliner, powered by two Napier Eland propeller-turbines driving normal forward-facing propellers, with the addition of a 90 feet diameter four-blade rotor mounted well above the fuselage. The rotor blades are of stainless steel and each blade has a Fairey pressure jet unit at its tip. For take-off, compressed air from the Eland engines is piped through the blades and is burned with fuel in the tip jet units. The resultant lift from the rotor takes the *Rotodyne* into the air vertically as a helicopter. This system of ducting the air to a tip-jet drive dispenses with the gears, shafts and clutches inseparable from a normal helicopter and ensures greatly increased life and safety. At operative height the engine power is transferred to the forward-facing propellers and the airliner then flies forward with the rotor auto-rotating (or "free-wheeling") and sharing the lift with the fixed wing. The sequence is reversed for landing. Thus it has the advantages of the fixed wing aircraft, such as speed, economical payload, lack of vibration, twin-engine safety, simple maintenance and the ability to fly at night and in all weathers, which do not exist in the pure helicopter, plus the unique advantages of vertical take-off and landing. It is the largest transport helicopter in the world today, with very considerable military as well as civil applications. With an all-up weight of just over 17 tons, it will carry up to 48 passengers or 4½ tons of freight over ranges of up to 400 miles at a cruising speed of 185 miles an hour.

LARGE ORDERS FOR VISCOUNT AIRLINERS

The number of Vickers *Viscount* turbo-prop airliners ordered is expected to reach 400 in the near future. Announcing this in a statement, Vickers-Armstrongs says that, to date, 235 out of the 374 *Viscounts* ordered have been delivered. The average rate of building over the past nine months has been ten *Viscounts* a month—one every three days—and production is continuing at this peak rate. The *Viscount* has been sold to more countries than any other aircraft of comparable size, the statement adds. Forty-six different operators in 31 countries have ordered the plane. The total value of *Viscounts* ordered to date is £143,250,000, of which overseas orders accounted for £117,250,000. Production tooling for the larger Vickers *Vanguard* turbo-prop airliner is building up alongside this greatly expanded *Viscount* production. The structure for the first *Vanguard* is already taking shape in the Weybridge (Surrey) assembly hall recently vacated by the *Valiant* jet bomber.

NEW SEALING DEVICES FOR CONTAINERS DEVELOPED

Drums and containers are extensively used for storage and transportation in various industries such as petroleum, vegetable oil, chemical, pharmaceuticals, etcetera. Usually a set of two closures at the feed and discharge openings is used for sealing the contents of each container. Nearly 600,000 sets of sealing closures are required for new drums or barrels produced and approximately 25 percent more are required for replacement. The annual demand of the sealing devices may, therefore, be placed at about 800,000 sets. One firm is reported to be making sealing devices, but the production falls considerably short of the large demand, and the bulk of the present demand is met from imports. The sealing device at present in use cannot be detached from the drums and as such becomes useless once a drum is discarded. It is also liable to leak in the event of the packing ring getting damaged or being not properly pressed between the nut and the container top. New sealing devices which are economical and easy to manufacture have been designed and developed at the National Physical Laboratory of India. These devices can be easily fixed to the drum and can be removed from the drum for re-use when the drum is wasted. The device consists of a set of couplings, a suitable packing, primary and secondary sealing arrangements, etcetera, and can be made in different sizes varying from ¾ inch to 2 inches as required for specific uses. It can be attached to the container or drum by welding, soldering or by packing through nuts. Parties interested in undertaking the commercial development of the process are invited to correspond with the Secretary of the National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi.

In the course of a world tour to see for himself the difficulties and opportunities of overseas trade, Mr. Lancelot Spicer, chairman of Spicers Ltd., Britain's largest firm of paper merchants, is visiting India and Ceylon.

Calcutta Markets

IRREGULAR TREND AT TEA EXPORT SALE

GOOD DEMAND FOR DUSTS

AT Sale No. 21, held on 11th and 12th November, offerings at the Export auction consisted of 50,830 packages. There was a strong and active demand for "teas for price" and for clean common teas with black leaf, particularly for Fannings which were often 8 to 10nP dearer. Medium B.P.'s and P. Fgs. were in good demand, but apart from a few teas with bright liquors, medium B.O.P.'s and O. Fgs. met with only a restricted enquiry and were sometimes 20 to 30nP easier. The very best C.T.C. Assams sold well, but the remainder met with very selective buying, and those with indifferent leaf and liquor were often 10 to 25nP easier, particularly the Fannings some of which were withdrawn. Stylish B.P.S. were in good demand while whole leaf grades were rather irregular. Darjeelings, particularly the broken grades and tippy teas, met with a good demand.

	Quotations 1957 Rs.		1956 Rs.	
Clean Black Pekoe	2.25 to 2.30	2 4	0 to 2	5 (
Plain B.P.	1.66 to 1.70	2 0	0 to 2	1 (
Plain Fannings	1.78 to 1.82			
Medium B.P.	1.76 to 1.80	2 4	0 to 2	5 (
Medium Fannings	1.86 to 1.90			
Best Assam C.T.C. Fgs.	2.80 to 3.00	3 2	0 to 3	4 (
Best Assam C.T.C. Fgs	2.80 to 3.00		(nom.)	

At the Internal Sale, 15,542 chests of Dust were on offer. There was a good general demand except for poorer liquoring fibrous C.T.C. teas which were sometimes up to 20nP easier. There was a better selection of the best liquoring C.T.C. Assams on offer and these were well supported and frequently sold above valuations. The remainder of the Sale met with a strong competition, particularly for cleanly sorted teas and powdery types from Assam.

	Quotations 1957 Rs.		1956 Rs.	
Medium Dooars Dust	1.74 to 1.76	2 0	0	
Medium Assam Grainy Dust	1.76 to 1.80	2 0	0 to 2	1 (
Medium Assam C.T.C. Dust	2.05 to 2.20	2 8	0 to 2	9 (
Best Assam C.T.C. Dust	2.70 to 3.00	2 11	0 to 3	12 (

Leafs on offer were 2,884 chests, and prices were generally dearer.

FREIGHT RATES UNCHANGED

A FAIR amount of miscellaneous business was concluded in the freight markets at rates which showed little change. Ore fixtures from India again featured in the exchanges and Visakhapatnam-Genoa was arranged at 51s f.i.o., for a 4,000 tonner, while Koilthottam-U.S.A. dropped 25 cents at $(U.S.)9.75. A *Liberty* size vessel was taken on trip time charter at 17s 6d, delivery Mormugao, redelivery Japan. A 15-knot motorship 11,450 d.w. was fixed by liner interests at $(U.S.)32,000 a month with delivery Chittagong, redelivery U.S.N.H. Grain from St. Lawrence to East Coast India paid 80s, and the trans-atlantic coal trade remained steady around 31s with rumours of higher rates in the near future. Cement was done at 72s from Split to East Coast India, and enquiries are circulating for tonnage from Haiphong to Calcutta for the same commodity. In spite of continued efforts to combat congestion in Calcutta, delays persist and the shortage of harbour masters becomes increasingly marked daily.

HIDES AND SKINS RISE

The hides and skins market was firm during the past week and prices showed an upward tendency. Stocks were less than in the previous week.

Bazaar Sales

(Between 5th November and 11th November, 1957)

Cowhides: Wet salted (Ord.) 10,000 pcs. on the basis of Rs. 8.25 to Rs. 10.87; Wet salted (Slaughtered) 17,800 pcs. on the basis of Rs. 13 to Rs. 21.50.

Goatskins: Wet salted (Daissee, Killed) 52,500 pcs. on the basis of Rs. 315 to Rs. 325, Rs. 345 to Rs. 365 and Rs. 385 to Rs. 410; Assam-Dinajpur 23,200 pcs. on the basis of Rs. 320 to Rs. 375; Patna-Pakur 13,000 pcs. on the basis of Rs. 325 to Rs. 330.

Bazaar Stocks

(11th November, 1957)

Cowhides: Wet salted 68,200 pcs.

Goatskins: Wet salted (Daissee, Killed) 25,500 pcs.; Assam-Dinajpur 52,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 1,81,000 pcs.

LINSEED FIRMER

Linseed prices advanced appreciably during the past week and there was no sign of an improvement in the supply position, with stocks apparently still being held upcountry. In sympathy with the advance in other oil markets, linseed oil moved up. Crushers were trying to secure stocks of seeds, but only small lots changed hands daily. Although Indian linseed oil prices were still above export parities, the recent rising trend in the U.K. is being followed with interest here. Latest quotations were based on ready November at Rs. 2[illegible] a maund.

COMPANY AND PUBLIC NOTICES

THE TITAGHUR PAPER MILLS CO. LTD.

NOTICE is hereby given that an Annual eral Meeting of THE TITAGHUR PAPER LS COMPANY, LIMITED, will be held at the istered Office of the Company, Chartered Bank ldings, Calcutta, at 3 P.M. on Tuesday, the day of December, 1957, for the following poses :—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1957, and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Directors in the place of the retiring Directors, including Sir Asoka K. Roy, who retires by rotation, and, being 71 years of age, is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting, specifically declaring that the age limit shall not apply to him.

And in this connection to consider and, if thought fit, to pass the following resolution, of which special notice as required by Section 281 (2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended below.

TO BE PROPOSED AS AN ORDINARY RESOLUTION.

"That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Sir Asoka K. Roy and that he be and is hereby re-elected as a Director of the Company, whose period of office as such director would be liable to determination by retirement of directors by rotation".

The Share Transfer Registers of the Company l be closed from 12th December, 1957 to 24th cember, 1957, both days inclusive.

By Order of the Board,
W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.
rtered Bank Buildings,
cutta, 4th November, 1957.

TES :—

(a) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 8th January, 1958, to those shareholders so entitled whose names appear in the Company's books on the 24th December, 1957, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT.

In the special notice given to the Company of resolution under item No. 3 of the above ice it has been stated that the services of Asoka K. Roy have proved most useful to the npany and as he has considerable experience l personal knowledge of the affairs of the Com- y, he should continue to remain on the Board Directors of the Company and that the age it imposed by Section 280 of the Companies , 1956, should not apply to him.

TARGETS FOR STEEL

STEEL IS THE STARTING POINT

Use steel only when you must today, there will be more tomorrow.

Six million tons a year is India's immediate target for steel—the absolute minimum for her present needs.
Eighteen million tons is the target for the Third Five Year Plan—it can be done.
India's deposits of iron ore, with the highest iron content in the world, can last a hundred years.
Adequate supplies of metallurgical coal and other raw materials abound.
The combination of technical skill and high quality materials makes India the world's cheapest producer of steel.
IISCO'S immediate target—eight hundred thousand tons of finished steel and two hundred and eighty thousand tons of pig iron.

INDIAN IISCO STEEL
THE INDIAN IRON & STEEL CO. LTD.
Works: Burnpur and Kulti
Head Office: 12, Mission Row, Calcutta.

BANKS

H indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary Rs.	Net Stock Account. Rs.	Reserve & other Funds Rs.	Acreage under Tea Rs.	Outturn and Average Price per lb realised for crop 1955 Lbs.	1955 As. P.	1956 Lbs.	1956 Rs. UTLOOK FOR THE TEA MARKETS

SAPPOINTING SEASON FOR PRODUCERS: HOPES OF BETTER DEMAND

CE trends in the north-Indian tea markets far during the current season have been ointing for most producers, and it is evident he possibility of over-supply, which has ated buying operations for the past five or nths, has not yet waned to any large extent. atest statistics from the main traditional exg countries indicate that their total crops nning approximately 16 million lbs ahead year, which itself was a period of perhaps than adequate production. Although there is to believe that world demand has also rising, auction trends suggest that the rise ot been sufficient to absorb the increase in es. This increase in supplies is not accounted ily by such exporters as Ceylon, southern and Indonesia (whose bumper crops may nsidered as having been partially offset by wer output of northern India and Pakistan); portant contribution has also been made expanding production and exports of East and by the reported increase in communist 's offerings of green tea.

months ago, much was made of the point ractically all the 1956 teas had been disposed d that the 1957-58 marketing season would, ore, get off to a good start since there was old surplus weighing down the markets (as e case before the 1956-57 auctions opened). t, this view seems to have erred on the side imism. Whereas the surplus of 1955 teas was ainly in producers' hands at the primary s (partly because of Governmental errors s the one under which the direct export of Indian tea for auctioning abroad was severely ted), the surplus of 1956 teas seems mainly e passed "into the pipeline" or into consu- hands—as a direct result of the heavy which followed the Suez hostilities. The crops of the current year have not, therefore, ffered to markets where the statistical posi- as originally healthy, but to markets which, gin with, were somewhat over-bought in eas. On this view, the restricted purchasing followed for some months by such important ners as the U.K. has been understandable.

*

e current year has been an unfortunate one he point of view not only of world produc- ut also of quality. Good teas have been g very satisfactory prices, but the depres- n common teas continues, although it is now than it was three or four months ago. circumstances, producers might have been ed to concentrate on quality manufacture, is is in fact what they have been doing, that weather conditions have been extreme- avourable. As Carritt Moran and Co. Private oints out in its latest monthly review of the ta market, "it has been apparent throughout ason up to date that considerable care has taken over the manufacture of tea in all ts and that, as far as conditions permit, ng has been kept fairly fine." The biggest ointment, perhaps, has been in the case of cond flush from Assam, which Carritt Moran as on the whole "not up to average. although were some quite useful invoices." Producers se in having decided not to sacrifice quality antity in spite of the reduction in the north- crop; the emphasis may need to be main- in their production plans for future years . Although adverse weather conditions can- predicted nor their effects completely neu- d, it is disappointing to note that certain made" factors too have been in operation the current season, the general effect of has been to bring about a deterioration in produced. Mr L. F. Paget, chairman of the branch of the Indian Tea Association, in dress at the annual meeting of the branch aturday, has mentioned labour absenteeism of these factors, and its importance in the ed conditions of today should not be under- ted. Greater discipline and a better sense ponsibility among workers could do much to strengthen the competitive position of the north-Indian tea industry.

The slightly better trend which has recently been noticed at the auctions in both Calcutta and London arises primarily from the prospect that the present lead in the major exporting countries' crops will be reduced considerably by the time the year ends. Output in Ceylon may not turn out to be as big as seemed likely a couple of months ago, and the early onset of winter in northern India should be bringing a quicker close to the plucking season there. Many still doubt whether as a result of these developments total crops for 1957 will be brought down to the level they reached in 1956, but it is evident that any reduction will act as a bullish influence. This is the more likely if demand increases noticeably, as there is a genuine prospect that it might. It was recently reported that Russia was negotiating for the purchase of approximately 40 million lbs of tea from Ceylon, and although those particular negotiations seem to have fallen through the former's recent operations at the Colombo auctions indicate that she might still lift a substantial quantity from there. It may be disappointing for India that Russia should be purchasing tea from other sources, after having confined her activities largely to Calcutta and Cochin. But from the point of view of world demand generally, Moscow's buyers could prove very useful in lifting part of the substantial surplus of common teas which is now sitting like an incubus on the markets. That would benefit India as well as other producers.

*

A development of this sort would certainly be welcome, especially if it is supplemented by greater demand from other countries such as Egypt. In trading with the latter country, however, India is likely to be hampered by the shortage of foreign exchange which afflicts both. There is, in fact, a serious threat to India's exports to those countries which also have a weak external payments position; many of them are important marginal buyers of her goods, particularly of her tea. The exchange difficulties which recently led to talk about a triangular deal under which Egypt would sell cotton to Japan, Japan would sell cotton textiles to Ceylon, and Ceylon would sell tea to Egypt, give a hint of the disadvantages India might suffer. These disadvantages will not be fully offset by India herself being compelled to go in for bilateral or trilateral trading arrangements; the rigidity of the trade pattern which is implicit in such arrangements cannot be conducive to the increase in exports which she hopes to achieve by selling new goods and exploring new markets. It cannot be a comforting situation for India that if she does not have enough foreign exchange to buy Egyptian cotton, Egypt should be obliged to cut her purchases of India tea. Recognition of such dangers is vitally necessary in framing export promotion schemes.

Equally necessary is a recognition of the need to reduce production costs—recognition which in the case of the tea industry has been sadly lacking. If the current season has so far been a poor one for tea producers, the reason is not so much that prices are too low as that production costs are too high. Solace is being derived from the fact that so far the average price of tea sold at the Calcutta auctions has been only a slight fraction below the price realised during the corresponding period of last year. That solace is mainly illusory, because this year there is no prospect of the Suez boom which came to the rescue of producers in November 1956. Most gardens meanwhile are expecting that their costs have risen, and profit margins consequently been squeezed. High production costs are also seriously hampering the expansion of the internal market for tea, a market without the growth of which the prosperity of the tea industry might be an extremely chancy affair in future years. A reduction of labour welfare burdens and of taxes, combined with a more vigorous campaign to promote tea-drinking in India itself, might well be the most important of the first steps that the Government could take to restore long-term health to the industry in this country.

THE LITTLE SPREAD THINLY

IMAGINE a large, very large and growing, Indian joint family presided over by an old man whose pension is small and whose commitments are many, not only to himself but also to his children and grandchildren whose demands rarely correspond to their earning capacity—and the financial picture of India today is not vastly different. Let it be admitted at the outset, therefore, that free India's second Finance Commission could not possibly have produced a report which would make everyone happy. Such is always the case when there is not enough to go round. Uneven development has already seen to it that some will feel they have got less than they put into the kitty and others that they are being treated as poor relations. West Bengal's dissatisfaction with the report is easily placed in the first category, and Kerala's in the second. Other voices will be heard before long, without much variation in the pattern of reaction.

Individual complaints apart, some of which are justified, the generosity of the Centre is not to be denied. "The Centre's loss and the States' gain will be Rs. 52 crores per year." The reason for this must be at least partially political. The Finance Commission makes no secret of its disappointment with the States' performance in raising funds for their own development plans. Deficit budgets are the order of the day in just about every State—which makes nonsense of the expectations of the Planning Commission. In the circumstances, to reward the States' failure to harness their resources for development is to encourage them to go on as before. The Centre has only itself to blame for the easily foreseeable consequences of this policy, although there should be appreciation for the difficulties of the State Governments. After all, they have to take a more proximate interest in the next elections than have the financial experts.

*

It may be rather late in the day to question the structure of development expenditure in India, but a great deal of the bickering heard at quinquennial intervals was perhaps inherent in the scheme itself. If the Centre was going to distribute largesse, on the basis of criteria on which there can be no agreement, tensions were inevitable. There is now a tendency for every State to look up to the Centre to a degree perhaps unintended by the makers of the Constitution. An additional complicating factor is the total lack of knowledge as to what would be the most persuasive methods for convincing the Centre. Much of the current confusion might have been avoided if development were an exclusively Central responsibility, and the argument that the States would be better able to enlist popular co-operation if they were associated with development should be re-examined in the context of the extent of co-operation received so far. It is a common error with politicians to put too high a value on popular enthusiasm; which in practice is often difficult of translation into anything concrete or constructive.

Given this scheme of distribution, which the second Finance Commission has altered very slightly, there was bound to be recrimination, and complaints of discrimination have already been heard. States such as West Bengal and Bombay, where most of the income-tax is collected, feel they have been diddled. States industrially backward, which are too many to be named, sincerely complain that they have not been given nearly enough money for new industries. This is the kind of complaint heard every day in non-affluent joint families where the third brother with only his wife and two children earns more than the eldest with his wife and eight children. Belonging to the same family, they want to go to the same school and wear the same clothes, and that is possible only at the expense of the third brother, whose willingness to sacrifice would be greater if his income had a larger surplus. This is the essence of West Bengal's complaint.

* * * *

There are good humanitarian reasons why the more developed States should help to develop their less fortunate neighbours. There are good human reasons why this generates resentment. To base the allocation from the divisible pool of income-tax mostly on population is to deprive West Bengal of her due, and that for a circumstance for which she really ought to be rewarded: that she has a relatively smaller population, which is India's need today. The backward States may well feel that they have a moral right to "foreign aid." even as backward countries sometimes feel in the context of international aid, but the source of internal "foreign" aid is itself beset with not a few problems; its affluence is purely relative. The States hurt by the Finance Commission's recommendations can also claim that industry grows faster in regions already industrialised and, when there is so little to invest, there is waste involved in industrialising backward areas, whatever the sentiments of the inhabitants of these areas. The present, West Bengal and Bombay may say, is no time for sentiments.

Like most things *ad hoc*, the grant-in-aid given to West Bengal in lieu of jute export duty could hardly be expected to satisfy this State. "These grants-in-aid," it has been stated on behalf of West Bengal, "have had no relation to the actual revenue of the Union Government from the export duty on jute and jute products." There is a great deal of truth in this, although other States could probably produce comparable instances of injustice. Here too the source of the dissatisfaction is not basically different from that discussed in the foregoing, and if West Bengal is to be accused of a regional reluctance to contribute to the development of the less advanced areas, she may well point out that regionalism is more rampant in certain other States which need not be named on this occasion. It should be repeated here that the regional rivalries stem more from no State having anything like enough than from one State being less virtuous than another.

If few new clear principles of federal finance and statal distribution emerge from the second Finance Commission's report, it should be conceded that the Commission has not been indifferent to the special needs of States like West Bengal and Punjab. As these special needs are going to be with us at least until 1960, it may be premature to cry over the proposed discontinuing of grants-in-aid in that year. Indeed it may be no bad thing that the Finance Commission has been guided more by the facts of the situation than by rigid academic formulae. The one thing recent experience with planning has taught is the Indian economy's stubborn refusal to oblige planners. Who knows what the scheme of things is going to be like by the time the next Finance Commission addresses itself to its task? Will the picture be less complex? It may be more so than today. Will all regional rivalries have disappeared by then? Nobody can be sure.

In a situation so fluid, so unpredictable, an empirical approach seems the best. Rich families do not have to plan, poor families cannot. When existence is hand-to-mouth, when there is so little to be diverted from current consumption into long-term investment—and all of it in a democratic structure of society, in which complaints can be made and have to be heard—it is given to no man, no Commission, to distribute inadequate resources in a manner satisfactory to everybody. The answer—a long shot, in all conscience—is an appreciable addition to the national product. Distribution will then be far less acrimonious.

COAL POLICY IN INDIA

By

Andrew Farquhar

This booklet consists of reprints of articles written by Mr. Andrew Farquhar, former Coal Adviser to the Tata Iron and Steel Co., Ltd., which have appeared in *Capital* in recent years. As expert analyses of India's coal problems and policies, they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

ELUDING THE CREDIT SQUEEZE

HIGH-INTEREST BORROWING FROM FINANCE HOUSES

THE Labour leader, Mr. Harold Wilson, who will presumably be Britain's Chancellor of the Exchequer if his Party wins the next general election, asked Mr. Peter Thorneycroft, the present Chancellor, recently whether he was aware of the "black market" in credit that had developed since Bank rate was raised to 7 percent, and whether he intended to take action against it. Some of the money, Mr. Wilson explained, came from Zürich and other financial centres abroad, and it was loaned at 12½ or 15 percent. There is, indeed, such a market ("grey" would be, perhaps, a better description than "black"), and Mr. Thorneycroft did not deny its existence. He was, however, curiously complacent about it. He pointed out that restriction of bank advances tended to promote borrowing outside of the normal banking system, and he was evidently content to let the matter rest there. Understandably, he showed no anxiety about the attraction of foreign capital to London, since one of his big problems this year has been to dissuade foreign capital from leaving London; but it would be preferable, of course, if foreign balances were rebuilt through the medium of the normal banking system.

This "black" (or "grey") market does not necessarily rely on foreign capital, which, indeed, has been introduced only recently. The market is conducted mainly by finance houses, whose original purpose was to finance hire-purchase trade and who now find that they can employ some resources more profitably by discounting trade bills at rates around 15 percent or by making direct advances to customers at similar rates. These institutions obtain their resources partly by advertising for deposits, at rates around 8½ percent, and partly by private introduction of relatively large individual sums (say £10,000 or £20,000), on which they may pay interest at 10 percent. It is generally the smaller finance houses that have been supplementing their resources by accepting deposits from abroad. But foreign capital does not always use these channels for operating in the market. It has also been buying the high discount trade bills through the ordinary banks. The British authorities objected to this practice—acquiring bills for foreign holding—on the ground that it was tantamount to borrowing abroad for operations that could not be financed by normal means at home. Precisely the same objection applies, of course, to the foreign deposits But whereas the authorities have some moral, and if necessary statutory, control over the ordinary banks, they cannot, as the law now stands, control the activities of the finance houses.

* * * *

The British commercial banks are traditionally independent, but they are closely integrated in the financial mechanism. In practice they conform fairly strictly with the authorities' wishes (though there was some misunderstanding in the early phase of the credit squeeze, when the banks sold securities to free resources for advances). It is not always realised, however, that by the Bank Act of 1946 the authorities have power to compel the commercial banks to follow a particular line of policy. A section of the Act states: "The Bank, if they think it necessary in the public interest, may request information from and make recommendations to bankers, and may, if so authorised by the Treasury, issue directions to any banker for the purpose of securing that effect is given to any such request or recommendation." The present limitation of the banks' advances to the average level of the 12 months ended last September, is, indeed, in the form of an instruction. As the Chancellor admitted, alternative sources of credit are sought and found when bank advances are restricted. The finance houses are not the only alternative source, but they are the most important; and their importance has grown rapidly. The importance of the banks—in terms of the proportion of total financing that they transact—has correspondingly diminished. This development is naturally causing some resentment among bankers, who feel that it is unfair and, to some extent, futile that they should be compelled to restrict credit when others are free to provide additional credit—to take some of the bankers' business, in effect—at considerably higher rates. The situation must be equally unsatisfactory to the authorities, for as the banks' share of financial business diminishes, so the range of the authorities' financial control diminishes.

The fact that the "grey market" rates are much higher—sometimes as high as 16 percent, compared with a maximum of 9 percent charged by the banks for overdrafts—is sufficient evidence that the customers cannot get finance from the banks. There are, indeed, some deserving cases that the banks are compelled to reject, but really necessary operations, especially operations for export, still qualify for advances. The operations that are financed in the "grey market" are often speculative, never essential. (One is not, of course, discussing the established business of finance houses which provide money for hire-purchase of machinery and other equipment. This trade, though not necessarily essential, has solid substance.) The "grey market" operations, therefore, are of the kind that ought to be frustrated until inflation is under control. Yet these finance houses can serve a very useful purpose, in the right place and at the right time. A purely negative attitude towards them would be wrong even in the present situation. The "secondary" market is certainly inconvenient to the extent that it attracts funds that would be better employed, or neutralised, in the "primary" market. But the stronger objection is that it is able to attract these funds because its activities are not controlled as the banks' are. Attempts have been made in the past to draft legislation to control these institutions, but the difficulties were apparently too great. It might be thought that the problem could be tackled more seriously now. The matter is not only serious in itself, because it weakens the effect of the Government's policy; it is also important as a reminder of the complexity of the problems of financial policy in an economy that is only partially controlled.

BROMIDES FOR AUTOMOBILE MANUFACTURERS

THE development of an automobile industry in India has long presented one major quandary: the industry must by nature be heavily capitalised, but economic justification for large-scale investment in it can only be found if the promise of a mass market exists. In this country, the mass market simply does not exist, and even the potential for sales which does exist has been far from fully exploited. This basic quandary finds very little reflection in the speech made by Mr. Manubhai Shah, Central Minister for Industry, in the Lok Sabha last week while introducing the Indian Tariff Amendment Bill, 1957, which proposes to grant protection "for the first time" to the automobile industry. Innocent admirers who are amazed how this gallant little industry has survived the cold winds of international competition without protection for so long should perhaps reserve their admiration for better things. The protection may not have existed in law, but in actual practice not many enterprises in this country have enjoyed molly-coddling to such an extent as those ostensibly manufacturing automobiles. The result of that molly-coddling is that consumers today have to buy vehicles which often are not only deplorable in quality but also dear in price. Their experience, however, need not count; without the aid of bromides, they are now invited to share Mr. Shah's opinion that "it is a matter for gratification that the automobile industry has progressed very well." This judgment is offered in spite of the Minister's view that "the volume, price and quality of the vehicles and cars manufactured in a country are the most important factors to be constantly borne in mind."

Mr. Shah states that production has risen "considerably" in the last several years. In 1950, it totalled 17,360 (8,278 motor-cars, 367 jeeps and 8,715 commercial vehicles), but the corresponding estimate for 1957 is about 32,000 (12,500 motor-cars, 4,500 jeeps and 14,650 commercial vehicles). Such expansion in output, impressive though it may seem when translated into percentages, is in fact of very little significance when considered in relation to the economics of automobile production. Many of the world's more experienced manufacturers, for instance, would consider an annual output of 32,000 units inadequate for a single model: in India, the total is divided between six firms, some of which make more than one type of automobile. The claim has also been made by Mr. Shah that the indigenous content of the various products has been steadily increasing, and in one particular type of motor-car it is well above 56 percent. While the basis on which the indigenous contribution is calculated is not always clear and costing deserves closer examination, that claim is probably true. From the consumer's point of view, however, the more important consideration is whether the use of indigenous components has maintained the quality of the automobile or helped reduce its cost. The evidence available suggests that it has done neither. The close supervision which the Government claims to maintain so as to ensure that automobiles are sold at a "reasonable" price and are of good quality has little basis in fact.

CURRENT COIN

Radio Lamp Works.—In his address to shareholders of the Radio Lamp Works Ltd. at the recent annual general meeting (a brief version of which appears on a later page), Mr. Kamalnayan Bajaj, chairman, has pointed out that the company's working results for the year ended March 1957 are better than those for the previous year. All arrears of dividend on preference shares have been cleared, and a distribution of 7½ percent has been recommended on the equity capital. Hind Lamps Private Ltd., in which the company has a 50 percent interest, continues to make good progress. Its production of electric lamps has increased substantially, and it has taken up the manufacture of miniature lamps. The glass tubing and rod plant has also gone into production. The demand for various electrical goods, including lamps and transformers, is growing, and the Planning Commission has raised the production targets for them. The difficulty, however, lies in finding foreign exchange and domestic capital, and this may "to some extent limit the size of expansion" of the existing concerns. But Mr. Bajaj says that "the demand for electrical goods handled by the company will continue to grow", and with proper planning and the best use of resources, it should be able to make "considerable improvements both in production and sales."

* * * *

Remittance of Foreign Incomes.—The tax concessions available to people residing abroad who wish to bring their accumulated foreign income into India have been clarified. Persons who do not ordinarily reside in India, and are non-residents for the purposes of the Indian Income-tax Act, do not pay any Indian tax on their incomes abroad. They are subject to Indian tax only to the extent to which any income accrues or arises to them in India, or is received in India by them or on their behalf. Any remittances they make to India out of their foreign income are completely free of Indian income-tax, the only exception being remittances made to wives. Such remittances to wives are, however, taxed on the rates applicable to the wife's total income and not on the basis of the income of the person making the remittances. As for persons hitherto non-resident in India who wish to bring their accumulated foreign income into India either immediately on their return to India or some time thereafter, amendments made to the Indian Income Tax Act in recent years provide for certain safeguards. If a person hitherto non-resident in India brings into India his past foreign profits within two years of his becoming a resident in India, he will not be subject to any tax liability on those profits. For instance, if a business man who returned to India from South Africa in May 1956 brings a sum of Rs. 2 lakhs in June 1957 out of the profits earned by him in South Africa before his arrival in India, the sum of Rs. 2 lakhs will be excluded from the total income for the year 1st April, 1957, to 31st March, 1958. It will not be included in the total income even for rate purposes. Thus, if the income earned in India during 1957-58 is Rs. 6,000, he will be taxed only on Rs. 6,000 and at the rate applicable to Rs. 6,000. Even if past profits are brought to India more than two years after the assessee becoming resident in India, they will not be included in his total income, provided that the tax liabilities, if any, already outstanding against the assessee on the date of the remittance are discharged within three months of the date of remittance. Thus, if in the example given above, a further sum of Rs. 3 lakhs out of past foreign profits is brought to India on 10th May, 1959, and if on that date, the assessee has an outstanding tax liability of Rs. 10,000, the whole of the sum of Rs. 3 lakhs will be excluded from the total income if the tax liability of Rs. 10,000 is discharged before 10th August, 1959. Remittances of capital are, of course, not taxable as income in any case.

* * * *

Export Outlook for Britain.—The latest issue of the *G. E. C. Export Guide* provides up-to-date information on the export prospects for 36 major groups of British products in 34 countries, together with an indication of the economic conditions in these countries. This shows that the current prospects for exports are "good" in 19 countries, "improving" in five, "deteriorating" in five and "bad" in five. The breakdown is as follows: "good" in Argentina, Australia, Burma, Canada, Ghana, Hongkong, Iraq, Italy, Malaya and Singapore, New Zealand, Nigeria, Norway, Portugal, Switzerland, Trinidad, South Africa, Russia, Venezuela and West Germany; "improving" in Belgium, Pakistan, Spain, Sweden and the United States; "deteriorating" in Ceylon, Denmark, the Federation of Rhodesia and Nyasaland, Kenya and the Netherlands; and "bad" in Egypt, Finland, France, India and the Irish Republic. The possibilities of improved trading since July have appeared in Argentina, Ghana, Pakistan and Portugal, while they have become worse in Egypt, the Federation of Rhodesia and Nyasaland, and France. The inadequacy of Britain's gold and dollar reserves in relation to the volume of her trade is recognised as a source of weakness. The *Guide* deals with this, pointing out that the level is only sufficient to cover two months' imports at the current rate, compared with about eight months' before the war. Although these reserves are now at about the pre-war level, £200 million is derived from a short-term loan from the International Monetary Fund which falls due for repayment in the next few years. Even before the war, between 1935 and 1938, the reserves were being eroded, for, with imports averaging £887 million a year and export at £527 million, the visible trade gap was £360 million and this was not fully covered by the surplus on invisible transactions. Hence, Britain incurred an overall balance of payments deficit in the years before the war. In 1938 this deficit amounted to £70 million. Between 1954 and 1956 the average trade gap was £673 million, which was only 18 percent of the total imports, compared with 41 percent before the war.

If trade, inward and outward, had doubled in value since 1938, while volumes remained stationary, the trade gap would have risen to £720 million. In spite of additional adverse factors, such as movements in the terms of trade, there has been, in fact, an annual average surplus of £88 million a year on current transactions. This achievement is due to exporting more than twice as much as prewar. The *Guide* points out that the causes of Britain's present weaknesses are due to adverse movements in the invisible trade accounts and to changes in the structure of the sterling area. The surplus on invisible transactions—payments for services and interest on investments—has failed to keep pace with the visible trade deficit. Though the loss of dollar investments is partially responsible for this, a net income from overseas investments of £200 million, which paid for nearly three months' imports before the war, is now only sufficient for three weeks' supplies. Heavy Government expenditure on invisible account must also bear some blame but this would only add another week's imports annually. The sterling area's membership includes some countries only recently free of political and economic control Many of these have drawn up plans for rapid industrial development. Where the United Kingdom, as the main provider of investment capital in the Commonwealth, is unable to provide funds, the flow of imports into the sterling countries depletes the reserves of the whole area. The only real buttress, in spite of the trebling of world prices since 1938, has been the devaluation of the pound in 1949 which realised a windfall gain of 30 percent. The root of the problem is that the gold and dollar reserves are now asked to work three or four times as hard as in 1938, and it is small wonder that they are

affected by a breeze which would not have shaken them 20 years ago. Finally, the export performance of some new products (not sent abroad before the war) is examined for the period 1948-65. The considerable growth in exports of radar equipment, diesel locomotives, synthetic detergents, television transmitters and receivers and permanent waving kits, underline the efforts of new industries as contributors to Britain's trading prosperity. But the *Guide* stresses that though Britain is the world's leading exporter for certain articles, such as aeroplane engines, motor vehicles, textile machinery, electrical generating equipment, wire ropes and cables and radio isotopes, relatively few firms in each field create these achievements. If more firms—marketing both "new" and "traditional" products—were engaged in the export trade, Britain's economic position would be significantly reinforced. The opportunities are certainly there.

* * * *

Housing in U.P.—According to a statement made by Mr. Ali Zaheer, U.P.'s Minister for Civil Supplies, the Government of India is drafting new proposals on giving financial aid for individual and community housing schemes in the States. About Rs. 3 crores was allotted to U.P. by the Centre during the first plan period, but the money could not be utilised because individuals were not prepared to invest Rs. 2,000 out of their own resources in order to qualify for a loan of Rs. 6,000 under the scheme. The fresh proposals now being drafted by the Centre, it is expected, will be announced by April next year. Meanwhile, 24 slum clearance and re-housing schemes costing Rs. 196 lakhs have been sanctioned by the Centre for the five major cities in U.P.—Kanpur, Agra, Banaras, Allahabad and Lucknow. The Centre's contribution will represent exactly half the cost, and the other half is to be borne by the State Government. This will be the first slum clearance project for the State, and under it, the construction of 1,420 single-storeyed and 3,949 double-storeyed tenements in all is proposed. The shortage of middle-class housing is assuming serious proportions. Rent control operates in all the important towns, but only about a third of the applicants succeed in getting allotments through official channels. The number of applicants in Kanpur in 1956-57 was 15,469, but the number of houses allotted was 6,874. In Lucknow, there were 12,495 applications, the number of houses allotted being 1,632. To encourage private building, houses constructed after 1951 have been exempted from the operation of the Rent Control Act. But this has not led to an increase in building activities, probably because the gap between the economic rent of new constructions and the rent-paying capacity of tenants has been widening.

* * * *

Muddle in Manganese Ore.—Under the new mineral export policy for the period from July 1957 to June 1958, the whole of the iron ore export trade has been handed over to the State Trading Corporation. The private sector's share of the manganese ore export trade has also been greatly curtailed; when it was decided to canalise more and more of this trade through the Corporation in June 1956, it was asserted that the private organisations were incapable of earning enough foreign exchange. The Government argued that the Corporation would be in a better position to achieve this aim. Speaking at the annual general meeting of the Western India Minerals Association, Mr. N. S. Worah, chairman, has said: "It is nearly one and half years since the State Trading Corporation interested itself in the manganese ore trade, and I think it was high time that it published information bearing on its actual performance in this particular field, rather than resorting to publishing figures covering contracts concluded, which means practically nothing although admittedly they look very impressive." Those who produce and sell manganese ore and iron ore are facing a serious problem; foreign demand is mostly for the high-grade ores. Until 1955-56, the United States and several other steel-producing countries imported most of their manganese ore from India. But the Government's new mineral export policy and the intrusion of the Corporation into this field have led to a change. The Corporation has not been able to fulfil its contractual obligations, with the result that its export quota has remained unutilised. Having contracted to purchase medium and low-grade ore from domestic producers, it has not been able to lift them for the last six months. Consequently, large sums of money have remained locked up which traders can ill afford to allow in times of stringency. In addition, it is reported that the Corporation has suggested the cancellation of its lower-grade purchase contracts "which, if true, I am constrained to say, does not reflect well on the part of an organisation having the backing of the Government." Foreign buyers are not satisfied with the delivery schedules of ores for the past year due to restrictions imposed by the quota system, and the Corporation has not been able to satisfy them either. They are less confident of getting regular supplies. Mr. Worah thinks it necessary to sponsor a delegation, consisting of members representing the mineral industry and trade, to visit the main consuming centres abroad.

* * * *

U. P. Electric Grids Connected.—Measuring 942 feet, the longest high-tension line over the Ramganga, with no support in between, has recently started to carry energy. It connects the two major grid systems in U.P.—the Ganga grid and the new Sarda grid. The Ganga grid has a total generating capacity of 77,900 kilowatts and the Sarda grid has an installed capacity of 41,400 kilowatts. The link has been designed to carry 20,000 kilowatts either way. The project was decided on by the U.P. Government as early as 1951, when the work was entrusted to the Electrical Machines Corporation (Private) Ltd. The total cost of construction has been Rs. 1 crore. Recently the Central Water and Power Commission advised all States to design their electric power systems in such a way that a single grid is formed within the State; it added that the possibility of an inter-State grid system should also be kept in mind. U.P.'s electrical engineers deserve credit for having anticipated the directive of the Central Water and Power Commission. When the Yamuna hydel scheme, the Ramganga hydel scheme and the Harduaganj steam station are completed, the new link will assume added importance as it will enable large blocks of power to be transmitted from one end of the State to the other.

* * * *

Exporting to Fiji.—The new Trade Commissioner who is to go to the Fiji Islands has heard from chambers of commerce in Madras pleas for a direct subsidised shipping service, instead of transhipment through Sydney. It has also been suggested that the market for condiments and tobacco from south India be explored and a trade delegation sent. Selling prospects in the south Pacific territory seem to be considered hopefully because many Indians live there. But Fiji, which depends heavily on its sugar industry, might well ask whether protection for Indian sugar is calculated to expand trade. The territory imported Indian goods worth only Rs. 67,000 in 1955-56, according to the vice-president of the South Indian Chamber of Commerce. The presence of a large Indian community in Fiji might suggest that it is a natural market for goods from this country, but it is sometimes overlooked that Australia and Japan too are interested there. A reading of U.K. Colonial Office reports could perhaps dispel many current notions about what Fiji requires or how important the sugar refining industry there is.

* * * *

Sahu Chemicals.—U.P.'s Chief Minister, Dr. Sampurnanand, attended the machine installation ceremony at a chemical factory in Dulhipur, near Banaras, a few days ago. Known as Sahu Chemicals, the factory will manufacture 40,000 tons of soda ash and 40,000 tons of ammonium chloride fertiliser annually. The latter will help increase food production. The project, which is estimated to cost Rs. 5½ crores, has been undertaken by Mr. Shanti Prasad Jain with a loan from the State Government. In an obvious reply to Socialist criticisms of the State Government's policy of giving financial aid to the private sector, the Chief Minister has told *kisans* not to be misled by political agitators but to work wholeheartedly for the success of the factory which, he says, will help fulfil agricultural requirements. He has also declared that an aluminium factory will shortly be set up in Churk, Mirzapur district. The Centre has recommended proceeding with the work on the Rihand dam, which is to be completed by 1961. It may be recalled that in answer to a question in

EUCLID S-18 the "step ahead" in all around big scraper performance. For power to move the earth, Euclid S-18 is the best investment.

Business Training.—Reference was made recently to the increasing attention being devoted in Britain to training for business careers. Two further developments have recently taken place in this sphere which merit mention. With export markets growing increasingly competitive, education and training become just as important to the salesman as to the man in the mill. Appreciating this point, the Manchester College of Commerce is offering a two-year course on "Textile Export Marketing" which includes a brief history of the trade and a summary of the principal materials used in textile manufacture, their characteristics, sources of supply, and current market prices. Manufacturing and finishing processes for cotton and synthetic fibres are also surveyed. The main part of the course deals with systems of export, direct and through confirming houses, appointments of agents, methods and terms of trading and payment with an examination of the documents involved in each operation. In addition, the course touches on a number of related matters including economics, business law and market research. The second is a new development in insurance education. A College of Insurance has been established in Surbiton under the administration of the Chartered Insurance Institute, and the first course opened recently. The college is intended to provide training for any students sponsored by firms engaged in insurance: these may be insurance companies, Lloyd's underwriters, brokers or loss adjusters. The first course is an elementary one for new entrants to the insurance profession and includes lectures and visits to organisations connected with insurance. A later course is for insurance inspectors and will be more technical. The college will have over 100 visiting lecturers.

* * * *

Textile Competition in the East.—It was one of the Japanese delegates to the International Cotton Conference in Venice, Dr. Kojiro Abe, who drew attention to the danger to which the present structure of world trade in cotton goods would be exposed through the expansion of the industry in China, but the matter is undoubtedly of as great concern to Hongkong, India and Pakistan, for it is the markets which these countries now serve to which any export drive by China would be directed, and more especially in South-East Asia. The dangers arise from two factors: firstly, the low costs which could be achieved with the country's standards of living and with the Communist pattern of industrial organisation, and secondly that the prices at which Communist countries are prepared to sell goods abroad are frequently based on political rather than economic calculations and that, moreover, export business is often conducted through barter transactions in which the prices of the goods concerned are not always apparent. Whether China has an advantage over, say, Japan through having its own cotton crop at the disposal of its mills is a question on which opinions may differ. Both India and Pakistan are cotton growers as well as cotton textile exporters, so that they are in the same category as China, and they will certainly have to struggle to maintain their overseas trade in cotton goods. India's desperate need for foreign exchange makes it essential that exports should be increased and that any capital expenditure should soon begin to make its fullest possible contribution to the improvement of the country's balance of payments. The new arrangements being considered, under which export quotas will be fixed for those mills which receive permission to install additional looms and an excise duty will be levied by way of penalty on cloth which is diverted into the domestic market from the export quota, may help to make manufacturers more anxious to secure overseas business, but will also add to their anxieties over Chinese competition.

* * * *

A Nylon Review.—Those in the textile industries who are interested in the research and development work which is being carried out with nylon yarns and staple fibres will find a great deal of information, attractively presented, in *Nylon Outlook*, a new journal of which the first issue has been published. British Nylon Spinners Ltd. hopes to produce it three times a year. It is intended primarily for general management, so that it is mainly written in non-technical language, and its scope covers not only scientific research but also the studies in technological and merchandising subjects of which managements should have some knowledge. Two of the articles in the first issue deal with hosiery, one with the use of nylon staple in worsted spinning, and another with nylon in the fishing industry. There is a description of some of the ways of conducting research into consumer preferences and their attitudes towards particular types of goods.

A PROBLEM OF RANK

OUR modern sensitiveness may be a sign of refinement, but refinement is often deficient in virility, and of the two, where men are concerned, it may be that virility hath the higher claim to respect. The old—it is old now—the old question, or wrangle, or discussion, call it what you will, regarding the military rank of the Volunteer officer is again, for some reason or other, to the front, and the arguments which appear are apparently, as of yore, all on one side. The Volunteers seem even more keen about military rank than do the Army Surgeons, and that is saying a good deal. But if ever a trivial, silly piece of vanity disturbed the peace of man's mind, this sensitiveness about Volunteer rank is surely one of the silliest. Volunteer organs, of course, back it up. They have to study their own constituency, and, to judge by what appears in their columns, it would seem that the average Volunteer officer is as fond of military embroidery as the average woman is of a new hat. It would really be interesting, indeed consoling, to know that there did exist in India one sturdy subject of Her Majesty the Queen who, with but small social position, was yet content to be a loyal Volunteer officer without bothering his patriotic head about titular distinctions off parade. But where are we to find him? The fact is the Volunteer Force as a whole is badly served by people who persistently agitate this wearisome question from the present querulous standpoint. *The Indian Volunteer Record* has recently unearthed a paragraph from *The Volunteer Service Gazette* of September 1893, in which the fact is recorded of a Volunteer C.O. who wished to know if his rank as Lieutenant-Colonel was *real*—whatever that may mean. The reply from the War Office, for it was the War Office to whom application was made, was as follows: "As long as you continue to hold such commissions, the rank is in its degree as real as that of any other officer holding Her Majesty's Commission."

Your Income tax affairs need not worry you

Preparation of Income tax returns is a complicated matter these days. This need not, however, worry you.

You will find it to your advantage to place your Income tax affairs in the hands of your bank.

The State Bank of India will be pleased to undertake the preparation of returns, the checking of assessments and the submission of claims for refund of tax at moderate charges. The Bank will ensure that you obtain all the refunds to which you are entitled.

Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Calcutta, one of more than 555 offices waiting to serve you throughout India.

Without Prejudice

PAYMENT OF TRAVELLING AND HALTING ALLOWANCES

VALIDITY OF DEMAND OF UNION REPRESENTATIVES

(FROM OUR LEGAL CORRESPONDENT)

EMPLOYERS, in industrial disputes, have their rights which, though the subject of much statutory modification, are generally speaking the rights of ordinary litigants in pending suits, while the particular dispute is maturing for trial but not actually decided by the labour court which will eventually dispose of it. The expression "equity, justice and good conscience" occasionally may cut both ways and we are indebted to the *Labour Gazette*, Bombay, of October 1957 for an illustration of that fact by reporting the views of the Supreme Court on an inequitable, unjust and bad principle which has been developing since at least 1951, under which it has been sought to saddle employers with costs of proceedings while they are still pending and before the eventual judgment is known or delivered, and to compel these employers to pay them in advance irrespective of the final result of the industrial dispute.

In the course of certain preliminary proceedings before the then industrial tribunal, Delhi, in 1955, an application was made on behalf of the All-India Punjab National Bank Employees Federation in which it was prayed that an order should be made directing the bank to pay travelling and halting allowances to the representatives of the various unions so as to enable the latter to send their representatives to Delhi, the place where the adjudication proceedings were pending. The industrial tribunal agreed that there was no provision of law on this point in favour of the unions but pointed out that "the general practice of the industrial courts, particularly in banks' cases," had "all along been to allow reasonable travelling and halting expenses to the unions' representatives". It may be mentioned that there were branches of the unions all over India and that payment of the "reasonable allowances" asked for would have involved the bank in an expenditure of not less than Rs. 2,500 for each day of hearing. Nevertheless, the tribunal directed the payment of travelling and halting allowances to the representatives of no less than 12 unions and organisations. Moreover, the representation of every one of the 12 was not confined to one member. All this at the bank's expense, whatever the eventual result of the case might be. A startling decision, you may think. But the grounds of it were even more so: "Natural justice".

A vague enough expression, admittedly, but in connection with the above facts, it is submitted, distorted out of all grammatical meaning or rather into the plain meaning of just "soak the rich".

The application of the unions was granted by the tribunal. The order made was in these terms: "The management objected to the grant of any travelling allowance or halting allowance to the representatives of the unions. It is no doubt correct that there is no provision of law on this point in favour of the representatives, but the general practice of various tribunals has all along been to allow reasonable travelling allowance and halting allowance to the representatives of the unions, specially in banks' cases. It is, therefore, ordered that the representatives of the unions who put in appearance (before) the tribunal from station outside Delhi shall be paid 2½ second-class railway fares to and from Delhi plus Rs. 10 a day as halting allowance by the management of the bank. The bank is also requested to direct its respective branches to pay travelling and halting allowances in advance to the employees who come to court as representatives."

That is to say, although the employers might eventually win the case, they were to be landed in advance, before the case was heard, with payment to trade unions and employees, of some Rs. 2,500 a day. When one remembers that the general rule of law is that costs follow the event, that is, are awarded to the successful party after the final result of the case, well, used as one has become to curious interpretations of "justice, equity and good conscience", this order takes one's breath away.

The bank of course took the matter further to the (Punjab) High Court for the purpose of quashing the order on the ground that it was made wholly without jurisdiction and also was manifestly unjust. But on 14th May, 1954, the High Court dismissed the bank's application. The bank thereupon asked for and obtained special leave from the Supreme Court to appeal to it.

* * * *

Now, of course, High Courts do not give unreasonable judgments and there was previous authority in support of the Punjab High Court's decision and by which the industrial tribunal, no doubt, considered itself bound. For some six years or so at least, attempts have been made to compel employers, particularly banks, to meet such expenses as the above in pending proceedings. One of these, which their lordships of the Supreme Court cited with forthright disapproval of the grounds on which the expenses were allowed, was the well-known case, *Certain banking companies v their workmen* (1952. II. L.L.J. 54).

The grounds on which that decision was based and upon which the allowances were granted in advance were these:

(1) The banks were well organised and their managements were in possession of resources.

(2) The adjudication by a labour court or industrial tribunal was a compulsory adjudication in the interests of the public, and as disputes relating to banking companies with establishments in more than one State were referred to the tribunals by the Central Government, the circumstance that various workmen residing in various States were compelled to submit to an adjudication by a central tribunal, was sufficient to justify an order for the payment of their travelling and halting allowances.

(3) There was nothing in the Act to preclude the exercise of such power on the part of the industrial tribunal as was required to carry on the fundamental object of ensuring a proper hearing for the two parties to the dispute and the weaker party, namely, the comparatively unorganised, numerous and scattered workmen employed in different branches, needed assistance to present their case.

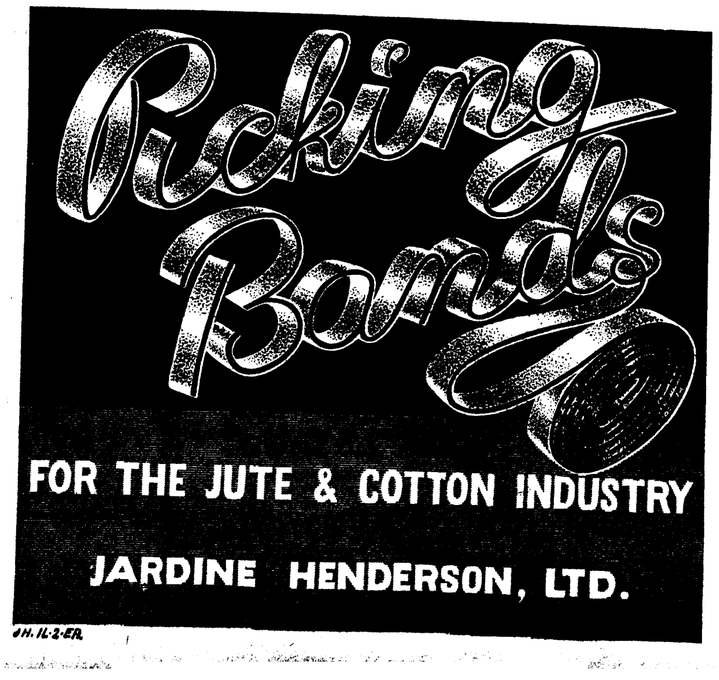
(4) Prior to the addition of sub-section (7) of Section 11 in 1950, various industrial tribunals used to pass similar orders and it was in recognition of the necessity of such orders that the statutory provision in the sub-section was made.

(5) The principles of natural justice required that a real opportunity should be given to the workmen to present their case by asking the employer to pay for their expenses.

* * * *

The Supreme Court crashed down on all these five grounds one by one with refreshing candour: "In our opinion," said S. K. Das, J. for himself and his three colleagues, "not one of the aforesaid grounds is really sustainable either in law or on the principles of justice, equity and good conscience. The circumstance that the banks are well organised and their managements are in possession of resources cannot be a ground for making them pay for the expenses of the other party; if that is the principle to be applied, then, in every case the richer party must be made to pay the expenses of the weaker party, irrespective of the ultimate result of the dispute; even in a dispute raised by the workmen which may be ultimately found to be devoid of all merit, the employer must be made to finance the workmen. Such a principle will merely encourage frivolous and unsubstantial disputes and will run counter to the object and purposes of the Act, namely, the promotion of industrial peace in the interests of the general public.

"The second circumstance, that the adjudication is a compulsory adjudication, applies equally to both parties. If it is a compulsory adjudication for the employees, it is equally so for the employer, and we can see no reason why that circumstance should involve the imposition of a penalty on one of the parties to the dispute and not on the other. We have already pointed out that on a proper construction of the sub-section there is no power in the tribunal to direct the payment of the costs of a party in advance by the other party irrespective of the final result of the proceeding, and the view expressed by the Banks Disputes Tribunal as to the construction of the relevant sub-section is manifestly erroneous; nor are we satisfied that prior to the addition of the sub-section there was any consistent or uniform practice in the matter, so as to lead to the inference that the provisions of the sub-section gave statutory recognition to the practice. It is difficult to understand how the principles of natural justice can be invoked in aid of an order which penalises one party to a dispute by making it pay for the costs of the other party in advance, irrespective of the result of the proceeding. We can only say that such an order is neither *natural nor has any element of justice in it*". (Italics curs).



* * * *

The above observations, coming from four judges of the highest Court in the land, constitute plain speaking indeed, and one fancies that there is a note of real indignation running through them. The reader will expect a little more information about sub-section (7) of Section 11 of the Industrial Disputes Act under which, without doubt, a wide and comprehensive discretion is given to the tribunals to determine how and by whom and to what extent and subject to what conditions costs are to be paid. It was in the purported exercise of that discretion that the order appealed against had been made. But what is the meaning of the word "discretion"?

Their lordships of the Supreme Court explained it with some pungency: ". . . . . discretion is a judicial discretion and must be exercised according to the rules of reason and justice—not by chance or caprice or private opinion or some fanciful idea of benevolence or sympathy. It is a negation of justice and reason to direct the appellant to pay in advance the costs of the respondents irrespective of the final result of the proceeding. The general rule is that costs follow the event, unless the court for good reasons otherwise orders. Respondent 1 (the tribunal) gave no reasons for his order except that of practice—a practice, assuming there be any such practice, which is neither legal nor just; . . . . It may be readily conceded that an employee is as much entitled to a fair deal as an employer . . . . . but 'social justice' does not mean that reason and fairness must always yield to the convenience of a party—convenience of the employee at the cost of the employer as in this case. . . . Such one-sided or partial view is really next of kin to caprice or humour. Lord Halsbury, L.C., put the matter in characteristically forceful language when he said: '. . . . . discretion means when it is said that something is to be done within the discretion of the authorities that that something is to be done according to the rules of reason and justice, not according to private opinion; according to law and not humour. It is to be not arbitrary, vague and fanciful, but legal and regular'."

The bank's appeal was allowed with costs.

[*Punjab National Bank Ltd. v I. T., Delhi and others. Labour Gazette* (Bombay), October 1957, P. 225.]

WHEN so much of Calcutta's social life is falling victim to the foreign exchange shortage, it is reassuring to find that the major event in our cultural calendar has survived—for this year at least. I am referring to the Calcutta School of Music's symphony concert season, which is due to start on Wednesday next at the New Empire. The guest artiste on this first occasion will be Miss Hanna Ludwig, the leading mezzo-soprano of the Dusseldorf Opera. I see Miss Ludwig has appeared at all the principal opera houses in the world; but I am sure she will never have faced a more appreciative audience than she will here in Calcutta. I wish the same might be said for its size. And that is my way of hinting that this season's concerts should be given the support they deserve. I have heard it said in the past that they do not always reach the peak of artistic perfection. That may well be. But I must protest that such an attitude is a poor appreciation indeed for the patience, expense and hard work which those associated with the School have, year after year, contributed towards the often thankless task of keeping western musical culture alive in this city. If, occasionally, the results of their efforts have been less than perfect, that does not alter the fact that they have provided us with some of the finest performances and performers, that have ever been heard east of Suez. The least we can do is to lend our full support on all occasions, lest, when we do feel the need for good music, it will no longer be available to us. This season's array of guests includes—beside Miss Hanna Ludwig—Mr. Gordon Watson, the Australian pianist, who is due to appear at the second concert on 10th December; Mr. Maurice Clare and Mr. Peter Cooper; the violinist, Mr. Ronald Woodcock; and for the final concert in the series, Miss Liesl Stary, Calcutta's own pianist. The Symphony Orchestra will be conducted this year, as last, by Mr. Bernard Jacob.

* * * *

I have just finished reading the latest socialist "classic", *Contemporary Capitalism*, by Mr. John Strachey, former U.K. War Minister and Labour Party theoretician—and I must admit I am disappointed. That is because I had been led by Mr. Strachey's reputation as an intellectual and an author, and by the discussions of his book in the pro-Left Press, to expect something profound, if not entirely original. But his book seemed to me to be sadly lacking in both qualities. Contemporary capitalism, Mr. Strachey tells us, no longer conforms to the elegant model of perfect competition beloved of nineteenth-century economists, and having now become monopoly-oligopoly in advanced capitalist economies, it has arrived at its "last stage". We have all heard of this monopoly-oligopoly business before, thanks particularly to Mrs. Joan Robinson, but this is the first time, to my knowledge, that anybody has taken for granted that it is the "last stage". I wondered on what evidence Mr. Strachey based his thesis, but careful re-reading disclosed nothing more than the opinion that the economic forces of democracy will keep modifying the character of capitalism until it is changed so radically as to lose its identity altogether. Semantics, of course, are rarely a strong point with socialist authors, but I presume this to mean, in terms of practical politics, that in democracies the socialists will somehow be voted into power, that trade unions will become more powerful and more exacting, and that State ownership of the means of production will continue to expand. If this interpretation is correct, I suspect that Mr. Strachey is doing less than justice to his own commonsense, and is certainly not showing much political foresight. In advanced societies, socialism and communism have become almost impossible propositions (Mr. Strachey might consult Professor Galbraith on this point), and the political trend, far from favouring socialists, is distinctly moving against them. The latest West German elections provide a good example of this, and Mr. Strachey knows, as does his leader Mr. Gaitskell, that the British electorate also prefers parties that side with individual enterprise and choice in the economic field. Mr. Strachey is even less convincing on two of the most important issues of the day—the problem of capital accumulation and the extent of public control over industry. I have read reports that the Social Democrats in West Germany were unable to state precisely their views on these questions at the recent elections and that the crafty Dr. Adenauer promptly cashed in on their dilemma. He offered at public meetings a prize equivalent to £100 to anybody who could explain clearly and simply what the socialist manifesto meant on these points. It is reported that not a single Social Democrat came forward.

* * * *

As I contemplate the march of active democracy in every sphere of life, there is one nightmare that haunts me. Our leaders have set their heart on workers' participation in management; students now determine who is fit to be their vice-chancellor; and, impressive or depressing as these experiments with democracy may be to you according to the extent of your "enlightenment," I sometimes imagine the students of a blind school deciding to have no outsider arranging their affairs. From there it is a short step for someone to get up and demand that the driver of the school bus must be blind too. That this was no extravagant fantasy of mine has been proved by some passengers of a local train between Howrah and Burdwan. When the train reached Baruipura station a group of passengers demanded that it be taken to Howrah as the diversion was causing them inconvenience. On some persuasion from the railway officials, the passengers were eventually kind enough to agree to go to Sealdah, but then demanded that the train should not stop at intermediate stations from Dankuni onward. Not unexpectedly, this inconvenienced certain other passengers with different destinations, and they soon proceeded to assert their inalienable democratic rights too. The "democratic" pressure on the railway officials must have been very great indeed to force them to change their schedules twice, and the consequent inconvenience to the passengers of the mail trains held up during the process of democratic debate is perhaps a matter of no consequence. This certainly was "consumer resistance" with a vengeance, and it should surprise nobody that my joy at this latest triumph of democracy is not exactly unbounded. This is not back-seat driving. This is the passenger at the wheel, and the road to disaster is clear and inviting. I am not thinking only of the railways either.

* * * *

It is an error to think that exchange restrictions hurt only other people and never oneself, as Air-India International reminded us recently. The company has shown a reasonable profit, which is creditable in a field so ruthlessly competitive as international commercial aviation, but it is clearly apprehensive of what the current and coming years may bring. Fewer passengers, for instance—and because of the total disappearance of the basic travel allowance. Despite nationalisation, Air-India International runs on strictly business lines (or it would be out of business in a jiffy) which, I see, cannot yet be said for the Indian Airlines Corporation. A part of the reason may be that the former has Mr. J. R. D. Tata for Chairman. There were stories in a section of the Calcutta Press recently that, perhaps, some officials of the I.A.C. were not enthusiastic about nationalisation. Their feeling, if true, may be shared by a larger public on a perusal of the latest accounts. There it is frankly admitted that losses will continue for some years yet. As for the charge of a lack of enthusiasm, it is unfair to particularise the I.A.C. officials; enthusiasm has always departed when the chilling hand of nationalisation has touched an industry. To say that independent operators make a profit on their freighter services while the I.A.C loses, is to admit that the former have been enterprising and the latter not. It does not mean that some officials have been "sabotaging" the Corporation. What it does mean is that, whenever there is the slightest competition with private enterprise, the inefficiency of a nationalised industry shows up in all its inevitable nakedness. To look for scapegoats in individuals is a dirty thing to do when "the fault, dear Brutus" is inherent in the very concept of nationalisation. This is not the passenger at the wheel, but worse. It is a bureaucrat at the wheel, and it far exceeds the horror of the nightmare I spoke of in the last paragraph.

* * * *

A friend asked me the other day whether I knew how to get rid of crows. He explained that these incorrigible birds were frustrating the plans he had for doing something with his garden this winter. I extended my deepest sympathy, but had to admit it was a problem I would not care to be facing. Birds can be difficult to discourage once they take a fancy to one's property. I recall reading some time ago that a war has been going on for the past ten years in Birmingham between the city's officials and its starling population. A recent communiqué points out that the birds are still undefeated and look like remaining so. For years they have congregated on the city buildings at night, and however ingenious the plot to dislodge them, they have simply found their way round it. They refuse to be frightened; stuffed owls and snakes in their roosting places have been treated with contempt. They have resisted being dazzled by searchlights, discomforted by electric shocks and deafened by high-frequency sound waves. Exploding fire-crackers have proved useless and various irritating repellents, such as naphtha and creosote, have either evaporated or hardened. The birds even survived a crafty scheme for broadcasting the distress cry of a female of their species; as one official ruefully remarked: "Chivalry does not appear to be a strong point with starlings" The latest weapon, I believe, is classified under "psychological warfare". It consists of greasing the edges of the buildings, so the birds will be unable to get a proper grip and will develop "insecurity feelings". Opinion is deeply divided on who will win this round, but the betting is still in the birds' favour. If such is the tenacity of Birmingham's starlings, I can see little chance of success against Calcutta's crows. The only advice I could give my friend was to refer him to a brilliant little scheme thought up some years ago by a well-known "burra-mem" of this city. She hit on the idea of soaking bread pellets in gin. The crows, I am told, loved it. The rest was easy—she just went out and collected them, they were too drunk to fly.

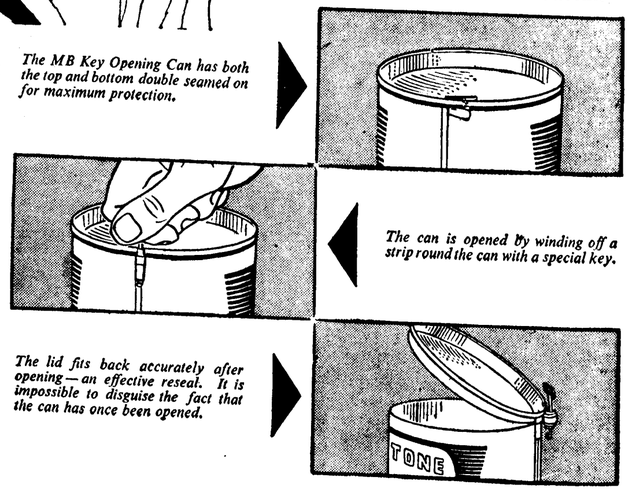
a pilfer-proof package for every product!

The manufacture of Metal Box's range of pilfer-proof containers and closures is backed by an active Research Organisation. The Central Laboratory in Calcutta assists suppliers in developing improved printing inks, surface finishes and protective lacquers, and maintains strict routine tests for all incoming raw materials to the Metal Box factories; on the spot control of operations is carried out by Branch Laboratories. This ensures pilfer-proof containers and closures of the highest quality, superbly printed and finished. Expert scientific advice from Associates throughout the world is available to assist in solving customers' packaging problems.



A METAL BOX PILFER-PROOF CONTAINER

MB KEY OPENING CAN

The MB Key Opening Can has both the top and bottom double seamed on for maximum protection.

The can is opened by winding off a strip round the can with a special key.

The lid fits back accurately after opening—an effective reseal. It is impossible to disguise the fact that the can has once been opened.

THE CALCUTTA MONEY MARKET

LITTLE CHANGE IN ADVANCES

Wednesday, 20th November.

THE total level of advances has shown a small decrease during the past week. Accommodation for foodgrains and for jute has risen a little, but sugar credit continues its downward trend. Requirements on account of cotton are virtually unchanged. The inter-bank market has been somewhat easier, and the call rate quotes 3½ to 3¾ per-cent.

The bill market has been very dull. Most of the documents passing have related to tea shipments, gunny bills being extremely scarce. Remittance has been on a modest scale. Sterling has improved in relation to the dollar and Continental currencies.

* * * *

Bullion was quietly steady in restricted trading. Silver declined to Rs. 179.56 on large arrivals of Tibetan coins. The price fell to 90-3/8 cents in New York, but the quotation in London showed little change at 78½d.

Gold was quoted at Rs. 109.50 and demand centred mostly on ready delivery.

* * * *

During the week ended 15th November, Government of India Treasury bills for Rs. 37,50,50,000 were sold in favour of the Reserve Bank.

* * * *

A decline of Rs. 3.94 crores to Rs. 1,487.04 crores in active notes was the notable feature of the return of the Reserve Bank of India for the week ended 15th November, 1957, while the total note issue was Rs. 57 lakhs higher at Rs. 1,514 crores. Foreign securities were reduced by Rs. 9.94 crores to Rs. 291.83 crores and rupee securities were increased by an equivalent amount to Rs. 970.65 crores. Balances held abroad in the Banking Department rose by Rs. 4.95 crores to Rs. 24.37 crores as a result of the transfer of securities from the Issue Department. Deposits of the Government of India fell by Rs. 3.23 crores to Rs. 51.63 crores, while other Government accounts rose by Rs. 2.03 crores to Rs. 8.19 crores. Balances of commercial banks at Rs. 102.15 crores showed a rise of Rs. 7.35 crores. Investments increased by Rs. 10.96 crores to Rs. 239.91 crores. Other loans and advances declined from Rs. 61.75 crores to Rs. 59.24 crores, of which advances to scheduled banks against usance bills amounted to Rs. 19.68 crores (Rs. 21.03 crores). Ways and means advances stood at Rs. 48.56 crores, compared with Rs. 51.32 crores.

* * * *

The return of the State Bank of India for the week ended 8th November, 1957, shows a drop of Rs. 4.37 crores to Rs. 365.45 crores in total deposits. Investments in Government securities are up by Rs. 6 lakhs to Rs. 153.94 crores, while other authorised investments remain unchanged at Rs. 10.14 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 31 lakhs to Rs. 161.40 crores. Cash and balances are, in consequence, shown at Rs. 47.98 crores or Rs. 8.18 crores less.

* * * *

The statement of the position of scheduled banks for the week ended 8th November, 1957, shows Demand and Time liabilities at Rs. 747.18 crores (Rs. 19.08 crores on account of borrowings from banks) and Rs. 651.47 crores (Rs. 14.32 crores), compared with Rs. 754.61 crores (Rs. 19.77 crores) and Rs. 645.63 crores (Rs. 13.97 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have decreased by Rs. 98 lakhs and Rs. 9.94 crores to Rs. 38.88 crores and Rs. 95.17 crores. There is a rise of Rs. 3.49 crores to Rs. 407.37 crores in investments. Advances and bills discounted at Rs. 854.39 crores show a drop of Rs. 2.39 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 9.6 percent and 61.1 percent, against 10.4 percent and 61.2 percent.

* * * *

The general meeting of the shareholders of the PUNJAB NATIONAL BANK LTD. held last year resolved that, subject to the sanction of the Controller of Capital Issues, the sum of Rs. 37,50,000, being the amount standing to the credit of the share premium account, be capitalised. It is learnt that the consent of the Central Government has been obtained to the issue. The directors propose to take steps to issue three fully paid-up shares for every seven shares held.

DREDGER FOR CALCUTTA COMPLETING TRIALS

The new twin-screw dredger *Bhagirathi*, built and engined by William Simons and Company of Renfrew, Scotland, to the order of the Calcutta Port Commissioners, is continuing her trials, which began in the last week of October. As the vessel had most of her machinery on board when she was launched on the River Clyde on 26th September, she is expected to be ready to leave the Clyde for Calcutta before the end of November. The 4,500-ton dredger is 350 feet in length.

RADIO LAMP WORKS LTD.

The following are extracts from the Chairman's address delivered at the 18th Annual General Meeting held on 7th November in Bombay.

Substantial improvement in sales and profits has been achieved by Radio Lamp Works Ltd during the year ended 31st March. 1957. Sales increased to Rs. 86.27 lakhs from Rs 62.57 lakhs. The profit was higher at Rs. 5.59 lakhs after providing depreciation of Rs. 93.645 as against Rs 3.77 lakhs after allowing for Rs. 58,081 for depreciation last year Rs. 3 lakhs has been provided for taxation as against Rs. 57,377.

DIVIDEND :

The Company has already paid arrears of dividend on Cumulative Preference Shares for the years 1954-55 and 1955-56 and interim dividend at 3% on Ordinary Shares At the Annual General Meeting of the Company held at Bombay on the 7th November, 1957, the Shareholders have approved the payment of Dividend @ 5% on the Preference Shares for 1956-57 and also a further final dividend of 4½% on Ordinary Shares making a total of 7½% for the year. A sum of Rs 20,364 has also been sanctioned as dividend on Deferred Shares which works out at approximately 11.8%. In all Rs. 2.81 lakhs has been absorbed as dividend out of the year's profit. All the above dividends are free of income-tax.

NEW LINES OF MANUFACTURE AND SALES :

Radio Lamp Works Ltd has fifty per cent interest in Hind Lamps Private Ltd., and half the lamps produced by Hind Lamps are marketed by the Company. Hind Lamps have increased their production of Lamps to 7.38 million during the year 1956 as against 5.74 million in 1955. They have also started manufacture of Miniature Lamps (flashlight lamps) and glass tubings and rods for electric lamps.

Radio Lamp Works Ltd. have also taken up the sale of light fittings and fixtures. The Company has been granted licence to manufacture 48,000 chokes and 36,000 fittings for Fluorescent and Electric Lamps per annum. Steps are being taken to commence production of these items.

The business in Transformers manufactured by the Company continue to be satisfactory. Subject to approval of the Government, the Company has negotiated for technical collaboration for the manufacture of Transformers with a reputed West German firm.

FACTS BEHIND FIGURES

Flying 70,000 times round the world

To and fro fly the shuttles in the 70,000 looms of India's 105 jute mills. Each travelling at a speed of 9,000 picks an hour (the length of a pick averages two yards), these shuttles together cover a distance equivalent to about 70,000 trips round the world, weaving 1,000,000 tons of jute cloth each year. The jute industry is India's most important foreign exchange earner; jute products form over 60% of India's dollar exports. Texmaco, pioneer manufacturer of cotton textile machinery in India, also supplies this important industry with the complete range of jute mill machinery, designed and built to established international standards, in technical collaboration with the world renowned British company, Fairbairn Lawson Combe Barbour Ltd.

BETTER TREND MAINTAINED IN STOCK MARKETS

WIDESPREAD GAINS IN INDUSTRIALS

London, 20th November.

THE better trend which developed in the stock markets recently was maintained during the past week. Most sections recorded gains under the lead of industrial equities, which attracted persistent small buying attributed partly to institutions. The news that the overseas trade gap in October had widened, and the Chancellor of the Exchequer's warning that there would be no early relaxation of the credit squeeze, had only a limited effect on sentiment. The market generally responded to some favourable company news and a more hopeful view of the U.K. labour outlook following a moderate statement on the Government's wage policy issued by the Trades Union Congress economic committee. Later came the news of a reversal in U.S. monetary policy, as evidenced by the reduction in several of the Federal Reserve Banks' interest rates. This encouraged the London market and Wall Street, although the latter's subsequent reaction induced a more cautious attitude here. The U.S. move was expected to encourage an expansion in American business activity, but it was appreciated that it might take some time to have its effect. Gilt-edged securities improved in response to the reduction in U.S. interest rates on the view that it brought nearer the possibility of a move in the British Bank rate, while sentiment was also assisted by the overwhelming success of the new Nottingham Corporation issue, which established a premium of about two points when dealings started. Japanese bonds went ahead on the plan to speed up the redemption of the external debt. The Antofagasta Rail stock lost ground on an adverse earnings statement. Widespread and often substantial gains were recorded in the industrial market. South African gold shares, after showing widespread gains, reacted partially on profit-taking. Oil shares fluctuated somewhat but recorded very little change on the week. Coppers and other base metals were rather erratic. Selectively firm conditions prevailed in rubber shares, mainly on bid hopes. Kuala Muda remained firm but were below the best. Tea shares were firm in response to the better trend at the auctions, while Ceylon issues were favourably influenced by the shelving of the nationalisation plan for foreign-owned estates.

The Money Market

The credit squeeze was firmly maintained in the money market during the past week. Money was in short supply and small borrowing had to be undertaken from the Bank of England on two occasions. Up to 6¼ percent was paid for non-regular money, with the average rate around 5¾ percent. Thursday was a very disappointing day for the market. The Government repaid the balance of the 2½ percent Funding Stock outstanding and it was expected that credit conditions would be comfortable in spite of heavier obligations in the way of a large bill take-up and the weekly tax transfers. However, the authorities had conditioned the market to such an extent by taking off during the recent operations a good many of that particular day's maturities that there was scarcely sufficient money available to meet market requirements. Credit conditions remained rather stringent.

Activity on Wall Street

Long-term United States Government obligations extended the recent forward movement on an increased volume of business. Treasury issues scored impressive gains prior to and after the news of the reduction in the discount rate in four Federal Reserve districts from 3½ percent to 3 percent. Investment quality corporates, which had been irregular, advanced following the news. Investment demand for the $250 million American Telephone and Telegraph debentures also increased sharply. Rails dropped in sluggish dealings, with some issues reaching new lows reflecting the sharp decline in freight-car loadings. Convertibles followed the upward trend in the stock markets. Foreign dollar bonds were mixed and quiet. German and Italian issues were soft, with losses of fractions to one point. Among Japanese issues, Government 5½ percents of 1975 fluctuated over a one point range. Chile 3 percents moved up a point, while Brazilian issues were mostly lower, with a number of them showing declines of from one to three points.

Irregular Trend in Vegetable Oils

Prices were easier for most oilseeds during the past week and business was not large. Castorseed continued downward, but U.K. consumers were not attracted. Demand for linseed remained poor, and although an easier price trend developed, Canadian offers remained out of line with crushers' views. During the closing stages, the market became firmer, reflecting the recovery in Winnipeg options. There was very little stimulating news in groundnuts and were few bids really to test the market. Linseed oil had a moderately active week, and after an interim downward move, values recovered to close almost on par with the initial selling indications. Demand for castor oil was still slow, and prices of Bombay oil November-December and December-January shipments were marked back by £3 a ton. British West African groundnut oil was steadily bought, most of the interest being shown for near positions.

Stocks and Shares

INITIAL RISE IN SHARE MARKET NOT MAINTAINED

SETTLEMENT CONSIDERATIONS INDUCE PROFIT-TAKING IN SPECULATIVES

Wednesday Evening.

THE stock market has closed today in a quiet mood and prices have eased on profit-taking induced by settlement considerations and higher carry-forward charges. The buying spree which developed some days ago seems to have ended, and operators are now taking a cautious view. It is feared that any foreign loans which India might get will carry high interest rates. The U.N. debate on Kashmir has been bearishly interpreted.

Indian Irons have declined at the close. Sentiment in jutes has weakened because of the fall in gunny prices. There has been some selective enquiry in coals, although investors are inclined to wait for the price of the commodity to be revised. Miscellaneous shares have been bought selectively on good corporate news. Subscriptions to the new Philips issue are, it is believed, running at a satisfactory level. A number of tea shares have improved as prices at the Calcutta auctions have increased. Securities have been quiet.

Details of the week's trading follow.

* * * *

The gilt-edged market ruled steady but the volume of business was less, as trading was hampered by a shortage of scrip. The enquiry for short-dated and medium-dated loans continued, but long-dated issues remained on offer and their prices were slightly easier. The 3% Conversion Loan was marked around Rs. 71 and 3% Non-terminable Paper had small buyers at Rs. 71.15. In short-dated loans, 3% 1958 was asked for at Rs. 99.75 and 3% 1959-61 was marked up further to Rs. 98.70; 2¼% 1961 continued in demand at Rs. 94.20 while 3½% 1961 was steady at Rs. 99.65. The 2¾% 1960 had buyers up to Rs. 97 and 2¾% 1962 was marked at Rs. 94.20, while 3¼% 1962 was traded around Rs. 97. In the medium-dated group, both 3% 1963-65 and 3% 1964 hardened to Rs. 93.48 and Rs. 93.70, respectively, while 3¼% 1964 was slightly better at Rs. 97.60, as was 3¼% 1965 at Rs. 97.40; 3½% 1967 changed hands around Rs. 97.55 and 3¾% 1967 was asked for at Rs. 99.50. In long-dateds, 3% Loan 1966-68 was traded at Rs. 91.15, but 3% 1970-75 had sellers over around Rs. 86; 3¾% 1974 was on offer at Rs. 98.25 and 4% 1972 was quoted at Rs. 100. There was a further improvement in the market for State loans, but as in the case of Central Government securities, trading was restricted by the absence of sellers; 4% U.P. 1963 had buyers over at Rs. 98.25 and 4% Madras 1963 was asked for at the same rate. Small lots of West Bengal 1963 changed hands around Rs. 99.25. Both 4% U.P. 1967 and 1968 hardened to Rs. 96.25 and 4% Madras 1968 had buyers at Rs. 96.50.

Very few transactions were reported in preference shares. In the miscellaneous group, Burn 6% was crossed at Rs. 106 and there were buyers of Calcutta Electric at Rs. 10.12. Indian Iron changed hands at Rs. 96 and Dalmia Cement Rs. 100 paid-up at Rs. 84. Jardine Henderson were placed around Rs. 53 and Orient Paper at Rs. 88.50. There were sellers of Richardson and Cruddas around Rs. 54.50. A solitary transaction was reported in jute preference shares—in Agarpara at Rs. 94.

In the banking section, United Commercial were a good feature and improved further to Rs. 58. Punjab National were unchanged at Rs. 65 and Hind Bank at Rs. 33.50. United Bank of India "D" shares changed hands freely around Rs. 4.12.

In railways, only one transaction was reported in a small lot of Ahmadpur-Katwa at Rs. 35.

In cotton textiles, Dunbar were marked down from Rs. 138 to Rs. 125 and Elgin Mills from Rs. 17 to Rs. 16. Kesoram were shaded at Rs. 10.94. Jayshree Textiles were crossed at Rs. 6.35.

Coal shares were dull and prices showed little change. Bengal were done at Rs. 229 and later today at Rs. 225 x.d. Borrea were slightly better at Rs. 16.56. Burrakur, after being done up to Rs. 22.75, turned easier at Rs. 22.25. Bhulanbararee were reported after a long interval at Rs. 13.25. Dhemo Main were marked at Rs. 7.62 and Equitable were easier at Rs. 23.25. Katras Jharia were unchanged at Rs. 51 and South Karanpura were crossed at the lower rate of Rs. 10.06, but were quoted at the close at Rs. 10.50. Central India and Western Bengal were both lower at Rs. 6.28 and Rs. 5.94, respectively.

Business in jute shares was on a restricted scale and prices tended to soften. Here is a chart showing representative price movements:

	Opening 14th November	Closing 20th November
	Rs.	Rs.
Alliance	87	84.50
Auckland	92	90
Bally	167	153
Barnagore	92	89
Champdany	134	125
Kinnison	133	125
Northbrook	19.75	19
Orient	97	95
Standard	60	56

Only two shares changed hands in the electric supply section—Agra at Rs. 124 and Calcutta at the previous quotation of Rs. 13.12.

Sugar shares showed a mixed trend. Belsund improved from Rs. 10.19 to Rs. 10.31 while Cawnpore were marked down from Rs. 14.50 to Rs. 14.31. Champaran were better at Rs. 21 but Ramnugger were lower at Rs. 19.37. Dyer Meakin changed hands around Rs. 7.19 and S.K.G. were reported at Rs. 9.

In engineerings, Indian Iron continued to meet with powerful bull support and at one time were taken up to Rs. 19.58; however, there were some profit-taking later and the shares reacted slightly to Rs. 19.21. Richardson and Cruddas and Jessop continued to meet with selling pressure and dropped further to Rs. 8 and Rs. 22.50, respectively. Textile Machinery, after being done up to Rs. 17.40, reacted at the close to Rs. 17.15. Guest, Keen, Williams were a firm feature at Rs. 28.62 while Burn were shaded at Rs. 328.

In papers, India Paper Pulp were better at Rs. 19.94, but Orient were easier at Rs. 25, as were Shree Gopal at Rs. 14.75. Titaghur met with investment support and improved to Rs. 32.94.

In cements, Dalmia were done at Rs. 9.87 and Jaipur Udyog were shaded at Rs. 11.95. Orissa came to hand at the higher rate of Rs. 12.69 and Sone Valley were offered at Rs. 4.67.

In insurances, a solitary transaction was reported in Ruby General at Rs. 6.12.

In shippings, India Steamship were steady at Rs. 11.75 but India General Navigation were marked down to Rs. 60.

Among miscellaneous industrials, Alkali and Chemical were unchanged at Rs. 13 and a fair amount of business was reported in Aluminium Corporation around Rs. 9.87. Angelo Brothers were steady at Rs. 18.37 but Britannia Biscuits were lower at Rs. 12.50. British India Corporation

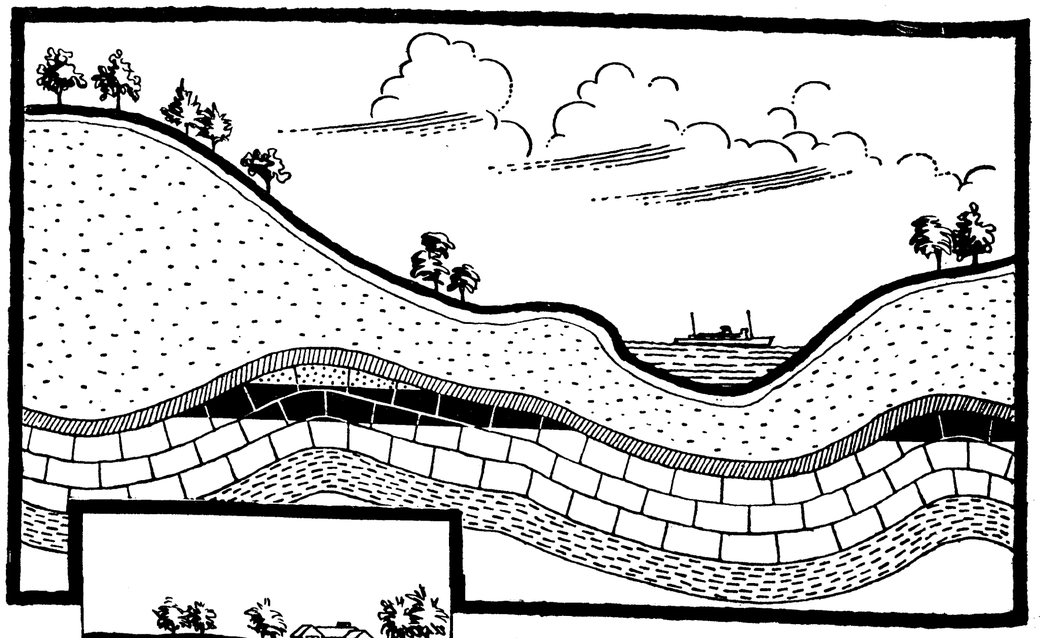
continued to meet with selling pressure and were marked down further to Rs. 4.50. Dunlop Rubber were better at Rs. 20.31, as were Hindustan Motors at Rs. 6.31. Imperial Tobacco were steady at Rs. 12 and Indian Aluminium changed hands at Rs. 12.81. Indo-Burma Petroleum were slightly better at Rs. 25.75. National Carbon changed hands at Rs. 23.50 and there were sellers of Rallis at Rs 28.50. Rohtas Industries were slightly better today at Rs. 17.81. Metal Box recovered to Rs. 26.25.

In the mining group, Indian Copper were fairly steady around Rs. 3.04 and Orissa Minerals improved to Rs. 19.50.

There was a sharp contraction in the volume of business in tea shares, which was mostly confined to stale bull liquidation. Among Assam shares, Baghmari had sellers at Rs. 20, as did Basmatia at Rs. 25.12. Bateli were slightly better at Rs. 28.25 and Bishnauth, after touching Rs. 21, had sellers at Rs. 20.19. Brahmapootra were weak at Rs. 3.25, with sellers over, and Brooke Bond were on offer at Rs. 17.62. Dhunseri were quoted at Rs. 13.75, as were Gohpur at Rs. 23, Grob "B" at Rs. 13.50 and Hoolungooree at Rs. 181. Ledo were done at Rs. 18.25. Of the Dooars shares, Birpara changed hands at Rs. 117 ex-dividend, as did Hasimara at Rs. 22.75 and New Dooars at Rs. 272. Oodlabari improved to Rs. 16 and Rajabhat were done at Rs. 18.25. Of the remaining shares, Pussimbing were crossed at Rs. 9.62 and Singtom changed hands at Rs. 5.18. Eastern Cachar were quoted at Rs. 4.62 and Patrakola and Teliapara came to business at Rs. 145 and Rs. 144, respectively. Gungaram were crossed at Rs. 136 and Belgachi were slightly better at Rs. 59.50.

* * * *



The profit of the DHELAKHAT TEA COMPANY has declined by Rs. 1.03 lakhs to Rs. 8.52 lakhs for the year ended last December. The dividend has been maintained at 25 percent, including an interim of 5 percent. General reserve is allocated Rs. 75,000 against Rs. 49,500. The carry-forward is Rs. 52,398, compared with Rs. 42,736 brought in. The crop fell from 721,440 lbs to 671,484 lbs but the average sale price rose from 46.25 annas to 50.60 annas a lb. Estimates for the current year have been made for a crop of 9,000 maunds at a cost of Rs. 13.79 lakhs.

* * * *

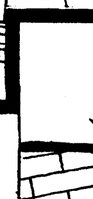
The PENCH VALLEY COAL COMPANY has increased its profit from Rs. 6.67 lakhs to Rs. 8.82 lakhs for the year ended last March. Bringing in Rs. 33,734 and other miscellaneous receipts, there is a balance of Rs 9,96,247. Taxation provision absorbs Rs. 2.63 lakhs. Contingencies reserve is allocated Rs. 2 lakhs, after transferring an equivalent amount from general reserve. A dividend of Rs. 2 a share has been declared to absorb Rs. 3.15 lakhs, leaving a carry-forward of Rs. 46,383. Raisings increased from 446,745 tons to 463,751 tons and despatches were higher at 463,237 tons against 454,926 tons. The directors state that in the accounts, provision has been made for Rs. 3,72,290 as the estimated cost of the Labour Appellate Tribunal award for the period from 26th May, 1956, to 31st March, 1957. The award was made retrospective from 26th May, 1956, whereas selling prices were increased by Rs. 1-8 a ton from 8th July, 1957.

* * * *

The INDIA PAPER PULP COMPANY has made a profit of Rs. 13.76 lakhs for the year ended last March. The taxation provision amounts to Rs. 6.25 lakhs. Bringing in Rs. 14,387, there is a balance of Rs. 7,65,544. Amounts of Rs. 1 lakh and Rs. 50,000 have been transferred from general reserve and dividend equalisation reserve, respectively. An interim dividend of 70 nP a share was paid and a final

The Story of Oil—3

Buried power



'Rock Oil' is the literal translation of the Latin words 'petra' and 'oleum' which make up the name petroleum. Trapped underground in the cells and fissures of porous rock, petroleum is a raw mineral consisting of liquid crude oil and natural gas. These are usually found together, and between them they are a major source of power for the world today and the basis of thousands of commodities useful to mankind.

Petroleum is a mixture of substances called hydrocarbons. These are chemical compounds made up of the elements carbon and hydrogen (the former heavy, the latter light in weight). Hydrocarbons vary widely in nature and behaviour according to the different proportions of these two elements they contain. Most are liquids at ordinary temperatures, but some are gases and others solids like bitumen.

Despite popular belief, this petroleum does not collect in large underground pools. If it did, exploration and discovery would be comparatively easy. Instead it lies, usually with a quantity of salt water, in layers of solid looking porous rocks closed in by walls or caps of non-porous rocks which prevent it escaping. There are three main types of oil-trap—the 'anticline', an arch-shaped upward fold in the earth's rock layers; the 'fault', or fracture in the earth's crust whereby a non-porous layer has slipped to cut off a porous layer; and the 'stratigraphic' trap, where because of changes in the type of rock a porous layer becomes sealed off by non-porous rocks.

Thus, when geologists begin their search for oil, they start with the knowledge that certain types of rock formation are more likely to yield oil than others.

The drawing at the top shows the inside shape of an *anticline*. Compression has buckled up the earth's crust, squeezed it into these folds. The other illustration is of a *fault*, a dislocation in rocks. Two sections of the earth have been forced in different directions until they cracked, slipped out of position, and upset the alignment of all the rock strata involved. The black section indicates oil-bearing rock.

Assam Oil A full-scale petroleum industry

This is one of a series of informative advertisements about the petroleum industry

B.O.C.

dividend of an equivalent amount has been declared, leaving a carry-forward of Rs. 33,544. The directors say that they had hoped to give further details about the Assam pulp mill project. Unfortunately, almost all the plant and machinery for the project has to be imported, and the shortage of foreign exchange has raised difficulties which have not yet been overcome. Consequently, it is not possible at present to estimate "when your mill will receive supplies of bamboo pulp from this source, and, in the circumstances and having regard to the present foreign exchange position, your board is now considering the desirability of confining expenditure on the existing paper-making machines to essential renovation work only". Although completion of the scheme as hitherto planned may have to be deferred and the company will not obtain the maximum benefits of the expansion until increased supplies of indigenous pulp are available, the benefits resulting from the installation of the third paper-making machine will be substantial, particularly considering "the increased range of quality papers which it will enable your mill to manufacture".

Bombay Market

SENTIMENT BETTER ON HOPES OF TATA LOANS

LESS ANXIETY ABOUT INCREASE IN INTEREST RATES

Wednesday Evening.

THE Bombay stock market closed on a steady note during the past week. At first, share prices improved on short-covering and selective support. The cut in the discount rates of four U.S. Federal Reserve Banks, as well as the assurance that there was no immediate prospect of an increase in Bank rate here, helped to bolster sentiment. Later, there was a reaction because of profit-taking. Towards the close, sentiment again improved on the report that the World Bank would sanction further loans to the Tata Iron and Steel Company and that the latter company had been assured of loans from nine American private banks also.

Tata Steels ended at Rs. 166.25, while Indian Irons were lower at Rs. 19.36 on selling by Calcutta interests. Alcock Ashdown were transacted at Rs. 228.75 and Premier Construction were bought at Rs. 159. There was scattered interest in automobile shares as the industry was being granted protection. Premier Automobiles came to hand at Rs. 92 and Hindustan Motors were sold at Rs. 6.40. Tata Locomotive rallied to Rs. 138.50 on replacement buying.

Textile shares improved on balance because of the news that the sales tax on cloth is likely to be replaced by an additional excise duty. Century improved to Rs. 403.50 on buying from knowledgeable quarters. Bombay Dyeing were transacted at Rs. 51.20 and Kohinoor were bought at Rs. 262.50 on investment account. Simplex realised Rs. 160.50 and Svadeshi were quoted at Rs. 172. India United Ordinary were taken at Rs. 9.68 and Apollo were freely available at Rs. 2.08.

Sugar shares were prominent in the miscellaneous group, and Belapur improved to Rs. 249.50. Phalton rose to Rs. 148 on prospects of a bonus issue. Cement shares were steady, and Associated Cement changed hands at Rs. 151.75. Digvijay Cement were taken at Rs. 129.75. Mining shares were quietly steady and fluctuations were narrow. Shivrajpur Syndicate were done at Rs. 84. Bombay-Burmah jumped to Rs. 553 on short-covering and National Rayon recovered smartly to Rs. 217.50 on interested support. Tata Chemicals were transacted at Rs. 15.52. Steamship company shares were steady, and Scindia Steam were bought at Rs. 17.24. Great Eastern Shipping came to hand at Rs. 21.16.

Banking shares were steady, though turnover was restricted. Punjab National were higher at Rs. 65.70 on the report that the Controller of Capital Issues had given his consent to the issue of bonus shares in the proportion of three fully paid-up shares for every seven shares held. Bank of Baroda were bought at Rs. 100.50. Insurance shares were selectively wanted and New India Assurance were transacted at Rs. 48.75.

Investment buying was seen in electricity supply undertakings, and Ahmedabad Electric were taken at Rs. 97. Tata Hydro changed hands at Rs. 115.

Foreign Trade . . .

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service.
With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Foreign Agencies

ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

It's 1,000 miles across the room...

RATTLE, clatter, thump goes the toy engine at the little boy's heels . . . rattle, clatter, thump across the room. And, to him, it's a thousand-mile trip! So what's vital to him is movement and speed.

To us, at Hindustan Lever, speed and distance are no less important. For you, we cover thousands of miles every day — every inch of India's 35,000 miles of railroad, for instance.

But before our products are despatched, we must consider how they will travel. Plane or train? Road or waterway? Handcart, head-load or mule-train? The answer depends on a great many factors — for instance, on the *kind* of territory those goods must cross and how *soon* they must arrive.

But arrive they must — and arrive in the best condition. For people have come to trust the goods we make — things like Sunlight Soap and Vim, Rexona and Dalda Vanaspati. The need for these products is growing — everywhere, all the year round.

We take trouble to satisfy this need — and so add another service to the service that the goods themselves perform. We add the service of *regular supply.*

Hindustan Lever serves the home

New Delhi

PROTECTION FOR TEN YEARS TO AUTOMOBILE INDUSTRY

GOVERNMENT POLICY ON LOANS TO PRIVATE CONCERNS

(FROM OUR NEW DELHI CORRESPONDENT)

BILLS to amend the Industrial Finance Corporation Act and the Indian Tariff Act were passed by the Lok Sabha last week. By the amendment of the Industrial Finance Corporation Act, the Corporation has been empowered to advance loans against deferred payments. The amended Indian Tariff Act gives protection for ten years to the automobile industry. The Minister for Industry, Mr. M. M. Shah, who piloted the Bill, announced that the Government had accepted the Tariff Commission's recommendation that three types of light cars should be permitted for manufacture in India, namely, the Fiat 1100, the Hindustan Ambassador and the Standard Vanguard.

The Minister added : "We are rejecting, we have rejected in the last two years, several proposals put-forward by industrialists to start more units in the automobile industry. We will confine ourselves only to the existing six units so far as this programme is concerned; and till such time as the volume of demand in this country increases, it will be hazardous to introduce new units in the industry. As for baby cars, we will permit their manufacture provided, consistent with their obligation, they manufacture 75 to 80 percent of the components in India; and provided, consistent with their obligation to bring down prices and consistent with their obligation to maintain the first-class quality of passenger cars, the existing units, without too much foreign exchange outlay, manufacture baby cars, such as Baby Hindustan or Fiat. Both of them are included in the original licences."

Financial Aid to Industry

The question of financial assistance to the private sector came in for some discussion during question hour in the Lok Sabha. Replying to a question, the Minister for Industry, Mr. Shah said that the Government had sanctioned a loan of Rs. 3 crores to Atul Products to enable it to undertake its expansion programme. The firm had so far drawn Rs. 1.32 crores against this loan.

Mr. Morarka : May I know whether they have recently signed an agreement with the Imperial Chemical Industries for the manufacture of dye intermediates and for that purpose they have applied for a big loan from the Government ?

Mr Manubhai Shah : They have recently signed an agreement for certain things such as vat colour, sulphuric acid. etcetera. So far, they have not approached us for any extra loan.

Mr. Morarka : Has the Government fixed any maximum limit on loans that can be given to any single industry in the private sector?

Mr Manubhai Shah : It varies from industry to industry. For instance, we have gone to the extent of giving the iron and steel industry about Rs. 10 to 15 crores and the chemical industries up to Rs. 4 or 5 crores. Generally speaking, to one unit controlled by the same party, not more than Rs. 3 crores—that is the normal limit.

Mr. Morarka : May I know the terms on which this loan has been sanctioned?

Mr. Manubhai Shah : Eleven years for repayment and 4.5 percent annual rate of interest.

Iron and Steel

Mr. Feroze Gandhi : He has just stated that Rs. 10 crores has been given to the iron and steel industry. Is it a fact that in the agreement signed between the Government and this industry, there is no specific date for repayment of the loan and also no mention of the rate of interest?

Mr. Manubhai Shah : The agreement is quite perfect. The rate of interest and the date of repayability, because of the uncertainty of the programme of development of that particular industry, has been left a little vague. But it has been done with a clear understanding that whatever the Government finally decides will have to be accepted by the party.

Mr. Feroze Gandhi : What I wanted to know is this. There is no date as to when this loan will be repaid. The agreement does not also specify any interest at all I would like to know why it is called a loan It should be called outright payment.

Mr. Manubhai Shah : There is a distinction The period of repayment of a Government loan should not normally exceed 15 years and all these loans have to bear an interest. As we were not certain when this development programme would go through, we left it vague and we have not made a provision about the rate of interest or when the first instalment will start to be repaid, but it is with a clear understanding that whatever the Government decides after seeing the development programme will have to be accepted by the party.

Mr T. N. Singh : As the Government has created so many credit agencies, why is this policy of granting aid in the form of direct loans by the Government being pursued?

Mr. Manubhai Shah : There are varying sizes of loans. Some are beyond the competence of any credit institution in the country and this has been the practice all over the world. When the loans are higher than Rs. 1 crore, the I.F.C. has to come to the Government and get it approved. When the loan is more than Rs. 3 crores, we do not encourage the I.F.C. to go into that. It is for the Government to see directly whether it is an economic unit and whether it can bear such a loan and also whether it is in the national interest and so on.

Mr. T. N. Singh : Has the Government got any policy which guides the grant of such individual loans to individual industries: Would they also seek the approval of this House before granting some money from the Consolidated Fund in this manner?

Mr. Manubhai Shah : As far as the House is concerned, this body is supreme; the Budget comes here and the allocations are indicated, and the House can always give directions to the Government. I can say very well that a well laid out policy and rules are there to govern this industry and the loans to be given to other industries. The higher priority industries are given such loans.

Mr. Gajendra Prasad Sinha : May I know how many chemical firms are there which have been allotted Rs. 3 crores as loans from the Government?

Mr. Manubhai Shah : As far as I can remember, one is F.A.C.T.—Travancore Fertilisers and Chemicals; the other is Atul Industries which has been given Rs. 3 crores. Less than Rs. 1 crore is generally the orbit of the I.F.C., and there are many chemical firms which have been given loans by the I.F.C.

Mr. Feroze Gandhi : May I know the total capital of this Atul Industries to which Rs. 3 crores have been given?

Mr. Manubhai Shah : The authorised capital is Rs. 5 crores now, and the paid-up capital Rs. 2 crores.

Capital Goods Imports on Private Account

The following is the break-up of import figures relating to the major items of capital equipment obtained on private account from the U.K., the U.S.A., West Germany and Japan during the period April 1956 to June 1957. They were made available to the Lok Sabha during question-hour last week :

(in lakhs of rupees)

Countries	Machinery of all kinds	Vehicles	Locomotives and spares	Ship and parts and aircraft and parts	Total
U.K.	8.390	1,862	181	131	10.564
U.S.A.	3.313	1,567	15	55	4.950
West Germany	4.350	1.345	59	1.066	4.950
Japan	950	119	7	112	1.188
Total	17,003	4,983	262	1,364	23,522

Part of these imports on private account are intended for public sector projects; the actual amount diverted to them is not available. Imports from Russia on private account are not available. The total imports of capital equipment from that country during 1956-57 were as follows :

		(Rs. lakhs)
Machinery of all kinds	...	36.45
Vehicles	...	5.26
Total	...	41.71

Answering supplementaries, the Government spokesman said that, although no definite target for imports by the private sector had been fixed, it was tentatively estimated that the private sector would require imports worth Rs. 450 crores during the second plan period. Out of this, the private sector had so far utilised Rs. 267 crores. As far as the future was concerned, strict control was being maintained on the use of foreign exchange. The Minister for Industry, Mr. Shah, said that during the current year, about Rs 112 crores worth of capital goods had been licensed, of which Rs. 60.9 crores were under deferred payment schemes.

Higher Capital Cost of State Steel Plants

Excluding the cost of townships, ore mines and quarries land, prospecting and designing, development of sources of water supply, power supply facilities up to the perimeter of the plants, personnel requirements for operation including the cost of training, railway works outside the perimeter of the plants, personnel employed directly by the projects, Customs duty, office expenditure and other ancillary expenditure, the cost of the three steel plants under construction in the public sector, has gone up by Rs. 86 crores as under : Rourkela (from Rs. 128 crores to Rs. 170 crores), Bhilai (from Rs. 110 crores to Rs. 131 crores), and Durgapur (from Rs. 115 crores to Rs. 138 crores). The present estimates of the cost of purchases from abroad, based on concluded contracts, compare with the original estimates as follows : Rourkela (Rs. 103 crores against Rs. 72 crores), Bhilai (Rs 78 crores against Rs. 54 crores), and Durgapur (Rs. 77 crores against Rs. 67 crores).

The differences are due to the following factors : (a) additions and improvements made to the project reports; (b) purchase abroad of structural steel work, refractories and such stores, which it was originally thought could be procured within India; prices abroad of these items are generally higher than in India; (c) under-estimating by the consultants and increases of prices and wages in Europe between the time of estimating the cost and the time when contracts were concluded; this applies mainly to Rourkela.

The significance of the original project estimates differs and is not the same in the case of all. The Russian estimate for the Bhilai steel plant project was virtually the quotation for the machinery and equipment to be supplied by Russia. In the case of Durgapur, the initial estimate of Rs. 67 crores for plant and equipment (included in the original estimate of Rs. 115 crores) represents the preliminary quotation subject to an increase of not more than 5 percent in certain sections. In the case of Rourkela, the estimate of expenditure abroad on plant and equipment was only the consultants' opinion of the likely cost and did not represent the offer of any suppliers.

Basis for Petroleum Prices

The prices of petroleum products are fixed by the oil companies on the basis of a formula approved by the Government since 1st April, 1950, taking into account the prices of imported products, it was stated last week in Paliament by the Union Minister, Mr. K. D Malaviya. He added that the Government had been considering for some time past the question of revising the present system of petroleum product pricing with a view to adopting the most economic basis Certain talks had taken place with the oil companies, but it was not considered desirable in the public interest to disclose the proceedings at present. These talks related to a new formula based on the cost of production plus an agreed margin of profits. *Prima facie*, there are, at least, two objections to this suggestion. Firstly, petroleum sources are liable to be exhausted in a particular area and the margin of profits should always provide not only for past prospecting and drilling, but also for future prospecting and drilling. Secondly, so long as the requirements of the country are met from imported crude oil, the international basis of computing the price cannot be ignored. To insist on a cost-plus-profit formula is to ignore the fundamental economics of the petroleum industry.

Recommendations of Finance Commission

The net effect of the second Finance Commission's recommendations, which have been accepted in full by the Government, is that the States will in future receive from the Centre, on an average, almost Rs. 50 crores more—that is, Rs. 143 crores instead of Rs. 93 crores as at present. This increase includes nearly Rs. 2 crores a year through the reduction in the interest charges on loans advanced by the Centre to the States

Two features are noticeable. The federal system of Government was launched in India in 1921 with provincial contributions to Central finances. The position has now been reversed. It is the Centre which increases every five years its aid to the States under various constitutional names. Here also, the Finance Commission has struck a note of warning. "It is for consideration whether the time is not ripe for a review of the Constitutional provisions dealing with the financial relations between the Union and the States", it says. It has argued that among the shared taxes, income tax is losing its dominant position. The amount of excise revenue given to the States has risen from 33⅓ percent to 50 percent of the total receipts. This is bound to rise still further.

The grants under Article 282 of the Constitution are already greater than revenue grants-in-aid given to the States under Article 275(1). According to the second Finance Commission's recommendations, the latter will amount to Rs. 190 crores, against Rs 275 crores likely to be received by the States under Article 282. With the levy of the estate duty and the tax on railway passenger fares, Article 269 of the Constitution provides an important source of State revenues.

The Commission has further modified the principle of allocation of income tax among the States. Sir Otto Niemeyer, who had first made these allocations, following the 1935 Constitution, adopted the principle of "collection" as the basis for allocation of taxes; States such as West Bengal and Bombay received the biggest amounts from the divisible pool The first Finance Commission modified this criterion by allocating 80 percent of a State's share from the divisible pool on a population basis, and 20 percent on a collection basis. The second Finance Commission has further raised the weightage of the population basis to 90 percent. By this modification, the share of West Bengal and Bombay, two major beneficiaries of the principle of allocation on the collection basis, would be further reduced. In actual practice, however, because of the reduction in the Centre's share by 5 percent to 40 percent, the loss by the change in the principle of allocation is likely to be made up, at least partially.

State Finances

The Commission has some uncomplimentary things to say about State finances and planning by the Planning Commission Here are some relevant quotations from its report : "Land revenue, which accounted for a little less than 20 percent of the revenue from principal heads in 1951-52, accounted for a little over 25 percent in 1955-56, the yield rising from Rs. 48 crores to Rs. 78 crores, largely as a result of the abolition of *zamindaris*. Out of the additional revenue raised during the period of the first five year plan, about 50 percent was accounted for by sales taxes and taxation of motor spirit and tobacco, and 20 percent by motor vehicles, passenger and carriage taxes The balance was raised by a number of minor taxation measures.

Taxation of land contributed very little and, except in Uttar Pradesh, irrigation rates also did not contribute any sizeable amount.

"A disturbing feature in the revenue position of most States was the deterioration in the net receipts from irrigation and electricity undertakings. At the end of the first five year plan, only two States, namely, Punjab and Uttar Pradesh, were able to obtain a net return from productive irrigation works after meeting interest and other charges. There has been noticeable delay in the utilisation of major irrigation works and tube wells. For all Part A and Part B States, excluding Jammu and Kashmir, it was anticipated in the first five year plan that an additional 8.3 million acres or so would be brought under irrigation in the area commanded by major projects. Recent estimates put this figure at less than 4 million acres.

"The delay in the utilisation of costly works naturally imposes a heavy financial burden. The full extent of this burden on the revenue budgets is not yet apparent, because in a number of major works, like Bhakra-Nangal, Hirakud and Chambal, which are in the process of construction, the interest on outlay is still being added to capital. We apprehend that some time towards the end of the second five year plan period, when some of these projects will be completed, the impact on the revenue budgets of the results of their working will cause anxiety. In electricity undertakings, only four States, namely, Madras, Mysore, Punjab and Uttar Pradesh, derived, according to the information supplied to us by the State Governments, an appreciable net return after providing for interest and other charges. The financial results in other States were far from satisfactory. In more than one State, there has been an accumulation of losses in the working of transport, industrial and commercial undertakings. There seems to be inadequate appreciation of the need to run such undertakings on a commercial basis and with a view to bringing a net return to the State exchequer.

Arrears of Revenue

"In a number of States, there has been a steady increase in recent years in the accumulated arrears of revenue To some extent, particularly in the case of arrears of land revenue and irrigation rates, this might have been due to the failure of crops. We were, nevertheless, left with the impression that sufficient attention was not always paid to the recovery of these arrears. The position appears to be the same in the case of loans also. On the whole, non-developmental expenditure appears to have risen at a pace somewhat more rapid than was envisaged in the plan, but part of the increase was perhaps unavoidable.

"The main points brought out by the review of the States' revenue and expenditure may now be summarised: (a) the scale of devolution recommended by the last Finance Commission was generally adequate for the normal expenditure of most States and left for many of them a sizeable surplus for meeting their plan expenditure. (b) The tax effort of many States during this period fell far short of the expectations of the Planning Commission. If they had raised the resources expected of them, some of the States which ran into deficits might not have done so. (c) The level of arrears of revenue and overdue loans in some States is a matter of concern and special efforts would seem to be necessary to reduce these arrears. (d) The public debt of the States is increasing rapidly on account of the implementation of the plan. A considerable part of it may turn out to be deadweight debt and the cost of its servicing will fall on general revenues. Efforts should be made to ensure that irrigation, electricity, transport, commercial and industrial schemes yield the maximum revenue so as to keep down the net burden of interest charges. (e) Expenditure has been steadily rising as a result of development; non-developmental expenditure has risen at a pace somewhat in excess of that envisaged by the plan.

"We noticed that in some States, administrative re-organisation, such as re-organisation of the police, was being undertaken. While we do not wish to express any opinion on the necessity for such re-organisation, we should like to urge the need for caution. With practically all the available resources earmarked for the plan or for meeting committed expenditure, administrative re-organisation involving an increase in non-development expenditure should not be undertaken unless it is inescapable. Even then, it should be phased over as long a period as possible. In formulating the second five year plan and assessing the resources available for it, the existing revenues of the States and the proceeds of future taxation had been fully taken into account, leaving the States without any margin for further commitments. Many State Governments complained that, in spite of this, additional burdens were frequently placed upon them by Central policies. They mentioned, in this connection, two matters to which we would like to draw the attention of the Central Government.

Matching Grants

"The first relates to the system of matching grants. During the first five year plan period, a number of schemes involving such grants were sanctioned and subsequently incorporated in the plan. A large number of such schemes have also been included in the second five year plan. The State Governments were unable to meet their share of the expenditure on these schemes as all their resources had already been committed for their inescapable expenditure for the implementation of the plan. Their difficulty was greater in the case of schemes outside the plan. The second matter mentioned by the States concerned the instructions issued from time to time by Central Ministries suggesting to State Governments the adoption of measures which resulted in the reduction of their revenues, such as the reduction of sales taxes on particular commodities, or in their incurring additional expenditure, such as on the consolidation of holdings. Except when the amounts involved were inconsiderable, these placed a further strain on the States' resources and often led to their running into deficits. There is force in this complaint also."

Finance Minister Reports on Foreign Tour

The Finance Minister, Mr. T. T. Krishnamachari, last week made a comprehensive statement in the Lok Sabha on his recent visit to the U.S.A., Canada, the U.K. and West Germany. He said: "The main impression which I have brought away with me from my talks with a large number of officials and non-officials at various levels is that in the U.S.A. there exists a deep interest in India and also a very real desire to assist in her effort to improve the conditions of her people. I was received by President Eisenhower, besides seeing the Secretary of State, the Secretary of the Treasury and other senior officials. The point which was repeatedly emphasised in all my conversations, whether with President Eisenhower and Secretary Dulles or with bankers or with academic persons, was that the U.S.A. would regard it as its duty to afford whatever reasonable assistance it could to a country like India which was endeavouring through democratic processes to effect the economic regeneration of her people. With this as the starting point, my task in removing such misunderstanding as existed in the American mind over our basic policies and principles and approach became very much easier and I feel, on the whole, successful. I explained the nature and magnitude of our needs and discussed the prospects of assistance from existing agencies and organisations in the United States which means, in the main, assistance from the newly constituted Development Fund, from the Export-Import Bank and assistance in the form of surplus commodities under P.L. 480. The whole question of U.S. assistance to India from the existing agencies and authorisations and, in view of the magnitude of our requirements, the possibility and feasibility of an approach to Congress for the purpose of assisting us is being examined at present by the United States Administration.

India and the Sterling Area

"My discussions in the United Kingdom with the Prime Minister, the Chancellor of the Exchequer and with various officials were concerned mainly with a review of the general position of the sterling area and with the problems connected with Indo-U.K. trade. Her Majesty's Government fully appreciates the fact that any assistance to India over the next few years would also strengthen the position of the sterling area as a whole. While, therefore, the U.K. is not in a position to assist us to any significant extent in the immediate future in view of her own rather difficult financial situation, I was assured that Her Majesty's Government is prepared and indeed anxious to do all it can to assist us in our general efforts to obtain credits from abroad necessary for the fulfilment of our second five year plan.

"In Germany, I met and had discussions with Chancellor Adenauer, Professor Erhard and various other members of his Government. I was assured of West Germany's interest in our developmental plans and willingness to assist in overcoming the difficulties we have immediately run into in their implementation. As a first step, as it were, the German Government has agreed in principle to find ways and means of making possible the deferring of certain payments which will fall due during the next 36 months or so, which constitute our most difficult period from the point of view of foreign exchange. These discussions will be carried forward in the next few weeks and I have every hope that significant assistance will be available to us as a consequence. I am glad to report also that as a result of these discussions, the West German Government will examine in consultation with us the possibility of making available the foreign exchange necessary to go forward with some of the projects to which we attach particular importance from the point of view of the fulfilment of our second plan."

Importance of Foreign Capital

The Finance Minister added: "Foreign investment either in the form of loan capital from and through the medium of banks and investment houses and other institutions or in the form of venture capital from industrial houses abroad, has an important part to play in Indian economic development. In the past, we have had important contacts with capital markets abroad. Over the last 15 or 20 years, however, these contacts have been broken and it is only recently that with the good offices of institutions like the World Bank we have been able to re-establish contacts with foreign capital markets to a small extent as in the case of the recent loan from United States commercial banks to the Air-India International and the prospective loan from U.S. commercial banks for the Tata steel plant. It has also been our policy to welcome foreign participation and foreign investment consistent with the overall requirements of our plan With this end in view, we have been negotiating abroad with several industrial concerns notably in the United States, U.K. and West Germany for participation in some of the important industrial projects that we propose to take up in the public or in the private sector.

"Notwithstanding the clarity of our statements concerning private foreign investment, there has been a certain amount of misunderstanding and misapprehension abroad about our economic policies and in particular about our attitude to private foreign capital. During my discussions with bankers and industrialists in the countries I visited, I was able to dispel some of the misapprehensions and misunderstandings. This process of creating a greater understanding among foreign industrialists and bankers of our policies, aspirations and potentialities of economic development has, of course, to be carried on, on a continuous basis.

"It is my definite impression that these sections, too, are watching with keen interest our plan and in particular our programmes for industrialisation and that not a few of the industrialists in these countries are desirous of sharing with us their technical know-how as well as of participating with us in the implementation of industrial projects by way of investment of money. To sum up, I would say that I found in all the countries I visited and among the sections of the people that I came across a much greater sympathy and understanding for our plans and aspirations than I had anticipated and that I expect that we will get sizeable assistance in particular from the United States and West Germany and from the International Bank to help us in our present difficulties. Whether this assistance would become available to us in good time in a measure commensurate with our needs will become clear only over the next few months. It is obvious, therefore, that we shall have to continue to exercise the greatest vigilance over new commitments for imports. It is of the utmost importance also that apart from continuous vigilance over imports we strain every nerve to increase our exports over the coming years. It is only by the greatest effort on our part to economise on imports and to promote exports that we shall be able to carry forward successfully our programmes for development during the current as well as the subsequent plan periods."

Foreign Investment in India

Some interesting figures of foreign investment in India during 1956 are now available. Country-wise, Britain topped the list:

	(In lakhs of rupees)
The United Kingdom	134.16
The United States	13.33
West Germany	14.67
Switzerland	9.27
Belgium	1.40
British East Africa, mostly repatriation of Indian capital	50 41
Others	0.44
Total	223.68

Industry-wise, the order of investment is as follows:

Industry or Trade	(Rs. in lakhs)
A. Manufacturing:	
Iron and steel products ...	53.78
Automobiles and accessories ...	44 63
Machinery and machine tools ...	8.40
Building and building materials ...	4.74
Heavy chemicals	22.63
Sugar	49.45
Cotton goods	16.76
Others	15.09
Total	215.48
B Trading:	
Machinery and machine tools ...	5.84
Exporters and importers ...	1.40
Total	7.24

These figures do not cover (i) investments in branches of foreign companies, (ii) investments made out of retained profits, (iii) investments in oil refineries, and (iv) a major part of the investment in the shape of goods.

A question of quality

THE man who has sound taste and judgement, who knows that to buy the best is in the long run more economical, will wear only Binny's fabrics. For over three generations Binnys have been studying the requirements of such men in their efforts continually to improve the quality of their fabrics—by trained skill and craftsmanship and by applying the latest technical developments in textile manufacture.

OFFICIAL PLAN TO CHECK INFLATION

LORD CHANDOS SUGGESTS WAGE PACT

(FROM OUR LONDON CORRESPONDENT)

PARLIAMENT was recently engaged on what promised to be an instructive, perhaps even a lively, debate on the Government's plans for the present session as outlined in the Speech from the Throne, with the Opposition tabling two motions of censure on the handling of housing and the economic situation. The speeches in the Commons were largely pedestrian, going over the old ground and reiterating the well-known arguments both for and against while the divisions produced the expected majority votes for the Government. Mr. Gaitskell was the outstanding speaker for the Labour Party with a serious, critical survey of the Government's failings. but was able to offer nothing in the way of alternatives other than the need for securing agreement concerning a general restraint in all directions and the reimposition of physical controls. Mr. Maudling was the most impressive official spokesman. He had little difficulty in meeting Mr. Gaitskell's points and turning them to good advantage. No opportunity was lost during the debate in emphasising that the Government was not proposing a complete wage freeze or an imposed wage policy, nor did it propose to interfere with the established principles of arbitration. As far as the criticism of the cutting back of investment was concerned, Mr. Butler referred to the fact that the average production in the September quarter was the highest ever and 3 percent higher than in the corresponding period of 1956. The fact that all these points had already been dealt with more effectively by the Prime Minister at the Lord Mayor's banquet and the meeting of the Institute of Directors, and by Mr. Thorneycroft at the meeting of the National Advisory Council on Industry—in an atmosphere less charged with Party acrimony—probably detracted somewhat from the debate in the Commons.

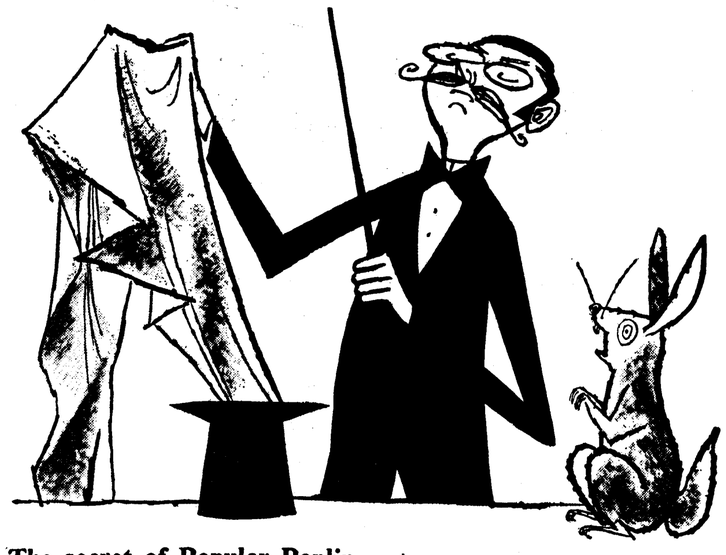
Basically, the Prime Minister had much the same to say at both the functions he addressed—a call for restraint all round. "A little more self-discipline all round," was how he put it, and then outlined a seven-point plan to check inflation, namely: no wasteful expenditure; no restrictive practices; no higher dividends or wages without considering their effects on production; more savings, bigger reserves; record investment now and still more investment "just as soon as we can afford it;" and, close co-operation between employers, unions and the Government in a national effort overriding sectional interests. This first reference to dividend restraint brought his 300 business men listeners something of a shock, but Lord Chandos, always ready with an original scheme, followed Mr. Macmillan by suggesting to his fellow-directors that managements ought to approach unions with an offer of a five-year wage agreement. This could assure an annual increase in the basic wage for a 44-hour week of some 2½ percent a year on condition that no wage claims would be advanced during the five years. There would have to be some contingency clauses to cover industries in trouble but the agreement should include greater security of employment. A man who has been with a firm for five years should have five weeks of guaranteed employment, and that principle should be carried throughout his working life. As a means of bringing both sides of industry together, this proposal has attracted attention in the House of Lords from both sides, and the Lord Chancellor promised that the Government would consider the plan.

Co-operation from Unions

With employers apparently prepared to co-operate, how about the unions? The T.U.C. Economic Committees has recently considered the economic situation, and it has issued a statement which, though highly critical of the Government's policy, ends on a note which could be taken as willingness to co-operate under certain circumstances. It says: "Britain's real economic objectives—preserving full employment, raising living standards, increasing investment, maintaining reasonable price stability, and improving our balance of payments—can only be achieved if all sections of the community are willing to limit to some degree their freedom of action to pursue independent policies. For this purpose, positive and constructive measures to keep down living costs and to expand output are essential. Any Government has a duty to help create a climate of confidence and co-operation in which these objectives can be achieved, or to make way for one which is able and willing to do so." The problems will be further examined by the General Council on 27th November, so the Government has some time at its disposal to break the present deadlock. Meanwhile, the Economic Committee has not supported the "warlike" proposals of its more extreme leaders and their followers.

October Trade Figures

Provisional figures for Britain's overseas trade in October show a substantial rise in the trade gap, which could have been the outcome of uncertainty in foreign countries as to which way the exchange situation was likely to develop, for the actual shipments would have been arranged well before the decision to raise Bank rate was taken. Imports rose sharply in value to £353.2 million, which was £45 million more than in September and 2¼ percent more than the monthly rate in the first nine months of the year. Over the first ten months, the value of imports was 5½ percent more than in the same period of 1956. Exports also rose, and at £271.8 million were £25 million more than in September but were 1½ percent less than the monthly rate for the first nine months of 1957, but over the ten months were also 5½ percent more than in the same period of 1956. Re-exports in October at £11.2 million were slightly higher than in September and 2 percent up on the monthly rate for the first three quarters. The trade gap jumped to £70.3 million, or £18 million more than in September and £13 million more than the monthly average for the first nine months of the year. In view of the decline in commodity prices, the volume of imports must have risen substantially.



October exports to the dollar area were reasonably well maintained at £35.4 million, or £3 million more than in September, but were 2 percent less than the monthly rate over the first three-quarters of the year, excluding silver bullion payments. To the U.S. market, exports were valued at £500,000 more than in September and amounted to £19.7 million and to Canada they were worth £15.7 million or £2.5 million higher than in September. While U.S. exports were slightly up on the monthly average for the first nine months, those to Canada were 5 percent less. The latter is not really as much of a setback as it looks, for over the first three-quarters of 1957 exports to Canada were worth about 11 percent more than the 1956 average and over 40 percent more than that in 1955.

Capital Spending Rate

Fears that the credit squeeze will cut back capital expenditure so as to have a deleterious effect on the economy are obviously based mainly on speculation. The final Board of Trade estimates of fixed capital expenditure by manufacturing industry are now available for the second quarter of the year and show that at that stage it was still increasing, though at a much slower rate. It was, in fact, 9 percent higher than in the same quarter of the previous year. This compares with an increase of 13 percent in the first quarter of 1957 and of 17 percent in the fourth quarter of 1956 compared with the same quarter in 1955. The slackening in the second quarter was due almost entirely to a 3 percent decrease in building work, compared with a 16 percent increase in that sector in the first quarter. Expenditure by most of the broad groups of industries showed a similar pattern in the second quarter of this year, either smaller increases or larger decreases. The main exception was the motor-car industry, with expenditure 45 percent higher, compared with a 6 percent increase in the first quarter. Total expenditure for the first half of the year was 11 percent higher than in the first half of 1956.

Commonwealth Investment

India's need for finance for her second five year plan, her hopes of securing loans from the United States and from West Germany, and the recent completion of the long-drawn-out negotiations for a loan from Russia have been receiving quite a lot of publicity in the Press—and unwittingly, or otherwise, this is invariably accompanied by a reference to the fact that Mr. Krishnamachari found his discussions while in the United Kingdom quite unproductive. This may be good from a propaganda view-point, but it is hardly fair to this country. During the House of Lords debate on the Queen's Speech last week, Lord Home, leader of the House had something to say about the British contribution in Commonwealth investment during a discussion of foreign policy. He said: "In the ten years from 1946 to 1955 70 per cent of the external capital invested in the Commonwealth came from the United Kingdom, 15 percent came from the United States, 10 percent from the International Bank for Reconstruction and Development, and 5 percent from elsewhere. As far as we can judge these percentages are being maintained, and the rate of investment in the Commonwealth from this country at the moment is about £200 million a year. In India 83 percent of all the foreign private investment is British investment." He added that Britain's rôle in Commonwealth commerce was also great. She imported 17 percent of Canada's total exports. 32 percent of Australia's. 65 percent of New Zealand's. 80 percent of India's. 16 percent of Pakistan's and 29 percent of Ceylon's.

The secret of Popular Poplin — Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label... but your customers don't know the 'behind the scenes' story that ensures the complete *reliability* of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for *you!*

Look for 'SANFORIZED' on the label

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay 2.

SIGNIFICANCE OF INDO-U.K. ECONOMIC COLLABORATION

NEED FOR CLOSER TIES STRESSED

(FROM OUR BOMBAY CORRESPONDENT)

THE U.K. High Commissioner to India, Mr. Malcolm Macdonald, has said here that Britain attaches the greatest importance to her partnership with this country since it is beneficial to the cause of the free world. He has described Indo-British friendship as the strongest link between the old democracies of the West and the new democracies of the East. "Therefore, let us do everything in our power not only to preserve but to strengthen Indian and British friendship." With reference to the second five year plan, he says that there is an increasing awareness in the West that "this experiment should succeed", not only in India's interests but also in those of the free world in general. The United Kingdom will be prepared to consider a request for further aid provided suitable ways and means are evolved. He has no doubt that Mr. Krishnamachari's recent visit to Britain, West Germany and the United States has served to create interest in the second plan and that some results will follow. Britain is India's biggest trading partner, having taken 27 percent of this country's exports over the last five years and having supplied 23 percent of its total imports. Mr. Macdonald thinks that Britain's total imports from India this year will amount to Rs. 208 crores, against Rs. 188 crores last year. As for foreign investments in this country, he says that Britain still leads with a capital investment of 82 percent of the total foreign investments. British investments here have increased by Rs. 137 crores between 1948 and 1953. He refers to the aid given through the Colombo Plan and other institutions.

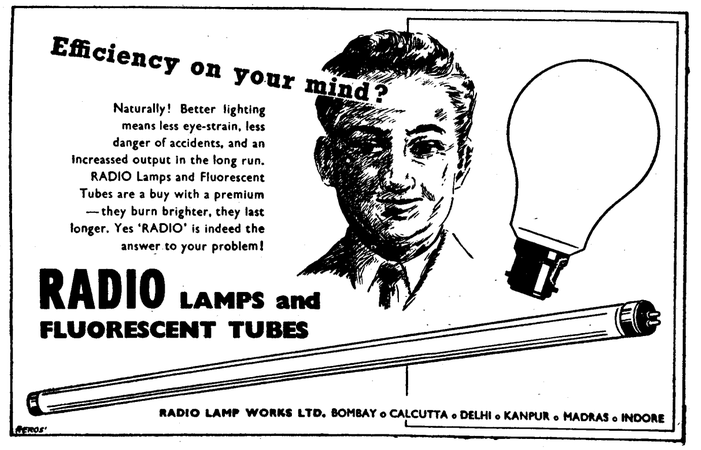
Concern over Rice Supply

The supply position of rice is causing concern here, and Mr. S. G. Kazi, Minister for Civil Supplies, has announced that 800,000 identity cards will be issued to families residing within the limits of Greater Bombay. Holders of these cards will be permitted to purchase rice only from fair-price shops. Wheat may be added later if found necessary. In spite of the somewhat difficult food situation, he has said that the Government does not propose to introduce rationing. The object of issuing identity cards is to ensure that the same person does not make repeated purchases in order to build individual family stocks. The quantity which an individual family can purchase against its identity card will vary according to the stock position. Additional staff will have to be recruited to operate the scheme. The Minister thinks that the present situation has arisen because of the reduced quota received from the Central Government. The quota for this month amounts to only 5,000 tons, against 10,000 tons in October and 6,000 tons in September.

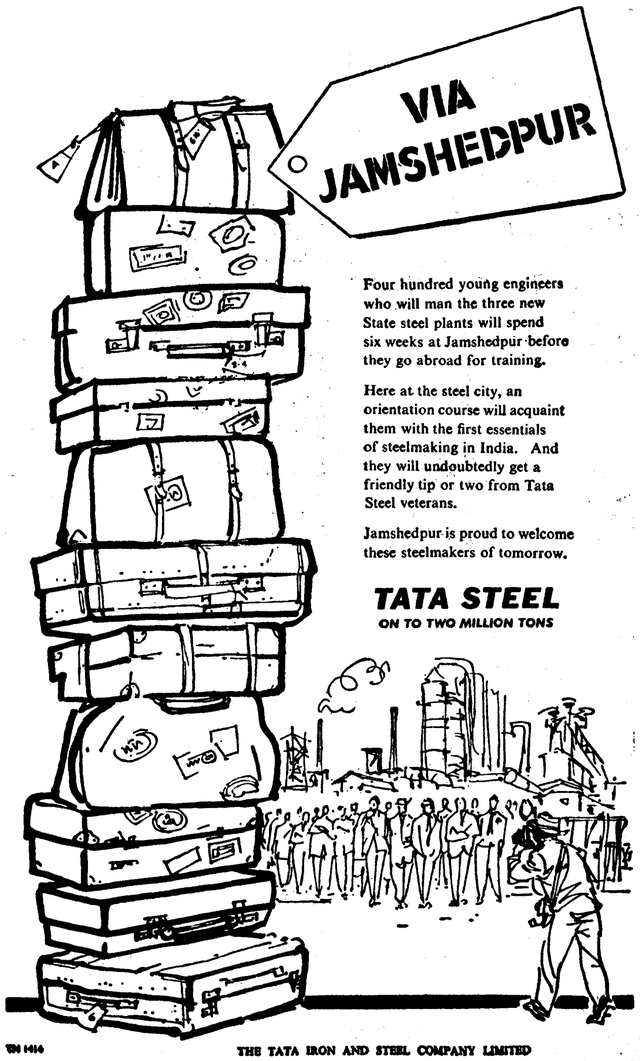
Decline in Cotton

The Jarilla March cotton contract touched a new low of Rs. 686 a candy last week. The main factor accounting for this fall was the Central Government's decision not to revise the cloth excise duty policy. Other delivery contracts also declined in sympathy. The spot market was lower by Rs. 12 a candy for all types. There was no business in export cottons because importing countries are able to buy cheaper in Pakistan and in the United States. As for imported cottons, there was some interest in spot lots of American and East African growths. Some 40,000 bales have been booked so far of the A. R. Uganda new crop.

Piecegoods Market Dull



The piecegoods market remained dull with limited turnover but prices were unchanged. While some enquiries were received from markets in the south for fine and superfine goods, the other major consuming centres showed no interest. It is reported that stocks are accumulating with mills and dealers. The export trade was also disappointing, the United Kingdom showing moderate interest in grey goods. The Sudan was the only other country to show interest and purchased a reasonable quantity.



Yarns Dull

The yarn market was equally dull because stocks of rayon piecegoods are mounting in up-country centres. Dealers there are offering at cut prices. The 120d December delivery contract moved between Rs. 810 and Rs. 818. The February contract was quoted around Rs. 10 lower than the December contract. The staple fibre contract for the 2/40 quality December delivery was quoted at Rs. 535. The cotton yarn market dropped by about four to six annas a bundle because of a lack of demand.

NEW TYPE OF STEERING BALL JOINT MADE OF NYLON AND STEEL

A new type of steering ball joint which was exhibited at the London Motor Show is made of nylon and steel. It has been manufactured by Chorley Precision Engineering, Ltd., of Lancashire. The company claims that the joint never needs greasing or any further attention after it is fitted; it absorbs road shocks: it is quite impervious to the grit and grime from roads; and it is suitable for all climatic conditions. More than two years have been spent in development and testing, and the joints have been in production since February this year. Since then, they have been sent to all parts of the world.

Engineering and Transport

BIG INCREASE IN AIR TRAVEL EXPECTED

NEED TO PROVIDE BETTER FACILITIES FOR TOURISTS

(FROM OUR NEW DELHI CORRESPONDENT)

MORE than 100 million tourists will travel by air during the next five years to countries which can provide the accommodation and other facilities they require. Mr. John Brancker, Traffic Director of the International Air Transport Association (I.A.T.A.), has told the 12th Congress of the International Union of Official Travel Organisations, held recently in Washington. If certain countries do not fulfil these requirements, then the tourists will go elsewhere, he has added.

Mr. Brancker foresees international air travel expanded to 30 million passengers a year by 1962—more than double that of 1956. These passengers, he says, are going to be of a rather special type. No longer is air travel primarily at the service of the "monied classes"; today, by bringing foreign holidays into the same sort of price category as a television set, the airlines have in fact become the means of travel for the average man.

Stressing the need to improve and expand facilities for the tourists, Mr. Brancker told the delegates: "If you invited a guest to your house and told him when he arrived that you were sorry but there was no bed available for him, you would soon lose your reputation as a host . . . If you ran a shop and put a guard on the door and insisted that every customer not only produced a certificate of good conduct, but was also disinfected before he came in, you would not get any customers—nor would you deserve them. But some countries still treat their tourist customers in much that way. Similarly no one will really believe that you want visitors if you make them spend a day getting a visa—something which costs time as well as money."

The I.A.T.A. Traffic Director points out that "a very large number of their potential tourist guests are women"—the current figure for north Atlantic travel is about 63 percent—and asked: "Have you ever tried to persuade your wife to stay in hotel accommodation which she didn't like? Any man who has tried this once will certainly never go to the same place again. You may get the male of the species to accept conditions which he doesn't like and didn't expect, but you will fail every time with the female." Mr. Brancker says that extended and tedious formalities and inconveniences at airports, besides irritating passengers, increase expenses for the airlines. Badly designed terminal buildings which require the use of large numbers of staff, serve to increase the costs of carriage; delays caused by inadequate buildings and facilities and indifferent navigational aids add further to airline costs, as do high landing fees. "If you want lower fares—and I think we all do—then the Governments must play their part as well as the air carriers. After all we are not looking for charity—only efficiency."

T. W. A. Polar Flight

T.W.A. completed its inaugural polar flight from Los Angeles to London on 30th September. The 649A jetstream made the trip in 18 hours and 32 minutes, against the normal scheduled time of 19 hours and ten minutes. It was the first commercial polar flight in history from Los Angeles to London. The S.A.S. polar service starts from Copenhagen. France has agreed to allow the T.W.A. and P.A.A. flights to land in Paris for a limited period, pending the disposal of her request for a reciprocal polar route for Air France. The French had threatened to ban polar service to Paris altogether, until arrangements were made for talks with the U.S.A. on the matter. The C.A.B. chairman, Mr. James R. Durfee, and a member, Mr. G. Minetti, will hold "informal conversations" with the French Government on the route question in Paris in the course of a European trip. They will also meet Italian officials in Rome and Spanish officials in Madrid. A U.S. State Department official, Mr. Livingston Satterthwaite, is also in Europe, where he will consult initially with the Portuguese and Spanish Governments about P.A.A.'s projected operations to Madrid, and with French authorities about the polar routes. Later, he will go to Switzerland for consultations on the proposed U.S.-Swiss bilateral air transport agreement.

Findings of T.W.A. Jet Planning Committee

T.W.A.'s jet planning committee thinks that the long-range *Boeing 320* may have to make fuel stops west-bound between Paris and New York when winds approach 60 kilometres and the load exceeds 90 passengers. East-bound, trans-atlantic flights should be possible non-stop most of the time. Direct seat-mile costs of the jets will be up to 30 percent less than those of the *1049G Super Constellation*. The minimum cost speed of the jets will be Mach 0.82. A wide variance of needed runway lengths with different payloads and ranges will pose a problem in defining runway requirements. For at least the first year of jet operations, airport facilities at 40 percent of the cities served by T.W.A. may not be satisfactory for the best jet use. The *Convair 880* and the long-range *Boeing 120* will cost relatively more to operate in summer temperatures. The General Electric CJ805-3 engines in the *Convair 880* now permit a runway length reduction from 7,600 feet to 6,300 feet with the same payload and range. The committee presented the T.W.A. management with a tentative schedule of the first commercial trans-continental jet flight by T.W.A., scheduled for May 1959. Among the details: flight takes off from Los Angeles with 55,600 lbs of fuel plus 6 000 lbs of water for engine augmentation during the take-off and initial climb. It reaches Idlewild in four hours 45 minutes with enough fuel to hold for 59 minutes, and lands at a gross weight of 172,000 lbs, requiring 6 500 feet of runway.

Fleet Purchases by Small U.S. Airlines

Some 200 modern aircraft can be purchased by small airlines in the U.S.A. under the guaranteed loan law, passed by the last session of Congress, according to the former C.A.B. member, Mr. Joseph P. Adams, General Counsel for the Association of Local and Territorial Airlines. The potential fleet, he said, would be "more than the entire U.S. airline fleet of 15 years ago and twice the carrying capacity." Twenty-eight companies are eligible for 90 percent of the guaranteed private loans of up to $5 million each, under the law to be administered by the C.A.B. Mr. Adams estimates that about eight replacement aircraft could be purchased for $5 million.

Tokyo-Singapore Service of J.A.L.

The Japanese Airlines will send a survey mission to Singapore in preparation for the opening of its Tokyo-Singapore service *via* Hongkong and Bangkok. J.A.L. will open a thrice-a-week service from Tokyo to Singapore on 1st April, 1958, the company has announced. The new route will be an extension of the present service between Tokyo, Hongkong and Bangkok.

Air-India International Service to Tokyo

Japan has agreed to an increase in December of Air-India International's present twice-a-week service between Bombay and Tokyo *via* Calcutta, Bangkok, and Hongkong, to a total of three flights a week.

Hongkong Airways

Hongkong Airways has increased its twice-a-week service between Hongkong and Tokyo *via* Taipeh to three flights a week.

U.S. Service of Qantas

Ansett has ordered three more *Convair 440s* for its domestic routes, bringing its metropolitan fleet to seven. Qantas has set 6th December as the opening date for its new service across the Pacific to the U.S.A. and then on to London, a spokesman of the airline has said in New York. Britain, it is expected, will grant the necessary authorisation for Qantas to serve London on the route in the near future. Initially, two flights a week are to be operated.

S.A.S. Polar Service to Tokyo

S.A.S will apply to the Japanese Civil Aviation Bureau for permission to increase its present twice-a-week polar service to Tokyo to three flights a week.

Landing Rights for K.L.M. in Saigon

The Government of South Vietnam has granted K.L.M. landing rights in Saigon on its Amsterdam-Tokyo route, according to a newspaper report. The airline was given temporary permission to serve Saigon, pending the ratification of a Dutch-Vietnamese air agreement.

Pakistan Ratifies I.C.A.O. Rome Convention

With Pakistan's ratification, the I.C.A.O.'s Rome Convention of 1952 will now come into force between the five countries which have ratified it—Canada, Egypt, Luxembourg, Pakistan and Spain. It regulates the liability for damage caused by a foreign aircraft in fight to persons or property on the surface of the territory of any one of these States. Formulated at a diplomatic conference in Rome on the basis of a draft prepared by the Legal Committee of I.C.A.O. after extensive studies of the legal and economic aspects of the subject, the convention was signed by 27 States. It provides for the limits of liability of the foreign operator, thereby affording him protection against the risk of catastrophic loss, and at the same time, safeguards the interest of the person suffering damage by providing that the only proof required of him is that the damage was caused by a foreign aircraft in flight or by any person or thing falling from it. A claim for compensation is to be made in the country in which the damage occurred and the judgment rendered by a court there will be enforceable in any of the countries which are party to the Convention.

MARKED RISE IN ELECTRICAL CONSUMER GOODS OUTPUT

DRIVE TO EXPAND EXPORTS

THE production of electrical consumer goods, such as lamps, fans, radio sets and batteries, has increased from Rs. 5 crores in 1948 to Rs. 25 crores in the current year, Mr. Manubhai Shah, Union Minister for Industry, has said. The Minister made this statement while addressing the Development Council for Light Electrical Industries which met recently in New Delhi to review the progress made by the different industries in the light of the second plan targets. He congratulated the industry on the five-fold increase in output since independence. The target of production for the second plan was Rs. 40 crores a year. This meant that a gap amounting to Rs. 15 crores had to be bridged. Looking to the past performance of these industries, he said that he had no doubt that the existing units and the new ones which were being set up would step up production so that the country could not only be self-sufficient, but could also export a sizeable volume of electrical goods.

Near Self-sufficiency

The *per capita* consumption of electrical energy in India has gone up from 2.75 kWH in 1951 to 4 kWH in 1955. This increased consumption has resulted in increased demand for light electrical products. The industries manufacturing these products are developing fairly rapidly in the past few years. Their rate of increase has been almost 25 percent a year during this period. The country has become nearly self-sufficient in a large number of these items and imports are confined to certain categories of specialised components. Referring to the progress made by individual industries, Mr. Shah has said that the production of electric lamps which was of the order of 9 million in 1948 has now risen to about 33 million lamps. While this progress could be regarded as satisfactory, the industry was not yet self-sufficient in raw materials and components. He, therefore, has suggested that more units should take up the manufacture of components to meet not only their own requirements, but the requirements of other small units. The manufacture of fluorescent tubes and miniature lamps was established during the first plan. The production of miniature lamps which was 3.5 million last year is now running at the rate of 8.5 million lamps a year. Two schemes have been approved for setting up factories for the manufacture of special types of lamps, namely, photo flash lamps and mercury vapour lamps.

Electric Fans

Referring to the electric fan industry, among the oldest electrical industries in India, he has said that the production which was 180,000 in 1948 has now gone up to over 500,000 tans a year. The present level is very near the second plan target of 600,000 fans and substantial additional capacity has already been licensed. A number of units have put on the market low-priced table fans. The industry is also able to export Indian fans, thus earning foreign exchange worth about Rs. 25 lakhs a year.

Radio Sets

The radio receiver industry was established after independence. The production in 1948 was only about 25,000 sets. But it has made substantial progress in recent years. The current rate of production is about 185,000 sets a year. The Ministry has, however, pointed out that the industry is partly an assembling industry and, therefore, greater emphasis should be laid on the manufacture of components and parts. The production of house service meters, which began only in 1952 has risen from 34,000 meters in that year to nearly 300,000 meters during the current year. Almost the full capacity of the industry is being utilised. The country is, however, not yet self-sufficient in house service meters. To meet the increasing demand, the original target of 450,000 meters by 1960-61 has since been raised to 650,000 meters a year.

Referring to the battery industry, the Minister has said that satisfactory progress has been maintained in the production of dry batteries. The output has risen from 124 million cells in 1948 to the present level of 180 million cells. The industry should, however, make every effort to utilise substitute materials which are available in the country. The output of batteries for motor vehicles which was slightly above 100,000 in 1948, has now gone up nearly three times. The country's requirements of motor-car batteries are now almost entirely met from indigenous production. Manufacturers have also been developing new lines such as batteries required by the defence services and the railways.

Export Promotion

The Minister has asked the Council to make a reassessment of the targets in the light of the current rate of production and demand as well as the export possibilities for different items. Exports of some of the electrical products in the first six months of 1957 were of the value of Rs. 20 lakhs. While these figures are heartening, it is necessary to augment these exports and find markets for new items. He particularly has mentioned items such as electric lamps, radio receivers and storage batteries. Rules have already been framed for allowing drawback of duty on imported raw materials and components for some of the items. The procedure has considerably been simplified and has encouraged exports. A directorate of export promotion has been set up in the Ministry of Commerce and Industry to look after export promotion work. Additional import licences are also being given for imports of raw materials and components, and steel and pig iron are being allocated for increasing production of exportable commodities.

Jute

DULL CONDITIONS PREVAIL IN GUNNY AND RAW JUTE MARKETS

FIBRE ARRIVALS REMAIN DISAPPOINTING

THE gunny and fibre markets were very quiet during the past week and dull conditions prevailed. Overseas consumers showed no interest and very little genuine business was transacted. Activity in the fatka market caused narrow fluctuations, and heavy bull liquidation in the absence of fresh business brought weakness to all sections. There was a slight improvement in hessian prices at one stage on reports of interest from America, but when business did not materialise rates fell back. Mills appeared to be keen sellers for all fabrics and deliveries but there did not appear to be any buyers.

The significance of the mills' change-over from hessian to sacking production is reflected in the figures for last month. In October 1956, they produced a total of 80,400 tons of manufactured goods in 203.5 hours. In October 1957, in only 192 hours the production amounted to 83,500 tons, and at 31,700 tons, hessian production was the smallest since January 1956. Consumption of raw jute last month was 18,100 bales more than in October 1956 although there were 11.5 hours less of working time. The increase took place because the heavier sacking fabrics were being produced.

The raw jute arrival figures for October 1957 have several interesting features. Arrivals from Pakistan last month showed a drop of 30,450 bales compared with the corresponding month of last year, but the total for July-October 1957, was 200 bales more than the total for the same period of 1956. Arrivals from India show the biggest change. Although last month arrivals were up by 28,400 bales compared with October 1956, the total for the four months July-October 1957, fell short of last year's corresponding figure by 156,400 bales, making an overall decrease in arrivals from both India and Pakistan of 156,200 bales. Total consumption of raw jute so far this season is 1,965,500 bales; arrivals are thus short of this figure by 329,000 bales. Last year, during the first quarter of the season, the gap between total imports and consumption was 243,650 bales. India seems to be falling behind in her race for self-sufficiency; last year at this stage the gap between arrivals from India and the total consumption was 470,550 bales, but this year it has widened to 560,100 bales.

THE JUTE MARKETS

Manufactured Goods: Prices fluctuated within narrow limits during the past week, the main movements being due to speculative activity. Overseas buyers and local shippers showed no interest in spite of a certain amount of selling pressure from mills. The difference between forward and near B Twills remained about Rs. 2 to Rs. 2.50, but in hessians there was very little difference between the two positions. Opening quotations last Thursday showed a slight improvement in ready B Twills which advanced to Rs. 115.10, but April-June shipment remained at Rs. 112. Hessians were also better and 40in. 10oz. was quoted at Rs. 41.75 for November shipment. The shortage of hessians for forward shipment began to make itself felt when the April-June rate showed a small premium of 15nP. On Friday, heavy bull liquidations in fatka caused B Twills to lose Rs. 1.25 in the near positions, and all other fabrics recorded minor losses in sympathy. The decline continued until the week-end, and in the absence of business B Twills fell to Rs. 113.20, which was Rs. 2 below the week's opening level. Dull conditions prevailed over the week-end but on Monday prices rose on reports of enquiries from America. The advance was small and short-lived, and was discounted by the close of business on Tuesday.

On Wednesday, the market was again quiet. In the absence of fresh business, all prices were reduced. Opening rates on Wednesday morning were as follows:

	Nov.	Dec.	Jan.-Mar.	Apl.-June
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	34.15	33.75	33.50	33.15
40in. 10oz.	41.25	41.40	41.45	41.40
B Twills	113.10	111.85	111	110.50
Heavy Cees (Plain)	113	112.50	111	110.50
A Twills	138.25	138.25	138.25	135.50
Liverpools	129.25	128	126.75	125.50
Cornsacks	111.50	112.25	112	111.50

Raw Jute: There was very little activity in the fibre markets during the past week and prices showed little change. Mills continued their policy of taking up small quantities each day, and in the absence of large-scale buying, quotations could be considered nominal. Daissee and Tossa were in good demand, and the price of these fibres remained steady. In Sheoraphuli, the market was very firm and prices tended to increase even when other markets were falling. Mill representatives and agents remained very active, although reports of their transactions rarely reached the market. Their effect, however, could be gauged by the steadiness of prices in the agencies, where sellers still appeared to hold bullish ideas. Opening quotations last Thursday were based on Assam jute at Rs. 29 and Northern at 50nP less. These rates were reduced by 25nP on Friday, and in the absence of business, a further 50nP on Saturday. Daissee quotations over the same period fell from Rs. 31 to Rs. 30.50 but the prices in the agencies were higher than those quoted in Calcutta. After the week-end, prices were unchanged but an easier sentiment prevailed.

Mills paid Rs. 27.50 to Rs. 28.75 for Northern-Assam jute and Rs. 28.75 to Rs. 30 for Tossa for November-December shipment. Selected Tossa from the Murshidabad districts was done at Rs. 29.50 a maund. Small lots of Desal White were reported at Rs. 25.75. Mesta came in for more interest and prices varied from Rs. 25.50 for Northern to Rs. 25.25 for Desal and Rs. 25.50 for Daissee Mesta. Business was done in Jungli White Bottoms and X Bottoms at Rs. 22 and Rs. 17 a maund, respectively. Good business was again done in Daissee and prices paid were from Rs. 30 to Rs. 30.75 for one month's shipment.

The Cossipore markets saw a fair amount of business and all the available jute came in for keen competition. Local covering against November contracts induced a steady undertone and sellers were reserved. Towards the close, however, they were keen for business. Wagon arrivals were again disappointing and only 600 were reported, as against 760 in the corresponding week of last year.

On Wednesday, opening quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam	28	Nov.-Dec.
Northern	27.50	"
Purnea Desal	25.25	"
Daissee	30.50	"
Assam Tossa	30.25	"
Murshidabad Tossa	29	"
Northern ex Calcutta	26.75	"
Local Packing	24.75	"
Mesta:		
Assam-Northern	25.50	"
Desal	25.25	"
Daissee	25.25	"
Murshidabad	25	"
Jungli	22	"
Bimli F.A.Q.	24.25	"
Pakistan Cuttings	80 a bale	"

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented:

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 10th November, 1957	1,286.7	19,017.1	20,303.8
1st to 10th October, 1957	551.2	8,763.9	9,315.1
1st to 10th September, 1957	1,617.2	13,052.8	14,670.0
	Sacking		
1st to 10th November, 1957	18,665.1	403.1	19,068.2
1st to 10th October, 1957	11,828.8	1,067.8	12,896.6
1st to 10th September, 1957	12,303.1	203.4	12,506.5

THE PAKISTANI JUTE MARKETS

LOOSE FIBRE RATES UNCHANGED

(FROM A NARAYANGANJ CORRESPONDENT)

PREPARATIONS for the International Jute Conference, which starts on 25th November, are in full swing. With many of the leading figures in raw jute buying organisations arriving here and most of the senior members of the Pakistani jute trade busy in connection with the conference, it is quite possible that the next two weeks will see very little activity in the market.

There has been no change either in the price of loose jute or in the quantity of arrivals. Probably due to increased demand, there is some strength in the Tossa market. A certain amount of inter-baler business has been reported in pucca bales, but that in kutcha bales has been restricted since the boat *majhis* have also been on strike and kutcha bales cannot be moved. The I.W.T. strike—the most serious so far—continues with little sign of either side giving in. A considerable amount of cargo has been held up in the ports and the movement of even more is being delayed. The jute labour strike has been settled, some of the larger companies having agreed to certain terms and conditions, but for the time being this does not apply to the whole of Narayanganj. It is possible, however, that other companies will eventually have to follow suit. In the meantime, work has been resumed throughout Narayanganj and when the import sheds and assorting lines are cleared, the worst affected companies will once again be able to commence buying. As there is little likelihood of arrivals improving, there may be a rise in the market.

With the E.P.C. registrations at 361,000 bales for the last half of October, the total registrations so far this year to destinations other than India amount to 1,775,000 bales, whereas shipments have been just over 1,200,000 bales. The difference of 550,000 bales is negligible, and since it can be safely assumed that there are about 800,000 bales in stock throughout East Pakistan (of which not more than 100,000 bales are for the mills or for local contracts), it appears that the overall position is square if not actually long. On top of this, it has to be remembered that with contracts being shipped earlier, the buyers' stock position must be fairly good. Under the circumstances, there is not much chance of any increase in the market. This bearish view is held by a fairly large section of the trade, which maintains that over and above everything else there is still about 10 annas of the crop to come in, which will arrive after growers have finished harvesting their rice crop.

The Karachi gunny market has become very weak. Ready B Twills have dropped by Rs. 3 to Rs. 140 and forward B Twills have also fallen. There are, however, practically no buyers in spite of the fact that the shipping position is not very good because of the I.W.T. strike. Hessians, however, remain firm and unchanged. Under these conditions, Pakistani mills should be eager to compete with the Calcutta mills in the overseas market.

THE FOREIGN JUTE MARKETS

YARN AND CLOTH PRICES STEADY

(FROM OUR DUNDEE CORRESPONDENT)

THE volume of business that is being done in jute yarns and cloth outside of India and Pakistan is restricted, and transactions are mostly of a hand-to-mouth nature. Consumers have not had the incentive to purchase freely, and there has not been anything like the trade done in raw jute this season as during the last. The Suez crisis, of course, came along to brighten the prospects, but there has been nothing to justify the high prices for fibre this season. Many feel that

rices will go down rather than go up. Already he level is higher than it ought to be, in the opi-ion of many, and at least £20 a ton above what sed to be the "minimum" prices. Four and a alf months of the season have already passed, id reports still suggest that imports from up-ountry markets in Pakistan are insufficient. here have been strikes at jute mills in Pakistan, hich has meant a reduction in consumption of ie fibre. Though these strikes are now settled, ss jute has been used, leaving larger supplies r sale. It has never been hinted that there ight be any scarcity of jute to satisfy require-ents this season.

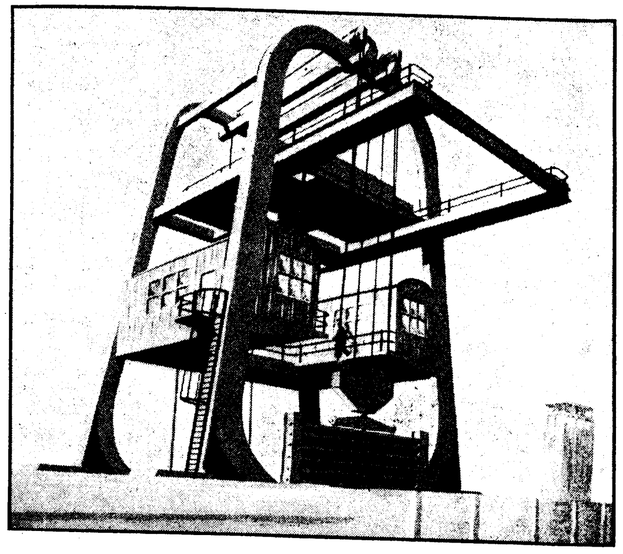
Prices here have remained practically unchang-l all the week at £115 to £122 for Mill Firsts. usiness is reported to have been done at £118 id £118 10s for decent quality and it is believed iat anything offered at less than £118 is not orth buying. Mill Lightnings are lowest at £99 id Mill Hearts at £90, with grade Hearts at £80, ood marks of Daissee-2/3 at £99 and grade at 92, grade Tossa-2/3 at £106 and grade Tossa-4 at 100, all c.i.f. U.K. or Continent, November-ecember shipment. Quiet but steady business as been done; the quantities bought have been nall. Calcutta goods have been irregular, but ow little change on the week at 63s 6d for 40in. oz. and 48s 6d for 7½oz., November. 63s 6d and s 3d December and 63s 9d and 48s January-arch, with B Twills at 173s, 171s 3d and 170s for e respective positions of shipment, all f.o.b., Calcutta. Dundee yarns and cloth remain very quiet and one or two spinners have been forced to restrict their production to three days a week. Prices remain steady and unchanged all round.

NEW JUTE CONTAINERS FOR POTATOES SHOWN AT U.K. EXHIBITION

New lines in jute sacks were shown at a recent potato pre-packaging exhibition held in the United Kingdom by the Potato Marketing Board, reports the *Jute Bulletin* of the Indian Central Jute Committee. The exhibition showed containers of different sizes which are now in demand for transporting small pre-packed units of potatoes. Most of those now in use are made of hessian, which is a light-weight fabric, yet strong. Being porous, they give air ventilation to keep potatoes in a fresh condition. Another important advantage is that they effectively screen light that causes damage to film-packed potatoes through "greening". Research work has shown that ordinary hessian stops more than four-fifths of light from passing through it. The result can be improved, if necessary, by the use of a closer weave or by certain finishing processes. Filled hessian containers can also be easily handled and stacked. They can be quickly closed by stitching or by a tie round the bunched neck; and they can be used several times over to keep packaging costs down. Another type of container used by potato pre-packers is made of twill fabric, which is very strong and closely woven.

Calcutta Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE



FAIR BUYING IN DUSTS

AT Sale No. 22, held on 18th and 19th November, 54,971 chests were on offer at the Export auction. There was a strong general demand. C.T.C. Assams with good liquors sold well and were often up to 20nP dearer, but the poorer descriptions again met with only a small demand, and were from 15 to 20nP easier with some withdrawals. Commonest sorts and clean plain teas met with an active demand and were from 2 to 4nP dearer, while medium Assams were about steady on last rates. There was, however, more demand for B.O.P.'s of this description. Black Fannings were again a strong feature, but sold generally at about last rates. Whole leaf grades met with an improved demand and were dearer. Darjeelings and tippy teas again sold well.

Quotations

At the Internal Sale, 17,591 chests of Dust were on offer. There was a fair demand, although quality was ordinary. Dooars and Medium Assams were well supported and prices were generally firm, the commonest descriptions tending dearer. C.T.C. Assams met with only an irregular demand, and the larger sorts were often easier, although powdery medium descriptions with useful liquors were steady.

Quotations

	1957 Rs.	1956 Rs.
Medium Dooars Dust	1.76 to 1.78	2 1 0 to 2 2 0
Medium Assam Grainy Dust	1.76 to 1.80	2 2 0 to 2 3 0
Medium Assam C.T.C. Dust	2.05 to 2.20	2 9 0
Best Assam C.T.C. Dust	2.70 to 3.00	(Nom.) 2 12 0 (Nom.)

There was a fair demand for the 2,751 chests of Leaf on offer, although prices were generally rather easier.

FREIGHT MARKETS WEAK

THE freight markets were again weak, and prospects are that chartering will continue at the present level. Trans-atlantic coal was fixed at the lower rate of 30s for early tonnage. Far East markets were quiet, but enquiries were made for tonnage for cement from Haiphong to Calcutta and for bagged rice from Burma to East Pakistan. The ore market was fairly quiet, but a local vessel was fixed from Calcutta to Constanza 7,200 tons at 36s 3d f.i.o.t. Grain trading was slow, although a vessel of 9,500 tons was fixed from St. Lawrence to West Coast India at 84s and a 11,500 tonner for a similar cargo at 82s 6d. The time charter market was also quiet with few enquiries, but an oilburner of 9,500 tons was taken at 16s for an East Coast-South American round voyage.

LINSEED LOWER

There has been a slight reaction in the Calcutta linseed market during the past week, and prices have lost most of the ground gained during the previous week. The main reason has been an increase in arrivals from the centres combined with the evidence of a keener interest from sellers. Crushers, who had been active at the beginning making fair-sized purchases, became rather reserved towards the close due to the stagnant condition of the oil market. With no improvement in overseas advices and a poor local demand, oil prices have declined somewhat. Latest quotations were as follows: November-December Rs. 23-4 a maund.

HIDES AND SKINS FIRM

The market in skins continued firm. Stocks were less than in the previous week.

Bazaar Sales

(Between 12th November and 18th November, 1957)

Cowhides: Wet salted (Slaughtered) 18,800 pcs. on the basis of Rs. 13 to Rs. 21.50.

Goatskins: Wet salted (Daissee, Killed) 43,050 pcs. on the basis of Rs. 325 to Rs. 350, Rs. 360 to Rs. 375 and Rs. 390 to Rs. 415; Assam-Dinajpur 18,950 pcs. on the basis of Rs. 355 to Rs. 375; Purneah-Kissenganj 6,000 pcs. on the basis of Rs. 335; Patna-Pakur 8,500 pcs. on the basis of Rs. 335 to Rs. 345; Muzafferpore-Patna 91,500 pcs. on the basis of Rs. 340 to Rs. 357.50.

Bazaar Stocks

(18th November, 1957)

Cowhides: Wet salted 45,600 pcs.

Goatskins: Wet salted (Daissee, Killed) 18,000 pcs.; Assam-Dinajpur 19,000 pcs.; Muzafferpore-Patna - Pakur - Purneah - Kissenganj 1,72,000 pcs.

SUGAR EASIER

During the week ended 20th November, sugar sales in the Calcutta market averaged 3,500 bags daily. Arrivals a day were 6,000 bags and stocks totalled 100,000 bags. Rates for ready sugar, ex-Kantapukur delivery, were Rs. 36-10 for ordinary grain and Rs. 38-10 for big grain. The market weakned due to heavy arrivals.

SHELLAC STEADY

During the week ended 19th November, the market was quiet at the beginning, and steady at close. The range of quotations was as follows:

Pure Buttonlac	Rs. 100, 99.50 value; 100 buyers.
Lemon No. 1 Shellac	Rs. 101, 100, 101.50 buyers.
Lemon No. 2 Shellac	Rs. 96.50, 96, 97 buyers.
F. O. Std. 1 Shellac	Rs. 89.50, 88, 89.50 buyers.
4% I.T.N. Shellac	Rs. 72.50 value; 70, 71 buyers.
Pure TN Shellac	Rs. 82, 80, 80.50 buyers; 83 basis done and buyers.
No. 1 Kusmi Seedlac	Rs. 89, 87, 89.50 value.
No. 2 Kusmi Seedlac	Rs. 84.50 value; 81 buyers; 85 value.
Fine Bysaky Seedlac (Manbhum)	Rs. 80, 79, 81.50, 81 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 75, 76.50 buyers; 77 done.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs. 71.50, 70 to 73 buyers; 73 done.
Ordinary Bysaky Seedlac (C.P.) Kireelac	Rs. 67.50, 65 buyers; 68 done and buyers. Rs 26, 27 buyers.

Shipments during November until the 16th were 32,594 packages comprising shellac 17,415 packages, seedlac 13,128 packages, buttonlac 664 packages and others 1,387 packages.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) worked out to 109.0 during the week ended 2nd November, 1957, compared with 108.9 for the earlier week. The index was higher by 0.4 and 1.4 percent, respectively, when compared with the corresponding week of last month and that of a year ago. The index for Food Articles rose by 0.7 percent to 107.7 compared with 107.0 for the previous week due to an increase in the prices of milk in Bombay (+32%) and in Calcutta (+8%), onions in Nagpur (+26%), rice in Marcara (+12%) and in Shimoga and maize in Mandi (+8% each), bananas in Bombay (+10%), ghee in Kaithal (+9%), bajra in Jodhpur (+7%), gingelly oil (+6%), black pepper (+5%), coconut oil (+4%), groundnut oil (+3%), eggs (+2%), wheat, jowar, barley, tea for exports and salt (+1% each). The prices of oranges (−21%), arhar in Bombay (−8%), rice in Jagdalpur (−7%), and in Contai (−5%), maize in Ludhiana and gur in Madras (−6%) and in Kanpur (−6%), cashewnuts (−5%), tea for internal consumption and potatoes (−2% each), masur, chillies, betelnuts and sugar (−1% each), however, showed declines. There being no change in the prices of Tobacco its index remained unaltered at the previous week's level of 95. The index for Fuel, Power, Light and Lubricants remained stationary at 114.6. Lower prices of groundnuts in Hyderabad (new crop) (−18%), raw wool in Bombay (−9%), lac (−6%), iron ore (−2%) and raw jute and rapeseed (−1% each) were responsible for bringing down the index for Industrial Raw Materials group by 1 percent to 114.3 compared with 115.4 for the earlier week, although the prices of copra (+6%), groundnuts in Bombay (+5%), linseed (+2%) and castorseed and tanning materials (+1% each) were marked up. The index for Intermediate Products receded by 0.8 percent to 105.8 compared with 106.6 for the previous week as a result of a fall in the prices of cotton yarn (−3%), zinc and copper (−2% each) and coir yarn, tin and lead (−1% each) in spite of a rise in the prices of linseed oil (+3%) and rayon yarn (+1%). The effect of a rise in the prices of oil cakes (+4%) and paper and newsprint and general chemicals (+1% each) was neutralised by a fall in the prices of jute manufactures and silk and rayon manufactures (−1% each) and the index for Finished Products stood unchanged at the previous week's level of 109.4.

SUGAR PRODUCTION AND DESPATCHES

The production of indigenous sugar amounted to 2,028,000 tons up to 31st October in the current season against 1,859,000 tons in the corresponding period of last year. The total offtake including quantities despatched for exports was 2,121,000 tons. Stocks with the factories on 31st October stood at 458,000 tons.

Plantation Topics

PROSPECTS FOR THE NEW COFFEE CROP

STIFFER COMPETITION FEARED IN EXPORT MARKETS

(FROM A SOUTH INDIAN CORRESPONDENT)

NEW records have been established in coffee production, consumption and exports during the season ended October 1957, the respective figures being 41,453 tons, 25,249 tons and 12,990 tons. Comparable figures for the previous season (1955-56) were 34,042 tons, 23,900 tons and 7,475 tons. Although the export allocation was as large as 15,320 tons, the Coffee Board could sell only 12,990 tons abroad out of the 1956-57 crop until the end of October. This has increased the carry-over into the new season to over 9,000 tons, against 6,000 tons in the previous season.

The picking of the new crop has started in certain areas. Some reports say that the crop will be smaller than was expected earlier in view of the large-scale occurence of leaf diseases in the main growing centres of Coorg and Mysore. The Coffee Board estimated the new crop some time ago at over 37,000 tons. But some now think that it will amount to only 32,000 tons. The Board, when it meets on 29th November for its half-yearly meeting, is expected to review the crop position and recommend the export allocation from the new crop.

Export prospects for Indian coffee during the next marketing season may not be as bright as they were for the past two seasons because of two factors. One is that the quantity available for export will be less. The other is that the downward trend in the price of mild coffees, which started during the past season, is expected to continue. It might even be accentuated next year by the likely increase in world production. According to estimates now available in the market, the 1957-58 season's world production of green coffee will amount to 50.4 million bags, or 8.9 percent higher than the previous season's output. Among the countries which are expected to have a larger crop are Brazil, Ethiopia, Kenya, Uganda and Tanganyika.

Jatti Committee Report

The Jatti Committee's report on the land tenure system in Mysore is worrying coffee planters there. It does not affect the coffee plantations which are already in existence but suggests that future planting be restricted to a ceiling of three family holdings, each family holding giving the owner-cultivator a net income of Rs. 1,200 a year. The net income an acre of coffee is to be determined on the basis of the information available with the Coffee Board. Critics point out that the growth of Mysore's coffee industry can be traced from the period it started on a plantation basis, and the Jatti Committee report, if implemented, will kill the industry. Plantations will not be able to plant in new areas to replace their stands on exhausted soil; they will not be allowed to cultivate new areas with improved strains unless they uproot the yielding trees. There will be unnecessary restrictions on new entrants to coffee planting and the present small holder will not be allowed to extend his holding to form an economic unit.

The Coffee Board, at a special meeting held a few days ago, has made an exhaustive study of the recommendations of the Jatti Committee. It says that there is no tenant-landlord nexus to be done away with in coffee plantations, nor a socio-political climate requiring the redistribution of land. Plenty of land is available for newcomers and the recommendations of the Jatti Committee, if put into effect, will affect the development and prosperity of the industry. The Board is asking the Mysore Government to drop the recommendations of the Committee.

Kerala Export Corporation

Kerala's Industries Minister, Mr. K. P. Gopalan, has told this correspondent that his Government's proposal to set up a State trading corporation to handle the export of Kerala's cash crops (which was announced by the Finance Minister in his Budget speech in June) so far remains in the proposal stage. No action has been taken to implement it. Although the Minister has not given any specific reason, this might be because the Government realises the uselessness of establishing such an organisation. Mr. Gopalan has hinted that there is no immediate prospect of implementing the other proposal to set up a corporation to take over the export trade in coir products. The scheme was announced by the Director of Coir Industries in Kerala a few days ago. The Minister says that the proposal is before the Government and is being examined. But he feels that there need not be any anxiety among private traders until the proposal takes concrete shape.

COCHIN TEA SALES

At Sale No. 30, 1,875,000 lbs of tea were on offer. There was a strong general demand particularly for low mediums and medium brokens. Fannings were irregularly 5nP to 10nP dearer and sometimes more. Best liquoring grades were easier following quality while whole leaf types remained irregular. Orange pekoes were easier and flowery pekoes were steady.

COMPANY AND PUBLIC NOTICES

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England).

NOTICE is hereby given that the Board of Directors of this Company have declared payment of an Interim Dividend on the Company's Preference Stock at the rate of £2-10-0 per cent net for the year ended 31st March, 1958. By Order of the Board,
BIRD & CO. (PRIVATE) LTD.,
Managing Agents.

BENARES ELECTRIC LIGHT AND POWER COMPANY, LIMITED.

NOTICE

NOTICE is hereby given that the Annual General Meeting (being the Fifty-eighth Ordinary General Meeting) of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday, the 16th December, 1957, at 11-0 a.m. for the following purposes :—

1. To receive and adopt the audited Accounts for the fifteen months ended 31st March, 1957, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring. In this connection notice is hereby given that a special Notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 281 of that Act to move the following Resolution at the meeting :—

   "That Sir Josna Ghosal, who has attained the age of 86 years, be and is hereby appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."
4. To appoint Auditors and fix their remuneration
5. As special business to consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be propcsed as Special Resolutions :—

   (a) That the requirements of Articles 82, 83, 87, 121, 176, 180 and 181 of the Articles of Association of the Company be not complied with in respect of the half-years ended the 31st December, 1956 and 30th June, 1957.

   (b) That the Articles of Association of the Company be altered in manner following :—

   (i) Articles 82 and 83 shall be deleted and the following new Articles substituted therefor :

   "82 In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors."

   "83. The General Meetings referred to in the last preceding Article shall be called Annual General Meetings; all other meetings of the Company shall be called Extraordinary General Meetings."

   (ii) Article 87 shall be deleted and the following new Article substituted therefor :

   "87. The business of an Annual General Meeting shall be to receive, consider and adopt the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special."

   (iii) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor :

   (iv) Article 176 shall be deleted and the following new Article substituted therefor :

   "176 At every Annual General Meeting the Directors shall lay before the Company a Profit and Loss Account made up to and a Balance Sheet as at the 31st day of March immediately preceding the date of the meeting and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company."

   (v) In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor :

   (vi) In Article 181, lines 1, 2 and 3, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing shall be deleted and the words "Annual General" substituted therefor :

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 10th December, 1957, to the 16th December, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy who need not be a member, to attend and vote instead of himself.

By Order of the Board,
MARTIN BURN LIMITED,
S. GUPTA,

THE INDIAN CABLE COMPANY LIMITED

NOTICE is hereby given that the Thirty-eighth Annual General Meeting of the Shareholders of The Indian Cable Company Limited, will be held at the Registered Office of the Company, 9, Hare Street, Calcutta, on Friday, the 27th December, 1957, at 11 o'clock in the forenoon, for the following purposes :—

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1957.
2. To declare Dividends.
3. To elect a Director.
4. To re-appoint the firm of Messrs. Lovelock & Lewes of 4, Lyons Range, Calcutta, Auditors of the Company for the current year and to fix their remuneration.

   As Special Business.

5. (a) In pursuance of Section 228(1) of the Companies Act, 1956, to appoint the firm of Messrs. A. F. Ferguson & Co. of Bombay for the purpose of auditing the accounts of the Branch offices of the Company at Bombay, Ahmedabad, Ambala, Jamshedpur, Kanpur, Nagpur, New Delhi and Secunderabad,

   and to fix their remuneration.

   (b) In Pursuance of Section 228(1) of the Companies Act, 1956, to appoint the firm of Messrs. Fraser & Ross of Madras for the purpose of auditing the accounts of the Branch offices of the Company at Madras, Bangalore and Coimbatore,

   and to fix their remuneration.

To consider and it thought fit pass the following resolutions with or without modification :—

As an Ordinary Resolution.

6. "That the accounts of the Branch office of the Company at Karachi, Pakistan, be not audited under the provisions of Section 228(1) of the Companies Act, 1956".

As an Ordinary Resolution.

7. (a) "That the Board be authorized to offer new Ordinary shares for subscription for cash at such price as may be determined by the Board to the persons on the Company's Register of Members on such date as may be fixed by the Board in the proportion of one new Ordinary share for every two shares, Ordinary and/or Preference, held by each such member on the said date (no fractional entitlement being given for the odd share in the case of any holding of an odd number of shares) with the right to renounce all or any of the shares so offered to him, in favour of any other person or persons, whether members of the Company or not, and with the right to apply for additional shares not taken up by members to whom they were originally offered or their renounces."

   (b) "That such offer and the issue of the new Ordinary shares be made in such manner and on such terms, consistent with (a) above, as the Board may, in its absolute discretion, determine".

   (c) "That the Board be authorized to dispose of any of the said new Ordinary shares not taken up in response to the offer in such manner and at such price as it thinks most beneficial to the Company".

   (d) "That the Board be authorized, if it thinks fit, to arrange for the issue to be underwritten on such terms consistent with the provisions of the Company's Articles of Association in that behalf, as it may determine".

The Share Transfer Books of the Company will be closed from the 14th December, 1957 to the 27th December, 1957, both days inclusive.

Dividends, if any, declared at this meeting will be payable to Shareholders registered on the Company's Books on the 27th December, 1957, or their mandatees.

By Order of the Board,
B. J. WOODLEY,
Chairman.

9, Hare Street,
Calcutta, 5th November, 1957.

N.B.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

THE NORTHBROOK JUTE CO., LTD.

AT a meeting of the Board of Directors held on the 16th day of November, 1957 the following Dividend was recommended to be paid for the year ended 31st March, 1957 without deduction of income tax paid by the Company.

Preference Shares ... 5¼% per annum.

By Order of the Board.
BIRD & CO. (PRIVATE) LTD.,
Managing Agents.

THE INDIAN STANDARD WAGON COMPANY LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the members of the abovenamed Company will be held at the Registered Office, 12, Mission Row, Calcutta, on Monday, the 16th day of December, 1957, at 11-30 A.M. for the purpose of considering and, if thought fit, passing with or without modification the following resolutions, namely :—

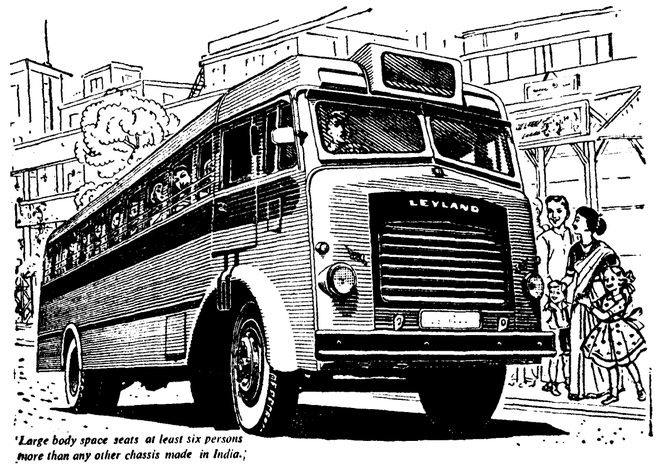
1. **(As a Special Resolution) :** That the Authorised Capital of the Company be increased from Rs. 40,00,000/- to Rs. 60,00,000/- by the creation of 80,000 new Ordinary Shares of Rs. 25/- each.

2. **(As a Special Resolution):** That the Articles of Association of the Company be altered in manner following :—

In Article 4, the figures "40.00,000" and "80.000" be deleted and in the same Article the figures "60,00,000" and "1,60,000" substituted therefor.

3. (a) That it is desirable to capitalise a sum of Rs. 19,49,250/- being part of the undivided profits of the Company standing at the credit of the free Reserves and accordingly that the said sum of Rs. 19,49,250/- be capitalised and that this amount be used as a capital bonus which shall be applied on behalf of the persons who are on the 16th day of December, 1957, holders of the 77,970 issued Ordinary Shares of Rs. 25/- each in payment in full for 77,970 new Ordinary Shares of Rs. 25/- each and that such 77,970 new Ordinary Shares credited as fully paid, shall be accordingly allotted to such persons respectively in the proportion of one new Ordinary Shares for every one issued Ordinary Share held on the 16th day of December, 1957, by such persons respectively and that the said Ordinary Shares so distributed shall rank in all respects *pari passu* with the existing Ordinary Shares save and except that they will not participate in dividends declared in respect of any period ending on or before the 31st March, 1957, and shall also be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such Ordinary Shareholder and not as income.

(b) That pursuant to the above resolution and in satisfaction of the said special capital bonus the Directors be and they are hereby directed to allot and distribute 77,970 new Ordinary Shares of Rs. 25/- each credited as fully paid up amongst the persons who are on the 16th day of December, 1957, holders of the 77,970 issued Ordinary Shares of the Company in the proportion of one new Ordinary Share for each one issued Ordinary Share held by them.



(c) That the draft of the Agreement providing for the allotment of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this Meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and that the Directors be authorised to affix the Seal of the Company to the duplicate engrossment of such Agreement as and when the same shall have been signed on behalf of the members holding Ordinary Shares in the Company on the 16th day of December, 1957, by some person to be appointed by the Directors in that behalf under Article 168 of the Articles of Association of the Company.

The share transfer books of the Company will be closed from the 7th December, 1957 to the 16th December, 1957, both days inclusive.

NOTE : A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

'Large body space seats at least six persons more than any other chassis made in India.'

LEYLAND is the first choice in over 50 countries around the world

EVERY Road Transport Authority in India has rated a higher seating capacity for Leyland Comet than any other chassis made in India. The Leyland Comet provides accommodation for at least six more passengers in every trip, and it costs no more to run. Its low fuel consumption, and easy maintenance makes it the ideal passenger transport vehicle everywhere.

State Transport Undertakings are adding more and more Leyland Comets to their fleet year after year. They know that they can depend on it for economy, efficiency and maximum load at the lowest cost per mile.

The chassis is specially designed to negotiate the sharpest corners with ease and confidence.

Large brake drums and linings make braking easy and sure. It's the strongest and the heaviest chassis made in India to stand the strain of modern transport.

Unusually long springs of the semi-elliptic laminated type are used to ensure maximum comfort over long distances.

Leyland 'COMET'

Ashok Leyland LIMITED

The longest Wheelbase Passenger Chassis made in India

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

Item No. 3: Sir A. Ramaswami Mudaliar, K.C.S.I., who retires by rotation and is eligible for re-appointment has attained the age of 70 years and hence his re-appointment needs your approval by a resolution in respect of which a Special Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such special notice from a member, notifying his intention to move the resolution as set out in the body of the notice. Sir A. Ramaswami Mudaliar, K.C.S.I., joined the Board of Directors of the Company in 1949. During the long period of his association with the Company he has rendered very valuable service to the Company and it is in the interest of the Company that the Board should avail of his valuable advice which is of great asset to the Company by retaining him as a Director of the Company.

When minutes count - count on Pan American

When time is precious, PAA's the way to fly. Just consider : of the last 100 Clippers* to serve Calcutta, 86 have been on time or within mere minutes of schedule—and 10 of the remaining 14 were less than 3 hours late. A remarkable record, *unmatched by any other airline*—and particularly so when you remember that each of these Clippers flew around the world !

On time performance is part of Pan American's idea of service, an idea reflected in the use of the finest equipment and most up-to-date techniques.

Our business is getting people to their destinations as quickly and comfortably as possible—people from 82 lands on 6 continents.

Being "on time" is a Pan American trade-mark. It is the kind of performance you would expect from an airline with 30 years of round-the-world experience. Punctuality is one of the many reasons why experienced travellers prefer Pan American.

For reservations, call your Travel Agent. Or call Pan American in :

Calcutta : 42 Chowringhee, Tel : 44-2651, 2652, 2653
New Delhi : Imperial Hotel, Tel : 48172, 48717
Bombay : Taj Mahal Hotel, Tel : 35304

BANKS

H indicates that Share capital is half paid. O. C. and Dd indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

FOODGRAINS ENQUIRY COMMITTEE REPORTS

A PRESCRIPTION FOR THE SYMPTOMS

AGRICULTURE, the second plan's Cinderella, is taking its revenge for the casual way it has been treated. Why its complete and over-riding importance should have been largely ignored is perhaps no great mystery; steel plants and heavy engineering factories have a more spectacular appeal. Besides, agriculture behaved so well in the first plan, and other development problems are so pressing, that the kind of wishful thinking which believed good luck had come to stay, was almost excusable. Now the food problem is back with us, and perhaps the most important point made in the Foodgrains Enquiry Committee's report is that no quick solution is possible. It requires little insight to confirm this view. Cheap and plentiful food has been a condition precedent to all examples of rapid economic growth—or else the kind of totalitarian ruthlessness which has been accepted as the alternative in communist countries. There is no justification for supposing that India can, by some miracle, contract out of this difficulty. Agriculture is the most important element in the Indian political and economic scene and will continue to be for as far into the future as it is possible to see. That is why the majority of the Committee's recommendations should be accepted as merely temporary palliatives to be used only in co-ordination with a nation-wide effort to re-think all current notions on such questions as agricultural taxation, methods of cultivation and, most important of all, land ownership.

The Committee appears to have taken for granted a secular trend towards increasing food prices, and has justified its view by referring to economic development. It might be argued that such a situation is inherent in India's agricultural set-up. But it need not be so, and it is only when this point is realised that the recommendations can be placed in their proper perspective. Then, they may be recognised as suggestions for ironing out short-term fluctuations only, while leaving the main problem—that of a high cost, low productivity agriculture—completely untouched. In this context, therefore, the Committee's proposals for a Price Stabilisation Board and the Organisation to go with it, together with the plea it has made for a non-official Central Food Advisory Council and a Press Intelligence Division, can be accepted without more ado. So long as this imposing collection of bodies is looked upon as of no more than strictly limited value, there can be no harm in it. But it would be a pity if such institutions were to finish up by being yet further examples of the tendency which is fast developing in this time of crisis to accept committees, boards, organisations and councils as a substitute for hard thinking on fundamentals and the facing of uncomfortable facts. The Foodgrains Enquiry Committee may well have done a commendable job of work within the limits of its own terms of reference, but a great deal more will be required if India's food problem is to become something different from what it is at the moment—an ominous cloud on the planning horizon representing a more serious threat to development than the foreign exchange and the internal resources crises combined.

*

The Committee's stand between the extremes of a free market in food and rigid rationing control, is probably the best one. The late Rafi Ahmed Kidwai showed what could be done by using liberal methods, but as we now see, his task was probably made a great deal easier by good luck with the weather. The ideal position would be one starting mid-way between the two poles, but allowed to move in the direction of greater freedom when the circumstances permit. Only as a last resort, and then merely in the limited rôle of a political gesture to meet a desperate situation, should overall rationing and controls be contemplated. This, the Committee appears to have realised. The proposal for maintaining food imports is a logical sequence to taking the agricultural situation as it is, and, therefore, must be accepted as only practical wisdom. The chief function of the proposed Price Stabilisation Board would then become, presumably, to advise the Organisation where and when the stocks can be applied in order to check the main cause of abrupt price increases—namely hoarding. No doubt sharp movements in the opposite direction would be taken care of by absorbing surpluses into stock and so cutting down on imports. The analogy is that of a buffer stock. It follows, therefore, that if the two bodies do their jobs properly, there will be no need to accept the further recommendation for "progressive socialisation of trade" in foodgrains. Indeed, it is not easy to see why this red herring should have been introduced at all into a document otherwise distinguished for its sound, practical approach, unless for political reasons. It is difficult not to associate such a suggestion with the many others made during the past few years for the nationalisation of this or that as the answer to some problem or other, especially when it is realised that most of the hoarding is done nowadays by the cultivators, whose reactions to inflexible prices are usually anything but accommodating. It might be better to pass over this particular recommendation as an unimportant lapse on the part of the Committee, while bearing in mind that food distribution is an excellent field for the exercise of both private and State-controlled trading combined.

*

The rather tentative reference to the possibilities of compulsory procurement must be regarded in a different light. The idea has superficial attractions and, used occasionally in circumstances of crisis, it might provide the answer to particular difficult situations which crop up. But its efficacy as a policy for the overall procurement of foodgrains, covering the whole economy, is probably limited. The type of peasant proprietor on which India's agricultural sector is based, has shown the world over a remarkable capacity for circumventing the spirit of methods of this kind. What might be effective in limited circumstances for implementing food supplies, could prove in the long run to be a drag on the much-needed increase in production. It might be better to rely on the present system of price incentives in all but the most desperate situations.

It is difficult to see how the Committee can reconcile its pessimistic forecast that only two thirds of the plan's target of 15.5 million tons of foodgrains is likely to be fulfilled, with its reluctance to recommend any reduction in the figure decided on. This must surely amount to a complete renunciation of all faith in the utility of plan targets. Even the guarded statement that if full use is made of all resources, it should be possible to reach closer to the planned figure, is not a satisfactory explanation. It might be better to accept a lower target right away, so that overall planning can go ahead on a more realistic basis. The Committee's rather unexceptional recommendations for increasing output are, nevertheless, worth careful study. Perhaps the main point to bear in mind is that little can be achieved without further resources being devoted to the problem. Even the much publicised Community Development Projects and Extension Schemes, if recent reports are any guide, are now in urgent need of a shot in the arm. Any proposal for diverting funds on a large scale from industrial to agricultural development is unlikely to be popular. But the time appears to be approaching rapidly when this will have to be done if the country is to avoid a food shortage which will almost certainly become chronic. Unfortunately, the least awareness of this fact is being shown in just the place where it should be most appreciated—in the Government itself. It is beginning to look, once again, as if realisation will arrive in New Delhi on the crest of a wave of crisis and emotion rather than as the result of a careful appraisal of the facts.

The Committee's recommendations, valuable as they may be, can be summed up as merely an attempt to fit the present food situation into an existing inflationary development pattern. They deal with the symptoms of the agricultural malaise rather than the cause. That may be inevitable in the existing political circumstances. But if the continuance of democracy is incompatible with changes in India's agriculture, then the future for that mode of Government in this country is a dim one. It is impcssible to over-emphasise the importance of the food problem. Other nations have either been more fortunate in the first place, or have had to resort to ruthless methods—as we see today, not even these have yet overcome China's difficulties. From time to time the word "co-operation" has been used in public pronouncements on India's agricultural problem, no doubt as the democratic counterpart of the communist "collectivisation". Up to now the efforts made in this direction have been little more than gestures, and unsuccessful ones at that. This might be the time to enquire what has happened to these bright hopes, and whether something can be done about reviving them. To rely simply on the recommendations of the Foodgrains Enquiry Committee to solve the agricultural problem may be to doom this country to perpetual inflation and chronic food shortage.

THE PATTERN OF STATE TRADING

WHEN the State Trading Corporation was established a year and a half ago, it was clearly stated that its main aim would be to participate in foreign trade by supplementing rather than elbowing out the existing import and export organisations. The first annual report of the Corporation covering the year ended 30th June, 1957, which has just been issued, gives little clear-cut indication of the extent to which this aim has been achieved. The main impression, in fact, which is conveyed by the detailed review of trading activities is that much of the Corporation's financial success, such as it is, arises from the sale of traditional commodities to traditional buyers. Admittedly, new goods have been sold, and new markets as well as new sources of supply explored: but there are two important questions to which the report does not provide an answer. Firstly, what is the importance of these strictly newer lines of trading in relation to the Corporation's total activities? Secondly, what has the Corporation achieved which the established trade did not achieve or had shown itself to be incapable of achieving? It is on the basis of these criteria that the State Trading Corporation has to justify its existence, and to excuse its deficiencies on the grounds of its youth will not suffice.

*

Mineral ores, as the report says, have constituted the major portion of the Corporation's export business. As India has long been a substantial exporter of the ores which have been handled, the statement provides an important hint of the extent to which the Corporation has encroached into a field

already well served by the established trade. The dislocation of ore exports which is known to have resulted from the Corporation's intrusion does not accord with some of the claims which Mr. K. B. Lall, the S.T.C. chairman, makes in describing achievements in this direction. He says, for instance, that it took "many months before this business could be placed on a sound footing. Though ores are widely known to be a bulk item, there was insufficient appreciation of the advantages likely to accrue from bulk contracting and bulk handling. Gradually, patient persuasion overcame initial misgivings, and buyers acquired a measure of confidence in the Corporation's ability to do business on mutually advantageous terms." The statement glosses over the fact that ore exports at present are far from being "on a sound footing." As for the advantages of bulk handling and bulk contracting, the main difficulty has all along been the inadequacy of railway and port facilities. Had those facilities been better and cheaper, India would have been able to export much more ore than she did. In obtaining larger wagon allocations mainly by virtue of its ownership, the State Trading Corporation can hardly claim to have shown up the inadequacies of the private trade. The claim about foreign buyers' increasing confidence "in the Corporation's ability to do business on mutually advantageous terms" can hardly be sustained in view of the serious misgivings about State trading which exist in the United States and Europe—to which the industrialists' delegation led by Mr. G. D. Birla has recently drawn attention. One of the main reasons why U.S. consumers, for instance, are searching more vigorously for alternative sources of ore supplies, is that India's exports are being increasingly canalised through the Corporation. The new mineral export policy, which has given the S.T.C. a monopoly over iron ore and a steadily expanding share of the manganese ore trade, can hardly be described as aimed at preserving and building traditional contacts.

* * * *

If the Corporation's achievements in the case of ore exports remain somewhat doubtful, there are other fields in which it might well in time begin to serve a useful purpose. Often, it will have genuine advantages over the private trade when doing business with monopolistic buyers and sellers, such as in the communist countries. This is especially so in cases where commodity markets are narrow or where the private trade is not well organised. The Corporation can also help diversify exports and export markets, and look for new sources of supply. Its annual report shows that it is not unmindful of these functions: "The possibilities of widening the scope for exports of manufactured goods and developing trade with new markets and new sources of supply have been explored and studied, but the management has been able to achieve so far only a limited measure of success." Handicrafts have been sold to Russia and Czechoslovakia; salt to Indonesia; gunnies and Sann hemp to Viet Nam; and tea to East Germany. In addition, new markets have been developed for such items as shoes and woollen fabrics. It is by transactions such as these that the Corporation will finally prove its usefulness. None of them may be very substantial or profitable for the time being, but to show that they can be made substantial as well as profitable is one of its primary functions. It would do well to concentrate on exploring and building export markets for the large variety of lesser-known Indian goods, such as shoes and handicrafts, for which a potential undoubtedly exists abroad.

* * * *

Private importers have had reason to regret the State Trading Corporation's intrusion into the import trade, and it is not easy to see from the annual report in what way the intrusion has benefited the country. The suspicion remains that a State-owned organisation, because it lacks the enterprise and the flexibility of most private organisations, has not been able to conduct trade more efficiently. The State Trading Corporation might well be in a better bargaining position when it has to obtain commodities for which international markets are not competitive, or when it has to do business with the semi or complete monopolies of the communist countries. But the importing activities outlined in its annual report do not give the impression that is has confined itself largely to such fields. Indeed, the overall impression conveyed, in the case of both imports and exports, is that the Corporation is using the advantages of being State-owned to intrude into established trade channels so as to secure itself a sound footing financially; as far as the promotion and diversification of exports is concerned, or the more efficient handling of imports, its achievements have as yet been relatively minor. It is not without significance, for instance, that out of a gross profit on trading account of Rs. 35.42 lakhs, as much as Rs. 21.62 lakhs has been contributed by iron ore and Rs. 10.45 lakhs by manganese ore—both of which have hitherto been important items in the established private export trade. The relatively minor significance of other items in the trading account is a measure of the enterprise which the Corporation still lacks.

THE PROSPECTS FOR GOLD HOARDERS

AMERICAN REASONS FOR PRICE STABILITY

OBSERVERS of the American scene have yet to be convinced that the relaxation of monetary policy will reverse the decline in American business activity, for that decline has gained some weight in recent months. Is it possible, some of them are wondering, that the American authorities, having made this important concession in monetary policy, can be persuaded to make a similar concession in their policy on the price of gold? It has always been understood that the Americans' insistence on $35 an ounce as an immutable price for gold, when prices of nearly all other goods and services have been multiplied, has been due primarily to the belief that this rise in other prices ought to be stopped and that raising the price of gold would, on the contrary, accelerate it. But the Federal Reserve Board's decision to reduce its discount rate acknowledged that the pressure of inflation had eased. Only a short time before, the Board had reiterated its intention to continue curtailing credit as a means of stopping inflation. If it was satisfied that credit could be eased, could it not also be satisfied that the price of gold could be safely raised?

The two problems are not, of course, closely comparable. Credit policy is intended to be flexible. The official price of gold is supposed to be fixed—though subject to adjustment, perhaps, from time to time. Varying the price of gold is not a recognised means of regulating economic trends. The question is whether the American authorities are looking for an opportunity to make an adjustment that many people believe is long overdue, and, if so, whether they see such an opportunity in the present situation. It should be recalled that a spokesman of the Federal Reserve Board explained the reduction of the discount rate as a recognition that inflation, "at least temporarily," had ceased to be the dominant factor in the economy. Obviously, no action concerning gold would be taken until the authorities were satisfied that what they were witnessing was something deeper than a temporary change in the sentiment of business. But we cannot exclude the possibility that the causes of the American recession are deep-rooted, requiring more drastic action.

If the recent turn of policy does not reverse the economic trend we shall have a better opportunity to test the idea that only fear of inflation prevents the authorities from agreeing to the demands—reiterated year after year—that gold be revalued to a realistic price. As the world's monetary reserves are, admittedly, abnormally small in relation to the total of international payments, there is a strong argument for raising the value of the gold element in those reserves. The belief that this step is logically inevitable must account for the tendency on the part of non-American countries to convert dollar balances into gold—a tendency observable even while American interest rates were relatively high and the immediate advantage of holding dollar balances rather than non-earning gold were therefore considerable.

* * * *

So far, however, the American authorities have firmly resisted the arguments for revaluation of gold, although they could surely without much difficulty have neutralised its inflationary effects. The constitutional difficulties of altering the American price are perhaps more complex—unless Congress is convinced of the wisdom of such a move. Even if the monetary authorities were convinced that raising the price of gold would be desirable to stimulate the American economy, it is doubtful if the politicians would approve a change that might have more important effects abroad than in America. For the countries with inadequate reserves revaluation would be beneficial in a sense that the Americans would generally approve—international payments, and therefore trade, would be facilitated. But this would not be a complete solution of the problem of deficiency; for the countries that would benefit most from revaluation would be those that had least need of the benefits—those whose reserves of gold were already substantial. And it so happens that (so far as can be judged from the information available) the country with the largest reserve outside of the United States is the Soviet Union.

We are now in the season of Soviet sales of gold, and there are signs that they will be substantial—though not, perhaps, as large as those of late-1956 and early-1957. Selling gold is the Soviet Union's normal method of balancing accounts with the rest of the world, and much of the proceeds of the sales is used to buy transferable sterling. The countries of the Soviet bloc buy rubber and wool and other sterling commodities in considerable quantities (though somewhat erratically), and they use transferable sterling to settle their accounts with non-sterling countries. These activities have been a significant factor in the recent strong recovery of quotations for transferable sterling, and the Soviet gold that accrues to the central reserve in London is naturally welcome. It may be assumed that the British authorities—and many exporters in the sterling area generally—would not be unduly distressed if the value of the Soviet Union's gold were raised and could thus finance more trade; but it is understandable that the Americans take a different view of such potential benefits.

Reluctance to aid the Soviet Union, even incidentally, may well prevent the American authorities from acceding to the widespread demand for revaluation of gold, even if it is apparent that the American economy needs a stronger stimulant. There are other ways of stimulating it—and it is possible that increased expenditure on weapons will provide as much as it needs. When the International Monetary Fund began a technical study of the supply of gold some months ago, the South Africans believed, apparently, that the campaign for a higher price was making progress, but it was emphasised in Washington that the study was not concerned with the problem of the price. Hoarders who buy for a rise may have to wait a long time.

COAL POLICY IN INDIA

By

Andrew Farquhar

This booklet consists of reprints of articles written by Mr. Andrew Farquhar, former Coal Adviser to the Tata Iron and Steel Co., Ltd., which have appeared in *Capital* in recent years. As expert analyses of India's coal problems and policies, they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

WORLD PRODUCTION AND TRADE TRENDS

THE picture of the world economy given in the International Monetary Fund's annual report for 1956 is, on the whole, a happy one. There were weaknesses in certain sectors, but conditions generally were those of a boom throughout. This prosperity, says the report, was sustained by a strong current of private business investment. Nearly everywhere the demand for capital remained intense, and the report traces this to the dynamic urge among countries, especially those which had been devastated by the war in western Europe, and those belonging to the under-developed regions, for the rehabilitation and reconstruction of their economies. "An outstanding feature in the development of recent years has been a persistent spirit of optimism which has characterised the business world in the planning of new industrial investments," the report says. Consequently, production in western Europe in 1956 was 75 per cent greater than before the war.

In the U.S.A., postwar private domestic investment rose to around three times its prewar volume. The growth of population aided this expansion. The labour force in western Europe was 20 percent greater due to a 15 percent rise in the total population; in the U.S.A., the labour force at the end of 1956 was nearly 30 percent more than in 1938. In the less developed countries, the demand for capital was not only urgent but "conspicuous." These nations found it more difficult to attract foreign capital because of the great demand from within the richer economies themselves, and also because of the various political and economic policies which the former followed. The rate of savings exceeded all previous records, even in relation to the increased national income. Yet, because of the great demand for capital, "the supply has been unable to grow as rapidly as would be necessary if all the demands for investment were to be satisfied." The balance of payments difficulties and internal monetary instability which many countries experienced were a direct result of this demand for capital.

World trade continued to expand. In fact, during the past few years, says the report, it has tended to exceed the growth in industrial production, particularly among industrialised nations. From 1955 to 1956 the volume of world exports rose by 8 percent, against 10 percent in the two previous years. These were the results of the progressive liberalisation of trade by the O.E.E.C. countries and the gradual penetration of the U.S. market by the exports of other industrial nations. Primary producing countries participated increasingly in the rising volume of international trade. But the average export prices were somewhat lower during the first three quarters of the year, and during the last quarter, the Suez crisis made the terms of trade still worse. "The rise in export prices of manufacturing countries and the increase in transportation costs produced a deterioration in the terms of trade of primary producing countries, which probably amounted to some 4 to 5 percent, with considerable differences between individual countries", the report says.

* * * *

On the balance of payments trends between the United States and the rest of the non-Communist world, the report says that the gold and dollar reserves of the countries outside the United States increased, but this was to a considerable extent "a result of the support given to certain countries by access to the Fund's resources." Only a small number of countries added substantially to their reserves in 1956, and without the support given by the Fund, the distribution of the increase would have been still more lopsided. The U.S. merchandise trade surplus with the rest of the world, which had increased steadily from $1,300 million in 1953 to $2,700 million in 1955, rose in 1956 to $4,500 million. But this was offset by a continued expansion of U.S. Government spending abroad, and net exports of U.S. private capital increased from $1,200 million in 1955 to $3,000 million in 1956. "These were important factors in the maintenance of international balance, the net result of these and other transactions being that about $550 million accrued to official holders in other countries from their transactions with the United States, compared with more than $1,000 million in 1955."

CURRENT COIN

Engineering Goods for Western Asia.—The Engineering Export Promotion Council sent a trade delegation to western Asia in August this year. Its purpose was to investigate the possibilities of finding markets for Indian engineering goods and to select suitable persons who might act as agents and correspondents. It was also asked to study economic conditions, establish personal contacts with importers and dealers, and give publicity to the engineering goods which India is in a position to offer. The delegation has found that all countries in western Asia are potential buyers and most of them are importing their requirements from Europe, the United States and Japan. "But because of the proximity of and goodwill towards India, they are willing to develop their imports from India. As the developments taking place in these countries, especially in the field of agriculture and industry, are on lines identical to India, they need the type of products which India is producing, such as diesel engines, pumps, electric motors, transformers, and many other small machines." The market for consumer goods, such as sewing machines, electric fans, abrasives, bolts, nuts and buckets, is quite large. The delegation says that in order to develop exports, manufacturers and exporters here should establish personal contacts with importers in western Asia and create confidence in the quality and prices of the goods offered. Except for electric motors and a few other items like bicycles, bolts and nuts, prices generally compare favourably, but as this country is comparatively new in the international market, she might have to offer special rates. Indian producers have certain advantages over the West, especially in the Persian Gulf area. If immediate and persistent efforts are made, it might not be difficult to capture a substantial portion of the market, especially for consumer goods and small machinery. The delegation feels that because communication and transportation services are poor, the Arab countries have little contact with India. It thinks that there should be a greater flow of traffic "and if Air-India International can start operation at these places, it would certainly create a better atmosphere for increasing exports from India." In countries like Iran, Syria and Egypt, some Western countries such as West Germany are trying to capture markets by offering extensive credit facilities. It will be difficult to compete unless manufacturers and exporters here offer similar facilities. Extensive visual publicity campaigns will have to be launched either by manufacturers or by the Government of India. Sales literature should be in Arabic to reach a large circle of consumers. The delegation further suggests the establishment of trade centres in the Persian Gulf area.

* * * *

Expanding Oilseeds Output.—India accounts for one-quarter of the world's production of the five major oilseeds—groundnut, rape-mustard, sesamum, linseed and castor. She produces the largest quantity of groundnuts and the second largest quantity of the others. These oilseeds together occupy about 9 percent of the total area under cultivation in this country. They are of vital importance not only for domestic consumption but also for earning foreign exchange. In an address to the Hyderabad Rotary Club, Mr. Shankaran, Secretary to the Indian Central Oilseeds Committee, says that the Government has fixed the production target for oilseeds at 7.55 million tons, which represents an increase of about 32 percent over the production at the end of the first plan period. In order to achieve this target, development schemes costing about Rs. 29 lakhs have been sanctioned. It is proposed to increase the area under oilseeds and introduce intensive methods of cultivation. Special emphasis is to be laid on groundnut and castor as they are the most important not only for internal requirements but also for export. There are great potentialities for increasing the production of these oilseeds. Although India is the largest producer of groundnuts in the world, her yield from the acre is as low as 641 lbs, compared with 1,613 lbs in China. This indicates the need for more intensive methods of cultivation. Some edible oils are being utilised for non-edible purposes, such as the manufacture of soap, paint, varnish and lubricants. More of the edible oils can be diverted for human consumption if the vast resources of non-edible oil-bearing seeds, like *neer, mahua* and *karanj*, are utilised. They are at present being wasted. Another method of increasing oil resources, according to Mr. Shankaran, is by crushing more cottonseed. Although India produces about 1.4 million tons of cottonseed annually, hardly 6 percent is crushed for the extraction of oil; the rest is fed to cattle. Cottonseed oil can be used for cooking purposes and for the manufacture of vanaspati. In America, it is being used in large quantities for making salad oil and margarine.

* * * *

Sales Tax Exemption for Cloth.—In response to representations made by the Kanpur textile industry, the U.P. Government has exempted from sales tax cloth of all kinds which is manufactured in the State but sold outside. The exemption applies to cloth sold during the period 21st October to 31st December, 1957. The move is realistic because ex-mill prices have fallen by about 12 percent, while accumulated stocks amount to 60,000 bales of cloth and 3,000 bales of yarn. The value of these stocks is estimated at Rs. 5 crores, while the decline in prices has meant a loss to the industry of about Rs. 1 crore. The concession in sales tax has been welcomed by the mills although they consider it inadequate. But the impending closure of Lucknow's only cotton mill, employing over 1,700 workers, suggests that more far-reaching remedies are required. The present lessees of the mill, General Fibre Dealers Ltd., have issued a notice saying that the mills will cease functioning from 21st December because of recurring losses resulting from the uneconomic nature of the unit. The mill, one of the old cotton factories outside Kanpur, resumed functioning only in 1956 after

having been closed for more than three years. The present lessees then took it over for a period of ten years. The factory is a rationalised unit, each worker manning four looms. It is stated that the lessees have for some time been trying to secure power to run the 100 automatic powerlooms installed in the factory, but they have not been able to do so because of the unhelpful attitude of the Government. This charge has been denied by the Government. A meeting of the workers of the mill has passed a resolution calling upon the State Government to supply power to the factory to run the automatic looms or, as an alternative, to take over the factory and hand it back to the workers to be run as a co-operative venture.

The Killick Centenary.—The house of Killick, the well known Bombay industrial organisation with such varied interests as textiles, electricity, manganese ore, coal, cement and light engineering, celebrated its centenary last Sunday. Its beginnings were modest enough, but it can now look back over the intervening years of impressive growth with satisfaction and pride. The Kohinoor Mills, which was among the first ventures started by Killick in India, was founded with an issued capital of Rs. 16 lakhs in 1896, largely as a spinning mill. Now it has an annual production capacity of 32 million yards of cloth and 9.5 million lbs of yarn. Similar is the story of the Killick group of electric supply companies which serve the industrial city of Ahmedabad and its environs, Surat and the sprawling suburbs of Bombay. They began with a small diesel station, but today the company owns one of the biggest thermal power-stations in south-east Asia. Installed capacity will have grown to 187,500 kilowatts by 1960. Killick was among the pioneers in establishing branch-line railways—enterprises which did not always bring adequate financial rewards. It sponsored nine feeder lines in such far-flung areas as Punjab, Gujerat, Bombay and Bengal, of which all but one—the Central Provinces Railway Co. Ltd.—have been taken over by the State. The Shivrajpur Syndicate represents Killick's main interest in mineral development, and has been engaged in mining and exporting manganese ore for more than half a century. The Hingir-Rampur Coal Co. Ltd. is the coal concern. As a contribution to the development of the cement industry in India, it is claimed that the giant A.C.C. organisation owes its present strength partly to the pioneering efforts of Killick. Among the latest interests of the latter is an engineering concern which is located in its industrial estate in Chandivili near Bombay. This concern produces steel files, the trade mark and patent rights for which have been acquired from John Baker and Sons Ltd. of Sheffield. The Chandivili industrial estate has extensive factory space, and in course of time, is likely to become an important industrial nucleus. The company has already framed plans for the manufacture of products such as nuts, bolts, dogspikes, coach screws, Snowcem cement paints and Dexion slotted angles, from factories in the estate.

* * * *

Warehousing Farm Products.—Under the Central Act to provide storing facilities for farm products in surplus areas and big assembly centres, it has been decided to set up seven warehouses in Bombay, Mysore and Orissa. The centres which have been chosen are Amravati, Gondia and Sangli in Bombay, Gadag and Davengere in Mysore, and Bargarh in Orissa. Personnel are being trained under the scheme, and the first batch has just completed the course, which includes such subjects as storage, quality standards, co-operation and banking. These trained warehouse men will soon take over their duties at the proposed warehouses, which, to begin with, will be holding such commodities as jowar, groundnut, paddy, rice, turmeric and pulses. Later, when more accommodation has been obtained and the Central corporation's own buildings are ready, other commodites, including jute, pepper, ginger and *gur*, will be accepted. It has been officially stated that because storing facilities are inadequate or poor, many Indian commodities which are exported have suffered in competition. This is a deficiency which the State-organised facilities should help remedy. Warehouses will be started soon by State Governments to link markets in the interior with major assembly centres. In his address to warehouse men on the completion of their training, Dr. P. S. Deshmukh, Central Minister of Agriculture, has indicated their responsibilities. "What is required", he says, "is not only efficient management, but the relationship that you will develop both with agricultural and business communities. You have to create and build up confidence by your honesty, integrity and tact." Close liaison will have to be maintained with N.E.S. blocks and community projects, which in turn will "educate agriculturists to take full advantage of the warehousing scheme." Co-operative societies will no doubt do part of the work by providing the agriculturist with transport and storing facilities, but there are not enough of them to do the job properly. So the Government has stepped in. The Minister has stressed that warehouse men should be extremely careful in maintaining quality and standards. Any commodity of poor quality will not keep well in a warehouse, and certain minimum standards will have to be applied in accepting goods for storage.

* * * *

U.P. Grumbles over Finance Award.—It is not surprising, perhaps, that "rather disappointing" is the reported official comment in Uttar Pradesh on the recommendations of the second Finance Commission. This comment has been made in spite of the fact the State will get Rs. 3.2 crores more from the Central Government than in the past. The figure falls short of U.P.'s expectations as indicated in the memorandum it submitted to the Finance Commission, but that is no measure of its inadequacy. U.P. is naturally pleased that its demand for the distribution of Central revenues on a population basis has, in the main, been accepted by the Commission, although the logical basis of that acceptance is doubtful. What had really raised hopes in the State was a recent hint which, it was said, was given by the Central Home Minister, Pandit Pant, to the U.P. Congress Committee that the State might get more than it expected. U.P. has been getting Rs. 13.5 crores a year from the Centre so far, and this will now go up to Rs. 16.75 crores. Item-wise, the State's share of income tax will go up by about Rs. 1.9 crores and it will get Rs. 1.5 crores from the railway fare tax. But the expected share of Central excise revenue will go down by about Rs. 20 lakhs and the question is being asked why a change should have been accepted if it is not to the advantage of the State. Income from estate duty has not been estimated because the procedure prescribed is cumbersome. U.P. got Rs. 29 lakhs from this source during 1955-56 and Rs. 36 lakhs during 1956-57. It has a Budget deficit this year of Rs. 11.67 crores, and although the State Government cannot have expected that the entire gap would be filled by the Centre, it will now have to intensify its search for more taxes to cover the deficit.

* * * *

Scarcity in Eastern U.P.—Although the U.P. Government claims that its views have been vindicated by the chapter on eastern U.P. in the Foodgrains Enquiry Committee's report, the Opposition Parties in the State have stepped up their demand for a separate commission of enquiry. Actually, an independent committee appointed by the Planning Commission and headed by Mr. M. S. Sivaraman, Adviser to the Commission, has just completed an enquiry concerning the scarcity areas of eastern U.P. A long-term solution for the problem might have to be deferred until this committee submits its report. According to the Asoka Mehta Committee, cultivation cannot be extended much in these districts and the cultivated area an acre has in fact greatly decreased during the past two decades. Consequently, there are large deficits even when crops are normal. As there is no scope for the extension of cultivation, the only way out, in the view of the Committee, is to increase the yield an acre and also to bring the area under double cropping. There is a high percentage of petty holdings in eastern U.P., and even sub-marginal land has been brought under cultivation. Holdings of below two acres account for 20 percent of the area under all holdings, the corresponding figure for the rest of U.P. being only 11 percent. The high density of population makes a major contribution to the chronic distress. In Gorakhpur and Banaras it is as high as 942 a square mile, and in Ballia it exceeds 1,000. The Asoka Mehta Committee's report has suggested family planning measures, but as an immediate step the U.P. Revenue Minister, Mr. Charan Singh, has proposed that the surplus population be assisted to migrate to the Andamans. The suggestion is surprising considering that plans for the "assisted migration" of East Bengal refugees have failed to a very large extent. The question also arises who is to provide the assistance for migration. U.P.'s own financial position is such that it can hardly bear the cost of population transfers, even on a small scale. The Centre, for its part, cannot be expected to assist considering that it already has too little money for resettling the East Bengal migrants. The immediate as well as long-term solution might well lie in introducing land reforms and better agricultural practices so as to increase output; promoting industrialisation: and intensifying family planning campaigns. The last is not necessarily the least important.

* * * *

Exporting West German Capital.—The creation of a special banking institution, which would be entrusted with the task of investing abroad part of West Germany's foreign exchange surplus, has recently been proposed by the president of the Dusseldorf Chamber of Industry and Commerce, Dr. Ernst Schneider. It is believed that the proposal is the outcome of a study undertaken by the Chamber. The bank is intended as a temporary arrangement until a better balance between exports and imports leads to an improved international payments situation. The plan recommends legislation to set up a special institution with capital equivalent to $(U.S.) 250 million, of which 50 percent would be contributed by the central bank and 50 percent by the private sector. Because of the prevailing shortage of private capital, only 25 percent of the private contribution would have to be paid at the beginning. Dr Schneider starts by pointing out that the present international payments situation cannot be allowed to continue and that the time has come for West Germany to take measures to restore a balance of payments equilibrium; her obligations would be fulfilled by a good creditor policy. The new bank's principal tasks would be: (1) repayment of German external debts prior to maturity, particularly the debts incurred in the postwar period; (2) financial assistance to importers to provide for larger stocks; and (3) assistance in the acquisition of West German participation abroad and other long-term foreign investments. The bank would be entitled to accept, in addition to the paid-up capital, foreign exchange deposits from the central bank and deutschemark deposits from the public authorities. The study concludes that the public authorities have accumulated an excessive volume of savings, which has led to low consumption and high indebtedness in the economy. The flow of savings must be redirected to the private sector, for West Germany must become an exporter of capital, however odd this may sound in view of the present situation in the West German capital market. Dr. Schneider suggests that the present cash reserves of the West German Government could become the basis for the foreign exchange credits proposed.

* * * *

Trade with Aden.—The South Indian Chamber of Commerce, which is interested in increasing exports of coffee, condiments and handloom goods, has in certain recent representations emphasised the importance of trade connections with Aden. The colony's transit trade, it is pointed out, has lately shrunk, and Japanese competition in textiles is keen. Moreover, a good deal of the trade to Ethiopia and other countries in the Red Sea area is carried on directly. Aden's exports to India are negligible, but it has been doing considerable business with Pakistan. Whatever might have been the old relations between India and Aden, it is pointed out, the latter's dispute with the Yemen creates difficulties for this country. Moreover, India's stand on the Oman affair and political uncertainties in the Middle East have not given her any particular advantage in spite of the recovery in the region's trade which has taken place since the clearance of the Suez Canal. Nevertheless, a review of India's trade with western Asia's main port supports the view that exports, of vanaspati and cycles, for instance, can be increased if prices are kept reasonably low.

A SHARE DIVIDEND CASE

WE notice in the *Pioneer* that a case, which is described as of considerable interest to commercial men, is about to be heard in the Court of the District Judge of Cawnpore. It is described thus: "The plaintiff in the case is a wealthy zemindar, a native who sold 277 shares in the Muir Mills Company, Limited, Cawnpore, to Mr. A. McRobert, Manager of the Cawnpore Woollen Mills, and at the time of sale a Director of the Muir Mills. The sale took place about the end of July 1895, and in August a dividend was declared and paid. The dividend was paid, in accordance with the Articles of Association of the Company, to all shareholders whose names stood on the Company's books at the date of payment, and that on the 277 shares was in due course paid to Mr. McRobert. The former owner (the present plaintiff) demurred, and claimed that the shares having been sold *after* the close of the half-year, the dividend was due to him, and not to Mr McRobert, and failing to obtain satisfaction has sued Mr. McRobert in the Civil Courts, with the Muir Mills, as a matter of form, co-defendants." We fail ourselves to see what interest this case has for commercial men, because when shares are sold through a broker in any of our presidency towns the contract expressly provides that any bonus, privilege or dividend declared *after* the sale is the property of the purchaser. The shares in the Muir Mills were sold and the purchaser became the registered proprietor of them *before* the dividend was declared, and as all dividends are stated to be payable to shareholders standing on the Register on such and such a date, there is no doubt whatever that Mr. McRobert is entitled to the dividend. When shares are sold *after* a dividend has been declared, but *before* it has been paid, it is always stated on the contract that the shares are sold with or without dividend. They may manage things differently in Cawnpore. Some people there have a queer notion about inspection of registers and the like, but no difficulty of the kind would ever have occurred in a presidency town, and the case is absolutely devoid of interest to commercial men.

A DITCHER'S DIARY

I NEVER met a politician who was wholly satisfied with the way the Press had treated him, and countries and continents are not vastly different in this respect. It is indeed possible to live in Europe or the United States and remain very ignorant of Asian affairs, even as the feat in reverse may not be impossible in Asia or Africa. The International Press Institute did well to bring out that it is also possible, and not very difficult, to be extremely well informed about the whole world by reading the right newspapers in London, Paris or Washington. It is not irrelevant to remember that, while complaints continue to be heard against the alleged indifference of the western Press to Asia, it was Mr. Nehru who accused Indian newspapers of dealing more with London and Paris than with Tokyo or Peking. Either instance of imbalance is the result of historical and geographical circumstances which nothing will undo. There is also the imbalance in importance, which it is all right for politicians to pretend to ignore but which that harassed man at midnight, the night editor, has to remember—or he will be told so the next morning by the management. Whatever may be true of Afghanistan or Laos, my own impressicn is that the coverage of India and other Asian countries that matter is fairly extensive, and increasing, in the entire serious Press of the western world. Indeed some of those who complain of inadequacy in this respect must now and then have wished there was nct so much publicity for problems like Goa and Kashmir and the Nagas. Finally, there are different concepts in different countries as to what is news. Only in this part of the world are speeches by certain individuals considered better copy than the actions and fortunes of masses of men.

* * * *

Talking of misreporting reminds me—I cannot think why—of Mr. Krishnamachari, whose recent remarks about the purchasing power of the rupee are disappointingly similar to some I remember challenging two years ago. Of course, what the Finance Minister said at the ASSOCHAM general meeting in 1955 was not exactly the same as his statement in Parliament last week that, "Perhaps you have to spend Rs. 4 there (in western Europe) in order to get what you are getting for a rupee in this country". But for the majority of those in India who do have occasion to spend money in both parts of the world—namely west Europeans and especially the British—it is not vastly different from the assertion that an income of Rs. 25,000 a year in India leaves its recipient better off than £2,000 in Britain, except of course that it is four times wider of the mark. Both statements show a depressing lack of acquaintance with the true facts. On his latest reckoning, Mr. Krishnamachari would now seem to imply that Rs. 25,000 a year in this country is the equivalent of £8,000 a year in Britain. With due respect to the Finance Minister, and at the risk of being accused myself of misquoting, I am afraid I must disagree most strongly with such a view even if it were based on a comparison of income after tax. In fact, while I am about it, I would like to enter a protest against all the various shades of this misconception which, I have found on various visits, are all too prevalent in New Delhi. Conditions in western Europe vary widely, of course, according to whether one lives in a metropolis, a provincial town, or in the depth of the country, just as they do in India. But in no comparable set of circumstances would the cost of the kind of article likely to be bought in both places, be four times as high as it would be here. If it cost as much, it would probably be an exception. And that I think is true of all the items which enter into the cost of living, such as rent, clothing, food, drink, fuel, transport and amusement. When one considers too the value of the amenities which abound in western Europe, and which are all too scarce here—good roads, public hygiene, and efficient bureaucracy, welfare benefits, State pensions, free education and so on—there is no real comparison between the purchasing power of a single rupee and its equivalents. I can only put Mr. Krishnamachari's odd views down to his not having spent much time in western Europe lately, at least not when he was paying his own bills, and I suspect that much of the misunderstanding which exists on this matter in New Delhi is due to travel abroad being restricted nowadays to officials, who do not have to manage their personal affairs anyway.

* * * *

Not as though I expect the authorities to agree with me, but I suspect I am right in thinking that by and large this is a most uncomplaining country. I can offhand remember a hundred things over which, as they say, the roof would have been raised elsewhere, while here there is nothing but resignation. The appropriate association recently tried to defend the doctors in Calcutta who have been the subject of some not always fair criticism lately, especially those connected with hospitals. One hears enough atrocious stories to be careful about taking the defence as complete exoneration. On the other hand, there is likely to be more than a modicum of truth in the statement that not all the blame attaches to the doctors. The administrative system, for instance, is at fault in more respects than one; and it is equally probable that the deterioration in our hospital services has been less than the increase in the critical spirit. There is in the public services in all countries a lack of the human touch. Here in India, where the idea of a welfare State is of necessity difficult to translate into efficient practice, a certain apparent callousness to the public was perhaps inevitable. Then there is the basic question of numbers. As every hostess knows, and is being reminded afresh in this season of festivities, it is just not physically possible to give the same attention to two hundred guests as it is to twenty. The officials under fire have to deal with thousands daily, and not all of them may be reasonable customers. What is certain is that the community should be on terms of cordiality and mutual respect with its healers, and that is far from true of Calcutta today. If the patients complain too much, the doctors, who must have some knowledge of a sick man's psychology, may do well to appreciate that it is part of the ailment too. It may thus be necessary to feel and show a little more sympathy for the patient—perhaps a little more than might otherwise be considered necessary or even adequate. It would certainly be a big step forward—and might help the doctors improve their reputation too—if hospital administrations treated human being less like left luggage, to be accepted or rejected according to whether the appropriate fee has been paid, and to be treated as simply a number on a ticket once inside.

* * * *

I found myself depressed after reading Mr. Nehru's verdict on past Indo-British relations given at last week's conference of U.S. Technical Co-operation personnel in Delhi. I am familiar with the picture presented by E. M. Forster in his *Passage to India*, but I have always felt it to be a trifle overdrawn, and I was genuinely surprised to find the Prime Minister apparently subscribing to it. Besides, what might have been true on the official plane, was not necessarily so on the business. And in a land where most Indians were subordinates anyway, it would have been remarkable if, among their ranks, they had not numbered at least a few "decent" ones. No. I find it difficult to accept the view that the relationship which existed before Independence between Britons and Indians, outside that of conqueror and conquered, was limited to the fact that after 150 years of British rule, they had "got to know each other". Happily all that is history, and Indo-British relations are being established on an entirely different basis now. Which brings me to the main burden of what Mr. Nehru had to say—that it is "very important" the U.S.A. and India should understand each other. I could not agree more, and it has always been a mystery to me why Americans are not more liked in this country. Nobody, for instance, could complain that they are not, as Mr. Nehru put it, "receptive to Indian background, culture and ideas". The extent to which individual Americans go out of their way to understand the things they see in India has often been a source of wonder to me and, I regret to say, of amusement to many who ought to know better. The impact on a particularly intrusive sense of humour, of the American female engrossed in the rapturous appreciation of a Jamini Roy painting, can often, so I am told, provide a real test of good manners. If, as Mr. Nehru says, friendliness evokes friendliness, then the Americans should be the most popular people in Asia. Yet the fact must be faced that the reserved Englishman and even the sycophantic Russian are often held in higher esteem, while the unfortunate American is left to enjoy only that measure of appreciation which his dollars can buy. It is time all this was changed. India has much to gain from a closer association with the United States, and the values for which the free world stands will benefit with her.

* * * *

When Andrew Farquhar left India he was still a sick man. He had been sicker, but it seemed he might be on the mend and with the prospects of a trip to Africa to see his son and a well-earned retirement ahead, we were all perhaps more hopeful than his health justified. Now he is dead and his many friends in India will feel the loss. Andrew Farquhar was associated with this country for forty years. During that time he served an unusually long list of reputable concerns—Macneills, Birds, Kilburns, Andrew Yules, Mackinnons and Martin Burns. He spent his last seventeen years with Tatas and was mainly responsible for the mechanisation and modernisation of their collieries He was a great exponent of coal washing in India and his articles on this and allied subjects must have been familiar to every regular reader of *Capital*. He might have contributed more had it not been his complaint that, as he once told me in his blunt Scots way: "You don't pay well enough". He was right, of course; and it would have been difficult to have assessed the true value of those articles to the coal and steel industries of this country. Indeed, India owed him a great deal. Yet such is the perversity of fate, that its parting gesture, the 1955 Budget, slashed savagely the gratuity bestowed by a grateful employer as a consolation in his declining years. It struck me when he told me of this what an odd way it was to reward a man whose contribution to coal washing had made the present expansion in steel production—on which so much of the future of this country depends—into a practical proposition. It was at his suggestion, made soon after he left, that *Capital* reproduced in pamphlet form the series of articles he wrote for us expressing his views and advice on this country's coal problems. It seems now that *Coal Policy in India* will be his last contribution to the subject which absorbed his working life. That is a pity, because I know he had plans for more.

LESS BUSINESS IN STOCK MARKETS

IRREGULAR TREND IN INDUSTRIALS

London, 27th November.

BUSINESS in the stock markets decreased during the past week, and by Tuesday, the last day of the current account, it had fallen to a very low level. The markets generally failed to develop any decided trend, and recorded small and irregular changes on balance. Prior to the week-end, the recent firm tendency was fairly well maintained but a rather dull tone developed later. A number of factors combined to reduce business to negligible proportions. Wall Street's failure to respond decisively to the cheaper money moves in the United States was a distinct disappointment to London. Expectations of an increase in activity in the new issue market, and particularly the belief that the long-awaited and very large British Petroleum issue would be announced shortly, restrained activity. In addition, the obscure economic and labour situation was a limiting factor. Gilt-edged made very little response to the strength of sterling against the U.S. dollar, and prices drifted slightly lower in the absence of support. There was very little interest in foreign bonds or rails. Dollar stocks fluctuated with Wall Street and were occasionally higher. Industrials moved irregularly. At one time, numerous small improvements were recorded but these were in many instances subsequently lost. On balance, price changes were small and irregular. South African gold shares were slightly easier. Sentiment was disturbed by the news of Sir Ernest Oppenheimer's death but the market soon settled down in the absence of any pressure to sell. Diamond shares were dull. Coppers eased and tins reflected the weakness of the price of the metal. Oil shares were dominated by the coming British Petroleum issue and there was not a great deal of change on balance. Generally firm conditions prevailed in rubbers and numerous gains were recorded. Higgoda advanced several shillings on the Ceylon Government's purchase price for the estate. In a quietly firm tea share market, there were occasional bright spots.

The Money Market

Stringent conditions prevailed in the money market throughout the past week. Requirements were not very heavy but the main banks were not well supplied with spare cash, so the demand for loans seemed keen, with borrowers paying rates ranging from 5⅞ to 6¼ percent. With disbursements on a small scale, the daily shortage was not so excessive, and for this reason the authorities saw fit to give only a small amount of assistance. This led to the market entering the Bank of England on two occasions to borrow small amounts. The feature was the first major change in the Treasury bill rate at the weekly tender. This was largely due to the continued keen outside competition which the money market was meeting, resulting in an allotment of bills far short of needs. Bids were revised to the extent that there was a fall of over 2s percent in the average rates for the mixed bills now being offered. Two other factors which contributed to the drop in bill rates were the firmness of sterling and the easier trend of American money rates.

Activity on Wall Street

Foreign dollar bonds were mixed in more active trading. Italian issues were firm, several of them adding a point or more. Among German nationals. 5½ percents of 1969 advanced nearly two points, while 5½ percents of 1965 and 5 percents of 1980 dropped over one point each. Japanese Government bonds showed small changes either way, while Tokyo Electric 6 percents of 1963 declined over a point. Chile 3 percents were a little lower on the week. Long-term U. S. Government obligations were generally higher. The Treasury scored impressive gains in response to hints that the Federal Reserve System might take additional steps to ease credit conditions. Investment quality corporates also advanced on good volume, although this section of the market experienced a temporary reaction following the announcement of a $720 million American Telephone and Telegraph convertible debenture offering to stockholders next year. Rails developed a firm undertone following a period of softness. Convertibles followed the stock market pattern to finish with sizeable advances.

U.S. Federal Reserve Return

The U S. Federal Reserve return for the week ended 20th November shows that the gold stock rose by $26 million to $22,761 million. Foreign deposits fell by $19 million to $304 million, while foreign investments declined by $31 million to $3,792 million. The Federal Reserve's holdings of bills fell by $98 million and of securities under repurchase agreements by $73 million, while holdings of certificates rose by $1 million. Total discounts and advances rose by $604 million to $1,504 million, while the aggregate excess reserves of member banks rose by $645 million to $672 million. The daily average excess reserves of member banks rose by $1 million to $528 million, while their daily average borrowings fell by $156 million to $747 million. Business loans of the New York city banks fell by $90 million to $11,523 million compared with a decline of $54 million to $11,090 million in the corresponding week of last year.

Hongkong Gold Steady

The Hongkong gold market was very steady throughout the past week, although the early improvement was not maintained. At first, the easing of American credit stimulated demand as traders believed that it might lead to a relaxation of credit in Hongkong in the near future. Later, demand tapered off when buyers found sellers with large stocks who were prepared to deliver gold. Carry-over charges totalled 280 cents a 10 taels in sellers' favour. The official offtake was 4,290 ounces, and unofficial 7,400 ounces Arrivals from Macao totalled 40,000 ounces and forward contracts quoted $(U.S.)37.90, c.i.f. Macao.

Rise in Paris Gold

Hectic conditions ruled in the Paris gold market, with sentiment influenced by the recent strike. North African developments caused some dealer covering, while hoarder demand was restricted. Business was at a very high level. Geneva advices of a weakening franc rate had an additional bullish effect on the market. Prices soared, and there was little opposition from sources dealing on behalf of the Bank of France. Later large sales were accompanied by profit-taking.

International Tin Council Meeting

At the request of a delegation, the date of the next meeting of the International Tin Council has been brought forward to 4th December. The meeting was scheduled for 11th December. At first, it was fixed for 29th January, but when it was brought forward to 11th December, well-informed quarters took the view that this was done to discuss quotas. Tin prices in the London Metal Exchange have risen since the announcement about the change to 11th December was made and because of reports from Holland that tin exports might be restricted.

Restoration of Sugar Export Quotas

The International Sugar Council has announced the restoration of sugar export quotas and other limitations provided for under the International Sugar Agreement. A Council *communiqué* says that quotas are being automatically restored in accordance with the agreement since the world price has now been below 3.90 cents for 17 consecutive days up to 18th November. The restored quotas are applicable for the whole year, taking account of various adjustments made during the inoperative period as a result of the redistribution of surrenders by some exporting countries. Details of the present quotas are given by the Council as follows: Belgium 15,080 tons, Formosa 758,264 tons, Cuba 2,736,887 tons, Czechoslovakia 118,000 tons, the Dominican Republic 728 tons, France nil, Haiti 45,000 tons, Hungary 4,740 tons, Mexico 75,000 tons, Philippines 5,000 tons, Holland 80,000 tons, and Russia nil. This totals 4,566,633 tons, not including 95.000 tons allocated to Formosa and 20.000 tons allocated to the Philippines under Article 14 (A) (B.I.S.) of the Agreement. Quotas on 25th January this year totalled 4,715,000 tons. The *communiqué* says that the difference between the two quotas is due to the fact that 148,367 tons were surrendered too late in the year and this could not be redistributed. If any participating country exceeds its export quota by the end of the quota year, it will not be penalised if it is shown that such excess resulted from exports and sales to final destinations made during the period when quotas remained inoperative.

Commonwealth Sugar Price

The rate to be paid for 1958 "negotiated price" sugar under the terms of the Commonwealth Sugar Agreement has been fixed at £43 16s 8d a ton in the course of recent meetings between representatives of Commonwealth sugar exporting territories, the U.K. Ministry of Agriculture, Fisheries and Food announces. The 1957 negotiated price is £42 3s 4d a ton. No change has been made in quotas but arrangements have been made to enable the British Honduras to increase exports as production expands within its maximum quota under the agreement.

THE CALCUTTA MONEY MARKET

INTER-BANK SECTION SLUMPS

Wednesday, 27th November.

THE overall level of advances has shown little change in the Calcutta money market throughout the past week. Demand from cotton, wool and jute mills has declined slightly along with the requirements of the sugar industry. But this has been counterbalanced by an increase in accommodation against wheat and grain storage. There has been a sharp fall in the interbank market, largely due to a surfeit of money from Bombay. The interbank call rate is now quoting 2¾ percent, its lowest for some time.

Exchange business has been rather dull. Most of the bills which have come to hand have been on account of tea. Remittance has been moderate. Sterling has strengthened on the world's markets and is now quoted above parity both against the dollar and Continental currencies.

* * * *

Bullion was steady because of limited arrivals. Silver increased from the previous week's level of Rs. 179.56 to Rs 180, quoted today for both ready and forward delivery The price was 78⅛d. in London, and the New York quotation was 90 3/8 cents.

Gold improved in sympathy with silver from Rs. 109.50 to Rs. 110. The sovereign showed a gain of 25nP at Rs. 71.

* * * *

During the week ended 22nd November, Government of India Treasury bills for Rs 35,50,00,000 were sold in favour of the Reserve Bank.

* * * *

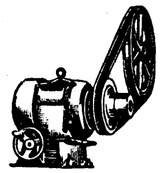
A decline of Rs. 6.14 crores to Rs. 1.480 90 crores in active notes was the notable feature of the return of the Reserve Bank of India for the week ended 22nd November, 1957, while the total note issue was Rs. 97 lakhs higher at Rs. 1.514.97 crores. Foreign securities were reduced by Rs. 11.64 crores to Rs. 280 19 crores and a transfer of these securities to the Banking Department from the Issue Department helped improve balances held abroad by Rs. 8.30 crores to Rs. 32.67 crores. Rupee securities were increased by Rs. 11.64 crores to Rs. 982.29 crores. Deposits of the Government of India rose by Rs. 1.56 crores to Rs. 53 19 crores and other Government accounts were Rs. 1.25 crores higher at Rs. 9.44 crores. Balances of commercial banks rose further by Rs. 7.08 crores to Rs. 109.23 crores. Investments increased by Rs. 21 57 crores to Rs 267.48 crores. Other loans and advances declined from Rs. 59.24 crores to Rs. 54.88 crores of which advances to scheduled banks against usance bills amounted to Rs. 15 10 crores (Rs. 19 68 crores). Ways and means advances stood at Rs. 27.75 crores against Rs. 48.56 crores.

* * * *

The return of the State Bank of India for the week ended 15th November, 1957, shows a drop of Rs. 4.37 crores to Rs. 361.08 crores in total deposits. Investments in Government securities are up by Rs. 2 lakhs to Rs. 153.96 crores, while other authorised investments are down by Rs. 20 lakhs to Rs 9.94 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have decreased by Rs. 2.46 crores to Rs. 158.94 crores. Cash and balances are, in consequence, shown at Rs. 52.11 crores or Rs. 4.13 crores higher.

* * * *

The statement of the position of scheduled banks for the week ended 15th November, 1957, shows Demand and Time liabilities at Rs. 732.91 crores (Rs. 18.12 crores on account of borrowings from banks) and Rs. 657.15 crores (Rs. 14.42 crores), compared with Rs. 747.18 crores (Rs. 19 08 crores) and Rs. 651.47 crores (Rs. 14.32 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 22 lakhs and Rs. 3.97 crores to Rs. 39.10 crores and Rs. 99.14 crores, respectively. There is a drop of Rs. 5 lakhs to Rs. 407.32 crores in investments. Advances and bills discounted at Rs. 844.61 crores show a drop of Rs. 9.76 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 9.9 percent and 60.8 percent against 9.6 percent and 61.1 percent.



* * * *

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land Customs revenue collected in the Indian Union during August 1957, amounted to Rs. 1,576 lakhs compared with Rs 1 342 lakhs in the corresponding month of last year. The comparison in the following should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total Customs revenue collections, import duties accounted for Rs. 1,320 lakhs against Rs. 1.114 lakhs, export duties for Rs. 213 lakhs against Rs. 198 lakhs and land Customs, miscellaneous and air Customs for Rs. 43 lakhs against Rs. 30 lakhs. The total gross collection of Union excise duties amounted to Rs. 2,317 lakhs compared with Rs. 1.512 lakhs. During the five months, April to August 1957, the grand total of gross Customs and Union excise revenue realised was Rs. 18,083 lakhs compared with Rs. 13.555 lakhs during the corresponding period of 1956 Of this amount, import duties accounted for Rs 6,879 lakhs against Rs. 5.428 lakhs, export duties for Rs. 764 lakhs against Rs. 919 lakhs, land Customs

LONDON FINANCIAL LETTER

SEASONAL INFLUENCES FAVOUR STERLING

By Air Mail.

A NOTABLE, though negative, characteristic of the London financial scene is a general reluctance to "take a view". In the crisis of September and for some weeks after, most dealers were prepared to forecast that inflation would defeat the authorities' attack on it, or that the latter were finally pushing the economy into a recession, that they had at last resolved to stabilise sterling, or that wage increases or industrial unrest would further weaken it. The conflicts have recently become too confused, and few people pretend to forecast developments even over a short period. In this state of indecision, seasonal influences favouring sterling have probably been decisive in the foreign exchange markets, where the currency has been firm but not strong enough to gain momentum in its recovery. The improvement in the gold and dollar reserves in October was satisfactory but not spectacular. There is evidence that the credit squeeze is effective; for instance, the clearing banks' statements made up to mid-October showed that in barely a month after Bank rate was raised to 7 percent and the banks were instructed to curtail credit, advances to the private sector were reduced more than £50 million. On the other hand, wage demands outstanding represent some £500 million a year of additional spending power, and many more demands will be lodged if some of those outstanding are successful. Against this background foreign confidence in sterling is not easily restored.

The influences affecting the stock market are still more complex. Successful wage claims will obviously be adverse to Government stocks, as they will imply more inflation and will weaken sterling. But investors in ordinary shares are not so sure that increases in wages will raise selling prices: they might further depress profits. On the other hand, if prices rose, the inflationary spiral would imply higher values for ordinary shares, the investor's traditional hedge against inflation. There is no difference of opinion whether gilt-edged stocks and ordinary shares should now be moving in the same direction. In an inflationary situation, ordinary shares should rise and gilt-edged stocks fall; in a deflationary situation, gilt-edged stocks should rise and ordinary shares fall. Yet some dealers are saying that ordinary shares cannot recover substantially until gilt-edged stocks show a more positive upward trend.

Reduction in Profits

One sure fact is that the pressure of the credit squeeze is being felt more on profits than on wages. The *Financial Times* publishes monthly an analysis of the past month's company accounts and compares the cumulative figures with those of the same companies issued a year earlier. Its cumulative table for the first ten months of this year relates, on average, to companies' earnings in the second half of 1956 and the first half of 1957. In the former half-year the economy was "moving sideways", but in the latter half-year production was increasing. Yet the average increase in trading profits, 10½ percent in the previous year, was reduced to 4½ percent, and net earnings available for ordinary dividends were actually reduced about 2 percent. Wage rates, by contrast, increased about 7 percent in the same period. Public statements on the wage struggle are usually confined to the unstabilising effects of wage increases. This is not, however, a simple problem of rising prices and increasing monetary purchasing power. It involves a complex process of redistribution, both between investment and consumption, and between one body of consumers and another. The greater part of industrial development in the private sector is financed out of profits retained, and the check to the increase in profits—a check imposed by the rise in costs, especially of wages—may well impede development by imposing a financial stringency additional to the official credit squeeze. If dividends were sacrificed to the extent that wages were increased profits immediately available for development would not be curtailed by wage increases (but total available capital would probably be reduced by transfer from the wealthier section of the community to the section less able to save). In fact, however, average dividends have this year continued to rise, by 6 percent, in spite of the reduction of available earnings, by 2 percent.

This is not a healthy situation. It emphasises the gradual shift of resources from investment to consumption that is implicit also in the Government's policy of restricting capital spending—a shift that seems to have been moderated by increased saving out of income. The stock market fears that dividends, already sharply reduced in individual cases, may soon come down on a broad front, so that companies will be able to retain enough money for development. On the other hand, many companies are reluctant to undertake capital expenditure while the trading outlook is uncertain. And to round off the complications, the trading outlook in the domestic field will deteriorate if wages cease to rise while new productive capacity initiated in the past year or two come into operation.

Monetary Stringency

The warning by the Chancellor of the Exchequer recently that the measures against inflation would not soon be relaxed caused no surprise. It had generally been assumed that stringency would be maintained during the coming months of critical wage negotiations. Yet London has been waiting anxiously for signs of relaxation in the United States where ideas on economic trends seem no more lucid than they are in Britain. It is too soon to assess the economic effects of the new drive to surpass Russia in science and defence, and the idea that the changed situation will need a huge increase in U.S. expenditure is not substantiated. The increase envisaged may, however, be enough to halt any tendency towards easier money. Yet many observers here believe that monetary stringency is now taking effect in the United States after many months, that its effects will not be quickly or easily reversed, and that a U.S. recession would have most damaging consequences for the sterling area.

Stocks and Shares

INDIAN IRONS IMPROVE ON RETENTION PRICE RUMOUR

INVESTMENT SCRIP REMAIN QUIET

Wednesday Evening.

INVESTMENT support is almost completely absent from the Calcutta stock market, and has been for the past week. There has been a recovery in the main speculative scrip from the levels reached in last week's clearing, but this has accounted for the entire activity which the market has experienced. The reason for the improvement in Indian Irons, with which the other speculatives have moved in sympathy, was the rumour, still unconfirmed, that an increase has been approved in the company's retention prices. The undertone is now quietly steady in the speculative issues, but distinctly quiet among investment counters. The depressing economic outlook, especially in foreign exchange and food, has had a dampening effect on sentiment throughout the week.

Among the sections, coals have been largely neglected, and a rather easier tendency has developed. Jutes have benefited to a strictly limited extent by further interest on the part of the Life Insurance Corporation. Engineering shares have held fairly steady due to the influence of Indian Irons, but miscellaneous counters have been mixed, with an easier tendency predominating. Teas have been quiet and prices have drifted lower. The new Philips and National Rubber issues have both been heavily over-subscribed—the former four times, and the latter twice, it is reported. Due to this over-subscription, the lists for both the 6 percent preference and ordinary shares of National Rubber were closed yesterday.

Details of the week's trading follow.

* * * *

The Government securities market ruled firm and there was a further appreciable improvement in prices. Enquiry was of a general nature, but once again was centred on short and medium-dated loans. Three percent Conversion Loan 1986 was marked at around Rs. 71 and 3% Non-Terminable Paper was unchanged at Rs. 71.15. In the short-dated group, 3% 1958 had buyers at Rs. 99.75, 3% 1959-61 improved to Rs. 98.75, 2¼% 1961 was quoted higher at Rs. 94.30. 3¼% 1961 was in strong demand up to Rs. 99.75, while 2¾% 1960 hardened to Rs. 97.05 and 2¾% 1962 had no sellers at Rs. 94.30; 3¼% 1962 was marked up further to Rs. 97.70. Among medium-dated loans, 3% 1963-65 was traded up to Rs. 93.60. 3% 1964 was asked for at Rs. 93.75, 3½% 1964 improved to Rs. 97.75 and 3½% 1965 was quoted higher at Rs. 97.50: 3½% 1967 changed hands at around Rs. 97.57 and 3¾% 1967 was marked up to Rs. 99.55. In the long-dated group, 3% 1966-68 turned buyers at Rs. 91.15 but 3% 1970-75 continued on offer at around Rs. 86: 3½% 1974 had sellers at Rs. 98.25 and 4% 1972 was marked at Rs. 100. The demand for State loans continued and there was an all-round improvement in prices. Four percent 1963 issues were in strong demand, with West Bengal at Rs. 99.25 and U.P. at Rs. 98.25. Among other loans 4% Madras 1967 and 1968 were asked for at Rs. 96.70 and 4% U.P. 1968 had buyers at Rs. 96.35. However, there were sellers of 4% U.P. 1964 at Rs. 98.25.

Business in preference shares was on a very restricted scale. In the miscellaneous group British India Corporation were crossed at Rs. 106 and Calcutta Electric were taken at Rs. 10.06. Indian General Navigation were done at Rs. 64 and Indian Iron & Steel were absorbed at Rs. 96. There were buyers of Indian Standard Wagon at Rs. 114.50, while Richardson & Cruddas were offered at Rs. 55. Purtabpore Sugar changed hands at Rs. 13.50. A parcel of Burn & Co., 6% was taken up at Rs. 105. In jute, Hooghly Mills were done at Rs. 7.56 and Kamarhatty at Rs. 74. Waverley were transacted at Rs. 30.87.

The report that the Controller of Capital Issues had given his consent to the issue of bonus shares by the Punjab National Bank in the proportion of three for seven had no effect on the price of the shares, though there were buyers at the previous rate of Rs. 65. Allahabad Bank partly paid were reported at Rs. 178 and Hind Bank were unchanged at Rs. 33. United Commercial improved to Rs. 59.

A solitary transaction was reported in the railway section, in Dehri-Rohtas at Rs. 9.56.

In the cotton section, Dunbar recovered from Rs. 124 to Rs. 130 and Kesoram were slightly better at Rs. 10.87. Cawnpore Textiles were shaded at Rs. 5.25.

Coal shares were devoid of interest. Bengal were initially marked at Rs. 225 ex-dividend, but later moved to Rs. 228. Burrakur changed hands at Rs. 21.75 ex-dividend. Central India were easier at Rs. 6.31 as were Western Bengal at Rs. 5.69. Equitable were unchanged at Rs. 23.50 and after a long interval Union were reported at Rs. 13.75. South Karanpura were marked down from Rs. 10.50 to Rs. 9.75 and Karanpura Collieries collapsed today from Rs. 100 to Rs. 78.

Except for a few nibbling purchases of jute shares by the Life Insurance Corporation during the week, investment interest was completely lacking. Here is a chart showing representative price movements:

	Opening 21st November Rs.	Closing 27th November Rs.
Agarpara	8.25	7.75
Barnagore	89	89
Auckland	90	82
Champdany	125	122
Ganges	56	55
India	121	119
Megna	87.50	85
National	19.60	19.60

In electrics, Benares receded from Rs. 14.43 to Rs. 14.12, while Calcutta were well maintained at Rs. 13.12. United Provinces were shaded at Rs. 119.

Little interest was shown in sugar shares and prices where changed were lower. Belsund came back to Rs. 10.25 and Ramnugger to Rs. 19.12. Contrary to the general trend, Dyer Meakin were steady at Rs. 7.25.

The engineering section was steady under the leadership of Indian Iron & Steel, following rumours (unconfirmed up to the time of writing) of an increase in the retention price of steel by Rs. 26 a ton. Indian Iron & Steel, after being sold down to Rs. 18.72, recovered at one time to Rs. 19.32 but reacted at the close to Rs. 19.06. Burn & Co., were taken at Rs. 311 ex-dividend and Guest, Keen, Williams at Rs. 28.81. Indian Standard Wagon, following confirmation that sanction had been obtained for the issue of bonus shares in the proportion of one for one, improved from Rs. 178 to Rs. 182 buyers. Jessop & Co., and Richardson & Cruddas continued to meet with selling pressure and eased to Rs. 23 and Rs. 7.75, respectively. Textile Machinery, after being sold down to Rs. 16.70, recovered at the close to Rs. 17.20.

In paper, Orient, after being done up to Rs. 25.40, closed lower at Rs. 25. Titaghur were

steady at Rs. 33.06. Shree Gopal were offered at Rs. 14.62; Sirpur were better at Rs. 8.62.

In cement, Assam Bengal were shaded at Rs. 4.37 as were Dalmia at Rs. 9.81. Jaipur Udyog were easier at Rs. 11.75 and Sone Valley were offered at the lower rate of Rs. 4.81.

In insurance, New Asiatic changed hands at Rs. 3.25 against a previous quotation of Rs. 4, and Ruby General were lower at Rs. 6.12.

In shipping, India General Navigation were neglected at Rs. 59, while India Steamship were steady at Rs. 11.81. Calcutta Landing & Shipping recovered from Rs. 13.50 to Rs. 13.87.

Among miscellaneous industrials, Aluminium Corporation met with profit-taking and closed easier at Rs. 9.69. Bengal Flour were marked down from Rs. 29 to Rs. 28 and British Burma Petroleum were subdued at Rs. 1.80. British India Corporation continued to be freely offered and were marked down further to Rs. 4.40. Dunlop Rubber were steady today at Rs. 20.25 but Hindustan Lever came back to Rs. 19.62. Imperial Tobacco met with selling pressure and at one time reacted to Rs. 11.75; today however the shares met with some enquiry and recovered to Rs. 12.12. Indian Aluminium were unchanged at Rs. 12.62 and Indo-Burma Petroleum at Rs. 25.62. National Carbon eased to Rs. 23.19 as did National Tobacco to Rs. 9.12. Rallis were quoted at Rs. 28.50 and Rohtas Industries at Rs. 17.75.

In the mining group, Indian Copper fluctuated narrowly around Rs. 3 while Orissa Minerals dropped from Rs. 20.25 to Rs. 19.50.

The market in tea shares was very narrow and prices drifted towards lower levels. Among Assam shares, Baghmari were traded at Rs. 20 and Betjan had sellers at Rs. 22.37. Bishnauth were easier at Rs. 20.25 as were Brahmapootra at Rs. 3.37. Brooke Bond were on offer down to Rs. 17. Of the Dooars shares, small lots of Baradighi came to business at Rs. 19.25. Bhatkawa were transacted at Rs. 21.35 and a small lot of Birpara changed hands at Rs. 117. A small lot of Choonabhutti came to business at Rs. 265, while Jaybirpara were done at Rs. 16. Of the remaining shares, Kaliti declined to Rs. 7, Patrakola were traded at Rs. 145, Teliapara were quoted at Rs. 140 and a small lot of Rungamattee was done at Rs. 63.

* * * *

The SONE VALLEY PORTLAND CEMENT COMPANY has suffered a loss of Rs. 1.13 lakhs for the year ended last December, against the previous year's profit of Rs. 5.53 lakhs. The dividend has been halved to 3 percent, after transferring Rs. 4½ lakhs from general reserve. The carry-forward is Rs. 4,287, against Rs. 41,942 brought in. The company has applied to the Industrial Finance Corporation for a loan of Rs. 1 crore to finance its expansion and renovation plans. Output declined from 195,000 tons to 174.630 tons. Despatches fell to 173,187 tons from 195,374 tons. Martin Burn Ltd. resigned from the managing agency of the company on 1st August, 1956.

* * * *

The RANICHERRA TEA COMPANY has made a profit of Rs. 5.87 lakhs for the year ended last December, compared with Rs. 5.28 lakhs. The dividend has been increased from 15 percent to 20 percent. Buildings and machinery reserve is allocated Rs. 2 lakhs, leaving a carry-forward of Rs. 24.662 (Rs. 21.371) The crop decreased from 12,684 maunds to 11.813 maunds but the average sale price rose from 29.99 annas a lb to 37.06 annas a lb. Estimates for the current year have been made for a crop of 13,750 maunds at a cost of Rs. 14.34 lakhs

* * * *

The SARAN ENGINEERING COMPANY has made a profit of Rs. 3.29 lakhs for the year ended last March, against Rs. 1.68 lakhs in the previous year. Providing Rs. 2½ lakhs (Rs. 2 lakhs) for depreciation and Rs. 1½ lakhs (Rs. 60,000) for taxation, there is a balance of Rs. 1.92,736. Rehabilitation reserve is allocated Rs. 1.30 lakhs. Bringing in Rs. 9.264, there is a distributable balance of Rs. 72,000. A dividend of 40nP a share has been declared against 4 annas a share. The carry-forward is Rs. 12,000.

* * * *

There is a profit of Rs. 65,478 for the INVESTMENT AND FINANCE COMPANY for the year ended last February, after providing Rs. 20,000 for taxation. An amount of Rs. 10,000 has been written back from taxation provision. General reserve is allocated Rs. 10,000. The ordinary dividend has been declared at 7½ percent, including an interim of 2½ percent, leaving a carry-forward of Rs. 19,504.

* * * *

The GENERAL INVESTMENT AND TRUST COMPANY has made a profit of Rs. 32,329 for the year ended last February, after transferring Rs. 16,000 to taxation provision. Bringing in Rs. 8,638, there is a balance of Rs. 40,967. An ordinary dividend of 7½ percent has been declared, including an interim of 2½ percent, leaving Rs. 14,983 to be carried forward. The directors mention that share values suffered a setback after the supplementary Budget, with its heavy taxes on investment. Although there was a slight improvement towards the end of the period under review, market prices were substantially lower than those on 29th February, 1956.

* * * *

The profit of the GOUREPORE JUTE COMPANY has amounted to Rs. 5.53 lakhs for the year ended last March Depreciation absorbs Rs. 4.40 lakhs. Transferring Rs. 2½ lakhs from general reserve and Rs. 2.20 lakhs from general and dividend equalisation reserve, and making other adjustments, there is a balance of Rs. 2,64,248. The ordinary dividend has been declared at Rs. 2-8 a share, leaving a carry-forward of Rs. 45,248.

* * * *

There is a loss of Rs. 4.25 lakhs for the NUDDEA JUTE MILLS COMPANY for the year ended last March. Depreciation absorbs Rs. 4.72 lakhs. Making all adjustments and transferring Rs. 9½ lakhs from general reserve, there is a credit balance of Rs. 20,195 to be carried forward. The dividend has been passed over.

* * * *

There is a profit of Rs. 4.63 lakhs for ANDERSON WRIGHT LTD. for the year ended last December, against a loss of Rs. 1.66 lakhs. The taxation provision is Rs. 2.08 lakhs (Rs. 77,075). Debenture redemption reserve is allocated Rs. 50,000. Investment depreciation reserve receives Rs. 1½ lakhs An ordinary dividend of 4 percent has been declared to absorb Rs. 80,000, leaving a carry-forward of Rs. 66,951.

Bombay Market

FOREIGN EXCHANGE PROBLEM DAMPENS SENTIMENT

OPERATORS BEARISH ON TAX PROSPECTS

Wednesday Evening.

IDLE conditions prevailed in the Bombay stock market last week and fluctuations were narrow. Except for some selective institutional support, buyers were scarce in the belief that it would be very difficult for this country to obtain substantial financial assistance from abroad. Considering the need for increased resources for economic development, there appears to be very little prospect of any worthwhile relief in taxation.

Tata Steels were maintained at Rs. 166.25 on short-covering and Indian Irons were quoted at Rs. 19.16. Alcock Ashdown were available at Rs. 225 and Premier Construction were bought at Rs. 156 by knowledgeable quarters. Tata Locomotive recovered to Rs. 138.25 on investment support. In the automobile group, Premier Automobile backed away to Rs. 92 on profit-taking and Hindustan Motors were freely offered at Rs. 6.24.

Cotton mill shares evoked little interest, and operators believed there might be a substantial fall in mill profits during the current year. The accumulation of stocks, combined with the decline in cloth prices, dampened enthusiasm. Century were an exception and improved to Rs. 405 on the report that the Life Insurance Corporation had bought a large parcel of the scrip. Bombay Dyeing recovered to Rs. 51 and Kohinoor were barely steady at Rs. 262.75. Svadeshi came to hand at Rs. 172 and Simplex were taken at Rs. 159. India United Ordinary were offered at Rs. 9.44 and Apollo were quoted at Rs. 2.10.

In the miscellaneous group, sugar shares were steady and Belapur improved to Rs. 252.50 on an excellent report. Phalton attracted interest at Rs. 148 on suggestions of a bonus issue. Cement shares were quietly steady and Digvijay Cement were transacted at Rs. 129, while Associated Cement were shaded at Rs. 152 in the belief that the company's expansion scheme might not proceed as quickly as was expected some time ago. Mining shares were idle, and Shivrajpur Syndicate at Rs. 84.50 showed little variation. Steamship company shares were active on the prospect of increased earnings. Scindia Steamship were steady at Rs. 17.40 and Great Eastern Shipping improved fractionally to Rs. 21.28. National Rayon were done at Rs. 214.25 and Tata Chemical were quoted at Rs. 13 c.d.r. because of the company's expansion plan. The report that the company might be successful in obtaining a foreign loan of Rs. 60 lakhs helped sentiment.

Banking shares were steady but business was restricted. Central Bank of India were taken at Rs. 51 and Bank of India were transacted at Rs. 132.50. Insurance shares met with selective support and New India Assurance were bought at Rs. 47.25.

Scattered interest was taken in electricity supply undertakings, and Ahmedabad Electric were maintained at Rs. 97.10. Tata Power were available at Rs. 1,155.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations, Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paise.]

TRADE BALANCE OF DENMARK IMPROVES

INCREASED ECONOMIC ACTIVITY IN AUSTRIA

(FROM A CORRESPONDENT)

IN a report on economic developments in Denmark, the *Neue Zurcher Zeitung* states that the balance of payments position in recent months has not been as unfavourable as was expected. Even before the restrictive fiscal measures taken in June had had any effect, the trade deficit had decreased and the pressure on the foreign exchange reserves had diminished. In July, there was an unexpected improvement of about 150 million kroners in the foreign exchange balances of the central bank and commercial banks, but this was due, to some extent, to sales of ships. Moreover, it is believed that substantial short-term foreign credits are still being obtained by business. It has been estimated that such credits amounted to about 250 million kroners in the first quarter of 1957.

The improvement in the reserves was helped by a reduction in imports, an improvement in the terms of trade and lower freight costs. In June, both exports and imports were considerably below those in June 1956. The reduction in imports was greater than that in exports. The trade deficit fell from 184 million kroners in May 1957 to 28 million kroners in June, the smallest since March 1956.

Part of the reduction in imports is explained by the large stocks of fuel, industrial raw materials and semi-manufactured goods which had been imported during the Suez crisis. In addition, the *Neue Zurcher Zeitung* states that the import decrease was the result of a stagnation in industrial production and a fall in private investment. Export prices rose by about 14 percent between April and July, while import prices rose by only 3 percent. However, the recent fall in prices of bacon indicates that the improvement might not last long, although butter and egg prices have held up fairly well.

In the first half of 1957, the trade deficit rose to about 975 million kroners, from 616 million kroners in the first half of 1956. Imports of fuel, metal and metal products, and textiles increased sharply. Industrial exports continued to rise, increasing by about 12 percent, or 1,709 million kroners, but agricultural exports fell by about 3.5 percent, or by 1,934 million kroners. The fall in the value of agricultural exports occurred in spite of an increase in the volume of exports as the prices of butter and bacon fell sharply.

After rising somewhat in the second half of 1956 and the early part of 1957, industrial production has levelled off again, and is now about 3 percent above the output in mid-1955. The increase was due entirely to the greater output of consumer goods; the production of capital goods—adversely affected by the restrictive economic policies in Denmark—declined. At present, it appears that the production of consumer goods also is levelling off. The stagnation in industrial production, which has lasted for several years and which, the *Neue Zurcher Zeitung* states, hardly has its counterpart in western Europe, has caused a rise in unemployment. In the second quarter of 1957, unemployment was about 7 percent of the labour force, against about 5 percent in the same period of 1956. Thus, the recent improvement in the balance of payments has been attained at the expense of an increase in unemployment. From a long-term point of view, this seems less than satisfactory; moreover, in spite of the volume of unemployment, it has not been possible to stabilise domestic costs of production. Wages are linked to the cost of living index which includes all taxes, both direct and indirect. As nominal wages increase and as the tax schedule is progressive, the cost of living index rises and additional cost of living bonuses fall due. Because of an increase in the cost of living index in July, workers, pensioners and most salaried employees are due to receive higher wages, etcetera. The cost of living index has risen by about 10 percent in the last two years; it is now about 42 percent above the index at the time of the 1949 currency devaluation. In Government circles, the *Neue Zurcher Zeitung* reports, a basic revision of the link between the cost of living index and wages is being recommended. A new cost of living index not including any taxes, direct or indirect, is to be devised. The Government hopes that the trade unions will accept the new index as a basis for wage negotiations.

Policy on Employment and Production

The newspaper states that it is generally agreed in Denmark that the policy of restraining domestic demand and production should be relinquished in favour of a policy that will result in an expansion of industrial exports. Only in this way will it be possible to solve economic problems through higher production and employment. Since agricultural exports are subject to various restrictions abroad, industrial exports become increasingly important. In order to obtain an increase in such exports, domestic wage stabilisation and an increase in productive investments seem necessary.

Austrian Economic Activity Increases

Economic activity in Austria has continued to increase during the summer months. Private investment activity was greater; there was a fresh increase in industrial productivity; and a substantial balance of payments surplus was reported. In July, young people coming out of school or being released from military service helped expand the labour supply, and employment rose by 23,700, which is more than the average seasonal increase. At the end of July, employment totalled 2,238,700, or about 41,000 more than in July 1956. The number of registered unemployed (65,600) accounted for less than 3 percent of the total labour force.

Zurich Office of New Suez Administration

The Egyptian Administration of the Suez Canal has decided to open a permanent office in Zurich, Switzerland. The office will deal with such matters as business relations with navigation companies, the preparation of work on the Canal, purchasing contracts and public relations.

Plan for Nordic Common Market

A committee of economic experts from Denmark, Finland, Norway and Sweden, set up in 1954 under the auspices of the Nordic Council, has now published detailed plans for a common trade market and extensive economic co-operation. The plans contain the following recommendations: a common market in which 80 percent of all mutual trade would be free from duty and tariff restrictions; co-ordination of production in several fields of industry; extensive collaboration in education and research; a common investments bank; co-ordination of currency, financial and trade policies; the formation of a permanent Council of Ministers to supervise, and a committee of senior civil servants to put into effect, the measures of co-operation agreed upon; and a draft convention on economic co-operation. Commodities which, according to the recommendations, will be sold free of duty inside the common market comprise timber and wood products, iron and steel products, metal ore, metals and semi-manufactured metal products, electro-technical equipment, instruments, machines and transport commodities including ships, chemical and medicinal products as well as a wide range of manufactured articles and foodstuffs. Commodities not included in the plans are agricultural products, fish and fish products, oils and fats, manufactured articles of wood, yarn, textiles and clothing, pottery, glass and glass products and manufactured metal products. It is intended that almost all duty barriers will be removed immediately the Convention is put into effect. In order to smoothen the process, however, a few articles, especially electro-technical equipment and machines, will be introduced gradually into the free common market over a period of five to ten years. The ultimate aim of the plans is to establish a full customs union with no trade barriers inside the common market and with identical tariffs for other countries outside the union.

New Delhi

FOREIGN EXCHANGE REQUIREMENTS OF THE SECOND PLAN

SHORTFALLS IN MARKET BORROWING AND SMALL SAVINGS

(FROM OUR NEW DELHI CORRESPONDENT)

THE Finance Minister, Mr. T. T. Krishnamachari, has made a statement clarifying certain points concerning resources for the second five year plan. Winding up the debate in the Lok Sabha, he has stated that as matters stand at present, the Government is trying to provide internal and external finance for carrying forward projects which are already sufficiently advanced. It is also endeavouring to complete, according to schedule, programmes relating to the core of the plan, namely, the railways, major ports, steel plants, coal and ancillary power. But it is not undertaking any new commitments outside the core, except against external assistance or foreign investment on deferred payment terms. There are outstanding commitments, on Government account and for projects in the private sector, which also will have to be met. All told, the external assistance which will be required to enable India to meet these commitments and complete the core of the plan together with certain peripheral projects is of the order of Rs. 700 crores. Some power and fertiliser projects will suffer. As for internal resources, the Finance Minister expects that budgetary surpluses will provide more than 25 percent of the plan outlay. He says that it is no longer possible to rely on deficit financing of the order recommended by the Planning Commission, namely, Rs. 1,200 crores. The present ceiling for deficit financing is placed at Rs. 900 crores to Rs. 1,000 crores, of which Rs. 500 crores will be in first two years of the plan. Market borrowings, he admits, have fallen below expectations; so also have the collections from small savings.

The Finance Minister has said: "We started with a plan involving an outlay of Rs. 4,800 crores. A forecast of resources was attempted in this connection. It was clear that the resources in sight, both internal and external, were inadequate. In internal resources, there was a gap of Rs. 400 crores after allowing for deficit financing of Rs. 1,200 crores. On the side of external resources, the balance of payments gap was estimated at Rs. 1,100 crores. It was realised that these gaps would have to be filled, and this was not going to be an easy task. The original estimates about the requirements of the plan have proved to be on the low side; there has also been an increase in non-plan expenditure, such as defence; and we have now to raise more resources, both internally and externally. It is in the light of this development that we have been reorientating our economic policy over the past few months.

"The Planning Commission has been reviewing the progress of the plan over the past 18 months or so. In 1956-57, it would appear, the actual outlay on the plan was about Rs. 675 crores; there have been considerable shortfalls in the States because of their preoccupation with States' reorganisation. For 1957-58, as against the plan target of Rs. 960 crores, the actual outlay may turn out to be smaller. For the two years together, expenditure on the plan will probably be in the region of about a third of the plan outlay. The Minister of *Planning indicated in his speech that* in view of the resources position, the Planning Commission was proceeding on the assumption that the financial ceiling for the plan outlay will be Rs. 4,800 crores, in spite of the increased cost of some of the schemes included in the plan. I have been considering the problem of resources against this target. There are uncertainties in the situation. Nevertheless, I am reasonably hopeful that, with effort, we shall succeed in raising resources to match this target.

Augmenting Tax Resources

"The House is aware of the measures we have taken to augment our tax resources. The measures taken by the Centre add up to an additional tax yield of Rs. 800 crores over the five-year period. Tax yields are also expected to increase as the plan proceeds. Further marginal additions to this effort at the Centre may be possible. The recommendations of the Finance Commission will mean a transfer to the States of some Rs. 170 crores within the plan period. Some of the tax measures adopted at the Centre will benefit the States also. For the rest, I think, the ball is now in their court. They must raise more resources for their plans, enough and more to match the targets they had originally expected. Altogether, the contribution of additional taxation at the Centre and in the States will cover the gap of Rs. 400 crores that was left initially in the plan; it can, if, as I expect, the States do their part, make a significantly larger contribution. In fact, it is imperative that the States raise more resources, since they, too, are finding some of their non-development expenditures going up; they must do more than was envisaged when the plan was made. The balances from revenues secured in this manner, plus the surpluses of the railways, which, I expect, will be larger than we had originally estimated, should enable us to finance more than 25 percent of the plan outlay."

Need for Self-Help

The Prime Minister, intervening earlier in the debate, had said: "I should like to put to the House something that troubles me greatly nowadays; this amazing capacity to ask for help and the amazing incapacity to do a thing oneself." One view here is that the tendency to depend upon others is a direct outcome of the welfare State ideology. It is against man's nature to do things oneself if everything is done for him by the State. The Ministries engaged in welfare activities have been inflated beyond recognition during the past ten years, and Central aid on a matching basis or otherwise has been liberally given to the States. *Why should people dig wells, for instance, if they* can get food without asking for it? The Prime Minister has said that it is the function of the Government to help, to develop self-reliance, self-help and "from such reports as I have, I think the community development movement, not everywhere, but in many areas, has succeeded in that to a great extent." But Mr. Mahabir Tyagi has told him that he is mistaken. "It has failed." Similar is the verdict of the committee on plan projects. An important community development centre, Nilokheri, is not in a very happy condition.

Consequences of Deforestation

The Prime Minister has referred to drought conditions in eastern Uttar Pradesh and has said that "this is a typical sign of semi-desert conditions, that is, dust bowls are being created. So the question of reafforestation is of the highest importance." There is nothing new in what the Prime Minister has observed. Columns have been written on the unplanned cutting down of forests since 1939, first, to meet the requirements of the second world war, and after independence, to meet the deficit resulting from Prohibition. A storm was created by the mere suggestion that Prohibition might be modified in Orissa. Columns have also been written that the *Vana Mahotsava* has become "a bit of a ritual." These criticisms against the unplanned cutting down of forests, against the harmful effects of the ideology of the welfare State, against the waste of money and duplication of services have been ignored by the Government. Any measure to enforce discipline, to make the people self-reliant and thereby increase their productivity, is likely to prove unpopular.

Food Shortage Estimated

The Prime Minister gave a reassuring message to Parliament last week. The damage from floods, he said, was not as severe as was originally feared. But enquiries show that, as far as Orissa and Madhya Pradesh are concerned, their surpluses will be wiped out. They, however, will not need any assistance from outside. From an all-India angle, this will reduce the availability of *foodgrains by about half a million tons.* West Bengal's deficit is placed at 800,000 tons and that of Bihar at 2 million tons. This places the deficit at 3.3 million tons. Some provision may have to be made for eastern Uttar Pradesh also. As against this, India has a stock of 1 million tons; 180,000 tons of wheat is expected from Canada and 800,000 tons from the United States. The present monthly rate of issue of foodgrains from the Central reserve is 250,000 tons, which might be stepped up to 300,000 tons. Thus India, it will be seen, has enough foodgrains to feed her people till the end of April 1958, when the new crop will have been harvested. Her present bill for foodgrain imports is about Rs. 45 crores a year. Plans are being examined to import more foodgrains, mostly on a deferred payment basis, the target for extra imports being Rs. 35 crores' worth.

Cloth Stocks in Bombay Mills

During September, textile mills in Bombay State delivered roughly 200,000 bales of cloth for all purposes. The total stocks lying with them at the end of October were 390,000 bales. Of this, 220,000 bales were unsold and 170,000 bales had been sold, but had not been lifted by the trade.

Ceiling on Raw Wool Imports

The Federation of Woollen Manufacturers has sent telegrams to Mr. Manubhai Shah, Minister for Industry, protesting against the Rs. 4-crore ceiling which has been imposed on the import of raw materials for the industry during the current licensing period. The manufacturers claim that this is entirely inadequate and want that it be raised to Rs. 10 crores for six months. They feel that licences should be issued according to the consumption of imported raw materials for the year, October 1956 to September 1957. The present spindlage basis of allocation of raw materials is inequitable, it is claimed, and will result in the closing of mill shifts, and unemployment in the organised as well as cottage handloom sectors of the industry. In considering the case of the industry, the manufacturers have asked the Minister to take into account a 10 percent rise in the productive capacity, and suggested also that an equivalent allowance of raw materials should be made for yarns and fabrics previously imported and now banned.

Rise in Machinery Prices

Since 1954, the price of capital machinery and equipment has gone up. It went up by 7 percent in 1956 and by 12 percent in July 1957, it is stated.

Bigger Freight Payments

India's payments for freight charges have been rising—from Rs. 55 crores in 1954 to Rs. 67 crores in 1955 and Rs. 74 crores in 1956.

Finance Ministry Mission Abroad

The H.M. Patel mission last week left India for London. It will go to West Germany and will thereafter visit France, Italy, Switzerland, and the U.S.A. There is no prospect of an immediate floating of a loan in London and Bonn. The mission's main effort in Britain and West Germany, therefore, should be to take such steps as will assist in creating the climate for larger foreign investment in India. Reports from West Germany, it is believed, have been favourable. It may extend credit facilities to India to enable her to commence the repayment in 1961 for her current purchases provided she pays forthwith certain agency charges for each project. With this main hurdle overcome, India may be able to proceed with some of her more important projects, such as the heavy machine tool shop, forge and foundry shop, an aluminium plant and a plant to manufacture intermediates for dyestuffs and drugs.

While in the U.K., the mission, it is expected, will try to persuade the British Government to have project reports prepared for plants to manufacture heavy structurals and heavy plates and vessels with Colombo Plan assistance. The shipbuilding mission, which returned to Britain last week, also came under the Colombo Plan to prepare a project report for a second shipbuilding yard. The Coates mission, which came to India, gave rough estimates for these projects. From its report, it seems that if one unit each of the works proposed are established, on the basis of a two-shift operation the annual output would be 18,000 to 20,000 tons each from the heavy structural fabricating plant and the heavy plate and vessel fabricating works, the estimated cost of both of

which is Rs. 6.25 crores. A great deal of the data is still to be collected before negotiations for setting up these plants can start, so India wishes to have the project reports prepared with Colombo Plan assistance.

The proposed projects are outside the hard core of the plan, for which alone foreign exchange of the order of Rs. 700 crores is needed. The World Bank has already made a loan for the railway development plan. A similar loan is expected for port development. The Patel mission will negotiate for further assistance to bridge the remainder of the gap.

Full Rebate for Exporters

The Government of India has decided, as a measure to promote exports, to allow exporters full rebate of the import duty paid on raw materials used in the articles which are exported. The rebate will be allowed at a flat uniform rate and will be equal to the full duty element—as against seven-eighths of the duty allowed so far. The rates for different items will be constant for a period of at least six months. The rebate at these flat rates will be available in the case of 22 different export items including plastic goods, silk fabrics, jute manufactures, ivory products, dry radio batteries, radio receivers and glass and glassware.

Similar arrangements have been made for allowing the rebate of excise duties where only excise duties apply. If an article is produced, partly from materials on which an import duty is paid and partly from materials on which an excise duty is paid, it has been decided to combine, wherever possible, the duty elements and prescribe a composite rate of rebate for the product.

The rebate of duty, which is an accepted form of relief in most countries, has been given in India under the Sea Customs Act for the past few years. The procedure followed so far for this purpose, however, required that the individual manufacturer should register himself and his products with the Customs authorities and give an undertaking that he would not change the specification of his registered brands. The Customs staff used to assess every quarter the duty element in the registered products. Seven-eighths of this duty element was fixed as the rate of drawback. Representations were received from business men that this procedure did not afford sufficient flexibility to enable them to take into account the amount of rebate in quoting prices while negotiating export contracts. The Government has, therefore, decided to introduce flat uniform rates of rebates.

It has also been decided that before revising the rates, the proposed amendments of the rates will, subject to the particular circumstances of the case, be published two months before they come into force. It is proposed to fix flat rates for individual manufacturers' products even where it is not easy to fix flat rates on a commodity basis, because the raw material contents in similar products manufactured by different manufacturers vary. These rates will be communicated to the manufacturers concerned.

The 22 items for which uniform flat rates of rebates have been fixed are: plastic goods, nitrous oxide, cycles, art silk fabrics, glass and glassware, saccharin, chokes, jute manufactures, fastners, ivory products, radio receivers, cough syrups, hydraulic brake fluid, vat green dyes, galvanised iron wire products, potassium citrate, dry radio batteries copper dusting preparations, telecommunications and roofing felt.

Some of the commodities which are being examined for fixing uniform rebate rates are: motor vehicles, crown corks, electric fans, tooth paste, staple fibre yarn, diamonds, fruit products, plywood, gold jewellery, soaps, confectionery and biscuits, paper products, plastic cables, umbrella and umbrella ribs, badminton and tennis rackets, diesel engines, pumps, typewriter ribbons, etcetera. The Government will be prepared to consider the cases of other commodities also.

Expert Scrutiny of Company Law

No fundamental changes have been recommended in the company law by the expert committee which has submitted its report to the Government. "Well-informed opinion," says the committee, "was almost unanimous against our attempting any drastic or wholesale change. It was represented to us that it was too soon to introduce major changes or radical amendments and that during the 20 months that have elapsed since the Act was passed, those responsible for the management of companies as well as shareholders had, with considerable effort, familiarised themselves with its scheme and its different provisions and that it would be a hardship to the business community and accountants and auditors, if they were now obliged to switch over to a set of new provisions. The balance of convenience and advantage was found to be in retaining the scheme and arrangement of the present Act, which, it might be mentioned, mainly follows the order in which the different topics were dealt with in the Companies Act of 1913. We, therefore, focussed our attention on the difficulties attendant on the working of the Act in actual practice, and the interpretation of its provisions. We have tried to plug loopholes, supply omissions, clarify ambiguities, correct mistakes, remove inconsistencies, omit unnecessary or otiose provisions and add others conducive to the smooth and effective working of the Act. We have also indicated the changes recommended by us as far as possible in the form of drafts of new sections or amendments of the existing ones in the hope that they might be of some assistance to Parliamentary draftsmen.

"The Act with its 658 sections and 12 schedules, no doubt, appears, on the face of it, to be far too elaborate and detailed. The increase in the number of sections in the Indian Companies Act of 1956, compared with the 462 sections of the English Act of 1948, is due mainly to the following reasons: (i) the inclusion of several provisions which do not find a parallel in the U.K. Act, but which are peculiarly appropriate to Indian conditions (namely, Sections 324 to 377 relating to managing agents); (ii) the inclusion of matters which formed part of the model regulations for company managemnt contained in Table A of the First Schedule of the U.K. Act in the body of the new Act as substantive provisions; (iii) splitting of matter comprised in one section of the previous Act and of the U.K. Act into a number of sections; and (iv) repetition of certain common statutory provisions with reference to each of the different classes of officers of a company or different modes of winding up of the company."

Indian and U.K. Acts

Though the number of sections in the Indian Act exceeds those of its U.K. counterpart, it will be found that the volume of printed matter of both the Acts is approximately the same, the U.K. Act having relegated to the schedules several provisions found in the body of the Indian Act. It was presumably the intention of the legal draftsman who drafted the Bill, as well as the then Finance Minister, who piloted it in Parliament, that the enactment should be a self-contained, complete and exhaustive exposition of the law governing joint-stock companies in India. "Whatever might be our view if we had to write on a clean slate, we have, in deference to the almost unanimous views of those whom this legislation primarily concerns, not attempted to rewrite the Act or upset its arrangement of the topics dealt with by it. Moreover, the time allowed to the committee was too short for such an overhaul.

"Since the passing of the Act, public interest in company law and its proper enforcement has increased and the volume and variety of representations that we have received show that small investors as well as managerial interests are becoming more and more company law minded. This is all to the advantage of healthy joint-stock enterprise. We have taken into consideration the representations, written and oral, made to us by the representatives of trade and industry, managements of companies, representatives of shareholders and by accountants and lawyers. We have paid attention to the difficulties experienced by the Company Law Administration in the working of the Act. The committee was asked to furnish solutions for several problems which confronted companies and shareholders individually, apparently under the impression that the committee was an advisory body constituted for giving advice to the public.

No Fundamental Changes Recommended

"Wherever questions affecting companies and shareholders at large or a considerable section of them or relating to the interpretation of obscure or ambiguous provisions of the Act were raised, we have attempted to deal with the difficulties pointed out and given our reasons for recommending a change in the law or a clarification of the meaning and effect of the Sections of the Act. We have refrained from assuming the rôle of a legal adviser or a judicial tribunal and recording opinions on concrete cases brought to our notice. It is obvious that a great deal has to be left to judicial interpretation in due course. We have also refrained from recommending changes on matters of major policy The decisions embodied in the Act on such matters were taken after great deliberation and very recently and it would be premature to alter such decisions at this stage. We have received numerous representations, namely, on managerial remuneration, proportionate representation, appointment of auditors by the Government, investment of companies' funds, appointment of Government directors on companies' boards, etcetera. We have not recommended any radical changes in such matters, although divergent views have been expressed and changes advocated in the representations received by us."

Metric System of Weights and Measures

The introduction of the metric system of weights and measures has been indefinitely postponed, it is reported.

The New Price Policy

The Government is busy evolving a price policy aimed at holding the price-line. The dangers of an upward trend in prices are now evident. It may soon lead to a demand for higher wages all round, which, in turn, will push up prices. One section here suggests linking any increase in wages to production in order to check inflation. An official announcement is expected shortly.

FORUM OF FREE ENTERPRISE

An Appeal

The economic difficulties confronting the country have been accentuated by the recent failure of food crops in several States. This has created a critical state of affairs, which is reflected in inflationary pressures and a serious rise in the basic cost of living. This has brought with it hardship and suffering to many of our people.

The situation is such that the Government and the country need the support of all who can help, and particularly do we see a challenge to Free Enterprise to rally to the aid of the Nation.

This can be done in several ways. By a vigorous and resourceful determination to overcome the many difficulties which have arisen to retard our plans for industrialisation; by maintenance of the highest standards of integrity and fair dealing in the conduct of our business; by scrupulously eschewing any tendency to exploit a shortage of consumer goods; and by such realistic adjustment of Government's economic and financial policies as would enable the Nation to meet the situation effectively.

The Code of Conduct enunciated by the Forum is a model for Free Enterprise to follow. It is for each one of us, whether industrialists, businessmen or traders, to measure up to this Code in the steadfast and sustained determination to see the country through the troublous times which now beset her.

GOVERNMENT DETERMINED NOT TO FINANCE WAGE RISES

CIVIL SERVICE UNIONS SHOW RESENTMENT

(FROM OUR LONDON CORRESPONDENT)

FOR the time being there appears to be a tacit agreement that the Government's alleged "war on the unions" in the matter of wage claims should be played down in the hope that there may be a breathing space during which both sides may have second thoughts and thereby avoid any direct clash. It is, however, an uneasy truce. It is questionable whether the unions will be able to hold off for long, for the Government's determination "not to finance inflationary wage rises" has been reaffirmed unequivocally both by the Health Minister's refusal to withdraw his veto on the 3 percent increase awarded to certain Health Service employees by the Whitley Council, but in a blunt warning to all Government employees from the Treasury to the effect that while wage and salary awards will be honoured, the money will be found by a "reduction of activities" in the departments concerned, involving in some cases "a run-down in establishments." The Chancellor of the Exchequer gave a warning of this earlier, but that has not prevented the Civil Service unions showing some resentment. Industrial labour will react even more forcibly, for it is already satisfied that the Government is following a policy which it will like others to follow, and on Friday last the engineering employers turned down the claim from their labour force for a 40-hour week, etcetera on the ground that it would add something like £1,000 million a year to the wage bill since to maintain present production levels involves the working of four hours' overtime a week which would rise to eight hours if the claim were granted. It is also pointed out that this disguised wage claim is in breach of the agreement for a 12-month standstill in the industry. The shipbuilding employers, faced with a similar claim, are due to reply on 3rd December, and will probably say the same, and both replies will be considered by the Council of the Confederation of Engineering and Shipbuilding Unions later in the month with a free hand to deal with the situation as it develops.

Economic Repercussions

It is unfortunate that these developments should have such contrary repercussions on the economic situation. The Government's determined fight against inflationary trends is an encouraging feature after its too-little-and-too-late measures over the last few years, and ordinarily should be welcomed as a move in the right direction. If, however, it is to be the prelude to prolonged labour troubles over a wide field, with a consequent fall in production, there might well be a revival of the recent pressure on sterling by Continental operators, which will be most unfortunate just as they are beginning to cover their short positions and Britain's gold and dollar reserves are showing signs of being replenished. The testing time lies just ahead, before the turn of the year, and there are small indications here and there that the strain is being felt in many quarters—as witness the Prime Minister's unexpectedly unparliamentary rebuke to Mr. Gaitskell in the House of Commons the other day when the latter baited him with a request for an assurance that an impending review of wage scales in the National Health Service would not be vetoed. Under the circumstances, all economic indicators in the next month or two will be studied with particular attention.

In this context, an increase of one point in the index of retail prices—the cost of living—is not so good. At 15th October, it stood at 107.1, compared with 106.1 at 17th September, due mainly to increase in rents, in the prices of newspapers and in postal and telephone charges, with the increase in rents accounting for less than one-third of the rise. At the moment, the effects of the Rent Act are proving less injurious than the Opposition's campaign against it would have led one to expect, but these will continue to make themselves apparent as time goes on, unless offset by reductions elsewhere

Wholesale Prices Fall

On the other hand, it is certainly good to learn that some prices are falling. Wholesale prices have been falling for six months, and they showed a further drop in October. The trouble is that falling prices of raw materials and of wholesale goods are not being translated into lower prices in the shops. This fact is certainly brought out in the latest figures given in the *Board of Trade Journal*. The index number for basic materials (except fuel) used by British industry other than the food industry was 146.8 in October, which is a decline of 2.4 points since September and the sixth successive monthly fall. The index in October was thus 7½ percent below that peak and is probably even lower now. Nevertheless, the only wholesale prices that as yet show any significant fall are those of the food manufacturing industry, and textiles other than clothing. Prices of clothing and footwear are still rising. Among the commodities showing significant price falls last month were raw wool, raw cotton, hides and skins, and non-ferrous metals other than aluminium and nickel. Jute was one of the few items to move against the general trend

Under the circumstances, the terms of trade—the ratio of import to export prices—might well have been expected to continue moving in Britain's favour as it has done since May. It comes as a sobering thought, therefore, to learn that in October there was no change on September and that the index stood at 93. The lower commodity prices had their impact on the import figure all right and it fell by one point to 103 (1954=100). This was offset by an adverse movement on the export side, where the index for engineering products, the main exporting group, fell by one point to 113, and this was sufficient to outweigh rises in the two other main groups, metal manufactures and textiles, reducing the export index to 111 against 112 in September, and also in August, though prices have actually been falling over both months but not enough until now to move the index. The engineering products index will be followed keenly in future, for the fall here, since it cannot be ascribed to lower production costs, must be attributed either to the decline in the purchasing power of raw material producers or the cutting of profit margins to meet increasing competition.

Better Balance of Payments

The President of the Board of Trade, Sir David Eccles, is making the most of his belief in a favourable balance of trade in the region of £200 million in his recent public utterances. Addressing the Engineering Industries Association on the European free trade area the other day he said: "The rate of expansion in world trade may be easing off a little, but overseas demand continues strong. Provided our costs are held, we have grounds for expecting a continuing high level in our exports and we shall be getting the benefit of cheaper imports through the improvement in the terms of trade. Moreover, less inflationary conditions at home will both help exports and check imports." The full overseas trade figures for October hardly conform with this view, for they do not provide a simple answer to the jump in the trade gap. The sharp rise of £45 million in the import bill covers £20 million more than the previous month for food and tobacco, £13 million more on basic materials, in soite of their falling prices, and £12 million extra on manufactured goods. On the export side, the disappointing October total was affected by very small deliveries of ships, and a fall in shipments to France and India, occasioned no doubt by the internal difficulties of those two countries. Exports of road vehicles and steel were good, but shipments of machinery failed to maintain the strong underlying growth which developed in the second and third quarters, while those of chemicals and textiles were also subdued.

New Plan for Lancashire

Mr. Harold Wilson, M.P., the Labour Party's "Shadow" Chancellor of the Exchequer, has campaigned consistently in the interests of the Lancashire cotton textile industry, and in consequence, has made a detailed survey of its faults as well as its needs. For the benefit of the United Textile Factory Workers Association, whose Legislative Council has approved it for adoption as Association policy, and perhaps for the next Labour Government—though that possibility is definitely excluded at the moment—he has now produced *Plan for Cotton* in the form of a 48-page booklet, which not only surveys the present position in the industry but makes several suggestions as to how many of its problems might be met. The author is nothing if not ambitious in seeking to solve all these problems at one fell swoop, and although he denies that nationalisation tinges most of his thinking, the fact remains that without an unduly large participation by the Government it will be unworkable in its entirety. It will certainly give rise to controversy, but for all that is worthy of study by the interests mainly concerned. Its main weakness, like most of the other "plans" emanating from the Labour Party at the moment, is that it fails to explain just where the finance needed to give it effect is to come from.

That Mr. Wilson should seek to dissociate his Party from the plan is understandable, for any Government which undertook to put it into effect would be taking on a full-time job. It would, for instance, have to interfere in virtually all the industry's activities, such as ensuring adequate supplies of raw materials, scrutinising price-fixing schemes, regulating imports of Indian textiles, providing taxation incentives to stimulate re-equipment, leasing buildings and machinery to selected managements, and taking a controlling interest in key firms. Just in case that should be mistaken for nationalisation, the Government has been given the completely divorced rôle of ensuring the industry's stability by placing orders for textiles in times of erratic commercial demand, and the other things could be done by a reorganisation commission, comprising representatives from both sides of the industry with a full-time independent chairman and independent members, but empowered by the Government to order the industry to do this, that, or the other—or else!

Brevities

After the October settlement, the U.K. position with the European Payments Union is that it has a debt of £137,117,500, against £140,446,786 a month earlier.

British steel production in October showed a slight fall, averaging 437,800 tons a week, compared with 438,200 tons in September. Pig iron production, however, was higher at the rate of 285,500 tons a week.

Mr. John Arbuthnot, chairman of Estates and Agency Company, tells shareholders that the board has decided to put no more risk capital in India and Ceylon until the climate of opinion for investment improves. A start has been made on the new estate in the southern Cameroons and application has been made for a 99-year lease on 2,000 acres adjoining the 3,930 acres property.

PROSPECTS OF U.S. AID FOR SECOND PLAN

IMPROVEMENT IN DOMESTIC CAPITAL MARKET NEEDED

(FROM OUR BOMBAY CORRESPONDENT)

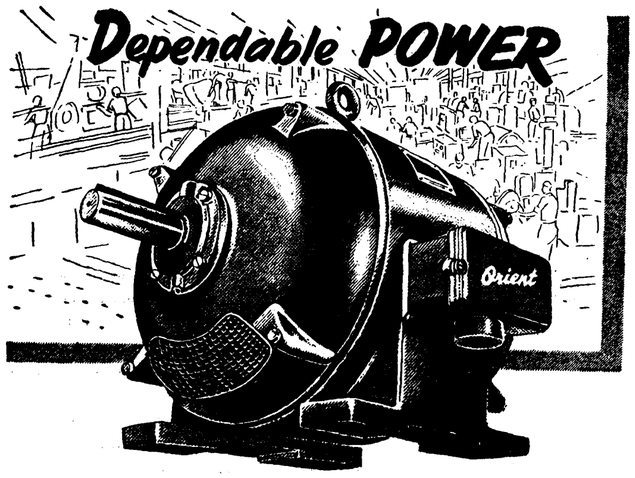
THE industrialist, Mr. G. D. Birla, has said here that he foresees the possibility of U.S. loans totalling $250 million being provided for the second five year plan. He has not indicated with any certainty the amount of assistance that might be available from the U.S. private sector. Mr. Birla, who led the industrial delegation which recently visited the United States, Britain, France and West Germany, has made these observations at a Press conference recently held at the Indian Merchants Chamber. He insists that if a proper climate is created at home, it will be possible to "see the core of the plan through." The members of the delegation have discussed specific projects with their counterparts in the United States and other countries, and these discussions have covered such industries as non-ferrous metals, rayon, pulp, chemicals, pharmaceuticals and plastics. The fall in sterling reserves and the acute foreign exchange position have shown that "if substantial assistance is not forthcoming from abroad, not only will the plan have to be substantially curtailed, but even the existing plants may find it difficult to run fully due to the scarcity of imported raw materials." Mr. Birla has said that the delegation concentrated on creating such a climate abroad as would attract investment and know-how.

The difficulties in the balance of payments position are generally known. "But its implication is perhaps not fully realised. There are two aspects to the question: (1) Lack of adequate resources to meet liabilities already undertaken by the Reserve Bank to supply foreign currency for the purchases of equipment made so far by the public and private sectors; and (2) lack of resources for the future need of the country to fulfil the plan." The remedy for the first is to raise a loan at Government level either from foreign Governments or in the private markets, and to defer payments for purchases already made. The way to overcome the second hurdle is to promote exports, and, at the same time, to attract foreign investments and commercial credits. Mr. Birla says that his delegation does not wish to comment on the first part of the problem as this is a matter which relates to the mission of the Finance Minister in the United States. He adds that the Minister has created a very favourable impression in the United States. "It will be rash to expect any miraculous results in the near future. We believe, however, that his visit has paved the way for future negotiations on the proposal. We also believe that a reasonable amount of assistance may be forthcoming in the near future from the United States and also credits from West Germany."

Misapprehensions and Doubts

The delegation has found a "lot of misapprehensions and doubts about our economic policy" abroad. India's recent fiscal and taxation measures have been discussed at length. Foreign financiers still fear nationalisation, while doubts are expressed about the rôle of the private sector. The delegation has succeeded in dispelling many doubts and misgivings. "The investor, however, is generally shy everywhere and while we have been able to satisfy him to a very large extent, he would like to wait and see how things shape in this country. We believe we have created an atmosphere which, if properly exploited, will lead to larger foreign investments and also obtaining larger commercial credits." He refers to the "contradictory currents in our present economic problems and difficulties which need the attention of all those interested in our progress." While it is not difficult for the private sector to attract foreign investments or commercial credits from abroad, it is necessary to have a project on hand to "make full use of them." To make this possible, "we must be in a position to raise the initial capital in the country itself." Stating that there is not "the slighest possibility of raising any sizeable capital in India," Mr. Birla says that if the country is not able to raise internal capital, "we can have no project and consequently no basis for seeking credits abroad."

Foreign Exchange Shortage



The Government's problem is the shortage of foreign exchange. The private sector is blocked by the lack of internal resources, and the public sector is held up for want of foreign exchange. "Until we can solve the problem of the scarcity of internal resources, even with the foreign capital available, which must remain unutilised, the traffic jam of our progress must continue." Mr. Birla points out that there is no need to take a pessimistic view because "there are a number of things at this end, the solution of which is entirely in our hands." He emphasises the need for toning up the capital market through monetary and fiscal measures. Explaining the terms of deferred credits offered by foreign countries, he has said that the payments generally cover a period of five years after the shipment of goods. As for those offered by the United States, the period ranges from three to 18 years.

Rise in Cotton

Bullish reports and a spate of rumours caused a sudden but sharp improvement in the cotton market. In sympathy with futures trends and following improved mill demand, prices of most varieties in the Sewri spot market hardened by about 10 points. These had an effect on the futures market and pushed the rate of I.C.C. Moglai Jarilla to a new high of Rs. 707.75 a candy. Futures scored sizeable gains in the rush of buying although by the week-end the market was hesitant. Jarilla, which opened at Rs. 691.50, finally closed at Rs. 707 to show an improvement of Rs. 15. There was a flare-up in spot values. Mill demand, sluggish up to last week, broadened to a great extent for all popular varieties. Investment buying was also noticed. In the export section, a steady improvement in prices for Bengal growths was observed. Bengal Deshi quoted Rs. 640 for December delivery, while Ganganager Bengal was booked at Rs. 680. The impression was that unless the export duty on Bengal Deshi was at least halved, no further progress would be possible in completing the export quota of 50,000 bales released early this month. In the foreign section, prices of Sudanese cotton dropped sharply on the news that the Sudanese Government had decided to reduce the export duty on cotton by 3.75d a lb. Subject to the availability of import licences, good business was reported in Sudan cotton. Prices for Egyptian growths were severely affected by the Sudanese Government's move.

Piecegoods Quiet

Quiet conditions prevailed in the piecegoods market. Demand from upcountry centres was at a low level. Prices remained unchanged. The lull was attributed to a revival of hopes that the Government might provide a measure of relief in the excise duty when steps are taken to merge the sales tax with the excise. Cloth stocks with mills at the end of October totalled 390,000 bales, of which 220,000 bales were unsold goods and 170,000 bales represented goods sold but not lifted by the trade. On the export front, shippers reported better enquiries emanating from the Sudan, East Africa and Ethiopia. Fair business was reported to have been done with the Sudan. The United Kingdom booked moderate quantities of medium greys. Reports that the Indonesian Government is likely to issue import licences in the near future circulated throughout last week.

BEHIND THE WHEELS OF INDUSTRY

Orient Industrial Motors are precision built from the highest quality materials to give high performance and long service.

Liberally designed, these motors have a high overload capacity and are capable of withstanding severe punishment.

Best insulating materials are used both in the slots and on the windings to give long life.

Dynamically balanced pressure die cast rotors are truly indestructible.

Uniflow forced draft ventilation system keeps belt dust away from the rotor.

These and several other features make ORIENT motors truly DEPENDABLE.

Jute

CONTRADICTIONS IN THE PAKISTANI JUTE POLICY

CONTINENTAL INDUSTRIES SEARCH FOR NEW FIBRES

SPEAKING at the opening of the International Jute Conference in Dacca, the Chief Minister of East Pakistan has said that the main aim of Pakistan's jute policy is to bring about stability in fibre prices, and to safeguard the interests of growers and consumers alike. The latter is an almost impossible task, as the one is directly contrary to the other. The inauguration of the Jute Marketing Corporation is claimed as the first step along these lines, but unfortunately this body does not hold the confidence of either buyers or sellers. Recent malpractices and interference, which have caused dissatisfaction and consequent changes in personnel, have done little to endear the Corporation to sellers, and since it spread its wings and entered the export market, overseas buyers have had cause for complaint in that the Corporation has defaulted against the first contracts entered into. The difficulties of the trade have been emphasised by the president of the Pakistan Jute Association in relation to the export of jute. Shippers have been particularly hard hit, as under the existing regulations they are required to affix their signatures to documents no less than 86 times before any single consignment of jute can leave the shores of Pakistan.

That overseas consumers are not satisfied with the present state of affairs, especially the high price of jute in Pakistan, is indicated by reports that a European institute for the study of industrial fibres is being set up in Geneva by four national federations of the Continental jute industry. Along with the increasing demand for substitutes, this could indicate the serious threat to Pakistan's jute export market, as the aims of the institute are said to be research on and the study of all materials which can be utilised for the manufacture of fibres in the jute category and which can be easily used as raw material in existing jute machinery. The output of such fibres is increasing and they can be found in large quantities in Africa and South America. They closely resemble jute and have been successfully used in those countries. It appears that the European jute industry is anxious to reduce its dependence on raw jute as much as possible.

U.S. Burlap Consumption

Although burlap consumption in the United States during October 1957 has shown an increase of 3 million yards to 75 million yards, compared with September, the figure is 11 million yards less than that for October last year. This has tended to counteract any bullish tendency in the market which the former might have initiated. Total consumption so far this year amounts to 697 million yards, giving a monthly average of 69.7 million yards. In 1956, during the same period, the United States consumed 28 million yards more than it did this year, the monthly average being 72.5 million yards. Stocks in America have declined, and Calcutta is encouraged by the thought that with stocks so low there is a fair possibility of enquiries in the near future. As a result, the hessian market has recorded only small losses and the undertone is steady. In contrast, sacking is weak due to a lack of enquiry, and also because interest is centred on the forward section. The squeeze in ready sacking has ended, and this has brought heavy selling pressure in the fatka market from weak holders.

The raw jute market has shown very little activity and prices in general are lower. Most sections of the trade have expressed surprise at the rapid fall in rates recently, when business was transacted at as low as Rs. 27 for Northern Bottoms. Prices in the agencies, however, remain high and the chief reason for this, and for the smaliness of imports, is that growers are more interested in harvesting paddy than in getting their jute to the market. They are able to do this because their holding power seems to have increased, since they have been getting a better price for their jute from mill agency buyers.

THE JUTE MARKETS

Manufactured Goods: The gunny market was dull during the past week. Enquiries were few and far between, so prices fluctuated according to local interest. Overseas buyers were completely out of the market, except for some interest in Australian-type goods, which was more likely shipper covering than fresh business. Near-delivery heavy goods were readily available as a result of the mills' switchover from hessian to sacking, and the ready position was weak. This was emphasised towards the close by mill selling pressure in the forward position. It brought about heavy liquidation in the fatka market, and the anxiety of weak holders to sell depressed rates to such an extent that on Tuesday ready B Twills recorded a loss of Rs. 1.25. During the week, prices fluctuated daily but towards the close there was little change from the week's opening rates. Ready B Twills were based on Rs. 112.40, which was a fall of 70nP, and 40in. 10oz. hessians lost 35nP to Rs. 40.90, which showed a discount of 30nP on the forward position. Ready B Twills continued to command a premium of about Rs. 2.50 on other forward delivery dates. On Tuesday, there were some small shipper enquiries and near quotations were influenced by them, sacking quotations advancing by 25nP or 50nP. Hessians, however, were neglected and small losses were recorded. On Wednesday the position was reversed, and while sacking lost the previous day's gains, hessians recorded small fractional improvements on reports of covering business. Covering over the week-end in both sections of the market resulted in strong advances on Monday morning. B Twills jumped to Rs. 113.10 and 40in. 10oz. to Rs. 41.25. The undertone was steady, but by the evening the position was again reversed, and mill interest in forward delivery resulted in heavy fatka sales which cancelled all previous gains. A loss of Rs. 1.25 in ready B Twills and 75nP in forward shipment brought ready prices back to Rs. 111.85 and April-June shipment to Rs. 109.75. Hessians also fell back to Rs. 40.80 and Rs. 41.20 for the near and forward positions, respectively.

At the close, the market was quiet, and opening quotations on Wednesday morning were as follows:

	Nov. Rs.	Dec. Rs.	Jan.-Mar. Rs.	Apl.-June Rs.
40in. 8oz.	33.75	33.40	33.20	33
40in. 10oz.	40.70	41	41.10	41.05
B Twills	112.25	110.75	110.10	109.75
Heavy Cees (Plain)	113.50	112.25	110.10	109.75
A Twills	135	135.50	135	134
Liverpools	129.50	127.50	126	125
Cornsacks	110.75	111	111	110.75

Raw Jute: Mill interest in raw jute was small during the past week, although daily business was reported, mainly from Indian groups. Sellers were not keen to transact because of the wide disparity between upcountry agency prices and those quoted to the mills in Calcutta. Raw jute derived very little support from the goods market and the general undertone in Calcutta was quiet. Imports upcountry were very small, but heavy demand against November due date contracts gave the impression that arrivals were smaller than they really were. At the present time, paddy harvesting is in progress and that invariably brings about a reduction in supplies coming forward, so the present drop in imports can be considered temporary. In the Daissee districts, imports were very small, but mesta arrivals were improving and sellers were keen for business in this fibre. Quotations during the week fluctuated between Rs. 28 and Rs. 27.25 a maund for Assam Bottoms, with Northern jute at a discount of 50nP to 75nP.

Business was done in Assam jute at Rs. 27.25 to Rs. 28, and in Northern agencies at Rs. 27 to Rs. 27.50. Northern Tossa was done on the basis of Rs. 29.50 to Rs. 30 a maund. Murshidabad Tossa fetched Rs. 29, while jungli Tossa passed at Rs. 28.50. Daissee was still in good demand, and

This winter
Fly WEST on the
FAIR WEATHER ROUTE

Pan American's southern route takes you home the sunniest, most direct, most scenic way. You fly on the mighty Clippers* to the great capitals of southern Europe — Istanbul, Rome, Madrid. Then wing your way on to Paris, London, Glasgow, or continue onwards to New York and Bermuda.

All the way you're aboard the world's most experienced airline, the airline that pioneered flight service around the world.

So if you're planning a trip home, remember, the FAIR WEATHER Route is *the* way to go. For free information or reservations, call your Travel Agent or Pan American in :

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Bags (Tons)	Cloth (Tons)	Total (Tons)
Hessian			
1st to 20th November, 1957	1,484.1	23,257.7	24,741.8
1st to 20th October, 1957	1,092.5	13,791.5	14,884.0
1st to 20th September, 1957	2,266.8	19,141.6	21,408.4
Sacking			
1st to 20th November, 1957	27,764.9	513.6	28,278.5
1st to 20th October, 1957	20,697.2	1,135.5	21,832.7
1st to 20th September, 1957	23,320.7	404.8	23,725.5

THE PAKISTANI JUTE MARKETS

SMALL INCREASE IN FIBRE ARRIVALS

(FROM A NARAYANGANJ CORRESPONDENT)

ARRIVALS of raw jute show a slight improvement in quantity, but the condition remains fair and quality is unchanged. The market is however weak, particularly in pucca bales, and there has been a slight reduction in loose fibre prices. It is reported that some of the foreign delegates have taken advantage of their visit to the International Jute Conference to purchase ready goods as far as possible. In a rather weak market, their support has not helped improve prices. The overseas market remains very weak and buyers are still holding off. The local market has at last also weakened. Business is reported in Export Firsts at £97 and Export Lightnings at £87. The Jute Marketing Corporation, in an attempt to steady the weak cuttings market, bought together with the co-operative society 30,000 bales and was reported to be buying 100,000 bales. The result however did not fulfil the earlier expectations, and although they paid prices about Rs. 3 higher, the market found willing sellers. There has been no change in the buying prices of other balers.

THE FOREIGN JUTE MARKETS

CAUTIOUS BUYING OF YARNS AND CLOTH

(FROM OUR DUNDEE CORRESPONDENT)

CONSUMERS of jute yarns and cloth continue their hand-to-mouth manner of buying and there is a great reluctance to make forward purchases, as there is little stability about the raw material situation just now. The general feeling is that there will be a reduction in the current high terms which raw jute shippers are quoting. The forecast of the Pakistani jute crop has at last been received, and a yield of 5.7 million bales is expected, with the possibility of it reaching 6.2 million bales.

Dundee is not the only jute goods producing centre which is being compelled to restrict production. Most other European countries are similarly affected, and it is a fact that all is not well with the trade. The high prices for raw jute are blamed to a certain extent, and it is agreed on all sides that a reduction is necessary. It is to be hoped that the world jute conference in Pakistan will lead to some improvement in the situation when representatives from all over the world state their grievances or otherwise. Good, keen business men have been sent from Dundee and London, and no doubt the Continental countries are very ably represented also. It is pleasing to hear that the Indian jute mills are represented at the conference after having at first refused to attend it.

Jute is now being rather more freely offered at from £115 to £122 for Mill Firsts and sold at £118 to £120 10s, with Mill Lightnings at £98 10s, Mill Hearts at £89 10s, grade Hearts at £79, good Daissee-2/3 at £98, grade at £91, grade Tossa-2/3 at £106 and grade Tossa-4 at £99, all c.i.f., U.K., November-December. Calcutta goods are easier at 62s 3d for 40in. 10oz. and 48s for 7½oz., November and December, and 62s 6d and 47s 9d January-March, with B Twills at 169s 3d, 168s and 167s 9d for the respective positions of shipment, all f.o.b., Calcutta. Business in jute yarns and cloth is quiet, mostly small lots, but prices are very steady.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in October was 3 million yards more than during September but was 11 million yards less than during October last year. The failure of consumption to show a greater seasonal increase seems to be largely due to an extension of returnable bag programmes particularly noticeable a few months ago. This has filled up the "pipelines", with replacement bag orders still on the low side. Bulk handling of feeds continues to expand and late crops also are factors in consumption this year not having reached the earlier anticipated levels. Estimated consumption for the first ten months is about 4 percent below the same period of last year. U.S. burlap stocks which have been declining since May continued to fall. At 219 million yards, 121 million yards were spot and 98 million yards were afloat stocks. Total stocks are 43 million yards lower than last year. Appearing below are two tables which include the October figures—(1) based on member exports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

Engineering and Transport

GOVERNMENT NOT TO ALLOW LARGER BILLET IMPORTS

ASSESSMENT OF CAPACITY OF RE-ROLLING MILLS

THE Government of India's decisions on various recommendations of the committee on electric furnaces, steel foundries and steel re-rolling mills have been published in a *Gazette of India Extraordinary*. The committee suggested the regulation of billet supplies, the planning of their allocation and production by the Iron and Steel Controller, encouragement to foundries to expand and to utilise all their liquid metals for castings purposes only and not to create any additional casting capacity before 1960-61. These have been generally accepted by the Government, but it considers it necessary that a further detailed technical assessment should be carried out before accepting capacity figures of individual re-rolling mills for the allocation of raw materials. The recommendation that import of billets should be increased, though worth considering, could not be accepted considering the foreign exchange position. The Government thinks that there is no case for the creation of new units except in areas which have little or no capacity at present and where considerations of convenience of transport and economic production justify it. In determining the location and size of such units, it is necessary to consider the possible disturbance to the pattern of distribution in a scarce market.

Allotment of Billets

As soon as the supply position of indigenous billets permits, it is intended to allocate them to re-rolling mills of 8 in. and above. In the meantime, allotments will continue to be made on the existing basis, subject to such modifications as are necessitated by their availability from time to time. The committee recommended that mains frequency induction furnaces with a monthly capacity of 150 to 300 tons should be set up to convert scrap into billets for rolling mills—at least one in each State and more than one if an assessment of scrap availability warrants it. The Government considers it necessary to examine the availability and suitability of scrap before accepting the recommendation. It considers that the economics of production should also be examined before considering applications for the installation of furnaces. The economic size of each unit will be determined after taking into account the particular circumstances of the case. It was recommended that permits might be given for the export of scrap until the furnaces were erected, subject to review every six months and subject to exporters making a certain percentage available to electric furnaces. The Government proposes to consider this recommendation on its merits at the appropriate time.

Raw Materials

The steel re-rolling industry, electric furnaces and steel foundries depend on raw materials from outside sources—indigenous or foreign. Problems, therefore, naturally arise concerning their availability, procurement and price. Production costs and transport are other important problems. The Government has taken cognisance of these.

The six-member committee was set up on 24th July, 1956, with Mr. B. B. Saxena, Joint Secretary, Ministry of Commerce and Industry, as chairman. The committee was asked to (a) study the raw material requirements of the existing electric furnaces, foundries and re-rolling mills and assess the kind of expansion that is possible having regard to the availability of raw materials in the future; (b) suggest ways and means of improving the efficiency of these units and recommend steps that should be taken to make them economic and independent of any form of subsidy concerning the prices at which they obtain their raw materials; (c) assess the additional capacity that it may be desirable to set up in the light of the developments which are taking place in other sectors of the economy and the considerations set out in (a) and (b) above; (d) indicate suitable sites for the new units that may be set up having regard to the importance of promoting regional development and other relevant considerations such as transport facilities and raw material supplies; and (e) formulate principles which should govern the examination of the applications for setting up re-rolling mills.

Existing Capacity

The committee's principal recommendations are:

(1) The existing capacity of the re-rolling mills of various categories, including secondary producers, is about 700,000 tons a year on a one-shift basis. As certain returns need re-checking, the figure should be regarded as provisional. All the existing capacity is not covered by valid sanctions. In some cases, the plant and machinery which was mainly for the purpose of replacement has been put up along with that already in position. Strictly speaking, the capacity created without proper sanction should not be recognised. It will not, however, be in the national interest to ignore the existence of such plant and machinery.

(2) In addition, some plant and machinery has been licensed by the Iron and Steel Controller to be obtained from abroad or from indigenous sources, mainly for replacement. There is reason to believe that most of the plant and machinery now to be arranged will have the effect of increasing the capacity of the re-rolling units. Such additional capacity has been assessed at 104,760 tons a year and may be taken as the projected additional capacity.

Re-rollable Scrap

(3) While the major part of the existing capacity is based on the use of billets, quite a few units, particularly the smaller units, depend on re-rollable scrap for their operation. Re-rollable scrap is not the proper material for the manufacture of quality product, but its use will be continued in mills below 8 in. sizes. These can operate economically on re-rollable scrap. The capacity of such units which can suitably run on re-rollable scrap is 26,200 tons a year. The remaining capacity should be taken as based on billets. It comes to 1,325,746 tons on double shift. No difficulty is anticipated in the mills below 8 in. in size getting their future requirements of re-rollable scrap as hitherto. As for the units based on billets, a number of such units have had to restrict their operations to single shift or even less. It is generally an accepted practice for such units to work double-shift to ensure economic production. Allowing for wastage at 10 percent, their total requirements of billets on double-shift work out to 1,458,024 tons a year. The indigenous suppliers of billets and imports under liberal policy have not proved sufficient to meet the requirements of the re-rolling industry according to the general practice in the line. The total anticipated availability of billets and electric furnace ingots for re-rolling purposes by 1960-61 is 890,000 tons a year. This quantity in terms of billets comes to 876,250 tons.

(4) Nothing can be said about the quantity of billets that will be available in the near future. It is clear that it will not be possible to cater to the entire industry as it exists today on a two-shift basis, which represents the general practice to achieve economic production. It will, therefore, be necessary to regulate billet supplies in the manner which more or less maintains the present pattern of distribution.

(5) In spite of the Government's liberal import policy for billets it was found necessary to obtain from abroad substantial supplies of certain sections for which capacity existed in the country. This points to the conclusion that it is difficult to get billets from foreign countries. The Government should, therefore, make a special effort to

ACC HONOURS THE CODE

3

"Employers owe it to labour to recognise that welfare is not conceived in terms of philanthropy, but as a social obligation. Men and women engaged in production shall do so with dignity, honour and a sense of security. Fair wages should be paid for work done. Working conditions shall be as pleasant as possible."

Code of conduct—FORUM OF FREE ENTERPRISE

As an employer of labour the ACC can well point with satisfaction to the salary/wages and other emoluments paid to its employees and to the many welfare activities voluntarily undertaken over the years.

To take salary/wages first, compare these figures of ten years:

	1945-46	1955-56
No. of employees	17,500	29,000
Salary/wages & amenities	Rs. 127.3 lakhs	Rs. 421.5 lakhs

Thus while the increase in the number of employees was 66%, the increase in the salary/wages, etc. for the same period was over 230%!

As for welfare activities, employees of the ACC's 17 factories and two collieries have for a long time been enjoying a large number of amenities for their security and social welfare, namely: provident fund and gratuity; schools, hospitals and dispensaries, creches, canteens, cinemas, clubs, playing grounds; welfare and benefit fund, and co-operative societies.

All these benefits have been provided out of a consciousness of social obligation. The ACC believes that a well-paid, well-looked-after, happy and contented employee is the best employee.

THE ASSOCIATED CEMENT COMPANIES LIMITED

THE CEMENT MARKETING CO. OF INDIA PRIVATE LIMITED

get from steel-producing countries, through trade agreements or otherwise, as much billet supply as possible to supplement the indigenous production and enable re-rollers to work on an economic basis.

(6) If adequate billet supplies cannot be arranged, those available may have to be rationed among the re-rollers according to capacity as recently assessed by the Iron and Steel Controller. In such allocations of billets the units which were given the option recently to change over to billets but preferred to continue to operate on scrap, and the unauthorised capacity, will have to be ignored. Unless supplies for one shift at least are assured to the industry, there will be a danger of larger units having to suspend their operations.

Regional Development

(7) The re-rolling industry is amenable to regional development. New capacity should be established so as to fill the gap locally as far as possible. The following States are deficient in re-rolling capacity: Andhra, Assam (including Manipur, Tripura and N.E.F.A.), Bihar, Himachal Pradesh, Jammu and Kashmir, Madras (including Pondicherry), Madhya Pradesh, Mysore, Kerala and Orissa. The other States have surplus re-rolling capacity.

(8) For all billets allocated, production orders should be planned by the Iron and Steel Controller in the same way as on the main and secondary producers.

(9) Existing classification of re-rollers (registered and unregistered) should be revised and in future there should be only two categories on the basis of the type of raw material used—billets or scrap. Only mills below 8 in. may continue to base their operations on scrap.

(10) The estimated total liquid metal capacity of steel furnaces, existing and projected, will be utilised both for castings and for the production of ingots or billets. The melting scrap expected to be available by 1960-61 is 260,000 tons a year. This will hardly be sufficient to meet the needs of the existing and projected steel furnaces, as their actual requirements of scrap will be about 285,000 tons a year. The capacity of the existing steel foundries is 21,000 tons a year. They expect to increase their capacity to 36,000 tons a year by 1960-61. These foundries should be encouraged to expand and to utilise all their liquid metal for casting purposes only.

(11) The estimated demand for steel castings by 1960-61 is 72,000 tons a year and the steel foundry capacity is expected to be 86,000 tons by that time. This will take care of the entire demand for steel castings. There is no need, therefore, to create any additional casting capacity before 1960-61. The position should be reviewed thereafter.

(12) The estimated availability of melting scrap (other than re-rollable industrial scrap) now is 200,000 tons a year. This, together with about 200,000 tons now being exported, makes up a total of 400,000 tons, and with the ingot production of 6 million tons a year after 1960-61, the expected availability of scrap by 1961-62/1965-66 is expected to be 1,000,000 tons, that is, 600,000 tons over and above the 400,000 tons.

Additional Steel Furnaces

There is definitely a need for additional steel furnaces for the manufacture of steel ingots or billets for meeting the needs of the steel rolling industry. By 1960-61, 250,000 tons of grade 2 and 3 scrap, now being allowed for export, will be available. Twenty percent of this scrap is comprised of very light varieties, which arise in all parts of the country. Besides, other types of light scrap can be had throughout the country. Efforts should be made to use such scrap in the regions where it arises. In all, about 80,000 tons of this type of scrap will be available a year. Mains frequency induction furnaces with a monthly capacity of 150 to 300 tons should be set up to convert the scrap into billets for rolling mills—at least one in each State and more than one if an assessment of scrap availability warrants such addition.

(13) Until furnaces are erected to utilise the scrap exported at present, permits may be given for export, subject to review every six months and the exporters making a certain percentage available to electric furnaces. Eventually the export should be stopped.

Scrap should be de-controlled, so that it may find its price level through normal trade channels.

PROGRESS OF PREMIER AUTOMOBILES

The 55,000th motor vehicle built by Premier Automobiles at its factory in Kurla, Bombay, rolled off the assembly lines on 22nd November. The company, which was established in 1944, and started assembling motor-cars and lorries in 1947, commenced its manufacturing programme in 1949. The vehicles produced include Dodge, Plymouth and Fiat motor-cars and Dodge and Gargo lorries. The chairman of the board of directors, Mr. Lalchand Hirachand, addressing invitees and workers at the plant, has stated that the company has made phenomenal progress during the last ten years. He says that nearly one-sixth of the total number of motor-vehicles on the road in India are Premier-built. This achievement will be considered all the greater when it is realised that over 60 percent of the components of the vehicles are manufactured by Premier Automobiles. The engines of Fiat motor-cars will soon be manufactured locally, the machinery being on its way. The company has prepared a huge expansion scheme and has already been granted a licence to import machinery and machine tools worth Rs. 1 crore. This will enable the factory to increase its present production of 1,000 vehicles to more than 1,500 vehicles a month.

NEW FIREPROOF MATERIAL FOR CORRUGATED ROOFING

Corrugated roofing is widely used in India, where constructional engineers will be interested to learn of a new development in the sphere which is being used to re-roof Trinity Street Railway Station, Bolton. The material chosen for the new roof is "Cellactite", a product of the Cellactite and British Uralite Company, of Gravesend. In appearance it resembles any ordinary corrugated metal, but it consists of a corrugated steel core covered with a blend of bitumen and asbestos. The blend is crucial to the material, for in normal circumstances bitumen will drip if subjected to intense heat and contribute to the spread of a fire. In making the product, the asbestos and bitumen are broken down together and reconstituted to form a protective covering which is fire-resistant and proof against atmospheric variations. The covering is then bonded to the steel core under high pressure, covering it completely. The finished product is light but unbreakable and it has been tested by the Department of Scientific and Industrial Research, which reported that in the event of fire it would in no way contribute to the spread of the flame.

BRITISH SHIP TO RENEW CABLES IN INDIAN OCEAN

The renewal of broken or faulty undersea cables between Bombay and Aden is part of the work the British cable ship *Ocean Layer* will undertake for four months in the Indian Ocean. Owned by Submarine Cables Ltd., the ship will leave London soon, carrying 1,000 nautical miles of telegraph cable for renewals on behalf of Cable and Wireless Ltd. The renewals will include cables between St. Helena and Capetown: Durban (South Africa) and Mauritius; and Zanzibar and Durban. The *Ocean Layer* is using a new type of meter to register the amount of slack which is allowed in the cable to enable it to follow the contours of the sea bed. The meter gives an instantaneous reading. Sir John Dean, joint managing director of Submarine Cables, has announced that the firm has received an order to extend the power cables it laid in Vancouver, Canada, last year. Forty miles of cable are to be laid between the Canadian mainland and Vancouver Island. Sir John also spoke of the firm's £8 million contract for 2,000 miles of the new trans-atlantic cable from Canada to France.

Calcutta Markets

EASIER TENDENCY AT TEA EXPORT SALE

GOOD SUPPORT FOR DUSTS AT LOWER RATES

AT Sale No. 23, held on 25th and 26th November, offerings at the Export auction amounted to 60,552 packages. There was less general demand, and the market was rather irregular with prices showing an easier tendency. Commonest sorts met with a good enquiry at about last rates, while clean common descriptions received less support and prices declined by about 6 to 8nP. Black Fannings also met with less support and these declined by abcut 2 to 4nP. Medium Assam B.O.P.'s of orthodox manufacture were the weakest feature of the Sale, and eased by 20 to 30nP with appreciable withdrawals. However, those in this category with bright liquors sold well. There was a good demand for C.T.C. Assams which were a strong feature and prices were dearer for those with useful liquors. The more ordinary liquoring types were rather irregular and were sometimes easier. Whole leaf grades and Stylish B.P.'s were fully firm to dearer. Darjeelings and tippy teas received fair support at prices which were often easier.

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2.40	2 6 0 to 2 7 0
Plain B.P.	1.64 to 1.66	2 5 0 to 2 6 0
Plain Fannings	1.72 to 1.76	
Medium B.P.	1.70 to 1.74	2 8 0
Medium Fannings	1.82 to 1.84	
Best Assam C.T.C B.P.	3.10 to 3.50 (Nom.)	3 0 0 to 3 2 0
Best Assam C.T.C. Fgs.	2.90 to 3.10 (Nom.)	

At the Internal Sale, Dust offerings amounted to 20,453 chests. There was a good general demand at lower rates. Commons and Mediums declined by 4 to 6nP and occasionally more, while the best liquoring kinds in this category remained about steady. Non-wither Dcoars were a strong feature and were fully firm, and at times dearer. The few best C.T.C.'s with good liquors, which were on offer, were firm to dearer, but the more ordinary kinds were up to 15nP lower and sometimes more. Flavcury Darjeelings realised high prices, while the remainder were irregular and generally easier.

Quotations

	1957 Rs.	1956 Rs.
Medium Dooars Dust	1.74	2 0 0
Medium Assam Grainy Dust	1.74 to 1.76	2 1 6
Medium Assam C.T.C. Dust	2.00 to 2.10	2 7 0 to 2 8 0
Best Assam C.T.C Dust	2.70 to 3.00	(Nom.) 2 12 0

A total quantity of 3,984 chests of Leaf was on offer. There was good demand at irregularly easier rates.

FREIGHT MARKETS QUIET

BUSINESS in the freight markets has remained at a very low level during the past week and prospects are not good. Some interest was shown in the time charter section, but rates were unremunerative. Trans-atlantic coals hovered around 29s, and a *Liberty* ship was fixed at $(U.S.) 2.26 for 11 to 13 months' time charter. Two 16,000-ton tankers were taken for grain or oil trading over three years at $(U.S.) 2.55 and $(U.S.) 2.60. In the local coal trade, a vessel was fixed for a part cargo of 4,000 tons to Chalna at 29s for early December loading. There has been a distinct fall in the level of exports from this country, and suggestions have been made that the rates of freight will have to be reduced by liners to promote business. In the Far East trades, Hongkong-operated tonnage has cut into the regular liner trades at very low rates.

LINSEED DULL

There has been no notable price change during the past week. A quieter undertone has prevailed and business has been dull. Sellers have been much more in evidence; crushers have been operating cautiously due to stagnant conditions in the oil market. The price of seeds has not declined, but oil prices have been quiet, and demand has been exceedingly poor. Latest quotations were: November-December Rs. 23 a maund.

SUGAR EASIER

During the week ended 27th November, sugar sales in the Calcutta market averaged 3,500 bags daily. Arrivals a day were 6,000 bags and stocks totalled 125,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 36-6 for ordinary grain and Rs. 38-8 for big grain. The market was easier.

HIDES AND SKINS STEADY

The market was quietly steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 19th November and 25th November, 1957)

Cowhides: Wet salted (Ord.) 10,000 pcs. on the basis of Rs 8.25 to Rs. 10.50; Wet salted (Slaughtered) 17,500 pcs. on the basis of Rs. 13.50 to Rs. 21.

Goatskins: Wet salted (Daissee, Killed) 55,700 pcs. on the basis of Rs. 315 to Rs. 320, Rs. 345 to Rs. 360 and Rs. 390 to Rs. 410; Assam-Dinajpur 15,300 pcs. on the basis of Rs: 345 to Rs. 355; Pakur 12,200 pcs. on the basis of Rs. 335 to Rs. 345; Muzafferpore-Patna-Muzafferpore 1,04,350 pcs. on the basis of Rs. 350 to Rs. 400.

Bazaar Stocks

(26th November, 1957)

Cowhides: Wet salted 7,15,00 pcs.

Goatskins: Wet salted (Daissee, Killed) 39,500 pcs.; Assam-Dinajpur 44,500 pcs.: Muzafferpore-Patna-Pakur-Purneah-Kissenganj 1,08,000 pcs.

SHELLAC STEADY

During the week ended 26th November, the market was quiet at the beginning, and steady at the close. The range of quotations was as follows:

Pure Buttonlac	Rs. 100 to 92, 94 buyers.
Lemon No. 1 Shellac	Rs. 100 buyers; 98 done; 95.50, 94.50, 96.50 buyers.
Lemon No. 2 Shellac	Rs. 95 buyers; 92.50 done and buyers; Rs. 89 buyers; 91.50 done and buyers.
F.O. Std. 1 Shellac	Rs. 83 to 8.50, 85.50 buyers.
Pure TN Shellac	Rs. 82 to 78, 79 basis done and buyers.
4% I.T.N. Shellac	Rs. 72 value; 69 buyers; Rs. 67.50, 69.50 value.
No. 1 Kusmi Seedlac	Rs. 88 to 85.50, 87 value.
No. 2 Kusmi Seedlac	Rs. 83.50 to 81, 82.50 value.
Fine Bysaky Seedlac (Manbhum)	Rs. 80 to 75, 77 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 75.50 to 72, 73 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 71.50 buyers; 69 done and buyers; Rs. 67.50, 68 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 67 to 64, 64.50 buyers.
Kireelac	Rs. 26, 25 buyers.

Shipments during November until the 22nd were 39,768 packages comprising shellac 21,104 packages, seedlac 16,060 packages, buttonlac 767 packages, and others 1,837 packages.

BRITISH TEXTILE REVIEW

CANADIAN PARTICIPATION IN NEW U.K. WOOL CONCERN

VARIOUS deductions have been made from the international reorganisation of the wool-combing business of the Wool Combing Corporation of Canada, associated with the formation of a new U.K. company, Parkside Combing which has been promoted and controlled by Bradford Dyers Association, with Winterbottom Book Cloth and the Wool Combing Corporation of Canada participating. At the Cotton Board's recent annual conference in Harrogate, a distinguished guest from the Continent, M. Jean Monnet, described how the "new" countries, beginning to idustrialise and export, turned their attention first to textiles and would later, probably, become important producers of machinery. So far as textile machinery is concerned, Britain is still doing an active export trade. The value of these exports, at £31.6 million, was £3.4 million less in the first three-quarters of this year than in the same period of last year, but the difference is largely explained by a decline in shipments to Russia—although the Indian market also disappointed; Pakistan and France have taken considerably more, Australia and Canada moderately more, this year than last.

Against this background it may seem strange that woolcombing machinery is being shipped from Canada to the U.K. as part of the above-mentioned reorganisation. But the change reflects not only the difficulties of the Canadian industry (including the disadvantage of high costs of transport from Australia), but also the strong demand, especially from the East, for intermediate worsted products prepared in the U.K. Incidentally the installation of this machinery in a dyeworks (leased from Bradford Dyers) is a reminder that some dyeing and finishing capacity in the U.K. is redundant and can be employed more usefully in earlier processes.

Another new company registered last mo th, East and West Wool Trading, has been planned to take advantage of the big actual and potential trade in intermediate products between Britain on the one hand, and China, Russia, and other east European countries on the other. One of the directors, Mr. Kenneth N. Keenan, was formerly directing the wool department of the London Export Corporation, a promoter of U.K.-China trade, and on the basis of his experience in that capacity he has estimated the potential trade with China, especially in tops, to be "terrific". One of the big existing units in the industry, Isaac Holden and Sons, has lately raised £300,000 of additional loan capital, primarily to finance purchases of additional woolcombing machinery—much of it from France. This is another illustration of the industry's confidence that the combing section's export business is expanding. However, from the viewpoint of the wool trade proper, it is interesting to note that this group has formed a new subsidiary, Isaac Holden (Synthetics), to take over and develop the synthetic fibre combing department of the parent. Synthetics and blends are making steady progress in that section of the industry, traditionally concerned with worsteds.

Conflict in Wool Trade

Many firms prefer synthetic fibres (where applicable) not for any special qualities or because their prices are favourable (which generally they are not at this stage), but because their prices are stable. The recent movements of wool have been viewed with particular regard to its erratic behaviour over the years. In the recent flurry between Syria and Turkey, merino futures performed the most violent fluctuations in the history of the London wool terminal market, with a day's turnover as large as 475 lots of 5,000 lbs each. The facilities for hedging are valued especially at such times, but this episode was a disturbing reminder of the instability of wool. It has also a curious habit of moving independently of commodities in general. In the early months of this year, wool was rising while nearly all other commodities were falling. Later the Middle East crisis caused sharp rises in wool futures in London, and in wool tops in Bradford, although it had no perceptible effect on most other commodities.

This seemingly perverse behaviour is not, however, irrational. The statistical position of wool, unlike that of most other commodities, is strong, and the wool industry is still, in general, active. The recent strength of futures and tops in the U.K. reflected a widespread belief that there was probably nothing to gain and possibly a good deal to lose by waiting for lower prices. The latest assessment here of the prospect is, however, rather more cautious. Whereas the reduction of Japan's import budget for wool has so far had less effect than was feared, the troubles in France are perceptibly restraining that country's buying. In Britain high interest rates are a strong reason for keeping stocks at the minimum required to assure continuity of operations; and some observers consider it ominous that the most active trades in the U.K. at present are those dealing in durable consumer goods, especially motor-cars and radio and television sets. It was formerly believed that consumer demand was shifting from such "hard" goods to "soft" goods such as textiles. In the rayon industry, conditions have been deteriorating for months past, and the trade was less surprised than the stock market was shocked by the reduction of Courtaulds' latest interim dividend.

Effective Flame-proofing

The public is not yet as conscious as it should be of the importance of reducing the fire risk in textiles, but many firms are satisfied that there is a big potential demand for any fabric that is guaranteed non-inflammable, and whose price and feel are not appreciably affected by the flame-proofing process. In Heald Green, Cheshire, in October the Textile Institute discussed at a one-day conference, progress in flame-proofing techniques. Summing up at the end of the proceedings, Professor C. S. Whewell, of Leeds University, emphasised the need for more research, but expressed confidence that the work already done was leading to a solution of the problem. "I think" he said, "the chance of a first-class proof appearing within the next five years is certainly high." There are already, of course, on the market several commercial products that are well on the way towards this objective.

The superiority of wool in flammability and the extent to which it will lose advantage if materials made from other fibres can be completely flame-proofed, are sometimes disputed, but the public certainly regards wool as slow-burning. The newer synthetics, on the other hand, have a reputation for melting under heat which is decidedly to their disadvantage among women whose skill with the iron is not infallible.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) advanced by 0.6 percent to 109.6 during the week ended 9th November, 1957, compared with 108.9 (revised) for the earlier week. The index was higher by 0.8 and 1.4 percent, respectively, when compared with the corresponding week of last month and that of a year ago. The index for Food Articles moved up by 0.7 percent to 108.3 compared with 107.6 (revised) for the earlier week due to higher prices of onions in Nagpur (+30%), gur in Muzaffarnagar (new crop) (+23%) and in Ahmadnagar (+7%), oranges in Madras (+23%), fish in Bombay (Pomfret) (+15%), arhar in Bombay (+13%), rice in Chiplan (+10%) and in Nagpur, Trivandrum and Nandgarh (+6% each), black pepper in Calcutta (+9%), wheat in Kanpur and eggs (+8% each), coconut oil and tea (+4% each), maize, mung, groundnut oil and cardamoms (+2% each) and jowar and bajra (+1% each) notwithstanding a fall in the prices of rice in Ranchi (-14%), in Marcara (-8%), in Shimoga (-7%) and in Jagdalpur and Kotma (-6% each), gur in Patna (-10%), fish in Calcutta (-9%) and milk at the same centre (-7%), ghee and black pepper both in Madras (-5% each), coffee (-4%), cloves (-3%), chillies (-2%) and barley, ragi, potatoes and salt (-1% each). The index for Tobacco remained at its last week's level of 95 as none of the prices showed any variation. The index for Fuel, Power, Light and Lubricants also stood unchanged at its previous week's level of 114.6. Higher prices of groundnuts in Hyderabad (+11%), raw skins in Kanpur (+7%), and rapeseed at the same centre (+6%), copra in Alleppey (+5%), raw jute and cottonseed (+2% each), and linseed and raw hides (+1% each) were responsible for pushing up the index for Industrial Raw Materials by 1.7 percent to 116.3; the prices of tanning materials (Avaram Bark) in Madras (-14%) and lac (-2%) showed a fall. The prices of zinc and tin (-2% each) and coir yarn (-1%) declined while those of linseed oil (+2%) and copper (+1%) showed a rise and in the result the index for Intermediate Products advanced slightly by 0.2 percent to 106.0. The index for Finished Products stood at 109.1 compared with 109.2 (revised) for the earlier week. Items which showed variations were: jute manufactures (-1%) and oilcakes (+1%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: 1952-53=100)

Groups and Sub-Groups	Week Ended 9-11-57	2-11-57	12-10-57	10-11-56
I Food Articles:	108.3	107.6(R)	107.1(R)	106.2

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to October 1957. As compared with September, the October Index for Food shows a drop of 4 points, while those for Clothing, Fuel and Lighting and Miscellanecus remain unchanged at 550, 281 and 284 points, respectively.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living declined by 2 points during October 1957.

Middle Class Cost of Living Index Number for Calcutta. Prices in August 1939 = 100.

HEAVY TAXATION AFFECTING PLANTATION DEVELOPMENT

WORKERS IN KERALA ESTATES DEMAND WAGE INCREASES

(FROM A SOUTH INDIAN CORRESPONDENT)

HEAVY taxation of plantations by the State and Central Governments is making it impossible for the industry to expand or to maintain itself properly. Many plantation companies in south India have already found it necessary to curtail or postpone their development plans and to reduce their capital expenditure to the minimum. Mr. W. E. Northey, president of the Cochin Chamber of Commerce, dealt with this state of affairs when he addressed the centenary meeting of the Chamber last week. He said that the situation was even more serious when it was realised that the Kerala Government intended to levy a wealth tax on plantations. The importance of the industry to the economy of south India is undeniable and, therefore, the president has expressed the hope that neither the Centre nor the State intends that taxation should cripple the industry, and in doing so, reduce its potential as a source of revenue.

Dealing with the application of wealth tax to plantation companies in Kerala, as the Centre had done in the case of other companies, he has expressed the opinion that there is no justification for levying such a tax on a corporate body of any sort, let alone public companies. It is a fixed annual levy which is completely unrelated to the yield from the wealth assessed and, therefore, basically unsuitable for application to corporations and agriculture. He has also said that compulsory deposit of the accumulated reserves of companies, the levy of wealth tax on companies, increased super tax on dividends and the heavier bonus share tax do not promote capital formation or encourage foreign investors. Nor are the threats of nationalisation and of trade being taken over by the Government through the State Trading Corporation.

Sales Tax

Referring to the problems of sales tax, Mr. Northey has said that uncertainties over liabilities and frequent changes in the rate of sales tax are not good for the development of trade, and it seems necessary to revive the plea for the centralisation of sales tax. He has suggested that the only satisfactory solution for all commodities will be a Central tax on the first sale, leviable at a uniform rate throughout the country, in complete replacement of both intra-State and inter-State taxes. An equally satisfactory solution in so far as the commodities subject to excise duty are concerned will be the replacement of intra-State and inter-State taxes by a surcharge on excise duty.

The Kerala Government has not consulted the chambers of commerce and trade associations before passing legislation directly affecting the trade and commerce in the State. It has not so far set up a sales tax advisory committee. Some of its enactment contain anomalies causing undue hardship to traders. Mr. Northey has pointed out that the Kerala Government's imposition of a single-point sales tax of 5 percent on tea might seriously affect the trade of Cochin by possible heavy diversions of tea from the Cochin market and the consequent loss of revenue for the State. The Chamber president has said that the expansion of the activities of the State Trading Corporation has threatened to disrupt business and cause serious losses to the private sector. He thinks that the time has come when the Government should be asked to give an assurance about the further steps it intends to take.

Visit of the U.K. High Commissioner

The U. K. High Commissioner in India, Mr. Malcolm Macdonald, has made a one-week tour of Kerala. According to Press reports, one of the purposes of his visit was to acquaint himself with the state of affairs in those plantations which are under British ownership and management. The High Commissioner, it is stated, has received several petitions on the law and order situation affecting these estates, and has been requested by planters to take up the matter with the Government of India. Soon after his return to Delhi, the High Commissioner is expected to discuss the matter with the Central Home Minister. While he was in Kerala, he had discussions with the Governor, the Chief Minister and some other members of the Cabinet.

Strike Threat by Plantation Workers

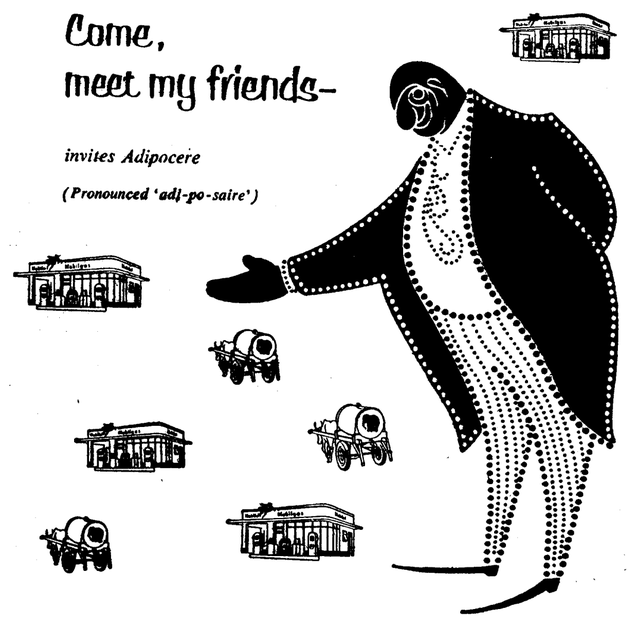
The plantation workers of Kerala not following the communists have decided to go on a token strike on 2nd December, and those under communist leadership on 10th December. This is part of their agitation for higher wages. The State Government has declared its opposition to the proposed strike of plantation workers. An official announcement states that the minimum wages for plantation workers in Travancore-Cochin area were fixed five years ago and the question of appointing an advisory committee to revise these minimum wages was being considered by the Government, when a proposal came up that a voluntary committee with representatives of the management and employees should be more useful to solve this question than a statutory body. It was also pointed out that such a committee might be able to recommend a higher rate of wages than what is contemplated in the minimum wages statute. On the basis of this suggestion, the State Government has constituted the Tharakan Committee with equal representation to workers and plantation management. This committee has already started work. The workers demand interim relief in the form of a small increase in their wages, towards which the Government is sympathetically disposed for the reason that the cost of living has increased considerably since the minimum wages in force were fixed five years ago, and that the plantation workers in Malabar area are drawing higher wages. The Government has offered to ask plantation owners to concede their demand for interim relief. Under these conditions, the Government feels that the strike notices served on the management are premature. It hopes that the workers will not precipitate the situation and will co-operate with the Government in finding a satisfactory solution for the dispute.

Sharp Rise in Coconut Oil Prices

Coconut oil prices rose sharply to Rs. 630 a candy of 6 cwts. last week. This is the highest price realised for the past several years. When compared with the price prevailing just prior to the restriction of imports, it is Rs. 155 a candy higher. Until the import policy for the third quarter of the year was announced, declining prices were the worry of the market, but now the sharp rise is the headache. Shortage of supplies is the real cause of this price increase according to the trade. This is a lean production period in Kerala, and the indigenous supply is very limited. Imports are restricted to a very small percentage of the licences held by actual users. As a cumulative effect of both these, an acutely tight supply situation has developed. The market is managing with a small supply, against a rising demand. It does not appear that even this increase in price has seriously affected demand until now. Dealers say that in spite of such a high price, there are very good orders from north Indian and other upcountry markets. This may possibly be the result of the panic which soaring prices have created.

World Price Trend

The world market also shows a rising trend in coconut oil prices. This is due to high demand locally and in the Middle East, and because of further purchases of Ceylon oil by the U. K. and of the Philippine copra by France. The world price a week ago was Rs. 1,500 a ton, against Rs. 1,980 in Kerala. This is too big a margin. However there is a feeling now that it will be dangerous to allow oil prices to rise further. It will be disadvantageous to the producers as well as to the consumers. Consumer resistance will develop if prices are allowed to go up to unreasonable level. An expanding market and a reasonable price will serve the best interest of the producers.



COCHIN TEA SALES

At the latest Dust Sale, 750,000 lbs of tea were on offer. There was a strong general demand and prices improved irregularly by 5nP. particularly for Milled Dusts which were up to 10nP dearer.

Come, meet my friends—

invites Adipocere

(Pronounced 'adi-po-saire')

After being refined into quality petroleum products, I am transported to the market. Here, through a well organised distribution system, I finally come to meet you—the consumer. Before I do that, however, you must meet my friends who bring me to you.

Stanvac, working through its Sales Offices, dealers and agents located throughout the country, is a good example of a well-knit organisation which markets me in my various forms. Its dealers and agents are an important element in the distribution chain. They are efficient and independent businessmen—big and small—who supply quality petroleum products so vitally needed by you. Stanvac helps these dealers by way of free advice and training their personnel to give efficient and courteous service to the customer.

By helping these enterprising businessmen to progress in their chosen field, Stanvac plays a significant part in the fast developing economy of the community and, indeed, of the nation as a whole.

STANVAC —*the name that stands for progress*

MONEY AND THE POLITICIANS

Money: Its Nature and Management. By B. T. Thakur. (Published by Orient Longmans Private Ltd., Calcutta; 195 pages. Price Rs. 9-8.)

This book is an expanded version of a series of lectures delivered by Mr. B. T. Thakur, former general manager of the United Commercial Bank, under the auspices of Calcutta University in July last year. It is not necessarily a comprehensive survey of monetary problems, as indeed a series of specialised lectures can hardly be intended to be. Its main merit lies rather in the fact that it comes from a leading banker; as such, it is essentially pragmatic in approach and should be a useful antidote to the ideological nonsense that is flooding into monetary discussions these days. The most vigorous of Mr. Thakur's attacks are directed at politicians and bureaucrats in authority who have set themselves up as monetary experts and bungled the country's financial affairs; indeed, his passionate condemnations on this account are apt often to interrupt unwarrantably the line of his argument. Mr. Thakur presents many interesting ideas, especially on the development and closer integration of the monetary and banking systems. Not all of them are likely to meet with general approval, but this is hardly to be expected in so controversial a field.

On the question of developing the small banks, for instance, many will disagree with the proposal that they be converted into "satellites", with their bigger counterparts to guide, supervise and control them. Admittedly the Reserve Bank has shown its supervision of the former to be imperfect. But that is a deficiency which not many of the bigger banks can remedy by stepping partially into the central banking institution's shoes. The fundamental weakness of the small banks is that labour awards have made their costs too high; although Mr. Thakur is well aware of this, his emphasis on organisational remedies is one with which many would not agree because they are likely to prove of mainly temporary significance. There are not many subjects on which unanimity can be expected in banking opinion, and one's occasional divergence of views does not detract from the value of this book. But the point remains that lectures cannot often be reproduced verbatim in print if they are to retain their original effectiveness. Although these are not so reproduced, a certain amount of editing and rearrangement might have improved considerably the impact of the ideas presented.

JUNGLE LAW

The Law and Practice of Sales Tax. By D. N. Guha Roy. (Published by A. Mukherjee and Co. Private Ltd., 2, College Square, Calcutta; 484 pages. Price Rs. 12.50.)

This book discusses mainly the sales tax law in West Bengal. It also contains the Acts and rules applicable to Assam, Bihar and Orissa. The Central Sales Tax Act, 1956, and the Central Sales Tax (Registration and Turnover) Rules, 1957, have been incorporated. The author's comments on the Bengal Finance (Sales Tax) Act, 1941, are useful, the provisions having been explained with the help of various high court decisions. Mr. Guha Roy's approach is critical and refreshing. For instance, about the wide powers of the Sales Tax Commissioner under Section 14 of the Act, he says: "The powers conferred by sub-section (3) and (4) are extraordinary powers and as such they should be resorted to with a proper dose of caution. The two sub-sections designed to check evasion of tax have armed the Commissioner with powers, the slightest abuse of which is likely to invite public criticism and resentment. It seems that our legislature has taken it for granted that there will be frequent evasion of tax for the prevention of which the Commissioner has been vested with arbitrary powers." Elsewhere, Mr. Guha Roy puts forward the interesting view that the Sales Tax Laws Validation Act, 1956, violates Articles 286 of the Constitution as interpreted by the Supreme Court in its judgment in the Bengal Immunity case. The book should prove useful to traders and lawyers who are concerned with the practical application of the sales tax laws.

REFERENCE BOOKS FOR INVESTORS

Investors' Encyclopaedia, 1956-57. Compiled by Kothari and Sons. (Published from "Oriental Buildings", Armenian Street, Madras 1; 2,329 pages. Price Rs. 20; foreign £2 3s).

From its modest beginnings in 1936 with only 168 companies and 349 pages, this well-known publication has become popular among investors and is considered to be a valuable work of reference. It has been brought up to date by the inclusion of information about public companies floated until 31st March, 1957. The compilers say that it is their intention to make the work more comprehensive by including details "of all the companies in India in the various industrial aspects." It is also their aim to include particulars of companies in Ceylon and Pakistan. The volume under review gives details of port trust improvement trust, municipal and Government loans, agricultural income tax, debenture issues of various public institutions, etcetera. Efforts have been made to provide information to those who want to set up new industries, such as details of company law, control of capital issues, income tax and supertax, and the Industries (Development and Regulation) Act. With its rich collection of facts and figures, the volume will prove useful to investors.

* * * *

The Madras Stock Exchange Official Year Book, 1956-57. (Compiled by the Madras Stock Exchange Association Private Ltd., 322/323, Linghi Chetty Street, Madras. Price Rs. 7.50; pages 770.)

This year-book, now in its fifth year of issue, provides a comprehensive coverage of companies quoted in the official list of the Madras Stock Exchange. The compilers have brought it up-to-date by including particulars relating to 243 companies officially listed by that Exchange and about 160 companies whose shares are quoted in other markets. A feature is that information about companies received up to 30th April, 1957, has been included. An effort has been made to sift unimportant details and to present useful extracts from the last ten years' balance-sheets of various companies. As the Securities Contracts (Regulation) Act, 1956, came into force from 20th February, 1957, the bye-laws and regulations were due to be revised extensively. The compilers, therefore, did not include the rules and regulations then in force. Within its compass, the year-book will prove to be a worthwhile guide for investors.

THE PRIME MINISTER

Nehru's India. By T. S. Bawa. (Published by Freeland Publications. Price Rs. 12-8.)

The voice of protest is too often silent and democrats do not take advantage, as Mr. Bawa points out, of their "divine right to grouse". It is, therefore, a pleasure to read Mr. Bawa's bold and constructive comments on many aspects of modern India. He points out that respect and affection for Nehru the man should not result in the blind following of Nehru the leader. Such subjects as nationalisation, corruption and a national language are discussed rationally. Mr. Bawa's criticisms are on the whole balanced. He maintains that many unwelcome developments would have been avoided had the Congress Party dissolved itself once independence was achieved, that the population problem is not given the attention it deserves, and that the Constitution should be remodelled with a Presidential type of executive. The book is stimulating and deserves to be read.

IN THE JUTE MILL

A Practical Treatise on Jute Cultivation and Jute Spinning. Part II. By S. K. Pal. (Published by Das Gupta and Co. Private Ltd., 54/3, College Street, Calcutta; 256 pages. Price Rs. 12.50.)

This is a practical study of the problems which often arise in the spinning section of a jute mill. Many of the latest developments are covered. The machines used are discussed in considerable detail. The publication has been approved as a text-book by the Institute of Jute Technology, Calcutta. There is not much literature on batching and spinning, so it should prove valuable to jute technicians.

4. With Containers and Closures Ltd. (An Associate of the Managing Agents) for sales of Gunnies and renting of Factory Premises and Staff Quarters, payment for such sales being due within one month of the date of supply.
5. With Kilburn & Co. Private Ltd. (An Associate of the Managing Agents) for purchases of Factory Equipment and Factory Maintenance Stores, which the Company may require for the purposes of its business.
6. With Kilburn & Co. Private Ltd. (An Associate of the Managing Agents) for sales of Gunny Bags, Cloth and Twines, payment for such sales being due within one month of the date of supply.
7. With The Ganges Manufacturing Co., Ltd. (Formerly an Associate of the Managing Agents) for purchases of Machinery and Stores, which the Company may require for the purposes of its business.
8. With The Ganges Manufacturing Co., Ltd. (Formerly an Associate of the Managing Agents) for sales of Gunny Bags, Cloth, Twine and renting of Factory premises and Staff Quarters, payment for such sales being due within one month of the date of supply.
9. With The Ganges Rope Co., Ltd. (An Associate of the Managing Agents) for purchases of Ropes, Twines, Carpets and other products, which the Company may require for the purposes of its business.
10. With The Equitable Coal Co., Ltd. (An Associate of the Managing Agents) for purchases of Coal, which the Company may require for the purposes of its business.
11. With The West Jamuria Coal Co., Ltd. (An Associate of the Managing Agents) for purchases of Coal, which the Company may require for the purposes of its business.
12. With The Dhemo Main Collieries Ltd. (An Associate of the Managing Agents) for purchases of Coal, which the Company may require for the purposes of its business.
13. With The Gourepore Electric Supply Co., Ltd. (An Associate of the Managing Agents) for purchases of Electrical energy, which the Company may require for the purposes of its business.
14. With The Gourepore Electric Supply Co., Ltd. (An Associate of the Managing Agents) for sales of Stores, payment for such sales being due within one month of the date of supply.

it, being term of each of the above contracts that the prices at which transactions take place shall be at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

As Ordinary Business.

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st March, 1957 and the Balance Sheet as at that date.
2. To appoint Auditors and fix their remuneration.
3. To elect a Director in place of Mr. D. P. Goenka.
4. To elect a Director in place of Sir Asoka K. Roy, who retires by rotation and who is 71 years of age and in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company.

"RESOLVED that the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Sir Asoka K. Roy and that he be and is hereby re-elected as a Director of the Company, whose period of office is liable to determination by retirement of Directors by rotation."

The Share Transfer books of the Company will be closed from 30th November to 13th December, 1957, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
J. H. G. WHITFIELD,
Acting Secretary,
Managing Agents.

2, Fairlie Place,
Calcutta-1, 15th November, 1957.

Note:—A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

BHATKAWA TEA COMPANY, LIMITED.

NOTICE is hereby given that the 57th Annual General Meeting of the Shareholders of Bhatkawa Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company on Saturday, the 21st December, 1957, at 11-15 A.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1956, and the Balance Sheet as at that date and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. G. T. Routledge, the Director retiring by rotation at the Meeting.

And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr. G. T. Routledge be and is hereby re-appointed a Director of the Company."

Special Notice dated 15th November, 1957, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge is presently a Director of Amluckie Tea Co. Ltd. which is a subsidiary of McLeod & Co. Ltd., the Managing Agents to the Company, and he is an associate of the Managing Agents within the definition in Section 2(3)(c)(1) of the Companies Act, 1956, who may only be appointed or re-appointed a Director by a Special Resolution, of which Special Notice has been given to the Company.

4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 9th December, 1957 to 21st December, 1957, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 22nd November, 1957.

NOTE:

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared will be made on or after 30th December, 1957, only to those members whose names are registered in the Books of the Company on 21st December, 1957, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

THE KARANPURA COLLIERIES LIMITED

AT a Meeting of the Board of Directors held on 20th November, 1957, at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, a Dividend at the rate of 5½ per cent per annum after deduction of Income Tax payable by the Company on the 5½% Taxable Preference Shares was recommended for the year ended 28th February, 1957.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED
Managing Agents.

Calcutta,
20th November, 1957.

THE KARANPURA COLLIERIES LIMITED.

NOTICE is hereby given to the members of the above named Company that the Thirtyninth Annual General Meeting of the members will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Saturday, the 28th December, 1957, at 10-30 A.M. for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 28th February, 1957, and to pass the Directors' and the Auditors' Reports thereon.
2. To declare Dividend recommended by the Directors.
3. To appoint Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 14th to the 28th December, 1957, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Calcutta,
20th November, 1957.

NOTE:

(1) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(2) The Dividend, if declared, will be paid on or after 4th January, 1958, to those members so entitled, whose names appear in the Company's books on the 28th December, 1957, or to their mandatees. No application for Dividend Warrants will be necessary.

THE PUNJAB NATIONAL BANK LIMITED

"Shree Niwas"
8, Underhill Road, DELHI.

NOTICE FOR ISSUE OF BONUS SHARES.

By an Ordinary Resolution passed by the shareholders of the Punjab National Bank Ltd., at the Annual General Meeting held on the 22nd June, 1956, it was resolved that, subject to the sanction of the Controller of Capital issues, a sum of Rs. 37,50,000 lying in the Share Premium Account be capitalised by the making of a scrip issue to shareholders in proportion to the number of shares held by them as on a date to be fixed by the General Board of Directors.

As the consent of the Controller of Capital Issues has since been received, the Directors, in their meeting held on 19-11-1957, have decided to issue 1,50,000 shares of Rs. 25 each as Bonus shares to the persons whose names appear on the Register of Members as at the close of business on 17-12-1957 in the proportion of three shares for every seven shares registered in their names at the close of business on the said date.

To overcome the difficulties likely to arise out of the issue of a large number of fractional certificates and to be experienced by the shareholders in dealing in such certificates, the Directors, in exercise of the powers vested in them vide Article (88-B) (2) of the Bank's Articles of Association, have decided that while allotting Bonus shares fractions be ignored and the aggregate of the shares in lieu of such fractional shares be allotted to Sardar Bahadur Sardar Mohan Singh, a Director of the Bank, upon trust, and for the benefit of the shareholders who would have been entitled to such fractional shares, and upon further trust to sell the said shares and distribute the proceeds thereof amongst the shareholders who would have been entitled to fractional shares in the proportion in which they would have been entitled thereto.

The Bonus shares which are now being issued will be entitled to the final dividend which may be declared by the Bank out of the profits for the year ending 1957 but shall have no right of claim to the interim dividend for the current year already declared and paid by the Bank in September, 1957.

The Transfer Books of the Bank will remain closed from 12-12-1957 to 17-12-1957 (both days inclusive).

By the Order of the General
Board of Directors,
R. L. TULI,
Secretary.

Dated, 22nd November, 1957.

NOTE:—Shareholders are requested to intimate any change of addresses, immediately to the Bank.

THE GOUREPORE COMPANY, LIMITED.

NOTICE.

NOTICE is hereby given that the Annual General Meeting of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, the 13th December, 1957, at 11-15 a.m. for the following purposes :—

PAHARGOOMIAH TEA ASSOCIATION, LTD.

NOTICE.

NOTICE is hereby given that an Annual General Meeting of the Members of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, the 20th December, 1957, at 3-20 p.m., for the following purposes :—

AGENDA.

(1) To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December, 1956, and the Balance Sheet as at that date.

(2) To declare a Dividend.

(3) To elect a Director.

(4) To appoint Auditors and fix their remuneration.

(5) **As Special Business.**

To consider and, if thought fit, to pass, with or without modification, the following resolutions, namely :—

(i) *(As an Ordinary Resolution).*—"That, as from the 1st day of April, 1956, Kilburn & Co. Private Ltd., the Managing Agents of the Company, shall hold such office upon the terms and subject to the conditions contained in the draft Agreement submitted to this meeting and for the purposes of identification signed by the Chairman thereof and that, accordingly, the Directors be and they are hereby authorised to enter into an Agreement with Kilburn & Co. Private Ltd. in terms of the said draft which has been approved by the Central Government in conformity with the provisions of Section 329 of the Companies Act, 1956."

(ii) *(As a Special Resolution).*—That the Articles of Association of the Company be altered in manner following:—

Article 137 shall be deleted and the following two new Articles 137A and 137B substituted therefor :

"137A. Subject to the provisions of Sections 198 and 348 of the Companies Act, 1956, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2(17) of the Companies Act, 1956) commencing after the 1st day of April, 1956, or in respect of any part of a financial year;

(a) A sum of, or, in respect of any period of less than a year, calculated at the rate of Rs. 25,000/- per annum, and

(b) Such further sum, if any, as together with the said sum of Rs. 25,000/- shall make up an amount equal to 10 per cent. of the net profits of the Company for such financial year or part thereof determined in accordance with the provisions of Sections 349 and 350 of the Companies Act, 1956.

The said sum of Rs. 25,000/- payable under (a) above shall be paid by the Company by equal monthly instalments payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year then to the extent that the amount paid to the Managing Agents under (a) above together with the remuneration paid to Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rs. 25,000/- the remuneration payable under (a) above shall abate and be repayable to the Company accordingly.

The further sum, if any, payable under (b) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in general meeting.

In respect of the Company's financial year ending on the 31st day of December, 1956, the Managing Agents shall, subject to the provisions of Section 198 of the Companies Act, 1956, if applicable, receive remuneration calculated in the manner provided in the Agreement dated the 5th December, 1947, save that the Managing Agents shall only be entitled to receive the office allowance payable to them under the Agreement dated the 5th December, 1947, upto and including the 31st day of March, 1956.

"137B. The remuneration payable under Article 137A shall not be regarded as in any manner or to any extent intended to reimburse the Managing Agents in respect of any expenses incurred or to be incurred by them on behalf of the Company and the Managing Agents, in addition to receiving such remuneration shall be entitled to be reimbursed by the Company in respect of any expenses incurred by them on behalf of the Company and such proportion of expenses that may be incurred by them partly on behalf of the Company and partly on behalf of themselves and/or some other company, concern or person as the Directors of the Company shall determine to be or to have been incurred on behalf of the Company. Without prejudice to the generality of the foregoing, the Managing Agents shall be entitled to recover from the Company, the remuneration (whether by way of salary, commission, bonus, gratuity, compensation, allowance or otherwise) provident and superannuation fund contributions and expenses payable to or in respect of all persons employed by them solely in connection with the Company's business and such proportion of the remuneration contributions and expenses, if any, of any persons employed by the Managing Agents partly in connection with the Company's business and partly in connection with any other business as the Directors of the Company may from time to time otherwise determine. Provided always that neither the Company nor the Managing Agents shall without the previous sanction of the Central Government (and then only subject to the provisions of Sections 198, 387 and 388 of the Companies Act, 1956) be entitled to appoint or employ any individual as a Manager of the Company within the meaning of the Companies Act, 1956."

(iii) *(As an Ordinary Resolution)*—"That, as provided in Clause 9 of the said draft Agreement referred to in the foregoing Resolution No. 5(i), Kilburn & Co. Private Ltd. and any associate or associates of theirs (as defined in sub-section (5) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries and Treasurers, Manager, Agent, Secretary or Selling or Buying Agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

(iv) *(As a Special Resolution)*—"That, as provided in Clause 12 of the said draft Agreement referred to in the foregoing Resolution No. 5(i) Kilburn & Co. Private Ltd. be and are hereby authorised to provide the Company with suitable office accommodation at Calcutta and also, if so required by the Company, at any other place or places in which Kilburn & Co. Private Ltd. may be able to provide such accommodation, and the Company shall pay to Kilburn & Co. Private Ltd. such portion of the rent and outgoings payable by Kilburn & Co. Private Ltd. as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided."

(v) *(As a Special Resolution)*—"That the Articles of Association of the Company be altered in manner following :—

The first sentence of Article 118 shall be deleted and the following substituted therefor :

"With effect from the 1st January, 1957, and unless otherwise determined by the Company in General Meeting, each Director shall be entitled to receive out of the funds of the Company for his services in attending meetings of the Board, a fee of Rs. 100/- per meeting of the Board attended by him."

The Share Transfer Books of the Company will be closed from 9th to 20th December, 1957, both days inclusive.

By Order of the Board.

By Order of the Board,

I. A. MACPHERSON,
Agent.

VICTORIA HOUSE,
Calcutta, 26th November, 1957.

THE NEW TERAI ASSOCIATION, LTD.

NOTICE.

NOTICE is hereby given that an Annual General Meeting of the Members of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, the 20th December, 1957, at 3-40 p.m., for the following purposes:—

AGENDA.

(1) To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December, 1956, and the Balance Sheet as at that date.

(2) To declare a Dividend.

(3) To elect a Director.

(4) To appoint Auditors and fix their remuneration.

(5) **As Special Business.**

To consider and, if thought fit, to pass, with or without modification, the following resolutions, namely:—

(i) *(As an Ordinary Resolution).*—"That, as from the 1st day of April, 1956, Kilburn & Co. Private Ltd., the Managing Agents of the Company, shall hold such office upon the terms and subject to the conditions contained in the draft Agreement submitted to this meeting and for the purposes of identification signed by the Chairman thereof and that, accordingly, the Directors be and they are hereby authorised to enter into an Agreement with Kilburn & Co. Private Ltd. in terms of the said draft which has been approved by the Central Government in conformity with the provisions of Section 329 of the Companies Act, 1956."

(ii) *(As a Special Resolution).*—That the Articles of Association of the Company be altered in manner following:—

Article 134 shall be deleted and the following two new Articles 134A and 134B substituted therefor:—

"134A. Subject to the provisions of Sections 198 and 348 of the Companies Act, 1956, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2(17) of the Companies Act, 1956) commencing after the 1st day of April, 1956, or in respect of any part of a financial year;

(a) A sum of, or, in respect of any period of less than a year, calculated at the rate of Rs. 20,000/- per annum, and

(b) Such further sum, if any, as together with the said sum of Rs. 20,000/- shall make up an amount equal to 10 per cent. of the net profits of the Company for such financial year or part thereof determined in accordance with the provisions of Sections 349 and 350 of the Companies Act, 1956.

The said sum of Rs. 20,000/- payable under (a) above shall be paid by the Company by equal monthly instalments payable on the last of each month. In the event of the Company having no profits or its profits being inadequate in any financial year then to the extent that the amount paid to the Managing Agents under (a) above together with the remuneration paid to Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rs. 20,000/- the remuneration payable under (a) above shall abate and be repayable to the Company accordingly.

The further sum, if any, payable under (b) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in general meeting.

In respect of the Company's financial year ending on the 31st day of December, 1956, the Managing Agents shall, subject to the provisions of Section 198 of the Companies Act, 1956, if applicable, receive remuneration calculated in the manner provided in the Agreement dated the 5th December, 1947, save that the Managing Agents shall only be entitled to receive the office allowance payable to them under the Agreement dated the 5th December, 1947, upto and including the 31st day of March, 1956.

"134B. The remuneration payable under Article 134A shall not be regarded as in any manner or to any extent intended to reimburse the Managing Agents in respect of any expenses incurred or to be incurred by them on behalf of the Company and the Managing Agents, in addition to receiving such remuneration, shall be entitled to be reimbursed by the Company in respect of any expenses incurred by them on behalf of the Company and such proportion of expenses that may be incurred by them partly on behalf of the Company and partly on behalf of themselves and/or some other company, concern or person as the Directors of the Company shall determine to be or to have been incurred on behalf of the Company. Without prejudice to the generality of the foregoing, the Managing Agents shall be entitled to recover from the Company, the remuneration (whether by way of salary, commission, bonus, gratuity, compensation, allowance or otherwise) provident and superannuation fund contributions and expenses payable to or in respect of all persons employed by them solely in connection with the Company's business and such proportion of the remuneration contributions and expenses, if any, of any persons employed by the Managing Agents partly in connection with the Company's business and partly in connection with any other business as the Directors of the Company may from time to time otherwise determine. Provided always that neither the Company nor the Managing Agents shall without the previous sanction of the Central Government (and then only subject to the provisions of Sections 198, 387 and 388 of the Companies Act, 1956) be entitled to appoint or employ any individual as a Manager of the Company within the meaning of the Companies Act, 1956."

(iii) *(As an Ordinary Resolution)*—"That, as provided in Clause 9 of the said draft Agreement referred to in the foregoing Resolution No. 5(i), Kilburn & Co. Private Ltd. and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries and Treasurers, Manager, Agent, Secretary or Selling or Buying Agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

(iv) *(As a Special Resolution)*—"That, as provided in Clause 12 of the said draft Agreement referred to in the foregoing Resolution No. 5(i) Kilburn & Co. Private Ltd. be and are hereby authorised to provide the Company with suitable office accommodation at Calcutta and also, if so required by the Company, at any other place or places in which Kilburn & Co. Private Ltd. may be able to provide such accommodation, and the Company shall pay to Kilburn & Co. Private Ltd. such portion of the rent and outgoings payable by Kilburn & Co. Private Ltd. as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided."

(v) *(As a Special Resolution)*—That the Articles of Association of the Company be altered in manner following:—

The first Sub-clause of Article 115 shall be deleted and the following substituted therefor:

"With effect from the 1st January, 1957, and unless otherwise determined by the Company in General Meeting, each Director shall be entitled to receive out of the funds of the Company for his services in attending meetings of the Board, a fee of Rs. 100/- per meeting of the Board attended by him."

The Share Transfer Books of the Company will be closed from 9th to 20th December, 1957, both days inclusive.

By Order of the Board.

NOTICE.

NOTICE is hereby given that an Annual General Meeting of the Members of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, the 20th December, 1957 at 4-30 p.m., for the following purposes:—

AGENDA.

(1) To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December, 1956, and the Balance Sheet as at that date.

(2) To elect a Director.

(3) To appoint Auditors and fix their remuneration.

(4) **As Special Business.**

To consider and, if thought fit, to pass, with or without modification, the following resolutions, namely:—

(i) *(As an Ordinary Resolution).*—"That, as from the 1st day of April, 1956, Kilburn & Co. Private Ltd., the Managing Agents of the Company, shall hold such office upon the terms and subject to the conditions contained in the draft Agreement submitted to this meeting and for the purposes of identification signed by the Chairman thereof and that, accordingly, the Directors be and they are hereby authorised to enter into an Agreement with Kilburn & Co. Private Ltd. in terms of the said draft which has been approved by the Central Government in conformity with the provisions of Section 329 of the Companies Act, 1956."

(ii) *(As a Special Resolution).*—That the Articles of Association of the Company be altered in manner following:—

The second sentence of Article 133 and Article 135 shall be deleted and the following two new Articles 135A and 135B substituted in place of Article 135:

"135A. Subject to the provisions of Sections 198 and 348 of the Companies Act, 1956, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2(17) of the Companies Act, 1956) commencing after the 1st day of April, 1956, or in respect of any part of a financial year;

(a) A sum of, or in respect of any period of less than a year, calculated at the rate of Rs. 18,000/- per annum, and

(b) Such further sum, if any, as together with the said sum of Rs. 18,000/- shall make up an amount equal to 10 per cent. of the net profits of the Company for such financial year or part thereof determined in accordance with the provisions of Section 349 and 350 of the Companies Act, 1956.

The said sum of Rs. 18,000/- payable under (a) above shall be paid by the Company by equal monthly instalments payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year then to the extent that the amount paid to the Managing Agents under (a) above together with the remuneration paid to Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rs. 18,000/- the remuneration payable under (a) above shall abate and be repayable to the Company accordingly.

The further sum, if any, payable under (b) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in general meeting.

In respect of the Company's financial year ending on the 31st day of December, 1956, the Managing Agents shall, subject to the provisions of Section 198 of the Companies Act, 1956, if applicable, receive remuneration calculated in the manner provided in the Agreement dated the 5th December, 1947, save that the Managing Agents shall only be entitled to receive the office allowance payable to them under the Agreement dated the 5th December, 1947, upto and including the 31st day of March, 1956.

"135B. The remuneration payable under Article 135A shall not be regarded as in any manner or to any extent intended to reimburse the Managing Agents in respect of any expenses incurred or to be incurred by them on behalf of the Company and the Managing Agents, in addition to receiving such remuneration, shall be entitled to be reimbursed by the Company in respect of any expenses incurred by them on behalf of the Company and such proportion of expenses that may be incurred by them partly on behalf of the Company and partly on behalf of themselves and/or some other company, concern or person as the Directors of the Company shall determine to be or to have been incurred on behalf of the Company. Without prejudice to the generality of the foregoing, the Managing Agents shall be entitled to recover from the Company, the remuneration (whether by way of salary, commission, bonus, gratuity, compensation, allowance or otherwise) provident and superannuation fund contributions and expenses payable to or in respect of all persons employed by them solely in connection with the Company's business and such proportion of the remuneration contributions and expenses, if any, of any persons employed by the Managing Agents partly in connection with the Company's business and partly in connection with any other business as the Directors of the Company may from time to time otherwise determine. Provided always that neither the Company nor the Managing Agents shall without the previous sanction of the Central Government (and then only subject to the provisions of Sections 198, 387 and 388 of the Companies Act, 1956) be entitled to appoint or employ any individual as a Manager of the Company within the meaning of the Companies Act, 1956."

(iii) *(As an Ordinary Resolution)*—"That, as provided in Clause 9 of the said draft Agreement referred to in the foregoing Resolution No. 4(i), Kilburn & Co. Private Ltd. and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries and Treasurers, Manager, Agent, Secretary or Selling or Buying Agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

(iv) *(As a Special Resolution)*—"That, as provided in Clause 12 of the said draft Agreement referred to in the foregoing Resolution No. 4(i), Kilburn & Co. Private Ltd. be and are hereby authorised to provide the Company with suitable office accommodation at Calcutta and also, if so required by the Company, at any other place or places in which Kilburn & Co. Private Ltd. may be able to provide such accommodation, and the Company shall pay to Kilburn & Co. Private Ltd. such portion of the rent and outgoings payable by Kilburn & Co. Private Ltd as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided."

(v) *(As a Special Resolution)*—That the Articles of Association of the Company be altered in manner following:—

The first sentence of Article 116 shall be deleted and the following substituted therefor:

"With effect from the 1st January, 1957, and unless otherwise determined by the Company in General Meeting, each Director shall be entitled to receive out of the funds of the Company for his services in attending meetings of the Board, a fee of Rs. 100/- per meeting of the Board attended by him."

By Order of the Board.

PAINT MANUFACTURERS SET UP PANEL FOR EXPORT PRODUCTION

The Indian Paint Manufacturers Association has constituted a panel with Mr. P. C. Chanda as convenor to step up the export of paints from India. The export of Indian paints and colours has been increasing in recent years. From Rs. 24 lakhs in 1954-55, the value of these exports went up to Rs. 27 lakhs in 1955-56 and to Rs. 35 lakhs in 1956-57. Indian paints are exported mostly to countries of south-east Asia and west Asia, such as Burma, Pakistan, Ceylon, Malaya, Kuwait, Nepal, Bahrein, Aden, Saudi Arabia. The principal items which are now being exported are earth colours, synthetic enamels, ready-mixed paints, varnish paints, synthetic varnishes, natural resin, varnishes and others.

BANKS

H indicates that Share capital is half paid. O. C. and Dd indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

COAL COMPANIES

O. Po. F. and Dd. indicate Ordinary Preferred Ordinary Founders and Deferred shares respectively. 'P' next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed" column indicate the month of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TAX PROBLEMS OF FOREIGN ENTERPRISE

A REALISTIC STUDY

TO be fair, attractive and economically useful, a country's attitude towards taxing private foreign capital, and the nationals who go with it, must be unimpeded by any suggestion of jealousy, prejudice, sectional self-interest, or just downright ignorance. This fact has, of course, always been accepted in high official circles in India, but only lately has the logic of it begun to seep down to the less enlightened layers of public and business opinion. The current shortage of foreign exchange may go some way to supplying the reason. That is why the study, *Taxation and Foreign Investment*, published recently by the National Council of Applied Economic Research, New Delhi, has appeared at an appropriate time. Its admirably sensible conclusions should fall on a public ear which has not been so receptive at any time since Independence—possibly even before. They will also repay study in other countries faced with similar problems. If only half the recommendations made could be accepted as official policy and embodied in the country's tax structure, the consequences for India's economic development would probably be out of all proportion to the concessions involved. Certainly the long-term benefits, and some of the more immediate as well, would outweigh any loss of revenue which might be incurred. When private foreign capital is needed by a country, it is only logical that its tax policies should be shaped accordingly. This publication suggests how that might be done.

The most prominent feature of the study is its realism. It takes no account of the principle that in any tax system there should be no discrimination in favour of, or against, anything or anybody—foreign and otherwise. It concerns itself with the fact that: "Foreign investors and foreign companies.....consider(ed) some of the Indian tax provisions to be significant deterrents to further foreign investment". And it goes on to analyse why that should be so and "what modifications might help in attracting more private foreign capital". It concerns itself chiefly with the *newer kind* of investment—that is, the type which comes in the shape of branches and subsidiaries of foreign firms. But its conclusions might equally be applied to the resident variety which, if it no longer has the choice of coming to India or not, is still in a position to decide whether to stay. Its emphasis on the psychological effect of India's taxes, quite apart from their material results, is a fortunate one. The new wealth and expenditure levies, and the compulsory reserve deposit provisions, are dealt with from the point of view that "it would be unrealistic to ignore their psychological impact". This is perhaps the ideal answer to those who argue that because these taxes are designed merely "to reduce inequalities of wealth and to discourage conspicuous consumption" therefore their effect on foreign capital can be ignored. In fact, from first to last the study provides a stimulating challenge to those attitudes towards the taxing of foreign capital which are based exclusively on the theoretical approach to what is in fact a most difficult psychological problem.

The pride of place given to the question of personal taxation, whether intended or not, is a commendable choice because, in the final analysis, the decision of a foreign firm whether or not to open a branch or subsidiary in India is likely to be made chiefly on the basis of investment yield. Other considerations, such as the prospect of losing a market due to import cuts, do play a part: it would also be foolish to ignore political factors. But essentially the fact remains that a company's choice tends to be based largely on statistical considerations whereas that of an individual may include a host of personal impressions about comparative living standards which are difficult to provide for in tax legislation designed exclusively to deal with indigenous needs. The study's verdict that, "north American and European personnel....especially in remote and unfamiliar areas....expect net remuneration of at least 20 to 25 percent above that which they can get in their home countries" is probably a fair one. When opportunities for employment in countries with lower taxes, higher standards of living and less exacting climates, are as abundant as they are today, there is little point in sticking to ideas about personal taxation based on the kind of resident foreigner who is fast passing from the Indian scene. The relevant question today is whether India can compete against the attractions of other countries, or even those of staying at home, in a world hungry for all kinds of technical and managerial specialists. The study, although accepting that, "India is now (after the May 1957 Budget) in a much better position to stand tax-rate comparison with other countries", nevertheless points out that, "the burden of taxation remains higher than that in important capital-exporting countries such as the United Kingdom, the U.S.A., Canada and West Germany in the range of incomes in which most of the salaries of foreign management lie".

It is against this discouraging background that the study's recommendations should be considered. These include the broadening of the term foreign "technician" to include essential management personnel, and the removal of the present restrictions on previous residents. The recommendations covering perquisites, personal reliefs and exemptions for foreign personnel would require only slight adjustments in the present tax structure, so far has the policy of liberalisation already been carried in recent Budgets. What problems do remain are largely in the nature of irritants—the regulations covering applications for free leave passages are good examples—and the loss of revenue involved would be a small price to pay for the subsequent improvement in the psychological climate. The views put forward on the taxation of non-resident individuals should repay close study, while those on the treatment of professional partnerships are the most liberal yet voiced in this country, except, of course, among the foreign partners themselves. Its point that, "foreign investors . . . require the services of foreign professional firms" is one which appears to have been ignored in the new regulations governing the membership of stock exchanges in this country. Finally, for those who are sceptical about the value of discriminating in favour of foreign personnel already resident in India, there is the sound advice that "unwillingness to continue to manage foreign investment can result in disinvestment of foreign capital". The Council can be congratulated on having produced a model of balanced and reasoned analysis where the tax problems of foreign personnel are concerned.

The study's findings and recommendations on the effect of corporate taxation on foreign business are less likely to provoke controversy than those concerning personal levies. The reason for this is that discrimination is unavoidable in all countries taxing foreign business, although in India's case, so the study shows, it works against rather than in favour at the present time. It is, for instance, pointless to expect capital to move into a country which permits foreign business one of the lowest percentages of retained to original profits of any in the world. The conclusion of bilateral double-taxation agreements, to which attention is at present being given, should help to increase this percentage; the study shows statistically how urgently relief is needed. Also dealt with are the effects of Section 23A of the Finance Act on foreign concerns, the taxation of bonus issues—a measure rejected by both the Royal Commission in Britain and the Taxation Enquiry Commission in India—and the compulsory reserve deposit provisions. It refers to the latter as an example of a measure taken to deal with purely local conditions, which is likely to be discouraging when seen from abroad; its advice is that foreign companies should be exempt. As is pointed out, it is rarely that their funds are used for stock market speculation. The wealth tax is another imposition which discourages foreign investors, if only because no other important capital importing or exporting country has adopted it. Again, the implication is that foreign companies should be excluded from the provisions. One recommendation which would benefit Indian as well as foreign investors is that the basis for dividend super-tax should be the total capital used in the business and not simply the paid-up capital.

If the general wisdom of the study's recommendations is accepted, there remain two important points to be pondered. The first is the purely economic consideration whether or not the administrative complications involved will be worth while compared with the benefits expected. This is not so easy to dispose of as may at first sight appear. Formidable problems of definition are likely to arise, apart from the organisational ones of having two tax systems running side by side. The second is the much more tricky problem of discrimination, especially in personal taxation. Once again, this is likely to be more troublesome than it appears to be. There is, for example, the wholly valid principle that discrimination in personal taxes should never be permitted under any circumstances. It is true also that foreign business in this country is just as much opposed to any violation of this principle as are the Indian tax authorities themselves. But relieved of its theoretical and emotional overtones, the problem eventually boils down to the question whether or not this country considers private foreign capital vital to its development and what sacrifices it is prepared to make to get it. It will not be easy to formulate policy with the degree of realism attained in this study. But the problems are real enough, and it should be possible, in the light of these recommendations and with the exercise of a little imagination, to handle them with rather more flexibility than exists at the moment.

CARGOES ALONG THE COAST

THE shortage of transport has been a major difficulty hampering the progress of the second five year plan. But in spite of the increasing attention it has been given over the past 1½ years, it does not seem that the expansion of facilities is keeping pace with the growth in needs. The inadequacy of the railways in coping with the traffic they are offered remains glaring, and although the Railway Minister is apt periodically to reassure himself that he is about to be given more money than the planners originally promised, there is no definite evidence yet that this is actually the case. Road transport operators have been treated to a plethora of soothing resolutions from verbose conferences, some of which have urged the immediate and bold purchase of thousands of lorries, without bothering about where the money is to come from or whether their running is likely to be economic. Coastal shipowners, meanwhile, have been waiting for conditions in which their working might be made less unprofitable—by their being given some of the traffic which the railways cannot carry.

The report of the Rail-Sea Co-ordination Committee offers some useful indications about how this might be done. Not many of the recommendations which the Committee makes can, perhaps, be considered notable for their originality. One—concerning the increase in coastal freight rates—has long been sought by shipowners and has already been accepted by the Government. Many of the others, such as those concerning the expansion of tonnage, echo old pleas, but are in danger of being rendered partially useless by the shortage of finance, and especially of foreign exchange. This shortage might to some extent be overcome by deferred payment arrangements of the sort our New Delhi correspondent outlines on a later page. But it seems extremely unlikely that such arrangements will be able to cover entirely the shortfall in the shipping targets fixed in the second five year plan, unless the United States can be persuaded to make major releases from her mothball fleet.

For many years, the main problem of coastal shipowners has been their inability to attract enough cargo. The main reason why they have not been able to do this is because the costs of coastal shipping have been considerably higher than those of overland transport; this has been particularly true of coal movements to areas lying

near the west coast of India. But inadequacy of traffic is much less of a problem now than it was. The demand for transport facilities has increased rapidly, but the railways have not been able to cope with it in spite of their favoured position. The trade in such commodities as coal, salt and cement has, therefore, been increasingly diverted to coastal vessels. The Committee thinks that the diversion will continue, but will need to be encouraged; it is on the basis of this expectation that it recommends urgent measures aimed at achieving the second plan target of 412,000 gross registered tons for the coastal and adjacent trades. With a tonnage of this order, it is estimated that it will be possible to carry four million tons of cargo in the purely coastal trade and one million tons in the adjacent trade. According to reports, the Committee has recommended that the diversion of private parties' traffic to the sea route should not be enforced, except in the case of coal. Most of the other traffic, apparently, should be enticed or encouraged, while promotional methods are used to increase the total cargo offered for coastal transport.

* * * *

It is to be hoped that these promotional methods will not consist merely of issuing exhortations from time to time. Yet, summaries of the Committee's findings which have appeared so far suggest that not enough attention has been given to the practical and concrete measures necessary to make coastal traffic more attractive. The major handicap of this form of transport has been its dearness, especially in comparison with the railways. Railway freight rates have been rising steadily in recent years, except in the case of a few selected commodities, and a further substantial rise seems likely soon. But by a decision announced some months ago, which was based on the Rail-Sea Co-ordination Committee's recommendations, coastal freight rates too have gone up by 15 percent (except in the case of salt). The rise in the latter can perhaps be justified on the grounds that coastal shipping operations have not been particularly profitable and that the companies need money for expansion. But ultimately the justification for a particular level of freights will have to be based on whether they are economic and competitive in relation to other modes of transport. There is no reason why they should not be, because many routes and a number of items of traffic are well suited for coastal shipping. In order that more routes and more items of traffic become suitable, strenuous efforts to improve the working of ports, major as well as minor, will be necessary. Indeed, many of the competitive handicaps which coastal vessels have suffered in attracting the traffic which lies around waiting for railway facilities, can be ascribed directly to the inefficiency and inadequacy of the ports.

* * * *

The notorious reputation which Calcutta, for instance, has earned has not only undermined India's mineral export trade; it has also been responsible for starving consumers in the southern and western areas of the country of the coal they might well have got by using coastal transport. Vague considerations of national prestige might suggest that the acquisition of more ships deserves first priority, but it has often been forgotten that the usefulness of these ships suffers greatly if they have to lie around for days waiting for loading and discharging facilities. Much of the operating life of the ships India already possesses, for coastal as well as overseas transport, is simply wasted by their being turned into "floating warehouses" in ports like Calcutta and Visakhapatnam. Greater economy and efficiency in port facilities has been emphasised by the Rail-Sea Co-ordination Committee as necessary for the healthy expansion of coastal transport. The Government might well consider whether it is this aspect of the problem, rather than acquiring new tonnage, that deserves the higher priority.

COAL POLICY IN INDIA

By

Andrew Farquhar

This booklet consists of reprints of articles written by Mr. Andrew Farquhar, former Coal Adviser to the Tata Iron and Steel Co., Ltd., which have appeared in *Capital* in recent years. As expert analyses of India's coal problems and policies, they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

INTERNATIONAL IMPACT OF RESTRICTIVE POLICIES

THE TEST OF CAPITALISM

AFTER Mr. Peter Thorneycroft, Britain's Chancellor of the Exchequer, had announced details of the Government's revised capital plans, the London *Financial Times* remarked: "The only obviously dynamic element in the economy—the investment programmes of the nationalised industries—is now a good deal less dynamic than it was before." The investment plans of private industry have been faltering in recent months, especially since the measures to avert (or overcome) a crisis were taken in September. The increase in consumption that seemed to be developing earlier in the year has not been fully maintained. It is difficult to avoid the conclusion that the effect, if not the intention, of the Government's whole policy is restrictive. This intention, apparently, was to restrain, perhaps temporarily to stop, the economic expansion that was upsetting sterling; but in the private sector of the economy this expansion was already stopping itself and probably going into reverse, so that by stopping expansion in the public sector the Government risks a recession in the whole economy.

On the same day as Mr. Thorneycroft made his statement to Parliament on the investment programme and other economic affairs, there appeared in *The Times* a letter signed by a dozen eminent economists of Oxford and Cambridge, headed by Professor R. F. Kahn. They pointed out that manufacturing production had been virtually stationary in both the United States and the United Kingdom for nearly two years, and they foresaw a distinct danger that it would decline in the months ahead in those countries and level off in other countries "as a result of the restrictive monetary policies being so widely pursued". When Mr. Thorneycroft remarked "we are by no means at the end of our resources of either monetary or fiscal policy" he was deliberately warning the community at home—and reassuring those interested in sterling abroad—that the Government would apply the brake still harder if inflation persisted. He did not ignore the current talk of recession, but he rejected it as a factor in current policy. "A falling off in demand abroad would not be an excuse for inflation in the United Kingdom; indeed, rather the reverse."

The plain fact is that British policy is concerned with the British problem, as American policy has been concerned with the American problem; and to some observers it appears that British and American statements that no recession is in prospect are merely intended to justify the one-sided attitudes. How can these policies be reconciled with the warnings of the above-mentioned economists? "It is not always realised", these economists continued, "that a comparatively small fall in commodity prices is equivalent in its effects to a cut of billions of dollars in aid to underdeveloped countries." It is not surprising, they concluded, that such countries turn more to Russia as a potential trading partner; and "the spectacle of industrial production stagnating in the West while it forges ahead in the East could create an unfortunate impression in those countries not firmly committed to either camp."

* * * *

There is no evidence that these possible political consequences of restrictive economic policies have been duly considered by the Governments of America and Europe. It might be thought that the political argument would appeal especially to America, whose foreign aid has avowedly had some political as well as humanitarian intent. Britain has also a strong economic interest in the problem of declining commodity values. At the beginning of November the British *Board of Trade Journal* discussed the export earnings of the overseas sterling countries. It could point to the satisfactory fact that the earnings, having been generally increasing since 1954, were still increasing in the first half of 1957; but it had to point out also that a large part of the increase in that recent period was attributable to a single commodity, wool, while aggregate earnings from exports of metals were reduced, despite substantial increases in quantities exported. Metals, after their long decline, have recently resisted the downward trend of prices, but wool has been distinctly weaker than it was earlier in the year. In general, the journal observed, the downward trend of values "has now begun to have a widespread effect on sterling earnings".

It can be argued that the weakness of commodities has been caused by over-production and that, therefore, the consuming countries are not to blame for it. But surplus production must be viewed in relation to levels of consumption that are lower than anticipated, and restrictive policies in the manufacturing countries are obviously a factor keeping down consumption. It would be absurd to blame one country for the downward pressure on prices; still more absurd to blame Britain's latest restraints, which were imposed when prices had already fallen a long way. But it must be said that insofar as these restraints are depressing prices further they are defeating their own purpose—reducing the export earnings of the other sterling countries and so weakening sterling. Another objection to the restrictive policy, so far as Britain is concerned, is that it attacks investment rather than consumption and so weakens the foundations on which economic expansion in general can be resumed. It is always politically easier to cut investment than to cut consumption, because the benefits of investment are in the future whereas consumption is in the present. But Britain, of all countries, cannot afford to relax while other countries, especially Germany, are devoting a larger proportion of their national product to investment. Dr. T. Barna, a leading British statistician, has shown in an article published in the *B. I. Review* that in the past three years gross fixed investment has averaged 15-16 percent of the national product in the U.K. but 21-23 percent of the national product in West Germany.

These objections do not form a cogent argument against restraints that can, certainly, help to overcome the insidious enemy, inflation. The criticisms are against the governments' easy acceptance of restriction *as a policy*, whose international effects are cumulative. The urge to expand seems at present lacking.

CURRENT COIN

Central Government Bonds.—To take advantage of the demand from institutional investors and the market generally for short-term securities, the Central Government has decided to issue short-term bonds for Rs. 30 crores which carry 3¼ percent interest and are redeemable in 1962. The Reserve Bank will be selling the bonds on tap. Their price will be fixed by the Bank in the usual course. The market guess is that it will probably be on the basis of the current market quotation for the 3¼ percent 1962 Loan, which is Rs. 97.70. At this price, the yield works out to 3.97 percent, including redemption, and 3.32 percent, excluding redemption, which is not unattractive. There is, however, a feeling that the timing of the issue is not appropriate. Three months ago, when the 3 percent 1957 Loan was repaid and a large amount of cash was seeking investment in short-term securities, the response to the bond issue might have been better. Conditions now, however, are not wholly unfavourable, and the demand in the market for short-dated securities should make it easier for the Reserve Bank to sell the bonds. A favourable sign is that the usual seasonal stringency in the money market is not yet severe. A number of factors explain this. The drastic curtilment of imports: the failure of crops in several parts of eastern India due to a prolonged drought: and the fact that most State Governments have not raised loans, are among these factors. The liquidity of the banks too has recently improved. Some commentators, however, feel that the resumption of Treasury bill sales to the public would perhaps have been more appropriate, because banks might hesitate before locking up their funds in the new bonds with the busy season approaching.

Plea for Tramp Shipping.—The chairman of the Great Eastern Shipping Company Ltd., Mr. A. H. Bhiwandiwalla, in his address at the latest annual general meeting (a fuller version appears on a later page) makes out an interesting case why Indian shipping companies engaged in the coastal trade should go in for overseas tramp services. He says that the industry and the country will benefit—firstly, because more foreign exchange will be earned, and, secondly, because it will thus become possible to acquire new ships. Great Eastern has employed some of its bigger ships as tramps in the overseas trade during 1956-57, and has thereby earned much more than what it might normally have received through only coastal operations. "In one year and nine months the net foreign exchange earnings, after deducting charter hire on coastal charters and disbursements at foreign ports, amounted to almost £500,000." When the expansion of Indian shipping according to the plan target of 900,000 g.r.t. is being held up by the shortage of foreign exchange, Mr. Bhiwandiwalla stresses that the Government must overcome its "prejudices" and allow all companies

complete freedom of operation so that external earnings can be stepped up by more tramping and time chartering operations. The present time is opportune for acquiring ships, as their price in the world market has declined, and his company proposes to acquire two coasters with the foreign exchange earned. It has a commitment with the Government, he says, "under which two coasters must be acquired in the near future to replace the two ships that were taken out of the coast for overseas tramping nearly two years ago. Under this arrangement, your company has earned almost £500,000 as marginal foreign exchange. This is a contribution in a unique way which would enable us not only to cover the cost of acquisition of the two coasters in foreign exchange but also to establish permanently an exchange-earning nucleus of tramp ships by providing their permanent replacement in the coastal trade." The prospects for coastal shipping are considered to be good, and the Rail-Sea Co-ordination Committee has stressed the need for expansion. Mr. Bhiwandiwalla complains that discrimination has been shown in the allotment of Government cargo between the Government-owned shipping corporations and private operators. He refers to an instance when one of the corporations brought railway equipment from Japan by chartering a foreign ship, although a Great Eastern ship was available to carry the equipment back from that country. "I am sure," he adds, "the Government's aim is to foster the development of Indian shipping and any discrimination between Government corporations and shipping companies in the private sector is bound to retard the development of Indian shipping."

* * * *

South Indian Textile Crisis.—The reference to the present crisis in the textile industry, made last week at Coimbatore by the president of the Ahmedabad Millowners Association, is a reminder that the present slow demand for yarn and cloth is affecting all units. The main difference between the Ahmedabad and Coimbatore mills is not the former's reliance on imported cotton but the existence and activities of a strong labour union, according to Mr. Arvindbhai Narottam Bhai. The need for renovation of plant may not exist in many mills, but the continuous addition to spinning capacity has created a problem. According to recent trade reports, export demand is poor and yarn stocks are increasing in the face of limited buying at home. Whether the abolition of the rebate on handloom cloth will lead to a further contraction of demand remains to be seen. It is said that unsold stocks in Madura are valued at Rs. 1 crore. The textile industry's prospects here are rated bleak, to judge by the fall in mill shares over the last fortnight. Madura is now quoting Rs. 35.25 only and all mill shares have weakened in sympathy. Whether new issues to shareholders can succeed is not the point; it is whether the mills will be able to keep up the dividends for 1957. When the shares of composite mills like Mettur are steady even in a sagging market, there is no doubt about the fall in textile scrip here in the wake of Bombay.

* * * *

Slump in Hemp.—The most important problem facing the hemp trade is the slump in prices resulting from the decline in external demand. Domestic consumption is negligible, and the trade depends almost wholly on exports for its prosperity. A number of substitutes have taken the place of hemp in foreign countries. Speaking at the annual general meeting of the Indian Hemp Association, Mr. G. S. Poddar, president, has said that the maintenance of high standards by the Agmark authorities, an irregular and inadequate supply of wagons, excessive freight rates and the heavy burden of taxation are among the important factors which are responsible for the slump in the trade. The Export Promotion Committee has not given particular attention to hemp problems, so Mr. Poddar complains: "The earnings of foreign exchange derived by exporting hemp may not be as large as those received from the export of tea, jute goods or cotton textiles, but that, surely, is no justification why the Government should not give the hemp trade the attention it deserves." Exports now amount to about Rs. 2 crores a year but the figure can be increased to Rs. 4 crores or Rs. 5 crores if suitable facilities are given. The Export Promotion Committee has suggested that concessional railway freights for export consignments can prove helpful. Mr. Poddar suggests that the concession should be granted to hemp and an export promotion council formed. Referring to the need for research, he says that at home the fibre is used at present only to a small extent for paper making. But the roots and stalks can serve as good fertilisers for several crops. There is also a need for the scientific cultivation of sann hemp in order to improve its quality. The national laboratories should, therefore, use their resources for intensive research work on the cultivation and the industrial utilisation of the fibre.
