Industrial Progress in the South.—Industrial progress in the south in recent years has been considerable and private enterprise has contributed greatly to it. The Central Commerce Minister, Mr. N. Kanungo, addressing the Andhra Chamber of Commerce, has said that although it is claimed that Uttar Pradesh and Madhya Pradesh have achieved more because of the Central Government's interest, industry in the south has flourished, judging by the increase in capacity installed and capital invested. The birth of a heavy chemical industry in Tirunelvelli and proposals for new cement plants are among the achievements of the private sector. A rubber tyre factory is to be opened near Madras city by Dunlops next year, and a small factory will be started near Tiruvothiyur for making miscellaneous rubber goods. Although the manufacture of electrical goods is still concentrated near Bangalore, the making of meters has been launched successfully in Madras. As the report of the Textool Company shows, plans for making pig iron from Salem ore are progressing. The assembling of railway wagons by Binny's new plant will help promote the growth of the engineering industry, as also will the authorised expansion of the Indian Steel Rolling Mills in Negapatam. Mr. Kanungo's appraisal of progress in the south is supported also by the progress of the bicycle industry, which is thinking of further expansion.

Hind Mazdoor Demands.—Liberalisation of the Employees State Insurance Scheme is among the seven principal demands formulated by the Hind Mazdoor Sabha in U.P. The organisation has decided to start an "intensive and planned campaign" throughout the State shortly to press these demands. It is asking for a 25 percent increase in all current wages; the supply of major items of consumption to the working class at reduced rates; provident fund benefits for all industrial workers; recognition of one trade union in every industrial unit in a local area as the sole bargaining agent; and compensation to all suspended workers whose industrial disputes are finally decided within three months. A three-day conference of the Sabha which has endorsed these demands has extended its approval to the proposed code of discipline in industry, but has urged "strong sanctions against defaulting employers." According to a Press note issued by the U.P. Government, 11 employers have been convicted for not complying with the provisions of the Employees State Insurance Scheme and decrees have been passed by civil courts against 23 for recovering the contributions due until September in the Kanpur

Coffee Marketing Outlook.—Coffee crop prospects this year have been affected by an irregular monsoon, and the question whether larger exports of up to 20,000 tons should be allowed will have to be weighed carefully. The chairman's statement to the Indian Coffee Board (reported more fully on another page) does not examine the efforts made by South American countries to stabilise prices by holding back supplies or the U.S. resolve to keep down prices. The trend in East African prices seems more significant for Indian coffee producers at present, and the failure of trial offerings to new markets in 1956-57 perhaps has a lesson for this country because export prices here are high. Many complain that a State-sponsored sales monopoly and high taxation are holding down internal consumption. While tea is fairly cheap for the domestic consumer (although fiscal levies are heavy), in the case of coffee home demand is restricted by the excise duty and sales tax. The removal of the export duty of Rs. 62-8 a cwt. has stimulated exports, but the fear that higher labour charges might push up coffee prices after March is implicit in the chairman's address. The growth in demand for Indian coffee from West Germany is encouraging. It is being asked, however, why there is a deliberate effort to keep down supplies for the home market in the face of increased demand in Mysore as well as Madras.

* * * *

The Value of Money.—In view of the varying opinions about the efficacy of Mr. Peter Thorneycroft's measures to fight inflation, it was apposite that an analysis entitled "The Decline in the Value of Money" should have been made by Professor R. G. D. Allen in his Stamp Memorial Lecture. Tracing the fall in the purchasing power of money in the United Kingdom since the war, which has averaged 4 percent to 5 percent a year, he distinguished three phases. There was first the 1946-48 price rise, "clearly of the demand-pull type", which tapered off into a period of relative stability between mid-1948 and the latter part of 1949. The second upward surge in prices, beginning in 1950, was also of the demand-pull type influenced by the devaluation of 1949 and the Korean crisis. That gave place to a relatively stable price level in the early months of 1953, which lasted until the middle of 1954. The third inflation phase, which began in the middle of 1954 and which has not yet ended is, in Professor Allen's view, different from its two predecessors. He points out that there was no sudden jump in 1954, tapering off later. It began with an upward drift in prices, gradually accelerating. In the view of this economist, it is not yet proved that the present inflation phase is of the cost-push type. Nor is he convinced that counter-measures through the Budget and the supply of money can be considered ineffective.

Britain Seeks Far East Trade.—The five-week visit which Mr. Erroll, Parliamentary Secretary to the Board of Trade, has paid to Burma, Hongkong and China, is only one of a number of moves now being initiated to improve British trade in Far East markets. It has recently been disclosed, for instance, that British industry is planning a series of trade and prestige exhibitions in five south-east Asian capitals to counter Japanese competition in the area. With the "active interest" of the Board of Trade, the exhibitions are being arranged by local committees in Singapore, Kuala Lumpur, Saigon, Bangkok and Rangoon. Backing for the series is threefold: from local representatives or agents, British manufacturers and the Government, through trade commissioners or embassy commercial officers. The governments of the countries concerned are to be represented on the committees. Though no definite programme has yet been drawn up, it is tentatively planned that the first exhibition, in the Raffles Institution in Singapore, will take place in August 1958, followed by Kuala Lumpur a month later, Saigon in December, Bangkok in February 1959, and Rangoon in March. At each of these the Board of Trade is providing, and buying space for an atomic energy exhibit. The exhibitions will last about eight days and cover 10,000 to 15,000 square feet, with British manufacturers' exhibits comprising products related to the specific development needs of the country concerned. About 30 firms have promised a £3,000 guarantee fund for the Singapore display and it is confidently hoped that space selling and admission charges will help to make it self-supporting. A similar result is hoped for in the case of the other exhibitions. Finally, it is understood that business leaders in Britain and in Hongkong are considering plans for a trade fair to display British goods to the Chinese in Peking. No decision has been reached on this project yet, and it might take as long as two years to prepare. But opinion is veering in favour of a Peking fair as the best way of breaking through the barriers separating Chinese and British business quarters.

* * * *

Man-made Fibres for Carpets.—The development of coarse denier crimped viscose staple and of other new fibres has contributed considerably to the growing demand for man-made fibres by carpet manufacturers, but the most important factor responsible for the rapid increase in consumption has been the introduction of the tufting process. Man-made fibres now play such an important rôle in carpet production that the Federation of British Carpet Manufacturers held a one-day conference recently to discuss some of the problems arising from recent developments. Much interesting and valuable information was made available as a result. While cheapness may be one of the reasons for using viscose staple in conventional carpets, such as the Wilton and Axminster types, Mr. J. A. Kirby, of Courtaulds Ltd., was anxious to emphasise at the conference that man-made fibres can also improve carpet quality. They can, for example, produce a richer pile with the cheaper fibre than would be possible with the more costly wool. Improvements in the quality of the carpet without extra cost were possible by blending nylon staple with wool and adding a certain percentage of "Fibrolane" to balance the extra cost of nylon. Examples of such blends are two-thirds "Fibrolane", one-sixth nylon and one-sixth wool, which is appreciably cheaper than all-wool, or 20 percent nylon, 40 percent wool and 40 percent "Fibrolane", which is slightly cheaper than all-wool. The cotton system lends itself easily to the spinning of carpet yarns, but traditional equipment is already being replaced in some of the mills by new machinery designed to cheapen the process. For example, roller and clear type card heads are now being made which are capable of processing 50 lbs to 80 lbs of fibre an hour, compared with 15 lbs to 20 lbs on the standard flat card. Another significant development is the introduction of machinery which spins direct from sliver at high spindle speeds on to very large packages.

* * * *

U.K. Textile Machinery Exports.—The British textile machinery industry is still doing a large export trade in spite of the difficulties it is experiencing in many of the countries which were formerly its most important overseas markets. Textiles are usually among the first manufactures adopted by countries which are in the early stages of their economic development, and new markets emerge from time to time for the machinery manufacturers. The broadening of the range of production in response to technological progress creates more scope for trade. In the nine months ended September, the value of British exports of textile machinery was £31.6 million—much the same as in the corresponding period of 1955, though about £3.4 million less than in that of 1956. The weight of the exports, however, at 1,030,000 cwt., was 207,000 cwt. less than one year previously and 190,000 cwt. less than two years previously. A continued decline in shipments to Russia, from 132,000 cwt. in the first nine months of 1955 to 67,000 cwt. last year and 32,000 cwt. this year, has been an important influence on the total volume of trade. India took only 214,000 cwt. in the first nine months of this year, compared with 309,000 cwt. in the corresponding period of last year.

NOTICE

With the weekly issue of CAPITAL which is to appear on 19th December, it is proposed to issue a supplement of approximately 148 pages, the Annual Review of Commerce, Trade and Industry. Besides essays on specific industries, such as jute, coal, tea and cotton textiles, the Review will contain exclusive articles by well-known authors. Mrs Ursula K. Hicks will write on the taxation policy appropriate to a developing economy; Mr A. K. Roy, Secretary to the Finance Ministry (Department of Revenue), on the position of foreign firms in the Indian tax structure; Mr Neil McInnes on the dependence of foreign investment on vigorous local enterprise; Dr I. S. Gulati on how taxes affect the demand for current resources; Mr B. V. Vagh on the expansion of road transport; and Mr P. C. Jain on the inflationary threat to the economy. Other articles will deal with sales tax anomalies; life insurance; price patterns; monetary trends; stock market jitters; agricultural progress; and community development programmes. The Review will be distributed free to all registered subscribers. Additional copies at Rs 5 each may be obtained from the Manager, Capital, at 5 Mission Row, Calcutta 1. Orders for extra copies should be placed early.

Grand Total Rs. 3,097.18.

MERCHANDISE MARKS

WE are very pleased to see that salutary punishment was meted out to Messrs. Upendra Nath Sett and Co., bazar dealers, carrying on business in Clive Street, on Monday last, by the Presidency Magistrate, Northern Division. It seems that these dealers resorted to the device of counterfeiting Gillingham's Portland cement labels, which are made of paper, and pasting them over barrels of Belgium cement, thus obliterating the tell-tale words, "made in Belgium," which are branded on the casks. The accused denied their guilt and endeavoured to set up a defence that the persons to whom they had sold the cement were the offending parties themselves. This defence, however, eventually completely broke down, and the accused were fined Rs. 500, and the whole of the cement bearing Gillingham's labels was directed to be confiscated. We hope that this substantial punishment by the Presidency Magistrate will be followed in future cases of a similar kind, as up to the present time the fines inflicted have certainly not acted as a deterrent, and the bazar dealers appear to think it is well worth their while to run the risk of a nominal fine to make large profits by selling spurious articles. It is high time that the provisions of the Merchandise Markets Act were properly regarded and administered, and the case in point is a move in the right direction.

FROM

CAPITAL

2nd December, 1897

IT was an interesting opinion Mr. Dhebar expressed in Calcutta last week about the difference between the policies of the Congress and Communist parties. After reading it, I gained the impression that if any exists at all, it is merely that the communists are likely to reach their socialistic goal first because they are more single-minded in pursuing it. I have always felt the best way of outbidding a political opponent was to offer something different and better. If we are to believe Mr. Dhebar, the Congress offers the same and differs only on the means. He may be right in believing that people faced with the kind of famine he himself predicts will study carefully the significance of their actions before they take them; but I hope he will excuse me if I do not. Until I read Mr. Dhebar, I was under the impression this goal of crude socialism had been abandoned by the Congress two years ago, partly due to maturer thinking and partly to accumulating experience. Now it seems that, notwithstanding what Mr. Nehru says the aim is still "to do away with capitalism". Mr. Dhebar is a responsible politician holding an important position—not in the Government, it is true, but at the nominal head of the governing party. When he makes a statement of this kind, his listeners have a right to take it as expressing the Congress point of view. Then what price the mixed economy? When all the usual indications point to there being a greater realisation of capitalism's value now than there has been for many years, when official policy is deliberately fostering confidence in foreign investors, and when Mr. Krishnamachari has been doing such good public-relations work in the United States and western Europe, it is odd to find a personality of Mr. Dhebar's standing committing himself in this fashion. Even if the Congress President was expressing a personal view, he must surely have remembered the "misunderstandings" about India's policy which we are told exist abroad and which the Government has recently spent a good deal of money in trying to correct. It looks as if it could have saved itself the trouble. As long as Government and party spokesmen continue to contradict one another in public, foreign observers will go on having their doubts about India's intentions. And nothing Mr. Krishnamachari or Mr. G. D. Birla may say will stop them.

* * * *

It would be impertinence on my part to advise the Americans on public relations, because my race is supposed to know nothing about the art. And yet it may be doubted whether indeed they do know the mind of this part of the world better than those who have had a longer association with it. It is useless pretending that Marian Anderson was not brought hither as much for her music, which was good enough, as for the colour of her skin, a dark one. Although Congressman Saund is his own sponsor, the co-operation extended to him by the United States Information Service was probably greater than would have been the case with most white-faced Congressmen. I sincerely hope that from both visits the U.S.I.S. has attained the objectives it had in mind, but I might as well put it on record that not every Indian friend I have met was equally impressed. I have often felt that the minds of peoples, especially in the East, are much subtler than many think, and a frontal attack on them, be it racialistic or democratic, often defeats its purpose. Mr. Saund's speeches in Calcutta were as anyone acquainted with the ways of Congressmen—U.S. style—might have expected them to be, which is not to say that all doubts on those aspects of life in America which all good Americans themselves resent were immediately set at rest. Mr. Saund himself brought out the American passion for public relations when he said that there was misunderstanding between India and the United States because the former had not done enough to tell the American people about herself. Every country's external publicity is an easy target for criticism; I imagine even the U.S.I.S. is not immune, but I am not sure that this is all there is to it. India would be wrong to think that all foreign criticism of her, the extent of which is easily exaggerated, stems from poor public relations alone. It might be more useful to remember that some of India's policies are difficult for foreigners to understand even with the lengthiest and most closely reasoned of explanations.

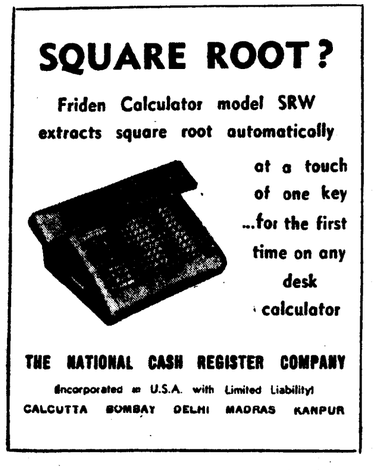
A DITCHER'S DIARY

* * * *

We all make mistakes, and I am no exception—although it is seldom I get my drinking days wrong. When I wrote in this column a fortnight ago that the Calcutta School of Music's second concert of the season would be held on 10th December, I ought to have known better. In fact, the date had already been switched to Wednesday, 11th December, due to a change in West Bengal's dry days. I hope none of my readers will miss their music through my carelessness, their patronage is all too badly needed. It was gratifying to see so many at the first concert to hear Miss Hanna Ludwig, although the audience was still smaller than might have been expected in a city the size of Calcutta, and for an artiste of Miss Ludwig's standing I have heard it compared unfavourably with the turn-out for Miss Marian Anderson—even if the latter was publicised like a popular brand of toothpaste. The guest artiste on Wednesday will be Mr. Gordon Watson, the Australian pianist. Those who enjoyed Miss Ludwig's performance could certainly find no better way of showing their appreciation than by supporting the further efforts of the organisation which presented her here.

* * * *

It is not nowadays fashionable for India to recall 1857 with much relish so far as her experience of the British is concerned. Be that as it may, there is at least one good reason why this country can remember that year with some measure of gratitude towards its British residents—it saw the birth, at Almora in the Kumaon Hills, of Ronald Ross, a man whose subsequent researches into the causes of malaria saved more Indian lives—and those of his countrymen too of course—than were ever lost in the unfortunate events of that year. Malaria had for centuries been a scourge in India. It is not now, although this happy consummation has been dated more than fifty years from the researches which made it possible. I see that the birth centenary of Ronald Ross has been celebrated in this country at the headquarters of the India Branch of the Ross Institute of Tropical Hygiene, Cinnamara, Assam. It would be difficult to imagine a more appropriate place, because the State's fortunes are founded on tea, and it is on its plantations that the most spectacular progress against the malarial mosquito has been made. Speaking at the function, a senior medical officer of the tea industry, Dr. Hay Arthur, said that in one large planting district, the incidence of malaria was only one in every thousand last year compared with five hundred in 1946. This is progress indeed, and whatever it may owe to D.D.T., the initial credit must go to Sir Ronald Ross's work in Secunderabad from 1897 to 1899. Ross was one of those Britishers who are so rarely recognised by modern political opinion in its comments on past relations between the two races—he was an ardent lover of both the country and its people. There have been others who were the same. But few have been able to give as much as he did.



* * * *

Brevity, Acharya Kripalani seemed to suggest in Parliament the other day, is the soul of wisdom. I would be inclined to agree with him, although if his recipe for success—writing as little as possible—relates to politics, and not merely to the passing of examinations, the speaker's own limited achievements are scarcely a good recommendation. Indeed, political success in this country usually goes to the most voluble, and that is a fact, however much it is to be regretted. The extension of Mr. Kripalani's principle to literature seems to me beset with even more doubts. It is only in our time that literary reticence has been raised to the level of an unmixed virtue, with the result that greatness has been conferred upon authors with no more than a very small body of work to their credit. Eliot and Camus are not the only instances. While this perfectionist attitude to art has a great deal to recommend it, I personally often miss the largeness and variety of the masters of old. There is much that is stodgy in Dickens or Balzac or Wordsworth. But the very size of their contribution to literature cannot help but evoke the admiration if not the envy, of later writers with a mere two or three slim volumes on the shelf. There are probably qualities in quantity which are grossly under-rated today; even as volume is no guarantee of excellence, it is still true that smallness does not always mean perfection. Self-criticism, I suppose, is the usually accepted explanation for the modern tendency to publish as little as possible. Another reason may be the limited creativeness of the gentlemen concerned. I put it to Mr. Kripalani that some of those who speak little do so because they have nothing to say—which, of course, might also apply to many of those who see no virtue at all in reticence. However, we must not forget what used to be said about getting on in the British Army—one either had to be the son of a lord or to know how to keep one's mouth shut.

* * * *

A reader has written to say how deeply he was touched by the remarks I made some weeks ago about the prophylactic and therapeutic effects of moderately administered alcohol. He tells me that my view has the support of no less an authority than Professor Charles Robb, who holds the chair in surgery at London University. I am most flattered. Addressing the British Medical Association on the surgical treatment of arterial embolism, at Newcastle-upon-Tyne last July, Professor Robb said: "The best drug for the relief of pain is alcohol—and I do not mean anything pharmaceutical, but whisky. It is an extremely good drug for reducing pain in these cases and helping them to sleep. We put our patients on big and rapid doses of whisky up to the maximum tolerance in individual cases. The best treatment for this condition is rest. The best rest is sleep. The best way to get sleep is to relieve pain and the best way to relieve pain is to give whisky." There, I could not have put it better myself. What I am wondering now is whether it is possible in Britain to get one's pain relieved at the expense of the National Health Service, and what exactly the worthy professor means by "maximum tolerance."

THE DITCHER.

THE GREAT EASTERN SHIPPING COMPANY LIMITED

CHAIRMAN MR. A. H. BHIWANDIWALLA'S REVIEW

Speech delivered by the Chairman, Mr. A. H. Bhiwandiwalla, at the Ninth Annual General Meeting of the Company held on 28th November, 1957.

Gentlemen,

It is indeed a great pleasure for me to meet you each year and discuss your company's affairs as well as the problems of the shipping industry in general.

Review of Progress

Last year I had indicated to you that the company would be faring well in the Financial Year 1956-57 and had expressed the hope that the company's freight earnings would reach the target of Rs. 3 crores You will find that we have done even better than what I could forecast at that time. Our freight earnings have totalled Rs. 3.63 crores as compared with Rs. 2.11 crores in the previous year. The total cargo liftings which stood in the previous year at 461,987 tons went up to 743,216 tons. The net profit recorded a rise from Rs. 24.95 lakhs in the previous year to Rs. 67.61 lakhs. The management's careful planning of voyages and exercise of vigilance to ensure the best possible results for each voyage, keen devotion of shore as well as ships' staff to their work and duties and loyal co-operation from the agents at various ports contributed to these excellent results. We could derive some, although limited advantage of the flourishing international freight market by employment of our more efficient owned ships in the overseas trade and operation of cheap chartered ships in their place in the coastal trade.

Theory in Practice

As I mentioned in my previous annual speeches to you, there was a great deal of prejudice against and opposition to taking out of owned ships from the coast to the overseas tramp trades. With great difficulty we had been able to persuade our shipowner friends and the Government and obtain their agreement to a scheme under which we diverted some of our better coasters to overseas trade and substituted them by cheap old time-chartered ships on the coast for carriage of bulk commodities, namely, coal and salt. Although we explained the advantages that would accrue to the Indian shipping and the country, our shipowner friends and the Government were not fully convinced of the implications of our theory. We were granted permission to try out our scheme for a period of two years in the first instance. This permission was granted on the basis of certain conditions mutually agreed between the Government and ourselves. One of the main conditions was that the coasters once taken out of the coast would become overseas trampers and within two years new ships will be bought by us in their place for coastal trading. If I lay the facts before you as to how this theory has worked in practice and benefited your company as well as the country, I am sure, the last vestiges of prejudice will disappear and there will be a proper appreciation of the concept of "freedom of operation".

Gentlemen, I can reveal that your entire fleet excepting "Jag Laxmi" was primarily intended for the coastal trading. If we had accepted the widely held but erroneous notion that, come what may, only Indian-flag ships should participate in the coastal trade and had not displayed the enthusiasm of taking out our owned coasters to the overseas trade, what would have been the result? Our six big ships including the tanker "Jag Jyoti" would have earned on the coast Rs. 1.50 crores as freight. Our two small coasters would have earned Rs. 30 lakhs as annual freight on the coast. With m.s. "Jag Laxmi's" freight earnings of Rs. 20 lakhs in her 4-month trading, the total freight earnings of our fleet would have amounted to Rs. 2 crores. By taking out owned ships out of the coast and substituting them by cheap charters, we have achieved the far higher freight earnings of Rs. 3.63 crores at an additional expenditure of Rs. 64 lakhs by way of charter hire on the charters in the coastal trade. This step has benefited not only your company but also the country by ensuring additional foreign exchange earnings. Recently, we made a careful assessment of the extra foreign exchange earnings arising out of our scheme. It was found that in one year and nine months the net foreign exchange earnings, after deducting charter hire on coastal charters and disbursements at foreign ports, amounted to almost £500,000. It is hoped that now there would not be any prejudice against our scheme which has secured substantial marginal foreign exchange earnings for the country.

The foreign exchange earnings on account of shiping services are called 'invisible earnings' and these earnings can play a vital role in maintaining a favourable or reducing an unfavourable balance of payments position of the country. The marginal exchange earnings accruing to our country under this scheme of ours are perhaps more 'invisible' than the usual 'invisible earnings' from shipping. We are proud of this unique character because we are perhaps the only company making contribution of marginal foreign exchange earnings to the national exchequer in this way.

Tramping Activity and Wisdom Behind Freedom of Operation

The company would have achieved still better results if it had enjoyed unrestricted freedom of operation. Right from the beginning, we had been urging on the Government to recognise the importance and special problems of tramp shipping. In spite of the all-round ignorance of an consequent prejudice against the requirements of tramp shipping, we not only pioneered but also persevered in this branch of shipping. As the liner interests and prejudices influenced and dominated the Government decisions, our path was strewn with many difficulties and obstacles. I am, however, glad to say that subject to our Government keeping up their commitment made in 1956 and permitting purchase of two cheap second-hand vessels for our coast we would establish a small nucleus of 3 large tramp ships. With the operation of such a tramp fleet the Government is also realising its peculiar problems and lends a sympathetic ear to the requirements of tramp shipping.

Complete freedom of operation is enjoyed by tramp shipowners all the world over, and has been responsible for the rapid and spectacular growth of shipping in countries such as Norway and Greece. Two years ago, from this very forum I had made the following observations.

"Two-way time-chartering is an integral part of shipping, especially of the tramp trade; at times this is particularly useful in covering business risks; besides, long-term chartering out of ships at favourable rates can directly stimulate tonnage expansion since it widens the opportunities for gainful employment of vessels and also enables a shipowner to plough back booked profits on a planned basis rather than depend on anticipated profits from trading which may or may not come true". If these words had been heeded and ban on time-chartering out of Indian ships had been lifted, our "Jag Laxmi" could have been time-chartered out for one or two years at the very favourable rates prevailing in the first half of 1957. This vessel alone then would have earned the net foreign exchange annually of the order of £375,000. Your company would have earned back the whole cost of the ship, viz. Rs. 1.20 crores in about 2½ years. The company's net earnings and the country's net foreign exchange earnings in 2½ years on this vessel would have been sufficient to purchase another ship costing as much as "Jag Laxmi". The foreign exchange famine has jeopardised the success of our Five-Year Plan itself and it saddens my heart that owing to the dogmatic approach on the part of the Government, such splendid opportunities for earning foreign exchange were missed.

My observations are not intended to lament the past but to draw the pointed attention of the authorities to the correct approach to this problem in future. The fallacy of the Government attitude can be further evidenced by the fact that whilst we can time-charter foreign ships for overseas trading, we cannot time-charter out Indian ships to foreigners. This means that whilst we can buy freight wholesale, we are not allowed to sell it wholesale. When the freight markets are likely to fall, the tramp operator must sell wholesale part of his shipping space at the prevailing favourable rates. If he is not permitted to do so, he is bound to sustain losses in retailing freight voyage by voyage at the progressively declining rates. Lately this subject has been discussed personally with the high Government officials and I am glad to say that the Government is realising that their rigid attitude in the past prevented the country from earning foreign exchange. May I express the hope that in future whenever opportunities present themselves again, the Government will permit the tramp operators to time-charter out some of their ships for a period trading at the favourable rates and help book the profits for the company and foreign exchange for the country?

Discrimination in the Allotment of Government Cargoes

The Government is the largest single importer of goods into the country. With the activities of the State Trading Corporation, the Government is acquiring a larger share in the export and import trade of the country also. In view of the control of the Government over large quantities of cargo moving into and out of the country, it is most important for the Government not only to allot these cargoes for shipment to Indian ships on a preferential basis, but also to allocate them on a fair and equitable basis whenever the ships operated by the Government Shipping Corporations and those operated by the public limited companies are competing for these cargoes. The Government spokesmen have announced from time to time that it is not their intention to foster the development of Government shipping corporations at the cost of the shipping companies in the private sector. Many a time we find that these intentions do not get translated into practice and the Government shipping corporations are favoured to the detriment of the companies in the private sector.

Illustratively I may say that we have a contract with Japanese importers for the carriage of ore from India to Japan. Our ships which discharge ore cargoes in Japan require return cargoes from Japan to India. Considerable railway cargoes are moving from Japan to India on account of the Government. These cargoes are of a tramp nature inasmuch as they are imported for development of Indian railways and do not constitute regular liner movement. In view of the tramp nature of these cargoes, the least that we could have expected was an equitable distribution of these cargoes between the ships of the Government Corporation which operates ships on a liner basis and your company which employs ships on a tramp basis. However to our great regret, we found that when our owned ship was ready recently to load this cargo in Japan and was offered to the Government accordingly, the Government Shipping Corporation was allowed to time-charter a ship and carry the entire available cargo to the exclusion of our ship. Even the unnecessary foreign exchange expenditure that was involved in needlessly chartering a foreign ship was ignored and our owned ship had to suffer on the return voyage. I am sure, the Government's aim is to foster the development of Indian Shipping and any discrimination between Government Corporations and shipping companies in the private Sector is bound to retard the development of Indian Shipping. I understand that further Indian railway and other cargoes have been purchased from the Far Eastern countries. May I appeal to the Government to ensure equitable distribution of these cargoes between the Government Corporation ships and our ships that require return employment from Japan?

Burma-India Rice Trade

It was in the second half of 1956 that the Government invited us and we co-operated in ensuring entire carriage of this movement by Indian Shipping companies. At that time 300,000 tons of rice had to be moved quickly within six months from Burma to India. The shipping companies discussed between themselves and worked out the capacity of each company to transport these cargoes. Your company was assigned a quota of 23.3% of the entire movement However, in fact we carried about 26% of the cargo In the calendar year 1957 about 500,000 tons of rice was to be imported from Burma. After the rate and terms of this carriage were fixed, the Director General of Shipping had to arbitrate as to what percentage of cargo each company was to carry because there was no agreement between Indian Shipping Companies on this point. Your company legitimately asked for a 25% share in this trade. However, I accepted the small quota of 19% without any protest in deference to the wishes of the Director General of Shipping who endeavoured to bring about an agreement between the shipping companies. We could also afford to be generous because our ships were being fixed in the overseas markets at handsome rates.

For the ensuing year however we must insist on our legitimate share as the second highest carrier especially because, among other things, we have added 22,000 d.w. tons of shipping to Indian Registry after our carriage of 26% of Burma rice shipments Your company has proved its worth historically and the expansion of tonnage and activities already implemented by it deserve recognition and encouragement. Next year I hope to report to you on the new high that your company would be reaching in the carriage of rice from Burma to India.

Coastal Target

The Rail-Sea Co-ordination Committee has estimated that by the completion of the 2nd Five-Year Plan the coastal ships will have to carry about 5 million tons of cargo annually as compared with less than 3 million tons carried at present. This would involve a tremendous expansion programme for companies operating on the coast and your company's tonnage position on the coast would have to be augmented considerably. In fact we foresaw this long ago and started adding tonnage at a fast pace. It is your company that took the initiative and put in considerable efforts for the release of U.S. moth-ball Liberties for our coastal trading—as a stop-gap arrangement. These efforts have not borne fruit yet. In any case with the increasing cargo movement on the coast, the scramble for cargo between coastal shipping companies is bound to disappear and give place to healthy competition between shipping companies as to how fast they can expand their tonnage. It appears to me that companies like yours with a smaller share, as compared with larger companies, will carry more of the additional cargo movement that will arise. I hope that by 1961 your Company would carry 25% of the total coastal cargo and this will be possible without in any way disturbing the existing tonnage of bigger companies.

Tonnage Expansion

Gentlemen, you are aware that under the Second Five-Year Plan the target of 900,000 g.r.t. is to be achieved by 1961. This is apart from the acquisition of tonnage for replacement of old and obsolete units. The inadequate funds that were earmarked under the Plan for tonnage expansion both in the public and private sectors have been exhausted and we have still to acquire about 200,000 g.r.t. to reach the target. There is general agreement that the present is the opportune time for acquisition of tonnage. The tonnage prices have registered a considerable decline and the country should avail of the favourable tonnage market in time and acquire the required tonnage. If both the rupee funds and foreign exchange are not made available in time, we may miss the bus this time also.

Your Company in fact has a commitment with the Government under which 2 coasters must be acquired in the near future to replace the two ships that were taken out of the Coast for overseas tramping by us nearly two years ago. As pointed out earlier, under this arrangement your Company has earned almost £500,000 as marginal foreign exchange. This is a contribution in a unique way which would enable us not only to cover the cost of acquisition of the two coasters in foreign exchange but also to establish permanently an exchange-earning nucleus of tramp ships by providing their permanent replacement in the coastal trade.

Apart from this long-standing and special commitment which applies only to your company, we also propose to participate wholeheartedly in the general tonnage expansion programme for the Indian shipping industry. The shipping industry is already earning foreign exchange for the country and release of foreign exchange for acquisition of ships will result in continuous enlargement of the country's foreign exchange pool. I would earnestly request the Government to grant top priority to the shipping industry in the allocation of the limited foreign resources that are available and thus enable the shipowners to seize the present opportunity for addition of tonnage.

Expansion and Development of Ports and Port Facilities

A good deal has been said on the urgent necessity and the great importance of the expansion and development of ports and port facilities and the Government seem to be seized with the matter. I would therefore only draw attention to one important aspect of the matter.

The drawing up and execution of our immediate plans for expansion must be done in such a way that they should be capable of being dovetailed easily into the port development plans under the successive Five-Year Plans. In a growing economy we must have regard to the "peak handling" that will result after the successful completion of a number of 5-year plans. Immediate development or expansion must not adversely affect the scope for ever-continuing expansion in the future.

I also feel that due to very large quantities of foodgrains that are going to be imported, provision for mechanical handling of foodgrains must be made at the ports of Calcutta and Bombay. Similarly in Madras mechanical equipment for discharging of coal should be installed This is essential not only for ensuring quick despatch of these cargoes but also for keeping these ports free for the expeditious handling of other cargoes. The mechanisation should not scare the dock labour because in the set-up of the growing sea-borne trade, the skilled dock labour released by mechanisation can be gainfully absorbed elsewhere on the water-front.

Future Prospects

I have always subscribed to the theory that shareholders are entitled to a reasonable share of any increase in surplus earnings. However, there are many considerations involved in deciding what the distribution should be in any given circumstances. Among these considerations is the current outlook and the desire, if at all possible, to avoid violent fluctuations from year to year. Unfortunately, shipping does notoriously have to face fluctuations not only those which are common to any industry, which are subject to the ordinary laws of supply and demand, but also such as arisen from changes, some times sudden and unexpected, in national and international relations and in the economic and financial field. Since the close of our financial year, there has been a sharp fall in the freight market; tonnage is plentiful and open market freight rates are on a much lower level. Business itself seems to have contracted. However, as far as we are concerned our interests are in 4 directions. First, we are interested in the coastal trade, where terms better than those prevalent some time ago have been granted by the Government in accordance with the recommendation of the Rail-Sea Co-ordination Committee and a small increase in freight rates has been given to us. Our second interest is in the Burma/India rice trade. The freight rates fixed by the Government up to the end of 1957 are attractive in comparison with the coastal freight rates. The Government is however seeking a revision of the terms effective from 1st January, 1958 and these terms are still to be finalised. Our third interest is the employment of the tanker which has been fixed for a period of 5 years at a lucrative charter hire rate. The fourth interest is in the international trade, where we have to face competition and where the markets have slumped. We are, however, in a fairly fortunate position of having contracted for the carriage of ore from India to Japan at favourable rates of freight.

The gross freight earnings during the first five months of the current financial year have exceeded Rs 1.60 crores. There are still almost 7 months to go and the results therefore cannot be forecast accurately. As against the adverse freight market, we are fortunate in having additional owned tonnage, namely, "Jag Laxmi" and "Jag Janani", under our operation and the advantageous freight cover in respect of ore shipments to Japan. It would be reasonable therefore to expect that subject to unexpected or unforeseen developments this year's results will be in line with those achieved during the last year.

I have now come to the end of my speech and wish to thank you for the patient hearing accorded to me. You will no doubt wish me to thank the Transport Minister, the Transport Secretary, the Director General of Shipping and other officers of the Transport Ministry and Directorate General of Shipping for their assistance I shall also place on record sincere appreciation of the devoted services of the members of staff both afloat as well as ashore.

May I now move for the adoption of the Annual Report and Accounts for the year ended 30th June 1957?

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

The Story of Oil—4

Exploring for oil

It is impossible for anyone to say exactly where petroleum will be found. It accumulates in isolated subterranean traps, and these are what the oil-explorers seek, rather than the oil itself.

It must first be decided where conditions in past geological time have favoured the formation of oil. This is usually land which was once the site of an ancient sea. Having selected a likely area, the next step is to survey the surface, mapping exposed rocks and searching for any oil which has seeped to the surface.

The geologist is all the time patiently searching for signs that could point to the existence of underground rock traps. Traps suitable for an accumulation of oil consist of porous rocks in which the oil (if any is there) is hemmed in on all sides by non-porous rock. Clues to such buried structures may be found in the banks of rivers and streams, for here the earth's rock layers are often exposed to view, enabling the geologist to calculate their age and measure the directions in which they slope beneath the surface. The rocks may contain the fossilised remains of plants and animals that lived millions of years ago, when crude oil was being formed.

Aerial photographs help the geologist too. They reveal a surprising amount of geological evidence, even in densely wooded country, enabling him to map the differences in rock structure.

When all surface sources of information have been exhausted, the next step in the search for oil is to explore deep beneath the surface of the earth. The science which makes this possible is known as geophysics.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

NARROWING PROFIT MARGINS FOR COMPANIES

(FROM A SPECIAL CORRESPONDENT)

THAT the most far-reaching problem in British economic affairs is the future trend of wages has become evident. This is not only confirmed through currency and trade developments, but also by the much lower profits which leading companies have shown in their latest reports. Profit returns are capable of a good deal of elasticity, according to what the compilers wish to convey. There is no doubt that profit margins are narrowing sharply in various directions. If the tendency continues for a year or two, then a large number of companies will be incurring losses. Industrialists are now confronted with uncertain prospects. Their reluctance to enter into further commitments is more pronounced than a month ago. Difficulties among small business men are increasing, and the high Bank rate is blamed for this. One may agree that it is partly responsible, but the artificial nature of the economic position must bear the major blame. What may be called a "black market" in lending has grown up, excepting that it is not really black, being quite legal so far. Money can be borrowed outside the banks at extremely high rates. Whether the borrower will be able to meet interest charges over a lengthy period is doubtful. Some of this borrowing is of speculative origin; but small industrialists and traders are also involved; and for them there should be genuine sympathy. They have developed legitimate enterprises, and need more capital. To them, the banks, at the behest of the Government, turn a deaf ear To close an undertaking is often far more difficult than to carry it on, and, naturally, many choose the latter path. But those who follow this procedure may not be able to meet, beyond a few instalments, the high interest rates to which they are committing themselves.

There are many anomalies pointing to the desirability of carefully qualifying any assessment of the present industrial situation. The enormous sale of motor-cars is one among these factors. Some manufacturers of radio sets, television sets and gramophone records continue to make very large profits. Consumption of drink and tobacco accounts for 8 percent of the national expenditure. Should these industries now be classed as staple, side by side with iron and steel, textile and coal? The decline in prices of commodities has improved the terms of trade, although it has caused discomfiture to producers of raw materials.

Textile Trends

The value of U.K. exports of cotton yarns and woven fabrics for the nine months ended September were £3 million lower than that of the corresponding period of 1956. The total was nearly £65 million, and there were record sales of textiles in the home market during the autumn. It should be noted, however, that some Lancashire cotton manufacturers have expressed uneasiness, on the ground that the labour force engaged in spinning is increasing at a more rapid rate than that employed in weaving. They foresee either an eventual surplus of yarns or a compulsory reduction in the labour force for spinning. A further expansion of demand for fabrics is regarded as improbable, the peak position being thought now to to have been reached.

Then tendency of British textile firms to insure against an uncertain future by widening their interests shows no weakening. In some cases the new interests acquired are similar to the old ones; in others, the freshly bought companies have only distant kinship. One textile company has just taken over concerns as diverse as chemical, engineering and bespoke tailoring. Tootal Ltd., one of the oldest and most progressive of British textile companies, has chosen an integrated policy by entering into plastics. Tootal has also become interested in the manufacture of fabrics containing glass yarns. The use of glass fibres in textiles has been limited hitherto by weaving and dyeing imperfections. As an outcome of recent inventions, substantial improvements have been made in these directions. Manufacturers of glass fibres have an advantage in that the industrial demand (for insulating buildings, etcetera,) is so large that the production of these can be made an economic proposition.

Expansion Programme of Imperial Chemicals

There have been setbacks in the chemical industry, but the outlook is still regarded as bright. Indeed, chemical companies are among the exceptions to the general reluctance to undertake large-scale developments. Imperial Chemicals has made an initial application to local and Governmental authorities for permission (quickly granted) to develop 1,000 acres of land for the construction and operation of factories in Gloucestershire, at a cost of £100 million. The scheme was first mooted four months ago, that is, well before the latest inflationary phase. It may also be noted that Monsanto Chemicals had no difficulty in selling to the public £3 million of debenture stock.

Sources of Crude Energy

"Coal and Chemicals" was the topical and important subject of the Dalton Lecture delivered in Manchester by Dr. J. Bronowski, a leading authority on this matter. He began by pointing out that coal has played a notable part in the development of British industry from the beginning of the Industrial Revolution to the present day. Coal is the main source of energy, and it has also provided (as coke) the most important chemical raw material. If Britain is to remain a leader in world industry, she must find other sources of crude energy to meet the yearly increases in electricity demand, with which coal cannot keep up indefinitely. One such source is oil, if it can be either made or imported cheaply, another source is atomic energy. Atomic fuels are an ideal source for mechanical energy which industry needs, and particularly for the generation of electricity. They are compact, fairly plentiful, and their potential efficiency is high. Britain is moving away from the crude use of energy in any form towards the more refined and flexible forms. The list of chemicals derived from coke ovens and gasworks was long and looked impressive. In fact, however, only a few of these chemicals had found use in large quantities. There were three main groups of chemicals based on benzene, naphthalene and phenols.

Coal Molecule

Discussing the coal molecule, with an essentially closed structure, and the open structure of the petroleum molecule, Dr Bronowski said that if we were trying to make a chemical built up from small open pieces, then petroleum was the obvious starting point. To break open the closed hexagons of coal was more difficult, requiring a greater amount of heat energy and the product of the breakage was likely to be a rather irregular mixture. But if the endeavour was to build up a chemical which contained closed rings—that is, an aromatic—then coal was the more sensible starting point. Thus, for the main range of chemicals which were not aromatic, a way had to be found of breaking open the carbon hexagons in coal, and this without uneconomic amounts of heat energy. New techniques were required to do this. In Dr. Bronowski's view, there is a great need to turn coals with a high volatile content into gas; in the long run, the gas will be used as synthetic gas, and so will become the basis of a liquid fuel for the chemical industry. "It may seem odd," he added, "to hold out this long-term prospect, that chemicals should be made from coal, not directly but as part of the making of petroleum and other liquid fuels, yet this is what we have found—that all foreseeable ways of breaking the coal molecule so far lead back to the same point, namely, in some way to use the break-down to make a petroleum-like fluid, and to reach the making of chemicals by way of this."

Money

THE CALCUTTA MONEY MARKET

SLIGHT INCREASE IN ADVANCES

Wednesday, 4th December.

THE money market has remained quiet, but there has been a small overall increase in the number of advances. This is by no means large enough to encourage a conviction that the busy season has arrived. A slight fall is recorded in the requirements of cotton and woollen mills, and the needs of the sugar industry are also down. On the other hand, there has been a fairly substantial increase in funds for the jute mills. Accommodation against wheat and grain storage is virtually unchanged. The interbank market has remained quiet and there is no change in the call rate at 2¾ percent.

There have been very few bills in the market this week. Those that have been dealt in have been chiefly on account of gunny shipments. Remittance has remained moderate. Sterling continues to strengthen on the world's markets and is now quoting above par with the dollar. There has been a certain amount of fluctuation against Continental currencies during the past week, but the undertone remains firm.

* * * *

Bullion was steady but activity was restricted. Silver reacted to Rs. 179.37 at the close on profit-taking. The price was quoted at 77¾d. in London and at 90¼ cents in New York.

Gold was steady at Rs. 109.50 because of good demand for ready stocks.

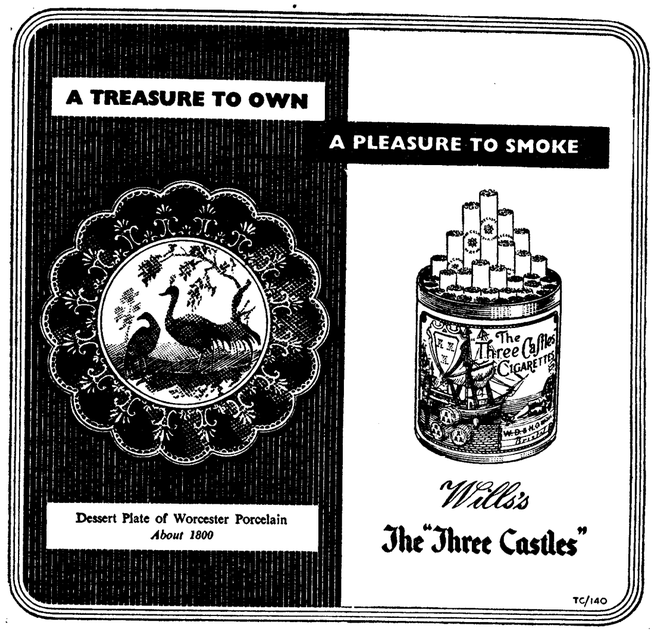
* * * *

During the week ended 29th November, Government of India Treasury bills for Rs. 7,05,00,000 were sold in favour of the Reserve Bank.

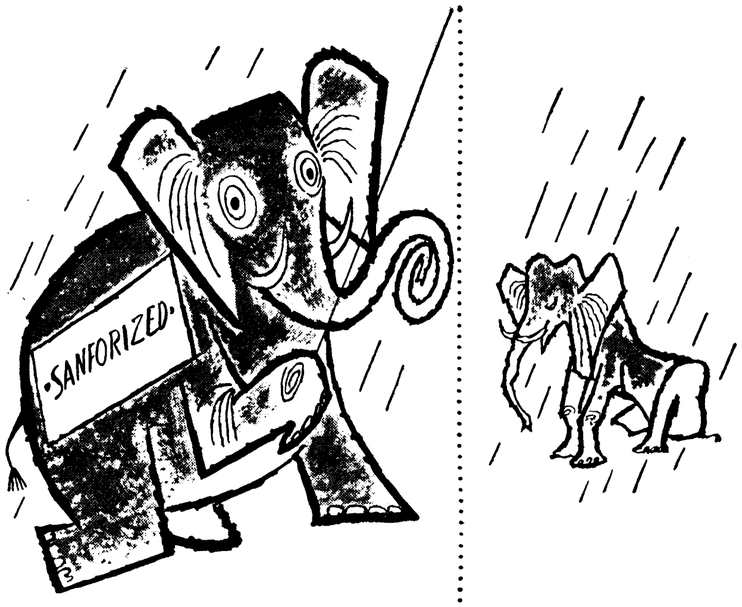
* * * *

There was a decline of Rs. 2.24 crores to Rs. 1,480.90 crores in active notes according to the return of the Reserve Bank of India for the week ended 29th November, while the total note issue was Rs. 40 lakhs higher at Rs. 1,515.37 crores. Notes held in the Banking Department consequently rose by Rs. 2.64 crores to Rs. 36.71 crores. Deposits of the Government of India declined by Rs. 2.25 crores to Rs. 50.94 crores but other Government accounts were Rs. 1.87 crores higher at Rs. 11.31 crores. Balances of commercial banks declined by Rs. 21 lakhs to Rs. 109.02 crores. Balances held abroad at Rs. 29.30 crores showed a fall of Rs. 3.37 crores. Investments were Rs. 1.80 crores lower at Rs. 259.68 crores. Other loans and advances declined from Rs. 54.88 crores to Rs. 52.13 crores, of which advances to scheduled banks against usance bills amounted to Rs. 14.12 crores (Rs. 15.10 crores). Ways and means advances totalled Rs. 29.01 crores against Rs. 27.75 crores.

* * * *



The return of the State Bank of India for the week ended 22nd November, 1957, shows a rise of Rs. 1.26 crores to Rs. 362.34 crores in total deposits. Investments in Government securities are up by Rs. 3 lakhs to Rs. 153.99 crores, while other authorised investments remain unchanged at Rs. 9.94 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have risen by Rs. 13 lakhs to Rs. 159.07 crores. Cash and balances are, in consequence, shown at Rs. 52.08 crores or Rs. 3 lakhs less.



* * * *

The statement of the position of scheduled banks for the week ended 22nd November, 1957, shows Demand and Time liabilities at Rs. 727.30 crores (Rs. 16.91 crores on account of borrowings from banks) and Rs. 667.66 crores (Rs. 15.61 crores), compared with Rs. 732.91 crores (Rs. 18.12 crores) and Rs. 657.15 crores (Rs. 14.42 crores), respectively, in the previous week. Cash has decreased by Rs. 61 lakhs to Rs. 38.49 crores, while balances with the Reserve Bank have increased by Rs. 6.93 lakhs to Rs. 106.07 crores. There is a rise of Rs. 1.04 crores to Rs. 408.36 crores in investments. Advances and bills discounted at Rs. 841.78 crores show a drop of Rs. 2.83 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 10.4 percent and 60.3 percent, against 9.9 percent and 60.8 percent.

* * * *

The scheme of the State Bank of India to issue rupee travellers cheques offers a mode of carrying travel funds in a safe, spendable and refundable form. An Indian travelling in a foreign country with the bank's cheques will reduce the loss likely to result from a resale of the unexpended foreign currency on his return to India, while in India it is hoped to combine in the travellers cheques the advantages of cash with the safety of a bank draft. The fact that the rupee is not an international currency will detract in some measure from the popularity of the bank's cheques in foreign countries, but it is felt that there will be scope for them. With nearly 600 offices and a worldwide network of correspondents, the bank feels fairly convinced that, given the co-operation of the various components of the tourist industry, it will be successful in introducing this innovation. The cheques when issued will be stocked by the bank's Indian and foreign offices and by its correspondents abroad; additional arrangements will be made to popularise them at centres of tourist interest. It is, however, not only the foreign tourist that it seeks to serve; the requirements of travellers here—to hill stations, conferences, fairs, festivals, etcetera,—will be systematically catered for.

STOCK MARKETS QUIET BUT STEADY

BRITISH PETROLEUM DEBENTURE ISSUE ANNOUNCED

London, 4th December.

QUIET conditions prevailed in the stock markets throughout the past week, but the undertone was steady and prices generally were well maintained on balance. Business was down to a very low level and was highly selective. The chief restraining influence was the expectation that the British Petroleum issue was imminent, and official details of the issue were in fact announced after the week-end. An issue to the public of £41 million 6 percent debenture stock 1976-80 at £99, carrying rights to convert into ordinary stock in July 1958, 1959 and 1960, is to be made, with the application list opening on 11th December. The attractive terms of the issue seemed likely to keep funds off the market for another week and it appeared probable that very quiet conditions would persist for the rest of the year. Before the week-end, President Eisenhower's sudden illness temporarily unsettled the market but the better news later about his health soon enabled both Wall Street and London to regain their equilibrium. This factor thus had very little effect on balance. In addition to the growing activity in the new issue market, business was restrained by the current economic uncertainties in the United Kingdom and the United States. Sterling's response to the Prime Minister's reference to a marked increase in the gold reserves during November stimulated interest in gilt-edged after their recent quietness. Small investment buying was responsible for a firm trend after the week-end and prices were slightly better on balance. Japanese bonds improved on some demand but otherwise foreign bonds and rails were subdued. Dollar stocks recorded very little alteration after a somewhat erratic week. The industrial market failed to establish any definite trend but a satisfactory undertone was maintained. South African gold shares showed occasional improvements on selective buying. Coppers, leads and zincs moved within narrow limits but tin shares reflected the fall in the price of the metal. Oil shares were dominated by the British Petroleum issue and there was no marked change on the week. Rubber shares were selectively firm on bid news or on the prospects of bids. Tea shares were generally irregular. James Warren reacted to 45s on the withdrawal of the bid.

The Money Market

With a bigger bill take-up by discount houses and no compensating increase in the volume of credit supplies, short loan conditions in the money market were again stringent during the past week. The demand for day-to-day loans was keen and up to 6½ percent was paid for accommodation during the most difficult periods, with 5¾ percent and 6 percent the more usual rates. A small amount of borrowing was undertaken from the Bank of England last Thursday, when revenue payments added to the difficulties created by the approaching end of the month. Business in bills was fair, with February and hot maturities changing hands at 6⅜ percent. The money market made a further upward, though small, revision in its bid at the weekly offer of Treasury bills which resulted in a further decline in the average rates for the mixed bills. The rate for 63-day bills was £6 9s 10.48d percent and that for 91-day bills was £6 9s 2.27d percent.

Sterling Recovers

Interest in sterling revived in a fairly active foreign exchange market on Monday. Sentiment was helped by the Prime Minister's week-end statement about a "marked rise" in the U.K. gold and dollar reserves during recent weeks. Sterling was in demand against U.S dollars and went ahead to close at the best level since the Bank rate increase. In spite of a late rally, the Canadian dollar also closed cheaper. Most Continental currencies moved in sterling's favour under the lead of the deutschemark, which was on offer and closed appreciably cheaper. French francs were firm on reports of the Government's new economic measures having been finalised.

Hongkong Gold Down

The Hongkong gold market fell considerably early last week but rallied later. However, it closed with losses on balance. The early easiness was due to the strength of sterling, heavy carry-over charges in favour of sellers and the tighter money situation with the approach of the year-end. But as sterling tended to lose ground, gold recovered to $(HK)256½. After falling to $(HK)255¾ at mid-week, a rallying attempt brought about a recovery to $(HK)257 by Saturday, but light profit-taking caused an easier close at $(HK)256¼. Carry-over charges were $(HK)3 a ten taels in sellers' favour. The official offtake was 3.850 taels and unofficial 8.650 taels. Arrivals in Macao totalled 45.000 ounces. Forward contracts were done at $(U.S.)37.89 an ounce, c.i.f. Macao.

Decline in Paris Gold

After a firm start prompted by uneasiness over domestic political developments, the Paris gold market tended to lose ground. The prospects of a French loan abroad and an improvement in the domestic political situation stimulated profit-taking and caused hoarders to leave the market. Activity was moderate throughout the past week.

Italian Copper Release

The Italian Government is thinking of releasing part of its copper stocks but no decision has been taken so far, according to trade sources in Milan. Copper is stockpiled by Azienda Residuati Alleati Roma, a State-owned company, which usually disposes of its copper by sales in the domestic market. The sources say that if the Government decides to release some copper, the quantity involved is unlikely to be more than 6.000 tons. In the London copper market, it is rumoured that the Italian Government intends to release around 20,000 tons of refined copper from its stocks.

Rubber Prices Improve

A moderate order from Bulgaria provided some interest in the spot market for rubber but otherwise there was very little activity during the past week. Because of the thinness of the market, prices moved quickly either way in occasional dealings. Sentiment improved somewhat on account of the increased U.S. consumption estimates for October but the market lacked the stimulus of a larger offtake. Offers from the East were slow to find acceptance as dealers were reluctant to extend commitments in the absence of an assured outlet. Prices finally were about ¼d a lb higher on the week. Moderate quantities of sole crepe were cleared but demand generally was insufficient to prevent the accumulation of stocks. Prices were on the reduced basis of 30d a lb for ½inch smoked No. 1 on the spot but some lower bids were accepted.

Fall in Shellac Prices

Compared with the recent virtual inactivity, the London shellac terminal market had a fairly animated session on Thursday last. An extension of the declining trend in Calcutta precipitated another sharp fall and brought prices to about 30s a cwt. below those ruling at the beginning of November. The feature of the day's business was the liquidation of the December position but traders reported that offerings were well absorbed at the lower level. At the outset December was traded at last Wednesday's closing price of 180s a cwt, but finally 168s 6d was accepted.

Chinese Technical Mission in Britain

A Chinese scientific and technical mission has asked a number of British firms to submit tenders to Peking on the machinery they can export to China. Details of the tenders are being kept secret but it is understood that textile machinery is one of the items. The mission is also understood to have made other enquiries during its five-week fact-finding tour. These are regarded as being in the nature of test enquiries to ascertain British reactions. It is not officially regarded as a purchasing mission. But it will take back to Peking an exhaustive dossier on British technological achievements after its visit to industries ranging from tractors to steel-making and electronics.

DULL TRADING AND NARROW PRICE MOVEMENTS

MUNDHRA GROUP SHARES RECOVER AFTER SHARP FALL

Wednesday Evening.

THE talk of the week in the Calcutta stock market has been the sharp decline in the prices of the Mundhra group of shares caused by heavy selling pressure. This has followed reports about certain irregularities discovered in the share certificates of one of the companies in this group. Jessop & Co. were at one time marked down to Rs. 21.12, Richardson & Cruddas to Rs. 6.56, British India Corporation to Rs. 3.85 and Brahmapootra Tea to Rs. 2.47. Replacement buying at the close, however, brought some recovery, although the trend is still uncertain. Sentiment in the remaining sections of the market was overshadowed by these heavy sales and partly also by the disappointing results published by two jute mills in the Jardine Henderson group, namely, Howrah and Reliance. Both companies incurred heavy losses and the preference and ordinary dividends were passed. The sharp reduction in the ordinary dividend of the managing agency company, Jardine Henderson Limited, from Rs. 7.50 to Rs. 2.50 a share added to the depression which prevailed.

Indian Irons have remained remarkably steady considering that today has brought the fortnightly clearing. The final price of Irons was Rs. 19.44, which is 23nP above the value at the last clearing. It is not yet obvious why this support should be forthcoming, and after hours today the market reacted sharply to some unloading which took place.

Investors appear to be in no mood to enter into fresh commitments and are now waiting, with some misgiving, for the forthcoming annual general meeting of the Associated Chambers of Commerce on 14th December, which is to be addressed by Mr. Nehru. This should prove an important day for investors throughout the country.

During the earlier part of the period under review, the gilt-edged market was steady but after the announcement of the extended issue of 3½% 1962 Bonds an easier trend prevailed and the enquiry subsided. Interest continued to be focussed on short and medium-dated loans, but more sellers were in evidence and the volume of business was smaller. It is reported that a few Indian banks in Bombay have been purchasing the new issue of 3½% 1962 Bonds in sizeable quantities. Long-dated loans were neglected and prices, where changed, were fractionally easier. State loans continued in good demand followed by an improvement in the prices of selected 4% issues.

Business in preference shares was, as usual, on a very restricted scale. The only item of interest was Indian Iron & Steel which had buyers at Rs. 96. A small parcel of Shaw Wallace was crossed at Rs. 66.

No business was reported in railway shares.

In cotton textiles, Cawnpore were marked down further to Rs. 5.12 and Kesoram were done at Rs. 9.87 ex-dividend. Elgin Mills eased further to Rs. 15.50.

In coal, there were some buyers of Bengal at Rs. 228 and Equitable were shaded at Rs. 23.31. East Indian were quoted lower at Rs. 21.50 and Burrakur idled around Rs. 22.

For the reason given in the preamble, jute shares displayed a softer trend and prices were marked down on a broad front, as will be seen from the following table :—

	Opening 29th November	Closing 4th December
	Rs.	Rs.
Anglo-India	151	150
Bally	153	148
Budge Budge	74	72
Cheviot	120	115
Howrah	17.25	16.12
India	119	115
Kinnison	125	115
Reliance	6.87	6.25

Contrary to the general trend, National were steady today at Rs. 20.05.

In electrics, Calcutta were better at Rs. 13.25, but U.P. reacted to Rs. 119.

Sugar shares were dull and neglected and there were no features of interest.

In the engineering section, Indian Iron & Steel kept reasonably steady at around Rs. 19.50 while Textile Machinery reacted from Rs. 17.35 to Rs. 17. Indian Steel & Wire Products were wanted at Rs. 60. Jessop & Co., and Richardson & Cruddas recovered at the close to Rs. 23.50 and Rs. 7.60. Braithwaite & Co. were crossed at Rs. 26.62 and Guest, Keen, Williams were taken at the higher rate of Rs. 28.87.

Paper shares moved to lower levels in the absence of support. Orient, after opening at Rs. 25.40, receded at the close to Rs. 25.25. Titaghur were easier at Rs. 32.75 as were India Paper Pulp at Rs. 19.50. Shree Gopal were offered at Rs. 14.62 without attracting buyers.

In cement, Sone Valley were marked at Rs. 4.54 ex-dividend while Dalmia were unchanged at Rs. 9.81 and Jaipur Udyog at Rs. 11.75.

In insurance, New Asiatic met with selling pressure and were marked down to Rs. 2.94 while Ruby General were unchanged at Rs. 6.

In shipping, India Steamship met with investment enquiry at Rs. 11.75. India General Navigation slipped back further to Rs. 55.50.

Among miscellaneous industrials, Angelo Brothers met with profit-taking and were marked back to Rs. 18.12. Dunlop Rubber changed hands freely at Rs. 20.25 and Indian Aluminium were offered at Rs. 12.62. Indo-Burma Petroleum were done at Rs. 24.50 ex-dividend and there was good enquiry for Indian Cables at the higher rate of Rs. 25.62. B.I.C. recovered today to Rs. 4.40. The two newcomers to the Calcutta Stock Exchange official list, namely, Philips India and National Rubber had buyers at Rs. 13.50 and Rs. 5.50, respectively, against the issue prices of Rs. 12.50 and Rs. 5, respectively. Jardine Henderson slumped from Rs. 74 to Rs. 60, following the drastic cut in the dividend. Metal Box were firm at Rs. 26 as were National Carbon at Rs. 23.50.

In the mining group, Indian Copper met with heavy selling pressure on Bombay account yesterday afternoon and dropped from Rs. 3 to Rs. 2.91. Karanpura Development were easier at Rs. 9 and Metal Corporation, on the publication of a disappointing report, were neglected at Rs. 6.25.

Tea shares were dull and prices drifted lower. Nagri Farm were quoted at Rs. 20.25 while Bishnauth, after touching Rs. 19.62, had sellers at Rs. 19.50. Brahmapootra were subjected to further selling and after touching Rs. 2.47, closed slightly better on bear covering at Rs. 2.87. Dhunseri were dealt in at Rs. 13 as were Dibrugarh at Rs. 24.12 and Ledo at Rs. 17. Kodala were quoted at Rs. 12.38 and Jay Shree changed hands at Rs. 9.25. Hasimara and Oodlabari had sellers at Rs. 20.75 and Rs. 15.37, respectively.

From a Neighbour

If there is a lot of comings and goings between Jamshedpur and Rourkela, that is only as it should be. Of all the steel plants, the one coming up at Rourkela is closest to Jamshedpur, India's first steel city.

If these comings and goings lead to an useful exchange of experience and ideas, that is again as it should be for Jamshedpur has been making steel these 50 years. And it is very happy to lend a hand with the training of engineers and technicians for Rourkela. There are nearly 150 of them at Jamshedpur—from key personnel to artisans.

Strengthening these ties of friendship are the surprisingly large number of old Jamshedpur faces that one sees at Rourkela. To them and their colleagues, Jamshedpur sends neighbourly greetings and good wishes.

Good Wishes to Rourkela

THE TATA IRON AND STEEL COMPANY LIMITED

TN 1500

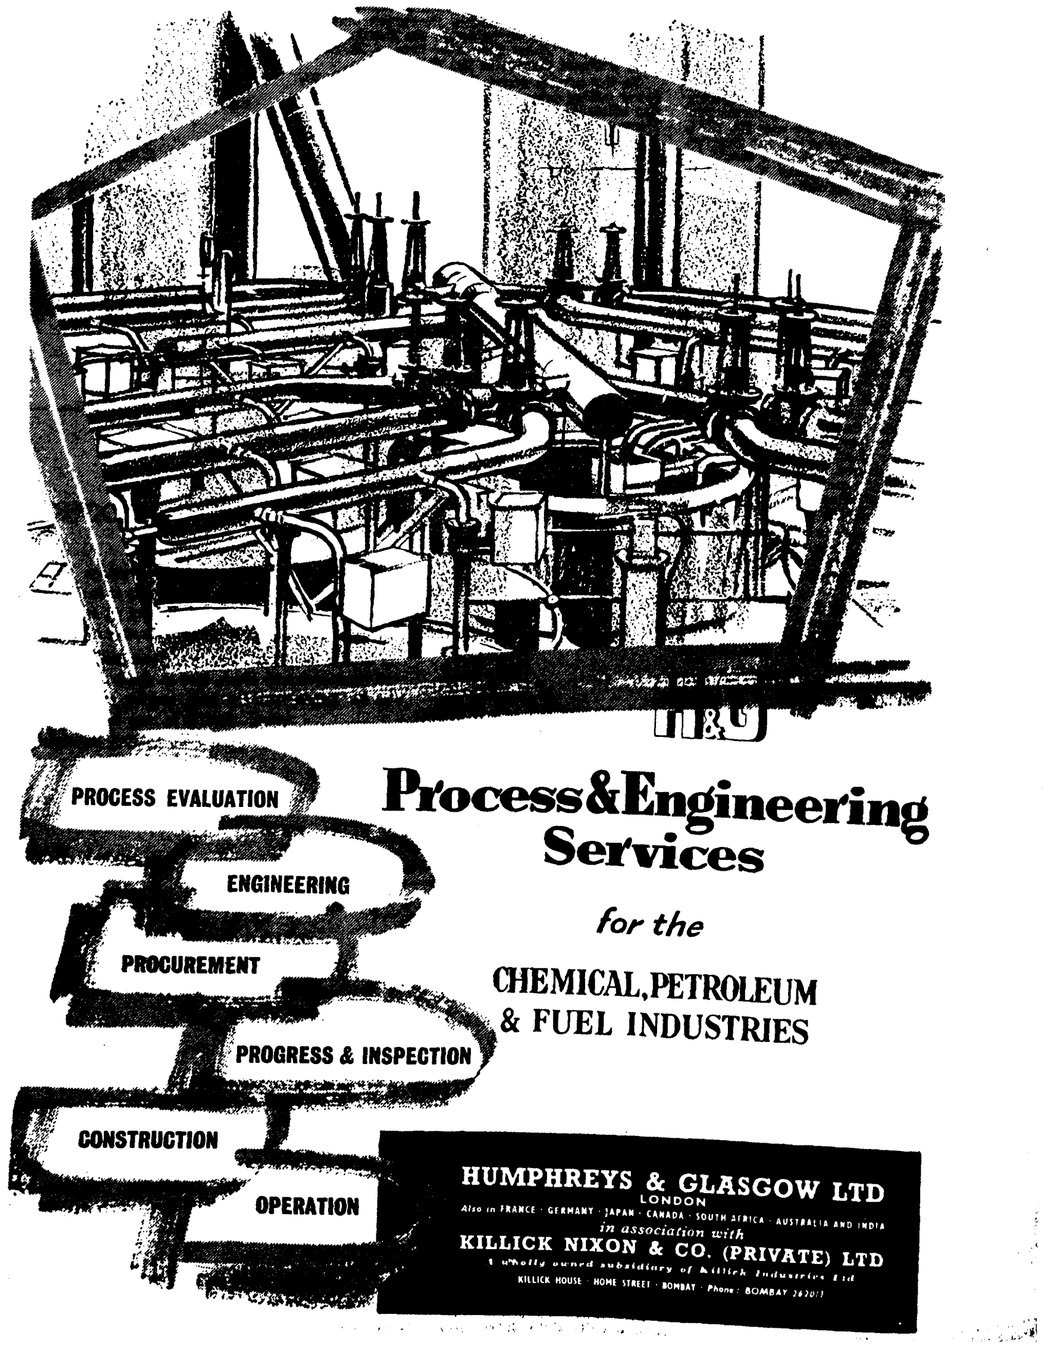
Rs. 18,200 for tax contingency reserve and Rs. 26,200 for development rebate reserve. The preference dividend has been paid but the ordinary dividend has been passed over. There is a carry-forward of Rs. 1,962 (Rs. 6,965). Raisings declined from 150,031 tons to 145,448 tons and despatches were lower at 145,991 tons against 148,818 tons.

* * * *

Providing Rs. 79½ lakhs for taxation, against Rs. 68 lakhs, the net profit of the INDIAN CABLE COMPANY has increased from Rs. 42.92 lakhs to Rs. 49.64 lakhs for the year ended last March. Bringing in Rs. 32,04,214, there is a balance of Rs. 81,68,399. The ordinary dividend has been maintained at 15 percent, including a cash bonus of 2½ percent. General reserve is allocated Rs. 10 lakhs and fixed assets replacement reserve receives Rs. 5 lakhs, leaving a carry-forward of Rs. 41,81,853. The directors propose to make a further issue of rights shares in order to raise the additional working capital required for the increased production resulting from expansion projects. Sales turnover has increased because of higher production and the profit has shown a corresponding improvement.

The BISHNAUTH TEA COMPANY has made a profit of Rs. 16.73 lakhs for the year ended last December, against Rs. 16.31 lakhs. Providing Rs. 7 lakhs for taxation, bringing in Rs. 1,49,360 and making other adjustments, there is a balance of Rs 11,51,326. The dividend is the same at 20 percent, but the share capital has been doubled by issuing bonus shares. General reserve is allocated Rs. 50,000, leaving a carry-forward of Rs. 3,16,326. The crop increased from 3,765,852 lbs to 3,879,539 lbs, and the average sale price was Rs. 2-11-11½ against Rs. 2-7-1½ a lb. Estimates for 1957 provide for a crop of 3,960,000 lbs at a cost of Rs. 174.66 lakhs.

* * * *



The profit of the BETJAN TEA COMPANY has improved from Rs. 4.33 lakhs to Rs. 7.33 lakhs. The dividend has been increased by 5 percent to 20 percent, but the capital has meanwhile been doubled by issuing bonus shares. General reserve is allocated the same amount of Rs. 70.000. Plant and building improvement reserve receives Rs. 50.000. The carry-forward is Rs. 69.106 (Rs. 66.156). The crop increased from 8,798 maunds to 9.548 maunds and the average sale price was higher at Rs. 3-1-11 against Rs. 2-9-3 a lb.

* * * *

There is an increase from Rs. 2.50 lakhs to Rs. 4.72 lakhs in the profit of the TENGPANI TEA COMPANY for the year ended last December. The dividend has been increased by 2½ percent to 10 percent, but the share capital has been doubled by issuing bonus shares. General reserve is allocated the same amount of Rs. 50.000. The carry-forward is Rs 42.609 (Rs. 37,738). The crop increased from 7,466 maunds to 7,619 maunds and the average sale price rose from Rs. 2-6-10 to Rs. 3-1-1 a lb.

* * * *

The profit of the DELHI CLOTH AND GENERAL MILLS COMPANY has declined from Rs. 94.81 lakhs to Rs. 38.31 lakhs for the year ended last June, after providing Rs. 80 lakhs for taxation, against Rs. 68 lakhs. Depreciation absorbs Rs. 97.16 lakhs (Rs. 73.67 lakhs). Bringing in Rs. 1,28,712, there is an amount of Rs. 39,59,620. The ordinary dividend has been lowered by 2 percent to 8 percent, leaving a carry-forward of Rs. 2,77,593.

Bombay Market

TURNOVER RESTRICTED IN QUIET TRADING

SOME SUPPORT FOR STEELS

Wednesday Evening.

THE Bombay stock market was quietly steady last week and turnover was restricted. Operators were disinclined to extend commitments either way and fluctuations were narrow. Except for a limited amount of selective buying by the Life Insurance Corporation, business was difficult to negotiate. There were two-sided movements in speculative counters, and at lower levels there was short-covering.

Sentiment was maintained in steel shares on the belief that output of the Tata Iron and Steel Company during November would show an improvement. Textile shares weakened on selling pressure because of the accumulation of cloth stocks. Trading in cloth was very poor and no worthwhile improvement is likely to take place in the near future, because of crop failures in several parts of the country.

Tata Steels were quoted at Rs. 166.50 and Indian Irons were steady at Rs. 19.46 on support from Calcutta interests. Alcock Ashdown recovered to Rs. 227.25 and Premier Construction were transacted at Rs. 187.75. Tata Locomotive were idle at Rs. 138. Except for scattered enquiries in Premier Automobiles at Rs. 88, there was little interest in the automobile group. Hindustan Motors were freely offered at Rs. 6.20.

Cotton mill shares showed widespread losses. Bombay Dyeing declined to Rs. 50.50 and Century were lower at Rs. 395. Simplex were offered at Rs. 158 and Svadeshi came to hand at Rs. 168.75. India United Ordinary improved to Rs. 9.8 on interested support, while Apollo were transacted at Rs. 2.06. Kohinoor met with scattered support at Rs. 262.

Fluctuations in the miscellaneous group were mixed. Sugar shares were steady, and Belapur were done at Rs. 253. Phalton changed hands at Rs. 148. Cement shares were quietly steady, and Associated Cement were transacted at Rs. 151.50. But it was feared that the company's expansion programme might not proceed as was expected some time ago due to the shortage of foreign exchange. Digvijay Cement were available at Rs. 128.50. Mining shares were subdued, and Shivrajpur Syndicate were bought at Rs. 84.50. Steamship company shares were active, and Scindia Steam came to hand at Rs. 17.16. Great Eastern Shipping were transacted at Rs. 21 on the prospect that the company's working during the current year was reported to be satisfactory. Bombay-Burmah declined to Rs. 539 on the suggestion that the company's capital reconstruction scheme might be delayed. Tata Chemicals were steady at Rs. 12.92 because of hopes of expansion in activity.

Banking shares were steady, and Punjab National were bought at Rs. 67. Central Bank changed hands at Rs. 51.30. There was little change in insurance shares, and New India Assurance were quoted at Rs. 48.50.

Electricity supply shares met with selective support, and Ahmedabad Electric were bought at Rs. 97. Tata Power were wanted at Rs. 1,147.50 on the announcement of a satisfactory dividend.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations, Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. TRENDS IN SWEDISH FOREIGN TRADE

DOMESTIC INFLATION CAUSING ANXIETY

(FROM A CORRESPONDENT)

SWEDEN'S foreign trade in September showed an export surplus for the first time this year. The surplus amounted to 40 million Kroners. In August, exports were 884 million Kroners and imports totalled 956 million Kroners. Exports of machinery, automobiles and vessels showed a big increase in September, as did those of base metals and their manufactures. Larger imports were made of foodstuffs, fuels, cars and vessels.

Over the first three quarters of 1957, there was an import surplus of 1,150 million Kroners, against 998 million Kroners for January-September 1956. Overall imports rose from 8,222 million Kroners to 9,393 million Kroners and exports from 7,224 million Kroners to 8,243 million Kroners. About one third of the increase in imports was accounted for by machinery, transport equipment and instruments. On the export side, one quarter of the nearly 1,000 million Kroner increase in value was because of vessels and approximately the same proportion was claimed by machinery and instruments. Timber exports rose by 100 million Kroners, paper and board by 80 million Kroners, automobiles by 60 million Kroners and iron ore by 100 million Kroners, while a slight drop was noted in the value of pulp exports.

In terms of volume, imports of coal and coke rose from 3.8 million tons to 4 million tons, while oil imports were unchanged at 7 million tons. Imports of iron and steel were up from 499,000 tons to 645,000 tons and car imports from 72,437 units to 84,638 units. Textile imports rose appreciably.

On the export side, shipments of timber rose, while those of chemical pulp dropped. Paper and board exports were up from 673,000 tons to 729,000 tons, iron and steel from 230,000 tons to 233,000 tons, and iron ore from 12.8 million tons to 13 million tons. The value of automobile exports rose from 182 million Kroners to 241 million Kroners, while the exports of ships increased from 359 million Kroners to 620 million Kroners.

SWEDEN'S BALANCE OF PAYMENTS ON CURRENT ACCOUNT 1955-57

(Millions of Kroners)

	1955	1956	1957 Estimates.
Imports (c.i.f.)	10,337	11,434	12,600
Exports (f.o.b.)	8,933	10,067	11,225
Balance of trade	—1,404	—1,367	—1,375
Shipping, net	1,025	1,215	1,450
Other services, etcetera.	35	25	25
Balance of payments on current account	—414	—127	+100

New Inflationary Threat

Sweden's fight against inflation is entering a crucial phase. The official consumer price index (1949=100) in July was 146—one point higher than in June and 7 points, or 5 percent, above the July 1956 level. As a result, old age pensions were raised on 1st October by 50 Kroners a year for single persons and by 40 Kroners for married persons. The basic pension, including the cost of living bonus, came to 2,200 Kroners for a single person and 3,520 Kroners for a married couple. Such an increase is not regarded as disturbing in itself, but the consumer price index now has come close to the two figures which, if reached this winter, will result in demands for compensation from both farmers and labour. This, in turn, would raise the index still further.

When the consumer price index reaches 147, the system of price support for the principal farm commodities will have to be revised. More important, however, is the fact that if the consumer price index for November reaches 150, trade unions will be entitled to claim wage increases. Higher prices of farm products alone will not raise the index to 150, but the increase in rents from 1st October, will be reflected in the new consumer price index.

Norwegian Terms for Free Trade Area

In connection with the plans for a Scandinavian common market, prepared by a committee of Nordic experts, the Norwegian Minister of Fisheries has stated that a condition for Norway joining the common market is that fishery products and fats be included. This opinion had already been emphasised by one of the Norwegian experts on the committee. The Government has not so far come to any policy decision, but it can be taken for granted that the decision will also be that Norway cannot enter into an agreement about a northern Customs union if fish and fishery products are not included. The same point of view will be of decisive importance in whether or not Norway will join the proposed European free trade area.

Raising Aluminium Output

Two aluminium works in western Norway, Ardal and Sunndal—both controlled by the State—have decided to increase their production to 150,000 tons a year. When the aluminium works in Mosjoen in northern Norway—now under construction—is completed, it will produce 90,000 tons of aluminium a year. The Norwegian share in world production of aluminium will then increase from 3 to 4 percent. The new aluminium works is a private concern, financed by one of the leading Norwegian electro-chemical undertakings in co-operation with Swiss interests. When the Ardal and Sunndal works have reached their full capacity, they will be the biggest industrial undertaking in the country. The total annual production will then have a value of £30 million. Norsk Hydro, the nitrogen-producing concern, has so far been the leading industrial enterprise.

Dutch Ratification of E.E.C. Treaties

The Second Chamber of the Dutch States-General has ratified by a large majority the treaty for the establishment of the European Economic Community (E.E.C.), and unanimously approved the treaty for the establishment of the European Atomic Energy Community. The House accepted two amendments during the discussion of the E.E.C. Treaty. The first lays down that future agreements relating to the implementation of the Treaty should be submitted to Parliament for approval. The second requires the Government to submit an annual report on the effect and application of the Treaty, showing, in particular, whether proper consideration is being given to the need for a gradual expansion of employment in the Netherlands. The House has rejected a third amendment tabled by the Liberal Party to the effect that the protocol of ratification should be accompanied by a statement that the special demographic condition of the Netherlands will be taken into account in the implementation and application of the provisions of the Treaty.

Two other motions have been approved in which the Government is requested to assist in setting up a system of deputies for the parliamentary meeting of the European communities and to provide facilities for the training of specialists in the subject of health protection against the effects of radio-activity.

This winter
Fly WEST on the
FAIR WEATHER ROUTE

Pan American's southern route takes you home the sunniest, most direct, most scenic way. You fly on the mighty Clippers* to the great capitals of southern Europe — Istanbul, Rome, Madrid. Then wing your way on to Paris, London, Glasgow, or continue onwards to New York and Bermuda.

All the way you're aboard the world's *most* experienced airline, the airline that pioneered flight service around the world.

So if you're planning a trip home, remember, the FAIR WEATHER Route is *the* way to go. For free information or reservations, call your Travel Agent or Pan American in :

New Delhi

PARLIAMENT REJECTS COMMUNIST MOVE AGAINST FINANCE MINISTER

PROBLEMS OF ATTRACTING FOREIGN CAPITAL TO INDIA

(FROM OUR NEW DELHI CORRESPONDENT)

THE Finance Minister, Mr. T. T. Krishnamachari, was last week given a vote of confidence by the Lok Sabha. This was done by a motion which approved the statement he made on the eve of his recent visit to the U.S.A., Canada, the U.K., and West Germany. Much of the credit for the motion being carried goes to Mr. Minoo Masani. He made a counter-move against the censure motion moved by the Communist Party. Mr. Masani gave a brilliant exposition of his case, indicating what was needed to attract foreign capital. He was followed by the Deputy Leader of the Communist Party, Professor H. Mukherjee, who tried to censure the Finance Minister for his activities in securing finance for the plan from non-communist countries. In doing so, Professor Mukherjee cited the "magnanimity" of Russia, which has granted long-term credits to India on easy terms. Acharya Kripalani, who has returned recently from a tour of communist countries, spoke in terms of his Gandhian ideology, but used unparliamentary expressions which had to be expunged from the proceedings of the House. The Prime Minister spoke more in defence of his foreign policy than of his Finance Minister. The Home Minister, Pandit Pant, used a sledge-hammer to rebut communist arguments and declared that he had some documents which indicated that Party's various intrigues. According to him, "the Communist Party is perhaps the only Party in our country which says that the plan should be retained in its full amplitude, that it should not be pruned, that not an iota should be taken out of it. Granted their sincerity, they desire to see that the country advances rapidly, though some people tell me that this insistence on the maintenance of the plan in its fullness is designed by motives which may not be altogether pure. They say that perhaps knowing that adequate resources for implementing the whole of the plan are not going to be available, it may be possible to argue at the end of these five years that these people are not capable of carrying out their plans."

Mrs. Renu Chakravarty (Communist): We have not said that.

Pandit Pant: I hope not. But I have got some documents to that effect.

Mrs. Renu Chakravarty: Place them on the table.

Pandit Pant: I am inclined to disregard them as I think the collective honesty of the people should be better than the revelations made by these documents. Whatever it be, the fact remains that they want the whole of the plan to be implemented. If the whole of the plan is to be implemented, what are the methods which they are going to suggest for securing the necessary resources for the implementation of the plan. Everyone knows that if you are going to put up three steel plants, if you are going to extend your railway system, if you are going to establish heavy industries, if you are going to have tools and machines made in your own country, then you do require aid from other countries. Whether you get it by means of negotiation in your own country or outside is a minor matter. But these are essential.

Defence of Mr. Krishnamachari

The Finance Minister, speaking in his own defence, said: "Basically, the approach that has been made by the Opposition follows the pattern of Communist thought. A prophet of Communism once said that if it had four enemies, it would make friends with three and destroy the fourth and then the process will go on. My friends of the Communist Party may seek to divide the Cabinet and that is a process that they have been carrying on for long. They must praise the Prime Minister and decry his colleagues in the hope that some time or the other they might, perhaps, devour the Prime Minister. They do not understand that the Prime Minister has chosen his colleagues and if he does not want them he can drop them.

"There is no point in their (communists') saying that the Prime Minister is a good man, but his colleagues are bad men. The Prime Minister chooses his colleagues. This propaganda is not merely carried on by the Communists, but also by those papers which are run by 'fellow-travellers.' We are pleased that our leader is spared from these furious epithets that are often hurled at our devoted heads but nevertheless the tactics happen to be infantile."

Mr. Krishnamachari referred to Professor Mukherjee's criticism that imports had been permitted largely in the field of capital goods used for the manufacture of consumer goods and said: "This is a new one on me. But so far as the Communist mind is concerned, it is inventive and nothing else, and probably we will hear of it later." The Finance Minister said that while he had been accused of having said something which would affect India's relations with her neighbours, the Communists abused other countries which were friendly to India. Turning to Communist members, he declared: "If you want to sympathise with East Germany, there is no need to abuse West Germany. If you want to be friendly with the Soviet Union, there is nothing wrong in being friendly with the U.S.A. and the U.K. also."

Ships on Deferred Payment Terms

Details are now available of the deferred payment terms on which two ships were recently purchased. The first vessel to be purchased under the deferred payment system was s.s *Chipman* by the Great Eastern Shipping Company. The cost of the vessel is £309,000, 20 percent of which has been released in foreign exchange by the Government. For the balance, the company has arranged an overdraft from a London bank after depositing its rupee equivalent with the Bombay branch of that bank. The foreign exchange loan is repayable by the company within a period of two years from the net foreign exchange earnings of the vessel. The following are the particulars relating to the purchase of *s.s. Silverburn* by the Scindia Steam Navigation Company Limited, Bombay, on a deferred payment basis. The cost of the vessel is £570,000 33½ percent of which is payable on delivery. The Government has agreed to release foreign exchange to the extent of 33½ percent from the sale proceeds of two of the company's vessels, namely, s.s. *Jaladutta* and s.s *Jalaganga* subject to the condition that the foreign exchange on the sale proceeds of the two vessels should first be deposited with the Reserve Bank, and also that the calculation of the net foreign exchange earnings on the new vessel, *s.s. Silverburn* is acceptable to the Bank. Other shipping companies are exploring the possibilities of securing ships on a deferred payment basis without any initial release of foreign exchange. The idea is that the price of the vessels purchased will be paid in annual instalments from the net foreign exchange earnings of the vessels. In other words, the purchase will be made under a self-financing scheme.

Trade with East Germany

Speaking to journalists, the Commercial Counsellor of East Germany, Dr. Herbert Meyer, has complained that India has not taken full advantage of the trade and credit facilities offered to her by his Government. In spite of the invitations from his Government, neither Indian business men nor, say, the purchase mission for port equipment have visited East Germany. His Government is prepared to help India in her present difficulties by supplying goods and industrial plant without demanding payment in foreign currency. East Germany cannot offer credit or deferred payment facilities, but will accept payment in Indian rupees in order to buy Indian goods. It has offered Rs. 9 million worth of plant and machinery to the private sector, in addition to 80,000 tons of fertilisers a year for three years to the Government. It has also offered to set up a raw film industry at an estimated cost of Rs. 5 crores, 10 percent of which will have to be paid on placing the order, another 10 percent at the time of shipping the equipment, and the balance in instalments of 20 percent each at an agreed yearly interest rate. As East Germany will have to purchase certain parts of this project from outside, the first 10 percent will have to be paid in a convertible foreign currency and the balance in Indian rupees. Dr. Meyer has also said that the Government of India has shown no interest yet in other projects such as fertiliser plant and power equipment. Trade between the two countries has increased, but is not up to his expectations.

Investments by Life Insurance Corporation

The total investments made by the Life Insurance Corporation in various industries in both the private and the public sectors during the period 1st September, 1956, to 31st August, 1957, are as follows:

		(In thousands of rupees)
(i)	Private sector	10.76.44
(ii)	Public sector	32.14
	Total	11.08.58

The total investments industry-wise are as follows:

Name of the industry	Net amount invested (In thousands of rupees)
Banks	75.99
Cement	1,28.58
Chemicals and pharmaceuticals	30.81
Coal	1.89
Electricity	51.55
Engineering	1,57.96
Mining	12.46
Paper	43.89
Plantations	8.64
Shipping	4.87
Steel	1,46.64
Textiles:	
Cotton	97.78
Jute	9.43
Rayon	7.22
Miscellaneous	3,02.93
Sugar	27.96

There were several supplementaries in the Lok Sabha when Mr B R Bhagat, Deputy Minister for Finance, told Dr. Ram Subhag Singh that the Life Insurance Corporation had, about the end of June 1957, purchased shares of the value of Rs. 1,26,86,100 in concerns in which Mr H. D. Mundhra was said to have an interest. Mr Krishnamachari, Finance Minister, said that the Corporation had very large holdings in private industry. The investment policy of the Corporation was decided by its investment committee.

Dr. Ram Subhag Singh: It was specifically stated on behalf of the Government, when the Bill for nationalisation was discussed, that because of spurious investments on the part of life insurance companies, we were going to nationalise these companies. May I know why that assurance is not being acted upon by the Government at present?

Answer: If the suggestion is that these investments are spurious, I would like to deny it.

Speaker: He only wants to draw the attention of the Minister to the fact that at the time the Insurance Bill was brought here, it was suggested that these (companies) had to be taken over because there were many instances in which the investments of the companies were spurious. He wants to know if it is persisted in now.

Mr Krishnamachari: It is not so. Investment by the Life Insurance Corporation is being done solely with a view to getting a return from safe investments. That is the policy for whatever investments it makes. The question is not if they (the undertakings) belong to any particular individual or group, but whether the Corporation benefits and the policyholder ultimately benefits by the investment.

Mr Krishnamachari said in answer to further questions that he believed, subject to correction, that the Corporation already owned shares in the concerns Dr Singh had mentioned. It was able to purchase these shares at an advantageous price. The Life Insurance Corporation was not interested in market operations.

Mr. Feroze Gandhi: Two months ago, were some shares purchased at a higher price than the market price of those very shares on that particular day in connection with the concerns Dr. Singh has just now mentioned?

Answer: That is not a fact.

Mr Ramanathan Chettiar asked whether this purchase had ben made to relieve the pressure on the stock exchange or some brokers in Calcutta. Mr Krishnamachari said the Life Insurance Corporation was not interested either in the stock exchange or in brokers. It was essentially interested in its own investments.

Mr. Feroze Gandhi: Will the Minister be pleased to lay on the table of the House a statement on the number of shares purchased from this particular concern, the date of purchase and the amount for which they were purchased?

Mr Krishnamachari: Yes. I will certainly try to get that information.

Maintenance of Mazagon Dock

The Government has not decided to purchase the Mazagon dock; nor is it negotiating the purchase. What the Government is trying to do is to persuade the owners, the P. and O. Company (a) not to dispose of the dockyard by bits and pieces, and (b) to continue to maintain intact the repair facilities until it is possible for someone in India to take up the concern and run it efficiently. The company's premises were originally developed as two separate ship repair yards, on adjacent sites, by the Peninsular and Oriental Steam Navigation Company and the British India Steam Navigation Company. The yards were then used to service the vessels of the two companies. In 1915 a partnership firm was formed to operate the north yard and the south yard under the name of Mazagon dock. In 1934, a public limited company under the name of Mazagon Dock Ltd was formed. During the first world war, considerable ship repair work, both mercantile and naval, was carried out. Between the wars the work of ship repairs, and also mechanical engineering work not connected with ship repairs, were carried out on a large scale. During the second world war no less than 4,678 vessels belonging to the Navies of the Allies and also merchant vessels of these nations were converted, refitted or repaired. Some knowledge of the extent of the work done can be gained from the fact that more than 22,000 tons of steel and 31,000 tons of timber were used on ship repairs between September 1939 and August 1945. The number of men employed daily on ship repairs during this time was in the region of 9,500.

Clearing Port Congestion

The following is the gist of the suggestions made by Sir Eric Millbourne, Adviser to the U.K. Ministry of Transport, on port congestion problems in India. It is stated that the first part of the problem is how to increase the rate of flow of cargo through the ports in such a way that goods from the ships to the areas of consumption, or from, sources of origin to the ships, are handled in the most expeditious way possible. For this, there should be, first of all, an examination of the present methods and

processes of cargo handling with a view to suggesting ways in which they may be improved; and, secondly, the acquisition of suitable mobile equipment wherever it may be immediately available. Such an examination will be made by two port operation experts, namely, Mr. Francis Cave, retired General Manager of the Liverpool Port Authority and Captain Alistair Smith, formerly Port Adviser and General Manager of the East African Railways, who will remain in India to visit ports and make recommendations for improvement. While the action on the first recommendation will alleviate the present situation, a major contribution to the overall problem of increasing cargo-handling capacity in advance of the provision of additional berths, can be made only by the installation of mechanical handling facilities for bulk cargoes such as foodgrains and mineral ores. Messrs. Cave and Smith have submitted their reports after their visits to the ports of Calcutta, Visakhapatnam, Madras and Bombay. These include detailed recommendations for effecting immediate improvement in operational matters and in several other directions.

Bigger Port Recommended

The British experts who recently visited India in connection with the congestion in the ports have suggested building a bigger port to berth larger ships. None of the existing ports, it is pointed cut, is capable of taking such ships; nor is any capable of being expanded.

Indo-Norwegian Fishery Project

The Norwegian Minister for Fisheries, Mr. N. Lyso, is on a visit to the Indo-Norwegian project in Neendakara. The Minister will stay for some time in Kerala. The Indo-Norwegian fisheries agreement was signed in October 1952 by the representatives of the United Nations, the Government of Norway and the Government of India. The Norwegian Government initially agreed to provide an amount equivalent to Rs. 67 lakhs and later, a further amount of about Rs. 1 crore, for the project. In addition, some funds have been raised by public subscription in Norway. The total of Norwegian expenditure until 31st March, 1957, was about Rs. 1.2 crores, the Indian contribution to the project being about Rs. 10.3 lakhs.

The aims of the project are: (i) increasing the return of fishermen's activity; (ii) distribution of fresh fish and improvement of fish products; (iii) improvement of health and sanitary conditions of the fishing population; and (iv) in general, a higher standard of living for the community in the project area.

The project area covers the two fishing communities on both sides of the Neendakara bridge near Quilon, in Kerala. It is ten square miles in size and the communities have a total population of 12,000. The contributions by the Norwegian Foundation consist of equipment to be imported, construction of the project centre, salaries of Norwegian personnel, special technical assistance, and experts, scholarships and fellowships. The Indian contribution consists of Indian labour, material for local construction, Indian personnel for local supervision and training, and the provision of sites at the project centre. The programme relating to the modernisation of fishing activities in the project area includes the introduction of mechanised fishing. For this purpose, specially designed boats were tested as local craft were found unsuitable for mechanisation. A boat-building yard has been established for the construction of small-sized boats with engines. Local carpenters have been trained for this purpose, and 65 boats have been built so far. Two medium-sized boats (30 feet to 35 feet) have been brought from Norway and tried, besides three Norwegian schooners (55 feet to 75 feet). One of the schooners has been converted for research purposes and is being used at the Marine Fisheries Research Station in Cochin.

Foreign Exchange Cost of Petroleum Imports

The import of crude petroleum and petroleum products involves foreign exchange expenditure amounting to approximately Rs. 100 crores annually, it is learned. It is one of the largest items in such expenditure. It is explained that oil is a basic commodity; its use cannot be deferred. Petroleum products are essential for a wide variety of productive operations in industry, agriculture and transport. Room for manoeuvre is extremely limited; the *per capita* consumption in India is about three gallons compared with approximately 150 gallons in western Europe. Market studies suggest that this consumption represents only the essential demand. Pleasure motoring, for example, involves not more than 6 percent of the motor spirit sold in India, and this, too, of a product in which output is surplus to internal demand.

Low consumption in a vast country makes physical control a major administrative problem. Any reduction in consumption might lead to increased unit costs of distribution, which may have an adverse effect, say, on export industries. Analysing the foreign exchange expenditure, it seems that any saving will be possible only by a reduction in either the import of crude oil or that of the refined product. But any reduction in imported crude, will mean a decline in indigenous production of refined products, leading to a further demand for their imports. It is substantially cheaper to import crude oil for refining in India than to import the equivalent amount of refined products.

The foreign exchange spent on the import of kerosene and aviation spirit is almost 50 percent of the total for refined products, kerosene itself requiring almost 40 percent. It is the most widely used of all petroleum products in the country, particularly in the villages. Any restriction on supply would mean a transfer to consumption of vegetable oils and this is highly undesirable for the following reasons: (a) vegetable oils are an essential food and cooking medium and to use them for lighting is wasteful; (b) the transfer is uneconomic and the use of vegetable oils is considerably more expensive—the price is in the proportion of 1: 6: 5: 6 in the order kerosene, mustard oil and castor oil. On average, vegetable oils are five to six times more expensive than kerosene; (c) vegetable oils earn valuable foreign exchange. In 1955-56, the earnings were Rs. 34.30 crores.

Any reduction in the supply of aviation spirit would cut into military consumption and that of the air services, the implications of which could be serious. The output of the oil refineries has been stepped up to the full extent possible. The current production of motor spirit and black oils is already greater than indigenous consumption, and certain quantities are being exported. Export markets are, however, limited, and India is not geographically well situated for competing with supplies from other producing areas. The main deficit is in what is called the "middle-distillate" range, comprising kerosene, V.O., H.S.D. and L.D.O. There is a limit to the flexibility of the refineries and they are already producing the maximum quantity of these products, bearing in mind the specifications essential to their consumers.

Surplus Motor Spirit Output

Further expansion of refinery output is governed by certain factors. There is already a surplus of motor spirit for which export markets are extremely limited. Motor spirit consumption in India is very low in comparison with the refinery output and is static while the consumption of most other products is increasing rapidly. If refineries are to expand in order to cover the deficit of these products, they would be faced with a large surplus of motor spirit which they would be unable to market economically.

Saving in Imports

There will be a saving of approximately Rs. 70 crores on a half-yearly basis in the commercial licensing of imports, excluding iron and steel. This saving is not likely to accrue during the next six months, but will be spread over a longer period depending on the utilisation of the licences.

Amalgamation of Small Collieries

The Government is considering whether the amalgamation of small collieries should be brought about by legislation or without it, Sardar Swaran Singh, Central Minister for Steel, Mines and Fuel, has told the Lok Sabha. The Minister has said that the Government has accepted in principle the proposal for the amalgamation of small collieries.

Madras-Rangoon Steamer Service

It has been decided that the Government-owned Eastern Shipping Corporation should take over the Madras-Rangoon steamer service as soon as it is able to acquire a suitable vessel for the purpose. When this materialises, the question of resuming calls at Visakhapatnam will be considered in the light of the traffic potential to and from that port.

Panna Diamond Mines

The Government proposes to nationalise the Panna diamond mines and legislation will be introduced as soon as possible. It will probably be necessary to set up an autonomous statutory corporation or a Government-owned private limited company for this purpose. A final decision will be taken when the matter has been fully examined and the requisite financial resources and foreign exchange are assured.

Amending Law on Capital Issues Control

A Bill to amend the Capital Issues (Control) Act was introduced in the Lok Sabha last week. The statement of objects and reasons says: "The Capital Issues (Control) Act, 1947, does not specify that capitalisation of reserves for the purpose of crediting partly-paid shares as fully paid or for increasing the par value of shares already issued, requires prior permission. This Bill, therefore, seeks to clarify the position. It has been the intention, ever since the inception of control on capital issues, that the execution of mortgages or hypothecations should require prior approval under the Act. As the expression 'other instruments' occurring in Section 2(b) (iii) of the Act is not sufficiently clear and has given room for doubts, it is proposed to put the matter beyond doubt by amplifying the definition of the term 'securities' in Section 2(b) so as to cover the transactions mentioned above. Similarly, opportunity has now been taken to define the expressions 'company', 'prospectus' etcetera, which the Act has so far left undefined and also for providing for certain other minor but relevant matters such as taking powers for revoking or varying consent already accorded, condoning offences under Section 5 of the Act and prohibition of the giving of false information in connection with any of the provisions of the Act."

London

MAINTAINING THE VALUE OF STERLING

MOVE FOR SHORTER WORKING WEEK CRITICISED

(FROM OUR LONDON CORRESPONDENT)

THE Government is doing whatever it can to secure co-operation over as wide a sphere as possible in the fight against inflation, without unfortunately quite as much success as it would like. Half the November issue of the Treasury's *Bulletin for Industry* is devoted to an exposition of the reasons why the value of sterling should be maintained at home and abroad, which it describes as "a national aim on which all sections and all political parties agree without reservation." That is perfectly true. No one questions the diagnosis of the malaise. Where disagreements arise is on the method of treatment to be adopted to remedy it. The Government's intention to carry on this war in defence of the pound along the lines already announced was confirmed by the Prime Minister in a speech in Liverpool last week. He rejected the Labour Party's preference for controls, denied any intention of interfering with the voluntary negotiation of how the wealth created by production should be distributed, but went on to give this warning: "If the Government must leave the decisions to others, it does not relieve it of the obligation to warn all concerned of the consequences of wrong decisions. Still less does it relieve those who have taken the wrong decisions, either irresponsibly or inadvisedly, of those consequences. They must not be allowed to dodge them at the expense of other sections of the community and of the country as a whole. Wage increases must be related to the growth of real wealth." He reiterated the warning that the money will not be made available to finance inflation, either in the nationalised industries or private industry and said: "We intend to do our duty, no matter how much we are abused or our actions are misrepresented."

In spite of this plain speaking, there is little indication of any change of heart so far as wage claims, or what virtually amounts to the same thing in the form of claims for a reduction of working hours, are concerned. The general concession of a 40-hour week to industry will cost the country £1,000 million a year—not the granting of that concession in the engineering industry, as was inadvertently mentioned in last week's despatch instead of the actual figure of about £130 million—yet the claim is being pressed also by miners, railwaymen, building trade workers, shipbuilding and ship repair workers and engineering clerks. The situation is ticklish as well as intriguing. Following the recent rejection of the engineering workers' claims, London Transport has refused flatly to consider a 25s a week rise for bus men, contending that it is inopportune and could only be met by a further increase in fares. The General Council of the Trades Union Congress is also marking time and has again postponed consideration of the Cohen Committee's invitation to express its views on prices, productivity and incomes, and is now the only invited body which has not been heard, so that if the Committee does produce its first "report to the public" early in January it will have been compiled without the assistance of the T.U.C. Everyone appears to be marking time, hoping that when a final decision becomes inevitable the necessity for it to be one which might antagonise public opinion will no longer be equally inevitable. The postponement of the railwaymen's claims until next year at the earliest has played hash with this cat-and-mouse game.

Further Decline in Bank Advances

The "holding off" is at least giving the Government's monetary measures a chance to effect some improvement in certain directions. Indeed, in the absence of industrial strife, all markets are reflecting the anticipated developments, though there are occasional setbacks here and there. Following the decline of £32.5 million in advances between 18th September and 16th October, the latest statement of the London clearing banks, made up to 20th November shows a further steep decline of about £50 million to reduce outstanding loans to approximately £1,870 million, or about £72 million below the Chancellor's new ceiling of £1,942 million. It is not clear to what extent this latest evidence of the tightening credit squeeze is attributable to a reduction of bank borrowing by the nationalised industries, but it seems likely that most of the fall has originated in the private sector of the economy. There, some of the decline probably represents the running down of stocks carried on bank money. This will have operated through the effect of high interest charges on holdings as well as the fall in commodity prices.

Increased Production of Coal

Coal output in recent weeks has shown some tendency to rise, but is still capable of further improvement when compared with comparable figures of last year. Nevertheless it is encouraging to learn from the latest statistics that coal imports so far this year have been almost halved and amount to only 2,650,500 tons, against the 5,915,600 tons which had been imported at the same period of last year. The chairman of the National Coal Board has recently suggested stepping up production by one extra wagon-load in each pit and helping eliminate imports completely. That will certainly prove a valuable contribution to Britain's balance of payments and to its economy as a whole. On the other hand, the news from another useful industry is not so good. The Chamber of Shipping is now issuing monthly instead of quarterly returns, and the first of these, for October, records that the amount of shipping laid up in Britain for reasons other than repair rose from 243,646 to 277,960 gross tons during the month. At 30th June, the total was only 81,917 tons, and at the end of September 1956, it was 45,054 tons. The laid up for repair figure also jumped, from 700,956 tons at the end of September to 839,236 tons at the end of October, against only 400,083 tons a year ago.

New Import Duties Bill

The Government's Import Duties Bill to simplify the existing Customs tariff has been published together with a White Paper clarifying certain features. Although not primarily concerned with negotiations for a European free trade area, one outcome will be to facilitate British participation. The main object is to end what has been described as the "jungle" of Customs tariffs. The Bill replaces six major Acts and 70 amendments to Acts. It will classify in an internationally agreed form all import duties applied by Britain. Twenty countries are adopting this which is known as the Brussels nomenclature. Except for marginal matters, all of which have been agreed by trade associations, there are no changes in the rates of duty under the Bill. Commonwealth preferences are preserved. The new structure comes into force from January 1959, but the Board of Trade hopes that before then it will have had a good "trial run" in using it. Hundreds of trade associations have been consulted and the changes are welcomed by industry. Both the checking of tariffs and the preparation of Customs entries will be considerably simplified.

An import duties board will be established under a permanent chairman and with part-time members to investigate and report on the facts on applications to change import duties. Objects and principles are laid down to meet modern conditions in which trade is governed by international agreements such as G.A.T.T. rather than the protection of individual industries. Power is given to the Government to retaliate against foreign discrimination. A retaliatory duty could be imposed against countries defaulting on agreements to lower tariffs. With its powers under the recent Anti-Dumping Act, the Government considers that the Bill will arm the country adequately if British participation in a free trade area materialises. The White Paper describes the structure of the Brussels nomenclature. There are over 1,000 headings in the classification. It is explained that at present there is little uniformity among Customs tariffs of different countries. Headings and definitions of products frequently differ so much that each national tariff normally needs detailed study before it can be correctly understood.

Privilege for Shipping

Sir Donald Anderson, deputy chairman of the P. and O., has defended before an audience of accountants at a City luncheon the privilege granted to shipping companies under the Shipping Companies Exemption Order, 1948, to publish profits that are incorrect. The justification is that the exemption allows a shipowner who is fighting in defence of his Conference to conceal his losses and hence his weakness from his enemies, and applies only to companies engaged in a single trade. Sir Donald stresses the competitive nature of shipping, which has no protective tariff, no home market, and, in the case of U.K. shipping, no reserved field of any kind. They do have their Conferences, however, so that the competition is not so unrestrained as might appear at first sight. A large proportion of ships comply with Conference rules, so that those in open competition are a minority. Even so, the system is still imperfect, with the result that there are "fights from time to time." In the last ten years the P. and O. had had two, one against the Japanese and the other against the Dutch. In each case, he said: "We should have found it unpleasant had our competitors known how much we were losing. In one case it went on for three years." He concluded by explaining that the P. and O. does not make use of the exemption order because as a group the loss on any individual fight would be submerged in the consolidated profit and loss account.

James Warren

Unusual activity during the last few weeks in the shares of James Warren and Company, the tea agents with large commitments in India and Pakistan to which have been added recently fresh interests in Africa, presaged the prospect of a take-over bid. Finally, a firm of London solicitors, acting on behalf of an undisclosed client, advised the company's board that an offer concerning all the preference and ordinary capital would be made. In due course the directors received "suggested terms of an offer" from Paragon Holdings and they advised shareholders to wait until they issued their views. A day or two later, however, after discussions between both sides, it was announced that Paragon Holdings had changed their minds and "do not now propose to make an offer for the shares."

Brevities

B.O.A.C. plans to replace *Britannia* aircraft on the Sydney-London route with *Comet IV* jet airliners late next year.

The Assam Company is proposing to become a holding concern under the name "Assam and African Holdings." At present it functions as an operating company for its Indian estates and as a holding company for its interests in East Africa.

The Royal Empire Society has passed a resolution to change the name to Royal Commonwealth Society. This will be subject to confirmation at another meeting and will then go to the Privy Council for its approval.

At separate Class meetings of the "A", "B" and "C" shareholders of the Mercantile Bank of India, Limited and at an extraordinary general meeting, resolutions agreeing to the scheme of arrangement for the reorganisation of the bank's capital and the proposal to change the name to Mercantile Bank Limited were carried unanimously. High Court sanction is now required to give effect to the proposals.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business, ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

SCHEME TO INCREASE CAPACITY OF MINOR PORTS

PLEA TO CHOOSE TROMBAY AS SITE FOR SECOND SHIPYARD

(FROM A BOMBAY CORRESPONDENT)

THE Bombay Government is reported to have made a strong plea for the selection of Trombay as the site for the proposed second shipyard for India, it is reliably learned. The British shipyard mission advising the Central Government on its location and construction visited the site recently. The mission's report is likely to be published by March next year.

Meanwhile, the State Government has decided to implement its scheme to increase the capacity of minor and intermediate ports by as much as 100 percent from the present annual capacity of 2,700,000 tons. The scheme includes the purchase of four small and one medium-sized dredgers, the construction of an additional pier in Okha, and the conversion of Ratnagiri into an all-weather port. A lock-gate for improving silt control, estimated to cost approximately Rs. 70 lakhs, is already under construction at Bhavnagar Port. The work, it is expected, will be completed within a year and will increase the port's cargo handling capacity from 450,000 tons to 2 million tons. The minor Konkan ports of Malwan, Vengurla and Devgad are also to be improved at a cost of Rs. 2 lakhs.

The State Government, it is further learned, proposes to divide all the ports under its control into ten groups, each group being placed under a port officer in order to increase administrative efficiency. These measures, it is believed, will ease the pressure on Bombay Port. As the sea traffic from Europe has become normal since the reopening of the Suez Canal, the congestion in the port has substantially eased. Import restrictions have also led to an improvement in the position and the city's once overcrowded docks are now less congested.

Import Ban on Razor Blades

The ban on the import of razor blades will save about Rs. 107 lakhs in foreign exchange. This has been said by Mr. S. M. Dahanukar on behalf of the All-India Razor Blades Manufacturers' Association. Requesting the Central Government to maintain the present ban for at least three years, he has traced the growth of the indigenous industry from 1948, when the first blade manufacturing plant was set up, to the present time when five units—two each in Bombay and Calcutta, and one in Ujjain—are operating. He estimates the country's requirements at 450 million blades. During the last three months the five units have produced 109 million blades compared with the annual production of 436 million. During the last six and a half years, India imported foreign razor blades to the value of Rs. 2,66,37,000. While the total value of imports in 1950-51 was Rs. 18.22 lakhs, it rose steeply in the following year to Rs. 88.36 lakhs. During the first five months of this year, blades worth Rs. 21.66 lakhs were imported.

Fluctuations in Cotton

Cotton prices fluctuated on alternate bouts of buying and selling last week, I.C.C. Jarilla March hovering between Rs. 700 and Rs. 711 a candy. The daily turnover amounted to about 10,000 bales. In the Sewri spot market, prices declined by about Rs. 5 or Rs 10 a candy. Reports of some mills curtailing output following New Delhi's refusal to reduce the excise duty on cloth aided the bearish sentiment. Principal attention was focussed on 1957/3 of both Berar and Khandesh, some coverage being extended to good quality 320F and new crop Vijay for February-March delivery. Business was fair in the foreign section, a fair volume having been transacted in U.S. cotton for December-January shipment.

There was some demand for Bengals, old and new crop stocks, but prices generally remained unchanged. In view of the fact that the quotation for Bengal had dropped by over Rs. 50 a candy over the past six weeks, shippers expressed the belief that there was no case for reducing the export duty on short staple cotton. Rumours have prevailed that New Delhi will soon announce a fresh export quota for Bengal. It is reported that a Sudanese trade delegation will visit India shortly to investigate the possibilities of selling more Sudanese cotton. Commenting on the foreign exchange difficulties that stand in the way, traders say that Sudan should be asked to receive payment in Indian rupees or, alternatively, to tie up the sale of cotton with the import of piecegoods from India. Meanwhile textile mills have urged New Delhi to restrict the imports of sterling area cottons to varieties of stapling $1^{4}/_{16}$in. and $1^{3}/_{16}$in. and above. Such a step, they believe, will facilitate the import of U.S. cotton which the country has been receiving under the aid programme.

Yarns Firm

The yarn market remained firm and active with higher demand for both staple fibre and art silk yarns, and as a result, prices showed a substantial improvement. Cotton yarn remained easy. The better sentiment in art silk yarn was attributed to the growing scarcity of tenderable yarn with stockists. With the statistical position having begun to assert itself, actual users felt the scarcity of 75 and other popular deniers. Prices of all deniers improved by about one anna a lb. In the ready section, Japanese rayon yarn of 150A and 120A bright Diafuki also rose by about an anna a lb. In the futures market 120D December delivery fluctuated between Rs. 816 and Rs. 822 a case on alternate spells of buying and selling and closed at Rs. 818 a case. The February delivery was quoted at a discount of Rs. 6 a case. The 2/40 staple fibre December delivery went up from Rs. 540 to Rs. 556, while February delivery was placed at a premium of Rs. 9 a bale.

Oilseeds Erratic

In the oilseeds market, futures fluctuated erratically. Linseed registered a considerable improvement, but cottonseeds declined sharply. The improvement in linseed was due to traders' optimism on the export outlook for this commodity. Export business for nearly 1,100 tons was completed last week, the United Kingdom being mentioned as the only buyer. The bulk of the business was done around £111 a ton. After easing from Rs 31.81 to Rs. 31.69, linseed May rose to Rs. 32.[illegible] and closed at Rs. 32.37 a cwt. Linseed oil reacted showed a rise of about 8 annas a quarter over the week. Groundnut futures fluctuated irregularly on alternate spells of short-covering and buff [illegible] dation. With arrivals fairly heavy, vanaspati manufacturers and crushers preferred to hold off the market in anticipation of lower prices. Groundnut February, which dropped from Rs. [illegible] to Rs. 161.37 on the opening day, closed at Rs. 162.26.

SOUTH EASTERN RAILWAY

TENDERS

Sealed tenders are invited for supply of the following materials :—

(1) Tender No. PB/8/57/COS/1000 HD(57) for supply of 100 Nos. each of (a) spotlight as per the Railways' specification (b) 30 watts × 6 volts sealed beam hooded with focussing beam for item (a) and Battery 6 volts, 13 plates capacity 92 A.H. at the 20 hour rate of discharge, usual car batter size for item (a).

(2) Tender N. PB/9/57/COS/69/CD/Prog (55) for supply of 720 piston rod 1.3/4" dia. brass sleeved to IRS Drg. VB. 70 Alt. 5 and to IRS Specn. R-3-51.

Tender forms are obtainable from the office of the undermentioned (PB Section), S. E. Railway, Garden Reach, Calcutta-23 on remittance of Rs. 3/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Railway, Garden Reach, Calcutta-23 by local firms. Earnest money is Rs. 200/- and Rs. 300/- for item Nos. 1 and (2) respectively.

Closing date of tenders is 27-12-57 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid income tax clearance certificate along with the earnest money deposit receipt with the tender.

CONTROLLER OF STORES

Jute

RESULTS OF THE INTERNATIONAL JUTE CONFERENCE

DIVERGENT VIEWS ON FAIR PRICES FOR FIBRE

THE International Jute Conference in Dacca which ended a few days ago has brought disappointment to many in the jute trade. In spite of a large measure of agreement on a variety of aspects, the main problems remain. As was expected, the controversial question of finding a stable price for raw jute, and at the same time safeguarding the interests of both growers and consumers, has proved too great an obstacle. Attempts to find a solution have finally been abandoned in spite of the best efforts of the sub-committee specially appointed for the purpose. Certain changes have been sanctioned in the L.J.A. contract, but it is understood that they deal mainly with the question of arbitration and the adoption of Pakistani law where it is applicable. The basic structure of the contract concerning guarantees, etcetera, remains the same, a fact which Pakistani interests are reluctant to comment upon. The new L.J.A. contract will come into force early next year.

The question of substitutes has figured largely in the discussions, and it is obvious from the meagre news given to correspondents and the reluctance to allow reporters to attend the Conference that all has not gone well as far as Pakistan is concerned. It appears that there is a price difference of approximately £10 a ton between Pakistan's idea of a fair price for Export Firsts, and the price which foreign delegates have in mind (£85 a ton). The representative of a Pakistani growers' association has even gone so far as to threaten that unless cultivators receive a better price for their crop, they might refuse to grow jute altogether. This attitude has been met with the contempt it deserves; there is nothing that can hasten the change to substitutes more than threats of this nature.

Among the many recommendations made to the Pakistani Government is one suggesting that the production target for raw jute in the 1958-59 season be 7 million bales. The world demand for raw jute during the coming season is assessed at 6¼ million bales. Probably one of the most significant results of the Conference is the opportunity given to delegates of making personal contacts. Many amicable agreements have been reached in this way, which would otherwise have necessitated lengthy correspondence and innumerable misunderstandings before a solution was finalised. This aspect of the Conference has been most encouraging, and many problems have been eliminated by a personal approach even before they materialised.

Trend in Gunnies

There has been very little genuine business in the Calcutta jute goods markets during the past week, and price movements have been regulated by speculative activity. Sacking prices have moved through a wider range than of late, and at one time new low levels were recorded. The undertone of the market is weak, and even local shippers appear to have lost interest. Weak holders in the fatka have depressed rates, and heavy selling pressure from them has invariably brought about fairly large fluctuations. The hessian market, although moving in sympathy with sacking, has shown a greater degree of confidence, as many operators expect greater interest soon from America. Consumption in the United States this year has been at a low level, and stocks too are unusually small.

Because of the lack of interest in finished goods, mills have bought only small quantities of raw jute. Their main interest, however, appears to be in the cheaper fibres; the better grades have been neglected. The only exception is Daissee, the demand for which far exceeds the supply. Some mills continue to purchase Daissee over the jetty, and this is causing discontent among genuine sellers. A group which is reported to be badly in arrears with its payments for jute bought under contract has been buying in this way. The position has become so acute recently that, to attract sellers, it has had to agree to pay interest on bills lying unpaid over a certain period. This group, however, is now buying Daissee over the jetty, payment for which is made in full within a few days of arrival. Naturally, sellers who have made delivery against contracts, and have waited up to six weeks for payment, have a grievance. Imports in all the upcountry agencies remain much smaller than normal, and prices there are well above the parity of those ruling in Calcutta.

THE JUTE MARKETS

Manufactured Goods: The gunny market showed an upward trend at the opening last Thursday, heavy speculative activity causing fluctuations in both sacking and hessians. B Twills showed a rise of 65nP to open at Rs. 112.90 in the near position, the premium over forward shipment rising to Rs. 3.15. It was obvious that the rise was due to speculation as hessians moved the other way, with 40in. 10oz. losing 20nP to Rs. 40.50, with forward shipment at a premium of 35nP. The rise in sacking was short-lived. Heavy speculation caused a rapid fall during the day, and a new low level of Rs. 109.50 was recorded. Hessians too fell by 40nP and a weak undertone prevailed. Further reductions were recorded during the day, but by the week-end sacking recovered slightly to rule at Rs. 110.75 with Rs. 2 difference between near and forward goods. In the absence of overseas enquiries, the market was quiet, and prices fluctuated within narrow limits over the week-end. Hessians recovered slightly in anticipation of business, and after the week-end remained steady on the basis of Rs. 40.05 for ready shipment. The main interest was in the forward section, and the premium here advanced to 50nP.

At the close, the market showed a decline in all fabrics, and opening quotations on Wednesday morning were as follows:

	Ready	Dec.	Jan.-Mar.	Apl.-June
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	33.40	33	32.90	32.70
40in. 10oz.	39.85	40.05	40.30	40.30
B Twills	109.60	109.25	108.75	108.50
Heavy Cees (Plain)	112.25	110.50	108.75	108.50
A Twills	134.25	134.50	133.75	132.75
Liverpools	128	126.25	124.75	123.75
Cornsacks	109.25	109.50	109.75	109.50

Raw Jute: Once again, mills only showed mild interest in raw jute. Day-to-day purchases on a small scale were the feature, and invariably business was done at slightly below the quoted prices. Raw jute derived no support from gunnies, and the undertone was weak, with the result that prices declined throughout the week. Quotations were nominal in the absence of business. The only agencies to show any parity with Calcutta were the Northern ones, and sellers were keen for business from these districts. Prices at all other agencies were well above Calcutta rates, and sellers were reserved. Good Daissee was scarce, and mesta was arriving in increasing quantities. Opening quotations last Thursday were based on Assam jute at Rs. 27.75 and Northern at Rs. 27.50 for December-January shipment. These rates were unchanged on Friday. On Saturday, however, in sympathy with the manufactured goods market, and in the absence of business, prices dropped by 50nP and persisted at Rs. 27.25 until Wednesday, when a further 25nP was taken off. Small business was conducted at each rate, and sometimes below the quoted prices.

Business was done for Assam jute at Rs. 27 to Rs. 27.50 a maund, and in Northern at Rs. 26.62 to Rs. 27.25 a maund, all for December-January shipment. Tossa from the same agencies was done at 75nP to Re. 1 higher. Daissee was in good demand and prices ranged between Rs. 29.75 and Rs. 30.25 for ready and one month's delivery. A fair quantity of Daissee mesta was also purchased at Rs. 24.75 to Rs. 25 a maund. In pucca bales, Pakistani cuttings were done at Rs. 80 to Rs. 82 a bale for T.C.'s on buyers' licence, and at Rs. 83 to Rs 85 a bale for sellers' licence and bills of lading.

At the close, the market was very weak, and opening quotations on Wednesday morning were as follows:

Indian Jute :	Landed at Mills	Shipment
	Rs. a md. basis Bottoms.	
Assam	27	Dec.-Jan.
Northern	26.75	"
Purnea Desal	24.50	"

THE FOREIGN JUTE MARKETS

DECLINE IN FIBRE PRICES

(FROM OUR DUNDEE CORRESPONDENT)

THE price trend in raw jute is in the right direction A fall of anything from £2 to £3 a ton has taken place recently, and the trade generally thinks that the declining tendency will continue. It is said that paper manufacturers are hard put to it to make both ends meet and that the demand for their products is falling off. The members of the jute trade in Dundee are pleased to hear that Mr. W. G N. Walker of Jute Industries, Ltd. has stressed at the International Jute Conference in Dacca the need for stable and economic prices. He has pointed out that certain middlemen are necessary to the trade. No doubt he refers to jute brokers in Dundee and London, who are very well organised, and the majority of them know the various difficulties of the local and Continental spinners. He agrees that Pakistan has a monopoly of raw jute, but thinks it better for that country not to treat its position as such. Mr R. E. B. Wilcox, chairman of the London Jute Association, has agreed with Mr. Walker's remarks, and stresses that confidence in the sanctity of contracts is vital, as otherwise buyers will be forced to use substitutes. The main

Foreign Trade . . .

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service.
With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Foreign Agencies

ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

For INFORMATION on AUSTRALIA, NEW ZEALAND, and FIJI

Business men requiring up-to-date information and a complete banking service are invited to use the facilities of the *Bank of New South Wales*, the oldest and largest commercial bank operating in Australia, New Zealand, Fiji, Papua and New Guinea, with over 1,000 branches and agencies.

The services include trade and industrial introductions, economic and market information, and assistance with travel requirements.

Enquiries may be made through your own bankers or direct to:—

BANK OF NEW SOUTH WALES

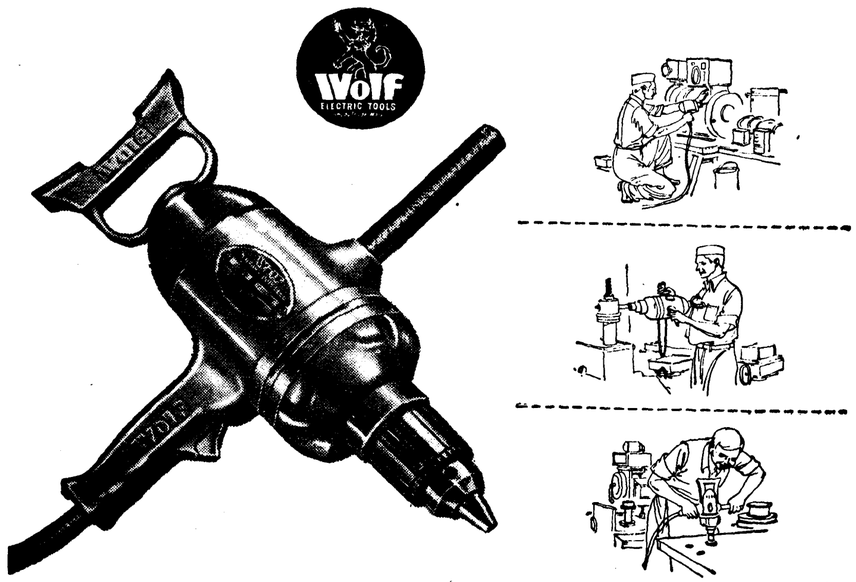
theme of his discussion has been that the essential needs of the ultimate consumer should be kept in mind. Mr. R. C. Carmichael, of the European Jute Association, has also spoken on identical lines. All the speakers have no doubt pressed home the wishes of the trade in all consuming countries, and it is felt by the trade here that the time taken over the Conference will not be wasted. There are, of course, quite a number of sceptics who cannot see any good coming out of it.

Offers of raw jute are made at £115 for Mill Firsts, from £96 for Mill Lightnings, £87 for Mill Hearts and £77 for grade Hearts, £97 for good Daissee ⅞ and £90 for grade, and £104 for grade Tossa ⅞ and £97 for grade Tossa 4, all c.i.f. U.K., December-January. Calcutta goods are easier at 61s 6d for 40in. 10oz. hessians and 46s 9d for 7½oz., December, 61s 9d and 46s 9d, January and 62s and 46s 6d February-March, with B Twills at 168s 6d, 168s and 167s 3d for the respective positions of shipment. all f.o.b., Calcutta. Jute yarns and cloth continue quiet.

GUNNY SHIPMENTS DURING OCTOBER



The following are the total net figures of manufactured jute goods shipped from Calcutta during October after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	2,716.9	20,582.1	23,299.0
Short Shipped	167.7	884.6	1,052.3
October 1957 (Net)	2,549.2	19,697.5	22,246.7
September 1957 (Net)	3,196.5	30,470.2	33,666.7
August 1957 (Net)	2,808.8	24,889.0	27,697.8

DIAMOND JUBILEE OF SHELL TRANSPORT AND TRADING

CONTRIBUTION TO GROWTH OF OIL INDUSTRY

(FROM A CORRESPONDENT)

THE Shell Transport and Trading Company was established by the Samuel brothers on 18th October, 1897. The amalgamation between Shell and Royal Dutch took place a decade later. The current year marks a double event for Shell and the Royal Dutch-Shell group. The name of the firm celebrating its diamond jubilee acknowledged its descent from the small trading concern in marine shells set up previously. By 1900 Shell had become one of the world's major oil companies, with 30 ocean-going tankers, 31 ocean depôts throughout the East and 11 more planned, and 320 subsidiary depôts in towns throughout the orient. It was a period of transition in the history of the oil industry. Gas and electric light had already proved serious competitors of the paraffin lamp. The motor-car industry was still in its infancy, but there were some who envisaged its expansion and the resulting demand for petrol, then only a waste product in the manufacture of kerosene. There were others who anticipated the substitution of oil for coal as a marine fuel.

As early as 1907 Shell petrol was very much in demand, and business had grown so rapidly that it could not find adequate sources of supply. Royal Dutch, on the other hand, had ample petrol supplies. Hence the amalgamation of Shell and Royal Dutch was deemed mutually beneficial. Thus, 50 years ago under the new alliance the Royal Dutch and Shell became purely holding companies, with their interests in the proportions of 60 and 40, respectively. Virtually half of Shell's span of life was guided by its first chairman, Marcus Samuel, knighted in 1898 and later elevated to the peerage as Viscount Bearsted. Under his direction, Shell became a partner in some 500 group companies, whose sales exceeded £2,300 million in 1956, and made it the third largest selling organisation in the world.

Various Activities

For five decades Royal Dutch and Shell have worked in harmony, and set up hundreds of companies in almost every country in the world. Beneath B.P.M. and Shell Petroleum—the twin operating concerns—are the 500 companies of the group linked by shareholdings with one of the parent holding corporations. Of these, 150 are engaged in each of the major operations of production, transportation and processing, while nearly 200 are concerned with marketing. A further 150 are entrusted with various other functions including research, storage and ownership of property.

The group's entry into the new world roughly coincided with the breaking up of the Standard Oil Trust, which inaugurated a new era in world competition. Coupled with the discovery of oil in the Middle East, it heralded the dawn of the international oil industry. While the high petrol content of the East Indies oil brought the Royal Dutch to western Europe, the opening up of Venezuela strengthened the group's trade in fuel oil. The greatest advantage of the Royal Dutch-Shell Group is the diversity and multiplicity of its operations in virtually every part of the free world. This is illustrated by the far-flung sources of crude oil supplies, the strategic location of processing and petroleum chemical plants, an enviable marketing position and the multifarious sources from which it derives its net income.

Crude Oil Production

A fifth of the group's crude oil production is located in north America, just over one-half in the new world, 30 percent in the Middle East and 12 percent in the Far East. Altogether, in 1956, nearly one-eighth of the free world's crude petroleum output accrued to it, inclusive of long-term supply contracts. The group companies have markets in almost every country of the free world. Nearly one-third of their sales is in north America, another third in Europe and the rest in the vast region embracing Africa, India, the Far East and Australasia. An analysis of the group's net income broadly indicates the relative importance of its operations in different parts of the world. Here its interests are almost equally divided between the new world and the old. Close on a fifth of its income is derived from its interests in Shell Oil Company operating in north America.

Petroleum Processing

Fifty years ago the oil industry turned out a small range of bulk products like kerosene, petrol, gas oil and fuel oil. Following rapid technological progress, modern petroleum processing has become a flexible combination of distillation, cracking, chemical refining and extraction techniques, by which it is feasible to modify the crude oil to a substantial extent and to adjust the end-products within limits to meet fluctuating market demands. Products, which in 1907 were difficult to prepare even in the laboratory, are now emerging from the refinery on a large scale. Also, components, which were both scarce and expensive then, are now produced at a fraction of the cost in hundreds of thousands of tons. The Royal Dutch-Shell Group has all along attached great importance to basic and applied research. Whereas the average outlay on research and development of the world oil industry is around 0.6 percent of the gross income, with the group it is 0.7 percent, or more than £12 million a year. It employs nearly 5,000 scientists and engineers, or one research worker for every 50 employees.

Capital Expenditure

During the postwar decade (1946-55) the Royal Dutch-Shell group spent on capital account £1,700 million in round figures. In 1956 the group companies' outlay of capital and exploration expenditure amounted to £388 million, split up in the following way: £188 million on exploration, oil rights and production; £94 million on refineries and chemical plants; £44 million on marketing facilities; £23 million on ocean-going fleets and £5 million on miscellaneous items. In that year investment by non-consolidated companies of the group totalled another £34 million. During 1946-55 nearly 90 percent of the capital expenditure was self-financed, the entire increase in working capital was met from its own resources; and its liquid position simultaneously showed marked improvement. New issues of capital for cash by the parent companies were made in 1947 to the amount of $240 million.

Working Results

Higher sales and net income have been reported by the group for the first half of 1957. Sale proceeds and other income of £1,307.4 million for the period represents a rise of £212 million on January-June of last year. Net income at £110.5 million was £26 million more than during the corresponding period in 1956. The net income for January-June 1957 is equivalent to 10s 10d (8s 3d for January-June 1956) a share for Shell, and 11.60 florins (8.82 florins) for Royal-Dutch. The group is maintaining a leading position in the world oil industry.

AIR-INDIA INTERNATIONAL TO REPLACE CONSTELLATIONS

ENGINE MODIFICATIONS IN BRITANNIAS

(FROM OUR NEW DELHI CORRESPONDENT)

AIR-INDIA International, according to reports, has decided to replace its three *Constellations* by two *Super-Constellations*. It will, therefore, experience some difficulty in expanding its services until the new aircraft are acquired.

Some criticism has been made of the attitude of the Government towards Air-India International. Indian trainees are sent to Russia by the Russian airlines, apparently to save some money. The Delhi-Moscow air fare is Rs. 1,230. The Indian Airlines Corporation has a working arrangement with the Afghan and Russian airlines to issue direct tickets from Delhi to Moscow. Both these arrangements cut into the earnings of a State enterprise. The Indian Navy could similarly use Air-India International for sending its trainees abroad.

I.A.C. to Put Viscounts on Ceylon Route

The Indian Airlines Corporation plans to introduce *Viscounts* on its route to Ceylon early next year, cutting by two hours the present flying time of 6¼ hours from Bombay to Colombo.

B.O.A.C. Britannia

B.O.A.C. has begun its daily first-class *DC-7C* service from New York to Nassau on 30th November. A daily tourist *Viscount* service from New York to Nassau, Montego Bay, and Kingston will start on 18th December: so also will a daily first-class *Viscount* service from Miami to Montego Bay and Kingston. Three first-class flights weekly from New York to Montego Bay and Kingston have begun from 30th November. B.O.A.C.'s long-range *Britannia*, which has been grounded in Miami for three weeks awaiting new engines, is nearly ready to resume its flying programme. New engines with shorter starter blades have been installed. Engine difficulties encountered by a B.O.A.C. *Britannia* on a proving flight to Florida are explained as follows by *Aviation Daily*. The plane had flown into the core of a cumulo-nimbus cloud, and the cooling effect of the cold rain on the outer casing of the engine caused it to contract, with the result that some of the compressor blades rubbed against it and one or more broke off. Modification of the engines, which will involve shortening the blades by .01 inch to give increased clearance, is being undertaken by Bristols on all Proteus 755 engines on a "crash" basis. Israel has been informed that El Al should not use its long-range *Britannias* outside Israel or Europe until modified engines are available. The Air Registration Board has recommended that the compressor speed of both the Proteus 755 and the 705 should not exceed 11,350 r.p.m. until further notice. These changes restore the situation which existed until about three weeks ago, when the Proteus was re-rated to allow 11,500 r.p.m., although in fact B.O.A.C. never increased the rating. Meanwhile, *Aviation Week* reports that Bristols believe that they have a permanent solution to the engine icing problem which is unrelated to the trouble encountered on the Florida flight. The icing problem is attributed to a bend in the engine intake duct where ice may collect under certain conditions. An announcement of the modification to correct the situation is expected shortly. The U.S. C.A.A. will not grant a certificate to the *Britannia* until the difficulty is permanently removed. During November alone, B.O.A.C. made 19 extra *DC-7C* Atlantic flights totalling 1,200 tourist seats to take care of the increasing number of emigrants from Britain to north America.

First Boeing off Assembly Line

The U.S.A.'s first commercial jet, the *Boeing 707* was rolled out of the assembly line in Renton, on 28th October. The airliner will make its first flight from Renton to the field before the end of the year and will be delivered to P.A.A. late in 1958, after testing and certification. A total of 150 *Boeing 707s* have been ordered by 13 airlines. The second *707* is now on the final assembly line. In a comment on the jet noise problem Mr. William M. Allen has said that the *707* prototype has been flying for several months with sound suppressors. He has cautioned that a price—in loss of engine thrust and increased fuel consumption—must be paid for noise suppressors.

Purchase of Boeings by Air France

The U.S. Export-Import Bank has announced that it will join two U.S manufacturers and three New York commercial banks in helping finance a $105 million purchase of 17 *Boeing 707s*, their engines and parts by Air France. Of the total amount, Air France will pay about $26 million in cash and the two U.S. companies (Boeing and United Aircraft) will carry, for their own account, about $18 million in deferred payment.

U.S.-French Talks on Polar Air Routes

The U.S.-French bilateral talks on polar air-routes will be resumed in Washington on 10th December, and will this time cover a "broader exchange of views." Initially, the talks were apparently limited to the question of polar air routes between the two countries. France objected to the inclusion of Paris on the polar route of U.S. carriers without a reciprocal polar route for Air France. In a joint *communiqué* issued in Paris it has been stated that "for some time France has felt that the civil air agreement concluded with the U.S.A. in 1946 has increasingly favoured the growth of the U.S. airlines at the expense of those of France." The polar routes Air France is said to be considering includes one from Paris to Tokyo *via* Anchorage, and a second one from Paris to Los Angeles or San Francisco with Frobisher Bay as a possible intermediate landing point.

Expansion of S.A.S. Services

S.A.S. will probably order 14 more *Caravelles*, according to reports in *Aviation Daily*. The order for six *Caravelles* formally announced in July included options on 19 more of the French jets. S.A.S expects to put its first *Caravelle* into service in January 1959. It is said that S.A.S. may also increase its present *DC-3* order from seven to 12 and add six more *Metropolitans* to the 16 already delivered. The airline has announced the issue of a loan at 6.5 percent interest. It will be raised for a total sum of $15.75 million in Sweden, Denmark and Norway to finance aircraft purchases and general expansion. The loan will be repayable from 1973 to 1982. The S.A.S. "Globetrotter" tourist service between Europe and South Africa—with direct connecting flights from the United States—has been inaugurated, the airline has announced. The new flights—combined with its "Royal Viking" first-class service—will be operated with 300-mile-an-hour *DC-6Bs*. The airliners will carry 45 passengers—25 tourists, and 20 in sleepers and first-class dormette seats. Starting in April 1958, the route will be flown by S.A.S. with new 350-mile-an-hour "global express" *DC-7Cs*. The schedule of the new service will be once a week in each direction. Flights will leave Copenhagen on Thursdays, and Johannesburg on Saturdays. The trans-atlantic flights from New York and over the polar route from the U.S. west coast will connect directly with the new service in Copenhagen. Passengers will be able to leave the U.S. east or west coast on Wednesdays and arrive in Johannesburg on Fridays. S.A.S. has operated an all-first-class "Royal Viking" service between Europe and South Africa since January 1953. The cities linked to Johannesburg by the route include the three Scandinavian capitals and Hamburg, Zurich, Athens and Khartoum. S.A.S. also offers a weekly flight each way a combination service between Europe and Nairobi, East Africa.

Stop-over in Lisbon

Passengers bound to or from South Africa on Pan American Airways flights can now stop over in Lisbon for an indefinite period provided they hold onward reservations on any carrier. Previously the Portuguese Government had imposed restrictions on PAA passengers going to or from South Africa *via* Lisbon. The airline operates two flights a week between New York, Lisbon, Accra, Leopoldville and Johannesburg with *Super-7 (DC-7C)* equipment. Another two flights go by way of New York, Boston, Santa Maria in the Azores, Lisbon, Dakar and Monrovia, one of them continuing on to Accra.

EXPANSION OF DUNLOP RUBBER

India is the only country in the world where the rubber manufacturing industry can draw largely on indigenous supplies of natural rubber. As a result, it has taken firm roots within two decades. Tyre manufacture—the mainstay of the industry in this country as elsewhere—commenced when Dunlops set up a factory in Sahaganj, West Bengal, 21 years ago. By the end of 1956, the factory produced nearly 67 million pneumatic tyres. It is now Asia's largest rubber manufacturing enterprise. Among the important developments at the Sahaganj factory was the manufacture for the first time in India, of tyres for jet aircraft,

after the Indian Air Force acquired jet fighters. The range of rubber manufactures has increased considerably during the first plan period. Production of latex foam cushioning commenced in 1951 and the plant for the production of rubber transmission belting, industrial vee-belts and rubber conveyor belting was opened in 1952. Indigenous production of large lengths of conveyor belting suitable for such big projects as Bhakra-Nangal and Bhilai has saved foreign exchange. Manufacture of industrial and agricultural hose by the lead press method commenced in 1953. A new addition at the Sahaganj factory is the manufacture of rubber lining to resist corrosion and abrasion. New enterprises have already availed of this service and the lining of hydrochloric acid tank wagons, recently undertaken at the factory, has saved the Indian railways over £4.000 in foreign exchange. Twenty-one years after the establishment of India's first tyre factcry, Dunlops are putting up another plant in Ambattur near Madras which is expected to go into production by the end of 1958. Truck, bus and cycle tyres will be produced there primarily for the needs of the south Indian market. An extensive expansion programme is also under way at Sahaganj which will considerably increase the output of truck and bus tyres, cycle tyres, cycle rims, industrial rubber products and Dunlopillo.

PROTECTION TO BARE COPPER CONDUCTOR AND A.C.S.R. INDUSTRY EXTENDED

The Government of India's resolution on the Tariff Commission's report (1957) on continuing protection to the bare copper conductors and A.C.S.R. (aluminium conductor steel reinforced) industry has been published in a *Gazette of India Extraordinary*. The Government has accepted the Commission's recommendation that protection granted to electrolytic copper rods, tariff item no. 64(4), and bare copper conductcrs and A.C.S.R., tariff item no. 72(12), may be continued at the existing rates of protective duty for a further period of three years, ended 31st December, 1960. It has also accepted the Commission's recommendation that all aluminium conductors (A.A.C.), irrespective of their conductivity in terms of copper wires, may be protected and brought under I.C.T. item no. 72(12) and assessed to the same rate of protective duty as A.C.S.R., that is, 35 percent *ad valorem*. The protective duty on A.A.C. is being brought into force with immediate effect. It has taken note of certain ancillary recommendations made by the Commission for granting assistance to the industry. The attention of the units producing bare copper and aluminium conductcrs has been invited to the recommendation that they should take immediate steps to obtain licences for I.S.I. certification marks and market their products under those marks. The attention of all the units engaged in the manufacture of conductors has been invited to the recommendation that they should take immediate steps to introduce a proper system of costing and report to the Commission before the end of June 1958.

ANOTHER VARIANT OF COMET AIRCRAFT

The de Havilland Aircraft Company is now offering a third variant of the *Comet IV* to the world airlines who feel they must soon re-equip with jets. It is to be called the *Comet IVC*, and it takes a middle place between the *Comet IV* and *Comet IVB*. The *Comet IV* is particularly suited to the long-stage lengths of B.O.A.C.'s Commonwealth routes, and the first of the 19 which it has ordered is due to fly in the next few months. The *Comet IVB* is economical over shorter ranges, and six of these have been ordered by B.E.A. for use in 1960. The *Comet IVC* will be most economical over stage lengths between 1,500 and 2,500 miles and at present exists merely as an alternative specification being offered to any customer whose needs it will suit. The *Comet IVB* was made competitive over the shorter distances by developing a shorter wing (107 feet instead of 115 feet) and lengthening the fuselage by 7 feet. It thus carries more passengers and flies faster than the *Comet IV* at a considerably lower altitude. The *IVC* has the longer fuselage of the *IVB* and the wider wing of the *IV*. Its speed will be more like the 500 miles an hour of the *Comet IV* than the 540 miles an hour of the *IVB*, and it will carry a larger load. In general, of course, all the three types are the same aircraft. The engines are the same and the great majority of the parts are the same. They can all claim a structural testing programme such as no aircraft has ever had, a high degree of development, and good delivery dates. On the *IVB* and no doubt on the *IVC*, there has also been a major effort to bring down costs. Whether these advantages will outweigh its comparatively old-fashioned design and the tragic history of the *Comet I* remains to be seen.

RISE IN U.K. AVIATION EXPORTS

U.K. aviation exports during October amounted to £9,192,714, the fourth highest monthly total of 1957. The corresponding figure for October last year was £8,531,445. This brings the total for the first ten months of 1957 to £87,581,528 which represents an annual rate of £105 million compared with last year's record figure of £104½ million. It will be a record year if the average monthly rate for this year £8,758,153 is maintained during November and December. The October figure was made up as follows: complete aircraft and parts £5,180,278, aero-engines £3,488,587, electrical appliances £299.473, tyres £55,319, instruments £169,057. Britain's best customer was India with £1,359,274; Lebanon came next with £659,020, the Netherlands £487,559, Australia £362.509 and Burma £336,944. During the first ten months of the year, India again topped the list with £5,531,220, followed by Sweden £5,423, 858, the United States £4 674 842, the Netherlands £3,328.454 and Canada £2,918.454. The aero-engine total for this period, £32,426,098, was almost £10 million more than in the first ten months of last year. Components amounted to £4.9 million against £3.8 million last year.

REPORT ON SECOND SHIPYARD EXPECTED BY MARCH

The shipyard mission which recently visited India under the auspices of the Colombo Plan and the U.K Shipbuilding Conference to advise the Government of India on the site and lay-out of the second shipyard has returned to the United Kingdom after its three-week visit. The Conference says: "The advance party and main mission between them have inspected 13 sites (cf which eight were visited by the main party—two in Calcutta, three in Karwar, and one each in Cochin, Bombay, and Kandla) The mission also visited the Hindustan Shipyard in Visakhapatnam to obtain general information on the lay-out of the shipyard and its operation. Many of the sites inspected clearly have the essential requirements needed for a shipyard. But communications and the supply of labour will, no doubt, be a major factor in arriving at a final decision. The mission spent its third week in New Delhi in discussions with the Indian Ministry of Transport and Communications and other departments concerned with education, heavy industries, railways, and steel production. Before leaving for the United Kingdom. Mr. James Lenaghan, leader of the mission, had an interview with the Prime Minister, Mr. Nehru. The members of the mission found the authorities in the areas visited extremely helpful and ready to provide full information. Plans will now be drawn up for the site which the mission considers most suitable, together wih a comprehensive statement of costs covering not only the preliminary civil engineering work but also the cost of all buildings and plant required. The shipyard will be planned on the most up-to-date lines, and will provide considerable employment, using materials produced by many industries in India." The statement adds that the mission's report will be submitted to the Central Government before the end of March 1958.

PROTECTION TO AUTOMOBILE LEAF SPRING INDUSTRY EXTENDED

The Government of India's resolution on the Tariff Commission's report (1957) on continuing protection to the automobile leaf spring industry has been published in a *Gazette of India Extraordinary*. The Government has accepted the Commission's main recommendation that protection to the industry should be continued up to 31st December, 1959, and the standard rate of protective duty should be retained at the existing level of 50 percent *ad valorem*. It has also taken note of certain ancillary recommendations made by the Commission for assistance to the industry and will take suitable action to the extent possible. In the resolution, the attention of all the units in the industry has been invited to the recommendations emphasising the need (a) for the introduction by them of a proper system of costing before the end of June 1958. (b) for effecting an immediate reduction in their selling prices and maintaining them at fair levels in relation to their costs of production, and (c) for periodically publishing and arranging to display at the premises of dealers price lists of all varieties indicating the price for each item.

PROTECTION TO TEXTILE MACHINERY INDUSTRY EXTENDED

The Government of India's resolution on the Tariff Commission's report (1957) on continuing protection to the cotton textile machinery industry has been published in a *Gazette of India Extraordinary*. The Government has accepted the Commission's main recommendation that protection to the industry for complete ring frames, spindles, spinning rings, fluted rollers and automatic looms should be continued beyond 31st December, 1957, for a further period of three years ended 31st December, 1960, and the protective duty should be continued at the existing rate of 10 percent *ad valorem*. It has also accepted the recommendation that protection for plain looms should be discontinued with effect from 1st January, 1958. It has taken note of certain other recommendations for assistance to the industry and will consider suitable action to the extent possible. The attention of the industry has been invited to the recommendations that it should (a) get in touch with the Forest Research Institute, Dehra Dun, and provide it with the information which it may need in carrying out investigations into the types of wood suitable for looms. (b) submit its case for the export of its products to the Export Promotion Directorate of the Ministry of Commerce and Industry, and (c) take steps to provide quick and adequate after-sale services at the centres where machines manufactured by different units are installed.

DESIGN FOR NEW TURBOPROP AIRLINER DEVELOPED

Heads of British airlines are studying designs for a large new turboprop airliner aimed at providing cheap travel. It is claimed that it could under-cut by about half the big U.S. jets due to come into service within two to three years. The machine has been designed by Short Brothers and Harland, of Belfast. Acting on the principle of "cheapness in numbers", they have allowed for 192 tourist-class passengers or 27 tons of freight. The aircraft is about half as big again as the long-range Bristol *Britannia*, the seating capacity of which is 133. The manufacture of the aeroplane will be a joint project of Shorts and Bristol Aeroplane Company. Shorts already make *Britannias*, and many parts of such aircraft, including the wings, will be employed in the new aeroplane. It will be powered by four Bristol Orion propeller-turbine engines, giving between them an equivalent of more than 20,000 horsepower. It will cruise at about 400 miles an hour, and have a range of 5,500 miles. The designers consider the plane's weight-carrying capacity as important as the cheapness of passenger transport, and they believe it will make trans-Atlantic air-freighting possible at competitive prices for the first time. The project is only a design study at the moment, but it is ready to go ahead as soon as a "break-even" order is obtained. Such an order might be smaller than usual, because existing *Britannia* jigs could be used, and for the same reason the aircraft could be in production fairly quickly.

MODEL OF DUNLOP PNEURIDE SUSPENSION SYSTEM AT MOTOR SHOW

A working model of the Dunlop Pneuride suspension system, in which nylon-reinforced rubber bellows replace conventional springs, is to be shown for the first time in the United Kingdom at the Scottish Motor Exhibition. The model has a full-sized air bellows and levelling valve connected to a platform. When somebody stands on the platform, his weight depresses it, whereupon a valve comes into operation, lets air into the bellows, and the platform is pushed back to its original height. Fitted to a vehicle these "air springs" maintain constant chassis height, irrespective of load. This makes for a smooth ride, and is particularly valuable at night, since it ensures that headlamp angles remain constant.

U.K. FIRM TO SUPPLY 3,000-VOLT ELECTRIC LOCOMOTIVES TO INDIA

The first 3,000-volt electric locomotives to be commissioned for service in India, it is announced in London, will be supplied by the English Electric Co. Ltd., which previously provided the South Indian Railway with its first electric rolling-stock and is, therefore, working on familiar ground. The new locomotives, made for a maximum service speed of 70 miles an hour, will be used for express and passenger trains and also for goods trains. This type of locomotive is especially designed for India and has an up-to-date streamlined look. With a driving-cab at each end, fitted with buffers and a cattle-guard, the locomotive can be driven in either direction. Two pantographs—sprung metal frames—make contact with the electric wires overhead. The superstructure, which is constructed from rolled steel with all joints seam-welded, has a smooth and pleasing appearance. All the electrical equipment, with the exception of traction motors, pantographs, and lightning protection equipment, is mounted in the superstructure.

Specially produced for Industry...

INDUSTRIAL GLYCERINE — WHEEL BRAND — TRADE MARK — MADE IN INDIA BY HINDUSTAN LEVER LTD. — BOMBAY

WHEEL BRAND

Industrial Glycerine

Wheel Brand Industrial Glycerine conforms to the highest standards of quality — quality that has been proved *by use* in many industries. Guaranteed to contain not less than 98% glycerol.

MADE BY HINDUSTAN LEVER LIMITED, P. O. Box 409, Bombay.

Distributors: Imperial Chemical Industries (India) Private Limited

PTGW.6-133

A PRODUCT OF HINDUSTAN LEVER LTD., BOMBAY.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) advanced by 0.5 percent to 110.1 during the week ended 16th November, 1957, compared with 109.6 for the earlier week. The index was higher by 0.9 and 0.7 percent, respectively, when compared with the corresponding week of last month and that of a year ago. The index for Food Articles showed a further rise of 0.7 percent to 109.2 compared with 108.4 (revised) for the earlier week due to an increase in the prices of potatoes in Kanpur and eggs in Bombay (+46% each), milk in Calcutta (+21%), rice in Jagdalpur and Balasore (+11% each), in Marcara (+7%) and in Ranchi and Dumka (+5% each), jowar in Jhajawar and turmeric in Calcutta (+9% each), barley in Moga (+5%) ragi and coconut oil (+4% each). maize, urd and tea (+3% each) and gram, masur, mustard oil, ccffee and betelnuts (+1% each), although the prices of potatoes in Patna (−16%), oranges (−14%), onions (−13%), jowar in Akola (−10%) and in Gulbarga (−6%), eggs in Delhi and arhar in Patna (−9% each) and eggs and gur both in Madras (−8% each), wheat in Kanpur (−7%), barley in Jaipur (−5%) and bajra, mung and chillies (−1% each) showed declines. Prices of Matiher tobacco (raw) in Calcutta increased by 3 percent but the index for Tobacco stood unchanged at the previous week's level of 95. The index for Fuel, Power, Light and Lubricants remained stationary at 114.6. Higher prices of copra (+5%) and raw cotton (Egyptian) groundnuts, linseed, gingellyseed and tanning materials (+1% each) pushed up the index for the Industrial Raw Materials group by 0.3 percent to 116.7 compared with 116.3 for the earlier week. The prices of cottonseed in Amravati (−8%), lac (−4%) and castorseed and rapeseed (−1% each), however, showed a fall. The index for Intermediate Products showed a rise of 0.3 percent to 106.3 due to an advance in the prices of aluminium (+6%), lead (+2%) and rayon yarn, zinc and copper (+1% each). A rise in the prices of paper and newsprint and oilcakes (+2% each) and bicycles (+1%) was neutralised by a fall in the prices of jute manufactures (−1%) and the group index for Finished Products stood unchanged at the earlier week's level of 109.1.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: 1952-53=100)

Groups and Sub-Groups	Week Ended 16-11-57	9-11-57	19-10-57	17-11-56

PROCEDURE FOR EXCISE DUTY REBATE ON EXPORTED SUGAR PRODUCTS

In order to increase the exports of sugar products, the Government of India has further simplified the procedure for granting rebate on excise duty on the sugar used in the manufacture of these products. The following are the special features of the procedure: (1) Manufacturers of such products will not be licensed but the exporters will have to get themselves registered with the Collector of Central Excise in whose jurisdiction such exporters conduct their business. The concession of rebate is confined to sugar products manufactured in accordance with the provisions of the Fruit Products Order. 1955. (2) The sugar for the manufacture of sugar products need not necessarily be purchased from the excisable factory direct. (3) The condition concerning the identity of sugar used in the manufacture of the sugar products with the duty-paying documents, has also been relaxed and no special accounts for that purpose will be necessary. (4) The exporters, after registration in the prescribed manner, will prepare an application for export, obtain the certificate of the Customs authorities that the sugar product has been exported, and present it together with shipping documents, etcetera, to the Collector of Central Excise, for granting the rebate in cash or by cheque. (5) The sugar products, and the rates of rebate admissible, on their export, are as follows:

(i) Mango *chutney* containing not less than 50 percent of sugar by weight — Rs. 5.35 a cwt. of such product.

(ii) Jams and jellies containing not less than 60 percent of sugar by weight — Rs. 6.40 a cwt. of such product.

(iii) Canned fruits in syrup containing not less than 16 percent of sugar by weight — Rs. 1.70 a cwt. of such product.

(iv) Squashes containing not less than 40 percent of sugar by weight — Rs. 4.30 a cwt. of such product.

(6) The concession of rebate under the revised procedure will not be available for export of such products to Nepal, or for export by parcel post to any country, including Nepal. A notification to this effect has recently been published in the *Gazette of India*. For further details the exporters may contact the Collector of Central Excise of their area.

PRODUCTION AND DESPATCHES OF SUGAR

The production of sugar amounted to 56,000 tons up to 15th November 1957, in the current season against 43.000 tons in the corresponding period of last year. The total offtake, including quantities despatched for exports, was 72,000 tons. The stocks with the factories on 15th November, 1957, stood at 413,000 tons.

MEASURES TO PROMOTE LAC EXPORTS

Lac exports in 1956-57 fetched foreign exchange worth nearly Rs. 9.5 crores. The value of exports was Rs 6.7 crores in 1953-54. The principal markets for the commodity are the United States, the United Kingdom, Russia, West Germany, Italy, Argentina, France, Australia and Japan. An Export Promotion Council has been set up with Government assistance to maintain and promote exports. Indian lac has been displayed in a number of international exhibitions, and it has been included as one of the items for exports in trade agreements with a number of countries. Measures have also been taken to remove unhealthy speculation in this commodity since it is an important factor in the export trade. On the recommendation of the Forward Markets Commission, futures trading in it was banned in December 1954. The ban is still in force. The National Council of Applied Economic Research has been asked by the Government to undertake a study of export markets. An interim report was recently submitted by the Council, and the final report is expected shortly. Gramophone records, electrical goods, varnishes, sealing wax, floor polishes, toys, abrasive paper, and lacquerware are some of the articles in the production of which lac is used. Measures taken for increasing the production of the commodity include the setting up of regional farms, intensified campaign to popularise cultivation and imparting training. The States of Bihar, Madras, Uttar Pradesh, West Bengal, Orissa, Punjab and Madhya Pradesh, where it is grown, have been given financial assistance for increasing output. The production of sticklac, which is the raw material for producing shellac and seedlac, is expected to go up to 1.55 million maunds a year by the end of the second five year plan from the present level of 1.1 million maunds. India, till recently, used to produce nearly 90 percent of the world output. But now there is competition from certain producing countries particularly Thailand, and from synthetic resins.

INCREASED PRODUCTION OF COPPER ORE

The production of copper ore during the quarter ended September 1957, was 98.352 tons, according to the Indian Bureau of Mines. The production during January-September 1957 was 299,723 tons which showed an increase of 16.131 tons compared with the corresponding period of the previous year. The entire output was raised from the Singhbhum district of Bihar. The production of copper metal during the quarter ended September 1957 was 1 945 tons against 2,080 tons in the preceding quarter.

ASIAN RICE OUTPUT LIKELY TO BE MAINTAINED

Output of rice in Asia, according to the Commonwealth Economic Committee (C.E.C.) *Rice Supplement* for November (just issued in London), it is expected, will be largely maintained during this season. Smaller crops, however, are indicated in the Western Hemisphere. The publication adds that if the harvests in the large producing areas of Asia prove as satisfactory as now indicated, there should be little decline in the overall output in the continent in 1957-58 A large crop is expected in India, and the first forecast for Pakistan shows a slight increase in acreage. World exports of rice in the third quarter of 1957, as far as can be gathered from the statistics available, show a downward trend from the high level of the first two quarters.

THE CENTRAL SALES-TAX LAW & PRACTICE (IN INDIA)

By S. C. BOSE, 2, Church Lane, Calcutta-1

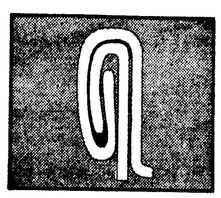
a pilfer-proof package for every product!

Metal Box pilfer-proof containers and closures, individually designed for each product, are precision engineered and superbly printed. This ensures product safety, purity, and powerful sales appeal. Reputable manufacturers use them to pack :



Ghee	Breakfast foods	Vanaspati and other food oils
Butter	Cocoa	Baking powder
Evaporated and Condensed milk	Coffee	Tea
Barley	Biscuits	Honey
Glucose	Confectionery	Processed fruits and vegetables
	Cashews	

MB OPEN TOP CAN

A METAL BOX PILFER-PROOF CONTAINER

Complete pilfer-proof protection is guaranteed by double seaming both top and bottom to the can body.

This cross-section of a precision engineered double seam shows how the rubber-like compound-lining ensures air-tightness.

Only a can opener, destroying the top of the can, will open it. It cannot be reused by unscrupulous dealers to repack with spurious products.

Plantation Topics

PLANTERS HAVE NO FAITH IN KERALA ENQUIRY

ISSUE PREJUDICED BY GOVERNMENT PROPAGANDA

(FROM A SCUTH INDIAN CORRESPONDENT)

SPOKESMEN of the plantation industry in Kerala have been expressing their disapproval of the State Government's proposed enquiry into planters' complaints about lawlessness on their estates. The Government, they point out, has placed undue limitations on the enquiry and has prejudiced the whole issue by its various announcements. According to its published plan, the Government proposes to set up a court of enquiry with a High Court judge as chairman. This court will be asked to investigate the cases reported from an estate selected by the State Government. Since the Government itself has become a party by openly challenging the complaints, the planters are not inclined to put much faith in the outcome of the proposed enquiry. Mr. K. L. Kershaw, chairman of the Association of Planters of Kerala, in a statement says that the planters consider it "improper and inimical to a proper conduct of the enquiry to prejudice the issue by palpable propaganda with a view to question the veracity of the planters' statements and undermining their public standing." He says that the planters do not consider that the truth or otherwise of their complaints can be established by investigating a chosen sample.

The planters' complaints are that violence and intimidation have become widespread on the estates and that the public utterances of Ministers on the subject have immobilised the police in their protective functions, and thus encouraged lawless behaviour. They seek an impartial enquiry in the memorandum they have submitted to the Central Minister for Labour. Mr. G. L. Nanda. Mr. Kershaw says that they will still welcome an enquiry provided it inspires confidence in those seeking justice. Another spokesman, Mr. A. Hepburn, chairman of the Malabar Planters Association. has expressed the same fear in his address to the latest annual meeting of the Association. He has attributed most of the incidents which occurred on estates in the recent past to a drive by the ruling Party to extend its sway over plantation workers. He has deplored the increasing tendency among labour to be unruly after the Communist Government took over in Kerala, and has regretted that instead of correcting the error where it lay and exercising its power of restraint, the Government has gone about confusing the issue by propaganda.

Depreciation in Plantations

Mr. Hepburn also has pleaded that provision should be made in the agricultural income tax law for a depreciation allowance for plantations for purposes of income tax assessment. He has said that in Kerala the total agricultural income tax and super tax together will amount to approximately 66 percent as against 45 percent in the neighbouring State of Madras.

Rubber Replanting

Referring to Kerala's rubber industry, Mr. Hepburn has said: "In India, synthetic rubber is making an entry under the Government wing and with a huge capital. We cannot foresee the effect such a Government-sponsored synthetic industry will have on our industry. Malaya and Ceylon, in spite of the advance in synthetic rubber, are going ahead with an ambitious replantation programme. Already 44.6 percent of the rubber on estate holdings in Malaya has been brought under high-yielding varieties. According to such information as is available the relative figure in India is around 20 percent. During 1956, Malaya's target for replanting was 70,000 acres, of which 45,000 acres were replanted. We have no information whether the 7,000-acre target is being fully maintained in India. It might be helpful if the Board can provide public information as to the progress the replanting programme is achieving, more frequently and in greater detail." The problem of rubber thefts has assumed more serious proportions. Where the number of licensed dealers is high it is on the increase. The Board should exercise some restraint in issuing licences to rubber dealers, Mr. Hepburn suggests.

Wage-fixing Machinery

Referring to the decision of the recent conference of the Labour Ministers in Delhi to set up regional wage boards for plantations. Mr. Hepburn says that the whole of the south Indian plantation industry having one wage-fixing authority may be an advantage. Peace has been eluding the plantations because each State has been following its own course As such, it has often not found it easy to overcome the temptation to claim that it has done for its labour more than any other. A regional wage board of the kind proposed could help remove one of the causes of friction, he says.

Cashew Labour Trouble

The South Indian Cashew Manufacturers Association of Quilon has notified the State Government that labour trouble in the cashew processing industry is making it impossible for producers to fulfil their commitments to foreign buyers, and the industry is again faced with a crisis. The factory owners, it is stated, may find it difficult to repay the amounts they have taken as loan from bankers on account of the losses they have had to suffer during labour troubles. The Association seeks the assistance of the State Government to put an end to these troubles and to ensure a peaceful atmosphere conducive to the proper working of the industry. One of the members of this Association has been having serious trouble in his factory in Kilikollur near Quilon, in which workers under communist leadership are involved, it says.

Bigger Pepper Exports

Pepper exports from India during September were fairly high. According to figures provided by a trade association, exports during that month amounted to 986 tons, compared with 555 tons in the same month last year. With this, exports during the first 11 months of the 1956-57 season totalled 14,157 tons, showing an increase of 1,773 tons over that of the same period of the previous season. The main factor which helped this increase was the entry of Indian pepper into certain new markets, including Czechoslovakia, Poland, Bulgaria, Rumania, East Germany, Denmark and Switzerland. Last year, over 1,100 tons of Indian pepper were imported by these countries. Russia, which imported nearly 4,000 tons of pepper from India during last year, is newcomer into the Indian market. The United States is however still the chief buyer.

LOWER ESTIMATE FOR THE COFFEE CROP

CLIMATIC CONDITIONS AFFECT OUTPUT

ADDRESSING the meeting of the Coffee Board in Bangalore on 29th November, Mr. K. Srinivasan, chairman, has said that the 1955-56 session closed with a crop of 22,302 tons of Arabica and 11,740 tons of Robusta, totalling 34,042 tons. The final payments made were Rs. 2.55 a point. Under the 1950 formula as revised last year, Arabica Plantation and Arabica Cherry received additional points of 11 and 12, respectively. In terms of rupees it will mean a net receipt from the Board by growers of Rs. 232.05, Rs. 206.55 and Rs. 135.15 a cwt of Plantation, Arabica Cherry and Robusta, respectively, for normal f.a.q. standards. For the year 1956-57, the actual receipts up to 31st October, 1957, into the pool were 29,117 tons of Arabica and 12,381 tons of Robusta, totalling 41,498 tons—the largest so far. The payment up to date is Rs. 2.12 a point for large growers. As far as one can venture to forecast at this time of year, the final payments will be not less than last year's level, and perhaps slightly higher.

The 1957-58 crop, the one now being picked, has been estimated at 37,000 tons, which is lower by 5,000 tons than that of the previous year. This is due to very patchy and belated blossom showers, and the seasonal conditions not being as satisfactory as in the previous two years. The monsoons have also been disappointing. Heavy rains just before and during picking in some areas adversely affected the crop. These unfavourable conditions were followed by a higher incidence and a greater spread of certain pests and diseases. Otherwise, it could well have been another record year.

Internal Consumption

The Board estimated in November last year the internal consumption at 25,810 tons for the current year. It also estimated the consumption for January and February 1958, for Arabica Plantation and Arabica Cherry, and for January to April 1958 for Robusta, conventionally called the "carry-over" beyond the calendar year, at 6,085 tons. The actual offtake during the ten months ended 31st October. 1957 was 9,179 tons of Plantation, 3,194 tons of Arabica Cherry and 9,040 tons of Robusta against the estimate for the same period of 9,442 tons, 3,147 tons. and 8,920 tons. respectively. In the latter half of the year, internal prices ruled fairly high; they were considerably higher than the usual range of Rs. 5 to Rs. 10 a cwt. above basic prices. There is apparently a demand for even more coffee for the home market. The Board had taken the actuals of last year and added another 10 percent to that, and the quantities released each month are also steady, and according to programme.

The export surplus was earlier placed by the Board at 7,900 tons; when the estimate approximated nearer the actuals at each revision, the export allotment also improved and was placed at 15,155 tons. Of this, it has sold to date 14,138 tons. There was some delay in the earlier part of the year in the progress of the sales. This was mainly due to the fact that coffee was not made ready according to the schedule drawn up in November last year, in consultation with curers; in later months, after June, some of the coffees were held against destinational quotas. Although specific enquiries were made from countries like Bulgaria and Rumania, these did not materialise. France agreed to increase her offtake from 300 to 500 tons, but this did not also come through Russia bought 725 tons of Plantation and East Germany 800 tons. As usual, West Germany was the largest buyer.

Movement of Stocks

This year, the Board had to shift 4,182 tons of coffee against 2,587 tons last year from the coast to upcountry centres, for storage during the monsoon season. Apart from the waste caused by transport charges. handling at both ends and storage charges. the time required to shift all the stocks is considerable. The Board began the movements this year as early as February, but could not complete the programme before the end of August. With the setting up of more curing centres in the interior, this expensive and wasteful movement and cross movement of coffee will, to a certain extent, be avoided. Whether this extra expenditure and loss affect the planter or the consumer is immaterial, Mr. Srinivasan says.

Referring to the price policy, he says that it remained unchanged. It will remain so for the period of six months ended 31st March, 1958, as decided by the Marketing Committee recently in spite of certain marked increases in the labour wage rate, the emoluments to the staff, and the increased provident fund contributions that the planters have to pay.

Coffee consumption in India is going up year by year. It will continue to go up, Mr. Srinivasan says, even without any propaganda. Any further increase in the tempo of the propaganda campaign in India seems therefore neither necessary nor desirable. The issue has importance in the context of the present need to maximise exports. The accent has to be more on propaganda and publicity abroad to sell Indian coffee at the best prices there. The exportable surpluses are becoming sizeable too.

The supply position concerning fertilisers and manures is still not satisfactory. Though the allotments of sulphate of nitrate, urea and ammonium sulphate are more or less according to requirements, there is considerable delay in getting the supplies at the time they are needed; there have been cases where deliveries have not been obtained in spite of payments made several months earlier. The matter has been taken up with the central Ministry of Agriculture. The position concerning cement and iron continues to be difficult and some sort of rationing has therefore been inevitable.

Development Scheme

The development scheme has made some headway since the Board met last. Loans have been sanctioned for a total sum of Rs. 2,32,452, of which Rs. 2,16,952 is for intensive cultivation and Rs. 15,500 for extensive cultivation. There has been delay in disbursing the amount because of a certain procedure prescribed by the Government. There is also considerable difficulty still on the legal side. In Kerala, there was a great deal of difficulty in sanctioning loans to holders of *Jenmi* lands and unauthorised occupants.

The Malabar area came on to Kerala with its own land tenure system. "The land revenue system in Kerala is now undergoing radical changes, and till we are clear about the final pattern, and the rights of the various groups interested in the land, the difficulties will continue." In Madras area too, non-ryotwari areas in Palni, Dinligul and Madurai are creating difficulties. In the Coorg area, there was a big obstacle concerning *Jamma* and other lands, but this has been solved by the State Government. "While the Board is anxious to expedite sanctions as much as possible, and is taking all steps in that direction, delay is involved in processes the various State Governments have to take," Mr. Srinivasan says.

Till a few weeks ago one used to hear frequent complaints about the rapid deterioration in the law and order position in the estates in Kerala. The position seems to have considerably improved since then.

Recession in World Prices

Referring to prices, Mr. Srinivasan says that producers have experienced a rather heavy recession in world prices in mild coffees this year. Colombian stocks have not moved as fast as they should normally; there has been a certain amount of free selling of Brazilian coffee with some support purchases. "It is rather difficult to say what the position would be like for the next year. The world production is estimated to be 50,400,000 bags, about 4 million bags larger than in the previous year. In spite of the very high export figure this year of Indian coffee, the realisations were not satisfactory because of the low prices." It is absolutely necessary for producers therefore to give more attention to improving quality at every stage, and to produce coffee at more competitive prices by resorting to better and more economical methods of production.

NO CHANGE IN TEA EXPORT DUTY

The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty, at Rs. 3.35 a lb against Rs. 3.30 a lb in force from 1st November, 1957. There is no change in the existing rate of duty of 38nP a lb.

COCHIN TEA SALES

At Sale No. 31, 2,100,000 lbs of tea were on offer. There was much less demand particularly for best liquoring grades which were 30nP to 40nP easier. Low medium brokens and fannings met with fair demand at prices 5nP to 10nP lower. Mediums and good mediums declined by 10nP while whole leaf types remained irregularly easier.

Calcutta Markets

EASIER TREND AT TEA EXPORT SALE

DUST PRICES FALL

AT Sale No. 24, held on 2nd and 3rd December, offerings at the Export Sale amounted to approximately 61,140 packages. Demand was again much less general than last week and there were fairly heavy withdrawals. Clean common teas were generally 6 to 10nP easier, but there was fair enquiry for "teas for price". Except for the few teas with bright liquors which sold well, medium Assam B.O.P.'s and O.Fgs. of ordinary manufacture were again a weak feature and declined by an irregular 20 to 30nP and 10 to 15nP, respectively. There was fairly good support for C.T.C. Assams, but prices were rather irregular and the poorer liquoring kinds declined by about 20nP, the Fannings grades generally meeting with less demand than the Brokens. Non-wither Dooars were easier by about 10 to 15nP. There was restricted demand for Darjeelings at easier rates. Whole leaf grades generally sold well, although often at easier rates.

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2.30	2 6 0
Plain B.P.	1.56	2 5 0
Plain Fannings	1.64	
Medium B.P.	1.60 to 1.64	2 7 0
Medium Fannings	1.70 to 1.74	
Best Assam C.T.C. B.P.	3.00 to 3.20	3 0 0 to 3 2 0
		(nom.)
Best Assam C.T.C. Fgs.	2.80 to 3.00	(nom.)

At the Internal Sale Dust offerings which amounted to 19.460 chests met with only fair demand, and the market was again easier for all descriptions. Commons, orthodox Dooars and Assams were from 6 to 10nP lower, while non-wither Dooars were also easier, although these did not share in the decline to the same extent. There were fewer invoices of good liquoring C.T.C. Assams on offer. The grainy types with useful liquors sold well at abcut last rates, but the plainer liquoring descriptions and those with fibre were 10 to 20nP easier. There was only limited demand for the Darjeelings on offer and prices were generally easier.

Quotations

	1957 Rs.	1956 Rs.
Medium Dooars Dust	1.68	1 15 0
Medium Assam Grainy Dust	1.68 to 1.70	2 0 6
Medium Assam C.T.C Dust	1.95 to 2.05	2 8 9
Best Assam C.T.C. Dust	2.70 to 3.00	2 13 0

There was a good general demand for the 2,481 chests of Leaf on offer, but all types were again generally easier. The few invoices of green tea also shared the general trend of the market.

ACTIVITY IN FREIGHT MARKETS IMPROVES

FREIGHT market conditions showed little change during the past week, although a considerable amount of business was concluded for Indian destinations. Four vessels were fixed for grain from British Columbia to East Coast India at 70s, option West Coast 72s 6d, and a number of vessels were fixed for cement from Split to East Coast India at 70s. A contract for 60,000 tons of rice, February-July, from Burma to Colombo was concluded at 27s 6d f.i.o.s., and greater interest was shown in time charter tonnage. A 9,400-ton motorship secured 25s for six to nine months' trading, and an 11,000-ton motorship $(U.S.)2.15 for a trip across to the U.S.A. with delivery Karachi in December. A *Liberty* vessel was taken at $(U.S.)2.20 for 11 to 13 months' trading with delivery Antwerp-Hamburg range in December. Further grain cargoes are offering for India and a rise in freight rates may be anticipated.

LINSEED DULL

An easier tendency developed during the past week. There has been an improvement in supplies and prices have reacted to lower levels. The demand from crushers was small and business has been rather limited with more sellers than buyers. The oil section has been lifeless with local enquiries at a standstill. Overseas markets have shown some improvement and local prices have been well maintained. Latest quotations were as follows: Ready-December Rs. 22-14 a maund.

HIDES AND SKINS STEADY

The market was steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 26th November and 2nd December, 1957)

Cowhides: Wet salted (Ord.) 35,000 pcs on the basis of Rs. 9.37 to Rs. 11.75: Wet salted (Slaughtered) 20,600 pcs. on the basis of Rs. 13 to Rs. 22.50.

Goatskins: Wet salted (Daissee, Killed) 49 400 pcs. on the basis of Rs. 300 to Rs. 315, Rs. 360 to Rs. 380 and Rs. 400 to Rs 410: Assam-Dinajpur-Purneah 5,400 pcs. on the basis of Rs. 290 to Rs. 350; Purneah-Kissenganj 3,000 pcs. on the basis of Rs. 350 to Rs. 360.

Bazaar Stocks

(2nd December, 1957)

Cowhides: Wet salted 1.04,500 pcs.

Goatskins: Wet salted (Daissee, Killed) 43.500 pcs.: Assam-Dinajpur 77,000 pcs.: Muzaffarpore-Darbhanga-Purneah-Kissenganj 2,23,000 pcs.

COMPANY AND PUBLIC NOTICES

DARJEELING TEA & CHINCHONA ASSOCIATION, LIMITED.

NOTICE.

NOTICE is hereby given that an Annual General Meeting of the Members of the above Company will be held at the Registered Office of the Company, No. 2. Fairlie Place, Calcutta, on Friday, the 20th December, 1957, at 4 p.m., for the following purposes :—

AGENDA.

(1) To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December, 1956, and the Balance Sheet as at that date.

(2) To declare a Dividend.

(3) To elect a Director.

(4) To appoint Auditors and fix their remuneration.

(5) *As Special Business.*

To consider and, if thought fit, to pass, with or without modification, the following resolutions, namely :—

(i) *(As a Special Resolution).*—The word "twice" appearing in Articles 81 and 178 of the Articles of Association of the Company shall be deleted and the word "once" substituted therefor respectively.

(ii) *(As an Ordinary Resolution).*—"That, as from the 1st day of April, 1956, Kilburn & Co. Private Ltd., the Managing Agents of the Company, shall hold such office upon the terms and subject to the conditions contained in the draft Agreement submitted to this meeting and for the purposes of identification signed by the Chairman thereof and that, accordingly, the Directors be and they are hereby authorised to enter into an Agreement with Kilburn & Co. Private Ltd. in terms of the said draft which has been approved by the Central Government in conformity with the provisions of Section 329 of the Companies Act, 1956."

(iii) *(As a Special Resolution).*—That the Articles of Association of the Company be altered in manner following :—

Article 132 shall be deleted and the following two new Articles 132A and 132B substituted therefor :

"132A. Subject to the provisions of Sections 198 and 348 of the Companies Act, 1956, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2(17) of the Companies Act, 1956) commencing after the 1st day of April, 1956, or in respect of any part of a financial year ;

(a) A sum of, or, in respect of any period of less than a year, calculated at the rate of Rs. 20,000/- per annum, and

(b) Such further sum, if any, as together with the said sum of Rs. 20,000/- shall make up an amount equal to 10 per cent. of the net profits of the Company for such financial year or part thereof determined in accordance with the provisions of Sections 349 and 350 of the Companies Act, 1956."

The said sum of Rs. 20,000/- payable under (a) above shall be paid by the Company by equal monthly instalments payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year then to the extent that the amount paid to the Managing Agents under (a) above together with the remuneration paid to Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rs 20,000/- the remuneration payable under (a) above shall abate and be repayable to the Company accordingly.

The further sum, if any, payable under (b) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in general meeting.

In respect of the Company's financial year ending on the 31st day of December, 1956, the Managing Agents shall, subject to the provisions of Section 198 of the Companies Act, 1956, if applicable, receive remuneration calculated in the manner provided in the Agreement dated the 5th December, 1947 save that the Managing Agents shall only be entitled to receive the office allowance payable to them under the Agreement dated the 5th December, 1947, upto and including the 31st day of March, 1956.

"132B. The remuneration payable under Article 132A shall not be regarded as in any manner or to any extent intended to reimburse the Managing Agents in respect of any expenses incurred or to be incurred by them on behalf of the Company and the Managing Agents, in addition to receiving such remuneration, shall be entitled to be reimbursed by the Company in respect of any expenses incurred by them on behalf of the Company and such proportion of expenses that may be incurred by them partly on behalf of the Company and partly on behalf of themselves and/or some other company, concern or person as the Directors of the Company shall determine to be or to have been incurred on behalf of the Company. Without prejudice to the generality of the foregoing, the Managing Agents shall be entitled to recover from the Company, the remuneration (whether by way of salary, commission, bonus, gratuity, compensation, allowance or otherwise) provident and superannuation fund contributions and expenses payable to or in respect of all persons employed by them solely in connection with the Company's business and such proportion of the remuneration contributions and expenses, if any, of any persons employed by the Managing Agents partly in connection with the Company's business and partly in connection with any other business as the Directors of the Company may from time to time otherwise determine. Provided always that neither the Company nor the Managing Agents shall without the previous sanction of the Central Government (and then only subject to the provisions of Sections 198, 387 and 388 of the Companies Act, 1956) be entitled to appoint or employ any individual as a Manager of the Company within the meaning of the Companies Act, 1956."

(iv) *(As an Ordinary Resolution)*—"That, as provided in Clause 9 of the said draft Agreement referred to in the foregoing Resolution No. 5(ii), Kilburn & Co. Private Ltd. and any associate or associates of theirs (as defined in sub-section (2) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries and Treasurers, Manager, Agent, Secretary or Selling or Buying Agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

(v) *(As a Special Resolution)*—"That, as provided in Clause 12 of the said draft Agreement referred to in the foregoing Resolution No. 5(ii), Kilburn & Co. Private Ltd. be and are hereby authorised to provide the Company with suitable office accommodation at Calcutta and also, if so required by the Company, at any other place or places in which Kilburn & Co. Private Ltd. may be able to provide such accommodation, and the Company shall pay to Kilburn & Co. Private Ltd. such portion of the rent and outgoings payable by Kilburn & Co. Private Ltd. as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided."

(vi) *(As a Special Resolution)*—"That the Articles of Association of the Company be altered in manner following :—

The first sentence of Article 113 shall be deleted and the following substituted therefor :

"With effect from the 1st January, 1957 and unless otherwise determined by the Company in General Meeting, each Director shall be entitled to receive out of the funds of the Company for his services in attending meetings of the Board, a fee of Rs 100/- per meeting of the Board attended by him."

The Share Transfer books of the Company will be closed from 9th to 20th December, 1957, both days inclusive.

By Order of the Board,
KILBURN & CO. PRIVATE LTD.,
J. H. G. WHITFIELD,
Secretary.
Managing Agents.

2, Fairlie Place.
Calcutta 23rd November, 1957.

Note :—A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

THE NATIONAL INSULATED CABLE CO. OF INDIA LTD.

NOTICE.

NOTICE is hereby given that the Fifteenth Annual General Meeting of the Shareholders of The National Insulated Cable Co. of India Ltd. will be held at the Registered Office of the Company, Stephen House, 4, Dalhousie Square East, Calcutta, on Monday the 30th December, 1957, at 4-30 P.M. to transact the following business :

(1) To receive and adopt the Directors' Report and the Audited Balance Sheet and Profit & Loss Account for the year ended 31st March, 1957.

(2) To declare a Dividend.

(3) To appoint a Director in place of Sir B. P. Singh Roy, Kt., K.C.I.E. who retires by rotation and is eligible for re-appointment.

(4) To appoint a Director in place of Mr. S. C. Roy who retires by rotation and is eligible for re-appointment subject to compliance with the provisions of Section 261 of the Companies Act, 1956 and to consider and if thought fit to pass the following Resolution as a Special Resolution of which a special notice as required by Section 261 of the Companies Act, 1956 has been received by the Company.

"RESOLVED that pursuant to the provisions of Section 261 of the Companies Act, 1956, Mr. S. C. Roy, a Director of the Company who is also a Director of Messrs. Associated Industrial Development Co. (Private) Ltd., the Managing Agents of the Company and thereby an associate of the Managing Agents and who retires by rotation be and is hereby re-appointed a Director of the Company."

(5) To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will remain closed from 17th December to 30th December, 1957, both days inclusive.

A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and that a proxy need not be a member.

The Dividend if declared will be paid on or after 22nd January, 1958, only to those members whose names appear in the register of the Company on 17th December, 1957 or to their mandatees.

By Order of the Board,
FOR THE NATIONAL INSULATED CABLE CO. OF INDIA LTD.,
P. P. ASSOCIATED INDUSTRIAL DEVELOPMENT CO. (PRIVATE) LTD.,
K. M. NAIK,
General Manager,
Managing Agents.

Stephen House,
4, Dalhousie Sq. East,
Calcutta-1.
26th November, 1957.

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT 1956.

Item No 4: Mr. S. C. Roy, a Director of the Company who retires by rotation and is eligible for re-appointment is also a Director of Messrs. Associated Industrial Development Co. (Private) Ltd., the Managing Agents of the Company and thereby an associate of the Managing Agents. The Managing Agents of the Company, Messrs. Associated Industrial Development Co. (Private) Ltd. have the right to appoint two Directors as Ex-officio Directors of the Company. Mr. G. K. Khemka, is an Ex-officio Director of the Company appointed by the Managing Agents. Hence the re-appointment of Mr. S. C. Roy needs the approval of the shareholders by a special resolution in respect of which a Special Notice has been given in accordance with the requirements of Section 261 of the Companies Act, 1956. The Company has received such notice from a member notifying his intention to move the resolution as set out in the body of the notice. Mr. S. C. Roy has been a Director of the Company since April, 1942 and for some years past been associated as one of the Directors of the Managing Agents who are entrusted with the management of the affairs of the Company. As it is in the interest of the Company that it should continue to receive the benefit of his valuable advice as a member of the Board, it is desirable that he be re-appointed as a Director by a Special Resolution in accordance with the provisions of Section 261 of the Companies Act, 1956.

To All Shareholders :
And in particular to :

Basakhi Ram, Raja Ram, Mr. R. R. Bhandary, H. H. Princess Abida Sultaan, Mrs. Allu F. Dastur, Mrs. Dinbai Minocher Kotwal, Mr. P. R. Kavasji, Mrs. Lucy Campos Serrao, Commdg. Genl. Sir Baber Shum Shere J. B. R., Mrs. Banoobai Framroz Pavri, Miss Ana Maria Pais, Miss Maria Ascenca C. D'Souza, Mrs. Angela De Sa and Narendra Shum Shere J. B. R.

JUBBULPORE ELECTRIC SUPPLY COMPANY, LIMITED.

NOTICE.

NOTICE is hereby given that the Annual General Meeting (being the Sixty-first Ordinary General Meeting) of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday, the 30th December, 1957, at 3-40 p.m for the following purposes :—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1957, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. As special business to consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions :—

(a) That the requirements of Articles 82, 83, 87, 121, 176, 180 and 181 of the Articles of Association of the Company be not complied with in respect of the half-year ended the 30th September, 1957.

(b) That the Articles of Association of the Company be altered in manner following :—

(i) Articles 82 and 83 shall be deleted and the following new Articles substituted therefor :

"82. In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors".

"83. The General Meetings referred to in the last preceding Article shall be called Annual General Meetings ; all other meetings of the Company shall be called Extraordinary General Meetings".

(ii) Article 87 shall be deleted and the following new Article substituted therefor :

"87. The business of an Annual General Meeting shall be to receive, consider and adopt the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special".

(iii) In Article 121 line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor :

(iv) Article 176 shall be deleted and the following new Article substituted therefor :

"176. At every Annual General Meeting the Directors shall lay before the Company a Profit and Loss Account made up to and a Balance Sheet as at the 31st day of March immediately preceding the date of the meeting and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company".

(v) In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor:

(vi) In Article 181, lines 1, 2 and 3, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing shall be deleted and the words "Annual General" substituted therefor :

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 24th December, 1957 to the 30th December, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend and vote instead of himself.

By Order of the Board,
MARTIN BURN LIMITED,
S. GUPTA,
Director.
Managing Agents.

12, Mission Row,
Calcutta-1.
The 5th December, 1957.

THE RELIANCE JUTE MILLS COMPANY, LIMITED.

NOTICE is hereby given that the One Hundredth Annual General Meeting of Members will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 4 o'clock in the afternoon on Friday, the 27th December, 1957, for the following purposes :—

(1) To receive and consider the Audited Accounts for the year ended 31st March, 1957, and the Balance Sheet as at that date and the Report of the Board of Directors and the Auditors thereon.

(2) To appoint a Director in place of one retiring and in this connection to consider the following resolution, which will be proposed as a Special Resolution :

"That Mr. T. C. Hornby, an associate of the Managing Agents of the Company, be and is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of directors by rotation."

(Special notice to move this resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, indicating that Mr. T. C. Hornby is an associate of the Managing Agents by reason of his being a partner in the firm of Messrs. Orr, Dignam & Co., a partner in which, viz. Mr. A. D. Vickers, is a director of the Managing Agents' Company, has been received by the Company.)

(3) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from the 16th to the 27th December, 1957, both days inclusive.

BANKS

H indicates that Share capital is half paid. O. C. and Dd indicate Ordinary Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary Rs	Net Stock Account Rs.	Reserve & other Funds Rs.	Acreage under Tea Rs.	Outturn and Average Price per lb realised for crop 1955 Lbs.	1955 As. COST PROBLEMS OF THE JUTE INDUSTRY

LESSONS OF THE DACCA CONFERENCE

THE most important outcome of the recent jute conference in East Pakistan would seem to be the jolt it has given to the complacency of its own hosts. Whatever the reasons for calling it might have been, the subsequent unanimity shown by the various delegations in condemning Pakistan's raw jute marketing policies could scarcely have been among them. That is not to say the motives behind the conference were no more honourable than the desire to see competing customers squabbling among themselves; there does seem somewhere to have been a genuine desire to create an atmosphere of greater understanding between a monopoly seller and its various disgruntled buyers. But the result should be a warning to Pakistan that public relations are no answer to over-pricing and that excuses based on the welfare of cultivators cut little ice with foreign industrialists who find their own interests threatened. There is no blinking the fact that high raw material costs are a menace to the survival of the world's gunny manufacturers—the Indian ones are no exception—just as they are to the continued use of raw jute as a textile fibre. This was the burden of what Pakistan's guests had to say, and that country would be acting with extreme foolhardiness if it did not give the fact its full consideration and sympathy.

There is little evidence that this will in fact be done. Observers at the conference were left with the impression that the Pakistani Central Government representatives may have seen the point. But the impact on the East Bengal authorities seems to have been negligible. Indeed, the peevish attitude of Mr. Habibur Rahman when faced with the real weakness of Pakistan's bargaining position, may be taken as a fair guide to the attitude of the growers and their Government as well. This is unfortunate; but it is still true that the point was made and can be expected to be remembered. Whether the Indian industry will derive any benefit is, of course, another matter. It is probable that the best prospects here are still embodied in the programme of self-sufficiency, coupled with a level of Pakistani prices which keeps all other competitors out of India's markets. In fact, the attitude of the East Bengal authorities simply served to underline the importance of plentiful and cheap home-grown jute for the Calcutta mills. If, as some of the delegates suggested, the days of raw jute's monopoly of the cheap textile-fibre market may be numbered, it is doubly important that India's largest export industry be provided with adequate raw material at a price which leaves it a comfortable margin of profit. Perhaps the best illustration of this point can be found in the recently published reports of the Howrah and Reliance mills. Both show heavy losses which are largely due to this difficulty: the Reliance has subsequently gone out of business. There has been no lack of emphasis on this threat from mill interests in the last two years. The trouble is that it has only inadequately been matched by awareness and willingness for action on the part of the authorities. Now is probably as good a time as any to point out that more votes are likely in the long run to be lost through mill workers being thrown out of employment than because cultivators are offered a more reasonable price for their jute.

The examples of the Howrah and Reliance mills are useful in another important connection—the need to keep costs from rising. Recent labour awards, the obligation to carry redundant workers, higher taxes and an inelastic demand for jute goods, have all had their impact on profit margins until, in many cases, they have disappeared altogether. That is what makes it all the more difficult to understand why the West Bengal Government should have chosen the present time to fasten another burden round the industry's neck. The inclusion of jute mills in the provisions of the Bengal Electricity Duty (Amendment) Bill, 1957, has already been the subject of representations on the part of the industry. This is scarcely surprising when as the Indian Jute Mills Association has pointed out, the imposition of a duty amounting to one naya paisa for each unit of electricity consumed, will cost some of the larger mills up to Rs. 1½ lakhs a year and the industry as a whole about Rs. 47 lakhs a year. In 1955, the last year for which figures are available, this would amount to taking from the industry a sum double the size of its annual net profit. The Association has also pointed out that 1956 results are unlikely to be better than those of 1955. The imposition of a new burden of this size will, therefore, not only amount to a substantial gift to India's competitors, but might, on the basis of present trading results, see quite a few of Calcutta's mills go out of business.

This example of the lack of true appreciation of the industry's position in these days of high raw jute prices, is not the first with which the mills have had to contend in the past few months. The implementing of the original provisions in the State Government's legislation governing fire-service charges is another. Even mills whose own fire-fighting arrangements are already adequate have now been forced into a position where they are paying an unnecessarily high price for a service they do not require. It still appears that even when the importance of exports to the national economy is being emphasised as never before, the problems of India's largest foreign exchange earner are not yet widely enough understood in the circles on whose good offices they depend. If the jute mills are to prosper, or even—more appropriate at the moment—to keep their heads above the waters of world competition, there will have to be a greater appreciation of the fact that they are not in a position at the moment to shoulder burdens which have no relation at all with their profits position.

The earning power of the Indian jute industry may not prove easy to expand in the next few years. The Pakistani mills have already established themselves and are building up the kind of experience which should help their own cost position increasingly as time goes on. The privileges they enjoy in the East Bengal economy show no sign of diminishing, and they must now rank as the only ones in the world which have no raw material problem. They are even assured of one large market in which Indian competition simply does not exist. If the search for a substitute fibre is successful, it will be the Calcutta mills, rather than those of East Pakistan, which will suffer most. All this adds up to one thing—that the Indian jute industry will have to be given every co-operation during the coming years in its own efforts to keep its costs down. Otherwise, the idea of its playing a predominant rôle among this country's foreign-exchange earning industries might just as well be abandoned.

The immediate market prospects are not altogether reassuring. Stocks declined in November, thus continuing a trend which has lasted for several months and has left the industry's stock position in a fairly healthy state for the time of year. But this does not mean that demand can necessarily be expected to follow its normal course when it picks up round about next April. Indeed, there is every indication that it may be delayed in 1958, and it may even fail to reach the level of previous years. This is due, of course, to the recession in the United States, which has already been the cause of an unsatisfactory offtake of hessian in the past few months. Market opinion is at present optimistic that replacement purchases will soon be on the way now that U.S. stocks are low. They may be right. But there is still the stagnant, or even downward, trend of the north American economy to be considered. This appears likely to last at least until the middle of next year, perhaps longer, and is almost bound eventually to affect the offtake of varieties other than hessian through its impact on trading economies throughout the world. The prospects for the future offer no excuse for panic, but they certainly do not justify fresh tax burdens on the Calcutta mills. Jute, it must be remembered, is not a prosperous industry. It has, in fact, reached the stage in its evolution when only radical and expensive reorganisation and adjustment of its cost structure is likely to prevent its eventually going the way of a former large export industry settled in this area—indigo.

THE BIRLA DELEGATION REPORTS

BY far the most important point made by the Indian industrialists' delegation to north America and Europe, in the report it has just submitted to the Federation of Indian Chambers of Commerce and Industry, is that this country's prospects of attracting foreign capital depend more than anything else on improving the domestic investment climate. "Reasonably large" investments, it says, can be expected from the United States and "small ones" from West Germany. "There is no limit," it adds, "that we would put to the amount of commercial credits that may be available from abroad, provided the climate is made favourable here for the raising of matching rupee capital." In all the countries it has visited —the United States, Canada, Britain, France and West Germany—there is a genuine sympathy for, and willingness to support, India in her economic troubles. This sympathy, apparently, cuts across political differences; such misunderstandings as there are relate to "certain aspects of the implementation of our policy, but this can be a passing phase if we work towards the removal of these misunderstandings." Much of what the delegation says in its report is essentially an amplification of statements already made by its leader, Mr. G. D. Birla, at recent Press conferences. The main impression which emerges is that India has a very fair chance of attracting much more foreign capital and assistance—but whether she will succeed in doing so depends almost entirely upon herself.

The delegation judges correctly that the biggest potential source of capital is the United States. Congressional opinion there is not at present inclined to favour a big loan to India, but "sizeable" help can be obtained from the World Bank and other semi-governmental institutions. As for U.S. interest in making new investments in India, it is "much greater" now "than ever before." But serious misgivings exist about the economic policies of this country. There is fear of nationalisation; it is widely believed that taxation is too high, which, it is felt, may be used "as a lever to stifle the private sector so that it could be nationalised ultimately without any substantial compensation." These fears have increased since the Indian Constitution was amended so as to make compensation non-justiciable, and since life insurance was nationalised. Other doubts relate to the encroachment of the State Trading Corporation on private trading, excessive governmental interference; labour troubles; the compulsory deposit scheme for company profits and reserves; double taxation; and the wealth tax, especially on companies. Next to the United States, the delegation feels that West Germany is the largest potential source of foreign capital for India. But there, too, the same anxieties exist and will need to be removed before any substantial flow of investment results. As for suppliers' credits, "there seem to be no difficulties in the United States, France or West Germany, and the present difficulties in Britain are regarded by us as of a temporary nature." In the case of Canada alone does the

delegation seem to be less than optimistic; this is not surprising, considering that the Dominion is herself a substantial importer of capital, that investors there are not familiar with India, and that Canadian machinery prices are relatively high.

The delegation is right in emphasising that the question of seeking credit from abroad hardly arises if enough domestic investment cannot be found. Foreign investors have not failed to notice, on the evidence provided by the deplorable state of the Indian stock markets, that the people of this country are themselves extremely reluctant to invest their savings in industry. Vigorous efforts therefore have to be made first to promote domestic savings, both personal and corporate. As far as personal savings are concerned, the scope for an increase seems small as long as inflation continues and taxation remains heavy. The likelihood of these savings being put into productive enterprise, furthermore, is poor because there is no confidence in the Government's economic policies. Alternative but unproductive investments such as bullion have inevitably gained in attractiveness with the sharp slump in equity prices over the past couple of years. Corporate savings, on the other hand, have been eroded by taxation and high production costs. As the delegation puts it succinctly, "without profits there can be no saving, and without saving there can be no investment, and without domestic investment, no seeking of capital abroad." There is little sign yet that this realisation is dawning upon the Government, but unless it does, there is little hope that India will get the foreign capital she needs. New Delhi has long been comforting itself that the verbal assurances it has given potential investors abroad have been more than adequate, forgetting that those assurances have often been swept away in the flood of its own ideological enthusiasm and verbosity. The delegation therefore provides a valuable reminder that "ultimately the foreign investor shall judge us by our actions and not so much from what we declare to be our policy." The inadequacy of the external investment India has so far attracted is a measure not only of the inadequacy of her policies but even more of her actions.

MUCH ADO ABOUT VILLAGES

TRUE to the provisions of Parkinson's Law, the first job of the Study Team for Community Development and National Extension Service, which reported to the Planning Commission recently in three volumes, has been to justify its existence. That it does in a manner which may be found satisfactory by some, although the public at large may wonder whether this multiplicity of agencies to look into the working of community development projects is only an overflow of the famous American passion for "check and double-check," or rather the manifestation of a certain amount of disquiet in some quarters that results may have fallen far short of expectations and efforts. To be fair, neither this Study Team nor the Programme Evaluation Organisation conceals the fact of inadequate success. The Prime Minister recently praised the achievements of the National Extension Service, but with very little of his earlier unbounded enthusiasm; and the suspicion has gained ground that progress, such as it is, has been uneven.

Not all the initial zeal was warranted by the magnitude of the malaise of rural India the community development idea was devised to cure. Even as decay had taken centuries to be near-complete, revitalisation too was bound to take a long time, and any *blitzkrieg* operation was out of the question. The essence of rural development is that villages should help themselves to live again, and this was the very thing lacking. Inertia was, and is, massive. With this primary fact largely left out of the calculations, it was inevitable that targets should remain unreached and despondency be disproportionate. One of the weaknesses of the report under discussion is that even now there is a strange reluctance to face up to the fact that, for a long while to come, things will have to be accomplished, if at all, without over-much popular co-operation.

* * * *

"The emphasis," says the report, "should shift without delay to the more demanding aspects of economic development." Even those who have followed the various reports on community development projects may wonder whether, in theory, the emphasis had not always been where, according to the Study Team, it should shift now. The priorities recommended by the Team—supply of drinking water, improvement of agriculture and animal husbandry, co-operatives, rural industries and health—seem so elementary that their iteration at this date may surprise many. If drinking water, agriculture and rural industries have not so long enjoyed the first attention, what has? The community development project administration is no infant, and it would really be interesting to be told what it has busied itself with all these years if not with the things listed above.

A possible deduction is that too much attention may have been paid in the past to what are called welfare activities, although these must be exceedingly hard to define. Education does not figure at all in the priorities allotted by the Study Team, but it may be an error to think it a luxury to be attained at leisure. The intended improvement of agriculture and animal husbandry, to say nothing of more efficient rural industries, are goals harder to reach if the people are without some basic educational equipment. There may be some justification for giving education a secondary place to the provision of drinking water, but for the achievement of the other targets an integrated approach is essential, and education must occupy an important place. As Mr. Nehru rightly said on Sunday, even the caste system is an obstacle to the country's progress. It may be truer of illiteracy, for the caste system, with much besides, thrives on that.

An integrated and practical attack on the pressing problems of rural India has been rendered the more difficult by certain fetishes, and the one dearest to the Study Team is what it calls "democratic decentralisation." As an ideal, this is unexceptionable. True progress will indeed be that which is brought about by the people themselves with the least possible dependence on others. Only in that event will progress be abiding, for it has been seen only too often that everything slows down or disappears altogether with the departure of the official or officials who had helped build a school or a road. The local junior official, the Gram Sewak, wakes up a second time only when the visit of a senior official impends.

On the other hand, there may be something to be said for giving the people a few "visibles" before soliciting their active co-operation—schools, hospitals and the like. It was noticed in an earlier report by the Programme Evaluation Organisation that there was a tendency to under-estimate the value of what it called "physical achievements." It was then pointed out in these columns that this might be a mistake, this waiting for a "psychological revolution" to precede the achievement of goods and services. The best order is perhaps for the two to proceed together, but it is not unknown that actual achievements have been followed by mental adjustments. The process in Soviet Russia may have been something like this, although it is arguable whether the Russian people have as yet adjusted themselves to their supreme technological triumph symbolised by the *sputniks*.

* * * *

It is too much to expect that, with a food shortage hovering over the country, there will be a diversion of attention away from the villages. It is an incontrovertible fact that the majority of the people in India live in these villages, millions of them. It is also true that agriculture is the livelihood of 75 percent of the population, and on their efforts, if blessed by the rains, subsist the rest of the people. Finally, in a democratic set-up such as India's, no Government could withhold from the countryside the benefits of such prosperity as there is, for there reside the voters. While, therefore, the country's industrial ambitions can be pursued only to the extent permitted by those whose primary interest is agriculture—and, it has to be admitted, the choice is intolerably difficult—it must be recognised that most of the resources employed for rural uplift are resources denied to industrialisation.

The political and other difficulties referred to above make it almost impossible for the country's leadership even to think of it, but there is the other thesis, not unworthy of examination, that rapid progress with industrialisation in the already urbanised areas might—and it must not be put more strongly than this—in a not too distant future, spell relative prosperity for the villages too. It is a matter of economic fact that industry in the rural areas requires greater initial investment, and when there is not an abundance of investible funds there could conceivably be a case for putting it where returns would be more immediate. The point is made because of the access of importance attached to rural industries in the Study Team's report. Industries, it may be contended, are better divided into efficient and inefficient rather than into rural and urban ones.

COAL POLICY IN INDIA

By

Andrew Farquhar

This booklet consists of reprints of articles written by Mr. Andrew Farquhar, former Coal Adviser. to the Tata Iron and Steel Co., Ltd., which have appeared in *Capital* in recent years. As expert analyses of India's coal problems and policies, they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

BUSINESS RECESSION IN THE UNITED STATES

THE reduction of Federal Reserve discount rates in late November was official recognition of the weakening of both business sentiment and business performance in recent months, says the December newsletter of the First National City Bank of New York. Since early this year new order reaching the industries have lagged, and backlogs of unfilled orders have steadily declined. In earlier months this downward trend made comparatively little impression on business expectations. As long as production held close to peak levels, capital expenditures remained enormous, and employment and trade figures were setting new highs, there was always hope that the autumn would bring an upturn in new business sufficient to support industrial operations in the aggregate, at the prevailing rate. These hopes have clearly been disappointed.

On the contrary, it has become evident that the economy was losing momentum. On a seasonally adjusted basis, industrial production and employment, personal income, and retail sales all dipped in September, declined further in October, and showed no signs of revival in November. Layoffs boosted insured unemployment in the first half of November more than 40 percent above the corresponding 1956 period; to be sure, the totals are still low. The tapering off of the capital goods boom was confirmed by surveys of business investment plans, and a declining rate of plant and equipment spending is indicated for 1958. The discount rate action also reflects the easing of some conditions against which the tight money policy had originally been directed. Shortages of materials and labour have all but disappeared, and business is now striving to control rather than accumulate inventories. Business demands for bank credit have slackened in a season when ordinarily they are approaching their peak. Stock market prices reflect the shift in business expectations. Prices of basic commodities have dropped to the lowest point in 7½ years, wholesale prices generally are below their summer peak, and the extended advance in consumer prices slowed to a standstill in October. A Federal Reserve Board spokesman stated in announcing the discount rate cut that "inflation no longer is the dominant factor in the nation's economy."

* * * *

So far, the adjustment has been most pronounced in manufacturing industries. On the whole, the decline this autumn in other types of non-farm employment has been no greater than could be accounted for by absences caused by the influenza epidemic. The seasonally adjusted number of factory production workers, however, has decreased month by month since the end of 1956. By October, over half a million workers had been dropped from factory payrolls since the December 1956 high, a cut of 4 percent. Factory production declined by about the same percentage in this period. The Federal Reserve Board index of industrial production (seasonally adjusted, 1947-49 = 100) was 142 in October, down 2 points from September. Overall output was about the same as it was two years earlier, when the sharp recovery of 1954-55 began to taper off. During the past two years, production has advanced and declined irregularly within a narrow range—a pattern characteristic of a period of rolling readjustment in which increases in some lines offset decreases in others. In the last couple of months, however, adjustments have been predominantly downward. The basic problem for manufacturers throughout 1957 has been the lack of sufficient new orders to maintain current rates of production and shipments. During 1955 and 1956, backlogs of unfilled orders accumulated because new ones came in faster than the factories could fill them. By 31st December, 1956, unfilled orders for manufactured goods had risen to $64,200 million, the highest total since the Korean war. Through September 1957, however, new orders fell short of shipments each month this year, and manufacturers drew on their order backlogs to sustain output. In the nine months ended 30th September, unfilled orders were cut more than $8,000 million and the drop during September was the sharpest of all—$1,600 million. Such a trend obviously cannot continue indefinitely. Since new business has not done as well as anticipated in the autumn season, the alternative has been to cut output. Order backlogs have been chopped most drastically in the transportation equipment industry (mainly aircraft and motor vehicles). This industry holds about one third of all unfilled orders, but accounted for over 60 percent of the drop during the first nine months of 1957. A sizeable part of this cut undoubtedly reflects the pre-*sputnik* cancellation or cutbacks of outstanding defence orders and the withholding of new military orders. Other industries too felt the impact of shifts in Defence Department procurement policies, but lagging demand from business and consumers also left its mark.

CURRENT COIN

Development Rebate for Ships.—The development rebate of 25 percent which is at present allowed to shipping companies for the acquisition of new vessels is considered insufficient by the industry. The cost of obtaining new ships which can fairly stand comparison in speed, in cargo-handling facilities and in other ways, it is stated, has been increasing, and today it bears little relationship to what it was a mere decade ago. Sir A. Ramaswami Mudaliar, chairman of the India Steamship Company Ltd, points out in his address at the latest annual general meeting (a fuller version appears on a later page), that the investment allowance to shipping companies in the U.K. (which corresponds to the Indian development rebate) has been raised from 20 percent to 40 percent. This has been done so as to maintain the mercantile marine of that country at a high level of adequacy and efficiency. "I trust that taking a long-range view of the position of the Indian mercantile marine, our Government would give consideration to the question of equating the relief in this direction with at least that given to the most powerful national marine of the world". Indian shipping companies are finding it difficult to implement their programmes of phased expansion, which in some cases are modest, because of the foreign exchange scarcity. It is a basic policy with shipping concerns all over the world to add by a continued and phased programme to their tonnage not merely "to replace ships which have to be scrapped or sold as uneconomic units for their trade, but also to meet the legitimate needs of shippers". The Indian companies have to do likewise, but the Government, in spite of its sympathy, is unable to help such expansion. As has been pointed out with considerable force, says Sir Ramaswami, shipping companies earn foreign exchange far more rapidly than any other local industry and "such earnings —invisible income as it is called—form the hard core of the solution of the balance of payments problems in many countries." Accordingly, it has been suggested that for the time being the foreign exchange earned by Indian shipping may be earmarked for the development of the coastal and overseas fleet. Sir Ramaswami refers to reports that the State Trading Corporation is thinking of entering the field of shipping; he says that it is difficult to ascertain the accuracy of these reports, but it is a matter of concern that the Government has tended to ignore shipping interests when trade agreements involving shipping are concluded. It is accepted practice in the U.K., Holland, Italy, France and other countries to consult shipping concerns in such matters. There is a proposal before the Government, he says, to charter ships for carrying the export and import trade organised by the State Trading Corporation. This is being considered, it is stated, because it is cheaper to obtain chartered tonnage than to entrust the cargo to conference lines. Apart from the fact that the proposal runs contrary to the assurances given by the Central Transport Minister, "it must be clear to the Government as a shipper of large tonnage over a long period that it cannot adopt the policy of some occasional shippers who take a short-range view and try to obtain a small initial advantage by resorting to charters when charter rates are comparatively low". Besides, it is always possible to get a special quotation from conference lines if the Government gives a guarantee of shipping only through them all the quantities it requires. Speaking about the working results of the company, Sir Ramaswami says that the earnings for the year ended March 1957 were higher than those of the previous year in spite of the Suez Canal disturbances. Another ship was added to the fleet since the two acquired in 1956. The congestion in the major Indian ports created acute problems for shipping companies, but the position has now greatly improved.

* * * *

Easier Monetary Conditions.—The more favourable position of the banking system before the start of this year's delayed busy season has been a subject of comment in financial quarters. It is, in fact, true to say that the banks are now in a better position to deal with the calls likely to be made upon them than they had been for a number of years. The reasons for this appear to be, on the one hand the fall in agricultural production and imports, on the other an encouraging increase in bank deposits. The improvement has had the effect of reducing the average ratio of advances to deposits from round about 70 percent a year ago to about 62 percent now. During the busy season in 1956 and 1957, this ratio reached a record of 76 percent. The dependence of the commercial banks on the Reserve Bank has therefore been dramatically reduced in the past two years, and the health and independence of the banking system can be expected to benefit accordingly. The reduction in the calls made on the banks is regrettable from the economic point of view, but it certainly provides a welcome respite from the strain to which they were subjected up till a year ago. The relief from imports cannot be expected to be permanent in view of the recent warning from the Finance Minister that payments will not reach their peak until the next financial year. It may also be necessary to accommodate large purchases of rice during the next six months. The main reason for the jump in banks' net deposits would seem to be the accumulation of U.S. wheat counterpart funds. This accounts for half the total increase of about Rs. 270 crores. The remainder is probably made up by the fall in activity on the stock markets and the general contraction of agricultural output. In spite of the favourable position with which the banks face the busy season, deposit rates are still high although call rates have eased considerably in the last few days.

* * * *

Tax Exemption on Foreign Loans.—By an amendment to the Income Tax Act, made by the recent Finance (No. 2) Act, 1957, interest payable by an industrial undertaking in India on any money borrowed or debt incurred by it in a foreign country in connection with the purchase outside India of capital plant and machinery will be exempt from taxation, provided the loan or debt has been approved specifically by the Central Government for exemption. In order to avoid industrial undertakings having to make two separate applications—for import licence to the Ministry of Commerce and Industry and for the grant of tax exemption to the Ministry of Finance (Department of Revenue)—and to facilitate the simultaneous disposal of these two points, a special procedure has been evolved. A standard form has been prescribed, incorporating the relevant particulars which may be required for arriving at a decision in each case. This form will constitute an annexure or a supplement to the application submitted by an industrial undertaking to the Ministry of Commerce and Industry. Any industrial undertaking wanting an exemption under Section 4(3) (xviib) (iii) of the Income Tax Act for its foreign creditor may fill in this form and submit it to the Ministry of Commerce and Industry, along with its application for acceptance of the foreign credit arrangement. If the foreign credit arrangement originally proposed undergoes any material change by the time it is found acceptable by the Ministry of Commerce and Industry, the revised particulars may be furnished at that stage. In cases where the terms of the loan or

It's 1,000 miles across the room...

RATTLE, clatter, thump goes the toy engine at the little boy's heels... rattle, clatter, thump across the room. And, to him, it's a thousand-mile trip! So what's vital to him is movement and speed.

To us, at Hindustan Lever, speed and distance are no less important. For you, we cover thousands of miles every day — every inch of India's 35,000 miles of railroad, for instance.

But before our products are despatched, we must consider how they will travel. Plane or train? Road or waterway? Handcart, head-load or mule-train? The answer depends on a great *many* factors — for instance, on the *kind* of territory those goods must cross and how *soon* they must arrive.

But arrive they must — and arrive in the best condition. For people have come to trust the goods we make — things like Sunlight Soap and Vim, Rexona and Dalda Vanaspati. The need for these products is growing — everywhere, all the year round.

We take trouble to satisfy this need — and so add another service to the service that the goods themselves perform. We add the service of *regular supply*.

Hindustan Lever serves the home

debt in general and the terms of its repayment in particular are found acceptable, an order of approval of the Ministry of Finance (Department of Revenue) for purposes of exemption will be issued, along with the order of the Ministry of Commerce and Industry approving the deferred payment terms and/or the grant of the import licence. The application forms for exemption of interest can be obtained from the Ministry of Commerce and Industry, or from the Deputy Secretary (Tec), Government of India, Ministry of Finance (Department of Revenue).

* * * *

The Economics of Old Age.—The debate on old age pensions in India is not yet in danger of degenerating into political football as in the U.K., but the U.P. Government seems eager to excel itself by advancing the introduction of its novel scheme from 26th January, 1958, to 1st December this year. The scheme, applies to "all poor and destitute persons of 70 years of age and over", but no one seems to know precisely how many people will fit this definition. According to the 1951 census over 1.2 million persons were over 70 years of age, but the census gave no indication about how many of them were destitute. The rules framed by the U.P. Government will automatically disqualify a large number from receiving any benefit, but even so the scheme seems over-ambitious and is open to many objections. Unlike the British Labour Party's scheme which is, in part at least, contributory, the U.P. scheme is to be financed wholly by taxation. In this aspect, the latter appears more akin to that of Communist Russia, where pensions are provided on a non-contributory basis. National pension schemes are in force in one form or another in about 50 countries today and no identical pattern is discernible in any of them. But an illustration of the financial burden involved is afforded by the fact that the average man of 65 in Holland can expect a further 14 years of life, against a little under 12 years in Britain and eight or nine years in India. Because of the advancement of science and higher standards of life, the definition of old age itself is constantly subject to revision in many countries where pension schemes have been in force. For, it makes little sense when faced with an aging but relatively healthy population, to preserve rigidly the age at which people are deemed to be unfit for work. Incidentally, if the justification for old age pensions in U.P. is that the beneficiaries are too old to work, the question arises of giving subsistence allowances to those who are fit to work but for whom the State is unable to provide any work. Further, any old age pension scheme which is financed out of taxation means that it is paid for by the working members of the community and that the beneficiaries themselves did nothing to earn a pension when they were themselves able to work.

* * * *

Preparing a Wage Map.—The Central Minister for Labour and Employment, Mr. G. L. Nanda, stressed the need for preparing a wage map in his speech at the first meeting of the Steering Group on Wages held in New Delhi recently. He said that apart from providing guidance to the Government, the wage fixing authorities, and employers' and workers' organisations, the map would indicate where data are deficient. Although considerable work has been done on the collection and interpretation of data, large gaps remain; many methods of "piecing together" the information which accumulates in official and other records have not yet been explored. Preparing the map will not be as simple as some appear to think. An essential pre-requisite is a comprehensive wage census covering industries in all regions. Although the Government is organising such a census during the current plan period, its findings, to be useful, must be comprehensive. But it is unlikely that the census can be completed in a very short time. Nor will the completion of the wage map be the end of the investigation, and Mr. Nanda has admitted that in a situation which is constantly changing, it will have to be brought up to date periodically. Whether prompt adjustments will be possible, especially by an administration which moves slowly, it is difficult to say. It will be dangerous to draw conclusions from the map without relating wage trends to prices and production. But this is likely to lead to controversy, which might result in industrial unrest, generating inflationary pressures at a time when the need to stabilise prices is great. The purpose of the wage map is presumably to suggest a certain uniformity in wage rates for various enterprises in a particular region. But any conclusion drawn from the map which does not consider the position of marginal units is likely to prove unrealistic. Without considering these problems, Mr. Nanda seems satisfied merely with the fact that comprehensive wage data are available for the coal industry and for plantations. Cotton textiles are currently being covered by a Wage Board which will be gathering data for that industry. Similar boards are being set up for cement and sugar. In cases like iron and steel, collecting data for the industry as a whole will not be difficult because the number of units involved is small. The records of the Central Provident Fund Commissioner and the Employees' State Insurance Corporation can also provide some guidance. But it seems optimistic to assume that a comprehensive wage map can be drawn up on this basis alone.

* * * *

Dry Irrigation.—On his return from a trip to drought-stricken Bihar, Mr. A. P. Jain, Central Minister for Food and Agriculture, has been reported as saying: "I was shocked to find that a large number of tube-wells which had been constructed and energised were not irrigating any land." The reason, he thinks, is that farmers are not willing to pay the cost of the water. According to Mr. Jain, therefore, there is a good case for making the water supply not only cheap but absolutely free. Mr Jain might, however, be more shocked to learn that in some parts of U.P., water cannot be had even for money because of the chronic failure of power supply. At a meeting of the District Planning Committee in Gorakhpur early this month, the District Magistrate himself has admitted that of the 40 tube-wells he has inspected, in not one has the register been maintained in proper order At one place, he has first been told by the supervisor that the supply and demand report is being prepared, and then that there is no demand at all. Invariably the supervisors complain of power failures, while the executive engineers deny all knowledge of this ever happening. Formerly, the peasants depended to some extent on *kutcha* wells for minor irrigation but with the introduction of tube-wells, the *kutcha* wells have been levelled up, so they are literally left high and dry if the tube-wells, for any reason, fail to function. The average performance a tube-well is barely 45 acres, which is poor enough, if not decidedly uneconomical. Typical of the petty causes which bring about power failure is contained in the story of the lizard which crept into the switchboard and made it his home, causing frequent short-circuits. According to the District Magistrate, the supervisor submitted a report about the lizard which, of course, was not received by the executive engineer, and the lizard continued his high-powered tenancy of the switchboard unmolested One hopes the story is apocryphal. If lizards have already begun to feature in supervisors' and executive engineers' files, it cannot be long before they become a ministerial preoccupation. It would be useful if underlings were told that to remove lizards from switchboards does not require preliminary sanction from the U.P. Cabinet.

Training for Administrators.—Dr. John Matthai, chairman of the court of governors of the Administrative Staff College in Hyderabad, has just inaugurated the first session there. The College is organised on the lines of the Administrative Staff College in Henley, U.K.; it is the first of its kind in India and perhaps in Asia. Dr. Matthai has pointed to the importance of the College by saying that changes in business and the Government demand a closer appreciation of the outlook and problems of both. The College hopes to promote this aim. Persons trained by the Henley College have contributed much to the financial stability and administrative efficiency of business and other organisations in the U.K. India too might need more colleges of the same kind, considering her demand for trained administrative personnel. General Srinagesh, the principal of the Hyderabad College, has expressed the hope that the College will work with the full complement of 60 students from 1959. Thirty have been admitted for the first session. These student members are sponsored by the Central and State Governments, and industrial and business concerns. The Central Government has sponsored five candidates, the State Governments three, nationalised industries six and the private sector ten. The first session is to last until the end of February 1958. The work of the College has been so designed as to exploit the practical knowledge and the varying educational background of the candidates. The course mainly covers comparative administrative structures, internal organisation and administration, constructive administration, external administration, specialist functions, the rôle of top management and the economic problems of contemporary India.

National Rubber Manufacturers.—The response to the new issue of shares by National Rubber Manufacturers Ltd., Calcutta, has been satisfactory. Out of a total of 420,000 ordinary shares of Rs. 10 each, 50 percent has already been subscribed by the directors, their friends, etcetera. It is reliably learnt that the remaining 50 percent (210,000 ordinary shares of Rs. 10 each) offered to the public has been over-subscribed to the extent of about two-and-a-half times. Allotment letters are likely to be issued before the end of December 1957. Although the exact basis of allotment is not known, knowledgeable circles think that applicants for 25 ordinary shares, the minimum prescribed in the prospectus, may get full allotment, while those for more than 50 ordinary shares are expected to secure partial allotment to the extent of about 40 percent. Subscriptions to the 5,000 preference shares of Rs. 100 each offered to the public have also been satisfactory. As mentioned in the prospectus, shareholders can expect a dividend of 10 percent for the year 1957 on the basis of the paid-up value of the shares. The shares of the company have been officially listed by the Calcutta Stock Exchange and the ordinary shares have been quoted at a premium of 50nP a share of Rs. 5 paid-up.

NOTICE

With the weekly issue of CAPITAL which is to appear on 19th December, it is proposed to issue a supplement of approximately 152 pages, the Annual Review of Commerce, Trade and Industry. Besides essays on specific industries, such as jute, coal, tea and cotton textiles, the Review will contain exclusive articles by well-known authors. Mrs Ursula K. Hicks will write on the taxation policy appropriate to a developing economy; Mr A. K. Roy, Secretary to the Finance Ministry (Department of Revenue), on the position of foreign firms in the Indian tax structure; Mr. S. Bhoothalingam, Secretary to the Iron and Steel Ministry, on India's steel expansion plans; Mr. Neil McInnes on the dependence of foreign investment on vigorous local enterprise; Dr I. S. Gulati on how taxes affect the demand for current resources; Mr B. V. Vagh on the expansion of road transport; and Mr P. C. Jain on the inflationary threat to the economy. Other articles will deal with sales tax anomalies; life insurance; price patterns; monetary trends; stock market jitters; agricultural progress; and community development programmes. The Review will be distributed free to all registered subscribers. Additional copies at Rs. 5 each may be obtained from the Manager, Capital, at 5 Mission Row, Calcutta 1. Orders for extra copies should be placed early.

Grand Total Rs. 3,417.18

CARRYING COAL TO CALCUTTA

SINCE the middle of November we have been hearing complaints that there is a dearth of wagons for carrying coal to Calcutta from East Indian Railway colliery stations both for local demand and for export. The figures of traffic receipts on the East Indian have been very high indeed, and it might be supposed that in the general flow of traffic, which there has been since we saw the last of the famine, wagons which should have been given to coal were in reality being taken away from coal and diverted to the carriage of more paying merchandise. We publish every week in *Capital* figures of the actual deliveries of principal commodities in Calcutta, including Howrah, by way of the East Indian Railway; and in order to ascertain whether coal is being treated fairly or not, we have summarised coal and coke figures from these statements, for the period of five weeks from the 31st October to the 4th December. The weight of coal and coke coming into Calcutta during that period has been 223,500 tons as compared with 177,750 tons during the same period of 1896, or an increase of 45,750 tons, or over 25 percent. The increase in the East Indian Railway's total traffic has been very far below 25 percent, so we must all admit that coal has not been dealt with badly; and that instead of referring to a dearth in wagons, we should rather ascribe the failure to comply with our indents in full to the great strides so quickly made by the coal traffic. The East Indian Railway like many another has suffered from the strike in England, and we believe that their latest addition to rolling stock of 500 wagons would have been ready for the current heavy traffic if the delivery of the wheels had not been delayed by this strike. So they are borrowing instead, and we can only hope that they will be able to borrow enough wagons to meet all demands.

FROM

CAPITAL

9th December, 1897

THE Americans are in a flap over these *sputniks*, and "that's for sure." And yet, they seem to have little excuse for being taken so completely unawares. Mr. Allen W. Dulles, the chief of the Central Intelligence Agency, claims that as far back as mid-1953 he told the National Security Council all he knew about Soviet missile development, and it appears he knew plenty. Corroboration comes from another source. In an article in *The Reporter* of 31st October, a Mr. Albert Parry says that in the same journal dated 18th November, 1954, he had quoted several Russian scientists as saying that Soviet flights to the moon would come within "our generation," and he himself predicted last July that the first Russian earth satellite would probably be launched before the end of September 1957, probably on 17th September—surely a remarkable piece of prophecy, considering that the object actually went up on 4th October. On 5th February, 1956, Mr. Parry informs us, Senator Stuart Symington of Missouri declared, "I don't *believe* the Soviets are ahead of us in ballistic missiles. I *state* that they are ahead of us in ballistic missiles." This is certainly no equivocation. The most astonishing part of Mr. Parry's piece consists of his quotations from Russian newspapers, mostly technical, in which the Russian scientists appear to have predicted most of what has happened since, and it is equally apparent that many American journals reproduced or reported those revelations without taking them very seriously. Incidentally, I was reading somewhere recently that the launching of an artificial satellite was originally an American idea. Mr. Parry adduces evidence to the contrary. The publicity denied to all this in the years gone by is now being heaped upon the series of American failures with their rockets and tiny little *yankniks* or *kaputniks*, or whatever derisory name one likes to give them. We are now told, in malicious detail as it were, just what happened to *Vanguard* three, four and five seconds after it had left the launching site, how it turned left, then right, and then crashed. Again, many must wonder why. The only possible clue I can find is in a recent Herblock cartoon, which shows two greatly relieved U.S service chiefs looking up at a Soviet satellite high in the sky. The source of their gratification? That the Russians had succeeded in putting it there—and not a rival service.

* * * *

While Mr. Krushchev addresses himself in childish terms to the Americans about the rocket he claims to have lobbed into their backyard, nobody can blame the man-in-the-street for asking what the Russians intend to do about any windows they may have broken. The question was irrelevant when it was supposed that satellites would burn up like meteorites when they re-entered the atmosphere. But if indeed rockets can return to earth, then the point arises, who is going to pay for the damage they do? With only one nation's satellites in the sky—and by the looks of things no others need be expected for some time—there should not be any trouble deciding responsibility, although whether the Russians would be prepared to do anything about it is another matter. But when the heavens become full of them, and there are no reliable means of finding out whose have fallen, then where will the money come from to compensate those whose houses they hit, or whose breadwinners they kill. As satellites become larger and more elaborate, their effect on landing may not be very different from the bursting of a high-explosive bomb. The arrival of one of them in a crowded city could cause loss of life, damage to property and possibly panic and its attendant evils as well. Not even a personal or business insurance policy, such as seems to be becoming popular in Australia and America at the moment, would cover all the contingencies which may arise. There seems work for the United Nations here. Unless some form of international agreement can be arrived at which makes nations responsible for any damage done in, say, direct proportion to the number of *sputniks* they have in the sky, questions of compensation are going to become an element in the cold war and nations such as India, with large territories and no satellites, are likely to find themselves carrying all too great a burden of the "benefits" of modern science. I am not one of those who consider, in this case, that the best way of avoiding the risk is to eliminate the cause; science holds far too great a promise for that. But I do think the time may have arrived for the ordinary citizen to ensure that the price he may personally be called on to pay in this battle for the mastery of space, is not higher than he can reasonably afford.

* * * *

There is probably no need to attach much importance to what Mr. Panchu Gopal Bhaduri said in the West Bengal Assembly last Friday about "discrimination" against Bengalis in British firms—except, of course, to the warning it gives of what sort of pressure foreign companies can expect if his party ever comes to power. The kind of aggressive prejudice which prompts such outbursts resembles nothing so much as the feelings which have just caused the Indonesians to damage their own economy, compromise themselves politically, and sully their good name in the eyes of the non-communist world. But whatever Mr. Bhaduri's motives might be in working on the undoubted frustrations of unemployed Bengalis, it would be useless to pretend that no such suspicions exist or that they do not need to be set at rest. The root of the matter seems to be that there are too few Bengali firms to provide the employment needed: reliance has to be placed on the British companies or on those owned by non-Bengali Indians. In both cases the position is the same—investors insist that ultimate control remains in the hands of their own people. With that essential qualification in mind, there is certainly no justification for accusing British firms of discrimination against Bengalis. Indeed, being by definition non-Indian, they are less likely to be prejudiced on religious, language, caste or State-of-origin grounds. I guarantee that any enquiries would only confirm that the record of British firms is the best of any hailing from outside the State boundaries. And whether of their own or their Indian personnel, recruiting is always done strictly on the basis of qualifications for the job. When the wholly reasonable fact that foreign capital will always remain predominantly under foreign management has already been widely realised, Mr. Bhaduri's resolution can only have been calculated to make a difficult educated-unemployed situation even worse than it is. But, I suppose, there is no reason to suspect that this is not one of the Communists' aims in raising the matter in the first place.

* * * *

Come to think of it, the loudspeaker is a relatively recent feature in Calcutta's festivities, which is not to say that some sort of regulation of its use has come too soon. Those who advocate the climbing of Mount Everest without the aid of oxygen on the ground that it is artificial, would probably regard all use of the loudspeaker as *infra dig*. For once, I am not as "reactionary" as all that. There are occasions on which the human larynx rightly resorts to the aids science has provided. Think of the strain Mr. Nehru, for instance, would have to bear if he were to dispense with the microphone and the loudspeaker. If letters to the editors of our local dailies are any guide, the chief objection to the playing of loudspeakers from public parks on the innumerable Puja days appears to be that they purvey cheap film music, which made me wonder whether a classical fare would go far to mollify these tireless protesters. The Opposition in the West Bengal Assembly suffer from fears of a very different order. They were afraid the suppression of loudspeakers might hush their speeches on the Maidan and other open spaces. Some post-graduate students living near a park, a favourite with the Leftists for its proximity to the Chief Minister's residence, did indeed write in recently to suggest that political speeches could be something of a disturber too for the studious. The trouble, really, is that loudspeakers force the unwilling to hear what they would rather not, and this is interference with individual liberty in a very real sense. On the other hand, would not life in Calcutta lose a deal of its savour without daily public meetings all over the city? One possible remedy may be to attach to all loudspeakers something corresponding to a speed governor in lorries and trucks, which would prevent noise magnifiers from going beyond a certain key. I can understand, however, why the Calcutta Police have not come forward with the suggestion. Their total failure to enforce any kind of good behaviour on the engines, loads and drivers of lorries was proved afresh only the other day when several passengers in a tram car were hit by lethal iron girders being struck through a window.

* * * *

Why, I cannot imagine, but the milk of human kindness would seem to be flowing slightly more freely than of late. This year's collection for the *Capital* Christmas Toy Fund is feeling the benefit, and I am sure the poor children whose stockings will be that much heavier in consequence are not going to trouble us for too many explanations. But I am afraid the governing word is still "slightly": the difference, up to 7th December, was a mere Rs. 155 compared with last year—Rs 2,322 against Rs. 3,167. Where improvements in money collections are concerned these days, however, to paraphrase what Dr. Johnson said about women novelists, the wonder is not that they are small, but that there are any at all. Last year's final total was Rs. 4,213. If it is higher this time, then we will have established an upward trend from that charity-shy year 1955. I must not trouble my readers by reminding them of the fact that this figure must be deflated by an index of toy prices before the fund's movements can be determined in real terms. I will simply confine myself to saying, with some confidence, that provided the improvement is maintained, more poor children will benefit this year than last. And it all depends on those who have not yet sent their contributions whether or not it will be maintained. That is why I am asking once again—and definitely for the last time—that contributions be sent to *Capital* Christmas Toy Fund 5, Mission Row, in time for them to be of use this season and not next. The orders are already being placed for the toys, so there is not much time left.

BETTER WORKING RESULTS FOR 1956-57

FOREIGN EXCHANGE SCARCITY HAMPERS EXPANSION

SIR A. RAMASWAMI MUDALIAR'S REVIEW

Addressing the Annual General Meeting of the shareholders of India Steamship Company Limited held on 6th December, 1957, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.), Chairman of the Company, said:

Gentlemen,

The Audited Accounts and Directors' Report for the period ending 31st March, 1957, have been in your possession for some time. With your permission I shall take them as read.

Trading Experience

The Directors' Report shows that the freight earned during the year was Rs. 6,00,17,168 as against Rs. 5,26,11,831. The freight carried in the Liner trade was 488,266 freight tons as against 507,773 in 1956. The total number of round voyages made during the year was 22½ as against 26½ in the previous year. The less number of voyages is accounted for by the fact that owing to the closure of the Suez Canal the ships had to go round Africa instead of coming through the Mediterranean. The higher freight earned in spite of the fewer voyages is to be attributed in part to the fact that our modern ships are faster and partly to the surcharge on freight rates consequent on the longer voyage entailed. The delay at ports continued as in the previous year and the turnround of the ships took a much longer time than should normally be the case. It must, therefore, be a matter of satisfaction to you as it is to me that in spite of these handicaps the Company made a net profit of Rs. 1,07,21,588 after providing for depreciation.

Delay at Ports

During the four months of the current year ships had to wait in Bombay, Madras and Calcutta over long periods to find a berth for unloading or for loading. The position became so acute that the Conference Lines considered the possibility of levying a surcharge on the freight to and/or from India to the U.K. and the Continent. Similar suggestions were made by other Conference Lines trading to other ports. I am glad to inform you that owing to the vigorous steps that have been adopted by the Port Authorities and the constant vigil that was exercised by the Transport Ministry to bring about a healthy situation in the ports, delay in finding berths for ships has virtually been eliminated and it is possible, certainly in Bombay and Madras and even in Calcutta, subject to draft restrictions, for a steamer to find a berth on arrival.

So far as labour conditions are concerned a special Committee has reported on the piece rate system that may be introduced and while Government have agreed to the policy of piece rate system and have in fact accepted it for Bombay, it is regrettable that owing to the attitude taken by certain labour leaders it has not yet been found possible to introduce the scheme at the Calcutta port. From every point of view, that of shipowners, stevedores and most of all labour itself, I consider the piece rate system with proper safeguards to be the only solution for avoiding conflicts and ensuring fair wages to dock and port labour.

Progress

I referred last year to the two ships—'Indian Resolve' and 'Indian Resource' which had been added to our fleet, one in March, 1956 and the other in June, 1956. Since then another ship the 'Indian Splendour' which was delivered in May, 1957 has augmented the fleet. We have thus at present twelve ocean-going vessels and one Coastal vessel. Another ship is being completed in the German shipyard and it is expected to be delivered towards the end of March, 1958. The Company has ordered a further four ships, two of which are expected to be delivered at the end of 1958 and two at the end of 1959. They will be built at the same German Shipyard. Besides these the Hindustan Shipyard Private Ltd. has an order from the Company to build a vessel of 5,500 tons, the keel of which is expected to be laid shortly.

We are deeply grateful to the Government for the financial assistance by way of loan which they have given and which has enabled the Directors to plan this programme and to arrange deliveries at appropriate dates so that your Company will have the minimum requisite number of ships to maintain a regular service on the India/UK./Continent run. However, since at the instance of the Government we ply ships to the Black Sea to enable the movement of exports to and imports from the Soviet Union and in particular the imports of plant and machinery required for the Bhilai Steel Plant, the number of ships that will be available for the India/U.K./Continent trade will still be short of the target that we have aimed at, namely, 18 ships by the end of 1960. It is hoped notwithstanding the financial difficulties in regard to foreign exchange it will be possible for the Government to enable us to complete this programme in the time indicated. I need not enlarge on the foreign exchange saving that will result from more Indian ships plying on the Overseas trade.

Earnings and Dividends

The Directors' Report shows the earnings of the Company and the net profit that has been made by the Company during the year. The Directors have decided to declare a dividend of Re. 1 per Ordinary Share making a 10% dividend and the usual dividend on Preference Shares. The Directors have also proposed that the share premium collected may be distributed with the sanction of the Government as Bonus Shares to the Shareholders at the rate of one share for every ten shares held. It will be observed that the Directors have provided funds for a General Reserve which now comes to Rs. 1 crore, a Fleet Replacement Reserve which will stand at Rs. 26 lakhs, a Dividend Equalization Fund and a Taxation Reserve. There has been some suggestion that a larger amount of dividend may have been distributed. The Directors, however, feel that taking a long range view a cautious policy is preferable and I hope you will agree that the allotments suggested are in the best interests of the Company. In order to prevent any wrong impression being created, I would, however, like to add that the current year may, from the results so far obtained, prove as satisfactory as the year under review.

Some Problems of Indian Shipping

(a) *Development Rebate:* The Shipping Industry of any country engaged in Overseas trade is subject to world-wide international competition. It cannot be protected or safeguarded by tariffs or quota limitations as the industries of a country can be. I have referred in previous speeches to the assistance given by several countries to their National Marine. This assistance takes various forms from downright operational subsidy to loans without interest and exemption from taxes. We are thankful for the loans that the Government of India have granted to Indian Shipping at a comparatively low rate of interest and the Development Rebate of 25% which has been sanctioned. The cost of obtaining new ships which can fairly stand comparison in speed, in cargo handling facilities and in other directions is increasing and bears no relationship to the cost only a decade back. If Indian Shipping interests represent to the Government of India that further consideration may be given to questions like Development Rebate, it is in no ungracious spirit that the request is made. The Government of the United Kingdom have in the last Finance Act raised the Investment Allowance (which corresponds to the Development Rebate) from 20% to 40% in order to maintain the Mercantile Marine of the country in the best possible state of adequacy and efficiency. I trust that taking a long range view of the position of Indian Mercantile Marine, our Government would give consideration to the question of equating the relief in this direction with at least that given to the most powerful National Marine of the world.

(b) *Expansion of Shipping:* Shipping companies all over the world have adopted as a basic policy of existence, the continued and phased programme of adding to their tonnage not merely to replace ships which have to be scrapped or sold as uneconomic units for their trade but also to meet the legitimate needs of shippers. Your Company has made a modest programme of phased expansion to meet both these needs. There are difficulties of foreign exchange, which, I readily recognise, seem to come in the way of Government's consideration of assisting such expansion, notwithstanding its sympathy. Shipping companies have pointed out with considerable force that they earn foreign exchange far more rapidly than any other local industry and that such earnings—invisible income as it is called—form the hard core of the solution of the balance of payments in many countries. They have also suggested that for the time being the foreign exchange earned by Indian Shipping may be earmarked for the development of Indian Shipping both Coastal and Overseas.

(c) *State Trading Corporation and Shipping:* Indian Shipping companies have been very much concerned to learn, with what exactness it is difficult to state, that the State Trading Corporation contemplates entering into their field and has otherwise seriously jeopardized their interests. I offer no opinion on the policy of State trading though at the inception it related to inter-governmental trading only. I am concerned only with that aspect of the State Trading Corporation's activities which cuts across or impinges on the legitimate interests of Indian Shipping. Indian Shipping companies have constantly addressed the Government to have their point of view represented before trade agreements involving shipping are concluded. It is a matter for regret that while shipping interests are closely kept in touch with various issues facing the Government like the Suez Canal crisis in the United Kingdom, Holland, Italy, France and Germany and while their advice is sought on all occasions, Shipping interests in India are not taken into confidence by Government and not consulted on such issues as deeply affect them. It is most desirable that in tackling these shipping problems Government Departments should take into confidence the Indian Shipping companies who have undoubtedly wide experience in these matters. It is understood that in some cases at least the State Trading Corporation has made contracts for the sale of bulk commodities such as ore on an f.o.b. basis which means that the importing country can completely shut out Indian Shipping in such trade. I trust that this subject will receive consideration by the Government at the highest level.

Another issue that has confronted the Shipping companies is the proposal stated to be receiving active consideration of Government chartering ships to carry the export and import trade organised by the State Trading Corporation. That this cuts across the principle so clearly and emphatically laid down by the Transport Minister last year will be obvious. The Hon'ble Minister for Transport said 'I may state very clearly that it is not our intention that shipping in the public sector should run in competition on routes in which existing private shipping companies have established themselves.' When it is added that these chartering activities of the State Trading Corporation may even cut across those of shipping in the public sector itself, the position becomes so Gilbertian that further comment seems to be needless.

It has been suggested that the rates charged by Conference Lines are greater than the rates obtainable through chartered tonnage. In the first place Indian Lines, it can be proved beyond dispute, have successfully fought for lower rates in the interest of the trade of the country and have brought about reductions in such rates. Secondly, it can be equally clearly demonstrated that till recently chartered tonnage was far more costly than tonnage carried by Conference Lines and Government or the shippers have been spared the payment of vast sums of money by entrusting the freight to Conference Lines. Thirdly, it is always possible to get a special quotation from Conference Lines if Government gives a guarantee of shipping only through Conference Lines their required quantities. Lastly, it must be clear to Government as a shipper of large tonnage over a long period that it cannot adopt the policy of some occasional shippers who take a short range view and try to obtain a small initial advantage by resorting to charters when charter rates are comparatively low.

Shipping companies have pleaded more than once that a co-ordinated and consistent policy may be adopted by all departments after full consultation and that shipping interests may have the opportunity of giving their experience and placing their knowledge at the disposal of the departments concerned at an inter-departmental conference. I hope fervently that such a conference will be held to the mutual advantage of both interests.

Foreign Shipping and Restrictive Practices

I have so far referred to internal factors and policies. These assume even a more grave aspect when they are considered in conjunction with the handicaps of Indian Shipping through the restrictive practices which foreign shipping adopt without logic to protect vested interests. The Indian trade is a happy hunting field for the foreign shipping of numerous countries. Neither their initial entry into the Indian trade nor the extent of shipping tonnage employed by some of them has any relationship to the trade subsisting between India and such countries. In fact some of them have hardly any interest in such trade and yet the fleet that they employ and their ever increasing demand for the employment of more tonnage is in inverse ratio to the interests that their nations have in the Indian trade.

The problem has assumed serious proportions and the stage has come when it should be firmly tackled. The exclusion of Indian Shipping from the trade of countries like Burma and Ceylon, from the trade from ports on the direct route to the United Kingdom and the Continent such as Aden, Port Sudan, Alexandria and onwards, has been mentioned more than once. The rejection of the application of Indian Lines for membership of these truncated conferences has been 'justified' on the ground that there is adequate tonnage serving these trades; yet when it comes to the Indian trade approval is readily granted to more and more Lines coming in or increasing their fleets notwithstanding the fact that there is often over tonnage in the trade. It is a situation that cannot and ought not to be tolerated further. If the policy of freedom of the seas is accepted it should be real and effective and should not be used for protecting vested interests.

Thanks

We owe a debt of gratitude to Mr. Lal Bahadur, the Minister of Transport whose re-entry into the Cabinet we heartily welcome and whose acceptance of the Transport portfolio we specially appreciate. His interest in Indian Shipping is deep and abiding and we are grateful for such interest. We also welcome Mr. Gupta the Secretary of the Department who has experience of shipbuilding and so of Shipping. We are thankful to other officers in the Secretariat to Dr Nagendra Singh the Director General of Shipping, his deputies and assistants from whom we have continued to receive advice and assistance.

Tribute

During an extremely difficult and anxious period it is a pleasure for me to record that the Company has been well served by all its officers afloat and ashore of all ranks and by its Agents and Brokers. On your behalf and on behalf of the Directors I wish to convey our thanks to all of them for their good and enthusiastic work throughout the year.

We have received during the year the loyal support of shippers both overseas and in this country for which we are extremely thankful. We have tried our best through expansion of our tonnage with high speed vessels to provide the services they need and expect and I believe we have in some measure built up a reputation for reliability and a reasonably careful handling of cargo entrusted to us.

I wish to thank you gentlemen for your attendance at this meeting and to share your hope that the Company will prosper in the years to come with the enthusiastic co-operation of our staff.

I shall be glad to answer any questions which Shareholders may wish to ask regarding the Accounts.

Money

THE CALCUTTA MONEY MARKET

ADVANCES RISING

Wednesday, 11th December.

A FURTHER increase in outstanding advances was recorded in the Calcutta money market last week. All the main sources of demand showed improvements in offtake. The requirements of cotton and woollen mills are up and also those of jute, sugar and against wheat and grain storage. The general advance in all categories suggests that the seasonal rise may be gathering some momentum. The interbank market was quiet and no change has been recorded in the call rate at 2½ percent.

Once again, there has been a scarcity of export bills. Remittance is much reduced. Sterling has shown considerable fluctuations over the past week, but the undertone remains firm both against the dollar and Continental currencies.

* * * *

Bullion was quiet on profit-taking. Turnover was restricted. Silver declined from the previous week's level of Rs. 180 to Rs. 179.25, quoted today for both ready and forward. The price was 77⅞d in London and 90 cents in New York.

Gold was easier in sympathy with silver. The price fell from Rs. 109.75 to Rs. 109.25. The sovereign at Rs. 70.75 showed a loss of 25nP.

* * * *

During the week ended 6th December, Government of India Treasury bills for Rs. 49,53,00,000 were sold in favour of the Reserve Bank.

* * * *

Increases of Rs. 30.59 crores to Rs. 1,509.25 crores in active notes, and of Rs. 7.52 crores to Rs. 1,522.89 crores in the note issue, were the notable features of the return of the Reserve Bank of India for the week ended 6th December, 1957. The currency expansion was covered by increasing rupee securities by Rs 10 crores to Rs. 992.29 crores. Deposits of the Government of India rose by Rs. 5.69 crores to Rs. 56.65 crores, while other Government accounts were Rs. 4.57 crores higher at Rs 6.74 crores. Balances of commercial banks declined by Rs. 30.52 crores to Rs. 78.50 crores because of subscriptions to the new 3½ percent bonds. Balances held abroad declined further by Rs. 97 lakhs to Rs. 28.33 crores. Investments were Rs. 6.84 crores lower at Rs. 252.84 crores. Other loans and advances fell from Rs. 52.13 crores to Rs. 49.81 crores, of which advances to scheduled banks against usance bills amounted to Rs. 12.42 crores against Rs. 14.12 crores. Ways and means advances stood at Rs. 35.24 crores (Rs. 29.01 crores).

* * * *

The statement of the position of scheduled banks for the week ended 29th November, 1957, shows Demand and Time liabilities at Rs. 722.68 crores (Rs. 14.99 crores on account of borrowings from banks) and Rs 672.46 crores (Rs. 17.86 crores), compared with Rs. 727.30 crores (Rs. 16.91 crores) and Rs. 667.66 crores (Rs. 15.61 crores), respectively, in the previous week. Cash has decreased by Rs. 23 lakhs to Rs. 38.26 crores, while balances with the Reserve Bank have increased by Rs. 34 lakhs to Rs. 106.41 crores. There is a rise of Rs. 46 lakhs to Rs. 408.82 crores in investments. Advances and bills discounted at Rs. 839.98 crores show a fall of Rs. 1.80 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 10.4 percent and 60.2 percent, against 10.4 percent and 60.3 percent.

BRITAIN TO TRAIN INDIAN ENGINEERS FOR DURGAPUR STEEL WORKS

Arrangements are now being finalised for the training in Britain of 25 Indian graduates and engineers who will join the Durgapur steel works on their return to India. They form the first batch of the 300 Indian steelmen who will receive specialised training in Britain over the next four years. The entire cost of the training scheme is being financed by the British Government as part of its contribution under the Colombo Plan. Arrangements for the training have been made by the Commonwealth Relations Office in association with the British Iron and Steel Federation. The programme has been carefully phased so that by the time the plant is ready to produce steel, a complete range of engineers will have received specialised training. Of the 25 selected for the first batch, nearly all are already employed in the United Kingdom. The remainder are expected to leave for the United Kingdom at the end of October. Like technicians from other Commonwealth countries, those employed in the United Kingdom have already had experience of working with such well-known firms as British Thomson-Houston, South Durham Steel and Iron Works, Stewarts and Lloyds, Babcock and Wilcox, and Davy and United Engineering. The training will be carried out in works throughout British industry. Depending on the type of work performed, it will last from six months to a year. The Durgapur steel works is being constructed and equipped by the Indian Steelworks Construction Co. Ltd—a consortium of 13 British companies—and financed by a loan of some Rs 35 crores from the United Kingdom under an agreement signed with the Government of

"CAPITAL" STOCKS AND SHARES INDEX*

The *Capital* Stocks and Shares Index (base: 1939) has now been brought up to September 1957. Compared with August, the September indices for Government securities and preference shares show rises of 0.6 points and 1 3 points, respectively.

There were decreases in banks 0.5 points, cottons 20.2 points, jutes 3.2 points, minings and oils 11.4 points, cements 7.3 points, engineerings 6.3 points, teas 19.9 points, papers 21.9 points, sugars 3.0 points and miscellaneous 3.1 points. Coals increased by 2.0 points.

Correlating all the factors, the *Capital* variable yield securities index declined by 8.8 points during September 1957.

	Index of Govt Securities	Index of Preference Shares	Variable-Yield Securities. Banks	Cotton Mills	Coals	Jute Mills	Mining and Oil	Cement, Lime etc	Eng and Metal Works	Tea Shares	Paper Mills	Sugar Shares	Others	Combined Index.

Stocks and Shares

FOREIGN AID HOPES LIFT SPECULATIVE ISSUES

PROFIT-TAKING AT THE CLOSE

Wednesday Evening.

THE stock market has been preoccupied this week with the prospects of foreign aid. The main talking point has been the report of the industrial delegation, a Press summary of which appeared last Monday, following the arrival in Calcutta of Mr. G. D. Birla, who led the delegation. Indian Iron shares after idling around Rs. 19.50, gradually improved to Rs. 19.72 reflecting a certain degree of optimism, on the part of the more speculatively minded operators. Today, however, there was a slight reaction to Rs. 19.56, when it was known that approximately 10,000 workers employed through contractors in the Indian Iron and Steel Company were on strike. Genuine investors have continued to remain out of the market and, as a result, the remaining sections have been virtually neglected, except for a few selected engineering issues. Jute shares, in particular, have succumbed under selling pressure.

The announcement that Sir Dhiren Mitra has been appointed as a special officer of Richardson and Cruddas—a Mundhra concern—following an *ex parte* application made before the Calcutta High Court on behalf of the Life Insurance Corporation of India, to take charge and supervise the conduct of the business of the company, was well received in the market, the shares of the company recovering from Rs. 7 to Rs. 8. Other scrip in the Mundhra group improved in sympathy, particularly Jessops which rose from Rs. 21.50 to Rs. 23.87. This company has just announced an ordinary dividend of Rs. 1.25 a share and the balance-sheet—considerably overdue—is now eagerly awaited.

The approaching meeting of Assocham, which Mr. Nehru will address on Saturday, together with the hopes of fiscal changes in favour of private investors in the forthcoming Budget, continue to help the outlook. Some opinion in the market, however, continues to take the view that Mr. Nehru is unlikely to make any startling announcement of changes in Government policy towards the private sector and expects the present uncertainty to continue until the Budget.

The easier conditions prevailing in the money market resulted in the lowering of the inter-bank call rate and imparted a steadier tone to gilt-edged; even the small selling pressure in medium-dated Central Government loans abated completely. Due to lack of sellers, buying orders were difficult to execute at the quoted rates. The feature in this section was the strong enquiry for State loans standing at a discount in view of the attractive yields offered.

In the preference section, there was an enquiry for selected jute and miscellaneous issues, including Anglo-India, Agarpara, Chitavalsah, Indian Iron, Alkali and Chemical, McLeod 2nd, Indo-Burma Petroleum, Allahabad Bank and Burn 6 and 7 percents.

Bank shares were featureless, though prices were well maintained.

There was very little business in cotton shares and the only two price changes were in Elgin Mills, which were quoted at Rs. 15, and in Kesoram at Rs. 9.50.

There was little of interest in the coal section, except for a small enquiry for Bengal, which improved from Rs. 230 to Rs. 233. Equitable changed hands at the higher rate of Rs. 23.75 as did New Beerbhoom at Rs. 14.62. East Indian, as a result of the reduction in the dividend, were sluggish at around Rs. 20.94 and Burrakur hovered around Rs. 22.

The outstanding feature in the jute section was the strong enquiry for National Jute which spurted from Rs. 20.20 to Rs. 21.65 on reports of cornering. Other issues were marked down in the absence of enquiry. Shares which suffered losses were Belvedere at Rs. 70, Champdany at Rs. 100 (a drop of Rs. 10) Howrah at Rs. 15, India at Rs. 105 and Nuddea at Rs. 30.

In electrics, the centre of interest was Calcutta, which improved further on investment buying to Rs. 13.56.

Sugar shares were featureless on prospects of lower dividend announcements this year by most companies. In breweries, there was a strong enquiry for Dyer Meakin today with the price spurting from Rs. 7.19 to Rs. 8.

Engineering shares were well supported—particularly Burn and Co., which improved to Rs. 312, Guest, Keen, Williams to Rs. 29.31 and Indian Standard Wagon to Rs. 192. Textile Machinery reacted today to Rs. 16.85.

In shipping, India Steamship had ready buyers at Rs. 10.75 ex the dividend of Re. 1 recently declared.

In paper, Shree Gopal recovered from Rs. 14.75 to Rs. 15.37 and Sirpur from Rs 8.44 to Rs. 8.56. Titaghur were better at Rs. 33 and Orient were fairly steady at Rs. 25.25.

Philips and National Rubber Manufacturers had buyers at Rs. 13.75 and Rs. 5.56. British India Corporation were barely steady at Rs. 4.30 and there was a good enquiry for Metal Box and National Carbon at the higher rates of Rs. 26.31 and Rs. 23.62, respectively. Jardine Henderson dropped further to Rs. 59.50 while Indian Wood Products met with investment enquiry at the higher rate of Rs. 42.25.

In mining, Indian Copper idled around Rs. 2.94 but large-scale offerings today brought the price down to Rs. 2.84. Metal Corporation eased further to Rs. 5.81 as did Karanpura Development to Rs. 8.37.

Tea shares were neglected in view of the continued down trend in the auction prices, particularly in the case of common teas. The only feature was the slight recovery in Brahmapootra from Rs. 3 to Rs. 3.56.

* * * *

The reports of the BIRD-HEILGERS group of jute mills for the year ended last March are given below. The directors mention "the altered pattern of selling which mills have been forced to adopt at the present time, when the 'thinness' of, and lack of financial strength in the bazar preclude the absorption of goods on the same scale as heretofore. It follows that mills tend to release their production only when there is reasonable buying interest since a top heavy bazar contributes to an unhealthy market."

KINNISON'S loss has amounted to Rs. 11.46 lakhs, after providing Rs. 8.05 lakhs for depreciation. Transferring Rs. 12.38 lakhs from reserves and bringing in Rs. 41,637, the usual preference dividends have been paid, leaving a carry-forward of Rs. 28,774. The ordinary dividend has been passed over.

Providing Rs. 4.76 lakhs for depreciation there is a loss of Rs. 2.99 lakhs in NORTHBROOK. Bringing in Rs. 70,116 and transferring Rs. 3.21 lakhs from reserve, the preference dividends have been paid. The carry-forward is Rs. 9,227. There is no ordinary dividend.

AUCKLAND has incurred a loss of Rs. 9.09 lakhs,

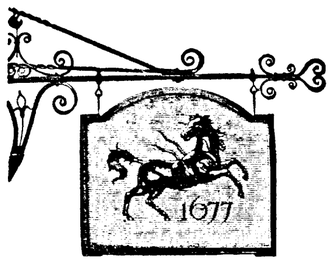
coal is prime mover.



Indeed, without coal much of our industrial and commercial life would be brought to a standstill. What's more, the coal industry must continue to grow if it is to keep in step with the country's expanding demand.

and in the progress of this vital industry, the Life Insurance Corporation of India plays a significant part. As the largest institutional investor in the country, it channelizes the savings of millions of policy-holders.

By investing funds in the coal industry, the Life Insurance Corporation benefits the Policy-holder in two ways. Directly, by ensuring a secure investment with profitable returns. Indirectly, by fostering an enterprise basic to the national economy.

Let LLOYDS BANK look after *your* interests

LLOYDS BANK LIMITED INCORPORATED IN ENGLAND

after providing Rs. 7.05 lakhs for depreciation. Transferring Rs. 5.19 lakhs from reserves and bringing in Rs. 11,377, there is a debit balance of Rs. 3,79, 016 which is carried forward. There is no dividend.

DALHOUSIE has shown a loss of Rs. 8.01 lakhs, after providing Rs. 5.14 lakhs for depreciation. Bringing in a debit balance of Rs. 2,20,845, transferring Rs. 1 lakh to debenture redemption reserve and transferring Rs. 2.46 lakhs from reserves, a debit balance of Rs. 8,75,531 is carried forward. There is no dividend.

There is a loss of Rs. 10.36 lakhs in NAIHATI, after providing Rs. 5.62 lakhs for depreciation. Bringing in a debit balance of Rs. 3,09,111 and making other adjustments, a debit balance of Rs. 13,08,719 is carried forward. The dividends have been passed over.

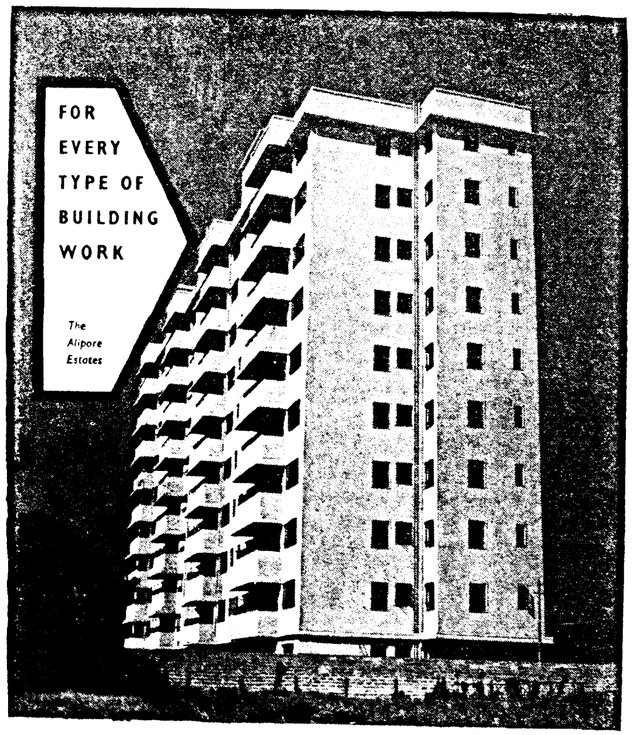
Providing Rs. 56,178 for depreciation, LAWRENCE has made a loss of Rs. 10.20 lakhs. A debit balance of Rs. 7,73,368 is carried forward, after transferring Rs. 2.47 lakhs from reserves and bringing in Rs. 3,793. There is no dividend.

The STANDARD MILL was closed down on 4th May. The directors state: "In view of the heavy losses which have been incurred by your mill over a considerable period and the fact that its size is such as to make it an uneconomic unit under current conditions in the industry, it was decided with reluctance to close down the mill, to realise the company's assets, to pay off the debentures and company's overdrafts with its bankers, and to invest the balance of the company's funds until such time as it becomes possible to make suitable arrangements for the future operation of the company. Shareholders' consent to the sale of the company's assets was obtained at an extraordinary general meeting held on 7th June, 1957." The company has made a loss of Rs. 15.23 lakhs, after providing Rs. 4.71 lakhs for depreciation. Bringing in a debit balance of Rs. 4,87,127, transferring Rs. 1 lakh to debenture redemption reserve and transferring Rs. 12.34 lakhs from reserves, a debit balance of Rs. 8,76,083 is carried forward. The dividends have been passed over.

LANSDOWNE'S loss has amounted to Rs. 8.80 lakhs, after providing Rs. 5.11 lakhs for depreciation. Bringing in a debit balance of Rs. 2,12,719 and transferring Rs. 1.84 lakhs from reserves, there is a debit balance of Rs. 9,08,440 which is carried forward. There is no dividend.

* * * *

The results of the JARDINE HENDERSON group of jute mills for year ended last March are disappointing. The HOWRAH MILLS COMPANY has incurred a loss of 25.23 lakhs, after providing Rs. 10.33 lakhs for depreciation. Bringing in Rs. 57,035, there is a debit balance of Rs. 24,66,402 which is carried forward The dividends have been passed over. The directors state that the new hessian mill machinery in No. 1 mill of Howrah was started in October 1956. and the modernisation scheme in that mill was completed in February 1957 with the start of the new sacking mill machinery. With improved lighting in the No. 1 mill factory enabling double shift working it has been found possible to close down entirely the No. 3 mill and by purchase from the Reliance Jute Mills Co., Ltd. of loom hours, No. 1 and No. 2 mills, both of which are entirely modernised, are working triple shifts with a double shift in No. 1 mill factory.



The loss of the RELIANCE JUTE MILLS COMPANY has amounted to Rs. 27.23 lakhs, after providing Rs. 5.22 lakhs for depreciation. A debit balance of Rs. 38,95,290 is carried forward. There is no dividend. The directors shut down the mill on 4th September, as it was found to be uneconomic to run it. The company has sold its loom hours for a period of six months beginning from 9th September, 1957. to the Howrah Mills Co., Ltd., the Kamarhatty Co., Ltd., and the Kanknarrah Co., Ltd. "So long as the company's loom hours can be disposed of on the present basis it should be possible to operate at a reasonable profit and such profit will go to reduce the company's indebtedness. Obviously, however, some considerable time must elapse before consideration can be given to resumption of dividends on the preference shares and before that stage is reached it seems inevitable that a reconstruction of the company's capital will have to be undertaken. Proposals to this end will be submitted to members in due course", the directors state.

* * * *

After providing Rs. 8.94 lakhs for depreciation, the loss of the CHAMPDANY JUTE MILLS COMPANY has amounted to Rs 26.43 lakhs for the year ended last March. Bringing in Rs. 19,010 and transferring Rs. 19 lakhs from general reserve. a debit balance of Rs. 7,24,043 is carried forward. The dividend has been passed.

* * * *

The profit of the JUTLIBARI TEA COMPANY has increased from Rs. 61,484 to Rs. 5.34 lakhs for the year ended last December. The dividend has been declared at 10 percent against nil. General reserve is allocated Rs. 50,000. The carry-forward is Rs. 23,606, compared with Rs. 7.668 brought in. The crop improved from 8,952 maunds to 10,594 maunds and the average sale price rose from Rs. 2-3-1 to Rs. 2-12-10 a lb.

Bombay Market

TAX RECOMMENDATIONS HELP SENTIMENT

ANXIETIES REMAIN OVER CLOTH POSITION

Wednesday Evening.

THERE were mixed movements on the Bombay stock market last week. Expectations of tax reliefs following the recommendations made by the National Council of Applied Economic Research induced short-covering in selected scrip, especially steels. The recession in the cloth trade continued to be a major restraining factor.

Operators were in a hesitant mood, and they were unable to take a constructive view, although it was felt that there was little prospect of an increase in Bank rate because of the recent issue of 3½ percent new oonds.

Tata Steels improved to Rs. 166.75 and Indian Irons were higher at Rs. 19.56. Tata Locomotive were idle at Rs. 138 50, while Alcock Ashdown were freely offered at Rs. 228.75. Routine turnover was done in automobile shares, and Premier Automobiles came to hand at Rs. 87. Hindustan Motors at Rs. 6.16 found virtually no support. Premier Construction were steady at Rs. 155 on buying from knowledgeable quarters.

Except for Century, which rose to Rs. 398 on bear-covering, textile shares were neglected and there were widespread losses. Bombay Dyeing were lowered to Rs. 50.70 and Simplex were available at Rs. 159.50. Svadeshi declined to Rs. 169 and Kohinoor were taken at Rs. 270 India United Ordinary were supported at Rs. 9.36, but Apollo were sold at Rs. 2.08.

In the miscellaneous group, sugar shares were quietly steady, and Belapur changed hands at Rs. 253.50 Phalton Sugar were transacted at Rs. 149. There was little business in cement shares and only minor changes in prices. Associated Cement were done at Rs. 152 and Digvijay came to hand at Rs. 133. Steamship company shares were steady on hopes of improved working. Scindia Steam were taken at Rs. 17.16 but Great Eastern lost fractionally at Rs. 20.92 on profit-taking. National Rayon made Rs. 217.50 and Tata Chemicals were quoted at Rs. 12.96.

Banking shares were steady, and business was done in Punjab National at Rs 67. Bank of India were transacted at Rs. 132. Prices of insurance

shares were maintained, and New India Assurance were done at Rs. 48.

Scattered interest was taken in electricity supply undertakings, and Ahmedabad Electric were maintained at Rs. 94 x.d. Tata Hydro changed hands at Rs. 115.50.

LESS ACTIVITY IN STOCK MARKETS

GILT-EDGED IMPROVE: SELECTIVE DEMAND FOR INDUSTRIALS

London, 11th December.

THE stock markets did not establish a definite trend during the past week and on balance there was very little change in prices. Activity decreased further. Compared with their previous levels, gilt-edged securities and South African gold shares were slightly better, but industrials were a shade easier and oil shares recorded losses. In addition to the factors which had restricted business in recent weeks, such as the fall in U.S. economic activity, there were the impending £41 million British Petroleum issue and the proceedings at the Bank rate enquiry. The British Petroleum issue, it was confidently expected, would achieve a resounding success. The uncertain trend on Wall Street had relatively little effect on dollar stocks, but they showed a preponderance of small losses. Gilt-edged reflected the mild disappointment over the end-November gold and dollar reserve figures, but soon recovered and were slightly harder on balance. In foreign bonds, Germans advanced on talk that the shortage of these bonds in London would become more acute, while Japanese issues tended higher. Interest in the industrial market was small and highly selective. The tendency was slightly easier in view of the low level of activity. Brewery and steel shares were firm on good dividend statements, although the improvement in the latter was not fully maintained. South African gold shares rose on selective buying encouraged by satisfactory dividends and good development reports. Base metal shares tended lower because of the fall in metal prices. Oil shares were dominated by the coming British Petroleum issue and were appreciably lower. Rubber shares were selectively firm on bid hopes; the rise in the price of the commodity had very little effect. Tea shares ruled quietly firm, although Ceylon issues were occasionally easier.

The Money Market

During the earlier part of the past week, disbursements of the War Loan dividend money brought somewhat easier conditions to the money market. But there was no surplus of funds and as the War Loan money disappeared into the banking system, tight conditions prevailed, with the supply affected by weekly revenue payments and seasonal currency demands. During the later part of the week, the authorities provided a fairly large amount of help and there was the inevitable small amount of borrowing from the central bank. Day-to-day loans fluctuated from 5¾ percent to 6¼ percent. Business in bills was fair, with February's sold at 6⅛ percent and 6⅛ percent, the latter rate being conceded under pressure. The mixed Treasury bill average rates recorded little change from those of a week ago, with the trend slightly in favour of the Treasury. The rate for the 63-day bills was £6 9s 10.44d percent and for the 90-day bills it was £6 9s 1.45d percent.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 4th December shows that the gold stock rose by $1 million to $22,763 million. Foreign deposits rose by $25 million to $308 million, while foreign investments rose by $5 million to $3 805 million. The Federal Reserve bought $202 million worth of bills during the period. Total discounts and advances fell by $109 million to $498 million, while the aggregate excess reserves of member banks rose by $36 million to $279 million. The daily average of excess reserves of member banks rose by $45 million to $487 million, while their daily average borrowings fell by $154 million to $618 million. Business loans of New York city banks rose by $89 million to $11,507 million, compared with a rise of $3 million to $11,143 million in the corresponding week a year ago.

Activity on Wall Street

The feature of bond dealing on Wall Street in the past week was the strength of U.S. obligations. The long-end of the list pushed ahead with some issues advancing a point or more. Increased buying interest was attributed to easier conditions in the money market. The forward movement was temporarily halted about midweek as a result of profit-taking, which was attracted by the rapid advance but the reaction provoked renewed support. Foreign dollar bonds generally moved into higher ground. Brazilians were a feature with gains of 2 to 3 points. Italians and Canadians were also firm spots adding a point or more. Peruvians dropped 4 points on a few sales.

Decline in Hongkong Gold

The Hongkong gold market was featureless in thin trading during the past week with big traders remaining inactive due to the lack of incentives. The steadiness of sterling and the over-supply of gold were regarded as bearish factors. Opening at $(HK)256¼, value hovered around $(HK)256 until the week-end when prices advanced to $(HK)256½ but at this level shorts entered the market forcing values down to $(HK)255¾. Carry-over charges were 160 cents in sellers' favour. Arrivals in Macao totalled 26,000 ounces. The official offtake was 3,450 taels and unofficial 7,780 taels. Forward contracts were placed at $(U.S.)37.89 an ounce, c.i.f Macao.

Vegetable Oils Firm

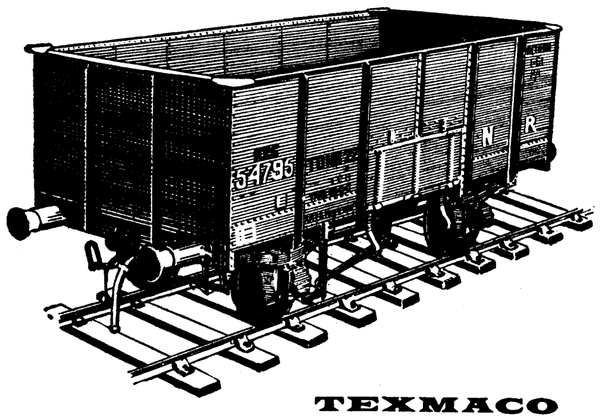
Firm conditions prevailed in practically all sections of the vegetable oil market with the exception of Indian castorseed oil. Straits coconut oil jumped at least £2½ a ton over the week-end, but after the sharp rise of Ceylonese oil could be bought at unchanged prices. This attracted most of the attention to Ceylonese oil with Italy buying afloat parcels of bulk oil from £112 to £112½ a ton c.i.f. Copra was extremely firm and after some hesitation north European buyers followed the market to pay from $188 to $190 a ton c.i.f. for December-January shipments from the Philippines. Most edible oils tended to harden with a lively demand developing for Nigerian oil, which made £120 c.i.f. for January-February shipments to north Continental ports with buyers finding sellers more reserved. Groundnuts were fully steady but actual business was slow to develop. Indian castor oil remained under pressure from both shippers and dealers, and current shipments dropped a further £2 a ton without evoking a response from buyers.

Rise in Rubber

Dull trading at the beginning of the past week left the market vulnerable to influences, with the result that values moved in response to movements at other centres. After an early decline in sympathy with Singapore, values hardened on short-covering, especially on Dutch account stimulated by the Indonesian political situation. Traders reported good buying of forward landed positions, but that business in rubber for shipment was relatively small. As Singapore did not maintain the improvement, values again eased. It was pointed out that while anxiety was felt about the movement of rubber from Indonesia, stocks in Singapore were in excess of current demand. At the final stage, further buying attributed to New York account caused a rally in the market, and values closed about ¼d a lb higher on the week. Traders reported a continued poor demand for sole crepe and further stock accumulation. Sellers still quoted on the basis of 30d a lb for ½th inch smooth No. 1 on the spot, but parcels changed hands at less.

Study of World Copra Trade

A study group on coconuts and coconut products which met recently in Rome for the first time has asked the Food and Agriculture Organisation to prepare a general report on the world economic situation for copra and coconut products. The study group, composed of delegations from 16 countries and observer-delegations from eight countries, was established by F.A.O.'s committee on commodity problems, and met from 25th November to 3rd December. The group's first meeting was largely concerned with establishing a working programme. Members agreed that they lacked technical, economic and statistical information necessary to help them to study their joint production, marketing, trade and disease control problems on an international level.



Mr. William H. Pinckard, retired Chairman of Caltex, New York, has died in California. Mr. Pinckard was formerly manager of the Caltex Asia division in India. He pioneered the entry of Caltex into the Indian market and organised Caltex (India) Limited.

FACTS BEHIND FIGURES

Travelling over 82,000,000 train-miles a year

Across the country roll 225,857 railway wagons over a network of 35,000 track-miles. Covering over 82 million train-miles these wagons transported 115 million tons of freight. By the end of the Second Five Year Plan period this tonnage will rise by almost 35%.

To meet the increasing needs of the Indian Railways the annual production of wagons will rise from 14,000 to 25,000 by 1961. Texmaco, pioneer in many fields of engineering, manufactures rolling stock and a wide variety of products for the Indian Railways.

AGREEMENT REACHED ON FORMATION OF RUPEE OIL COMPANY

TWO REFINERIES TO BE SET UP IN PUBLIC SECTOR

(FROM OUR NEW DELHI CORRESPONDENT)

THE signing of an agreement between the Government of India, the Burmah Oil Company and the Assam Oil Company for the production and transport of oil discovered in the Nahorkatiya, Hugrijan and Moran areas in Assam, is a major event. The oil was discovered almost two years ago; since then, negotiations for its exploitation have been in progress. In spite of the tight money situation in the U.K., the Assam Oil Company has offered to advance £10 million to the rupee company to meet the foreign exchange content of the cost of the first stage of the pipeline and other related facilities The Government will have a 33⅓ percent share in the equity capital of the rupee company, which will exploit the oil reserves of the area and will own the pipeline to transport crude oil to the two refineries. There are some obvious gaps in the agreement. First, finance is now assured for the pipeline to be constructed between the oilfields and the first refinery, which is to be installed in Assam. But no such provision exists to finance the pipeline to connect the oilfields with the second refinery in Barauni, although it is presumed that Burmah Oil will finance the second venture as well.

The bigger question is how to finance the two refineries, which, in the nature of things, will involve large foreign exchange expenditure. That politics has triumphed over economic or commercial considerations is one comment heard here on the location decisions. The expert committee appointed by the Government had suggested three sites. Its first preference was for Calcutta, the second for Barauni in Bihar, and the last for Assam. The Government first decided in favour of Barauni. This was followed by agitation in Assam. The decision to have two refineries in Bihar and Assam, instead of one economic unit in Calcutta, is, therefore, largely political.

The agreement fixes a ceiling for the crude oil price, which will be supplied by the rupee company to the two refineries in the public sector. Its distribution, it seems, will be through regular trade channels.

Following is the text of the statement of the Minister in charge, made in Parliament: "Negotiations were being conducted with the Burmah Oil Company and the Assam Oil Company for the formation of a rupee company to exploit the oil reserves discovered in the Nahorkatiya, Hugrijan and Moran areas in Assam. These negotiations were suspended in May 1957 and resumed on 18th November, 1957. An agreement has now been concluded between the Government of India and the Burmah Oil Company and the Assam Oil Company and this will be executed shortly. The broad features of the agreement proposed to be executed are:

"1. The rupee company will undertake production of oil and will also arrange for the construction in two stages and operation of a pipeline, or such other related facilities as may be considered necessary for the transport of the crude oil up to Barauni. During the first stage, the pipeline or other related facilities will be laid up to an intermediate locality to be approved by the Government of India and the Burmah Oil Company, and during the second stage, the extension of the pipeline or other facilities from such intermediate locality to Barauni will be taken in hand. The timing of the commencement of each of the two stages will be determined by the Government of India.

"2. The oil produced by the rupee company will be sold to two refineries, sponsored by the Government of India and to be established in the public sector. The delivered price of crude oil payable by each such refinery will be either the lowest price delivered in Calcutta at which such crude oil can be secured by the refinery from any alternative source or the cost incurred by the company together with a reasonable commercial return, whichever is less, such price being fixed by the company with the approval of the Government of India after an examination of costs, and subject to review every half-year.

"The Burmah Oil Company has offered to advance a sterling loan to the extent of £10 million to the rupee company on terms to be agreed between that company and the Government of India to meet the foreign exchange content of the cost of the first stage of construction of the pipeline and other related facilities. In the context of this firm commitment given by the Burmah Oil Company, it is proposed to have a refinery located at the intermediate stage between the oilfields and Barauni in addition to having a refinery in Barauni. The Government has already appointed consultants to undertake the pipeline survey from the oilfields to the refinery sites and also for the refinery project studies. The sizes, actual locations and the patterns of production to be adopted for the two refineries now proposed to be established in the public sector will be determined after the receipt and examination of the project reports. The first of the two refineries is likely to be located somewhere in Assam and it is possible that this refinery will be on stream within about three years."

Food Stocks and Imports

The question of importing foodgrains, following drought conditions in eastern U.P., Bihar and West Bengal, has been largely clarified. Replying to a question in the Lok Sabha, the Food Minister, Mr. A. P. Jain has said that the present stocks of foodgrains with the Centre are 780,000 tons in addition to 250,000 tons with State Governments. During the two years, 1956-57 and 1957-58, about 5.9 million tons of foodgrains, it is expected, will be imported.

Mr. N. R. Munisamy: May I know how much wheat and how much rice are to be imported and from which countries?

The Deputy Food Minister, Mr. A. M. Thomas: At present, according to our firm commitments, we have to import about 1,336,000 tons; that is, against our normal marketing. On 1st January, 1958, the stock of wheat would be 630,000 tons, so that the total availability will be 1,966,000 tons. Having regard to the expected demand during 1958, we may have to import a little more than 2 million tons of wheat and other coarse grains. As for rice, according to our current commitments, we will have about 507,000 tons of rice: from Viet Nam 7,000 tons and from Burma 500,000 tons. It is estimated that, adding the quantity internally procured, we will have about 900,000 tons, and we may have to import about 300,000 to 400,000 tons.

Mr. N. R. Munisamy: May I know how much will be the quantity of coarse grains out of this import?

Mr. A. P. Jain: We have not determined what would be the proportion of wheat and what would be the coarse grains. It all depends on the availability, the price and other things.

Mr. Jhunjhunwala: What is the criterion taken into consideration before launching upon import and how many ounces of consumption is there an adult?

Mr. A. P. Jain: In fact, we have received some assessment of the losses from the State Governments and, for the time being, we have tried to base our imports on the minimum losses that are expected. We have also tried to ascertain from the State Governments as to what their requirements are likely to be, and it is on the basis of the estimates of the losses and their requirements that we have based our import programme.

Mr. Tyagi: What is the total cost, stipulated, of the foodgrains desired to be imported this year and the next year?

Mr. A. P. Jain: One lakh tons of foodgrains generally cost between Rs. 3 crores and Rs. 4 crores.

Mrs. Renu Chakravarty: For the two years?

Mr. A. P. Jain: One lakh tons cost between Rs. 3 crores and Rs. 4 crores, and the total cost of this additional import of 2 million tons will be about Rs. 70 crores.

Mr. Tyagi: May I take it that, during this year, only Rs. 70 crores worth of foodgrains will be imported totally?

Mr. A. P. Jain: Excluding what has been taken.

Mr. Tyagi: I wanted to know the total cost of imported grains this year.

Mr. A. P. Jain: Does the Hon. Member mean 1957?

Mr. Tyagi: The financial year.

Mr. A. P. Jain: It may be about Rs. 80 crores or Rs. 90 crores. I am speaking very roughly.

Per Capita Consumption

Replying to another question, the Minister told the Lok Sabha that the *per capita* availability of cereals in India during 1956-57 was 13.3 ounces. He also gave the following figures of *per capita* consumption of cereals in other countries:

	(In ounces)
Australia (1953-54)	8.1
Burma (1947-48)	14.8
Canada (1953-54)	6.7
„ (1954-55	7.3
Ceylon (1953-54)	12.7
Denmark (1954-55)	9.0
Egypt (1953-54)	18.3
Japan (1947-48)	13.3
Pakistan (1953-54)	16.3
Philippines (1954-55)	12.5
United Kingdom (1954-55) ...	8.8
United States (1953-54)	6.8

Mr. Jhunjhunwala's question, it seems, has remained unanswered. He wanted to know the rate of consumption a head on the basis of which imports are being planned. The Minister, instead, has given the assessment of losses from drought. Similarly, there can be no comparison of the *per capita* availability and consumption of cereals between some of the countries Mr. Jain mentions and India. For some reason, the Government has not disclosed the figure of *per capita* consumption of foodgrains on the basis of which imports should be planned, if they are not already so planned.

Deferring Foreign Payments

Further clarification is available of the deferred payment scheme which is now in operation. It was recently announced that the first payment under this scheme would be made in 1961. This applies to contracts made during the six months ended 31st March, 1958. For the following six months, March-October 1958, the dateline for the first payment will also be 1961, and for the next six months, October 1958-March 1959, it will be 1962, and so on. Looking at this picture, the third five year plan may largely be a plan for the repayment of the liabilities incurred during the second plan period. It was recently stated in Parliament that the Government had neither approached nor had Russia offered further credit to finance the project for pharmaceutical intermediates. Enquiries, however, show that, subject to the availability of foreign exchange, the Government has decided to proceed with the pro-

ject, for which purpose an approach to Russia is contemplated. Meanwhile, the representatives of the West German firm of Bayer were here in connection with establishing in India a dyestuff intermediates plant in the public sector. As Bayers do not manufacture machinery, the representatives have returned to West Germany to enquire whether credit terms demanded by India, will be available. The forge and foundry project has also reached an advanced stage.

Dredging Bombay Harbour

A provision of Rs. 8 crores has been made in the second five year plan for dredging Bombay harbour. It is explained that the main channel leading from the sea to the harbour is a natural one and the depths in it are adequate for the needs of the port. This channel has never been dredged in the past, the dredging of the port being limited to the artificial channels leading from the main harbour channel to the docks, piers and bunders. During the surveys conducted in 1954, it was found that the main harbour channel had silted up to the extent of 5 to 6 feet. A preliminary investigation has indicated that a quantity of about 30 million tons of silt will need to be dredged out in order to restore the depths in the channel so as to enable deep drafted oil tankers to be brought up to the new marine oil terminal which has been constructed in the Butcher island to serve the two oil refineries in Bombay. In order to solve the problem of disposal of this large quantity of silt and to find out suitable locations of dumping grounds, a model of the port of Bombay has been constructed at the Central Water Research Station in Poona, where hydraulic experiments are being carried out. After the results of the model studies are known and solutions to the problems connected with the dredging operations are found, tenders will be invited for carrying out this large work of dredging by contract.

Foreign Participation in Indian Shipping

It is a fact that the Indian shipping interests are mostly against foreign participation in Indian shipping, the Shipping Minister, Mr. Lal Bahadur Shastri, last week told Parliament. The Government would consider each case of foreign participation on its merit in the light of the Government of India, Commerce Department Resolution of 1947. According to the Resolution, the Government's criteria to be satisfied by companies to qualify them for treatment as "Indian shipping" companies are as follows: (a) The steamers of the companies should be registered at a port or ports in British India, provided that where the Government is satisfied that any company is prevented from complying with this condition by circumstances beyond its control, it may be modified suitably. (b) At least 75 percent of the shares and debentures of the companies should be held by Indians in their own right; (c) All the directors should be Indian; and (d) The managing agents, if any, should be Indian.

Service Conditions of Port Workers

The All-India Port and Dock Workers' Federation's demands included the revision of the wage scales of port and dock workers and the appointment of suitable machinery for the purpose, Mr. Shastri said. The Government did not feel justified in considering a general revision of the wage scales of this class of employees in isolation. It accepted the necessity for undertaking a review of the disparities and anomalies in the pay scales in the light of the recommendations of the 1947 Pay Commission. An officer on special duty was appointed for this purpose, who had submitted a report which had been sent to the port authorities for consideration, Mr. Shastri added.

Indo-Japanese Trade Agreement

The Joint Secretary to the Central Ministry of Commerce, Mr. K. B. Lall, has been asked to proceed to Japan, first, to continue discussions on an Indo-Japanese trade agreement, and, second, to mobilise credit for India to bridge the foreign investment gap.

Monetary Position

The Finance Minister, Mr. T. T. Krishnamachari, last week assured the Lok Sabha that as a result of the Government's fiscal policies the monetary position in the country was getting under control. He informed the House that the Government's policy of restricting bank advances against foodgrains to curb speculative trading was bearing fruit. There had been a drop in the amount advanced for the purpose. On the whole, the Government's policy had helped steady the gilt-edged market, he declared. The Finance Minister gave figures of foodgrains held by banks as security for advances issued and said: "The facts of the situation indicate that there has been a distinct improvement over the position last year. I think it will only be fair to allow some credit for this state of affairs to the institutions concerned." The Asoka Mehta Enquiry Committee has also recognised this position. Mr. Krishnamachari said that there had been a sharp decline even in advances made by banks on all securities, as also on foodgrains. Along with foodgrains, the advances made by banks against other commodities had fallen steeply. It was a fact that the industrial sector needed more money and, therefore, the fall in advances did throw a certain amount of pressure on it. Another interesting fact, Mr. Krishnamachari said, was that when a contraction was made in the advances they found that in the case of 11 offices in one bank, where the constituents had to pay back Rs. 20 lakhs advanced against foodgrains in order to conform to the new percentage, the credit was obtained from indigenous bankers and moneylenders. Therefore, he thought that the regulation of the organised banking system alone would not cover the position. It had been revealed that non-banking sources had been utilised for the purpose.

New Central Bond Issue

Mr. Krishnamachari referred to the Government's recently-floated loan for Rs. 30 crores and said that by 2nd December, two-thirds of it had been subscribed, although the interest was low. This and other factors indicated that the monetary position was getting under control. Saying that the general monetary position was easy, Mr. Krishnamachari concluded: "By and large what we are doing is showing results and the House may be satisfied that the position which perhaps a month back looked grimmer is now easy. I do hope that that position will get further easy as time goes on."

Company Contributions to Political Parties

The expert committee on company law, which has recently submitted its report, has suggested that every company should disclose in its profit and loss accounts every donation made by it during the year to any political party, "giving particulars of the amount given and the name of the person or persons, association or party to whom or to which such donation was made." The committee is opposed to a company securing the prior approval of high courts for any such contributions, but it suports the suggestion that such contributions should be given the widest publicity in newspapers.

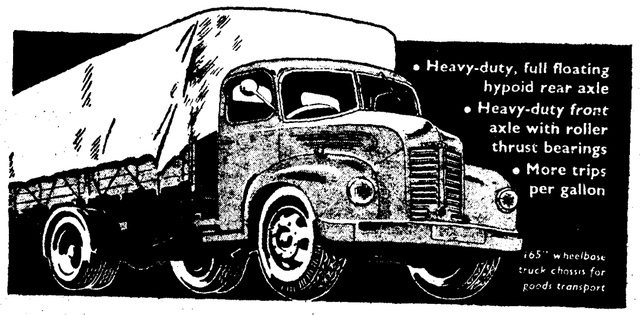
Japanese Ambassador

The present Ambassador for Japan in India, Mr. Seijiro Yoshizawa, is returning to his country this month on the completion of his term. During his time, the prime ministers of the two countries exchanged visits, an Indo-Japanese agreement for the purchase of iron ore was signed, and negotiations on an Indo-Japanese agreement on "enemy property" and an Indo-Japanese trade agreement have been initiated.

Iron Ore Shipments to Japan

In connection with the Indo-Japanese iron ore agreement, a 30-man mission is shortly arriving here, included in which are geologists, harbour experts, etcetera, to survey the possibilities of transstating the shipment of larger quantities of iron ore.

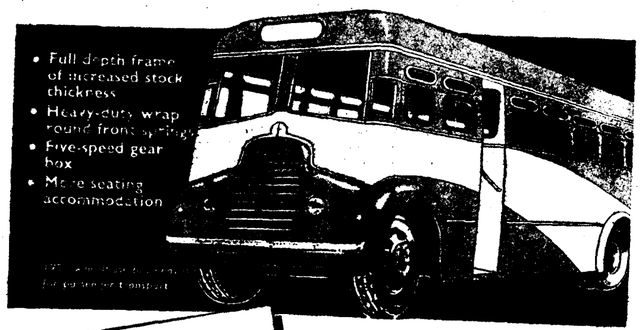
Shipping Boom Fading Off



The boom in the Japanese shipbuilding industry is tapering off, making it possible for Japan to sell ships to India on deferred payment terms.

Tanker for Coastal Oil Movement

India is likely to acquire another oil tanker. She spends nearly £2 million a year on the coastal movement of oil; Burmah-Shell carries 800,000 tons a year and Standard Vacuum and Caltex 300,000 tons each. The tanker deal will involve £450,000. It will, however, require no foreign exchange, because it is proposed that one of the three refineries will pay the sum in lieu of its coastal freight charges.



Holland Seeks Indian Mediation

The Dutch Ambassador met Mr. Nehru this afternoon, it is learned. They presumably talked about the seizure of Dutch assets in Indonesia. The Indonesian Government estimates the value of Dutch commercial assets there at 2,500 million guilders, while Dutch commercial circles estimate it at 8,000 million guilders. A conservative estimate, however, is 5,000 to 6,000 million guilders. These assets belong to about 300 Dutch business houses, including four large banks and five import-export firms. Seventy percent of the plantations in Indonesia are owned by the Dutch. In terms of trade, 50 percent of Indonesia's foreign exchange is earned by Dutch houses, and they pay 40 percent of her taxes. Through her Dutch connections, Indonesia is associated with the European Payments Union. As far as the Netherlands is concerned, her exports to Indonesia are 2.9 percent of her total exports, and her imports from Indonesia are 3.1 percent of her total imports. New Delhi's main concern apparently is that the investment climate in Asia is likely to be affected by the Indonesian action. India, it is pointed out, is likely to use her good offices with Indonesia to urge a peaceful approach to the New Guinea issue.

CHANCELLOR APPEALS FOR PRICE CUTS

NOVEMBER RISE IN RESERVES CONSIDERED DISAPPOINTING

(FROM OUR LONDON CORRESPONDENT)

THE recent steady decline in the cost of imported raw materials is taking a long time to work s way through the normal economic processes as to have some influence on the cost of living— long, in fact, that it provides the Socialist aders with a useful talking point and is even elieved to be causing some concern to the Governent. Import prices have fallen by eight points etween April and October, but over the same eriod shop prices have actually risen by 2½ points. seeking an explanation for this apparent ano- aly, one is informed that whereas import prices count for only about one-fifth of the total cost the national output, wages and salaries are esponsible for approximately three-fifths, and the tter have gone up by 5 percent since January. ne is also reminded that the present fall in nport prices has so far done little more than set the rise which occurred last autumn and inter and that the October index figure is equal that of July of last year. The Government's iew is that if the "tight money" policy succeeds stabilising costs—and so far as its own employes are concerned it is most resolute that any wage ncreases must be balanced by economies in other irections—and import prices can be held at existg level, it will be justifiable to look to manufacrers and the distributive trades for a perceptible rop in prices.

That was undoubtedly at the back of Mr. horneycroft's mind when, speaking in Birmingam the other day, he made the most forthright ppeal yet to industrialists for a voluntary price- utting campaign. The Chancellor of the Exchequer dmitted that it took time for prices to meet the backlog" of wage increases, but he emphasised hat "it should be the prime aim, as it could be he principal contribution, of employers in Britain cut every price they can. This is no moment or a ring designed to keep prices up, or for restric- ive practices designed to prevent them coming own. Do not wait for the Restrictive Practices ourt. If any firm, no matter what ring it belongs , can lower its prices, it is its patriotic duty to o so, and quickly. Instead of an annual round f wage increases, we should see an annual round f price reductions."

Faith in Sterling

This effort to stabilise the pound and restore onfidence in sterling is the main theme of reasury publicity at the moment, and it has been arried down into a small booklet entitled *The ound and Our Future*, which, Mr. Thorneycroft s hoping, will be prescribed reading for the mployees of the 25,000 firms throughout the ountry to whom he has written about it. In imple, plain language, it deals with the causes f the decline in the purchasing power of the pound etween 1947 and today, quotes the evidence of he Gallup Poll to show that people as a whole ut the cost of living and rising prices at the top f the questions that worry them most, traces the lose connection between the private worry and he national one, and points out that unless there s confidence in the pound at home, then it cannot e expected that there should be confidence in it broad; that if there is no confidence in it abroad, hen inevitably the standard of living here will uffer. Sterling is the lubricant that keeps world rade moving, says the booklet, and when trade anguishes Britain is among the first to suffer. In onclusion, it points out that the sterling area as whole had banked £2,925 million in Britain in he middle of 1957 and that countries outside the terling area also held sterling balances. "If the ounds deposited in our country by people abroad ose their value, we are letting down people who rust us."

Not surprisingly, perhaps, at a season of the ear when economic subjects are rather at a discount, this publication has given rise to quite a merry little controversy as to whether the sterling area has not now served its purpose and whether t is of any more benefit to this country, or to anyone else. One Cambridge economist, writing in he latest *District Bank Review*, advocates exchange control on movements of capital from Britain to the sterling area, and argues his case logically enough. In a talk on the B.B.C. Third Programme, however, another economist went further and recommended a dismantling of the sterling area system, only to be challenged by yet a third on the grounds that it would be too great a loss of earnings by the City of London. The *Manchester Guardian* joins in to suggest that what needs revision is the policy rather than the means by which it is given effect. It concludes "sadly" that some sacrifice is inevitable for an increase in the gold reserve and for a repayment of the sterling debts, since these are the only things that can bring safety, and thinks it likely this will have to be made in overseas investment. The paper, in its turn, has been assailed for misinterpreting the views of the earlier contributors. The City Editor of the *Star* seeks to have the last word by suggesting that the only thing to be said on the subject is this: "There is a marked trend for freedom of remittance to become a one-way traffic. The sterling area was originally supposed to be one within which there was complete freedom of remittance. Today, while there is still almost complete freedom to remit out of Britain to any other part of the area, there are growing restrictions and difficulties in remittances from those parts into Britain. India and Pakistan are notable examples. Even South Africa has from time to time put some restrictions on money coming here to earn higher interest rates."

Gold Reserve in November

In view of all these opinions, the $92 million increase in the sterling area's gold and dollar reserves at the end of November is rather disappointing, for it compares with a $243 million improvement in October and a better showing than this was expected. These two good months together have failed to offset the August and September losses, which aggregated $517 million. The results with the E.P.U. for November are also disappointing, showing a deficit of £1 million, whereas in October there was a surplus of £8.7 million which has done much to make the gold surplus for November look less depressing. The future outlook is too uncertain for speculation, even though the E.P.U. setback can be explained by France's need to window-dress. At a total figure of $2,185 million (£780 million), the reserves are hardly yet in a position to meet any undue strain, leave alone providing any margin for debt repayment. On the contrary, the Treasury has announced its intention of drawing another $250 million from the American Import-Export Bank shortly; it will have to decide soon whether it needs another postponement of the repayments on the American loans which fall due at the end of December, and whether it intends using the $738 million stand-by credit granted by the International Monetary Fund which is due to expire within the next few days.

Fall in Industrial Production

Another none-too-satisfactory development was the sharp contraction in industrial activity disclosed by the provisional index of industrial production during October, although this is mitigated to some extent by the fact that the influenza epidemic reached its peak during the month, and had the effect of raising absence from work due to sickness by 60 to 70 percent above the normal for the time of year. Adjusted for seasonal factors, the September figure of 140 was two points higher than in August and three points higher than in September 1956. The provisional estimate for October is 137-139, 2 to 3 points down on the month, and only 2 points up on the year. There were considerable changes either way in different industries, for whereas output in building and coalmining compared with a year earlier was substantially lower, in the steel, motor vehicles and electricity generating industries it was much higher. The latest statistics issued by the British machine tools industry suggest that fears that industry was suffering a severe falling away in re-equipment activity is hardly justified. It is true that the September figures show home market orders again a little lower than in the previous month, but they are substantially the same as in September 1956. Export orders, on the other hand, have dropped considerably in recent months, the September figure for these being the lowest for a long time and only half as much as the average for the first half of this year. Nevertheless, the total of outstanding orders at the end of September was valued at £21 million for export and £64 million from home customers, and although more reasonable delivery periods are now being offered, the backlog is being reduced only very slowly.

Help for Colombo Plan

External assistance on a Government level to the countries of the Colombo Plan in south and south-east Asia last year amounted to some £357 million, bringing the total assistance of this kind since the plan began in 1950 to some £1,250 million. These figures are disclosed in a White Paper dealing with the sixth annual report of the Consultative Committee. The review of economic progress, with which the report opens, points out that through all the sections devoted to individual countries run references to the search for additional resources, more capital, more equipment, and more managerial and technical skills. "But it would be wrong to regard the situation as wholly discouraging," the review comments. "These are signs that the countries concerned are pressing on with urgent tasks of development and the raising of living standards with speed and energy. The United Kingdom's part in the plan has continued to include the provision of capital, training experts and technical knowledge. Since 1951, it has made available to the countries of the area about £92 million by way of grants, loans, credits, and technical assistance. The number of trainees accepted by this country since the plan began was 1,582, of whom 333 were from non-Commonwealth countries. In addition, there were many unspectacular private transactions.

Brevities

Mr. Macmillan, the Prime Minister, is due to start his Commonwealth tour on 7th January, accompanied by Lady Dorothy Macmillan and a staff of three or four, including a representative of the Commonwealth Relations Office, with the following provisional itinerary: India from 8th to 12th January; Pakistan from 12th to 16th January; Ceylon from 16th to 18th January; New Zealand from 20th to 28th January; and Australia from 28th January to 11th February.

How banking helps the
FISHING INDUSTRY

THE seas around India's 2,900 miles of coastline are rich in fish. In the South of India, particularly, fishing is an important industry. It supplies food and many valuable by-products, some of which are exported.

In South India alone, the fishing industry employs over 1¼ lakhs of people, and its catches are worth about Rs. 3½ crores every year.

Banking has greatly helped the growth of the fishing industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the fishing industry.

We at Palai are proud that so many leading fishing firms, and indeed important firms in every field of business and industry in South India, employ the *complete* banking service we offer:

Current Accounts — Demand Drafts — Telegraphic Transfers — Investments — Letters of Credit — Bill Collection — Deposits — Loans and Overdrafts — Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office: PALAI, KERALA STATE

Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. Also at: Delhi and New Delhi.

TEXTILE INDUSTRIES FAIR OPENS

PROGRESS OF RURAL ELECTRIFICATION

(FROM A BOMBAY CORRESPONDENT)

THE Indian textile industry will be given full support by the Government in its attempt to "attain full maturity in the manufacture of textile machinery." This assurance was given by the Central Minister for Commerce and Industry, Mr. Morarji Desai, when he inaugurated the Textile Industries Fair here. Referring to the fact that India now produces an average of 5,000 million yards of cloth a year, which compares well with the best anywhere else in the world, Mr. Desai expressed regret that the country was not producing sufficient machinery and mill stores to fill the needs of the industry. He said that Indian manufacturers of such machines were producing 40 percent of the total requirements and 80 percent of the mill stores needed. While admitting that the industry has made considerable progress, the Minister felt that so long as it was not self-sufficient in machinery production, it could not be said to have been founded on a sound basis. Mr. Ramnath A. Podar, chairman of the Reception Committee of the Fair, stated that India had been relegated to second place in the field of exports of textile goods because of her shrotcomings in technology and "in the sphere of training labour within the industry." The Fair, which will remain open till 6th January, covers an area of 400,000 square feet and contains 276 stalls. It was built at an estimated cost of Rs. 15 lakhs.

Export of Engineering Goods

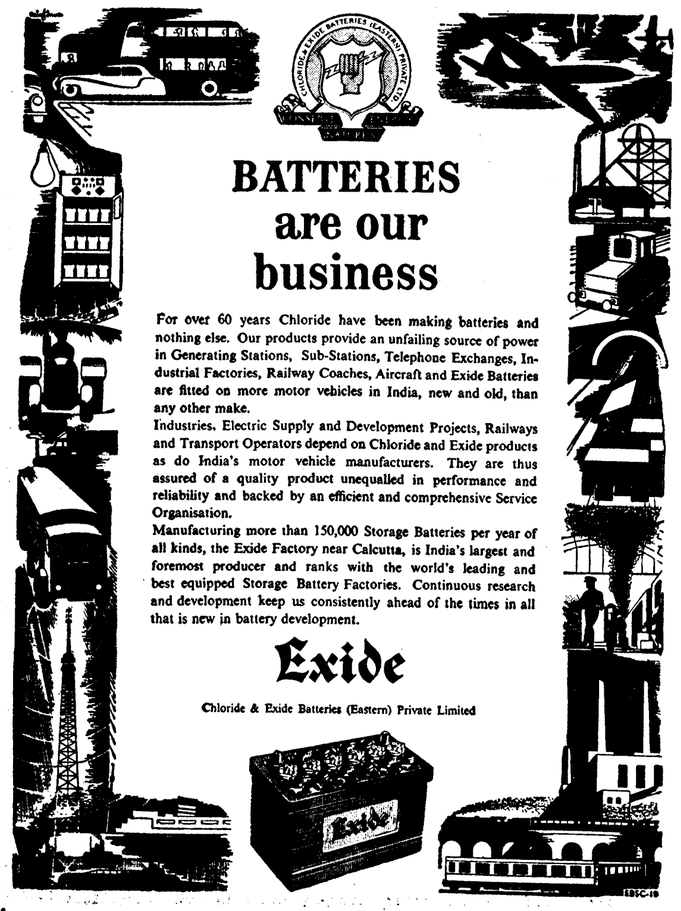
Inaugurating the annual general meeting of the Bombay Regional Engineering Association of India, Mr. Morarji Desai has urged the members to sell their products abroad on a "no-loss, no-profit" basis to help the country earn more foreign exchange. Stressing the need to improve the quality of goods to meet foreign competition, Mr. Desai has expressed the hope that the pig iron position will improve by the middle of 1958. The Government has been a little more liberal in the matter of imports of the principal raw materials, and consumer demand has grown in 1956 and this year. These factors have given engineering industries an impetus, but due to foreign exchange difficulties, it is difficult to allow unrestricted imports of the principal raw materials, or of components. He has urged the industries producing consumer goods to strive for increased production. A decrease in the production of electric motors, transformers, cables and diesel engines, he has said, is what the country cannot afford.

About the foreign exchange problem, the Minister has said that deferred payment terms, as have been laid down by the Government, cannot be further liberalised. He anticipates that more stringent measures are likely in the case of key and strategic industries, and also for those projects included in the core of the second plan. He has made a strong plea for higher production. A resolution urging the Central Government to pursue an import policy, less restrictive and somewhat liberally conceived, and which permits the issue of actual user licences to industrial consumers for all steel items based on their minimum requirements, was passed at the meeting.

Electricity in Villages

The Central Minister for Irrigation and Power, Mr. S. K. Patil, has told the representatives of the electricity industry here that the Government will be ready to consider the industry's case on the tax problem so long as the rates for electricity are not raised. He said this while inaugurating the annual meeting of the Federation of Electrical Undertakings of India. Acknowledging the great contribution of the private sector, the Minister has said that it owned 43.7 percent of the total generating capacity last year. The capacity in the country was 2.3 million kW before the first plan had got under way, and reached 3.4 million kW by its end. It is likely to touch 6.9 million kW by the end of the second plan. The Minister has stressed that the *per capita* power generation compares unfavourably with some foreign countries. While it is 6,610 kW in Norway, 4,860 kW in Canada, 3,470 kW in Sweden, 3,320 kW in the United States, 1,571 kW in the United Kingdom, and 712 kW in Japan, it is only 25 kW in India. On the mammoth task of rural electrification, he has said that the Central Government has asked the States to help and encourage licensed commercial undertakings. Of the 560,000 villages, only 3,000 were electrified before the first five year plan. The number had increased by the end of this period to 6,500 and, it is now envisaged, the number will rise to 16,000 by the end of the present plan.

Cotton Market Depressed



The cotton market was depressed during the past week. I.C.C. Moglai Jarilla March opened at Rs. 698, declined sharply to Rs. 688.50 on heavy selling, then touched the low of Rs. 672 and finally closed at Rs. 675. The Sewri spot market was easy and prices for popular growths declined by Rs. 10 a candy. Transactions were mostly done in 197/3 of Khandesh and Berar, Surti, Vijay and Wagad. The demand for exportable varieties was negligible. The statistical position of raw cotton was still in favour of bulls. Although the year's crop is estimated higher at 5.1 million bales, consumption also shows a rising trend. Assuming that exports are allowed to the extent of 300,000 bales, the carryover for the new season, it is expected, will continue unchanged at 2 million bales, according to market sources. Imports this year are estimated at 500,000 bales. In the export section, the demand for Bengal Deshi was so weak that the prices of December delivery touched the low level of Rs. 612. In the foreign section, the Sudan made enquiries subject to the availability of an import licence. Meanwhile, the visit of the trade delegation from the Sudan is responsible for the belief that that country will be prepared to open a rupee account with India and thereby facilitate large-scale imports of Sudanese cotton, the cheapest of all foreign varieties now.

Rise in Imported Yarn

The main feature of trading in the yarn market was the marked rise in imported art silk yarn. Japanese 150A and 120A bright Diafuki varieties improved by about 8nP a lb, while 100 bright Japanese cones recorded a rise of 25nP a lb. Italian varieties showed a similar improvement. In the futures section, December delivery ranged irregularly between Rs. 810 and Rs. 819 a case, on alternate spells of buying and selling.

Setback in Oilseeds

There was an all-round setback in prices in the oilseeds market, the only exception being linseed. Castorseed was the worst sufferer. The present price of castorseed in the country, it is said, is about one cent above the world parity. Overseas interests seem to be holding off on hopes of a cut in the export duty on Indian castor oil. In the absence of such a cut, the castorseed market may continue to decline. Castorseed May 1958 contract moved down from Rs. 151 to Rs. 146.50 on heavy selling. It recovered subsequently, but finally closed at Rs. 144.50, the net loss over the week being about 7 points. Ready Madras fell from Rs. 30.50 to Rs. 30, and Kanpur from Rs. 30.12 to Rs. 28.50. Castor oil Commercial decreased by 87nP and closed at Rs. 15.87; B.S.S. oil declined from Rs. 17.75 to Rs. 17. Groundnut also suffered a sizeable drop. Groundnut February 1958, which opened at Rs. 161.25, closed at Rs. 157.62. Bold ready declined from Rs. 31.87 to Rs. 31.56. Linseed provided the bright feature. Broadening overseas enquiries were a bolstering factor. Considerable business was put through with the U.K. and Continental countries at around £114 a ton, against £110 a ton of a fortnight ago. Prices, in consequence, went up by about Re. 1 a cwt. Linseed May 1958 contract opened at Rs. 32.19, steadied at Rs. 32.75, and closed at Rs. 32. Bold ready shed 30nP. Linseed oil moved up from Rs. 16.25 to Rs. 16.94. The cottonseed market lacked strength throughout. Cottonseed February delivery opened at Rs. 100.75 and weakened to Rs. 95 at the close.

BATTERIES are our business

For over 60 years Chloride have been making batteries and nothing else. Our products provide an unfailing source of power in Generating Stations, Sub-Stations, Telephone Exchanges, Industrial Factories, Railway Coaches, Aircraft and Exide Batteries are fitted on more motor vehicles in India, new and old, than any other make.
Industries, Electric Supply and Development Projects, Railways and Transport Operators depend on Chloride and Exide products as do India's motor vehicle manufacturers. They are thus assured of a quality product unequalled in performance and reliability and backed by an efficient and comprehensive Service Organisation.
Manufacturing more than 150,000 Storage Batteries per year of all kinds, the Exide Factory near Calcutta, is India's largest and foremost producer and ranks with the world's leading and best equipped Storage Battery Factories. Continuous research and development keep us consistently ahead of the times in all that is new in battery development.

MOVE FOR CUSTOMS UNION IN SCANDINAVIA DEFENDED

BIG FOREIGN TRADE SURPLUS FOR WEST GERMANY

(FROM A CORRESPONDENT)

PLANS for a northern Customs Union have not been rendered superfluous by the six-power Rome Treaty or by the proposed European free trade area, says Herr Eric Brofoss, director of the Bank of Norway. On the contrary, the northern countries must be "organised and united in a Customs Union", in order to safeguard their interests in the proposed free trade area, which cannot be established without their participation, he adds. "If Norway chooses to stand alone, she may be compelled to accept regulations laid down by the stronger countries. They are guarding their own interests, which are not always ours. Standing alone, the northern countries may be faced with a take-it-or-leave-it attitude from the other countries, but united they will be able to exert considerable influence on the shaping of the free trade area."

Industrial Fair

Norway's next industrial fair will be held in Oslo from 29th May to 15th June, 1958. All branches of Norwegian industry will be represented.

Adverse Trade Balance for Austria

The trade balance of Austria in September was unfavourable, the deficit amounting to 244 million schillings. It was offset, to some extent, by earnings from the tourist trade. After a deduction of 86 million schillings, which was allocated as foreign travel allowance to Austrians, 255 million schillings represented the net receipt this year. In the overall analysis of the September transfers, however, the foreign exchange balance showed a slight surplus.

Motor Vehicle Exports

Austria's exports of motor vehicles of all types reached a value of 224 million schillings during the first six months of 1957, compared with 175 million schillings during the same period last year. Exports of two-wheel motor vehicles have been steadily rising. They totalled 58 percent of the total motor vehicle exports during the first half-yearly period. During the same half of 1956, only 25,856 two-wheel vehicles valued at 85.7 million schillings were exported; the figures this year are 42,784 and 130.5 million schillings, respectively. Among the 50 countries which import the Austrian vehicles are the U.S.A. which led with 5,366 vehicles valued at 15.7 million schillings, followed by Yugoslavia with 4,931 (18.9 million schillings), Norway with 4,696 (12.6 million schillings), Sweden with 4,637 (11.9 million schillings), and Switzerland with 4,438 (10.5 million schillings). Belgium, West Germany, the Netherlands, South Africa, the U.K. and France are some of the other customers.

Swiss Gold Reserves

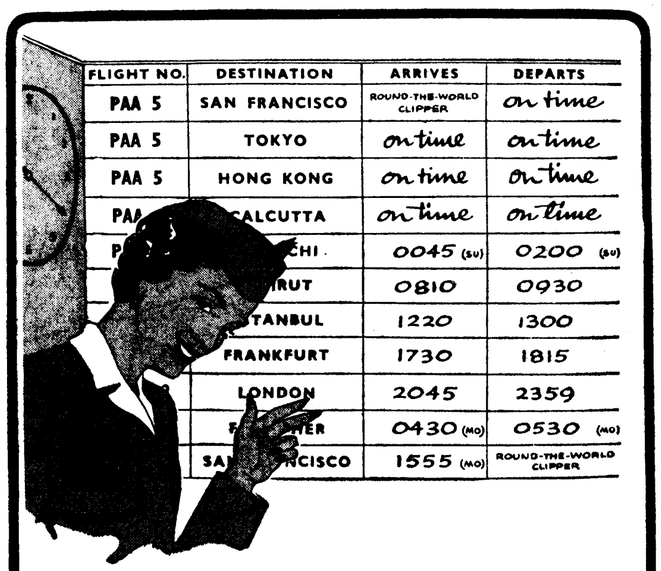
At the beginning of November, the gold reserve of the Swiss National Bank amounted to 7,369 million francs ($(U.S.)1,717 million), while the foreign exchange reserve totalled 535 million francs ($(U.S.)124.7 million). Notes in circulation were a little more than 5,500 million francs ($(U.S.)1,282 million).

Regional Economic Development in Italy

The Italian Government's report to the O.E.E.C. on the economic situation includes interesting data on the difference in development between northern and southern Italy. In the past two years, the report says, northern and southern Italy have increased their incomes at about an equal rate; thus the gap in their developmental level remains. The south could not raise its income according to plan, which was principally due to the unsatisfactory progress of agriculture as well as to a slow-down in the industrial sector. The income derived from tertiary activities, however, increased at the anticipated rate. In fact, agricultural income in the north during the past two years has risen by 3 or 3½ percent a year, compared with the 1 or 1½ percent anticipated; in the south it has risen by an average of ½ or 1 percent a year, against the planned increase of some 2 percent. In industry, the north registered in 1955 an increase of 5 percent; the south reported 7½ to 8 percent, against the anticipated 9½ to 10 percent; in utility services, the north registered 7 percent against an anticipated 4½ percent, while the south showed 10 percent, which was the planned rate for the region.

The continuing gap between the two regions is also demonstrated by the fact that while north Italy registered a decrease of 36,000 in unemployment, in southern Italy it increased by 60,000. The report admits that little headway has been made in the effort to level up the economic conditions of the two regions, and the rate of expansion has, on the contrary, underlined further the sharp gap which divided the north from the south. Three different circumstances, it is believed, are responsible for the difference in the rate of expansion. First of all, it is pointed out that the present situation has favoured principally industrial expansion thus benefiting the more industrialised north; secondly, the adverse weather conditions of 1955 have slowed down the south's economic expansion, and 1956, while a better year, could not fully make up for the loss of the previous year; thirdly, a reduction in public investments has hit the south more than the north.

West German Foreign Trade



Imports of West Germany and West Berlin in September stood at 2,587 million deutschemarks and were almost unchanged against those of August at 2,586 million deutschemarks. The value of exports declined from 3,085 million deutschemarks in August to 2,868 million deutschemarks in September. Consequently, the foreign trade balance for September 1957 closed with a smaller export surplus at 281 million deutschemarks, against 499 million deutschemarks in August 1957. Imports in the first nine months of 1957 rose by 15 percent to 23,200 million deutschemarks, against the same period of 1956, and exports by 19 percent to 26,300 million deutschemarks. The surplus in the balance of trade thus amounted to 3,100 million deutschemarks, compared with 1,900 million deutschemarks in the first nine months of 1956. Incidentally, the export surplus of 2,900 million deutschemarks achieved in the whole of 1956 has already been surpassed in the first nine months of the current year.

Machinery Output

According to the report published recently by the Association of the German Machinery Manufacturers (V.D.M.A.), the value of the West German machine production at 8,621 million deutschemarks in the first six months of 1957 was 7.8 percent higher than in the same period of 1956. In volume, the rise was only 1.5 percent. The number of employees in the machine-building industry, on a monthly average, rose by 5.4 percent to 828,584, compared with the same period of 1956. This industry is leading in employment; the textile industry comes next with 644,142. Due to a shortening of the weekly working time, working hours declined by 3.4 percent. Because of this, and due to wage increases effected in 1956, wage costs a working hour rose by 9.1 percent; the sum of the employees' salaries was 11.4 percent higher. The additional costs arising from this and the preceding increase in the steel prices added up to an advance in the prices for machines (producers' prices) by 5 percent, in the second half of 1956. In the first six months of 1957, the price index remained unchanged at 141 (1950 equals 100).

U.S.-Dutch Transport Agreement

The N. V. Algemene Transport and the American Railway Express Agency have concluded an agreement on the international transport of goods. The agreement offers many advantages to the carriers. This arrangement essentially consists in the use of one continuous consignment-note covering the entire transport of goods from the place of despatch to the destination. Transport is supervised by one of the firms from the starting point to the terminus—namely, by Van Gend and Loos for the shipment of goods from the Netherlands to the U.S.A., and by the Railway Express Agency for shipment from the U.S.A. to the Netherlands. As a result of this co-operation, more than 1,000 places in the Netherlands and more than 20,000 places in the U.S.A. are directly connected with one another.

When minutes count - count on Pan American

When time is precious, PAA's the way to fly. Just consider: of the last 100 Clippers* to serve Calcutta, 86 have been on time or within mere minutes of schedule—and 10 of the remaining 14 were less than 3 hours late. A remarkable record, *unmatched by any other airline*—and particularly so, when you remember that each of these Clippers flew around the world!

On time performance is part of Pan American's idea of service, an idea reflected in the use of the finest equipment and most up-to-date techniques.

Our business is getting people to their destinations as quickly and comfortably as possible—people from 82 lands on 6 continents.

Being "on time" is a Pan American trade-mark. It is the kind of performance you would expect from an airline with 30 years of 'round-the-world experience. Punctuality is one of the many reasons why experienced travellers prefer Pan American.

For reservations, call your Travel Agent. Or call Pan American in:

Calcutta : 42 Chowringhee, Tel: 44-2651, 2652, 2653

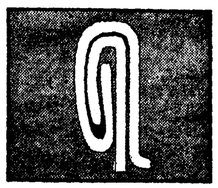
PAA 1157

a pilfer-proof package for every product!

Metal Box pilfer-proof containers and closures, individually designed for each product, are precision engineered and superbly printed. This ensures product safety, purity, and powerful sales appeal. Reputable manufacturers use them to pack :



Ghee	Breakfast foods	Vanaspati and other food oils
Butter	Cocoa	Baking powder
Evaporated and Condensed milk	Coffee	Tea
Barley	Biscuits	Honey
Glucose	Confectionery	Processed fruits and vegetables
	Cashews	

MB OPEN TOP CAN

A METAL BOX PILFER-PROOF CONTAINER

Complete pilfer-proof protection is guaranteed by double seaming both top and bottom to the can body.

This cross-section of a precision engineered double seam shows how the rubber-like compound-lining ensures air-tightness.

Only a can opener, destroying the top of the can, will open it. It cannot be reused by unscrupulous dealers to repack with spurious products.

Jute

MARKET REACTS BULLISHLY TO I.J.M.A. GUNNY STOCK FIGURES

REASONS FOR THE SOFTER TREND IN PAKISTANI FIBRE

SOME people think that the recent International Jute Conference in Dacca has had a certain measure of success as far as the price of jute is concerned. The current downward trend, in both India and Pakistan, is being attributed to the Conference. Growers' associations are dissatisfied with the results, and complain that present conditions have been artificially created and do not provide the farmer with an adequate return for his efforts. Overseas manufacturers, on the other hand, are pleased at the latest turn in events, but do not appear to have taken advantage of the situation. Purchases of jute from Pakistan since the price fell to £95 a ton have been negligible compared with earlier in the season when prices were about £25 a ton higher. The reason given for this by a spokesman of the trade is that the price of gunnies at present is uneconomic. This may or may not be true, but the two markets are so closely inter-related that if lower jute prices are demanded, then cheaper goods must be expected.

In India, raw jute prices have recently been at a new low level. This has been unexpected, as mill purchases through official sources are far behind what they have been in previous years. It was thought that large purchases would be made early in December to replenish the mills' stocks, so the general undertone was steady. But apart from one or two isolated cases, no large-scale purchases have been recorded, and quotations to the mills have fallen. The decline has not been supported by a similar trend in the agencies, however, except perhaps in the Northern districts, and at present a large price discrepancy exists between local and upcountry rates. In many agencies, prices have been kept up by mills purchasing through their agents. Premiums of Re. 1 and over are frequently paid for parcels, and the mills claim that they are justified in paying these prices by the quality and the condition of the jute received through their own agencies. But if they were prepared to pay these same premiums to ordinary sellers through normal channels, they would get equal satisfaction without the expense of running an agency or employing agents. That they have to pay higher prices is an admission that jute cannot be obtained at the quoted rates, but this does not appear to be taken into consideration when purchases are made in the open market. The demand for Daissee is still very strong, and the price of this fibre has not fallen as much as that of other types. In the better class Daissee districts, however, agency prices are high, and sellers are unable to operate at a profit. One of the main problems is moisture, and many arrivals contain anything up to 7 seers of water, or about 20 percent. At the present price level, this represents an initial loss of about Rs. 6 a maund to the seller.

The gunny market has been very quiet lately, and overseas transactions have been few and far between. The shipping statistics for last month, however, were good, and this has been reflected in the stocks of jute goods held by mills at the end of November. These showed a drop of 4,700 tons compared with October, and the total, at only 71,300 tons, is the lowest for two years. The I.J.M.A. gunny stock figures have had a bullish effect on the market, but have been counteracted by speculative activity in the fatka on account of due date settlements, which has caused minor fluctuations. The Calcutta mills are not keen sellers at the present levels, except perhaps for forward hessian, which is showing a very small premium over other deliveries. There are no genuine buyers, and with America continuing to sit out of the market, business has mostly been done by the bazaar. Sacking is depressed, and the price difference between near and forward shipment B Twills has been reduced to about Re. 1. Small activity has been recorded in cornsacks towards the close, but again this is in the forward position; in anticipation of seasonal demand, April-June quotations for this fabric are at a small premium.

THE JUTE MARKETS

Manufactured Goods: There was very little stability in the gunny market during the past week, and daily price variations gave no real indication of the actual trend. At the opening, prices were depressed and quotations for all fabrics recorded losses. B Twills opened at Rs. 108.50 for December shipment, which represented a drop of 75nP, and April-June shipment lost 60nP to Rs. 107.90. Hessians showed a drop of 25nP in all sections, and quotations for 40in. 10oz. were based on Rs. 39.80 for December, with forward shipment at a small premium of 25nP. Reports of business in hessians with the U.K. and America instilled some confidence, and over the next two days prices advanced. The market became firm, and good shipping statistics strengthened the undertone further. Small business was done on the rise, but in the absence of fresh enquiries over the week-end, prices fell back on Monday. December B Twills stood at Rs. 108.80 and 40in. 10oz. hessians at Rs. 40.30. With the approach of fatka settling day, heavy goods prices improved, and the publication of the I.J.M.A. gunny stock figures, showing a drop of 4,700 tons, helped the upward tendency. On Tuesday morning, B Twills were Rs. 109.15 and 40in. 10oz. Rs. 40.40, but in the absence of business these rates could be regarded as nominal. They were maintained principally by speculative activity.

At the close the market was steady and opening quotations on Wednesday morning were as follows :

	December	Jan.-March	April-June
	Rs.	Rs.	Rs.
40in. 8oz.	33.35	33.15	33
40in. 10oz.	40.50	40.75	40.75
B Twills	109.75	109.50	109.25
Heavy Cees (Plain)	111	109.75	109.25
A Twills	134.25	133.75	133
Liverpools	126.75	125	124
Cornsacks	108.75	110.50	110.25

Raw Jute: During the early part of the past week, raw jute prices showed a gradual decline. Quiet conditions prevailed, and in the absence of mill interest, quotations were nominal. Sellers were not keen for business at the lower rates, as there was no parity between Calcutta and upcountry prices. On Friday and Saturday, however, with the improvement in manufactured goods, several mills came out to buy, so over the two days business of about 300,000 maunds was reported. Prices advanced on the strength of the business done, and were maintained by small purchases after the week-end. Opening rates last Thursday were based on Assam jute at Rs. 26.75 a maund, which was 25nP below the previous closing prices. On Friday, a similar loss was recorded but business was done. On Saturday, rates advanced to Rs. 27 a maund, and fresh business was reported at the higher price. After the week-end, prices continued to advance and by Tuesday Assam Bottoms were quoted at Rs 27.50.

Business consisted of Assam jute at Rs. 26.25 to Rs. 27 a maund basis Bottoms for December-January shipment, and Northern at Rs. 26 to Rs 27 for the same shipment. Daissee was in good demand and fetched Rs. 29.50 to Rs. 30 a maund basis Bottoms, and Rs. 34.50 to Rs. 35 when free from samla middles. Mills showed interest in Daissee mesta at Rs. 24 to Rs. 24.50, and Northern and desal mesta at Rs. 24.25 to Rs. 24.50. Pakistani cuttings were in demand under sellers' licence, and prices paid ranged from Rs. 80 to Rs 82 a bale, while business was done under buyers' licence at Rs. 76 to Rs. 77.50 a bale.

Heavy covering business was reported in Cossipore against recent contracts and the market there was steady. Wagon arrivals improved and a total of 770 arrived at the Cossipore sidings. During the corresponding week of last year, a total of 816 wagons was recorded. At the close, the market improved by about 50nP and Kishengani jute was quoted at Rs. 27 a maund for garsat quality.

The market was steady and quotations on Wednesday morning were based on the following:

Indian Jute :	Landed at Mills Rs. a md basis Bottoms	Shipment
Assam	27.50	Dec.-Jan.
Northern	27.25	"
Purnea Desal	25	"

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta These are gross figures based on shipping bills presented.

	Bags (Tons)	Cloth (Tons)	Total (Tons)
Hessian			
1st to 30th November 1957	3,358.9	32,347.1	35,706.0
1st to 31st October, 1957	2,716.6	20,582.1	23,298.7
1st to 30th September, 1957	3,460.1	31,666.7	35,126.8
Sacking			
1st to 30th November, 1957	41,374.9	864.2	42,239.1
1st to 31st October, 1957	35,533.4	1,445.8	36,979.2
1st to 30th September, 1957	52,124.2	547.0	52,671.2

I.J.M.A. PRODUCTION FIGURES FOR NOVEMBER

The Indian Jute Mills Association reports the total production of jute goods for November as follows :

Description	Quantity	
1. **Gunny Bags**		
(a) Hessian	3.521	tons
	1.14.4	lakh yds.
	72.8	lakh Nos.
(b) Sacking	52.290	tons
	12.46.1	lakh yds.
	5.15.3	lakh Nos.
2 **Gunny Cloth**		
(a) Hessian	29.923	tons
	11.51.2	lakh yds.
(b) Sacking	882	tons
	21.2	lakh yds.
3 Other Manufactures	5.330	tons
4. Total production (above figures combined)		
(a) All kinds	91.946	tons
(b) Hessian (both bags and cloth)	12.65.6	lakh yds.
(c) Sacking (do)	12.67.3	lakh yds.

Summary

	(00,000 Yds) 1957 Nov	1957 Oct.	1956 Nov.	(000 Tons) 1957 Nov.	1957 Oct.	1957 Nov.
Hessian	12.66	12.09	13.88	33.4	31.7	36.8
Sacking	12.67	11.17	9.66	53.2	47.1	41.8
Others				5.3	4.7	5.2
Grand Total :				91.9	83.5	83.8
Hours worked :				206.0	192.0	209.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

THE FOREIGN JUTE MARKETS

EASIER TENDENCY IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE easier tendency in raw jute prices has continued this past week, and consumers of yarns and cloth are expecting a reduction in the rates for yarns and cloth. Consequently, business in these has been confined to small quantities for early deliveries. Most spinners and manufacturers are in a position to deliver almost immediately, as they have machinery standing idle and waiting for such orders. Too often, buyers are placing orders for immediate despatch and producers have no opportunity of booking orders for distant deliveries. Occasional items of news give the industry some hope for the future; one such is that a big firm of consumers of jute goods proposes to return to make purchases of jute cloth and bags instead of paper, to which it diverted itself some time ago Also, there is the fact that Messrs Caird (Dundee), Limited, who had been running for three days only a week in their spinning departments for some time, have returned to the normal five-day week all over. It is interesting to note that linoleum hessians are well booked up over the next two months at least. Some Dundee firms, who had planned extensions to their works, have suspended operations for the present.

Raw jute has dropped another £1 to £2 a ton again since the last report. Mill Firsts are offered at from £112, Mill Lightnings at £95 5s to the Continent. Mill Hearts at £86 and grade Hearts from £76, good marks of Daissee-2/3 from £96 and grade at £89, while grade Tossa-2/3 has been sold down to £102 10s and grade Tossa-4 at £96 10s and now offered at £96, all c.i.f., U.K., December January shipment. Calcutta goods have also come down to 60s for 40in. 10oz. and 46s 6d for 7¼oz., December, 60s 3d and 46s 6d January and 60s 6d and 46s 9d February-March, with B Twills weak at 164s 163s 9d and 163s for the respective positions of shipment, all f.o.b., Calcutta. Jute varns and cloth are quiet, but still unchanged in price.

I.J.M.A. STOCK FIGURES FOR NOVEMBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of November as follows :

Description	30th November 1957 Lakh Yds.	000 Tons	31st October 1957 Lakh Yds.	000 Tons	Increase over (+) or decrease from (-) last month Lakh Yds.	000 Tons	30th November 1956 Lakh Yds.	000 Tons
Hessian cloth and bag	9.68	26.0	10.85	29.5	−1.17	−3.5	8.88	24.7
Sacking cloth and bag	8.57	35.5	9.11	37.5	−54	−2.0	16.08	67.1
Others		9.8		9.0		+0.8		9.9
Grand Total (000 Tons only)		71.3		76.0		−4.7		101.7

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non member mills.

LONDON INSURANCE LETTER

NEW EXCHANGE BUILDING OF LLOYD'S

By Air Mail.

ON 14th November, almost exactly five years after its foundation stone was laid by the Queen, Lloyd's new building in Lime Street, in the city of London, was opened by the Queen Mother. It combines modernism with the traditionalism associated with this institution, to provide, it is hoped, the most efficient, as well as the largest, insurance exchange in the world. Traditionalism is embodied particularly in the committee suite, the committee room itself being a reconstruction of the Adam Great Room of Bowood House, Wiltshire, whose chimneypiece, ceiling, and panels, were acquired by Lloyd's when it was being dismantled; the dining room, likewise in Adam style, is partly a replica of the original. The writing room of the gallery has a desk and chair made from the timbers of the Lutine. The Lutine Bell itself is impressively housed above the callers' rostrum, with an indicator designating a broker who is called.

The new calling system is a special feature of the underwriting room. This room, 340 feet long, 120 feet wide, provides 44,250 square feet of floor space—more than twice the area in which business has been transacted with increasing difficulty hitherto. Distributed over the floor and surrounding gallery are 72 telephone dials. Each broker will have a number, and when it is called, by telecommunication, the broker concerned will dial it and the number of the box where he can be located; so dialling his code number, the broker can indicate his location on a panel. Another modern feature is an air-conditioning and heating plant which is among the largest in Britain. These are important innovations in a room which has to cater for a membership of 4,500, many of whom are on the floor at one time. The old premises—still in use for their traditional purpose until the new room comes into use at the beginning of next year—are no longer adequate for this expanded organisation, dealing with a premium income in excess of £230 million in 1954 (there are no complete figures for later years), compared with £34 million in 1938. The cost of the new building, some £5 million, is considerable, but it will be well justified by improved convenience and efficiency.

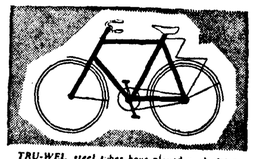
Broadening the Range

Besides the increase in underwriting members (there were not many more than 600 in 1913), a feature of Lloyd's in recent generations has been the diversification of its risks. It is sometimes assumed that this institution has insured almost any risk during most of its long history, but in fact it did almost nothing but marine insurance until about 70 years ago. The broadening of its interests is not simply a matter of new risks—associated, for instance, with motor-cars or aircraft; it reflects also a change in the character of Lloyd's itself. Some months ago, there appeared an authoritative survey of this institution, *Lloyd's of London: A Study in Individualism* (Macmillan), by D. E. W. Gibb, a Lloyd's man of 50 years' experience. Mr. Gibb attributed the transformation of Lloyd's to a particular underwriter, Cuthbert Heath, whom he described as the father of the modern Lloyd's and the foster father of modern company insurance. Heath became an underwriting member in 1880 and soon after began to write fire business, at that time very little developed at Lloyd's. Incidentally, he initiated Lloyd's in American non-marine business by accepting reinsurance from an American (as well as a British) company. A few years later, Heath wrote a burglary policy—because another broker wished to cover his property against the risk. An "all risks" policy followed—because a relative of Heath wished to cover her jewellery against loss. It was Heath, too, who initiated, at the end of the 19th century, loss-of-profits insurance, covering consequential loss arising from fire; and credit insurance in the U. K. is attributable to him. Heath regarded novelty not as a reason for special caution (any risk, he reasoned, could be assessed), but as an opportunity to make a market in advance of competitors. Operating on this principle, he was an outstandingly successful underwriter.

Aviation Hazards

Attention has recently been focussed on aviation insurance by numerous mishaps in various parts of the world. Yet it is not so much the number or magnitude of accidents as the competitive character of the business that makes aviation insurance relatively unprofitable these days. This is, by its nature, a difficult kind of insurance, and many underwriters feel that it should be appropriately rewarded. Its salient feature is the size of the individual risk. The same problem arises with a big ship or factory, but total loss is more likely in the case of an aircraft that crashes than in the case of a ship that suffers misfortune at sea or a factory that catches fire on land; and total loss of an aircraft that may be valued at £1 million is a heavy burden on the underwriters. About a score of Lloyd's syndicates specialise in this business, and many others accept some of it. There are also two companies which specialise in it, and a number of others which underwrite aviation risks in varying degrees. The few brokers who specialise are not merely expert insurance men, but are also highly informed on the technicalities and operation of aircraft. Their task is complicated by the fact that aircraft are still in process of rapid technical development, so that knowledge laboriously acquired is soon out of date. From the underwriting angle, higher speeds mean more economical use of aircraft—a bigger turnover by operators is not fully reflected in premium incomes. The market recognises that the increase in air traffic has not brought a corresponding increase in accidents and that the proportion of fatalities is small and diminishing.

ERW* STEEL TUBES



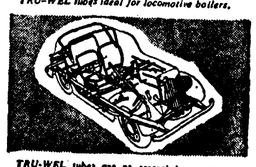
fill a basic need in industry

IN the developing tempo of industrialisation in India, the part that ERW steel tube plays cannot be overemphasised. The bicycle industry is entirely dependent on it. Motor cars, locomotive boilers and transformers are some of the highly specialised industries which require ERW steel tubes in large quantities. It is in extensive use in body building and interior furnishings in buses, trains and ships. Its use in home and office furniture is becoming increasingly popular. ERW steel tubes combine great strength with exceptional lightness.

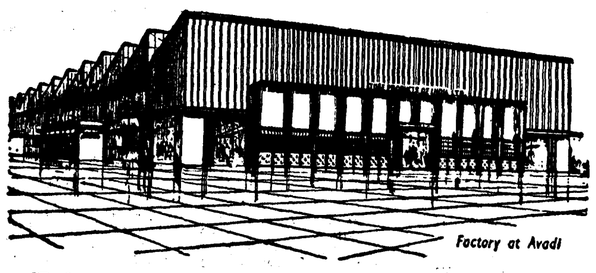
For nearly thirty years Tube Products Limited, Oldbury, have been the principal suppliers of ERW steel tubes to India, familiar to the trade as TRU-WEL tubes. Now these world famous tubes are produced in India by Tube Products of India Limited. Promoted as a joint venture between Murugappa & Sons, Madras, and Tube Investments Limited, Birmingham, U. K. (through their subsidiary, Tube Products Limited, Oldbury, Birmingham), Tube Products of India Limited supply these tubes in increasing quantities.

Murugappa & Sons, who lead in India's cycle industry with their composite manufacturing unit in the T.I. Cycles of India Limited, promoted and worked in collaboration with Tube Investments Limited, are happy that yet another important industry of great magnitude has been developed and worked to the satisfaction of their customers.

* Electric Resistance Welded



TRU-WEL steel tubes have played a decisive part in the evolution of the slim, light and immensely strong cycle of today.



Cooling tubes for transformers - an example of electrical equipment to which TRU-WEL tubes provide a foundation of dependability.

Flawless accuracy and uniform finish make TRU-WEL tubes ideal for locomotive boilers.

TRU-WEL tubes are as essential as tyres to the modern motor vehicle. Their applications range from small tubes for radiator overflow pipes to outsize tubes for rear axle casings.

Factory at Avadi

Tube Products of India Limited, "Swastik House" 106, Armenian Street, Madras-1

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

INCREASING INTEREST IN FREE TRADE AREA MOVE

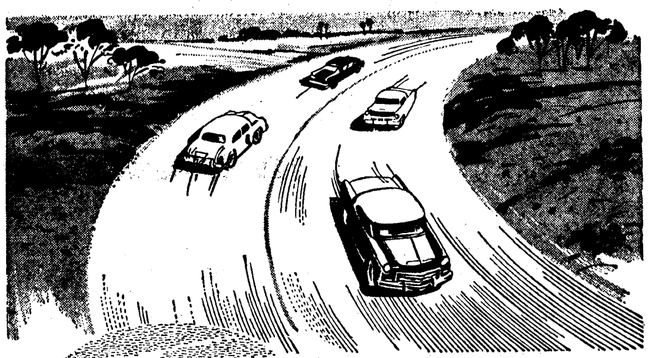
(FROM A SPECIAL CORRESPONDENT)

INDUSTRY at the moment is more concerned with strategic than technical questions. It has been gradually moving to this position for some time past, under a growing sense of the prizes that a free trade area in Europe might yield to British industries. The subject is now a favourite one for discussion at industrial gatherings of various kinds; it was given prominence at a recent Cotton Board conference where Sir Edgar Cohen, a second secretary of the Board of Trade, gave a lengthy exposition of the issues involved in "Negotiating for Free Trade in Europe". Since Sir Edgar spoke, what is called "the Britain and Europe Fund" has got into full stride. The Fund has, among its objects, acknowledged or unacknowledged, the encouragement of European economic development, and the ensuring of a vigorous commercial and financial participation by Britain in the process. The list of initial contributors is an impressive one, and includes some of the hitherto most staid and conservative members of British industry, down to such daring trading innovators as the Great Universal Stores Ltd. In fact, the contributors to the Fund are nothing if not catholic; for although iron and steel, engineering, textile and other staple industries are there in force; the subscribers even include the Hulton Press newspaper combine, a well-known firm of advertising agents and a newspaper distributing company. This is not illogical; for entirely new fields for journalistic and publicity endeavour will undoubtedly be opened. It is perhaps hard to see why the Inland Revenue Staff Federation should also be represented, but it is not surprising that it has been found possible to gather in the more robust type of trade unions; for even in Labour circles, in spite of the prosperity of all but the upper middle classes, the possibility of Britain having a severe struggle ahead in order to maintain her standard of living is widely recognised. It is indeed perceived, dimly or clearly according to one's powers of discernment, that with the altering nature of the British Commonwealth, combined with certain other political challenges of our times, Britain will have to find "fresh fields and pastures new" in order to keep prosperous, and that a united effort for this purpose is essential. Even a writer in the quarterly review of one of the leading banks (represented in the Britain and Europe Fund), has had some outspoken remarks on the necessity of Britain making a new orientation of commercial policy, in which the Commonwealth countries, at least as far as imports from Britain are concerned, will occupy a place of steadily diminishing importance. As is well known, bank reviews are usually models of convention in their utterances, and, therefore, so frank a declaration as that just cited, has made a profound impression.

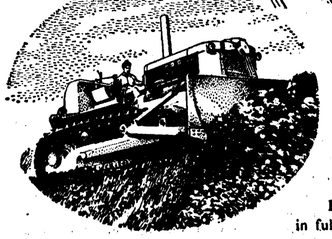
Boom for Publishers

It will be seen that yet another revolution is beginning and one which has to be added to the various other revolutions, achieved or yet to be achieved, which are altering social and economic structures so rapidly and in so many directions. Meanwhile, literature is being poured forth, with maps showing the European areas which await large-scale visitations by British salesmen and also graphs and tables indicating actual resources and probable wants. Any publisher who can produce something on the projected European "Free Trade Area" or the "Common Market" is on a sure thing, and is likely to be so for a long while to come, unless the scheme breaks down through some extraneous and disrupting political issues being introduced.

Perhaps, at the moment, optimism is keyed at too high a pitch; for Britain's exports to the six countries which are, it is hoped, to comprise the initial European Free Trade Area (further additions are envisaged) are already at the rate of £450 million a year. This is not an overlarge figure, but neither is it an insignificant one. Certainly, there will be an intensification of European development in various directions, and in spite of the uneasy British financial situation, capital would be found, if necessary, to foster rapid expansion. But the fact remains, and has been given too little attention so far, although not altogether ignored, that the European importers of British goods will have to find the means of paying for what they buy, whether they be new entrants to the fold, or long established exporters on their own account. Settlement may be accomplished for the time being, by means of credit operations, but, in the long run, exports will have to pay for imports, and in increasing measure, for, unlike Britain, the European countries have very few "invisible" exports, other than expenditures by foreign tourists, to help balance their trading account.



Competition with British Goods



Will any considerable part of the European increased exports be brought into competition with British goods, and what are the comparative advantages on each side, such as differences in wage rates, closer accessibility to raw materials, transport advantages, etcetera? There is the rub. One comes back, indeed, to the familiar problems of trading between nations, in whatever part of the world they are situated—problems whose presence is an incentive to protectionism, however strong the desire may be to establish free trade units. It depends only upon the relative degree of imminence whether these problems assert themselves today or tomorrow, in the absence of some co-operative system of international trading yet to be devised. To turn from the general to the specific, how will Russia and even the United States view the European Free Trade move? Possibly, in the immediate future with no great concern, for each of these vast territories, though in different ways, can keep its labour fully employed and largely satisfy its consumers' needs, by internal trading in its own agricultural produce and manufactures. Nevertheless, it will not always be so, and as we well know, although they have their own wealthy market to hand, American industrialists today are eager sellers in any market that can afford to pay for goods they can offer. British industrialists are not altogether unaware of what may lie ahead, and already there is much talk of the necessity of accelerating the rate of amalgamations of companies, strengthening financial resources, pooling knowledge and of making other adjustments to fulfil the structural necessities of the new trading outlook. The country seems to be on the verge of great industrial changes, as Britain seeks closely to ascertain the requirements of the new overseas markets with which she hopes to replace the old. It is also evident that political factors, although kept from sight as much as possible, are playing their part in the European Free Trade move, that the belief is entertained that here is yet one more way of consolidating the democratic countries of Europe. Indeed, it is difficult to see any other reason why an American foundation has seen fit to subscribe to the Britain and Europe Fund.

Publication on Zirconium

On the technical side, there is one point of interest worth mentioning this time, that is, the publication of a second edition of a volume on zirconium. It is likely that a third edition on this member of the rarer metals will soon follow. The metal has been known since 1789, and for a very long time all that was heard about it was that it is "a tetratomic element intermediate between aluminium and silicium." A few years ago it began to gain prominence for its value in the manufacture of electronic valves, which supplemented its use in the making of steel alloys. But the great increase of attention it is now receiving is due to the discovery of a new method of purifying zirconium so as to produce hafnium-free metal for use in nuclear reactors. (Hafnium is an element which occurs in zirconium). Zirconium, thus purified, is playing a big part in the manufacture of atom-powered submarines, having among its other virtues, a remarkable resistance to corrosive action. It has, in fact, now become another of those heralds of the approaching millennium, which you may hail with enthusiasm or trepidation, when new forces will play their part in man's prosperity or destruction.

"Our highways of to-morrow ...

can be built by CATERPILLAR*

*Caterpillar and Cat are Registered Trademarks of Caterpillar Tractor Co., U.S.A.

to-day !"

Because India's expansion programme is in full swing many new industries are coming into existence and due to the 'Grow More Food' campaign more food is being produced. More and more goods are being carried by road transport.

To open up new areas, to take care of the increasing traffic, new roads must be built and old roads have to be improved.

Better roads can be built with Caterpillar equipment. You do not save time by stopping the clock. Neither do you save money by buying cheap equipment. Caterpillar equipment will save you both time and money by giving you better output with less downtime and more economical operating costs.

Invariably a first choice among Government engineers and leading contractors, CATERPILLAR will, no doubt, play a leading part in building India's future Highways.

CATERPILLAR* Paving the way to India's progress

ACCUMULATION OF CLOTH STOCKS WITH MILLS

NEED TO REDUCE EXCISE DUTY

(FROM A SPECIAL CORRESPONDENT)

NEVER since the war has the cotton mill industry been in a more difficult position than it is today. While the level of cloth output has remained high, there has been no corresponding increase in offtake. Even after the Puja and Divali festivals, the volume of unsold cloth remains large. Tens of crores of rupees have been immobilised at a time of acute financial stringency, threatening to drive the marginal and weaker units to the brink of diaster. The crisis of confidence created by the official measures adopted last year continues to cast a shadow over the whole range of textile activity. Merchants are still unwilling to resume normal business with mills and prefer to pursue the policy of "wait and see".

All these difficulties have arisen during the past 12 months. Before this period, there was a steadily expanding demand for cloth, thanks mainly to the successful working of the first five year plan. In fact, from 1951-52 to 1955-56, development was combined with stability. The national income rose by 18 percent, and prices were relatively stable or somewhat lower. In these favourable conditions, the consumer found it possible to improve his clothing standards. In view of the increase in demand, both producers and expert bodies recommended a liberal production programme for the second plan period. In the circumstances, their plea was well-founded. The following table shows the availability of cloth for civil requirements during the period 1951-56:

Year	Population in millions	Availability for civil requirements in million yards*	Per capita availability in yards
1951	361	4.238	11.7
1952	365	5.275	14.4
1953	369	5.566	15.0
1954	373	5.586	15 0
1955	377	5.951	15.8
1956	381	6,275	16.5

* Includes mill, handloom and powerloom cloth.

There is good reason to believe that this progress could have been maintained, if, in the meanwhile, stresses and strains had not developed in the economy. While the first plan put more purchasing power in the hands of the people, there was no corresponding increase in the production of consumer goods. In a developing economy like that of India, it is of the utmost importance that supplies of food and cloth and other essential consumer goods should be adequate.

Increase in Production

In the case of cloth, production has been increased through multiple-shift working in the mill sector. The excise duty was sharply raised from 1st September, 1956, in an attempt to bring down demand to the level of available supplies. No such device is available for combating the food shortage which has resulted from bad monsoons. A large majority of the people are poor and even a small rise in prices has a serious effect on their meagre domestic budgets. Inevitably, dearer food undermines the capacity of the consumer to buy more cloth, although this too is a basic necessity of life. It is unlikely that he will be able to maintain even the present level of cloth consumption unless the prices of foodgrains and other essential consumer goods are brought down. To make the position worse, cloth has been made more expensive by the imposition of heavy excise duties at a time when the producer is unable to make big cuts in his prices. The high price of cotton and the sharp increase in manufacturing costs have added to his burdens. The resultant high prices have given rise to strong consumer resistance, leading to a huge accumulation of stocks with the mills.

In these circumstances, the logical course to follow is to lower the excise burden since the situation which warranted its increase no longer exists. The levy was enhanced to serve the twofold purpose of enforcing restraint on consumption until more cloth became available and of enabling the Government to take a share in the "excess" profits which the textile trade and industry, it believed, was making. On more than one occasion, the Finance Minister stated in Parliament that the reason for raising the excise duty was not to realise more revenue, but to meet "a possible contingency of shortage of cloth and increase in prices". Since the reintroduction of controls was not considered desirable, he was having recourse to a fiscal device "to inhibit consumption" and to "mop up some of the increased profits that are being made".

Curbing Excessive Consumption

Explaining what he called the "factual aspect" of the situation, Mr. Krishnamachari said that, while consumption showed a "sharp upward trend", there was no corresponding increase in supplies. The reason for this was the adoption of a restrictive policy towards the mill sector and the inflexibility of production tools. He expressed the hope that, as a safeguard against the recurrence of shortages, the mills would be allowed to increase their installed capacity suitably. Meanwhile, the fiscal weapon, forged against higher consumption, has threatened to become more potent than its user could have intended. The incidence of the increased levy is so heavy that neither the producer nor the wholesaler nor the consumer is able to bear it. The following table shows the extent of the increase in the duty:

	Before March 1956 Rs. As. P.	After 1956 Budget Rs. As. P.	Latest excise Rs. As. P.
Coarse: *dhotis* and *saris*	0 0 6	0 1 0	0 1 9
Coarse others	0 0 6	0 1 0	0 1 9
Medium	0 0 6	0 1 0	0 2 3
Fine	0 1 3	0 1 9	0 3 3
Superfine	0 2 0	0 2 6	0 4 3

As a result of the upward revision, the excise duty, it is estimated, will yield Rs. 72 crores in 1957-58, against Rs. 59.58 crores in 1956-57. According to another estimate, the revenue will be nearly Rs. 80 crores a year. There cannot be any justification for saddling cloth with such a heavy burden, especially when the rise in its price was by no means sharp or unreasonable. The White Paper on the Budget for 1957-58 points out that the index for cotton manufactures in 1956 increased by only 4.3 percent. "This small rise in prices", says an authoritative publication, "cannot justify an increase in excise duty by an average of 11.2 percent over August 1956 and 14.8 percent over December 1955. Today, excise calculated on the mill prices of a variety of representative qualities of cloth varies according to classification from 11.5 percent to 31.9 percent and averages 24.8 per cent—an average increase of 11.2 percent over August 1956. In fact, in certain categories of superfine cloth, it is as high as 38 to 39 percent."

Fear of Dislocation

It became obvious soon after the increase in the levy that there would be a marked decline in the offtake of cloth. Fearing that it would not be possible to pass on the additional excise to the consumer, many wholesalers declined to take deliveries, thus paving the way for an abnormal accumulation of stocks with mills. Meanwhile, in an attempt to safeguard the interests of the consumer, the Government of India published in the Calcutta papers on the eve of the Puja holidays what it described as "fair prices" and called upon the public not to pay more for their cloth. The exhortations only added to the prevailing confusion, as it was impossible to offer cloth at the published prices.

It was pointed out on behalf of producers that in many cases the published retail prices were lower than mill contract prices, even without the addition of any part of the increased excise. Since merchants could not supply cloth at such low rates, frantic demands were made on the mills to cancel or postpone the despatch of goods. The hardship to the consumer, resulting from the disorganisation in the flow of cloth to the market, has, by a strange perversion of logic, been attributed to the "machinations" of the producer. While the mills were contending with the problem of cloth accumulation, the Government directed that they should not hold stocks exceeding one month's average production, but the unreasonableness of this stipulation was realised later and the limit was raised to six weeks' output.

These facts are recalled here in order to show how in attempting to solve a simple problem, a complicated situation has been created. The stock position indicates that all is not well with the textile trade and industry. The following table shows the stocks of cloth held by mills in the month of September over a period of years:

(In bales of 1,000 yards)

Year	Mill account	Others	Total
1949	N.A.	N.A.	426,006
1950	N.A.	N.A.	190,385
1951	N.A.	N.A.	351.343
1952	N.A.	N.A.	274.960
1953	388.414	123.764	512,178
1954	316.884	125.291	442.175
1955	216.323	N.A.	216.323
1956	201.431	N.A.	201,431
1957	356.114	216,049	572,163

Unsold Stocks with Mills

The volume of unsold cloth with the mills in September 1953 was bigger than in September 1957, but the comparison is misleading unless the figures in the next column are also taken into account. The fact that large quantities of cloth are allowed to lie with the mills after they have been bought indicates the continuing reluctance of merchants to make large commitments. Even if one takes only unsold stocks into consideration, the following figures show how the situation has been deteriorating from month to month:

1957	(In bales of 1,500 yards)
January	274.596
February	287.486
March	300.238
April	292.154
May	261.308
June	297.277
July	319.062
August	338.585
September	356.114

It is often suggested that producers should reduce cloth prices in order to stimulate consumption. This, in fact, has already been done, and in August last, the Government conceded in Parliament that, "on an average, the present prices are about 5 percent less than in September 1956". This, however, is an under-statement. A comparison of the ex-mill quotations for the representative varieties of piecegoods shows that cloth prices are actually lower than in December 1955. In other words, besides bearing the entire burden of the additional excise, which represents an average increase of 14.8 percent over that of December 1955, the industry has made a cut of 5 percent in ex-mill prices. It cannot be expected to make further sacrifices without serious detriment to its financial stability, especially in a period when costs are rising.

Assurance on Excise Duty

There is, therefore, a good case for a drastic reduction in the excise duty. The Government is committed to making such a revision should the need arise. Apart from the pronouncements of Ministers, the Statement of Objects and Reasons of the Bill which was brought forward for enhancing the levy contained the assurance that "if prices indicate a downward trend, necessary adjustments will be made in the excise duty" There cannot be a more opportune moment than the present one for fulfilling this promise.

The purpose for which the duty was raised has now been fully served. It was increased in order to reduce the rate of consumption until more cloth became available and to enable the Government to take a share of the extra profits of the textile trade and industry. That it was not a revenue measure was emphasised last year by both the Home Minister and the Finance Minister. Today, neither of the two considerations is relevant, for it is no longer necessary to apply fiscal or any other brake on consumption when so much cloth is lying with the mills. With the increasing calls upon its resources, the industry can no longer make profits on a scale that would entitle the Government to claim a bigger share from them Indeed, the plight of the industry will become obvious when the balance-sheets of mill companies for 1957 are drawn up.

It is unreasonable to dismiss the industry's complaint about unsold cloth as being without substance. The present stock position makes it clear that the case for a substantial reduction in the excise duty is strong. It is true that the Government needs money for financing the second plan and that the excise on cloth constitutes a sizeable proportion of its revenues. But the hope of collecting large sums of money from the industry will not be fulfilled if the stability of the mills is undermined by a serious fall in their turnover. The excise duty should be brought down to a sufficiently low level to counteract the effects of the food crisis and the inflationary pressure on prices.

Steel is the starting point in a country's progress towards economic self-sufficiency. In India today there exists a wide gap between requirements and production of steel. While the present annual production is only 1,430,000 tons, by the end of the Second Five Year Plan the country will need at least 6,000,000 tons a year.

The public and private sectors have joined hands to narrow this gap by the establishment of three new steel plants at Rourkela, Bhilai and Durgapur and by expanding the existing works.

The Indian Iron & Steel Company Limited plan to expand their ingot output to 1,000,000 tons by 1961, as their contribution towards the needs of the nation's ever growing economy.

NARROWING THE GAP

STEEL IS THE STARTING POINT

Use steel only when you must today, there will be more tomorrow.

INDIAN IISCO STEEL

THE INDIAN IRON & STEEL CO. LTD.
Works: Burnpur and Kulti
Head Office: 12 Mission Row, Calcutta.

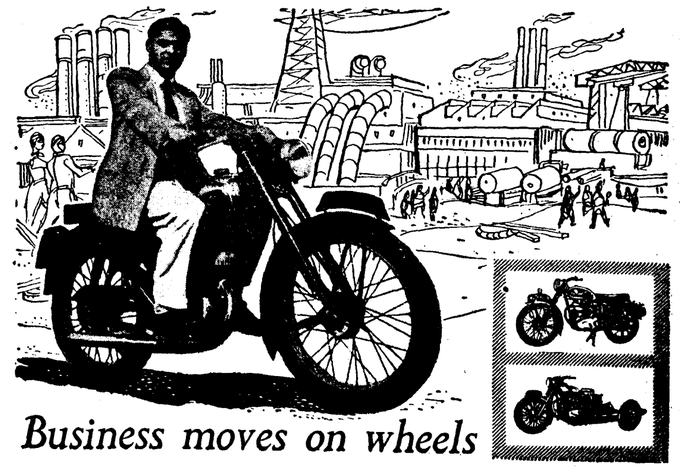
MANUFACTURE OF SOFT COKE FOR DOMESTIC CONSUMPTION

About 1.67 million tons of soft coke a year is now being manufactured and despatched for domestic consumption. This has been said by Sardar Swaran Singh, Central Minister for Steel, Mines and Fuel, in reply to a question in the Lok Sabha. The rest of the supply is met by firewood, charcoal, cowdung cakes, farm wastes, coal gas—in fact, any waste product that burns. The approved plans of the private sector "provide for an additional 1 million tons of coking coal of lower grades being produced for the manufacture of soft coke; further, when coking coals are washed for metallurgical purposes, a large quantity of middlings will become available and these also may be utilised for the manufacture of soft coke depending on availability of transport and market."

CLOSURE OF COTTON MILLS

The Central Deputy Minister for Labour, Mr. Abid Ali, has said in the Lok Sabha that 14 cotton mills closed during the past year and as a result 15,539 workers were unemployed. Most of these were closed either due to financial difficulties or uneconomic working. Discussing the steps taken by the Government in the event of such closure, he has said: "(a) For mills which needed finance for rehabilitation in order to ensure future continued working on economic lines, loans were granted from the National Industries Development Corporation after conducting necessary investigation by the special team working under the Textile Commissioner. Vigorous steps are being taken by the Government for expediting the grant of these loans. (b) Whenever there are complaints about mismanagement of any mill, appropriate action is taken either under the relevant provisions of the company law or under the Industries (Development and Regulation Act), 1951, for a thorough investigation into the affairs of the mill for taking remedial steps wherever possible. (c) Workers are provided some relief by way of compensation for loss of employment under the provisions of the Industrial Disputes (Amendment) Act, 1957, which also acts as a factor discouraging closures in general."

PROTECTION TO SHEET GLASS INDUSTRY EXTENDED FOR THREE YEARS



The Government of India's resolution on the Tariff Commission's report (1957) on continuing protection to the sheet glass industry has been published in a *Gazette of India Extraordinary*. The Government has accepted the Commission's main recommendation that protection to the industry should be continued for a period of three years after 31st December, 1957, and that the present rate of protective duty, namely, 70 percent *ad valorem* be continued throughout the period of protection. The Government has also taken note of certain ancillary recommendations made by the Commission for assistance to the industry. The attention of glass manufacturers has been invited to the Commission's recommendation that they should try to improve the packing of sheet glass so that it can withstand the driage timber used even in hot weather. The attention of refractory manufacturers has been drawn to the recommendation that they should give the glass industry the same priority as has been agreed to by them for industries like iron, steel and cement, when the additicnal reduction capacity of refractories materialises.

PROTECTION TO OIL PRESSURE LAMPS INDUSTRY TO BE DISCONTINUED

The Government of India's resolution on the Tariff Commission's report (1957) on continuing protection to the oil pressure lamps industry has been published in a *Gazette of India Extraordinary*. The Government has accepted the Commission's main recommendation that protection granted to the industry may be discontinued when the present period of protection expires on 31st December, 1957. The attention of oil pressure lamps manufacturers, who import brass rods and tubes and finished components like pressure gauges, mantle holders, nipples, pump valves, etcetera, has been invited to the Commission's recommendation that they should like immediate steps to meet their requirements of these articles from indigenous sources. The attention of manufacturers, who do not have candle power testing equipment, has also been drawn to the Commission's recommendation that they should take steps to install such equipment wihout delay.

TIN SURPLUS ESTIMATE OF INTERNATIONAL COUNCIL

At the end of June, the quantity of ready and forward tin held in the buffer stock was 3,916 tons This is disclosed in a *communiqué* recently issued by the International Tin Council. It estimates the surplus of tin for the year 1957, including Russian tin coming to the market, at

Business moves on wheels

THAT'S why nearly 30% of Government of India's investments in the successive Five Year Plans are devoted to the development of nationwide transport.

The assembly and progressive manufacture of Royal Enfield motor cycles and three-wheelers fill a major gap in the transport needs of our economy. Motor cycles are an essential item of equipment of our Armed Forces. Police, Post & Telegraphs and other Government Departments use motor cycles in increasing numbers. Motor cycle is the most economical form of automotive transport for our business executives, engineers, technicians, agriculturists, salesmen, insurance agents and others doing field work who must go places to do their work efficiently and on time. For local deliveries in our steadily expanding cities and towns there's none so ideal as the Royal Enfield three wheelers for quick despatch of goods in easy, economical lots.

Planned and progressed in collaboration with the Enfield Cycle Company, Redditch, England and backed by the entrepreneurs with the experience of over a generation in the motor cycle and engineering lines in India, Enfield India factory and their business organisation are truly a model of achievement. Already expansion plans are in hand to increase the production capacity to serve the growing transport needs of our country.

12,500 tons. This is larger than its earlier forecast, but the recent trend of output has been downward. Export quotas can be imposed if the buffer stock approaches 10,000 tons, and the price of tin has lately fallen to the level (£730 a ton) at which the buffer stock manager must buy. No discussion on a date for the introduction of quotas took place at the meeting which has just ended. A clash has occurred on the Council over the re-allocation of marginal votes. The new percentages were approved by a distributed simple majority, but Indonesia has asked it to be stated that she voted against. Under the new distribution, her percentage as a producer has declined from 21.50 to 20.43. Malaya's percentage has risen from 36.61 to 37.50 and Thailand's from 6.29 to 7.35. These figures are directly proportionate to the percentages of permitted tin exports that would apply if export control were introduced before the first meeting of the Council after 1st July, 1958.

BIGGER AREA UNDER COTTON THIS YEAR

According to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, the all-India second estimate of cotton, 1957-58, puts the current year's area at 16,211,000 acres, against the corresponding adjusted estimate of 16,018,000 acres for 1956-57. This shows an increase of 193,000 acres or 1.2 percent in area during the current year. The increase in area during the current year has been shared mainly by Bombay and Punjab and has been attributed to favourable weather conditions at the sowing time. It has, however, been offset to some extent by decreases reported mainly by Madhya Pradesh and Mysore States. Among the different varieties of cotton, the increase in area has occurred mostly in Dholleras, Broach-Vijay and Surti-suyog. A considerable decrease in acreage has, however, been reported under Jarilla, Oomras, Hyderabad Gaorani ad Malvi varieties. As for staple lengths, the increase has occurred only in medium staple cotton. The long and short staple show small decreases. This estimate generally covers the period up to the end of September 1957. Till then, the condition of the crop was reported to be, on the whole, satisfactory. This estimate does not cover the entire area sown to the cotton crop during 1957-58. Past experience has shown that the area at the second estimate stage forms roughly 75 percent of the area under the crop finally reported.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) receded by 0.3 percent to 109.5 during the week ended 23rd November, 1957, against 109.8 (revised) in the previous week. The index was higher by 0.6 percent when compared with the corresponding week of last month, but was lower by 0.1 percent than that of a year ago. The index for Food Articles fell by 0.3 percent to 108.4, against 108.7 (revised) for the earlier week, due to a decline in the prices of arhar in Bombay (−14%), jowar in Ujjain and in Jhalawar (−12% each), in Hubli (−10%) and in Mohal (−5%), wheat in Saugar (−11%), in Khagaria (−8%) and in Kotah (−5%), gur in Muzaffarnagar (−10%), rice in Dumka and oranges in Madras (−9% each), meat in Ludhiana and cardamoms in Mangalore (−7% each), bajra in Rajkot and Agra (−6% each), groundnut oil in Madras, coconut oil in Bombay and chillies in Patna (−5% each), maize (−3%), urd (−2%) and mung, potatoes and coffee (−1% each) in spite of an increase in the prices of jowar in Akola (+14%), rice in Balasore (+11%), barley in Jaipur (+10%), bajra in Anakapalli (+9%), oranges in Nagpur (+9%) and in Shillong (+7%), onions in Nagpur and turmeric in Calcutta (+8% each), wheat in Dhanduka (+7%), black pepper (+5%), dalda and eggs (+3% each), gingelly oil (+2%) and mustard oil, tea, betelnuts and salt (+1% each). The index for Tobacco remained stationary at its previous week's level of 95. The index for Fuel, Power, Light and Lubricants also remained at its previous revised level of 115.0 in spite of a rise in the price of castor oil (+1%). Lower prices of groundnuts (−7%) copra in Alleppey and castorseed in Bombay (−6% each), raw silk in Banaras (−4%), rapeseed and lac (−2% each) and raw jute and linseed (−1% each) brought down the index for Industrial Raw Materials by 0.3 percent to 116.3, compared with 116.6 (revised) for the earlier week. The indices of raw cotton (+9%) (estimated), as a result of reappearance of four varieties of Indian cottons in the market, cottonseed (+2%) and raw wool and tanning materials (+1% each), showed advances. The index for Intermediate Products stood at 106.2, compared with 106.3 for the previous week. The prices of zinc (−3%), linseed oil (−1%), tin (+3%) and rayon yarn and copper (+1% each) showed variations. The index for Finished Products worked out to 108.7, against 108.8 (revised) for the earlier week. The prices of paper and newsprint (−2%) and cycle and jute manufactures (−1% each) recorded a fall, while prices of oilcakes (+2%) witnessed a rise.

INCREASED PRODUCTION OF IRON ORE IN SEPTEMBER

Production of iron ore increased from 341,396 tons in August to 373,794 tons in September 1957. Returns received from the Chief Inspector of Mines from 95 mines during September showed that 258,850 tons were despatched to the iron and steel plants and 88,243 tons to the export market. Stocks at the end of the month were estimated at 1,332,711 tons.

The International "500" at Monza, Italy, was famous for tyre safety as well as speed. The same quality control and the same manufacturing skill built into those race winning tyres are the things that create that *extra* safety you too can have by fitting Firestone "family type" tyres on *your* car.

Engineering and Transport

TALKS ON FUTURE OF PALAM AIRPORT

AGREEMENT ON ECONOMY SERVICES OVER NORTH ATLANTIC

(FROM OUR NEW DELHI CORRESPONDENT)

THE consultative committees on communications and airports, of the Directorate of Civil Aviation, are meeting in New Delhi this week. The future of Palam airport will be an important item for discussion. An expert committee has planned a lay-out for this airport, and construction work has been going on for some time. Lately, the construction work has suddenly stopped, causing considerable inconvenience, particularly to passengers in transit. The deadlock still continues over the future of the airport. Originally, it belonged to the Air Force. With the use of bigger aircraft and the inadequacy of Safdarjung aerodrome to handle them, civil aviation began to use Palam increasingly. Both the Air Force and civil aviation are now holding fast to the airport and preventing its development on modern lines. A sub-committee recently investigated the possibilities of building an alternative aerodrome for civil aircraft. It recommended a site across the Jumna, an integral part of the scheme being a bridge over the river in the vicinity of Purana Kila. The proposal was estimated to cost roughly Rs. 40 crores. Some wonder whether it is worth spending this large sum of money on an aerodrome which will have at the most 40 landings every 24 hours. The question of control, however, is of vital importance. As matters stand at present, the Air Force exercises control over the airport. Recently, it was closed to all air traffic for four hours in connection with the visit of a foreign dignitary. What might be the fate of a civil aircraft which is scheduled to land during such periods can well be visualised.

Non-scheduled Airlines

The recent statement of the Communications Minister, Mr. Humayun Kabir, that non-scheduled airlines have a promising future, has created a big problem particularly for the Indian Airlines Corporation. The statement has been interpreted in some quarters as a major modification in the policy of nationalising civil aviation. At least two concerns, Birla Brothers and Patnaiks, have asked for permission to operate non-scheduled air services. Mr. Patnaik has arranged to bring six French aircraft, which he wants to operate initially as freighters.

The statement of Mr. Kabir was made almost simultaneously with the publication of the annual report of the Indian Airlines Corporation, showing losses amounting to Rs. 106.79 lakhs. These losses should not cause much surprise. Firstly, the main purpose of nationalisation in India is not to reduce inequalities in wealth but to create employment and make an industry a testing ground for the welfare ideology. The nationalisation of the airlines was recommended not only to improve the efficiency of the services but also to economise on working costs. Contrary to expectations, the then Minister for Communications, Mr. Jagjivan Ram, announced during the passage of the nationalisation Bill in Parliament that not a single employee of the various airlines would be retrenched. The Minister also estimated that the annual loss would be Rs. 1 crore. The reports of the Indian Airlines Corporation show that the wage bill has gone up by Rs. 80 lakhs during the four years ended March 1957. This is not surprising, because Mr. Jagjivan Ram, with one stroke of the pen in 1953, increased the wage bill by Rs. 55 lakhs. As for economy in personnel, the number since nationalisation has gone up from 7,500 to 9,000. This is the price which has had to be paid for nationalisation, because the liberalisation of service conditions, internal audit and frequent questions in Parliament have had the effect of increasing the staff. About Rs. 27 lakhs is provided for the depreciation of *Skymasters* and *Herons*. It is explained that Rs. 40 lakhs were spent on providing new engines for the *Skymasters*.

As for the future, the losses for 1957-58 are estimated at Rs. 1.5 crores and those for 1958-59 at Rs. 2.20 crores. The Corporation has decided to sell its fleet of eight *Herons*. Mr. Kabir has also been considering the possibility of using them to carry V.I.P.s. The *Herons* were originally purchased for operation on feeder routes. Ministers had gone about promising to link every State capital by air, regardless of the traffic potential. There was some justification for the purchase. If air services have to be developed, it is sometimes necessary to operate on uneconomic routes so as to make people air-minded. It is natural, for instance, that the feeder service to Rajasthan should have resulted in a loss of Rs. 21 lakhs. A non-lapseable development fund might be necessary for opening new air routes.

Round-the-World Services

Two more round-the-world services are to be started in the near future. Northwest Orient Airlines operates between the U.S.A., Japan, Korea, Formosa, Hongkong and the Philippines. It has no operating rights beyond Hongkong in the east or New York in the west. T.W.A. has operating rights over the U.S.A., Europe and part of Asia, up to the Philippines *via* India, Ceylon and Siam. The two airlines together will therefore be able to operate a round-the-world service.

Australia has recently entered into agreements with the U.S.A. and the United Kingdom. Under the first agreement, Qantas is permitted to operate through the United States and beyond to Europe by way of San Francisco and New York. Australia will permit a U.S. airline to extend its services beyond the present terminus in Sydney, through Melbourne, Perth and Darwin to Antarctica, South Africa and south-east Asia. The agreement with the U.K. provides for an extension of routes as between B.O.A.C. and Qantas. It permits Qantas to operate across the Atlantic to and beyond London, and for B.O.A.C. to operate from San Francisco across the Pacific to and beyond Australia. This will enable Qantas to operate a round-the-world service.

New Economy Service

The scheduled international airlines have agreed to introduce a new "economy" service across the north Atlantic from 1st April, 1958, at fares 20 percent below those of the tourist class. The fares for the new service will be $252 for one way, and $453.60 for a round trip on the basic New York-London route. Fares between other north Atlantic cities will vary somewhat. The agreement was reached earlier in Paris, in discussions carried over from the I.A.T.A. traffic conferences in Miami Beach a few weeks ago. Mr Hugh B Main, vice-president of Canadian Pacific Airlines, who acted as chairman of the Paris meeting, has said that it has also covered all other outstanding points concerning fares on the north and mid-Atlantic routes. "The carriers hope that the new economy service, as it will be called, will appeal particularly to a new class of potential customers. It represents another major step on the part of the airlines in their sustained effort to offer cheaper transportation to the public."

Seating in the economy service will be less spacious than that offered in the present tourist class. The food service will be simple, being limited to sandwiches, tea, coffee, milk and mineral water; no alcoholic beverages will be served or sold. The free baggage allowance however will be 20 kilograms (44 lbs), the same as the present tourist allowance. Mr. Main says that because of rising costs, carriers have found it necessary to raise the existing first class and tourist fares by small amounts of $35 and $25, respectively, from 1st April next year. The present fares are $400 one way for first class and $290 one way for tourist class, from New York to London. It has been decided not to continue the existing 15 days' excursion fare over the north Atlantic for the time being. Fares on the mid-Atlantic route will also be subject to a slight upward adjustment, effective for first class only, from 1st April. Special fares for immigrants and their families travelling during the off season will be retained and will be available on both the tourist and the economy services. All fares are subject to governmental approval before they can be introduced.

Dutch-Japanese Pact

Under an agreement concluded between the Netherlands and the Japanese aviation authorities, the Netherlands has acquired the right to start an air connection between Amsterdam, Tokyo and Biak (Dutch New Guinea) *via* landing places in Iceland, Greenland, Alaska and the Aleutian Islands. Japan will operate an air service from Tokyo to Amsterdam and another from Tokyo *via* Manila to Biak. K.L.M. expects to make use of these rights in the autumn of 1958 to fly from Amsterdam *via* the North Pole to Japan and Dutch New Guinea. It will operate the services, in a frequency to be determined later, with Douglas *DC-7C* planes which are capable of accommodating up to 76 passengers.

GROSS EARNINGS OF RAILWAYS INCREASE

THE approximate gross earnings of the railways during October 1957 amounted to Rs. 30.14 crores. They showed an increase of Rs. 2.37 crores compared with the actuals for October 1956. The approximate coaching earnings amounted to Rs. 11.06 crores and goods earnings to Rs. 18.38 crores. Other earnings amounted to Rs. 68 lakhs. The total approximate actual gross earnings from 1st April, 1957, to 31st October, 1957, amounted to Rs. 212.93 crores. This represents an increase of Rs. 19.20 crores compared with the actuals of Rs. 193.73 crores for the corresponding period of the previous year.

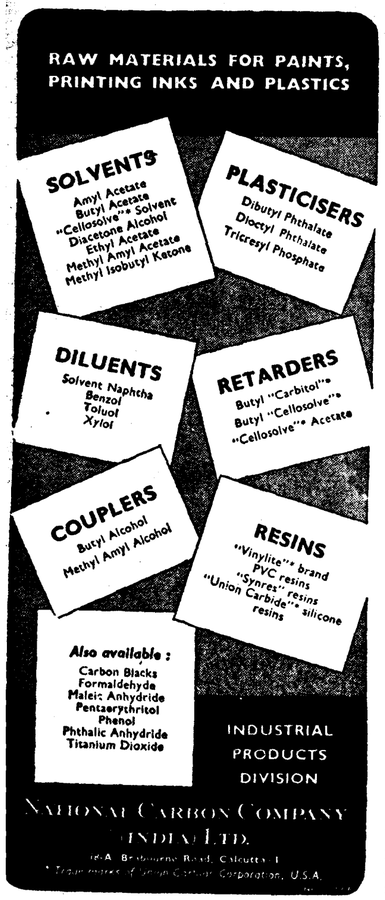
		1956-57 (Actuals)	1957-58 (Actuals up to September 1957 plus approximate for October 1957)
Coaching	...	80.21	84.02
Goods	...	110.79	125.22
Others	...	2.73	3.69
Total	...	193.73	212.93

The tonnage lifted from 1st April to 31st October, 1957, as compared with the actuals of the corresponding period of the previous year, increased on the broad gauge from 47,918,000 to 50,278,000 and on the metre gauge from 11,570,000 to 12,614,000.

Java

A tropical isle of great natural beauty, sometimes called "the Pearl of the East Indies."

The natural beauty and grace of the Javanese women complete the perfect picture they make when dressed in their national costume. This consists of a short robe covered with a long loose garment over which is worn a brightly coloured, long sleeved coat. The beautiful gold and silver embroidery work on the coat makes this costume a work of art.



There is no end to the variety of costumes all over the world.

Wherever you go
—they're good

arkad.

During October, the number of wagons loaded with goods traffic increased by 5.35 percent on the broad gauge and by 2.22 percent on the metre gauge as compared with the previous month. From 1st April to 31st October, 1957, the number of wagons loaded increased by 6.17 percent on the broad gauge and by 11.8 percent on the metre gauge as compared with the corresponding period of the previous year.

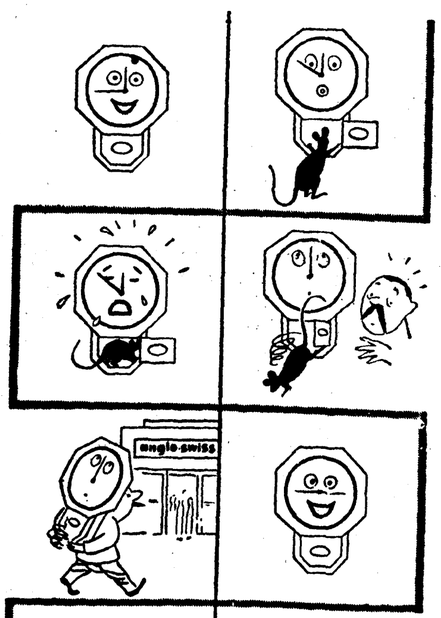
RAIL-MOUNTED BRIDGE INSPECTION UNIT DEVELOPED

Many railway viaducts and high-level bridges are between 80 and 100 years old, and civil engineers have long been anxious to devise a better means of keeping them under inspection. The usual practice has been to examine them through field glasses to search for signs of deterioration in the mortar, fractures, or looseness in masonry. Where moss has grown between joints, however, it has not always been possible to detect faults from below, and scaffolding has sometimes had to be erected to permit closer investigation. This is not only costly, but time wasting, especially when no deterioration is found. An answer to this problem has probably been found by the civil engineering department of the North-Eastern Region of British Railways in the form of a rail-mounted viaduct inspection unit—the only piece of rolling stock of its kind in the world—developed in conjunction with Simon Engineering (Midlands) Ltd. and the Auto-Mower Engineering Company. An official of the former company was hesitant when asked about the cost of the prototype unit demonstrated recently on a viaduct near Knaresborough. A great deal of money had gone into experimenting and trials, but now the design had been perfected. He thought that similar units could be made for between £5,000 and £6,000. The unit will be developed for other regions, and there are great export possibilities which should bear fruit very quickly. The new equipment, on which research began about two years ago, is designed to give direct access to the underside of viaduct arches with a payload on the inspection platform of 600 lbs. It is possible to carry out inspection to a depth of 29 feet below rail level and to travel under the arch a distance of 15 feet from the outside face. It is mounted on a railway wagon 52 feet long and is hydraulically operated. The unit consists of a slewing gantry which is swung into position at right angles to the track and from which two arms unfold to carry the examining platform or cage attached to the lower arm to the required position. The examiners, by using three levers fitted to the platform, can move both the platform under the arch and the wagon on the the wagon. At viaduct height, the wagon can be rails above. The unit can also be operated from moved forward or backward at 40 feet a minute below the bridge the speed is 20 feet a minute. Floodlights are fitted to the cage and draw power from a generator on the wagon. Power tools can also be operated from a plug point in the inspection cage, which is linked by telephone to the wagon. The new unit it is claimed, will be able to do in hours work which in the past took several days or even weeks.

U.K. FIRM ANNOUNCES NEW SCHEME FOR TRAINING OVERSEAS PILOTS

Under a new scheme announced in London recently, considerable inducements are offered to would-be pilots to enter the field of civil aviation. The plan, which also provides courses for flight navigators and conversion courses in helicopter flying, is adapted to meet the requirements of overseas airlines. The scheme has been launched by General Air Training (G.A.T.), a firm expressly designed for the purpose. The G.A.T. plan provides for the grant of £1,600 from the airline operator towards the £3,000 involved in the 12 months' training needed for a commercial pilot's licence. The pilot will pay the balance by equal monthly instalments over a period of three years on completion of the course, by which time he should be a co-pilot with a commercial airline. The monthly repayment should be in the region of £35. In the case of overseas airlines, the only difference will be that they themselves will be the borrowers in any transaction, and will make individual arrangements with the nominees. Thus any boy, whether in the United Kingdom or overseas, will have a chance of becoming an airline pilot, regardless of his means. As Mr. I. Donnelly, managing director of G.A.T., put it: "Our intention is to make Britain the world's nursery for training airline captains". The conversion course in helicopter flying will apply mainly to seasoned pilots, as most operators prefer to sponsor "fixed-wing" pilots. The six week's residential and full-time conversion course costs nearly £2,000. Of this, the employers will contribute £900, and a helicopter pilot about £28 a month over a period of three years.

NOVEL AUTOMATIC GEARBOX FOR MOTOR-CARS



A novel form of gearbox for motor-cars which, it is claimed, will combine the advantages of automatic gear changing with those of cheapness and efficiency, has been developed by the U.K. Motor Industries Research Association in Nuneaton. The device is described as a "torque converter" in common with many other forms of gearbox now in service. A statement issued by the Department of Scientific and Industrial Research on behalf of the Association says that it provides "an infinitely variable gear" and that it automatically selects the most economical gear for any road conditions. The statement continues: "It makes possible two-pedal car control with no increase in weight and probably not in cost. As in use it continually adjusts the gear to the most economical setting without any roughness or jerking, it should also result in fuel economy." The new device has two "trains" of gears, separately controlled by a combination of hydraulic pump and motor. The variable setting of the latter is in turn controlled by a hydraulic governor, which is itself adjusted to correspond to the road speed and throttle adjustment of the motor-car. Each different engine will entail a governing device of slightly different design. It is claimed for the new gearbox that its construction involves no especially accurate machining, so that maintenance should be within the scope of skilled mechanics, while production will not involve many costly operations. So far three prototypes have been built at the Nuneaton laboratories, and one of these is now installed in a medium-sized motor-car which is about to start road trials. Another of the units was on display at the London Motor Show recently. It is understood that the new invention, which has taken two years to develop, is adequately protected by patents.

MANUFACTURE OF PLATE TYPE HEAT EXCHANGER IN INDIA

A plate-type heat exchanger is, for the first time in India, being manufactured by Chemical Plant and Equipment Limited, of Calcutta. The design is complicated, in as much as a greater quantity of heat can be transferred and/or exchanged between hot and cold media within the minimum time and floor area. The cooling medium is passed counter-currently to the medium to be cooled. Both the liquids flow in a spiral and the efficiency of heat exchange is better than in an ordinary type of multi-tubular heat exchanger. This type is suited for pharmaceutical concerns, especially those manufacturing antibiotics. The material to be used may be mild steel, stainless steel, monel metal or copper.

COLLABORATION TO MANUFACTURE TRUCKS APPROVED

The Central Minister for Industry, Mr. Manubhai Shah, has stated in the Lok Sabha that the Government has approved in principle the request of the Hindustan Motors Limited for the manufacture of trucks in collaboration with the General Motors Corporation of the United States. He says the country's requirements for trucks and buses by 1960-61 will be about 40,000.

CALCUTTA TEA AUCTIONS IN NOVEMBER

IRREGULAR TREND IN DEMAND

EXPORT offerings during November totalled approximately 221,700 packages, say Messrs Carritt Moran & Co. Private Ltd. in their monthly tea market review. In the first two sales, there was a good demand and common sorts were dearer, while medium leafy brokens were a strong feature. Medium B. O. P.'s however continued to decline and Orange Fannings, being in comparatively little demand, eased further. C. T. C. Assams apart from a few good invoices showed a further drop in prices, but non-wither Legg-cut Dooars teas tended dearer in both sales especially where cup quality improved. Whole leaf grades were about steady and the more stylish ones sometimes appreciated in value, while the demand for Darjeelings and for tippy teas showed little change. In Sale No. 22, "tea for price" was fully firm and clean common brokens were dearer, while Fannings grades in this category showed little change, but tended to appreciate. There was a slightly better demand for medium B. O. P.'s which sold at about previous rates, but O. F.'s were barely steady. Darjeelings and tippy grades again sold readily. There was rather less demand in the last sale of the month and, with little Russian activity, medium B. O. P.'s were 20 to 30nP lower and a considerable number of lots were withdrawn, although the better bright liquoring teas in this category sold well. There was a better demand for C. T. C. Assams and prices frequently advanced, although some of the more ordinary medium sorts were again easier. Whole leaf grades and the more stylish B. P. S.'s were steady, but Darjeelings and tippy teas came in for rather less support and generally sold below valuations, except for the best for which there was good competition.

There was little change to note in the quality of the offerings from Darjeeling district, although in the last two sales a few invoices showed signs of improvement. The general standard of leaf appearance and cup quality was maintained at the very high level noted throughout the season. Apart from a few invoices of bright liquoring teas both of C. T. C. and orthodox manufacture, quality of Assam teas generally was of an ordinary rains description. Liquors were plainish and uninteresting and a little more stalk and fibre became noticeable. Leaf appearance generally, however, was fully average and some useful tippy grades were catalogued.

Leaf appearance of Dooars' teas continued satisfactory and cup quality was fully average for the time of year showing little change compared with October. In many cases, non-wither Legg-cut teas showed further improvement and had brighter liquors. In Cachar teas, there again was little change either in leaf appearance or cup quality, both of which were about average.

Internal Market

A total number of 12,567 chests of Leaf was offered for sale. Quality continued to be of a residue description. In the earlier sales, prices were generally firm or dearer but thereafter prices showed some decline. There was a total of 71,852 chests of Dust on offer. Quality was again of rains manufacture. The demand of the previous month was well maintained and during the first three sales prices rose, but some decline was noticeable in the final sale. The useful liquoring small powdery grades from Assam continued to be a popular feature and sold well. The very best C. T. C. Assams and the few mediums with useful liquors sold at satisfactory prices, but the prices of the remainder continued to decline. Darjeelings were an irregular feature but generally the invoices with flavour sold well.

Quotations

	1957-58 Rs. nP	1956-57 Rs nP
Sale No. 20 Clean Common Dust ...	1.70	1.84
Sale No. 21 " " " ...	1.77	1.97
Sale No. 22 " " " ...	1.77	1.97
Sale No. 23 " " " ...	1.73	2.09

Export sales up to and including Sale No. 23, totalled 1,025,863 chests at an average price of Rs. 2.36, against 1,032,359 at an average price of Rs. 2.54 during the same period of the previous season. Internal sales at 36,055 chests of Leaf and 345,736 chests of Dust at the average price of Rs. 1.52 and Rs. 1.91 go against 21,207 chests and 330,384 chests, respectively, (Rs. 1.58 and Rs. 2.27) of the same period last season.

The estimated north Indian crop to the end of October 1957 was 462,611,892 lbs, compared with 491,043,197 lbs to the same date last year. The average figure at this date for the three years 1954-1956 was 468,210,147 lbs.

The price of Export quota remained fairly constant for the first three weeks of November and varied between 19 to 20nP. In the last week of the month, however there was a decline and business was transacted at 18nP and the tendency thereafter was that there would be a further fall due to a drop in the export market.

Arrivals (with the corresponding figures of the previous season in parentheses) in Calcutta warehouses during the period 24th October to 23rd November were: 441,090 chests (489,549) by steamer, 169,512 chests (204,989) by rail and 21,275 chests (19,054) by air, totalling 631,877 chests (713,602). Arrivals since the beginning of the season 1st April, 1957 to 23rd November, 1957, have been: by steamer 2,036,337 chests (2,235,189), by rail 708,669 chests (692,186) and by air 133,568 chests (110,407), making a total of 2,878,524 chests (3,037,782).

COCHIN TEA SALES

At Dust Sale Y, 800,000 lbs of tea were on offer. There was a fair demand at much lower rates. Low mediums eased irregularly by 5nP or 10nP while mediums declined by 10nP or 15nP. The rest were 20nP easier.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for the month of November.

Upper Assam: Cold weather has set in and the season is practically closed; weather dry in Doom Dooma with occasional rain in Panitola; outturn normal in most districts but poor in Sonari.

Central Assam: The cold weather has set in; weather generally seasonable but it is dry in Golaghat; outturn normal in most districts but below average in Jorhat.

Lower Assam: Cold weather has set in; outturn last month about normal in most districts but poor in Bishnauth and Nowgong; the season has practically closed.

North Cachar: Weather abnormally dry and is interfering with outturn; prospects unfavourable.

South Cachar: Weather seasonable but in Chutlabheel the dry weather is interfering with outturn; outturn last month generally poor.

Eastern Dooars: Weather seasonable; outturn last month generally about normal but is considerably under last year in Kalchini; immediate prospects fair.

Central Dooars: Weather seasonable; outturn about normal.

Western Dooars: Weather cold and dry; outturn last month about normal but production to date is considerably under last year; helopeltis prevalent in some districts; blister blight prevalent in Oodlabari.

Darjeeling: The season has closed.

Terai: Cold weather has set in and the season will close shortly; helopeltis and blister blight prevalent in north Terai.

SERVICE TO THE INDUSTRIES OF THE WORLD

that has been the aim of SKF from the very beginning. An all-embracing service like this demands a comprehensive range of bearing types to meet each particular need. Of these different bearing types SKF has designed:

- the self-aligning ball bearing, which can accommodate slight misalignment of shafts or bearing housings,
- the spherical roller bearing, also self-aligning, and with a higher radial carrying capacity, size for size, than any other type of bearing, as well as a high thrust carrying capacity,
- the cylindrical roller bearing, which is able to carry heavy radial loads at high speeds,
- the spherical roller thrust bearing, which is able to carry heavy thrust loads at relatively high speeds.

In addition, SKF manufactures single row, deep groove ball bearings, angular contact ball bearings — many of them incorporating improvements introduced by SKF over the original design. SKF manufactures bearings in sizes ranging from 10 mm in outside diameter to over 1400 mm; bearings which can operate at speeds of over 100,000 r.p.m. and bearings with a carrying capacity of over 2000 tons at low speeds. Now and in the future, you will find that the 8,000 types and sizes manufactured by SKF ensure the use of the right bearing in the right place.

Calcutta Markets

POOR DEMAND AT TEA EXPORT SALE

EASIER TREND IN DUSTS

AT Sale No. 25, held on 9th and 10th December, offerings at the Export auction, amounted to 63,751 packages which met with a poor and irregular demand, and there were appreciable withdrawals of teas in all categories. Internal buyers gave some support to the commonest descriptions which declined by 6 to 8nP, while clean commons and medium B.P.'s and P.F.'s were fully 10nP easier. Once again, a weak feature of the Sale were the medium B.O.P.'s and O.F.'s, which eased by 20 to 30nP, except for the few invoices with bright liquors which sold well. The better liquoring C.T.C. Assams received fair support, but these declined by 20 to 30nP, while those with indifferent leaf and liquors were difficult of sale. Nonwither Dooars also participated in the general decline of the market and were 10nP easier. Darjeelings met with a very limited demand, and were often withdrawn, while whole leaf grades and tippy teas sold well although at irregular rates.

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2.25 to 2.30	2 7 0
Plain B. P.	1.50 to 1.52	2 4 0
Medium B. P.	1.56 to 1.58	2 6 0
Best Assam C.T.C. B.P.	2.30 to 3.00 (Nom.)	3 0 0
Plain Fannings	1.54 to 1.58	
Medium Fannings	1.60 to 1.64	
Best Assam C.T.C Fgs.	2.60 to 2.80 (Nom.)	

At the Internal Sale, Dust offerings amounted to 20,800 chests, for which there was restricted demand which weakened as the Sale progressed, particularly for C.T.C. Assams. Prices for orthodox descriptions from all districts at the beginning of the Sale were up to 6nP lower, but eased further and at the close, were up to 10nP lower. There was a better demand for black leafy exportable grades suitable to the Middle East, but these usually shared the same decline. C.T.C. Assams were a weak feature and there were fairly numerous withdrawals of teas in this category. The best liquoring descriptions were up to 40nP lower at the close, while medium C.T.C.'s were between 20 and 25nP easier.

Quotations

	1957 Rs.	1956 Rs.
Medium Dooars Dust	1.58 to 1.60	1 13 6 to 1 14 0
Medium Assam Grainy Dust	1.60 to 1.64	1 14 6 to 1 15 0
Medium Assam C.T.C. Dust	1.80 to 1.90	2 6 0
Best Assam C.T.C. Dust	2.40 to 2.65	2 10 0 to 2 11 0

The 1,551 chests of Leaf on offer met with fair demand at irregular rates.

FREIGHT MARKETS QUIET

DURING the past week, chartering in the freight markets remained very slack with little new enquiry. Coal and grain trades from north America were a little more active, but trans-atlantic coal rate has again fallen to 27s and a number of fixtures have been concluded at that rate. Australian grain shippers were in the market with a vague interest in barley for Europe. A small volume of business was concluded for ore cargo from Marmugao to Japan at the rate of 49s 6d f.i.o. and trimmed with 600 load and 1,500 tons discharge. Charterers quoted $(U.S.)9.25 f.o.b. for December-January position for ore from Bombay to the Northern Range. The fixture of a motor vessel from Kobe-Bombay with 10,800 to 11,400 tons wheat was concluded at the rate of 58s 6d and charterers paid 42s 6d f.i.o. stowed for 4,200 tons of barley in bulk from Basrah to London. In the time charter market, an oilburner, 9,592 tons deadweight, was fixed voyage out Persian Gulf, delivery Cardiff at 19s.

LINSEED FIRM

The market was firm during the past week and prices moved up slightly. A steady undertone prevailed. There was a good demand from local crushers and with keener offers from sellers an increased daily turnover has been reported. There was a sharp advance in the oil market following a notable improvement in the U.K. market and reports of recent sales made by Bombay shippers. Local shippers were active, and fair quantities changed hands daily. Latest quotations were as follows: Ready-December Rs. 23-2 a maund.

HIDES AND SKINS STEADY

The market in skins ruled steady. Stocks we higher than in the previous week.

Bazaar Sales

(Between 3rd December and 9th December, 195

Cowhides: Wet salted (Ord.) 5,52,000 pcs. (the basis of Rs. 9.50 to Rs. 11.75; Wet salte (Slaughtered) 17,800 pcs. on the basis of Rs. 13.5

Goatskins: Wet salted (Daissee, Killed) 36,7 pcs. on the basis of Rs. 325 to Rs. 335, Rs. 350 Rs. 365 and Rs. 400 to Rs. 415; Assam-Dinajpu 8,200 pcs. on the basis of Rs. 280 to Rs. 285; Patn (Ord.) 1,200 pcs. on the basis of Rs. 315.

Bazaar Stocks

(10th December, 1957)

Cowhides: Wet salted 98,500 pcs.

Goatskins: Wet salted 13,500 pcs.; Assar Dinajpur 70,200 pcs.; Muzafferpore-Patna-Paku Kissenganj 2,67,000 pcs.

SHELLAC STEADY

During the week ended 10th December, th market was steady. The range of quotations wi as follows:

Pure Buttonlac	Rs. 95 buyers.
Lemon No. 1 Shellac	Rs. 94.50 buyers; 95 dor and buyers; 95.50, buyers.
Lemon No. 2 Shellac	Rs. 89.50, 91.50 buyers; done and buyers.

COMPANY AND PUBLIC NOTICES

THE TITAGHUR PAPER MILLS COMPANY, LIMITED.

This Notice is issued in supersession of the Notice issued on 4th November, 1957.

NOTICE is hereby given that an Annual General Meeting of THE TITAGHUR PAPER MILLS COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3 P.M. on Monday, the 30th day of December, 1957, for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1957, and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Directors in the place of the retiring Directors, including Sir Asoka K. Roy, who retires by rotation, and, being 71 years of age, is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting, specifically declaring that the age limit shall not apply to him.

   And in this connection to consider and, if thought fit, to pass the following resolution, of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is appended below.

   TO BE PROPOSED AS AN ORDINARY RESOLUTION.

   "That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Sir Asoka K. Roy and that he be and is hereby re-elected as a Director of the Company, whose period of office as such director would be liable to determination by retirement of directors by rotation."
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 18th December, 1957 to 30th December, 1957, both days inclusive.

By Order of the Board,
F. W HEILGERS & CO. (PRIVATE) LTD.,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 2nd December, 1957.

NOTES: (a) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 14th January, 1958, to those shareholders so entitled whose names appear in the Company's books on the 30th December, 1957, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT.

In the special notice given to the Company of the resolution under item No. 3 of the above notice it has been stated that the services of Sir Asoka K. Roy have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

SHREE GOPAL PAPER MILLS LTD.

NOTICE is hereby given that the Board of Directors of the above Company have declared an interim dividend of Rs. 4/- (free of Income-tax) per First Preference Share and an interim dividend of 62 nP (free of Income-tax) per Ordinary Share for the calendar year 1957. Dividend Warrants will be made out in the names and addresses of members standing registered in the books as on 14th December, 1957, or their mandatees.

Register of Members and Share Transfer Books of the Company will be closed from 15th December, 1957 to 23rd December, 1957 (both days inclusive).

Holders of Blank transfers are advised to have the Shares registered in their names in time before the closure of the books.

By Order of the Board,
KARAM CHAND THAPAR & BROS. PRIVATE LTD.,
Managing Agents.

12, India Exchange Place,
Calcutta,
7th December, 1957.

HINDUSTHAN HOUSING AND LAND DEVELOPMENT TRUST LIMITED.

BANKS

H indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

ASSOCHAM PRESIDENT STRIKES NEW NOTE

THE QUIETLY OPTIMISTIC APPROACH

THE main significance of the presidential speech at this year's annual general meeting of the Associated Chambers of Commerce would seem to lie not so much in its words, as in the way they were said. It is interesting, for instance, to speculate whether Mr. W. H. S. Michelmore meant to imply that the private, and especially foreign, enterprise which he represents is at last satisfied with its lot; whether it is so tired of grumbling that it no longer has strength for any more; or whether in future public protest from this section of Indian business is to be abandoned in favour of the kind of private representation which has undoubtedly been more effective in the past. Another explanation is, of course, that the speech was designed to fit a special occasion—one on which the Prime Minister was to acknowledge by his very presence the importance to this country of private enterprise in general and foreign capital in particular. The answer is probably a combination of all these reasons. In any case, the speech must mark a fresh stage in the relationship between the Central Government and private industry.

There is a good deal to be said for the approach Mr. Michelmore has chosen. The Government must already be aware of the problems facing Indian and foreign private capital. If it is not by now, it probably never will be. Equally, business men should know well enough the difficulties with which the Government has to deal; and there is probably no harm in saying so once in a while. A mutual expression of moderate goodwill, such as both Mr. Michelmore's and Mr. Nehru's speech appeared to constitute, should certainly help towards a better understanding in the future. The main point, perhaps, is that the Assocham President's words did not deny the anxieties which his members feel, or the difficulties they have to work with. If the Government proceeds to overlook these references it will be doing the economy a bad service and making this kind of understanding less likely in the future. Mr. Michelmore's quiet optimism is probably the result of feeling that the worst must by now be over—provided the mixed economy is to remain at all—and that any change will be for the better so far as the private sector is concerned. It is unlikely to spring from a conviction that really rosy times are ahead and good profits will soon be had for the asking. A willingness to join as partners in the task of building the Indian economy would seem to be the theme underlying an address of this kind. It is now left for the Government to remember that with all the risk in the world, conditions must be favourable if private enterprise is to play its part. The prospects that this will, in fact, be borne in mind are probably better than for some years. The very size of India's development problems, and the obvious inability of the Government to meet them unaided, are a reasonable assurance that they would improve further. At least, that will be the case provided the Government continues to show the kind of willingness to learn from experience which Mr. Nehru himself has always had. It is probably no coincidence that the most accommodating attitude expressed by any Assocham President in the last few years, should have been addressed by the man who, above all others, embodies that spirit of empirical reasonableness without which democracy, and therefore the existence of a private sector, would be quite impossible in this country.

The Assocham President did well to draw attention to the upheavals through which foreign business has passed since Independence. His verdict of "amazingly resilient" for the performance of his members in face of these far-reaching changes, must rank as a modest statement. To continue in business at all is something for which many firms can be congratulated—to have sustained a faith in India's ultimate future as a field for private foreign capital is indeed an achievement. But Mr. Michelmore made it clear that the question whether or not this faith is to continue, and grow in such a way as to make its full contribution to the country's development, is for the Government to answer. The problem of taxing foreign technical and managerial personnel is one on which the President placed considerable emphasis. The National Council of Applied Economic Research has already dealt authoritatively with the matter, but Mr. Michelmore was right to remind his audience that, as with many of the problems of foreign capital itself, the findings do not apply only to non-Indians.

The essential factor in this matter of taxation is that India should not be less attractive for foreign enterprise than other capital-importers. Mr. Michelmore enumerated the points on which this country can claim to be a good investment; they will not fail to be noted abroad. There is no denying the degree of political stability which has been attained in a remarkably short period. But it is, perhaps, this time factor itself which gives rise to most doubts abroad. India has a mere ten years' tradition of democracy; a sound business man thinks in longer terms. So much of India's present stability and unity undoubtedly depend on the personality of Mr. Nehru himself, and foreign investors cannot be blamed for feeling anxious about the future when he has gone. Other newly-independent countries which have not been blessed with such a Prime Minister have not shown anything like the same promise. Law and order is well maintained in this country, although the attitude towards the police—perhaps one of the most unfortunate hangovers from pre-Independence days—has not always been reassuring. The action of the Kerala Government, for instance, in appearing openly to encourage lawlessness among plantation workers, has not gone unnoticed abroad. Nor has the apparent indifference on the part of many prominent Congress Party leaders to the principles involved. India's civil service, after Mr. Nehru, is probably the greatest blessing of all. But those who know on what small numbers its great traditions of service now depend, can be forgiven their misgivings concerning the future before it. There are, in fact, so many imponderables which foreign companies must face before they can tap this market of "nearly four hundred million potential customers" that without more positive incentives, there is little excuse for suspecting that a solution to the problem of presenting India's attractions is even in sight. Mr. Michelmore referred to the number of contradictory statements which are heard. He might have pressed the analogy to include the contradictions inherent in India's position as a socialist country dependent upon capitalism. If Mr. Michelmore and the interests he represents have accepted this odd situation, foreign investors considering whether to risk their money in India have not necessarily done the same.

The question of the impression created by India abroad is especially important at the present time. There are few people in this country who fear that the present events in Indonesia, for instance, could happen here—not for many years at any rate. Yet India has expressed sympathy with Indonesia's claims, and as with individuals, countries are judged by the company they keep. Just as the action of Egypt in nationalising the Suez Canal without prior negotiation damaged the interests of all undeveloped countries throughout the world—in spite of India's condemnation of the manner in which it was done—so will the decisions of Indonesia influence public opinion about the creditworthiness of every nation in a similar position. There is little India can do to influence these impressions—the swing of confidence away from investing in newly-independent countries is well under way and will quite possibly continue. Whether the present news from Indonesia turns out to be distorted or not—and it rather looks as if it might be—the damage has been done and the innocent will suffer along with the guilty. The only remedy such countries as India have in the matter—apart from declaring themselves against the principle of hasty expropriation in any form, as was done over Suez—is to make their own economies the models of stability, efficiency and incentive. Anybody with the least idea of the struggle India's Government has had in the past ten years, will appreciate the difficulty of that. Nevertheless, the rewards are probably great enough to make the effort worth while.

Perhaps the most important among these efforts at the moment would concern the report of the Birla delegation which, or so it is rumoured, is receiving scant attention in New Delhi. Many foreign observers, especially those in the United States, will be watching the fate of this document with interest. If it is permanently shelved, it is difficult to imagine what excuse they can find for encouraging their faith in India at all. Unlike the interests Mr. Michelmore represents, they are not here on the spot to form true impressions of India's future. Other more immediate problems, such as food and internal resources, are no doubt exercising official minds at the moment. But the essence of the foreign exchange question is its long-term nature and impressions created now may be doubly valuable in two or three years' time. World trends are against India; the reasonable, co-operative attitude which Mr. Michelmore expressed, is probably not typical of potential investors outside this country, especially those in the United States. That is why the tone of his speech should not be allowed to obscure the many warnings it contained. All is still far from well in India so far as private enterprise is concerned. And it would be dangerous to lose sight of that fact because the President of the Associated Chambers chose, for once, not to put too gloomy an emphasis upon it.

The coming year may well prove a trying one for private enterprise in this country. The past activities of one particular financier are threatening to bring the whole private sector into disrepute before the bar of an already over-critical public opinion. On the face of it, the Mundhra scandal is a thoroughly deplorable business, and deserves the severe condemnation of all interests, both public and private. But it would be unfortunate if the behaviour of one speculator were to feed prejudices which have certainly done severe damage to industrial progress in the past. Some of the lessons of the Mundhra situation seem to point to the fallibility of public rather than private enterprise, although it is doubtful, in the present state of opinion, whether this will be recognised. Similarly, it may be forgotten that so many of the companies concerned in the present upset are former British concerns which sold out at a time when the future appeared even more uncertain than it does at present. It would be as well to appreciate the fact that speculators are just as active under depressed conditions as they are under prosperous ones, and that all the restrictions and harassment of the last few years have not been able to stop this one. A good thing which could come out of the Mundhra business would be a willingness to think out the problems of private enterprise afresh, instead of against a half-digested philosophy which is already thirty years behind the times. If "capitalists", as Mr. Michelmore unashamedly called them, are allowed to make reasonable profits honestly, and are not unduly hampered by restrictions and irritations, then there would be less scope for speculators to acquire their properties for activities which are not in the national interest.

Behind the Assocham President's urbane words lay a host of shrewd points which, if they are to

implemented, will materially help his members to play their part in the future prosperity of this country. It is to be hoped that, among its many preoccupations, the Government will not ignore these suggestions simply because they were presented in a quiet and friendly manner. The economic events of the past year have shown clearly the importance of the private sector, both foreign and indigenous. If Mr. Michelmore let these experiences do most of his pleading for him, his words should carry no less weight on that account. The Government has an admirable opportunity before the next meeting of the Associated Chambers of showing that it appreciates the spirit of this year's presidential speech. In his reply, Mr. Nehru did seem to get the point; he cannot often be found in such excellent humour when speaking to the private sector these days. All interests can share the hope that this is the beginning of a new phase of co-operation between capitalists and socialists from which everybody will benefit—not least India herself.

REPLACING THE SALES TAXES

A WIDE welcome is likely to be given in principle to the legislation introduced by the Finance Minister, Mr. T. T. Krishnamachari, in Parliament last week, under which additional Central excise duties are to replace the sales taxes levied by States on sugar, tobacco and mill-made textiles. Sales tax laws have differed widely from State to State, and much hardship has been caused to industry, trade and the consumer by the variations. This hardship has been aggravated by the tendency of practically every State Government to collect sales taxes even on transactions to which they should not, strictly speaking, be applicable. The varying levies have led to endless complications in book-keeping, to litigation, to harassment —and, not least, to evasion. This has not been confined to petty retail establishments; in big centres like Calcutta, highly organised markets have flourished where it is possible to purchase in bulk many commodities on which sales tax is evaded with impunity.

Not all these commodities have come under the purview of the latest legislation; to that extent, the regular trade will have reason to regret that it is so limited in scope. Some idea of the evasion which has been going on may be gained from the Central Finance Minister's estimates: he has said that although the incidence of the additional excise duties will generally be less than that of the sales taxes it replaces, the revenue will increase by at least Rs. 7 crores a year. Many will wonder, in the light of these disturbing estimates of evasion, why the measure could not have been introduced earlier. The National Development Council unanimously recommended its adoption as long as a year ago. Even allowing for the consultations which were necessary with State Governments and the Finance Commission, the time taken over this limited move towards the centralisation of sales taxes seems to have been inordinately long. Considering the haste shown in introducing measures which are not dissimilar in their federal revenue-sharing complications, such as the tax on railway passenger fares or even the haste shown over revolutionary measures like the expenditure tax and the wealth tax, the delay in introducing the latest legislation is particularly regrettable.

* * * *

Consumer reaction to the additional excise duty is likely to be mixed. Perhaps not much sympathy need be wasted on the large body of people, both traders and buyers, who have contrived to ignore the sales tax laws but will find it less easy to do so now. Their number is presumably largest in those States where the incidence of sales tax has been particularly heavy, and the collection machinery particularly inefficient. The additional excise duty will tend to decrease the incidence of taxation in States such as Andhra Pradesh and Madras where a multi-point sales tax has been levied, so consumers there should welcome it. In other States, however, which have had relatively low sales tax rates, the incidence will now increase. The trade in West Bengal, for instance, has not been slow to react; sugar has become dearer, and so have tobacco and cigarettes.

In the case of cloth, the trend is uncertain; the temporary reduction in the excise duty on medium cloth from 2 annas a square yard to 1 anna 6 pies a square yard, coupled with the prospective withdrawal of the rebate of 6 pies a square yard given to mills producing more than their average output, has introduced a major complication in local mathematics. Also, there is much uncertainty about future trends in the demand for cloth. The trade, not only in this item but also in sugar and tobacco, is not likely to settle down for some time yet, because no adequate clarification is available on how stocks will be treated—stocks on which the additional excise duty has not been paid, nor the sales tax collected. Mr. Krishnamachari has said that State Governments are taking action to ensure that sales tax is collected on floating stocks "by some form of compounding with the holders of these stocks"; for this purpose, the sales taxes on these goods may be technically in force for some time.

The Bill relating to the additional excise duties does not statutorily prevent any State Government from continuing to levy sales tax. It merely provides that if a State does retain its sales tax after 1st April next year, it will not be entitled to share in the proceeds of the additional excise duties. For the time being, all States have agreed to participate in the new scheme. But the possibility cannot be ignored that some State might later prefer to have its own sales tax rather than a share in the additional excise revenue. Considering the extent to which State Government finances have come to depend on sales taxes, and the flexibility with which the latter have been treated in recent years, the loophole might prove a serious one. There is a case for making the States' participation in the new scheme obligatory, if necessary by amending the Constitution. The shortcomings of the Additional Duties of Excise (Goods of Special Importance) Bill, 1957, are therefore mainly two. One is that it offers no guarantee that the major aim of uniformity in taxation will be fulfilled in the longer term. The second is that it is too limited in scope, since it covers only three commodities.

CONTROLLING COMMODITY PRICES

DIFFICULTY OF DISCIPLINING PRODUCERS

IN London this month the International Tin Council held a meeting (originally planned for January) at which it imposed control on exports of tin and fixed quotas to reduce substantially the participating countries' exports. At the same time, it authorised the manager of the buffer stock to sell tin at lower prices than were previously permissible, in order to prevent a sharp rise in prices during the period of the quotas. The principle of regulating commodities was thereby reinforced. Last month the International Sugar Council reimposed the export quotas to which the exporting countries participating in the International Sugar Agreement are liable if the price of the commodity falls below a certain level.

The copper producers have no formal international agreement, but they have been engaged for some time past, intermittently, in discussions on the problem of surplus supplies. The recent meeting in London, under the auspices of the International Non-ferrous Metals Federation, included Chilean as well as Rhodesian producers, and dealers on the London Metal Exchange assumed—somewhat prematurely, it appears—that the Chilean producers had agreed to cut their production. The Rhodesian interests had previously reduced their output, but not in accord with any precise agreement. One big group, Rhodesian Selection Trust, had also attempted to stabilise the price of the metal by quoting independently of the London Metal Exchange, but the attempt failed and was abandoned. Individual actions to control prices are, however, sometimes successful. When the Brazilians decided not to export cocoa while the price was below a certain level, the ensuing shortage brought the price above that level fairly rapidly.

Many people question whether restrictive schemes, formal or informal, can ever be effective for long—apart from the question whether, even if effective, they are desirable. The difficulty in the past—especially, perhaps, in the cases of rubber and tea—has been the intrusion into the market of producers who are not taking part in the scheme, or the intrusion of substitutes. The International Tin Council is evidently confident that its plan can be enforced; and, indeed, as the six countries participating produce about 90 percent of the world's output, apart from that of the U.S.S.R. and China, there should be no difficulty in tightening the market in the short term. However, Soviet sales of tin have been on a considerable scale this year, and China's potentialities as a producer and exporter are apparently considerable.

* * * *

This question of supplies from the Communist bloc will be increasingly important in the coming years. Offers of Soviet aluminium in Europe in recent months have attracted much attention, and it has been suggested that they may soon break down the price-regulating policy of the big western producers and force aluminium on to the London Metal Exchange, to be priced by supply and demand. Rumours that the Soviet Union may soon export copper are impossible to confirm, but in any discussion of a restriction scheme for copper they should be taken into account. The exportable quantity of Soviet—and later Chinese—metals may not seem important in relation to world consumption, but it is often the "marginal" supply that finally determines the price—and disrupts restriction schemes planned to maintain a price. The price of a commodity can easily be kept stable for long periods when one or two large producers predominate, as in the cases of aluminium and nickel. In such cases no elaborate restriction scheme is required. If demand is weak, production can be adjusted to the price, or the price can be altered. The producers cannot, however, ignore a problem that besets the controllers of any restricted commodity, that substitutes are sought if the price does not appeal to consumers.

The tin scheme has so far been successful in maintaining the cash price of the metal at the agreed minimum level (£730 a ton), but it cannot be said that the value of tin has been stabilised. Buying surplus supplies into the buffer stock at the minimum price became so costly that the market lost faith in the organisation's ability to maintain the price, and forward quotations (which are not supported) dropped to wide discounts. These discounts would certainly have undermined the price structure if regulation of exports had not been enforced, and the market is not yet certain that a similar situation will not arise again in the future—even though the organisation's finances have recently been reinforced. On the other hand, it is possible that the tendency towards restrictionism will be reversed by economic forces. The general downward tendency of commodity prices that was causing so much anxiety during most of this year has recently been checked, and artificial regulation of prices seems less urgent. Whether the decline is ended or only temporarily arrested it is too soon to say.

Not everyone shares the belief that the decline in commodity prices was a damaging and dangerous development. A contrary opinion is that prices had been raised to unrealistic levels by a "marginal" deficiency of supplies, which could be corrected only by bringing in supplies from producers operating at excessively high costs, and that the subsequent adjustment of prices is natural and beneficial. It would certainly be a mistake to attempt to maintain prices on a high-cost basis after the "marginal" excess of demand over supply had disappeared. Even if one accepts the principle of restriction, it can be convincingly argued, for instance, that the Chileans ought not to curtail their output of copper, which is mainly from low-cost mines, while high-cost mines are still operating elsewhere. Many people, however, reject the principle of restriction. For years after the end of the war scarcity and high prices of commodities hampered economic development and distorted its pattern. More evidence of the damaging effects of lower prices is surely needed before we resort to general restriction—even if it could be effective.

COAL POLICY IN INDIA

By

Andrew Farquhar

This booklet consists of reprints of articles written by Mr Andrew Farquhar, former Coal Adviser to the Tata Iron and Steel Co., Ltd., which have appeared in *Capital* in recent years. As expert analyses of India's coal problems and policies, they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

TRANSPORT TROUBLES

THE shortage of transport is becoming a serious economic problem. The view is gaining ground that unless immediate measures are taken, it will be impossible to implement the ambitious schemes for industrial expansion outlined in the second five year plan. The economy is at present facing the prospect of widespread bottlenecks. The transport conference called recently by the Federation of Indian Chambers of Commerce and Industry, in which both operators' and users' representatives participated, marks the latest organised attempt to promote a more lively appreciation of the problem, in solving which the Government as well as the general public have a fundamental part to play. It has served an important purpose by providing a critical review of the transport situation, and the measures which need to be taken urgently in different fields such as the railways, civil aviation, road transport, shipping and inland waterways.

The Federation's President, Mr. Babubhai M. Chinai, placed the matter in perspective by com-

g transport development in this country with of the more advanced economies, as well as some which are more or less at the same of economic development as India. The popu- to each mile of railway in India is higher even in Thailand and Ceylon, let alone e, the U.K. or the U.S.A., although India has f the largest railway systems in the world. ame is the case with the development of high- and roads. Motor vehicles to each thousand itants average only 1.8, compared with 17.2 alaya and 8.6 in Ceylon. Only 6 percent of s overseas trade is carried in her own vessels. l navigation has been neglected. Mr. Chinai d the statistics merely to indicate the great ice India has yet to go before her transport n can reach an adequate stage of develop- and suggested that in any scheme for large- industrial development, transport should first and not the other way round. Transport been given a large proportion of the total —nearly 30 percent—in the second five year he said. Yet this vast sum has been found insufficient for developing the system ade- ly to meet the growing traffic needs.

Taxes have been levied e States as greedily as they could raise them. have been arbitrary restrictions on the loads carried and also on the inter-State movement ods traffic by road. The Code of Principles Practice under the Motor Vehicles Act, 1939, een another great stumbling block, and the t of nationalisation of privately-operated ort services, the biggest of them all.

. Chinai said the time had come for the Gov- ent to relax all these restrictions and grant atorium on nationalisation till the end of the five year plan. What is more important, there d be "a national agency" to look after the sts of road transport. With this suggestion, al Bahadur Shastri, Central Minister for port, who inaugurated the conference, has con- d, and has said that broad agreement between entre and the States is essential for its pro- elopment. In fact, an Inter-State Transport nission "with the specific purpose of develop- nd co-ordinating inter-State transport par- rly, and road transport generally" will soon t up under the amended Motor Vehicles Act. Mr. Shastri was less re-assuring on the ques- f motor vehicles taxation. While informing onference that the Centre has urged State rnments to accept a ceiling on all taxes on vehicles at 75 percent of the total taxes in as, and the States generally agree about it, d not indicate whether this in fact would be The States have a habit of making motor les an easy target for additional taxation ites, since in their case little ingenuity is red and less trouble involved. They could, advantage, be firmly restrained from doing obviously harms the broader interests of the ry.

CURRENT COIN

Electricity for the Villages.—If an agricultural economy like India's is to support an enduring industrial development programme, an extension of electric power supply to the rural areas should rank high among the priorities to increase farm production. The licensed electric supply undertakings are doing their best to extend their services to outlying areas, but their efforts are circumscribed by the seriousness of the problems inherent in rural electrification. Speaking at the annual general meeting of the Federation of Electricity Undertakings of India, Mr. K. G. Milne, chairman, has said that a successful rural electrification programme needs some form of subsidy. "A part of any scheme of subsidy should, however, provide for some financial assistance to be made available to the commercial licensees, with which they could themselves attempt an enlarged rural electrification programme in their areas." The Government should not overlook the potentialities of commercial undertakings. Commenting on the same problem at the meeting of the Association of Electricity Undertakings, Mr. M. J. Maneckji, chairman, has said that if all the villages are to be electrified, the capital expenditure involved in laying distribution lines alone will exceed Rs. 3,000 crores; therefore, any programme for this purpose will have to be phased. The second plan visualises an outlay of Rs. 75 crores on the electrification of small towns and villages. The tempo of development would be quickened if licensees are offered financial assistance. An increase in the cost of electricity is often opposed by the consumer. But although the prices of commodities in general have risen since prewar days by 400 percent, the price of electrical energy has gone up by about 40 percent only. A feature of the industry is that it is highly capital intensive, "and being without recourse to large-scale internal finance, is continually in need of equity capital. The capacity to raise such capital is largely dependent upon the undertakings' rate structures yielding sufficient net revenues as to permit the statutory reasonable return. Failing this, the strength of the utility concerned will be seriously affected." The amendments to the Electricity (Supply) Act have to some extent improved the conditions under which the industry operates, but they have done

Communications by Standard

One of the largest telecommunication engineering organisations in the British Commonwealth, Standard Telephones and Cables Limited is engaged in research, and the development, manufacture and installation of all types of communication and control systems. Concerned with every aspect of telecommunications engineering, the Company is in an unrivalled position to undertake, within its own organisation, the co-ordinated planning of complete communication projects involving inter-dependent systems of various types.

'Standard' products include:—

- Telecommunication Line Transmission Equipment
- Radio Broadcasting Equipment
- Radio Communication Equipment
- Air Radio Navigational Aids
- Supervisory and Remote Control Systems
- Railway Communication Apparatus
- Railway Control Equipments
- Telephone Cable
- Sound-Reinforcement Systems
- Public and Private Telephone Systems

☆ *'Standard' telecommunication systems serve society on land, at sea and in the air. In the field of radio broadcasting 'Standard' transmitters are in service with leading broadcasting administrations throughout the world. Illustrated is a 'Standard' CM.10 100kW broadcasting transmitter at the British Broadcasting Corporation Station at Walford Heath in Somerset.*

little to raise the equity values of electricity undertakings which are expanding. The industry is faced with the problem of enabling it to make provision for deferred tax liability "which, with its incidental difficulty of shareholders not being able to 'gross up' the dividends, is still exercising some bearish influence." Referring to this, Mr. Milne says that the Taxation Enquiry Commission confirmed the validity of the industry's arguments on this point.

Meanwhile, the Madras Electricity Department has expressed the hope that all the 65,000 villages in the State will get cheap power by 1965. Extensions to rural supply are proceeding steadily and it is claimed that private licensees are being helped in selling power for agricultural purposes. Since September 1956, the Department has raised its rates for the bulk supply of power by 30 percent on the ground that generating costs have increased. The electrification of villages might be promoted by the early completion of the Kundah project, but it will not perhaps do much to improve domestic lighting Many villages which are served by the Department can show only a couple of houses with electricity. The initial expense of wiring is apparently too high for most villagers and tiled houses (which are insulated) are few. The investment required for expansion could come from the depreciation funds built by the Electricity Department, which gets a handsome return from the three major systems of Pykara, Mettur and Madras. But it is doubtful whether transmission lines can be established in all rural areas in seven years. The higher cost of motors, starters and cables might hinder the use of pump-sets for irrigation.

* * * *

Obstacles in Engineering Expansion.—The main problem confronting the engineering industry at the present time is the inadequate supply of raw materials. While help should necessarily come from the Government in the shape of the allocation of foreign exchange for the imports needed, manufacturers themselves can try to ease the problem by making a rational and equitable distribution of available supplies. Speaking at the annual general meeting of the Engineering Association of India, Bombay Region, Mr. M. G. Vohra, chairman, said that producers in western India have joined hands and set up an organisation known as the Engineering Raw Materials Consumers' Corporation for the bulk purchase and distribution of the principal raw materials for the industry. "Only the members of our Association, all of whom are manufacturers or processors of iron and steel in one form or another, are eligible to buy the shares of the Corporation. Similarly, supplies of raw materials by the Corporation are made only to the members of the Association thus ensuring that supplies of scarce raw materials go only to genuine consumers". An important function of this agency is to maintain buffer stocks of iron and steel so as to ensure that production is not held up in any unit for want of raw materials. The organisation has been accorded due recognition by the authorities and substantial releases of iron and steel have been made to it on a basis of priority. Mr. Vohra referred to the bottleneck which has developed in the supply of hard coke to western India. It has long been felt that the annual supply of about 22,000 tons of by-product hard coke is inadequate. The shortage will be further accentuated when the various ferro-manganese units licensed by the Government of India go into production. Since self-sufficiency in coke will take time, manufacturers will have to bring about a more rational utilisation of the available supplies. Referring to the curtailment of Bombay State's quota of steel and pig iron, he said that numerous small units have been faced with the problem in carrying on day-to-day production. "While a general curtailment of State quotas of iron and steel is understandable in the context of the prevailing shortage of iron and steel, so considerable a reduction as has been effected in the case of Bombay State tends to suggest that the fact that the State has become larger as a result of reorganisation bringing in its wake a number of new iron and steel processing units which were formerly in other States has been overlooked." The number of new processing units in the reorganised State of Bombay being larger than before, there is a strong case for enhancing its quota of controlled items like iron, steel and coke, Mr. Vohra said.

* * * *

Assets for Wealth Tax.—Sub-section (2) of Section 5 of the Wealth Tax Act, 1957, empowers the Government to exempt, by notification, from wealth tax any deposit made by the assessee with the Government, or any of its own securities or those of local authorities. Wealth tax returns have to be submitted by assessees before 31st December, 1957, and the Government has yet to issue a notification specifying the deposits and securities to be exempted. The Committee of the Indian Chamber of Commerce, Calcutta, has urged the Government to issue such a notification without further delay. In a communication addressed to the Central Finance Ministry, it points out that income tax assessees are expected to deposit certain amounts periodically with the Income Tax Department by way of "advance tax"; this represents a tax liability and should not be treated as an asset for wealth tax purposes. Certain moneys have to be deposited with the Government under the "Current Profits Deposit Scheme". This scheme deprives assessees of working funds. If they are now called upon to pay wealth tax on these amounts also it will add considerably to their difficulties. Another type of deposit which deserves exemption is that made by assessees with the railway authorities to cover the freight charges against despatches. These deposits represent a freight liability, and as such, should not be treated as assets for the purpose of the tax. Many assessees have made deposits with Customs authorities, port authorities, etcetera, for payment of import duties, port charges, and the like These deposits should not be treated as assets for wealth tax purposes for similar reasons. Manufacturing concerns and other business houses have to make deposits with the electricity distributing companies towards the dues payable for power supplied and these deposits, too, are actually an advance payment. Business houses generally have to deposit earnest moneys for the performance of contracts. Since contracts also lead to losses, the earnest moneys should be exempted from the assessment for wealth tax, the Committee suggests.

* * * *

G.A.T.T. and the European Common Market.—World trade trends are giving food for thought to the contracting parties to the General Agreement on Tariffs and Trade. The meeting recently concluded in Geneva, though the proceedings were dominated by the probable effects of the European Common Market, also decided to brief three or four internationally recognised experts to report on trends in international trade, including assessment of medium-term prospects. This report will take into account the failure of the trade of the less developed countries to grow as rapidly as that of the industrialised countries, excessive short term fluctuations in prices of primary products and widespread resort to agricultural protection. Most of the proceedings, however, were devoted to trying to establish whether or not the Rome Treaty, bringing into being the six-nation European Economic Community as a prelude to a wider European free trade area, was in conflict with G.A.T.T. Most of the other nations expressed misgivings about the intentions of the six member countries and fears for the future of their own export trade It is significant that the general idea was not criticised, for the G.A.T.T., of course, permits such developments as long as they do not raise barriers to the trade of other contracting parties, but the main point of disagreement centred on the association of colonial territories with such a Customs union, which would amount to the constitution of a new preferential area which would violate G.A.T.T. rules and endanger the precarious economies of other under-developed countries and territories elsewhere. Britain spoke for some 40 dependent territories on this aspect: and Indonesia went so far as to threaten to seek new trading partners in the Communist world unless assured of the same treatment accorded to the overseas territories associated with the Common Market. The six Common Market countries maintained a firm and united front and the whole question was left over finally for more detailed examination by an inter-sessional committee covering all the contracting parties. It will be some months yet before any decision either way can even be hoped for.

* * * *

Trade Unions for Government Servants.—The U.P. Government appears to be less doctrinaire but perhaps more practical than the Centre in resisting the latter's suggestion that trade union laws should apply to State Transport employees. How far the extension of trade union privileges can go, and the serious consequences which might follow, were recently illustrated in Uttar Pradesh in a dramatic way when some policemen resorted to hunger strike and other methods to have their association recognised, even when the association had elected as its office-bearers one or two individuals who had earlier been dismissed from the force for misconduct. The Centre itself had a taste of militant trade unionism among its employees a few months ago when Posts and Telegraph workers threatened to launch a general strike and the Government had to issue an ordinance prohibiting strikes in essential services. The U.P. Government's contention, in brief, is that the permanent employees of the transport services hold pensionable posts and if they are also given the advantage of trade union laws, it might be difficult to resist similar demands from other Government employees. Government servants, it is claimed, should choose between a pension and the advantages of trade union laws; they cannot have both. There is perhaps something to be said for this point of view; but the fact remains that differences between the Central and State Governments and their empoyees have generally been growing all over the country and that the question of evolving suitable machinery for settling them will have to be faced sooner or later. It is interesting to recall that the first Pay Commission appointed by the Central Government in 1946 under the chairmanship of the ex-Chief Justice of India, Mr. S. Varadachari, had among its terms of reference: "Consideration of the machinery for negotiating and settling questions relating to conditions of service which may arise out of differences between the Government and its employees." The Commission recommended the establishment of Staff Councils on the model of the Whitley Councils in the U.K. and also the institution, except for the highest class of Government servants, of *ad hoc* tribunals similar to the Civil Service Arbitration Board in Britain. It was unfortunate that immediately after the transfer of power, the Governments, both at the Centre and in the States, became preoccupied with other problems and the experiment suggested by the Commission could not be initiated.

* * * *

Wage Board for Sugar.—The setting up of a wage board for the sugar industry, which the Union Deputy Minister for Labour, Mr. Abid Ali, has announced in the Lok Sabha, has taken a long time. The Development Council for the Sugar Industry decided as early as January this year to establish a committee of its own to consider the question of the wage board. Because of the Government's announcement, the idea of setting up this committee has now been abandoned on the initiative of the industry itself. At present, there is a wide disparity between the wages of sugar mill workers in different parts of the country; they range from Rs 55 (including dearness allowance) in Uttar Pradesh and Bihar to Rs. 21 in Madras. No

ANNUAL REVIEW OF COMMERCE, TRADE AND INDUSTRY

With this week's issue of CAPITAL is being issued a supplement of 152 pages, the Annual Review of Commerce, Trade and Industry. Besides essays on specific industries, such as jute, coal, tea and cotton textiles, the Review contains exclusive articles by well-known authors. Mrs. Ursula K. Hicks writes on the taxation policy appropriate to a developing economy; Mr. A. K. Roy, Secretary to the Finance Ministry (Department of Revenue), on the position of foreign firms in the Indian tax structure; Mr. S. Bhoothalingam, Secretary to the Iron and Steel Ministry, on India's steel expansion plans; Mr. Neil McInnes on the dependence of foreign investment on vigorous local enterprise; Dr. I. S. Gulati on how taxes affect the demand for current resources; Mr. B. V. Vagh on the expansion of road transport; and Mr. P. C. Jain on the inflationary threat to the economy. Other articles deal with sales tax anomalies; life insurance; price patterns; monetary trends; stock market jitters; agricultural progress; and community development programmes. The Review is being distributed free to all registered subscribers. Additional copies at Rs. 5 each may be obtained from the Manager, Capital, at 5 Mission Row, Calcutta 1. Orders for extra copies should be placed early.

retaining allowance is paid in Andhra and Madras, but in Bihar it is paid at the rate of 25 percent to semi-skilled workers and 5 percent to unskilled workers. In Uttar Pradesh, on the orders of the State Government, which have been provisionally accepted by the industry, certain categories of workers are paid a retaining allowance of 50 percent during the off season. As for bonus, which, according to Mr. Abid Ali, is also to be referred to the Wage Board, under a formula evolved by a tripartite conference last September, 67 mills in U.P. are required to pay Rs. 72.54 lakhs as bonus for 1954-55 and Rs. 69.46 lakhs for 1955-56. Where a factory claims that it has suffered losses, it has a right to make a representation to that effect but no amount already paid is recoverable. Meanwhile, widespread damage, estimated at not less than 15 percent, has been reported to the sugarcane crop in U.P. this year. Although the Cane Commissioner has issued orders increasing the basic quota of cane supplies to mills by 25 percent, it is feared that the total quantity which is actually crushed by the mills this year will be about a million tons less, and will cause a corresponding reduction in sugar output. Smaller cane supplies will have their repercussions on the *gur* and *khandsari* sections of the industry; the prices of these commodities are already reported to be high.

* * * *

Dearer Spices and Chemicals.—Domestic inflation and the tighter import restrictions which have been in force since October have contributed to the rise in the prices of certain spices and chemicals in Madras. The price of pepper is unchanged in spite of the Indonesian troubles, but cardamom and cloves have become dearer. Mercury has risen to Rs. 2,000 a jar. Camphor has gone up from Rs. 5.12 to Rs. 7.12 a lb. an increase which is particularly felt in a month of prayer and devotional songs; the premium on Japanese camphor is much smaller now. Sago prices in Madras have fallen in sympathy with the trend in Salem, where stocks are increasing because transport facilities to Calcutta have deteriorated. But the fall in sago does not mean much to the average consumer; he is more concerned about the rise in the prices of barley imported from Holland, and of cummin seeds, which still come from abroad. The disparity between wholesale and retail prices is fairly pronounced and the latter do not fall readily when local stocks increase. The advance in coconut oil prices, following the rise in London and Colombo, has hit the consumer hard; it has raised the price of coconuts, too, on the east coast. Edible oils are now highly susceptible to speculative activity, and Bombay fluctuations have been guiding the trend in groundnut oil.

NOTICE

There will be no issue of CAPITAL on 26th December, 1957, as the markets will be closed for the Christmas holidays. The first issue of the New Year will be published on Thursday, 2nd January, 1958.

* * * *

Industrial Disputes.—The time-loss due to industrial disputes during September 1957 decreased by 71,120 man-days, as compared with the previous month. The average duration of disputes current at any time was, however, 7.4 days, as against 6.7 days in August. There were 131 fresh disputes in September, bringing the total number of disputes current at any time during the month to 163, including 26 lock-outs. Among the important causes of fresh disputes were wages and allowances, bonus and personnel. One hundred and twenty-two disputes terminated during September. Of these, 84 lasted not more than five days each and only five lasted more than 30 days each. The time-loss increased in the "electricity, gas, water and sanitary services", "transport, storage and communications" and "miscellaneous" groups. Bihar recorded the biggest time-loss (164,573), followed by West Bengal (130,891), Bombay (81,285) and Orissa (46,800). Compared with the previous month, the time-loss increased in Bihar, Madhya Pradesh, Uttar Pradesh and Tripura but decreased in all other States. Industrial relations, according to reports from the States, were almost normal everywhere, except in Bihar, where the labour situation was particularly disturbed in the industrial areas of Dalmianagar and Jamshedpur. Information received from ten States showed that, in all, 6,026 complaints were received by the Labour Departments there, and 7,692 were settled or investigated. The index of industrial unrest during September was 121 (base 1951 equals 100).

* * * *

Coal Output in August.—Coal output increased to 3,373,701 tons in August 1957 from 3,297,198 tons in the previous month, according to information received from the Chief Inspector of Mines. The total quantity despatched during August was 3,229,380 tons, compared with 3,044,779 tons in July. Coal stocks at pitheads at the end of August amounted to 2,780,440 tons, against 3,074,761 tons at the beginning of the month. During August, 833 collieries were reported to be working with an average daily employment of 343,356 workers. Output a man-shift was estimated at 1.13 tons for miners and loaders, 0.60 ton for all workers underground and in open workings, and 0.40 ton for all persons employed, including surface workers. The percentage of absenteeism was 14.12. Nine coke plants at collieries and elsewhere produced 262,846 tons of hard, soft and other kinds of coke. They despatched 199,801 tons.

GOVERNMENT LOANS

WE publish in our extract columns some remarks by the *Pioneer* on the 3 percent loan. We are not prepared to say that the Government of India have been guilty of a breach of faith in issuing a 3½ percent loan after reducing their rate of interest to 3 percent, and announcing in the Budget speech that the 3 percent rate of interest would be continued, but they have gone perilously near to being accused of this, and certainly the case of holders of this loan is a very hard one. Besides the North-Western Railway Co., which has locked up a good deal of money in the 3 percents, there are several banks and institutions in the same predicament. The 3 percents are nominally quoted at Rs. 92, but there is really no market for them, and they are, to all intents and purposes, an unnegotiable security. The Government of India, however, hold in their Currency Department under the Currency Act some ten crores of Government securities, nearly all of which must be 3½ percents. Now nothing would be simpler than for the Government to offer to exchange these 3½ percents for 3 percents upon receiving the difference in interest for the seven unexpired years for which the former loan has to run; in other words, at a reduction of 3 to 4 percent on the market price of Government 3½ percent Paper. This would entail absolutely no loss whatever on the Government, and would be a great advantage to the holders of the 3 percents, while the Government would probably find, when they brought their next loan out, that they would have more people ready to tender for it than they had last time.

Without Prejudice

DEPOSIT OF CUSTOMS DUTY FOR GOODS NOT EXPORTED

VALIDITY OF CLAIM FOR REFUND

(FROM OUR LEGAL CORRESPONDENT)

HERE is an interesting point on Customs duty paid in advance for the export of goods out of India and the liability or non-liability of the Government to refund the duty paid when, in fact, the goods are not exported. The plaintiff was a limited company, the Bhagwan Industries Ltd., which had brought a suit against the Union of India for the recovery of Rs. 8,182-12, said to be due to the plaintiff on account of Customs duties paid in advance for the export from India of mustard oil. The facts were that the plaintiff dealt in mustard oil and desired to export 1,870 maunds of that commodity to East Pakistan via Katihar. Under the rules, a permit for export is issued only after a person desirous of exporting goods deposits the export duty payable on the commodity sought to be exported in advance. The plaintiff deposited Rs. 10,990-15 with the Customs authorities in Purnea in advance, as this was the amount of duty which would have been payable on the 1,870 maunds of mustard oil sought to be transported.

The plaintiff then tried to get wagons for transport of the oil but only two wagons could be had, and these with great difficulty; therefore, the plaintiff was able to export only 513 maunds and 6 seers of mustard oil and after deducting the export duty on this amount of oil, a sum of Rs. 8,182-12 remained on deposit with the authorities. The plaintiff then sent applications to the officers of the Customs Department for the repayment of this excess amount. There was a protracted correspondence and ultimately the plaintiff was told that the duty could not be refunded in view of the provisions of Section 40 of the Sea Customs Act. The plaintiff then gave the statutory notice of two months to the Union of India and filed a suit for the recovery of Rs. 8,182-12. The plaintiff was successful before the Civil Judge in Lucknow, who decreed the full amount of the claim, whereupon the Union of India appealed to the Lucknow Bench of the Allahabad High Court, which heard the appeal some six years after the date of the Civil Judge's decree.

The suit was contested and the subsequent appeal launched by the Government on purely technical grounds. There was no doubt about the facts. It was admitted that the plantiff was desirous of exporting 1,870 maunds of mustard oil to East Pakistan. It was admitted that the deposit of Rs. 10,990-14 was made towards the payment of export duty on this oil. It was also admitted that only 513 maunds and 6 seers of oil could, in fact, be exported for reasons beyond the control of the plaintiff. And upon the general law, Randhir Singh J. observed in the appeal: "Under the Indian Tariff Act, read with the Land Customs Act and the Sea Customs Act, an export duty becomes leviable *when goods are exported.* (Italics ours.) There can be no levy of duty on goods which are not exported or which could not be exported. If, for the sake of convenience, the Government has framed rules for deposit of duty in advance of the export the appropriation of duty takes place only where there is an actual export. If no export is made, there is no appropriation of the duty which is deposited in advance. It has been contended on behalf of the appellant that the duty is not refundable. This deposit was evidently not made towards any fees payable on account of any licence or permit. It was clearly the export duty which was payable in advance. The amount of duty which was *deposited but not appropriated* (italics ours) would evidently be repayable to the person who has deposited the money, unless there is some provision of law which bars the recovery of the amount."

* * * *

"Unless there is some provision of law which bars the recovery of the amount". The Government's contention was that there was such provision of law, in fact that there were two such provisions which barred recovery. Statutory provisions. Section 40 and Section 140 of the Sea Customs Act. Anyone who does the writer the honour of perusing these random notes regularly will be aware that every now and again one has the opportunity —and delights in the same—of putting before him a legal problem which depends for its solution on the correct grammatical construction and interpretation of some phrase or sentence in the English language. This is just such a problem. So the honours man in English is invited to consider, word for word, these two sections. It is not an easy conundrum. Far from it. But we have played fairly and more than fairly with the reader by supplying him in the first part of this article with such copious hints as almost to put the right answer in his mouth.

Now, read Section 40. This is it: "No Customs duties or charges which have been paid and of which repayment, wholly or in part, is claimed in consequence of the same having been paid through inadvertence, error or misconstruction shall be returned, unless such claim is made within three months from the date of such payment." You are to assume, please, that no claim was made within the prescribed period; and a plain reading of the above provision of law shows that the Customs duties or charges paid through inadvertence, error or misconstruction shall be returned only if a claim was made within three months from the date of such payment.

And Section 140 runs as follows: "If any goods mentioned in a shipping bill or manifest be not shipped, or be shipped and afterwards relanded, the owner shall, before the expiration of five clear working days after the vessel on which such goods were intended to be shipped, or from which they were relanded, has left the port, give information of such short shipment or relanding to the Customs Collector. Upon an application being made to the Customs Collector, any duty levied upon goods not shipped, or upon goods shipped and afterwards relanded, shall be refunded to the person on whose behalf such duty was paid: provided that no such refund shall be allowed unless information has been given as above required." Here, too, language is clear and unambiguous. Duty levied in such circumstances is not refundable unless the prescribed information is given within five days. And here, again, in the last short sentence we have supplied the reader with the clue to the correct answer. Could the Government resist successfully a claim for a refund of Rs. 8,182-12, or could it not? "Yes", argued the Government counsel, relying upon the two Sections quoted above. "No", said the High Court, and we will now see why.

* * * *

The key words are "duties paid" and "duty levied". Both Sections deal with the refund of duties which have actually been levied, that is, duties which have been appropriated. They do not deal with amounts paid for future appropriation towards export duty. There is a clear distinction between an amount appropriated towards duty and an amount deposited for payment of export duty. In the former case, duty which has actually been levied and paid has evidently become the property of the Government and no person would be entitled to get it back unless there is a provision of law to enable that person to get the duty already appropriated back from the State or the Government. In the latter case, however, when an amount has been deposited to be appropriated thereafter towards the export duty which may fall due, there having been no appropriation, the property in the money does not pass to the Government unless export takes place and the duty is levied.

Randhir Singh J. (Chaturvedi J. concurring) held that "Sections 40 and 140 will have no application to applications for refund of deposits not actually appropriated towards levy of duty. Out of the amount deposited by the plaintiff, only that amount will be appropriated which was equal to the amount of export duty which fell due on the goods actually exported. The rest of the amount, namely, Rs. 8,182-12, remained unappropriated, and the property in this amount vested in the plaintiff and it never became the property of the Government. The plaintiff was therefore entitled to claim back the amount which was held by the defendant as a deposit.....In view of the circumstances under which the deposit was made in advance, there is evidently an implied agreement that the amount would be refundable if not appropriated and the depositee becomes a debtor for the purpose of the repayment of the money to the person entitled to get back the deposit."

A further technical defence raised on behalf of the Government was that the suit was barred by time as the application for refund had not been made within three months as provided in Section 40 of the Sea Customs Act. But if you look back at the Section, you will see that it relates to claims for repayment based on duties paid through "inadvertence, error, or misconstruction" only. In this case, said the Court, "no refund of any duty paid and appropriated is sought for on the ground of an erroneous payment or of payment due to misconstruction or inadvertence. The limit of time prescribed in Section 40.....does not therefore apply to this case as the plaintiff does not seek refund on any of the grounds mentioned in Section 40 but claims the repayment of money held in deposit but not appropriated."

The High Court held that the money was refundable and the Government's appeal was dismissed with costs.

[Union of India v Bhagwan Industries, Ltd. 44 A.I.R. 1957 December (Allahabad)]

ACC HONOURS THE CODE

3

"Employers owe it to labour to recognise that welfare is not conceived in terms of philanthropy, but as a social obligation. Men and women engaged in production shall do so with dignity, honour and a sense of security. Fair wages should be paid for work done. Working conditions shall be as pleasant as possible."

Code of conduct—**FORUM OF FREE ENTERPRISE**

As an employer of labour the ACC can well point with satisfaction to the salary/wages and other emoluments paid to its employees and to the many welfare activities voluntarily undertaken over the years.

To take salary/wages first, compare these figures of ten years:

	1945-46	1955-56
No. of employees	17,500	29,000
Salary/wages & amenities	Rs. 127.3 lakhs	Rs. 421.5 lakhs

Thus while the increase in the number of employees was 66%, the increase in the salary/wages, etc. for the same period was over 230%!

As for welfare activities, employees of the ACC's 17 factories and two collieries have for a long time been enjoying a large number of amenities for their security and social welfare, namely: provident fund and gratuity; schools, hospitals and dispensaries, creches, canteens, cinemas, clubs, playing grounds; welfare and benefit fund, and co-operative societies.

All these benefits have been provided out of a consciousness of social obligation. The ACC believes that a well-paid, well-looked-after, happy and contented employee is the best employee.

THE ASSOCIATED CEMENT COMPANIES LIMITED

THE CEMENT MARKETING CO. OF INDIA PRIVATE LIMITED

THE Assocham general meeting is not usually a cheerful occasion. For the last few years, at any rate, it has been anything but. Perhaps it was the presence of Mr. Nehru which gave last Saturday's gathering almost a happy atmosphere. Or the credit might simply be given to this year's President, Mr. W. H. S. Michelmore, for refraining from the usual moans and grumbles in the presence of a personality who, as we all know, has little patience with such things. Whatever the reason, it must have struck many as a welcome change; the warnings, the pleadings and the protests have all been heard before, and are often better left to financial journalists anyway. Not that Mr. Michelmore ignored the business community's difficulties —he would certainly have failed in his duty to his members had he done that. But he did make it quite clear, by implication if nothing else, that foreign enterprise feels more settled and hopeful than it has done for years. Mr. Nehru seemed to sense the fact, because nothing in his words conveyed the slightest hint of the moralising to which so many official spokesmen—not excluding the Prime Minister himself—seem to have delighted in treating the non-resident business community in the past. The foreign exchange shortage might have something to do with this change. Let us hope not. It is far better for the country's future that it should come from a greater realisation of the value of private enterprise generally, Indian as well. The ovation which followed Mr. Michelmore's speech must have been the loudest heard on that occasion for some years. Once again, it was perhaps not so much what he said, as the impression he made by saying it. Saturday's proceedings may well, it seems, present economists, leader writers and other professional misery mongers, with a real problem. Have they the Assocham President's word for it that all is for the best in the best of all possible worlds? Certainly not: the facts are still there for everybody to see. If Mr. Michelmore decided for once to let the experiences and lessons of the last twelve months speak for themselves, that is not to say they do not exist, or that they are not in need of urgent study and action. Indeed, as the Prime Minister himself implied when speaking about the food situation, never has the need for realism been more imperative.

* * * *

There have been a few things Mr. Hugh Gaitskell has said and done with which I have not found myself in complete agreement. Over Suez, for instance, I thought his public attitude did his common sense less than justice. And that opinion was not due to any ideas I might have had about the wisdom of Sir Anthony Eden's policy, because my admiration for the statesmanship of Mr. Bevan —no supporter of the Government's stand by any stretch of the imagination—was easily as great as the disappointment I felt at the way Mr. Gaitskell behaved. When I met Britain's future Prime Minister in Calcutta last week, therefore, my chief emotion was that of surprise—for the fact that he is not the person he appears to be on public platforms or television screens. He is, in fact, a charming gentleman with a comfortable manner who has managed somehow to combine earnestness with realism while avoiding all trace of the supercilious. The combination is indeed a most agreeable one. If I were in the habit of making my political choices on considerations of personality alone, I would unhesitatingly vote for him. But I wonder how many people do make their decisions on these grounds. The other qualities a Prime Minister needs, such as courage, ruthlessness, honesty of purpose and complete emotional stability, are not, of course, things which stand out at a casual meeting. I have heard it said of Mr. Gaitskell that he lacks them all. Personally, I am content to wait and see. It is only big tasks that make big men; and the consolation in giving one a try in Britain is that there are plenty of others ready to take his place if he fails and any amount of people prepared to let them do so. Mr. Gaitskell's quick grasp of India's problems struck me as appropriate for a man on whose shoulders the mantle of Lord Attlee has fallen. His visit here should have done much good at a time when Britain's policies are often misunderstood and her "repentance" in colonial matters is being openly questioned. Only he, I felt, could declare himself in such strong terms against the actions of Indonesia in expropriating and persecuting the Dutch, and still avoid being branded an imperialist. I felt myself wishing him luck. He has a big job ahead. Yet, after meeting him, it did not seem to me that he has quite so much to fear from that dynamic colleague of his.

* * * *

Joseph Conrad, so it has been pointed out, paid a tribute to the British when he adopted their language for writing some of the best novels in it —although his own way of stating the matter was that he had been adopted by the English language. If he had not written in English, he said, he might not have written at all. On the other hand, a compliment is due to Conrad too, that he decided to write in a language he began to learn only at the age of twenty-three, for it can scarcely have been an easy decision to take. Every writer knows that it is hard enough to express oneself in one's own tongue; to attempt to do so in a foreign one is considered by most as just foolhardy. And yet, is it—always? The arguments put forward by many Bengali writers, from Michael Madhusudan Dutt to Tagore, that the chances of Indians becoming so many "swarthy Macaulays" are slender, still hold true. But, on the other side of the book, there is the solid achievement attained by so many from R C. Dutt to Nirad Chaudhuri. The latter, I seem to remember, once said that he could not adequately describe even a Durga Puja festival without recourse to English. This, I suggest, is not so much a reflection on Bengali as a frank admission of the fact that he too had been "adopted" like Conrad. It does not seem to me altogether impossible that there may be Indians today who are not writing at all because they refuse to do it in English. This is not true of India alone, for I have heard that in Australia and Canada too there is a sense of inadequacy in the use of English which I consider largely unwarranted. The rewards of writing in an international language such as English are many, and there is no reason at all to think that they must always remain beyond the reach of those not born in Britain. The movement to retain English in India, which is gathering welcome momentum, should not, in my view, concern itself only with its practical uses in commerce and administration—the case for which is unanswerable—but also with its graces and beauties. That an intimate association with English literature contributed much to the enrichment of modern Indian languages is not disputed. I would add that there is still a positive contribution to be made by Indians to English literature.

* * * *

I sincerely hope Mr. William Graham and his Private Enterprise Incorporated will receive from Indian business men, medium and small, the response he is expecting. It must not be assumed that only in steel plants and the like is international co-operation desirable, while small concerns and the distributive trades can be left to look after themselves. Those familiar with western, especially American, sales techniques will not need to be told that India has much to learn in the art of stimulating demand. Secondly, the creation of a chain of auxiliary suppliers, necessarily medium and small, is essential for the sustenance of heavy industry itself. (The problems of the Indian cycle and automobile manufacturers in this department are well known.) There is, thus, a great deal that Mr. Graham can do in India, but optimism should take account of the fact that he rightly insists on what the Birla delegation recently said is not forthcoming—indigenous capital to match foreign investment. Mr. Graham's scheme for advancing 25 percent of the required resources is undoubtedly generous, but the Indian financier with another 25 percent and the indigenous business man with 50-percent worth of ideas or experience or assets may not be found so easily. On the one hand, there is the lure of big industries, of which the Government and most moneyed men are unredeemable victims, and on the other there are the taxation and other policies of the Government which make it virtually impossible for most people to save anything. Small stockholders are not numerous and it is understandable that they should generally respond more to invitations from established industrialists than to those from the little known. To list these difficulties does not mean that Mr. Graham is on the wrong track. But it would be folly for him to count on the kind of enthusiasm he would have had a right to expect in his own country. To destroy a climate for investment can be accomplished by any politician before breakfast; to create it takes longer.

* * * *

Cold baths are supposed to be good for the health. As I see it, however, it is all a question of taste, and personally I prefer other outlets for my masochistic inclinations. The trouble these days is that I do not seem to be given much choice in the matter. After the third major attack of goose pimples in a week, I am seriously considering giving up my morning bath altogether—blue does not go with my early-morning green. Enquiries into the cause of all this have always brought the same answer—insufficient pressure on the gas. Now I am one of those who have read with sympathy the heart-rending appeals from the gas people about economising and reporting leaks. I have even done my modest best to help. But I have yet to find this willingness to appreciate the difficulties of others reciprocated in my own case. When I opened my last month's bill, confidently expecting to find a handsome rebate due to my gas being delivered in a form which might best be described as "unfit for human consumption", my disappointment was complete. When it is so clearly a fact that pressure is just as important as quantity where gas is concerned, I fail to understand why I should pay the same price for each unit whether it heats my bath or not. I would like to point out to the gas people that any slight difficulties they may be having keeping up pressure are as nothing compared with those I continually experience these days in holding on to money. And for every point they can make about coal supplies, or whatever else is at the root of the problem, I undertake to find a dozen about high taxes, rising prices and the general reluctance of this hard world to reward its journalists in the fashion to which their undoubted talents entitle them. I would not expect the gas company to approve it, but I would like to press for a new pricing policy in future which takes account of quality and efficiency rather than simple "cubic feet consumed". But perhaps I am alone in my complaints. There may, in fact, be some plot to discriminate against me personally; the last communication I had from the gas people did not have my name on it at all—it was addressed to my dog.

QUIET CONDITIONS IN STOCK MARKETS

BRITISH PETROLEUM DEBENTURES OVER-SUBSCRIBED

London, 18th December.

QUIET conditions persisted in the stock markets throughout the past week, although a distinctly firmer tendency developed in gilt-edged securities. The outstanding event was the start of dealings in the British Petroleum debenture stock, which attracted applications of no less than £675 million for the £41 million issue. As expected, a substantial premium was established when dealings commenced and a vast amount of the stock changed hands. The Christmas holidays were approaching, economic uncertainties remained and a huge amount of money was tied up in the British Petroleum issue, so activity in most sections was at a low level. The gradual fall in Wall Street was rather slow to take effect but it eventually helped unsettle sentiment. Gilt-edged responded to small but persistent demand and recorded some useful gains. Dollar stocks reflected throughout the downward trend in Wall Street but the industrial section showed some small improvements on selective buying. Brewery shares responded to the recent good dividends but steel shares were often easier on profit-taking in spite of their good reports. Base metals reflected the further fall in metal prices. Oils fluctuated narrowly and were mostly easier, although Shell was in demand from time to time in anticipation of the new issue which was expected early in the New Year. The rubber section was quietly irregular, although some good features developed on bids or hopes of bids. Movements in teas were usually small and irregular.

The Money Market

Credit conditions in the money market were unsettled by the British Petroleum debenture issue and the large demand for currency for the coming holidays. Stringent conditions prevailed on most days, and in spite of official help, the market had to borrow on three occasions from the Bank of England. The release of some of the oil money following the closing of the application lists for the British Petroleum issue led to some improvement, but the supply of credit was still barely adequate for market needs. No change was made in bids by the market at the last Treasury bill tender, and the average rates for the mixed bills were scarcely changed from the previous week.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: "London gilts are holding their recent minor rises. Industrials are inclined to drift, with no immediate tendency. Gold shares are in the ascendant. Base metals are lower on bearish advices and switching operations. Oils resumed their fall under New York pressure and the influence of the British Petroleum issue. Wall Street's technical rally appears to have been completed and the Dow Jones index may test its recent resistance levels down to 427. With rails marking another new low, the market pattern continues bearish. The abnormal idleness of the London Stock Exchange is not necessarily due to the British Petroleum issue. Much money is tied up in that issue but anyway that money might not come into the market. There is little to attract investors. Wall Street remains uncertain. Industrial results are uninspiring and the weakness of steels in spite of excellent profits and dividends underlines investors' doubts as to the general election which will gradually become a market factor."

Activity on Wall Street

The bond market on Wall Street was highlighted by the persistent strength of U.S. Government obligations. Long-term Treasury bonds scored their sharpest gains, with most issues at or near their 1957 highs. The spectacular advance in a fairly good volume of business continued to reflect the easier conditions in the money market and the lack of selling pressure. However, the market eventually receded on profit-taking. High-grade corporate issues also moved ahead with the Treasury list before retreating slightly. Speculative rail issues reversed their downward trend and moved higher in sympathy with the sharp advance in carrier shares. Convertibles displayed a mixed appearance. Foreign dollar bonds were featured by the firmness in Canadian issues, with the 2¾ percents of 1974 adding more than three points. Australians and German Nationals were mixed, with Italian and Norwegian issues generally unchanged. Denmark 4½ percent and Greeks were higher by fractions. Serbs were neglected. Among the Japanese issues, the Government 5½ percents of 1975 fluctuated over a range of one point. Chile 3 percent and Union of South Africa 4½ percents held steady at $37 and $94, respectively.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 11th December shows that the gold stock rose by $7 million to $22,770 million. Foreign deposits rose by $22 million to $330 million and foreign investments increased by $3 million to $3,808 million. The Federal Reserve bought $45 million worth of bills and $49 million worth of Government securities under repurchase agreements, total U.S. Government securities being $94 million higher at 23,872 million. Total discounts and advances rose by $474 million to $972 million, while the aggregate excess reserves of member banks advanced by $240 million to $519 million. The daily average of excess reserves of member banks fell by $18 million to $469 million, while their daily average borrowings rose by $51 million to $669 million. Business loans of New York city banks rose by $186 million to $11,693 million, compared with a rise of $115 million to $11.258 million in the corresponding week of last year.

Decline in Paris Gold

The compromise solution within the French Government about an increase in the wages of civil servants caused a sharp drop in Paris gold prices. The downward trend was reinforced by the U.N. vote on the Algerian question, which led dealers to feel that a settlement might be within reach. After having found its equilibrium at 578,000 francs for the ingot, the market lost further ground in the last session, but the undertone was cautious, pending new developments. The forthcoming national congress of the French Socialist Party and dissatisfaction of civil servants' trade unions about the Government's proposals may provide new factors to determine the future trend of the market.

Rise in Hongkong Gold

The Hongkong gold market was steady but trading remained sluggish with the major traders extremely cautious. Tightness of money was hampering the activities of small-scale speculators. A slight easing of sterling stimulated sentiment at one time but as the rate gave little indication of any significant decline, bullion circles again became cautious. Traders expected only very small price variations for the remaining part of the year. Slight variations were noted throughout the past week although the market closed just a shade higher than on the opening day. Carry-over charges were 108 cents in sellers' favour. The official offtake was 2,020 taels and unofficial 8,500 taels. Arrivals in Macao totalled 35,000 ounces and forward contracts were placed at $(U.S.)37.87 an ounce, c.i.f. Macao.

Oilseeds Weak

The oilseeds market showed early firmness but towards the end of the past week there was a tendency for prices to ease. Linseed fluctuated irregularly but closed steadier because of the firmness in Winnipeg options. Castorseed closed lower on increased offers. Copra prices showed good gains on balance in spite of some easing in the later stages. Notwithstanding some early hesitancy pending the announcement of the Argentine assessment rate, linseed oil prices showed gains, with both the Argentine and Indian markets closing on a firmer note. A weak market continued for castor oil and a further reduction of about £8 a ton brought only spasmodic interest. Bombay B.S.S. December-January could have been bought down to £132 a ton and Commercial to £126 a ton, prices varying, however, as to terms.

Promotion Programme of U.S. Tea Council

The Tea Council of the United States has prepared an ambitious promotion programme for 1958 with funds increased to $1,200,000. Imports in the first eight months of this year were about 5 percent higher and the Council hopes to boost demand even further in 1958. Since this agency was created in 1950, grocery store sales alone have been raised from 69,300,000 lbs to 79,600,000 lbs for 1956, with further increases expected during this year and the next.

Indonesian Troubles Disturb Rubber

Nervous short-covering in a market disturbed by the Indonesian situation set rubber prices on a rising trend at the start of the past week. Apart from heavy demand on Dutch account, home trade dealers were anxious to cover their open positions. The higher price level left room for profit-taking and when demand was satisfied, a declining trend set in because of lack of support from the consuming end of the trade. In view of the uncertainties of the Indonesian situation, the market remained nervous, with prices quickly responding to varying reports and rumours. After fluctuating widely the market closed weak although forward positions were still ¼d a lb higher on the week.

Money

THE CALCUTTA MONEY MARKET

POOR WEEK FOR BILLS

Wednesday, 18th December.

THERE was little change in the total level of advances outstanding in the Calcutta money market last week. Funds to cotton and woollen manufacturers were slightly down, but this was balanced by small increases in the requirements of jute and sugar mills. Accommodation against wheat storage in upcountry areas shows a slight decline. The interbank market continues quiet and the call rate is unchanged at 2¾ percent.

The export bill market was particularly quiet during the past week with very few documents coming to hand either on account of gunny or tea. On the other hand, remittance has been good. Sterling continued to fluctuate sharply throughout the week, but the undertone remained firm.

* * * *

Bullion was steady because of increased demand and limited arrivals. Silver advanced from the previous week's level of Rs. 179.25 to Rs. 180.50, quoted today for ready delivery. The rate for forward delivery was Rs. 180.25. The London and New York prices showed no change at 77½d and 90 cents, respectively.

Gold rose in sympathy with silver from Rs 109.25 to Rs. 110. The sovereign at Rs. 71 showed a gain of 25nP.

* * * *

A rise of Rs 3.37 crores to Rs. 1,512.62 crores in active notes was the notable feature of the return of the Reserve Bank of India for the week ended 13th December, 1957, while the total note issue was Rs. 25 lakhs lower at Rs. 1,522.64 crores. Notes held in the Banking Department consequently declined by Rs 3.61 crores to Rs. 10.02 crores. Deposits of the Government of India fell by Rs 1.10 crores to Rs. 55.53 crores, and other Government accounts at Rs. 4.97 crores showed a decline of Rs. 1.77 crores. Balances of commercial banks were Rs. 2.12 crores lower at Rs. 76.38 crores. Balances held abroad declined further by Rs. 3.95 crores to Rs. 24.38 crores. Investments fell from Rs. 252.84 crores to Rs. 248.02 crores. Other loans and advances increased from Rs. 49.81 crores to Rs. 51.92 crores, of which advances to scheduled banks against usance bills amounted to Rs. 14.35 crores (Rs. 12.42 crores). Ways and means advances stood at Rs. 37.61 crores against Rs. 35.24 crores.

* * * *

The return of the State Bank of India for the week ended 6th December, 1957, shows a drop of Rs. 1.18 crores to Rs. 360.72 crores in total deposits. Investments in Government securities are up by Rs. 19.54 crores to Rs. 173.51 crores, while other authorised investments are down by Rs. 1 lakhs to Rs. 9.93 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have increased by Rs. 2.85 crores to Rs. 161.26 crores. Cash and balances are, in consequence, shown at Rs. 29.48 crores or Rs. 26.33 crores less.

* * * *

Provisional figures of India's foreign trade by all routes—sea, air and land—on private and Government accounts during August 1957, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: *Merchandise*: excluding transit trade of Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim and Bhutan: Exports Rs. 5,987 lakhs, re-exports Rs. 38 lakhs, imports Rs. 8,098 lakhs, total trade Rs. 14,123 lakhs. *Treasure*: exports (including re-exports) of currency notes Rs. 30 lakhs, others negligible; imports of gold Rs. 3 lakhs, currency notes Rs. 625 lakhs, others nil. *Balance of Trade*: the merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustments. Subject to this deficiency in import figures the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs. 2,076 lakhs.

* * * *

With a view to encouraging exports, the Government of India has been granting full rebate of excise duty paid on excisable goods used in the manufacture of other articles and exported out of India. At present this rebate is admissible for ready-made apparel, tents, sugar products including biscuits and preserved fruits, cotton bags, umbrella cloth, *chaddars*, pillow cases and table covers, embroideries and laces and tarpaulins. With effect from 14th December, cotton fabrics, woollen fabrics, rayon or art silk fabrics, sugar and tobacco have been subject to an additional excise duty. The Government has decided that these articles are also entitled to the rebate of the additional excise duty paid on the excisable goods used in their manufacture. The collectors of Central Excise will provide further detailed information on request.

SALES TAX REPLACED BY CENTRAL EXCISE

NEW DUTIES ON TOBACCO, SUGAR AND MILL CLOTH

THE Finance Minister, Mr. T. T. Krishnamachari, last week introduced a Bill in the Lok Sabha to provide for the levy and collection of additional duties of excise on certain goods and for the distribution of part of their net proceeds among the States and to declare those goods to be of special importance in inter-State trade or commerce. Mr. Krishnamachari said: "The question of replacing the sales taxes levied by States on certain goods of widespread consumption by an additional duty of excise the proceeds of which will be distributed among the States has been under consideration for some time in consultation with State Governments. Last December, the National Development Council came to the unanimous decision that the sales taxes on sugar, tobacco and mill-made textiles should be replaced by a surcharge on excise duties to be distributed on the basis of consumption, the present income of the States from this source being assured to them, the manner of distribution being left to the consideration of the Finance Commission. The detailed implementation of this decision has been the subject matter of consultation with the State Governments for some time. Meanwhile, last May, the Finance Commission was requested to make recommendations about the distribution of the additional duties if and when levied and the present income from sales taxes to be assured to the States.

"I am sure this measure would be widely welcomed. It replaces the widely varying sales on these commodities by a uniform levy. It secures for the exchequer a larger revenue than is at present collected by the elimination of evasion and also by bringing in the entire production of these goods under taxation, some of which used to escape sales taxes, particularly where the sales taxes were levied not on individual commodities but on the total turnover subject to a minimum exemption. From the point of view of the trade also, this measure would be welcome as eliminating a considerable measure of inconvenience."

Proposed Rates

The following are the proposed rates:

Sugar: Rs. 3.31nP a cwt. or just about 3nP a lb. It is expected that in a whole year the revenue to be derived from this proposal would amount to Rs. 12 18 crores gross.

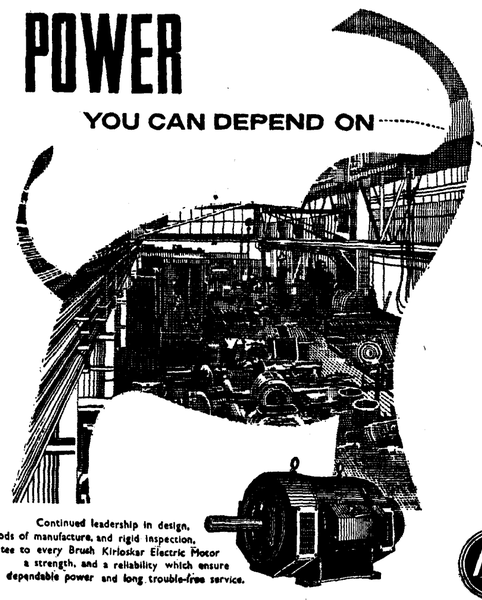
Textiles: The rates proposed a square yard are 13nP for the superfine, 8nP for the fine, 4nP for the medium and 3nP for the coarse varieties, respectively. The proposed rate for art silk cloth is 3nP a square yard and for woollen cloth 5 percent *ad valorem*. It has been estimated that in a whole year this should bring in a gross revenue of Rs. 21.90 crores.

Tobacco: There are a large number of special rates covered by the schedule. The Minister while not going through the entire list individually, summarised the proposals as follows:

Unmanufactured tobacco: (a) those used mainly for the manufacture of *hookah* and chewing tobaccos as also cigars—3nP a lb. (b) those used mainly for the manufacture of biris—20nP a lb. As biris now pay a separate sales tax and there is no excise duty on biris as such, the duty on the tobacco has had to be pitched at a high figure. (c) those used for the manufacture of pipe tobacco and smoking mixtures—50nP a lb.

Cigarettes: For the levy of Central excise duty, cigarettes have been subdivided into eight categories and the rates of duty vary from Re. 1 a thousand for the lowest category valued at less than Rs. 7.50 a thousand to Rs. 21.50 a thousand for the highest category valued at more than Rs 50 a thousand. The additional duties proposed follow the same pattern and have been pitched at 40 percent of the Central excise rates for each category.

Cigars: As in the case of cigarettes, the additional excise duties proposed amount to 25 percent of the basic rate for all the nine categories.



As a result of the imposition of these additional excise duties, the yield from tobacco and tobacco manufactures in a whole year is estimated at Rs. 7.40 crores gross. The total expected yield as a result of these proposals is expected to be Rs. 38 crores to Rs. 39 crores.

By virtue of the declaration under the provisional Collection of Taxes Act appended to the Bill, the rates proposed have come into effect from 14th December.

Duty on Medium Cloth Cut

After introducing the Bill, the Finance Minister made the following statement: "The Government of India has been maintaining a close watch on the production, clearance for internal consumption, stock position and price trends of cloth. The stock position undoubtedly merits this consideration. Although price levels have not yet come down to those prevailing in December 1955, prices particularly of medium cloth have fallen by an appreciable extent. There has also been a worsening of the competitive position of medium cloth vis-à-vis the coarse varieties, with the result that relatively larger stocks of medium cloth have accumulated with the mills. It is expected that the proposal for the integration of sales tax collected by the States on textiles with excise duties announced will help considerably in stocks of cloth being lifted from mill godowns. Nevertheless, it may be necessary to provide some additional relief, even if it be for a time. The Government of India has, therefore, decided as a temporary measure, to reduce the excise duty on medium cotton fabrics from 2 annas a square yard to 1 anna 6 pies a square yard with immediate effect. A notification giving effect to this decision will be issued immediately. This reduction will remain effective only up to 31st March, 1958. With this reduction in excise duty on medium cloth, which normally accounts for almost three-quarters of the total production of cotton fabrics, it is no longer necessary to continue the rebate of 6 pies a square yard to mills which produce cotton fabrics in excess of their average or normal packed production. It has, therefore, been decided to withdraw this rebate with effect from 1st January, 1958. A notification giving effect to this decision will also be issued immediately."

L.I.C. PURCHASES OF SHARES IN MUNDHRA COMPANIES

DETAILS GIVEN BY FINANCE MINISTER

IN his statement in the Lok Sabha on the purchases made by the Life Insurance Corporation of shares in the Mundhra group of concerns, the number, the date of purchase and the amount for which they were purchased, Mr. T. T. Krishnamachari placed on the table of the House the following statement. He also submitted a statement giving the particulars of the shares of these companies which the Corporation took over from the former insurance companies.

Stocks and Shares

CHANGES IN EXCISE DUTIES CAUSE NERVOUS LIQUIDATION

NO CLUE FROM MR. NEHRU

Wednesday Evening.

IT has been an eventful week, with changes in excise duties, the Assocham meeting and the new developments in the Mundhra affair. But the only perceptible stock market change was an intensification of the general uncertainty and a further shrinking in business. Investment support was completely lacking and prices tended to drift to lower levels. The increase in Central excise duties in place of State sales taxes on cloth, sugar and tobacco created some amount of uncertainty, as operators were not sure of the implications of the changes. Such reaction as occurred was bearish, and in cotton textiles not even the decision to reduce the excise duty on medium cloth brought a change of sentiment. Mr. Nehru's speech at the Assocham meeting was, not altogether unexpectedly, devoid of anything that could be considered a pointer to impending changes in the Government's policy towards private investment, domestic or foreign. Operators have now reconciled themselves to waiting until February next year, when Mr. Krishnamachari's Budget will perhaps provide the answer. Mr. Haridas Mundhra's financial problems have continued to provide an almost inexhaustible topic of market gossip. The Lok Sabha debate on the L.I.C. investments in his group of shares, with its grave allegations and the promised enquiry, have served to increase anxiety. Reflecting the prevailing nervousness Indian Iron declined below Rs. 19 for the first time since 26th November.

It is reliably learnt that the issue of 500,000 equity shares of Rs. 10 each at a premium of Rs. 2.50 a share by Philips India Ltd. has been oversubscribed more than four times. The board of management of the company has made an allotment to each eligible applicant of an equitable proportion of the number of shares applied for, excepting of course those applications which had to be disqualified on technical grounds. The vast majority of the applications were received from those who asked for 50 or 100 shares, and the board of management has, therefore, allotted 30 percent and 15 percent of the shares, respectively. It has scaled down this proportion still further in the case of those who asked for more shares. The letters of allotment and of regret, together with the appropriate refund pay orders conforming to the Securities Contracts (Regulation) Rules of 1957, will be issued simultaneously during the first week of January 1958.

Except for some interested buying in National, which hovered around Rs. 21.30 after being bid up to Rs. 21.90 a couple of days earlier, jute shares were neglected. Accumulation of stocks, low gunny prices and uncertainty over U.S. offtake on account of recession fears in that country have kept investors away.

Money conditions continued to be easier. As a result gilt-edged prices were steady, although quotations showed little variation. Owing to lack of scrip, however, buying orders were difficult to complete and business was of a retail nature.

Only 10 transactions were reported in preference shares during the week, including Indian Iron which changed hands at Rs. 96.50 and Kumardhubi Engineering which were crossed at Rs. 85. Calcutta Electrics were taken at Rs. 10.12.

The outstanding feature in the bank section was Hind Bank which, on rumours that the Bank might be amalgamated with the Bank of Baroda, spurted from Rs. 33 to Rs. 43. Punjab National were crossed at Rs. 67 cum rights and United Commercial were done at Rs. 58.50

A solitary transaction was reported in railway shares, in Dehri-Rohtas at Rs. 9.37.

Cotton textiles were featureless.

Despite the satisfactory report published by the New Manbhoom Coal Co., Ltd., the shares receded from Rs. 10.56 to Rs. 10.25. Bengal Coal, after being done up to Rs. 233, receded at the close to Rs. 229. Equitable were a steady feature with buyers at the higher rate of Rs. 24.37. Burrakur fluctuated narrowly around Rs. 22.

In electrics, Calcutta were slightly easier at Rs. 13.25.

In sugar, Darbhanga dropped Re. 1 to Rs. 18.50 and profit-taking in Dyer Meakin Breweries brought the price down from Rs. 8 to Rs. 7.56.

In the engineering section, heavy bull liquidation in Indian Iron & Steel brought the price down from Rs. 19.56 to Rs. 18.80 which was today's settlement rate. The appearance of the balance-sheet this week of Jessop & Co., caused disappointment among shareholders and the price reacted from Rs. 23.50 to Rs. 22.44. Richardson & Cruddas met with selling pressure and receded from Rs. 7.94 to Rs. 7.44. Textile Machinery were extremely quiet and lost Re. 1 to close at Rs. 15.70. Contrary to the general trend, Guest, Keen, Williams and Indian Steel and Wire Products were supported at Rs. 29.19 and Rs. 61. The passing of the Indian Galvanizing dividend brought out sellers of the shares at the lower rate of Rs. 16.

In paper, Orient were subdued at Rs. 24.70. Other issues were marked down in sympathy with the exception of Shree Gopal which were slightly better at Rs. 15.31.

There was no interest in cement and insurance shares.

In shipping, India Steamship continued to be supported at around Rs. 10.75 and India General Navigation were one point better at Rs. 54.

Among miscellaneous industrials, British India Corporation met with selling pressure and receded from Rs. 4.35 to Rs. 4. Dunlop were unchanged at Rs. 20.25 as were Imperial Tobacco at Rs. 11.69. Philips India were slightly easier at Rs. 13.75, but Metal Box were higher at Rs. 26.87. National Carbon were better at Rs. 24. National Rubber (Rs. 5 paid-up) had buyers at the higher rate of Rs. 6 while F. & C. Osler weakened further to Rs. 2.12. National Insulated Cables were enquired for at Rs. 24.75 and there was a small recovery in Jardine Henderson to Rs. 60.50.

In the mining section, Indian Copper were softer at Rs. 2.81, but Chrestien Mica Industries were better at Rs. 10.50.

Despite the improvement in demand at the Calcutta auctions particularly from abroad, there was no change in the tea section which continued to suffer from neglect possibly because prices for the commodity have shown no improvement and in fact producers of common teas are reported to be making losses.

* * * *

The profit of the HUKUMCHAND JUTE MILLS LTD. has declined by Rs. 4.02 lakhs to Rs. 22.75 lakhs for the year ended last March. After providing Rs. 1 lakh (Rs. 2.36 lakhs) for depreciation, Rs. 1½ lakhs (same) for taxation, transferring Rs. 1¼ lakhs (Rs. 2 lakhs) to investment reserve and bringing

in Rs. 1,18,935, there is a balance of Rs. 14,44,396. The dividend has been reduced by 50nP to Rs. 1.50 a share, leaving Rs. 1,14,396 to be carried forward.

* * * *

Providing £13.283 (£12,230) for depreciation, £28,950 (£46,125) for taxation and £3,075 for wealth tax, the net profit of the EAST INDIAN COAL COMPANY has amounted to £4,730, against £50.430. The dividend has been reduced to Rs. 1.50 a share, including an interim of 50nP. Taxation provision for the previous year is allocated £9,975, leaving a carry-forward of £26.677 (£58 922). Raisings increased by 9.852 tons to 561,050 tons and despatches were 39.894 tons higher at 562.446 tons. The company's expansion and mechanisation programme is making good progress.

* * * *

The NEW MANBHOOM COAL COMPANY has made a profit of Rs. 1.03 lakhs for the year ended last March, against Rs 44,701. Bringing in Rs. 70,222 and making other adjustments, there is a balance of Rs. 1.73.499 A dividend of 5 percent has been declared against nil. There is a carry-forward of Rs. 1.43.499. Raisings increased from 131.246 tons to 143.485 tons and despatches rose from 116,642 tons to 120,744 tons.

* * * *

MACNEILL AND BARRY LTD. has made a profit of Rs. 44.75 lakhs for the year ended last March. Bringing in Rs. 6,31.124, there is a balance of Rs. 51,06,535. Taxation provision is allocated Rs. 22½ lakhs (Rs. 20.75 lakhs). Allocations include: capital reserve Rs. 2.67 lakhs (nil), harbour boating replacement reserve Rs. 2½ lakhs (Rs. 2.66 lakhs), and general reserve Rs. 2 lakhs (Rs. 3 lakhs). The ordinary dividend is reduced from 11 percent to 8 percent. leaving a carry-forward of Rs. 4,24,245. The directors say that the introduction of the Insurance (Amendment) Act, 1957, which cancelled the principal agencies held by the company from 1st September, 1957, will affect its income They add that trading conditions in the tea industry improved towards the end of the year under review, but at present the outlook for the industry is somewhat unsettled. In the coal and jute industries, there was a turn for the better, but for inland water transport the prospects are unsatisfactory. Trading conditions in harbour boating were buoyant but the future will be adversely affected by the import policy.

* * * *

The loss of the INDIAN GALVANIZING COMPANY (1926) LTD. has amounted to Rs. 5.97 lakhs for the year ended last December. Transferring Rs. 4.33 lakhs from taxation provision and Rs. 2.30 lakhs from stock reserve, and bringing in Rs. 41,267, the preference dividends have been paid, leaving a carry-forward of Rs. 90,223. There is no ordinary dividend.

Bombay Market

L.I.C. INVESTMENT REPORTS CAUSE ANXIETY

MARKET UNCERTAIN ABOUT EXCISE DUTY INCIDENCE

Wednesday Evening.

THE Bombay stock market was quiet last week, and towards the close operators were unwilling to extend commitments either way. The debate about the Life Insurance Corporation's investments in a particular group of shares caused nervousness. The token reduction in the excise duty on medium cloth has had little effect as the relief in duty has been substantially counteracted by the withdrawal of rebate on increased output. Market circles have not yet been able to ascertain the precise incidence of the proposal to substitute sales tax on cotton textiles, sugar and tobacco by a Central excise duty.

Tata Steels closed at Rs. 163 and Indian Irons were maintained at Rs. 19.06 on support from Calcutta interests following the report that the strike of the contract labour at Burnpur had been withdrawn. Tata Locomotive were transacted at Rs. 138.25 and Premier Construction were selectively supported at Rs. 155.50. Alcock Ashdown were freely offered at Rs. 227.50, with sellers predominating. Automobile shares were quietly steady, and Premier Automobiles came to hand at Rs. 87.50. Hindustan Motors were available at Rs. 6.

Barring Century, which improved to Rs. 392.50 on the belief that the company's rayon plant would produce satisfactory results, textile shares showed widespread losses. Bombay Dyeing declined to Rs. 50.10 and Simplex were lower at Rs. 158. Svadeshi were offered at Rs. 169 and Kohinoor were bought at Rs. 263.75. India United Ordinary changed hands at Rs. 9.06 and Apollo were taken at Rs. 2.02.

Mixed trends were seen in the miscellaneous group. Associated Cement were steady at Rs. 151 and Digvijay Cement were done at Rs. 134 on good corporate news. Among sugar shares, Belapur were maintained at Rs. 253 and Phalton were bought at Rs. 147. Steamship company shares were steady on hopes of increased freight earnings. Scindia Steam came to hand at Rs. 16.96 but Great Eastern Shipping were shaded at Rs. 19.36 on profit-taking. Mining shares were subdued as the outlook for metals appeared to be discouraging. Shivrajpur Syndicate were transacted at Rs. 82.50. National Rayon were higher at Rs. 212 on prospects of improved corporate working and Tata Chemicals were taken at Rs. 12.84.

Bank shares were steady, and Bank of Baroda improved to Rs. 106.25 on investment support. United Commercial Bank were done at Rs. 59.50. Routine business was done in insurance shares and fluctuations were narrow. New India Assurance were taken at Rs. 47.75.

Scattered interest was taken in electricity supply undertakings, and Ahmedabad Electric were maintained at Rs. 94.10. Tata Power changed hands at Rs. 1,160.

THE WEEK'S TRANSACTIONS

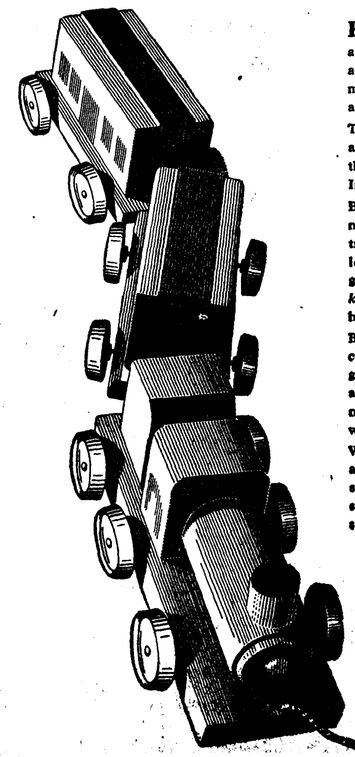
JESSOP DIRECTORS REPORT ON MR. H. D. MUNDHRA

COMPANY PERSUADED TO "INVEST" IN OTHER CONCERNS

PRESENTING their report for the year ended October 1956, the directors of Jessop and Co. Ltd. say that in July 1956. Mr. H. D. Mundhra advised the board of directors that he wished to bring Richardson and Cruddas Ltd. and Duncan Stratton Ltd. under the control of Jessop and Co. Ltd. Mr. Mundhra stated that he and his associates then held about 70 percent of the shares in Jessops. and that they held over 80 percent of the shares in each of the other two companies, both of which were engaged in engineering work. The directors considered that it would be in the interests of the company to have, in Bombay and Madras, facilities for the manufacture of component parts of sluice gates. cranes, etcetera. So it was agreed to purchase shares in Richardson and Cruddas Ltd. A substantial holding was purchased in September and October 1956.



In November 1956, further contracts amounting to Rs. 60.24 lakhs were made for the purchase of 217,000 additional shares in Richardson and Cruddas Ltd These contracts were made with Rameswar Daga and Co., a firm of registered stock brokers of the Calcutta Stock Brokers Association. They were recommended to the company by Mr. Mundhra. The money was paid to Rameswar Daga and Co. in November 1956. but the share scrip were not delivered to the company. This position was not known to any of the other directors for several months, but when it became known. the position was discussed on numerous occasions with Mr. Mundhra, who gave his personal assurance and undertaking that the money would be returned to the company. Mr Mundhra stated that due to the serious fall in the value of securities on the Calcutta Stock Exchange. he had not yet been able to keep his promise to cause the money to be restored to the company, nor had he been able to give any security for this amount. "In view of Mr. Mundhra's promises, the directors are making continuous efforts to recover the money amicably, but at the same time advice is being sought as to what other steps should be taken in the interest of the company."

The directors add that they were approached by the Assam Cements Ltd. with a proposal that Jessops should take an interest in the construction of a cement factory in Assam. In view of the difficulty of transporting cement from Bihar to Assam. the directors thought that the project had excellent potentialities and invested Rs. 7.35 lakhs in the Assam Cements Ltd. "Due to protracted negotiations between the interests concerned in Assam," the bulk of the authorised capital amounting to Rs. 2 crores has not been called up. As the paid-up capital amounted to Rs. 8.75 lakhs on 31st October. 1956. the investment meant that on that date Jessop and Co. Ltd. became the "holding company" within the meaning of the Companies Act. 1956.

The profit of Jessop has improved by Rs. 19 16 lakhs to Rs. 63,98,618. An ordinary divided of 12½ percent has been declared. against 30 percent. This gives a yield of 5.6 percent at Rs. 22.37 a share. The general reserve allocation is Rs 2 lakhs lower at Rs. 7 75 lakhs. and special reserve receives the same amount of Rs. 4.75 lakhs. The taxation provision has been increased by Rs. 25.39 lakhs to Rs. 45.65 lakhs. Depreciation is Rs. 15,000 lower at Rs 5.10 lakhs. A balance of Rs. 51,642 is carried forward, against Rs. 14.000 brought in.

Sales were about the same as during the previous year. The directors reorganised the importing and trading departments of the company. The metals department was closed because of uneconomic working. The directors state that the "order book continues to grow" They add that the "results of the recent financial year ending on 31st October, 1957. are also encouraging, and once the present difficulties are overcome the future prospects are good."

It's 1,000 miles across the room...

RATTLE, clatter, thump goes the toy engine at the little boy's heels... rattle, clatter, thump across the room. And, to him, it's a thousand-mile trip! So what's vital to him is movement and speed.

To us, at Hindustan Lever, speed and distance are no less important. For you, we cover thousands of miles every day — every inch of India's 35,000 miles of railroad, for instance.

But before our products are despatched, we must consider how they will travel. Plane or train? Road or waterway? Handcart, head-load or mule-train? The answer depends on a great many factors — for instance, on the *kind* of territory those goods must cross and how *soon* they must arrive.

But arrive they must — and arrive in the best condition. For people have come to trust the goods we make — things like Sunlight Soap and Vim, Rexona and Dalda Vanaspati. The need for these products is growing — everywhere, all the year round.

We take trouble to satisfy this need — and so add another service to the service that the goods themselves perform. We add the service of *regular supply*.

Hindustan Lever serves the home

MEETING OF ASSOCIATED CHAMBERS

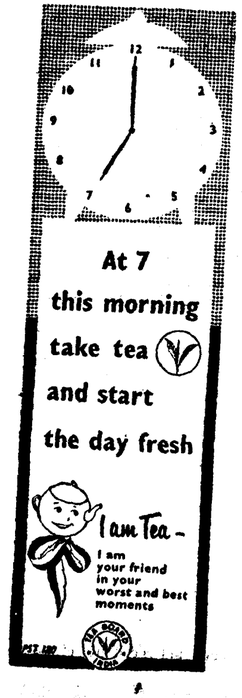
TEXT OF RESOLUTIONS ADOPTED

At the annual general meeting of the Associated Chambers of Commerce in Calcutta, the following seven resolutions were adopted unanimously.

Stability in Taxation.—Madras Chamber of Commerce. The Associated Chambers of Commerce of India, while accepting that in present circumstances industry and trade must play their part in providing an equitable share of the tax revenues of India, deplore the present situation in which not only are there frequent changes in the rates of such taxes as excise duty, sales tax, cess and octroi duties but also State Governments are able to impose taxes within their own borders which retard the essential development of industries that are nationwide and that contribute to the national economy. They therefore urge the vital necessity of a measure of stability both concerning the burden of tax and the period for which it is levied in order to allow a reasonable and orderly development of production, demand and consumption of the commodities affected.

Ports and Transport.—Bombay Chamber of Commerce and Industry. In view of the serious, wasteful and costly port congestion recently experienced at the major Indian ports and the further difficulties apprehended as essential imports, including heavy machinery, increase, the Associated Chambers of Commerce of India would emphasise the vital need for continued and intensified efforts to improve the capacity and efficiency of India's ports and for rapid and balanced expansion of all the transport facilities of the country to meet the increasing transport requirements of the second five year plan. They would urge in particular that:

(a) continued action should be taken to improve the working of the major ports by the provision of additional mechanical equipment, by the general extension of incentive schemes for labour and by ensuring that port administration and technical services are fully staffed by competent personnel at all levels, ashore and afloat:



SOUTH EASTERN RAILWAY

TENDERS

Sealed Tenders are invited for Tender No. PA/GM/5/GB5(57) for supply of 1700 I.G. paint red lead R/M non-setting to I.S. 102—1950.

Tender Forms are obtainable from the Controller of Stores. S. E. Rly., Garden Reach, Calcutta-23 on remittance of Rs. 5/- per copy (not refundable) by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, Garden Reach by local firms. Closing date is 13-1-58 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the Tender. Earnest Money is Rs. 1,190/-.

GENERAL MANAGER

(b) particular attention should be paid to improving movement facilities to and from the main ports where present and threatened traffic bottlenecks prevent an economical and efficient use of transport capacity;

(c) higher priority should be given to the development of road and inland water transport and coastal shipping in order to relieve the railways of some of the transport burden of the second five year plan and to provide transport to those areas of industrial and agricultural development which have inadequate rail services. The Chambers would particularly recommend the urgent expansion of the national highways, an increase in the road transport fleet of vehicles, and a decrease in the level of taxation on, and therefore the cost of, road transport services;

(d) repair berth facilities at the major Indian ports, and particularly Bombay, should be improved so that foreign shipowners may be induced to use the indigenous ship repairing industry and thus increase India's earnings of foreign exchange.

Food Policy.—Upper India Chamber of Commerce. In view of the contribution which a substantial increase in food production throughout the country could make to:

(a) current and future foreign exchange resources,

(b) the neutralisation of the price increase from deficit financing,

(c) the raising of standards of living and an improvement in the national income,

(d) increasing employment both of men and resources in the rural areas, the Associated Chambers of Commerce of India urge that a major effort should be made by the Central and State Governments to encourage greater agricultural production by the intensification of the Grow More Food Campaign and, in particular, of those aspects of it such as the increasing use of fertilisers, a rapid improvement in supplies of selected seed, development in the use of irrigation facilities by reduced water charges, more extensive rural credit arrangements and a general strengthening of the agricultural advisory services, which will give an effective stimulus to large crops.

Corporate Taxation.—Bengal Chamber of Commerce and Industry. The Associated Chambers of Commerce of India are gravely perturbed by the heavy and increasing burden of taxation on corporate enterprise in India and invite the attention of the Government to the inevitable results, namely:

(a) the erosion of existing capital resources;

(b) the reduction of the return on capital to levels which are inadequate to attract either foreign or internal investors;

(c) the inability of industry to finance development and modernisation from its own internal resources;

(d) inflation;

and suggest that if foreign investment is to be attracted to Indian industry, early action is essential with the object of reducing corporate taxation to levels more compatible with the requirements of a country engaged in promoting rapid industrialisation in competition with other countries for the limited capital resources of the world.

Export Policy.—Bengal Chamber of Commerce and Industry. The Associated Chambers of Commerce of India, while supporting many of the recommendations in the recent report of the Export Promotion Committee, urge that the need to restore the country's external balance of payments is all important; that all exportable commodities and the industries concerned with their production should be regarded primarily as earners of foreign exchange, and other considerations and in particular the contribution made by such commodities to internal revenue should be subordinate to this essential requirement.

Labour Relations.—Punjab and Delhi Chamber of Commerce. The Associated Chambers of Commerce of India, while reiterating their faith in collective bargaining as an essential element in satisfactory employer-employee relations, consider that the community of interest of both parties in increasingly efficient production demands continuous improvement in the direct relations between management and all categories of employees. They therefore commend and strongly support the lead given by the Government of India in the various proposals made in recent tripartite discussions calculated to bring employers and employees closer together, namely:

(a) the encouragement of the movement for workers' education and training for greater efficiency in industry;

(b) the improvement of industrial relations through the observance, both in the letter and in the spirit, of the recently evolved code of discipline;

(c) the introduction on a voluntary and experimental basis of workers' participation in suitable aspects of managements;

and suggest that constructive action should be taken to develop these conceptions by employers, Governments and the trade unions concerned.

The Metric System.—Bengal Chamber of Commerce and Industry. In view of the many problems involved in the introduction of the metric system of weights and measures, particularly for such industries as the steel manufacturing and fabricating industries, the Associated Chambers of Commerce of India note with satisfaction that the Government of India is proceeding cautiously in the matter and they trust that for every stage in the change-over a suitable programme will be framed in consultation with all the interests concerned.

DISCUSSION ON ASSOCHAM RESOLUTIONS

THE resolutions passed at the annual general meeting of the Associated Chambers of Commerce on 14th and 16th December reflect the major economic worries of the year. The diversity of these worries is indicated by the fact that two of the resolutions relate to taxation, and the remaining five to transport, food, exports, labour relations and the metric system.

Introducing the resolution on the need for stability in taxation, Mr. G. N. Noel-Tod (Madras Chamber) welcomed the Central Finance Minister's assurance that the pattern of taxation had now been fixed, and that future adjustments would only be marginal. But he pointed out that this was by no means the case with taxation imposed by State Governments. Apart from the large variety of sales taxes, some States imposed a cess on sugarcane and Kerala had an agricultural income tax. While the States' need to raise revenue was recognised, it was essential that early action should be taken to exempt from sales tax or other indirect taxation by States the products of all industries other than those making non-essential consumer goods. Such sales taxes could be replaced by a Central excise which would be refundable in case of export. It was necessary to exempt from sales tax all imports of essential commodities. Seconding the resolution, Mr. K. M. Wilcox (Upper India Chamber) urged greater co-ordination between the Central and State Governments in framing their taxation policies. He also felt that greater uniformity was necessary in the taxes imposed by local authorities.

Moving the resolution on ports and transport, Mr. E. Parker (Bombay Chamber) spoke of the serious difficulties resulting from the congestion in Indian ports earlier this year. He felt that the difficulties would recur when imports returned to their normal levels and as shipments of foodgrains increased next year. Measures necessary to improve the working of Bombay port included the provision of more dredgers and ship repair facilities. Referring to road transport, Mr. Parker urged the need for better roads. Taxes on road transport should be reduced and made more uniform, the proposed Inter-State Transport Commission should be set up soon, and an assurance should be given that there will be no nationalisation until at least 1971. Seconding the resolution, Mr. E. J. M. Leigh (Madras Chamber) mentioned the inadequacy of railway facilities, and urged the expansion of coastal shipping.

Introducing the resolution on food policy, Mr. J. K. Srivastava (Upper India Chamber) emphasised that no programme of industrialisation could succeed without a programme for a large increase in agricultural production. The high level of investment expenditure had led to a general increase in the demand for foodgrains. As a result, prices had risen sharply. Extensive cultivation alone would not solve the food problem and the emphasis should be on intensive cultivation. Mr. I. P. Anand (Punjab and Delhi Chamber), seconding the resolution, urged that agriculture should follow the same scientific and rational practices which were adopted in factories to increase production.

Mr. J. D. K. Brown (Bengal Chamber) moved the resolution on corporate taxation. He pointed out that because taxation was too heavy, companies could not provide finance for the ultimate replacement of fixed assets and found it more difficult to carry the same volume of stocks at rising prices. Taxation would have to be reduced if sustained progress was to be made in the corporate sector and if damage to a number of established industries was to be avoided. Seconding the resolution, Mr. L. D. Mudie (Bombay Chamber) criticised the wealth tax, especially in its application to companies. He also felt that the rules framed by the Government to implement the compulsory deposit scheme were defective.

Moving the resolution on export policy, Mr. D. F. Macmillan (Bengal Chamber) said that there were indications of a trade recession in the United States and a general fall in world commodity prices. If these trends continued, it would be difficult for India to expand and diversify her export trade. Internal revenue considerations should, therefore, be given less importance where export industries or exportable commodities were concerned. The resolution was seconded by the Madras Chamber.

Moving the resolution on labour relations, Mr. F. C. Badhwar (Punjab and Delhi Chamber) welcomed the tripartite agreement between managements, labour and the Government on adopting a voluntary code of industrial discipline. He hoped that the Government would take effective steps to see that the code is obeyed in practice. In his view the proposal for administrative tribunals should not involve a restriction of the jurisdiction of law courts. Seconding the resolution Mr H. L. Murray (Bombay Chamber) pointed to the political rivalries which govern trade union activities in India.

Mr H. M. L. Williams (Bengal Chamber), moving the resolution on the metric system, complimented the Government on the realistic manner in which it was promoting its use. He considered it fortunate that the decision to change over to metric standards had been taken now, instead of being deferred for another 20 years, when the cost and complications would have been much greater. The resolution was seconded by the Bombay Chamber.

New Delhi

INDUSTRIAL PROJECTS HELD UP BY FOREIGN EXCHANGE SHORTAGE

FERTILISER PRODUCTION PERMITTED IN PRIVATE SECTOR

(FROM OUR NEW DELHI CORRESPONDENT)

SOME 17 industrial projects, almost fully scrutinised, are having to wait until foreign exchange is available for their implementation. They are aluminium, tungsten carbide and alloy and tool steels in the metallurgical industries sector; synthetic rubber, newsprint from bagasse, cellulose pulp, organic intermediates, raw film, sulphur and sulphuric acid from pyrites, phosphorus and basic refractories in the industrial materials sector; and heavy foundry and forge, heavy plate and vessels, heavy machines, heavy machine tools manufacture, mining machinery and heavy structurals among the engineering schemes.

On the aluminium project, preliminary reports from the Italian firm, Montecatini, the U.S. firm, Reynolds and the French firm, Fochiney are under examination by the Government. Deferred payment terms will be negotiated. In the scheme to manufacture synthetic rubber, Firestone, Lummus and Montecatinis have shown interest. They have submitted project reports, all of which are under scrutiny. For the production of organic intermediates, talks for deferred payment terms are in progress with the German firm, Bayer. The Government, it is expected, will also approach Russia for credits to set up a plant for the manufacture of intermediates for the drug industry. The Government has entered into an agreement with Russia for the establishment of a heavy machine building factory and a coalmining machinery unit. Negotiations are still in progress for obtaining credit for the projected forge-foundry. Some Amrican firms have been invited for technical collaboration in the manufacture of streptomycin at the Hindustan antibiotics factory in Pimpri. The installed capacity of this factory, which is now producing penicillin, will have been expanded by nearly 60 percent by the beginning of next year. The streptomycin scheme envisages the manufacture of 15,000 to 20,000 kgs. The capital cost of the scheme is placed at Rs. 1.12 crores of which, Rs. 44 lakhs will have to be spent abroad.

A scheme for doubling the capacity of the D.D.T. factory in Delhi is under way. The U.N.I.C.E.F. has agreed to supply the requisite plant and equipment. After this expansion, the factory, it is expected, will produce four tons of technical D.D.T. a day. Another D.D.T. factory with an annual capacity of 1,400 tons of technical D.D.T. is being set up in Alwaye in Kerala State. The factory, it is expected, will go into production by the middle of 1958.

Sindri's expansion scheme is based on the utilisation of the entire quantity of 10 million cubic feet of coke oven gas now produced from the existing plant. On its completion, 70 tons of urea and 400 tons of double salt a day, or 60 percent more than the factory's present output, will be produced. With the announcement by the Government that the manufacture of fertilisers can also be undertaken in the private sector, the proposal to utilise gases from the oil refineries in Bombay for the production of fertilisers is being revived.

Expansion of Glaxo Laboratories

Proposals for further expansion of the Glaxo Laboratories' plant have been approved by the Government. The condition is that the additional plant should be financed by credit over a period of years. The company, it may be recalled, began with the manufacture of baby foods. But it has since extended its activities to a wide range of health foods, antibiotics, pharmaceuticals and veterinary products.

U.S. Credit to National Rayon Corporation

The U.S. Import-Export Bank, it is reported, has offered a credit of $1.8 million to the National Rayon Corporation, Bombay for the expansion of its plant. The terms of the offer are being examined.

No Auctions for Wool

The proposal to set up a wool auction market in India has been shelved, at least for the present. The Wool Development Council, which examined this matter in detail, is of the opinion that the quantity of wool available for export is not sufficient to attract foreign buyers to India. It is also feared that the setting up of an auction market in India might do more harm than good.

Textile Machinery for Deferred Payment

Negotiations are in progress for the import of textile machinery from Czechoslovakia. Some details are also available of the agreements recently concluded for the import of textile machinery from East Germany and Japan. The agreement with East Germany provides for deferred payment for four years with the provision that the sale proceeds will be utilised to purchase Indian goods. The Indo-Japanese agreement provides for payment after five years, to be made directly to Japanese sellers. It is an open agreement which does not stipulate any ceiling for imports. The agreement with East Germany places it at Rs. 1.2 crores. The Japanese agreement is valid for one year. Payment will be made in sterling, and the unit of payment will be in terms of yen, subject to an agreement to that effect within six months of the signing of the agreement to import machinery. Ten percent of the f.o.b. contract amount will be remitted as advance payment within 14 days after the date on which contract is signed. A further 10 percent of the value will be paid through letters of credit, confirmed irrevocable without recourse at sight and payable against presentation of the necessary shipping documents. The remaining 80 percent will be deferred, the remittances being in ten equal half-yearly instalments; the first instalment will be paid at the expiry of six months from the date of shipment. Subsequent instalments will be paid at six monthly intervals thereafter, together with interest on the amount which will be outstanding at the rate of 6 percent a year, and will be paid in advance along with each instalment. The letter of credit, which will be established through a "prime" bank within 14 days after the date of contract, will also provide for the interest amount. The following items of textile machinery can be imported under the agreement, namely, (1) blow room lines, including machine for opening and treating cotton waste, (2) carding engines, (3) drawing frames, (4) coming sets, (5) speed frames, (6) ring frames, (7) complete cotton waste spinning plant, (8) high-speed winding machines, (9) high-speed warping machines, (10) sizing machines, (11) automatic looms, (12) cloth and yarn, dyeing, bleaching, printing and finishing machinery outside the banned category, (13) silk, art silk and spun silk spinning, weaving and finishing machinery and (14) electric motors for the above machinery.

Loans to Hotels

The Government has suggested to the State Bank and to the Life Insurance Corporation that they should consider requests for loans from hotels on easy terms. Hotels have been recognised as an industry under the Industrial Finance Corporation Act Amendment Bill which was recently passed by Parliament.

Exports of Indian Sugar

About 170,000 tons of sugar have been exported so far from India, earning about Rs. 14 crores of foreign exchange. A decision to export 50,000 tons of sugar was taken by the Government in December 1956. In March this year, this ceiling was raised to 200,000 tons. The export was possible because of high world prices which the damaged beetroot crop in Europe and cane crop in Cuba had helped to bring about. The prices of the British refined sugar, which generally average around £40 f.a.s. a ton rose to £70 a ton in May 1957. The sugar prices have now come back to the normal level of £40 a ton, which will make it difficult to maintain the export of Indian sugar. According to certain estimates, exports of Indian sugar at current British prices would entail a loss of £14 a ton or about Rs. 81 a maund. To stimulate exports, however, certain rebates of the excise duty were recently announced.

Conference on Transport

At the conference on transport convened by the Federation of Indian Chambers of Commerce and Industry recently in New Delhi, in which the representatives of operators and users of different kinds of transport took part, the general consensus of opinion expressed can be summed up as follows: An efficient and well-developed transport system is a sine qua non of all progress, especially economic development. In fact, adequate transport facilities and economic development are interdependent. Production and distribution depend on transport, and transport in turn can only develop against the background of an economy which is continually moving forward.

In the context of planning in the country and the importance that has come to be rightly attached to rapid economic development through industrialisation, it is necessary that transport should move in advance of development in other spheres of the economy. Otherwise, there is a constant danger of development in other spheres being held up by bottlenecks in transport. The second five year plan has, to a large extent, recognised this. Of the total initial planned outlay of Rs. 7,200 crores both in the public and private sectors, as much as Rs. 1,534 crores has been earmarked as the outlay in transport. The fact, however, is that even after this outlay, development in other spheres might be held up due to transport shortage. This only shows the great leeway that has to be made up in terms of our current and growing needs. Even taking into consideration our limited resources—physical, financial and human—and the competing demands from other projects, substantial funds should be made available for the development of all modes of transport, particularly shipping and road transport which have suffered through neglect. It should be a duty, therefore, to see that the available resources are put to the best use to yield the optimum result and further that the existing transport capacity is used most effectively.

The conference strongly felt that the transport problems should be viewed both in the more general and technical aspects. Certain handicaps existed. One was the division of responsibilities under the federal political structure for developing various modes of transport.

Under the Constitution, the responsibility for the development of railways, shipping and ports, air-navigation and navigation on national inland waterways rests with the Central Government. For the development of roadways and road transport, however, the responsibility is divided, in as much as the Central Government is responsible for national highways and the State Governments for other roads, bridges and ferries, vehicles whether mechanically operated or not, taxes on them and on the goods carried by them. Although the Centre has concurrent jurisdiction over mechanically-operated vehicles including principles on which taxes are to be levied, the experience of the last few years indicates that this does not leave sufficient powers with the Centre to draw up a well-grounded road policy.

Normally users must have freedom of choice between different modes of transport. It is realised that when some modes of transport tend to be neglected either because their immediate contribution to a solution of transport difficulties will not be considerable or because they were neglected in the past, the freedom of choice is limited. It is necessary that an overall assessment of long-term transport requirements and the economy, efficiency and carrying potential of the different modes of transport be undertaken in the context of the resources and each encouraged to develop to the fullest extent possible. While envolving a comprehensive transport policy, considerations of economy, efficiency, security, strategy, potentiality of saving and earning foreign exchange and international obligations should all be given due importance.

Bearing in mind the interdependence of transport and economic development generally and realising the need to formulate and follow priorities, the conference was of the opinion that the following measures in relation to each type of transport would subserve the objectives:

Railway Development

Railways play an important and vital rôle in the economy. It is on the railway system that the efficient functioning and growth of the economy had mainly depended in the past. The overall insufficiency of resources makes it necessary that the transport capacity of railways should be increased more by improving operational efficiency rather than by increased capital outlay. The second plan has taken a 10 to 15 percent increase in operational efficiency for granted. The railway authorities must regard this increase in efficiency as the minimum and constantly endeavour to raise the standards of efficiency and service. Towards this end, the railway administration may consider as to whether

(1) The loads of wagons and goods trains might be increased.

(2) There should be quicker movement of wagons with an intensive drive to reduce the detentions particularly in the marshalling yards and junctions. (It has been complained that wagons are unduly held up in marshalling yards, junctions and transhipment points).

(3) The facilities available at break-of-gauge and transhipment points be reviewed so as to provide better equipment at these points.

(4) Where there is acute congestion in certain sections, to divert traffic especially export traffic, through other routes by offering concessional rates for a limited period and by laying connecting lines, wherever necessary.

(5) During the slack season the railways should try to move their requirements of coal and other stores and stack them at convenient depôts. Coal for private consumers also may be similarly transported in consultation with them.

(6) Advance intimation of the arrival of wagons and empties will be helpful to the users in planning their loading and unloading thus minimising detention of wagons.

(7) The security arrangements for the protection of railway goods and goods carried by the railways should be tightened.

(8) The responsibilities of the railways as public carriers should be made more specific than now. (Claims against loss of goods in transit are many and apart from the loss to the railway administration put the users also to loss and inconvenience).

(9) The procedure for the settlement of claims should be simple and speedy. The amount of compensation offered is so meagre and delayed that the parties are, in some cases, compelled to have recourse to normal judicial proceedings. The attitude of the Claims Administration should be as helpful as possible with a view to assisting those who have been already put to loss and inconvenience.

(10) More special type wagons should be built to expedite movement of oversized and heavy consignments and more tank wagons be also added for speedy movement of oils, acids, etcetera.

(11) Wagon rates should be extended to as many commodities as possible.

The users of railways must also co-operate to the fullest extent with the administration in the matter of speeding up the turnround of wagons.

Road Transport

Road transport is intimately connected with the economic and social life of the people. It is

STATE BANK OF INDIA'S

RUPEE TRAVELLERS

CHEQUES FOR

CARE-FREE TRAVEL

You can travel anywhere in India and outside without having to carry a large amount of cash, without being in fear of theft or of running short of money.

The State Bank's travellers cheques, issued in denominations of Rs. 100/- and Rs. 50/-, represent the ideal travel funds. They are as safe as a bank draft and are encashable anywhere, anytime.

This is one more of the services the Bank will provide from January 1958. For complete information, please ask for a copy of our illustrated booklet from the branch nearest to you, or consult your travel agent.

SISTA'S-SB-15

very flexible in that a more individualised type of service can be rendered. The handicaps which road transport faces in this country arise mainly from three factors, legislative, financial and operational. In the legislative field, the Motor Vehicles Act, 1939 and the Code of Principles and Practices arising therefrom severely restrict the activities of road transport. Financially, the cumulative burden of taxes, direct and indirect, levied by the Centre and State Governments and by local bodies, has abnormally raised the cost of operation. The operational restrictions pertain mainly to restrictions on routes, distances and laden weight. The Motor Vehicles Act has been amended recently and there is a provision to set up an Inter-State Transport Commission for developing, co-ordinating and regulating inter-State traffic. The All-India Conference of State Transport Commissioners and Controllers held in Mussoorie recently has made a number of suggestions aimed at encouraging the development of road transport. The main suggestions are :

(1) a moratorium on nationalisation of goods transport until the end of the third five year plan. This will provide security for private operators and help them to speed up expansion of road transport.

(2) no restriction on movement of goods carriers within a State and liberalised movement on inter-State routes.

(3) free issue of permits for operation within a State. A target of at least 50 percent increase in the number of vehicles operating at present has been envisaged.

(4) levy of sales tax on motor vehicles, spare parts and fuel by the Union Government and distribution of the same to the States on an agreed basis. The State Governments should levy only one consolidated tax on motor vehicles and may give subvention to local bodies in place of the octroi, wheel tax, etcetera, collected by them at present.

(5) appointment of a sub-committee to prepare a model administrative set-up for the transport departments of State Governments.

(6) at least a 50 percent increase in the number of public carriers during the next three years. To achieve this expansion steps such as the formation of viable units, liberalisation of the grant of permits and suspension of the Code of Principles for a period of five years have been emphasised.

These suggestions, as also the setting up of the Inter-State Transport Commission, should be implemented forthwith. In addition, this conference has suggested :

(a) The whole system of national highways should be completed expeditiously by providing the missing links and the bridges.

(b) Since a 50 percent expansion in the existing fleet of public carriers comes to only some 60,000 vehicles and this is considered insufficient, all encouragement and facilities be given to automobile manufacturers to step up their manufacturing programmes. The buyers of vehicles also be given adequate credit facilities by the banks.

(c) All restrictions on inter-State and inter-regional movement of vehicles, should be removed as early as possible by State Governments.

(d) Roads and bridges which are in a bad condition result in accidents and higher operational costs. They should be improved and strengthened appropriately to permit movement of heavier traffic and to enable relaxation in the restrictions on laden weights.

(e) Laden weight rates be revised and fixed in close consultation with manufacturers and assemblers.

(f) Truck-trailer combinations be actively encouraged subject to adequate safety devices, etcetera.

(g) The scheme of motor vehicle taxation be rationalised and a ceiling of 75 percent of the Madras rate be made the maximum. There should not be any other levy by the States or by the local bodies either on intra-State or inter-State traffic.

(h) To encourage tourist traffic by road the permits for tourist coaches, as contemplated in the amended Motor Vehicles Act, should be granted on all-India basis.

Shipping Target

The target of 900,000 g.r.t. has been laid down for shipping in the second five year plan. The tonnage actually in operation on 31st March, 1956, was 502,903. Seventeen ships were under construction on that date. Some of them have been delivered. Others will be delivered by the middle of 1958. The target of 600,000 g.r.t. laid down in the first plan will then be achieved. Rs. 37 crores has been provided for shipping in the second plan. Commitments for light coastal ships and 20 overseas vessels were made in the first year. That represented tonnage to the extent of about 170,000 g.r.t. The entire sum of Rs. 37 crores has already been spent for meeting the cost of these fresh orders. Including the replacement of 90,000 g.r.t. of old ships, India will have to put orders for the purchase or construction of about 210,000 g.r.t. to reach the target of 900,000 g.r.t. by March 1961.

The volume of cargo carried in the overseas trades in 1955-56 was about 18 million tons. It is estimated that about 24 million tons will be carried in that trade by 1960. If the negotiations for the export of ores to Japan materialise, that volume will go up to 30 million tons a year. Both the Planning Commission and the Transport Ministry want Indian ships to carry at least 15 percent of the cargo in overseas trade. Even if the lower figure of 24 million tons is taken, Indian ships will have to carry about 3.6 million deadweight tons every year in international waters. When all the ships under orders are delivered, the tonnage of overseas vessels will reach only 490,000 g.r.t. The tonnage required to carry 3.6 million tons will be 850,000 g.r.t. There will, therefore, be a shortage of about 360,000 tons for carrying 15 percent of the overseas trade.

The Transport Minister has proposed the establishment of a non-lapsable shipping development fund. If amounts are credited to this fund as suggested, it will give internal finance to the tune of Rs. 50 crores by 1961. If the amount to be repaid against the instalment of loans by the Indian shipping companies is allowed to be utilised for the acquisition of fresh tonnage, and if the amounts of depreciation and other reserves accruing year after year are earmarked for meeting the cost of new tonnage, it might bring in an extra sum of about Rs. 20 crores. It may be possible, therefore, to raise internal finance to the extent of Rs. 70 crores. Unless this amount is converted into foreign exchange, neither can order be placed for constructing a new ship, nor can finance be found for the purchase of a second-hand vessel.

Foreign Exchange Earnings

Indian ships are contributing today about Rs 8 crores to the foreign exchange pool of the country. They are expected to contribute about Rs. 10 crores next year and thereafter about Rs. 12 crores. If this amount of foreign exchange earned by ships is allowed to be utilised for acquiring additional tonnage, about Rs. 45 crores can be found as foreign exchange against Rs. 70 crores mentioned above. The balance of Rs. 25 crores may be secured by the Government either from its own resources or by negotiations with institutions abroad. It is well known that the Government has to pay a toll of about Rs. 140 crores as freight today to the foreign flag That payment is a complete drain. Additional Indian tonnage, however, will be able to pay its own cost in foreign exchange within four to five years and will thereafter make a substantial contribution to the foreign exchange resources of the country. It is, therefore, essential that the Government should give the necessary foreign exchange for the acquisition of ships, for maintaining at least the present position of Indian shipping of carrying about 6 to 7 percent of the country's overseas trade.

Coastal tonnage at the end of the first plan stood at 241.896 g.r.t. With the ships under construction at the end of the plan and with the commitments for further acquisition made in 1956, the total coastal tonnage will reach the figure of about 291,000 g.r.t. The Rail-Sea Co-ordination Committee has considered it imperative that India must have by 1959 412,000 tons of coastal vessels. As the old coastal ships are to be replaced, the additional tonnage which will be necessary will be roundabout 200,000 g.r.t. The coastal tonnage today has been more or less meeting the needs of the trade. It is estimated, however, that with the increase in the tempo of development, about 2 million more tons may have to be carried on the coasts and in the adjacent trades. If the recommendations of the Rail-Sea Co-ordination Committee are implemented, coastal vessels will have to carry a further volume of 800,000 to 1 million tons of coastal cargo. Moreover, the volume of refined oil products carried by tankers comes to about 2 million tons. As against Indian vessels carrying about 3.5 million tons of dry cargo in the coastal and adjacent trades, these coastal vessels will have to carry about 7.5 million tons of dry cargo and refined oil products by 1960-61. As the coastal trade is reserved to national ships, it will be obvious that the same will have to be carried by Indian ships. Arrangements will have, therefore, to be made for raising finance as well as foreign exchange for the acquisition of the tonnage, that is, dry cargo ships and tankers for that purpose. To conserve and to make the best use of foreign exchange is to spend it in the acquisition of ships and not to waste it by the payment of freight or charter hire, particularly when the tonnage market at present is more favourable than in the immediate past.

Government Policy

The national shipping policy which holds the field today is that cent percent of coastal trade, 75 percent of adjacent trade and 50 percent of overseas trade should be carried in Indian vessels. The Government of India should render all such financial assistance and give all financial aid for that purpose as is given by important maritime countries such as the U.S.A. and the U.K.

According to the present national policy, Indian shipping means at least 75 percent of Indian capital and cent percent of Indian management, Indian directorship and Indian control. It is quite vital from all viewpoints that no departure should oe made from this accepted policy. Shipping being an international industry, it must remain in the hands of the nationals from the viewpoints of security, strategy and the discharge of international obligations.

Indian shipping has to compete with foreign shipping and particularly with British shipping in overseas trade. It should not have, therefore, any financial burdens by way of taxation, etcetera, higher than those imposed on foreign ships. It is, therefore, necessary to put Indian shipping on an equal level with British shipping in the matter of investment allowance, income tax, capital gains tax, etcetera. The present policy of the Government in advancing loans at a low rate of interest to Indian shipping companies for acquisition of tonnage on the security of insured value of their vessels should be adhered to. Several important suggestions have been made by the Indian National Steamship Owners Association in the matter of tax relief. Both the Estimates Committee and the Export Promotion Committee have strongly recommended that the Government consider all such proposals about tax relief very sympathetically and favourably. It is quite necessary to do so to enable Indian shipping to maintain its competitive capacity and to build up its economic strength.

Official Cargo

The present system of giving Indian shipping the first preference for the carriage of Government cargo should be scrupulously followed as the volume of cargo carried on Government account has been running now into millions of tons. Whenever the Government enters into bilateral trade agreements and when Government organisations sell cargo on f.o.b. terms and purchase goods on c.i.f. terms, arrangements should be made for the carriage of goods, as a result of the agreements or the contracts, by the national ships of the contracting Governments or the contracting parties, in certain proportions. It should be made clear beyond a shadow of doubt that private enterprise will be allowed to carry the tanker trade in the future.

The Industrial Policy Resolution has laid down that there should be no discrimination between the units of shipping in the public sector and the units of shipping in the private sector. This is not being followed at present. It is essential, therefore, that the treatment accorded to the units in the public sector should be equally accorded to the units in the private sector. Complete co-ordination in the implementation of the national shipping policy should be established among the different Ministries at the Centre. In other words, the Transport Ministry should take all effective steps to ensure that fullest preference is given to Indian ships for the carriage of cargo under the ownership and control of the Government. The terms and conditions under which loans are advanced to Indian shipowners should be fully liberalised as assured by the Minister for Transport.

Development of Ports

The Planning Commission has stated that the development schemes of the major ports will require about Rs. 76 crores. The Estimates Committee has pointed out that that amount will go up to Rs 81 crores. The Planning Commission has allotted a sum of Rs 40 crores only for the execution of these schemes. It thinks that it would be possible for the major ports to raise the sum of Rs. 41 crores. The Estimates Committee has indicated that a part of this sum might be raised by the ports by raising their charges. It should not be forgotten that any rise in the wharfage and kindred charges will strongly militate against the drive for export promotion. Moreover, the surplus of all the ports during five years did not exceed the sum of Rs. 4 crores. It will, therefore, be next to impossible for the major ports to raise the sum of Rs. 41 crores by raising their charges. It is a matter, therefore, of crucial importance that other avenues should be explored for raising that finance. It is satisfactory that negotiations are being carried on for this purpose with the World Bank. Unless the schemes accepted by the Planning Commission are executed in time, the handling capacity of the ports will not increase. The necessary berthing and other facilities cannot be provided for. Congestion may not disappear as a normal occurrence, and the turnround of ships will not become quick and regular. Greatest possible importance should, therefore, be attached to the execution of these schemes.

It is considered vital in the interest of the ports as well as shipping that active steps should be taken for the following purposes :

(1) Provision of a larger number of berths for repairing ships. In the absence of an adequate number of repair berths, ships have to wait for an abnormal length of time which leads to a heavy loss, or the ships have to be repaired abroad whereby a good amount of foreign exchange is lost.

(2) The laying out of a dry dock in Visakhapatnam.

(3) Provision of such mechanical equipment as electric cranes, fork lifts, mobile cranes, floating cranes, dredgers, etcetera.

(4) Increase in berths including suitable special berths for the discharge and loading of bulk cargo.

(5) Adequate lighterage facilities including discharge points.

(6) Extension of the piece-rate system of remunerating labour at all the ports.

(7) Supply of sufficient number of railway wagons suitable for the different types of commodities to be carried.

(8) Intensive dredging programme at all ports to keep the existing berths accessible.

(9) Simplification of Customs procedure for quicker clearance of cargo.

The question of minor ports should be carefully gone into for developing them in the light of the existing circumstances and the possibility of establishing communications with the hinterland.

Inland Waterways

The efforts for developing the inland waterways of the country are to be welcomed. Sufficient data on the possibilities of such development are not available at present. It is necessary to have such data together with the results of traffic surveys and kindred matters. Without such information, it is not possible to plan for development in all its economic and other aspects. In the meantime, the present inland waterways service, for instance, between Calcutta and Assam, Calcutta and Bihar, etcetera, should be maintained in efficient condition in the interests of the country.

longevity

Pipe mains conveying water and distributing gas, providing sanitary services and carrying oil, are the lifelines of civilisation.
Today the Cast Iron Pipe, with Spigot and Socket Joints, provides the most widely used medium for the transmission of water and gas.

U.K. TRADE GAP FOR NOVEMBER NARROWS

BUOYANT TREND IN EXPORTS TO DOLLAR MARKETS

(FROM OUR LONDON CORRESPONDENT)

THOUGH a single month's figures, whether they be good or bad, are an inadequate guide to trade trends, it is difficult not to entertain some cautious optimism at the situation which is disclosed by the Board of Trade's provisional estimates of overseas trading in November. Exports at £286.9 million were £15 million better than in October, whereas imports at £320 million showed a sharp drop of £33 million. For the first 11 months of 1957, the value of exports is 4½ percent higher than for the same period in 1956 and that for imports is 5 percent lower. The trade gap for November—the excess of imports over exports—narrowed by £48 million to only £22.1 million, which is the smallest for a normal month's trading for seven years. The figures for October 1954, and November 1956, it will be remembered, were affected by the dock strike and the Suez Canal closure, respectively, to produce abnormally low results. It is also encouraging to find that exports to dollar markets continue their buoyant trend. To north America sales reached £38.1 million in November, against £35.4 million in October, with the United States and Canada each taking £1.5 million more. The Chancellor of the Exchequer was able to quote these figures when addressing the National Union of Manufacturers as one of several indications that the response to the measures introduced by the Government on 19th September had been "by no means discouraging." Mr. Thorneycroft went out of his way to emphasise, however, that foreign opinion, though it is no longer unfavourable to sterling, is not yet prepared to give a vote of complete confidence in the country's ability to check inflation. At the same time, millions at home are sick of rising prices and it is time "that a combination of increased efficiency and lower import costs" were reflected in lower prices, which is "the biggest contribution any one of you can make to the national economy at the present moment."

The Chancellor and the Prime Minister have been making appeals to both sides of industry to exercise moderation so as to break the wage-price spiral, for it is appreciated that the next few months will be critical and, as Mr. Thorneycroft put it, "much depends on the industrial negotiations which lie ahead." These negotiations, or decisions on them, are now imminent, and it is reassuring to find a number of trade union leaders indicating their readiness to co-operate in combating inflation provided the Government takes measures to keep down living costs and expand output. Furthermore, the Economic Committee of the T.U.C. has finally decided to recommend to the General Council to accept the invitation to give evidence before the Cohen Committee on Prices, Income and Productivity, and there is a possibility that the whole atmosphere of wage negotiations affecting Government employees may be changed as a result of an award just made by the Civil Service Arbitration Tribunal. A change for the better in employer-employee relations could well prove a solution to most of the economic troubles with which Britain is faced.

Free Trade Possibilities

There has been so much muddled thinking on the advisability of the United Kingdom joining the proposed European free trade area that it is probably a good thing that there should be an objective survey of the whole question to serve as a useful guide. This has been prepared by the Economist Intelligence Unit Ltd., after research both in the United Kingdom and on the Continent, at the request of the Britain and Europe Fund, sponsored by leading bankers, trade union leaders, industrialists and economists. The authors state their firm conviction that this country's interests would be damaged if it remained outside. Although economic success or failure depends primarily on Britain's own efforts to deal with her own problems, these would be easier to deal with as a member of the free trade area and new possibilities of development would be opened which would otherwise be denied to her. They foresee a Europe in which a free trade area might function by 1970 with a population of nearly 255 million and a gross national product of some £113,000 million, or about 55 percent higher than in 1955. Only a handful of industries would be likely to produce less or employ fewer people if there was a free trade area; most would produce more.

This survey examines such criticism as have been advanced against the plan and rejects most of them. Those industries likely to gain are motor vehicles, chemicals, wool, electrical engineering, general engineering, rubber manufacturers, steel, hosiery, clothing non-ferrous metals, metal manufacturers, aircraft, shipbuilding, oil refining, building materials, glass, scientific instruments and sports goods. On the other hand, the industries such as cotton, rayon, paper, leather, watches and clocks, footwear and toys are all likely to lose, while railway engineering, jute manufacturers and furniture are likely to be little affected. Something like 70 percent of British industry stands to gain and only a very small percentage to lose, for among the latter adjustment or specialisation might offset the disadvantages. It should be possible also the report Britain and Europe adds, to provide a better market in the United Kingdom for certain Continental agricultural products while providing the British consumer with cheaper food and at the same time safeguarding the interests of the Commonwealth.

Latest Worry of Lancashire

It will be noticed that Lancashire figures among the "losers" so far as the European free trade area is concerned. In view of the contraction which, it is felt, will at that stage be inevitable, a plea has been put forth for the development of alternative industries in the area to absorb both labour and factory capacity. Meantime, however, it is facing a new threat in the field of grey cloth imports which is to be shortly discussed in the House of Commons. The Government is to be asked by the member for Clitheroe to impose an anti-dumping duty on that variety now being imported from China "in view of the increasing quantities being offered at cost-paid prices 6d below those of efficient producers in Lancashire." Mr. Richard Fort, the M.P. in question, who is also Secretary of the Conservative Members Textile Sub-Cmmittee, claims that in the second quarter of this year something like 4 million square yards of grey cloth had been imported from China and that about half had been retained in this country. He sees no reason why Britain should help Communist China at the expense of the Lancashire textile industry, and suspects that China is subsidising her exports of cotton goods in order to destroy the Lancashire industry.

The Board of Trade states that the value of textile yarns and manufactures imported into this country from China between January and October of this year was £1,861,000. and that the highest imports took place in October. A further complaint from Lancashire relates to the fact that some of this Chinese cloth goes to Hongkong, is further processed there and made up into garments which are then exported to Britain duty-free under an "Empire" label.

End of the B.I.F.

It looks as though the 1957 British Industries Fair, held only at Castle Bromwich, Birmingham, after being held simultaneously both there and in London for many years, will be the last of its kind. There was insufficient support from industry this year to hold the London section. At the request of the President of the Board of Trade, the Federation of British Industries carried out an enquiry among 109 trade associations whose members are concerned with trade fairs as to the future of the B.I.F. The Birmingham Chamber of Commerce, organisers of the Castle Bromwich section, had indicated that there would be no fair in 1958. The result of the enquiry certainly dooms the B.I.F., for only two associations showed any decided preference for general fairs while 105 favoured specialised fairs and a substantial number indicated that they would like to see the scope of the latter type widened sufficiently to allow for the grouping of the products of allied industries. Opinion was about equally divided as to whether specialised fairs should be purely national or international, which more or less corresponds with what happens in the case of the 60 specialised fairs held in the United Kingdom each year at present. The Federation of British Industries now proposes to consider what is required to give specialised fairs the modern features and facilities they need, and a further enquiry is to be made into this aspect of the subject.

British Interests in Indonesia

British business circles are concerned over the effect of the recent developments in Indonesia on British interests in that country. Whatever the outcome of the troubles may be, and even if Dutch nationals are allowed to continue to work there, it is felt that those interests will be seriously affected. The British stake in Indonesia is estimated at about £150 million, of which about one-third is in rubber estates which, with the smaller number of American-owned estates, are responsible for about one-third of the country's estates-grown rubber output of around 240,000 tons. It is estimated that British business interests are staffed up to 50 percent with Dutchmen, and if all of them are to be evacuated suddenly the continuation of work and production will be well-nigh impossible. British concerns also account for about 25 percent of the Indonesian tea output. Other major interests include the British American Tobacco Company and the Royal Dutch "Shell" Group. The London insurance market is worried over the reported seizure of Dutch ships in Indonesian harbours. These are reported to be worth about £12 million, of which some £4½ million is insured in the London market. The reference here is to the small ships belonging to the inter-island service. Underwriters for the present are assuming that the ships cannot be regarded as a total loss.

Brevities

Sir Stephen Gibson has been elected a director of the Chartered Bank from 1st January.

Sir Leonard Paton presided at the annual meeting last week of Harrisons and Crosfield for the first time after the retirement, as chairman, of Sir Eric Miller, who has been elected Life President of the company.

Mawchi Mines, the tin and wolfram producer, reports a loss for the year ended 31st March of £115,723, against a deficit in the previous year of £23,666. Although the joint venture agreement with the Burmese Government has not yet been formally signed the latter has made a further advance of £37,500 to enable the mine to continue in production until output can be increased beyond the break-even level by the arrival of British miners. The mill is now capable of dealing with the prewar production rate of over 100,000 tons of ore a year.

The Iron and Steel Board announces that steel production in 1957 is expected to reach about 21.7 million tons compared with the estimate of 22.3 million tons of possible production made at the start of the year. Output last year was 20.7 million tons. Causes contributing to the shortfall of 600,000 tons are said to include a drop in demand for tinplate, running down of stocks, delay in bringing new finishing equipment into operation, and the strike in the engineerig industry in the spring.

Serving Industry—which Serves Mankind

1901—the birth of Monsanto starting with practically sweet nothing—the manufacture of a *single* chemical—Saccharin. Today, Monsanto ranks among the greatest names in chemicals and plastics, serving industry which serves mankind. Today—hundreds of industries rely on Monsanto: Agriculture—Automotive—Aviation—Beverages—Ceramics—Chemical Processing—Cosmetics, Perfumes—Dental—Dyeing—Electrical—Foods—Insecticides—Leather Tanning—Lumber—Machinery—Mining—Packaging—Paint, Varnish, Lacquer—Petroleum—Pharmaceutical—Pulp, Paper—Plastics—Printing Ink—Radio—Rayon—Refrigeration—Rubber—Soaps and Detergents—Textiles.

To those of you who are concerned with any operation in any of these industries, we extend a personal invitation—"Come and consult us". We shall help you increase production... improve products... decrease operating costs... and increase your sales.

REACTION TO TEXTILE TAXATION CHANGES

IMPROVEMENT IN PIECEGOODS OFFTAKE LIKELY

(FROM A BOMBAY CORRESPONDENT)

TEXTILE circles here have not been greatly cheered by the announcement of additional excise duties to replace the sales taxes on cloth. Commenting on the changes, they point out that although a measure of relief has been provided by a reduction in the excise duty on medium cloth, the benefit has been more than offset by the imposition of a larger burden on the industry as a sequel to the replacement of the sales tax by the additional excise duty. The redeeming feature is that the offtake of cotton piecegoods is likely to pick up because of the removal of the sales tax. The laws for the latter in various States had come in the way of the freer movement of goods from producing to consuming areas. It is now felt that the offtake of cloth will improve and help reduce the heavy stocks lying with the industry and trade. As a result of the reduction in the duty on medium cloth. trade circles believe that the industry will benefit to the extent of some Rs. 10 crores. But they add that the levy of additional duty on the different categories of cloth will impose a burden of Rs. 22 crores on the industry.

While the Government will collect the duty from the industry, the ability of mills to pass it on to the trade will depend on the eventual course of business. It is pointed out that if the offtake improves the trade will be able to absorb the new levies. But if market conditions remain sluggish, it is feared the industry may have to absorb part of the fresh burden. In view of the uneven incidence of the new duty, the production of various categories of cloth is likely to undergo a change. As the burden is heavier on the superfine varieties, mills are expected to cut the output of such qualities and switch to other categories. In view of the somewhat better prospects for the medium variety, it is anticipated that the recent increase in the output of coarse goods will cease while the production of medium qualities will rise.

Shipping Development

Mr. Vasanth J. Sheth, president of the Indian National Steamship Owners Association, has made a strong plea for the reduction of taxation imposed on the shipping industry. He has made a pointed reference to the slow pace at which India is expanding her tonnage. He predicts that "it will be decades before even the target of 2 million tons placed before the country by the Government will be reached" He urges the Government to tackle the question of port congestion "on a war footing."

Good Year for Malabar Steamship

Mr. Pratapsingh Shoorji Vallabhdas, chairman of the board of directors of the Malabar Steamship Company Ltd., Bombay, has told shareholders at the company's annual general meeting here, called to discuss its balance-sheet and profit and loss account for the year ended 31st March, 1957, that the value of their fleet has increased from Rs. 88,44.921 to Rs. 1,71,75.659. while freight earnings at Rs. 89,08,876 have registered an increase of Rs. 30.85,538 over the previous year. The net profit earned by the company has totalled Rs. 22,25,645.

Need for Industrial Engineers

The need for industrial engineers has been stressed here by Dr. R. F. Bruckart, of the Institute of Technology, Kharagpur. Speaking on the subject, "Industrial engineering—a challenge and an opportunity," at a joint meeting of the Institute of Industrial Engineers (India), the Bombay Management Association, and the Institution of Production Engineers, Dr. Bruckart has referred to the meagre output of industrial engineers from technical institutions and has emphasised the need for more industrial engineers to study the latest techniques. By way of illustration, he has cited some interesting statistics. In the period between 1940 and 1950, the number of industrial engineers graduating in the United States rose from 12,000 to 46.700, an increase of 376 percent. The U.S. institutes are turning out 1.200 industrial engineering graduates a year and they are still insufficient to meet the needs of industry there.

Recovery in Cotton

The cotton market staged a good recovery, Jarilla March 1958 contract having improved by Rs. 18 to Rs. 683 a candy on renewed support from Akola, Ahmedabad and other upcountry centres. The improvement was attributed to the decision of the Central Government to reduce the excise duty on medium cloth by half an anna a yard. But traders remained puzzled about the future course of cotton prices. Reports from upcountry centres indicate that first pickings in the Vijay and Surti tracts are not satisfactory concerning both grade and staple. Shippers' demand for exportable varieties has also been low and prices have declined further. The daily business put through was nominal around 10.000 bales. In the spot market, demand for domestic styles showed some improvement. Prices improved by about Rs. 10 a candy Spinners showed interest in 197/3 from Khandesh and Berar, 320F and Vijay and Wagad growths. There was no demand for Bengal and other short-staple varieties because shippers were not able to put through any fresh business. In foreign cottons, there was fairly good interest in Sudans and a good quantity was bought by spinners for December through May shipment, subject to import licences.

The Central Government has decided to allow an import quota of 30,000 bales of cotton staple length of 1 3/16 in. and above valid for soft currency areas. The decision, it is stated, may help the Sudan, whose representatives have been discussing in Bombay and Delhi how to compete in the supply of cotton of this staple length. Cotton importers here have suggested to New Delhi that Egyptian cotton can be secured at lower rates if payment is made in sterling. Egypt gives a large discount on payment in that currency. But it is doubted whether New Delhi will allow payment for Egyptian cotton in sterling.

Improvement in Oilseeds

The oilseeds market showed signs of recovery. Though intermittent offerings caused an irregular price pattern, prices in almost all sections made considerable headway. Castorseed, however, remained dull due to the continued absence of overseas enquiries. Groundnut took the lead in the recovery. Active buying by crushers in the ready position to the tune of some 2,000 tons, the subsidence of selling pressure from the interior and aggressive buying by Saurashtra interests were stimulating factors. Linseed ruled firm on persistent overseas enquiries Good business in linseed oil was done with the U.K. at £118, while Australia bought 450 tons at £120. Reports of the charter of an oil tanker for the export of 2,000 tons aided sentiment. There was, therefore, keen buying by exporters and shippers in oil. Recovery in cottonseed was caused by technical considerations. The recent low prices brought forth short-covering, while the recovery in ready cotton acted as a contributory factor.

Groundnut February opened at Rs. 157, moved to Rs. 160.12 and eventually closed at Rs 162.12. The net rise over the past week was Rs. 5.12. Bold ready steadied from Rs. 32 to Rs. 32.50. Coromandel and Khandesh quality moved up from Rs 32 62 to Rs. 33.37 and Rs. 32.87 to Rs. 34. respectively. Railway receipts went up from Rs. 17.75 to Rs. 18.37, while ex-mill advanced from Rs 17.87 to Rs. 18.44. Castorseed May commenced the week at Rs. 143, climbed to Rs. 144 and dropped to Rs. 142.50. The closing quotation was Rs 146. Ready Madras moved from Rs. 30 to Rs. 30 25, while ready Kanpur went from Rs. 28.50 to Rs. 29.25 and then eased to Rs 28 75. Castor oil commercial advanced from Rs. 15.25 and closed at Rs. 15 Oil B.S.S. dropped from Rs 16.62 to Rs. 16.25. Linseed May started the week at Rs. 31.87. touched Rs. 32.50 and closed at Rs 32 19. Bold ready moved up from Rs. 31 to Rs. 31.25. Linseed oil went from Rs 16 81 to Rs 17 37. Cottonseed February spurted from Rs. 93.50 to Rs. 101 and finally closed at Rs. 99.75.

Limited Demand for Piecegoods

The demand for cotton piecegoods remained poor but trading activity was expected to improve appreciably soon. Shippers reported only stray enquiries from foreign countries. Fresh demand emanated largely from East Africa, the United Kingdom and Ethiopia. Hopes that Burma will be issuing import licences for cloth have not yet materialised. There are reports that India may not be able to ship textiles to Burma on any significant scale for another two months.

This may shrink **This will not shrink**

That's why people look for 'Sanforized' on the label!

The Trade Mark 'Sanforized' inspires such confidence that people all over the world pick fabrics trade marked 'Sanforized' — knowing they bear this assurance: *This garment will not shrink out of fit—even after many, many washings!*

It adds value and prestige to your own label—enables you to sell with confidence—and assures the public that you take trouble to give them value.

People rely on you to serve them well—so serve them cloth labelled 'Sanforized'.

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements'

For information: 'Sanforized' Service, 95, Marine Drive, Bombay 2

"CAPITAL" STOCKS AND SHARES INDEX*

The *Capital* Stocks and Shares Index (base: 1939) has now been brought up to October 1957. Compared with September, the October indices for Government securities and preference shares indicate drops of 0.5 points and 2.6 points, respectively.

There were increases in cottons 2.9 points, coals 8.6 points, jutes 5.5 points, minings and oils 6.8 points, cements 2.6 points, engineerings 5.7 points, teas 7.2 points, sugars 17.3 points and miscellaneous 3.6 points, while decreases occurred in banks 1.8 points and papers 5.9 points.

Correlating all the factors, the *Capital* variable yield securities index advanced by 5.6 points during October 1957.

Jute

JUTE GOODS MARKETS DULL AND IDLE

BIG FALL IN U. S. BURLAP CONSUMPTION

THERE appears to have been a recession in jute goods during the past few weeks; markets in general have been dull and idle. Little or no business has been reported either with overseas consumers, or local interests. The general trend of events is illustrated by the latest figures for American burlap consumption and stocks. At a time when it is generally expected U.S. consumption should be at its highest comes the news that during November it dropped to 63 million yards, *i.e.* 12 million yards less than the previous month and 18 million yards less than the corresponding month last year. Figures for the period January-November 1957 now amount to 760 million yards, for an average of 69 million yards a month against an average of 73.3 million yards during the same period in 1956. With such a large drop in consumption it would be reasonable to expect an equally large increase in stocks, but these have only gone up by 5 million yards to 224 million yards—indicating that America has already curtailed her buying programme abroad to meet the reduced consumption. At this time last year stocks were 44 million yards more than they are now—that is, equal to about three weeks' consumption.

It is difficult to assess the reasons for the change of policy, but it is obvious that substitutes and bulk handling must take a large share of the blame. Another aspect is the versatility of jute bags themselves; one of the main selling features of jute goods is the fact that they can be used more than once. It is perhaps because consumers are now taking the maximum advantage of these properties, and *extending the uses and life of current* supplies that the present slump in replacement orders has occurred. Another disquieting item of news as far as Calcutta is concerned comes from Burma. It is reported that Burma's first jute mill is now in production in Rangoon. The mill incorporates all modern devices, and when working properly will rank as one of the most modern jute mills in the East. At the present moment, only 250 looms of the scheduled 520 are working. But it is anticipated that the full complement, including 12 circular looms, will be in full production very soon. A second mill of similar dimensions is also under consideration. Although, at the present *rate of production* it will be some time before Burma could become self-sufficient in jute goods, current developments mean the end of India's monopoly in this market, and in the long run may close an important outlet for her export *trade*.

New Low Levels

Calcutta markets reacted strongly to the lack of business last week, and sacking rates at one period recorded a new low level of Rs. 104.80 for B. Twills. This meant a fall of nearly Rs. 50 a ton. The market for heavy goods was extremely weak and speculative activity only tended to emphasise this. No large orders were reported, although some shipper covering took place at the lower levels. Cornsacks were the only fabric to show any activity. Once again, interest was centred on the forward section, which continued to command a premium of about Re. 1. Small business was concluded, but it is not possible to ascertain whether this was genuine, or merely speculative buying in anticipation of demand. The latter would appear to be true as far as the hessian section is concerned. In spite of the lack of interest from overseas buyers, especially American, 9 and 11 porter fabrics, while not showing any improvement, recorded relatively small losses compared with the rest of the market. Towards the close, rates actually advanced under heavy speculative buying in hessian. A large section of the trade is still of the opinion that America's entry into the market cannot be long delayed. These elements are confident that when this takes place prices will rise. The fall in hessian rates over the week is only in the region of between Rs. 25 and Rs. 30 a ton.

In sympathy with the goods market, fibre rates slumped during the week, and only small activity was recorded. Sellers were very reserved at the *lower rates*, because, with few exceptions, upcountry prices were well above those quoted to Calcutta mills. The only fresh business reported in the agencies was covering against higher-priced contracts. Mills were not keen for business as the fall in fibre prices had not kept pace with gunnies; only on a very few fabrics was double business possible at a profit. Imports into the upcountry agencies are small, and arrivals at Cossipore during the week also dropped back. In general the raw jute sentiment is weak, with little or no business passing.

THE JUTE MARKETS

Manufactured Goods: At the opening of the goods market last Thursday, *speculative selling* pressure caused an easier sentiment to prevail. B. Twills lost 75nP to Rs. 109 for December shipment, with forward shipment at a discount of 50nP. Hessians were quiet, and 40in. 10oz. showed minor losses of between 15nP and 20nP to open at Rs. 40.35 and Rs. 40.55 for the near and forward positions respectively. Continuous speculative activity caused sacking prices to depreciate, but hessians *remained unchanged*, and during Friday even recorded a slight rise. On Saturday the publication of the U.S. burlap stock and consumption figures caused heavy bearish activity, and all fabrics lost heavily. B. Twills dropped Re. 1 in the near section to stand at Rs. 107.75, while 40in. 10oz. fell to Rs. 40.05. After the week-end the recession continued and substantial losses were recorded in all sections. By Tuesday morning, B. Twills were quoted at Rs. 106.50, and during the day, under continuous attention from speculators, a new low level of Rs. 104.80 was recorded. But towards the close this loss was recovered due to heavy buying pressure in hessians at the lower levels.

At the opening of the market on Wednesday morning quotations were as follows:

	December Rs.	Jany.-March Rs	April-June Rs.
40in. 8oz.	32.80	32.50	32.25
40in. 10oz.	39.80	39.30	40.10
B. Twills	106.50	106.25	106.25
Heavy Cees (Plain)	107.25	106.50	106.25
A. Twills	130.25	130.25	130
Liverpools	123	121.50	121.50
Cornsacks	106.50	107.25	107.25

Raw Jute: Calcutta mills showed only a limited interest in raw jute last week. Sellers were very reserved as the large price discrepancy between upcountry and local rates prevented any business at a profit. Imports upcountry continued to be small, and only in northern districts could the demand be satisfied. At the opening on Thursday last week Assam jute was quoted at Rs. 27 a maund, but by the week-end prices were 25nP lower. Small business was done almost every day, but the quantities were negligible, and in the absence of interest prices were mainly nominal. On Monday the *downward tendency continued* and Assam jute was quoted at Rs 26.50. This price prevailed until the close, with sellers reluctant to do business.

During the week Assam jute was purchased at Rs. 26.25 to Rs. 27 a maund basis bottoms for December-January shipment, and Northern at 25nP below these rates. Northern Middles alone were also done at Rs. 29 and Rs. 28.50. Small lots of Daissee changed hands at Rs. 29 to Rs 29.25 and Daissee Mesta at Rs 23.25 to Rs. 24. Desal white was done at Rs. 24.25.

In Cossipore wagon arrivals dropped to 712 last week, as against 850 during the corresponding week of last year. All arrivals found ready buyers, but there was not enough to meet the demand as a very large proportion was already against contracts. Mill representatives were keen buyers at the lower rates, which towards the close fell to about Rs. 25 a maund for garsat quality Kishenganj jute.

On Wednesday morning opening quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam	26.75	Dec.-Jan.
Northern	26.50	"
Purnea Desal	24.25	"

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Bags (Tons)	Cloth (Tons)	Total (Tons)
Hessian			
1st to 10th December, 1957	379.2	13,183.2	13,562.4
1st to 10th November, 1957	1,286.7	19,017.1	20,303.8
1st to 10th October, 1957	551.2	8,763.9	9,315.1
Sacking			
1st to 10th December, 1957	13,336.4	222.1	13,558.5
1st to 10th November, 1957	18,665.1	403.1	19,068.2
1st to 10th October, 1957	11,828.8	1,067.8	12,896.6

THE FOREIGN JUTE MARKETS

CUT IN PRICES FOR YARNS AND CLOTH

(FROM OUR DUNDEE CORRESPONDENT)

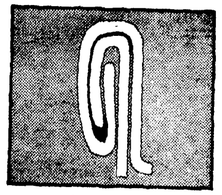
THE long-expected cut in prices for jute yarns and cloth has been approved by the accountants who look after the fixing of these, and the reduction has come into effect from 10th December. A fall of the usual £5 a ton is announced on most prices, but the fine small yarns, 4 lbs. 5 lbs and 6 lbs and also Rove are allowed to remain unchanged. The Rio yarns—J.C.2.R. and J.C.3.R. qualities—have been raised by about £10 a ton. Since the change, there has not been much fresh business passing, even though 40in. 10oz. hessians have been reduced from 12.26d to 12.18d a yard, and 8oz. from 11.32d to 11.01d while 10 por. 27in 20oz. twilled sacking is down from 24.42d to 23.78d a yard, for 12 shots and 14 por. 36in. 18oz. tarpaulin is down from 26.24d to 25.64d for 15 shots. Ordinary C.H.W. (common hessian weft) yarn is down to 15.14d from 15.72d a lb for 8 lbs and medium J.C.H. spools from 16.29d to 15.72d for 8 lbs, while 3 ply 8 lbs twist is now at 17.56d from 18.13d a lb. For 8 lbs J.C.2.R the rate is up from 20.87d to 22.02d a lb and for 8 lb J.C.3.R. from 18.58d to 19.73d. This is due to the very high rates demanded for the raw jute used to make these qualities. Sacking 24 lb weft is reduced, after being at 13.26d a lb since 21st August, to 12.69d a lb.

Raw jute has hardened by 10s or 20s a ton and the market appears to be very firm. The old excuse that imports from upcountry are very light is offered for the dearer market. Mill Firsts are now at £114. Mill Lightnings at £97, Mill Hearts at £87 and grade Hearts at £77, with good marks of Daissee-2/3 at £96 10s and grade at £89 10s. Grade Tossa-2/3 is lowest at £104 and grade Tossa-4 at £96 10s, all c.i.f. U.K., December-January. Calcutta goods have been very irregular but there is a firm undertone at 61s 3d for 40in. 10oz. and 47s 3d for 7½oz., December and also January, and 61s 6d and 47s for February-March, with B Twills at 164s 9d and 164s 3d for the respective positions of shipment, all f.o.b Calcutta. Spinners and manufacturers have *mostly curtailed production.*

a pilfer-proof package for every product!

Metal Box pilfer-proof containers and closures, individually designed for each product, are precision engineered and superbly printed. This ensures product safety, purity, and powerful sales appeal. Reputable manufacturers use them to pack:

Ghee	Breakfast foods	Vanaspati and other food oils
Butter	Cocoa	Baking powder
Evaporated and Condensed milk	Coffee	Tea
Barley	Biscuits	Honey
Glucose	Confectionery	Processed fruits and vegetables
	Cashews	



A METAL BOX PILFER-PROOF CONTAINER

MB OPEN TOP CAN

Complete pilfer-proof protection is guaranteed by double seaming both top and bottom to the can body.

This cross-section of a precision engineered double seam shows how the rubber-like compound-lining ensures air-tightness.

Only a can opener, destroying the top of the can, will open it. It cannot be reused by unscrupulous dealers to repack with spurious products.

MAINTAINING EXPORTS OF SUGAR

IMPRESSIVE RISE IN PRODUCTION

(BY A CORRESPONDENT)

IT has been said that "there are few instances on record in this country or elsewhere which can parallel the rapidity and sureness of growth of the Indian sugar industry" Within four years after the grant of protection in 1932 the industry produced enough to make the country self-sufficient. Its working during the last four years shows that it has doubled its production from 1 million tons in 1953-54 to a little over 2 million tons in 1956-57. For the first time this year India has emerged as an exporter of sizeable quantities of sugar.

The significance of this development is emphasised by the fact that only in 1954-55, the country needed to import about 600,000 tons. Earlier in 1953-54, imports were about 700,000 tons. Those large imports were necessitated by a sudden increase in internal consumption following the decontrol of sugar in 1951-52 Within a year or two, the industry has been able not only to meet the internal consumption in full, but produced a net surplus for export Considering the foreign exchange shortage, it is a welcome development. This year sugar is expected to earn about Rs 13 crores of foreign exchange. The actual export earnings of sugar for the period January-June 1957 (by which time about half the quantity had been shipped) and some of the well-established commodities are given below:

Commodity	(Value in lakhs of rupees)
Tea	49 35
Jute manufactures	46.69
Cotton manufactures ...	37.71
Manganese ore	16 60
Hides and skins (dressed) ...	11 24
Tobacco	8.35
Sugar	6 90
Vegetable oil	6 88
Iron ore	6.08
Lac	4.72
Mica	4.53
Spices	2.70

In January 1957, the Government decided to allow the export of some of the surplus sugar. Within the first ten months or so a total quantity of about 153,000 tons has been exported. During the remaining two months, another 2,000 to 3,000 tons, it is expected, will be sold abroad. Thus the total sales by the end of this year may be about 156,000 tons Against the total sales effected up to the end of November, about 145,000 tons have already been shipped to the following destinations:

Name of country	Quantity shipped (tons)
China	33,549
Malaya	19,240
Singapore	4,647
Burma	11,643
Ceylon	8,158
Iraq	13,085
Aden	8,050
Saudi Arabia	1,247
Other destinations in West Asia ...	5,645
Sudan	14,847
East Africa	24,106
U.K.	1,002
North Viet-Nam	823

World Production and Exports

Total world production of sugar is about 44 million tons a year, of which 12 million tons are exported. The net imports of white sugar of India's neighbouring countries, which may be considered as her natural markets, are about 1.2 million tons. The countrywise estimates of imports of the neighbouring countries are given below:

Name of the country	Estimated annual imports of white sugar in '000 metric tons.
Iran	210
Malaya including Singapore ...	126
Iraq	126
China (Mainland)	100
Sudan	95
Pakistan	84
Israel	77
British East Africa including Zanzibar	69
Saudi Arabia and other neighbouring territories	63
Thailand	37
Viet-Nam	32
Ceylon	32
Afghanistan	20
Aden	20
Burma	19

The quantities sold to most of these markets, as will be seen from the table, are substantial. It is only reasonable to expect that with the experience gained this year it would be possible further to step up exports to these countries. The work of sugar exports has been entrusted to the Indian Sugar Mills Association. The Government perhaps felt that in this early stage of the industry's emergence as an exporter, it would be beneficial if exports were handled by a centralised agency. That the decision was in the right direction is borne out by the results achieved. In spite of an upward world market there was formidable competition from rival producing countries and serious efforts were made to oust Indian sugar by price competition, sometimes by a cut of £10 or £20 a ton. It, therefore, required an organised effort. In spite of this stiff competition, business has been secured in a good many cases through international tenders. Besides, though absolutely new to the export market, Indian sugar has so established itself that it is not grouped among the cheaper varieties such as Brazilian or Argentine sugar, but is sold at a price about £8 to £10 higher than these varieties, and in competition with the world's best sugars which are normally sold in India's neighbouring countries, including Malaya and the Middle East.

Fund against Losses

A notable feature of this business is that it has been done on a non-profit basis, which no individual party could afford to do. The profits earned on exports during the period of high world prices have been kept in a separate fund to be utilised for export at a loss. Although most of the sales during January-July were effected on a profit basis, there were occasions when lower prices had to be quoted to secure business against international tenders where price was the only criterion. This was possible because the losses could be adjusted from profits earned on earlier sales. The world market has since come down a great deal and any sales now are possible only at a loss. The I.S.M.A. has been able to maintain sales to neighbouring markets by providing for the losses out of the earlier profits. It is not only in the case of India that sugar export business results in an overall loss This is the position with the older exporting countries as well, where losses on exports are made good by raising the internal price. The industry here, too will have to provide for a similar contingency if exports have to be carried on permanently.

Rise in Production

The following figures give an idea of the increase in production over the last four years:

Year	Production (00,000 tons)	Consumption (00,000 tons)
1953-54 ...	10.01	18 07
1954-55 ...	15.90	17 23
1955-56 ...	18 62	19 38
1956-57 ...	20 26	19.70

It will be seen that production has increased by 100 percent. In the White Paper on the Central Budget for 1957-58 it has been observed that sugar provides a notable case of a substantial increase in production among the established industries. In one year sugar output has increased by 20 7 percent compared with the increases during the same period of 9 8 percent in cement, 4.2 percent in finished steel, 3.7 percent in mill-made cloth, 2.3 percent in cotton yarn 6 4 percent in jute textiles, 4.7 percent in tanned hides and 2½ percent in coal. The achievements of the industry will be further appreciated if account is taken of the fact that almost the entire increase in production has been achieved by the existing units. In the last season, only eight new factories were working and their total production amounted to 40,000 tons. About six more factories were expected to go into production, but their installation was delayed by the Suez crisis.

The second plan production target for this industry is 2.25 million tons For achieving the target, a provision has been made for 54 new factories with a total production capacity of 600,000 tons a year. This is in addition to the extensions allowed to the existing units to the tune of about 400,000 tons. With the production of about 2 million tons already achieved from the existing units it will be seen that towards the end of the second plan period, when all the new units are expected to be in production the total output is likely to exceed the plan target by a substantial margin In licensing new units the potentiality of the existing units to increase this production has been under-estimated The expansion of the existing units could be accomplished more cheaply and quickly and the requirements of foreign exchange would have been very much less. Again there seems to be considerable room for improved coordination between the programme for cane development and that for sugar production in the second plan as will be seen from the figures given below:

States	Additional capacity licensed including expansion of existing units (in 00,000 tons of sugar)	Quantity of cane requirement for the additional capacity (00,000 tons)	Additional production of cane targeted by the second five year plan	Difference of column 4 and column 3 (00,000 tons).
1	2	3	4	5
U.P.	2.40	24	115	91
Bihar	0.40	4	10	6
Bombay	2.50	24	9	—15
Andhra	1.10	11	5	— 6
Madras	0.75	8	11	3
Punjab and P.E.P.S.U.	0.90	9	24	15
Orissa	0.40	0.9	1	0.6
West Bengal	10.20	2	7	5
Other States	0.75	7.6	2	—5.6
Total	9.40	90	184	94

As will be seen, there is considerable scope for bringing about a proper balance between the additional capacity and the expected increase in cane production envisaged under the plan. The dangers of any serious disequilibrium in this behalf need no emphasis for disposal of the surplus cane would present a very serious problem affecting a large number of cane-growers. It is, therefore, desirable that whenever any additional capacity is to be licensed, preference should be given to the existing units keeping in view the position of cane production.

Stability of Prices

Increased production has naturally had a depressing effect on the price of sugar which, except for minor seasonal variations during June and July, has been low. While the index number of wholesale prices has been rising, sugar prices have not shown any increase The White Paper on the Budget for 1957-58 has also commented on the stability of sugar prices at a time of persistent inflationary pressures. Depressed market conditions have had an adverse effect on the weaker units, particularly in eastern U.P. and Bihar. An erratic supply of transport has been an important factor causing variations in prices at consuming centres, particularly as a considerable portion of the country's requirements moves over the North-Eastern Railway involving transhipment. The supply of wagons being inadequate, sometimes supplies to the consuming centres fall short of the requisite quantities, causing a temporary rise in prices, on other occasions, there is a sudden and unexpected improvement in the supply which causes a glut in the market. No doubt, there are difficulties in maintaining regular movement across Mokamehghat and other transhipment yards. This year, the railways have been required to move substantially more sugar for export through Calcutta port which has been made possible only with the assistance of the railway administration concerned and the Central Food Ministry.

While efforts are being made to raise sugar output further, a disquieting development has been noticed. This is the rapid growth of the *khandsari* industry, particularly since the recent doubling of the excise duty on factory sugar. This industry enjoys a virtual protection of Rs. 10-4 (Rs 8-4 excise duty and Rs 2 cane cess on factory sugar from which *khandsari* sugar is exempt). Whereas the sugar factories have to pay a minimum cane price of Rs 1-5 and Rs 1-7 for gate and rail deliveries respectively, there is no such statutory regulation for the *khandsari* units, which in most cases succeed in getting cane at about 14 annas a maund. These factors have resulted in the mushroom growth *khandsari* units, in most cases in the vicinity of sugar factories, thus affecting adversely cane supplies to the factories. This will also affect the consumption of sugar. A cottage industry may well deserve support But in case of the *khandsari* industry the matter is different As the Karve Committee has rightly pointed out, it is a wasteful process as sugar recovered from cane is not more than 7 percent against about 10 percent in the case of sugar factories This results in a national loss. It is necessary, therefore, that the Government gives attention to this matter. Unless suitable steps are taken in curbing the expansion of the *khandsari* industry, the whole programme for the expansion of factory sugar output may be upset. This would also seriously undermine the interests of a large mass of cane growers.

Prospects for Next Season

The prospects of production for the next season appear to be quite bright. Unless something suddenly happens a greater diversion of cane to the *khandsari* industry, for instance, sugar production, it is expected, will show a further improvement. The first estimate places it at 2.15 million tons. The condition of the crop it is reported, is fair except in eastern U.P and Bihar, where it is said to have suffered both in quality and in quantity. But any fall in production in these regions may be offset by the better production in other areas Fourteen new units will be going into production. Besides, extensions to the existing units in most cases will be soon completed.

Tax Burden on Export Sugar

Thus a sizeable surplus should be available for export. No doubt, the prices now ruling in the world markets are very low, and it may be necessary for the industry to provide for an arrangement by which these losses can be met. Both the Government and the industry are alive to the needs of the situation, and it is expected that shortly some arrangement will be made to enable the industry to export sugar on a permanent basis. In the circumstances it becomes imperative that all avenues are explored to minimise the losses on sugar sold for exports. The steps that can be taken in this direction are as follows: (1) the State Governments concerned should agree to refund the cane cess on sugar sold for export—the U.P. and Bihar Governments have already agreed to such a refund from 1st October this year (2) concessional freight rates should be allowed by the railways. This is necessary as more than 70 percent of the sugar is produced in U.P and Bihar, and this has to be moved over a long distance to reach the ports (3) anomalies in sales tax laws in various States should be removed and sales for export should be exempted from these taxes Similarly, Central sales tax should not be charged on sales by mills for export.

ACREAGE AND OUTPUT OF GROUNDNUT INCREASE

According to the Directorate of Economics and Statistics Central Ministry of Food and Agriculture, the all-India second estimate of groundnut, 1957-58 puts the current year's area and production at 12,518,000 acres and 3,651,000 tons (of nuts in shell), against 11,421,000 acres and 3,570,000 tons for 1956-57, respectively. This shows an increase of 1,097,000 acres or 9.6 percent in area and 81,000 tons or 2.3 percent in production during the current year, compared with last. The increase in the ac-

reage during the current year has been reported by almost all the groundnut growing States except Andhra Pradesh. It is particularly marked in Bombay and Madhya Pradesh, and has been attributed generally to favourable climatic conditions at the sowing time. The increase in current year's production has also been shared mainly by Bombay and Madhya Pradesh, and has been attributed chiefly to an increase in their acreage. The rise in production has, however, been offset to some extent by the decrease reported by Andhra Pradesh. This estimate covers the period generally up to the end of September or the beginning of October 1957. Till then, the condition of the crop was reported to be, on the whole, satisfactory, except in parts of Andhra Pradesh, Bombay, Madhya Pradesh and Madras States, where the crop, it was reported, was affected slightly by the attack of pests. This estimate does not cover the entire area sown to the crop during 1957-58. Past experience has shown that the area at the second estimate stage forms roughly about 85 percent of the area under the crop finally reported.

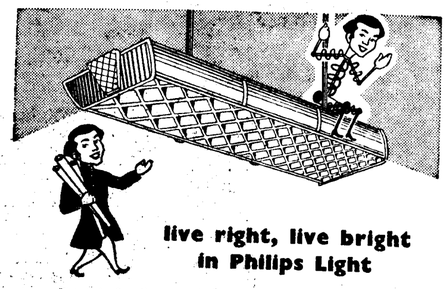
BRITISH TEXTILE REVIEW

OPPOSITION TO FREE TRADE AREA PLAN

IN the course of further negotiations in November on the proposed European free trade area, the two main employers' organisations in the Lancashire cotton industry—the one in spinning, the other in weaving—declared their opposition to the plan. They made the customary qualification: "unless adequate safeguards are provided"; but they mean in effect by this qualification unless the purpose of the plan, that is, free competition, is abandoned. It must be agreed on the evidence of recent experience that the industry will have difficulty in competing without protection, though individual units in it will remain competitive. On the other hand, there may be possibilities of exporting grey cloth to the Continent, especially for dyeing and finishing there. But these opportunities relate to rayon rather than to cotton cloth. In his chairman's speech at the annual meeting of the British Man-Made Fibres Federation, Sir William Palmer has said that the association representing textile retailers in West Germany has suggested to the U.K. industry that more grey rayon cloth will be welcome from Britain; negotiations with the British Rayon Weavers Association have, he says, taken the matter to the stage where negotiations with individual firms may begin. Whether there are similar opportunities for grey cotton cloth is questionable, but it is relevant to recall that Lancashire used to sell substantial quantities of such cloth to West Germany and other European countries.

It seems that it is not only with the Europeans that the Lancashire industry must expect more competition in Europe. It has been noted here that a Japanese textile leader, Mr. Itoji Muto, who represented his country at the International Cotton Conference in Venice this year, is advocating for Japan a policy similar to Britain's, aimed to capture some of the same markets, in Europe and the United States, as Britain tries to maintain. Writing recently in the *Japan Times*, he has argued that India and China are gradually absorbing the Asian markets and that Japan is not likely to succeed indefinitely with a policy of bulk selling at low prices. The argument does not seem, however, to imply a weakening of Japan's position so much as a change in it. Mr. Muto sees considerable opportunities arising from the decline of the textile industries in the United States and Europe, as a result of the diversion of labour to other industries.

Reduction of Cotton Yarn Imports



While the growth of imports of grey cotton cloth into the United Kingdom continues (in October, for the second time, the previous occasion being June), there has been this year a distinct reduction of imports of cotton yarns. On the other hand, imports of man-made fibres, both yarns and staple fibres, have increased substantially. The increase in the imports of staple fibres, particularly is an example of the reciprocating character of Britain's overseas textile trade. This country was formerly a big exporter of rayon staple to the north American industries; in recent years (though not so much this year), the trade has diminished rapidly as north America's output has expanded. Britain now imports considerable quantities of staple fibres from that continent. In fact, that region, formerly the main outlet abroad for Britain's staple fibre, is now the main overseas supplier of staple fibres to Britain. But the composition of the trade has changed. The outward trade in the past was mainly in rayon; the inward trade now is mainly in synthetics such as Terylene and Dacron. There is a shortage of trade synthetic staple fibres, as the processers find more demand for the goods made from them than existing supplies can satisfy. At present, fashion favours Terylene staple blended with cotton. But there are effective competitors. Blends of triacetate with cotton are notably successful; triacetate is being blended satisfactorily with strong rayon staple. Moreover, blends of triacetate with wool are found suitable for spinning on the cotton system.

Increased Offtake of Staple Fibres

Rayon still dominates the monthly figures of production of man-made fibres, and it must still be assumed, in the absence of a statistical breakdown, that changes in production and deliveries mainly reflect changes in the rayon trade. A notable feature this year has been the recovery of output and deliveries of filament yarns, which is explained by industrial demands, especially for motor-car tyres (the motor-car industry, depressed last year, having been restored to full activity this year). There has been also an increase in the offtake of staple fibres. This is explained by the activity of the wool industry and by its growing use of staple fibres. Cotton-spinners have been slightly reducing their offtake of staple fibres. Even so, the figures for the third quarter of this year were heavily in favour of cotton spinning, which took 28 million lbs, against 11.3 million lbs for wool spinning.

Plans for Integration

While the British textile industries are lively enough in adapting themselves to new fibres and blends, they are often (not always fairly) criticised as tardy in adapting themselves to new forms of organisation. It can be seen in a recent account in *The Wool Textile Bulletin* that the work-study centre set up by the Wool (and Allied) Textile Employers Council early in 1954 has not been wasting its time. It has, on the contrary, been teaching many new methods of efficiency in an industry that has shown itself to be very willing to learn. The cotton industry's problems are more profund, and it cannot be said that the broad problem of organisation has yet been solved. The organisation of the weaving section, in many separate units of varying strength, is ill suited to the intensely competitive conditions that have developed over many years and are developing still. Further consolidation seems inevitable. But there are differences of opinion whether weavers should merge among themselves or with spinners. The former President of the Board of Trade, Mr Harold Wilson, has drawn up a plan for cotton that will possibly be the basis of the policy if the Labour Party is returned to power; and it seems to favour the vertical method of integration. It proposes that a reorganisation commission should be set up, with powers to draw up schemes for amalgamation to be enforced, if necessary, by statute. "Special consideration should be given", it says, "to the encouragement of appropriate vertical groupings."

live right, live bright in Philips Light

See this family relaxing contentedly in the smooth, soothing brightness of Philips Fluorescent Lighting planned to perfection. They are happy because Philips light is so easy to work in, so cosy to live with. Even exacting jobs, like sewing or cooking, become a pleasure. Children play happily, men can relax with a sigh of pleasure. . .

PRODUCTION AND DESPATCHES OF SUGAR

The production of sugar amounted to 135,000 tons up to 30th November, 1957, in the current season, against 116,000 tons in the corresponding period of last year. The total offtake, including quantities despatched for exports, was 151,000 tons. Stocks with factories on 30th November, 1957, stood at 411,000 tons.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) fell by 0.5 percent to 108.8 during the week ended 30th November, compared with 109.3 (revised) for the previous week. The index was lower by 0.2 percent and 0.4 percent, respectively, when compared with the corresponding weeks of the previous month and that of last year. The monthly average for November 1957 worked out to 109.3, against 108.9 for the earlier month and 108.7 for the month of November 1956. Lower prices of maize in Dohad and potatoes (−14% each), rice in Jamshedpur (−13%), Raipur and Balasore (−10% each), in Nandgarh (−8%), in Tihu (−6%) and in Ranchi (−5%), onions (−9%), fish in Cuttack and groundnut oil (−5% each), barley and ragi (−4% each), jowar, urd and eggs (−3% each), bajra, gingelly oil and cardamoms (−2% each) and wheat, gram, mung and tea for exports (−1% each) resulted in a further fall in the index for Food Articles by 0.8 percent to 107.0, compared with 107.9 (revised) for the previous week. The prices of turmeric (+8%), rice in Kanpur and maize in Khagaria (+7% each), fish (*Rohu*) in Calcutta and oranges (+5% each), arhar and bananas (+3% each), gur, tea for internal consumption, and cummin (+2% each) and coconut oil and chillies (+1% each), however, showed advances. The prices of tobacco (snuff) in Madras fell by 4 percent but the index for Tobacco stood unchanged at 95. The index for Fuel, Power, Light and Lubricants also remained stationary at the previous week's revised level of 115.1. A rise in the prices of groundnuts in Hyderabad (+8%) and raw cotton, raw wool linseed, castorseed and gingellyseed (+1% each) was almost neutralised by a fall in the prices of lac (−3%), raw jute and cottonseed (−2% each) and raw silk, rapeseed, copra and tanning materials (−1% each), and the index for Industrial Raw Materials stood at 116.4, against 116.3 for the earlier week. The index for Intermediate Products stood unchanged at the previous week's level of 106.2. The prices of copper (−7%), groundnut (−4%), coir yarn and tin (−2% each), zinc (−1%) and linseed oil, cotton yarn and rayon yarn (+1% each), however, showed variations. The index for Finished Products receded by 0.3 percent to 108.8,

compared with 108.6 (revised) for the earlier week due to a fall in the prices of glass (−3%), drugs and medicines and oilcakes (−2% each) and jute manufactures (−1%); there was, however, a rise in the price of paper and newsprint. (+1%).

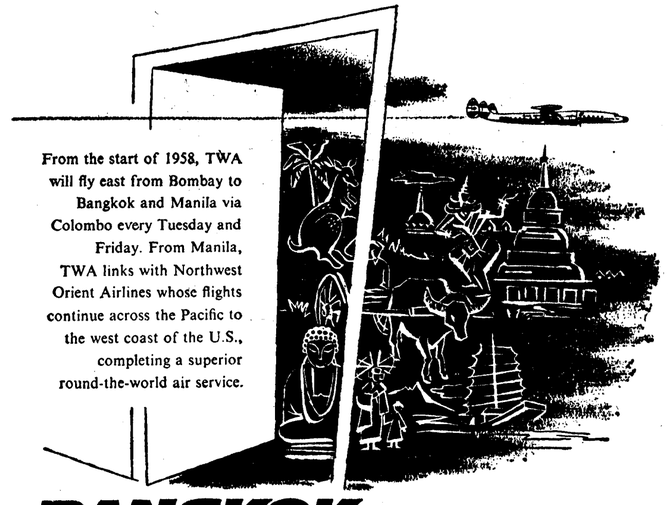
FLUORESCENT LIGHTING FIXTURES FOR BHILAI PROJECT

Hindco Lighting Industries, Bombay, has received an order, covering practically the complete requirements of flourescent fixtures, from the Bhilai steel project. This is the largest single order awarded to a party in India for this purpose. Hindco is also to supply low-voltage lighting transformers to Bhilai. The value of the order from Bhilai exceeds Rs 5 lakhs.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base : August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to November 1957. As compared with October, the November Index for Food Clothing, Fuel and Lighting and Miscellaneous remained unchanged at 502, 550, 281 and 284 points, respectively.



Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living remained unchanged at 434 points, during November 1957.

Middle Class Cost of Living Index Number for Calcutta Prices in August 1939 = 100.

TWA opens the FAR EAST

From the start of 1958, TWA will fly east from Bombay to Bangkok and Manila via Colombo every Tuesday and Friday. From Manila, TWA links with Northwest Orient Airlines whose flights continue across the Pacific to the west coast of the U.S., completing a superior round-the-world air service.

BANGKOK and MANILA added to TWA international routes

Convenient connections from Bangkok and Manila to:

TOKYO
HONGKONG
FORMOSA
MALAYA
FIJI
PHILIPPINES
INDONESIA
AUSTRALIA

Fly in radar-guided, Super-G comfort on TWA to Bangkok and Manila . . . stepping-off destinations for many other Far Eastern cities.

Engineering and Transport

RAILWAY ELECTRIFICATION PLANS

DESIGN OF LOCOMOTIVES SUPPLIED BY ENGLISH ELECTRIC

THE vast increase in suburban and main line traffic during the second world war on the former East Indian Railway and the Bengal and Assam Railway brought these systems to the stage where they would shortly have reached saturation point with steam traction over the existing lines. The Indian railways recognised this situation and, having in mind the extensive anticipated development of the industrial belt in Bihar and West Bengal, they instructed their consultants to prepare a report on the financial prospects of electrification of the East Indian Railway from Howrah to Moghalsarai *via* the Grand Chord, including the suburban sections of the Howrah and the Sealdah divisions. The report indicated that for moving the additional traffic anticipated by 1956-57, the electrification might result in some saving in working expenses as compared with steam traction, if ample electric power were available at reasonable rates This report was based on pre-partition conditions and showed that the cost of a project of this magnitude would be quite considerable. By 1953, however, electrification was seen to be the only alternative to the construction of additional lines for the effective handling of growing traffic and the relief of congestion in the city of Calcutta. Accordingly, the Railway Board appointed a team of officers to re-examine the case for electrification and to report on the system to be adopted.

The decision to electrify at 3,000 volts direct current was taken early in 1954, and tenders for track equipment and rolling stock were invited in the 1955-56 global procurement programme for the first stage from Howrah to Burdwan. As a result of these tenders, the English Electric Company Ltd. was awarded a contract to supply 12 111-ton, 3,120 horse-power locomotives These will be the first 3,000-volt electric locomotives to be commissioned into service in India and will form a direct link with the company's previous association with the Indian railways, for it supplied the first electric rolling stock to be operated on the former G.I.P. and South Indian Railways. The locomotives are designed Class EM/2 and are designed for a maximum service speed of 70 miles an hour, and the following description may be of interest to technical readers.

Operating Requirements

The original electrification plan envisaged a 3,000-volt suburban system in Calcutta with main line electrification from Howrah to Moghalsarai *via* the main and Grand Chord lines. The operating requirements specified a dual-purpose locomotive capable of handling express and slow passenger trains and also freight trains on these lines, with the exception of the heavily graded Gaya-to-Asansol section, where freight trains are not required to be hauled. The following table shows the specified balancing speeds of a single locomotive hauling the load specified on ascending gradients at 2,900 line volts :

Type of Train	Ascending gradient	Estimated balancing speed m.p.h.	Field connection
630 tons passenger	Level	71.1	WF
630 tons passenger	1 in 200	57.5	WF
630 tons passenger	1 in 80	39.3	FF
825 tons parcels	Level	57.6	FF
825 tons parcels	1 in 200	44.5	FF
825 tons parcels	1 in 80	37.0	FF
2,300 tons freight	Level	44.6	FF
2,300 tons freight	1 in 400	38.2	FF

General Arrangement

The locomotive consists of a single superstructure carried on two three-axle bogies in which each axle is driven through single reduction resilient spur gears by a nose-suspended axle-hung traction motor. There is a driving cab at each end of the superstructure protected by a nose compartment and the locomotive can be driven in either direction of travel. Access is provided to each driver's cab by means of a door on each side of the locomotive and through communication is achieved by a central corridor through the main body of the locomotive. A compressor and an exhauster are housed in each nose compartment, together with their associated contactors and resistances, entry to the compartment being gained by a central door. The driving position is located at the left-hand side of the cab, where the master controller brake handles and driving instruments are arranged within easy reach of the driver. The assistant's position is at the right-hand side of the cab adjacent to the handbrake. The high tension control equipment is housed in two equipment frames mounted in the main body compartment, together with the two main starting resistance frames and the two motor generator sets. Each high-tension frame forms a compartment with bulkheads, and the locomotive side and the access doors in the cab bulkheads are mechanically interlocked with the pantographs and main earthing switches. The whole lay-out of the locomotive is designed to provide maximum accessibility for ease of maintenance and is symmetrical to give lateral and longitudinal balance.

Underframe and Superstructure

The underframe is fabricated from rolled steel sections and plates, the main longitudinals running the full length of the locomotive. Robust buffer beams of rolled steel plate are provided at each end of the locomotive and are fitted with standard buffers, drawgear and couplings. A standard design of cattle-guard is also fitted at each end of the locomotive. The superstructure framing is constructed from rolled steel and pressed sections It is divided into sections to facilitate construction, each of which is assembled on jigs for welding. All joints are seam welded and ground flush to provide a smooth and pleasing appearance. The roof over the main body compartment is sunk below normal roof level to house the pantograph and is in two removable sections. Special monsoon louvres are fitted in the locomotive sides to prevent ingress of rain water into filters. Partitions and bulkheads are constructed from steel sections and are panelled with steel sheet. The main floor-plates are of steel welded to the underframe members and the assembly floor-plates over the cable ducts are of steel chequered plate.

Bogie Construction

The underframe is carried on two-slab frame bogies with swing link bolsters of a type previously used in Brazil, Spain and India. The basis of each bogie is two robust side frames of rolled steel plate, flame cut and machined to profile, secured to fabricated steel transoms and head-stocks by means of driving fit bolts. The superstructure is carried through the centre pivot on to an annular bearing surface on the fabricated double bolster. The latter is supported on two fabricated spring plank assemblies through four groups of double elliptical leaf springs and the spring planks are suspended by long links from the transoms. Steps are provided on the side frames to limit the lateral movement of the bolster when under control of the bolster springs and swing links. Dual compensating beams are fitted between adjacent axleboxes and the vertical load is transmitted to each compensating beam through two sets of concentric coil springs located between the beam and the top of the side frame. The wheels are built up from rolled steel disc centres with tyres secured by riveting. Each wheel is fitted with clasp brakes operated through compensated rigging, each wheel set of brake blocks being operated by an air cylinder mounted on the side frame. The axleboxes are of cast steel and are fitted with roller bearings. There are 12 sandboxes on each bogie, six operating for each direction of locomotive travel.

Electrical Equipmtnt

All the electrical equipment, with the exception of the traction motors, pantographs and lightning protection equipment, is mounted in the locomotive superstructure. The six force-ventilated traction motors each develop 520 horse-power at the one hour rating and are insulated for the full line voltage. Three stages of field weakening are provided by a combination of field tap and divert resistances. Each motor is attached to the bogie transom by a resilient nose suspension and is supported on the axle by journal bearings. The high-tension control equipment is mounted on two frames which form compartments with the locomotive sides. Access doors are provided in the rear bulkhead of each cab and the doors are interlocked with the pantographs and main earthing switches. The sub-division of equipment between the two frames is so arranged that when half of the traction power circuits is isolated, the equipment in one frame only controls the three motors on one bogie. Isolation switches are also provided to enable any one traction motor to be isolated with operation of the remaining motors up to the series full field connection. These isolating features are peculiar to Indian railway practice. Two motor generator blower sets are provided. Each blower supplies cooling air to three traction motors on one bogie and air is tapped off the main duct to ventilate the high tension frame and nose compartments. Each generator supplies a compressor and exhauster, and the remaining low tension circuits—including the interior ventilating fan, low tension control circuits, battery charging circuits and speedometer equipment—can be supplied from either generator through a low tension change-over switch. The alkaline battery which supplies the control and lighting circuits is mounted in a ventilated container in the body of the locomotive

immediately below the interior ventilating fan. The bulk of the low tension control equipment is located in a frame adjacent to No. 1 driver's cab with access from hinged doors in the cab and body. A special feature of the low-tension equipment is the use of miniature circuit breakers instead of fuses.

Two pneumatically-operated pantographs are amounted on the locomotive roof and connections are taken to isolating switches in one of the high tension compartments. Each pantograph is connected to lightning protection equipment consisting of a lightning arrestor and capacitor. The pantographs are of light-weight construction and embody double pans which are so balanced to enable the pans to follow irregularities in the overhead wire without movement of the main frame. The main starting resistances are of expanded metal construction and are mounted in two separate resistance compartments, one adjacent to each high tension compartment. The resistances are arranged for natural ventilation by means of air drawn through the underframe and louvres in the locomotive side and expelled through cowls in the locomotive roof. The brake system is of the air vacuum type, the services being provided by two Westinghouse Type DVC3 compressors and two Northey 180 RE exhausters. The system is arranged so that the straight air brakes on the locomotive are applied automatically through a vacuum-air proportional valve when a vacuum brake application is made on the train. A six-position selector switch is provided in the low-tension frame to give a wide combination of running speeds on the two exhausters.

The power circuits are arranged for the series, series parallel and parallel connections of the six traction motors with shunt transition between groupings. These connections are controlled through a hand-wheel type of master controller which provides 17 resistance notches in the series grouping, nine notches in the series parallel grouping and six notches in the parallel grouping. The equipment is arranged to notch back in exactly the reverse sequence to that obtained when notching up.

NON-LAPSABLE SHIPPING FUND TO BE CREATED

MINISTER URGES DIVIDEND RESTRAINT ON COMPANIES

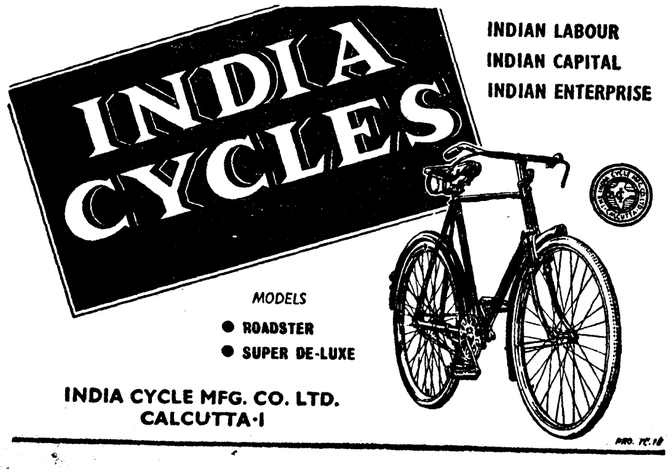
THE Central Minister for Transport and Communications, Mr. Lal Bahadur Shastri, told the Indian National Steamship Owners Association on Saturday that with the concurrence of the Planning Commission, the Central Government had taken a firm decision to establish a non-lapsable shipping fund providing the rupee resources for financing the further purchase of ships. The immediate effect of this fund was that an additional sum of Rs. 7 crores would be available, raising the allotment of Rs. 37 crores for shipping to Rs. 44 crores. The Minister, who inaugurated the annual meeting of the Association in Bombay, assured shipping interests that the constitution of this fund would pave the way for "a perennial source of finance" and "perspective planning" for developing the shipping industry in India. He also announced that loans advanced hereafter by the shipping development fund would bear a uniform, effective rate of interest at 3 percent per annum for coastal and overseas vessels. "This is a significant step which would provide a much needed fillip to the development of coastal shipping".

Foreign Exchange Shortage

Mr. Shastri in his address covered several significant points, including the foreign exchange difficulty, the recommendations of the Rail-Sea Co-ordination Committee, the progress of the shipping industry so far, port development plans, congestion in the ports, and the constitution of the bipartite National Maritime Board and the National Welfare Board for Seafarers. Giving details of the shipping fund, he said that annual contributions would be made to it from the consolidated fund of India and such amounts as may be determined from time to time by the Central Government. All repayments of loans so far advanced to Indian shipping companies and all payments by way of interest on these loans would be credited to this fund instead of being merged with the general revenues. The Minister spoke at considerable length on the additional foreign exchange needed for the shipping industry. "In spite of heavy odds, I have every hope of success. Though it is true that the Government has not been able to agree to pool the foreign exchange earnings of Indian ships for release for the acquisition of tonnage, it will nevertheless welcome any self-financing schemes that the shipping companies may be able to evolve for the procurement of tonnage, and will have no difficulty in permitting them to utilise the net freight earnings of their newly acquired overseas vessels for the purpose."

Deferred Payments

If any deferred payment scheme could be arranged under which foreign exchange payments would commence only after 1961, it would be possible for the Government to accept such an arrangement and allow companies to go forward, even though the ships may be intended for the coast, where they could not earn any foreign exchange, he said. It might be possible for the Government in individual cases to allow shipping companies to utilise the foreign exchange proceeds of their existing vessels for the acquisition of fresh tonnage. Indian shipping companies might also be able to raise foreign exchange credit from their own resources, such as by the mortgage of their assets to foreign bankers or other leading institutions. "It may be well worth their efforts to explore the possibility of raising foreign exchange credits from their own resources and the Government would be prepared to lend the necessary support." If the expected U.S., Japanese and German loans materialised, the Minister said, they might be of much benefit. The Government had agreed to accept any reasonable sum for obtaining new or second-hand ships within the framework of these loan agreements.



Although finance was extremely important, there was another vital side of the picture—the availability of cargoes. Mr. Shastri said: "There has, I feel, not been adequate co-ordination between the Department of Transport, on the one hand, and other Ministries of the Government of India concerned with imports and exports, on the other. The Government has very recently given this matter careful attention at the highest level and has decided, firstly, that a co-ordinating agency should be set up at the earliest to ensure effective liaison between the Department of Transport and other Ministries, particularly those of Commerce and Industry, Works, Housing and Supply, Railways and Steel, Mines and Fuel; secondly, that liaison officers should be appointed in the private and public sectors for the work of co-ordination and effective contacts with the importing and exporting departments; and, thirdly, that the Department of Transport should invariably be kept in the picture when negotiations for large contracts involving the shipping aspect are concerned." These steps would ensure, as far as Government cargoes were concerned, that the interests of Indian shipping were in no way jeopardised or ignored. The Government shipping corporations were taking immediate steps to appoint a liaison officer in New Delhi and it was hoped that private shipping companies would follow suit.

Repair Facilities

Referring to ship repair facilities within the country, the Minister said that the Government had finalised the personnel and terms of reference of the committee under the chairmanship of Mr. O. V. Alagesan to go into the question. It had already implemented the recommendation of the Rail-Sea Co-ordination Committee to increase coastal freight rates by 15 percent. It was considering the other recommendations. The Committee had strongly urged that steps be taken for the early attainment of the target of 412,000 G.R.T. for the coastal and adjacent trades. "Now that there has been a fair increase in coastal freight rates, the Government has also agreed to reduce the effective rate of interest on coastal loans from 4½ percent to 3 percent." The Minister hoped that shipping companies would redouble their efforts to bridge the gap in coastal tonnage.

Referring to a suggestion that the Government should consider the possibility of chartering ships on a long-term basis for the movement of Government cargoes and allow them to be operated by Indian shipowners, Mr. Shastri said that it was a "double-edged weapon". The Government was, however, examining the suggestion. He did not accept the suggestion that the Government should give Indian shipowners full freedom to operate their tonnage as they liked and where they liked. "It is difficult for us to accept the suggestion even as a general proposition. We have undertaken a certain responsibility by reserving the coastal trade for Indian ships and it is our duty to ensure that the minimum tonnage is maintained by Indian shipowners for essential coastal operations, particularly in times like the present, when tonnage on the coast is far short of demand." Discussing a suggestion that the Indian Coastal Conference should not be denied the freedom to change coastal freight rates, the Minister said that by parliamentary legislation the coastal trade was now reserved for Indian ships but such reservations carried with it certain obligations too. The first was that the coast be adequately manned by Indian ships and the second that freight rates on the coast be reasonable.

On the question of having more shipbuilding yards, Mr. Shastri said there could be no two

INDIAN LABOUR
INDIAN CAPITAL
INDIAN ENTERPRISE
INDIA CYCLE MFG. CO. LTD.
CALCUTTA-1

opinions. Under the Industrial Policy Resolution, shipbuilding had been assigned a place in the public sector. "I have often been asked if the private sector could be permitted to participate in this venture. My reply would be that if any such requests were received, they could certainly be considered on their merits." The Government was already examining a proposal to pay a construction subsidy on a percentage basis for ships built in the Visakhapatnam shipyard.

Port Congestion

Mr. Shastri, referring to the recent congestion in Indian ports, said that with the solitary exception of Visakhapatnam the state of congestion was over. "It is now a question of berths waiting for ships and not ships waiting for berths". This improvement was brought about by a determined effort on the part of the port authorities and workers with the active co-operation of shipping interests. The ports which faced congestion were being inspected by a team of port operation experts from the U.K. coming under the Colombo Plan. On the question of mechanisation, the team itself had advised going slow, particularly in the mechanisation of loading and unloading facilities for bulk commodities. To avoid the bunching of ships and congestion in the ports, the Minister hoped that the port authorities would be vigilant and avail themselves of the present comparative lull to gear up their machinery for any likely eventuality. They had to prepare themselves to meet big demands effectively and this was possible only if port administrations were always on the alert.

Referring to port development plans, the Minister said that they were in the core of the second five year plan and were on the same footing as the development of the railways. The foreign exchange difficulty would be removed when the World Bank took a decision on India's request for a loan. The Minister welcomed suggestions to improve traffic in the new port of Kandla.

Increase in Tonnage

Within the first six months of the second plan period, almost the whole provision of Rs. 37 crores for the development of shipping was fully committed. The Minister said that the present tonnage stood at about 570,000 G.R.T. and India would soon attain the first plan target of 600,000 G.R.T. The target for the second plan was 900,000 G.R.T. The climate for shipping had improved appreciably. The Planning Commission had gone into the matter recently and the Finance Minister had also taken a keen and sympathetic interest in the problems of the industry. In the overseas sector, shipping had made a definite advance. The number of ships had gone up from 42 in December 1956 to 49 now, and the tonnage had increased from 280,000 G.R.T. to 331,000 G.R.T. With the orders for overseas vessels during the second plan period, the overseas tonnage would reach 450,000 G.R.T. Referring to the release of ships from the U.S. mothball fleet, the Minister said that the U.S. Administration had already taken action to initiate legislation. India had two tankers on her registry and a third tanker, it was expected, would be acquired by the Western Shipping Corporation. The Minister suggested that shipping companies should not distribute dividends to shareholders above a certain percentage. Profits should be ploughed back into the industry or contributed to the new shipping development fund for reinvestment in the purchase of ships.

Discussing labour problems in the shipping industry, the Minister complimented the representatives of port and dock workers on their responsive attitude. The port authorities were helpful in promoting a spirit of mutual goodwill and co-operation to maintain industrial peace and improve output. He hoped that the forthcoming discussions between the representatives of workers and port administrations on the Choudhury Committee's recommendations would prove fruitful. The Minister said that the piece-rate system would soon be introduced in Calcutta and Madras on the same lines as the scheme which had worked so successfully in Bombay.

U.K. AVIATION EXPORTS INCREASE

INDIA TOPS LIST OF PURCHASERS

DURING the first ten months of the present year, India stood at the top of the list of purchasers of British aviation exports, the total figure for the period being £5,531,220. In October alone, India took aviation exports valued at £1,359,274. Figures released by the Society of British Aircraft Constructors (S.B.A.C.) in London show that the grand total of British aviation exports to all countries during the first ten months of 1957 amounted to upwards of £87.5 million, which represents an annual rate of £105 million. This means that if the exports are maintained during November and December the final figure will make it a record year. The aviation exports are made up of complete aircraft in some cases, aero-engines and electrical appliances, navigation aids and the special tyres fitted to aeroplane wheels.

Over the January-October period of the present year, the second largest importer of British aviation products, next to India, was Sweden, with total purchases of a little under £5.5 million, while the United States—itself a leading aero-constructor and exporter—bought from Britain aircraft, engines, and spare parts to the value of £4,674,842. Next on the list were the Netherlands, with nearly

Hunters Preferred

In view of the decision of the Indian Government in August to order *Hawker Hunter* fighter planes, S.B.A.C. notes that the Swiss Government, which has also chosen to re-equip its air force with these aircraft, added a postscript to its announcement of the decision. This said that Russian *MIG* fighters had been offered by Czechoslovakia "at an extraordinarily favourable price", and that the American *Sabre Mk* 4 had also been considered, as well as French and Sweedish-built fighters, but it was decided that all these aeroplanes were "outmoded" by the *Hawker Hunter*. Swiss aviation experts said that they liked the *Hunter's* "greater firepower and general performance".

The Swiss order, which is worth £26 million, is the tenth received for British military aircraft this year. Another notable overseas order was that from India in February, when 68 *Canberra* jet bombers, worth more than £20 million, were contracted for. Venezuela also favours these well-proved jet bombers, and has placed a repeat order worth over £3.5 million. The *Canberra*, under another name, has been adopted by the U.S. Air Force. The Federal Republic of Germany, Finland, Denmark, the Netherlands, Austria, and South Africa are among the other countries which have chosen British-designed and built military aircraft.

Military Aircraft

Altogether, the 1957 orders for military aircraft from Britain over the first ten months of the year total 460 aircraft, valued at almost £100 million—a figure which does not take into account separate engines, spare parts, and components, or civil aircraft of any description. Incidentally, it is mentioned that 700 *Beaver* and 200 *Otter* aircraft, produced by the Canadian offshoot of the de Havilland Company of Britain, are at present being used for either military or civil purposes in 55 countries. India has ordered some of these versatile *Otters*, and recently delivery of the first six was accepted by the assistant air attaché at the Indian High Commission in Ottawa, Canada.

KALINGA AIR LINES ACQUIRES FRENCH AEROPLANE

Kalinga Air Lines has acquired the French aircraft *Noratlas (Nord 2508)* which arrived in Dum Dum on 6th December after successfully completing demonstration flights in Delhi. As a civil and military transport aircraft, it has many outstanding qualities. It is so designed that it can be utilised as a freighter aircraft or as a combined passenger freighter transport. All-up weight ranges from 20.6 tons to 23 tons and in its most powerful form it has a carrying capacity of 18,000 lbs. It has normal passenger capacity of 44 and 62 in high density. The *Nord 2508* is powered by two P and W.R. 2800 series C.B. 17 engines (developing 2,500 horse-power each) plus two Turbomeca Marbore jet engines (880 lbs thrust each). It has a 1,700-mile range, cruising at 200 miles an hour. It is a high altitude performer (25,000-30,000 feet) and can land and take off from short and even unprepared airfields. It has rear loading doors. This design permits supply dropping and the carriage of bulky cargoes. Being fully equipped, the machine can virtually operate anywhere, even under sub-zero conditions. It is reliably learnt that this machine will be engaged on the Calcutta-Lhasa route if the high-level negotiations between India and China, now in progress, materialise.

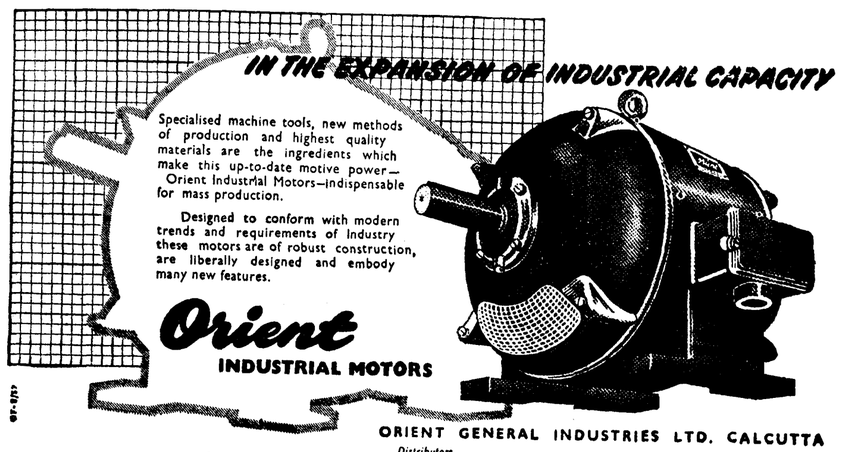
B.O.A.C. TO USE BRITANNIAS ON ATLANTIC ROUTE

OPERATIONAL COSTS OF WORLD AIRLINES INCREASE

AN El Al *Britannia* has flown the Atlantic in 8 hours 3 minutes which is 23 minutes less than the previous record established by an airliner. "And we could have gone faster", said its pilot. This achievement is a fitting curtain-raiser to the first regular Atlantic service by a turbine-powered airliner due to be inaugurated shortly by B.O.A.C., followed later by El Al. Both airlines will use *Britannias*. British turbine-airliners have been operating on the world's air routes for five and a half years: the first foreign equivalent will not be delivered until late in 1958 or early in 1959. Now the *Britannia* is to be the first turbine-airliner on the arduous north Atlantic route and will be the only one of its kind until the first of the American *707s* starts operations in about mid-1959. So the British aircraft will have 18 months in which to capitalise on its speed, passenger comfort and economy.

Already in spite of teething troubles common to most new airliners the *Britannia* has achieved a daily utilisation of 5 hours 51 minutes a aircraft on Empire routes. During the last two months it has averaged nearly 8 hours a day. Comparable figures for the *Constellation* and *DC 7*—unlike the *Britannia*, both developments of earlier types—were 5 hours 39 minutes and 6 hours 38 minutes after a year's operation. Utilisation figures are a yardstick of reliability since it is impossible to achieve a high figure if the aircraft is on the ground under repair.

U.S. Competition



When the U.S. jet airliners start competing on the Atlantic route, where will the turboprop *Britannia* stand? The pure jet aircraft will have one advantage—speed. But the cost is already causing headaches. American Airlines is seeking a 15 percent fare increase to help cover the cost of a jet replacement programme costing some £70 million. In addition, operating expenses have soared. Mr. Carter Burgess, T.W.A. president, has estimated that it cost his airline £5 million more to do business in 1957 than for the same volume in 1956. In three years, he says, the payroll has gone up by 24 percent and the price of fuel and oil by 28 percent. Many operators who have ordered these big jet aircraft (costing some £2 million each) are seeking fare increases now, not only to counter rising costs, but to finance progress payments of their future equipment. Last year the 79 major world airline operators had a total expenditure of £1,200 million; but their profit was less than £20 million, or 1¼ percent. This margin is too close to meet the ever-increasing operational costs. Passenger traffic increases by about 15 percent a year, a good deal less than the costs of operations.

Construction of Runways

Another costly factor is the construction of runways for big jet airliners. *Aviation Daily* reports that, in South America alone, airports in Rio de Janeiro, Sao Paulo, Santiago de Chile, Lima, Guayaquil, Quito and La Paz will be inadequate for jets unless present programmes are accelerated and more finances found. According to General Aler, president of K.L.M., big jet airliners will have to achieve a utilisation of 3,000 hours a year or more than 8 hours a day if they are to pay their way. Depreciation costs will be high and delays and technical difficulties will be costly. To achieve this high utilisation the *707* or *DC 8* will have to accomplish a double crossing of the Atlantic every 24 hours for, perhaps, a month before being laid up for a few days for overhaul, as there will be little time left for the engineers to do other than the simple daily maintenance checks in the day's routine. This presupposes a much faster turnround time than is at present achieved with less complex piston-engined airliners.

Jet Equipment

General Aler says that he is not satisfied with 1960 jet equipment. Airlines have failed to indicate clearly what they want. The result is that they have to accept what he described as an adapted, or converted jet tanker. World air transport needs an aircraft with a "quiet" speed of 500 knots which could be operated economically at half the present day fares. The turboprop *Britannia* with its long range, cruising speed of 400 miles an hour (644 kilometre an hour), and great economy of operation on a mileage or cost basis seems to have a long life ahead of it on the Atlantic route—assuming that the international scale of air fares will allow its benefits to be felt in competition with its pure jet competitors.

NEW CANDLE FILTERS FOR PURIFYING WATER

Kieselguhr has been employed as a filtering medium for domestic and industrial filters for some considerable time. This silicious earth because of its great porosity forms a highly efficient filter. It is used by Berkefeld Filters in the form of hollow candles which allow the water to pass through from outside to the inside leaving all impurities on the outer surface, and giving a high degree of bacteriological purification. To maintain this condition, however, the candles must be removed from the filter periodically and sterilised by boiling; otherwise bacteria would tend to develop in the sediment collected on their exterior. To overcome this disadvantage, research was carried out some years ago with soluble disinfectants incorporated in the candles with a view to providing these with a sterilising action which would endure throughout their entire life. The irregular rates of filtration and consequent variation in the amount of sterilant absorbed by the water, however, made this method impracticable.

Sterilising through Silver

Experiments recently carried out with finely divided silver showed that if this could be effectively introduced, the bactericidal properties of the silver ions would produce a more lasting sterilising action. Silver is one of the least poisonous of metals and the amount which water can absorb is very small. It is interesting to note that it has been recognised since early times as a sterilising agent. It will be recalled that silver plates and pins are frequently employed in surgery and that silver is used for various dentistry purposes. An efficient process was finely devised to ensure thorough and uniform penetration of the silver into the Kieselguhr candles, and subsequent tests lasting for two years showed that water which was artificially contaminated to a degree such as would never be encountered in any supply provided for domestic purposes, was made safe for drinking by a single passage through the candle. Furthermore, the water so treated could be stored for considerable periods without bacteriological deterioration.

Since the development of this type of candle (to which the name "Sterasyl" was given) every test made has shown complete absence of bacillus Coli in the filtered water and the life of the candles has been recorded as being upwards of two years. Spore bacilli and algal growth which are resistant to normal sterilising agents are also destroyed by the Sterasyl process. Official tests subsequently carried out by public health authorities with Sterasyl candle filters in various parts of the world, under the most arduous conditions and with a large variety of bacteriological organisms, have confirmed in every case their complete bactericidal action. The only maintenance required is occasional cleaning with a soft brush in clean water when the rate of filtration shows signs of slowing down. No soap or other detergent is necessary. Filters incorporating these candles have been proved to be equally efficient in tropical climates. Further details can be obtained from the manufacturers, British Berkefeld Filters Ltd., Sardinia House, Kingsway, London, England.

I.A.C. TO INTRODUCE VISCOUNT SERVICE BETWEEN BOMBAY AND COLOMBO

Colombo and Madras will be linked with Bombay by *Viscounts* when the Indian Airlines Corporation's *Viscount* service from Bombay to Colombo *via* Madras starts operating from 21st December. Operating to a daily schedule, it will enable passengers to Colombo from Bombay and *vice versa* to reach their destinations in four and a half hours' flying time. The halt at Madras *en route* will satisfy the needs of air travellers in South India desiring a fast, direct service to Bombay, so that Trichinopoly may continue to be air-linked. An extra *Dakota* service connecting Madras with Trichinopoly and Colombo is being inaugurated from the same date.

ELECTRICITY OUTPUT IN AUGUST FALLS

During August 1957, 811 public utility power supply undertakings generated 920.8 million kWH, of which 731.0 million kWH were sold to ultimate consumers. The output in July 1957 was 826.1 [illegible] generating undertakings were the new additions during the month. They are situated in Goalpara and Malbari in Assam.

INTERNATIONAL COUNCIL EXPECTS SUGAR SURPLUS NEXT YEAR

A surplus of sugar is likely in 1958. Accurate estimates at this stage are impossible, but the figures published after the recent meeting of the International Sugar Council show that there is likely to be some excess. The free market's requirements during 1958 are put at 5,510,000 metric tons. Export quotas which were announced at the same time total 4,865,000 metric tons, allowing for the sugar exported by countries which do not belong to the Agreement, which might be about a further million tons, and there will be a surplus of over 300,000 tons. Dealers in London are not inclined to be depressed by these figures. They say that consumption has a way of proving more than the forecasters expect. Meanwhile, the market, with sugar at around 3.80 cents a lb, is firm. The Cubans have just had a very good season, having sold large amounts at favourable prices. At present they are reluctant sellers. The export quotas which were announced by the Council are only the first round in determining how much individual countries can sell in 1958. The figures follow the pattern laid down in the Agreement several years ago, and countries which asked for quotas then may not want to fill them now. For example, Cuba which has a quota of 2,415,000 metric tons, and has sold over 2,500,000 metric tons already this year, will probably be able to supply much the same amount in 1958.

Four hundred young engineers who will man the three new State steel plants will spend six weeks at Jamshedpur before they go abroad for training.

Here at the steel city, an orientation course will acquaint them with the first essentials of steelmaking in India. And they will undoubtedly get a friendly tip or two from Tata Steel veterans.

Jamshedpur is proud to welcome these steelmakers of tomorrow.

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

BETTER SUPPORT FOR DUSTS

AT Sale No 26, held on 16th and 17th December, offerings at the Export auction consisted of 63,441 chests. There was a good general demand with better support forthcoming from the outmarkets than in recent weeks, while internal buyers were operating freely for plain and "teas for price." The market opened 2nP to 10nP easier, but the demand improved as the Sale progressed. Plain and medium B.P.'s closed only 2nP below last week's rates, while plain Fannings were about steady. Medium Fannings tended to be dearer. Low medium B.O.P.'s generally eased by 10nP and were a weak feature, but there was improved demand for medium B.O P's and O.Fgs., particularly for those invoices with brighter liquors which sold well. The better C.T.C.'s received quite good support, although these were 20nP easier, while the poorer sorts with indifferent liquors received less enquiry and there were some withdrawals. Whole leaf grades received rather irregular support, but generally sold at about last week's rates. Tippy teas sold well, but Darjeelings met with only a fair enquiry and were at times up to 20nP easier.

Quotations

	1957 Rs.	1956 Rs.
Plain Fannings	1.34 to 1.60	
Medium Fannings	1.64 to 1.68	
Best Assam C.T.C. B.P	2.60 to 2.80	3 0 0
Clean Black Pekoe	2.25 to 2.30	2 7 0
Plain B P	1.48 to 1.52	2 5 6
Medium B.P.	1.54 to 1.58	2 7 0
Best Assam C.T.C. Fgs	2.40 to 2.60	(nom.)

At the Internal Sale, a total of 19,720 chests of Dust was on offer. There was better general demand which improved towards the close of the Sale. Black clean grades were a strong feature and were generally dearer. The other orthodox descriptions were about firm when the Sale closed, with the exception of the smaller useful liquoring grainy kinds from Assam which were a little irregular with an easier tendency. The better liquoring C.T.C. Assams met with more demand and were frequently dearer, but the plainer liquoring fibrous descriptions were again a weak feature and were sometimes up to 15nP easier.

There was only a fair demand for the 24 chests of Leaf on offer, and prices for most descriptions tended easier.

Quotations

	1957 Rs.	1956 Rs.
Medium Dooars Dust	1.60 to 1.62	1 15 0
Medium Assam Grainy Dust	1.62 to 1.66	2 0 0 to 2 [illegible]
Medium Assam C.T.C. Dust	1.80 to 1.90	2 6 0
Best Assam C.T.C. Dust	2.45 to 2.70	2 10 0 to 2 11 [illegible]

COAL RATES LOWER IN FREIGHT MARKET

THE trans-atlantic coal rates in the freight market have been quoted slightly lower during the past week than had been previously reported: 13,500 tons 5 percent coal Hampton Roads or Baltimore to Antwerp-Rotterdam or Amsterdam was fixed at 26s 6d with 3,000 discharge free, and charterers were open at 26s for further fixtures. In the grain trade, U.S. Pacific to East Coast India 12,500 tons wheat paid 70s. British Columbia to picked U.K. ports was fixed at 61s. Constantza to Calcutta cement paid 62s 6d f.i.o., option lightering one other port East Coast India 2s 6d extra, with 1,000 load and 700 discharge. Due to improvement in the present port condition the discharge rate of 700 tons of cement in Calcutta is quite adequate, as during the week one vessel discharged paper bagged cement 2,920 tons in 24 hours and the average rate of discharge was about 2,000 tons a day. The exporters are open at 55s to carry 6,000 to 8,000 tons of bagged cement Constantza-Persian Gulf. A Russian vessel with 9,500 tons metal and generals was fixed at 69s f.i.o. from one port Black Sea to Madras or Visakhapatnam. Ore charterers from Marmugao to Hamburg-Bremen paid 50s for 7,000 tons, 5 percent 15th January to 15th February position. Alexandria and/or Port Said-Colombo or Galle 7,800 tons 10 percent rice was fixed at 41s 6d f.i.o and stowed. In the time charter section, a motorship 9,600 d.w. tons was fixed for one West African round, delivery Mersey at 17s.

LINSEED RISES

Linseed prices increased further during the past week and activity was fairly keen while the tendency of the market was firm. The daily turnover increased, with crushers interested and supplies generally falling short of demand. Following an all-round improvement in overseas prices, export prospects appeared bright and shippers were operating on a fairly wide scale. Towards the close, however, overseas prices eased slightly. Latest quotations were as follows: December 1957 and January 1958, Rs. 23-12 a maund.

HIDES AND SKINS FIRM

The market in skins was firm. Stocks were less than in the previous week.

Bazaar Sales

(Between 10th December and 16th December 1957)

Cowhides : Wet salted (Ord.) 7,500 pcs. on the basis of Rs. 9.50 to Rs. 10.75; Wet salted (Slaughtered) 16,600 pcs. on the basis of Rs. 13.50 to Rs. 21.

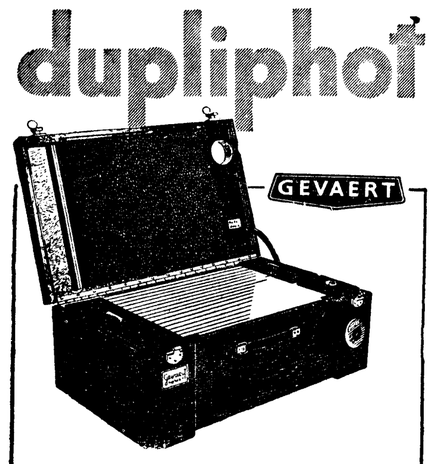
Goatskins : Wet salted 49,300 pcs. on the basis of Rs. 335 to Rs. 340, Rs. 350 to Rs. 365 and Rs. 390 to Rs. 410; Assam-Dinajpur-Jalpaiguri-Maldah 28,200 pcs. on the basis of Rs. 345 to Rs. 390; Purneah-Kissenganj 2,500 pcs. on the basis of Rs. 355; Patna-Pakur 1,200 pcs. on the basis of Rs. 355; Muzafferpore-Patna 16,000 pcs. on the basis of Rs. 352.50.

Bazaar Stocks

(16th December, 1957)

Cowhides : Wet salted 1,22,500 pcs.

Goatskins : Wet salted 23,000 pcs.; Assam-Dinajpur 91,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 2,44,500 pcs.



SUGAR QUIET

During the week ended 18th December, sugar sales in the Calcutta market averaged 5,000 bags daily. Arrivals a day were 500 bags and stocks totalled 150,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 37-2 for ordinary grain and Rs 39-12 for big grain. The prices rose due to the additional excise duty levied by the Centre. The market however was quiet.

SHELLAC STEADY

During the week ended 17th December, the market was quiet at the beginning and steady at the close. The range of quotations was as follows:

Pure Buttonlac	Rs 93 buyers; 90.50 value; 90 buyers.
Lemon No. 1 Shellac	Rs. 93.50 to 91, 91.50 buyers.
Lemon No. 2 Shellac	Rs. 88.50 to 84.50, 86.50 buyers.
F.O Std 1 Shellac	Rs. 83.50 to 80, 80.50 buyers.
Pure TN Shellac	Rs. 76.50, 75.50 buyers; 74 basis done and buyers; Rs. 75 basis buyers.
4% I.T.N. Shellac	Rs. 66.50 to 64.50 value; 64 buyers.
No 1 Kusmi Seedlac	Rs. 85 to 80 value; 80 buyers.
No. 2 Kusmi Seedlac	Rs. 80 value; 76, 75 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 74 to 71.50, 73.50 buyers; 75.50 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 70.50 to 68.50, 69.50 buyers.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs. 65.50 buyers; 64 done and buyers; 63.50 buyers.
Ordinary Bysaky Seedlac (C.P.).	Rs. 59 done and buyers; 58, 57, 57.50 buyers.
Kireelac	Rs. 24.50, 24, 24.50 buyers.

PRODUCTION OF RUBBER MANUFACTURES RISES

PLANS TO INCREASE RAW MATERIAL OUTPUT

AT the annual general meeting of the Association of Rubber Manufacturers in India held on 12th December, 1957, Mr. J. Luckham, managing director of Dunlop Rubber Co. (India) Ltd., has said in his chairman's speech that the progress of the rubber manufacturing industry during 1957 as measured by the consumption of rubber has been quite satisfactory. The industry would have consumed by the end of the year 35,000 tons of natural and synthetic rubber, an increase of 11 percent over the year immediately preceding and 65 percent over 1952., "This figure however does not complete the picture of rubber consumption when you know that some essential rubber goods had to be imported during the year because local production capacity was inadequate to meet the country's rising demand. Together with the rubber contents of these imports our raw rubber consumption for the year would have reached an even higher level."

This high rate of consumption has necessitated the import of large quantities of both natural and synthetic rubber (nearly 3,500 tons of the former and 3,200 tons of the latter up to the end of October). While it is to be regretted that the industry is not self-sufficient in this strategic commodity, and will not be for several years more to come, the plans for increasing the acreage of south Indian estates are being implemented during the year. The National Industrial Development Corporation's proposal for setting up a synthetic rubber plant, however, appears to have been shelved for the time being presumably for lack of the large amount of foreign exchange involved in the original scheme.

Mr. Luckham says that it should be a matter of satisfaction for many manufacturers who have at present no facilities of their own for research and development that a Rubber Manufacturers Co-operative Research Association is likely to come into being in the next few months. Since this is the age of science and technology, the survival of the units of any industry will no doubt be largely conditioned in future, much more than in the past, by their ability to progress scientifically. The research association now being formed, he says, will serve ably the many units of the industry which are without the facilities of technological and scientific guidance

Technological Progress

Technological progress elsewhere in the world is proceeding at an incredible pace. Atomic energy, it is reported, is replacing in some instances the use of heat in vulcanisation. Nuclear vulcanisation of tyres is being achieved in the United States by radio-active fuel elements replacing what is standard today, namely, the use of heat or sulphur or accelerators. These developments are not confined to processes of manufacturing rubber goods but technological progress is also reported to have been achieved in raw materials such as natural rubber. A new type of the latter developed in the laboratories and experiment station of the Rubber Research Institute of Malaya called superior processing natural rubber, or "S.P. Rubber", is said to be specially designed to overcome problems arising in the processing of compounds. Its advantages are said to be most striking in extruded and calendered products.

Stress on Exports

The slogan, "export or perish", has now assumed considerable significance in view of foreign exchange difficulties. That there are many items of rubber goods of Indian manufacture that can successfully find a worthwhile foreign market needs no reiteration. "The co-operation we should extend to the Government of India in the promotion of export trade is urgent and, may I say, the industry's bounden duty. The Export Promotion Committee of the Ministry of Commerce and Industry in its report for 1957 has stated that some exports of rubber footwear, matting, railway rubber fittings, medical goods, cycle grips, corks, washers, hard rubber electrical goods and erasers are being made at present to west Asia and south Asian countries." The scope for their expansion is considerable if goods offered for export are of a quality conforming to international standards. The Committee is taking steps to ensure quality and for pre-shipment inspection. Mr. Luckham appeals to all rubber manufacturers to extend their co-operation to it in this effort.

Expansion Plans

He has referred to a few specific manufacturers' expansion plans that have already been set in motion during this year and from which many others, both small and large, will take a cue. First, the National Rubber Manufacturers Ltd., has had its share issue of Rs. 52,00,000 over-subscribed immediately after it was opened to the public only a month ago. The company's manufactures include transmission and conveyor beltings, V-belts, hoses and rubber dock fenders as well as cycle tyres, and buffer springs and other railway rubber fittings. In the tyre industry both Firestones and Dunlops have taken up major expansion programmes and it is hoped that very shortly, they will be able to meet the country's needs. The second five year plan has necessitated this rapid expansion as road transport is considered important in the scheme of planning, Mr. Luckham says.

Mr. Luckham was elected chairman of the Association for the coming year.

INDUSTRIALISTS IN KERALA FEEL INSECURE

TOUR IMPRESSIONS OF MR. MORARJI DESAI

(FROM A SOUTH INDIAN CORRESPONDENT)

THE Union Minister for Commerce and Industry, Mr. Morarji Desai, while on a week's tour of Kerala, said that several planters and industrialists in that State had complained to him about labour trouble in their concerns. Planters, he said, also felt that the incidence of taxation in Kerala was very high At a Press conference, he said that these fears of industrialists and planters had been conveyed by him to the State Government. Even if it was vague, it was in his opinion dangerous to have such a feeling of insecurity. The fears should, therefore, be removed to create a proper atmosphere for industrial enterprises in the State. "I do not say that the feeling here is entirely unfounded. Among the incidents brought to my notice, one or two seemed to justify these fears to some extent. It is up to the State Government to remove these fears, whether justified or not."

Asked whether there had been as many complaints from other States, Mr. Desai said that it was not a question of numbers, but they had not received "this sort of complaints" from industrialists outside Kerala Incidents happened elsewhere for which the Communists were also responsible, he said. "Here when the Communist Party also runs the Government—and such incidents happen—it creates a greater fear. It might not be created by the Government itself, but when the two synchronised, it created a fear in the minds of the people." Replying to another question, he said that no representation from the Kerala Government for the nationalisation of plantations had reached him so far.

Help to Coir Industry

The Minister has assured coir producers in the State that the Union Government will consider giving help to the industry, especially in increasing exports of coir products, importing shearing blades for finishing the products and making available facilities for research for dyeing the goods though the Central Coir Research Institute which it is proposed to open shortly near Alleppey. The Union Minister visited a coir factory in Alleppey in the course of his tour, when various associations connected with the coir industry made representations on the problems facing them.

High Taxation of Cashew Concerns

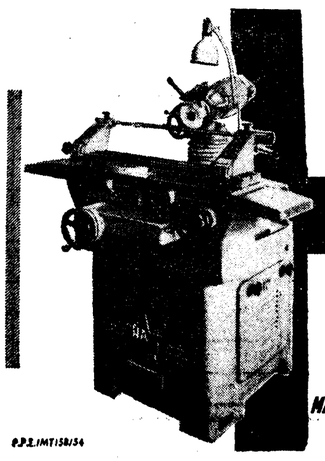
The Minister also visited certain cashew factories in Quilon to acquaint himself with methods of processing cashew kernels. At a Press conference in Ernakulam, he referred to the inadvisability of taxing the cashew processing industry too heavily. He said that the sales tax on cashew in Kerala was as high as 4 percent, while in Mysore, where there was 15 percent of India's cashew processing industry, sales tax was charged at 1.7 percent only. This disparity in taxes might be an additional attraction for industrialists, including cashew processors, to shift their business to other States. At present, 80 percent of India's cashew processing industry is concentrated in Kerala.

Bigger S. Indian Tea Output

South India had yet another bumper harvest of tea during October; the official figures which have just been released place the crop at 16.4 million lbs, compared with 12.5 million lbs during the corresponding month of last year. The south has been producing a larger volume of tea for the past few months, and the total output to the end of October at 120 million lbs shows a lead of 17 million lbs over that of last year.

Higher Rubber Production

Rubber production, too, touched a new record in October, the output being 2,768 tons, against 2,326 tons in the same month of the last season. The total output to the end of October amounted to 18,362 tons, compared with 17,730 tons during the first ten months of last year. Manufacturers' offtake to the end of the month amounted to 26,221 tons, showing a lead of 2,419 tons over that of the previous corresponding period. The gap between production and consumption by the end of October amounted to 7,859 tons. The country had a stock of 8,865 tons at the end of October this year.



COCHIN TEA SALES

At Sale No. 32, 2,100,000 lbs of tea were on offer. There was much less demand particularly for low mediums and mediums which were 10nP to 15nP easier Best liquoring grades eased irregularly by 30nP or 40nP.

COFFEE CROP ESTIMATE FOR 1957-58

The coffee crop for 1957-58 is estimated at 37,000 tons, consisting of 24,000 tons of Arabica and 13,000 tons of Robusta. Out of this, a quantity of 7,810 tons is provisionally set apart for export subject to review in January-February next For home consumption in 1958, the quantity estimated and provided for is 28,451 tons, consisting of 12,098 tons of Plantation, 3,857 tons of Arabica Cherry and 12,496 tons of Robusta. This allows for an increase over the 1957 offtake of Plantation and Robusta by 10 percent and 15 percent, respectively. Releases of coffee in the internal market during November 1957 amounted to 2,324 tons bringing the total releases from January to November to 23,737 tons, against 22,114 tons released during the corresponding period of last year. Out of 15,155 tons allotted for export from 1956-57 crop, the quantity which remains to be sold is 586 tons only.

A subject which received much attention during the recent meetings of the Board and its committees was that of steps to be taken to keep up the quality of coffee offered for export. Sizeable outturns produced from station selections grown on estates in different regions as well as samples from the normal produce of the same estates will be sent during the current season to London, Hamburg Amsterdam, Switzerland and the United States for testing their comparative quality and market response. The Board took an important decision to establish a department for testing coffee and to obtain the services of a competent taster from abroad for this purpose. The need to impose a deterrent penalty on those growers who sent under dried coffee for curing was stressed and the measures to be taken in this behalf are to be investigated.

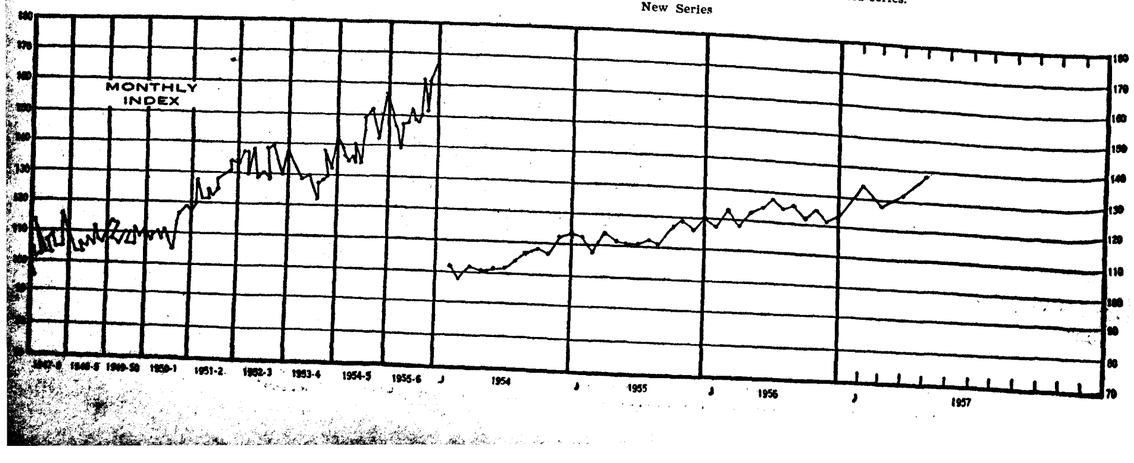
"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**



The *Capital* Index of Indian Industrial Activity (base: 1953) has been revised and calculated up to April 1957. Compared with the preceding month, there were decreases in sugar 91.83 points, cement 11.17 points, pig iron 6.30 points, finished steel 6.14 points paper 3.57 points, automobiles 42.20 points and railway ton-miles 23.54 points, while increases occurred in tea 41.61 points, jute 2.90 points, yarn 2.58 points, cloth 2.74 points, coal 2.44 points, tyres 15.95 points, bicycles 3.6 points and electricity 4.80 points.

Combining all the factors, the *Capital* Index of Indian Industrial Activity increased by 6.6 points during April, 1957.

** Revised in December, 1957. Old Series

* General Index figures from 1947-48 to 1955-56 are taken from old series. New Series

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY

REVISED SERIES ISSUED

THE *Capital* Index of Indian Industrial Activity was started in 1937, with 1935 as the base year. The constituents were as given below:

	Weights
I. Industrial Production	
(1) Cotton manufactures	9
(2) Jute manufactures	6
(3) Steel ingots	5
(4) Pig iron	8
(5) Cement	5
(6) Paper	3
	36
II. Mineral Production	
Coal	7
III Internal Trade	24
IV. Financial Statistics	
Cheque Clearances	20
V. Trade (Foreign and Coastal)	
(1) Value of exports	4
(2) Value of imports	3
VI. Shipping (Foreign and Coastal)	
(1) Tonnage entered	3
(2) Tonnage cleared	3
Total	100

Some of these items had to be replaced later because information was not available, especially during the war, and also because information about certain items was available only very late, thus delaying the calculation of the index. The aim of the index, as originally conceived, was that it should help in understanding the current economic situation; it was not meant to be merely a convenient historical record. Reducing the time-lag in calculating the index, through the use of readily available information, was, therefore, deemed to be highly desirable, even at the cost of some lack of precision.

During the postwar years, the range and variety of economic information has expanded enormously. The annual census of industrial production, conducted by the Government of India under the Industrial Statistics Act, has in particular contributed to the knowledge of the working of industries. Such detailed information on the structure of industries can only be incorporated by revising the index, through a readjustment of items and reallocation of weights. The new series of the *Capital* Index of Indian Industrial Activity is intended to serve this purpose.

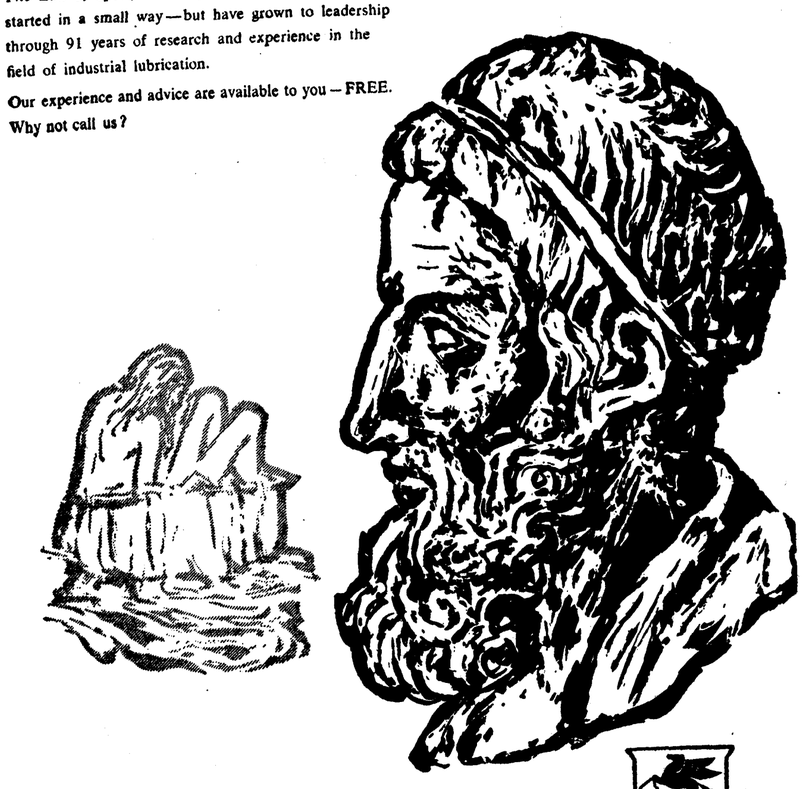
A distinctive feature of the *Capital* Index is that it combines industrial production with other associated activities, such as transportation and trade, the latter being indicated by the volume of financial transactions (measured by the amount of cheque clearances of scheduled banks). It is thus a hybrid between an index of industrial production and an index of business activity. Theoretically, it is difficult to define the precise domain of such activities; for example, transportation may be regarded as essentially associated with industrial activity, though it is also associated with agricultural and business activity. The only comprehensive concept could be defined in terms of value creation, which would be broad enough in scope as it would include agricultural production and in fact all the component activities in the determination of the national income. However, such an index would not reflect industrial progress adequately. In fact, the argument against the inclusion of agricultural production was emphasised by Bowley in his *Economic Census of India* when he said that the preponderance of agricultural production would swamp the industrial items.

As the available information about various industries was very meagre, except for some organised large-scale industries, it was not possible to include all the relevant activities in the construction of the index; the items had to be chosen to represent industrial activity on the grounds of suitability and expediency. It was felt that the old series of indices having served a useful purpose, any subsequent revision should retain the identity of the original concept as far as possible, so as to maintain continuity and comparability. This has been the main principle in the choice of items and the method of construction of the revised series of indices, though there is some shift in the emphasis on industrial production.

The constituents of the new series are as follows:

	Weights
I. Industrial Production	
(1) Sugar	4.63
(2) Tea	4.95
(3) Jute textiles	8.11
(4) Cotton textiles	
(a) Yarn	7.75
(b) Woven material	19.39
(5) Cement	1.54
(6) Coal	6.01
(7) Iron and steel	
(a) Pig iron and ferro-alloys	1.91
(b) Finished steel	3.81
(8) Paper and board	1.27
(9) Tyres	2.13
(10) Automobiles	1.45
(11) Bicycles	0.45
(12) Electricity	2.11
	65.52
II. Transportation	
Railways: net ton-miles	34.48
Total	100.00

The constituents of the new series are the same as those of the old series, except for the introduction of transport equipment (which has come to acquire an important place in the industrial system), and sugar and tea, which are also very important. Internal trade as a constituent had already been replaced by railway statistics, and financial statistics like cheque clearances and notes in circulation have been dropped.



In the determination of weights, the average value added by manufacture a unit of output during the years 1949-53 has been used, as it was found that the value added a unit output varies considerably in different years, depending on the conditions of the market. The base of the index has been chosen as 1953, which may be considered a normal year for the Indian economy, when the effects of planning were already discernible. The index is a weighted arithmetic average of the individual item indices. No adjustments for seasonal variations have been made for the items themselves, and these indices denote actual levels of activity. For the general index, both seasonally adjusted as well as unadjusted values are given.

It is hoped that the new series of the *Capital* Index of Indian Industrial Activity will be useful to research workers, administrators and industrialists.

That leisurely bath...

...may have *started* Archimedes thinking—but it took years of expert, scientific investigation to establish *The Law of Specific Gravity*. So too, MOBIL products started in a small way—but have grown to leadership through 91 years of research and experience in the field of industrial lubrication.

Our experience and advice are available to you—FREE. Why not call us?

BANKS

H indicates that Share capital is half paid. O. C. and Dd indicate Ordinary Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. Managing Agents refer to the Key (last page) under the numbers indicated.

COAL COMPANIES

O., Po., F. and Dd. indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.
