In a notification published in the *Gazette of India* of 6th July, 1957, the Government of India made it clear that iron and steel castings manufactured with the aid of power for sale to the public would alone be covered by the registration and licensing provisions of the Industries (Development and Regulation) Act, 1951. As a result, only those industrial undertakings which employ 50 or more workers, use power and make iron and steel castings for sale to the public, need apply for registration or licence, as the case may be. Any undertaking which makes iron and steel castings for the production of articles for which it is already registered or licensed under the Industries Act need not apply for registration or licence unless its casting capacity is such as would enable it to effect sale of castings to the public in addition to meeting its own requirements.

Commodity Markets

INCREASED OUTPUT OF COTTON

SLIGHT DECLINE IN ACREAGE

ACCORDING to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, the all-India final estimate of cotton, 1956-57, puts the current year's area and production at 19,843,000 acres and 4,723,000 bales (of 392 lbs each) of cotton lint, against the partially revised estimate of 19,978,000 acres and 4,001,000 bales, respectively, for 1955-56. This shows an increase of 722,000 bales or 18.0 percent in production during the current year, in spite of a small decrease of 135,000 acres or 0.7 percent in area. During 1956-57 the production of cottonseed is estimated at 1,653,000 tons, against the partially revised estimate of 1,400,000 tons for 1955-56, thereby showing an increase of 253,000 tons or 18.4 percent over last year. The overall decrease in acreage during the current year has been shared mainly by Madhya Pradesh and Rajasthan and has been attributed largely to unfavourable weather conditions at the time of sowing. The decrease in acreage has, however, been offset to some extent by the increases registered mainly in Punjab and Madras. In spite of a decrease in area, there has been a substantial increase in production during the current year. The increase in production is shared mainly by Bombay, Madhya Pradesh and Punjab and is attributed largely to better seasonal conditions prevailing during the growing period of the crop compared with last year.

Details according to staple lengths of current and previous year's estimates are given below:

Staple	Area (Thousand Acres)			Production of cotton lint (Thousand bales of 392 lbs each)		
	1956-57 (Final estimate)	1955-56 (Partially revised estimate)	Increase (+) or decrease (−) of Col. (2) over Col. (3)	1956-57 (Final estimate)	1955-56 (Partially Revised estimate)	Increase (+) or decrease (−) of Col. (5) over Col. (6)
(1)	(2)	(3)	(4)	(5)	(6)	(7)
Long Staple	7,736	7,326	(+) 410	1,938	1,610	(+) 328
Medium Staple	8,698	8,794	(−) 96	2,007	1,692	(+) 315
Short Staple	3,409	3,858	(−) 419	778	669	(+) 79
TOTAL:	19,843	19,978	(−) 135	4,723	4,001	(+) 722

As between the different varieties of cotton, the increase in production has occurred mainly in Americans, Jarilla, H. 420 and Oomras and a decline in production has occurred in the case of Broach-Vijay, Dholleras and Surti-Suyog. The increase in production has been shared mainly by long and medium-staple cotton. Past experience has shown that the official estimates of production are generally lower than the estimates of the crop prepared by the Indian Central Cotton Committee on the basis of the data on the actual utilisation of the crop. These latter estimates for 1956-57 would, however, become available only about December 1957, i.e., about four months after the close of the 1956-57 cotton season on 31st August, 1957. According to the relationship based on previous data between the official final estimates and the I.C.C.C. estimates (Formula II), this year's final estimate of 4,723,000 bales would correspond to 5,121,000 bales of the I.C.C.C. estimate. The I.C.C.C. estimate for the year 1955-56 was 4,460,000 bales.

FOREIGN EXCHANGE EARNINGS FROM OILS AND OILSEEDS

India earned over four times more in foreign exchange through the export of five major vegetable oilseeds, namely, groundnut, sesamum, castor-seed, rape and mustard and linseed, and oil in 1954-55 than in the previous year. The total value of exports in 1954-55 was Rs. 19.12 crores, compared with Rs. 4.68 crores in 1953-54. The production of oilseeds also touched the peak level of 5.88 million tons in 1954-55, against 5.46 million tons in the previous year. The increase in production occurred mainly in case of edible oilseeds. These facts are given in a publication *Oilseeds in India. 1954-55*, issued by the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture. Among the important buyers of India's groundnut and groundnut oil, the Netherlands accounted for about 37 percent of the exports in 1953-54, compared with 21 percent in the prewar period. The U.K. and Australia received about 80 percent of the total export of linseed and linseed oil during 1954-55. The U.S.A. obtained about 47 percent of India's total export of castor oil during 1954-55, against negligible quantities in prewar years. In 1954-55 the U.K. and Australia together imported more than 47 percent of castor oil. The groundnut production rose from 3.57 million tons (nuts in shell) in 1953-54 to 3.82 million tons in 1954-55. Similarly, rape and mustard and seasamumseed production increased from 860,000 tons and 550,000 tons in 1953-54 to 960,000 and 590,000 tons, respectively, in 1954-55. Linseed and castorseed also recorded an increase in production. The publication contains detailed data relating to trends in production, utilisation, exports and prices of oilseeds and oil.

PROTECTION TO SAGO INDUSTRY

The Government of India's resolution on the Tariff Commission's report (1957) on continuing protection to the sago industry has been published in a *Gazette of India* extraordinary. The Government has accepted the Tariff Commission's main recommendation that protection to the sago industry should be continued for a further period of two years, that is, till the end of 1959. Protective duties on the relevant tariff item will be continued at the rates in force now under the Finance (No. 2) Bill, 1957. The Government has taken note of certain other recommendations of the Commission for assistance to the industry, and will take suitable steps to implement them as far as possible. The Tariff Commission has also made certain ancillary recommendations for improving the technique of production of sago, for the expansion of sales, for the maintenance of statistics, etcetera. The attention of the sago industry and the Salem Sago Manufacturers Association has been drawn to these recommendations.

ECONOMIC CONDITIONS OF FRUIT PRESERVATION INDUSTRY

The *murrabba* or fruit preservation industry, run by small proprietory and partnership concerns, produces on an average about 82,000 maunds of *murrabbas* of various types, valued at Rs. 33 lakhs a year. The annual requirements of the industry are estimated at 54,600 maunds of fruits and 65,520 maunds of sugar. This information is given in a report on the fruit and vegetable *murrabba* industry in India, issued by the Directorate of Marketing and Inspection of the Central Ministry of Food and Agriculture. The report states that the history of the *murrabba* industry is linked with the indigenous systems of medicine, particularly *unani*. It flourished considerably under State patronage during the Mughal rule in India. At present the industry is chiefly concentrated in Delhi and Amritsar which together contribute up to about 80 percent of the total production in the country. The report has recommended that the industry should organise itself into co-operatives and pool common items of services. Attempts in this direction should be made in Delhi. Another point on which the report has laid particular emphasis is the establishment of a laboratory in Delhi or Lucknow. The prevalent condition in several *murrabba* factories, it is stated, is unsatisfactory. The report has recommended that the existing units situated in thickly-populated areas should be shifted to healthier surroundings. The report has discouraged the existing practice of packing *murrabba* in large containers or selling it loose, and has suggested that quick steps be taken by the trade to introduce airtight packing in tins or glass containers. Concluding, the report has pointed out that there is considerable scope for expansion of the *murrabba* markets in the country and abroad.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) advanced by 0.7 percent to 112.1 during the week ended 20th July 1957, compared with 111.3 for the previous week. The index was higher by 1.5 percent and 8.2 percent respectively, when compared with the corresponding week of the previous month and that of a year ago. The index for Food Articles rose by 0.7 percent to 111.2 against 110.4 (revised) for the previous week due to advances in the prices of oranges in Madras city (+32%) onions in Delhi (+30%) potatoes in Kanpur (+23%) and in Delhi (+11%, milk in Calcutta (+9%), meat in Ludhiana and salt in Bombay (+8% each), ragi in Ghoti (Bombay) (+6%), coconut oil in Cochin (+5%), maize and arhar (+3% each), wheat, rice and mustard oil (+2% each) and bajra barley, mung, groundnut oil, sugar, coffee, chillies and betelnuts (+1% each). The prices of milk in Bombay and fish (−9% each), onions in Calcutta and bananas in Bombay (−8% each), potatoes in Patna (−7%), tea (−6%) and jowar (−1%), however, moved down. The index for the Liquor and Tobacco group remained stationary at the previous week's level of 94.3. An increase in the prices of kerosene oil and castor oil (+2% each) was responsible for a rise of 0.3 percent to 114.8 against 114.5 (revised) for the previous week in the index for the Fuel, Power, Light and Lubricants group. The index for the Industrial Raw Materials group moved up by 1.6 percent to 122.8 compared with 120.9 (revised) for the earlier week, mainly due to increases in the prices of raw wool in Fozilka (+19%), groundnuts (+10%), raw jute in Barpeta Road (Assam) (+6%), copra (+4%), linseed, castorseed, gingellyseed and rapeseed (+2% each); the prices of cottonseed in Hyderabad (−10%), tanning materials (−3%) and raw cotton and raw silk (−1% each), however, moved down. Linseed oil, cotton yarn, zinc, copper and tin (+1% each) showed advances while coir yarn (−2%) and lead (−1% each) moved down and as a result the index for Intermediate Products showed a rise of 0.5 percent to 109.2 compared with 108.7 for the previous week. The index for Finished Products also advanced by 0.4 percent to 109.0 compared with 108.6 (revised) for the earlier week as a result of an increase in the prices of groundnut cake in Calcutta (+5%), bricks and tiles (+2%) and cloth (mill) and jute manufactures (1% each). The prices of coconut cake in Kozhikode (−5%) and handloom cloth and cycles (−1% each), however, showed declines.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base 1952-53=100)

PRODUCTION OF RAPE AND MUSTARD RISES

According to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, the all-India final estimate of rape and mustard for 1956-57 puts the current year's area and production of the crop at 6,211,000 acres and 1,017,000 tons respectively, against the partially revised estimates of 6,317,000 acres and 848,000 tons for 1955-56. This estimate shows an increase of 169,000 tons or 19.9 percent in production, in spite of a decline of 106,000 acres or 1.7 percent in area during the current year compared with last year. The decrease in area during the current year has occurred mainly in U.P., West Bengal and Bihar, and has been attributed mostly to unfavourable weather conditions at the sowing time. This decrease in area has been offset to some extent by increases recorded mainly in Punjab and Rajasthan. In spite of a decrease in area, production has increased during the current year compared with last year. The increase in production has been reported mainly by Uttar Pradesh, due to favourable weather during the growing period. Slight decreases have, however, occurred in West Bengal, Madhya Pradesh and Bihar.

ACREAGE AND OUTPUT OF LINSEED FALL

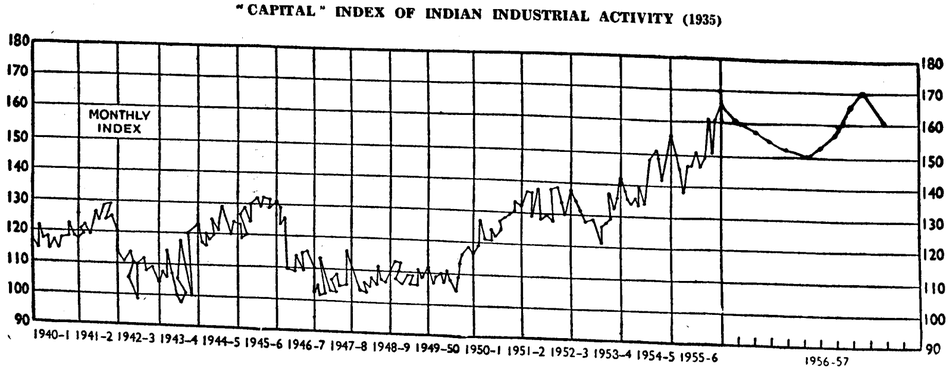
According to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, the all-India final estimate of linseed for 1956-57 puts the current year's area and production at 3,758,000 acres and 349,000 tons, against the partially revised estimates of 3,781,000 acres and 414,000 tons for 1955-56. This shows a decline of 23,000 acres or 0.6 percent in area and 65,000 tons or 15.7 percent in production over last year. The decrease in acreage during the current year has been reported mainly by Uttar Pradesh and Bihar and has been attributed to unfavourable climatic conditions at the time of sowing. This decline in area has, however, been offset to a great extent by increases in Rajasthan, Bombay and West Bengal. The decrease in production has been shared mainly by Uttar Pradesh, Madhya Pradesh and Bihar. This has been attributed partly to the decline in acreage and partly to unfavourable weather conditions during the growing period. A slight increase in production has, however, been reported by Andhra Pradesh, Bombay and Mysore.

SUGAR PRODUCTION AND DESPATCHES

The production of indigenous sugar amounted to 2,018,000 tons up to 15th July in the current season against 1,853,000 tons in the corresponding period of last year. The total offtake including quantities despatched for export was 1,493,000 tons. Stocks with factories on 15th July stood at 1,049,000 tons.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The *Capital* Index of Indian Industrial Activity (base : 1935) has now been brought up to February 1957. Compared with the preceding month, there were decreases in cotton consumption 5.4 points, jute manufactures 0.8 points, steel ingots 12.0 points, pig iron 0.6 points, cement 16.6 points, paper 16.8 points, coal 4.6 points, wagons loaded 12.9 points and electricity 7.2 points.



The index for cheque clearances fell by 13.8 points, while that for notes in circulation rose by 4.7 points.

Combining all the factors, the *Capital* index of Indian Industrial Activity declined by 9.4 points during February 1957.

	Industrial Production						Mineral Production	Total Number of Wagons Loaded (f)	Financial Statistics	Trade Foreign & Coastal		Trade Foreign & Coastal		General Monthly Index

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY (1935)

Calcutta Markets

SELECTIVE DEMAND AT TEA EXPORT SALE

DUST PRICES DECLINE

AT Sale No. 9, held on 5th and 6th August, offerings at the Export auction, consisted of 65,320 chests. The Sale opened with a good general demand, although this weakened towards the close. Bright liquoring C.T.C.'s were a strong feature, but the more ordinary teas of this description were generally easier. Teas from all districts with useful liquors were quite well supported, but the more ordinary Mediums were 10 to 15 nP easier, Fannings being a weak feature. Plain B.P's were 5 nP easier, while Plain Fannings were 10 nP easier. Darjeelings generally received less support. Tippy teas sold well, but the whole leaf grades met with less demand and were generally easier.

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2.30	1 15 0 to 2 0 0
Plain B. P.	1.75	1 8 6 to 1 9 0
Plain Fannings	1.56	
Medium B. P.	1.90	2 6 0 to 2 8 0
Medium Fannings	1.90	
Best Assam C.T.C. BP	3.80 to 4.00	4 0 0 to 5 0 0
Best Assam C.T.C. Fgs.	4.00 to 4.50	

At the Internal Sale, Dust offerings consisted of 18,469 chests, and these met with a fair demand, but all sorts showed a decline over the previous week. C.T.C. Assams were a very weak feature of the Sale, and at the close, were up to 20 nP easier, although the very best sorts met with more interest. The remainder of the offerings were 4 nP easier, particularly teas from Assam which somewhat showed a decline of 8 nP.

Quotations

	1957 Rs.	1956 Rs.
Medium Dooars Dust	1.50 to 1.55	1 8 0 to 1 9 0
Medium Assam Grainy Dust	1.58 to 1.66	1 11 0
Medium Assam C.T.C. Dust	2.10 to 2.30	2 10 0 to 2 14 0
Best Assam C.T.C. Dust	2.50 to 2.90	3 10 0 to 3 14 0

There was a limited demand for Leaf and prices for the 713 chests on offer declined.

FREIGHT MARKETS REMAIN WEAK

THE freight markets remained weak last week, and the trans-atlantic coal rate declined to 32s. Business generally was on a restricted scale, and although some grain cargoes were arranged from Pacific to India at 72s 6d and 75s, owners are inclined to fight shy of this trade in view of the delays in discharging. Ore rates from India again declined with Visakhapatnam-U.S.N.H. paying $(U.S.)11 for August loading and Cochin-New Orleans $(U.S.)10 for ilmenite. Sugar was fixed from London-Rangoon at 95s, and rice from Haiphong to Colombo at 42s 6d. In the time charter section, a *Liberty* type accepted 16s 3d for four months' East Africa-India trading and a similar ship 17s 6d delivery Rangoon, redelivery Continent. Local markets were bare of orders.

LINSEED EASIER

There has been a slight reaction in prices last week and an easier undertone has developed following a general decline in trading. Although there has been no notable improvement in supplies, the demand from crushers has fallen off and in spite of keener offers from sellers the turnover has been small. The oil market was stagnant; buyers were pausing and the daily offtake was negligible. Export markets were dull, and the disparity in Indian price levels was still wide enough to preclude any immediate possibility of business. Latest quotations were as follows : Ready Rs. 22-8 a maund and August-September Rs. 22-14 a maund.

HIDES AND SKINS STEADY

The market was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 30th July and 5th August, 1957)

Cowhides: Wet salted (Ord.) 7,000 pcs. on the basis of Rs. 7.50 to Rs. 10.25; Wet salted (slaughtered) 14 600 pcs. on the basis of Rs. 12 to Rs. 20.50.

Goatskins: Wet salted (Daissee, Killed) 1,14,600 pcs. on the basis of Rs. 285 to Rs. 325, Rs. 330 to Rs. 350 and Rs. 380 to Rs. 390; Assam-Dinajpur 8,500 pcs. on the basis of Rs. 315 to Rs. 335; Pakur-Patna (Ord.) 2,500 pcs. on the basis of Rs. 285 to Rs. 315; Muzafferpore-Patna 23,200 pcs. on the basis of Rs. 311 to Rs. 334.

Bazaar Stocks

(5th August, 1957)

Cowhides: Wet salted 2,23,000 pcs.

Goatskins: Wet salted (Daissee, Killed) 78,000 pcs.; Assam-Dinajpur 4 400 pcs.; Muzafferpore-Patna - Pakur - Purneah - Kissenganj 53,000 pcs.

SHELLAC FIRM

During the week ended 5th August, the market was quiet and firm at the close. The range of quotations was as follows :

Pure Bottonlac	Rs. 90, 88 value, 90 buyers.
Lemon No. 1 Shellac	Rs. 93 value, 92 buyers, 97.50 done and buyers.
Lemon No. 2 Shellac	Rs. 88 value, 87 buyers, 93 done and buyers.
F. O. Std. 1 Shellac	Rs. 83, 82, 87.50 buyers.
Pure TN Shellac	Rs. 79.50, 78 buyers, 80, 83 done and buyers.
4% I.T.N. Shellac	Rs. 71, 68.50, 74 buyers.
No. 1 Kusmi Seedlac	Rs. 98 value, 85 buyers, 90 done and buyers.
No. 2 Kusmi Seedlac	Rs. 83.50 value, 80 buyers, 86 done and buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 78.50, 77.50, 84 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 75, 74, 80 buyers.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs. 68.50, 67, 74 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 63.50, 62, 68 buyers.
Kireelac	Rs. 28 to 30 buyers.

Shipment during July until the 31st were 25.576 packages comprising: shellac 14.801 packages; seedlac 8.858 packages; buttonlac 575 packages and others 1,342 packages.

Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate along with the earnest money deposit receipt with the tender.

GENERAL MANAGER

Books and Publications

PORTRAIT OF AN INDUSTRIALIST

Sir Purshotamdas Thakurdas. By Frank Moraes. (Published by Asia Publishing House, 316 pages. Price Rs. 17.50)

"READ biography, not history, for that is history without theory," said Disraeli. If one cannot go all the way with this typically glib aphorism, it at least remains true that well-written biographies provide an essential insight into the life of a nation. And if Mr. Moraes has not maintained the standard he set himself in his biography of the Prime Minister, then at least he does not fail in this prime duty while telling the story of Sir Purshotamdas Thakurdas, whose career over the last 60 years has covered a wide variety of activities. The book lacks, for example, the insight which marked an earlier study of Mr. Nehru; on the contrary, it sometimes lapses into rash assertions, as when Mr. Moraes refers to the difficulties aroused by the creation of bilingual Bombay as having been "largely resolved," an estimate which the election results would appear to contradict. But these are small blemishes in an otherwise readable book. Particularly interesting are the chapters on Sir Purshotamdas's political activities. The one on his relations with Mahatma Gandhi throws some interesting sidelights on that unique personality. Mr. Moraes's narrative serves as a reminder that in the days of the independence struggle there was a greater diversity of opinion, more forcefully expressed, than now, when greater diversity might be expected and would certainly be more desirable. He writes that "crusaders of Sir Purshotamdas's calibre and status had a comparatively small place in guiding a Government based on adult franchise and propelled along socialistic paths by the election manifestoes of the Congress Party." Covering Sir Purshotamdas's work for industry, particularly the cotton industry, this book is a useful contribution to India's recent economic history.

EASY MONEY

The Way To Fortune. By Edward Westropp. (Published by Oldbourne Press, London; agents Rupa, Calcutta 12, Pages 216. Price 15s).

If you dislike the idea of too much wealth being in one person's hands, this book will displease you. If, on the other hand, you are a member of that jealous species who dreams constantly of making untold millions, then here is a book which may make you a little more optimistic about realising those dreams. Mr. Westropp sets out to write about those men who have "a burning urge to overcome difficulties and establish themselves as men of vast wealth and often of vast power over their fellow human beings". Detailed descriptions are given of the activities of such gentlemen as Vanderbilt, Cecil Rhodes, Lord Northcliffe and of some of their more modern counterparts such as Harry Ferguson and Kenneth Wood. Three chapters are devoted to the great depression of the 'thirties particular reference being made to those forgotten souls who actually made money from the disaster. At the end of the book is a list of the virtues necessary for making money: "a sense of humour" and "education" appear at the end of the list. Mr. Westropp writes in a racy style and his book is, therefore, easy to read. The morality of the methods whereby millions are made is unfortunately ignored.

THE JAPANESE ECONOMY

Fuji Bank Bulletin, June 1957. (Published by the Fuji Bank Ltd., Tokyo, Japan. Pages 39.)

The June issue of this bulletin gives a *résumé* of the problems and prospects of the Japanese economy in the fiscal year 1957. The study begins with a discussion of economic trends, and suggests that the main problems during the current year will centre on the balance of payments and the domestic financial situation. The trend in Japanese foreign trade has been changing gradually; in fact, the deficit on visible account proved considerable in the latter half of 1956. Prosperous business conditions at home and import restrictions abroad, the *Bulletin* says, have moderated the rise in exports. Those who are keen to develop medium and small-scale industries will find valuable material in the section which deals with the special problems of Japan's small enterprises. The destruction of big factories during the second world war and the dissolution of the *Zaibatsu* by the occupation forces gave a powerful stimulus to the development of small industries, which contribute much to the nation's economic prosperity. The section on power resources is interesting, and the bulletin gives a well-informed account of the economic problems of modern Japan.

ENGINEERING GUIDE

Indian Engineering and Industries Guide. Compiled by Endeavours (India) Private Ltd. (Price Rs. 20.)

The ninth annual issue of this guide has been considerably enlarged in size. The major engineering industries in the private sector, leading personalities in the industrial field, industrial associations and technical institutes, popular brands and trade marks have been highlighted in various sections. There is certainly a need for a specialised annual register of this nature since the second plan has laid great stress on the expansion of the engineering industries. As a standard guide on the subject, the volume will prove useful to those connected with the engineering industry and trade.

COMPANY AND PUBLIC NOTICES

THE KARANPURA DEVELOPMENT COMPANY LIMITED

NOTICE is hereby given to the members of the Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Friday the 30th August, 1957, at 10 A.M. for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1956, and to pass the Directors' and Auditors' Reports thereon.
2. To appoint a Director in place of Mr. S. B. Bose, who retires by rotation and being 69 years of age is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

   And in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required under section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by section 173 of the said Act is appended below.

   To be proposed as an Ordinary Resolution.

   "That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. S. B. Bose and that he be and is hereby re-elected as a Director of the Company, whose period of office as such Director would be liable to determination by retirement of Directors by rotation."
3. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 16th August to the 30th August 1957, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Calcutta,
25th July, 1957.

Note: A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

EXPLANATORY STATEMENT.

In the Special Notice given to the Company of the resolution under item No. 2 of the above notice it has been stated that the services of Mr. S. B. Bose have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

Gillander House,
Netaji Subhas Road,
Calcutta.
The 24th July, 1957.

BRIDGE & ROOF CO. (INDIA) LTD.

THE Board of Directors has decided to recommend to the forthcoming Annual General Meeting of the Company a dividend of 20% for the year ended 31st December, 1956.

By Order of the Board,
BALMER LAWRIE & COMPANY LTD.,
D. MANSON,
Secretary.
Managing Agents.

21, Netaji Subhas Road,
Calcutta.
31st July, 1957.

THE UNITED PROVINCES ELECTRIC SUPPLY COMPANY, LIMITED.

NOTICE is hereby given that the Eighty-first Ordinary General Meeting (not being an Annual General Meeting) of the abovenamed Company will be held at its Registered Office No. 12, Mission Row, Calcutta on Thursday, the 29th August, 1957 at 11-0 a.m. for the following purposes:—

1. To receive and adopt the Audited Accounts for the half-year ended 30th September, 1956 and the Directors' and the Auditors' Reports thereon.
2. To declare a Dividend.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 23rd August, 1957 to the 29th August, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LTD.,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta 1.
The 5th August, 1957.

EXPLANATORY STATEMENT

This meeting is being convened to consider the accounts for the half-year ended 30th September, 1956, in accordance with the provisions of the Company's Articles of Association.

THE TEEN ALI TEA COMPANY, LIMITED.

THE Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday, the 6th day of September 1957, at 3-30 p.m., for the following purposes:—

(1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1956.
(2) To declare a dividend.
(3) To elect Directors in place of the retiring Directors. In this connection Special Notice is hereby given of the intention to move the Special Resolution at the meeting, that is to say:—

"That Mr. H. R. Townend who retires by rotation be and is hereby appointed a Director of the Company, such appointment to have effect as and from the 23rd November, 1956."

(4) To elect Auditors for the ensuing year, and to fix their remuneration.

The Share Transfer Book of the Company will be closed from 30th August, 1957 to 6th September, 1957, both days inclusive.

OCTAVIUS STEEL & CO., LTD.,
A. H. GALLOWAY,
Managing Director,
Managing Agents.

Calcutta, 5th August 1957.

NOTE:—

A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and on a poll to vote instead of himself and the proxy need not be a member.

EXPLANATORY STATEMENT

In the Special Notice given by the Company to the Shareholders under item 3 of the annexed notice for Annual General Meeting, intimation has been given of intention to move a Special Resolution for the re-appointment of Mr. H. R. Townend, who will retire in rotation at the meeting. Special Notice of such intention has also been given to the Company. Since Mr. Townend is also a Director of Messrs. W. S. Cresswell & Co. Private Ltd., who are the brokers of the Company for the sale of their tea, it is considered desirable that he should be appointed to the Board by Special Resolution.

The Special Resolution has been framed so as to have retrospective effect from the date of the last Annual General Meeting.

THE HOOGRAJULI (ASSAM) TEA CO. LTD.

THE Board of Directors has decided to recommend to the forthcoming Annual General Meeting of Shareholders a Dividend of Rs. 1/50 nP per share in respect of the year ended 31st December, 1956 without any deduction in respect of taxation payable by the Company.

By Order of the Board,
ANDREW YULE & CO. LTD.,
Managing Agents.

Calcutta, 31st July, 1957.

JAYBIRPARA (DOOARS) TEA CO. LTD.

THE Board of Directors has decided to recommend to the forthcoming Annual General Meeting of Shareholders, a Dividend of 60 nP per share in respect of the year ended 31st December, 1956, without any deduction in respect of taxation payable by the Company.

By Order of the Board.
ANDREW YULE & CO. LTD.,
Managing Agents.

Calcutta, 31st July, 1957.

SEN-RALEIGH INDUSTRIES OF INDIA LTD.

NOTICE is hereby given that the Seventh Annual General Meeting of the members of Sen-Raleigh Industries of India Limited will be held at the Registered Office of the Company, Mercantile Buildings, Lallbazar Street, Calcutta, on Saturday the 31st day of August, 1957, at 12 noon for the following purposes:—

1. To receive and pass the Directors' Report and Audited Accounts for the accounting year ended 30th September, 1956.
2. To declare dividends.
3. To elect Directors.
4. To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS:

To consider and, if thought fit, to pass, with or without modification, the following resolutions:—

5. "That the Company do hereby approve of the appointment of Mr. S. K. Sen who has attained the age of 68 years as a Director of the Company and declare that the age limit of 65 years specified in Section 280 of the Companies Act, 1956, shall not apply to him."

6. "That the Company do hereby resolve that the accounts of the Branch Office of the Company at New Delhi be not audited under the provision of Sub-Section (1) of Section 228 of the Companies Act, 1956 by a person qualified as an Auditor."

7. "That the Company do hereby resolve that where, under any provision of the Companies Act, 1956, any member or person not being a member of the Company is entitled to inspect any minute books of general meetings, registers returns, certificates, deeds, instruments or documents required to be kept or maintained by the Company, the Member or person so entitled to inspection shall be permitted to inspect the same between the hours of 10-30 A.M. and 12-30 P.M. on such business days as the said Act requires them to be open for inspection."

8. "That, in compliance with Sub-Section (1)(a) of Section 293 of the Companies Act, 1956, the Company do hereby consent to the Board of Directors of the Company selling, leasing or otherwise disposing off the whole or substantially the whole of the undertaking of the Company as the Board may at any time and from time to time, deem necessary for the purposes of the Company."

9. "That in compliance with Sub-Section (1)(b) of Section 293 of the Companies Act, 1956, the Company do hereby consent to the Board of Directors of the Company remitting or giving time for the repayment of any debt due by a Director of the Company as the Board may at any time and from time to time, deem necessary and expedient for the purposes of the Company."

10. "That, in compliance with Sub-Section (1)(c) of Section 293 of the Companies Act, 1956, the Company do hereby consent to the Board of Directors of the Company investing, whether in trust securities or in stocks, shares or debentures of any body corporate or otherwise the sale proceeds resulting from the acquisition, after the 1st April, 1956, without the consent of the Company in general meeting, of the whole, or substantially the whole, of the undertaking of the Company or where the Company has or acquires more than one undertaking of the whole, or substantially the whole, of any such undertaking or of any premises or of properties used for any such undertaking and without which it cannot be carried on or can be carried on only with difficulty or only after a considerable time as the Board may, at any time and from time to time, deem necessary."

11. (As a Special Resolution)—"That Article 81 of the Articles of Association of the Company be altered by deleting therefrom the proviso commencing with the words 'provided that the amount for the time being remaining undischarged' and ending with the words 'the limit hereby imposed had been exceeded'."

12. "That, in compliance with the requirements of Sub-Section (1)(d) of Section 293 of the Companies Act, 1956, the Company do hereby consent to the Board of Directors of the Company borrowing moneys (excluding temporary loans from time to time obtained by the Company from its bankers in the ordinary course of business) in excess of the aggregate of the paid up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose as the Board may at any time and from time to time deem necessary for the purposes of the Company."

13 "That, in compliance with Sub-Section (1)(e) of Section 293 of the Companies Act, 1956, the Company do hereby consent to the Board of Directors of the Company contributing to charitable or other funds not directly relating to the business of the Company or the welfare of its employees any amounts the aggregate of which, will in any financial year, exceed Rs. 25,000/- or 5% of the average net profits of the Company as determined in accordance with the provision of Sec 349 and 350 of the Companies Act, 1956 during the three financial years immediately preceding, whichever is greater, as the Board may, at any time and from time to time deem necessary for the purposes of the Company."

Share Transfer Books and the Register of Members of the Company will be closed from the 17th August, 1957 to 31st August, 1957, both days inclusive.

Payment of any dividend, if declared, will be made only to those members whose names are registered in the Books of the Company on the 17th August, 1957 or to their mandatees. No application for warrants will be necessary. Claims on behalf of holders of shares held on blank transfers will not be entertained. Payments will be made on and after 30th September, 1957.

By Order of the Board,
K. D GANGULI,
Secretary.

Mercantile Buildings,
Lallbazar Street,
Calcutta-1.

Date: 30th July, 1957.

NOTES: (1) A member who is entitled to attend and vote at the meeting is entitled to appoint a proxy to vote on his behalf and a proxy need not be a member of the Company.

(2) Special notice has been received by the Company of the intention to propose resolution No. 5.

(3) Extension of time upto 30th September 1957 for holding the Annual General Meeting of the Company for the year ended 30th September, 1956 has duly been obtained from the Registrar of Companies West Bengal under Section 166(1)(c) of the Companies Act, 1956.

SEN-RALEIGH INDUSTRIES OF INDIA LTD.
EXPLANATORY STATEMENT.

To
The Members,
Sen-Raleigh Industries of India Ltd.

Dear Sir(s)/Madam,

The Companies Act, 1956 which became law with effect from 1st April, 1956, specifies various matters which require the approval or the direction of the Company in general meeting. Certain of these matters are now being dealt with and this statement explains the reason for the resolutions which are being placed before you for approval as special business at the Annual General Meeting.

RESOLUTION NO. 5:

As you are aware Mr. S. K. Sen has been a Director of the Company since its incorporation and, being an ex-officio Director, is not liable to retirement by rotation of Directors. Special notice pursuant to Section 190 and Sub-Section (2) of Section 281 of the Act has been received by the Company stating that Mr. Sen has attained the age of 68 years and giving notice of a resolution to propose that his appointment as a Director of the Company be approved and that the age limit prescribed in Section 280 of the Act shall not apply to him. Section 280 of the Act prohibits the appointment of a person as a director of a public company if he has attained the age of 65 years. Where a director has attained the age of 65 years before the 1st April 1956 his appointment terminates at the conclusion of the third annual general meeting held after the 1st April, 1956. The company in general meeting is, however, empowered to appoint or approve of the appointment of a director who has attained the age of 65 years and specifically to declare that the age limit shall not apply to him.

Mr. Sen has had many years experience in the particular business that is being carried on by the Company and the Board of Directors recommends the passing of the resolution as being in the best interests of the Company.

RESOLUTION NO. 6:

This opportunity is being taken to propose a resolution to satisfy also the provisions of Sub-Section (1) of Section 228 of the Act. This section requires that the accounts of a Branch Office of a company shall be separately audited by a local auditor appointed for that purpose, unless the company otherwise resolves. The Company has a Branch Office at New Delhi (for purposes of liaison with the Central Government and its agencies), the accounts of which are controlled from the Registered Office of the Company and audited by the Company's Auditors. Your Directors do not consider it necessary for a local auditor to be appointed to audit the accounts of the Branch Office and therefore, recommend that the appropriate resolution, numbered 6 in the convening notice, be passed. The accounts of transactions effected by the Branch Office will continue to be audited by the Auditors of the Company who have a statutory right to visit the Branch Office and to inspect all books and accounts thereat.

RESOLUTION NO. 7:

Under various provisions of the Act, the Company is required to maintain minute books of general meetings, registers returns, certificates, deeds, instruments or documents and members of the Company and, in some cases persons who are not members of the Company, are entitled to inspect the books and registers etc. The Act however, empowers the Company in general meeting to impose such reasonable restrictions so that not less than two hours in each day are allowed for inspection. The Board of Directors feel that the period of inspection should be restricted to the hours between 10-30 O'clock in the forenoon and 12-30 O'clock in the afternoon on normal business days and the resolution prescribes these hours.

RESOLUTION NO. 8:

Sub-Section (1)(a) of Section 293 of the Act prohibits the Board of Directors of a company from selling, leasing or otherwise disposing off the whole or substantially the whole of the Company's undertaking except with the consent of the company in general meeting. It is considered desirable that the Board of Directors should have the power of so disposing of the undertaking of the Company if it is deemed necessary to do so in the best interests of the Company, but there is no present intention to exercise this power.

RESOLUTION NO. 9:

Sub-Section (1)(b) of Section 293 of the Act prohibits the Board of Directors of a company from remitting or giving time for the repayment of, any debts due by a Director except with the consent of the Company in general meeting. It is considered desirable that the Board of Directors of the Company should have this power. At present none of the Directors is indebted to the Company and any such indebtedness can only lawfully arise subject to compliance with Sections 295, 297 and 299 of the Act.

RESOLUTION NO. 10:

Sub-Section (1)(c) of Section 293 of the Act prohibits the Board of Directors of a Company from investing, otherwise than in trust securities, the sale proceeds resulting from the acquisition of the whole or substantially the whole of the undertaking of the Company. It is considered desirable that the Board of Directors of the Company should be able to invest in any manner they think fit the sale proceeds referred to above but there is no present intention to sell any part of the Company's undertaking.

RESOLUTION NOS. 11 & 12:

Article 81 of the Articles of Association of the Company empower the Directors at their discretion, to borrow moneys for the purposes of the Company up to a limit of the nominal amount of the issued share capital of the Company without the previous consent being received of the Company in general meeting. Sub-Section (1)(d) of Section 293 of the Act imposed a statutory limit which may be enlarged by a resolution of the Company in general meeting. This Section restricts the borrowing powers of the Directors where the moneys to be borrowed, after the commencement of the Act, together with moneys already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose. At present, the paid-up capital of the Company amounts to Rs. 1,00,00,000/- and its free reserves as at 30th July 1957 to Rs. 2,00,000/- making a total of Rs. 1,02,00,000/-. The Company is entitled to borrow Rs. 1,02,00,000/- and, as at the present time, the borrowing of the Company is much less than the permissable limit.

Company Notices and Dividend Table appear on Page 183

The bankers of the Company require, and your Directors recommend that the statutory borrowing powers of the Directors be unlimited and should not be restricted to the extent as laid down either in Article 81 of the Articles of Association of the Company or in Sub-Section (1) (d) of Section 293 of the Act so that the Directors could borrow according to exigencies of the circumstances. In order to be able to put this into effect it will also be necessary to amend Article 81 which resolution No. 11 proposes to do.

RESOLUTION NO. 13:

Sub-Section (1)(e) of Section 293 of the Act places a statutory limit of Rs. 25,000/- or 5% of the average net profits of the Company during the three financial years immediately preceding, whichever is greater on the amount which the Board of Directors may contribute to charitable and other funds not directly relating to the business of the Company or the welfare of its employees. Under its Memorandum of Association the Company has unlimited discretion to subscribe to charitable or benevolent objects and the Directors recommend that the statutory limit on their power to do so be enlarged to accord with the provisions of the Memorandum of Association of the Company.

Mr. S. K. Sen is interested in the passing of Resolution No 5 and Mr. A. Sen and Mr. S. Sen, Directors of the Company are relatives of Mr. S. K. Sen and may to that extent, be deemed to be interested in the Resolution.

By Order of the Board,
K. D GANGULI,
Secretary.

Calcutta.
The 30th July, 1957.

To all Shareholders of Sen-Raleigh Industries of India Ltd., with particular reference to:

Md. A. Hasan Mr. E. E. Baker Mr. K. P. Chakravarty, Mr. P. K. Chakravarty Mr. L. C. Clarkson, Mr. A. J. Coelho & Mrs. I. V. W. Coelho, Mr. G. K. Dutta, Mr. J. M. Dhar, Mr. B. Giria, Mr. P. K. Kuruvilla, Mr. F. J. V. deMonezes, Mr. A. N. Manandhar, Mr. S. V. Mahatma, Mr. T. N. Manandhar, Mr. B. K. Naik, Mr. K. C. Pal, The Raleigh Cycle Co. Ltd., M/s. Union Sils, van de Loo & Co., Mr. A. A. BANKS

H indicates that Share capital is half paid. O C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEN YEARS THAT DID NOT SHAKE THE WORLD

PAST ACHIEVEMENTS AND THE PROBLEMS AHEAD

To sum up India's first decade of independence as ten years that did not shake the world is not necessarily a negative compliment. The country which did shake for ten days has not stopped shaking since and, 40 years after that revolutionary rigor political stability is still unknown in Soviet Russia. The manner of the smooth transfer of power to India is not the less unique today for being ten years old. That distinguished American commentator, Walter Lippmann, called it Britain's finest hour when she decided to concede freedom to a fifth of the human race It was India's finest hour too, for the manner in which she received power Not a little of the subsequent stability in this country is ascribable directly to the dignity and gracefulness of the event ten years ago, and it is right to celebrate the day Those who affect to be bored by iteration of this part of the achievement have only to be advised to look around and see how few are the countries enjoying anything like the political tranquillity of India. The comparison is not merely with Burma and Indonesia, where chaos seems to impend almost every evening, but with quite a few countries in Europe.

What makes India's political maturity especially significant is the incontrovertible fact that economic progress cannot even begin without this pre-condition. A tribute though it is to the leadership of the country that its stability is taken for granted by the majority of its citizens—in spite of the integration of the princely states, which was a near-miracle, and two general elections, a record unmatched in this part of the world—it should not be forgotten that the foundations of unity are not as yet as secure as many imagine. The agitation over the reorganisation of States, of which we may not have seen the last, was a warning that there is some way to go before Indianhood can be treated as a built-in fixture in the mind of everyone living in this country.

*

Internally and internationally India has, in the past ten years, consolidated her position in a variety of ways. If in the past twelve-month there has been a welcome shift of attention away from the international scene to the national, as is widely believed, that too is further evidence of consolidation. It is no longer necessary for India to get involved in every dispute to prove that she exists as a sovereign country. Her advice is valued in many capitals and at the United Nations, and the Prime Minister's tours in various countries on his way to the Commonwealth Prime Ministers' conference brought further proof that India is a much respected country. Those who scoff at the habit of some people producing testimonials from foreigners could do worse than remember that not always is international respect won for nothing. If there is some current dissatisfaction that the outside world's respect and sympathy are not immediately convertible into financial help for the second five year plan, there is the point to remember that this country has been the most vigorous exponent of the thesis that there should be no political strings attached to economic aid. The divorcement of one from the other can work the other way too, and political sympathy may not be regarded as a prelude to a seven-year credit.

Commenting on the latest instalment of changes in the Kremlin, Mr. Nehru recently said that Russia was returning to normality because no country could live for ever on the crest of a revolution. This was, in some ways, a profound observation. Nor is India, at this date, as fervent and enthusiastic a country as she was ten years ago. Opinions are bound to differ whether this is the twilight of hope, meaning frustration, or the dawn of sobriety, but there is no denying that there is a suggestion of despond in some quarters. Unemployment remains a serious problem in many parts of the country, and it was stated only the other day in the Lok Sabha that the larger part of the problem of rehabilitating refugees was still unsolved. The difficulties of the second plan were brought to the fore afresh when half a million employees of the Government of India threatened to go on strike last week with perhaps a couple of million others waiting to join them soon to bring the life of the nation to a standstill in a matter of days.

*

It is possible that the two pictures presented in the foregoing—one of achievement and the other of apprehension—are not wholly unrelated. Professor D. W. Brogan has argued admirably that there is a price to be paid for revolutions and that the price is too often out of all proportion to the goods received. It may be equally true that there is a price to be paid for not having a revolution. That India has paid dearly for enjoying the fruits of an industrial revolution she has not had has been argued often enough in these columns. What is being attempted now is an industrial revolution and no less, but the reluctance to pay the full price therefor is so widespread that it is not too early to ask the question whether the Planning Commission had even once taken this into account. There seems no other way of explaining the pained surprise of the Government of India at the insistence of its employees, who in this respect may represent the country at large, on having the welfare State here and now, regardless of what happens to the second five year plan. The shortage of foreign exchange and the deficiency in other material resources are discussed oftener than a possibly very large gap between what the Planning Commission thinks the country can stand and what in fact the people—and not merely the posts and telegraphs employees—will.

Many are the conflicts noisy enough to deflect attention from this basic question. It requires only a little insight to see that almost all the tensions besetting the country today are attributable to the basic fact of poverty. Assam would not care to be troublesome on where to locate the next oil refinery if there was a little more to go round in the State. Biharis would invite Bengalis to go and work there if all Biharis were employed and there was still more work to be done. When a large body of Government employees threatens to go on strike, it may be because their capacity of sacrifice had been exaggerated by planners. Terms such as "economic freedom" are imprecise, and to say that it has still to be won means nothing in economic thinking. What may be true, still, is that while political conditions have been created which would make economic progress possible, there has been less success in creating such economic conditions as would sustain the success on the political front.

Again, there may be a correlation between the two. The political maturity applauded earlier may itself be a brake on economic progress. The former arouses expectations of a better life which the latter is not yet able to satisfy. The prematureness of the promise of a welfare State comes to be a thing political maturity refuses to recognise—and tensions result. One Party accuses the other of a lack of patriotism and the compliment is promptly reciprocated, while the inherent unattainability of some of the goals remains concealed behind charges and counter-charges. There has been much talk lately of scaling down the plan. What it really means is the scaling up of economic realism Political idealism need not suffer in consequence. Indeed, it may then be placed on a firmer foundation than obtains at present. The next ten years will certainly be more momentous for India than the last ten, but this happy Independence Day offers an excellent occasion for resolving that they will be momentous in a creative way.

SPREADING THE RESERVES

IN the weeks before the annual meeting of the International Monetary Fund, the various problems of the European currencies have been developing towards a crisis. The French deficits and the West German surpluses on international account are distinct problems, though related. The weakness of sterling has seemed to be more closely related to the under-valuation of the deutschemark as belief in revaluation of the deutschemark has attracted funds into that currency as though it were a magnet. The West German problem, especially, has become too difficult for the routine consultations of the members of the Organisation for European Economic Co-operation. The regular and large West German surpluses in the European Payments Union are embarrassing enough, and when large-scale movements of short-term capital are added the problem becomes unmanageable. The valuation of a major currency is, anyway, a matter for the International Monetary Fund: and the Fund's meeting would be an appropriate occasion for discussing the position of the major currencies as a whole.

*

London is still convinced that there is nothing fundamentally wrong with the present parities of sterling; that the disharmonies in the present situation are partly a result of incorrect valuation of other currencies. There is growing awareness, however, that these disharmonies are also a result of unhelpful policies on the part of creditor nations, irrespective of the valuation of currencies. The world's reserves tend to flow into the United States and Western Germany, and these countries do not, it may be thought, make enough effort to redistribute them Western Germany's record is not, on the whole, discreditable. Some of her leaders have even been bold enough to advocate active importing as a deflationary measure, and her import trade has, in fact, expanded considerably. Yet this expansion has failed to keep pace with the expansion of exports. A growth of exports is normally commendable (assuming that it is not artificially fostered): but exporting is not an end in itself, and Western Germany's mounting surpluses, while disturbing to other countries, are of little use to her. The United States is more blameworthy. Relatively, U.S. exports have expanded less than West German in recent years, but U.S. imports have expanded much less than U.S. exports. There is much talk of liberalising the import trade, but in practice the Administration nearly always takes protective action as soon as any particular interest is "threatened" by foreign goods. This policy compares unfavourably with the policy of Western Germany in similar circumstances: and it is particularly serious when adopted by the United States because that country's surplus is so much larger than any other's.

The credit balances on visible trade this year have been of the order of $7,500 million annual rate for the United States and $900 million annual

rate for Western Germany; and the aggregate surplus of the two countries together is at an annual rate approximately one-third larger than last year's. This development alone accounts for much of the deterioration in international payments as a whole this year; and (as a result of speculative movements) Western Germany's surplus in the European Payments Union has been increasing much more than her trading surplus this year, so that in Europe especially, the mechanism of payments has been severely strained. It is in this state of international strain that the position of sterling is of crucial importance. Disequilibrium would not necessarily have serious effects if most countries had adequate reserves. It must be accepted as a basic fact of the present situation that the available reserves of gold and dollars are inadequate—at least, at the present price of gold. But reserves in general could be adequate if the world could, as in the past, use sterling freely for the purpose. The benefits of plentiful sterling, while the world had reasonable confidence in the currency, were apparent in the earlier years of Western Germany's creditor position—which coincided with the shrinking of the credit facilities of the European Payments Union. In the past two or three years, however, the restrictive policies of the U.K. have curtailed the world's supply of sterling, and the world has not generally felt enough confidence in sterling to treat sterling balances as reserves equivalent to dollars.

Sterling is not performing its proper function as a lubricant of international trade. And the maldistribution of gold and dollars is growing worse. Apart from Western Germany in Europe and Canada and some Latin American countries in the western hemisphere, few countries have increased their holdings of gold and U.S. dollars during the past two-and-a-half years or so, and many countries have suffered losses. Yet international trade in general has continued to expand—much faster than the overall expansion of reserves, however distributed; and the expansion of trade has not been confined to the countries with healthy reserves. Optimistically, one may regard this development as evidence that trade can flourish even while reserves are, by conventional standards, inadequate. Unhappily, there is already evidence to the contrary. There is an inevitable tendency to impose restrictions on trade in order to protect reserves; and restrictions have a habit of multiplying themselves. There is already a serious risk that the progress of world trade will be temporarily halted by a partial breakdown of the mechanism of payment. The experts of the International Monetary Fund cannot avoid discussion of these matters; but the proper function of the Fund is to guide its members rather than to solve their problems. Not only good creditor policies but also sound economic policies in countries that have run into difficulty are needed to get the mechanism of payments working smoothly again. And it is obviously of paramount importance that sterling be restored to full health so that it can effectively supplement the supply of gold and dollars.

CURRENT COIN

U.S. Business Activity.—The month of July has brought no marked change in business activity, says the latest monthly letter of the First National City Bank of New York on U.S. business and economic conditions. As usual, vacation shutdowns have reduced output in some industries, and labour disputes, particularly the long strike in the cement industry, have hampered operations in others. In overall terms, however, the dip seems no more than seasonal. The general trend is still sideways and indecisive, at a high level. Department store sales, seasonally adjusted, appear to have reached a new peak. Steel demand has held up better than expected and automobile production has been greater than last year at this season. On the other hand, demand for non-ferrous metals and petroleum products has been sluggish. Overall industrial production held on a plateau during the second quarter, with the Federal Reserve Board's index (seasonally adjusted, 1947-49=100) at 143 for April, May and June. This is exactly the figure for August 1956; in the meantime, the index marched up to 147 last December, and down again. Any change in July evidently has been small, and this will probably be true for the rest of the summer. During the spring months, trends have varied from one industry to another, but in the aggregate the ups and downs have tended to cancel out in the well recognised process of "rolling readjustment." Recently individual fluctuations have been more moderate than in 1956; last year's precipitous drops in automobiles, home-building and farm machinery, and sharp rise in producer goods of all kinds, have had no counterpart in 1957. Rather, activity has levelled out in both firm and soft spots, including such areas of strength as plant and equipment outlays and such areas of weakness as home-building. Similar overall stability appears in retail sales, which after seasonal adjustment have held within a narrow range of 1 percent since last November, and in non-agricultural employment (also seasonally adjusted) which has fluctuated less than 1 percent since the end of the steel strike last August. On the other hand, the total output of the economy, as measured by the gross national output expressed in dollars, has risen further. According to revised figures published in July, it reached a seasonally adjusted annual rate of $433.5 billion in the second quarter, compared with $429.1 billion in the first quarter and $426 billion in the fourth quarter of 1956. Price inflation accounted for a major share of the rise, but even so there was a demonstrable increase in overall activity.

* * * *

International Finance Corporation.—The International Finance Corporation has in its first year-end financial statement reported a net income of $1,643,000. The statement covers the period from 24th July, 1956, when the Corporation began its operations, to 30th June, 1957, the end of the fiscal year. Gross income amounted to $2,408,000, from which were deducted administrative expenses of $765,000, including organisational expenses incurred prior to the formation of the Corporation. All income for the period came from the Corporation's investment of its capital in U. S. Government obligations. These obligations were carried on the balance-sheet at $92,429,000. At 30th June, 1957, the Corporation had entered into a commitment for a $2 million investment in Siemens do Brasil Companhia de Electricidade for expansion of manufacturing operations, subject to the completion of necessary legal formalities and satisfaction of other conditions. The investment is to be represented by 6 percent notes maturing in 15 years, with amortisation to begin at the end of the eleventh year. In addition, the Corporation is to receive a 15-year option on the shares of the company. Membership of the Corporation numbered 49 countries on 30th June, 1957, and capital subscriptions aggregated $91,892,000. All the subscribed capital had been paid to the Corporation by the member countries, except for the subscription of the Government of Egypt, amounting to $590,000, which has been due since 23rd August, 1956. As required by the articles of agreement of the Corporation, all payments on account of subscribed capital have been made in U. S. dollars or gold.

* * * *

Future of Suez Canal Company.—The Suez Canal Company is pressing its claims for compensation arising from Egypt's nationalisation of the waterways on 26th July last year. At its annual general meeting in Paris recently, M. Charles Roux, chairman, said that everything possible was being done to achieve this. An implicit criticism of the western countries for agreeing to pay Canal dues to Egypt is contained in the company's report. It says that by thus giving in to Egypt the last powerful bargaining counter has been lost. The time has come, therefore, to carry the question of compensation from the realm of principle to that of facts. If negotiations with the Egyptian Government to determine the practical terms of compensation are unsuccessful, the question will have to be taken to arbitration. The report suggests that part of the Egyptian assets frozen in Britain, France and the United States should be earmarked for compensation. If the payment of dues to the Egyptian company becomes widespread, thus removing the most efficient guarantee for the payment of compensation, the company will have to examine what measures it can take under the circumstances. Although deprived of the opportunity of continuing its former activities, the Suez Canal Company is to carry on. A certain number of fairly important projects are being studied, the chairman said, including participation in a technical survey of the proposed Channel tunnel project, though not necessarily in its actual construction, if that should come about. As a preliminary to this diversification of activities, steps are being taken to reorganise the company so as to divest it of its international nature and make it subject to French law, to reduce the size of the board of directors accordingly, and to link voting rights more closely to actual shareholding.

* * * *

World Bank Economic Institute.—The Economic Development Institute, begun two years ago as an experimental activity of the World Bank, is to be continued on a regular basis. The Institute was organised in July 1955 as a staff college where senior officials from the Bank's member countries could study problems of economic development. In its first two years, it has been attended by 32 participants from 26 countries and overseas territories. The Bank has now considered reports on the results achieved and on the possibility that the Institute will continue to attract enough senior officials as participants. It has decided that the Institute's accomplishments and prospects merit its being maintained as a continuing activity. The Ford and Rockefeller Foundations contributed up to $100,000 toward the expenses of the Institute in order to support it during its experimental period. In future, the costs of the Institute will be borne by the Bank, assisted by a contribution of $1,500 from each Government sponsoring a participant. Preparations have now been completed for the Institute's third course, which will be attended by 25 participants. In all, the first three courses will have included 30 participants from Asia, nine from Africa, 14 from Latin America and the Caribbean and four from Europe. Finance ministries have contributed 16 to this total, 13 have come from other central or regional Government departments, 11 from central banks or monetary boards, nine from planning commissions and eight from industrial or agricultural development banks. The staff of the Institute for the third course will consist of the Director, Mr. Michael L. Hoffman, formerly European economic correspondent of the *New York Times*, two economists from the staff of the Bank, Mr. William Diamond and Mr. Benjamin King, Mr. K. S. Krishnaswamy, on leave from the Reserve Bank of India; and, for the latter part of the course, Mr. Martin Ekker, an engineer and economist from the Netherlands. Mr. George Garvy of the Federal Reserve Bank of New York will serve as a part-time staff member. In addition, well known specialists will lead seminars at the Institute or deliver lectures on their special subjects. The course will also include visits to important financial, industrial and agricultural centres in the United States.

* * * *

Textiles for Ceylon.—Ceylon is reported to be devoting some attention to the possibility of growing cotton as well as of manufacturing cotton textiles. It is all very tentative at present, but it is understood that the plans being considered place the establishment of textile factories first and cotton growing second. Within the next five years it is hoped to erect five shipping mills, each with 25,000 spindles, while weaving capacity will be provided both by powerlooms in mills and by handlooms in the villages. It is believed that domestic production from this source should amount to some 85 million yards a year—a yardage equivalent to the current rate of imports. At first, cotton for the mills will be imported from Egypt and elsewhere, but it is intended to develop local production of the raw material. An area of 100,000 acres, it is believed, could be brought into cultivation, and this should yield a crop of 30 million lbs. This, it is estimated, would meet the requirements of the domestic mills.

* * * *

Creditworthiness and Debt.—The level of activity of "trade protection" societies is probably a fair indication of the level of business as a whole. In the U.K., for instance, where some 40 associations specialising in giving reports on the creditworthiness of firms and individuals exist, the steep fall in the number of enquiries received and handled since 1954 is an indirect confirmation of the effectiveness of the credit squeeze. The recent figures of the London Association show how things have been going:

Year	No of Enquiries answered 000's	Total debt collected £000	Percentage of total referred
1946	109	57	83
1948	124	230	86
1950	149	338	70
1952	145	400	78
1954	158	357	74
1955	132	420	75
1956	116	491	67

It will be seen that the number of enquiries last year was the smallest since the end of the war, and the drop since 1954, which was the peak year, has amounted to about 25 percent. Debt collection—which represents the other function of the trade protection societies—on the other hand showed a rise. Last year the societies in the London area had to cope with the largest volume of debt they had ever had in any one year. It is interesting to see that the proportion actually collected fell to 67 percent, the lowest figure since before the war. With the restrictions on trade, firms were obviously coming to the societies for their help more quickly, while, on the other side, the debtors were having more difficulty in finding the money. There are signs that the pendulum may have started to swing back. The Manchester Guardian Society for the Protection of Trade, one of the oldest in the business, reports that it issued 18,521 credit reports in the second quarter of this year, against 17,304 in the same period last year and 16,019 in 1955. But the amount of debt collected was high, too—£274,250, against £264,707 in 1956 (second quarter again). However, some of this was debt sent in for collection in the previous quarter. The total of new debt sent in during the second quarter was only £258,577, against £271,699 in 1956, which indicates a definite downward swing.

* * * *

Atomic Energy Insurance.—From the financial standpoint, the main problem confronting the British insurance industry in implementing the proposals for insuring atomic power installations will be the creation of adequate reserves. The creation of a "pool" of insurance offices to handle atomic business may in itself be no more than a partial solution. As the industry's Advisory Committee points out in its report, the amount of cover required for a large reactor may be £30 million for material damage and a further £10 million for liability arising from its use. Premium income will necessarily be slow to build up, as for the next few years at least only a limited number of reactors will be insured. Most British insurance offices will join the pool, and to that extent the creation of an atomic insurance reserve will be facilitated. But the Committee wants an approach made to Governments for tax concessions on funds put aside for atomic risks. Moreover, British insurance offices are likely to play an important part in covering atomic risks in foreign countries, and the Committee also calls for international agreement on questions of deposits, reserves and currency transfers. The creation of national or regional pools and a system of reinsurance between them is suggested. In support of tax and other concessions, the Committee points out, claims arising from one major incident could, even after several years, exceed the total of premiums received. If the industrial use of nuclear energy is to achieve its fullest possible expansion, satisfactory insurance arrangements must obviously be made. This implies both adequate cover and reasonable premiums. The Committee believes that premiums will not be a significant item in total costs. The problem of reserves should not be insurmountable, but some hard lobbying will be necessary if all the Committee's suggestions are to bear fruit.

* * * *

Progress in Textile Research.—Research at the Shirley Institute, the centre organised and maintained by the British cotton textile industry, continues to make good progress. What is more, it is also doing well financially from the marketing of such of its products as have practical application in the industry through the associated company, Shirley Developments Ltd. The annual meeting of the latter took place recently, when the chairman, Sir Raymond Streat, gave an interesting account of the activities of both organisations. He said that no less than 50 "Shirley" devices—instruments, machines and chemicals developed by the Institute—were actually on the market and selling well not only in Britain but also overseas. As a result, Shirley Developments Ltd. had increased its trade by £4,441 to a total of £18,462 in the past year. The company's best seller is the roller vibration detector, which Sir Raymond described as "a valuable tool for the mills." The new instrument for measuring micronaire value of cotton, the "Wira" fineness meter (cotton model), is also in good demand, and the manufacturing delays which held up the delivery of the "Shirley" photo-electric stapler have now been overcome. Other devices which have sold well are the "Shirley" opener, which replaces four or five other machines, the "Shirley" pneumatic delivery wheel, the "Ferranti-Shirley" viscometer and the "Shirley" ampli-dry dryness indicator. Full-scale mill tests on the "Shirley" pressure point system for card dust extraction are now complete. They show that "this most important invention" is "the most efficient means of suppressing the dust menace in card-rooms and one which does not interfere with the operative's work or later processing." The company is making arrangements for the system to be made commercially available on a large scale.

* * * *

Rayon Production Records.—Apart from the 1952 setback, world production of man-made fibres has risen steadily each year since the war. Last year brought another record. According to the U.S. Textile Economic Bureau, the output in 1956 was 5,929 million lbs, compared with 5,579 million lbs—the previous record—in 1955, and with 4,902 million lbs in 1954. In the group of rayon yarns and staples, output increased last year to 5,245 million lbs, against 5,017 million lbs in 1955. This increase of 228 million lbs compares with one of 528 million lbs shown by the figure for 1955 over that for 1954, and it is perhaps not surprising that the rate of expansion slowed down. On the other hand, the output of non-cellulosic yarns and staples increased last year to 684 million lbs from 562 million lbs in 1955, 476 million lbs in 1954, and 385 million lbs in 1953. Of the non-Communist countries, the three largest producers of rayon yarn and staple are the United States, Japan and Western Germany. The United States produced only 1,148 million lbs in 1956, compared with 1,261 million lbs in 1955, but it remained at the head of the list. Japan, which was again second in the list, showed an output of 917 million lbs last year, against 732 million lbs in the previous year, and Western Germany was again third, with 529 million lbs, against 486 million lbs. Productive capacity in the world's man-made fibre industry is estimated by the Textile Economic Bureau at 7,621 million lbs at present, and an increase to 8,676 million lbs by the end of 1958 is forecast. It will be noted that output last year was about 20 percent less than the current capacity to produce, though no doubt many new plants came into production during the year. Figures so far received do not show how much of the indicated increase in capacity is for rayon and how much for non-cellulosic fibres, but it seems probable that the latter group accounts for much the larger proportion.

* * * *

Freight by Air.—Many air services try to induce the public to support air freight services, but without quite eliminating from the mind of the potential user the nagging thought—except in the most obviously urgent cases—that the saving in time and other advantages claimed do not quite balance the additional cost, especially on less expensive commodities. Hunting-Clan Ltd. of the U.K. has therefore done a service to air freighting by carrying out an analysis of the kinds of electrical goods being sent from the U.K. to Africa by its air cargo services. In an emergency, where cost is of no consequence, air transport is the obvious answer: for instance, a particular component to keep a machine running or medical apparatus to have a life. For other goods, air freights are still sufficiently high to make the value-for-weight of a consignment an important consideration in deciding whether it is economic to send by air. It is interesting to find from the analysis, therefore, that more and more firms—notably in central Africa—seem to be coming to the conclusion that air transport, although relatively costly in itself, offers such substantial savings in other ways that it is worth using regularly. One would expect X-ray equipment and scientific instruments to be in the list of recent air cargoes, but it is interesting to see also such things as vacuum cleaners, electric cookers, floor polishers, radiograms, railway and trolley-bus motors and water-heating appliances. The immediate reasons prompting a firm to use air transport are perhaps the obvious advantages of speed in delivery, lower packaging costs and less risk of damage on the way because transhipment at docks or railheads can be avoided. But there may be financial advantages of much more fundamental importance. A merchant in one of the developing countries may have to lay out a very large amount of capital if he wants to stock any substantial range of goods. If he also hopes to provide efficient maintenance and servicing facilities for goods once sold—particularly for machinery and electrical goods—he must lay out even more capital on spares. By making suitable arrangements with manufacturers and using air transport, he can draw goods from his suppliers almost as he needs them and, if he has a customer for some particular piece of equipment, he can expect to get it within a few days. He can, in fact, run his business on far less trading capital, and he can hope to turn over the capital he does employ far more frequently. These considerations may in fact make air freight economic for cargoes which, on the face of things, it would seem too expensive to consign by air. But to make the most of air transport, it must not only be quick in itself but regular and reliable. Much of its economic advantage may be lost if, for instance, goods that ought to be despatched within a few hours of receiving a cabled order are delayed on the ground awaiting a Customs clearance. At both the sending and the receiving end, it is of the first importance that delays should be cut.

INDUSTRIAL POLICY

IN submitting the Indian Financial Statement to the House of Commons on Friday night Lord George Hamilton, after some remarks, said "that it was the policy of the Government to multiply the industries of the country, thus rendering the population less dependent on the rainfall." In a country like India, which must of necessity very largely depend upon agriculture, a very extensive multiplication of the industries must be effected before any appreciable relief can be afforded to agriculture. The statement that the Government favours industrial enterprises will come as a pleasing surprise to the manufacturers of this country; it is certainly a statement that the previous attitude of the Government scarcely justifies. Turning, for instance, to the great jute industry of Bengal, we find that representations made to the Government by the Jute Manufacturers' Association, so far back as the 19th of October last, have been unanswered. In a letter of that date, the Government of Bengal were asked to make some enquiry into the relations of mills and factories to municipalities, but the common courtesy of a reply has been omitted. There are various ways in which the Government can recognise and show their appreciation of the public spirit of manufacturers. There are certain men whose names stand out in certain industries. What recognition has the Government accorded to them? Take, for instance, the great tea industry. What recognition was ever afforded to Dr. Berry White? Take again the jute industry. What recognition was ever made of the public spirit of Mr. William Birkmyre, who in the year 1874 transferred his mill from Scotland to India, and did not appeal to the public to take shares in the company so as to supply a snug berth for himself as Managing Agent? Messrs Birkmyre Brothers' mill is one of the largest in Bengal, employing probably more workpeople than any other concern in the place. It is not too much to say that the action of Mr. Birkmyre was the turning point in the jute manufacturing industry in Bengal, and led to a large number of jute mills being at once set down on the banks of the Hooghly.

Without Prejudice

DEFAMATION IN DIVORCE PROCEEDINGS

PROSECUTING HUSBAND FOR CRIMINAL LIBEL

(FROM OUR LEGAL CORRESPONDENT)

FOR good or ill, the principle of divorce has taken a firm hold on the citizens of India. Plaints and prosecutions by one spouse against the other, both criminal and civil, which would have been unthinkable only a comparatively short period ago, are nowadays an everyday occurrence. When the writer first came to India, divorces among Hindus were virtually unknown. Marriage was a sacred contract "till death us do part", in the same way that it used to be, but no longer is, in Britain. Now, with the emancipation of women, the law reports are cluttered up with cases where-in wives assert their rights. By no means only in divorce or matters concerning their property either. Who, 20 years ago or less, would have dreamt it possible for a Muslim wife to prosecute criminally her own husband for libel and to get him convicted? Yet that is what happened in Madras with a couple, socially well situated, a short while ago. In England where a wife's rights are by legislation far more extensive than they are, even now in India, one has never yet heard of a wife prosecuting her own husband for defamation in divorce proceedings instituted by him. One doubts whether she could do so, as by common law in England statements in legal pleadings and in the witness box are absolutely privileged. How-ever, this much aggrieved wife in Madras thought differently and proceeded to assert what she con-sidered to be her rights.

The parties were middle-aged people and be-longed to the Muslim community. They were married some time in May 1930. The marriage was a happy one for many years. The wife had borne eight children to the husband, including a son aged about 23 and a daughter aged about 19. Her case, as stated by Somasundaram J., in the appeal by the husband from his conviction and sentence for defamation by the Second Presidency Magistrate, Madras, was that the husband, referred to from now on as the appellant, had taken an Anglo-Indian girl as his second wife. This fact was not disputed. "It is stated," said his lordship, "that this girl has been converted into a Muslim and thereafter the appellant married her. Accord-ing to the complainant (wife), this Anglo-Indian girl was a typist under the appellant. It is during her service under him that he has developed in-timacy with her which has led to this ultimate marriage. Ordinarily even when brothers fall out the enmity is bitter So also seems to be the case when husband and wife fall out," which is an un-derstatement of the reflection, almost invariably incorrectly quoted, of an English poet to the effect that "Heaven has no rage like love to hatred turned; nor Hell a fury like a woman scorned."

* * * *

It was claimed by the husband that though certain properties were in his wife's name, they in fact belonged to him and were only purchased benami in the name of his wife. "Not so," said the woman scorned. "They belong to me." How-ever, on that point his lordship observed: "We are not concerned in this case with the rights of the parties or their title to the properties in whose name they may be. Suffice it to say that after the Anglo-Indian girl crossed the path of the complainant, trouble arose between her and the respondent The conduct of a husband carry-ing on with a typist under him would certainly evoke protest from a wife. Hot words must have passed beween the husband and wife over this intimacy between him and this Anglo-Indian girl who is said to be 30. Apparently the husband must have attempted to dominate and indulge in outbursts against his wife. As a result of these misunderstandings the wife left the house and went and remained with another friend." A friend, let it be said at once, of both parties.

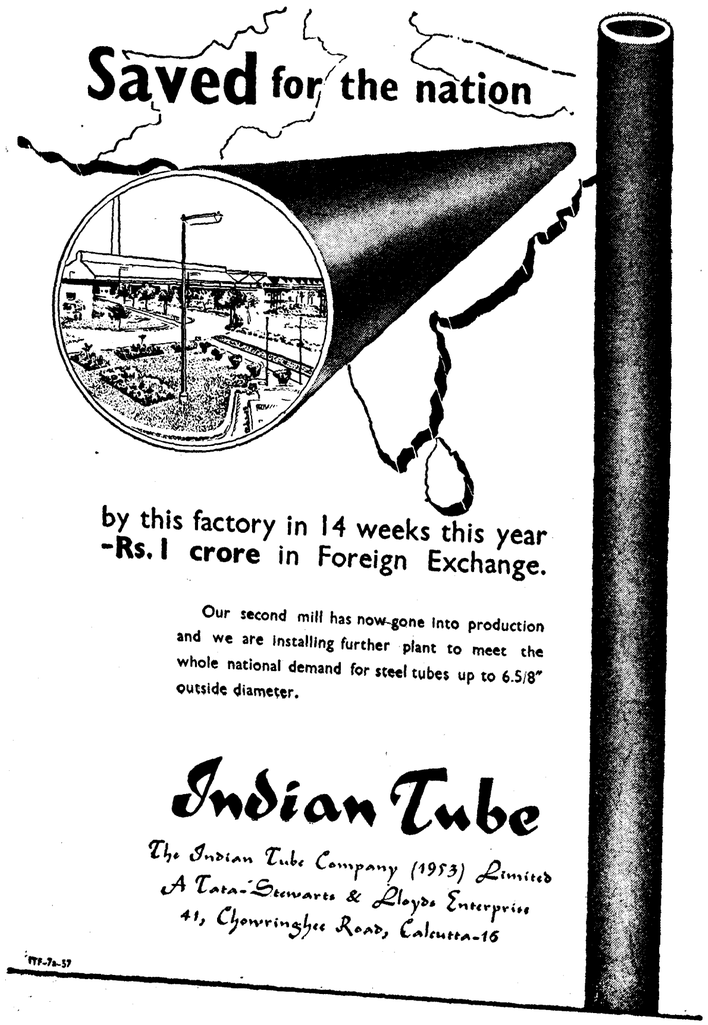
* * * *

This friend, afterwards a prosecution witness, a Mr. Sibatulla, interposed with a view to effect-ing a reconciliation between the husband and wife. He seems to have brought the still irate lady back to her husband. You will have guessed what followed. Someone, a couple of hundred years ago, sagely observed with special reference to matters matrimonial that "those who in quarrels interpose, must often wipe a bloody nose" Mr. Sibatulla sustained this bloody nose metaphorically. He stayed the night and his re-ward was to be later accused by the husband of having slept with his wife while the husband was out.

"This allegation," said his lordship later, "has only to be made to be rejected. It is quite un-necessary to go into the truth or otherwise of this allegation, as it seems to me that the incidents that have been mentioned in the notice have been got up for the purpose of justifying his (the husband's) conduct. It is difficult to believe that the wife, who has given birth to about eight children and has got a son aged about 23 and a daughter aged about 19, should think, at this late stage of her life, of developing a romance with another man and with that object should think of deserting her husband with whom she has been living happily all these years."

"As already stated", his lordship proceeded, "when the husband and wife quarrelled, each attacked the other most bitterly and margin must be allowed for the anger which one developed against the other. The husband was very much enraged at the wife leaving him, and as the law allows him to marry four wives he has taken another wife, an Anglo-Indian, who according to him, has been converted into a Muslim. Equally, the complainant, who has been his sole wife, must have been very much annoyed with the husband when he took a second wife at this late stage in his life. Her separation cannot, for that reason, be accounted as due to misconduct on her part.....Unnecessarily much dirt has been thrown at the wife for no sufficient reason."

* * * *



Now, turning to the ordinary process of the courts, if one spouse involved in divorce proceed-ings makes, in the pleadings or in the witness box, honestly believing them to be true, allega-tions against the character of the other spouse, those allegations would not be actionable however defamatory they might be. They would be privileged. And the law is that it is not defama-tion to make an imputation on the character of another, provided that the imputation is made in good faith for the protection of the interest of the person making it or for the public good. (Exception 9, Section 499, I.P.C.)

The appellant in this case, being a Muslim, had pronounced divorce as he was by his religion entitled to do, i.e., by the words talak, talak, talak, in a letter which he had written to his wife. But he also went out of his way—out of his legal way anyhow, whatever his moral or religious obligations were—to give reasons for the pro-nouncement of divorce; and the "reasons" were alleged unchastity of his wife. Assuming these allegations to be untrue, did the making of them render him liable to criminal prosecution, at the instance of his wife, for defamation? "Yes," said the Madras Presidency Magistrate, and con-victing the husband sentenced him to a fine of Rs. 500, and in default of payment to undergo simple imprisonment for three months.

On appeal by the husband to the Madras High Court, the Court said: "The question is whether this allegation of unchastity was necessary to be made for the protection of the appellant's in-terests. It seems to me that under the law no reason need be given for pronouncing talak. If that is so, however much religion may enjoin a person to give reasons for pronouncing talak, so long as the law does not require it, it was not necessary for the appellant to have made this allegation when pronouncing the talak. It was not necessary for the protection of his interests. The case therefore does not fall within Exception 9 to Section 499, I.P.C. As already stated, it is quite unnecessary to go into the truth or other-wise of the allegations. I am satisfied on the evi-dence that the wife, the complainant, is not proved to have been guilty of the conduct alleged by this appellant." His lordship confirmed the conviction but with the observation that "in this quarrel be-tween husband and wife, for the moment both have lost their heads," reduced the fine to Rs. 10.

Whether this lady lost her head or not is as may be. But the fact remains that she won her case. And we record it because—writing subject to cor-rection—it is, we believe, the very first time on re-cord in India or Britain where a wife has success-fully prosecuted a husband for criminal libel. Only a few years ago such a case, in India at any rate, with a lady, a Muslim lady at that, as complainant would have been unthinkable. One word about the young Anglo-Indian tentium quid. She was not a party in either the police court or High Court proceedings and therefore had no chance of putting forward any answer to the allegations made against her.

A DITCHER'S DIARY

FEW schemes ostensibly aimed at improving the health, moral as well as financial, of Indian journalism deserve a quicker and quieter burial than the price-page schedule for newspapers. Yet, in the light of the recent discussions in New Delhi on its introduction, it seems to me extremely unlikely that such a fate impends. The concept that news-papers which serve their readers better by offering more pages should be penalised by being compelled to charge higher prices than they themselves choose, seems extraordinary, to say the least. The Indian language Press, which is mainly respon-sible for inventing the schedule idea, might well even at this late stage do some heart-searching as to the real causes of its financial difficulties. Pro-fessional incompetence, in particular, may be an important one. The Government is coolly pretend-ing to like the price-page schedule because it thinks it will keep more newspapers in existence and thus supposedly promote the freedom to express opi-nions But it forgets that nothing is more damag-ing for that freedom than the bait, such as it is now offering, of official assistance to keep mediocrities going: the price-page schedule may be a ready example to never-do-goods of the sort of help they can get if only they kow-tow to Dr Keskar's Minis-try. The less successful newspapers, I feel, are being over-optimistic in imagining that they will be able to steal advertisements from their better rivals merely because in maintaining a competitive price the latter will have to keep down the number of their pages and therefore also the space they devote to advertisements. Unlike our five year planners, advertisers do not fix expenditure targets and then blindly set about reaching them regardless of the returns obtained. Nor is there any rigidity about their budgets for newspaper advertising; visual media such as posters, hoardings and the cinema might well be the chief beneficiaries should the presently more successful newspapers be forced under the price-page schedule to decline advertise-ment offers. A point which particularly intrigues me is how subscription rates will be fixed. Can any newspaper reasonably predict the precise average of pages it will print over the next one year or even over the next six months? And having fixed its subscription rates on the assump-tion that it will publish a certain number of pages, would it be right in varying them from time to time should the assumption prove incorrect?

* * * *

Among the curious objects which has appeared on my table this week is a specimen copy of an engagement diary for 1957 issued by the Ministry of Information and Broadcasting in New Delhi. Accompanying it is a circular addressed to "all important industrial and commercial houses" saying that a similar diary is to be issued for 1958, and would they please place their orders in advance. The precise need for the Govern-ment to go into the diary manufacturing business, I have been unable to fathom; but an uncharitable suspicion is that the Directorate of Advertising and Visual Publicity, which is responsible for the production, may have been at a loss to know how to use its time. (It is not uncommon for Govern-ment departments first to get bloated, and only later to begin discovering ways which might appear to justify their expansion.) This parti-cular engagement diary has little to recommend it, beyond what I have seen in many others of its kind which perennially glut the markets. One might have thought the Ministry of Information and Broadcasting would have known better what to do with its resources than to swell with medio-crity the supply of an item which is already easily and cheaply available; its diary might, for ins-tance, have had some justification if it came some-where near achieving the excellence of what was issued by the Tata Iron and Steel Company almost eight months ago to commemorate the New Year. But it could never be of the same quality unless its production were heavily subsidised, which there is no reason for doing. When exactly New Delhi's effort to produce the 1957 engagement diary came to fruition, I would not know: but it cannot have been before March this year. I imagine, and that does not say much for a sense of timing on the part of those responsible for its production. This presumption is based on the in-formation given in the diary that the postage on inland ordinary letters for the first tola is "2 annas or 13 naye paise": if I remember rightly, it was not until March that the Posts and Telegraphs Department openly flaunted the decimal coinage conversion table issued by the Finance Ministry, by announcing that whatever the latter might or might not say, it was going to treat 2 annas as equal to 13 naye paise and not 12. Mr Morarji Desai, who is rumoured to be anxious about cut-ting paper imports might also be interested to ob-serve that the 1957 diary is made of Austrian paper: the circular recommending the purchase of the 1958 edition offers no hint that "the national effort" will be promoted by the use of Indian paper.

* * * *

Mr. Clive Jenkins is probably entirely right in saying that Aeroflot is the largest civil air trans-port operator in the world, and its expansion plans, as stated by him, are truly staggering. After all Russia is a huge country, and any slower form of transport would make travel very uncom-fortable indeed A friend with some experience of flying with Aeroflot tells me that even now it could do with a few bourgeois amenities. He does not insist on a seat-belt, and has no complaint at all against the Ilyushin-14 except that while flying over the Hindu Kush, he would have been happier without the oxygen mask. He was not sick, he just felt so. On my friend's trip at any rate, there was not an air hostess all the time. For meals, I am told, the plane just landed at any old airport, often indistinguishable from an abandoned paddy field. Good airports may be dispensable luxuries, but they also help eliminate some of the ner-vousness still attaching to landing and taking off. No airline can be absolutely punctual, for the weather it flies over has not yet submitted to human control but Aeroflot personnel is said to be singularly uncommunicative about flying plans. As my friend drank Russian tea, which soon ran out of supply in the shed attached to the Termez landing ground he had a horrible suspicion that there was more than bad weather which held up the plane for about 24 hours. There was a chess-board around, and the gaze of the pilots was fixed more on it than on the distant mountains There were also portraits of Stalin, Khrushchev and Bulganin on the wall behind, but they all seemed strangely indulgent.

* * * *

The Government's Press Information Bureau has lately taken to issuing hand-outs about the length of copper wires stolen every so often. Its diligence has apparently not yet been matched by anything comparable from sister departments, such as action to ensure deterrent punishment for the thieves. But diligence to duty is not con-fined to the Press Information Bureau; it is shar-ed, for instance, by tube-well drillers, one of whom caused darkness at noon in Clive Street offices on Friday last week by going about his work so energetically that he drilled into, and fractured, one of the main underground electri-city cables in the area. Whether the shock he thereby received gave him a mental black-out comparable to the slightly dissimilar black-out which prevailed in many business offices for some hours that day, I would not know. But I imagine the Calcutta Electric Supply Corporation may be ruefully reflecting on the irony that, in order to ensure the reliability of its services, it has firmly resisted the temptation to erect overhead lines although they are cheaper to install and simpler to maintain: yet its distribution system has not escaped the attentions of either the driller or the pilferer. Some time ago the supply of electricity through a Hooghly cable failed in the early hours of the morning, because of the efforts of a worthy who seemed determined to become a capitalist the hard way Having armed himself with a pick-axe and an hack-saw, he risked his life in using the axe to deaden a 33,000-volt cable where it en-tered the river: then, with the saw, he cut off a few yards of heavy copper wire, for which he probably collected about twenty rupees in the scrap market. The cable was damaged beyond repair and had to be abandoned in the river. As a result, the enterprise he showed ultimately cost the C.E.S.C. no less than ninety thousand rupees, plus the emoluments of a squad of durwans who now stand on guard where the new cables enter the Hooghly. The scale on which elec-trical and communications conductors are stolen in West Bengal and Bihar is extraordinary. To help prevent thefts is partly the responsibility of the public, in the sense that pilferers should be reported: but an important lesson to be learnt from such episodes may be that the frequency of crime increases in direct proportion to the ease with which it can be committed and in inverse pro-portion to the severity of the punishment given for it.

* * * *

Arthur Miller, whose earlier reputation seems almost eclipsed by subsequent events like mar-riage and trial, once wrote a play called *Death of a Salesman*. It did not seem to me very drama-tic a name, for if men are mortal so must be salesmen. The death of a tragic actor also seems very much in character, for one has seen him die on the stage. The death of Oliver Hardy the other day in Hollywood at the age of 65 filled me with curious thoughts. Utterly irrational, I know, but somehow it had never occurred to me to asso-ciate death with a man whose only function in life was being himself and making children of all ages laugh. That he made as many as 200 pic-tures is irrelevant information. It is a single image of the man that remains in our recollec-tions single and unvarying and unchanging. Pro-founder analysts than myself have seen much so-cial significance in Marx Brothers and in Donald Duck: the former are supposed to symbolise three unconscious states of the human mind and the latter is said to represent something equally eso-teric. As far as I know, the Laurel-Hardy pair never came in for such scholastic dissection—per-haps just as well. In the house of comedy there are many mansions, and one of them will long echo with the laughter produced by Laurel and Hardy. The long and short of it is that I much prefer honest-to-goodness slapstick to lacklaugh Punches and Krokodil tears.

TATA LOCOMOTIVE & ENGINEERING COMPANY, LIMITED

CHAIRMAN MR. J. R. D. TATA'S REVIEW

Summary of the speech delivered by the Chairman, Mr. J. R. D. Tata, at the Annual General Meeting of the Shareholders of the Tata Locomotive and Engineering Company, Limited, on Monday, August 12, 1957.

Addressing the Twelfth Annual General Meeting of Tata Locomotive and Engineering Company, Limited, the Chairman, Mr. J. R. D. Tata observed that the all-round progress made and the satisfactory profits earned by the Company during 1956-57 had enabled the Directors to recommend an increase in the dividend to 8%.

The provision of adequate funds to finance the growing operations was today one of their main problems, said Mr. Tata. "By the nature of the industries in which we are engaged," he added, "and the circumstances peculiar to this country in the matter of essential supplies and bought-out items, it is necessary for us to maintain substantial stocks of raw materials and bought-out components. This locks up large funds as can be seen from the considerable amount of borrowings shown in the balance sheet. In addition, we still have a large amount of capital expenditure to incur in the next few years as we proceed with our current manufacturing and expansion programmes. Although, in the long run, the funds provided from year to year out of allocations for depreciation and various reserves will substantially cover the total amount of capital expenditure so incurred, the heavy commitments during this year and the next make it necessary for us to raise additional finance in the very near future. While no decision has as yet been made, the possibility of an additional issue of equity shares, possibly in the form of debentures convertible into ordinary shares cannot be ruled out."

The Company's commitments to deliver locomotives at the rate of 100 complete units per year from the beginning of 1958 would be fulfilled and possibly improved upon. The Chairman added that with the increase in output, further improvement in efficiency and fuller utilisation of available capacity it was expected that the costs would come down to a satisfactory level despite the recent steep increases in the costs of materials and in wages.

Dieselisation of Rail Transport

Mr. Tata observed that in India as elsewhere a gradual but inevitable movement towards the "dieselisation" of rail transport was taking shape, and said, "As and when oil in adequate quantities is discovered within the country, the process is bound to be accelerated. As mentioned in my speech last year, our works are exceptionally well equipped to undertake the manufacture of diesel locomotives. The Railway Board have recently issued enquiries for a fairly substantial number of such locomotives and we propose to respond to this enquiry in collaboration with our technical associates, Messrs. Krauss-Maffei A. G., and Messrs. Daimler-Benz A. G. We are in this regard fortunate in our association with both these firms, for Krauss Maffei are leaders in the field of main line diesel hydraulic locomotives, while the Daimler-Benz range of high efficiency diesel engines are ideally suited to rail traction. If our expectations fructify, we can look forward to a long period of continued collaboration with, and service to, the Indian Railways, even after the cessation of steam locomotive manufacture."

The Automobile Division was nearing the end of the second stage of development strictly according to schedule and despite the many complicated problems affecting supplies and operations the Company was confident that the manufacturing programme would be maintained.

Referring to the popularity and dominant position in the market of the Tata-Mercedes-Benz commercial vehicles the Chairman said that they had no doubt of the ability of these vehicles to withstand any competition they might have to face. Mr. Tata expressed gratitude to Government for their decision to sanction to the Company its reasonable requirements of foreign exchange for plant and equipment to implement its approved manufacturing programme. This would enable the Company to complete its plans by the end of 1959 when the Company was expected to be in a position to produce almost entirely Indian-made diesel truck and bus chassis. With the completion of this programme the foreign exchange saved each year would be larger than the aggregate amount spent for the purchase of plant, machinery and equipment for the Automobile Division.

Mr. Tata welcomed the decision of the Government of India to give the automobile manufacturers in the country a reasonably free hand to fix the prices within the overall limits, with a return of 10% on cost subject to general supervision and check by the Government as this would go a long way towards providing an effective incentive for the rapid development of the industry.

In conformity with the Tariff Commission's views, the Company had submitted to Government a scheme for doubling once again the capacity of the Automobile Division and bringing it upto 12,000 vehicles per year. Mr. Tata said that the Government of India have informed the Company that the scheme would find acceptance provided suitable credit arrangements could be made to stretch out the foreign exchange expenditure over a period of years.

Diversification of Output

The Chairman hoped that the Government of India would in due course also enable the Company to diversify the output of its Automobile Division by manufacturing other types of vehicles such as light commercial vehicles, cars and diesel engines for various uses. Such diversification would promote efficiency and reduce costs. "The best warranty that we can offer to Government for the fulfilment of these objectives in due time," said Mr. Tata, "is our actual performance in the fulfilment of the initial programme of manufacture of trucks and buses on which we are now engaged."

Continuing, Mr. Tata said, "On the recommendation of the Tariff Commission, the Government of India have decided to grant protection to the automobile industry for a period of ten years. Our present manufacturing programme will have been completed long before the end of this period. We hope also, before that time, to be well on the way to completing the expansion plan as well as further plans for other products. In effect, it is our intention to build up in this country, as rapidly as circumstances and the authorities concerned will permit, a self-contained and highly efficient automobile industry.

"We have also taken steps to implement other recommendations of the Tariff Commission, so far as they relate to us, amongst which is the extension of hire-purchase facilities, with the collaboration of our bankers and insurers, to the buyers of Tata-Mercedes-Benz vehicles."

Mr. Tata informed the meeting that the construction of the Steel Foundry—unquestionably the most up-to-date in the country—had been virtually completed. The production of castings in the Alloy Iron Foundry for the Automobile Division was expected to commence according to schedule.

Referring to matters of personnel and labour, Mr. Tata said that it was disappointing to note that in the year under review there had been a tendency on the part of certain sections of workmen to take matters in their own hands. "Our men," observed Mr. Tata, "are amongst the highest paid in the engineering industry. They enjoy excellent conditions of work in a fine integrated factory equipped with the best machinery and equipment to which we are continuously adding." "The capital investment per employee in our Company," added Mr. Tata, "is probably the largest in the industry. Our employees have a fine and safe future before them, but it is time they realised that the Company's continued ability to pay high wages and provide the maximum of amenities and job security depends on high productivity which, in turn, requires that the workers put in a reasonable day's work.

Standards of Productivity

"Although some progress has been made, we are not satisfied with our present standards of productivity which, in the case of the Locomotive Division, have been criticised in the past by the Tariff Commission as comparing unfavourably with those at Chittaranjan. We are pursuing our efforts to achieve a satisfactory labour output but these will be in vain unless our employees and their Union co-operate with us. I am sorry that such co-operation has shown signs of weakening in recent months rather than the opposite, and I particularly regret that, in spite of its responsible and mature leadership, the Union has recently aggravated the lack of discipline by instigating the workers to down tools for a few hours in each shift mainly, it seems, as a protest against their not having been consulted in regard to the quantum of bonus declared this year. This action was, I feel, particularly unfair as the figure of bonus proposed to be declared was in fact disclosed to the Union some time before the publication of the Report and Accounts and the total amount distributed is twice that of last year and proportionately much in excess of the corresponding increase in dividends.

"As our manufacturing programme develops and an increasing proportion of the contents of our products are made in our own Works, our results will depend increasingly on the work and productivity of our own men. Nothing could bring greater benefit to them as well as to the Company and its shareholders than a sound and cordial relationship between Management and Labour based on mutual understanding, respect and co-operation. I sincerely hope, therefore, that our workers and their Union, with both of whom we are anxious to maintain the most cordial relations, will take a correct and responsible view of the situation and will co-operate with the Management in their own long-range interests as well as those of the nation."

The Chairman referred to the satisfactory progress of the Apprentice Training Scheme and of the arrangements with the Company's technical associates for imparting higher practical training in their factories abroad to the Company's personnel. "We attach the greatest importance," he said, "to the efficient recruitment and training of young engineers which we consider as a vital part of our programme of development. We are trying to make every young man who comes to us feel he is well looked after, his worth recognised and every chance given to him to equip himself, at our expense, for a successful, imaginative and rewarding career."

The Chairman expressed appreciation of the valuable services rendered by Mr. Y. N Sukthankar and Mr V. T. Dehejia as Directors of the Company. He also expressed appreciation of the services rendered by Dr. Heinrich Korschan, General Manager of the Company from October 1951 to the end of April 1957 when he retired for reasons of health and of Mr F. G. S. Martin's ready compliance with the Management's request to take over again temporarily the responsibilities of the post of General Manager. The Chairman then expressed his thanks to his colleagues and to all the members of the staff for the year's excellent work.

"Since this speech was written," said Mr. Tata, "the labour situation at Jamshedpur has, I regret to say, taken a serious turn. On the 5th of August, a minor matter concerning the temporary transfer, many week's earlier, of three men, without loss of pay, from one section of the Auto Division to another in accordance with established practice, was made the excuse for an illegal lightning strike which had obviously been well planned in advance, accompanied by violent behaviour towards German supervisors on the part of the ring leaders."

Labour Situation

Mr Tata said that the instigators had acted without the support or knowledge of the recognised Union. They refused to listen to Union representatives and insisted on being represented by a communist group.

Continuing, Mr. Tata said, "A serious aspect of the situation is that the trouble is clearly not an ordinary trade dispute, which could be settled in the normal way by negotiation with the Union concerned, but a deliberate attempt on the part of Communist leadership to disrupt operations at the Telco Works There is evidence that this incident is part of a larger plan to disrupt the working of the whole of the industrial complex of Jamshedpur."

Mr. Tata observed that industrial strife formed a part of the traditional pattern of Communist action throughout the world, and that if they had failed up to now to achieve their ends in the Steel Works at Jamshedpur, it was because of the strength and success of the Tata Workers' Union and the good sense of the workers themselves.

A secondary but important issue to which Mr Tata drew the attention of the shareholders was the situation in Jamshedpur and elsewhere of foreign technical staff brought to India to assist the country in the establishment and development of new industries. It was impossible, he said, to exaggerate the contribution made by these technicians to the successful establishment of the industry. The German supervisors at Jamshedpur had been greatly upset by the prevailing indiscipline and violence. It was pointed out by Mr Tata that if discipline was not re-established and maintained, the Company's operations would be paralysed and the completion of the programme of progressive manufacture, essential to the full establishment of the Locomotive and Automobile industries and to the resulting saving of large amounts of foreign exchange, would be seriously delayed. Mr Tata pointed out that this situation applied not only to Jamshedpur but to other Companies and centres in India where new equipment and processes are being introduced with the assistance of foreign experts.

Mr. Tata expressed the hope that the highest authorities in the Central and State Governments whose attention had been drawn to this matter, would take a firm stand in Jamshedpur and everywhere in India where the Congress Governments are in power and that they would make clear by word and action their determination to protect the industrial life of the country.

At the conclusion of his speech, Mr. Tata issued a note of warning and said that if this conspiracy to sabotage the country's progress was allowed to succeed at Jamshedpur and elsewhere, not only would the economic crisis looming before the country be aggravated but law and order and the peaceful and democratic development of the country would be imperilled.

THE CALCUTTA MONEY MARKET

SMALL DECLINE IN ADVANCES

Tuesday, 13th August.

THERE has been a small decrease in advances in the Calcutta money market during the past week. Jute and sugar remain the main categories contributing to the fall. Cotton accommodation is virtually unchanged, while funds for the storage of seeds and grains have risen slightly. The interbank market has been quite active and the call rate quotes 3¾ percent, although it has at times been as high as 4 percent.

In the exchange market, there have been very few bills, most of them on account of tea shipments. Demand for ready remittance is poor, but in the forward section it has been very considerable. The firm trend in sterling, which prevailed earlier, has now been reversed, particularly since the French Government's move to readjust franc values.

* * * *

Bullion was quiet on profit-taking. Silver showed little change at Rs. 180, quoted today for ready. The forward price was Rs. 179.75 The New York price rose to 91⅛ cents and the London quotation was higher at 78½d.

Gold was quiet in sympathy with silver and the price fell from 109.50 to Rs. 109.25. The sovereign was lower at Rs. 71.25 against Rs. 71.50.

* * * *

The return of the State Bank of India for the week ended 2nd August 1957, shows a rise of Rs. 2.76 crores to Rs. 328.29 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 6 lakhs and Rs. 13 lakhs to Rs. 94.10 crores and Rs. 11.20 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have decreased by Rs. 2.11 crores to Rs. 169.61 crores. Cash and balances are, in consequence, shown at Rs. 66.47 crores, or Rs. 6.49 crores higher.

* * * *

The statement of the position of scheduled banks for the week ended 2nd August, 1957, shows Demand and Time liabilities at Rs. 728.80 crores (Rs. 19.45 crores on account of borrowings from banks) and Rs. 578.93 crores (Rs 4.62 crores), compared with Rs. 741.92 crores (Rs. 17.98 crores) and Rs. 568.72 crores (Rs 4.22 crores), respectively, in the previous week. Cash has decreased by Rs. 94 lakhs to Rs. 36.59 crores, while balances with the Reserve Bank have increased by Rs. 16.52 crores to Rs. 107.04 crores. There is a drop of Rs. 14 lakhs to Rs. 332.42 crores in investments. Advances and bills discounted, at Rs 883.60 crores show a fall of Rs. 1.51 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 11.0 percent and 67.6 percent, against 9.8 percent and 67.5 percent.

* * * *

The following is a statement of the cash balances of the Central Government on the last day of May 1957:

		Rs.
(1) At the Reserve Bank of India in India	...	36,97.33.000
(2) At treasuries in India	...	26,13,000
(3) In England (Sterling converted at 18d the Rupee)	...	1,55,25,000
Total	...	38,78,71,000

* * * *

Provisional figures of India's foreign trade by all routes—sea, air and land—on private and Government accounts during May 1957, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: *Merchandise*, excluding transit trade of Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim and Bhutan: exports Rs. 5,251 lakhs, re-exports Rs. 29 lakhs, imports Rs. 8,541 lakhs, total trade Rs. 13,821 lakhs. *Treasure*, exports (including re-exports) of currency notes: Rs. 8 lakhs, current coins (excluding gold coins) Rs. 1 lakh, others—nil; imports of gold Rs. 3 lakhs, currency notes Rs. 393 lakhs, others—negligible. *Balance of trade*: the merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures, the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs. 3,264 lakhs.

The Manager of the Chartered Bank, Calcutta, has received the following information from his head office in London: By a special resolution passed by stockholders in an extraordinary general meeting on 7th August, the authorised capital has been raised to £4.4 million. The Stock Exchange has granted a quotation for the additional stock, and the offer to Eastern Bank shareholders has become unconditional. Acceptances to date represent 96¼ percent of the issued share capital of the Eastern Bank.

RUBBER MARKET UNCHANGED

LOWER TREND ON WALL STREET

London. 13th August.

LITTLE change occurred in rubber market conditions last week. Prices followed the pre-holiday trend by remaining fairly steady in spite of continued lack of business. Dealers were able to meet modest factory orders without difficulty. Outside interest was at a low ebb and the market received no encouragement from overseas advices. The modest volume of business reported was mostly of a switching nature. Towards the close, the market was described as stagnant, having lost an interim advance of ⅛d a lb. Prices finally were little changed on balance. The shipment market was somewhat overshadowed by increased offerings of Indonesian grades which were at about ⅛d a lb discount from Malayan. Not much crepe was on offer, but the supplies available and in prospect were ample to cover modest trade offtake. Business was reported on the slightly lower basis of 37½d a lb for ⅛th inch smooth No. 1 on the spot.

Activity on Wall Street

Foreign dollar bonds were mixed in a limited volume of trading. German nationals moved up by fractions to a point, while among industrials, United Steel Works added nearly two points. Italian issues were higher with Republic 3 percents of 1977 up over one point. Japanese Government bonds gave up some ground. Chile 3 percents were shaded slightly with several Brazilian issues higher by one point. Uruguay 3½ percents of 1984 dropped ten points on a single sale. Long-term U.S. Government obligations moved to lower ground, with one issue hitting a new low. The market's action reflected the increase in short-term money rates along with expectations of a boost in the rediscount rate by the U.S. Federal Reserve system. The rate was raised by four Federal Reserve Banks outside of New York after the close of the market on Thursday from 3 to 3½ percent. Investment quality corporates were earlier easy as a result of tight money conditions but eventually attracted improved support. Rails drifted irregularly in very slow dealings.

Rally in French Gold

French gold prices soared last week to the highest level since the summer of 1953 in very active sessions. On 8th August, the kilo reached a peak of 511.000 francs and the Napoleon 4,000 francs. These were rises of 60 percent and 20 percent, respectively, compared with the lowest August 1955 prices of 420.000 francs and 2.490 francs. A month ago the rates were 471.000 francs and 3.620 francs, respectively, and 10 percent and 8 percent below last week's highest levels. Bullion dealers said that many factors were responsible for the apparent failure to check inflation. Increased steel prices were announced, together with higher basic minimum wages. A rise in the price of bread was said to be imminent. In a stern warning on the danger of living beyond one's income, the Governor of the Bank of France said that the country had "been living on illusions." At the same time, the trade statistics showed that in July, France had her biggest deficit for six years with the European Payments Union. All these factors coincided with a conflict within the French Cabinet about massive economies in the 1957-58 Budget. The battle was won by the Finance Minister, M. Felix Gaillard, but only after he had threatened to resign if the Cabinet did not accept his 600.000-million Franc cut in the Budget. The trend of rising prices in the gold market was checked after M. Gaillard's victory and intervention in the market which was attributed to the Bank of France. But by the week-end some covering operations and other technical factors caused a rally. The price of gold ingots rose again to 500.000 francs—11,000 francs below the week's peak.

Hongkong Gold Steady

The gold market's easier trend last week due to heavy stocks in Macao and Hongkong was followed by steadiness towards the close which encouraged bulls to hope for higher rates to come. Bullion dealers were of the opinion that as long as sterling maintained its steadiness, no sustained improvement could be expected in the near future. The week's high was achieved in the opening period, but prices suffered a backslide, reaching the lowest on Friday last. Pre-holiday short-covering, however, enabled the market to recover slightly. The official offtake amounted to 5,850 taels and the unofficial to 13,900 taels. Arrivals in Macao totalled 50,000 ounces. Forward contracts were done at $(U.S.)37.78. c.i.f. Macao. Carry-over charges totalled 585 cents a ten taels in sellers' favour.

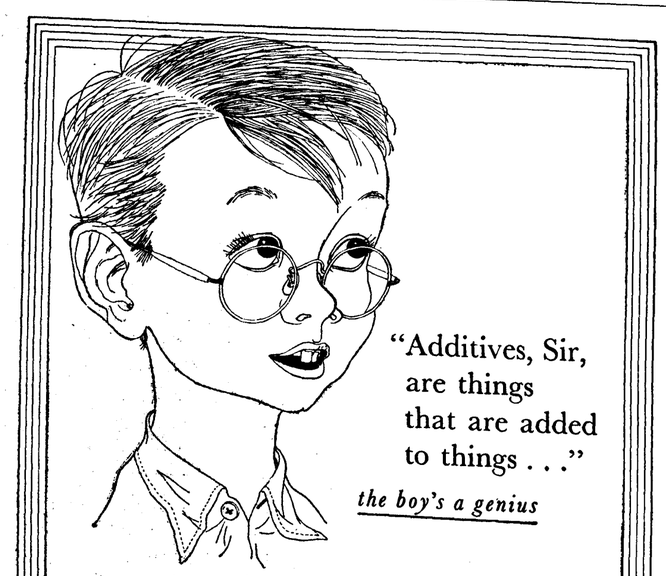
Manganese Ore Prices Lower

The downward drift in manganese ore shipment prices which has been a feature of the market for several months showed no signs of coming to a halt, according to London trade circles. Lower freights have undoubtedly played their part in bringing down prices but trade quarters add that the prevailing paucity of demand, largely seasonal, has also been a contributory factor. For good ferro-grade 46 to 48 percent material a price range of from 120d to 130d a long-ton unit, c.i.f. Europe, is mentioned, compared with 120d to 135d recently. Prices reached their peak early this year when a range of 135d to 150d was indicated, largely due to the centralisation of the ore trade by the Indian Government, higher export duties in that country and Suez Canal considerations.

Increased U.S. Steel Prices

It was a sheer economic superstition to contend that the recent increase in U.S. steel prices would create fresh inflation, Mr. Roger M. Blough, chairman of the board of the United States Steel Corporation, told the Senate anti-trust committee. Mr. Blough, first witness in a new Congressional enquiry into the steel industry and its pricing policies, said that viewed in its present perspective the price of steel was amazingly low. The steel hearings were prompted by the $6 a ton price rise for the metal which became effective on 1st July.

Sugar Refinery in Ceylon



A contract worth £1½ million for constructing a sugar factory in the Galoya valley, Ceylon, was signed last week by Mirrlees Watson Company Ltd. of Glasgow, who will build the complete factory, including the steel framework and the machinery inside. The factory, which is to begin production in 1959, will crush 2,000 tons of cane a day.

Disposal of U.K. Zinc Stocks

The U.K. Board of Trade has disclosed further details of its programme for reducing its zinc stocks. In all about 27,000 tons will be sold over a period of not less than nine months, of which 9,000 tons will be open to tender and the balance offered to original suppliers or their agents. About 9,000 tons will represent the first sales and will be offered for delivery and pricing over the next three months.

Purchase Offer for Java Plantation

Not a little surprise has been occasioned by the report that an American firm is negotiating for a take-over of Anglo-Indonesian Plantations, formerly Anglo-Dutch Plantations of Java, especially in view of the unsettled conditions which still appear to be prevalent in that [illegible]

It sounds simple enough. To add special qualities to a motor oil, you just...well...add things to it.

Simple? It was revolutionary! When SHELL X-100 MOTOR OIL was first introduced, eyebrows were raised in query. Here was a new kind of oil altogether, an additive oil, claiming to do things no motor oil could do before and completely refuting existing ideas on engine wear.

It's not friction, we said, which causes most wear in engines. It is corrosion from acid products of combustion. Research has proved it. A modern oil must therefore be able to fight acid action. Again, conventional lubrication is no longer enough. A modern oil must have a detergent action, to keep working parts clean and free from clogging deposits. Again, standards of stability must be raised to resist the higher temperatures and pressures of modern engines. How could these things be achieved? Shell research found the answer... by remarkable chemical additives. SHELL X-100 MOTOR OIL, with its three special forms of protection, was a major advance in car lubrication. Its success was immediate. To-day it is the leader amongst detergent oils whose superiority is now universally recognised. It is yet another instance of how Burmah-Shell are continually distributing the better products which a changing situation demands.

BURMAH-SHELL... *in India's life and part of it*

Stocks and Shares

SPECULATIVE ISSUES DECLINE ON SELLING PRESSURE

FEARS ABOUT SCOPE OF WEALTH TAX BILL

Tuesday Evening.

THE stock market has been quiet during the past week and prices of speculative shares are shaded on selling pressure. Operators are nervous about the Wealth Tax Bill, and it is feared that the select committee might not make any substantial modification. The deterioration in political relations with Pakistan seems to be an additional restraining factor.

Investment support in selected miscellaneous issues has shrunk substantially on fears of the growing tightness of funds. Jutes are neglected because of the declines in gunny prices. A fall in the prices of common teas has diminished support in tea shares.

Government securities, especially short and medium dateds, have met with good enquiry. Medium and long-dateds are also in demand, although 3% Conversion Loan and 3% Non-terminable Paper have declined further on predominance of sellers.

Details of the week's trading follow.

* * * *

The enquiry for dated loans was fully maintained and prices were again marked up fractionally. However, trading was restricted by the shortage of scrip and buyers found it difficult to obtain their requirements. In contrast to the general trend of the market, 3% Conversion Loan was weak and the price drifted further from Rs. 71.60 to Rs. 71.20, while Non-terminable Paper was quoted lower at Rs. 71.50. In short-dateds, 3% 1957 continued in demand at Rs. 99.90 and 3% 1958 had buyers at Rs. 97.70; 3% 1959-61 hardened to Rs. 98.05 and 3½% 1961 was asked for at Rs. 99.33. The 2½% 1961 was marked up to Rs. 93.65, as was 2¾% 1960 to Rs. 96.53, 2¾% 1962 was better at Rs. 93.93 and 3¼% 1962 was taken up to Rs. 97.50. In the medium-dated group, 3% 1963-65 was marked up to Rs. 93.37 and 3¼% 1964 was firm at Rs. 97.60; 3½% 1965 was taken at around Rs. 97.37 but 3½% 1967 was on offer at Rs. 97.65. Among long-dateds, 3%, 1966-68 had buyers over at Rs. 90.95 and 3%, 1970-75 was fractionally better at Rs. 85.95; 3¾% 1974 changed hands at around Rs. 98.30. The enquiry for provincial loans continued and there was a further small improvement in prices; 4% Madras 1967 and 1968 were asked for up to Rs. 96.30 and 4% U.P. 1967 and 1968 had no sellers at Rs. 96.

In the banking section, United Commercial were transacted at Rs. 57.50 and United Bank of India "D" at Rs. 4.12.

There was little interest in cotton mill shares. Elgin were transacted at Rs. 19.69. Kesoram were done at Rs. 13 and New Victoria Ordinary were freely available at Rs. 1.61.

Sellers predominated in coal shares, although Burrakur were maintained around Rs. 22 on interested support. Dhemo Main declined to Rs. 5.50 and New Beerbhoom were available at Rs. 13.19. Central India fell to Rs. 5.87.

Except for Megna, which were wanted at Rs. 83, jute shares were freely offered without attracting any worthwhile support. National were lowered to Rs. 17.90. Reliance fell to Rs. 6.50 and Birla were done at Rs. 14.31 ex-dividend.

Routine turnover was seen in mining shares. Indian Copper were fractionally higher at Rs. 3.31, while Burma Mines declined to Rs. 2.30. Scattered interest was taken in Orissa Minerals around Rs. 20.

In the cement section, Dalmia Cement came to hand at Rs. 11.43 and Sone Valley were done at Rs. 5.87. Rohtas changed hands at Rs. 18.31.

The trend was mixed in the miscellaneous group. India Steamship rallied to Rs. 10.40 on the prospect that shipping companies might be exempted from the wealth tax. Dunlop Rubber were transacted at Rs. 20.62 and Aluminium Corporation improved fractionally to Rs. 11.50 on dividend prospects. Calcutta Tramways were done at Rs. 15.81 and Clive Row Investment were a shade higher at Rs. 10.81. Hindustan Lever came to hand at Rs. 19.65 and Imperial Tobacco were done at Rs. 14.25. Calcutta Electric moved narrowly around Rs. 12.25, while interest was taken in Alkali and Chemical at Rs. 13.56.

Guest, Keen, Williams were a bright feature in the engineering section and improved to Rs. 28.56. Elsewhere, conditions were subdued, and Indian Irons declined to Rs. 18.96 on selling pressure. Britannia Engineering were wanted at Rs. 13.56, but Jessop declined to Rs. 22.87. Textile Machinery were shaded at Rs. 17.32 on selling pressure and Richardson and Cruddas were quoted lower at Rs. 13.

In the paper mill group, Orient Paper declined to Rs. 24.40 and India Paper Pulp were available at the lower price of Rs. 19.75. Titaghur were transacted at Rs. 33.37.

Among sugar shares, Belsund came to hand at Rs. 10.81 and Gwalior Sugar were transacted at Rs. 69.75.

Turnover in tea shares shrank substantially and buyers were not inclined to extend commitments because of the declining prices of common teas. Among Assam gardens, Bishnauth were lower at Rs. 20.44 and Methoni fell to Rs. 19.81. In the Dooars group, Banarhat were available at Rs. 323 and Hasimara fell to Rs. 22.69. Among Darjeeling gardens, Mim were quoted at Rs. 240 and Teesta Valley were available at Rs. 26.

* * * *

The profit of the BIRLA JUTE MANUFACTURING COMPANY has declined by Rs. 4.67 lakhs to Rs. 16.77 lakhs. The ordinary dividend is the same at Re. 1 a share. Taxation absorbs Rs. 4 lakhs against Rs. 9 lakhs, leaving a carry-forward of Rs. 2.66,794 (4,37,393). The directors say that the calcium carbide factory worked to full capacity throughout the year and there was a good demand for its products in the market. Permission was obtained from the Central Government to increase the installed capacity of the carbide furnace from 10 tons to 25 tons a day. Orders for the plant and equipment have been placed. It is expected that the new carbide furnace with larger capacity will go into production by 1959. The erection of the staple fibre spinning plant was completed during the year under review and it went into production in March 1957. The working results of the section showed a net loss of Rs. 99.315, after providing Rs. 96.869 for depreciation. Satisfactory progress was made in the construction and erection of the cement plant in Satna. It is expected that the plant will go into production from July next year.

OXYGEN CORROSION in Boiler Plant

can be eliminated with the

WEIR

"Optimum" De-aerator

Dissolved oxygen in boiler feed-water is the most important and most dangerous factor in corrosion in boilers, pipelines, etc. It can be expelled by a Weir "Optimum" De-Aerator, which can readily be installed in existing plants, and acts as a feed-water heater by retaining in the feed-water the heat in the operating steam. Write for Publication No. OV. 37.

ciation and making other adjustments. Bringing in Rs. 17,839, there is Rs. 34,504. An amount of Rs. 2 lakhs is transferred from general reserve and the taxation provision absorbs Rs. 1.60 lakhs, leaving a carry-forward of Rs 5.496. There is no ordinary dividend, against 10 percent. The directors say that the position of the company as concerns its rights has been complicated by the contention of the Bihar Government that it is an intermediary under the Bihar Land Reforms Act, 1950, and as such the company's right to receive royalties from its sub-lessees passes to the Bihar Government. This contention has been refuted by the coal industry as a whole. An application has been made in the Calcutta High Court under Article 226 of the Constitution by the Indian Mining Association and the Indian Mining Federation for a stay order and an interim' stay has been granted. Steps are being taken and papers are being prepared for a similar application under Article 226 of the Constitution to be made in the Patna High Court for a stay order. The litigation in connection with the suit instituted by the Raja of Ramgarh has now been brought to a successful conclusion, but at the cost of a severe drain on the company's resources. The balance of the legal expenses has now been paid and is largely responsible for the loss incurred on the year's working. The company has been prospecting and mapping in the Karanpura field for the last 40 years. It was always its intention to exploit the resources of this field as soon as the demand for coal was there and transport was available. Unfortunately, until very recently the supply of coal in this country was greater than the demand and this fact, coupled with an almost complete lack of transport facilities in Karanpura, precluded the company from obtaining the reward for many years of field work. The Government has said that "it intends developing this field itself, at the same time providing the transport facilities necessary to move the vastly increased output". The company is negotiating with the Government on the subject of compensation "for all the expense incurred by it in the past and of which the Government will now reap the benefit."

* * * *

The RAJGARH TEA COMPANY has increased its profit by Rs. 1.95 lakhs to Rs. 3.24 lakhs for the year ended last December. Taxation provision absorbs Rs. 1.35 lakhs. Bringing in Rs. 31,831, there is a balance of Rs. 2,21,925. General reserve is allocated Rs. 1 lakh against Rs. 75,000. The dividend is increased by Rs. 1-8 to Rs. 4 a share, leaving a carry-forward of Rs. 41.025. Production rose from 5.532 maunds to 6.013 maunds, and the average sale price increased to Rs. 2.65 a lb from Rs. 2.17 a lb. Estimates for the current year have been made for a crop of 6.500 maunds at a cost of Rs. 8.39 lakhs.

Bombay Market

EARLIER IMPROVEMENT NOT MAINTAINED

EQUITY PRICES DOWN ON WEALTH TAX WORRIES

Tuesday Evening.

IRREGULAR fluctuations were seen in the Bombay stock market during the past week. At first share prices rallied on short-covering and replacement buying as soon as the postal strike was cancelled. Good corporate news also helped sentiment. The improvement in the piecegoods coupled with better prospects in the export market, induced support in the mill group. Towards the close, share prices weakened on long liquidation because of uncertainties about the Wealth Tax Bill. It was feared that there might not be any worthwhile modification of the Bill at the select committee stage.

Tata Steels declined to Rs. 171 and Indian Irons were lowered to Rs. 19.15 on selling pressure from Lyons Range. Alcock Ashdown were shaded at Rs. 250 and Premier Construction were available at Rs. 157.50. Tata Locomotive improved fractionally to Rs. 145 on replacement buying, but Larsen and Toubro were offered at the lower price of Rs. 14.70. In the automobile group, Premier Automobiles improved to Rs. 92.50 on higher sales of the company's products and Hindustan Motors were steady around Rs. 6.75.

In the mill group, Bombay Dyeing were maintained at Rs. 561 on the report that the company's ordinary share of Rs. 250 each would be split up into ten shares of Rs. 25 each. Century came to hand at Rs. 418 and Kohinoor were taken at Rs. 263 by knowledgeable quarters. Simplex realised Rs. 160.50 and Svadeshi were transacted at Rs. 176. India United Ordinary were freely offered at Rs. 11.35.

Among miscellaneous shares, Bombay-Burmah rose to Rs. 583 on the news that the scheme of arrangements about the capital structure of the company had been sanctioned. The company has announced a distribution of 15 percent, of which 9 percent represents the interim dividend for 1956-57 and the additional 6 percent relates to the amount held in suspense pending the sanction by the appropriate authorities of the scheme of arrangements. Shipping shares attracted attention on the report that the Government would consider giving additional funds to the industry in order to enable it to increase tonnage beyond what has been decided in the second five year plan. Great Eastern Shipping advanced to Rs. 22.50 on dividend prospects and Scindia Steam were quoted higher at Rs. 19.50. In the sugar group, Walchandnagar Industries realisaed Rs. 256.25. Among mining shares, Indian Copper were available at Rs 3 44 and Shivrajpur Syndicate came to hand at Rs. 82. In the cement group, Associated Cement declined to Rs. 159.50 and Digvijay Cement were shaded at Rs. 139.50. Tata Chemicals changed hands at Rs. 17.95 and National Rayon were done at Rs. 222.50.

Routine turnover was seen in the banking section and price changes were few. United Commercial came to hand at Rs. 58 and Bank of Baroda were done at Rs. 102.25. Scattered interest was taken in insurance shares, and British India General were fractionally higher at Rs. 14.50.

Among electricity supply companies, Ahmedabad Electric were placed at Rs. 93.75 and Tata Power were done at Rs. 1,160.

Another skymark in Indian aviation!

SERVING THE NATION

In the new India of today, I.A.C. is playing a vital role — providing the swiftest, most convenient means of transportation, and seeing that you get the finest service!

I.A.C.'S TURBO-PROP

VICKERS VISCOUNTS

Ushers in a new age of air travel

NEW VISCOUNTS for I.A.C. mean the finest in speed and luxury for you. Powered by four Rolls-Royce turbo-prop engines, the Vickers VISCOUNT flies *above the weather* . . . while you relax in armchair comfort in the fully-pressurised cabin. The swiftest, smoothest flying you've ever known! The new Vickers VISCOUNTS will soon be introduced on all I.A.C. trunk routes.

YESTERDAY AND TODAY

Over the years, I.A.C. has rapidly improved and extended its services — and today, its large fleet of planes links towns and cities throughout the country. Only a few decades ago, air travel was a rich man's luxury — now, you can fly to almost anywhere in India at comparatively little cost.

COMFORT FIRST AND FOREMOST

With I.A.C., passenger-comfort is of paramount importance. Trained hostesses take excellent care of you throughout the flight; you get free transport to and from the airport, free baggage allowance, and meals are served en route!

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS
(RAILWAY BOARD)
TENDER NOTICE

Tenders are invited from established foundries in India only for the supply of about 1.50.000 tons of cast iron CST9 sleeper plates. Broad Gauge and Metre Gauge to be supplied by 31st December, 1958.

2. Pig Iron will be supplied by the Railway Board up to 100% of the quantity ordered on the firm who will be expected to make up melting losses under their own arrangements.

3. Applications for copies of tender documents should be made to the Deputy Director, Works, Railway Board, New Delhi. Tender documents embodying conditions of supply and contract and relevant drawings will be supplied at Rs 10/- per set and will be available for sale from 22nd August. 1957 onwards on any working day during office hours.

4. Tenders will be received up to 13.00 hrs. on 17th September. 1957 and opened in the office of the Railway Board. State Entry Road, New Delhi, at 15.00 hours on the same day.

P. R. CHOPRA,
DY. DIRECTOR (WORKS)
RAILWAY BOARD.

New Delhi,
Dated 8th August. 1957.

TAKING DISCIPLINARY ACTION AGAINST WORKERS

CASES OF MISCONDUCT JUSTIFYING DISMISSAL

By M. Sur

WHAT is an act "subversive of discipline", and when is a company justified in taking proceedings against the workman or workmen responsible? This is a problem which often puzzles managements. Unfortunately, a number of judgments of industrial tribunals, given on technical grounds or on a too strict interpretation of standing orders, have led managements to hesitate to take action unless the wording of the standing orders quite clearly covered the case of misconduct, even though a worker's action was obviously undermining discipline and morale in an organisation. This inevitably affects the morale of the law-abiding workers since they feel that they are at the mercy of the indisciplined elements. A study of Labour Appellate Tribunal and Supreme Court decisions in recent years will show that a firm attitude has been and is being taken by industrial courts towards cases of serious indiscipline. A review of some of these may be a useful guide to labour officers and managements.

In 1953 a very important judgment was given by the Appellate Tribunal, Calcutta, in the case of Shalimar Rope Works (L.L.J. 53 II p. 876). This has been quoted in almost all subsequent cases on discipline. The case related to the assault by a number of workers on a jamadar and durwan near the temple inside the cooly lines which resulted in the death of the former and severe injury to the latter. The assault occurred outside working hours, and was the result of a quarrel over money taken in gambling. A complaint about the money was made to the works manager who promised an enquiry, but before the enquiry could be held the workmen concerned, who included the assistant secretary of the union, took the law into their own hands. An enquiry was held later and the men were dismissed.

Standing Orders

It was argued on behalf of the workmen that the standing orders did not cover such an incident which occurred outside working hours, and that an act could only be regarded as subversive of discipline if it was committed in the factory or was connected with the affairs of the factory. The Appellate Tribunal observed: "An employer is certainly concerned with the peace and good order in the factory and any act on the part of the workmen having the tendency or effect to disturb the peace and good order should be regarded as subversive of discipline. Thus a fight in the factory between two workmen during the working hours over their private affairs will be an act subversive of discipline even if the standing order did not specifically mention such an act as misconduct . . . Equally it would be regarded as an act of misconduct for which an employer may punish him by dismissal or otherwise, even if it occurs outside the working hours and outside the factory or place of business of the employer if the act: (1) is inconsistent with the fulfilment of the express or implied conditions of service, or (2) is directly linked with the general relationship of employer and employee, or (3) has a direct connection with the contentment or comfort of the men at work, or (4) has a material bearing on the smooth and efficient working of the concern."

That the workmen concerned did not wait for the manager to hold an enquiry but took the law into their own hands was, in the opinion of the Appellate Tribunal, an affront to the authority of the manager and amounted to undermining the smooth working of the factory. The Appellate Tribunal also said that "it is not possible to set out an exhaustive list" of acts subversive of discipline as described in the standing orders nor was it necessary that these should specifically mention the act as an act of miscoudct before the employer could dismiss a workman for such an act.

In a recent case the Appellate Tribunal upheld the dismissal of three workmen by the Empire Dyeing and Manufacturing Co. Ltd. (L.L.J. April 1957 p. 415) for an assault on the Labour Officer outside the working hours and outside the premises of the factory. The Tribunal observed that such an assault was an act subversive of discipline and amounted to grave misconduct. The hour and the place where the act of indiscipline took place were not the material factors. If it were subversive of discipline or if it involved moral turpitude, it could give a right to the management to take disciplinary action against the employees found guilty of such an act.

Creating Disturbance

In 1955, the Appellate Tribunal, Lucknow, (L.L.J. 55 II p.22) upheld the dismissal of a workman by Bhupendra Cement Works. The workman was found guilty of creating disturbance during the May Day celebrations, although this was outside the working hours. The management arranged a cinema show as part of the celebrations, but this had to be abandoned because rowdy elements among the workers objected to the reservation of certain seats for officers' wives. After an enquiry was held, the workers responsible for the disturbance tendered a written apology, with the exception of the propaganda secretary of the union, who was charge-sheeted. The Appellate Tribunal held that the show arranged at the request of the workers to celebrate May Day was intended to foster good relations between the management and workers and was therefore connected with the legitimate activities of the factory.

In the case of the Kannan Devan Hills Produce Co. Ltd. (L.A.C. January 1957 p.31), the Labour Appellate Tribunal in Madras reversed the decision of the lower court and held that the management was entitled to dismiss a worker "for using vulgar and abusive language" against another worker on the company's estate, as this was an act subversive of discipline. The lower court had taken the view that this was merely a private altercation between two employees of equal status and that the company had no jurisdiction over the private or domestic life of the workmen. The incident, however, took place between workers belonging to rival political parties and strife between the two organisations had frequently resulted in violent clashes. In the circumstances, the Appellate Tribunal held that there "would be enough provocation for the incident to take a grave shape and it would not be wrong on the part of management to take disciplinary action in the interest of smooth working of the estate."

Libellous Allegations

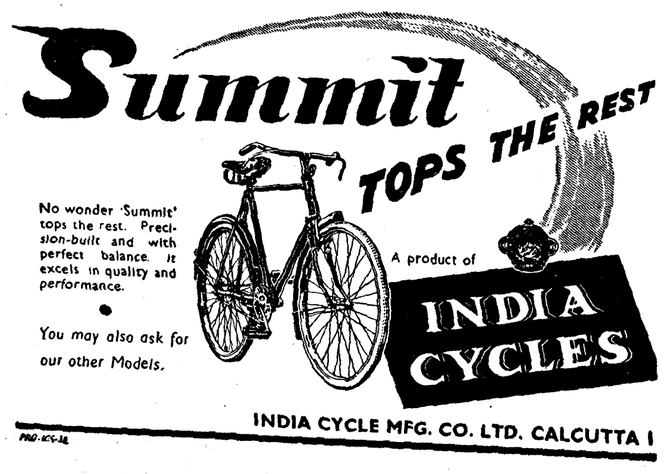
The Appellate Tribunal, Bombay, in the case of Bennett Coleman and Co. Ltd. (L.L.J. 55 II p. 548) upheld the dismissal of certain union executives who were charged with the issue and distribution of leaflets "couched in abusive, defamatory, libellous and disloyal language" thus breeding "a sense of disrespect, insubordination and indiscipline amongst the employees" after the general manager had warned them not to do so. The union argued that the activities of the members of its executive fell outside working hours and outside the premises of the company. But the Appellate Tribunal observed that "the fact that a person is a member of a trade union does not place him above the law" and went on to say: "The unrestrained and abusive attack launched on the proprietor and officers of the company and the libellous allegations made against them were not a legitimate trade union activity, and coupled with the exhortations to disloyalty and hostile action contained in the earlier leaflets, were calculated to destroy the respect which the workmen ought to feel for them and to affect discipline."

False complaints against a manager, deliberately and maliciously made to the police with a view to discrediting him, were held to be an act for which dismissal was justified in the case of the Agarpara Jute Mills (L.A.C. January 1957, p. 14). The Appellate Tribunal, Calcutta, observed that "an act, which brings the head of an establishment into contempt, is undoubtedly subversive of discipline . . . Any person who makes a complaint against any other, does so entirely at his risk. He is required to act in good faith and to make all reasonable enquiries . . . to ascertain the truth of the complaint before setting the law in motion." The Tribunal added that the "maintenance of internal discipline in the labour force is an acknowledged right of the management."

Using Insulting Language

Insulting language used against a superior is an act subversive of discipline. In the case of Lakshmi Devi Sugar Mills (L.L.J. 55 II p. 250) an employee, who was also the secretary of the union, wrote an insulting letter to the manager and was found guilty under the standing orders of an act subversive of discipline. In upholding his dismissal the Labour Appellate Tribunal observed: "If a workman of any management, even if he happens to be a very active and important member of a union, is permitted to use abusive and insulting language and such conduct is tolerated, the management will suffer immensely."

Where an employee threatens or intimidates a superior officer on account of some grievance connected with his work, whether during or out of office hours, whether inside or outside the business premises, "it is a misconduct which we refuse to countenance, much less condone." This was a statement of the Special Bench of the Appellate Tribunal in the case of the Bank of Bikaner (L.A.C. 54 I p. 98) in which an employee of the bank had been charge-sheeted for saying about the head cashier at a meeting of the union held in the bank premises that "we shall see that he is totally ruined and if we get a chance will beat and punish him." It was argued that the enquiry held was illegal because it related to the internal affairs of the union, but the Appellate Tribunal declared that this was a serious act of indiciplne which merited dismissal and "there is no question of curtailment of trade union activities involved in the decision we are giving."



Resolutions at Union Meetings

On the other hand, care must be exercised in raising cases relating to resolutions passed at union meetings, where some degree of privilege can be urged. A distinction has to be made between clear threats directed against individuals and general resolutions airing grievances or demanding the removal of an officer. This was brought out in the case of the Laxmi Devi Sugar Mills which was heard by the Supreme Court. The charge was that the vice-president of the union in a speech had instigated workers to seek the removal of the general manager and that this was calculated to undermine discipline in the factory. The Supreme Court observed: "The respondent was the vice-president of the union and prima facie any resolution passed by the union asking for the removal of the general manager would be perfectly legitimate if the members of the union thought that there were circumstances warranting the same. The correctness or otherwise of the reasons given for such removal would not be liable to scrutiny by the Court, the only thing requisite being that the union was not acting mala fide or was not actuated by any malice or ill-will against the manager in passing such a resolution. The resolution by itself would not have the effect of harming the general manager at all. The act of its passing the resolution would be innocuous...and the members of the union would not be committing any breach of the standing orders, nor would they be guilty of any act subversive of discipline."

It is interesting to note, however, that while the Supreme Court did not hold the vice-president of the union guilty of a subversive act in sponsoring the resolution, they found the conduct of this employee in refusing to answer the charge made against him, in maintaining that he was not accountable for his behaviour as a trade unionist and that the manager had no jurisdiction to charge him was most reprehensible. "To say the least, the respondent was guilty of insubordination and his attitude was such as would not lead to the maintenance of discipline in the factory...we would have found it difficult to resist the appellant's claim for his dismissal if he had been charged with having been guilty of such misconduct...His refusal to give replies on the pretext of shielding himself in his capacity as vice-president of the union was absolutely unjustifiable."

Dismissal for Misconduct

Summing up, it may be said that an assault on an officer or another employee, whether it takes place outside the premises or outside working hours, is misconduct meriting dismissal, if it is linked in any way with the relationship between the employer and employee or with the comfort or contentment of workers. A disturbance created in the workers' quarters but outside working hours, if it has anything to do with the welfare or social amenities provided by the employer, may be regarded as misconduct. Unrestrained and abusive attacks against the employer, or his officers launched in the place of work by a union is not "countenanced" by the Appellate Tribunal, because such propaganda breeds disrespect and insubordination. Intimidation of, or personal threats against a superior officer, even when made outside working hours and in a union meeting, are acts subversive of discipline, though general resolutions at a union meeting airing a grievance or asking for the removal of a certain officer may not be considered so. Employees cannot claim to hold office in a union to shield themselves from the results of their actions. Refusal to accept or answer a charge on the ground of immunity as an officer of a union is insubordination for which dismissal would be upheld.

London

IMPROVEMENT IN THE GILT-EDGED MARKET

GOLD AND DOLLAR RESERVES FALL

(FROM OUR LONDON CORRESPONDENT)

WITH Parliament in recess until October, but subject to recall should circumstances demand it—a concession from the Government to the Opposition's somewhat synthetic alarm at the inflationary danger—the economic outlook as a whole appears to be quiescent. For this, almost the only apparent explanation is a slightly better tone in the gilt-edged market and some relief in the recent pressure on sterling which was aggravated by the spate of warnings about inflation from both the Prime Minister and the Chancellor of the Exchequer. The ban on further net purchase of Canadian securities, which the Treasury introduced on 5th July, has also helped the improvement in the general situation by stopping the largest loophole for British capital.

Taken by and large, the fall of $14 million in the gold and dollar reserves during July to $2,367 million, especially as it was arrived at after meeting payments totalling $25 million to the European Payments Union, was, if anything, rather better than had been expected. Making allowance for the E.P.U. payment and the receipt of $1 million as U.S. defence aid, there was actually a residual surplus of $10 million for July, which compares quite favourably with the deficits of $11½ million in June and of $7 million in May. As far as August is concerned, this will be affected by the £18 million deficit with E.P.U. in July, compared with only £10 million in June, reflecting the summer tourist demand for Continental currencies. In the same month in the previous two years, however, the deficit was as much as £25 million. It is believed that it would have been heavier this year but for the fact that the West German Federal Bank is reported to have started accumulating a sterling balance in London against the Federal Government's proposal to deposit a total of £75 million towards various future liabilities in an effort to reduce the pressure of the continuing West German export surplus on the international monetary mechanism. Unfortunately, monthly movements in the sterling balances are not disclosed, or it would be easier to assess the real significance of changes in the gold reserves.

Views on Production Prospects

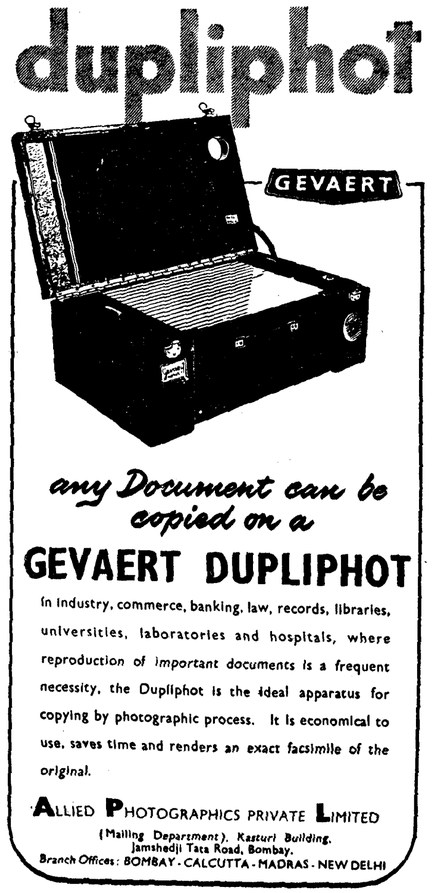
There can be little doubt that much of the confidence which is felt in some quarters as to the future economic outlook stems from the belief that industrial productivity, now that the period of stagnation has come to an end, will go on rising steadily. Indeed, there are some optimists who are prepared to argue that output may rise so quickly as to overtake the inflation which has occurred in the purchasing power of the public. That hope, of course, is based on the argument that the benefits which can be expected to flow from the unusually large amounts of capital British industry has invested in new fixed assets, especially new factories, plant and equipment are yet to be seen. The recent resumption of the upward trend in the industrial production index is ascribed to the initial impact of these developments. Once the new assets are in full use an increased volume of work will be put through the factories, and if the demand continues to expand, as it has done recently after a slight recession last year, productivity will again start setting up new records. The argument has some justification in fact, but it calls for a more detailed study lest it might not be realised, and thereby give rise to unnecessary disappointment.

According to the Board of Trade, total expenditure on fixed assets by manufacturing industries in 1955 was 27 percent higher than in 1954, and in 1956 it was again 20 percent higher than 1955. These are no more than estimates and are, therefore, subject to revision, but, on the whole, may be taken as roughly representing the progress which has actually taken place. The real danger lies in accepting the overall figures as representing an accurate picture of what is happening in industry as a whole. In point of fact, as the detailed Board of Trade figures go to show, experience in individual industries has been rather chequered. The percentage rises for the two years covering a few large groups help to correct any misapprehension: iron and steel, +17 and +21; motor vehicles, +77 and +16; paper and printing, +51 and +48; engineering, shipbuilding, etcetera, +12 and +15; food, drink and tobacco, +20 and +13; chemicals and allied trades, +3 and +34; other manufacturing industries, +41 and +20.

Industrial Relations

So far as it is possible to form an opinion as to Government policy on economic rehabilitation, activity is being concentrated on the creation of an atmosphere, especially in the realm of industrial relations, where the natural forces which are working towards an improvement may have a reasonable chance to flourish. The proposed advisory council to examine basic economic factors and explain their impact to the Government, employers and to workers, to say nothing of the general public, is the main plank in this policy. That it has not yet made any further progress may perhaps be due to the difficulty of making appointments acceptable as both expert and independent to these many conflicting interests and yet authoritative enough to be generally convincing. It is no easy task under favourable circumstances, and with the T.U.C. definitely unco-operative, an even greater headache. The absence of parliamentary duties for a spell may give the responsible Ministers a chance to get on with this difficult job, but it is doubtful whether any advance will be possible until the autumn.

At the same time, Mr. Macleod, Minister of Labour, is seeking ways and means of eliminating the innumerable industrial disputes which are so serious a handicap to better output by replacing the existing machinery and the legislation under which it has been devised by something more in line with current thought on this vexed question and a more acceptable form of compulsory arbitration. This he is hoping to do through a succession of consultations with the parties interested so as to evolve a general scheme which will enlist the support of the National Joint Advisory Council, which advises the Government on labour questions, and thereby perhaps have a reasonable chance of general acceptance. Some progress has been made, in that the Employers' Confederation has expressed itself in favour of one statutory body to replace the Industrial Dispute Tribunal and the Industrial Court and provide a "half-way house" between a statutory wages council and completely voluntary machinery. On the other hand, the T.U.C., it is understood, has expressed the opinion that any legislation to replace the Defence Regulations should ensure the reappointment of the Industrial Disputes Tribunal in substantially the same form. Whether these conflicting views can be reconciled remains to be seen. At least, Mr Macleod now knows just where he stands and what he is up against.



India House Staff Problems

Those who can look back to pre-independence days—a not unlikely process around the middle of August—will remember the resentment which existed among locally recruited staff at the disadvantages of their position vis-a-vis their compatriots from overseas. As a "talking point" this disparity played a part in the Congress Party's rise to power. This fact lends additional piquancy to the report that the Indian Government is now faced with a similar situation in reverse in the form of representations from about 750 of the 1,100 staff employed by the High Commission of India in London. These refer to "acute hardship" and "grave dissatisfaction" and only just stop short of supporting a "go slow" threat advocated by a few, in view of the inferiority of their wages and conditions as compared with those of the 350 employees recruited from India as well as with those enjoyed by comparable members of the British Civil Service. Mrs. Pandit is understood to be holding discussions with representatives of the staff at present, but the case will surely find its way out to New Delhi in due course.

Briefly, members of the Whitley Council staff side claim that the pay of clerks recruited in India is much higher than that of locally recruited Indian staff and Europeans, many of whom have been employed by the Commission since it was set up in 1947. With various allowances, the India-recruited clerical officers' pay is as much as £1,000 a year compared with the £625 of locally recruited Indians and Europeans. It is said that the £1,000-a-year men work side by side with, and are taught their jobs by, temporary clerks drawing between £460 and £430 a year. While they are asking that these anomalies should be adjusted, the staff are mainly concerned that guarantees given that their wages and conditions should be made comparable with the British Civil Service have not been implemented. It is being maintained that two salary increases since 1947 still leave them far behind the British standard. Examples are quoted of the rates paid by the Commission and in the British Civil Service, such as £1,600 to technical officers against £2,050, and a similar discrepancy persists through all grades down to temporary clerks who receive £460 and £750, respectively. In a recent resolution passed by the staff, who claim that they have used all the constitutional channels to press their case, it was stated that a promise given them five years ago to reorganise their service had not been implemented. This, it was said, "is causing a grave sense of frustration."

Accountancy Merger Approved

The Society of Incorporated Accountants has announced that members have approved by the necessary three-fourths majority, schemes for integration with the Institute of Chartered Accountants in England and Wales and with the corresponding Scottish and Irish Institutes. Members of the Society were sent ballot papers on the proposed merger after the schemes had been approved, by 927 votes to 111, at a meeting of the Society in June. The result of the ballot just announced was 8,747 for integration and 1,327 against. At the June meeting, the Chairman of the Society, Sir Richard Yeabsley, said that the schemes had been approved by the Institutes. The broad objective was to take a first step and go as far as was practicable at present towards the unification of the accountancy profession in the United Kingdom and Ireland.

Bombay

BOMBAY TO HAVE ONE STOCK EXCHANGE ONLY

GOVERNMENT DECISION UNDER SECURITIES CONTRACT ACT

(FROM OUR BOMBAY CORRESPONDENT)

THE Government of India has decided that Bombay should have only one stock exchange. The Native Share and Stock Brokers Association and the Indian Stock Exchange Ltd. applied for recognition in terms of Section 3 of the Securities Contracts (Regulation) Act of 1956. The Government has considered both the applications and has decided that only one stock exchange should be allowed to function in Bombay. It has also decided that official recognition should be accorded to the Native Share and Stock Brokers Association. The Government's decision is considered wise by many. There is little to be said in favour of having two stock exchanges functioning simultaneously in the same city. The case for a single exchange for Bombay is strengthened by the fact that the Indian Stock Exchange Ltd. has confined its activities mainly to two speculative shares, namely. Indian Iron and Tata Ordinary. The Native Share and Stock Brokers Association, apart from being the older body, consists of members who are professionals. A unified control over a vital section of the market may be easier. The recognition granted to the Native Share and Stock Brokers Association will take effect from 31st August, 1957, but the Indian Stock Exchange Ltd. has been given time until 15th October, 1957, to wind up its affairs.

A further point is that the members of the Indian Stock Exchange Ltd. are eligible for membership of the recognised stock exchange provided they conform to the prescribed terms and conditions. Those applying for membership must have been active members of the Indian Stock Exchange Ltd. for 12 months prior to 6th August, 1957; be eligible under Rule 8 (i) of the Securities Contracts (Regulation) Rules, 1957; pay an entrance fee of Rs. 15,000 in two instalments of Rs. 6,000 with the application and the balance of Rs. 9,000 within a period of six months and should be admitted to membership only after the payment of the full amount of Rs. 15,000 is complete, provided that those who pay a sum of Rs. 6,000 within a fortnight of their election to membership shall be admitted as members without any further payment. They must pay a membership deposit of Rs. 20,000 with the application, provided that those who are not able to pay in full the amount of Rs. 20,000 with the application they may pay Rs. 5,000 with the application and the balance in three quarterly instalments of Rs. 5,000 each. But till the full amount of Rs. 20,000 as membership deposit is paid, the persons concerned shall work only as "representative members"; application for membership must be made before 15th October, 1957, but it will be open to the board of the recognised exchange to extend this period under special circumstances and to entertain applications received after that date. It is further stipulated that if an active member of the Indian Stock Exchange Ltd. who fulfils the prescribed conditions is not admitted to membership of the recognised exchange, he will have the right to appeal to the Government of India within a month of the rejection of his application. The decision of the Government will be final and binding on all parties.

Stresses and Strains

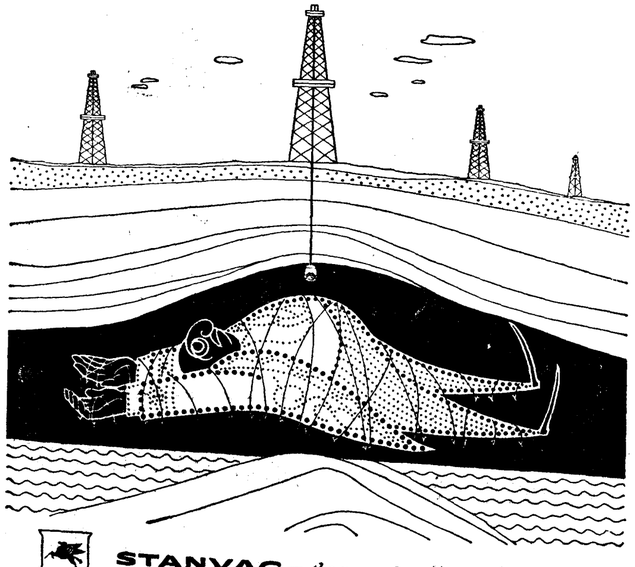
Meanwhile, Mr. K. R. P. Shroff, president of the Native Share and Stock Brokers Association, speaking at the annual general meeting, referred to the strains and stresses in the economy. He said: "Externally, the foreign exchange reserves were down to the minimum safety level because of a spectacular deficit in the balance of payments. Internally, imbalance was visible in the upward spiral of costs and prices and the steep rise in the cost of living. Heavy spending and deficit financing on a large scale in the public sector combined with an equally rapid extension of activity, a relative shortage of savings and a sharp increase in bank credit in the private sector were the principal elements in the situation. Torn between the conflicting demands of stimulating development and arresting inflation, the efforts of the Government were concentrated in a series of fiscal and monetary measures, the brunt of which at the outset fell exclusively on investors. The normal tendency for the stock market to rise and provide a hedge against inflation was therefore reversed. On the one hand, the imposition of severe taxes, one after another, reduced the profitability of corporate enterprise, spread doubt and uncertainty about the future and undermined the confidence of investors. On the other hand, the shortfall in savings and acute scarcity of funds led to continued liquidation of investments, while the concomitant rise in interest rates implied a change in the fundamental yield basis and compelled a downward revision in the structure of share prices. In the event, equity values declined at a steadily accelerating rate, and set against the background of rising prices elsewhere, the fall in real terms assumed the dimensions of a major slump."

Mr Shroff said that the buoyant conditions in the previous financial year led the stock market forward on its own momentum during the early months of 1956-57. The success of the first five year plan created optimism for the future and the prospect of deficit financing under the second five year plan raised further hopes. In addition, the Prime Minister's assurances to the private sector, the decision to expand mill production by the installation of automatic equipment, the abolition of the export duty on coarse cloth and the country's general industrial performance were among the other encouraging factors. The variable dividend industrial securities index, therefore, rose from 123.1 in April 1956 to 127.4 in August of the same year. But at this point, the increase tapered off mainly because of the increase in the excise duty on cloth and the other restrictions placed on the textile industry. This prepared the ground for a further depression. Enthusiasm for investment diminished and this was followed by the Industrial Tribunal's plantation award in October 1956 which precipitated a fall in plantation shares. Market sentiment became increasingly subdued and the variable dividend industrial securities index fell to 122.9 in November last year. Mr Shroff said that this fall has been continuing since then and stood at 113.7 in January this year. The budgetary proposals announced on 15th May, 1957, "virtually placed the country on a war footing." Once again, the brunt fell on investors and the corporate sector and for a time "the retreat of prices in the stock market was turned into a rout."

STEEL IMPORTS TO AMOUNT TO 1.5 MILLION TONS DURING 1957-58

The quantity of steel that would be imported into the country during 1957-58, both against Government contracts and commercial licences would be about 1.5 million tons, the Union Minister for Steel, Mines and Fuel, Sardar Swaran Singh said in reply to a question in the Lok Sabha. The programme for import in 1958-59 was still being considered. The foreign exchange to be spent during 1957 would be about Rs. 120 crores.

I'm in harness



by Adipocere

(Pronounced 'adi-po-saire')

They tell me that once I have been found, it takes 30 years for those who have spent their time, money and energy to equate their investment. What an important person I appear to be!

An enormous structure, called a Drilling Rig is now the centre of all attention, and the operation of drilling commences. They say that drilling oil wells is a highly technical business requiring complex expensive machinery and men of specialised skills.

Day by day, and hour by hour the oil-finders come near me, until at last I gush out and make a lot of noise at the taste of fresh air and try to escape... but these men are persevering and I am channelled into a maze of pipe-lines as they feel that I should now be "Refined," in other words, become a Gentleman. So, I undertake a journey to a huge gigantic structure called an Oil Refinery.

NO MERGER OF INDIAN AIR CORPORATIONS

B.O.A.C. TO USE MORE BRITANNIAS

(FROM OUR NEW DELHI CORRESPONDENT)

THE report on talks for the merger of the two air corporations—the Indian Airlines Corporation and Air-India International—is discounted here. Apart from other considerations, there is the problem of the World Bank loan which Air-India International has recently taken. The loan stipulates that the structure of the Corporation shall remain unaltered as long as it has not been repaid.

B.O.A.C. is slowly replacing its existing fleet of aircraft with *Britannias*, which will be introduced on its London-Bombay-Colombo route from 23rd August. In due course, the service will cease to call at Karachi. Pan American's third service *via* New Delhi will likewise cease to call at Karachi at an early date. From September next, B.O.A.C. will operate three services through Bombay, two through New Delhi, and six through Calcutta, including one passing through Delhi. With the exception of one service going through Calcutta to Australia, all others will have first class (20 seats), and tourist (42 seats) class.

Turkey Buying Viscounts

Vickers-Armstrongs (Aircraft) Limited has announced the sale of five *Viscount 700* series turbo-prop airliners to Turk Hava Yollari—Turkish Airlines Incorporated. The first *Viscount* will be delivered to Turkey by the end of this year, as B.O.A.C. has agreed to forgo the delivery at that time of one of its 12. The other four aircraft will be delivered in 1958. The number of *Viscounts* sold so far is 372.

Co-operation between European Airlines

The French airline, Air France, and Lufthansa of Western Germany have signed an agreement of co-operation concerning their operations of the south Atlantic air route. The agreement which came into force on 1st July applies to the route common to both airlines, namely, Paris-Buenos Aires. To the passenger it will mean the choice of four weekly services against the former two from each. These four will provide identical types of plane *(Super G Constellation)*, classes and service. Coming after a series of similar conventions already concluded between France and Western Germany for a number of north Atlantic services, the new agreement marks further co-operation between the airlines.

U.S.-Australian Air Agreement

The Australian Government has approved the proposed U.S.-Australian air agreement granting Qantas an extension of its Pacific service across the U.S.A. to New York and on to Europe, and giving the U.S.A. a number of new routes to and through Australia. U.S airlines are authorised to fly from Australia to Antarctica, South Africa, and south-east Asia. The concession to Qantas gives the Australian airline a round-the-world service.

S.A.S. to Obtain French Aircraft

S.A.S. has signed a contract to buy six French *Caravelles* for delivery in 1959, with the option to buy three more, *Aviation Daily* reports. The formal announcement of this purchase is shortly expected. Also reporting the order for six *Caravelles*, *Aviation Week* says that S.A.S. is prepared to buy 19 more. Delivery to S.A.S. in the first half of 1959 will probably mean that Air France will forgo some of its 12 *Caravelles*. The two airlines are reported to have concluded an agreement covering the operation of jets on the Paris-Stockholm run. French sources predict that the S.A.S. order will be followed by further orders from both sides of the Atlantic.

Jet Airport in Norway

A Norwegian Government commission has recommended that the Fornebu Airport, Oslo, is best suited for development as Norway's central jet airport. It has also recommended the lengthening of existing runways and the construction of a new one of approximately 7,500 feet, to be extended later to 10,000 feet.

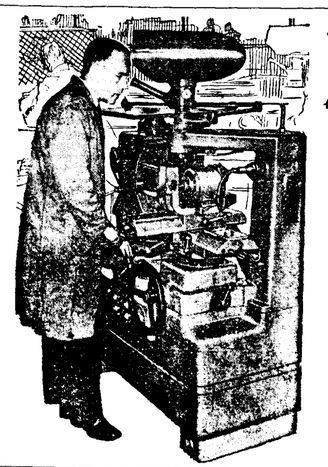
P.A.A. Seeking New Pacific Route

Indications are that Pan American Airways is about to be granted a "Great Circle" route across the Pacific and that Northwest's present temporary "Great Circle" certificate will be made permanent. P.A.A. has applied for north Pacific rights both from California to Tokyo and from Seattle-Portland to Tokyo. The latter route will parallel Northwest's present route. A one-year grant to P.A.A. for the Seattle-Portland-Tokyo service is being considered, but permission for the California-Tokyo route appears to be a certainty. C.A.B. recommendations for polar route grants to both Pan American and T.W.A. for a service from California to Europe are also reported to have been submitted to President Eisenhower.

Jet Plane for U.S. Air Force

First details of a small jet aircraft being developed by Lockhead and North American Aviation for the U.S air force training, were disclosed at a recent session of the Institute of the Aeronautical Sciences in Los Angeles. Lockhead's *CL-329* will be a 10-passenger swept low-wing aircraft, with four jets mounted on the rear fuselage in side-by-side pods. Gross weight will be 28,000 lbs. cruising speed 500-550 m.p.h. at 25,000-45,000 feet. North America's *Sabreliner* will seat four to nine passengers, and have its G.E. J85 turbojets in the wing roots. Cruising speed will be Mach 0.76 at 39,000 feet, and top speed 450 m.p.h.

Improvement to La Guardia



The Port of New York Authority and six U.S. airlines will finance a $32 million improvement programme for La Guardia airport, second busiest terminal in the world. The programme calls for a new finger-type passenger terminal, improved runways, taxiways and apron facilities, a 50 percent increase in parking space, a new roadway system and a control tower. Work is to start immediately, but full-time operation of the field will continue. Rebuilding is scheduled for completion in stages by the end of 1962 "to provide one of the world's most modern and convenient air terminals for the seven million passengers a year who are expected to use La Guardia airport by 1965". In 1956, La Guarida handled 5,403,239 air travellers. The New York airport will be geared to serve short and medium-haul flights, with the trans-continental and overseas services reserved for Idlewild. Longest runs out of La Guardia will probably be to Chicago or St. Louise. Planes using it will be mostly piston-engined, but the possibility that some medium-range jets might use it is not ruled out. Mr. Austin J. Tobin, P.N.Y.A. executive director, has said that the determining factor would be noise that would be "tolerable to surrounding communities." The first and only jet to be given access to any of the four New York airports which P.N.Y.A manages is the *Caravelle*, which returned to Idlewild recently after a tour of the U.S.A. La Guardia's two major runways are to be rebuilt to handle planes up to 175,000 lbs weight. They can now handle aircraft up to 105,000 lbs weight. Rebuilding is necessary to accommodate heavier turboprops which will come into operation next year. One of the runways is 6,000 feet long and the other is 7,000 feet. Whether or not they should be lengthened has not yet been decided. To help finance the building programme, airlines using La Guardia have agreed to pay five times their current rents and fees to the airport authority. These airlines are American, Eastern, Capital, Northwest, T.W.A. and U.A.L.

Disposal and Purchase of Aircraft by I.A.C.

The Indian Airlines Corporation will sell its 12 *Vikings* by mid-1958, when it will have received its ten *Viscounts*. The first five *Viscounts* will be delivered within the next few months.

Jet Runway for Tokyo Airport

The Tokyo international airport is to get a new 10,000-foot runway capable of handling jet planes. Tokyo now has an 8,400-foot main runway.

INCREASING LAWLESSNESS IN KERALA ESTATES

COMMITTEE ON WAGE STRUCTURE FOR PLANTATION WORKERS

(FROM A SOUTH INDIAN CORRESPONDENT)

THE Vandiperiyar plantation district has become the worst scene of lawlessness in Kerala. During the last three weeks, four major cases of violence have been reported from there, one among them being a clash between two rival groups of plantation workers, which resulted in the death of three and serious injury to many. In another case, a manager, along with his wife and child, was waylaid. Another estate manager was stabbed for refusing bonus to a person who claimed that he had worked on the estate in a previous year, which the office records did not prove.

Yet State Government spokesmen in Kerala dismiss the planters' complaints as "bogeys". Mr. R M. Howie, chairman of the Association of Planters of Kerala, in a statement, says: "The plantation industry is interested in conducting its business in peace and not in raising bogeys of any kind. If the Minister (the Law Minister) is not convinced of the truth of our statement he ought to agree to an impartial enquiry" He continues: "Wilful obstruction of staff and their families, assaults on managerial staff stabbing incidents destruction of property, trespass and threats of murder have been reported from estates At one stage or another complaints to police, appeals to the Government for intervention and representations at the highest level have been made. This Association is in a position, if so required, to publish details of incidents involving violence, threats, coercion or obstruction that have occurred on the plantations in Kerala during the past four months.

"What is causing grave concern to the industry is the manifest growth of a general feeling that lawless behaviour directed against industry will not only go unpunished, but will be defended by the Government. There have been cases of direct incitement to violence in speeches heard in plantation areas. If it had not been for the good sense and friendliness of a large section of our workers, many of these incidents would have ended more tragically than they have done. Much of the hooliganism has arisen from rowdy elements, with the active support of outsiders. The Kerala Chief Minister's statement of 23rd July makes a fine distinction between industrial property and individual property which we believe is not sustainable in law and in practice would leave the plantation industry at the mercy of hooligans. We are gravely concerned with the distinction made by the Chief Minister which places industrial properties outside the pale of legal protection", Mr. Howie adds.

Bonus for Coffee Workers

The Plantation Labour Committee of Kerala at its meeting on 6th August recommended a 6¼ percent bonus for workers in Malabar coffee estates for the years 1952 to 1954. Estates with less than 300 acres need pay only 5 percent. For the years 1955 and 1956 also estates with more than 300 acres will have to pay 6¼ percent, and those with smaller acreages a 5 percent bonus. These are inclusive of the bonus already paid. The payments will have to be made before 10th October, 1957 To the estates in which the bonus for any of these years has been settled either by agreement or by a Tribunal award, the above rates will not apply. These rates are the same as those recommended for estates in the Travancore-Cochin area.

Plantation Wage Structure in Kerala

The Government of Kerala has constituted a committee with a retired District and Sessions Judge as chairman, and with equal representation for management and labour, to recommend a wage structure and formula for the future payment of bonus to plantation workers in the State.

Coffee Cultivation in Andamans

The Andamans has about 15,000 acres suitable for coffee cultivation, according to a survey team sent out by the Indian Coffee Board. The island enjoys well distributed rainfall of 80 to 120 inches a year, and temperature and soil conditions are favourable for coffee. The protected hill slopes facing inland are suitable sites for cultivation. The salubrious climate of the surrounding seas, as in Hawaii, is expected to compensate for the lower altitude. Planting coffee on terraces, training it on multiple stem, adoption of mixed farming with coffee and exploratory trials to start with are, it is understood, among suggestions made in the team's report, which is now under the consideration of the Government.

U.P.A.S.I. Meeting

The Central Minister for Commerce and Industry, Mr. Morarji Desai, will inaugurate on 27th August the 64th annual general meeting of the United Planters Association of Southern India in Coonoor. The U.P.A.S.I. exhibition will be inaugurated by Mr. Manubhai Shah, Central Minister for Industries, on 26th August.

Higher S. Indian Tea Crop

The South Indian tea crop for June at 15.2 million lbs was 3.1 million lbs higher than that of the same month last year. The region's output for the first half of the year amounts to 72.6 million lbs, compared with 65.2 million lbs in the same period last year.

Fall in Rubber Output

Rubber production in south India during June, amounting to only 750 tons, was the lowest for that month of any year since 1951. The two main factors which contributed to the fall were the heavy monsoon rains and the cutting down of trees for replanting. For the first five months of the year, however, production was keeping ahead of last year's, the figures being 8,292 tons for January-May 1957 against 8,147 tons for the same months in 1956 But by the end of June, the situation was reversed; the production figure for the first half 1957 totalled 9,042 tons against 9,631 tons for the corresponding period in 1956, showing a decline of 589 tons.

Consumption, on the other hand, was higher during this period when compared with last year's. The total offtake of the manufacturers amounted to 15,751 tons, against 14,199 tons. The gap between indigenous production and consumption at the close of the first half of this year was 6,709 tons. Last year, it amounted to 4,568 tons. The gap was covered partly with imports (4,001 tons). The year opened with a stock of 8,311 tons, including synthetic rubber, which went down to 6,766 tons by the end of June.

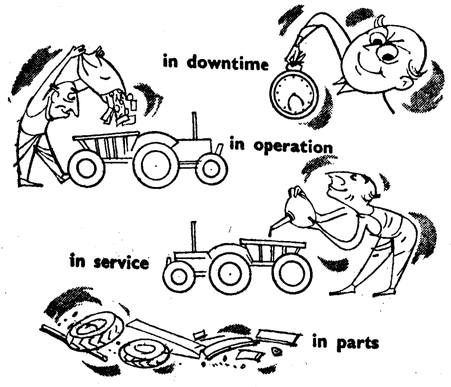
RUBBER PRODUCTION AND CONSUMPTION IN JUNE

Indian rubber output in June was 750 tons, according to the Rubber Board of India. Exports were nil while imports were 571 tons. Consumption by manufacturers was 2,513 tons. Stocks with estates and dealers on the last day of June were 3,413 tons, including 1,145 tons in transit. Stocks with manufacturers at the end of the month amounted to 2,155 tons. Manufacturers also consumed 326 tons of reclaimed rubber, of which they held a month-end stock of 532 tons, and used 217 tons of synthetic rubber, their month-end stock of which was 1,198 tons.

COCHIN TEA SALES

At Sale No. 22, 1,650,000 lbs were on offer. There was a better demand all round, but prices were irregularly 10 nP easier for everything except for best liquoring Fannings which were fully firm.

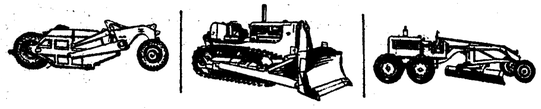
COLOMBO RUBBER PRICES



The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing prices on 26-7-57 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.16	1.16
No. 2	1.11	1.11
No. 3	1.06	1.06
No. 4	1.01	1.01
No. 5	.96	.96
	Sheet cuttings 1	.99
	do. 2	.94
Crepe:		
Water White	—	—
R.M.A. No IX	1.20 Nom	1.21¾
R.M.A. No 1	1.12/16	1.15
	Crepe No. 2	1.07¼
	Crepe No. 3	1.04¼
Scrap Crepe:		
Sc. Crepe No 1	1.04 Nom	1.03½
Sc. Crepe No. 2	.98-1.01	.99
Sc. Crepe No. 3	.88/96	.91¾
Flat Bark	.85/87	.85¼
	Sc. Crepe 3X	.95

To arrive at f.o.b. Colombo prices add 53.53 cents a lb for crepe other than scrap crepe and 31.53 cents for scrap crepe to the above market prices.



What's the job going to cost!

Before you buy your earthmoving equipment find out the job-costs

It's the *total job cost* that should be considered and not *only the purchase price* of equipment. Get the best for your job—buy "Caterpillar" earthmoving machines. You will have less downtime, lower operating costs, better service and ready supply of parts.

Pushing, pulling or carrying, on tracks or rubber, "Caterpillar" will move more earth in less time at less cost per cubic yard than any other machine. The high efficiency of Caterpillar performance more than offsets the initial costs.

Jute

THE OUTLOOK FOR RAW JUTE SUPPLIES

REPORTED FEELER FROM PAKISTANI MARKETING CORPORATION

IT is usual at this time of year for the question of the availability of jute to arise. Various sections of the trade have their own ideas and estimates, according to their positions, of what the size of the new crop will be. Last season, for the first time in several years, total arrivals of raw jute in India, from Indian and Pakistani stations, exceeded the estimated mill consumption. The excess amounted to about 275,000 bales, but India still fell short of her target of self-sufficiency in jute by 350,000 bales. She may increase her output further in the coming season, provided the improved cultivation methods urged by the Government and agricultural research institutes are adopted. Last year, arrivals of raw jute from Indian stations amounted to 90 percent of the mills' consumption. This was an increase of 13 percent on the previous season, and nearly 20 percent on 1953-54. Confidence has been expressed, by both the Government and the trade, that self-sufficiency in jute is not far distant. It is perhaps this fact which has prompted the industry's recent attitude towards enquiries from Pakistan about jute.

It is understood that a request was put before the Indian industry recently by the East Pakistani Jute Marketing Corporation, to send a delegation to meet the Indian industry's representatives and negotiate terms for the delivery of Pakistani jute. The Corporation is a semi-Government concern, and has been given preferential treatment by the Pakistani Government in that it is the only body which has permission to pack and export jute in kutcha bales. As India is one of the few buyers which takes jute in this form, it appears that Pakistan is concerned over the present situation and is making an attempt to recapture lost markets. It is understood that the approach has met with very little success. This is not surprising in view of the fact that the industry has already had reason to regret a similar venture with the Pakistani Jute Board not very long ago. Large sums of money are still due to India by the Board on account of short weight, claims, etcetera, and the settlement of the disputes seems distant.

I.J.M.A. Production Figures

The total output of mills during July amounted to 85,900 tons for a 209-hour working month. This represented an increase of 5,100 tons over the preceding month, which had 197.5 working hours. The former figure was made up of 35,600 tons (41.4 percent), of hessian, 45,000 tons (52.4 percent) of sacking, and 5,300 tons (6.2 percent) of other goods. In the corresponding month of last year, the distribution between hessian, sacking and other goods was 36.5 percent, 56.2 percent and 7.3 percent.

Consumption of Raw Jute

During July, the estimated consumption of jute and mesta by mills reporting to the I.J.M.A. was 500,800 bales. This was 33,800 bales more than in the previous month, which had 11.5 working hours less, but 47,800 bales less than in July 1956, when the industry was working more looms.

I.J.M.A. Stocks of Manufactures

In July, stocks of jute goods held by mills reporting to the I.J.M.A. were 108,200 tons, which was 7,800 tons less than in the previous month. Hessian stocks were 38,300 tons (35.4 percent), sacking stocks 63,300 tons (58.7 percent) and other goods 6,000 tons (5.9 percent). Compared with the previous month, hessian was 4,100 tons lower, sacking was 1,500 tons less and other goods dropped by 2,200 tons.

Flood Reports

Among the earliest reports of flooding in the jute-growing areas were received during the past week, and it was said that river levels in some upcountry districts had risen above the previous records. The damage to the jute crops, however, was not extensive, as in many of the low-lying areas most of the crop had already been harvested. In other areas, the plants had grown too big for heavy damage to be inflicted. The effect of the floods was revealed in the arrival figures last week in the Cossipore sidings. Transport was disrupted in many places on the Assam Link railway, especially in the Siliguri area, and reports of breaches in railway lines were numerous. Wagon arrivals dropped to about 250 wagons, and on Sunday and Monday receipts were recorded as 11 and seven wagons, respectively. Latest reports, however, indicate that the situation in this section is much better now, and that full communications will be restored in the very near future. In Bihar, over a dozen rivers are in spate and most of them have burst their banks. Meanwhile, as a result of the short arrivals and the increase in business in the local markets, stocks in Cossipore have dropped to about 70,000 bales.

THE JUTE MARKETS

In spite of the fall in raw jute prices during the past week, gunnies were neglected, and the only activity reported was in connection with the fatka settlement on Wednesday, 10th August. Prices however were maintained, mainly on account of the shortage of near delivery goods. Calcutta mills continued to take an interest in raw jute, and business was reported daily at lowering rates. Activity in Co[illegible] influence Calcutta prices, but easier conditions prevailed towards the close on account of the quieter trend upcountry.

Manufactured Goods: At the opening of the market last Thursday after the holidays, all sections were inclined to be quiet, and in the absence of overseas interest, prices declined. Congestion of shipping at the docks contributed a great deal to the decline, but towards the week-end conditions improved with the approach of settlement day in the fatka market. Prices fluctuated rapidly as the shortage of ready goods and delivery orders became pronounced, but eventually the gains and losses cancelled each other, and on paper quotations were unchanged. Calcutta mills showed very little interest in spite of the fall of about Rs. 27 a ton in the price of raw jute. The announcement of a substantial fall in mills' stocks of jute goods caused a temporary improvement in the market, but towards the close prices again fell back. B Twill quotations last Thursday were based on Rs. 113.50 a 100 bags for August shipment, while October-December shipment stood at Rs. 112.35. The nearness of settlement day made itself apparent on Friday when a general improvement of about 25 nP was recorded in all sections. This combined with the fall in stocks induced a strong undertone. But through lack of support after settlement day the market weakened, and on Monday morning B Twills had fallen back to the week's opening rates. During the same period, hessian ruled quiet, but prices fluctuated in sympathy with heavy goods. Thursday's opening rates were based on 40in. 10oz. at Rs. 42.05 for August shipment and Rs. 41.95 for October-December shipment. Over the next two days, prices moved only against B Twill fluctuations, and after the week-end, rates there also reverted to the original levels. At the close on Tuesday, the market was much weaker, and quotations were based on the following:

	August Rs.	Sept. Rs.	Oct.-Dec. Rs.
40in. 8oz.	34.25	34.15	33
40in. 10oz.	41.70	41.70	41.65
B Twills	113	112.29	111.75
Heavy Cees (Plain)	113.75	113.25	112.25
A Twills	138.50	138.50	137.50

Liverpools	127.25	127.25	127.25
Cornsacks	116	115.50	114

Raw Jute: Calcutta mills took advantage of the easier fibre markets during the past week, and business was put through almost daily. The quantity of jute on offer from sellers showed a marked increase, although there was a tendency for delivery dates to be longer. This was mainly because of disappointment over the initial supplies of new crop jute, the condition of which has given considerable cause for complaint. Offers of old crop were small but it appeared that mills had lost interest in this category of jute under contract. Mill representatives were very active in Cossipore and purchased large quantities of both old and new crop fibre. Imports into Cossipore were very small last week, and stocks there dropped to about 70,000 bales. Prices were well maintained as a result of the daily activity, but in Calcutta rates tended to ease in sympathy with a fall in upcountry indications. Reports from the agencies, however, confirm that prices there are still above the parity of Calcutta rates, but are expected to fall once the arrivals of new crop jute increases At the opening of the market on Thursday, raw jute quotations were based on Rs. 29 a maund basis Bottoms for August-September shipment, and ruled unchanged until the close.

Pakistani Cuttings N.C.'s	95 a bale	"

During the past week, business was reported in Dhubri-Northern and Assam jute at Rs. 29 a maund basis Bottoms for one month and August 15th September shipment, and also at Rs. 34.25 and Rs. 32 for Tossa Tops and Middles alone for September shipment. Tossa Bottoms, B Bottoms and X Bottoms were purchased at Rs. 31, Rs. 28.50 and Rs. 26.50, respectively. There was a demand for ready bills of lading and good business was done at Rs. 29.50 basis Bottoms. Small lots of Desal mesta

I.J.M.A. STOCK FIGURES FOR JUNE

The Indian Jute Mills Association reports the total stocks of jute goods at the end of July as follows:

Description	31st July, 1957		30th June, 1957		Increase over (+) or decrease from (-) last month		31st July, 1956.	
	Lakh Yds	000 Tons	Lakh Yds	000 Tons	Lakh Yds.	000 Tons	Lakh Yds	000 Tons
Hessian cloth and bag	13.96	38.3	15.57	42.4	—1.61	—4.1	14.29	38.5
Sacking cloth and bag	15.25	63.3	15.73	64.8	- .48	—1.5	22.06	93.2
Others		6.6		8.8		—2.2		6.2
Grand Total (000 Tons only)		108.2		116.0		—7.8		137.9

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

JH. IL-2-EA.

were done at Rs. 26.50 and Rs. 26.25 a maund, while Daissee mesta passed at Rs. 27.50 for August shipment. Local packing for old and/or new crop was also done at Rs. 27.50 a maund. There was also business in jungli mesta at Rs. 24.50 for October shipment, and jungli white at Rs. 26.50 for September shipment. Mills were still interested in cuttings, and Pakistani N.C.'s were sold at Rs. 94 to Rs. 98 a bale, and D.T.C.'s at Rs. 105 to Rs. 106 a bale.

Wagon arrivals in Cossipore last week were very poor and well below the average of recent weeks. The total number which arrived was 250, as against 360 in the previous week, and 665 during the corresponding week of last year. During the last two days, only about 20 wagons arrived, and the sharp drop was due to breaches in the railway line from the northern agencies on account of floods. There was still more old crop than new crop jute arriving, and the majority of this was from the jungli areas. The markets in Cossipore were firm due to local coverine for quick delivery jute against recent contracts. Mills' local agents were also active, and the volume of business transacted over the week was much larger than for some time.

I.J.M.A. PRODUCTION FIGURES FOR JULY

The Indian Jute Mills Association reports the total production of jute goods during July as follows:

Description	Quantity
Gunny Bags	
(a) Hessian	2,620 tons
	90.5 lakh yds.
	54.9 lakh Nos.
(b) Sacking	44,200 tons
	10,50.5 lakh yds
	4,48.3 lakh Nos.
Gunny Cloth	
(a) Hessian	33,001 tons
	12,51.8 lakh yds.
(b) Sacking	813 tons
	18.6 lakh yds.
3. Other Manufactures	5,309 tons
4. Total production (above figures combined)	
(a) All kinds	85,943 tons
(b) Hessian (both bags and cloth)	13,42.3 lakh yds.
(c) Sacking (both bags and cloth)	10,69.1 lakh yds.

SUMMARY

	(00,000 Yds.)			(000 Tons)		
	July 1957	June 1957	July 1956	July 1957	June 1957	July 1956
Hessian	13.42	12.34	13.26	35.6	32.3	34.3
Sacking	10.69	10.13	12.53	45.0	42.3	52.9
Others				5.3	5.5	6.9
Grand Total				85.9	80.1	94.1
Hours Worked				209.0	197.5	200.5

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

THE PAKISTANI JUTE MARKETS

ANXIETY ABOUT ACTIVITIES OF MARKETING CORPORATION

(FROM A NARAYANGANJ CORRESPONDENT)

ALTHOUGH raw jute prices are quoted at the close at Rs 29 for B Bottoms, Rs. 27 for C Bottoms and Rs. 25 for X Bottoms, the market is pausing and imports have decreased. At these prices, it is possible to transact business for shipment during August at a profit. As expected, the rush of imports and daily fall in prices came to a halt over the Mohurram holidays. At present, one or two balers have reduced purchases in an attempt to keep down prices. Sellers are not quite sure whether to bring in more jute before rates drop further or whether to hold on. It is quite possible that during the next few days, values will rise because some balers have high-priced sales which they can easily cover at a profit. As the end of the month approaches, prices might increase further. There is no apparent reason, however, to keep the market up during September. The Jute Marketing Corporation may well then be able to buy in the border areas at the increased prices which it has recently announced. There has been a considerable amount of speculation about the Corporation both in market gossip and in the Press. A senior member of the Government has even been defending it over the radio. The speculation which is rife deals mainly with the supposed corruption and inefficiency of the Corporation's outstation managers. But a more important point to consider is the effect of the Corporation's activities on the trade and on Pakistan's jute interests. The Corporation was intended to function as a buyer in the border belt and thus discourage smuggling to India. To the best of your correspondent's knowledge, however, it has not bought a single maund of jute in the border area so far but has bought jute in Narayanganj and has sold over 5,000 bales overseas. It looks merely as if there is yet another jute baler who is to be financed by the Government with money that was originally allocated for spending in the border areas to benefit growers and to stop smuggling.

In spite of indications of an impending rise in prices, the pucca bale market in Narayanganj remains dull and there are very few buyers. Cuttings particularly appear to be of no interest to anybody. It is felt, however, that their prices are at present rather low and interest might be shown shortly. Overseas buyers have been nibbling at Pakistani offers and business is reported for August-September at £100 for Mill Lightnings and £95 for Mill Hearts. Fairly large business has been done with Spain and Portugal, but as it went exclusively to one baler, it might not affect the market. Apart from this, no particularly large business has been reported. The Chinese, the Russians and the Poles, who normally manage to raise prices by their very appearance in Dacca, are not expected to arrive until the cold weather sets in.

There has been no change in the gunny market but Pakistani mills are feeling the effects of reduced buying interest from overseas. In spite of a reduction in jute prices, the profit, if any, in sales at today's levels is very small. Mills which are far from Chittagong or Chalna are seriously handicapped by transport difficulties. Inland water transport barges of the type which can carry gunnies to Chalna are scarce. Since the majority of shipments are now going through Chalna, this makes the position very difficult. The Americans, who either suffer most or complain loudest about their late shipments, are in a worse position than ever this month due to the lack of steamers. The position in Chittagong is no better. The new marshalling yards, which cost a lot, were apparently badly constructed; with the first signs of rains the foundations of the rails have subsided and Chittagong port will have to continue for at least a year to use the old shunting facilities. Apart from being obsolete, these have suffered to some extent to make way for the new marshalling yards. When the rush of raw jute exports begins in Chittagong, conditions may be even more chaotic than they are at present in Calcutta.

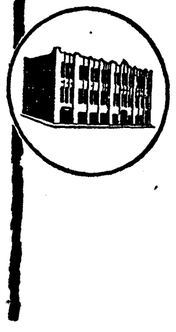
THE FOREIGN JUTE MARKETS

PRICES STEADY

(FROM OUR DUNDEE CORRESPONDENT)

THE Dundee jute markets remained closed for the past two weeks, during which time there was very little alteration in prices for raw jute or Calcutta goods. Members of the trade are very disappointed that the decline in fibre values has not continued, as there is no other way in which the jute industry can compete with substitutes. Much has been written and said about the British Government's decision to reduce the difference between the prices ruling for imported goods and those for locally produced hessians of 40in. and 36in. widths by 10 percent, but the trade is no further forward. It has been suggested that an appeal should be made to the Pakistani Government to reduce the raw jute rates, but it is unlikely that this will be done to satisfy Dundee manufacturers. About 30 percent of the Dundee trade has been in these widths recently, and spinners and manufacturers are very perturbed over the situation. The question of the U.K. entering into the European trade pact is looming large in the minds of the jute trade. The general feeling is that, unless the industry is exempted and protected in some way, Dundee will not long be the centre of production of jute goods in the U.K. The shippers of raw jute are offering quite freely, but they are not reducing their prices as much as the trade would like to see. Mill Firsts were offered at £109, Mill Lightnings at £103 to £105 and Mill Hearts from £99 to £100 for August-September shipment, and £108, £101 and £97 for September-October, all c.i.f., U.K. New crop Tossa-2/3 was quoted at £111 and Tossa-4 at £106 for grade marks, c.i.f. Single marks of white jute were generally quoted at £3 to £4 a ton more than the above rates for natives.

Calcutta hessians showed little change over the past fortnight at 64s 3d for 40in. 10oz. and 49s 3d for 7½ oz., with B Twills 3s lower at 174s 3d. all August shipment, f.o.b., Calcutta. Jute yarns and cloth ruled dull, and both buyers and sellers are anxiously awaiting further developments. Prices for all yarns and cloth remain unchanged.



A Happy Coincidence

THE INDIAN BANK LTD. GOLDEN JUBILEE 1907-1957

HALFA CENTURY 50 OF SERVICE

Today fifty years ago the Indian Bank started business. Optimistic as the founders must have been about the Bank's future, they could not have visualised that in forty short but fateful years, India would become an independent country and would immediately launch a vast scheme of industrialisation. In the success of this scheme, the country's banking institutions have a large part to play, apart from their contribution to the smooth running of normal trade and industry.

To all those connected with the Bank, it must be matter for satisfaction that, it has been privileged to add its quota of service in the common cause.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) rose by 0.5 percent to 112.2 during the week ended 27th July, compared with 111.6 (revised) for the previous week. The index was higher by 1.4 percent and 7.3 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The monthly average for July worked out to 111.6, compared with 110.7 (revised) for June and 103.5 for July 1956. Higher prices of eggs in Delhi (+39%) and in Bombay (+35%), fish (cat fish) in Bombay ((+33%), prawn ((+21%) and in Calcutta (+6%), onions in Delhi (+24%), oranges in Madras (+17%), black pepper in Calcutta (+10%); maize in Khageria, arhar in Bombay and masur (+6% each), jowar in Hospet, mung ghee in Khurja, meat in Bombay and chillies in Calcutta (+5% each), gram mustard oil and coconut oil (+3% each), barley and urd (+2% each) and rice, wheat, betelnuts and salt (+1% each) raised the index for Food Articles by 0.8 percent to 111.7 compared with 10.8 (revised) for the earlier week, although the prices of jowar in Rohtak and maize in Dohod (−11% each), eggs in Madras (−7%), milk in Bombay and fish in Quilandy (−6% each), tea (−4%), potatoes (−3%) and bajra ragi, bananas, cashewnuts, groundnut oil and gingelly oil (−1% each) showed declines. A fall in the prices of raw tobacco (−3%) was responsible for a decline in the index for the Liquor and Tobacco group by 2.4 percent to 92.0 against 94.3 for the earlier week. The price of kerosene oil (−2%) moved down while that of castor oil (+1%) showed an advance and the index for Fuel, Power, Light and Lubricant stood at 114.7 against 114.8. The index for Industrial Raw Materials advanced by 0.7 percent to 121.9 compared with 121.0 (revised) for the previous week as a result of increases in the prices of lac (+5%), raw cotton and rapeseed (+2% each) and groundnuts, castorseed, gingellyseed, cottonseed, copra and raw hides (+1% each); the price of raw wool in Fazilka (−15%), iron ore (−11%) and raw silk in Malda (−5%), however, moved down. The index for Intermediate Products also advanced by 0.2 percent to 109.0 compared with 108.8 for the previous week. Items which showed noticeable changes were: linseed oil (+2%), lead (−7%), zinc (−3%) and tin (−2%). The index for Finished Products remained stationary at the previous week's level of 109.0. The prices of linseed cake in Bombay (−12%), coconut cake in Kozhikode (−10%), paper and newsprint (−2%), jute manufactures and cycles (−1% each), tiles (Mangalore pattern) in Bangalore (+5%) and handloom cloth (+2%), however, showed variations.

OUTPUT OF SMALL MILLETS INCREASES BUT ACREAGE FALLS

According to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, the all-India final estimate of small millets for 1956-57 puts the current year's area and production at 12.2 million acres and 2.01 million tons, respectively, against the partially revised estimates of 12.7 million acres and 1.94 million tons for 1955-56. There is, thus, an increase of 73,000 tons or 3.8 percent in production during the current year, even though the acreage under small millets has declined by 504,000 acres or 4 percent over last year. The decrease in area during the current year has been shared mainly by Madhya Pradesh, Bihar and Mysore and, to a lesser extent, by Bombay, Andhra Pradesh and Rajasthan. This decrease is attributable largely to unfavourable seasonal conditions at the time of sowing. In spite of the decrease in area, the production of small millets during the current year shows an increase over last year. The increase in production is shared mainly by Uttar Pradesh, Andhra Pradesh and Madras, and is due to favourable climatic conditions during the growing period of the crops.

STRONG GENERAL DEMAND AT TEA EXPORT SALE

BETTER SUPPORT FOR DUSTS

AT Sale No. 10, held on 12th and 13th August 59,907 chests were on offer at the Export auction. There was a strong and general demand, but buyers again paid close attention to quality. The very best C.T.C.'s sold well often at dearer rates, but the more plainer teas of this description were up to 20 nP easier Plain and low medium teas met with a fair enquiry, but were from 4 to 6 nP easier Plain Fannings, however, received more support and were often dearer. "Teas for price" were keenly competed for and were fully firm. Bright liquoring non-wither Dooars were dearer, but again plainer teas of this description were easier. The Darjeelings on offer were mostly plain in quality and these were generally easier. There was again less demand for tippy teas and whole leaf grades were also easier by about 10 nP.

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2.20	1 15 0
Plain B.P	1.70 to 1.75	1 10 0
Plain Fannings	1.56 to 1.60	
Medium B.P.	1.84	
Medium Fannings	1.85	
Best Assam C.T.C. BP	4.00	2 6 0 to 2 8 0
Best Assam C.T.C. Fgs.	4.50 to 5.00	4 0 0 to 4 8 0

At the Internal Sale, Dust offerings were 20,414 chests. There was an improved demand for almost all descriptions. Powdery sorts and the best bright liquoring C.T.C. Assams were well supported but plain C.T.C.'s were 20 nP easier and the remainder of the Assam offerings were sometimes 6 nP easier, while teas from Cachar and Dooars also tended easier.

Non-wither Dooars were sometimes up to 4 nP dearer.

Quotations

	1957 Rs.	1956 Rs.
Medium Dooars Dust	1.50 to 1.55	1 10 0 to 1 10 6
Medium Assam Grainy Dust	1.55 to 1.65	1 12 0 to 1 13 0
Medium Assam C.T.C. Dust	2.00 to 2.25	2 10 0 to 2 14 0
Best Assam C.T.C. Dust	2.40 to 2.90	3 8 0 to 3 10 0

Leaf on offer amounted to 1,001 chests, and these met with a fairly good general demand. The few lines of green tea sold well and generally realised valuations.

FREIGHT MARKETS DULL

THERE was little change in the freight markets over the holiday period last week, and conditions remained dull after the resumption. Transatlantic coal paid 32s for single voyages, but a five-year contract for 600,000 tons commencing end-1958 was arranged at 47s for 10,000 to 14,000 tonners. P.g Iron from U.S.N.H. to Calcutta was done at $(U.S.)16.50 f.i.o., and dried milk from Savannah to six ports India at $(U.S.)30. In the time charter section, a modern 9,370-ton motorship took 28s for 12 to 16 months' trading and *Liberty* $(U.S.)43,000 a month for five years trading. A similar type of vessel was chartered at 21s for two years. There was little local activity, but details of a recent coal fixture to Karachi at 50s became known.

LINSEED STEADY

Fairly steady conditions were maintained in the linseed market throughout the past week and prices remained unchanged. Supplies were still very scarce and a somewhat better demand from crushers was noted after an advance in overseas prices of linseed oil. Local sellers of seeds were reserved due to a shortage of goods, so the weekly turnover was small. There was little activity in the oil section, except for a small demand from local buyers. Although the margin narrowed, a fair disparity existed between local and overseas prices. Latest quotations were as follows: Ready Rs. 22-8 a maund and August-September Rs. 22-14 a maund.

HIDES AND SKINS STEADY

The market was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 6th August and 12th August. 1957)

Cowhides: Wet salted (Ord.) 15,600 pcs. on the basis of Rs. 7 to Rs. 10.50; Wet salted (Slaughtered) 17,500 pcs. on the basis of Rs. 12.50 to Rs. 21.

Goatskins: Wet salted (Daissee, Killed) 68,000 pcs on the basis of Rs. 285 to Rs. 315, Rs. 322 to Rs. 350 and Rs 375 to Rs. 385; Assam-Dinajpur-Murshidabad 13,300 pcs. on the basis of Rs. 255 to Rs. 315; Patna-Pakur (Ord.) 4,500 pcs. on the basis of Rs. 295 to Rs. 340; Muzafferpore-Patna (Ord.) 13,300 pcs. on the basis of Rs. 300 to Rs. 325

Bazaar Stocks

(12th August, 1957)

Cowhides: Wet salted 2,23,000 pcs.

Goatskins: Wet salted (Daissee, Killed) 37,000 pcs.; Assam-Dinajpur-Murshidabad 49,000 pcs. Muzafferpore - Patna-Pakur - Purneah - Kissengan 68,000 pcs.

DALMIAPURAM.

CIRCULAR

Note:—This Circular is meant for only the Shareholders holding ORDINARY SHARES of Rs. 2/8/0 each, both old and new. However, for their information a copy each of this Circular is being sent to the other Shareholders also.

ALL THE SHAREHOLDERS ARE HEREBY INFORMED THAT:—

1. The Extraordinary General Meeting of Shareholders held on 4th July, 1957 has passed the RESOLUTION mentioned in the notice of the meeting dated 1-6-1957. Thus, in short, the meeting has decided that the Ordinary Shares of Rs. 2/8/0 each be consolidated into Ordinary Shares of Rs. 10/- each and that the holders of the former Shares be issued certificates for Ordinary Shares of Rs. 10/- each on surrendering certificates for their Ordinary Shares of Rs. 2/8/0 each
2. Certificates for Ordinary Shares of Rs. 10/- each in exchange of the certificates for the old Ordinary Shares of Rs. 2/8/0 each will be issued after 31st October, 1957. All the transfers of Ordinary Shares of Rs. 2/8/0 each received till 31-10-1957 will be entertained. Thereafter, if any transfer of Ordinary Shares of Rs. 2/8/0 each is received it will be returned and the transferee will have to obtain from his transferor a fresh transfer deed for the corresponding Ordinary Shares of Rs. 10/- each.
3. New Ordinary Shares of Rs. 2/8/0 each are also to be consolidated. The allottees of these Shares will therefore be issued, as stated in the Explanatory note to the notice of the aforesaid meeting of the Shareholders held on 4-7-1957, certificates for Ordinary Shares of Rs. 10/- each and not the Ordinary Shares of Rs. 2/8/0 each actually allotted. The certificates will be issued after 31-10-1957. As in the case of the old

Company Notices and the Dividend Table appear on Page 219

Shares, one Ordinary Share of Rs. 10/- will be given against four Ordinary Shares of Rs. 2/8/0 each allotted.

4. No transfer of the new Ordinary Shares of Rs. 2/8/0 each also will be effected after 31-10-1957. In the mean time transfers will be effected against the letter of allotment and the relative transfer deed duly executed and stamped.
5. If a Shareholder holds old Ordinary Shares of Rs. 2/8/0 each, which are not a multiple of four, or if the number of new Ordinary Shares of Rs. 2/8/0 each allotted to him is not such a multiple, he will be issued a fractional certificate representing one-fourth of an Ordinary Share of Rs. 10/- in respect of each of the Shares in excess of the maximum possible multiple of four.
6. The fractional certificates will be renunciable and will have to be exchanged with Ordinary Shares of Rs. 10/- each. For the exchange either four fractional certificates or certificates in the number which is exact multiple of four, will have to be sent. Whosoever produces the fractional certificates, will be given one Ordinary Share of Rs. 10/- against each four fractional certificates. Till exchange of the fractional certificates with full share/s dividend in respect of the fractional Shares, will be paid to those in whose names fractional certificates are issued.
7. In order that the Shareholders who are issued fractional certificates may not meet with any difficulty, the Managing Agents have agreed to buy from or sell to, the Shareholders fractional certificates at the rate of Rs 2/8/0 per fractional certificate. No Shareholder will be able to buy from or sell to the Managing Agents more than THREE FRACTIONAL CERTIFICATES and the last date for that purpose will be 31-12-1957.
8. Shareholders are requested not to send certificates of their Ordinary Shares of Rs. 2/8/0 each for exchange with certificates for Ordinary Share of Rs. 10/- each before 31-10-1957.
9. For exchanging with certificates for Ordinary Shares of Rs. 10/- each, the letters of allotment of the new Ordinary Shares of Rs. 2/8/0 each should also be sent after 31-10-1957.
10. As the Shareholders will appreciate, it will be more convenient to issue certificates for the new Preference as well Ordinary Shares at one and the same time. As such, the allotment letters for the new Preference Shares of Rs. 10/- each for the purpose of exchanging them with Share certificates should also be sent after 31-10-1957.

For DALMIA CEMENT (Bharat) LIMITED,
P. T. HINDUJA,
Registrar, Share Department.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

AT a Meeting of the Directors held on the 13th August 1957, it was decided to recommend to the shareholders at the Annual General Meeting, which was fixed to be held on the 26th September 1957, the payment of a final dividend for the year ended 31st March 1957, of 3% (free of Income Tax) on the issued Ordinary shares, payable on the 28th September 1957.

The net profit for the year, after deducting all charges and expenses of management and providing for taxation, is Rs. 1,37,94,641.

Two interim dividends, each of 2% (free of Income Tax) amounting in total to Rs. 60,64,000 in respect of the year to 31st March 1957, were paid on the 25th September 1956 and the 28th March 1957 respectively.

After paying the final dividend amounting to Rs. 45,48,000 and allocating Rs. 1,23,370 to Capital Reserves and Rs 30,49,386 to Fixed Asset and Stock Replacement Reserve, the amount carried forward will be Rs. 25,04,159.

The Directors also declared a first interim dividend of 2% (free of Income Tax) in respect of the year to 31st March 1958, payable on the 28th September 1957.

The final dividend, if approved, and the interim dividend will be paid to the shareholders whose names appear on the register on the 26th September 1957 and dividend warrants in respect thereof will be despatched to such shareholders or their mandatees on the 28th September 1957. The share transfer books of the Company will be closed from the 9th Sentember to the 26th September 1957, both days inclusive, and transfers received in order at the registered office of the Company up to the 7th September 1957 will be in time to be passed for the payment of the dividends to the transferees.

By Order of the Board,
J. R. BLAIKIE,
Secretary.

Virginia House,
37, Chowringhee,
Calcutta.
14th August 1957.

ASHOKA CEMENT LIMITED

NOTICE is hereby given that the Second Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at Dalmianagar on Saturday, the 31st August, 1957 at 11 A.M. to transact the following business:—

(1) To receive and adopt the Directors' Report and the Audited Accounts of the Company for the period ended 31st March, 1957.

Dalmianagar,
5th August, 1957.

N.B. A member entitled to attend and vote at the meeting is entitled to appoint a proxy and vote instead of himself and a proxy need not be a member.

THE PUNJAB NATIONAL BANK LIMITED
SHREE NIWAS, 8, UNDERHILL ROAD,
CIVIL LINES, DELHI.

NOTICE OF INTERIM DIVIDEND

THE Directors of the Punjab National Bank Ltd., Delhi have decided to pay an Interim Dividend for the current year at the rate of Rs. 2.50 nP per share, free of income-tax. The dividend will be payable at the Registered Office of the Bank at Delhi on or after 2nd September, 1957, to the shareholders, whose names stand on the Register of Members of the Bank as on 24th August, 1957.

The Transfer Books and Register of Members of the Company will remain closed from 19th August, 1957 to 24th August, 1957 (both days inclusive).

By Order of the General Board of Directors,
A. M. WALKER,
General Manager.

Dated: 6th August, 1957.

BHARAT NIDHI LIMITED

NOTICE

THE Annual General Meeting of the shareholders of Bharat Nidhi Ltd., will be held at the Constitution Club, Curzon Road, New Delhi, on Wednesday, the 18th September, 1957, at 3-15 P.M. to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Statements of Accounts for the year 1956.
2. To declare dividends on Preference and Ordinary Shares.
3. To elect a Director in the vacancy caused by the retirement by rotation of Shri B. P. Khaitan, who, being eligible, offers himself for re-election.
4. To elect a Director in the vacancy caused by the retirement by rotation of Shri Shital Prasad Jain, who, being eligible, offers himself for re-election.
5. To appoint Auditors for the current year and fix their remuneration. Messrs. Sodhbans & Co., Chartered Accountants, retiring Auditors, being eligible, offer themselves for re-election.
6. As special business to consider and if thought fit, to pass, with or without modification, the following resolution:—

"RESOLVED that the Books, Registers and other Documents required to be maintained by the Company and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Section 49, 118, 144, 163, 196, 301, 302, 304, 307, 362 and 372 of the said Act, shall be available for inspection at the Registered Office of the Company by the persons entitled thereto to the extent and in the manner and on payment of the requisite fees, if any, specified in the aforesaid provisions, between the hours of 10-30 A.M. and 12-30 P.M. (I.S.T.) on each business day except when the registers and books are closed under the provisions of the Companies Act, 1956 or the Articles of Association of the Company upon 24 hours' written notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected. Provided, however, that the Register required to be maintained under Section 307 of the Act, shall be open for inspection of the members of the Company between the times above mentioned only during the period prescribed by sub-section 5(a) of Section 307."

Share Transfer Books of the Company shall be closed from the 27th August, 1957 to 18th September, 1957, both days inclusive.

A member entitled to attend and vote at the meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

By Order of the Board,
J. B. JAINI,
Manager.

New Delhi,
6th August, 1957.

EXPLANATORY NOTE:—

Approval of the shareholders is sought to specify the hours of inspection, etc. as set out in the Resolution above which is allowed by the Companies Act, 1956.

MOBILISING RESOURCES FOR THE BANKING SYSTEM

INADEQUACY OF SAVINGS: RISING COSTS HINDER BRANCH EXTENSION SCHEMES

THE growing stringency of credit has been the feature of monetary activity over the past one and a half years. Industrial production has been rising, agricultural output has been at a fairly high level, and the volume of trade has expanded. The increased demand for funds in a developing economy has strained banking resources to an extraordinary degree. As a result, even at a time of year which has traditionally represented almost the trough of the slack season, the advance-deposit ratio for scheduled banks remains around 67 percent. The Reserve Bank's latest report on the *Trend and Progress of Banking in India*, which reviews developments during 1956, points out that economic activity has been characterised by inflationary pressures, in contrast to the comparative monetary stability that prevailed in 1955. This has resulted from an increase in both the magnitude and tempo of the developmental programme. The size of the budgetary deficit, the trends in the capital market and the record level of bank credit provide an indication that the volume of investment in both the public and the private sectors has risen substantially. But, as far as the banks are concerned, the point of greatest immediate interest is that although the growing developmental activity has led to a large increase in their advances, this has not been matched by a corresponding accretion to their deposit resources; the increase in currency circulation has formed much the larger part of the increase in money supply, which has itself been restrained by the widening deficit in the balance of payments. As a result, there has been acute financial stringency, somewhat similar to that experienced in 1951. Money rates throughout the year have generally been at higher levels, while the borrowings of banks from the Reserve Bank have been substantial.

Conditions during the first eight months of the current year seem to have conformed roughly to the same general pattern. It is possible, however, that there will be a considerable change in the tempo and pattern of economic development in the future. The rise in industrial production may be retarded by the shortage of foreign exchange and domestic capital; agriculture will remain susceptible to the vagaries of the weather; and the growth of budgetary deficits may have to be restrained in view of the serious inflationary pressures which have developed. But in spite of the possibility that the pace of economic expansion is likely to be slowed down, few expect that the embarrassment banks have had to face in meeting the credit demands of trade and industry will be substantially relieved. Rather, it is likely that the problems arising out of the banks' resources being inadequate will remain, unless vigorous and effective measures can be evolved to spread banking habits throughout the country.

*

This is a point on which the Reserve Bank's offer. In describing the measures which have been latest report unfortunately has little solace to taken, and outlining those necessary for the future, it indicates a complacency which barely goes to the root of the problem of increasing banking resources. The report rightly remarks that the financial stringency represents essentially a shortage of savings in the public and private sectors alike. But it does not offer a worthwhile analysis of the reasons for the inadequacy of savings. Even allowing for the central banking institution's increasing subservience to the Finance Ministry, many will regret that no salutary remarks have been made on those aspects of the Government's policies which have hampered the growth of savings, and therefore of bank deposits. The high level of taxation, the rising trend in prices and the undermining of investment confidence, especially in the private sector, will appear to many as among the relevant explanations for the shortage of resources on which the expansion of credit can be based. While the report has little to say on these aspects, its emphasis seems to be mainly on two others: firstly, that banks should make more vigorous efforts to mobilise resources by speeding up their branch extension programmes; and, secondly, that they should be more selective in making advances, confining the latter increasingly to what the Reserve Bank considers relatively essential purposes.

Acceptable though these aims may be, it would be optimistic to expect that they can be achieved by means of exhortations and directives. Much has been said in recent months about the increase in banks' profits, and it has been urged that in view of their greater prosperity, they should now invest more heavily in extending the area of their operations. The suggestion, implicitly, seems to be that banks are now in a better position to open new branches, even though in many of the places where they would be expected to do so, they are liable to incur losses, at least in the initial period. But such increase in the banks' profits as has taken place may prove to be mainly temporary. It has been achieved to a large extent by over-stretching resources, and it is doubtful whether the present state of affairs can be taken as a healthy norm for the future, however justified it might be as a temporary expedient to relieve the credit stringency. Banking costs too are rising, not only because employees have to be paid more but also because banks have to pay higher rates on deposits and on the funds they borrow. If the increase in their profits is not likely to last, it is questionable whether it would be proper for them to take on the additional and relatively permanent liabilities accompanying a vigorous programme of branch expansion.

*

The stability of the banking system is the most important prerequisite, and in many cases it will be found that consolidation rather than expansion offers the more rational scope for the use of new profits. The Reserve Bank's report suggests that, if private banks launch a programme of branch extension, "the losses which are inevitable in the early years would be made good in course of time as the volume of operations of the branches expands." Theoretically, this might seem feasible, but the manner in which the State Bank, with its special advantages, has been establishing branches does not encourage the commercial banks to proceed as enthusiastically as might have been expected. Unless the State Bank can restrict itself to its original purpose of establishing new branches only where existing banking facilities are far too meagre, or do not exist at all, the reluctance of other banks to act would be understandable. In other ways also the State Bank has used the advantages of its ownership to attract away funds lying in private banking institutions. The result has been a growing hesitation among ordinary banks to venture into any areas which might possibly later be encroached upon by the State Bank.

Discussing measures to strengthen the general financial position of banks, the Reserve Bank's report says that considerable improvement has taken place since the system of inspections was started. But it considers that many banks, especially the smaller ones, need to improve their methods of working further. It is pointed out that, "in so far as their weaknesses stem from insufficiency of business, the smaller banks might well explore possibilities of merging with other relatively stronger banks in their own interests as well as in the larger interests of the economy." It would be wrong, however, to ignore the fact that small banks, as such, also have an important rôle to play in economic development. Their knowledge of local conditions is likely to be more thorough than would be the case if they were merely branches of bigger banks; and their costs would probably be lower, especially with the present categorisation concerning the emoluments of bank employees. To the extent that the weakness of small banks is due not to their smallness but to their general standards of efficiency, to help improve the latter is partly the responsibility of the Reserve Bank; and it is a responsibility which should not be shifted by recommending measures such as mergers with bigger banks. In any case, the practical difficulties in bringing about such mergers are serious enough to suggest that they may be relatively infrequent. The Reserve Bank recognises that the process must be essentially voluntary in nature and the initiative will have to come from the banks themselves. While that initiative is awaited, it might be appropriate for the central banking institution not to take the easy way out by merely asking the weaker banks to shut down, but to help them in a more constructive way to get on to a sounder footing.

FLEXIBLE EXCHANGE RATES

IT is interesting to consider how differently Europe's monetary affairs might have developed if Professor Ludwig Erhard's proposal for more flexible currencies had been promptly adopted. When the West German Minister of Economic Affairs put out his memorandum on currencies about the middle of last year, there were already warnings of trouble. A year later the trouble was becoming critical: and the crisis itself broke this August. It may be long, and it will certainly be painful. Now in Britain, as well as in Western Germany, the critics are saying that this crisis would not have occurred if exchange rates had been less rigid, and that such crises can be avoided in the future if the appropriate lesson is learned. The situation was clarified but not fundamentally improved by the *de facto* devaluation of the franc. Most of the financial world regarded the devaluation as inevitable and assumed that the tension would be relaxed when the necessary adjustment had been made. Instead, the success of speculative operations against the franc encouraged international operators to proceed with speculative operations in favour of the mark, and the transfer of funds on a huge scale put various other currencies under pressure.

*

In London, much orthodox opinion has been converted by these speculative operations to the idea that some measure of flexibility in exchanges is necessary while many countries are unable or unwilling to order their internal affairs so that a system of fixed exchanges is permanently workable. Professor Erhard has been concerned with the transitional period (which may be long or short) during which each currency may find its true value. But there is now in London a tendency to argue that the true value in 1957 or 1958 will not necessarily be the true value in 1959 or 1960, and that rather than make painful adjustments to rigid parities every few years, it would be better to fix no rigid parities at all. The 1 percent margin within which exchange rates are at present permitted to fluctuate on either side of parity is an obvious subject for discussion at this year's meeting of the International Monetary Fund. It has been suggested informally that the margin should be widened, at

least to 5 percent, preferably to 10 percent, so that minor adjustments can be made by the forces of supply and demand and the parities themselves can afterwards be adjusted accordingly. But not even a concession of 10 percent could solve a problem as acute as the franc's: that currency had to be devalued 20 percent, and even on its new basis was not noticeably firm.

There is no evidence that either the British Treasury or the I.M.F. (as a body) has changed its ideas on widening the margin, which have hitherto been unfavourable. (The last clear British declaration on the subject was in 1954, when unwanted funds had been flowing into London in the belief that the margin would be widened to allow sterling to appreciate.) Still less is there any reason to believe that either the British or the American Treasury favours the idea of permanently flexible exchanges. The idea suggests chaos in these centres of orthodoxy Yet it cannot be said that Canada's flexible system has brought either the Canadian dollar or the Canadian economy to a state of chaos. It is, indeed, true that withdrawal of the obligation to support the currency at, or near, an agreed parity may allow the monetary authority to relax its policy at home. A country whose costs and prices rise more than the average will receive a warning through the exchanges, whether they are fixed or free. But, whereas a fixed rate must be supported at a predetermined point, a free rate can be allowed to slide unobtrusively lower indefinitely. And it is easier to let the currency adjust itself to inflation than to stop inflation. Unfortunately, the imposed discipline of fixed exchange rates has not been conspicuously effective. In France it has demonstrably failed; only on the basis of a devalued currency are the French authorities attempting to grapple with inflation. The British authorities pretend that the pressure on sterling in recent weeks has been caused not by inflation in Britain but by a restrictive policy in Western Germany, applied most obviously by high interest rates. This policy is not called deflation, because the West German economy has manifestly not been deflated. So the essence of the argument is that control of inflation has been firmer and more successful in Western Germany than in Britain.

* * * *

Inflation is a widespread disease, against which some countries antidotes are more effective than others'. The result is periodic disharmony in the exchanges, causing large-scale movement of funds whenever the situation seems to be developing to the point where devaluation of an overvalued currency or revaluation of an undervalued currency will be inevitable. In normal circumstances (if the phrase means anything these days), these movements would not necessarily have serious effects. When monetary reserves, and liquid resources available to finance international transactions, are already deficient, these movements may restrict international business, because the concentration of funds in one country (as recently in Western Germany) aggravates the deficiency in others. There is little doubt that the weakening of commodities, shipping freight rates, etcetera, in recent months is partly attributable to this cause. Such violent movement of speculative funds is focussed on a particular act of devaluation or revaluation. No such act could occur in a system of flexible exchanges, for the currencies would undergo a process of adjustment all the time. Speculators would, of course, try to anticipate the trends, but they could never expect a sudden spectacular profit such as can accrue when a fixed parity is drastically adjusted. Flexibility is a good economic principle, and it would be good practice in the exchanges—if the monetary authorities of each nation respected its currency.

EQUITY OFFER FROM ASHOK LEYLAND

ON a later page of this issue of *Capital* appear the details of a public offer by Ashok Leyland Ltd. of 988,688 equity shares of the nominal value of Rs. 49,43,440 at par, payable in full at the rate of Rs. 5 a share on application. The subscription list will open on 23rd August, and will remain open until 6th September, unless closed earlier at the discretion of the directors. It will not, however, be closed before 30th August. The total unsubscribed capital of the company is Rs. 1,01,72,610, out of which Leyland Motors Ltd. of Leyland, Lancashire, has agreed to take up shares of the nominal value of Rs. 52,29,170. The balance is being offered for public subscription. The Industrial Credit and Investment Corporation of India Ltd. has underwritten the entire issue. The additional capital which is to be raised from the present issue will be used to complete the buildings and equipment necessary to enable the company to increase production, in accordance with the programme of progressive manufacture, up to a total of 2,500 vehicles a year. A significant point to note is that the company does not expect any difficulty in getting foreign exchange for meeting the cost of imported plant, etcetera, necessary for the expansion programme to be financed from the present issue. It expects to meet the cost of imported capital equipment by the issue of equity shares of the company to Leyland Motors Ltd. in the U.K.

Except for the year 1955, Ashok Leyland has paid regular annual dividends since its inception. The year 1955 was, however, exceptional; there were large items of non-recurring expenditure, such as the payment of compensation to managing agents and writing down the value of Austin spares since the assembly of Austin vehicles was discontinued, and these made it inexpedient to declare a dividend. For the year ended December 1956, a tax-free dividend of 6 percent was paid after making provision for taxation and depreciation and after placing Rs. 1.5 lakhs to reserve. Sales of "Comet" trucks, which amounted to 159 in 1953, have steadily increased, and are expected to reach a total of 1,000 during 1957. The rising demand has led the company to embark on its plans to increase capacity to 2,500 vehicles a year. The importance of adequate transport facilities for the five year plans should bring a fair reward to investors who are on the look-out for "growth" stocks of this kind.

CURRENT COIN

Expansion in T.E.L.C.O.—Addressing the twelfth annual general meeting of the Tata Locomotive and Engineering Co. Ltd., the chairman, Mr. J. R. D. Tata, has said that the company has made all-round progress and earned satisfactory profits during 1956-57, so the directors have been able to recommend an increase in the ordinary dividend from 6 percent to 8 percent. One of the main problems is to find enough money to finance the growing operations. Mr. Tata refers to the possibility of a fresh issue of stock, possibly in the form of debentures convertible into ordinary shares. The company's commitment to deliver locomotives at the rate of 100 complete units a year from the beginning of 1958 will be fulfilled and possibly improved upon. Mr. Tata adds that with the increase in output, further improvement in efficiency and fuller utilisation of available capacity, it is expected that costs will come down to a satisfactory level, in spite of the recent increases in the costs of materials and in wages. The Railway Board has issued enquiries for a fairly substantial number of diesel locomotives. T.E.L.C.O. proposes to respond to this in collaboration with its technical associates, Messrs Krauss Maffei A. G., and Messrs Daimler-Benz A. J. The automobile division is nearing the second stage of development according to schedule, in spite of many difficulties. Mr. Tata thanks the Government for sanctioning the company its reasonable requirements of foreign exchange for plant and equipment to implement its approved manufacturing programme. This will enable it to complete its plans by the end of 1959, when it expects to be in a position to produce almost entirely Indian-made diesel trucks and bus chassis. On the completion of the programme, the foreign exchange saved annually will be larger than the aggregate amount spent for the purchase of plant, machinery and equipment for the automobile division. According to Mr. Tata, the Government has said that the scheme for doubling the capacity to 12,000 vehicles a year will be accepted provided suitable credit arrangements can be made to spread out foreign exchange expenditure over a period of years. The construction of the steel foundry, the most up to date in the country, has almost been completed. Referring to the serious labour situation in Jamshedpur Mr. Tata sounds a note of warning. He says that if attempts to sabotage progress are allowed to succeed in Jamshedpur and elsewhere, not only will the economic crisis be aggravated but law and order and the peaceful and democratic development of the country will be imperilled.

* * * *

Interim Report on Life Insurance.—The interim report on the activities of the Life Insurance Corporation indicates a big drop in the volume of business during 1956. As against Rs. 238.30 crores of new business completed in 1955 and Rs. 236.34 crores in 1954, the sum assured in 1956 was only Rs. 187.69 crores. It is hardly any consolation that this figure compares favourably with the 1953 figure of Rs. 155.20 crores. There are many signs of complacency in the report, including a list of excuses to explain the Corporation's shortcomings. The reasons given for the decline in business are more or less the same as those already offered by official spokesmen in Parliament. The report says that business suffered because the process of organising the divisional and branch offices had not been completed. "There was inadequacy of technical and experienced staff at the various offices .... Agents and other field workers had not got accustomed to the new set-up, and the office staff had not become familiar with the procedures and methods introduced by the Corporation." But it does little credit to those in charge of reorganisation that the dislocation should have been so serious, and that so much of resources should have been lost at a time when insurance could have made a valuable contribution to development plans. The other explanations offered for the decline in the volume of business also appear to be doubtful. For example, the interim report says that it is due to a substantial reduction in premium rates in 1954 that a large number of policyholders took out new policies with the idea of substituting them for their old policies which were made paid-up. But even assuming this to be true, it is not easy to see why the decrease in new business should have been as sharp as it was. Nor is it enough to say that the sudden influx of new business under estate duty policies in 1954 and 1955 made the increase abnormal in those years. This type of business could well have been made substantial even in 1956. The real reasons for the decline in business are to be found in the Corporation's inefficient working. The centralisation of its administration has led to procedural delays, while red-tapism and bureaucracy have undermined the basis of personal service on which insurance prospers. Premium receipts are delayed and applications for new policies have to pass through many hands before they are finally confirmed. The Corporation's system of operations may have to be reorganised so as to give more incentives and opportunities to field workers. A monopolistic Corporation may have special advantages, but unless it can maintain a spirit of competition among those who are charged with securing new business, the advantages will be nullified.

* * * *

Wealth Tax and Capital Formation.—The adverse effect of the proposed wealth and expenditure taxes on capital formation was the subject of a lecture by Mr. Russi Jal Taraporevala at a meeting in Bombay organised by the Forum of Free Enterprise. Mr. Taraporevala spoke a few days before the changes in the Wealth Tax Bill proposed by the Select Committee were published, but his observations on how it will undermine the incentive to work, save and invest remain largely true. Moreover, the rates of tax on personal wealth, except in the case of Hindu undivided families, remain unchanged after scrutiny by the Select Committee, and it is this class of assessees Mr. Taraporevala has mostly dealt with. Giving figures for the tax at various levels of wealth and gross income, he points out that an individual whose wealth amounts to Rs. 80 lakhs and who has a gross income of Rs. 4,80,000 will have to pay the whole of his gross income to meet his income tax, supertax and wealth tax liabilities. Persons whose wealth is above Rs. 80 lakhs "will not only have to pay their entire gross income, but also varying amounts out of their capital in order to meet their liabilities under these taxes." The incidence of the tax is such that individuals owning wealth in excess of Rs. 22 lakhs will be left with a net income of only Rs. 960 for each additional Rs. 1 lakh after paying income tax and supertax, but they will still be liable to pay Rs. 1,500 as wealth tax. "Thus the effect of the proposed rates of income tax, supertax and wealth tax is to confiscate the wealth of individuals in excess of Rs. 22 lakhs at the rate of 0.54 percent *per annum*." Mr. Taraporevala, therefore, fears that "the confiscatory nature of these taxes, coupled with the continuous decline in income left after paying the taxes with every increase in wealth," will have serious adverse effects "on the incentives to save, to invest, to work and to take risks." There is no country in the free world, he adds, where the burden of taxation on individuals is such that the combined effect of income tax, supertax and wealth tax is to confiscate the entire gross income of certain persons and also a portion of their capital. The wealth tax on companies is regressive, he says. The large majority of shareholders are small investors whose wealth amounts to no more than Rs. 10,000. For investors who are wealthy, the levy amounts to double taxation. The assets of the companies will be taxed twice—first when wealth tax is paid by companies and then when it is paid by individual shareholders who "will have to pay on the value of their shares which merely represent ownership rights in the assets of the companies." The tax will discourage small investors from putting their hard-earned savings in company shares; and it will destroy incentives for the rich. Mr. Taraporevala thinks that the proposed expenditure tax will neither curb spending nor promote savings. "Indeed the fears of inflation, of a rise in the burden of taxation in the coming years and of rapid confiscation of wealth may encourage the wealthy. . . to spend lavishly in the future and to enjoy their wealth while there is still a chance left for them to do so."

* * * *

Achieving Higher Productivity.—The study of productivity has played an important part in the postwar industrial development of many countries. Stress is being laid on increasing productivity with a view to improving the standard of living of the people. It is in the fitness of things, therefore, that the subject should attract attention in India. The report of the Indian delegation which went to Japan to study the productivity movement there has highlighted its importance. But the acceptance of the proposal to establish a National Productivity Council by the Central Advisory Council of Industries has paved the way for launching a productivity drive. Discussing the implications of the programme, Mr. H. D. Shourie of the Ministry of Commerce and Industry says in an article that very often the word "productivity" is confused with the stress on increasing production. It is said that higher productivity implies bigger work-loads, greater speed-up of work and a greater intensification of effort. There is also a fear that increased productivity will lead to unemployment. But the experience of countries where productivity has been raised belies this line of thinking. In fact, higher *per capita* output has everywhere gone hand in hand with higher levels of employment. An increase in productivity leads to lower costs of production and therefore to a reduction in prices, which in turn leads to an expansion of sales, demand for more products, and greater employment. Greater productivity tends to bring higher wages, shorter working hours and better working conditions. These create increased producing power, the ability to buy more goods and services and more leisure for workers. Consumers too share in the benefits of greater productivity, for they get goods and services at lower prices. The developed countries have made great progress in improving techniques of production, and automation is ushering in a new revolution in industry. The average American worker produces nearly eight times as much as the Japanese worker, two to three times as much as the British, five to six times as much as the Italian and three times as much as the German. Unfortunately, the productivity of Indian labour does not bear any comparison with that of its counterparts in industrially advanced countries. If she is to improve her position in the world market, India will have to raise her productive efficiency in order to cope with competition from elsewhere.

* * * *

Foreign Exchange Crisis.—The heavy drain on foreign exchange resources has posed a serious problem. The balance of payments statistics show that imports in 1956-57 amounted to Rs. 1,076 crores while exports were valued at Rs. 637 crores. The figures mentioned in the plan were Rs. 783 crores and Rs. 573 crores, respectively. Speaking at the annual general meeting of the Association of Indian Industries in Bombay, Mr. D. M. Desai, president, has referred to the Government's inordinate delay in publishing regular trade statistics. In the past, trade figures became available for March as well as April by this time of year, but now they are late. "When it is remembered that our foreign exchange requirements have gone up by Rs. 400 crores than anticipated in the plan, the need for adequate trade statistics will be apparent for proper planning and regulation of foreign trade." The large trade deficit is undoubtedly due to the steep rise in imports, so there is a crucial need to increase exports. Since annual production has been expanding at a rate of more than 8 percent, "we should plan our export trade in such a way that it also expands at least by an equivalent amount." Japan is expanding her export trade by more than 21 percent a year; this phenomenal increase has been attributed to incentives given by the Government there, such as exemption from income tax of export earnings and the right of exporters to retain part of their earnings for imports. Mr. Desai hopes that the Indian Government will provide similar incentives, apart from railway freight concessions and refund of excise and Customs duties paid on principal raw materials consumed in finished goods exported. In his inaugural address, Mr. S. K. Wankhede, Bombay's Minister for Planning and Development, has asked producers to explore methods of reducing their dependence on imported raw materials and even imported machinery. Referring to the Bombay Government's appointment of a Cabinet sub-committee to go into the question of industrial housing, Mr. Desai says that it would be realistic to postpone this until industry is in a position to bear the burden.

* * * *

Atomic Insurance.—A report from the Insurance Advisory Committee which has been studying the problem of limiting the liabilities from atomic risk says that there is a "grave risk" that courts might interpret existing fire insurance policies, for example, as giving protection against atomic hazards. The report concludes that the public should be told that contamination from nuclear fission is a new and previously unknown risk and therefore not covered by existing insurance policies. This was one of a number of interesting points that emerged from a paper which Mr. H. T. Silversides read recently to the annual meeting in London of the Chartered Insurance Institute. Mr. Silversides referred in his paper to the report of the British Insurance (Atomic Energy) Committee, which has been studying these problems for two years. The Comittee has had to consider the possibility that there may be an atomic catastrophe. On this it states that, "both so far as concerns the U.K and from such information as has been made available in respect of overseas developments, the Committee feels that while a disaster of catastrophic proportions must always be recognised as a possibility, it should be regarded as improbable." But if the catastrophe does occur, the risk may be illimitable. The answer of insurance men is that there must be a limit to their liability. Cover would be provided up to a certain ceiling and no further. In ways such as these, the risk from atomic hazards can be limited and made into a matter of practical in ance. But the whole subject bristles with com cations. The experts have quite a difficult t and until they complete it the companies are lil to qualify their policies.

* * * *

Japanese Shipping Worries.—While Japan is second only to Britain as a shipbuilding nation, the size of her own merchant fleet is giving concern to the authorities there. A White Paper issued recently by the Japanese Transportation Ministry proposes an expansion of the merchant marine and its fuller use by local traders. The Paper reported that Japanese shipping carried only 47.4 percent of the country's foreign trade in the last fiscal year, compared, with 60 percent before the war. Expansion of the merchant fleet was necessary as part of the effort to improve Japan's balance of international payments. To compete effectively in the world freight market, Japan would have to build larger and more modern ships. This would entail the securing of long-term low-interest funds from the Government as the cardinal point in Japan's future shipping policy. Japan's shipyards are building about twice as much tonnage for export as for home use. Although the Japanese merchant fleet increased by 470,000 tons to 3,860,000 gross tons in the year ended last March, it is still less than a quarter the size of Britain's.

* * * *

Andhra Comments on Food.—There is a clear relation between the prices of agricultural products and of other consumer goods, so the Government should take them all into consideration in any scheme for stabilisation of agricultural prices. This is the plea put forward by the Government of Andhra Pradesh in the memorandum it has submitted to the Central Foodgrains Enquiry Committee. The memorandum points out that the rise in prices of foodgrains is generally affected by the rise in prices of other commodities. What the farmer pays for manufactured goods affects the cost of production of his crops as well as his cost of living. The general level of prices which concern him should therefore be taken into consideration in determining the level of foodgrains prices. Comparing the price index of cereals with that of other commodities, the memorandum points out that prices of textiles and metal products have gone up, and those of cereals have kept pace. Andhra Pradesh, being essentially an agricultural State, has to produce food for other deficit States. At present, it has a surplus of about 600,000 tons of rice, which will just offset the deficit of this commodity in the southern zone. The State Government's estimates of production of foodgrains in 1961 is 7.05 million tons. Calculating on the basis of an increase in *per capita* consumption by two ounces, the State will have a surplus of 1.15 million tons. The marketable surplus, however, will be affected by such factors as the Government's development plans, changes in occupational distribution and urbanisation of larger sections of the people. In order to ensure a reasonable return from his land, even if prices are depressed, the farmer's cost of cultivation should, in the opinion of the State Government, be kept low. Other measures suggested in the memorandum to increase the income of the grower by securing good prices for his produce are (1) credit facilities to prevent the sale of produce at low prices; (2) storage facilities in villages or nearby marketing centres; (3) marketing facilities: and (4)the setting up of co-operative marketing societies.

INDIAN PAPER CURRENCY

WE notice from the home papers by the mail that Sir Samuel Montague asked in the House of Commons questions similar to those included in our article of last week, *viz.*, whether (in view of the short reserve of coin) the Indian Government intended to coin on their own account silver rupees sufficient to place their paper currency on a sounder basis, and whether they would in future publish their accounts as regards currency weekly instead of monthly, so as to enable prudent bankers and merchants to provide in time against the possible danger of an extreme scarcity of currency in India? We should have expected that when the Secretary of State for India had notice of such important questions being put, he would have endeavoured to acquire some understanding of the subject and given an intelligent reply. But all Lord George Hamilton could say was that he was not aware of any intention on the part of the Government of India to coin silver on their own account and that as to weekly publication of accounts by the currency office, he would communicate with the Government of India, but he could give no promise that the honourable member's suggestion would be accepted. Such a reply can only suggest either that the Secretary of State is entirely ignorant of the subject of currency and currency reserve, or that he has a supreme contempt for the opinion of others on Indian matters. It is curious that Lord George Hamilton never makes a public utterance on any Indian subject without leaving us in doubt whether his ignorance or his habit of contemptuous exclusiveness is more at fault.

THE RIGHT TO STRIKE

ITS CONSTITUTIONAL AND LEGAL ASPECTS

(FROM OUR LEGAL CORRESPONDENT)

IN the light of the withdrawal of the threatened strike in the Posts and Telegraphs Department, with the likelihood of sympathetic support in the way of strikes by employees in other essential services, the writer, in the hope of finding guidance on the constitutional aspect of such strikes, has been delving into the works of some leading experts on constitutional and governmental law and practice; and, as a result, does not recommend any reader to follow his example. You will obtain no unanimous guidance at all of practical value from the Commonwealth's acknowledged authorities; or perhaps it would be putting it more correctly to say that you will obtain any amount of most definite opinions cancelling one another out by being mutually contradictory. The late Harold J. Laski, that most brilliant and unpredictable Professor of Political Science in London University, rushes violently into the arena waving his red flag and in the course of an academic one-man strike against everything, the Party System, the Lords, the Commons, the Civil Service, the Judiciary and the Monarchy, contends that all strikes, even a general strike in all branches of industry, including Government servants, are constitutionally perfectly proper and in order.[1]

Professor Dicey, on the other hand, Vinerian Professor of English law, writing in the cloistered seclusion of All Souls had apparently never heard of the possibility of a general strike designed to dragoon a lawful Government into submission.[2] Dr. H. Finer leans against the legality of such a strike in his monumental work on modern Government.[3] But it is the temperate yet stern condemnation of Viscount Bryce which makes some of us feel that it is the virtual extinction of the Liberal Party as a counter-balancing factor between Labour and extreme Toryism that is in great measure responsible for the bitter antagonism which at present undoubtedly exists between capital and labour. Certainly under a Liberal Government modern industrial legislation would not have been such, in Britain and faithfully copied throughout the Commonwealth, as to give the workman every sort of advantage and to leave the employer very few rights which are capable of practical enforcement.

If the wheel has now gone full circle, the employers are not without blame. The right to strike at all in any circumstances was long and bitterly resisted. The criminal law was invoked to put the organisers in jail. In the end, this led to trade unionism being protected by statute, so as to legalise strikes *in certain circumstances*. Mr. Barwell, in his standard work on the law of Master and Servant, supplies us with a long list of historic cases which led to this culmination, and which, writing of India, he says "marked very nearly the end of a series of efforts on the part of employers to bring the executive of various trade unions within the mischief of actionable conspiracy.....Modern industrial legislation in England has, in effect, placed....such sanctions as strikes....outside the jurisdiction of the ordinary courts of law. And legislation in India has already followed suit." Under the Indian Trade Unions Act, trade unions and their officers are immune both criminally and civilly to a wide extent for anything done in furtherance of any of the lawful objects of the union.

* * * *

The words "in certain circumstances" have been italicised. Would these words include strikes by employees in essential and even Government services, followed by sympathetic strikes by other branches of service, with in the end the logical outcome of a general strike? The question takes us back to the general strike in England in 1926, the one solitary occasion on which such an event has happened within the Commonwealth. The younger reader will not remember it, so let us recapitulate the facts. The strike was called by the General Council of the Trades Union Congress in support of the coal miners. The men called out included railway and transport workers, the printing and paper trade unions, metal engineering and building trade workers and a great number of others. It brought the ordinary organised work of the whole country to a standstill. The Home Secretary at the time was a rather remarkable character; a stocky man of 50 who loved a fight, named Winston Churchill. He carried a reluctant Cabinet with him in his determination to fight the strikers to a knock-out and his slogan was, then, as later, "Unconditional Surrender." He even decided that John Citizen should not be deprived of his morning paper and produced one himself, printed badly by amateurs but full of grandiose Macaulayesque rhetoric and edited by one greater than Macaulay, to wit the Home Secretary himself.

The strike came to an end in an extraordinary way. The strikers tightened their belts and prepared to fight to a finish. They were, as they thought, law-abiding citizens exercising their constitutional right to strike under the Trade Disputes Act. But Sir John Simon, the greatest lawyer in the land, got up in the Commons and informed them that their strike was unconstitutional and illegal and that the Act did not protect them. This was too much. They were prepared to ruin the country but not to break the law. It really reads like Gilbert and Sullivan but is a fact. Sir John Simon's speech broke the strike; and it collapsed after nine days.[4]

* * * *

Professor Laski himself produces the strongest argument against strikes of this nature; and then, unrealiable counsellor that he is, proceeds to ignore it. "Men say they can understand strikes in industries which do not seriously affect the society as a whole. If the makers of perfume cease work, that is a matter of indifference; society will not die for lack of perfume. But on the railways or in the police *force* a strike, it is urged, is a very different thing. For these functions are clothed with a directly public purpose: where they cease to operate, a direct blow is aimed at the very heart of social organisation. It is, therefore, so it is said, impossible to permit dislocation in enterprise of this kind. The State owes it to society to see that there is continuity of service. Either, then, it must make strikes in these functions definitely illegal, or it must have the means at its disposal of operating alternatively the dislocated service."

Leaving out the qualifying phrases, "Men say", "it is urged", "so it is said", the above argument seems absolutely sound. The learned professor, near-Communist though he seems to have been, does not enlighten us as to the views of the Russians. But James (Viscount) Bryce does, and workers in Kerala State might well consider the position in their spiritual home. There are not and cannot be any strikes in Russia. Not a single one. "The Soviet Government in Russia," Lord Bryce tells us, "has officially defended the system of compulsory labour enforced there, declaring that the workers' State has the right to send the worker to any place where his labour is needed and to lay hands on anyone who refuses to carry out his labour orders as also to punish any worker who destroys 'the solidarity of labour', and justifies this by the argument that such compulsion is inevitable and no worse than that which exists under the hiring system of the bourgeoisie."[5]

However, we are not in Russia nor, as yet at any rate, even in Kerala governed on Russian lines. In India the right to strike to compel employers to raise wages, shorten hours of labour, confine employment to members of a particular union, and secure amenities, though limited by industrial legislation, is unassailable. But a strike of several associated bodies of workers employed in a form of industry, whether governmental or private, essential to the welfare of the community at large, such as work on railways or in electric lighting and power, seeing that the suspension of railway traffic, for instance, paralyses all industries and inflicts the gravest injury to the whole population is another matter.

Such associated strikes of workers in separate essential industries are termed the method of direct action and, in the opinion of Lord Bryce and many of the other experts other than Professor Laski, are unconstitutional, revolutionary and antidemocratic. "A general strike whether directed against the whole community or meant to compel a Government to take a particular course is an attempt to override the legal methods of the people's rule just as in an armed insurrection. Such action is therefore a declaration that democracy has failed and must be replaced by that very violence it was designed to avert. It may seem strange that this method should be at this time of day so lightly resorted to, for violence is a game at which every party can play and history warns us that a victory won by such means has no promise of finality, since, besides creating a sense of insecurity, it inevitably tends to provoke further violence."

"Victory won by such means," said that great Liberal statesman James Bryce. But everyone of us whose memory goes back to the first and only general strike of 1926 knows that victory cannot be won by such means. Responsible leaders like Jim Thomas, Philip Snowden and J. R. Clynes knew, as later General Weygand did in 1940, that they had been presented (by the men) with a lost battle and were expected to win it. How well one remembers their faces growing gloomier and gloomier during those historic nine days contrasted with joyous pugnacity of Winston Churchill, shared by the whole population outside the unions. It was a fight between the unions and the people. And the people won; as they would do in India.

From a Neighbour

If there is a lot of comings and goings between Jamshedpur and Rourkela, that is only as it should be. Of all the steel plants, the one coming up at Rourkela is closest to Jamshedpur, India's first steel city.

If these comings and goings lead to an useful exchange of experience and ideas, that is again as it should be for Jamshedpur has been making steel these 50 years. And it is very happy to lend a hand with the training of engineers and technicians for Rourkela. There are nearly 150 of them at Jamshedpur—from key personnel to artisans.

Good Wishes to Rourkela

Strengthening these ties of friendship are the surprisingly large number of old Jamshedpur faces that one sees at Rourkela. To them and their colleagues, Jamshedpur sends neighbourly greetings and good wishes.

A DITCHER'S DIARY

IT would be an error to dismiss protests against the proposed administrative tribunals, heard recently in both Bombay and Calcutta, as being motivated by the fear that the legal profession might lose business in consequence. There is much more at stake, and the invocation of the French model cannot do much to allay sincere misgivings. Justice delayed may be, in some cases, justice denied. Justice denied is, in all cases, tyranny hastened. The Law Commission has been enquiring how justice may be speedier and cheaper, and there is doubtless much complexity which can be eliminated without undermining the rule of law. It is entirely another matter when the executive threatens to take the place of the judiciary in selected matters. It is at present proposed to take only those affecting revenue and Government employees outside judicial control and place them in the hands of administrative tribunals, but it is in the extension of such lists that the bureaucracy always displays the utmost dynamism. A measure of impatience is understandable in times such as this, for the country is trying to move fast in various directions, and it would in any case be unrealistic to expect that ideas of economic planning can be imported from undemocratic countries without the accompaniment of some uninvoiced items too. Administrative tribunals may be only a little less dangerous than people's committees in negating the citizens' rights as guaranteed by the Constitution, and a New Delhi reportedly concerned over the prevalence of the committees in Kerala is ill-advised to consider the former for the whole country. Officials freed from the chastening fear of the judiciary usually have as little time for justice as the party militants that find their way into so-called people's committees.

* * * *

From time to time, one sees Hindi equivalents of English terms published in the papers. Since the arrival of the report of the Official Language Commission on my desk, I have been wondering if they have found a Hindi expression for the phrase "hasten slowly." That the Government of India has taken over a year to publish the report submitted on 31st July last year is apparently not reassuring enough for everybody that there will be comparable delay in the implementation of the report's recommendations, for angry and apprehensive comments have already appeared. Dr. Chatterji, author of the minority report, is not entirely fair to the Commission, which has not in fact recommended that English must be replaced by Hindi by 1965. If there is a marked preference for Hindi in the report, it is because such was the dictate of the Constitution. That the advocates for the retention of English, at least until Hindi is a more efficient language than it is claimed to be today, have the ratification of reason for their view does not necessarily mean that their attitude to the question is completely free from the emotions they ascribe to champions of Hindi. The fact is that we are all attached to certain languages in a partly sentimental sort of way, and habit plays probably as big a part. I will not, therefore, argue the case for English. What the partisans of Hindi will do well to recognise is that there is widespread sentiment, and habit, in favour of English too, to say nothing of the thirteen other national languages. A third point in favour is the convenience of continuing with what is. By the way, I understand that more and more Russians are now learning English, and it may not be long before many other countries, including America, follow suit.

* * * *

To my knowledge, the B.B.C. never addressed a letter of protest to Radio Luxembourg against the latter's beaming a commercial service to Britain. If it did, it did something it shouldn't have done. I do not see why a different view should be taken of the Indian missive to Radio Ceylon. Since no country has yet practised free trade, except when it has suited its own interests, it is perhaps wholly academic to argue that all restrictions on trade are bad (as they really are); but restrictions on broadcasting may yet be fought, especially when it is sought to impose them not on grounds of political propriety but on those of debatable aesthetic values. Claims that All India Radio is culturally superior cannot conceal the fact that, in the sphere of entertainment at least, Radio Ceylon is enticing away more Indian listeners-in than Dr. Keskar seems prepared to lose. And, because of this obvious divergence between what the Indian public wants and what Dr. Keskar will give, the latter is seeking other ways of keeping his public, which are not much less illiberal than the totalitarian method of making short-wave receiving sets scarce. As far as I know, there is nothing to prevent Ceylon from declining, politely or otherwise, the request from the Government of India, which has its own overseas services of which it is conceivable some countries may disapprove. If competitive co-existence is India's foreign policy, there should be more evidence of it—at least in the air.

* * * *

If it is a tribute to Professor N. K. Sidhanta that he should be wanted as badly in Calcutta University as in the Pay Commission, it is permissible to wonder whether the former is as much in need of better administration as I hear or the latter is really expected to make a very thorough enquiry. Or, is it suggested that the country has so desperate a dearth of men that one person must be asked to do half-a-dozen full-sized jobs at the same time? All three explanations may be off the mark, or so one must hope. Some very serious allegations against the University of Calcutta appeared in the daily Press after the recent elections to its Senate, and the general impression was that it is not an over-administered body. The Vice-Chancellor's is certainly a full-time job. The Pay Commission will decide the level of wages in this country, and not in the public sector alone, for many years to come. This, too, I should have thought, required the closest attention of every member for a considerable length of time. It is no reflection on Professor Sidhanta to say that even he may not be able to do full justice to both. It may still be a good idea to find not only good men for big jobs but also to give the good men a fair chance to do their jobs well. I raise the question because this salutary principle of administration is perhaps being neglected in a wider sphere than in Calcutta University and the Pay Commission.

* * * *

Now that business management is regarded as a specialised profession, on par with accountancy and other special skills essential to the successful operation of a business, it is inevitable that the consultant should make his appearance for the benefit of the smaller firm unable to carry the expense of a full-time expert. Like doctors and lawyers, however, the management consultants' code of professional conduct precludes all forms of advertising, so to employ one it is necessary to consult trade associations, chambers of commerce, or depend on the recommendations of other users—with all the risk of not getting just the type of result one particularly needs. To help firms who find themselves in a dilemma of this sort in Britain, the Management Consultants Association there has recently issued a pamphlet entitled *How to Choose a Consultant*. It sets out eleven questions—such as "how long has the consultant been in business?" and "How much of its business is repeat business?"—which the prospective employer should ask before making his selection. It also explains how consultants' fees are arrived at and why there are no fixed scales of charges. The booklet can be obtained free of charge from the Association's offices at 4 London Wall Buildings, London, E.C.2. It does not answer the vital question, but certainly helps against accepting the wrong advice.

* * * *

The labours of the rather large select committee which has been considering the Wealth Tax Bill, and the amendments it has produced, have—a little unfairly, I think—inspired reminders of an old saying about the mountain and the mouse. The amendments might have looked less like the latter had not advance notice been given of their coming. But their intrinsically rodent-like quality is perhaps in some respects rather obvious, for instance, in the niggardly concessions given to companies. The one question which I have not yet seen seriously answered is why industrial, or mainly industrial, companies should not be wholly exempt from the tax. There may or may not be (I personally do not think there is) something in the argument that if all companies were to be exempted, wealthy individuals would tend to transmute themselves into ambulatory corporations when visiting the revenue-gatherers' offices, merely in order to escape the tax. But, surely, there is no way in which personal wealth can be smoked away under the guise of an industrial enterprise, unless it is feared that some of us might get ourselves registered as manufacturers of perspiration and carbon dioxide for wealth tax purposes. The Government has enough control over the setting up of new industrial undertakings to ensure that their creation is not motivated solely by the hope of escaping wealth tax. The concessions under which companies running at a loss or those launching upon expansion schemes have now been given limited exemption seem meagre in the light of this original injustice. How serious the injustice is might have been appreciated better if some of the huge enterprises the Government itself owns such as the railways, were made to pay wealth tax. Their accounts would look rather less flattering, and it would cost the Government nothing, except perhaps its reputation.

* * * *

Most people by now are reconciled, I suppose, to the fact that before the second five year plan celebrates its second birthday some of its limbs will be mutilated and others subject to infantile paralysis. But the terminological hair-splitting which has featured this approaching phenomenon seems to provide a fascinating field of study for those interested in linguistic research and political psychology. There has been talk about the size of the plan being cut; but by current fashions of verbal heroism, it is rightly rejected as a crude piece of vulgarity. How considerably more soothing for one's vanity it is to speak instead of "adjustment" and "rephasing", nouns whose main virtues are that they are polysyllabic and therefore relatively unfamiliar. An economist and former high executive of the U.N. has just made his own contribution to this jugglery by declaring that present difficulties will not wreck the plan but only cause it to be reoriented. All these, of course, are merely refinements of earlier official declarations that the plan will be maintained intact even if only its "core" is implemented. As the foreign exchange reserves have come down, the term "core" has given way to "hard core", which suggests that if the deficit in external payments continues at its recent extraordinary rate, the qualifying adjective in the new term might suffer further amendment. I sincerely hope that when the Finance Minister flies to the United States a few days hence, he will admit that he has travelled in a whole aeroplane and not merely in a fuselage.

	Single	Return
Amsterdam ...	Rs. 400	Rs. 720
London ...	„ 427	„ 769
Glasgow ...	„ 427	„ 769
New York ...	„ 426	„ 767
Montreal ...	„ 426	„ 767

Similar savings available on tourist fares to many other destinations.

BOOK NOW AND FLY

PROSPECTUS

1. A copy of this Prospectus has been filed with the Registrar of Companies, Madras, for registration as required by Section 60 of the Companies Act, 1956.

2. Consent of the Central Government has been obtained to this issue by two Orders No. F. 21 (34)-CCI/55 dated 27-9-1955 and No. F. 21 (67)-CCL/56-286 dated 19-3-1957, of which complete copies are open to public inspection at the Registered Office of the Company at Ennore, Madras. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any Scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

3. The subscription list will open at 10-30 A.M. on Friday, the 23rd day of August, 1957, and will remain open until Friday, the 6th day of September, 1957, unless closed earlier at the discretion of the Directors but not before Friday, the 30th day of August, 1957.

ASHOK LEYLAND LIMITED

(Incorporated under the Companies Act, on 7th September, 1948.)

4. **AUTHORISED CAPITAL**

The Authorised Capital consists of 40,00,000 Equity Shares of Rs. 5/- each ... Rs. 2,00,00,000

SUBSCRIBED AND FULLY PAID UP

19,65,478 Equity Shares of Rs. 5/- each ... ... Rs. 98,27,390

leaving a balance of 20,34,522 Equity Shares of Rs. 5/- each available for subscription Rs. 1,01,72,610

5. Particulars of the issues of Capital, all in Equity Shares of Rs. 5 each, which have been made during the past two years are given in the statement contained in paragraph 19 of this Prospectus.

This statement shows that at the date of this Prospectus Equity Shares of a total nominal value of Rs. 31,29,410 remained unsubscribed from previous issues. Of this amount Rs. 10,82,720 is reserved to be taken up by Leyland Motors Limited of Leyland, Lancashire, and Rs. 20,46,690 is available for issue at the discretion of the Directors.

At a General Meeting held on 6th June, 1957, it was resolved to issue a further Rs. 70,43,200 nominal in Equity Shares of Rs. 5 each for payment in full at par and that of these shares Rs. 28,17,280 nominal be offered to Leyland Motors Ltd., and the balance, viz. Rs. 42,25,920 nominal be available for issue at the discretion of the Directors.

Pursuant to these Resolutions, the Directors have offered to Leyland Motors Ltd., who have agreed to take up shares of the nominal value of Rs. 52,29,170. The amounts payable in respect thereof will be subscribed in cash from time to time by Leyland Motors Ltd., normally as and when payments are made to them by the Company in respect of deliveries of Capital equipment. This amount of Rs. 52,29,170 includes Rs. 13,29,170 additional to the amounts mentioned in the preceding paragraphs as reserved for Leyland Motors necessary to bring the eventual total holding of Leyland Motors and other overseas holders in the equity Capital of the Company to 49% in accordance with arrangements recently agreed with Government.

The total nominal amount of the present issue is therefore Rs. 49,43,440, viz. Rs. 1,01,72,610, the total unsubscribed capital, less Rs. 52,29,170 to be subscribed by Leyland Motors Ltd.

9,88,688 Equity Shares of the nominal value of Rs. 49,43,440 are accordingly offered to the Public in terms of this Prospectus for subscription at par payable in full at the rate of Rs. 5 per share with application.

The shares now offered will rank for dividends and voting rights and for all purposes *pari passu* with the existing shares except that they will be entitled to participate in any dividend declared for the year 1957 at the next Annual General Meeting or by way of interim dividend or by way of final dividend so that the total dividend paid for the year 1957 in respect of the new shares shall be in proportion to the length of time, being part of the year 1957 during which the capital thereon is paid up and in proportion to the capital respectively paid up thereon and will thereafter rank *pari passu* as to dividends and in every respect with the existing shares.

6. The Shares of the Company already issued are dealt in and are officially listed and quoted by the Madras Stock Exchange Association Ltd., Madras. An application has been made to the Madras Stock Exchange Association Ltd., Madras, for permission to deal in the shares now being offered and in due course for an official quotation.

7. Application for shares should be made for a minimum of 100 shares on the Form accompanying the Prospectus and delivered before the close of the subscription list to the Company's Bankers, namely :

(i) The State Bank of India—at all their branches in the Madras Circle and at their Branches at Bombay, Delhi, Calcutta, Hyderabad, Nagpur, Cuttack, Patna, Lucknow and Bhopal.

(ii) Grindlays Bank Limited at any of their branches

together with a remittance for the full nominal value at Rs. 5 per share.

OBJECTS OF THE COMPANY

9 The Company was incorporated in 1948 under the name of Ashok Motors Ltd., which was subsequently changed to ASHOK LEYLAND LTD., to assemble, manufacture and trade in motor cars, motor buses and trucks, diesel engines and all kinds of motor vehicles, their parts, components and accessories.

The main object of the Company as contained in the Company's Memorandum of Association is as follows :—

To carry on the business of manufacturers, assemblers of, dealers in, hirers, repairers, cleaners, storers, warehousers, of motor cars, motor cycles, cycle cars, motors, scooters, motor buses and lorries, trucks, tractors, cycles, bicycles and carriages, launches, boats and ships, vans, aeroplanes, hydroplanes and other vehicles and conveyances of all description for carrying passengers or their personal goods, commodities, produce, cargoes and other things on land or sea or by air (all hereinafter comprised in the term "motors and other things") whether propelled or assisted by means of petrol, spirit, steam, gas, electrical, animal or other powers, and all engines, chassis, bodies, turbines, tanks, tools, implements, accessories and other things, materials and products used for, in or in connection with motors and other things.

The Company obtained a certificate of commencement on 14-12-1948 and has been carrying on business since then. Initially, the Company was engaged in assembling Austin Cars and trucks. In 1950, the assembly of Leyland Commercial vehicles was added to its activities. Steady progress was made in the volume of production and Ashok Motors Limited became recognised throughout India as one of the pioneers of a new industry.

When in 1953, the Government of India, on the advice of the Tariff Commission, selected five firms as the approved Manufacturers of Automobiles in India, Ashok Motors Limited, now Ashok Leyland Limited, was one of the five. At that time, the Company was assigned *inter alia* the role of manufacturing heavy duty commercial vehicles. It was decided in the latter part of 1952 to discontinue the assembly of Austin vehicles and to concentrate on the production of Leyland Heavy Duty Commercial vehicles for passenger and for goods transport.

A phased manufacturing programme for the production of Leyland "COMET" Chassis was submitted to the Government of India and approved in March 1954. The Company expressed its intention to extend manufacture to the complete range of Leyland Commercial vehicles in due course. Leyland vehicles are world renowned and Leyland Motors Limited of Leyland, Lancashire, England, are one of the largest manufacturers of heavy duty buses and trucks. Their range, including vehicles manufactured by subsidiary Companies in their group, covers buses for every type of duty including the clutchless high performance Royal Tiger Worldmaster Chassis with underfloor engine as a single deck passenger vehicle and the "Atlantian" double deck bus which is the most advanced vehicle of the class in the world today, with seating capacity for 78 passengers. In the goods range, lorries are available for loads up to 60 tons and includes single vehicles such as the "Octopus" which without any form of articulated trailer can accommodate gross loads up to nearly 25 tons. All these chassis are powered by the famous Leyland range of direct injection 6-cylinder diesel engines.

The objects before this Company therefore are, commencing with the Leyland "COMET" Chassis, designed for gross loads up to 12 tons, to establish the manufacture of a range of Commercial vehicles comparable to the range offered by Leyland Motors Limited in the United Kingdom and including the manufacture of the Leyland range of diesel engines. In due course, it will be the Company's object not only to produce for the Indian market but also to export to Overseas markets.

DEVELOPMENT

10. Under the Agreement dated 5-12-1955, planning of production including manufacture of jigs and fixtures was to be undertaken by Leyland until competent staff could be trained in India, the services of Leyland Technicians were to be available to assist with the training of staff and the development of efficient material control, planning and production control in India, and facilities were to be provided at Leyland for the training of Indian personnel.

By the end of 1955, initial planning being complete and the delivery in India of machine tools, jigs and other factory equipment having commenced, implementation of the manufacturing programme was started. Progress since then has been continuous and at present after a little over one year from the inauguration of manufacture, 15·80% of the c.i.f value of the Leyland "COMET" is produced in Madras.

FINANCIAL BACKGROUND

11. In the original agreement dated 5-12-1955 concluded between the Company and Leyland Motors Limited of Leyland, Lancashire, with the approval of the Government of India, it was provided that the eventual contribution by Leyland Motors might be Rs 80 lacs i.e. 40% of the Company's authorised capital of Rs 2 Crores. Pursuant to this arrangement, the capital has been increased from time to time until the paid up Ordinary Capital amounted to approximately Rs 95 Lacs, of which Leyland Motors held Rs 38 Lacs. The sanctions granted by the Controller of Capital Issues provide for issue upto 40% of the capital to non-resident shareholders.

Government have recently agreed that the participation of Leyland Motors may be increased to 49%, whereafter the paid up capital was increased to approximately Rs 98 lacs, of which Leyland Motors held Rs 41 lacs. The Company has applied to the Controller of Capital Issues to increase the percentage of shares to be issued to non-residents from 40% to 49% of the capital. The present issue will bring the total subscribed capital to Rs Two Crores, of which Leyland Motors will hold Rs 98 lacs. The purpose of the Issue is to meet Capital and other expenditure as hereinafter mentioned.

OBJECTS OF THE ISSUE

12. The additional capital to be raised as the result of the present issue is required for the purposes of completing buildings and equipment necessary to enable the Company to increase production, in accordance with the programme of progressive manufacture, up to a total of 2,500 vehicles per annum.

It is to be noted that the original estimates of the Capital needed to implement the programme for full scale manufacture of Leyland "COMET" buses and trucks, viz Rs 2 Crores, is likely to prove correct. The sum of Rs. 1,01,72,610 to be raised by this issue and by the subscription of shares to be taken up by Leyland Motors Ltd. will be utilised as follows :—

(a)	To finance the balance of the building programme and to purchase additional factory equipment	Rs. 50,00,000
(b)	To repay money borrowed for the erection of buildings and purchase of plant and machinery	Rs. 25,00,000
(c)	For addition to working capital	Rs. 23,00,000
(d)	For expenses of the Issue	Rs. 2,20,000
(e)	Contingencies, being the balance	Rs 1,52,610
		Rs. 1,01,72,610

Automobile manufacture requires substantial working capital to cover stocks of raw materials, work-in-progress and finished components awaiting assembly. In addition to the amount provided for working capital above the Company will make use of substantial loans from its Bankers secured on its stocks of raw materials, work-in-progress, etc.

FOREIGN EXCHANGE

13 The Company does not anticipate any problem in the provision of foreign exchange for meeting the cost of imported plant, etc necessary for the expansion programme to be financed from the present issue, since the cost of imported capital equipment is expected to be met by the issue of Equity Shares of the Company to Leyland Motors Ltd., in the U.K., as hereinbefore mentioned.

PROSPECTS AND PROFITS

14 Except in respect of the year 1955, the Company has paid a dividend annually since its inception. The year 1955 was exceptional in which heavy items of non-recurring expenditure, such as the payment of compensation to Managing Agents, writing down the value of Austin Spares since the assembly of Austin vehicles has been discontinued, made it inexpedient to declare a dividend. The working results for 1956 were good and a dividend of 6%, free of tax was paid after making provision for taxation and depreciation and after placing Rs. 1·5 lacs to Reserve.

Sales of "COMET" trucks which amounted to 159 in 1953 have steadily increased and are expected to reach a total of 1,000 for 1957, which, in the Company's planning was regarded as a level of production and sales which would achieve economic results. The rising demand leads the Company to proceed with its plans to increase capacity to 2,500 vehicles per annum, and, given reasonable trading conditions, the Company expects to be in a position to continue to pay Dividends on the capital as increased as the result of this issue.

Leyland vehicles are noted for their long life. The average life of those now being put on the roads is estimated at a minimum of 12 years. In many cases Leyland vehicles remain in service for 20 years or more. After two or three years service replacement of worn parts commences during routine overhauls. There will, therefore, during the coming years, be a considerable increase in the sale of spare parts which will have a beneficial effect on the Company's ability to make reasonable profits.

15 The following is a copy of the report of the Company's Auditors Messrs. M. S. Krishnaswami & Jagannathan and Messrs. Suri & Co., Chartered Accountants :

ASHOK LEYLAND LIMITED—*Cont'd.*

ASHOK LEYLAND LIMITED

Ennore, Madras

We have examined the accounts of Ashok Leyland Limited for the five years ending 31st December 1956 and in accordance with the provisions of Clause 24 of Part II of Schedule II of the Companies Act, 1956, we report as follows. A summary of the Profit & Loss Accounts of the Company for these years together with the adjustments to be made is given hereunder :

Year Ended 31st December :	1952 Rs	1953 Rs	1954 Rs	1955 Rs	1956 Rs.

Non-recurring item for which adjustment is necessary : Profit on sale of assets	14,017	42,645	398	8,282	14,909
	2,04,66,098	1,77,41,214	1,50,06,151	2,48,57,741	4,28,93,557
Opening stock, purchases and other expenses including normal depreciation	1,95,40,043	1,71,79,575	1,45,62,494	2,43,88,298	4,20,24,943
Non-recurring items for which adjustment is necessary :					
Brokerage on shares	1,500	—	—	—	—
Initial and extra depreciation	4,42,271	1,17,495	40,246	36,774	—
Donations & Charities	1,100	2,100	—	3,150	1,000
Compensation for termination of Managing Agency	—	—	—	2,50,000	—
Payment to former Managing Agents	—	—	—	—	11,924
	1,99,84,914	1,72,99,170	1,46,02,740	2,46,78,222	4,20,37,867
Net Profits Subject to Income Tax :	4,81,184	4,42,044	4,03,411	1,79,519	8,55,690
Percentage of Dividend 'A'	5%	5%	5%	Nil }	6%
" " 'B'	5%	5%	5%	Nil }	

We further report that no dividends have been paid in respect of the year ended 31st December, 1955. No accounts of the Company have been made up since 31st December, 1956.

'A' and 'B' Class shares of the Company were converted into equity shares of Rs 5 each during 1955.

The Assets and Liabilities of the Company as at 31st December, 1956, as disclosed by the Audited Balance Sheet, were as follows :—

		Rs.	Rs.	Rs.
1.	Fixed Assets less Depreciation		46,94,617	
2.	Investments		500	
3.	**Current Assets :**			
	Stores	1,19,589		
	Stock-in-trade	1,39,87,918		
	Sundry Debtors	25,75,966		
			1,66,83,473	
4.	Advance, Deposits and prepaid expenses		10,75,464	
5.	Cash and Bank balances		4,70,406	
				2,29,24,460
	Less Liabilities :			
1.	Secured Loans	83,41,653		
2.	Current Liabilities and provisions— (including proposed dividend of Rs. 3,56,580)	53,18,553		1,36,60,206
				92,64,254
	Share Capital :			
	17,13,360 Equity shares of Rs. 5 each fully paid up	85,66,800		
	Reserve and surplus	6,97,454		92,64,254

Note :

1 The stock-in-trade includes Austin and Proprietary Parts, the original book value of which as on 1-1-1955 was Rs 26,09,925 (the sales value of which cannot readily be ascertained). After taking into account subsequent purchases and sales and writing down the value by Rs 3,59,712 out of profits of the year 1955 and Rs 1,78,418 out of the profits of the year 1956 the value of these parts stood at Rs. 15 lacs as at 31-12-1956

2 There is a Contingent Liability for Madras Sales Tax amounting to Rs 4,77,014 not provided for in the accounts, as the matter is under appeal.

3. Since the Company's Accounts were made up at the end of 1956, the paid up Capital has been increased to Rs 98,27,390.

(Signed)

(i) M. S. Krishnaswami & Jagannathan

(ii) Suri and Company

Chartered Accountants

Dated, 8-7-1957.

MINIMUM SUBSCRIPTION

16. The minimum subscription upon which the Directors will proceed to allotment is Rs. 49,43,440; subscription of this amount is assured by reason of the underwriting to which reference is made below. This sum together with the amount to be subscribed by Leyland Motors Ltd. in respect of shares reserved for them, viz Rs 42,29,170 will cover the total expenditure of Rs. 1,01,72,610 hereinbefore set out.

VOTING RIGHTS

17. Under Article 92, as modified by Section 87 of the Companies Act on a show of hands every member present in person shall have one vote and upon a poll, every holder of shares present in person or by proxy shall have voting rights in proportion to his share of the paid up equity Capital of the Company.

RESTRICTION OF RIGHT TO TRANSFER

18 The Directors may decline to register any transfer of shares upon which the Company has a lien and in the case of shares not fully paid-up, may refuse to register a transfer to a transferee of whom they do not approve.

PAST OFFERS AND ALLOTMENTS OF SHARES

19 The following is the statement required by the Companies Act 1956 of shares offered allotted and paid up during the past two years viz.

(The amounts quoted are nominal values of Equity Shares of Rs 5 each.)

	Rs.	98,27,390

The amount remaining unsubscribed from the offer dated 5-12-1956 was Rs 20,56,690 to which must be added Rs. 10,72,720 shares unsubscribed from issues prior to 31-7-1955 making the total issued but unsubscribed capital at the date of this Prospectus Rs. 31,29,410.

SHARE CERTIFICATES

20. Every member shall be entitled to one certificate for the shares registered in his name, or if the Directors so approve to several certificates, each for one or more of such shares, in terms of the Articles of Association of the Company.

UNDERWRITING

21. The Industrial Credit and Investment Corporation of India Limited, Fort House, 221, Dadabhoy Naoroji Road, Bombay 1, have agreed to underwrite 9,88,688 Ordinary Shares of the nominal value of Rs. 49,43,440. The Directors are of the opinion that the resources of the Underwriters are sufficient to discharge their underwriting obligation.

UNDERWRITING COMMISSION

22. Underwriting commission at the rate of 2½% of the total nominal value of the shares underwritten, viz. Rs. 49,43,440 is payable to The Industrial Credit and Investment Corporation of India Limited, in accordance with the terms of Agreement contained in letter dated 27th July, 1957 from the Underwriters and the Company's acceptance thereof, dated 29th July, 1957.

BROKERAGE

23. Brokerage will be paid by the Company to recognised Brokers and Banks at the rate of 1% on the nominal value of shares allotted in respect of applications bearing their stamps.

Brokerage on the same basis will be payable to The Industrial Credit and Investment Corporation of India Limited, in addition to the underwriting commission, on allotments in respect of applications made or procured by them provided that the relative forms of applications bear their stamp.

EXPENSES OF THE ISSUE

24. The expenses of the issue, other than brokerage and underwriting commission, are estimated to amount to Rs. 35,000 and will be payable by the Company.

DIRECTORS AND MANAGEMENT

25. (i) The number of Directors shall be not less than 7 or more than 15.

(ii) The qualifications of a Director shall be the holding in his own right of shares of the nominal value of not less than Rs. 5,000.

(iii) Until otherwise determined by the Company's General Meeting, every Director including the Managing Director shall receive out of the funds of the Company by way of remuneration a sum of Rs. 100/- for each meeting attended by him, and all travelling and other expenses properly incurred by them in or with a view to the performance of their duties.

(iv) If any Directors, being willing, shall be called upon to perform extra services or to make any special exertion in going or residing away from his home town for any of the purposes of the Company or giving any special attention to the business of the Company or be appointed to discharge the duties of any office under the Company, then the Company may remunerate the Director so going or so giving special attention or being so appointed either by a fixed sum or by a percentage on profits or otherwise as may be decided by the Directors and such remuneration may be either in addition to or in substitution of his share in the remuneration above provided for the Directors.

MANAGING DIRECTOR

26. Mr. A. E. L. Collins is the Managing Director of the Company. He has been appointed under an agreement dated 25-2-1955 as the Managing Director for a period of 5 years from that date. Sanction of the Central Government to his appointment has been obtained.

Subject to the control of the Board of Directors the business of the Company is carried on by the Managing Director.

The remuneration of the Managing Director is a salary of £3.500 per year and an allowance of £1,000 per year or the Rupee equivalent thereof, both payable in monthly instalments, together with such bonus, if any, as the Board of Directors may decide.

BORROWING POWERS

27. The Directors may from time to time at their absolute discretion raise or borrow any sum or sums of money as they may consider necessary for the purposes of the Company from any person, Company or Bank, so that the amount at any one time owing in respect of moneys so borrowed or raised shall not without the further sanction of the General Meeting exceed Rupees One Crore.

INTEREST OF DIRECTORS

28. Sir Ramaswami Mudaliar, the Chairman of the Company, is also a shareholder in and the Chairman of The Industrial Credit and Investment Corporation of India Limited, and as such is interested in the underwriting contract between Ashok Leyland Ltd. and The Industrial Credit and Investment Corporation of India Ltd., to which reference has been made.

Sir Henry Spurrier and Mr D. G. Stokes, Directors of this Company, are also Directors of and Shareholders in Leyland Motors Ltd., and as such are interested in all transactions with that Company.

Mr. I. G. Macintosh, alternate Director of the Company is the Manager of the Madras Branch of Grindlays Bank Ltd., one of the Company's Bankers.

Mr. A. E. L. Collins is the Managing Director of this Company and as such is interested in the remuneration payable to him.

AGREEMENTS OR CONTRACTS

29. The following Contracts or Agreements have been entered into and are or may be material:—

(a) An agreement called the Financial Agreement dated 5th December, 1955 between the Company and Leyland Motors Ltd., Leyland, U.K.

(b) An Agreement called the Manufacturing Agreement dated 5th December, 1955 between the Company and Leyland Motors Ltd., Leyland, U.K.

(c) An Agreement dated 25th February, 1955 between the Company and Mr. A. E. L. Collins, appointing Mr. Collins as the Managing Director of the Company.

(d) Letter dated 27th July, 1957 from The Industrial Credit and Investment Corporation of India Ltd., making an offer to underwrite and the Company's acceptance thereof, dated 29th July, 1957.

(e) Letter dated 20th June, 1957 from the Government of India agreeing to Leyland Motors Ltd.'s subscription of 49% of the Company's capital.

(f) Letters dated 20th May, 1957 and 28th June, 1957 from Leyland Motors Ltd., agreeing to subscribe 49% of the Company's capital.

DOCUMENTS

30. The following documents can be inspected at the Registered Office of the Company at any time during business hours for a period of 14 days from the date of publication of this Prospectus or until subscription list closes, whichever is earlier.

1. Copy of the Memorandum and Articles of Association of the Company.
2. Copies of the Agreements referred to in paragraph 29 above.
3. Copy of Auditors' Report and copies of Balance Sheet and Profit & Loss Accounts upon which the report is based.
4. Original consent orders from the Controller of Capital Issues.

31. Further copies of the Prospectus and the application forms will be available at the said office of the Bankers, from the Brokers to the issue named above, from the Underwriters and from the Company's Registered and City Offices at Madras. Where no allotment is made the deposit will be returned in full and where a partial allotment is made, the unutilised balance will be returned. The Directors reserve the right to refuse any application wholly or in part without assigning any reason. Failure to pay any amount due on the shares allotted when due will render previous payments liable to forfeiture. The shares when issued will be subject to the Memorandum and Articles of Association of the Company, a copy of which may be inspected during business hours at the Registered Office of the Company and the City Office at Bank of Mysore Buildings, N. S. C. Bose Road, Madras 1. The Share Certificates will be issued within three months of the date of allotment.

Dated this First day of August, 1957.

THE CALCUTTA MONEY MARKET

SUBSTANTIAL FALL IN ADVANCES

Wednesday, 21st August.

THERE has been a substantial decrease in advances in the Calcutta money market during the past week. The main contributions to the fall have been made by sugar and by grains and seeds. Cotton accommodation is slightly lower and jute credit also shows a small decrease. In the inter-bank market, conditions have shown little change and the call rate quotes 3¾ percent.

There have been relatively few tea and gunny bills in the exchange market, but remittance continues on a normal scale. Sterling has been under pressure for most of the week because of rumours of a general adjustment in various currency exchange rates.

* * * *

Bullion was quiet in the absence of interest. Trading was limited. Silver declined from the previous week's level of Rs. 180 to Rs. 179 50, quoted today for ready delivery. The rate for forward delivery was Rs. 179.25. There was little change in prices abroad.

Gold was quiet in sympathy with silver during the early part of the past week but at the close it was steady and the price advanced from Rs. 109.25 to Rs. 109.50. The sovereign stood at Rs. 71.50.

* * * *

During the week ended 16th August, the Government of India Treasury bills for Rs. 22,25,50,000 were sold in favour of the Reserve Bank.

* * * *

A decline of Rs. 7.66 crores to Rs. 1,508.45 crores in active notes was the outstanding feature of the return of the Reserve Bank of India for the week ended 16th August. The total note issue was Rs. 56 lakhs higher at Rs. 1,535.36 crores. Notes held in the Banking Department consequently rose by Rs. 8.32 crores to Rs. 26.91 crores. Deposits showed an all-round decline. Deposits of the Government of India declined by Rs. 15.26 crores to Rs. 70.22 crores and other Government accounts fell by Rs. 14.07 crores to Rs. 2.83 crores. Balances of commercial banks, at Rs. 75.88 crores, showed a fall of Rs. 9.25 crores. Balances held abroad dropped by Rs. 89 lakhs to Rs. 16.62 crores and investments were Rs. 29.75 crores lower at Rs. 250.66 crores. Other loans and advances declined from Rs. 102.21 crores to Rs. 87.58 crores, of which advances to scheduled banks against usance bills fell from Rs. 54.37 crores to Rs. 45.62 crores. Ways and means advances, at Rs. 28.84 crores, showed little alteration.

* * * *

The return of the State Bank of India for the week ended 9th August, 1957, shows a drop of Rs. 86 lakhs to Rs. 327.43 crores, in total deposits. Investments in Government securities are down by Rs. 89 lakhs to Rs. 93.21 crores, while other authorised investments remain unchanged at Rs. 11.20 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 1.37 crores to Rs. 170.98 crores. Cash and balances are, in consequence, shown at Rs. 44.32 crores, or Rs. 22.15 crores less.

* * *

The statement of the position of scheduled banks for the week ended 9th August, 1957, shows Demand and Time liabilities at Rs. 704.61 crores (Rs. 13.38 crores on account of borrowings from banks) and Rs. 577.22 crores (Rs. 5.30 crores), compared with Rs. 728.80 crores (Rs. 19.45 crores) and Rs. 578.93 crores (Rs. 4.62 crores), respectively, in the previous week. Cash has risen by Rs. 3.60 crores to Rs. 40.19 crores, while balances with the Reserve Bank have fallen by Rs. 23.14 crores to Rs. 83.90 crores. There is a rise of Rs. 5.68 crores to Rs. 338.10 crores in investments. Advances and bills discounted, at Rs. 881.99 crores, show a drop of Rs 1.61 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are in consequence, shown at 9.7 percent and 68.8 percent, against 11.0 percent and 67.6 percent.

* * * *

Government promissory notes of the following loans enfaced for payment of interest in Delhi and New Delhi, interest on which falls due for payment during September 1957 will now be accepted by the Public Debt Office, Reserve Bank of India, New Delhi, for payment of interest to facilitate delivery of their securities and interest warrants on the due dates. *Central Government Loans:* 3% Conversion Loan 1946: 4% Loan 1960-70: 2¾% Loan 1976. *State Government Loans:* 3% Loans 1960; 2¾% Loans 1961; 3½% Loans 1962; 4% Loans 1967; 4% Loans 1968. Holders of the above loans have to lodge their securities well in advance of the due dates. In view of the heavy work involved, the period for delivering securities tendered for payment of interest will be extended to six clear working days.

* * * *

The outstanding balance of the 3 percent Victory Loan, 1957, is repayable on 1st September, 1957, and no interest will accrue thereon from that date. As, however, 1st September, 1957, falls on a Sunday, the discharge value will be paid on the preceding working day, namely, 31st August, 1957. To facilitate discharge of the loan on the due date, holders may tender their securities at the Public Debt Office, the Treasury or branch of the State Bank of India at which they are enfaced or registered for payment of interest on or after 21st August, 1957. Full details of the procedure for obtaining discharge value can be obtained on application at any of the above offices.

STOCK MARKETS UNCERTAIN

GILT-EDGED FALL: RISE IN GOLD SHARES

London, 21st August.

THE major influence in the stock markets during the past week was the nervousness and uncertainty which developed in the foreign exchange market following the partial devaluation of the French franc. The consequent talk of adjustments in the exchange rates of other currencies brought sharp falls in gilt-edged securities and contrasting rises in gold shares. Other important factors contributing to the general unsettlement of the stock markets, were the persistent weakness of Wall Street, the rising trend of interest rates in north America and Europe and the political developments in Syria. The latter particularly affected oil shares which are highly susceptible to adverse developments in the Middle East. Business outside the gold share market which was active, and to a lesser extent in oils, was on a reduced scale. Gilt-edged securities sustained heavy falls prior to the week-end on currency fears and a number of stocks reached new low levels, but prices subsequently became steadier on the firm denial by the U.K. Treasury of the rumour that sterling is to be devalued. The currency fears led to attention being concentrated on the South African gold share market and in very active conditions, a widespread and substantial advance was recorded. Prices lost part of the gain after the week-end, but following the devaluation denial, they were substantially higher on the week. German bonds were in demand, but other foreign bonds and rails were subdued. Dollar stocks were appreciably lower due to Wall Street's influence. Industrials were quiet and prices generally drifted lower to show small declines on the week. Wall Street's performance and the Syrian developments brought sharp falls in oil shares, particularly the leading issues. Quietly firm conditions were maintained in the rubber share market, while tea shares were irregular.

The Money Market

Stringent credit conditions were again encountered by borrowers on the London money market last week. Not only were the banks' positions affected by revenue payments, but there were heavy foreign exchange settlements resulting from the fresh heavy pressure put on sterling by Continental speculators. This resulted in heavy calling by the banks in order to keep their cash balances at a working level, and due to the resultant shortage, up to 4 percent had to be paid for non-regular money with 3¾ percent as the minimum. Government disbursements at the end of the week eased the situation to some extent, but tight credit conditions developed again. At the Treasury bill tender last Friday, there was a fresh advance in the average rate for the bills to £3 19s 10.62d percent, this being the highest rate since April last.

Activity on Wall Street

Long-term U.S. Government obligations drifted irregularly in a slow moving bond market last week. Earlier in the period one of the Treasury's issues hit a new low, while two issues came within a point of the previous bottoms. But the market eventually developed a firmer tendency in thin and largely professional dealings. Investment quality corporates attracted little attention with prices showing minor changes either way. Rails were mostly lower on small turnover. Convertibles eased with the stock market but were not very active. Foreign dollar bonds were moderately active and mixed German nationals were up fractions to a point or more. Italian issues turned firm following an early spell of softness.

U.S. Federal Reserve Return

The U.S. Reserve return for the week ended 14th August shows that the gold stock fell by $2 million to $22.625 million. Foreign deposits rose by $18 million to $385 million, while foreign investments fell by $88 million to $3.668 million. The Federal Reserve sold $26 million worth of bills. Total discounts and advances fell by $262 million to $546 million, while the aggregate excess reserves of member banks fell by $121 million to $84 million. The daily average excess reserves of member banks rose by $56 million to $536 million, while their daily average borrowings rose by $96 million to £1.156 million. Business loans of the New York city banks rose by $144 million to $11.782 million compared with a rise of $160 million to $10.222 million in the correspondening week last year.

Sharp Rise in Hongkong Gold

The Hongkong gold market staged a sharp upturn in the second half of last week, following a substantial depreciation of switch sterling in New York. Nevertheless, there was heavy profit-taking in the final session in spite of further weakness of sterling, and prices declined. The market declined in the first half of the week and reached its lowest point on Wednesday. Late on Thursday, heavy buying by prominent bulls brought prices sharply higher and this was reportedly stimulated by forecasts of a sharp drop in switch sterling in Zurich. Bullion dealers think that the upward movement would have been greater but for the lack of short-covering as most leading Chinese banks have been anticipating a "crack" in sterling. These sources, however, doubt that sterling devaluation is imminent, but think that European operators will probably continue their short-selling of sterling. The official offtake totalled 4.080 taels and the unofficial 16.000 taels. Carry-over charges were 590 cents in sellers' favour. Arrivals in Macao approximated 40.000 ounces. The forward contract was done at $(U.S.)37 78.

Further Devaluation of Franc Denied

Higher gold prices in Paris last week reflected the belief that sterling and the Dutch guilder are due for adjustment of their dollar exchange rates, and that the 20 percent export premium now enjoyed by French exporters will not be enough to keep them competitive. Fears that there will be more "devaluation" of the French franc are denied by the Government. M. Jean Gkyon, the Secretary of State for the Budget, said in an article published in *La Nouvelle Republique de Bordeaux*, "the Government's policy can be summed up as being neither inflation nor devaluation. The measures taken by M Felix Gaillard, the Finance Minister, ought to enable us to avoid a devaluation that certain people in France and abroad are suggesting. But such a measure in the present circumstances would be to accept defeat having fought the battle." M Gaillard has returned to the capital after a brief holiday on the Atlantic coast.

Rubber Prices Rise

In a mainly quiet rubber market last week, price movements had a somewhat exaggerated appearance in contrast with the very small fluctuations witnessed recently. During the first part of the period, steadiness gave way to easier conditions with prices losing ¼d a lb in dull trading. Later, the market turned steadier with sellers reluctant to offer. Prices hardened against some U.K. enquiry and covering orders against previous sales. Improved overseas advices contributed to the steadier undertone. Towards the close, traders attributed a further strengthening of values largely to Dutch and West German buying. The generally increased interest in the market seemed to reflect the fact that traders were mindful of the pressure on sterling in combination with the internal inflationary trend. The early decline was regained and a further advance of ¼d a lb was made but prices eased from the best and closed about ¼d higher on the week. Very little interest was shown in sole crepe and although there was not much pressure from new landings stocks were more than ample to meet the demand. As a result, dealers found it difficult to make the quoted prices based on 37½d a lb for 1th inch smooth no. 1 on the spot.

WHO said cats can't fly?
Why only last week, I flew all the way from Bombay to London and enjoyed every minute of it.
My exclusive berth was most comfortable; the attendants extremely courteous and helpful; the food excellent.
I arrived feeling fresh and happy.
I only had one complaint — there wasn't a mouse in sight! A-I.I. will have to do something about that if they want more cats to fly.
When you have cargo for Europe or U.K., send it by A-I.I.

SHARE PRICES FALL SHARPLY IN RESTRICTED ACTIVITY

SELECT COMMITTEE REPORT ON WEALTH TAX BILL CONSIDERED DISAPPOINTING

Wednesday Evening.

THE stock market has been very quiet during the past week and share prices have slumped on long liquidation. The report of the select committee on the Wealth Tax Bill has been interpreted bearishly. Rumours about devaluation of sterling are causing anxiety, although towards the close there has been a slight improvement on the view that there is little prospect of a change in the value of the pound. Settlement considerations have helped prices to recover a little today.

Indian Irons have closed at Rs. 18.74 on short-covering induced by a good report from the company for the year ended last March. The provision of Rs. 50 lakhs out of the profit during the year under report, on account of a possible future adjustment of dividend on the recently increased ordinary share capital of the company, has been a helpful factor. Operators hope that the chairman of the company will throw more light on the question as to what the dividend on the increased capital will be, at the annual general meeting which is to be held on 11th September.

Details of the week's trading follow.

* * * *

Dated loans continued in good demand and prices improved fractionally. At the higher rates, however sellers were attracted and this led to a moderate increase in turnover. The 3% Conversion Loan 1986 continued to drift and was marked back further from Rs. 71.20 to the lowest level touched since it was issued in 1946; 3% Non-terminable Paper fell to Rs. 71.25. In short-dated loans, 3% 1957 was quoted at Rs. 99.90 and 3% 1958 had buyers over at Rs. 99.70; 3% 1959-61 was asked for at Rs. 97.95 ex-voucher and 3½% 1961 was fully steady at Rs 99.35. The 2½% 1961 had no sellers at Rs. 93.65 and 2¾% 1960 was firm at Rs. 96.55; 2¾% 1962 was asked for up to Rs. 93.93 and 3½% 1962 had buyers at Rs. 97.50. In the medium-dated group, 3% 1963-65 turned sellers at Rs. 93.37 and 3½% 1964 was traded at Rs. 97.60; 3½% 1965 was offered at Rs. 97.35 and 3½% 1967 was easier at Rs. 97.58. Among long-dated loans, 3% 1966-68 changed hands around Rs. 90.95 and 3% 1970-75 was marked up further to Rs. 86; 3¾% 1974 had sellers around Rs. 98.30. In State loans, there were ready buyers for 4% discount issues, but little business was reported due to the shortage of scrip; 4% U.P. 1967 and 1968 moved up further to Rs. 96.10 while 4% Madras 1967 and 1968 were asked for at Rs. 96.30. The 4% Punjab 1968 changed hands around Rs. 97.75.

Trading in preference shares was on a very restricted scale and selling orders were difficult to execute in spite of the fact that shares were offered at lower than the quoted rates. In jute, Naihati 2nd were done at Rs. 57 and a special transaction was reported in Lawrence at Rs. 84. Barnagore changed hands at Rs. 31. Among miscellaneous issues, Bengal Assam Steamship were sold down to Rs. 61.50 and Calcutta Electric were marked at Rs. 9.56. Dunlop Rubber changed hands at Rs. 117 and Godfrey Phillips around Rs. 61. Indian Iron and Steel met with some enquiry at Rs. 98 and Indo-Burma Petroleum were crossed at Rs. 86.50. Martin Burn came to hand at Rs. 94 and Rohtas Industries "B" Preference were crossed at Rs. 61.50.

Contrary to the general trend, bank shares were reasonably steady. Punjab National improved from Rs. 57 ex-dividend to Rs. 57.50 ex-dividend, while United Commercial were unchanged at Rs. 57.50 as were Hind Bank at Rs. 32.50. A small lot of Bank of Bikaner was placed at Rs. 18.

In the railway section, Dehri-Rohtas were transacted around Rs. 10.19 and a small lot of Howrah-Amta were done at Rs. 45.

In cotton textiles, Jayshree were offered at Rs. 6.25 and Kesoram were lower at Rs. 12.12. New Victoria were depressed at Rs. 1.50. Elgins were marked down today from Rs. 19.69 to Rs. 17.75.

There were few price changes in the coal section, but on the whole dull conditions prevailed. Bengal were marked down to Rs. 215 and New Beerbhoom to Rs. 13.37. Amalgamated changed hands at Rs. 14.50 and Dhemo Main were offered at Rs 5.37. Burrakur idled around Rs. 22. South Karanpura were shaded at Rs. 8.12 but Western Bengal Coalfields were slightly better at Rs. 5.62.

Jute shares continued their downward trend, as will be seen from the following price table:

	Opening 14th August	Opening 21st August
	Rs.	Rs.
Agarpara	7.31	7.25
Anglo-India	135	133
Birla	14.31	14
Cheviot	125	115
Howrah	16	15.50
National	17.80	17.60
Orient	92	90

In the electric suuply section, there was some enquiry for Calcutta Electric at the lower rate of Rs. 12.31. Benares were shaded at Rs. 16.12. There were sellers of Patna at Rs. 10.50 but Agra and United Provinces were sought after at Rs. 120 and Rs. 121, respectively.

Sugar shares spent an extremely dull week and very few transactions were reported. Belsund were offered at Rs. 10.25, against an opening quotation of Rs. 10.81, while Carew were unchanged at Rs. 7.25. Dyer Meakin were slightly easier at Rs. 6.37 and Champaran were lower at Rs. 20.50.

In the engineering section, Indian Iron met with heavy selling pressure and the price was marked down at one time to Rs. 18.60 cum-dividend, against an opening price of Rs. 19.10 cum-dividend; tonight's settlement rate was Rs 18.74. Ex-dividend dealings will commence in these shares with effect from the next settlement and business in the few shares will cease from today, as both will now rank *pari passu* for the dividend for the period ended 31st March, 1958. There were sellers of Jessop at the lower rate of Rs 22 and Richardson and Cruddas at Rs. 11.37. In contrast, there was good enquiry for Kumardhubi Engineering at Rs. 9.56. Textile Machinery, in sympathy with other speculative issues, were marked down from Rs. 17.22 to Rs. 16.15, which is tonight's closing quotation. Burn met with investment enquiry at Rs. 318, as did Braithwaite at Rs. 27.75 and Guest, Keen, Williams at Rs. 28.87. Business was reported in Indian Steel and Wire Products fully-paid ordinary at Rs. 56.75.

Paper shares suffered widespread losses, including India Paper Pulp which were marked down to Rs. 19.50, Orient to Rs. 22.50. Shree Gopal to Rs. 14.75, Sirpur to Rs 8.50 and Titaghur to Rs. 33.12. In contrast, Star Paper spurted today from Rs. 10.25 to Rs. 11.50.

In cement, Ashoka were quiet at Rs. 9.12 and Jaipur Udyog were crossed at Rs. 12. Orissa

Cement were reasonably steady at Rs. 13.87 but Sone Valley were depressed further *to Rs. 5.69.*

Among insurance shares, Concord of *India* changed hands at Rs. 11.12 and Ruby General, on the announcement *of a higher* dividend of 62 nP, against 50 nP for the previous year, was steady *at Rs. 6.75.*

In spite of the select committee's proposal to exempt shipping *companies from payment of the* wealth tax, India Steamship showed little change *at Rs. 10.30.* Port Shipping were marked at the higher rate of Rs. 16.19 *and India* General Navigation were unchanged at Rs. 68.

Among miscellaneous industrials, Alkali and Chemical *were easier at Rs. 12.87,* as were Aluminium Corporation at Rs. 11.06 *Angelo Brothers* were shaded at Rs. 19 and Balmer Lawrie were offered *at Rs 150.* British India Corporation were depressed at Rs. 5.95, as were *Clive Row Investment* at Rs. 10. Dunlop Rubber eased to Rs. 19.44 on *stray selling. F. and C. Osler* were offered at Rs. 3.56 and Hindustan Lever *were crossed at Rs. 20.19.* Hindustan Motors were quiet at Rs. 6.62, as were *Indian Cables* at Rs. 24.25. Indo-Burma Petroleum were marked back to *Rs. 25.75 and* National Tobacco to Rs. 10.44. Steady features were Metal *Box at Rs. 27.75.* National Insulated Cables at Rs. 22.75 and National Carbon *at Rs. 25.44.* Shaw Wallace were dull at Rs. 10.

In the mining section, reports of a lightning strike by the *workers of the Indian* Copper Corporation Ltd., brought the price of the shares *down overnight* from Rs. 3.16 to Rs. 3.04. Karanpura Development dropped *to Rs. 8.75* and Metal Corporation to Rs. 7.75.

Business in tea shares was virtually at a standstill. *Anandabagh* changed hands at Rs. 21.25 and Brahmapootra had sellers at *Rs. 5.06. Ledo* were easier at Rs. 19, as were Dauracherra at Rs. 9.75, and New *Samanbagh* at Rs. 17.87. Teliabara came to business at Rs. 134 and *Jayshree* were traded at *Rs.* 9.37. Hasimara were quoted at Rs 22.81 and *Oodlabari declined* sharply to Rs. 16.75.

* * * *

The HINDUSTAN MACHINE *TOOLS (PRIVATE)* LTD., has earned a profit of Rs. 17.02 lakhs for the year ended *last* March. Depreciation is allocated Rs. 13.03 lakhs. A sum of Rs. *3.38 lakhs has* been utilised to write down development and commissioning *expenditure,* leaving Rs. 61,457 to be carried forward. The directors hope *that a net profit* from the first year of trading will be regarded by the shareholders *as gratifying,* "in view of the many pessimistic and critical *forecasts which had* gained currency in the past. These favourable results are mainly due to the inherent skill of the Indian workman for high precision work developed through intensive *and scientific training* programmes organised at the factory."

* * * *

The profit of the MURPHULANI (ASSAM) TEA *COMPANY has increased* by Rs. 1.57 lakhs to Rs. 4.16 lakhs for the year ended last *December. Taxation* provision absorbs Rs. 1.75 lakhs. Bringing in Rs. *33,401, there is Rs. 2,74,252.* General reserve is allocated Rs. 1½ lakhs *against Rs. 1 lakh.* The preferred ordinary dividend has been raised to Rs. *2.50 from Rs. 1-12* a share, and the ordinary dividend has been increased *from Rs. 1-4 to Rs. 2* a share. The carry-forward is Rs. 39,252. The crop *increased from 5,162* maunds to 5,244 maunds and the average sale price *rose from Rs. 2.47 a lb* to Rs. 3.05 a lb. Estimates for the current year have *been made* for a crop of 5,500 maunds at a cost of Rs. 7.54 lakhs.

* * * *

The profit of the INDIAN IRON AND STEEL COMPANY *has* declined by Rs. 17.89 lakhs to Rs. 6.39 crores for the year *ended last March.* The directors consider that out of the profit, provision should be made for possible future adjustment of dividend on the recently increased *ordinary share* capital of the company. Accordingly, out of the balance of profits of *Rs. 2,06,47,762* a sum of Rs. 50 lakhs has been transferred to *dividend adjustment* account and Rs. 1 crore set aside on works and ore mines new extension reserve, leaving an amount of Rs. 56,47,762. To this is added *the balance of Rs. 4,49,314* brought forward from the previous year, making a total of *Rs. 60,97,076.* The ordinary dividend of Re. 1 a share will absorb *a sum of Rs. 51,83,706,* leaving a balance of Rs. 9,13,368 to be carried forward. Not*able allocations include* depreciation Rs. 1.35 crores (against Rs. 1.20 *crores). taxation* provision Rs. 3.19 crores (Rs. 2.88 crores). taxation contingencies *reserve Rs. 22* lakhs (Rs 23 lakhs), plant rehabilitation reserve Rs *45.10 lakhs (Rs. 594* lakhs), extensions special reserve Rs. 23.70 lakhs (Rs. 29.48 *lakhs).* works and ores reserve Rs. 1 crores (same) and general *development reserve Rs. 9½* lakhs (Rs. 7 lakhs). The output of pig iron declined *from 706,986 tons to 695,156* tons. Steel ingots increased from 531,508 tons to *532,315 tons* and saleable steel fell from 452,910 tons to 443,721 tons. Despatches *of steel* were lowered from 451,591 tons to 420,477 tons. The directors *state that* good progress continues to be made on the 1953 extensions programme. *The first additional* battery of coke ovens is scheduled for commissioning *during the last quarter* of 1957, although its actual starting up will depend *on adequate* increased supplies of coal being assured, *a matter* which at present gives cause for some anxiety. The commissioning of the first *additional* blast furnace is scheduled for the end of 1957. but *this in turn will* depend on the starting up of the new coke ovens battery and *the availability in* Burnpur of the increased requirements of ore and *limestone.* Some difficulty has been experienced over late delivery of plant for the *mechanisation of* the Gua ore mines, but. "given facilities for stock*piling of ore,* this position would not of itself operate to delay the bringing into production of the new blast furnace. The adequacy of rail trans*port for the* conveyance to Burnpur of the increased quantity of ore, both for initial stockpiling and for subsequent operational requirements, is how*ever a matter* for grave concern, and will be the deciding factor in this connection."

* * * *

The reduction of the capital of the CONSOLIDATED *TIN MINES OF BURMA LTD.,* involving the repayment to members *of 3s and the* cancellation of 1s on every 5s share held by them, has been confirm*ed by the* High Court of Justice in England. The repayment is to be satisfied by the transfer to members of one share of 3s in the capital of the *company's* subsidiary Contin Finance and Mining Co. Ltd. for every 5s share held. Steps are being taken to convert Contin Finance and Mining Co. *Ltd. into* a public company. These will be completed in the near *future, and an* application will be made to the Council of the Stock Exchange, *London,* for permission to deal in its shares. Certificates for the 1s shares of the Consolidated Tin Mines of Burma Ltd. and the 3s shares of Contin *Finance and* Mining Co. Ltd. will be prepared in favour of shareholders on the register *of the Con*solidated Tin Mines of Burma Ltd. at the close of *business on* 31st August, 1957. Only shareholders registered on 31st August, 1957. will be *recognised* by the company for distribution purposes under the capital *reorganisation* scheme.

Bombay Market

DEPRESSED CONDITIONS PREVAIL

FEARS OF CHANGES IN EXCHANGE RATES

Wednesday Evening.

DEPRESSED conditions prevailed in the Bom*bay stock market* during the past week and equity prices slumped on heavy *selling pressure.* Operators were disappointed by the report of the select committee on the Wealth Tax Bill, as it was feared *that the modifications which had* been suggested were inadequate. Rumours about devaluation of sterling, following the devaluation of the *French franc a few days ago, caused* nervousness. Towards the close, sentiment improved slightly on the belief that there is no prospect of any change in the *value of the pound, as the British economy* is in a healthy condition.

Tata Steels closed at Rs. 169 and Indian Irons *were* quoted at Rs. 18.75. Other engineering shares were freely offered *without attracting any worth*while support. Tata Locomotives declined to *Rs. 142.50* and Premier Construction were available at Rs. 154. Alcock *Ashdown were shaded at* Rs. 245. Except for scattered interest in Premier *Automobiles* around Rs. 91 on reports of increased sales, automobile shares *lacked interest. Hindustan* Motors were freely offered at Rs. 6.65.

Mill shares were depressed because of uncertainties *about* the outlook for exports. The maintenance of the interim dividend of Rs. 7 a share by Bombay Dyeing disappointed the market. *The scrip were quoted at Rs. 53.50* on the basis of Rs. 25 paid-up a share. The Stock Exchange authorities decided to allow the scrip to be quoted on this *basis in lots* of ten shares each in order to help the company's move to split up each share of Rs. 250 into ten shares of Rs. 25 each on 1st October. Later *the scrip are expected* to be quoted in lots of five shares each. Century fell to Rs. 400 on heavy selling pressure. Kohinoor were taken at Rs. 262.50 and *Simplex were bought at Rs. 160.50.* Svadeshi came to hand at Rs. 172.50 and India United Ordinary were done at Rs. 11.20.

Miscellaneous industrials declined in sympathy with the general trend. *Among mining shares,* Indian Copper slumped to Rs. 3.06 on selling pressure *from* Calcutta interests and Shivrajpur Syndicate were fractionally *lower at Rs. 81.50.* Cement shares were subdued on reports of mounting *stocks* because of transport bottlenecks. Associated Cement were *lower at Rs. 156.50 and* Digvijay Cement were bought at Rs. 135.50. Shipping shares were relatively steady on the report that the industry would be *exempt from the* scope of wealth tax. Scindia Steam were transacted *at Rs. 19.70* and Great Eastern Shipping made Rs. 22.35. National Rayon declined to Rs. 220 and Tata Chemicals were available at Rs. 17.80.

Routine business was done in banking shares and *fluctuations were narrow. United* Commercial Bank were done at Rs. 57.50 and Bank of India realised Rs. 137. There was little interest in insurance shares, *and New India* Assurance were taken at Rs. 42.75.

Electricity supply companies were lower, where changed. Ahmedabad Electric were shaded at Rs. 94 and Tata *Power made Rs. 1,158.75.*

THE WEEK'S TRANSACTIONS

[In the *following* list of stocks and shares in which transactions have taken place during the past week the figures *indicate* Opening Quotations Highest for the week, Lowest for the week *Closing Quotations,* Quotations for the Corresponding Closing Date a Year Ago, the last-named *being* shown in parentheses and will not be given where such a quotation is not available. Figures *given* after a stroke (/) mean Naye Paise].

DUTCH SUPPORT FOR COMMON MARKET PLAN

TALK OF NORTH EUROPEAN CUSTOMS UNION

(FROM A CORRESPONDENT)

THE Netherlands Government has submitted to the second chamber of the States-General Bills ratifying the treaties on the establishment of the European Common Market. The Government emphasises the compromise nature of the two treaties. The most obvious advantage Holland may expect to derive from the Common Market Treaty is the increased sales opportunities which will gradually open before its industries as trade barriers are removed. For the Dutch economy, the prosperity of which depends much on exports, the extension of the market is of first importance. Holland will be able to benefit by the gradual improvement in the specialisation of production in Europe. These improvements will enable Dutch firms to employ production methods which will reduce costs.

Dutch imports will gain from the possible results of increased specialisation. Ultimately, trade will benefit by the accompanying increase in the volume of exchange transactions. The Government points out that in recent years, Dutch exports to the member countries of "Little Europe" have increased at a greater rate than exports to the rest of the world. The proportion of the Netherlands' exports to the five partners of the common market scheme rose from 32 percent of the total in 1949 to 40 percent in 1956.

Some Objections

One of the Government's objections to the treaty is that, in general, the other participating countries are more protection-minded than the Netherlands; the proposed external tariffs of the European Community will be even higher than the existing Netherlands (Benelux) Customs tariffs. Despite this, the Netherlands will always advocate the most liberal trade policy possible.

The Government also recognises the danger that the creation of the Community may increase wage and price levels in Holland, although the number of treaty obligations having an immediate effect of increasing prices is small. Reference is made to greater parity between men's and women's wages and the possible introduction of an overtime regulation similar to that existing in France. The two categories together may increase prices by 6 to 7 percent. Account should also be taken of the effect of the increased tariff for non-member countries, which over a 12-year period may lead to a price rise of about 2 percent.

Adverse Trade Balance of Holland

During the first six months of 1957, the Netherlands had a deficit of $(U.S.)20,475,000 in the balance of payments with the member countries of the European Payments Union. This deficit was reduced by $1,419,000, representing the amount the Netherlands received as interest on her claim on the European Payments Union for the first six months of 1957. Of the remaining deficit (figures in U.S. dollars) of $19,056,000, $14,292,000 was paid in gold or dollars, reducing the debt to $4,764,000. An amount of $11,745,000 was received under the consolidation agreements concluded with Denmark, the U.K., France, Italy, Norway and Iceland. As a result of all these movements, the Netherlands' claim on the European Payments Union fell from $109,962,000 at the end of 1956 to $93,453,000 at the end of the first six months of 1957.

Deficit in Swedish Foreign Trade

Sweden's foreign trade during the first half of 1957 resulted in a deficit of Kr. 1,039 million ($(U.S.) 202 million), compared with Kr. 937 million for the same period of last year. Imports were up from Kr. 5,463 million to Kr. 6,397 million ($(U.S.)1,242 million), and exports from Kr. 4,527 million to Kr. 5,358 million ($(U.S.)1,040 million). The June trade statistics showed a decline for both imports and exports compared with the high figures for May. The former fell from Kr. 1,122 million to Kr. 995 million, while exports were down from Kr. 1,065 million to Kr. 909 million.

Nearly one-third of the over Kr. 900 million increase in the value of imports during the first six months of the current year, as compared with January-June 1956, was accounted for by machines, transport and instruments, Kr. 160 million by iron and steel and Kr. 200 million by liquid and solid fuels. Of the over Kr. 800 million increase in exports, nearly Kr. 300 million was from forest products, Kr. 150 million from vessels and close on Kr. 200 million from other means of transport, machines and instruments.

On the import side, coke and coal were up from 2.2 million tons in January-June 1956 to 2.5 million tons in the same period of this year, while mineral oils decreased from 4.8 million tons to 4.7 million tons. Imports of iron and steel rose from 328,000 tons to 455,000 tons, and of motor vehicles from 49,517 units to 57,361 units. Textile imports showed an increase in value from Kr. 581 million to Kr. 635 million. On the export side timber shipments increased. Other increases were in chemical pulp from 875,000 tons to 968,000 tons, paper and board from 444,000 tons to 500,000 tons, iron and steel from 153,000 tons to 162,000 tons, and iron ore from 7.5 million tons to 7.8 million tons. Ship exports increased in value from Kr. 257 million to Kr. 410 million.

Swedish Industrial Output Rises

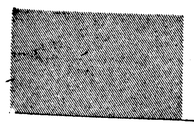
Sweden's industrial production in the first five months of 1957 was about 5 percent higher than in the same period of 1956. According to the production index of the Federation of Swedish Industries, the total production volume registered for May stood at 255 against 244 in May last year (1935=100). Iron ore mining attained in May the highest production figure hitherto recorded, while the output of iron and metalworking industries showed a marked decline. The pulp and paper industry recorded considerably increased production, and the favourable trends noted earlier for the timber industry continued during May. The food industry produced less than during the preceding month and during May 1956.

Sweden's overall gold and foreign exchange reserves dropped by Kr. 163 million to Kr. 2,602 million (£179 million or $505 million) during the first half of 1957. This compares with a decline of Kr. 279 million to Kr. 2,272 million in January-June 1956. The Riksbank's holdings increased by Kr. 19 million to Kr. 2,467 million over the first six months of 1957, while the net sight foreign claims of the commercial banks decreased by Kr 182 million to Kr. 135 million. The composition of the overall reserves improved in so far as the relative share of gold and dollars in the total holdings rose from 92 to 99 percent. The gold reserves fell by Kr. 181 million to Kr. 1,195 million, while dollar holdings rose by Kr. 209 million to Kr. 1,380 million. A decline of Kr. 238 million to Kr. 132 million was noted for European Payments Union currencies.

Collaboration with Canadian Firm

Stora Kopparbergs Bergslags A.B., the large Swedish steel and forest industry combine, will collaborate with a newly established company in Canada, Nova Scotia Pulp Limited, by placing technical experts in forestry at the latter's disposal, according to a news report. The Swedish firm will also grant licences for processes for the production of bleached pulp developed at its Skutskar mills.

Additions to Norwegian Merchant Fleet



The Norwegian merchant fleet, according to the Norwegian *Veritas*, on 1st July reached a total of 8¼ million gross tons, of which 4½ millions were tankers. During the first six months of 1957, 102 ships—totalling 528,000 gross tons—were added to the fleet. Of these, 21 ships of 271,000 gross tons were tankers. In Norwegian yards alone, 214 ships of 1·8 million gross tons were at the same time either under construction or contracted for.

Whale and Sperm Oil Output

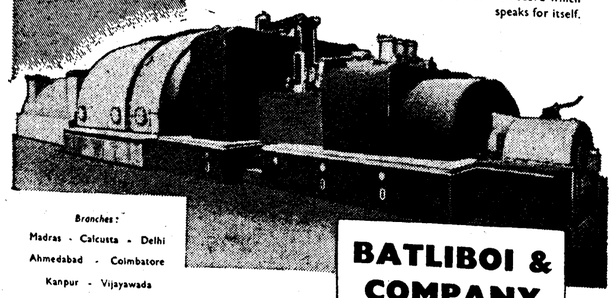
Of the total quantity of oil produced in Antarctica during the 1956-57 season, that is, 435,000 tons of whale oil and 90,000 tons of sperm oil, the Norwegian expeditions produced 171,000 tons of whale oil and 20,000 tons of sperm oil. This showed an increase compared with the previous season's production. The U.K. produced 66,000 tons of whale oil and 6,000 tons of sperm oil while Russia's figures were 28,000 tons and 15,000 tons. There was a slight reduction for both the latter countries compared with their last season's output.

Northern Customs Union Move

In all the northern countries, the question of a northern Customs Union and its relation to the European Common Market and the European Free Trade Area, is being widely discussed. A committee representing the four northern countries has agreed on a report which is now being considered by the respective Governments, and which, it is said, proposes the establishment of a common Scandinavian market. Norwegian and Danish papers, in their comments, are emphasising that the British policy in favour of keeping agricultural produce, including fish, outside the Free Trade Area is complicating the matter and making a solution more difficult. In the European Customs Union—"Little Europe"—the problem may partly be solved by the introduction of common minimum prices, while the U.K. still insists that agricultural produce must not be included in the European Free Trade Area. The Norwegian newspaper *Aftenposten* writes that if the U.K continues this policy, the result may be that Denmark will be forced to join the European Customs Union, and this may then put an end to the move for establishing a Northern Customs Union.

BATLIBOI & CO

Representing Leading FRENCH Manufacturers



ALSTHOM ☆ NEYRPIC

C.G.E. (Compagnie Générale d'Électricité)

for Complete Plant and Equipment for Thermal and Hydro-Power Stations

The picture is of the Power Station of CREIL-ST-LEU (Oise), France, showing one 125,000 kW, 15.5 kV. hydrogen cooled turboset running at 3000 rpm, steam pressure 1250 psig, at 1000°F. with reheat at 240 psig to 1000°F, supplied by Messrs. Alsthom in 1956.

In the years 1949-1953, Messrs. Alsthom supplied in France, Holland, Spain, Poland and Turkey about 20 turbosets for a total of 1,200,000 kW—a record which speaks for itself.

PROGRESS OF N.I.D.C. INDUSTRIAL PROJECTS REVIEWED

SELECT COMMITTEE REPORTS ON WEALTH TAX BILL

(FROM OUR NEW DELHI CORRESPONDENT)

THE latest report of the National Industrial Development Corporation reviews the progress of various industrial projects. To develop the production capacity for the manufacture of heavy industrial plant and machinery, the Corporation had from the start a number of heavy engineering projects in view. These included a heavy foundry for grey iron and steel castings, a heavy forge shop and a heavy structural works. Since then a great deal of consideration has been given to the whole problem. At the invitation of the Central Government, a team of experts from Russia and another team from the United Kingdom sponsored under the joint auspices of the Colombo Plan and the Federation of British Industries visited India and submitted reports recommending the projects to be undertaken in this field. Both these reports clearly indicate the importance of setting up the production capacity for heavy castings and forgings. The foundry-forge project, which the Corporation had planned for this purpose, has made substantial progress. Detailed projects have been received from firms, one from Czechoslovakia, one from the United Kingdom and two from Western Germany. These are being scrutinised by the Government. A decision will be made on the implementation of the scheme in the context of the overall programme for the manufacture of heavy machinery, taking into consideration the Russian and British teams' reports.

Intermediates for Organic Chemicals

Most of the organic chemical industries in the country today—drugs, dyestuffs, plastics, etcetera—are based on imported intermediates. With the expansion which is taking place in the steel industry, it will be possible to manufacture most of these intermediates by utilising coke oven by-products and the coal tar available from them. As the local dyestuffs industry is undeveloped, the Corporation invited a technical team of experts from Italy to come to India and prepare a report on the scope and pattern of developing the manufacture of intermediates, taking into account the future development of the dyestuffs industry. Reports on the same subject were also submitted to the Government by a consortium from Western Germany and a firm in the United Kingdom, besides a study voluntarily undertaken by a group of young Indian technicians. A team of experts from Russia went into the intermediate requirements of the drugs and pharmaceuticals industry. On the basis of these reports and the clarification which has since become available of the programmes of dyestuffs manufacturers, a project for the manufacture of the more important intermediates including, but not confined to, the primary intermediates, has been drawn up; the terms of its execution are being negotiated with overseas firms which have offered their collaboration in this field. It is expected that a final agreement with one or two of them will be reached very soon.

Alloy and Tool Steels

With the industrial development of the country, and especially with the emphasis on the manufacture of industrial plant and machinery, there will be a growing demand for special alloy and stainless steels. Preliminary reports for a project to produce these have been received from firms in Czechoslovakia, France, Italy and the United Kingdom. The first two have given their proposals for a plant with a capacity of 20,000 to 25,000 tons a year for rolled and forged steel sections and 7,500 tons of tool steel sheets and stainless steel sheets; the plant could be expanded later. The other two proposals are for a plant of 100,000 tons initial capacity. Discussions are in progress on the size of the project and the method of implementation.

Expansion of Aluminium Production

The consumption of aluminium has been steadily increasing and the gap between production and demand by 1960-61 is expected to be about 15,000 to 20,000 tons a year. The country has adequate supplies of bauxite and with the development of new hydro-electric projects from which cheap power will be available, the expansion of the aluminium industry has been engaging the attention of the Government. An expert committee set up by the Government has recommended the setting up of units of 10,000 tons annual output, with scope for expanding them to 20,000 tons or more as soon as might be feasible. The Government decided that the National Industrial Development Corporation should process one such project, so the latter invited experts from the U.S.A. to study the economic and technical aspects. Based on the report, negotiations are now in progress with a number of important manufacturing groups. The question of the second plant of similar capacity will be taken up when a financial provision is available for it.

Synthetic Rubber Plant

The present demand for rubber (both natural and synthetic) is about 28,000 tons and it is likely to increase to 45,000 tons in 1960-61. The production of natural rubber is about 21,000 tons and both natural and synthetic rubber are being imported to fill the gap. Even though efforts are being made to expand the production of natural rubber and offtake for the entire output will be assured, a gap will remain to be filled by the local production of synthetic rubber. Its inherent physical and chemical properties give it a superiority over natural rubber in many applications. Furthermore, the production of synthetic rubber will offer an economic outlet for the alcohol from sugar factories which by 1960-61 is expected to amount to 40 million gallons.

The Corporation invited a team of experts drawn from a consortium of four well-known U.S. companies to study and work out a preliminary project for making 20,000 tons of synthetic rubber a year. This study was followed by an independent assessment by another large manufacturer-consumer of synthetic rubber and both the reports indicate that the scheme is technically feasible. Negotiations are in progress with firms interested in collaborating in this field for setting up manufacturing capacity not only for synthetic rubber but also for the chemical components. The styrene project will be located in Rourkela and the synthetic rubber plant will be established in Bareilly.

Manufacture of Cinema and X-Ray Films

The demand from the Indian film industry for cinematographic film is likely to increase from 300 million feet today to 400 million feet by 1960-61. There is also a considerable volume of demand for X-ray films and photographic paper. At the invitation of the Central Government, a team of experts from Eastern Germany visited the country in 1956 and submitted a preliminary report on the technical and economic aspects of the scheme. Negotiations for implementing the project are in progress. The plant is most likely to be located in Ootacamund.

Newsprint Plant Project

A team of experts from a firm in Western Germany, which was invited to explore the scope for making newsprint from bagasse as well as to survey the prospects of making rayon grade wood pulp from some indigenous raw materials, particularly bagasse, indicated that it would be possible to make newsprint from sugarcane bagasse and that a plant of 30,000 tons initial capacity could be set up near Shakarnagar in Andhra State. This would help to cover a large part of the gap between the current demand of about 80,000 tons and the capacity output of 30,000 tons from the only newsprint mill in the country. The Corporation has been conducting further negotiations for implementing the project.

Demand for Basic Refractories

With the expansion of the steel industry the demand for basic refractories is growing very rapidly. After preliminary discussions with a number of firms, two proposals—one from a U.S. firm and another from a French group—are being studied and have been referred for technical examination to the consultants to the Government of India.

Sulphur from Pyrites

Since there are no indigenous sources of sulphur and there is an imperative need for ensuring supplies of this commodity from local sources to meet the needs of essential industries, a proposal has been worked out for converting indigenous pyrites into sulphur by a suitable process, such as the "Orkla' process. Before proceeding further in the matter and discussing with possible firms how to secure their full technical collaboration, it is necessary to make sure of adequate supplies of pyrites for an economic unit. The most fruitful source is said to be in Amjhor in Bihar and work on prospecting and proving these deposits is to be expedited. It is proposed to establish a National Pyrites Mining Corporation Private Ltd. at a very early date.

Problem of Funds

The implementation of these projects will, however, depend on the availability of funds. As indicated by the Finance Minister, the Government is already committed to projects, both in the public and private sectors the foreign exchange part of which is placed at Rs. 900 crores. Deferred payment is one media through which it is proposed to finance these projects. Here again, the Russian credit is a certainty. The Russian team is expected shortly to finalise about five projects. The U.S. President's special fund for under-developed countries may provide money for some other projects.

No Loan from the London Market

The Finance Minister, Mr. T. T. Krishnamachari, told the Lok Sabha that the Government was not negotiating for a rupee stabilisation credit from the London market. The Minister added: "We do not approach the market for a loan unless we are certain of an encouraging response. The London money market is not presently responsive to India and is not prepared to accord trust-eship status to Indian loans if they are floated." The Minister disclosed that certain small loans, mostly by the private sector, were being floated abroad.

Discussion on Oil Refinery

The Minister for Natural Resources, Mr. Malaviya, replying to a question, said that no final agreement on the formation of a rupee company for the production of crude oil had yet been reached with the Assam Oil Company. Among the points at dispute was the price of crude oil. There was, however, agreement that the Government's share in the proposed rupee company would be 33⅓ percent. The company will be responsible for the production of crude oil and possibly for its transport. This question, he said, had been delinked from that of the oil refinery.

Pending a decision on the location of the proposed refinery, negotiations had been suspended by the Assam Oil Company, although the Government was pressing for their resumption, the Minister said. Referring to the last annual report of the Burmah Oil Company, wherein its directors had declared their inability to recommend further investments in India so long as the present conditions continued, the Minister said that it was for the company to map its future course in the light of the Government's latest terms. He added that India would demand better terms than Burmah-Shell had recently offered to Pakistan.

Rephasing of the Plan

Rephasing is the latest device to put off individual projects without altering the facade of the second five year plan. According to reports, the number of fertiliser projects, for example, has been reduced to one, namely, that at Nangal. Heavy electrical equipment and hydro-electric projects, similarly, have been severely pruned. Even this device will not solve the problem of meeting the foreign exchange deficit. As indicated by the Finance Minister last week, India's present foreign exchange commitments amount to Rs. 900 crores. These commitments cover development in the private sector for which import licences have already been issued, and the "core of plan" consisting of the steel plants, railway and transport development and ports and coal. The completion of the "core" by 1961 will need another Rs. 300 crores, against which the Government has certain credits amounting to Rs. 275 crores. The Government, it will thus be seen, has to find nearly Rs. 1,000 crores of foreign exchange to honour its existing commitments.

It may be added that a large number of still uncommitted projects include those drawn up by the National Industrial Development Corporation—heavy machinery, dyestuff intermediates, alloy and tool steels, aluminium, synthetic rubber, raw film, newsprint and basic refractories—and oil production and prospecting. Two courses are open to the Government, namely, to make all-out endeavours for raising foreign loans or to stop making fresh commitments. The possibility of raising loans in the London money market has been ruled out at present. The other possibility of raising a loan in the United States is, however, being explored. The forthcoming visit to the United States of the Finance Minister is, therefore, being watched with great interest.

Report on Wealth Tax Bill

The report of the Select Committee on the Wealth Tax Bill was presented to Parliament last week. The Committee has made several changes in the Bill, the most important of which are as follows. In the opinion of the Committee, livestock and animals intended for the personal or household use of the assessee should not be subject to wealth tax. It has therefore excluded animals as a category from the definition of assets. The Committee feels that tools and implements used for raising agricultural produce should be exempted from the tax. In its opinion, a right to annuity should be excluded from assets only if the commutation of any portion thereof is precluded by the rules applicable thereto. This item has accordingly been split up. The period of five years referred to in the original items (f) (iv) has been increased to six years in order to bring it in line with the pattern of the Indian Income Tax Act, 1922. It has been clarified that debts relating to assets which are exempt from wealth tax are not to be deducted from the gross wealth of the assessee.

Definition of Net Wealth

On the definition of "net wealth", the Committee has noted the assurance given by the Finance Minister that if any asset referred to in the said definition is lost or stolen or destroyed, it will not be included in computing the net wealth of an assessee, provided it has not been insured. Necessary instructions on this will be issued to the authorities concerned. In connection with the definition of "company", the Committee has considered the question whether companies should be excluded from the purview of the Bill. It is of the opinion that they should not be excluded. It feels that avoidance of wealth tax by the original transferor, by reason of the transference or converting of the assets transferred into other assets, should be prevented. The Committee also feels that the expression "irrevocable transfer" should be clearly defined. It considers that some *bona fide* transfers might have been effected in the past either with or without adequate consideration. It feels that there should be a demarcation line to distinguish such transfers from those which may have been effected after the introduction of the Bill to avoid the tax. The Committee further feels that in making rules for ascertaining the interest of an

assessee in a firm or association, the rule-making authorities should be guided by some principles like those contained in Partnership Act, 1932. The clause has been recast accordingly.

Religious Properties Exempted

It has been clarified that properties held for any public purpose of a charitable or religious nature in India should be exempted. The Committee is of the opinion that having regard to the covenants and agreements entered into by the Government of India with the former Indian rulers, one building in their occupation should be exempt from wealth tax. This new item has accordingly been inserted. The Committee considers that no exemption should be given for any property used by an assessee solely for the purposes of his own residence. However, to avoid hardship in the case of houses situated in rural areas, it feels that one house belonging to the assessee, exclusively used by him for residential purposes and situated in a rural area, should be exempted. This item has therefore been inserted. An item has been inserted in order to make it clear that a vested interest which is not in the possession or enjoyment of the assessee should not be included in his wealth. The Committee is of the opinion that there should be total exemption for household assets other than jewellery and in the case of jewellery exemption up to the value of Rs. 25,000 should be provided. The original item (vi) has been recast accordingly.

Agricultural Tools and Implements

Tools and implements used by the assessee for the raising of agricultural produce should in the opinion of the Committee be exempt from wealth tax but not plant or machinery used in any tea or other plantation in connection with the processing of any agricultural produce or in the manufacture of any article from such produce. This new item has therefore been inserted. In the case of tools and instruments necessary to carry on one's profession or vocation, the Committee feels that in view of the present high prices of such tools and instruments, the exemption limit should be raised from Rs. 2,500 to Rs. 10,000. The Committee considers that drawings, paintings, photographs, prints and other heirlooms not intended for sale should also be included in the list of exemptions. It however, considers that for the purposes of exemption, heirlooms should not include jewellery. The original item (iii) has been recast accordingly.

Exemption on Jewellery of Rulers

So far as rulers of former Indian States are concerned, in view of the fact that certain jewellery has been treated as State property and certain jewellery as the personal property of the rulers, the Committee feels that special provision should be made for the exemption of jewelleries in the possession of any ruler, not being his personal property which has been or may be recognised as his heirloom. A new item provides for the exemption of shares held by one company in another company, including shares held by a person in a company which is not for the time being liable to pay wealth tax by virtue of the provision contained in Clause 45(d). Such investments are in the nature of inter-corporate investments which, in the opinion of the Committee, require special consideration. It feels that an exemption similar to that provided in Clause 45(d) should be available to companies which undertake substantial expansion of their undertakings. The exemption should be confined to that portion of the companies' assets which are employed in the new unit. For the purpose of obtaining the exemption, the new unit should be a separate one with its own accounts and should satisfy the same conditions as are laid down for the undertakings mentioned in Clause 45(d). A new item makes provision for this purpose.

Redraft on Deposits

A redraft makes it clear that although wealth tax is not payable on the amount of deposits, etcetera, they are to be included in computing the net wealth. In the opinion of the Committee, provision should be made to prevent avoidance of wealth tax by an assessee changing his taxable investments into exempted investments near about the valuation dates. A sub-clause has been inserted accordingly. The Committee feels that individuals and Hindu undivided families not resident or not ordinarily resident in India and companies not resident in India should obtain exemption for their assets and debts outside India. The original clause was confined to individuals who are not citizens of India or to Hindu undivided families or companies not resident in India. The clause has been recast accordingly.

Time Limit on Assessment

The Committee feels that in order to avoid any harassment or hardship to the assessee, a time limit should be fixed for reopening cases of wealth escaping assessment. A period of eight years for cases falling under Clause (a) and four years for cases falling under Clause (b) appear to be reasonable for this purpose, in the opinion of the Committee. The clause has been amended accordingly. It feels that in the case of a Hindu undivided family, the exemption limit should be raised in item (b) (i) from Rs. 3 lakhs to Rs. 4 lakhs and in item (b) (ii) the limit should be reduced from Rs. 10 lakhs to Rs. 9 lakhs. Part 1 of the Schedule has accordingly been amended. The Committee feels that some special consideration should be shown to a company which has incurred a net loss in any year and which has not declared any dividend on its equity capital for that year. Such a company should be exempted from wealth tax for that year. A proviso to Part II of the Schedule has accordingly been inserted.

Investments of Non-resident Foreigners

In rule 2, the word "private" has been omitted so that the benefit of this rule is available for the value of shares in any company instead of any private companies only, as originally proposed in the Bill. The Committee feels that some special consideration should be given for wealth tax on the value of the Indian investments of non-resident foreigners In the opinion of the Committee, a rebate of 50 percent should be allowed in these cases. This new rule 3 to the schedule has therefore been inserted. In the case of the assets of an assessee being located partially in India and partially outside India, the Committee feels that a proportionate rebate of 50 percent on assets located outside India should be given. This new rule 4 has therefore been inserted. The Committee feels that some special consideration should be shown to companies where the profits made in any year are less than the wealth tax due for the relevant assessment year. In the opinion of the Committee in order to avoid hardship to such companies, the wealth tax payable for the assessment year should be limited to the amount of profits. This new rule 5 has therefore been inserted.

New Parity for Oil Prices

The oil companies have conceded a long-standing demand to delink Middle East oil prices from Mexican Gulf prices. A new category called the Persian Gulf prices has been created to distinguish it from the Mexican Gulf prices. The Minister for Gas and Oil, Pandit K. D. Malaviya, estimates a saving of Rs. 1 to Rs. 2 crores a year by this change. The following are the estimates of the crude and product imports and exports of India during the years 1956 and 1957:

	1956		1957	
	Imports	Exports	Imports	Exports
	(in thousands of barrels)			
Crude Petroleum	27,000	—	30,700	—
Aviation Gasoline	800	—	950	—
Motor Gasoline	350	700	—	1,700
Kerosene	8,000	—	9,450	—
Diesel Oil	1,900	—	1,850	—
Fuel Oil	50	1,750	—	1,050
Other Products	2,600	200	3,100	200
Total Products	13,700	2,650	15,350	2,950

Reports on Transport

Two important reports are still being examined by the Government. They are the report of Sir Ramaswamy Mudaliar's Committee on the railway rate structure and of the Lokur Committee on rail and coastal transport. Indications are that short-distance freights on the railways will become more expensive, perhaps even to the point of being prohibitive.

Increase in Central Clerical Staff

The total number of employees under the Central Government, excluding the railways, rose from 655,484 in April 1956 to 676,091 in March 1957. During these 12 months, the number of unskilled workers declined by 4,028 and that of skilled and semi-skilled workers fell by 3,464. This decline in employment was counter-balanced by clerks, whose number rose by 14,739; and by "administrators", whose number rose by 13,360. According to an employment exchange report, the vacancies notified by the Central Government in May 1957 stood at 8,935 and placements by the exchanges at 6,218. That the economy drive was not likely to affect employment was further indicated by the statement that directions had been issued to all concerned "to observe the utmost economy in the expenditure on travelling allowances, and on items such as furniture, stationery, electricity, telegrams, telephones and the like." Committees had been set up in every Ministry to review the levels of expenditure on staff and contingencies, it was added. It should also have been added that for the last five years, a unit has been examining Ministry-wise the level of expenditure on staff. This unit has produced over two dozen reports but they are gracefully lying in pigeon-holes. The utility of these economy committees is not easily understandable when large sums of money are being spent in creating office and residential accommodation in New Delhi. At the same time, large sums of money have been spent on maintaining Government estates in Simla and other places, where accommodation has been lying unoccupied because the Central Cabinet will not take a decision on the dispersal of non-essential offices from Delhi.

Economy in Cement Consumption

The substitution of cement by lime mortar and the adoption of alternative specifications for buildings to reduce the consumption of cement, have been recommended by the enquiry committee which was set up some time ago by the Central Ministry of Works, Housing and Supply. The committee has suggested that the organisations connected with building works in both the public and the private sectors should make the adoption of its recommendations obligatory, subject to the availability of the proper quality of materials. It has observed that the demand for cement in 1955-56 was 9 million tons, against an output of 4.28 million tons when the installed capacity was 4.93 million tons. The present estimated demand of 9 to 10 million tons is expected to go up to 14 million tons in 1961. In spite of the likelihood of the targets of 16 million tons of installed capacity and 13 million tons of production, fixed for the second five year plan, being achieved, the committee fears that there will still be a shortage. The targetted production, if realised, will provide for 54 lbs of cement a head of population in India compared with 430 lbs in Australia; 521 lbs in Austria; 94 lbs in Brazil; 1,113 lbs in Belgium; 521 lbs in Canada; 622 lbs in Denmark; 499 lbs in France; 736 lbs in Western Germany; 200 lbs in Russia; 536 lbs in the U.K.; 630 lbs in the U.S.A. and 66 lbs in Turkey. The Government has asked foreign embassies in New Delhi to import cement on their own account for their construction work.

Remittance of Foreign Profits

The Central Finance Minister, Mr. T. T. Krishnamachari, told the Lok Sabha that the Government of India was not contemplating any deviation from the accepted international standards of business morality over the remittance of profits by foreign firms operating in India. He was replying to a Communist member, Mr. Hiren Mukherjee, who had asked whether the Government was contemplating any temporary moratorium on the remittance of profits by foreign firms, in view of the country's present foreign exchange position and the Government's cordial relations with foreign investors. Asked whether the Associated Chambers of Commerce, Calcutta, had offered the Government any assistance to ease the difficult foreign exchange position, Mr. Krishnamachari said: "We do not go and approach chambers of commerce for assistance, whatever might be our difficulties." Asked further whether the Associated Chambers of Commerce had made an offer voluntarily, Mr. Krishnamachari said: "No offer is invited; no offer is accepted; and I hope no offer will be made."

The Finance Minister informed another Communist member, Mr. V. P. Nayar, that the profits remitted by foreign firms during 1956-57 were over Rs. 27 crores, of which Rs. 22.4 crores were remitted to the U.K. The Government had complete control over all transactions of foreign exchange that took place through the "traditional channels," he said. Answering supplementaries on the inflow and outflow of foreign capital, the Finance Minister said that on the whole, over a period of five years, India was breaking even in the outflow and inflow of foreign capital.

Indo-Pakistan Financial Issues

Replying to another question the Finance Minister said that he was not quite sure whether the outstanding financial issues between India and Pakistan could be taken to the World Court. Asked what steps the Government was taking to settle these issues, he said that the relationship now between the two countries was such that moral persuasion had no place in a matter of this nature. He added that 20 or 21 financial issues which were fairly big, were still not settled between the two countries. India had to get from Pakistan over Rs. 300 crores as overall Partition settlement. Apart from this, there were a large number of other issues also. Pakistan claimed from India about Rs. 48 to 49 crores on the ground that the divisible assets of the Issue Department of the Reserve Bank prior to Partition had not been completely transferred to her. Asked whether Pakistan was paying India interest on the amount she owed, Mr. Krishnamachari said: "It is common knowledge that no payment is received from Pakistan." Asked what efforts were being made to arrange another meeting of the Finance Ministers of both countries to resolve the outstanding issues, he said that to arrange a meeting, two people must come together. India was prepared, the other was not.

W. German Export Credit

The Finance Minister disclosed that the West German Government at present was not prepared to help its exporters with any form of credit or credit guarantee for providing capital goods either to India or to any other country. He stated that since deferred payment terms for a number of projects were still under discussion, it was not possible now either to indicate the extent of progress made in the scheme or to calculate the increase in the price of machinery due to such arrangements. However, the increase was expected to be of the order of 6 percent, on an average.

Foreign Exchange Fund

Answering supplementaries, the Finance Minister said that the preparations for creating a foreign exchange fund in the Reserve Bank for deferred payment schemes had almost been completed. But that did not mean that the fund would be constituted. The fund would have to be subscribed by those who required guarantees for getting capital goods from abroad on a deferred payment basis. He did not know how many would be prepared to "pay cash down" for the purpose of obtaining the guarantee.

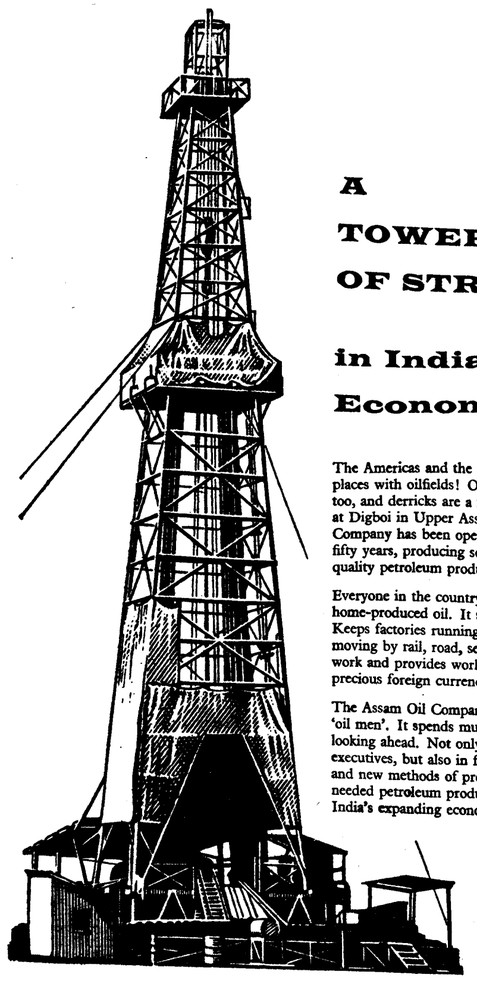
Rise in Capital Goods Imports

Asked why the present foreign exchange difficulties had not been anticipated a year ago, Mr. Krishnamachari said it was true that the question of an "acute" shortage had not been realised, say, two years ago. Nor had it been realised at that time that the import of capital goods in the private sector would be of the magnitude that it had been in the past 18 months. In fact, there had been a "phenomenal increase" in the import of capital goods both on private and public account.

Reduction in Paper Currency Reserve

The Government of India has no intention of reducing below Rs. 300 crores, or abolishing, the paper currency backing held in foreign securities, Mr. T. T. Krishnamachari, Central Finance Minister, announced in Parliament. Such a step, he added, might prove detrimental to India's interests. He disclosed that the fall of Rs. 18.36 crores in the foreign exchange reserves during the week ended 2nd August, was due to the Burma Government drawing Rs. 10 crores out of the loan granted to it last year and remitting that sum to London. On 2nd August, the foreign security reserve stood at Rs. 375.52 crores. The Finance Minister confirmed that the Government of India had permitted the Reserve Bank to reduce for six months the amount of foreign securities required to be held in the Issue Department to a figure below Rs. 400 crores, but at no time less than Rs. 300 crores. "Wait and see" was his short reply to a question as to what he proposed to do after the marginal amount of Rs. 75 crores over the statutory limit of Rs. 300 crores in the paper currency reserve had been exhausted. The Finance Minister estimated Rs. 900 crores as India's present commitments of foreign exchange. He added another Rs. 300 crores to it for the remaining second plan period.

Estate Duty and Gift Tax



He indicated that he proposed to amend the Estate Duty Act to remove the lacunæ found in its working, leading to tax evasion. There was also a proposal to levy a gift tax.

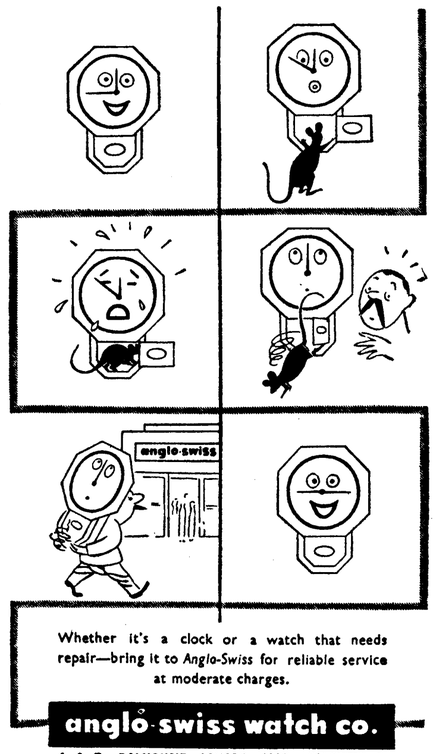
Foreign Visit of Mr. Krishnamachari

The Central Finance Minister, Mr. T. T. Khishnamachari, who will represent India at the forthcoming annual meetings of the World Bank and the International Monetary Fund, due to be held in Washington in September, will be accompanied by his Principal Secretary, Mr. H. M. Patel, the Governor of the Reserve Bank, Mr. H. V. R. Iengar, his private secretary, Mr. C. S. Krishnamoorthi, and two Economic Advisers, one of whom is Dr. I. G. Patel. He is expected to leave India by the middle of September. From Washington, Mr. Krishnamachari will go to Canada to attend the Commonwealth Finance Ministers' Conference in Ottawa. On his homeward journey, he will spend about ten days in England and a week in Western Germany before returning to India about the middle of October.

Higher Salary Scales for Railwaymen

While talk of inflation and interim relief to posts and telegraphs employees was in progress, the Ministry of Railways was busy in upgrading the salary scales of railwaymen. According to the National Federation of Indian Railwaymen, some of the important items of the agreement are: (1) ward-keepers of stores depôts who are at present in the grade Rs. 80—160 will be fixed in the grade Rs. 150—225; and those in the grade of Rs. 150—225 will be taken to the grade of Rs. 200—300. (2) The present basic grade of Rs. 60—130 for sanitary inspectors will be raised to Rs. 80—160, and 60 percent of the total staff will be placed in higher grades of salaries. (3) The percentage of promotion to the categories of artisans, etcetera, from the lower categories (class IV) will be raised to 50 percent in the case of artisan staff, and 25 percent in the case of other staff. (4) Telephone operators at present in grade of Rs. 80—160 will be moved into the grade of Rs. 80—220. It is not surprising that station masters are in revolt.

A TOWER OF STRENGTH in India's Economy



The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

NEW COUNCIL TO REPORT ON ECONOMIC TRENDS

LORD COHEN APPOINTED CHAIRMAN

(FROM OUR LONDON CORRESPONDENT)

THE Council on Prices, Productivity and Incomes upon which—so far as the Government is concerned—much depends in the shaping of future economic policy, came into being last week with the appointment of Lord Cohen as chairman and Sir Dennis Robertson and Sir Harold Howitt as members. It is expected to hold its first meeting this week and it is to be hoped that as a result the public will have some idea of just what its somewhat vague terms of reference really mean. These are: "Having regard to the desirability of full employment and increasing standards of life based on expanding production and reasonable stability of prices, to keep under review changes in prices, productivity and the level of incomes (including wages, salaries and profits) and to report thereon from time to time." So far, the only additional information which has been vouchsafed is that the chosen three will receive no salaries but will be remunerated on the same basis as members of Royal Commissions (a subsistence allowance of £2 8s 6d a day, tax free at present). The Council will be "completely independent and impartial" and as fully informed as the members' own resources and those of the Government can make it. No member will act in a representative capacity. Its reports will not be made to the Government or to Ministers. They will be made to the public at large and will be free to comment on any aspect of Government policy which the Council considers relevant. To some extent its work will be of an experimental character at first. The aim will be to voice informed wisdom.

All three members of the Council are men of eminence in their own spheres. In addition they have been associated previously with important economic enquiries. Lord Cohen, a Lord of Appeal in Ordinary, was for four years in the Ministry of Economic Warfare and was first Chairman of the Royal Commission on Taxation of Profits and Income. Sir Dennis Robertson, retiring professor of Political Economy at Cambridge, has been an adviser at the Treasury and was a member of the Royal Commission on Equal Pay. Sir Harold Howitt, a partner in the chartered accountants, Peat, Marwick, Mitchell and Company, was a member of the Economic Advisory Committee and of the courts of enquiry into the engineering and shipbuilding disputes. Recently he was asked to report on the purchasing policy of the British Transport Commission. No one is likely to doubt either the impartiality or the integrity of whatever advice they may have to offer, for they certainly represent no sectional interests: but the success or failure of the Council's efforts will depend largely on the subjects it chooses for report and whether its arguments will be sufficiently convincing to overcome the open hostility of the trade unions (the employers welcomed the idea but have not commented since the constitution of the Council was announced). Ultimately, however, the responsibility for dealing with economic dangers rests with the Government, for it will have to act on the Council's advice and not shelter behind it as an excuse for inaction. As a starting point the resolutions of the Confederation of Shipbuilding and Engineering Unions in Hastings will provide a useful batch of topics with the 40-hour week, extra holidays with average pay, a further wage rise, etcetera.

Trade Gap Widens

The need for authoritative comment on developments is certainly very necessary at the moment, for the situation in the markets is complex with the pressure on sterling increasing again after the recent improvement, and further complicated by the exchange movements on the Continent. Against this background the provisional trade figures for July are not particularly encouraging. As a result of a sharp rise in imports, Britain's trade gap, measured by the excess of imports over exports, widened last month from £38 million to £68.8 million. This was £12 million more than the monthly average for the first half of the year. Imports in July at £359.6 million were £36 million more than the relatively low June figure. Exports recovered by £5.5 million to £281.4 million, which corresponds to the first half-year average. It remains to be seen whether the rise in imports was due to some special factors, and it would be reassuring to know that exports are rising in line with the increase in production and that the latter is not merely finding its way on to the home market.

What is encouraging is the recovery in exports to the dollar markets. At £38.8 million, sales to the United States and Canada were £4½ million better than in June and at the same level as in May. But the total is more than £5 million below the April peak of £44.1 million. They were, nevertheless, 9½ percent above the first half-year's monthly average. Exports to Canada at £17.7 million increased by £3 million and were 12 percent above the January-June average. The value of goods sold to the United States was £1½ million up at £21.1 million, an increase of 7½ percent on the first half-year's average. Re-exports, however, fell again and at £9.4 million, against £10.1 million in June, were 19 percent below the first half-year's average. The trade figures do nothing to shake the confidence with which the balance of payments prospects for the next 12 months are regarded in official quarters. If there is to be any trouble for sterling, it will come from the capital account—excessive overseas lending and investment, heavy withdrawal of sterling balances, and perhaps speculative movements against the pound. The real danger of the near future would be a loss of confidence rather than a deterioration of trade.

Discussions on Free Trade Area

Recent fears that the British Government had undergone a change of mind on the proposal for a free trade area in Europe have been dispelled with the appointment of Mr. Reginald Maudling, the Paymaster-General, to represent the British Government in the discussions and negotiations with Continental countries on its formation. Mr. Maudling will report directly to the Prime Minister, though he will work in consultation with the other Ministers concerned with the free trade area plan, in particular the Foreign Secretary, the Chancellor of the Exchequer, and the President of the Board of Trade, all of whom are undoubtedly too occupied with other departmental matters to be able to devote the necessary time to what promises to be a long and tough task.

Hitherto, the talks about the free trade area plan have been largely between officials, except for one ministerial meeting in Paris in February and several bilateral talks, chiefly on general principles. Serious negotiations are expected to start in the autumn, and it has been found advisable to have a British Minister continuously available for meetings and discussions requiring ministerial status. Mr Maudling's qualifications, and his previous experience of discussions in O.E.E.C., made him a natural choice.

Setback in Textile Machinery Exports

There is no doubt that British textile machinery manufacturers would like to meet India's enormous demand under the next instalment of its development plan, but whether they can do so on the deferred terms which India makes a condition for the placing of orders is another matter. Were India's finances in better shape, the orders would have been most welcome, for export trade in textile machinery experienced a rather sharp setback in the first half of this year after several years of encouraging progress. Shipments in the six months ended June amounted to 718,000 cwt, against 899,000 cwt. in the corresponding period of 1956 and 795,000 cwt. in that of 1955. The value, however, at £21,857,000, though £2,637,000 less than in the first half of last year, was £1,204,000 more than in that of 1955. In the first half of this year, compared with a year previously, exports to India at 150,000 cwt. were 87,000 cwt. less, and those to Russia at 25,000 cwt. were 29,000 cwt. less, but perhaps the most striking change was the fall to 622 cwt. from 46,684 cwt. in the shipments to Egypt. Brazil took only 4,000 cwt., against 14,000 cwt. a year previously, and there were also smaller exports to Finland, Poland, the Netherlands, Belgium and Spain.

Some Continental countries, however, increased their offtake, shipments to France rising from 30,000 cwt. to 39,000 cwt., and those to Italy from 17,000 cwt. to 26,000 cwt., while Sweden, Norway and Denmark showed somewhat larger figures. Exports to Pakistan were 53,000 cwt., against 33,000 cwt., those to Australia 35,000 cwt., against 24,000 cwt., those to South Africa 24,000 cwt., against 14,000 cwt., and those to Hongkong 8,000 cwt., against 3,000 cwt. The United States took 28,000 cwt., compared with 30,000 cwt. in the first half of 1956. Most types of textile machinery shared in the decline, but machines for making synthetic fibres increased to 16,000 cwt. from 11,000 cwt., and flatbar and warp knitting looms increased to 10,000 cwt. from 7,000 cwt.

Whiteaway Laidlaw Bid Prospects

Piecemeal realisation of assets due to shortage of working capital is put forward by Sir Harold Gillett, the chairman, as the likely alternative to acceptance of the Great Universal Stores bid for the equity of Whiteaway Laidlaw. In a circular giving full details of the offer, Sir Harold says in effect that there is no alternative to acceptance as the board does not consider it possible to raise the additional capital needed on reasonable terms, for the Canadian subsidiary must be expanded to become profitable. While most shareholders will agree with Sir Harold, there is a possibility that the large buyer whose activities forced the market price of the ordinary shares up sharply earlier in the year might exercise some marginal influence on the final outcome.

Brevities

An advisory committee on further education for commerce which will consider provisions made for such education by local education authorities has been appointed by the National Advisory Council on Education for Industry and Commerce. Its chairman is Mr. J. G. McMeeking, who is also chairman of the education sub-committee of the Association of British Chambers of Commerce.

The directors of the Pabbojan Tea Company are making offers to acquire the ordinary capitals of the Deamoolie Tea Company, the Tara Tea Company, the Rupai Tea Company and the Duamara Tea Company on the basis of one £1 ordinary share of Pabbojan for each £1 share of the other companies plus 4s in cash for Deamoolie, 3s for Tara, 1s 6d for Rupai, and 2s 3d for Duamara. All the companies belong to the James Warren group.

The cost of living index rose by one point between 18th June and 16th July from 106 to 107 (17th January, 1956, taken as 100). Calculated to one decimal place, the July index of retail prices was 106.6, compared with 105.7 in June.

CONTROVERSY OVER YARN PRICE INCREASE

STIFF JAPANESE COMPETITION IN EAST AFRICAN TEXTILE MARKET

(FROM OUR BOMBAY CORRESPONDENT)

A CONTROVERSY is now going on here between manufacturers of rayon yarn and producers of art silk fabrics. This has followed the decision of yarn manufacturers to raise prices during the third quarter of 1957. A section of the weaving industry contends that yarn manufacturers have taken undue advantage of the recent cut in import quotas and that, in fact, there is no real justification for an increase in the prices of domestic yarns. Yarn manufacturers, on the other hand, say that they have acted in consultation with the Government of India which was satisfied that a genuine case existed for an upward revision of prices. It is further pointed out that the new prices of domestic yarns compare favourably with the landed cost of similar imported materials. The price for 150 denier is fixed at Rs. 3.86 which is the same as the landed cost of the imported product while the price of 120 denier is somewhat lower than the imported price for the same quality of yarn.

On the basis of these comparative prices, it would seem that yarn manufacturers were justified in their action. It is also pointed out that 1956-57 was a lean year for yarn manufacturers for which they were not wholly to blame. Rayon cloth manufacturers and the trade imported around 66 million lbs of yarn during this period which is some 6 million lbs in excess of the normal requirement. This over-import, claim domestic yarn manufacturers, hit them hard. Another aggravating factor was that the actual offtake of yarn dropped considerably because large stocks of cloth accumulated with the mills which they could not sell even at reduced prices. This meant that local yarn manufacturers had to dispose of their product under distress conditions. In defence of their decision to raise their prices, they claim that the present increase is an extremely moderate one which does not fully cover the increase in costs. In addition, they say, they have had to shoulder the burden of the excise duty on yarn. It is also pointed out that two yarn producing units returned a gross profit of 15.3 percent and 17.3 percent, respectively, before depreciation and taxation on their gross block expenditure against a gross profit of 65 percent returned by some fabric manufacturing units. Finally, it is stated that whereas the piecegoods industry is protected, the yarn industry enjoys no such advantage.

East African Market

Reports from East Africa indicate that these Territories will continue to be an excellent market for rayon piecegoods. Imports during the first quarter of this year were around 6 million yards valued at £522,000, against 5.4 million yards at £498,000 in the corresponding period of last year. In June, Kenya alone imported 2,223,000 square yards valued at £173,000 against 1,451,000 square yards worth £116,000 in the same month of last year. Although there is considerable interest here among mills and the trade to capture some of this lucrative business, it is feared that competition from Japan will be far too severe for Indian products to enter the East African Territories on any large scale. Of the £522,000 worth of goods imported by East Africa during the first quarter of this year, Japan accounted for £225,000. Japanese competition is likely to stiffen considerably because yarn stocks in that country are now mounting, and it is believed that Japanese weavers may be able to secure their supplies at favourable prices. Reports from Tokyo indicate that Japanese makers of rayon yarn, spun rayon yarn and staple fibre have been advised to curtail their operations further in order to stabilise prices. The Ministry of International Trade and Industry has asked seven manufacturers to hold down their rayon yarn output to 16.3 million lbs with effect from this month till the end of December this year. This restriction means an operational cut of some 18 percent against June's total output of 19.6 million lbs and approximately 20 pecent compared with this year's peak of 20.1 million lbs achieved in January. Stocks of rayon yarn increased by 7 million lbs during the period from last October until June this year. The Ministry warned manufacturers that allocations of foreign exchange for the import of rayon pulp would be reduced if they failed to comply with its advice. As for spun rayon, the Ministry advised 95 manufacturers to seal 15 percent of their production facilities and maintain a 16-hour operational day and a 25-day month from September till the end of December. Under normal operations, the present production, averaging some 50 a month, would be reduced by 7 to 8 percent. With the sealing of 15 percent of the production facilities the total operation cut would amount to around 22 percent. Some 13 staple fibre manufacturers have been advised to limit their total output to 51 million lbs for the next four months.

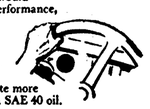
Cotton Textile Imports of Kenya

In addition to rayon fabrics, the East African market is rapidly expanding for cotton piecegoods as well. Kenya alone imported 5,877,000 square yards valued at £378,000 in June compared with 4,248,000 square yards worth £279,000 in the same month of last year. The total for the first six months of this year was a little over 30 million square yards worth £2,092,000. This compares with 27,887,000 yards imported in the comparable period of last year. A point to be noted is that the average price paid during the first six months of this year was ½d a square yard less than the price ruling in the same period of 1956. Reports from Kenya say that the offtake during the current half of this year is likely to increase still further. It is also reported that merchants there have applied for import licences valid for Japan. As in the case of rayon goods, it is possible that the Japanese will be able to offer cotton piecegoods at prices which will be more attractive than those they have been quoting at present. The Japan Cotton Spinners Association announced that yarn production during the second quarter of this year amounted to a new postwar record of 289,236,000 lbs. It was also stated that the export of cotton textiles during these three months was most favourable at an average rate of 120 square yards a month. The volume of cotton yarn production marked an increase of 16 percent over the corresponding period of last year, and was 6.6 percent higher than the previous quarter. Cotton textiles produced during April to June this year amounted to 960,732,000 square yards which represents an increase of 14.5 percent when compared with the same period of last year. Exports of cotton yarn amounted to 8,702,000 lbs, an increase of 49.1 percent over the corresponding period of last year. Cotton piecegoods exports totalled 361,496,000 square yards which is 39.2 percent in excess of the figure for the same quarter of last year. It was announced that the Philippines, Hongkong, Burma and Indonesia were Japan's best customers. The Japan Cotton Spinners Association predicted that this overproduction would probably result in a decline in prices during the current quarter. If this occurs, as seems likely, India will have to face keener competition in all her traditional markets of south east Asia and west Asia and Africa.

Synthetic Mica

A report from Washington, which is of considerable interest to India, reveals that research by U.S. scientists on developing synthetic mica has produced promising results. Although still short of the goal of finding a substitute for strategic grades and qualities of natural mica, the research programme has been marked by several successes, said Mr. Marling J. Ankeny, Director of the Bureau of Mines. One company now is producing flake synthetic mica for use in glass-bonded mica in the electrical field and other proposes. Another company has demonstrated that man-made mica flakes can be formed into a continuous paper-thin sheet, and the Bureau has demonstrated that fine synthetic mica crystals can be fabricated easily into ceramic materials for special uses and likewise can be combined with metals in wire or powder form. It was also found that synthetic mica can be combined with abrasives to make a new type grinding wheel. Because the United States depends almost wholly on imports for high quality mica sheets, so essential to the electrical and electronic industries, the Bureau's efforts to develop substitute materials have been supported variously by the Army Signals Corps, the Navy's Bureau of Ships, and the U.S. Department of Commerce, as well as industrial concerns. In summarising the Bureau's work, Mr. Ankeny said: "The research programme and the results obtained thus far show that synthetic mica should be looked upon as a new and versatile product rather than as a substitute for natural sheet mica. The Bureau has demonstrated that hundreds of different mica compositions can be prepared and that the properties of the synthetic material can be altered by changing the basic ingredients as well as operating procedures.

A motor oil so good it cuts petrol consumption up to 15%

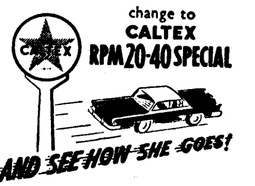


CALTEX RPM 20-40 SPECIAL WORKS FOR YOU LIKE THIS

when you start your car
you need the performance of a 20 oil
Every time you start, your engine needs a light, quick-lubricating 20 oil. Bearings are then instantly protected, petrol is not wasted overcoming friction caused by a heavier oil, excess power is not drained from the battery.

ten minutes later
you need the performance of a 30 oil
As your engine warms up it needs a SAE 30 oil—an oil with more "body" to resist the increase in engine temperature. At this stage, a lighter 20 oil would not give complete protection or maximum performance, a SAE 40 oil would be too heavy.

twenty minutes later
you need the performance of a 40 oil
Out on the open road your engine will operate more efficiently with the full-bodied protection of a SAE 40 oil.



RPM 20-40 SPECIAL meets engine requirements during all stages, gives extra protection at full throttle and ensures cooler, smoother running all the time.

RPM 20-40 SPECIAL gives you these important benefits:

1. Up to 15% increased mileage per gallon
2. Up to 33% less consumption of oil
3. Quicker, smoother engine response during warm-up
4. Less drain on battery
5. Minimises wear
6. Meets passenger car and truck manufacturers specifications
7. Can be used in all weathers, all seasons, all driving conditions

COMPULSORY CULTIVATION OF WASTE LAND

STEPS TO INCREASE FOOD PRODUCTION

(FROM OUR MADRAS CORRESPONDENT)

FOOD production, it is claimed, is rising in the State. An order has been issued authorising district collectors to arrange for the compulsory cultivation of waste land amounting to 400,000 acres. Moreover, the Government is requisitioning rice stocks. Legislation on the British model for leasing out waste lands to landless persons was mooted four years ago. Leases for five years to tenants and payment of fair rent to owners who cannot cultivate the land by themselves are contemplated. But most such land (estimated at over 250,000 acres) lies in only three districts with scanty rainfall. So the Revenue Minister told the Assembly last month. Assignment of land for cultivation is held to be a public purpose, and Constitutional rights will not be infringed if district collectors put new cultivators in place of the owner or the tenant who lets the land lie uncultivated. The owner with the title has to give over possession, unless he can prove that the barren land cannot be put to any use. The order may not lead to harassment, but it is feared that the strict application of a new rule may not help the consolidation of holdings or promote cordial agrarian relations, if tenants are put in without regard to owners' rights.

Police Help in Rural Welfare

The Madras city police have taken a hand in rural reconstruction. A village 12 miles from the city was cleaned and improved last year, and another village is to be taken up. Local improvements such as maternity centres and installation of pumps are carried out by policemen. This scheme has been praised by the Chief Minister who feels that outlook of the police, too, is changing. The police experiment will suggest that with the fall in serious crime the police can do much to promote the welfare of the people.

Lignite Mining Project

Confidence in the potentialities of the Neyveli field is sustained by the sending of officers from the South Arcot field to Western Germany, as well as the assurance that the Russian credit to India may be used for buying the machinery needed. The managing director of the Neyveli Corporation is convinced that open-cast mining here will succeed and that the organisation of the project corresponds to that obtaining in Europe. Conveyor belts and bucket-wheel excavators are on order and delivery according to schedule is expected. The visit to Europe of Mr. T. M. S. Mani showed him how power stations in the lignite field could be set up. The artesian water problem is peculiar to Neyveli, but hardness of soil is found in German mines also. The U.K. Government helped Mr. Mani to look over open-cast mines. The quality of Indian lignite is up to the standard or better than that found in Germany. An American evaluation of lignite properly processed as a fuel, may kindle enthusiasm about the chances of a fertiliser plant as well as cheap thermal power for the adjacent district of Salem which has bauxite, magnesite and iron ore.

Prospects for Coir Mat Exports

Prospects for the export of Indian coir mats and mattings and woollen carpets to Canada are good, according to a market report received from the Commercial Secretary of the Indian High Commission in Ottawa. According to the report, the quality of Indian coir mats is considered good by the Canadian trade. It says that the competition from Canadian mats has now almost completely disappeared because of high labour costs in that country. Plain coir matting has a bright future but coloured coir matting requires immediate changes for survival. Serious efforts should be made to introduce some fundamental innovations in coir matting manufacture so as to make these more attractive and soft. About coir yarn, the report says that the entire quantity of coir yarn used in Canada is imported from India. The demand for floor coverings generally is expected to continue increasing in Canada. In view of the recognised quality, style and colours, the prospects for Indian carpets in the Canadian market appear bright. The report suggests a review of prices in order to make Indian carpets more keenly competitive in export markets. The report makes a number of suggestions which will help increase India's exports to Canada. Indian business houses should establish direct contacts with the Canadian importers of Indian goods and relax payment terms. The present system of Indian exporters demanding payment for shipments by some form of letters of credit may be relaxed. This, according to the report, does not foster happy business relations. It, therefore, suggests that Indian business firms should obtain financial rating and business integrity reports on the firms with whom they intend to do business.

Jute

TRENDS IN U.S. BURLAP CONSUMPTION

BIGGER RAW JUTE ARRIVALS FROM PAKISTAN

THE Calcutta markets received a setback last week after the publication of the U.S. burlap consumption and stock figures. These showed that during July, consumption totalled 61 million yards, which was 10 million yards less than in the previous month. Speculators immediately took the news as bearish and depressed the market before the full significance of the fall could be judged. The consumption figure was exactly the same as in the corresponding month of last year, and the fall appeared big mainly because a comparison was made with the June total, which was unusually high. Normally, U.S. consumption during July tends to be low, so in reality it cannot be construed as indicating a change of feeling in the U.S.A. towards jute goods. If the disappointment continues in the second half of the year, when figures tend to rise, only then can a true comparison be made. Last year, the average monthly consumption in the first six months of the year was 69 million yards, and in the second half of the year 77 million yards. In the current year, consumption from January to June, at 70 million yards, was slightly better, so the outcome is really undecided until later figures are known.

Burlap stocks in the U.S.A. also showed a fall last month, and at 246 million yards were 6 million yards less than in June but 2 million yards better than in July last year. The dominant aspect of these figures is the afloat stocks, which at 102 million yards are considered in the trade to be satisfactory. The total stocks, however, only represent 3½ months' consumption, 1½ months' of which is afloat. This could easily become an embarrassment to the U.S.A. if shipping delays, which already amount to about six weeks in Calcutta alone, are allowed to continue. In that case, the present stocks would be inadequate, and could speed up the change to substitutes.

The publication of the raw jute arrival figures for Calcutta and mill stations during July encourages some interesting comparisons. Total arrivals amounted to 333,800 bales, of which 54,700 bales came from Pakistan, and 279,100 bales from India. They were 21,700 bales more than in July 1956; there was an increase of 26,700 bales in arrivals from Pakistan. The current Pakistani total is the highest since December last year, and is rather surprising in view of the recent trend in supplies from that source. It was, however, mainly composed of cuttings, and the figure for long jute was very small. This turn of events was brought about by the fact that Pakistani sellers' licences expired on 30th June; there was some doubt whether they would be renewed, so as much jute as possible was shipped by them during that month, arriving in India during July. The financial aspect also played its part, as many sellers found it impossible to hold jute as they did in former years due to the stricter measures enforced by banks on overdrafts. They had to clear current outstandings before fresh agreements could be drawn up. Consequently stocks, the majority of which were cuttings, had to be liquidated. The effect of this has been demonstrated by the price of cuttings in Calcutta. Two months ago, cuttings were on offer at Rs. 115, but the influx of ready bills of lading and selling pressure was so great last month that rates fell rapidly and business was reported this week as low as Rs. 83 a bale, or a drop of Rs. 32 a bale.

At the close, the market was very weak, with ready goods falling back after settling day. Opening quotations on Wednesday morning were as follows:

	August	September	Oct.-Dec.	Jan.-March
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	32 80	33.60	33.15	32.75
40in. 10oz.	40.80	40.80	40.75	40.35
B Twills	111.85	110	109	108.25
Heavy Cees (Plain)	113.50	111.50	109.50	108.50
A Twills	138	138.75	134.50	134
Liverpools	125.50	126	125	124
Cornsacks	116.50	114	111.50	110.50

Raw Jute: Although business was transacted almost daily in the raw jute market, conditions were very similar to gunnies. Mills were not keen buyers, and were only interested in testing the strength of the sellers by frequent sallies into the market. In most cases, they withdrew after purchasing only small quantities, and on several occasions so many offers were put up at reduced rates against indications that buyers withdrew without taking up anything. Sellers appeared to be keen for business and were willing to meet most counterbids submitted by mills. Prices throughout the week showed a gradual decline, and from an opening of Rs. 28.50 on Saturday dropped to Rs. 27.25 before the close. The quantities of jute on offer showed an increase. Imports in all agencies, however, were small because of transport difficulties, and this was again reflected in the arrivals at mills and local sidings.

During the week, business was done in Dhubri-Northern-Assam jute at prices ranging between Rs. 28.75 for ready bills of lading and Rs. 27.50 for August-September shipment. Northern Middles alone were also purchased at Rs. 30 a maund for September shipment. Small lots of Daissee White were done at Rs. 28 for August shipment, and under the influence of settling day, remained firm. On Tuesday morning, at Rs. 113 they commanded a premium of Rs. 3.75 over the forward positions.

THE JUTE MARKETS

Lack of overseas or local interest caused depressed conditions to prevail in the jute goods market during the past week. The only activity was in fatka, where interest centred on settling day which fell on 20th August. The fibre markets were also very quiet, and although business was conducted almost daily, the quantities were very small, and were intended only to test the market. Each transaction was put through at reduced rates, and towards the close sellers were keen for business.

Manufactured Goods: There was no interest in the gunny market and prices in general tended to fall. Speculative activity in fatka created a false impression in near heavy goods rates which remained steady, and at one stage B Twills for August shipment were quoted at a premium of nearly Rs. 4 on forward shipment. Mills were unable to take advantage, however, as most of them had very little in hand for this period, and it is doubtful if any real buyers could be found. The U.S stock and consumption figures temporarily depressed the market and the general undertone throughout was weak. On Thursday and Friday, all markets were closed to celebrate Indian Independence Day, so the first working day of this period was Saturday, when B Twills opened at Rs. 113.35 a 100 bags for August shipment. This was an increase of 40 nP. January-March shipment stood at Rs. 111 and was unchanged. Hessian was quiet, and all deliveries recorded small losses, 40in. 10oz. standing at Rs. 41.50 for August shipment, and January-March at a discount of 30 nP. Over the week-end, a general decline set in. Sacking rates dropped by an average of 50 nP and hessian by 25 nP. There was no interest in the market at this stage and prices continued to fall. The only exception was ready delivery B Twills which,

Business in the Cossipore markets was much smaller but buyers were active every day. All arrivals were taken up and good prices were paid. Imports were again disappointing, and only 295 wagons arrived at the Cossipore sidings as against 850 during the corresponding week last year. Stocks remained the same at about 70,000 bales.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 10th August, 1957	1,073.6	13,859.3	14,932.9
1st to 10th July, 1957	1,006.9	14,011.1	15,018.0
1st to 10th June, 1957	607.2	13,628.0	14,235.2
	Sacking		
1st to 10th August, 1957	16,447.2	416.8	16,864.0
1st to 10th July, 1957	10,373.3	754.9	11,128.2
1st to 10th June, 1957	9,267.7	680.5	9,948.2

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in July declined 10 million yards from June, but was identical with that for July 1956. A decline in burlap offtake in the month, compared with a year ago, was offset by an increased use of burlap for industrial purposes. Burlap feed bag and potato bag business, last month, did not come up to expectations. Returnable bag programmes, in several instances, were getting under way with a resultant lack of replacement business. In the case of potato bags, drought conditions in the eastern States adversely affected the crop and in the central plains and northwest areas, heavy rains have delayed all crops about a month. Generally speaking, farmers, too, in many areas, are being squeezed price-wise resulting in more bags being re-used. U.S. burlap stocks again declined moderately in July. Of 246 million yards, 144 million yards were spots and 102 million yards were afloats. Appearing below are two tables which include the July figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

THE FOREIGN JUTE MARKETS

GOODS PRICES REDUCED

(FROM OUR DUNDEE CORRESPONDENT)

FROM 15th August, prices for most qualities of jute yarns and cloth are cheaper by about £5 a ton. The long-expected change has at last taken place, due to the heavy drop in prices for raw jute in Pakistan. An exception is made in the case of 8 lbs C.H.W. (Common Hessian Weft), which is allowed to remain unaltered at 15.72d a lb, but 8 lbs J.C.H. and all qualities above that level have been reduced by £5 a ton. J.C.H. is reduced from 16.86d to 16.29d a lb, basis of 8 lbs. No change has been made in the common hessian prices, those which come into competition with imported Calcutta or Pakistani goods, 40in. 10oz. hessians are still quoted at 13.26d a yard and 8oz. at 11.32d in the common makes, but where J.C.H. yarn is used for both warp and weft, recent rates have been taken down by £5 a ton. Sacking yarns and twist are reduced by that amount to 13.84d a lb for 24 lb weft and 18.13d for 3 ply 8 lb, respectively. Rove is reduced from £109 15s to 104 5s a ton for 48 lbs and £85 10s to £80 for 200 lbs. The small yarns and Rio grades are down by £5 a ton. Twilled sacking and tarpauling are down, the latter in 14por. 36in. 18oz. falling from 27.04d to 26.24d a yard and 8por. 27in. 16oz. sacking from 20.95d to 20.32d a yard. The reduction has brought out more interest from buyers, but there is still a good deal of hesitation to satisfy requirements, as consumers are not yet too sure of the position There is ample scope for a further drop in raw jute prices, though the position has remained unchanged for two days now.

Mill Firsts have come back to £102, Mill Lightnings to £96, Mill Hearts to £92 and grade Hearts to £88, August-September, with 20s less possible for September-October, c.i.f., U.K. Dark jute is now at £102 for crack Daissee-2/3 and £97 for grade. £106 for grade Tossa-2/3 and £100 for grade Tossa-4, c.i.f., September-October.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) advanced further by 0.7 percent to 113.2 during the week ended 3rd August, 1957, compared with 112.4 (revised) for the earlier week. The index was higher by 1.3 percent and 7.4 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The index for Food Articles rose by 1.4 percent to 113.7 against 112.1 (revised) for the previous week due to increases in the prices of cardamoms in Calcutta (+21%), onions in Nagpur (+20%), potatoes (+15%), milk, and tea for internal consumption (+11% each), rice in Varanasi (+9%), wheat in Bahraich (+6%), ghee in Madras, gur in Muzaffarnagar and black pepper in Cochin (+5% each), maize and oranges (+3% each) and barley, ragi, mung, cashewnuts and betelnuts (+1% each). The prices of onions in Delhi (−10%) and in Calcutta (−8%), masur in Bombay (−9%), rice in Ranchi (−8%) and in Hailkandi (−7%), wheat in Delhi, bajra in Hissar, arhar in Bombay and eggs (−6% each), tea for export (−4%), jowar and gingelly oil (−2% each) and gram and mustard oil (−1% each), however, moved down. The index for the Liquor and Tobacco group remained stationary at the previous week's level of 92.0. The index for the Fuel, Power, Light and Lubricants group moved down slightly from 114.7 to 114.6 as a result of a decline in the price of castor oil (−2%). Higher prices of lac (+5%), linseed and rapeseed (+2% each) and raw cotton, raw wool, gingellyseed and cottonseed (+1% each) raised the index for the Industrial Raw Materials group by 0.2 percent to 122.2 compared with 122.0 (revised) for the previous week, although the prices of tanning materials in Madras ((−11%), castorseed (−3%), bamboo (−2%) and raw jute, raw silk and groundnuts (−1% each) showed declines. The index for Intermediate Products stood at 108.9 against 109.0 for the earlier week. The prices of brass (−2%), tin (−1%) and zinc (+1%) showed variations. The prices of general chemicals (+2%) and oilcakes (+1%) were marked up while those of jute manufactures and cycles (−1% each) showed a fall, and in the result, the index for Finished Products stood at 108.9 compared with 109.0 in the previous week.

RECORD AUSTRALIAN WOOL PRODUCTION FORECAST

THE official preliminary estimate of the Australian wool clip for the 1957-58 marketing season which opens in September is 4,940,000 bales which, if realised, will set up another high record in the history of Australian wool production. This news has been received by the British Wool Federation from the Australian Council of Wool Buyers. The estimate for the new season is approximately 5 percent higher than the revised estimate of 4,689,500 bales for the 1956-57 season, issued last March, but this latter estimate was itself exceeded in the final months of the season, for it is already reported that 4,716,000 bales passed through Australian brokers' stores up to the end of May. A clearer indication of the progress of Australian wool production is obtained from a comparison of net weights. It has been announced by the National Council of Wool Selling Brokers of Australia that wool production for the 1956-57 season, lately concluded, is provisionally estimated at 1,565 million lbs (greasy basis), and that the preliminary estimate for 1957-58 is 1,603 million lbs, which shows an advance on last season's record output of approximately 2½ percent.

During the present decade the expansion in Australia's wool production has fulfilled the most optimistic expectations. Since 1951-52, for instance, New Zealand's wool production has increased by about 48 percent and that of South Africa by 28 percent but Australian production has increased by about 48 percent. Australia is now responsible for about 60 percent of the entire wool production of the Commonwealth and about 40 percent of the wool output of the free world. This postwar transformation in the wool production of Australia—and, indeed, of the other Commonwealth countries—is attributable to the application of modern methods and the results of scientific research to stock breeding, pest control and to achieving increased land fertility.

Synthetic Substitute

"As for the question of any synthetic substitute, what can be stated quite definitely is that up to date nothing practicable has been found which in any way compares with the real qualities of natural raw wool." This was a comment made by Sir Denys Lowson, chairman of the Australian Estates Company Ltd., in his report recently presented at the annual meeting of the company in London. The company's board, Sir Denys said, had given much thought to the long-term outlook for wool, and while it was difficult to make a definite forecast, the present signs all appeared to be favourable. "World stocks of raw wool are today negligible in quantity," he continued. "Notwithstanding the increase in production during the last 12 months, the whole of this appears to have passed into consumption, as stocks in the hands of merchants at the end of the season are estimated to be lower than for a number of years past."

Rising Costs

"The cost of the basic material for all forms of synthetic textiles is continuing to rise quite sharply. Many of these synthetic textiles have as their base wood (that is pulp), oil or natural gas. All of these have risen very considerably in price during the last five years, and the indications are that this rise will continue just as sharply in the future. It might be reasonably to look for some easing in It might be reasonable to look for some easing in advance of recent months; and, in fact, this might be welcomed by many producers. However, there would seem no reason to feel at the present time that the long-term tendency will be other than favourable, so long as the population of the world continues to increase and the standard of living everywhere continues to rise, coupled with the existing full employment," Sir Denys said.

ACREAGE AND OUTPUT OF TUR INCREASE

According to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, the all-India final estimate of *tur*, 1956-57, puts the current year's area and production at 5,696,000 acres and 2,047,000 tons, against the partially revised estimate of 5,637,000 acres and 1,830,000 tons for the last year. Thus the current year's estimate shows an increase of 59,000 acres or 1.0 percent in area, and 217,000 tons or 11.9 percent in production over last year. The increase in acreage during the current year has been shared by Uttar Pradesh, Bombay, Madras, Andhra Pradesh and Rajasthan and has been attributed to favourable climatic conditions at the time of sowing. The increase in area has, however, been offset to some extent by decreases registered in Bihar, Madhya Pradesh, Mysore and West Bengal. The increase in production during the current year has occurred in Uttar Pradesh, Madras and Rajasthan. This has been attributed partly to the increase in area and partly to favourable seasonal conditions during the growing period of the crop. The increase in production has been offset to some extent by decreases recorded in Madhya Pradesh, Bihar, West Bengal and Mysore.

GRAM PRODUCTION INCREASES IN SPITE OF ACREAGE FALL

According to the Directorate of Economics and Statistics Central Ministry of Food and Agriculture, the all-India final estimate of gram, 1956-57, puts the current year's area and production at 23,980,000 acres and 5,930,000 tons, against the partially revised estimate of 24,157,000 acres and 5,331,000 tons, respectively, for 1955-56. This shows a nominal decline of 177,000 acres or 0.7 percent in area and an increase of 599,000 tons or 11.2 percent in production compared with 1955-56. The nominal decline in acreage during the current year has been shared mainly by Uttar Pradesh, Punjab, West Bengal and Bombay, and has been attributed to unfavourable climatic conditions at the time of sowing This decrease has, however, been offset to some extent by increases registered in Rajasthan, Madhya Pradesh and Madras. In spite of the decrease in area there has been a substantial increase in production during the current year. The increase in production is shared by almost all the important gram-growing States, except Bihar. The increase is particularly marked in the case of the Punjab. Rajasthan, Madhya Pradesh and Uttar Pradesh and is attributable to better seasonal conditions during the growing period compared with last year,

Plantation Topics

INSECURITY IN KERALA PLANTATIONS

SOUTH INDIAN TEA PRICES UNECONOMIC

(FROM A SOUTH INDIAN CORRESPONDENT)

MORE cases of intimidation and assault on non-Communist workers and members of the staff by Communist-led workers have been reported from the plantations in Kerala. The United Planters Association of Southern India in a Press statement says that on an estate which is in the centre of High Range planting district, a Communist loudspeaker van has been going about announcing that the workers can do anything they like and no police action will be taken. The Association gives many other instances of intimidation and assault.

South Indian teas are now being sold at an uneconomic price. During recent export sales in Cochin, they have fetched between 138 nP and 150 nP, as against the production cost of 160 nP a lb. Mr. A. V. George, a prominent south Indian planter, fears that if this position continues, some tea estates will not be able to survive for long. He says in a statement that fresh welfare measures for plantation labour and taxes are coming into being when slump conditions are ahead. "If the tea industry has to contribute to the country's wealth, restraint and realism on the part of the Government in dealing with the industry are absolutely essential."

Small tea growers in the Nilgiris have decided to move the High Court against the levy of the 5 percent sales tax on green leaf, in addition to the levy of another single-point sales tax of 5 percent on manufactured tea on factory owners. This amounts to double taxation; most small growers sell their teas to nearby factories as they do not have their own factories. This decision was taken at a meeting of the Small Growers Association held on 11th August. The meeting requested the Government to provide more facilities for transporting manufactured tea to market centres. The Tea Board was requested to accept the affidavits of the parties concerned, for the allotment of export quota, supported by certificates from the respective village officers, as sufficient evidence in the case of partition, succession or devolution of small estates.

Taxes on Coffee

Coffee dealers are pleading for the inclusion of coffee, raw, roasted and powdered, in the list of commodities now being considered by the Central Government for the levy of excise duty at an enhanced rate in the place of State and inter-State sales taxes. Mr. A. N. Naik, president of the All India Coffee Merchants' Association, in a communication to the Union Minister for Commerce and Industries, says that the Union Government is already collecting an excise duty of Rs. 21 a cwt. at the first release from the Coffee Board, which controls the production and distribution of coffee in India. There is now a wide disparity in the method of taxation of coffee in different States. It is pointed out in the communication that the introduction of inter-State sales tax by the Union Government will also add to the tax burden. The total tax burden on coffee will come to about 12 percent, which is equivalent to the Union excise duty now levied. For the consumer, the price of coffee will go up by another 25 percent. It is also pointed out that transport charges for the movement of coffee are already heavy. He has pleaded for the refund of excess duty collected from the dealers by the Board amounting to nearly Rs. 3 lakhs. The Coffee Board has collected excise duty at the enhanced rate of Rs. 29 a cwt. originally proposed in the Union Budget for 1957-58, from the stocks cleared after 16th May. But later, this additional duty was withdrawn by the Central Government and the Board made necessary readjustments in its release prices. Coffee dealers have been pleading for the refund of the excess duty collected from them during this interim period.

TEA DRINKING HABITS IN BRITAIN

CONSUMER SURVEY SHOWS BIG SOCIAL DIFFERENCES

ODD and marked differences exist in the quality of tea bought in different areas of the U.K., according to the Tea Bureau's seventh consumer survey among housewives, published recently. Scotland, bearing out a reputation for thrift, "accounts for a far higher proportion of cheaper teas than other regions." Forty-three percent of Scottish housewives buy tea which costs under 6s 8d a lb. while only 30 percent in the north of England do so. At the other end of the scale is Tyneside extravagance 31 percent of housewives in the north-east buy tea at 7s 8d a lb or more. The highest percentage in any other region is only 19. The survey also indicates an elaborate series of class distinctions in methods of preparing tea. The members of the upper class use more electric kettles than others. Nineteen percent of the working class "brew up" over gas, against 45 percent in the upper and 59 percent in the middle. The "very poor" division is the only serious user of open fires and solid fuel ranges. Nineteen percent of the "upper class" drink coffee at breakfast, against 9 percent in the middle class. Forty percent of both classes, however, drink coffee for "elevenses." Only 24 percent of the working class do so. The number of "one-for-the-pot" housewives has increased. Twenty-one percent put three full spoons into a pot for two; only 19 percent did so last year. Buying habits are shown to be favouring co-operative stores increasingly over the last few years at the expense of private grocers. In the last three years, the percentage of housewives buying at private grocers has fallen 56-54-51, and the percentage buying at co-operative stores has risen 20-24-28.

COCHIN TEA SALES

At Dust Sale Q. 950,000 lbs of tea were on offer. Demand was useful but irregular with prices easier for everything except for good liquoring Medium types which were dearer.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing prices on 9-8-57 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.16	1.16
No. 2	1.11	1.11
No. 3	1.06	1.06
No. 4	1.01	1.01
No. 5	96	.96
	Sheet cuttings 1	.98
	do. 2	93
Crepe:		
Water White	—	—
R.M.A. No. 1X	1.16/18	1.16½
R.M.A. No.1	1.12/15	1.13½
	Crepe No. 2	1.06
	do. 3	1.03½
Scrap Crepe:		
Sc. Crepe No 1	1.00 Nom.	1.00½
Sc. Crepe No. 2	.95/98	.97
Sc. Crepe No. 3	.88/95	.90¾
Flat Bark	.83/85	.84
	Sc. Crepe 3X	.94

To arrive at f.o.b. Colombo prices, add 53.53 cents a lb for crepe other than scrap crepe and 31.53 cents for scrap crepe to the above market prices.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for the month of July.

Upper Assam: Weather is very wet; outturn last month was generally normal; but for the season so far, it is slightly under last year, especially in N. Lakhimpur; black rot reported in Sonari.

Central Assam: Weather seasonable; normal outturn; prospects fair.

Lower Assam: Weather seasonable but rain deficient in Borsola; outturn poor in Tezpur, normal elsewhere; prospects fair.

North Cachar: Weather seasonable but rain deficient in N. Cachar; prospects fair to good; blight not so severe; outturn normal.

South Cachar: Dry weather is interfering with outturn, but excessive rain has fallen in Chutlabheel; outturn varies from considerably below to rather more than last year; prospects fair; red spider blight prevalent in some districts but lifting in Chutlabheel; black rot and helopeltis prevalent in Longai.

Eastern Dooars: Outturn normal; prospects fair; weather wet.

Central Dooars: Weather seasonable; outturn poor; prospects fair.

Western Dooars: Excessive rainfall has caused flooding and is interfering with outturn which is below last year; prospects fair.

Darjeeling: Weather seasonable; outturn normal; prospects bad; blister blight prevalent.

Terai: Rainfall deficient; outturn very poor; prospects fair.

Engineering and Transport

FIFTY YEARS OF TATA STEEL

EARLY DIFFICULTIES: NEW EXPANSION PROGRAMMES

(FROM A CORRESPONDENT)

ON 26th August, 1907, a number of Indian industrialists registered a company in Bombay to manufacture steel in India. Some 8,000 people paid over Rs. 2 crores—the largest sum raised till then in India for any industrial project. The money went to build the Tata Iron and Steel Works in an obscure jungle village called Sakchi in Chhotanagpur. India's modern steel industry was born. Today, 50 years later, Tata Steel is one of the largest integrated steel works in the world.

There were a number of ineffectual efforts in the nineteenth century to manufacture steel on modern lines. The success of Tata Steel against the background of these earlier failures, is due largely to the personality of the man who founded it: Jamsetji Nusserwanji Tata. From 1880's, J. N. Tata had been exploring the possibilities of starting a steel works in India. He knew that the preconditions for a steel industry were technical know-how and basic raw materials—iron ore, coking coal and fluxes. He visited steel-making centres in Britain and the United States, conferred with leading experts, and secured the services of eminent specialists. Despite onerous mining laws, he set in motion a systematic and determined search for iron ore. With the help of the Bengali geologist, P. N. Bose, this search ultimately led to the discovery of the Dhalli-Rajhara deposits in the Madhya Pradesh and the iron ore deposits in Keonjhar and Singbhum.

Start of Production

On 7th February, 1908, the first stake was driven in a jungle clearance in Sakchi, marking the beginning of the Tata steel works and a city that later came to be known as Jamshedpur. In 1911, the Tata steel works went into production. The first cast of pig iron flowed down the runners on 2nd December, 1911. The first ingots were rolled on 20th February, 1912, and the first steel rails on 18th March of the same year. By 1914, the factory was producing 100,000 tons of steel and employing 6,000 workers. During the first world war, the Tata steel works went all out to attain capacity production which they did by 1916. They supplied no less than 1,500 miles of rails and 200,000 tons of steel for war purposes. From the very beginning, the management followed the policy of ploughing back profits into business to meet development costs. It was this policy that enabled the steel company to launch a bold expansion programme—the "greater extensions scheme"—in 1919. This scheme enabled the company to raise its output of steel to 425,000 tons by 1924, and to diversify its range of products.

Protection for Industry

The years 1923-33 were among the most critical in the life of the company. Cheap Continental steel flooded the market, so price of steel toppled. Representations for protection were first turned down, but later in 1924, the Government granted a small protective duty for three years. Due to a sharp decline in the price of imported steel, the scale of protective duties had to be revised in 1927 for seven years thereafter.

As the Indian steel industry was attempting to recover from the postwar slump, there came the great crisis of 1929. Tata Steel faced the problem of survival. Yet not a single worker was laid off. By 1934, the company was out of the woods. But even during the decade of the crisis, it maintained a steady progress in production. In 1923, the output stood at 156,000 ingot tons. By 1927, due to the greater extensions scheme, production increased to 530,000 ingot tons, and by 1934, it reached 834,000 ingot tons. As a result, the country's steel imports fell from 75 percent of the requirements in 1927-28 to 38 percent in 1932. By 1933-36, Tata Steel was able to restore ordinary dividends. A year before, a special bonus had been granted out of savings to its workers.

Wheel Tyre and Axle Plant

During the second world war, Tata Steel concentrated on meeting war needs. It was in 1941 that the wheel, tyre and axle plant was set up in Jamshedpur. This plant paved the way for the full-scale manufacture of locomotives in India by supplying essential rolling stock components. Towards the end of the war, Tata Steel started the manufacture of electrical sheets of dynamo grade and a little later of transformer grade which helped in starting the manufacture of electric fans, motors and dynamcs on a large scale in India. With the end of war, Tatas began actively to plan for a major expansion. In 1946, it appointed a firm of foreign consultants to work out a blueprint for expansion. But it was not until 1951 that a modernisation and expansion programme (M.E.P.) was finally launched, at an estimated cost of Rs. 25 crores of which the Government agreed to lend Rs. 10 crores interest-free from the Equalisation Fund. M.E.P. was aimed at carrying out much-needed repairs and renewals of plant and machinery, to diversify production in new directions such as skelp, and to raise output from 1 million ingot tons to 1.3 million ingot tons. The skelp mill came into production in March 1956, making possible the development of a steel tube industry.

Two-Million Ton Programme

With the adoption of the second plan target of 6 million tons of steel by 1961, the Government agreed to a further expansion of the existing units. Accordingly, Tata Steel launched on its 2-million ton programme (T.M.P.) in December 1955, for which it entered into a contract with Kaiser Engineers of the U.S.A. This contract, covering design, procurement and construction of the new production facilities, is valued at $130 million and provides for completion of the project on a 30-month schedule by 31st May, 1958. The cost of this project will be met from three sources: a World Bank loan of $75 million—the largest loan ever advanced to a private firm; a fresh issue of share capital; and from increased retention prices. T.M.P., it may be noted, covers every aspect of production. Outstanding technical features of the extension project are a sintering plant, the first in India (capacity of 5,000 tons a day), to use iron ore fines hitherto thrown away. There is also a 28-foot hearth blast furnace which will be the largest in Asia.

During 50 years of its existence, Tata Steel has produced well over 22 million tons of saleable steel including nearly 4 million tons of rails and fish plates, 2.5 million tons of heavy structurals, 5.5 million tons of bars and light structurals, etcetera. What is more, it has been making steel at a cost, well below that of the major exporting countries. The price it receives is on the average around Rs. 405 a ton compared with the average import price of Rs. 800 a ton. Over the years, a number of industries have grown up in Jamshedpur. These include the Tata Engineering and Locomotive Works, Indian Tube Company (1953) Ltd., Tinplate Company of India Ltd., and Indian Steel and Wire Products.

Training Technical Staff

In the spreading of technical know-how, Tata Steel has made a valuable contribution. In 1921, the Jamshedpur Technical Institute was established. During the 35 years of its existence, the Institute has trained 560 graduate engineers for positions of responsibility and 1,100 skilled artisans. From 250 foreign technicians in the steel works in the 'twenties, the number has today dwindled to less than half-a-dozen. This Institute has also done pioneer work in establishing scientific trade tests for a wide range of jobs, which have proved useful not only to Tata Steel but also to many other industries. At present, this Institute is training a large number of Rourkela personnel, from apprentices to senior-most supervisors. It is also providing a six-week orientation course for 400 young graduate engineers recruited by the Government for the new steel plants prior to their training abroad. Similarly, it will train 300 operatives for State steel plants.

Relations with Labour

In the matter of working conditions and fair wages, Tata Steel has pioneered in a number of directions. It introduced the eight-hour day, leave with pay and provident fund when they were either unknown or berore they were generally introduced. In 1933, it introduced a special bonus out of earnings even before it was able to distribute ordinary dividends. This was continued on an *ad hoc* basis from year to year until profit-sharing bonus was put on a systematic basis since 1937. In the field of labour-management relations, Tata Steel has an agreement with its workers. Signed between the management and the Union on 4th August, 1956, it introduced a three-tiered system of joint councils of management and employees to bring about an increasing measure of closer association of workers with the management.

PROGRESS IN CONSTRUCTION OF STATE STEEL PLANTS

Sardar Swaran Singh, Central Minister for Steel, Mines and Fuel, described the progress which has been made in the construction of all the three steel plants in reply to a joint question by Messrs. M. L. Dwivedi, Vasudevan Nair, Punnoose, T. B. Vittal Rao, Vajpayee, S. V. Ramaswami, Ram Krishan, Radhelal Vyas and Mrs. Tarakeshwari Sinha in the Lok Sabha recently. He said that the construction of the Durgapur steel works was proceeding according to schedule. In Bhilai there were some initial difficulties in making arrangements for civil engineering construction on the large scale required. Therefore, the quantum of work which has been done so far is not as great as it could have been had it been possible to start work as originally planned. On the other hand, as arrangements have since been made for civil engineering work in the whole of the plant, it is possible to increase the tempo of work progressively. The initial backlog can, therefore, be made up in the course of construction. By readjusting monthly programmes suitably, it is hoped to achieve the original targets for actual production, namely, iron at the end of 1958 and rolling of steel at the end of 1959. In Rourkela in spite of cetain difficulties in civil engineering, it is hoped to commission the departments required for the production of iron according to schedule, and the first blast furnace is expected to go into production before the end of 1958. Even greater difficulty is being experienced in securing civil engineering contractors with the capacity and experience necessary to undertake the large and complicated work in the rolling mills. It is feared that the commissioning of the rolling mills may be delayed by three to six months. Completion of the work in all the three plants would, however, depend to a large extent on the facilities available in the ports for unloading of ships and for the transport of the consignments from the ports to the sites. So far there has been no difficulty about railway transport, but unloading in the ports is becoming increasingly difficult.

Calcutta Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE

BETTER SUPPORT FOR DUSTS

AT Sale No. 11, held on 19th August, offerings at the Export auction amounted to 41,322 chests. There was a strong and general demand. "Teas for price", particularly the Fannings descriptions, were a strong feature, although enquiry for these weakened towards the close of the Sale. Black Dooars B.P.O.'s and O. Fgs. were well supported at generally dearer rates. Medium Assams were irregular, but generally dearer, although low mediums with indifferent liquors were easier. There was good support for B.P.'s which generally appreciated in value, while whole leaf grades were generally firm. Apart from the very best, C.T.C. teas were from 20 to 30 nP easier. There was good demand for tippy teas, but Darjeelings were generally easier.

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2 20	1 15 0
Plain B.P.	1.78	1 9 0
Plain Fannings	1.70	
Medium B.P.	1.90	
Medium Fannings	1.90	
Best Assam C.T.C. B.P.	4.00	2 4 0 to 2 6 0
Best Assam C.T.C. Fgs.	4.50 to 5.00	3 12 0 to 4 2 0

At the Internal Sale 13,300 chests of Dust were on offer. There was a better general demand and prices for most descriptions were firm or dearer. Best C.T.C. Assams were irregular, and the poorer sorts easier, but better liquoring medium C.T.C.'s were well supported and prices frequently showed considerable advances. Other Assams were firm and sometimes dearer, particularly the plainer liquoring sorts. There was keen competition for common and plain Dooars and prices were sometimes 6 nP dearer. Non-wither Dooars were generally firm.

Quotations

	1957 Rs.	1956 Rs.
Medium Dooars Dust	1.55 to 1.60	1 11 0 to 1 12 0
Medium Assam Grainy Dust	1.60 to 1.70	1 15 0 to 2 0 0
Medium Assam C.T.C. Dust	2.15 to 2.20	2 10 0 to 2 14 0
Best Assam C.T.C. Dust	2.50 to 2.90	3 6 0 to 3 8 0

Leafs on offer were 1,083 chests. The market was irregular and C.T.C. Assams on offer were a weak feature and considerably easier. There were a few green teas on offer and these met with fair demand and sold below valuations.

FREIGHT MARKETS MORE ACTIVE

ALTHOUGH there was more activity in the freight markets last week, the tone remained unchanged. Conditions are so bad that one large London Greek operator has laid up six *Liberty* ships. The trans-atlantic coal rate is now down to 29s and a contract for one million tons over three years commencing in 1958 has been arranged at the low figure of 43s. There was a good deal of miscellaneous business involving Far Eastern ports including rice, U.S. Gulf-Chittagong at 62s 6d, fertilisers Rotterdam-Chittagong at 75s and generals Black Sea-Bombay at 80s. Mormugao-Continent ore was done at the lower rate of 65s, gross terms and U.S.-North Pacific East Coast India, grain, at 70s. There was much activity in the time charter section with 20s being paid for a 10,000 ton oil burner, delivery Singapore, redelivery Japan *via* Mormugao. A *Liberty* accepted $(U.S.) 2.55 for 15 months' trading and a similar vessel 17s for four, eight and 12 months' trading. In the light of the port conditions here, it is of interest to note that the new bulk sugar loading plant in Mackay, Queensland, was opened on 12th August when between 07.00 hours on that day and 19.45 hours on 13th August, the m.v. *Silverpoint* loaded 11,234 tons.

LINSEED STEADY

The market has remained more or less unchanged during the past week and steady conditions have prevailed chiefly due to a scarcity of arrivals from the producing centres. A fair demand from crushers has resulted in some small trading, while sellers have been rather reserved. The oil section has been inactive; although overseas prices have been keeping fairly steady, local indications have been very much out of line. Latest quotations were as follows: August-September Rs. 22-12 a maund.

HIDES AND SKINS

The market ruled steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 12th August and 18th August, 1957)

Cowhides: Wet salted (Ord.) 35,000 pcs. on the basis of Rs. 7.50 to Rs. 10.50; Wet salted (Slaughtered) 17,800 pcs. on the basis of Rs. 12.50 to Rs. 21.00.

Goatskins: Wet salted (Daissee, Killed) 79,960 pcs. on the basis of Rs. 285 to Rs. 300. Rs. 320 to Rs. 340 and Rs. 370 to Rs. 380; Assam-Dinajpur 11,700 pcs. on the basis of Rs. 295 to Rs. 330.

Bazaar Stocks

(18th August, 1957)

Cowhides: Wet salted 2,64,500 pcs.

Cowhides: Wet salted (Daissee, Killed) 17,000 pcs.; Assam-Dinajpur 19,700 pcs.; Muzafferpore-Patna - Pakur - Purneah - Kissenganj 28,500 pcs.

COMPANY AND PUBLIC NOTICES

TEESTA VALLEY TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of Teesta Valley Tea Company, Limited will be held at the Registered Office of the Company at No. 6, Church Lane, Calcutta, on Friday, the 13th September, 1957, at 2-30 P.M. for the following purposes:—

1. To consider and adopt the Profit and Loss Account for the year ended the 31st December, 1956, and the Balance Sheet as at that date, and the reports of the Directors and Auditors.
2. To declare a final dividend.
3. To appoint Auditors for the year ending the 31st December, 1957, and authorise the Directors to fix their remuneration.
4. To elect a Director in the place of Mr. G. T. Routledge who retires by rotation but being eligible offers himself for re-election, and to consider and, if thought fit, to pass the following resolution as a Special Resolution in respect of which Special Notice has been received by the Company, as required by Section 190 read with Section 261 of the Companies Act, 1956. (The reasons which make the resolution necessary are set out in the Explanatory Statement under Section 173 of the Companies Act annexed hereto.)

"That Mr. G. T. Routledge who retires by rotation from his office as a Director and who is a Member and Director of J. Thomas & Co., Private Limited, which Company may be deemed to hold an office or place of profit under the Company, be and he is hereby appointed a Director of the Company".

The Share Transfer Books and Register of Members of the Company will be closed from the 31st August to the 13th September, 1957, both days inclusive.

By Order of the Directors,
DAVENPORT & COMPANY PRIVATE LIMITED,
Managing Agents.

6, Church Lane,
Calcutta, 14th August, 1957.

Note:—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead, and a proxy need not be a member of the Company.

EXPLANATORY STATEMENT.

With regard to item No. 4 of the Agenda, Mr. G. T. Routledge retires by rotation from the office of Director of the Company but offers himself for re-election. As Mr. Routledge is a Member and Director of J. Thomas & Co. Private Limited, which Company may be deemed to hold an office or place of profit under the Company, according to the provisions of Section 261(1)(c) of the Companies Act, 1956, if Mr. Routledge is to be appointed as a Director, a Special Resolution is necessary for that purpose of which Special Notice must be given to the Company under Section 190(1) of the said Act read with Section 261(2) thereof not less than twenty-eight days before the meeting at which the resolution is to be moved. Such Special Notice of intention to move the Special Resolution relating to Mr. Routledge's appointment has been duly received by the Company. It is desirable that the Board should have the benefit of Mr. Routledge's knowledge and experience and it is recommended that he be re-elected as a director.

GIELLE TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of Gielle Tea Company, Limited will be held at the Registered Office of the Company at No. 6, Church Lane, Calcutta, on Friday, the 13th September, 1957 at 3 P.M. for the following purposes:—

1. To consider and adopt the Profit and Loss Account for the year ended the 31st December, 1956, and the Balance Sheet as at that date, and the reports of the Directors and Auditors.
2. To appoint a Director in place of Mr O. N. Goenka who retires by rotation and who, being eligible, offers himself for re-appointment.
3. To appoint Auditors for the year ending 31st December, 1957, and authorise the Directors to fix their remuneration.

The Share Transfer Books and Register of Members of the Company will be closed from the 31st August to the 13th September, 1957, both days inclusive.

By Order of the Directors,
DAVENPORT & CO., PRIVATE LTD.,
Managing Agents.

6, Church Lane,
Calcutta, 14th August, 1957.

Note:—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead and a proxy need not be a member of the Company.

THE INDIAN IRON AND STEEL COMPANY LIMITED.

NOTICE.

NOTICE is hereby given that the Annual General Meeting (being the Fortieth Ordinary General Meeting) of the Company will be held at the Registered Office, 12, Mission Row, Calcutta, at 11 a.m. on Wednesday, the 11th September, 1957, for the following purposes:

1. To receive and adopt the Audited Accounts for the year ended 31st March, 1957 and the Directors' and Auditors' Reports thereon.
2. To declare a dividend on the Ordinary Share Capital to be paid on or after the 24th September, 1957, to those shareholders whose names appear in the Company's Register on the 11th September, 1957 or to their mandatees.
3. To appoint Directors in place of those retiring. In this connection notice is hereby given that two Special Notices as defined in Section 190 of the Companies Act, 1956, have been received by the Company under Section 281 of that Act to move the following Resolutions at the Meeting:—

"That Sir P. P. Ginwala be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."

"That Dr. N. N. Law be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."

4. To appoint Auditors and fix their remuneration.
5. As Special Business:

To consider and, if thought fit, to pass, with or without modification, the following Resolution of which Special Notice has been received:—

"That the age limit specified in Section 280 of the Companies Act, 1956, shall not apply to Mr. T. Leslie Martin and this meeting hereby approves any appointment of Mr. Martin as a director of the Company which may hereafter, whilst this Resolution remains in force, be made by the Managing Agents pursuant to Article 108 of the Company's Articles of Association."

The Share Registers and Transfer Books of the Company will be closed from the 4th September, 1957 to the 11th September, 1957, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Calcutta.
17th August, 1957.

THE UNITED FLOUR MILLS COMPANY, LIMITED

NOTICE is hereby given that the Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, at 3 P.M., on Thursday, the 19th September, 1957, for the following purposes:—

(1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 30th November, 1956.
(2) To declare a Dividend.
(3) To elect a Director.
(4) To appoint Auditors and to fix their remuneration.

The Transfer Register will be closed from the 12th September, 1957 to 19th September, 1957, both days inclusive.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy who need not be a Shareholder of the Company. If it is desired to use a Proxy, the same should be completed in the manner described by Section 176(5) of the Companies Act 1956 and delivered at the Registered Office of the Company at least 48 hours before the time fixed for the Meeting.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.,
Managing Agents.

Calcutta, 24th August, 1957.

THE Board of Directors has today decided to recommend to the forthcoming Annual General Meeting of Shareholders, a dividend of Rs. 6/50 per Preference Share and a dividend of Rs. 40/- per Ordinary Share in respect of the year ended 31st December, 1956 without any deduction in respect of taxation payable by the Company.

By Order of the Board,
ANDREW YULE & CO., LTD.,
Managing Agents.

Calcutta, 19th August, 1957.

THE MYSORE SPINNING & MANUFACTURING CO., LTD.

NOTICE TO SHAREHOLDERS.

NOTICE is hereby given that the Sixty-fourth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Friday, the 20th September, 1957, at 4-30 P.M. for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 28th February, 1957.
2. To declare a dividend and bonus
3. To appoint Directors in place of those who retire but are eligible for re-appointment.
4. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 24th day of August, 1957 to the 18th day of September, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

(The holders of the 4½% Cumulative Preference Shares of the Company have no right to be present or to vote either in person or by proxy in respect of their holdings of such Preference Shares at the above Annual General Meeting).

Detailed Notice of the above Meeting is being published in the Press and is also being posted to the Shareholders individually.

By Order of the Board.
N SIRUR & COMPANY PRIVATE LTD.,
Managing Agents.
V. N CHANDAVARKAR,
Managing Director.

Bombay,
12th August, 1957.

N.B.—The Dividend and Bonus when declared will be made payable at the State Bank of India, Bombay on and after Friday, the 27th September, 1957, to those shareholders whose names stand on the Register of Members on the 24th August, 1957. The Dividend Warrants will be made negotiable at par at the State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

BANKS

H indicates that Share capital is half paid. O C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

MINOR CHANGES IN TAXES ON WEALTH AND EXPENDITURE

DISAPPOINTING REPORTS FROM THE SELECT COMMITTEES

THE reports of the select committees on the Bills relating to the wealth tax and the expenditure tax have brought the stock markets one of the worst depressions in their recent history. For those assessing the likely investment climate in this country in the future, it is pertinent to reflect that a mere two months ago the Finance Minister was hinting at the prospect of a gradual rise in equity prices. Not only has the prognostication been falsified; the irony is that it has been falsified by the very agency from which it emanated. Investment confidence has been given a blow from which it will not easily recover. While talk continues about increasing voluntary savings at home, encouraging private enterprise and attracting investment from abroad to ease the foreign exchange shortage, taxation policies have been swung round sharply in a direction such as to ensure that none of these aims will be achieved. It cannot perhaps have been widely expected that the select committees considering the Bills on the wealth tax and the expenditure tax would have treated them in the only realistic way they could be treated: by rejecting them in their entirety. The pressure of opinion within a section of Congress Party (and a few other juntas besides) is too strong to allow measures nominally aimed against the relatively well-to-do to be scrapped as quickly as their intrinsic nature demands. But sobriety at least called for a number of important changes in the Bills—changes which would have reduced the inequity of the new burdens placed on individuals and on corporate enterprises. Such changes as have been made are grudging when they are concessional; elsewhere, their effect is mainly to increase the loads and the complexities which assessees will have to cope with—in dealing with a tax administration whose grubbiness and inefficiency is increasing twice as fast as the revenue it is supposed to collect.

*

The main criticism of the wealth tax has centred on two features: firstly, its application to companies; and, secondly, its tendency to scare away foreign investors. This is not to say that it has been quietly accepted as a measure of personal taxation; it has not, but in an age of flourishing jealousies, condemnation of the tax has been concentrated on the more vulgar of the injustices it perpetrates. The concessions given both to companies and to foreign investors by the select committee are meagre: non-resident foreigners are to get a 50 percent rebate on whatever their wealth tax liability happens to be, which is welcome only in the sense that any sort of balm is welcome after a lusty kick. The Government of India can hardly pretend that the egalitarian philosophy which has fathered the tax is applicable to foreign investments entering this country. Yet, this is what it is implying by not exempting such investments entirely; it seems to have been almost forgotten that India's greatest need of foreign resources today relates to entrepreneurs and their capital, not to socialists and their gilded verbosity. Once the wealth tax has been enacted, the fear will remain that its rate is liable to be increased. This fear is not likely to be assuaged after last week's events, when almost every single responsible newspaper in the country reported that a hint had officially been given at a Congress meeting about the wealth tax rate being increased in years to come. On behalf of the Finance Minister, it has since been denied that a Party Junta was entertained to a preview of Budgets not yet presented, but fresh speculation has arisen from the statement, authoritatively confirmed, that all he said was that wealth tax collections would increase in future years. This speculation is based on the reflection that there are only three ways in which these collections could be increased. One is if inequalities of wealth were to grow, so that more and more people became liable to pay the tax: this implies that the wealth tax will have failed as an egalitarian measure. The second is if the exemption limit were lowered; and the third is if the rate of tax were increased.

Formidable as the doubts are likely to be on this score, they will be increased in view of the very limited nature of the concessions proposed for companies. For fear of looking foolish, no one has argued that egalitarianism should apply to corporations as it does to individuals. Yet, although egalitarianism is almost the only purpose of the wealth tax, its application to companies remains. No effort has been made to correct the fundamental defect that the levy in this form will often amount to multiple taxation of the same assets—once in the hands of shareholders, and then in the hands of companies. If the aim were solely to prevent individual wealth from escaping tax by assuming a corporate guise, the least which might have been expected is that exemption would have been granted to industrial companies, and to public companies with their subsidiaries. The exemption which has been given, on second thoughts, in the case of inter-corporate investments is only inadequate recognition of the original injustice. Shipping companies will welcome the exemption it is now proposed to grant them, but many other types of enterprises will wonder how their activities are considered so much less essential that they should not deserve the same treatment.

*

There is a measure of realism in the proposal that when new companies are formed to establish approved industries, or when old companies invest in new undertakings, the new investment thus involved should not be subject to the wealth tax for five years. Considering that capital put in a new industrial enterprise rarely gives a worthwhile return for the first few years, the Wealth Tax Bill in its original form provided the strongest possible disincentive for industrial expansion. Even now, it is questionable whether the five-year "holiday" is adequate. There is also a measure of realism in the proposal not to collect wealth tax from a company in a particular year if it has made a loss in that year. But it is unfortunate that this exemption has been made conditional on the company not paying a dividend for that year. The select committee apparently takes the view that provisions for dividend equalisation are a meaningless adornment of balance-sheets; by this, it does a serious injustice to shareholders and to its own understanding of investor psychology. Nor is there any justification for the suggestion that if the profit of a company in a particular year is less than its wealth tax liability for that year, the whole of the former will go into the Government's coffers. Shareholders have no less a claim to a return on their investment than the Government has to taxes, and it is curious in the light of the current advocacy of auto-financing that a measure should have been recommended which will prevent companies that are none too prosperous from building reserves.

The complexities in the calculation of the liability to wealth tax, in the case of individuals even more than in the case of companies, promise to be serious enough. Still greater complexities, however, are likely to arise when personal expenditure is computed for the purposes of the expenditure tax. The select committee on the Expenditure Tax Bill has not made the task any the easier by recommending that individuals with an income of over Rs. 36,000 a year (as against the Rs. 60,000 originally mentioned) will become liable to this revolutionary new levy. It would be unfortunate if the suggestion concerning the extension of the tax to gifts and donations were to be accepted. It is open to question whether far-reaching amendments of this nature are best made at what is, strictly speaking, not Budget-time. India's reputation has already suffered considerably from the newly adopted fashion of presenting Budgets whenever whim demands; and uncertainties will not be lessened if the activities of the Finance Ministry are supplemented by competitive Budget-hatching among select committees. In spite of the concessions which the select committee has recommended in computing taxable expenditure under the Bill, the fact remains that the incentive to work harder and earn more in order to enjoy the benefits of bigger earnings has been seriously undermined. It is not for a country like India to experiment with smart new forms of taxation when fiscal deities of the eminence of Nicholas Kaldor himself have pointed to the administrative incompetence which permits hundreds of crores of income to evade the much simpler taxes already in force. The idea that the triumvirate of wealth tax, expenditure tax and income tax will together prevent evasion promises to be proven a major theoretical fallacy. All that the imposition of these taxes will imply is increasing harassment, evasion, dishonesty and resort to cash transactions.

WORLD COMMODITY TRENDS

THE weakness of commodity prices over the months of increasing difficulty in international finance has aggravated the fear that a serious recession of international business may develop unless the mechanism of payments can soon be properly readjusted. On the other hand, there have lately been glimpses of evidence that distrust of currencies is arousing interest in commodities as being safer to hold. However, this movement has been slight and erratic; whereas if there were serious distrust of sterling—the "transferable" variety of which is used extensively for purchasing both sterling and dollar commodities—there would presumably have been large-scale speculation in commodities. The relations between currencies and commodities are somewhat intricate, but there is no doubt about the effect of monetary stringency on commodity prices. The accumulation of liquid resources in Western Germany has reduced the resources available in other countries to finance buying of commodities, and stringency has undoubtedly been a factor in the recent movement of prices. The danger is not, perhaps, so much in this development itself as in the circumstances in which it has arisen. The monetary position became difficult when commodities in general were for the first time since the war, in plentiful supply. The markets were disorganised in the "Korean era," when unrealistic ideas of scarcity prevailed, when producers assumed that almost any project for expanding supplies must be automatically profitable. The schemes initiated at that time are now coming to fruition, but the anticipated demand has not materialised.

*

Another important factor is the major Governments' policies on stockpiling. Around 1950-51 many Governments, especially the American and British, were accumulating strategic materials al-

most indiscriminately. Their costly acquisitions did serious damage to industry while the acquisitive policies continued, and subsequent changes of policy have done serious damage to the commodity markets. The present position in this respect is interesting. The American and the British policies on stockpiling are quite different. When the American authorities had accumulated sufficient reserves for the purposes of strategy, they turned their attention to protecting domestic producers by absorbing their surpluses, but, even so, bought much more selectively than in the earlier phase. Whether their purchases were genuinely intended to maintain productive capacity in being in case of military need or were a facet of the generally protective economic policy may be debated, but the accompanying policy of imposing protective duties on imports of materials—especially metals—fits into either interpretation. The effect of such duties is to restrict American demand and so to depress prices outside of America. The British, on the other hand, have few domestic interests to protect and have in the past year been concerned more with economy than with strategy. The authorities have been selling strategic commodities, and plan to sell more of them—presumably with due regard to strategy but with no apparent regard at all to the convenience of the commodity markets.

American policy has been confused by the conflicting interests of different producers. The political need to maintain prosperity in the farming community produced such enormous stockpiles of agricultural produce that it was physically difficult to store them. Later some of these surpluses were distributed abroad, partly in exchange for strategic metals. This year, however, the authorities are reluctant to buy metals, even in exchange for agricultural produce and dealers in base metals—especially lead and zinc—have lost confidence in this special support. Britain's destocking policy, which applied mainly to metals but includes also timber and other commodities, has been even more inept. If the authorities had deliberately reversed the principle of buying cheap and selling dear they could hardly have improved on their performance. The losses sustained by the Exchequer are a separate problem; what concerns the markets is that commodities were withdrawn from use when they were scarce and are now being unloaded when they are plentiful. Obviously, one cannot blame the monetary troubles for all the troubles of the commodity markets; the misfortune is that the problems of finance have been superimposed at a particularly inopportune time. Equally unfortunate is the possibility that the monetary troubles will be aggravated by the fall in commodity prices.

* * * *

An analysis of the sterling area's dollar-earning commodities, in relation to the individual movements of commodity prices, suggests that the fall in prices may not be affecting the gold and dollar reserve as much as many people imagine. The area's ten major dollar-earning commodities, in order of value of exports to the dollar area in 1956, are rubber, wool, tin, tea, sugar, lead, cocoa, copper, manganese and jute. The most spectacular decline has occurred in the copper market (in some 16 months the metal lost half of the value that it attained in the spring of 1956) but copper ranks eighth among the ten. Of the others, wool, tea, cocoa, sugar and jute have been mainly higher this year than last. Other financial problems can arise, however, from the decline in the purchasing power of the primary-producing countries. The territory of central Africa, for instance, has been much less attractive to other countries' exporters since the price of copper slumped. The export trade in manufactured goods in general will obviously become more difficult if the decline in commodity prices persists. So the problem of payments, which affects the export trade anyway, can have important secondary effects if it aggravates the downward trend of commodities. But this trend is not likely to be permanent. In due time consumption must surely rise; and consumers' stocks are already low. Whether producers' confidence will be fully restored is another matter.

PLANTATION WORRIES IN THE SOUTH

GROWING INSECURITY: TAXATION BURDENS INCREASING

LAWLESSNESS in the plantation areas of Kerala continues unchecked in the absence of firm action by the State Government, and is breeding an acute sense of insecurity. Not only has the Trivandrum Government shown an inexplicable indifference to this problem; its Chief Minister has from time to time made statements which seem almost to condone the behaviour of the lawless elements. The United Planters Association of Southern India has been protesting, and has given accounts of various incidents which go to show that the rule of law has been denied to the planting community there. The latest of these protests comes from its president, Mr. M. S. Calderwood, who has at the annual general meeting in Coonoor this week said that the question of law and order in the Kerala plantation areas has become serious. "What is more serious about the situation in Kerala", Mr. Calderwood says, "is the statement by the Chief Minister that employers cannot expect assistance from the police, even, apparently, when trade union activity has passed its lawful bounds and become criminal trespass, assault, or unlawful restraint of liberty or damage to industrial property". The planters expect protection against threats to life, property and freedom of movement, which every citizen is entitled to receive under the Constitution, Mr. Calderwood says. "We have never asked and would never expect more, and I most emphatically repudiate the statements which have been made by the Chief Minister of Kerala that the police have been used, in plantations at any rate, as strike breakers." He wonders how it is a denial of trade union rights if the police are used to maintain law and order in genuine cases of disorder.

In another way, by its taxation policy, the Communist Government of Kerala is also harming the industry. On assuming power, its first announcement was about nationalising foreign-owned plantations, which it has not so far succeeded in doing because of the firm policy adopted by the Central Government. But he sees in taxation trends in Kerala today, "not the determination to build up or to foster our industry, but by subtle economic means to wreck it." He points out that the total of taxation on a rupee company producing 1,240 lbs of tea already amounts to Rs. 1,358 an acre, that is, more than Re. 1 a lb of tea. This is more than the prewar capital value of an acre of first-class tea property. The new rates of agricultural income tax which the Kerala Government now proposes to levy "go much further and are discriminatory against" larger estates. When the State Government's budget proposals were known, the market in plantation shares collapsed. This shows how the investing public is viewing the prospects of the plantation industry there. "By persisting in its proposals for a graduated scale of rates of agricultural income-tax on companies according to size, the Kerala Government has shut its eyes to palpable injustice, and is indulging in a discrimination which must inevitably prove damaging to the State."

Mr. Calderwood refers to the very large number of staggering "shocks" which the plantation industry received last year. The Madras State Industrial Tribunal Award, the reorganisation of States, the application of the Provident Fund Act to plantations, the election result in Kerala and the Plantation Enquiry Commission's reports on tea, coffee, and rubber—are among the more notable ones. Mr. Calderwood speaks of a sense of despair. The Plantation Enquiry Commission's report on tea, in particular, has been most startling. Mr. Calderwood says that the Association put at the Commission's disposal "volumes and volumes of laboriously compiled statistics and endeavoured by numerous personal contacts and by appointing assessors" to help it get over its lack of previous knowledge of the planting industry. But the Association's hopes of justice have been belied. The Commission's conclusions "are so contrary to facts" that one is forced to make a very searching examination of its statistics in order to discover the errors and fallacious reasoning which have made such conclusions possible. Errors apart, there is a biased form of presentation. "The picture of greater financial soundness of Indian compared with sterling companies, and the picture of a dying industry with enormous arrears of replanting to be overtaken, are striking examples of what can be done by the misuse of statistics." The Commission in its later chapters has found itself compelled to use statistics which completely contradict its earlier conclusions by showing not only an increase in total acreage, but an unbroken record of increasing yield an acre, he points out. The industry, however, is reassured to find that the Central Government has been thoroughly analysing the Plantation Enquiry Commission's reports and not accepting them at their face value.

RAW COTTON FOR WESTERN EUROPE

WESTERN Europe once accounted for nearly one quarter of the total world consumption of raw cotton, but now consumes only about a fifth. The causes of the decline have been investigated by the International Federation of Cotton and Allied Textile Industries. It has published its findings in the form of a brochure entitled *The Availability of Raw Cotton in Western Europe*, in which an analysis of the situation has been made. The conclusion is that trends in consumption are governed by many factors—some are long-term, bound up with general economic growth, while others are medium-term and short-term, such as balance of payments difficulties. The dollar shortage, in particular, has been the main short-term cause. The United States was the largest prewar supplier of raw cotton to west European countries. But in the postwar period, its share in the total supply to various countries has fallen by between 10 and 60 percent of its prewar exports. In the case of Britain, Western Germany and France, the three biggest importers of raw cotton, the drop has been noticeably sharp. U.K. imports of U.S. cotton have come down to 27 percent of its total, from 46 percent prewar. France has reduced her U.S. cotton imports to 25 percent from 52 percent of the total and Western Germany to 22 percent from 70 percent. Other countries such as Belgium, Denmark, Italy, Norway, Holland, Sweden and Switzerland have cut their imports in varying proportions. Apart from currency considerations, which are the main factor, price trends have played their inevitable part. U.S. raw cotton prices are artificially kept at a high level due to the Government's policy of supporting agricultural prices. It has now introduced a new export price which is lower than the domestic price of raw cotton; that, in conjunction with other economic aid measures, may help U.S. exporters to recapture part of their old markets.

* * * *

In the meanwhile, west European countries have turned to alternative sources of supply. Among the producing territories which have benefited from this changeover are the British and French colonies. Brazil, Nicaragua, Persia, Syria, the Lebanon and Greece. The three countries which have benefited little and have only a very variable place in European imports are India, Pakistan and Turkey India's raw cotton exports to Germany were less than 2 percent of the latter's total imports in 1955, after varying between less than 1 percent and 1.5 percent during 1950-55. Her exports to the U.K. were less than one percent of total U.K. imports until 1954, but in 1955 the U.K.'s offtake of Indian raw cotton amounted to 3.43 percent of its total imports. A similar improvement is noticed in the case of Belgium, which in 1955 imported 8.90 percent of her total requirements from India. But with France, there was a considerable decline—to 1.39 percent in 1955 from nearly 5 percent in 1950. Summing up, the brochure says that there is an absence of a general market for raw cotton in west Europe. "We have before us a dislocated market both as regards sellers and buyers. The prices in operation are, in fact, not sufficiently international...Moreover, the methods of supply are also disorganised and unsystematic. Not all purchasers are free to buy where they wish. There are those who, by reason of currency shortages, are obliged to have recourse to one market rather than to another which would appear to be indicated from the point of view of economic cost. It is, therefore, fair to say that the responsibility for the difficulties which arise in respect of raw cotton supplies must be shared by buyers and sellers.....Would not concerted action (for) a united Europe provide the right answer?"

CURRENT COIN

More Money for Housing.—The Union Minister for Works, Housing and Supply, Mr. K. C. Reddy, has said that the Government hopes to spend Rs. 1,000 crores for urban housing during the second five year plan, as against the original provision of over Rs. 100 crores. He has also announced a rural housing scheme which will benefit 10,000 villages at a cost of Rs. 10 crores only. In his view, these schemes cannot be regarded as over-ambitious. It is difficult to say whether this increase in the allocation for housing will mean much in practice, for second plan projects are now being "rephased" or pruned, with many items more important than housing being thrown overboard. Mr. Reddy thinks that to encourage house-building in urban areas, it will be necessary to set up housing corporations in various States to provide loans, with the Central and State Governments giving subsidies. These corporations will offer long-term loans on reasonable rates of interest. As for resources, the corporations will secure funds from such sources as banks, investment companies, the Life Insurance Corporation and provident fund accounts. It is unlikely that the Union Government will be able to offer substantial loans and subsidies to these corporations. It is also too much to expect that many financial institutions will show interest in long-term investment of the sort that a housing programme will involve. It may not, therefore, be easy to raise Rs. 200 crores a year for the new housing programme during the second plan. The Central Government's industrial housing programmes have not succeeded, as State Governments and private industrialists are unable to bear their share of the cost. The mere establishment of housing corporations in the States will be of little use unless more resources can be found. These might be available if waste in public works departments can be reduced. Mr. Reddy says that efforts have been made in the past to improve these departments, and they are now being intensified. The Central Government has set up a separate Department of Housing in the Ministry of Housing and Supply, under a Housing Commissioner, in order to implement the housing schemes more expeditiously and effectively. Four main schemes for housing have been in operation—subsidised industrial housing, slum clearance and improvement, low-income group housing and plantation labour housing. While admitting that progress has not been as fast as is desirable, Mr. Reddy says that the Government has now come to feel that something more should be done about this. Before proudly inflating the allocation for housing, it might be an idea for him to drop in next door at the Commerce and Industry Ministry to find out if enough building materials are available. Available, that is, outside the black market.

Recommendations on Second Shipyard.—An inter-ministerial committee has recommended that the proposed second shipyard should have a capacity of 60,000 gross registered tons, with provision to increase its capacity to 80,000 tons later. The committee's recommendations have been presented to the Lok Sabha by the Union Minister for Shipping, Mr. Raj Bahadur. As for many years to come it will be necessary to handle large vessels of 9,000 to 12,000 d.w.t., the committee feels that the length of berths in the new shipyard should not be less than 550 feet. It has also suggested that one or two berths of 600 to 625 feet long are desirable and that one of these should be so constructed that its length could be increased to 750 feet and breadth to 130 feet for the construction of large merchant ships and tankers. Because of high cost of equipping a shipyard for the construction of naval vessels, the committee thinks that only one of the two shipyards should be so equipped. As organisations in Calcutta, Bombay and Cochin can build small craft like tugs, launches and coasting vessels, the committee says that it will not be necessary to provide special capacity in the second shipyard for building them. Nor does it favour the building of dredgers in the proposed shipyard since it will be uneconomic to provide special facilities for building these or other specialised types of vessels at this stage.

* * * *

Legislation on Trade Marks.—There is an urgent need to amend the legislation concerning patents and trade marks. Trade mark owners and the public are greatly handicapped by the inadequacy of the provisions of the Penal Code and the Merchandise Marks Act in deterring infringements. Although a new Copyright Act has been placed on the Statute Book, some of the provisions of the Act have met with strong disapproval of a significant section of the public. A new Patent Bill, materially amending the patent law, was presented to Parliament in 1953. Speaking from the chair at the ordinary general meeting of the Trade Marks Owners Association of India Ltd., Mr. K. T. Chandy has suggested that the Government should make an early clarification of its point of view in this matter in order to dispel the embarrassing uncertainty in which patent owners and inventors find themselves today. The Union Minister for Commerce and Industry, Mr. Morarji Desai, has said that the Bill has been allowed to lapse as several suggestions have subsequently been received on it. A judge of the Madras High Court has been entrusted with preparing the revised Bill. The Minister has said that he has every hope that the amended Trade Marks Act, as also several Central acts having a bearing on trade marks, will be taken up during the next session of Parliament. The legitimate rights of foreigners on patents will be protected without prejudice to the interests of this country. The Minister has also assured the Association that suitable summaries of proceedings of all international conferences on industrial property, in which India participated, will be made available to the public as early as possible. Mr. Chandy has said that while a country may not be immediately able to abandon its existing system of classification of patents and trade marks, it will be useful to establish a common international system of classification for secondary use with which all other systems may eventually be linked. "There is already an international classification of patents for invention, which is also known as the European Convention on Classification. Many members of the Commonwealth have adopted this system and I would urge the Government to give early consideration to adopting the same, as at least a secondary system for use in India."

* * * *

Outlook for Jute Goods.—In his address from the chair at last week's annual general meeting of the Gunny Trades Association, Mr. Hiralal Mehta has commented on some important problems facing the jute industry. He says that India has made great progress towards achieving self-sufficiency in raw jute. Her production was only 1.7 million bales in 1947-48, and 5.3 million bales had to be imported from Pakistan. But this position has undergone a sharp change; during the past year, India produced 5.5 million bales, including bimli and mesta, and cut down her imports from Pakistan to a mere 600,000 bales. "Absolute self-sufficiency" in raw jute, says Mr. Mehta, "is a definite must, for every maund of jute imported from Pakistan means expenditure of foreign exchange which India can ill afford." The average yield of jute was 2¼ bales an acre in the 1956-57 season. "If the yield can be raised to 3 bales an acre, India will be entirely independent of its raw jute imports." The main method of increasing jute output is the use of improved strains of seed, better retting facilities, fertilisers and modern equipment for sowing and reaping purposes. He compliments the Government of India on the steps it has taken, and particularly for appointing the central supervisory body which is to review the progress of jute cultivation and see to it that improved methods of cultivation are adopted in the jute-growing States. Mr. Mehta is personally confident that the production of raw jute will be raised not only to the point of self-sufficiency, but also to produce a surplus for export. The chief anxiety now centres on the threat of competition in overseas markets from manufacturers in other countries and also from the growing number of substitutes. New mills are being set up in many places abroad. Capacity is being expanded in the Far East and the Middle East. Industrially advanced countries are using more multi-wall paper bags and bulk-handling methods, thus affecting the market for Indian jute products. Pakistan, in particular, is now a formidable competitor. Formerly, she depended on India for her jute goods requirements, which were about 50,000 tons annually. Now she is not only able to produce all she needs for her own consumption but she also has an exportable surplus of about 100,000 tons a year. Her industry is still being expanded, so keener competition is to be expected in the future. Jute bag production in China is increasing. Mr. Mehta notes, however, the encouraging increase in India's internal consumption of jute manufactures. It was only 110,000 tons in 1954, but rose to 170,000 tons in 1955 and to 193,000 tons in 1956. "It can safely be presumed that it may move up to 300,000 tons by the second five year plan", Mr. Mehta says.

* * * *

Total Food Control Opposed.—"I have not come across any protagonist of the policy of full control, including monopoly procurement and rationing, in the five States the Committee has visited so far." This has been stated at a Press conference held in Hyderabad by Mr. Asoka Mehta, chairman of the Foodgrains Enquiry Committee. Mr. Mehta thinks that control is opposed mostly because of past experience and hardships. It failed to bring down prices and therefore proved disappointing. The producer had to render accounts concerning his output, and the consumer had no choice of the quality of the grain he wished to buy. Mr Mehta adds that it is wrong to juxtapose full control with decontrol; there are many alternatives in between. However, if the Committee comes to the conclusion that the situation can be met only by introducing control it is free to make such a recommendation to the Government. A strong plea for introducing foodgrain rationing so as to bring down prices has been put forward by the president of the Hyderabad branch of the Indian National Trade Union Congress before the Committee. The measure has been suggested by leaders of various other labour organisations in Andhra Pradesh also. Grain dealers oppose rationing and the distribution of foodgrains by the Government, because these measures would involve a huge expenditure and would have a demoralising effect on the people. They think that foodgrains could be distributed through fair price shops and agencies recognised by the Government.

THE SMALL CAUSE COURT

WE observe that a writer in a daily contemporary complains that the increasing unpopularity of the Small Cause Court is due, not to the alleged vexatious delays, but to the inability of some of the judges to decide cases fairly and satisfactorily; to the objectionable summary procedure which does not require the judge to record evidence and deliver a written judgment; to the absence of any provision for appeal; and also to the insufficient staff of judges. Now the *raison d'être* of a Small Cause Court is that it should dispense speedy and summary justice, and that it should be a court of equity and good conscience, untrammelled by too much technicality. Of course when two parties come before a judge to settle their difference it can hardly be supposed that both will go away satisfied: the losing side has generally something to say about the incapacity of the judge. But there is no doubt that the dissatisfaction of the public with the working of the Small Cause Court is well grounded, and the reasons are not far to seek. We have no hesitation in saying that for some years past the judges of the Small Cause Court have been almost the refuse of the Calcutta Bar, and that not one of them has been able to earn at that Bar what might be called a really decent livelihood. Of course, it is impossible to get the pick of the Calcutta Bar for these appointments, just the same as it is impossible to induce leading counsel to accept judgeships in the High Court; but we have no hesitation in saying that if the Government were determined honestly to secure the best men obtainable, there would be a considerable improvement in the judges of the Small Cause Court. The procedure being summary, it is of the highest importance to secure commonsense, level-headed men, who are able to form a satisfactory judgment quickly. One has only to go through the list of Small Cause Court judges to see how utterly wanting they are in these absolutely essential requirements.

THREATENING A WITNESS

OFFENCE OF CONTEMPT OF COURT

(FROM OUR LEGAL CORRESPONDENT)

THIS incident is of no commercial importance whatsoever. But it presents one of those exercises in commonsense which we like to set before the non-legal reader, deeming him fully as able to solve it as any lawyer. A prosecution for that nastiest of all offences, blackmail, was in course of being tried in the court of a magistrate in Delhi. The complainant, who was the first witness for the prosecution, had been examined in chief and counsel for the accused rose to cross-examine the witness. We now quote Kapur J., in the Punjab High Court later: "At this stage counsel for the accused, Mr. Radha Kishan, addressed the witness holding some photos numbering 1 to 16 in an envelope marked 'A' (with the suggestion) to withdraw the case in the interest of the witness's family otherwise it will be bad for the family of the witness, i.e., against the interest of the family of the witness."

Well, one submits that you might read the above observations 20 times without finding anything legally or ethically objectionable in them, still less anything in the nature of a punishable offence for having uttered them. And the writer well remembers an English case in which he was once concerned, almost on all fours with this one as for the principle involved. The father of a teen-age university girl student was being prosecuted by her for alleged aggravated assault on her. In fact he had, with the concurrence of her mother, severely thrashed the girl in an endeavour, after all rebukes and remonstrances had failed, to compel her to cease her improper association with a married man. The girl gave her evidence in chief and Mr. F.E. Weatherly, K.C., rose to cross-examine her. The writer had the honour of his friendship and there was no man more venerated in the West of England than the famous song-writer and lawyer. His motives being beyond reproach, he could do things which other younger advocates might not dare. Facing the girl, he tapped a bundle of letters in his hand. He knew and she knew that they were from her seducer, and were of such indecency that the reading of them would have ruined her socially and probably ended her scholarship at Cambridge. Extracting one of the letters and half handing it to the girl, the old gentleman paused reflectively and then quietly asked her whether on further thought and in the interest of her mother and herself she might not think it prudent to ask the Recorder's permission to withdraw the case. The prosecution advocate indignantly protested saying that the suggestion was most improper and amounted to intimidating the witness, whereupon the Recorder asked if he might see the letters and they were handed up to him.

After scanning them, he passed them back not to Mr. Weatherly but to the prosecution counsel, with the observation that the suggestion was indeed irregular and, perhaps, improper. "Nevertheless," his honour added significantly, "the young lady might be well advised to consider it." She did and the case was withdrawn. But we have to remember that in this case the technically intimidatory suggestion came from the leader of the Western Circuit and, much more than that, from a wise and kindly old man who, everybody in the court knew, was genuinely thinking of the girl's future welfare. The rest of us do not carry guns of that calibre. Such a man is entitled to have it assumed in his favour, as the court and the public and the girl herself did, in fact, assume, that he had no intention of interfering with or obstructing the course of justice, and that his sole intent was to save the girl from herself But coming from any ordinary general practitioner the shaking of a bundle of incriminating letters in a complainant's face, accompanied by the intimation that she had better withdraw the case or else..... might be a very serious matter for the lawyer concerned.

* * * *

Returning to the Delhi case, you will now have guessed the nature of the little conundrum with which we opened this note. By flourishing the 16 photos at the complainant in the witness box and telling him that it would be bad for his family if he did not withdraw the case, had the accused's counsel committed any offence and, if so, what offence?

The Punjab High Court summoned the counsel concerned before it. Said Kapur J. later: "As the case is one which is still under appeal, I do not propose to say anything about it lest it may interfere in the course of justice. But it cannot be said that the words uttered by the counsel appearing for the accused did not tend to intimidate the witness and more or less to force him to withdraw the case. I therefore issued a rule to counsel why he should not be dealt with for contempt." So there you have the answer to the conundrum. If it was any offence at all, it was that of contempt of court. His lordship proceeded: "Counsel appearing for the respondent submits that it was never his inention to act in any improper manner. I examined the respondent in court and he has reiterated that he never intended to do anything which was likely to interfere with the course of justice, nor had he any intention to intimidate the witness or to force him to withdraw the criminal matter which he had brought in the court of the magistrate."

That explanation, of course, if accepted as true, knocks the bottom out of the suggestion of *mala fides* on the part of the learned counsel. Nevertheless, there was a good deal more necessary to be done in the way of explanation, since, however innocuous or even praiseworthy a man's intentions may be known to himself to be, the law presumes a man to intend the natural and probable consequences of his own acts. His lordship proceeded with an admonition to advocates in general. "It must be made clear that a counsel is not exempt from the ordinary disability which the law imposes, that his position is not inviolable and his privileges cannot extend to interfere with the administration of justice. On the other hand, he is expected to help in serving the course of justice and not to impede it in any manner." Going from the general to the specific, Kapur J. cited authorities, English and Indian. The first was almost exactly 100 years old and the party up for contempt was not a lawyer but one of the two litigants. In *Smith v Lakeman* (1856) 26. L.J. Ch. 305, the plaintiff sent a letter to the defendant with the object of intimidating him in the defence of his case. The letter warned the defendant that should the case pending in the Chancery Division proceed to judgment he (the defendant) would be indicted for swindling, perjury and forgery and thus bring disgrace on his family. Stuart V. C. held this to be a case of contempt and remarked that the letter amounted to a threat for the purpose of intimidating the suitor, and therefore, whether it had had that effect or not was unquestionably a contempt of court.

A more recent decision of the Allahabad High Court in 1935 comes nearer the present case, though it was much more flagrant. There an advocate, during the pendency of a suit, sent a notice on behalf of his client to the defendant threatening him that unless he withdrew the plea and paid a certain sum as damages he would be prosecuted criminally for defamation of the plaintiff's deceased father. The Bench (Sulamain C.J., and Harries J.) held that the advocate who drafted and sent the notice on behalf of the plaintiff was guilty of contempt of court. And so he was, without doubt. But there is all the difference in the world between a threat and a suggestion; suggestion moreover, which in the Delhi case the counsel explained that he made with the object only of "bringing about an amicable settlement between the complainant and the accused and... of saving the family of the complainant from any exposure which they might have been subject to, if the case had proceeded."

It was a borderline case; and, personally, one would have thought that the advocate concerned had committed no offence at all. The High Court, however, no doubt rightly, was not of that opinion. It held that the words uttered by counsel did "tend to intimidate the witness and more or less force him to withdraw the case" but it held further that in view of the unconditional apology tendered by the counsel no further action was necessary.

Court (on its own motion).

Radha Kishan, A.I.R. (Punjab), 1957, p. 105. Vol. 44.

THERE are many highbrow arguments against commercial broadcasting, and not all of them are invalid. The only alternative to Beethoven plus "plugs" on detergents, however, is not a Government monopoly, and the case for the latter is so weak that Dr. Keskar has been obliged recently to indulge in some very irresponsible attacks on parties of proven innocence. The Indian Society of Advertisers has promptly repudiated the suggestion that advertisers, foreign or domestic, exercise any influence on the policies of newspapers, and their authority is the report of the Press Commission itself. One can look through the Indian Press week after week and find not a word in favour of free enterprise of any nationality, and if any advertiser attempted to influence editorial policy he would not claim much success for his unnecessary endeavour. There is no reason to resort to high morality either to justify free enterprise's refusal to influence newspapers. (Morality is a monopoly of the State these days.) The simple reason is that it does not pay. A newspaper that takes its line from external influences soon loses all respect of the readership, and columns and columns of "plugs" will then pay no dividend. Business men know this, and are therefore anxious to uphold the dignity of the Press so that they at least get value for the money they spend on advertising. As for Dr. Keskar's unsubstantiated insinuation that he has heard from newspapermen of the insidious influence of foreign advertisers, there are two answers. One, Dr. Keskar is not the only man in authority to hear what he likes to hear. Two, I must have heard oftener of Ministers seeking to influence newspapers, of which, however, I took no notice because journalists who are influenced, by whomsoever, are not worth influencing.

* * * *

May I add a sixth footnote to the Legal Correspondent's admirable "Without Prejudice" in last week's *Capital* on the constitutional and legal aspects of the right to strike? There was a reference in it to the General Strike of 1926, the one solitary occasion on which such an event has happened within the Commonwealth. The whole thing, as we know, was off when Sir John Simon declared the strike illegal, for the strikers "were prepared to ruin the country but not to break the law." Sir Osbert Sitwell deals with the event in *Laughter in the Next Room* and, in his usual tortuous prose, writes, "Yet it is, I believe, to be doubted how far the great lawyer's statement concerning the matter was deeply considered, and whether it was not almost an impromptu, for he is said to have confided to a friend in the House of Commons, on his way downstairs to make the speech, that he had resolved, of a sudden, to give the matter this interpretation...From this moment on, the strike leaders, in their blue serge suits, with their moustaches and bowler-hats, found that they had come perilously to resemble rebels, and must have felt from time to time on the verge of being proclaimed.....Of what use was it, I asked myself, to inform politely an encroaching and overwhelming flood that it had transcended the bounds? But how wrong was I! Everywhere Sir John's declaration produced in the people of this country, tolerant and law-abiding by nature, an immediate response. 'Good gracious!' they exclaimed, primly, 'what I'm doing isn't respectable!', and many of them longed in consequence to return quietly to work." For no reason at all, I then turned to another autobiography, Mr.

A DITCHER'S DIARY

Nehru's. Thirty-one years before the threat of a terrible strike confronted him this month, he was a near-witness to the crisis Sir Osbert speaks of. Mr. Nehru wrote, "Soon after our arrival in Switzerland, the General Strike broke out in England. I was vastly excited, and my sympathies were naturally all on the strikers' side. The collapse of the strike, after a few days, came almost as a personal blow." The recent excitement must have been of a different nature, but it does Mr. Nehru no little credit that, on this occasion too, few questioned his sympathy for the workers who had threatened to go on strike.

* * * *

Mr. Harold Macmillan, who has already given abundant evidence of some much-needed fresh thinking on world and home affairs, can be trusted to do an excellent job of his tour of five Commonwealth countries early next year. It will be like calling on five old friends, and hence essentially different from the noisy and grandiose visits some capitals have lately witnessed. There are probably good administrative reasons why the Commonwealth Prime Ministers' conferences continue to be held in London, and consultations among colleagues must be more frequent than we are told, but the occasional presence of Her Majesty's First Minister in places like New Delhi, Karachi and Canberra can make the Commonwealth so much more real to so many. It was considered mildly ridiculous that Britain should have thought she was no mere "also ran" with the possession of the hydrogen bomb. Although Mr. Macmillan had made it amply clear that the American alliance was a primary essential of the foreign policy of the United Kingdom, there were journalistic speculators to suggest that Britain was trying to cease to be what she had never been, a satellite of the United States. Even if the fact is not mentioned every five minutes with a "plug" on Winston cigarettes, which taste "good like a cigarette should," it is known in the State Department, as it must be in the Kremlin, that the Commonwealth is the main source of its own strength —and Britain's. And because no member is a satellite. Details of Mr. Macmillan's programme are not known yet, but I am pretty sure he will go through his entire itinerary as though he had not left home. As a matter of fact, he will not have left home. The Commonwealth is a large family with no more than the usual rows and no less than the usual ultimate solidarity.

* * * *

India's annexation of the world polo title has not made big news. Without wholly approving it, I know the reason. It is a rich man's game, and the average newspaper reader, it is argued, is not interested. And yet, how true is this arbitrary assessment of the mythical average man's tastes in things? That polo is an Indian game in origin is hardly mentioned by those who are otherwise ardent nationalists, but it is not for that, I think, that hundreds of very ordinary people watch practice matches on the Maidan. An earlier Ditcher was a great one for rugby, and he discovered with great joy that his driver, a fine specimen from the hills, soon became as much a fan as his master. If the latter ever forgot an event, which was not often, the driver never did; he would be there at the door at 4-30 p.m. to remind the *sahib*. The finer points of the game, I daresay, were totally lost on the man of the wheel; I doubt if he knew even the rules. What pleased to him was the manliness of the game, and I should not be surprised if that is what attracts many uninitiated to polo. With incessant talk of wiping out privy purses, on which Mr. Nehru recently introduced a classic evasion—that he was in Indonesia when these were agreed upon—the future of polo cannot be excessively bright. It may be a pity. Calcutta is a singularly poor city in the matter of middle-class and working-class entertainment. With the departure of polo and rugby from the Maidan, it is not merely *maharajahs* and mercantile assistants who will be sorry. They will be missed by the man selling peanuts, the *ayah* knitting her scarf—to say nothing of the driver, who is understood to have developed an interest in another kingly sport of late, racing. Only the other day there was turned down a third application for a loan "for defraying the heavy costs of my beloved and departed grandfather's funeral."

* * * *

I am intrigued by Mr. Morarji Desai's reference to the foreign exchange shortage last week in terms such as almost to suggest that it is a divine blessing. "A God-sent chance to increase our trade and production", is how the Commerce and Industry Minister has described the country's most pressing problem before the Export Promotion Advisory Committee in Madras. As God-fearing souls, there is much we have to be grateful for, but not even in any esoteric sense had I imagined that our external payments crisis was, somehow, of divine origin. One hopes the fashion will not grow of presenting human errors as a manifestation of the Almighty's benign influence. There is no reason to doubt that the Almighty is on the side of India's secular Government, but I will perhaps be pardoned for my old-fashioned tendency to believe that when people starve for food because of lack of foreign exchange, or States for money because of Prohibition, the occasion should not be approached as a divine challenge. Mr. Desai's, however, is among the less original of the contributions I have seen this week to an understanding of our foreign exchange difficulties. A venerable contemporary which issues from the Lower end of a Circular Road (no metaphor, mind you) started its leading article last week by saying that the foreign securities backing for the paper currency would have to be reduced in three or four weeks' time; and added midway through the article that it had already been reduced three or four weeks ago. Another no less venerable commentator informs investors from the heart of the business world in Lyons Range that "domestic inflation and the foreign exchange crisis.....are of profound importance, but let us keep the issues straight and not confuse them with the quite separate matter of currency reserves." The path for the week's achievement in monetary intelligence however goes to the Bombay financial correspondent of the *Statesman*, who has this comment to offer: "The reported decision of the Central Board of the Reserve Bank (to seek sanction for reducing the paper currency reserve) is a good gesture in one sense, as it would infuse greater confidence overseas on the strength of the Rupee, which is considered generally as 'strong', though passing through a difficult phase. The significance is all the more greater (*sic*) when India is trying to secure enough foreign exchange from abroad to finance her Second Plan."

NSETTLED CONDITIONS IN STOCK MARKETS

GILT-EDGED BETTER: EASIER INDUSTRIALS

London, 28th August.

tY quiet and generally unsettled conditions prevailed in the stock markets during the week, and the tendency in most sections was ds lower levels. Losses, however, were small. narket had much to contend with during the but very little to assist sentiment. The per- : weakness on Wall Street, nervousness about :onomic outlook in the United States, the al developments in Syria and currency un- ainties were the main adverse influences, gh the last-named was not such a potent as in the previous week. The better ten- which developed in sterling in the foreign ige market after the week-end was respon- for a definite rally in gilt-edged securities. reached new all-time lows in many cases to the week-end but recovered to show very change compared with the previous levels. n bonds fully maintained their recent gains, r Eastern and Greek issues were dull. Dollar moved in line with Wall Street and recorded oread falls reflecting the lower values in ans-atlantic markets. Very quiet conditions in the industrial market, and prices for the art tended easier. Losses usually were small rely exceeded a few pence. South African hares suffered their first setback since the advance started at the beginning of the , and the volume of business contracted y. Nevertheless, the bulk of the recent gains aintained. Copper shares reflected the fall- ing price of the metal, and other base metal shares were uncertain. Oils had an erratic week, but showed only minor changes on balance. Interest in rubber shares was at a very low level and price movements generally were small and irregular. Firm spots included Pahangpara on the bid offer becoming unconditional. Tea shares were dull, although conditions were very quiet.

The Money Market

Foreign exchange settlements, lack of maturities and revenue payments continued to exert pressure on the money market last week. Money remained dear with 3⅞ percent as the general ruling rate for day-to-day loans, and the spread was from 3¼ percent to 4 percent. Conditions were most acute during the early part of the week when the market had to go to the Bank of England and borrow for the week at 5 percent in spite of a considerable amount of assistance by the authorities. There was some easing towards the end of the week, but the conditions since then have again become difficult.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 21st August shows that the gold stock rose by $1 million to $22 626 million. Foreign deposits fell by $43 million to $342 million, while foreign investments declined by $64 million to $3.604 million. The Federal Reserve sold $17 million worth of bills and bought $1 million worth of certificates. Total discounts and advances rose by $163 million to $709 million, while the aggregate excess reserves of member banks rose by $119 million to $203 million. The daily average excess reserves of member banks fell by $13 million to $523 million while their daily average borrowings fell by $231 million to $925 million. Business loans of the New York city banks rose by $163 million to $11.945 million, compared with a rise of $107 million to $10,329 million in the corresponding week of last year.

Decline in Sterling Exchange Rate

Although pressure on sterling has eased following U K and West German denials of alterations in currency values, there was little sign in the foreign exchange market of sellers wanting to replenish their run-down sterling balances. Nevertheless, although not maintaining an early improvement, sterling ruled steady with rates fluctuating narrowly throughout the day. After opening higher, however, sterling eased against the U.S. dollar. Canadian dollars were firm, although closing below the best level. Among Continental exchanges, deutschemarks were in demand but Belgian francs were on offer, while Swedish kroners continued to depreciate. Sterling held steady against Dutch guilders and Swiss francs. In the forward market, the US dollar and one or two leading Continental currencies were offered, resulting in some contraction of premiums. Forward Belgian francs, however, continued to appreciate.

Hongkong Gold Steady

The Hongkong gold market turned sluggish last week following the U K.'s denial of devaluation rumours, coupled with falling demand from overseas. The week's best levels were seen at the opening session, but heavy profit-taking by traders, who had been persistent buyers over the past weeks, quickly reversed this trend and prices eased. They steadied, however, at the end of the period on the Syrian situation. Carry-over charges of 918 cents a tael worked against buyers. The official offtake was 1.840 taels and the unofficial 17,300 taels. The forward contract was done at $(U.S.)37.75. Arrivals at Macao totalled 55,000 ounces.

Copper Disposal by U.K. Board of Trade

The U.K. Board of Trade has announced that it is to dispose of a further 27,000 tons of copper in continuation of the policy announced in the 1956 White Paper. It says that no detailed plan for the method and rate of disposal can be announced until discussions have been held with Commonwealth producers and other trade representatives.

Steady Trend in Vegetable Oils

Activity in the vegetable oils and seeds market was sluggish last week although fully steady conditions obtained with frequent price gains. Most traders anticipated a rise in coconut oil values, and with dealers here only holding small quantities on their books, there was little attempt to discount origin levels. Philippine copra sellers were reserved and rarely talking below $177 c.i.f., while general buying ideas advanced to $174 to 175 c.i.f. Private reports from India claimed that new crop castor oil will be available by the end of January, but trade quarters here expressed strong doubt, and general buyers continued to hold off the market. Linseed oil held steady, although buyers were reluctant to follow the 10s rise asked. Cottonseed and soyabean oils presented no real feature, although here again prices were maintained, and for sale to north European ports, current shipments were available down to £242½ a ton, cost and freight. Nigerian groundnut encountered a lively demand from Continental buyers over the week-end, when several thousand tons it was reported changed hands from £69½ to £69¾ c.i.f. Enquiries continued and business was disclosed up to £70 c.i.f. on commission terms, although resellers still discounted this latter price possibly by 5s a ton. Groundnut oil maintained its recent values, although enquiries were slow to appear. Canadian linseed weakened over the week-end, but response was poor, while castorseed was generally commanding slightly higher prices.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

SUBSTANTIAL FALL IN ADVANCES

Wednesday, 28th August.

THERE has been a substantial fall in advances in the Calcutta money market during the past week. The main category accounting for the decrease is sugar, followed by jute. Cotton accommodation is also lower, but funds for the storage of grains and seeds remain around the previous levels. The interbank market has been a little more active, but the call rate remains at 3¾ percent.

There has been a fair amount of activity in the exchange market, with bills relating mainly to tea and gunny shipments. Remittance has been on a moderate scale. Sterling has been under pressure for the greater part of the past week, but the forward rates are now steadier.

* * * *

During the week ended 23rd August, Government of India Treasury bills for Rs. 60,00,000 were sold in favour of the Reserve Bank.

* * * *

Silver was steady on short-covering and the price advanced from the previous week's level of Rs 179.50 to Rs. 181.50, quoted today. The rate for forward delivery was Rs. 181. There was no change in the London and New York prices.

Gold was easier and the price declined from Rs. 109.50 to Rs. 109. The sovereign, at Rs. 71, showed a loss of 50 nP.

* * * *

Declines of Rs. 22.91 crores to Rs. 1,512.45 crores in the total note issue and of Rs. 24.86 crores to Rs. 1,508.45 crores in active notes were the outstanding features of the return of the Reserve Bank of India for the week ended 23rd August, 1957. The currency contraction was covered by reducing foreign securities by Rs. 15 crores to Rs. 360.52 crores and rupee securities by Rs. 9.84 crores to Rs. 901.97 crores. Deposits of the Government of India fell by Rs. 4.92 crores to Rs. 65.30 crores but other Government accounts rose by Rs. 3.05 crores to Rs. 5.88 crores. Balances of commercial banks, at Rs. 80.85 crores, showed a rise of Rs. 4.97 crores. Balances held abroad, at Rs. 24.92 crores, were Rs. 8.30 crores higher because of a transfer from the Issue Department. Investments declined by Rs. 40.24 crores to Rs. 210.42 crores. Other loans and advances fell from Rs. 87.58 crores to Rs. 75.67 crores, of which advances to scheduled banks against usance bills amounted to Rs. 37.04 crores, against Rs. 45.62 crores. Ways and means advances stood at Rs. 38.81 crores (Rs. 28.84 crores).

* * * *

The return of the State Bank of India for the week ended 16th August, 1957, shows a drop of Rs. 50 lakhs to Rs. 326.93 crores in total deposits. Investments in Government securities remain unchanged at Rs. 93.21 crores, while other authorised investments are down by Rs. 19 lakhs at Rs. 11.01 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have declined by Rs. 4.28 crores to Rs. 166.79 crores. Cash and balances are, in consequence, shown at Rs. 40.52 crores, or Rs. 3.80 crores less.

* * * *

The statement of the position of scheduled banks for the week ended 16th August, 1957, shows Demand and Time liabilities at Rs. 702.55 crores (Rs. 13.35 crores on account of borrowings from banks) and Rs. 579.10 crores (Rs. 5.25 crores), compared with Rs. 704.61 crores (Rs. 13.38 crores) and Rs. 577.22 crores (Rs. 5.30 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs 82 lakhs and Rs. 9.52 crores to Rs. 39.37 crores and Rs. 74.38 crores, respectively. There is a rise of Rs. 1.73 crores to Rs. 339.83 crores in investments. Advances and bills discounted at Rs. 875.26 crores, show a fall of Rs. 6.73 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.9 percent and 68.3 percent, against 9.7 percent and 68.8 percent.

* * * *

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land Customs revenue collected in the Indian Union during May 1957 amounted to Rs. 1,530 lakhs, compared with Rs. 1,374 lakhs in the corresponding month of last year. The comparison in the following is between the current figures and those of the corresponding period of the preceding year. Of the total Customs revenue collections, import duties accounted for Rs. 1,366 lakhs against Rs. 1,151 lakhs, export duties for Rs. 126 lakhs, against Rs. 192 lakhs and land Customs and miscellaneous for Rs. 38 lakhs against Rs. 31 lakhs. The total gross collection of Union excise duties amounted to Rs. 2,153 lakhs, compared with Rs. 1,437 lakhs. During the two months, April and May 1957, the grand total of gross Customs and Union excise revenue realised was Rs. 6,939 lakhs against Rs. 5,230 lakhs during the corresponding months of the preceding year. Of this amount, import duties accounted for Rs. 2,805 lakhs against Rs. 2,194 lakhs, export duties for Rs. 253 lakhs against Rs. 364 lakhs, land Customs and miscellaneous for Rs. 68 lakhs against Rs. 43 lakhs and Union excise duties for Rs. 3,813 lakhs (Rs. 2,629 lakhs).

The National Bank of India Ltd., has declared an interim dividend for 1957 of 7½ percent, less income tax at 8s 6d in the pound, payable on and after 19th September.

LONDON FINANCIAL LETTER

ISSUES FOR THE I.M.F. MEETING

By Air Mail.

THE annual meeting of the International Monetary Fund is usually an occasion for clarifying policies rather than developing them, but London has some hope that the coming meeting in September will prepare the ground for positive action. The state of international finance has deteriorated more than it has improved since last year's meeting, and it could become critical. It is, presumably, too much to hope that the Americans are yet ready to be convinced of the need to bring the price of gold into a proper relation with the value of goods in general, but in the U.K. opinion in favour of revaluation is hardening. There is the obvious danger that the deficiency of many countries' reserves, in relation to the total turnover of their international transaction, will impede the development of international trade and may cause regression. Few people seriously believe that the Americans would be incapable of neutralising the inflationary force of a rise in the value of their gold stocks. It is assumed that the Americans' basic objection to revaluation is that it would increase the purchasing power of Russia's substantial supply of gold. But it is only natural that in London the prospect of receiving Russian gold of enhanced value in exchange for increased exports of sterling goods is not regarded with disfavour. That gold, added to the present stock, revalued, might soon bring the total sterling area reserve to the level of sufficiency.

However, it is assumed that the authorities will concern themselves at present rather with the maldistribution of existing reserves, and especially with the disharmony of the European currencies which is an important cause of that development. In recent years Europe has surprised the world—and itself—by the pace of its economic progress, but now its finances are defective and relations between its members are becoming acrimonious. Realignment of the undervalued West German mark must obviously follow that of the overvalued French franc—and soon. But this European problem cannot obscure the influence of American "bad-creditor policies" on the distribution of reserves. It is hoped that the non-American representatives will not be afraid to criticise those policies, and that their criticisms will be received with understanding.

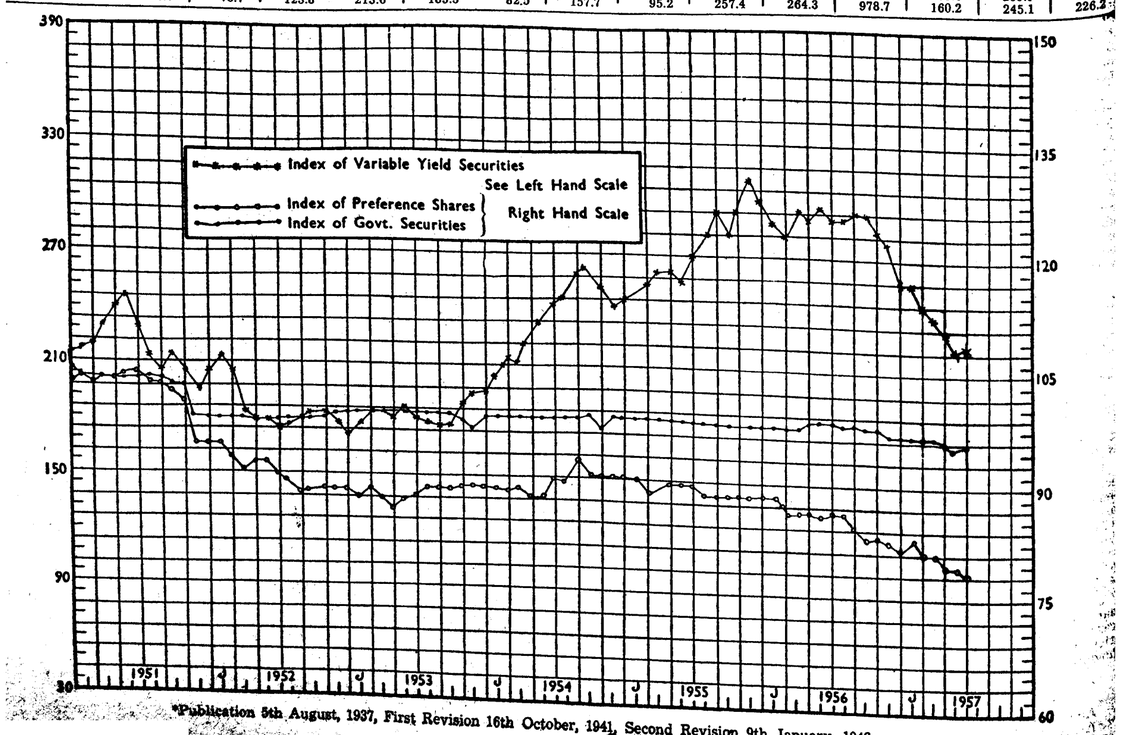
Value of Sterling

The belief in London that sterling is not ripe for devaluation, and that no devaluationary situation is developing, has until lately been supported abroad. While spot sterling has been weak—but not unduly weak for the time of year—forward rates have not reflected any serious apprehension. The deutschemark's forward premium is, of course, a special case. Meanwhile, transferable account sterling, though not quite maintaining its value in the free markets, has declined so little that the reduction of the official rate has almost closed the gap between the two. The near identity of official and unofficial rates may seem fortuitous, but in fact, it is evidently intentional. For a time transferable account sterling has been supported by such factors as conversion into sterling of dollars acquired from the I.M.F. by Japan. The British authorities could have absorbed these dollars to strengthen the reserve, but they have preferred to let the operation show its full effect in market rates. Their inaction confirms previous evidence that they wish to provide facilities for conversion of non-resident sterling into dollars at, or very near, the rates at which formal exchanges are made.

It must be assumed, however, that this *de facto* convertibility of non-resident sterling is an end in itself, not a step towards full convertibility, including the resident variety, nor even a step towards *de jure* convertibility of non-resident sterling—for such a measure of convertibility will emphasise the disadvantages suffered by holders of sterling resident in the sterling area. Before the British authorities can seriously consider any formal move in external monetary policy they must be satisfied that the internal finances of the U.K. are sound and that there are no major weaknesses in the rest of the sterling area that would cause undue strain on the currency. The latter problem is not directly their concern, and in any case, they are in no position to criticise while they are themselves severely criticised for their failure to get to grips with inflation. The stark fact is that the British Government, faced by inflation of demand generated by rising incomes, is maintaining conditions that make private capital projects difficult to finance and is restricting its own capital expenditure, while leaving consumers free to assert their demands. This priority of consumption over investment is an unsound policy, which must aggravate the difficulties of the export trade, increase inessential imports, and weaken the fundamental position of sterling.

Doubts about Profits

Though the situation remains inflationary, the stock markets have not reacted as is customary to such a situation. They were so reacting earlier in the year, but about midyear, after a period of hesitation, ordinary shares began to slip gently back while gilt-edged stocks began tentatively to advance. The trends were confused and irregular, and there were some extraneous influences (such as the movements on Wall Street) at work; but the general feeling was that the gilt-edged market had "touched bottom" and that the industrial markets could be depressed by the squeeze on profits. It is a fact that, in the field of manufactured goods, inflation is affecting costs of production more than prices of goods produced. Profit margins are diminishing, and output is not, generally, increasing enough to spread the increase in costs over a proportionately larger turnover. According to the figures for the seven months in which accounts have been published this year, as analysed by the *Financial Times*, the latest year's profits of manufacturing companies increased from £1,273 million to £1,311 million, but, because depreciation and tax required more, profits available for ordinary shareholders were reduced from £433 million to £416 million. The latest month's figures alone show a reversal of the decline in "equity earnings," but it remains a disturbing factor. From the viewpoint of the economy in general it is particularly disturbing because distributions to shareholders are not correspondingly reduced but are, on the contrary, increased—from £138 million to £145 million in the seven months' accounts. Industry is thereby curtailing its allocations to reserve (a major source of capital) and distributing more to potential spenders, so duplicating the main error that is observable in the Government's policy.



"CAPITAL" STOCKS AND SHARES INDEX*

The *Capital* Stocks and Shares Index (Base: 1939) has now been brought up to June 1957. Compared with May, the June index for Government securities indicates a rise of 0.3 points, while that for preference shares shows a fall of 0.4 points.

There were increases in banks 0.5 points, coals 2.6 points, minings and oils 2.8 points, cements 1.8 points, engineerings 11.1 points, teas 6.3 points and miscellaneous 5.2 points, while decreases occurred in cottons 2.5 points, jutes 2.0 points, papers 7.2 points and sugars 3.4 points.

Correlating all the factors the *Capital* variable yield securities index shows that the index for stock prices in these classes of shares advanced by 2.7 points during June 1957.

	Index of Govt Securities	Index of Preference Shares	Variable-Yield Securities

Stocks and Shares

EQUITIES CLOSE SLIGHTLY BETTER AFTER A WEEK OF DEPRESSION

TAXATION PROSPECTS REMAIN MAJOR INFLUENCE

Wednesday Evening.

CONDITIONS in the stock market have been very dull during the past week. Towards the close, however, equity prices have recovered on short-covering and fresh support induced by the Finance Minister's reported hint that there is likely to be very little in the way of new taxation for the rest of the second plan period. The report of the select committee on the Expenditure Tax Bill has been depressing, especially because of the proposal to extend this tax to gifts and donations. Towards the close, anxiety prevails over the strike threat which, it is reported, has been issued by the workers of the Indian Copper Corporation.

Among individual sections, the feature has been the increased activity in jute shares. Prices have risen on the view that profit margins of mills will improve with the prospect of a fall in raw jute prices. Among engineerings, there has been a small recovery in Indian Irons, and other issues are steady in sympathy. Turnover has been limited in tea shares because of the uncertain outlook for the commodity, although prices at this week's auctions have been fairly good. There has been a notable improvement in gilt-edged. It is reported that official support has been extended to long-dated loans. Short-dated issues are scarce, while there has been a fair demand for medium-dateds. The broadening of enquiry has been attributed to the view that 1957 3% Loan will be repaid shortly and there will, therefore, be more money to invest.

Details of the week's trading follow.

* * * *

On the whole, the Government securities market was steady. The volume of business was maintained and there was a further improvement in prices. However, some selling of one or two medium-dated issues was observed, and in the absence of enquiry, prices were marked back fractionally Due to bear-covering, 3% Conversion Loan 1986 steadied up to Rs. 71.15, while 3% 1996-97 was traded around the same rate. Among short-dated issues, 3% 1958 was marked back further to Rs. 99.75 and 3% 1959-61 hardened to Rs. 98.03; 3½% 1961 was quoted higher at Rs. 99.45 without attracting sellers. The 2½% 1961 improved further to Rs. 93.70, as did 2¾% 1960 to Rs. 96.65; 2¾% 1962 was asked for at the higher rate of Rs. 93.95 and 3¼% 1962 was marked at Rs. 97.50. In the medium-dated group, 3% 1963-65 was easier at Rs. 93.30 and 3% 1964 was quoted at Rs. 93.55; 3½% 1964 was slightly better at Rs. 97.62 but 3½% 1965 remained on offer at Rs. 97.35. The 3½% 1967 had no buyers at Rs. 97.53 and the new 3¾% Loan 1967 found sellers at the issue price of Rs. 99.50. In the long-dated group, 3% 1966-68 was shaded at Rs. 90.90 but 3% 1970-75 continued its upward trend with the price improving appreciably to Rs. 86.20; 3¾% 1974 was quoted at Rs. 98.30 and the new 4% 1972 loan was offered at the issue price of Rs. 100. In State loans, the enquiry for 4% discount issues continued but little business was reported due to the absence of sellers; 4% Madras 1967 and 1968 had buyers at around Rs. 96.30 and 4% U.P. 1967 and 1968 were asked for at the higher rate of Rs. 96.20.

Once again it was difficult to find a home for preference shares and sellers continued to predominate in the market. In the miscellaneous section, Allahabad Bank were done at Rs. 100 and Burn 7% at Rs. 113.50. Carew were marked at Rs. 81.82 and Duncan Brothers at Rs. 52. Godfrey Phillips were crossed at Rs. 61.62 and Hall and Anderson were taken at Rs. 61.50. Indian Iron changed hands around Rs. 98 and a small lot of Indian Aluminium at Rs. 64. Osler Electric Lamp were sold down to Rs. 47, against a previous quotation of Rs. 58. In jutes, Hukumchand were reported at Rs. 95.50, Naihati 1st at Rs. 81 and the 2nd at Rs. 54.

In the banking section, Punjab National met with profit-taking and reacted from Rs. 57 to Rs. 55. United Commercial however were steadier at Rs. 58. United Bank of India "D" shares were slightly better at Rs. 4.12.

A solitary transaction was reported in the railway section in Dehri-Rohtas at Rs. 10.25.

Cotton textile shares were featureless and in the absence of enquiry prices in most cases were marked down. Cawnpore were offered at Rs. 6.12 against Rs. 6.50, and Elgin Mills at Rs. 17.50 against Rs. 18. Kesoram were shaded at Rs. 12.

Dull conditions continued to prevail in the coal section and buying orders were difficult to execute. Bengal recovered to Rs. 214 but Pench Valley were easier at Rs. 15.37. Amalgamated receded to Rs. 14.25 and East Indian changed hands at their previous rate of Rs. 21.75. Burrakur were steady at Rs. 21.75, with little business reported. Central India and Western Bengal were quoted higher at Rs. 5.87 and Rs 5.75, respectively.

Jute shares provided the best section. Reports that most mills on the river were now earning reasonable profits attracted bargain hunters and prices recovered on a wide front. Here is a chart showing representative price movements:

	Opening 22nd August	Closing 28th August
	Rs.	Rs.
Agarpara	7.25	7.75
Anglo-India	135	140
Barnagore	76	90
Cheviot	115	122
Howrah	16.25	17
Kinnison	177	128
Kamarhatty	82	92
Union	100	112

In the electric supply section, Calcutta were slightly better at Rs. 12.50 and Patna changed hands at the lower rate of Rs. 10.37.

In sugar, business was reported in Carew around Rs. 7 and Dyer Meakin Breweries at the higher rate of Rs. 16.37. Ramnugger Cane were better at Rs. 21.25 as were Belsund at Rs. 10.31.

In the engineering section, Indian Iron at one time dipped to Rs. 17.50, but following the Finance Minister's hint during the debate on the Finance Bill in the Lok Sabha yesterday that no new taxes were likely to be levied until the end of the second five year plan period, market operators took fresh courage and once again began making speculative purchases. Consequently, Indian Iron recovered at the close to Rs. 18.14. Textile Machinery, after opening at Rs. 16.30 receded to Rs. 15.90, but replacement buying at the close brought a recovery to Rs. 16.31. Guest, Keen, Williams were steady at Rs. 28.62, but Braithwaite were easier at Rs. 27.25 as were Burn at Rs. 216. Jessop and Richardson and Cruddas came under selling pressure, and were marked down to Rs. 22.50 and Rs. 11, respectively.

In papers, Bengal were better at Rs. 70 and Orient, after being knocked down to Rs. 22.70, improved at the close to Rs. 23.50. Shree Gopal were steady at Rs. 14.50, as were Sirpur at Rs. 8.50, Star at Rs. 11.50 and Titaghur at Rs. 32.75.

In cement, Ashoka were quiet at Rs. 9.19, as were Sone Valley at Rs. 5.62. Jaipur Udyog were slightly easier at Rs. 12.19 but Orissa were steady at Rs. 12.62 ex-dividend.

No transactions were reported in insurance shares.

In shippings, the only shares which changed hands were India Steamship at around their previous quotation of Rs. 10.31.

Among miscellaneous industrials, Alkali and Chemical were better at Rs. 13, while Angelo

Brothers were unchanged at Rs. 18.75. Britannia Biscuits were higher at Rs. 13.87 and British Burma Petroleum were marked at Rs. 2.10 ex-rights. British India Corporation were very quiet at Rs. 5.40, as were Clive Row Investment at Rs. 9.50. Dunlop Rubber came under selling pressure and at one time eased to Rs. 19 but recovered again to Rs. 19.25. Hindustan Lever were steady at Rs. 21 while Imperial Tobacco were easier at Rs. 13.19. Indian Aluminium were depressed at Rs. 12.31, as were Indian Cables at Rs. 24. Indian Wood Products were better at Rs. 38.62 and Martin Burn were unchanged at Rs. 23.56. Metal Box advanced further to Rs. 28 and National Insulated Cable to Rs. 23. National Carbon reacted to Rs. 25.12. Shaw Wallace were unchanged at Rs. 10.

In the mining section, Indian Copper touched a new low at Rs. 2.98 on reports of labour trouble in Ghatsila. Orissa Minerals were better at Rs. 19.62, but Karanpura Development were neglected at Rs. 8.50.

The features in tea shares were New Samanbarh and Birpara, which improved on expectations of higher dividends from Rs. 17.87 and Rs. 115 to Rs. 19 and Rs. 125. Of the remaining shares, Pussimbing changed hands at Rs. 9.87 and Bishnauth lost further ground to Rs. 18.75. Brahmapootra were pushed down to Rs. 4.62 with sellers over, and East India and Hoograjuli changed hands at Rs 20 and Rs. 29, respectively. Seajuli were traded at Rs. 24.50. Rungamattee were weak at Rs. 80 while small lots of Patrakola and Teliapara changed hands at Rs. 144 and Rs. 132, respectively. Jayshree were fractionally better at Rs. 9.50 and Banarhat had sellers at Rs. 328. Hasimara were easier at Rs. 21.50 as were Huldibari at Rs. 21.75.

* * * *

The profit of the BRIDGE AND ROOF COMPANY (INDIA) has improved by Rs. 2.10 lakhs to Rs. 11.16 lakhs. Transferring Rs. 5.01 lakhs (Rs. 4.07 lakhs) to taxation provision, bringing in Rs. 1,51,297 and adding other miscellaneous receipts, there is Rs. 7,67,445. The dividend has been increased from 15 percent to 20 percent. General reserve is allocated Rs. 3½ lakhs against Rs. 2.75 lakhs, leaving a carry-forward of Rs. 1,77,445.

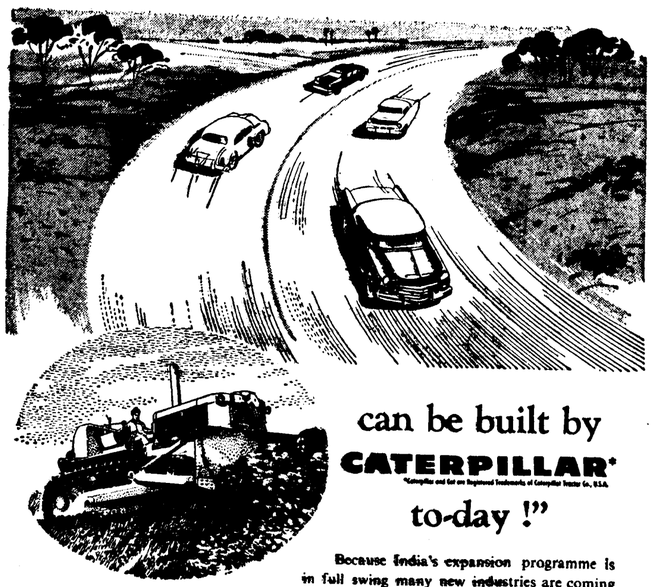
* * * *

There is a rise of Rs. 1.42 lakhs to Rs. 3.36 lakhs in the profit of the TEESTA VALLEY TEA COMPANY for the year ended last December. The dividend has been increased by 10 percent to 25 percent, including an interim of 10 percent. The carry-forward is Rs. 54,831 (Rs. 56,738). The crop increased from 3,70,473 lbs to 3,86,281 lbs and the average sale price was Rs. 3.17 a lb against Rs. 2.62 a lb. Estimates for the current year provide for a crop of 5,000 maunds at a cost of Rs. 8.29 lakhs.

* * * *

The profit of the NEW CHUMTA TEA COMPANY rose from Rs. 1.71 lakhs to Rs. 3.02 lakhs for the year ended last December. The dividend has been increased from 15 percent to 25 percent, including an interim of 10 percent. A balance of Rs. 76,930 (79,692) is carried forward. The crop increased from 520,000 lbs to 564,457 lbs and the average sale price rose from Rs. 1.65 a lb to Rs. 1.86 a lb. Estimates for the current year have been made for a crop of 6,500 maunds at a cost of Rs. 7.32 lakhs.

* * * *



The GONDALPARA JUTE MILL has made a profit of Rs. 6.36 lakhs for the year ended last December. The dividend has been declared at Rs. 50 a share. There was no dividend in the previous year. Taxation provision absorbs Rs. 33,720. The carry-forward is Rs. 11,510, against a debit balance of Rs 3,95,916 brought in. The company proposes to change its name to "the General Industrial Society Ltd." shortly. It is also proposed to split the present ordinary share of Rs 200 each into 30 shares of Rs. 10 each in the near future.

The ENGO TEA COMPANY has incurred a loss of Rs. 12,226 for the year ended last December, against a loss of Rs 18,522. A debit balance of Rs. 30,748 is carried forward. There is again no dividend. The crop fell from 2,659 maunds to 2,454 maunds but the average sale price rose from Rs. 1.67 to Rs. 1.96 a lb. Estimates for the current year have been framed for a crop of 3,000 maunds at a cost of Rs. 4.30 lakhs. The directors say that the crop to 30th June, 1957, amounted to 768 maunds, compared with 742 maunds manufactured to the same date in 1956. In view of the serious and prolonged drought which occurred in the Dooars district earlier in the season, "it is most satisfactory that the crop should be ahead of last year," they add.

* * * *

BURMAH-SHELL REFINERIES LTD. has made a profit of Rs. 9.42 crores for the year ended last December, against Rs. 4.83 crores. The dividend has been paid at 3.5 annas a rupee on the called-up ordinary share capital to absorb Rs. 3.02 crores. The taxation provision is Rs. 3.10 crores. Depreciation is higher at Rs. 1.49 crores against Rs. 1.23 crores. An amount of Rs. 5.11 crores represents the difference between depreciation (including development rebate) allowed for taxation purposes to date, and the provision made by the company for depreciation in its accounts to date. The carry-forward is Rs. 5,15,269 (Rs. 1,85,97,563). The directors state that the various plants, utilities and auxiliaries have been in steady operation during the period under review, apart from the scheduled shutdowns for routine inspection and maintenance. A total of 2,351,266 long tons of crude oil from the Persian Gulf was processed, yielding 2,189,265 tons of finished products. The Edeleanu processing unit for improving the quality of kerosene produced came into operation in June 1956. The construction of the Platforming unit has proceeded according to plan, only minor items being outstanding at the year-end. In September 1956, the directors decided that the financial position of the company arising from operations based on current working conditions and on the refinery performance to date was sufficiently encouraging to recommend that the Indian Government be advised with effect from 1st October, 1956, that Burmah-Shell Refineries Ltd. was willing to forgo the duty protection of 2 annas an imperial gallon enjoyed on motor spirit production, for which provision has been made under the agreement between the Indian Government and the main shareholders for the construction and operation of the refinery. This duty protection was calculated to amount in a full year to Rs. 2 crores. The Central Government revenues would, therefore, benefit to this extent from the offer made by the company, which was accepted by the Government.

"Our highways of to-morrow ...

can be built by CATERPILLAR*

*Caterpillar and Cat are Registered Trademarks of Caterpillar Tractor Co., U.S.A.

to-day !"

Because India's expansion programme is in full swing many new industries are coming into existence and due to the 'Grow More Food' campaign more food is being produced. More and more goods are being carried by road transport.

To open up new areas, to take care of the increasing traffic, new roads must be built and old roads have to be improved.

Better roads can be built with Caterpillar equipment. You do not save time by stopping the clock. Neither do you save money by buying cheap equipment. Caterpillar equipment will save you both time and money by giving you better output with less downtime and more economical operating costs.

Invariably a first choice among Government engineers and leading contractors, CATERPILLAR will, no doubt, play a leading part in building India's future Highways.

CATERPILLAR* Paving the way to India's progress

Bombay Market

DULL TRADING IN EQUITIES

STEADIER UNDERTONE AT CLOSE

Wednesday Evening.

THE Bombay stock market closed on a steady note after a long spell of dull trading throughout the past week. Disappointment about the report of the select committee on the Wealth Tax Bill depressed sentiment, and it was feared that in spite of minor concessions, as suggested, it would hinder the working of the corporate sector. The recommendations of the select committee on the Expenditure Tax Bill were considered unsatisfactory. It was believed that if these two measures were enacted, they would cause considerable embarrassment to assessees without bringing any substantial revenue to the Government.

On Tuesday, share prices staged a minor rally because of the Finance Minister's reported hint that there might not be any more new taxes during the second five year plan. Operators, nevertheless, were cautious and were inclined to await the result of official monetary and fiscal policies aimed at maintaining the value of the rupee. Fresh support from the Life Insurance Corporation on Tuesday also helped improve sentiment.

Tata Steels recovered to Rs. 169 and Indian Irons were quoted higher at Rs. 19.14 on short-covering. Alcock Ashdown were available at Rs. 247.50 and Premier Construction came to hand at Rs. 151.50. Tata Locomotive were transacted at Rs. 143.50. Except for scattered interest in Premier Automobiles at Rs. 89.25, automobile shares were freely offered, and Hindustan Motors dipped to Rs 6.55.

The closing prices of mill shares showed a minor improvement on bear-covering. Bombay Dyeing realised Rs 53.75 and Kohinoor were bought at Rs. 264.75. Svadeshi were dealt in at Rs. 173 and Simplex made Rs 169. India United Ordinary were offered at Rs. 11.25 and Apollo came to hand at Rs. 2.40.

The miscellaneous group was dotted with a number of losses in sympathy with the general trend. Belapur Sugar declined to Rs. 233 and Walchandnagar Industries were quoted lower at Rs. 250. Steamship company shares were relatively steady on the prospect of an improvement in port working conditions. Scindia Steam attracted interest at Rs. 19.25 and Great Eastern Shipping were taken at Rs 22.10. Mining shares were shaded, and Indian Copper fell to Rs. 2.98. Among cements, Associated Cement came back to Rs. 154.50 and Digvijay Cement declined to Rs. 135.50. Tata Chemicals fell to Rs. 16.85 and National Rayon were shaded at Rs 216.50 on selling pressure.

Banking shares were about steady and fluctuations were narrow. Punjab National were done at Rs. 99 and Bank of Baroda were bought at Rs.

96.50. There was little interest in insurance shares and prices declined on balance. New India Assurance were quoted lower at Rs. 42.25.

Routine business was done in electricity supply company shares, and Ahmedabad were taken at Rs. 93.75. Tata Hydro were transacted at Rs. 114.50.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. SOUTH EASTERN RAILWAY

TENDERS

Sealed tenders are invited for supply of the following materials :

Tender No. CON/GM/30/67/WP/D/57-58 for supply of (1) 302 Nos Henry William's self reversing Point Lever Type B.S. complete etc. to drawing No 38015-1; (2) 166 Nos Henry William's self-reversing Point Lever Type B complete etc. to drawing No. 26173; (3) 468 Nos. Pull-over rod for William's type B and Type B.S Point Lever and I.R.S. Flexible leading stretcher bar to C.E.'s S. E. Rly Drawing No. 12246A and I.R.S. specification No. S. 10 (current).

Tenders will be opened on September 20, 1957 at 12 noon.

Tender forms are obtainable from the Controller of Stores (Construction Section) Garden Reach, Calcutta-23 on remittance of Rs. 5/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Rly., Garden Reach, Calcutta by local firms.

Earnest money of Rs. 1000/- is to be deposited with the Chief Cashier South Eastern Railway, Garden Reach, Calcutta and the receipt obtained should accompany the tender without which the tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs. 1,000/- with the Controller of Stores need not pay the earnest money.

Firms not on this Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

AIR-INDIA INTERNATIONAL TO START MORE SERVICES

PROBLEM OF FLIGHTS TO MOSCOW AND PEKING

(FROM OUR NEW DELHI CORRESPONDENT)

AIR-INDIA International is adding two more services to its Far Eastern and African routes. From 2nd September, a third service will be added to the Bombay-Nairobi route which will then pass *via* Aden. The two existing services pass through Aden and Karachi. A third service, Bombay-Tokyo, will be started from 8th October. Enquiries indicate that some technical difficulties have cropped up about operating a Delhi-Moscow or Delhi-Peking air service. The principal difficulty is that the inferior quality of petrol available in Russia and China is unsuitable for the aircraft used by Air-India International. As matters stand at present, Indian aircraft will have to carry aviation spirit for the return journey if they are to operate on the Chinese or Russian routes. This is impracticable.

P.A.A. Service through New Delhi

Pan American service *via* New Delhi will be inaugurated on 31st August. It is the service from Philadelphia to Los Angeles, which will pass through London, Frankfurt, Istanbul, Ankara, Teheran, Karachi and New Delhi. The eastward service will pass through London on Wednesdays and New Delhi on Thursdays. The westward services will pass through New Delhi on Fridays and London on Saturdays. From October next, the service will eliminate Karachi, the eastward route passing through London, Frankfurt, Vienna, Istanbul, Ankara, Teheran, New Delhi and the westward route through New Delhi, Teheran, Ankara, Istanbul, Vienna, Dusseldorf.

Anglo-U.S. Air Negotiations

Anglo-U.S. air negotiations, it is believed, have broken down. The U.S.A. wanted rights for T.W.A. to operate a service through London to Zurich and for North West Airline to operate a service *via* London to Hungary. Under the existing agreement, T.W.A. can operate only on the London-Frankfurt route. An extension of the rights to operate up to Zurich would have enabled T.W.A. to connect this service with its Far Eastern services. B.O.A.C. wanted operational rights on the San Francisco-Australia route.

Specifications of Boeing 717

Performance details and specifications released for the first time of the *Boeing 717* short range jet reveal that the aircraft is identical in design with the *707-120* and the *707* longer-range inter-continental planes. External dimensions of the *717* and the *707-120* are the same, but the *717* weighs only 185,000 lbs. compared with the *707-120's* 247,000 lbs at take-off. The aircraft will be powered by four Pratt and Whitney advanced JT3 engines, although the General Electric advanced JT9 and other engines in this power class may be used. The cruising speed has been set at 550 to 600 m.p.h., the cruising altitude will range from 25,000 to 40,000 feet. The range with maximum payload will be 1,700 miles, and with full passenger payload, 2,400 miles. The fuel capacity is 10,092 gallons. With standard configuration the aircraft will carry 88 passengers, with a tourist seating capacity of 130.

The manufacturers say that the *717* will be capable of take-offs and landings on runways presently available at the major and intermediate airports of the world. The Civil Air Regulation's field length required for the full gross take-off weight will be 5,400 feet with dry power ratings. Landings at 150,000 lbs will require a C.A.R. field length of 5,500 feet. *Boeing* officials have declined to comment on whether firm orders for the short-range jet have been received, but it is believed that the release of the performance figures indicates sustained interest in a short-range jet on the part of at least one U.S. trunkline.

More Passengers on Trans-Atlantic Routes

Air traffic gains across the Atlantic in the first half of 1957 indicate that passenger totals for the year will for the first time exceed the one million mark this year, an *Aviation Daily* survey reveals. The 14 airlines that fly between the U.S.A. and Canada and Europe recorded a 27.5 percent increase in passengers in the first six months of 1957 over the comparable 1956 period. In the first six months of 1957, 413,764 passengers crossed the Atlantic on scheduled flights, against 324,462 in the first half of 1956. Between the U.S.A. and Europe, both ways, the airlines carried 360,666 passengers which shows a rise of 25.9-percent over the 286,424 of last year. Canada-Europe services showed an even bigger gain of 39.6 percent, from 38,038 to 53,098. Largely responsible for the passenger traffic increase was the 73.9 percent jump in westbound tourist passengers, attributable to reduced emigrant fares, the Hungarian revolt and the Egyptian conflict. The increase in tourists was 39 percent overall; first-class only 1.3 percent.

New Cheaper Services

A new term, "T-34", has been added to the informal list of airline jargon. It is used by many airlines to designate a new class of "mass" air transport which it is proposed to start across the north Atlantic next April at rates considerably below the present tourist class fares. The origin of the term is "T" for tourist, and "34" for the proposed permissible seat "pitch" in inches for this class of travel. "Pitch" is the distance between the top of a seat and that of the one in front of it when both are in a fully upright position. In the present tourist class, the "pitch" is usually about 38 inches and, in the new class, it will be 4 inches less, thus providing for the necessary additional seating capacity. Alternatively, this class of travel is known as "thrift", but "T-34" is at present more popular because it can be used in all languages.

Japanese Domestic Services

In Japan, a number of domestic routes are operated by a company known as Japan Helicopter Air Transport. Although, as its name implies, this carrier operates helicopters, they are employed only on charter work and the scheduled services are all flown with *DC-3's*. Regular services operate from Tokyo to Misawa—Sapporo, Sendai, Nagoya—Osaka—Kokwa and Nagoya—Kanazawa—Osaka.

New Name for Afghan Airline

The Afghan carrier, hitherto known as Aryana Airlines, has now changed its name to Ariana Afghan Airlines. The existing services continue to operate as before, but there is now an additional weekly flights in each direction on the route Kabul-Amritsar-Delhi, omitting the Kandahar stop made by the second flight between these points.

U.S. Trans-Continental Non-stop Service

U.S. airlines have announced that the first trans-Continental non-stop service between Boston and Los Angeles was started on 1st August. These daily "Mercury" flights will be operated by fast *Douglas DC-7* airliners. The features of the "Mercury" flights are de luxe cuisine, beverage service, reserved seats and arrival and departure red carpets. The elimination of an intermediate stop has reduced flying time by one hour, but it should be emphasised that the two existing daily non-stop *DC-7* "Mercury" flights between Boston and Los Angeles, one *via* Chicago and the other *via* Cleaveland, will continue to operate. Boston is one of the important U.S. east coast "gateway" points, and passengers travelling betwen the west coast and Europe are able to effect an apreciable time saving by using this city as their connecting point.

P.A.A. Trans-Atlantic All-Cargo Service

Pan American World Airlines has announced the extension of its trans-atlantic all-cargo service to Berlin and Hamburg. This is the first regularly scheduled through service between the U.S.A. and Berlin, thus eliminating the change of aircraft for shipments to and from the former German capital. 5th July marked the 20th anniversary of the first P.A.A. trans-atlantic flight when a *Clipper* made the Atlantic crossing from Newfoundland to Ireland in preparation for the introduction of a commercial air service. The operation was conducted in concert with Imperial Airways then the British flag carrier and predecessor of B.O.A.C., one of whose *Caledonia* flying boats made an east-to-west crossing on the same day, the two captains exchanging messages *en route*. Regular scheduled flights began two years later, but were interrupted after a few months by the outbreak of war in Europe. In those days flying boats were used for the long ocean crossing, but these have now been replaced by land planes and today Pan American alone serves 27 major European cities with 160 weekly passenger and cargo flights. Late next year, the *Boeing 707* jet airliner is due to begin its trans-atlantic service and will reduce the flying time between New York and London to approximately six hours.

U.S.-Mexican Air Route

Western Airlines, following the recent air transport agreement betwen the United States and Mexico, has inaugurated a daily *DC-6B* service betwen Los Angeles and Mexico city. These first-class luxury flights, operated under the name "the Californian" originate in the outward direction in Seattle and call intermediately at Portland (Ore.) and San Francisco, thus providing for the first-time through service from these important west coast cities to the capital of Mexico. In the return direction, connections are available in Los Angeles for San Francisco, Portland and Seattle. Continental Airlines has increased the frequency of its "Club Coach" service betwees Chicago, Denver and Los Angeles, and has added an intermediate stop in Kansas on the daily flight, thus introducing the tourist class service to this point.

New Air France Service

Air France has introduced a third weekly service to Mauritania, linking Dakar with Atar by way of St. Louis, Richard-Toll and Akjoujt.

THE INDIAN BANK

Fifty years of prudent and discriminating participation in trade, industry and commerce have given us strength, stability and a secure place among the big banking institutions in India

REALLOCATION OF PRIORITIES FOR SECOND PLAN

BIG DEFICIT IN TRADE BALANCE

(FROM OUR NEW DELHI CORRESPONDENT)

HOW best to implement the projects for which blueprints have been prepared by the National Industrial Development Corporation, has become the subject of earnest consideration here. Financial resources, particularly foreign exchange, are lacking. There are three possibilities for overcoming this difficulty. The first and foremost is some form of foreign aid. Private financing in terms of deferred payments or participation in capital is another alternative. "Scraping the bottom of the barrel" in order to see what resources can be made available is the third. This, however, needs a reallocation of priorities in the core of the plan not by the yardstick of ideology and pressure politics, but by that of taking "first things first." In such a scheme of things a national theatre may find no place. Duplication and overlapping in administrative services as an instrument for creating employment may also have to be abandoned. While austerity has been imposed on the public, particularly where foreign exchange expenditure is concerned, the Government has yet to convince the public that it is itself equally austerity-minded.

The Indian delegation to the U.N. Session is being selected on the *Kumbha Mela* style, with women and children included in it. It may be news that there are over 1,200 employees in the Indian High Commission in London alone, who have been making their contribution to the foreign exchange crisis. Why is the Indian public made to suffer by the stoppage of imports, if the Government is not prepared to reduce the size of its delegations?

Adverse Trade Balance

The need of the hour is to put a stop to fresh commitments and create the climate for foreign investment. But neither of these courses seems acceptable to the Government. The Finance Minister, replying to a question in Parliament, said that India's uncovered commitments of foreign exchange so far amounted to Rs. 900 crores.

Replying to another question, the Commerce Minister, Mr Morarji Desai, said that the adverse balance of trade for the five months ended May 1957 was Rs. 143 crores; imports were Rs. 405 crores and exports Rs. 262 crores. The Prime Minister, on the same day, assured the House that, as far as the Government is concerned, there is "absolutely no element of defeatism" in facing the difficulties in implementing the plan.

The Planning Minister, Mr. G. L. Nanda, said that the second five year plan was flexible. As conditions changed, there might have to be readjustments and rephasing. He added that three sets of priorities had been allotted to the plan projects, namely, priority No. 1: steel plants, railways, transport including ports, coal and "specified projects"; priority No. 2: projects in an advanced stage of completion, in which the bulk of the foreign exchange expenditure has already been incurred; priority No. 3: projects which would earn or save foreign exchange within a short period of time and were covered by deferred payment credit terms. (According to the Minister for Industry, Mr. Manubhai Shah, so far 37 cases of deferred payment, involving a sum of Rs. 20.87 crores, have been approved by the Government.)

The factual basis of the Prime Minister's assurance, however, was not disclosed. The statements made by his colleagues, on the contrary, proved the correctness of the appraisal made originally by a Planning Commission Member, Mr. K. C. Neogy, and a member of the Finance Commission, Mr. M. V. Rangachari. The tragedy is that the Chairman of the Planning Commission is also the Prime Minister of India. The inauguration of the plan, which came a little before the second general elections, introduced a large element of unreality. As was stated at the time the plan was presented, it was in the nature of an election manifesto. The Prime Minister, having signed the plan as its Chairman, has indirectly committed the Government to it. It was never scrutinised by the Government as such, as it should have been scrutinised. The ruling party, having won the general elections on the promises embodied in the plan, is unwilling to acknowledge that the plan is, in reality, being drastically modified under the name and style of "rephasing."

Annual Plans

As Mr. Nanda correctly said, the plan is a flexible one. It provides for annual adjustments. Mr. Nanda has indicated the priorities which will regulate the 1957-58 plan. More projects will be added in the third annual plan if the financial situation improves and the foreign exchange crisis is over. So far, there are no indications that this miracle will take place in 1958. In other words, the 1958 plan may be a carry-forward of the 1957 plan. Even this assumption is based on the optimism that India will be able to find Rs 900 crores of foreign exchange to implement only the "hard core" of the plan.

The Finance Minister Mr T. T. Krishnamachari, however has set his machinery in motion. Careful scrutiny is in progress to ascertain the dateline of the various commitments grouped under the lump sum of Rs. 900 crores which is the present total gap in the payments balance. It may be added that the private sector's share in this foreign exchange gap is of the order of Rs. 225 crores. This represents the value of import licences so far issued. Here again, as is known, an import licence is cancelled if the goods covered by it are not imported within 12 months of the issue of the licence. These expired licences are no longer automatically renewed. A licence-holder has to convince the Government that the goods are in the process of being manufactured before his licence is renewed. The scrutiny now in process is expected to indicate over what period India's exchange commitments are actually payable and what surplus, if any, there will be in foreign exchange over a given period.

Tight Import Control

It may be added that import licensing has been on an extremely tight basis since June. According to careful estimates, on the basis of the current import policy, it will take three years for India to get out of the foreign exchange woods. But the present import control will have to be liberalised if inflation continues.

Claim of Food Ministry

The Central Minister for Agriculture, Mr. A. P. Jain, recently claimed that his Ministry was able to exceed the target of food production by 5.6 percent. His reasoning was that the agricultural targets under the second five year plan envisaged an increase of about 27 percent in the five years ended March 1961, or 5.4 percent a year. According to the final estimates, the production of foodgrains in 1956-57 was 68.6 million tons against 64.9 million tons in 1955-56—an increase of 3.7 million tons, or 5.6 percent over the previous year. The following are the comparable figures:

	1955-56	1956-57
Rice	26,846,000 tons	28,142,000 tons
Wheat	8,569,000 tons	9,068,000 tons
Other cereals	19,041,000 tons	20,041,000 tons
Gram	5,331,000 tons	5,930,000 tons
	59,787,000 tons	63,181,000 tons
Other pulses	5,158,000 tons	5,405,000 tons

To this should be added the foodgrains imported during the year. The Agriculture Minister explained the paradox of rising food prices by stating that they were not determined solely by supply. In fact, from the time, the "grow more food" campaign was launched by the Linlithgow Government, the Ministry of Agriculture has never gone wrong. It has always exceeded the targets fixed for it or by it. In the earlier stages, it was the cultivator who started eating larger quantities of foodgrains than he was accustomed to before the campaign was launched. In the present context, the cultivator, or his *benamee*, is hoarding foodgrains.

Move to Raise Petroleum Prices

The Government has decided to negotiate a new price structure for petroleum products with the three oil companies operating in India before considering their request for an increase in oil prices. The oil companies had recently asked the Government to permit them to raise oil prices because of the rise in f.o.b. prices and in ocean freight rates following the Suez crisis. The Government, it may be recalled, has already given partial and interim relief in May last by agreeing to a certain rise in the prices of a number of petroleum products. The oil companies, however, have been demanding a further rise.

Departure Date of Mr. Krishnamachari

The Finance Minister, Mr. T. T. Krishnamachari, proposes to leave for Washington on 17th September. According to his present plans, he will leave India by Air-India International and change over to Swissair in Zurich for New York. He will stay in England on his homeward journey.

Functions of Refinance Corporation

The primary function of the proposed Refinance Corporation will be to augment resources for medium-sized industrial units in the private sector. It will, for this purpose, provide re-lending facilities against loans given by banks to medium-sized concerns. This was disclosed in Parliament by the Finance Minister Mr T. T. Krishnamachari.

Rupee Traveller's Cheques

It is expected that rupee traveller's cheques will be issued by the State Bank of India by the end of this year.

Iron Ore for Japan

It has been agreed to supply 7.2 million tons of iron ore to Japan between April 1957 and March 1962. In the first year, namely 1957-58, a total quantity of 1.3 million tons will be supplied. The delivery schedule for the remaining quantity will be settled by mutual negotiations each year. Supplies will be arranged through the State Trading Corporation.

Rephasing the Plan

The phasing of the plan is a vital subject on which high-level policy talks are at present in progress here. These talks relate to resources in general, and resources for the 1957-58 plan in particular. State Governments have made definite commitments to implement their part of the plan. The talks, therefore, relate to the States mobilising resources. Irrigation and power projects needing foreign exchange are another subject under discussion. With the huge foreign exchange gap of Rs. 900 crores, it is no longer possible to discuss plans which will have the effect of widening this gap. Availability of cement is another consideration, even if the irrigation part of the projects is de-linked from the power part. In any case, the power part of the projects will have to wait until the foreign exchange crisis eases. Agricultural production and the prices is another subject under discussion. Three members of the Planning Commission are shortly leaving New Delhi on a tour to discuss these problems with the States. Sir V. T. Krishnamachari visits Madras, Andhra and Kerala, Mr. K. C. Neogy visits Orissa and Madhya Pradesh and Mr. J. C. Ghose West Bengal. Discussions with the other States will be completed before the Standing Committee of the National Development Council meets here on 14th and 15th September. Earlier in September, the Congress Working Committee and the All-India Congress Committee will also have discussions on the financial difficulties confronting India, with particular reference to the implementation of the plan and the foreign exchange crisis.

Soft Coke Price and Output

A letter from the Coal Controller on the subject of the soft coke price structure is interesting. Explaining the omission of soft coke from any price increase following the coal labour award, he says: "So far as soft coke is concerned, two elements build up its cost price, the cost of raw coal used and the labour cost involved in the manufacture. The Government considered that the existing price of soft coke contains a sufficient margin to absorb any increase in the cost of production of soft coke. They considered, therefore that any further increase in the selling price of soft coke at this juncture was not necessary and would not be justified. No colliery-owner is under compulsion to convert his raw coal into soft coke and market it as such. It is open to him to reduce the quality of soft coke manufactured or to give up such manufacture altogether. But, for all the coal raised by him in his colliery, wages will have to be paid to the workers in accordance with the provisions of the Appellate Award." Colliery-owners, it appears, have accepted the Coal Controller's advice by drastically curtailing the manufacture of soft coke. After this advice, what steps the Coal Controller has taken to meet the demand for soft coke is not disclosed. It is presumed that the consumer will also be advised that he is under no compulsion to use soft coke. It is open to him to use raw coal instead.

Railway Coal Consumption

The Railway Board has set up another committee to suggest economies in the consumption of coal. A committee on fuel economy on the railways with Mr. D. C. Driver as chairman, made its report in 1953. How far the recommendations of the Driver Committee have been implemented is not known. In any case, the appointment of this new committee should be welcomed.

National Productivity Council

Plans are in an advanced stage to set up an autonomous central organisation, called the National Productivity Council. This Council will be representative of the Government, management, labour, technical experts in industry, scholars, research workers and professional consultants. It will lead to the establishment of local productivity councils in areas where industries are concentrated, and will also utilise and strentghen the existing organisations which deal with various aspects of productivity such as management practices, control techniques, training within industry, human relations, etcetera. The Council will have a board consisting of the representatives of the various elements, indicated above. The representation of the employers and labour on the board of the Council will be equal. Membership of the Council will be open to employers and labour, from individual units in industry as well as from industry-wise and national organisations. It has been suggested that the Council should create the climate for increased productivity by propaganda and by the exchange of teams within India as well as with foreign countries canalise financial aid for productivity work from national and international sources, and provide technical assistance which will be required as a result "of successful generation of consciousness of increased productivity."

It is proposed to convene a seminar of the representatives of various elements to determine the principles which will have to be adopted for ensuring effective participation of labour and employers in the movement, and the shape of the movement at the national and the local levels. Meanwhile, the draft constitution of the National Productivity Council has been prepared for facilitating its consideration at the proposed seminar. The proposal is to register the National Productivity Council as a society under the Societies Registration Act. Similarly, its programme of work has been drawn up, along with the estimates of the expenditure. Discussions will shortly be initiated for securing the requisite funds. Relevant details of the programme and finances will be furnished in the seminar. The programme envisaged for the National Productivity Council includes the following important items:

Programme of Work

(a) *Information:* The objective will be to rouse productivity consciousness in the entire range of industries, including large, medium and small industries, in the private sector as well as the

public sector. Activities aiming at the dissemination of information on productivity will include the publication of a productivity journal, pamphlets and reports; organising exhibitions, lectures and seminars; establishing a productivity library and film service; organising a technical digest service and a technical information service (the former for disseminating to Indian industries the technical information available from abroad, and the latter for handling specific technical queries for eliciting information from abroad); and propagating general techniques and processes of productivity increase.

(b) *Technical Exchange:* Technical exchange will be stimulated and encouraged in the international field as well as in the domestic field. In the international field, the programme will include the sending of teams abroad for the study of productivity techniques and processes in specific technical fields as well as in the general productivity fields of management practices, human relations, control techniques, training and selection, work measurement and job analysis, simplification, standardisation and specialisation, etcetera. Consultants and experts in productivity subjects will be invited from abroad for organising seminars, lectures and training courses. Indian counterparts will be trained for the follow-up. The training of individuals abroad will be sponsored in certain fields of productivity studies. In the domestic field, inter-plant visits for the study of general productivity processes, on the lines of the Productivity Circuit Scheme of the U.K., will be encouraged.

(c) *General Activities:* The National Productivity Council will stimulate and facilitate the establishment of local productivity councils. It will also encourage and strengthen the existing organisations dealing with various aspects of productivity work. It will provide specialist services to the local organisations for starting training courses, seminars and lectures. It will undertake and sponsor research on subjects related to productivity. In general, it will meet the technical requirements which will be generated by the propagation of the climate for productivity increases in industries.

To the fastidious smoker, Trayophane film packing means that he can trust the cigarettes to taste good!

Trayophane moisture-proof film opens your goods to buyer's eyes—but shuts the weather out! Whatever you wrap—cigarettes, tea, coffee, sweets, biscuits—your goods remain fresh longer, not affected by moisture-vapour!

Trayophane Moisture-proof film is tough—No cracking, no tearing!
Trayophane can be heat-sealed—just run a hot iron along the seam.
Trayophane is cheaper than other transparent packing material. Available in sheets and rolls. Write for our free samples catalogue.

TRAYOPHANE* The new name for TRAYONS TRANSPARENT FILM
stops the eye—starts the sale!
THE TRAVANCORE RAYONS LTD.
Factory:
Rayonpuram P.O., Kerala State.
Sales Office:
2/6, Second Line Beach, Madras-1.

London

EXTERNAL PRESSURE ON STERLING

EXPANSION IN U.K. EXPORTS

(FROM OUR LONDON CORRESPONDENT)

AN unfortunate concentration of unrelated circumstances—the French devaluation, talk of an upward revaluation of the deutschemark, India's drawing down of her sterling balances, etcetera,—has led to an unexpected pressure on the pound which, but for official support, might well have led to a real crisis. Mr. Macmillan's perspicacity in establishing strong reserves for our gold and dollar resources in the form of the standby credits negotiated last December has proved of undoubted value. Without that, it is at least questionable whether the Exchange Control could have given the support it has done, or whether the Treasury's recent announcement to the effect that "there is no question of devaluation or any other change in the pound's exchange rate" would have carried sufficient conviction to produce the easing of the pressure which has since been manifest. The whole question of European payments will be discussed at the forthcoming meeting of the International Monetary Fund in Washington, which Mr. Thorneycroft, the Chancellor of the Exchequer, will attend, and no doubt he will take the opportunity to confirm the Treasury's statement even more forcibly.

By itself, however, that may not be sufficient to restore confidence in sterling. Much more convincing would be the putting into effect of the more stringent domestic monetary measures which have so often been hinted at and which now would appear to be urgently needed. Employers, trade union leaders and top men of the nationalised industries met last Monday to advise the Chancellor how to fight inflation and strengthen the pound. These experts in various fields will also attend a special emergency meeting at the Treasury of the National Production Advisory Council on Industry, called at the suggestion of Lord Citrine. It will be an occasion for Mr. Peter Thorneycroft to sit back, listen and take notes, but he could also make a useful contribution to the proceedings if he announced the Government's intentions in carrying on the anti-inflationary battle.

Sterling Balances of India

India's contribution to British difficulties has been unintentional and unavoidable. It arises from the fact that for the first time, her sterling balances have been allowed to drop below £300 million, which used to be regarded as the minimum cover for the rupee currency. Although the Reserve Bank is covered by an Act of Parliament which allows the reduction of the currency cover to £225 million, the fact itself reflects the intensity of the crisis. India's balance of payments normally suffers seasonal pressure at this time of year, and Burma's withdrawal of half of the £15 million loan granted by India in 1955 has made things worse. But even without allowing for special items, the balances are still running down at something like £5 million a week and the effect of the tightening of import licences will not be noticed for several months to come.

First Meeting of Economic Council

In view of the need for clear thinking on economic affairs, there was satisfaction in the news that the Council on Prices, Productivity and Incomes was to meet last Thursday—in a hospital, of all places, where one of its members, Sir Harold Howitt, was a patient. This was commendable enthusiasm, but after discussions lasting some hours it transpired that in dealing with its main task, a review of the problems of inflation, nothing can be done before October. Addressing Press representatives at the hospital Lord Cohen, the chairman, explained that staffing and procedure had been discussed and that the Council would shortly be appointing a secretary "who will be charged with the task of preparing material for initial studies of the problem before the Council." The meeting had been held to arrange for preliminary material necessary for considering inflation so that the Council could "get on with its job" when all its members were free to do so. The office staff, which will not be large, will come under the direct control of the Council. Although the Council has been appointed by the Government, it is intended to be a completely independent and impartial body whose reports will be made direct to the nation.

Overseas Trade Expansion

The detailed export and import figures for July make it possible to see the overseas trade trends more clearly, for the distortions of the early part of the year have now worked themselves out. After allowing for the carry-over from 1956 of imports delayed by the closing of the Suez Canal, the Board of Trade statisticians estimate that the real increase in imports so far this year was probably about 5½ percent in value and 2 percent in volume. (Actual arrivals were up 7 percent in value and about 3½ percent in volume.) Exports still keep ahead of this increase. In the first seven months they rose about 6 percent in value and about 3 percent in volume above the corresponding period of 1956. Against this trend, the less favourable trade figures for July, which show a sharp rise in the visible trade deficit to £69 million, look much less worrying. The high imports during July included increases in industrial materials, petroleum products and finished materials. Among industrial materials, arrivals of timber and metal ores were seasonally heavy, but imports of wool, metals and other semi-manufactures were also higher, including steel sheets from the U.S.A. for the motor industry.

On the export side, engineering shipments in July did not quite maintain the increase recorded in the second quarter, mainly because of lower exports of ships and boats. Cars and commercial vehicles continued to do well. The balance of trade with the dollar area has greatly improved. In July, dollar imports were 3 percent below the first half-year's level, while dollar exports were 13 percent higher than in the first half-year. The drop in imports was due to lower arrivals of dollar petroleum, sugar, cotton and coal. Exports to member countries of the O.E.E.C. have recently been buoyant, but fell sharply in July, particularly to France, Norway, Sweden, Denmark and the Netherlands. Imports from these countries, on the other hand, rose steeply in July. In the main the change was seasonal, but the restrictions now applied in France are bound to hit U.K. exports, which so far this year have been 20 percent up on last year and 50 percent up on two years ago.

Terms of Trade in Favour

Since April, the international terms of trade have moved steadily in favour of Britain. According to the Board of Trade's index, total import prices have dropped from 111 in April to 110 in May, 109 in June, and 108 in July. The chief cause has been the gradual fall of fuel prices from the abnormal peak during the Suez crisis, though the fuel import price index in July was still about 10 percent above the average for last year. Metal prices have also declined, but much less sharply. On the export side the overall price index, which had remained unchanged at 110 since February, rose one point in July, reflecting slightly higher prices for engineering exports. The terms of trade index, which shows the ratio of import to export prices, fell from 101 in April to 100 in May, 99 in June and 97 in July. That is a worthwhile gain for the balance of payments, especially as exports continue to expand in spite of the slight rise in our prices.

£15 million for 1956 Wool Clip

British wool producers received nearly £15 million for their 1956 clips, equal to 53.079d a lb, says the British Wool Marketing Board's annual report. Largely because of the more valuable wool delivered, they were paid more than the Government's wool guarantee would provide. The overpayment of more than £400,000 (1.4d a lb) has been met from a special fund set aside for this purpose. The total clip was 67.6 million lbs, 435,000 lbs more than the previous year. Its condition was good, and it contained a larger proportion of more valuable wools than in previous years.

More Cars Produced in July

Any long continuation of the stopage of work in the factory of Fisher and Ludlow, the car body builders, would prove a serious handicap to the recently recovered production schedule of the motor industry. Car production in July, with four weeks, totalled 79,483—an increase compared with 92,476 in the five weeks in June, and 76,378 in four weeks of May. Goods vehicles produced in July numbered 22,989 (28,074 June and 22,630 May). This recovery was particularly welcome, but is also a bit worrying in that it is domestic demand which is being boosted rather than export. Cars exported in July numbered 36,540 (38,054 June and 41,612 May). Goods vehicles exports were 9,516 (9,904 and 11,518). In July 675 public service vehicles were produced and 553 exported.

Take-over Bid Rules

New rules drawn up by the Stock Exchange make it necessary for directors to disclose changes in their companies earnings and assets resulting from successful take-over bids and similar deals. Before permission is granted to deal in shares issued as a result of such transactions, the Stock Exchange may insist that shareholders be given full details of the purchase. Generally, more information will be required before market dealings can start. The changes, which are the first for ten years, are not unexpected. They have been introduced to provide greater protection for investors and to meet the challenge of new techniques which have exposed some defects in the existing Stock Exchange regulations.

Brevities

Glenfield and Kennedy, Kilmarnock, have received an order valued at over £150,000, from the Indian Ministry of Defence for all the large valves for the dry dock at the new naval dockyard in Bombay.

The Calcutta Electric Supply Corporation is paying a final dividend of 2½ percent, making 8½ percent for the 15 months to 31st March, against 6 percent for the previous year. Gross revenue for the 15 months of £8,101,785 compares with £5,859,483 for 12 months. Expenditure, including depreciation, increased from £4,334,257 to £5,907,907.

The U.K. Board of Trade will dispose of a further 27,000 tons of copper from the strategic reserve. No detailed plan as to the method and rate of disposal can be announced until discussions have been held with Commonwealth producers and other trade representatives. The monthly rate of disposals is unlikely to exceed 2,700 tons. No copper will be offered for sale before October.

H.M.S. *Nigeria*, an 8,000-ton Colony class cruiser, is to be handed over to the Government of India on 29th August at the yard of Messrs Cammell Laird and Company, Limited, Birkenhead, where the ship, completed in 1940, has been refitted and modernised. The *Nigeria* will meet the Indian Navy's need for a second cruiser for training purposes. She is to be re-named *Mysore*.

Bombay

RESTRICTION OF ADVANCES AGAINST FOODGRAINS

SURVEY OF SMALL INDUSTRIES URGED

(FROM OUR BOMBAY CORRESPONDENT)

THE high level of foodgrain prices is causing concern here. Mr. H. V. R. Iengar, Governor of the Reserve Bank, is reported to have warned leading bankers to restrict drastically advances against foodgrains. He said that the Government of India was seriously concerned about the present situation and warned that unless the position improved perceptibly, the Centre would be compelled to take drastic action. Mr. Iengar said that advances against foodgrains had gone up considerably and now stood at a much higher level than last year. This, he said, was a significant reason for rising prices. There was no bottleneck in the transport of foodgrains because the highest priority had been given to it. The Governor asked bankers to issue strict instructions to their branch offices to curtail such credits and he further requested them to ensure that their branch offices carried out their instructions. Referring to overall advances by banks, Mr. Iengar asked bankers to reduce these by Rs. 75 crores to Rs. 800 crores within the next two months. He warned that if the necessary steps were not taken in this direction, the Reserve Bank might reduce its financial assistance to banks during the busy season. Illustrating his point by citing figures, Mr. Iengar said that overall bank advances stood at Rs. 904 crores on 12th July, 1957, at Rs. 883.5 crores on 2nd August, 1957, and at Rs. 882 crores on 9th August, 1957. He said that the small decline of Rs. 22 crores between 12th July, 1957, and 9th August, 1957, was not adequate. While urging that these advances must be reduced to Rs. 800 crores by the middle of October, Mr. Iengar emphasised that industrial advances should not be curtailed and expressed the view that an overall reduction was possible without disturbing industrial finances. The Governor pointed out that during the advent of the previous busy season, the banks had indicated that they would need assistance to the extent of Rs. 150 crores. This amount of assistance had been provided. It was estimated that during the forthcoming busy season, the banks would need Rs. 200 crores as assistance from the Reserve Bank. Mr. Iengar said that it would be difficult for the Reserve Bank to meet this demand if the banks continued to maintain their advances at the present high level during the interim period.

Mr. Iengar further said that the authorities of the International Monetary Fund and the World Bank were strongly of the view that a dear money policy and the restriction of bank credit were essential steps to curb inflationary pressures. India had taken loans from both these institutions and was hoping for further assistance. It would therefore be unwise to ignore the views expressed by the International Monetary Fund and the World Bank. Meanwhile, over the week-end, Mr. Iengar inaugurated the first Bombay State Co-operative Urban Banks Conference. Mr. R. G. Saraiya, chairman of the State Co-operative Banks' Association, presided. In his speech, Mr. Saraiya outlined the history of the co-operative credit movement since its inception in 1904. He said that non-agricultural credit societies had taken great strides within recent years and now had the status of full-fledged urban banks. They had rendered invaluable service by providing cheap credit to their constituents. But with the growth of the co-operative system, Mr. Saraiya felt that the time had come for the Government to confer certain supervisory powers in the Association so that it could ensure that all co-operative banks in the State followed sound banking policies.

Co-ordination in Policies

Mr. Saraiya pointed out that many urban co-operative banks showed a satisfactory record of increasing deposits in spite of the fact that the rate of interest offered by them was lower than that of commercial banks. But, he said, the competition for available funds was now increasing and he therefore urged the Reserve Bank to help in co-ordinating the policies of urban co-operative and commercial banks. Making a further suggestion, Mr. Saraiya said that there was an urgent need for the Reserve Bank to compile a survey of small-scale industries on the same lines as the Rural Credit Survey. He said that such a survey of the problems and requirements of small-scale industries was needed if adequate assistance was to be given to them. In his reply, Mr. Iengar said that the compilation of such a survey could not be conveniently undertaken by the Reserve Bank. A sample survey would be of little value but while the Reserve Bank would be glad to assist in investigating specific problems, he felt that a complete survey on a systematic basis should be undertaken by the Central Government or by the State Government or by both in conjunction.

Assistance for Small-scale Industries

As for financial assistance to small-scale industries, the Governor expressed the view that this could best be done by providing aid through urban co-operative banks with the State Bank of India standing by to help if the need arose. He felt that the State Bank should, in the normal course of events, be left free to tackle problems arising from its rapidly expanding business of a purely commercial nature and from its responsibilities in the rural field. Mr. Iengar emphasised once again that the Reserve Bank would continue to press commercial banks to restrict credit. He said that the prices of essential goods had to be kept low and simultaneously a large volume of funds was needed for development purposes. If crops following the current monsoon proved satisfactory, the position would ease somewhat. Referring to Mr. Saraiya's view that it was necessary to co-ordinate the policies of urban co-operative banks and commercial banks, the Governor said that this was a complex problem "in which we are not altogether master of the situation." He said that several countries had increased their interest rates which meant that exchange banks operating in India were seeking cheaper money within the country instead of borrowing abroad. This added to the pressure on funds for developmental purposes with the result that call money was being quoted at a higher rate. Under the circumstances, if there was to be a change in interest rates in this country, it would tend to be on the higher rather than on the lower side. But Mr. Iengar added that he would welcome suggestions on this from the State Co-operative Banks Association.

PROPOSED EXPORT OF IRON SCRAP THIS YEAR

The Government of India proposes to export approximately 146,000 tons of iron scrap during 1957, said the Union Minister for Steel, Mines and Fuel, Sardar Swarn Singh, in reply to a question in the Lok Sabha. The Minister added that there was no control over the price of scrap which was exported. The price varied from Rs. 9 to Rs. 12 a maund, depending on quality and demand. Export of melting scrap, not usable in the country, was permitted to any destination, the Minister said.

One weapon the world can forget

It was hit-or-miss. Usually miss. Thank goodness that in the unending war against insect pests better weapons are now to hand than the unreliable fly-swatter.

To-day, Science has provided for homes, offices, stores—wherever insects are a problem—a new insect-killer of great power which gets insects *everywhere*, whether they fly or whether they crawl.

It is *Shellox* with *dieldrin*. *Dieldrin* is a wonderful new SHELL insecticide, the strongest and most persistent ever known, which world health experts have proved in their fight against insect-borne disease.

Used as a space spray, *Shellox* rapidly clears the air of insects. But it does much more. It introduces a new technique into insect-killing—brushing the liquid on to a surface so that no insect can crawl there. This is because *dieldrin* stays effective longer than any insecticide ever before. You can now secure a room against insects simply by spraying this safe liquid on to the floors, windows, walls, cupboards, etc.

The housewife in her home, the caterer in his restaurant, the motorist in his car, the industrialist in his factory—they all enjoy the fruits of modern oil research through products which Burmah-Shell are distributing day and night in India.

FRESH ASSESSMENT OF LAND REVENUE URGED

LOW YIELD FROM AGRICULTURAL INCOME TAX

(FROM OUR LUCKNOW CORRESPONDENT)

THE suggestion recently made by the Union Finance Minister, Mr. T. T. Krishnamachari, for the replacement of the existing land revenue by an agricultural income tax has been described as impracticable by the State's Revenue Minister, Mr. Charan Singh. According to him, if the suggestion were accepted, the State would have to write off about Rs. 19 crores out of the Rs. 22 crores which at present accrues to the Exchequer as land revenue. The present yield from agricultural income tax is only Rs. 55 lakhs. In the event of this tax replacing land revenue the minimum taxable limit will have to brought on par with the lower limit in income tax By implication, acccrding to Mr. Charan Singh, the State Government will have to exempt all holdings below 30 acres and this will entail a loss of over Rs. 19 crores. It will be recalled in this connection that the Taxation Enquiry Commission rejected agricultural income tax as a substitute for land revenue and recommended the imposition of both. The Union Minister's suggestion, however, has received some qualified approval from a section of the Press in Uttar Pradesh. With the abolition of intermediaries, it is said, the rate of land revenue has assumed considerable importance. Except in Assam and Madras, the whole class of tenants and the outgoing intermediaries who retain land generally continue to pay the old rates of rent. The rents which were being paid by cultivators in the pre-abolition period varied for different classes of tenants and it has meant varying rates of land revenue for the same class of land depending on whether it is at present held by the previous intermediary or a particular class of tenant. If land revenue has to continue, it is argued, it has to be on the basis of a fresh assessment.

Estimates of Per Capita Income

Some confusion has been caused by the statement made by the Prime Minister in Parliament on 9th August on the *per capita* income in Uttar Pradesh. It said that there was a fall in the *per capita* income in U.P. in 1954-55 compared with earlier years. In 1954-55 it was Rs. 212.7 against Rs. 230.0 in 1953-54, Rs. 259.9 in 1950-51 and Rs. 249.4 in 1948-49. This appears to contradict the State Government's claim put forward in the budget as well as in the five year plan review that the *per capita* income in 1954-55 was higher than ever before, namely Rs. 276.7 against Rs. 249.4 in 1948-49. The contradiction has arisen because the Economics and Statistics Department of the U.P. Government compiles figures both in terms of constant prices and current prices. The figures quoted by the Prime Minister and supplied to him by the State Government were in terms of current prices whereas the figures released for "home" consumption are in terms of constant prices. The decline in terms of current prices reflects a decline in the total income of the State from Rs. 1 508.7 crores in 1948-49 to Rs. 1,401.6 crores in 1954-55.

Navigation Possibilities on the Ganga

The State Government has decided to become a member of the Ganga-Brahmaputra Water Transport Board set up by the Union Government. The latter has had under active consideration for some years the enactment of suitable legislation for the development of inter-State rivers and river valleys. But with a view to tackling some of the more immediate problems relating to navigation in the Ganga, the Brahmaputra and their tributaries, the Ganga-Brahmaputra Water Transport Board has been set up. It is to be financed by an annual contribution of Rs. 2 lakhs from the Centre and Rs. 1 lakh each from U.P., Bihar, West Bengal and Assam for a period of five years in the first instance. It has been decided to carry out a pilot project for the development of riverine traffic in the upper Ganga and Ghagra. The Board has also decided to undertake a survey in the Ganga between Allahabad and Kanpur to explore possibilities of navigation between these two points.

Loans from State Finance Corporation

Loans amounting to Rs. 64.42 lakhs were sanctioned by the U.P. State Finance Corporation on 43 applications, out of a total of 191 received from various industries in the State up to the end of March 1957. Industries engaged in the manufacture of sugar, railway track material, chemicals, fruit canning, etcetera, were the major beneficiaries, receiving loans aggregating over Rs. 50 lakhs. Interest is charged on the loans at the rate of 6 percent. A sum of Rs. 25 lakhs has been provided in this year's budget for the purchase of additional shares of the Corporation which proposes to increase its paid-up and subscribed capital from Rs. 10,000,000 to Rs. 1,50,00,000. The Corporation was floated in 1955 with an authorised capital of Rs. 3 crores to provide medium and long-term credit to small-scale industries in the State. The Government of India has also sanctioned a sum of Rs. 6 lakhs to Uttar Pradesh for the development of small-scale industries.

Licences for New Industries

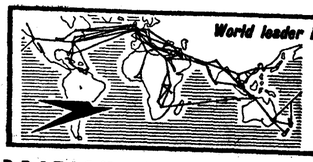
Replying to questions in the Legislative Assembly last week, the State's Deputy Minister for Industries declared that the Union Government has given licences for 12 new factories in Uttar Pradesh. These are: the soda and ammonium chloride factory in Banaras being erected by the New Central Jute Mills of Calcutta, the rayon filament yarn factory in Kanpur by the J. K. Cotton Mills, the textile machinery parts manufacturing factory in Kanpur by the Lakshmi Rattan Engineering Works, a railway wagon factory each in Kanpur and Ghaziabad, a transformers and switchgears factory in Naini in Allahabad, a cement factory in Dehra Dun by the Hindustan Sugar Mills of Golagokarnath, a wrapping paper factory in Allahabad, a paper factory (from bagasse) in Meerut, a sulphuric acid factory in Kanpur, a chromocrust factory in Kanpur and a torch factory in Lucknow. The State Government has sanctioned a loan of Rs. 1.45 crores to the New Central Jute Mills of Calcutta for the erection of its ammonium chloride factory in Banaras.

Extension of Cotton Cultivation

The possibility of reviving cotton as a major cash crop in Bundelkhand and some of the eastern districts is at present being explored by the State Government. Cotton growing in these areas received a setback before the second world war because of the general slump in prices. The Government's aim is to encourage cultivators to take it up again, so three pilot projects have been launched. Under the second five year plan, an additional 60,000 acres of land is to be brought under cotton cultivation in the State. The total cotton area would thus go up to 280,000 acres and the production of cotton would increase to 110,000 bales. Of the present total cotton area of 220,000 acres in the State, only 120,000 acres are under improved varieties, including American and the 35/1 type.

TYPICAL OFF-SEASON TOURIST FARES

Calcutta	Single Fare	Rs. 1,560/-
London	Return Fare	Rs. 2,808/-



B.O.A.C. OFF-SEASON TOURIST SERVICES

Yes, from September 1, you will be able to travel by B.O.A.C.'s wonder aircraft, the *Britannia*, from Calcutta to London at startlingly reduced cost!

A B.O.A.C. *Britannia* has standards of comfort, cuisine and service beyond compare. And all this will be available to you.

B.O.A.C. also offers Off-Season Tourist services to major European cities. Seize this magnificent opportunity to fly B.O.A.C. NOW!

SUBSTANTIAL INCREASE IN RAW JUTE PURCHASES BY MILLS

STEADIER UNDERTONE IN FIBRE AND GUNNIES

AFTER several weeks of restricted buying, Calcutta mills purchased 100,000 to 700,000 maunds of jute in a few days. This was done at a time when their former policy appeared to be paying dividends; prices were on the decline, and having dropped about Rs. 95 a ton from the top, showed signs of falling further. In recent months, it seemed that the system of mills making simultaneous gunny sales and jute purchases had been abandoned and that an increasing number of them were "taking a view" of the market. Some months ago, the July-September delivery period of most fabrics, in contrast with former years, showed a substantial premium over other shipping dates, so many mills took advantage by selling large quantities, especially for the end of that quarter. At that time, raw material rates were around Rs. 31 a maund, at which there was very little profit. It was assumed, however, that raw jute rates would be lower in July and August, when the first rush of new crop arrivals would be having a bearish influence on prices. That some mills took this gamble is now obvious, as there was no compensating activity in jute goods during the last week. Once the ice was broken and the first purchases made, there was keen competition from several buyers, and emphasis was laid on specific delivery dates. Purchases were made at between Rs. 27 and Rs. 28 a maund, giving mills an advantage of about Rs. 90 to Rs. 100 a ton on the prices ruling when the gunny sales were made.

All the purchases were not made for early delivery, however, as business was done as far forward as October-November. Many sellers were chary of entering into contracts calling for quick delivery, as the movement of jute from a large number of upcountry stations was still severely restricted. This was due to flooding in many areas and although the situation has improved recently, it will be some weeks before normal conditions are restored. Imports upcountry are still very small for the time of year, and this has been reflected by the arrivals in Calcutta. Local markets have been kept very firm by keen covering against recent sales. This has given a false impression about the amount of business done, and is the result of a growing practice on the part of some brokers to do "jobbing", which is against the rules of the brokers' own associations and is frowned upon by the industry. In many instances, however, the tendency has been encouraged by mills themselves in accepting bulk offers under one mark, thus enabling the broker to cover at his leisure or allowing the brokers to declare the sellers' name after the initial acceptance chits have been passed. This has been proved during the past week by the large number of contracts returned by sellers to brokers who had closed without the sellers' permission. If this practice is allowed to continue, some mills may find themselves in a difficult position when delivery dates arrive and contracts are repudiated.

THE JUTE MARKETS

There was a big increase in mill buying interest for raw jute during the past week, and purchases of 600,000 to 700,000 maunds were reported. Prices rose steadily from the lowest levels at the beginning, and there were sellers over at most rates. The increase in raw jute buying was not accompanied by a similar increase in gunny purchases. Manufactured goods were neglected in the early part of the week, but later a steady undertone developed in sympathy with jute and prices were maintained.

Manufactured Goods: There was very little change in the goods market at the opening last Thursday, the only interest being in the near positions. In heavy goods, ready B Twills were quoted at a premium of about Rs. 3.50 a 100 bags over other deliveries, but these figures gave an erroneous impression of the trend. This was due to a dispute in the fatka market between two rival factions on the question of the rates for due date settlement. The delay allowed B Twill prices to be pushed up on speculative activity, but once a final decision was reached, prices reacted quickly and the large premium enjoyed by ready goods was minimised. By the close, the disparity between the various deliveries was reduced to about 50nP. This was partly due, however, to a sharp rise in forward delivery rates, presumably on account of unconfirmed reports of overseas enquiries from Russia. These stimulated further speculative operations and a steady undertone developed. Only small real goods business was reported but, coupled with the firmer fibre markets, it was enough to create confidence.

Opening quotations last Thursday were based on August B Twills at Rs. 111.60, which was nearly Rs. 3 better than the January-March indications. Similar conditions prevailed in hessian, and 40in. 10oz. August shipment at Rs. 41.15 commanded a premium of 75nP over forward shipment. Ready quotations advanced rapidly on speculative activity in fatka, but once the due date "satta" was finalised, prices fell equally fast. On Saturday morning, ready B Twills lost Rs. 1.10 while other deliveries were unchanged. After the week-end, a complete change came over the market and reports of overseas enquiries forced up rates. Prices in all sections took a turn for the better, and the difference ruling between ready and forward shipment B Twills was reduced to 75nP, thanks to a substantial jump of Rs. 1.75 in January-March shipment. At this stage, August shipment stood at Rs. 111.75, which was slightly better than the opening rates in spite of the violent fluctuations; 40in 10oz. hessian near delivery rates stood at Rs. 41.70 for both near and forward deliveries, this being well above the opening quotations.

At the close, the market was steady, and opening quotations on Wednesday morning were as follows:

	August Rs.	September Rs.	Oct.-Dec. Rs.	Jan.-March. Rs.
40in. 8oz.	34.75	34.50	34.20	33.70
40in. 10oz.	41.60	41.80	42	41.50
B Twills	111.50	111.90	111.50	111
Heavy Cees (Plain)	115	113.50	111.75	111
A Twills	138.50	139.50	136.80	135
Liverpools	126	126.50	126.50	125.50
Cornsacks	119.50	117.50	114.50	112.50

Raw Jute: Large-scale transactions were the feature of the fibre market during the past week. The bulk of the sales were put through at the lower rates prevailing early in the week, but the advantage was soon lost, and prices rose rapidly later. Delivery dates varied from early September to November, and business, except for a very small percentage, was confined to new crop jute. The higher prices did not deter mills, who were buying jute at the end of the week at about Rs. 1.50 a maund higher than their initial purchases. In the opening stages, sellers were keen for business, and in most instances there were sellers over, but later sellers were reserved and brokers experienced difficulty in obtaining buyers' requirements.

At the opening last Thursday, Northern and Assam jute was quoted at Rs. 27.25 a maund basis bottoms for August-September shipment, but by Friday it increased to Rs. 28. Bulk buying continued, and on Saturday a further 25nP was added. After the week-end, quotations were based on Rs. 28.50, with a tendency to rise following fresh business. At the close, the market was firm.

Business reported in Northern and Assam jute was based on Rs. 27 to Rs. 28.50 a maund basis Bottoms for deliveries ranging from September to September-October. Tossa from the same districts was done at Re. 1 higher. Daissee white was reported at Rs. 26.50 to Rs. 28.50 a maund for September shipment, and Daissee mesta at Rs. 25.50 to Rs. 26.50 for September-November shipment. Small lots of old crop Daissee mesta were bought at Rs. 27 for ready delivery. A fair amount of jungli jute was bought, and white passed at Rs. 25.50 to Rs. 27 for September and September-October shipment, while mesta rates ran from Rs. 24 to Rs. 25.50 for September-15th October shipment. Desal and Northern mesta also came in for interest, and business was done at Rs. 26.25 to Rs. 27.50 for September-October shipment. Large quantities of cuttings were taken up, and rates varied from Rs. 83 to Rs. 84 a bale at the beginning of the week for ready bills of lading, to Rs. 87 to Rs. 89 a bale for September-October shipment of NC-MC-TC.

At the close, the market was steady and opening quotations on Wednesday morning were based on the following:

Indian Jute	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam	29	Aug.-Sept.
Northern	29	"
Purnea Desal	28	"
Daissee	29.50	Sept.-Oct.
Daissee White	28.50	September
Assam Tossa	29.50	Sept.-Oct.
Murshidabad Tossa	29	"
Northern Ex Calcutta	29	Aug.-Sept.
Local Packing	28	"
Mesta:		
Assam	26.50	Sept.-Oct.
Northern	26.50	"
Desal	26.50	"
Daissee	26	"
Murshidabad	25.50	"
Jungli	25	"
Bimli F.A.Q.	25.50	"
Pakistan Cuttings N.C.'s	90 a bale	Aug.-Sept.

The Cossipore markets were very firm as a result of heavy covering business over the past week. All imports found ready buyers, and high prices were paid for requirements. Old crop jute was neglected, and comprised over 90 percent of the total stocks, which remained at about 70,000 bales. Rail imports showed a slight improvement and during the week ended 28th August a total of 320 wagons were reported at the Cossipore sidings. This was very much lower than during the corresponding week of last year when a total of 515 wagons arrived. The continued demand for quick delivery jute pushed up prices, and over the week rates advanced by about Re. 1 to Rs. 1.50 a maund.

SEVEN FARMS SET UP TO SUPPLY QUALITY JUTE SEEDS

For the multiplication of quality jute seeds, seven farms have been set up—one by the Centre and the remaining six by the States in the main jute-growing areas The Central Nucleus Jute Seed Multiplication Farm, with an area of 212 acres, was established in Panagarh in the Burdwan district of West Bengal, and started work in 1956-57 under the supervision of the Indian Central Jute Committee, Calcutta. The West Bengal Government has established two major farms for which the Central Government sanctioned long-term loans amounting to Rs. 8,11,500. Similar farms have been set up by the U.P. and Assam Governments—one in each State. The Central loan granted to Assam for this purpose amounted to Rs. 1 lakh. In addition, the Bihar Government was sanctioned a loan of Rs. 4,63,144 and the Orissa Government Rs. 2,67,192 in 1956-57 for setting up two farms. A further loan of Rs. 86,818 has been sanctioned to the Orissa Government for 1957-58 for the extension of the farm in that State.

THE PAKISTANI JUTE MARKETS

EFFORTS TO STEADY UP FIBRE PRICES

(FROM A NARAYANGANJ CORRESPONDENT)

WHEN fibre prices came down to Rs. 25 for loose jute B Bottoms, as they did for a short period, the propaganda machine was set in motion to steady the market. The Jute Marketing Corporation was reported as a free buyer at Rs. 28 for B Bottoms whereas actually it was not taking up more than 500 maunds a day. Gharries and rickshaws went around Narayanganj with loudspeakers announcing that minimum prices for overseas had been fixed at £92 and that the Government would not allow sales of loose jute at lot prices below Rs. 25. Nobody paid much attention to this rather weak propaganda. What in fact happened was that the *beparis* who were frightened by the persistent losses they had suffered this year stopped bringing in jute. So the market improved somewhat as arrivals dried up. B Bottoms are now scarce at Rs. 26 for loose jute and even cuttings, which went down to Rs. 55, have rallied to Rs. 60 sellers. There has been some demand for S.N.C. at about Rs. 74. The pucca bale market has steadied somewhat but the interest is mainly in Lightnings which are scarce. During the early part of the past week river levels all over East Bengal began to rise rapidly and Sarisabari was flooded. The province has had a period of dry weather with a fall in river levels; but once again rain is falling, maintaining the waters at a reasonable level and encouraging further harvesting of the midland and highland crop and retting of the midland crop.

Most balers have a long position on their books and since there is ample jute available in spite of the temporary scarcity of arrivals, there is reason to believe that the present steady undertone is only temporary. It is improbable, however, that jute prices will fall much below Rs. 25, which is an economic level at which buyers can purchase freely and sell overseas making a small profit. In the overseas market a steadier undertone is felt but sellers are scarce. It is probable that this is so because they expect a rise in prices and that buyers are rather more keen than before because they feel that the bottom of the market has been passed. Although despatches to the port for export are now very heavy, they are probably urgent shipments against guaranteed contracts and do not really indicate heavy sales on sellers' books. The afloat market should, for the present, command a premium.

The Karachi gunny market remained unchanged although not very much business was transacted. Most Pakistani mills are fairly heavily booked up to October. Fairly heavy sales were reported recently at a time when the Calcutta mills began to sell freely forward. It appears that both Pakistani and Calcutta mills expect lower prices for raw jute.

THE FOREIGN JUTE MARKETS

ANOTHER CHANGE IN YARN AND CLOTH PRICES

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market took an upward turn during the past week and sellers raised their terms by about £2 a ton. It was, therefore, surprising to find a change being made in prices of jute yarns and cloth from 21st August, mostly reduced by £5 a ton. An exception was made in the case of J.C.3.R. quality yarns, which were reduced by £10 a ton, rove by only £2, 15s for 96 lbs and 48 lbs to £93 5s and £101 10s, respectively, 200 lbs remaining unchanged at £80. The small yarns 4 lbs, 5 lbs and 6 lbs, were left unaltered. All jute cloth rates were down by £5 a ton, hessians, sackings and tarpaulings. Raw jute opened with sellers of Mill Firsts at £97 10s a ton and now they are £100 lowest, with Mill Lightnings sold a few days ago at £93 now at £95 10s, Mill Hearts at £89 10s now £91 10s and grade Hearts £85 now at £86, c.i.f., U.K., August-September. There are sellers willing to accept 20s less for September-October. Dark jute has been very irregular, down to £96 being quoted for crack Daissee-2/3 and £93 for grade, now 10s up in each case, while grade Tossa-2/3 is about unchanged on the week at £102 10s and grade Tossa-4 at £97, September-October c.i.f. This second change in prices for jute yarns and cloth in six days (they were altered on 15th August by £5 a ton for most yarns and the better grades of cloth) has brought about a good deal of business. Consumers had been allowing their stocks to fall to very low levels and therefore replenishment was necessary. The whole position is still somewhat vague since the future course of prices cannot

et as ascertained. There has been much talk of akistan raising the minimum prices for the bre. but the general opinion is that this would e a retrograde step and against the interests of the idustry.

Calcutta goods have weakened during the eriod to 61s 9d for 40in. 10oz. and 48s 3d for oz., August 61s 9d and 48s September and 61s 6d id 47s 6d October-December. with B Twills 169s, 7s 3d and 166s 3d for the respective positions of ipment. f.o.b., Calcutta. The value of C.H.W. ommon hessian weft) is now 15.14d a lb. basis 8 lbs. and J.C.H. 8 lbs spools 15.72d a lb. with ply 8 lb twist at 17.56d. 24 lb sacking weft 26d a lb and 14 lb carpet warp (hard twist) 02d a lb. Cloth prices are down to 13.86d a rd for 40in. 10½oz., 12.88d for 10oz. and 11.01d - 8oz., while 14por. 36in. 18oz. tarpauling is at 64d and 10por 27in. 20oz. 12 shots sacking at 21d a yard It is hoped that the improvement ll continue. as many firms are working only ree days a week in Dundee. Jute Industries d. has announced that it is commencing to work double-shift in its new large mill in Douglas-field, where a new housing scheme has recently been erected. Angus mill and Rashiewell have stopped spinning and these places are used only for twisting and finishing yarns.

SLUMP IN BELGIAN JUTE INDUSTRY

A marked deterioration in the financial conditions of the Belgian jute industry during 1956 features the annual report of Jutibel. a national co-operative organisation of jute spinners. reports a recent issue of the Indian Central Jute Committee's *Jute Bulletin*. The slump which overtook the industry in 1955 is stated to have worsened in the year following. Output margins narrowed. often hardly covering the manufacturing costs and endangering the amortisation of equipment installed by the mills in recent years. Competition was stronger not only from large producing centres such as India and Pakistan, but also from neighbouring countries in Europe. Some of the latter, the report points out. are protected by governmental measures or by freely agreed regulations within the industry itself Under the impact of sharply increased competition in 1956. both production and exports declined. Spinning output moved downwards from 78.680 tons in 1955 to 76.921 tons in the year under report. While the production of carpet and fine yarns indicated a slight increase output and delivery of yarns for flat weaving dropped to 35.946 tons in 1956 from 40 967 tons in the year before. The weaving mills in 1956 produced 35 642 tons. against 40.588 tons in the preceding year. All export outlets with the exception of the Netherlands shrank considerably. Shipments of cloth outside the Netherlands dropped to only 12.408 tons from 61.232 tons in 1955 An increase of 2.500 tons was however, recorded in Holland's intake of yarns from Belgium. Belgium. a member of the Association of European Jute Industries was the most adversely affected by the drop in export sales because the industry there. more than any other in Europe. is based chiefly on exports. Over 50 percent of the Belgian output of jute manufactured products are exported annually. Exports of other members of the Association in 1955 were: Austria 1.60 percent. Denmark 1.31 percent France 9.94 percent. Germany 9.13 percent. Italy 2.14 percent. Netherlands 4.25 percent Portugal 1.75 percent. Spain 0.01 percent. Sweden 0.12 percent. Switzerland 0.51 percent and U.K 16.97 percent. Total present spindlage of the Belgian industry has been put by Jutibel at 77.554 against 83.238 before the war. In the weaving mills nearly all the looms have been converted to automatic or replaced by automatic looms. The automation effort has led to a reduction in the number of working men and girls employed in the industry.

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) declined by 0.4 percent to 112.6 compared with 113.1 (revised) for the earlier week. The index was higher by 1.0 and 6.0 percent. respectively, when compared with the corresponding week of the previous month and that of a year ago. The prices of onions in Nagpur (−17%), milk in Calcutta (−15%) potatoes in Shillong (−12%) and in Mandi (−5%), arhar in Madras and cardamoms in Calcutta (−9% each), tea (−8%), wheat in Kanpur (−7%), jowar in Gulbarga and maize in Ludhiana (−6% each). rice in Jagdalpur (−5%), groundnut oil (−3%), and masur. ghee and mustard oil (−1% each) showed declines resulting in a fall of 0.8 percent in the index for Food Articles to 112.6 compared with 113.5 (revised) for the earlier week. The prices of coconut oil in Bombay (+26%), rice in Badali (+13%). in Ranchi (+10%) and in Balasore (+6%), potatoes in Farrukhabad (+10%) and in Patna (+7%). eggs in Calcutta (+7%), barley in Jaipur, arhar. urd and milk in Bombay (+6% each), wheat in Saugar and ragi in Bangalore (+5% each) fish (+4%), gingelly oil and coffee (+2% each) and mung. chillies and salt (+1% each), however, moved up The index for *Liquor and Tobacco* remained stationary at the previous week's level of 92.0. The index for Fuel. Power. Light and Lubricants stood at 114.5 compared with 114.6 for the earlier week: the price of castor oil (−2%), however. showed a decline. The index for the Industrial Raw Materials group fell by 0.5 percent to 121.7 compared with 122.3 (revised) for the earlier week due to declines in the prices of groundnuts in Cuddalore and linseed in Kanpur (−6% each). rapeseed (−4%) and gingellyseed (−1%): the prices of lac (+7%). linseed in Sahibganj (+6%), tanning materials (+2%) and cottonseed (+1%) showed advances. The index for Intermediate Products exhibited a fall of 0.3 percent to 108.6. Items which showed fluctuations were zinc (−5%), lead (−2%) linseed oil. rayon yarn and copper (−1% each) brass (+2%). and tin (+1%). The index for Finished Products stood at 109.1 compared with 108.9 for the earlier week. The prices of oilcakes (−2%), cycles (−1%) and jute manufactures and bricks and tiles (+1% each), however. showed variations.

ACREAGE AND OUTPUT OF WHEAT INCREASE

According to the Directorate of Economics and Statistics. Central Ministry of Food and Agriculture. the all-India final estimate of wheat for 1956-57 puts the current year's area and production of the crop at 32.891.000 acres and 9.068.000 tons. respectively against the partially revised estimates of 30.386.000 acres and 8.569.000 tons for 1955-56. This shows an increase of 2.505.000 acres or 8.2 percent in area and 499 000 tons or 5.8 percent in production during the current year compared with last. The increase in the current year's area has been shared by all the principal wheat-producing States. particularly Rajasthan. Madhya Pradesh. Punjab. Bihar and Bombay. This increase in area is attributable largely to favourable seasonal conditions at the time of sowing. In Rajasthan. the increase in the current year's acreage is reported to be due to more areas having been brought under wheat cultivation out of the areas where *kharif* crops failed to mature due to adverse weather conditions. The increase in production during the current year has been shared mainly by Punjab and Rajasthan and to a lesser extent by Uttar Pradesh and Madhya Pradesh. This increase in production is due partly to the increase in area and partly to better climatic conditions during the current year compared with last year. In Bihar, considerable decline in current year's production is reported mainly due to unfavourable climatic conditions such as hail-storm and strong winds during the growing period.

ACREAGE UNDER BARLEY INCREASES

According to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture. the all-India final estimate of barley for 1956-57, puts the current year's area and production of the crop at 8.594.000 acres and 2,744.000 tons respectively. against the partially revised estimates of 8 382.000 acres and 2.749.000 tons for 1955-56. The overall production of barley in 1956-57 is practically the same as in 1955-56. in spite of an overall increase of 212,000 acres in area. There has been a substantial shortfall in production in Bihar and Uttar Pradesh. especially in the former State, due to adverse seasonal conditions during the period of growth of the crop. In Bihar, the crop was damaged heavily by hail-storm.

PROVING OF COAL BY INDIAN BUREAU OF MINES

The Indian Bureau of Mines has proved a total of 184.5 million tons of coal of different grades in various coalfields of Madhya Pradesh and Bihar. The areas where the proving operations were conducted by the Bureau were Korba. Kathara. Jhirki, Chalkari and Bisrampur blocks. Exploration operations began in September 1955. and nearly 171 000 feet of drilling had been completed by the end of June this year The total target envisaged for the scheme is 413.000 feet. The proving operations have been undertaken by the Indian Bureau of Mines as a measure to develop coal production in the public sector for attaining an over-all production target of 60 million tons by the end of the second five year plan period.

ACREAGE AND PRODUCTION OF SUGARCANE INCREASE

According to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, the all-India final estimate of sugarcane, 1956-57, puts the current year's area and production at 5,019,000 acres and 66,890.000 tons of cane against the partially revised estimate of 4,564,000 acres and 59,317,000 tons for 1955-56. This shows an increase of 455,000 acres or 10.0 percent in area and 7,573.000 tons of cane or 12.8 percent in production over last year. Expressed in terms of *gur*, the current year's production is placed at 6,745,000 tons, against 5,982,000 tons for 1955-56. The increase in acreage during the current year has been shared by almost all the sugarcane-growing States, and is marked in the case of U.P., Punjab, Bombay and Bihar. This increase has been attributed mainly to better climatic conditions at the sowing time compared with last year. Higher prices of *gur* and better irrigation facilities this year in Uttar Pradesh, compared with last year, are also reported to be responsible for the increase in area under sugarcane. The increase in production has been reported by almost all the sugarcane-growing States, especially U.P., Bihar, Bombay, Madras, Mysore and Rajasthan, and has been attributed partly to the increase in acreage and partly to favourable weather conditions during the growing period. The increase in production has, however, been offset to some extent by decreases reported by Punjab, West Bengal and Andhra Pradesh.

INCREASED EXPORTS OF COTTON CARPETS, RUGS AND DURRIES

There has been a considerable increase in the exports of cotton carpets, rugs and *durries* and in the foreign exchange earned thereby during the last two years. The exports of these items during the first three months of this year were 1,653,000 square yards valued at Rs. 38.27 lakhs, compared with exports of the value of Rs. 41.69 lakhs in 1956 and Rs. 41.42 lakhs in 1955. Saudi Arabia led other countries in the import of Indian cottcn carpets, rugs and *durries* in 1955 and 1956. It was followed by Ethiopia, Iraq, Kuwait. Aden. Ceylon, Canada and the U.K. But in the first three months of 1957, the U.K. imported 632,000 square yards. Australia 328,000 square yards, Saudi Arabia 199.000 square yards, Ethiopia 151.000 square yards and Kuwait 130.000 square yards. About 30 countries are importing the Indian cotton carpets and rugs, etcetera. In the case of woollen carpets and rugs, the level of exports has remained almost steady during the last two years. Exports of woollen carpets and rugs during the first quarter of 1957 amounted to 498,000 square yards valued at Rs. 104.2 lakhs compared with exports valued at Rs. 404.08 lakhs in 1956 and Rs. 404.74 lakhs in 1955. During these years. the U.K. has been leading the other countries in the import of Indian woollen carpets and rugs. Among other importing countries are Canada, the U.S.A., Australia and Singapore.

INCREASED WOOL SHIPMENTS FROM U.K.

The U.K. woollen industry made considerable gains in its export markets during the first quarter of this year, according to figures released in the *Wool Textile Bulletin*. Shipments of tops were up by 6 percent on the first quarter of last year; yarns were 200 percent higher and tissues showed an improvement of 9 percent. Prices have continued to rise and this. coupled with an increase in the volume of exports. led to a gain of some 16 percent in foreign exchange earnings. Due largely to a decline in shipments to India and China, Canada became, once again, the largest overseas market for tops. Exports to Japan, Pakistan and Sweden showed large improvements over the previous year and, among the smaller markets, Western Germany, Belgium, Rumania and Switzerland all increased their purchases. These increases helped to compensate for the decline in trade with China and India and for the temporary loss of the Egyptian and Formosan markets. The gain in yarn exports arose mainly from an increase in shipments to Western Germany—still the largest single market for yarns—and due to the rising demand from Holland, Denmark and New Zealand. There were sizeable falls in deliveries to South Africa and Finland, but most other markets improved compared with the previous year. Western Germany also contributed to the rise in cloth exports, as did Canada and the United States and, to a lesser extent, Denmark, Japan, France, Italy and Holland. There was a fairly general improvement in cloth shipments to the Middle East, and exports to Brazil and Venezuela showed signs of recovering. Against this, South Africa, Hongkong, Iraq and Peru all took less cloth and the Egyptian market closed completely.

PROTECTION TO HAND TYRE INFLATOR INDUSTRY EXTENDED

The Government of India's Resolution on the Tariff Commission's Report (1957) on the question of continuing protection to the automobile hand tyre inflator industry has recently been published in a *Gazette of India Extraordinary*. The Commission has recommended that a protective duty of 25 percent *ad valorem* should be adequate and that protection to the industry should be continued at that rate till 31st December, 1960. The Government has accepted the Commission's recommendation that protection to the industry should be continued till 31st December, 1960. As for the rate of protective duty, while it is agreed that a duty of 25 percent *ad valorem* would be adequate to protect the industry against foreign competition, the Government has decided in consultation with the Commission, that considering the existing structure of the revenue tariff, the protective duty should be continued at the present level of 45 percent *ad valorem*. The attention of the industry has been invited in the Resolution to the Commission's suggestion that it will be advisable for the manufacturers who produce hand tyre inflators (pumps) out of welded tubes, to use seamless tubes for the manufacture of these pumps.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA
(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to July 1957. As compared with June, the July Indices for Food and Fuel & Lighting indicate rises of 12 points and 7 points, while those for Clothing and Miscellaneous remain unchanged at 546 and 284 points, respectively.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living advanced by 7 points during July 1957.

STEPS TO COUNTERACT COIR SLUMP

PROGRESS OF RUBBER REPLANTING SCHEME

(FROM A SOUTH INDIAN CORRESPONDENT)

THE Industries Minister of Kerala, Mr. K P. Gopalan, recently outlined his Government's plan to counteract the slump in the coir market. He said that the slump has its origin chiefly in the Suez crisis. during which buyers abroad had built up a heavy stock which had not yet been exhausted. This. coupled with the seasonally lower exports, made the situation difficult for a large number of coir yarn producers in the coastal area of the State.

The State Government in its effort to find a solution to the problem has requested the Centre to take immediate measures for enlarging the demand for coir. and to grant a loan of Rs. 1½ crores at a lower rate of interest for coir co-operative societies. The State Government has allotted Rs. 10 lakhs for purchasing accumulated stocks as a temporary relief measure. These purchases will be made on behalf of the Government by coir co-operative societies A committee has been constituted to supervise the Government's coir purchasing scheme. Meanwhile. hopes are expressed in trade circles that normal business will be resumed by September as in previous years. Unless the Government takes extra care in releasing the stocks it is now purchasing, the delicate balance will be upset.

Spices and Cashewnut Committee

The Director of Agriculture and the Development Commissioner of Kerala will represent the State Government in the Central Spices and Cashewnut Committee. set up by the Indian Council of Agricultural Research. A local spices and cashewnut committee has been formed in Kerala on the advice of the I.C.A.R. and the Government has nominated one member each to represent producers, processors, dealers, co-operatives. consumers and other interests. The Director of Agriculture will be its chairman. The committee's main job will be to advise the State Government on development measures for spices such as pepper, ginger and cardamom and cashewnut. Kerala produces the bulk of these commodities, which have an important place in India's export trade.

Abolition of Coolie Contractors

A committee has been constituted by the Kerala Government to enquire into the *Kangani* system in Kerala plantations with a view to ascertaining whether it should be abolished immediately and if so, how, when and on what terms. The *Kanganies* are labcur contractors who get a commission on the labourers brought by them to the estate. In the new set-up, they are considered a set of unwanted middle men, and there is a strong demand for the abolition of the system, Steps are being taken to eliminate them, but they have been agitating against it. Recently, they threatened to go on a hunger strike. The Government has appointed this committee as a measure to pacify them. It has also promised to act according to the recommendations of the committee. The *Kanganies* have done a useful service to the plantation industry especially at a time when it was difficult to get workers to open up new plantations on the hills.

Rubber Replanting

The Rubber Board reports satisfactory progress with its replanting scheme. Under it, it has been envisaged to replant 70,000 acres with high-yielding strains within ten years. A Government subsidy ranging between Rs. 250 and Rs. 400 an acre will be given for it. For the first year it received applications for an area amounting to 8,497 acres, but it accepted applications only for 6.232 acres against the targetted area of 7,000 acres. There is a complaint from growers, especially small growers, that the Board's insistence on cutting all other trees on the area set apart for replanting except two trees an acre is proving hard for them On the small grower's estate, interplanting with other trees is widely practised, and naturally, he will be reluctant to cut other trees such as jack, mango and coccnut Rubber Board officials are apparently not prepared to change their policy. It is estimated that the cutting down of trees for replanting will result in the loss of production to the tune of about six to seven hundred tons of rubber a year To cut down this loss, the Board advises planters to adopt suitable methods of "slaughter tapping," and intensive tapping as well as the application of yield stimulants on trees to be replanted.

COCHIN TEA SALES

At Sale No. 23, 1,900,000 lbs of tea were on offer. There was useful demand particularly for Low Medium B.O.P.'s which were fully firm to dearer. All other grades were irregular and easier particularly Fannings. Tippy teas were very strong.

coal is prime mover.

Indeed, without coal much of our industrial and commercial life would be brought to a standstill. What's more, the coal industry must continue to grow if it is to keep in step with the country's expanding demand.

and in the progress of this vital industry, the Life Insurance Corporation of India plays a significant part. As the largest institutional investor in the country, it channelizes the savings of millions of policy-holders.

By investing funds in the coal industry, the Life Insurance Corporation benefits the Policy-holder in two ways. Directly, by ensuring a secure investment with profitable returns. Indirectly, by fostering an enterprise basic to the national economy.

STRONG GENERAL DEMAND AT TEA EXPORT SALE

GOOD BUYING IN DUSTS

AT Sale No. 12, held on 26th and 27th August, 58,144 chests were offered at the Export auction. There was a strong and general demand. Plain liquoring B.P.'s and P. Fgs. were a weak feature, but medium teas met with good enquiry and bright liquoring B.O.P.'s and O. Fgs. were appreciably dearer. Plain clean black Fannings were 5 to 10 nP dearer, while commonest teas which opened about steady weakened towards the close. The very best C.T.C. Assams and those with useful liquors sold well, although C.T.C.'s were generally an irregular feature Non-wither Dooars with bright liquors were keenly competed for and were dearer, while whole leaf grades were fully firm and tippy teas were well supported.

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2 20 to 2 25	1 14 0
Plain B.P.	1.78	1 9 6 to 1 19 0
Plain Fannings	1.75	
Medium Fannings	1.90 to 1.94	
Best Assam C.T.C. B.P.	4.00 (Nominal)	3 8 0 to 2 3 0
Medium B.P.	1.90 to 1.94	2 1 0 to 2 3 0
Best Assam C.T.C. Fgs.	4.50 to 5.00 (Nominal)	

At the Internal Sale, Dust offerings were 19,303 chests. There was again a good general demand, but prices were up to 4 nP easier, with the exception of clean good liquoring C.T.C.'s, which were fully firm. There was more demand for teas from Darjeeling.

Quotations

	1957 Rs.	1956 Rs.
Medium Dooars Dust	1.54 to 1.58	1 11 0 to 1 12 0
Medium Assam Grainy Dust	1.58 to 1.68	1 14 0 to 1 15 0
Medium Assam C.T.C. Dust	2.10 to 2.20	2 10 0 to 2 12 0
Best Assam C.T.C. Dust	2.50 to 2.90	3 4 0 to 3 6 0

Leafs on offer amounted to 1,657 chests, which met with a good demand and prices were frequently dearer. The few lines of green tea on offer sold at about valuations.

DEPRESSED CONDITIONS IN FREIGHT MARKETS

THE freight markets continued to be very depressed last week with little sign of any immediate recovery. Trans-atlantic coals repeated 29s, and such business as was concluded in the far east, was at very low rates. A number of ore fixtures were arranged from India, among them, Visakhapatnam-U.S.N.H. at $(U.S.) 11.25 for end-August. $(U.S.) 11 for October and the same rate for November. Calcutta-Black Sea was lower at 57s 6d and Mormugao-Japan dropped to 68s. Grain from north Pacific to India was fixed at 71s 3d and rice Burma-Colombo at 25s while rice Whampoa-Colombo was done at 35s. Various time charters were arranged by Liner companies at low rates, e.g., 17s which was paid for a *Liberty* for an Indian round and a similar ship accepted $(U.S.) 2.20 for 12 months' trading. Two 9,000-ton motorships with good speed were taken at 28s 6d for 12 months' trading. Meantime, congestion at Calcutta and Visakhapatnam ports continues as before, but there are signs of improvement at Bombay and Madras ports.

LINSEED STEADY

Fairly steady conditions have prevailed during the past week and prices have shown little change. Scarcity of goods has been the chief factor, and in spite of fairly good enquiries from crushers, the weekly turnover has been poor. The oil section has been slightly more active following better local enquiries; shippers have been showing some interest on the strength of an overseas tender later in the week, but business has not resulted yet due to the disparity in prices. Latest quotations were as follows: August-September Rs. 22-10 a maund.

SUGAR MARKET UNCHANGED

During the week ended 28th August, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 5,000 bags and stocks totalled 70,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 37-8 for ordinary grain and Rs. 39-6 for big grain. Ex-mill rates hardened. The market opened higher, but towards the close the rates fell back.

HIDES AND SKINS QUIET

The market in skins was quiet. Stocks were higher than in the previous week.

Bazaar Sales

(Between 20th August and 26th August, 1957)

Cowhides: Wet salted (Ord.) 22,600 pcs. on the basis of Rs. 7.50 to Rs. 10.75; Wet salted (Slaughtered) 17,500 pcs. on the basis of Rs 12.50 to Rs. 21.

Goatskins: Wet salted (Daissee. Killed) 58,700 pcs. on the basis of Rs. 275 to Rs. 285, Rs. 295 to Rs. 340 and Rs. 360 to Rs 380: Assam-Dinajpur 18,000 pcs. on the basis of Rs 260 to Rs. 340: Muzafferpore-Patna 53,300 pcs. on the basis of Rs. 312.50 to Rs 325: Patna 12,700 pcs. on the basis of Rs. 290 to Rs. 295.

Bazaar Stocks

(26th August 1957)

Cowhides: Wet salted 2,47,000 pcs.

Goatskins: Wet salted (Daissee. Killed) 27,000 pcs.: Assam-Dinajpur 31,500 pcs.: Muzafferpore - Patna Pakur - Purneah - Kissenganj 40,100 pcs.

COMPANY AND PUBLIC NOTICES

HULDIBARI TEA ASSOCIATION, LIMITED.

NOTICE is hereby given that the Sixty-eighth Annual General Meeting of the Members of Huldibari Tea Association, Ltd. will be held at the Registered office of the Company at No. 6, Church Lane, Calcutta, on Friday, the 20th September, 1957, at 12-30 P.M. for the following purposes :—

1. To consider and adopt the Profit and Loss Account for the year ended the 31st December, 1956, and the Balance Sheet as at that date, and the reports of the Directors and Auditors.
2. To declare a dividend.
3. To appoint Auditors for the year ending the 31st December, 1957, and authorise the Directors to fix their remuneration.
4. To elect a Director in the place of Mr. G. T. Routledge who retires by rotation but being eligible offers himself for re-election, and to consider and, if thought fit, to pass the following resolution as a Special Resolution in respect of which Special Notice has been received by the Company, as required by Section 190 read with Section 261 of the Companies Act, 1956. (The reasons which make the resolution necessary are set out in the Explanatory Statement under Section 173 of the Companies Act annexed hereto).

"That Mr. G. T. Routledge who retires by rotation from his office as a Director and who is a Member and Director of J. Thomas & Co. Private Limited, which Company may be deemed to hold an office or place of profit under the Company, be and he is, hereby appointed a Director of the Company".

The Share Transfer Books and Register of Members of the Company will be closed from the 7th September to the 20th September, 1957, both days inclusive.

By Order of the Directors,

DAVENPORT & COMPANY PRIVATE LIMITED,
Managing Agents.

Calcutta, 22nd August, 1957.

Note :—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead, and a proxy need not be a member of the Company.

EXPLANATORY STATEMENT.

With regard to item No. 4 of the Agenda, Mr. G. T. Routledge retires by rotation from the office of Director of the Company but offers himself for re-election. As Mr. Routledge is a Member and Director of J. Thomas & Co. Private Limited, which Company may be deemed to hold an office or place of profit under the Company, according to the provisions of Section 261 (1) (c) of the Companies Act, 1956, if Mr. Routledge is to be appointed as a Director, a Special Resolution is necessary for that purpose of which Special Notice must be given to the Company under Section 190 (1) of the said Act read with Section 261 (2) thereof not less than twenty-eight days before the meeting at which the resolution is to be moved. Such Special Notice of intention to move the Special Resolution relating to Mr. Routledge's appointment has been duly received by the Company. It is desirable that the Board should have the benefit of Mr. Routledge's knowledge and experience and it is recommended that he be re-elected as a Director.

THE BRITANNIA BISCUIT COMPANY LIMITED

NOTICE is hereby given that the Sixty-sixth Annual General Meeting of the Shareholders of The Britannia Biscuit Company, Limited, will be held at the Registered Office of the Company, 15, Taratola Road, Calcutta-27, on Friday, the 20th September, 1957, at 10-30 A.M., for the following purposes :—

To consider and receive the Report of the Directors with Statement of Accounts and Balance Sheet and to read the Report of the Auditors thereon.

To declare a Final Dividend.

To elect a Director.

To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 18th September to 25th September, 1957 both days inclusive and Warrants for such Dividends as may be declared will be issued directly to the Registered Shareholders or their mandatees.

By Order of the Board,
A. P. CHANDA,
Secretary.

15, Taratola Road,
Calcutta, 22nd August, 1957.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 24 hours before the meeting.

THE INDIA JUTE COMPANY, LIMITED.

NOTICE is hereby given that an Annual General Meeting of the Members of the above Company will be held at the Registered Office of the Company at No. 16, Strand Road, Calcutta-1, on Wednesday, the 25th September, 1957, at 11-15 O'clock in the forenoon for the following purposes :—

1. To consider the Profit & Loss Account of the Company for the year ended 31st March, 1957, the Balance Sheet as at that date and the Reports of the Directors and Auditors.
2. To declare a dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 11th September to 25th September, 1957, both days inclusive.

By Order of the Board,
R. L. McINTOSH,
Secretary.

16, Strand Road,
Calcutta, 26th August, 1957.

Note : A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a Member of the Company.

LODNA COLLIERY COMPANY (1920) LIMITED.

NOTICE is hereby given that the Thirty-sixth Annual General Meeting of the Members of Lodna Colliery Company (1920), Limited will be held at the Registered Office of the Company, No. 6, Lyons Range, Calcutta, on Thursday the 26th day of September at 3-15 P.M. for the following purposes :—

1. To receive and consider the Profit and Loss Account and Balance Sheet and the Reports of the Directors and of the Auditors.
2. To declare a dividend in respect of the year ended 31st December, 1956.
3. To appoint a Director in place of Mr. J. A. Gloag who retires in accordance with the provisions of Article 120 of the Company's Articles of Association. Mr. Gloag has advised that he does not intend to offer himself for re-election and has notified the Company that he intends to propose Mr. A. H. Hume as a Director to fill the vacancy. Mr. A. H. Hume is a Director and Employee of the Managing Agents and his appointment therefore requires a special resolution under Section 261 (1) of the Companies Act.

The following Resolution will therefore be proposed as a Special Resolution :—

"That Mr. A. H. Hume be and is hereby appointed a Director of the Company to fill the vacancy caused by the retirement of Mr. J. A. Gloag".

4. To appoint Auditors and to fix their remuneration.

The Share Transfer Register of the Company will be closed from the 19th September, 1957 to 26th September, 1957, both days inclusive.

Warrants for the Dividend, when declared, will be forwarded in accordance with the registered instructions, but if no such instructions have been received, to the registered address of the Shareholders whose names appear on the Company's Register at the date of declaration.

By Order of the Board,
For and on behalf of
TURNER, MORRISON & CO., PRIVATE LTD.,
C. O. FOUNTAIN,
Director,
Managing Agents.

Calcutta, 24th August 1957.

Note :—A member entitled to attend and vote at the meeting is entitled to appoint a proxy, who need not be a member of the Company, to attend and vote in his stead.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED
(Incorporated in England).

NOTICE is hereby given that the Board of Directors of this Company have decided to recommend to stockholders at the forthcoming Annual General Meeting that a Final Dividend for the fifteen months ended 31st March, 1957 on the Company's Ordinary Stock at the rate of £2-10-0d per cent net (Tax applicable at 8s. 6d. in the £) be paid on the 30th September, 1957 to those stockholders whose names are registered in the Company's Stock Register on the 12th September, 1957.

Applications for transfers received in this office before 12 O'clock noon on Thursday, the 12th September, 1957, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

By Order of the Board,
I. A. MACPHERSON,
Agent.

Victoria House
Calcutta, 26th August, 1957.

THE KARANPURA DEVELOPMENT COMPANY LIMITED

NOTICE is hereby given to the members of the Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Friday the 30th August, 1957, at 10 A.M. for the following purposes :—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1956, and to pass the Directors' and Auditors' Reports thereon.
2. To appoint a Director in place of Mr. S. B. Bose, who retires by rotation and being 69 years of age is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

And in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required under Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by section 173 of the said Act is appended below.

To be proposed as an Ordinary Resolution.

"That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. S. B. Bose and that he be and is hereby re-elected as a Director of the Company, whose period of office as such Director would be liable to determination by retirement of Directors by rotation."

3. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 16th August to the 30th August, 1957, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Calcutta,
25th July, 1957.

Note : A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

EXPLANATORY STATEMENT.

In the Special Notice given to the Company of the resolution under item No. 2 of the above notice it has been stated that the services of Mr. S. B. Bose have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

NEW CHUMTA TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of New Chumta Tea Company, Limited will be held at the Registered Office of the Company at No. 6, Church Lane, Calcutta, on Friday, the 20th September, 1957, at 12-15 P.M. for the following purposes :—

1. To consider and adopt the Profit and Loss Account for the year ended the 31st December, 1956, and the Balance Sheet as at that date, and the reports of the Directors and Auditors.
2. To declare a final dividend.
3. To appoint a Director in place of Mr. M. L. Pyne who retires in accordance with Article 111 and who, being eligible, offers himself for re-election.
4. To appoint a Director in place of Mr. D. P. Dunderdale who retires by rotation and who, being eligible, offers himself for reappointment.
5. To appoint Auditors for the year ending the 31st December, 1957, and authorise the Directors to fix their remuneration.

The Share Transfer Books and Register of Members of the Company will be closed from the 7th September to the 20th September, 1957, both days inclusive.

By Order of the Directors,
DAVENPORT & CO. PRIVATE LTD.,
Managing Agents.

Calcutta, 22nd August, 1957.

Note :—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead and a proxy need not be a member of the Company.

THE HATTIKHIRA TEA CO. LTD.

A Dividend of 5% for the year ended 31st December, 1956 without any deduction for Income Tax paid by the Company has been declared payable to the shareholders.

OCTAVIUS STEEL & CO., LTD.,
Managing Agents.

Calcutta, 23rd August, 1957.

BANKS

H indicates that Share capital is half paid. O C. and Dd indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

RISING TREND IN FOOD PRICES

THE INFLATIONARY IMPACT OF GOVERNMENT SPENDING

GROWING anxiety is being felt throughout the country over the sharp rise in foodgrain prices. Various measures have been taken in recent months to stem the increase, but they have had only limited success. Pockets of scarcity remain in parts of West Bengal, Bihar, Uttar Pradesh, Bombay and Mysore. The Food and Agriculture Minister, Mr. A. P. Jain, has been claiming that production during the past year or so has been at near-record levels; considering that imports are being speeded up, this would seem to provide a remarkable commentary either on the extent to which demand has risen, or on the short-comings of the distribution machinery, or on the unreliability of Mr. Jain's statistics. The whole situation finds different spokesmen of the Government speaking with different voices. Only a few weeks ago, the Food and Agriculture Minister said that the prices of foodgrains had not gone up to an "alarming extent", and that the rise in the prices of manufactured goods had been much greater. The statement was made in blunt contradiction of the facts as shown by the official wholesale price index issued by the Government's Economic Adviser; and a concrete rebuttal of Mr. Jain's assertion was provided by the Finance Minister in the Lok Sabha last week when he declared: "The rise in cereal prices since April 1956 has been 20 percent; rice and wheat have recorded increases of 21 percent and 13 percent respectively, and coarse grains have risen more. As compared with these increases, industrial raw materials have gone up by 10 percent and manufactured articles by 6 percent. These data show that although the rise in prices has been fairly general, it has been particularly marked in the case of foodgrains and agricultural products." Whatever the strength of Mr. Jain's argument that the rise in foodgrain prices has to a large extent been in the nature of a corrective to the depressed conditions which prevailed in 1954 and 1955, it is the analysis of the Finance Minister which is borne out by consumer experience and market statistics.

*

However, the debate as to the prices of which commodities have risen more seems relatively futile at this stage. The important point is that the upward trend in prices generally is pushing up the cost of living, and the upward trend in foodgrains (also, secondarily, in industrial raw materials) holds the greatest danger to economic prosperity. Much of the unrest among employees, not only of the Central and State Governments but also of many industrial establishments, springs directly from the fact that living conditions have become more difficult. If inflationary pressures continue, the possibility of widespread wage increases cannot be ruled out; these, by pushing up industrial costs, could have serious implications for the balance of the domestic economy and for the promotion of exports. To the extent that public investment is based on deficit financing, the growth of inflationary pressures could well necessitate an end to both. It is in the light of this prospect that the problem of prices in general, and of agricultural prices in particular, has to be considered. Advocates of rural prosperity argue that the important need now is not to reduce prices, but to stabilise them. But they forget that it is precisely in the present inflationary conditions that wage demands are being vigorously pressed and the export trade is being hampered. There is nothing to show that India would be worse off with a dose of disinflation, after having for more than two years suffered rising prices, because supplies have failed to keep pace with demand, because investment outlays have outrun real savings, and because taxes and industrial costs have been rising.

The primary dilemma in the case of foodgrains centres on production. Their total output increased from 51 million tons in 1951-52 to 58 million tons in 1952-53 and to nearly 69 million tons in 1953-54. Thereafter, it declined to 66.6 million tons in 1954-55, and to 65 million tons in 1955-56. In 1956-57, it has recovered to 68.6 million tons, and it is reported that this quantity is to be supplemented by imports amounting to 3.5 million tons. The rising trend of prices in spite of expanding supplies clearly indicates that demand has increased—whether for actual consumption or for stock-building. Since estimates of consumption are even more unreliable than those of production, the Food and Agriculture Ministry has been inclined to take the easy way out by suggesting that stock-building (that is, hoarding) is mainly responsible. Mr. Jain implied as much when he said some time ago that there were enough foodgrains to go round, and that "so far as the physical availability of food is concerned, I dare say we have been able to supply sufficient food to eastern U.P., Bihar and also Bengal. We have also been able to maintain adequate supplies to Bombay. But it took us a little time to arrange supplies. We have built up stocks there." That hoarding has contributed to the increase in foodgrain prices need not be denied, but it would be an error to exaggerate its effects or to rely on memory in trying to detect the precise sectors of the trade in which it may have taken place. The failure of recent measures to bring down food prices indicates that there has been a considerable misjudgment both of the extent and of the location of hoarding. The creation of wheat and rice zones in the country has provided only limited relief to certain areas; the success of the fair-price shops has been even less evident; and the move to acquire stocks lying in West Bengal's rice mills seems unlikely to affect the main centres of hoarding.

*

Most doubtful of all is likely to be the effect of recent directives urging the commercial banks, to reduce their advances against foodgrains. This policy, which passes under the description of selective credit control, is far from selective in actual operation. The fixing of specific limits has in many cases affected advances which there is no reason to suspect were being used for other than genuine trade purposes. It is also remarkable that, according to reliable reports, the Governor of the Reserve Bank conveyed to leading bankers in Bombay a fortnight ago his complaint that they had not co-operated in bringing down the level of foodgrain credit; and yet the Finance Minister was able to say last week that "there need be no doubt as to the Reserve Bank's determination to make its directives effective—nor, indeed, of the willingness of banks to abide by these directives." Figures given by Mr. Krishnamachari last week clearly indicate that bank advances have played a very minor rôle in the hoarding of food stocks. On 26th July, total advances against foodgrains were Rs. 29.30 crores, against Rs. 42.52 crores at the end of May and Rs. 32.70 crores a year previously. Advances against rice amounted to Rs. 11.14 crores on 26th July, and at this level were about Rs. 10 crores less than at the end of May and slightly less than a year before. The lesson to be drawn from a fall in foodgrain advances coinciding with a rise in foodgrain prices is too important to be missed. It indicates that so negligible a proportion of the country's total trade in food is financed by bank advances that selective credit controls of the type now in force barely touch the fringe of the problem. To the extent that hoarding is going on, it is being financed largely from sources other than banks.

In concentrating on hoarding, the Food and Agriculture Ministry seems to be underestimating the significance of other important factors which have contributed to the rise in foodgrain prices. One, to which Mr. Krishnamachari has drawn welcome attention, is the huge increase in expenditure under the second five year plan. Food production has not increased above the 1953-54 level, when expenditure on the plan was Rs. 343 crores; the budgeted outlay for 1957-58 is Rs. 965 crores. In a poor country, it is inevitable that most of this new money should be concentrated on the purchase of food. Much of the extra currency has gone to the rural areas and been used by farmers to hold back crops, or to buy bullion, in the hope of speculative gains. The greater prosperity of the countryside is by no means to be deplored; on the contrary, it is to be welcomed, but it calls for a far-reaching change in official attitudes and policies on food distribution. The most important aspect of the change would be the realisation that as long as food prices go on rising, more and more food will be hoarded—and hoarded by people who, because they are to be found in widely diffused pockets, will be increasingly difficult to reach. The second important point to bear in mind is that because the centres of hoarding are becoming more widely spread, physical controls, partial or otherwise, will be the more ineffective. Those who have been recommending compulsory procurement, requisitioning, rationing or price controls forget the corruption and hardship which prevailed during the war and earlier postwar years. That is not an experience to be repeated in the light of the known administrative deficiencies of today.

As long as the population continues to grow at its present disturbing rate, first importance will have to be attached to increasing food supplies and building reserves. In view of the foreign exchange shortage, and in spite of the large amounts of surplus foodstuffs coming on loan from the United States, an increase in supplies means essentially an increase in domestic production. With nearly five million more mouths to feed each year, India has reason to be disturbed over the fact that her food output is no higher than it was in 1953-54, and that in the intervening period it has been a good deal less. Unpalatable as the prospect may be, it has to be realised that without adequate supplies of the basic needs, such as food and cloth, there is nothing to offset the inflationary impact of the huge investment outlays now being undertaken under the second five year plan. Food constitutes the true "hard core" of the plan—much more so than the steel plants, transport, power or anything else. It is also the most vulnerable sector of the economy, and therefore deserves much greater attention than it has recently been given. The distortions born of the inflationary investment policies adopted by the Government cannot be avoided without providing for adequate supplies of basic consumer necessities, of which food is the most important.

PROVIDING FOR OLD AGE

THE controversy about retirement pensions is reaching a critical stage in Britain. The Labour Party's conference will soon discuss the superannuation scheme which its experts have presented. The Conservative Party must soon formulate its own plan, as an alternative designed to make a stronger appeal to the electorate. Meantime, the chronic problem of the pensioners themselves, the decline in value of their benefits, is aggravated by every rise in the cost of living. The plan published by the Labour Party a few months ago made a powerful impact on the imagination of the general public and aroused in the financial community a vigorous discussion that has not since subsided. In barest outline, the plan provided—ultimately—pensions equivalent to a half of the rate of income earned just before retirement, these pensions being financed by contributions extending over the beneficiary's whole working life at a rate of 10 percent of his earnings. Of these contributions, employers were to provide five-tenths, employees three-tenths and the national Exchequer two-tenths. But the plan was only a model, subject in practice to drastic modification. It was paraded in a cloak of financial respectability but could obviously be perverted by political expediency.

*

When this plan was presented, as an assurance that every working person could retire in reasonable comfort in the future, it was immediately assumed that the Conservatives would be compelled to draw up a plan providing the same assurance, or better. Subsequent discussion, however, has

exposed serious defects in the Labour plan, even as a vote-catching measure. Employees would evidently be required to provide only 30 percent of the contributions, but their proportion would still represent in many cases a substantially larger deduction from earnings than is exacted under the present scheme. (The employers' proportion would increase still more, but employers, as a class, have not many votes.) *In return for this* present sacrifice the working man would expect substantial benefits in his later life; but he would find that *full benefits would not be payable until* after the year 2000, when he *might no longer be* living to draw them. It is not always clear to the general public that any kind of superannuation scheme, however financed, however administered, makes a claim on the current national income of the community, and that only the working members of the community can meet that claim—unless the non-working members' savings are used for the purpose, and even then the savings must be converted into goods and services provided by the working members. Whether in this hypothetical socialist Britain, where contributions would be required on a substantial scale to provide pensions, or in Communist Russia, where relatively generous pensions are provided on a non-contributory basis, it is impossible to satisfy the needs of the retired people otherwise than by the labour of those who still work. Financing pensions by a superannuation fund may be a sounder principle than financing pensions by current taxation; but a fund, though it can accumulate the money required, cannot accumulate the goods and services which the recipients of pensions will later buy.

In a sense, therefore, the working people are in any case forgoing current consumption, not (as they suppose) to provide for their own retirement but to provide for the people who have retired already. But a superannuation scheme should be also a means to provide for future needs. It should exact savings which can be invested in productive development and so ease the burden that pensions will otherwise impose on future generations. Such is, broadly, the purpose of the British Labour Party's plan. But the difficulties are immediately apparent. Saving on the scale required is obviously unattractive to the working people who are forced to save, and it is almost inevitable that if this scheme is ever adopted the benefits will begin to flow quickly, for political reasons, not, as they should for economic reasons, slowly. It will not then be able to accumulate a fund commensurate with its future commitments (which are particularly heavy in a community whose average age is increasing) and will soon be running a deficit of hundreds of millions of pounds a year.

* * * *

If the working portion of the community is really willing to forgo current consumption for the sake of social security, and is therefore willing to accept taxation as a means of transferring wealth to non-workers, a deficit is not necessarily inflationary. In practice, however, both high taxes and compulsory contributions to a fund stimulate efforts to increase incomes. It is easy to envisage demands for higher wages to maintain the working people's standard of living (or the increase in its standard of living), and increases in companies' selling prices to offset wage increases, tax increases, and the compulsory contributions. Pensions which would be reasonable enough if their purpose was to spread available resources—between workers and non-workers, between the productive part and the non-productive part of a worker's life—would undermine the stability of the whole economy if they were largely additional to full current consumption. Britain has already too many commitments, internal and external combined, and the addition of liberal pensions, without corresponding reduction of other expenditure, could have disastrous effects on her currency. A policy that seriously curtailed current consumption would certainly be resisted. So it is doubtful whether adequate pensions (present pensions are admittedly quite inadequate) can ever be safely granted until international politics are more stable and the military burden can be much reduced. Until that happier time, cautious opinion favours voluntary arrangements by each individual for his retirement rather than a compulsory scheme that enables all to retire in reasonable comfort. Even so, the State's basic scheme can provide a little more peace in old age.

EXPANSION OF TATA STEEL

NEGOTIATIONS FOR NEW LOANS FROM ABROAD

THE private sector of the Indian steel industry has been as busy with its expansion programmes as the public sector. An account of the progress achieved by the Tata Iron and Steel Company, the biggest steel-manufacturing unit, is given in the address of the chairman, Mr. J. R. D. Tata, at the company's latest annual general meeting. (A fuller version of the address appears elsewhere in this week's issue of *Capital*.) It is the first and most important task of the company, says Mr. Tata, to complete the expansion of the plant and reach the two million ton target for capacity as quickly as possible. The schedule of construction has been an "extremely tight one" right from the start, and Kaiser's, the U.S. engineering consultants for the programme, hope to stick to the original schedule. Mr. Tata however is not yet in a position to forecast the exact dates on which each of the new units will come into full production. Meanwhile, as an unavoidable consequence of "having to telescope much of the programme into one year", a greater degree of interference with existing production has been necessary than the company expected.

The outcome of the management's efforts to secure money for expansion has been satisfactory. The negotiations which Mr. Tata and the vice-chairman of the company held with the World Bank in June this year have been successful, and the Bank has agreed to raise its already sanctioned loan of $75 million "by an equal amount to that which (the company) is able to raise elsewhere, subject to a maximum of $17.5 million." In order to facilitate the task, reports Mr. Tata, the Bank has gone further. It has agreed to raise the amount of the present mortgage up to $110 million, so that other lenders in the United States can rank *pari passu* with the World Bank in the matter of security. The Bank has also agreed to the prior repayment of loans from such lenders. Tata Iron has been negotiating with private U.S. commercial banks through the First Boston Corporation for a loan of $17.5 million, and it is expected that the negotiations will succeed. "We are deeply appreciative of the consideration and assistance extended to us by the World Bank, without which the task of raising the necessary funds would have been well-nigh impossible," he says.

* * * *

While appreciating the help which the company has received from the Government in raising the foreign loan, Mr. Tata finds much to criticise in New Delhi's taxation policy, which is destroying the incentive to save and invest. Taxes, he says, have cumulatively dried up various sources of working capital for companies as well as of equity capital for the expansion or starting of new ventures. During the first five year plan, additional taxes by the Centre amounted to Rs. 255 crores. In the second five year plan, the figure of Rs. 450 crores proposed for new taxation might be exceeded. Mr Tata points out that, according to the Finance Minister's recent indications, the quantum of deficit financing is to be reduced from Rs. 1,200 crores to Rs. 800 crores. But that will merely increase the uncovered gap to something like Rs. 1,600 crores. "If any appreciable part of this gap were sought to be met by a further increase in taxation, it would place an unbearable burden on industry and commerce and deprive them of what little is now left of funds available for investment."

The latest Central Budget has some new and unprecedented features represented by the wealth tax and the expenditure tax. The wealth tax on companies, in particular, has met with general disapproval. Mr Tata finds it difficult to understand how a measure of personal taxation such as this can be applied to the assets of large public companies made up of the contributions of thousands of shareholders, rich and poor alike. He quotes statistics which do much to rebut the impression fostered by the Government that "in the peculiar conditions of India, very few shares in companies are owned by small shareholders." The survey of ownership of shares and securities in Bombay City, carried out by the Reserve Bank in 1954, showed that 60 percent of the shareholders of companies were persons with incomes below Rs. 3,000 a year. In the case of Tata Iron, half the shareholders have holdings of less than Rs. 1,000 each, while the holdings of about 37 percent amount to less than Rs. 5,000 each. "The subjection of companies to wealth tax," Mr. Tata points out, "will therefore hit a large section of the middle class will result in the shareholders being taxed twice on the same assets, and will act as a powerful disincentive to save and invest."

Mr. Tata reports that as a result of the new Central taxes, the amount of additional taxation which his company has to bear, including excise duty on the steel used in the expansion programmes, will be approximately Rs. 1 crore for the current year and corresponding amounts in subsequent years. He also refers to the view expressed by some shareholders that the occasion of the company's golden jubilee should have been celebrated in some suitable form, such as the distribution of an enhanced dividend or bonus shares. The annual report and accounts considered at last week's annual general meeting related to the financial year 1956-57, while the fiftieth anniversary of the company's foundation falls in the financial year 1957-58. "I cannot say today what the board may find it possible to do when considering the accounts for the current year. Much will depend on the results achieved and the circumstances in which we shall then find ourselves, but I can give the assurance that the directors will give the matter their sympathetic consideration," Mr. Tata says.

DEVALUATION OF DEGREES

IT has become usual for a university degree to be regarded as the minimum qualification for all but the lowest posts in the Government. As university education has spread, the number of graduates has multiplied, and there has been keen competition among them even for ill-paid jobs. Mammoth colleges have sprung up, manufacturing a mass of mediocrities who have been busy preparing themselves for the colourless routine of examinations without caring much for knowledge as such. The tendency still continues, and the fascination which degrees and diplomas hold for the younger generation remains unmitigated. The young are not wholly to blame for this state of affairs, as the preference shown by employers for graduates has been largely responsible for increasing the demand for university education. The eagerness for education might have been more welcome if the community had the resources to provide it. Entry into the universities nowadays seems indiscriminate, with the result that overcrowding hampers the full development of an individual's personality which is the aim of education.

* * * *

While much larger number of candidates seek admission to colleges or universities than the latter are equipped to deal with, it is not purely a question of numbers; in the rush for university education, quality has suffered, since persons who have neither the aptitude nor the serious inclination to be educated seek to join colleges. There is also a lack of uniformity in the standards of the various universities. Considering this aspect of the issue, the Public Services (Qualifications for Recruitment) Committee's report says that "the same degree or diploma given by two different universities often involves two entirely different standards. A B.A. or a Ph.D. of one university is not necessarily of the same standard as a B.A. or a Ph.D. of another. This is a problem which, we are informed, has engaged the attention of the educational authorities but has defied solution so far on the ground that there is no objective standard on the basis of which the degrees awarded by different universities could be measured." Also, a lack of opportunities often prevents many intelligent persons from studying at a university; yet, by private study they manage to attain the same intellectual standard as those who have obtained their degrees. But these are exceptional cases, for which it would be too rash to lay down a strict and general rule. The Committee has, therefore, suggested that "university degrees cannot and should not be dispensed with entirely."

Dividing the public services into three categories—senior officers, junior officers and clerical services—the Committee recommends that entry into the first category should be restricted to graduates and should be between the ages of 21 and 23. As for the second category, the Committee says that a university degree should not be made the minimum qualification, but graduates should be given an opportunity to compete if they so desire. A university degree should not be insisted upon for the third category covering the clerical services. It is arguable that age limits or restrictions on entry into the universities would be of little use unless employment opportunities are increased. The main problem before the universities is to raise standards so as to improve the quality of their graduates.

CURRENT COIN

Sen-Raleigh Maintains Progress.—Mr. S. K. Sen, chairman, has given an encouraging review of the progress of Sen-Raleigh Industries of India Ltd to shareholders at the annual general meeting in Calcutta last Saturday (a fuller version of his address appears on a later page). Production has increased by about 50 percent. A larger number of complete bicycles (approaching 100,000 units) and more new components have been placed on the market. Demand remains steady. The first phase of the company's programme having been completed, the Government gave permission in February 1957 for a substantial expansion of the production capacity for bicycles and components. But plans for expansion have been held up because of the foreign exchange shortage and the entire expansion programme has had to be rephased in the light of the new circumstances. The chairman adds, however, that the Government has taken a sympathetic view of the company's problems and has issued some of the import licences required for plant. The time has come when it will be necessary to explore ways in which every component and every store required for the manufacture of bicycles can be produced within the country in order to conserve foreign exchange. The Tariff Commission has examined the problems of the bicycle industry and has granted protection to it for another three years ended 31st December, 1960. The working results of the company for the year ended 30th September, 1956, are satisfactory. After meeting depreciation and other charges, there is a profit of Rs. 14,36,292, against Rs. 11,07,056 for the previous year. The ordinary dividend has been maintained at 6 percent tax-free. The paid-up capital of Sen-Raleigh Industries has been increased by Rs. 5,75,386 during the year. A further loan of Rs. 15 lakhs has been sanctioned by the Industrial Finance Corporation. The addition to the share capital, together with the loan of Rs 15 lakhs, when received, will make it possible for the company to implement the remaining expansion schemes, including the manufacture of free-wheels and bottom bracket axles.

* * * *

Bombay and Mysore State Loans.—The loan announcements made by the Bombay and Mysore State Governments, of which further details appear on a later page, have not had any notable influence on the gilt-edged market. The Bombay offer is for Rs. 6 crores at an issue price of Rs. 99.75 percent; and the Mysore loan is for Rs. 3 crores at an issue price of Rs. 98.75 percent. Both loans carry interest at 4½ percent, and the two State Governments reserve the right to retain subscriptions up to 10 percent in excess of the notified amount. Subscription lists will open on 16th September, and will close on 18th September, or earlier. The terms and conditions are generally in line with what the market had expected. The running yield of the Bombay loan works out to 4.26 percent and that of the Mysore loan to 4.30 percent, which are attractive in comparison with other stocks of similar maturities. But redemption yields (4.27 percent on the Bombay loan and 4.38 percent on the Mysore one) are not so attractive on the same comparison. It is expected that both State Governments will not have any major problem in getting the money, since they are the only two to have announced a borrowing programme of this sort during the current year.

* * * *

New Commission on Road Transport.—An inter-State transport commission is to be set up shortly by the Government of India to promote the development of road transport. The Union Minister of Transport and Communications, Mr. Lal Bahadur Shastri, addressing the annual general meeting of the New Delhi branch of the Indian Roads and Transport Development Association, has said that a preliminary scheme for establishing the commission is already in hand and he hopes to be able to announce its personnel shortly. It is felt that there is also need for a body on which non-official organisations interested in roads and road transport and in other means of transport, apart from the railways, will be represented. In this connection, the Minister has announced that the Government has decided to constitute an advisory committee whose detailed composition will be worked out soon. The Government has been considering the question of adding to the present mileage of national highways. Apart from bridging certain gaps it is necessary to extend the highways. Mr Shastri feels that the target should be 20,000 miles of highways, but at present one should proceed only cautiously. It is almost certain that there will be an increase of 1,200 miles more, bringing the total length to 15,000 miles, as the present position is annually reviewed by the Planning Commission. Mr Shastri says. Referring to the need to revise the Nagpur Plan since the entire scheme for road transport has to be reviewed from a new angle, he declares that the revised plan will be far bigger and will be based on an assessment of the requirements of the country during the period of 20 years commencing from the third plan period. The draft of the revised plan is expected to be ready by the end of 1957-58. The importance of the development of road transport "has been generally accepted and the only issue before us today is how best this development can take place. It is needless to say how much the success of our plan depends on the development of our transportation system and that includes road transport. It has to be geared up to its full capacity to enable the movement of all essential materials."

* * * *

Small Savings in the Village.—As part of the effort to provide increasing facilities for small savings, the posts and telegraphs department has started a new system for encashing National Savings and other postal certificates through village postmen. This will make it possible for the villager to encash his certificates at his doorstep. Hitherto he had to go to the nearest post office authorised to do savings bank business to make an application for encashment and then visit the office again to receive payment. He had also to take with him each time someone who was known to the post office for identification in person. Under the simplified procedure the holder of a certificate can hand over the duly attested application for encashment to the village postman. The payment of the money order commission may be made by affixing postage stamps of the same value on the application. Identification, too, may be made on the application itself by any responsible resident of a village whose signatures are already recorded in the branch post office for the purpose of checking the visit book of the village postman. The postman will collect the cash from the post office and on his next round to the village hand it over to the applicant. This step is intended to help in popularising National Savings and other postal certificates by removing the inconveniences attendant on their encashment.

* * * *

Investment of Life Insurance Funds.—It has been officially stated that the Life Insurance Corporation's total investments in equities were Rs. 3,56,77,806.93 as on 20th April, 1957; Rs. 4,82,71,968.82 as on 31st May, 1957; and Rs. 5,63,83,885.32 as on 20th June, 1957. The amounts invested by the Corporation from 1st September, 1956, to 30th June, 1957, in (i) Government and approved securities and (ii) debentures, preference shares and ordinary shares, together with the proportions they bore to the respective totals, were as follows:

(a) Government and Approved Securities	Amount (Face Value) Rs.	Percentage
Bombay	13,53,32,800*	82.4
Calcutta	1,11,65,600	6.8
Madras	1,67,57,900	10.2

*Out of this, Rs. 2,42,74,000 represents securities bought directly from the Reserve Bank of India, Bombay.

(b) Debentures, Preference and Ordinary Shares	Amount Invested Rs.	Percentage
Bombay	4,60,88,700	47.2
Calcutta	4,78,30,300	48.9
Madras	38,20,700	3.9

The Finance Minister has denied that the Government has given any direction or exercised any control over the investment of life insurance funds by the Corporation.

THE INDIAN PRESS

WE see that Sir Charles Elliott has come out in his true colours in a letter to the *Spectator*. He says: "I would have one law for all Indian papers, Vernacular or English; compulsory registration of editor, manager, and proprietor; power to compel the insertion of corrections, and to issue a warning if statements are published which are calculated to provoke a breach of the law. If the first warning is disregarded, it should be in the power of the highest executive official in the province to decree the suppression of the paper on his own responsibility." The above suggestion is quite in keeping with Sir Charles Elliott's character. His government of Bengal gave satisfaction to no one, and he would almost have been hooted out of the place had it not been for the great esteem in which Lady Elliott was held and her softening influence on the rigours of his reign. We do not believe that Sir Charles Elliott made a single good appointment during the whole of his tenure of office. Conceited to a degree, his capacity for flattery was perfectly unlimited. Honest and independent officials were passed over, flatterers and toadies got promotion. We have no hesitation in saying that given a Press and other Acts such as Sir Charles Elliott desires and half-a-dozen Sir Charles Elliotts to rule over the various provinces of India, and we should probably lose the country in a few years' time. As Milton observes: "To prevent men thinking and acting for themselves by restraints on the Press is like the exploits of that gallant man who thought to pound up the crows by shutting his park gates." Or in the words of Lord Stanhope: "If our boasted liberty of the Press were to consist only in the liberty to write in praise of the constitution, this is a liberty enjoyed under many arbitrary governments." It seems to us that if the Press is to be gagged and people like Sir Charles Elliott are to dictate to it in India what it is to say, the British Ensign should no longer float proudly over the land, because it will have ceased to be free.

Without Prejudice

TRAVELLING WITHOUT A RAILWAY TICKET

CLAIM FOR DAMAGES IN CASE OF ACCIDENT

(FROM OUR LEGAL CORRESPONDENT)

A man intends to travel by train. He is a respectable and responsible citizen and his intention is to pay his fare and buy his ticket at the railway station. But his car breaks down on the way to the station at which he arrives just as the train is moving out. He boards the moving train and settles himself in his seat, meaning to pay his fare to the guard and to take a ticket from him at the next stop. But before this is reached, a collision occurs with another train, entirely due to the negligence of the railway's servants. The ticketless traveller is injured. Can he successfully claim damages against the railway administration for his injuries? The above is a purely suppositious case; and one poses the question in order to pave the way for the reader to consider the latest Indian decision in which the railway was in a much stronger position. We will assume—though with a good deal of doubt—that our gentleman without a ticket was a trespasser.

Would he, being a trespasser, have any claim for damages? None whatsoever, says one standard authority, but one, perhaps, a bit prejudiced in favour of the railways through being standing counsel to the largest of them: "There is no liability to a mere trespasser. For the rule is that a man trespasses at his own risk."' That, it is submitted with great respect, is putting it a good deal too high. A trespasser has his rights. True it is that even today country squires in County Petty Sessions who may let off with a fine John Hodge when he beats up his wife or with a kindly admonition when he is drunk and disorderly, will unhesitatingly send him to jail when convicted of "trespassing in search of conies" (i.e., rabbits). And the writer has himself seen in a genial Wiltshire squire's grounds a board with the grim words nearly obliterated by time, on it "Man Traps and Spring Guns". But nowadays anyone, trespasser or not, injured by any such engine would without doubt have his remedy at law. It is no longer true to say that "a man trespasses at his own risk." Nor, today, would a gamekeeper dare to fire his pellets at a trespassing poacher as he would have done in 1854, the year in which was decided the leading case *Lygo* v *Newbold* on which the learned authors base their dictum. It is rather on modern legislative protection than on the common law that railway administrations rely in support of their stand concerning trespassers and it is on both these backgrounds that we must approach the latest Indian decision.

* * * *

That brings us to the latest Indian authority. Mr. Sohan Singh Nanda belonged to the Rawalpindi district, but before partition he had come to reside in Amritsar where he had started business and was carrying it on, according to the plaintiffs' witnesses, on an extensive scale. On 6th October, 1947, he set out from Amritsar to go to Delhi. He reached Ambala Cantonment before 10th October, on which day it was stated that he boarded a train which was going to Delhi from Ambala Cantonment station. The train was a goods train with a passenger bogie attached to it. According to the assistant station master at the station, this bogie was customarily attached to such goods train for the convenience of military escorts. Mr. Sohan Singh Nanda, with some relations of his, got into this train. He did not have a ticket. It was contended later that no tickets were issued on those days on the ground that the trains were meant for refugees and no tickets were needed. Mr. Nanda was not a refugee. The same day, 10th October, there was a collision, as a result of which 24 persons were killed and 110 were injured.

Among those killed was Mr. Nanda. It seems that he was carrying with him about Rs. 5,000 in cash and cheque and they were lost in the collision. Various railway servants deposed later that Mr. Nanda did not obtain the permission of any of them to travel. Moreover, neither they nor the station master in Ambala were authorised by the railway administration to give permission. But those were days of panic and confusion and people, refugees and others crowded into the goods wagons in spite of the prohibition of the railway servants and attempts, both in Ambala and an intermediate station, to get them out of the wagons. Mr. Nanda, as has been said, was killed and his representatives sued the Union of India for damages. The Union admitted that the collision must be taken to be due to the negligence of railway servants. Both the trial court and, on appeal, the High Court held that Mr. Nanda was a trespasser, so now we have a clear-cut issue: Can a trespasser, who travels by a train, without permission of the railway and in spite of attempts by the railway servants to stop him, recover damages for an accident due to the neglect of railway servants? "Yes", said the trial court, some two and a half years after the accident, and awarded the representatives of the deceased Rs. 10,000 as damages. Note the leisurely progress of litigation in India. The railway administration appealed and on 17th December, 1956, more than nine years after the accident, the appeal, which is not necessarily the final stage of the case, was heard.

* * * *

A number of interesting authorities was cited by the eminent counsel, Mr. Tek Chand, who represented the plaintiffs. In one of these, *Nur Muhammed* v *King Emperor*, 31, Punj: Re Cr (1905), a man was travelling on the footboard of a first-class compartment, and while he was talking to the Civil Surgeon who was travelling by the same compartment, he went on standing for 400 yards while the train was in motion and gathering speed when he jumped down and "escaped rather badly". The Chief Court held that such a person was a passenger. As he had no ticket, "he was a trespassing passenger but by remaining on the footboard after the train had started he made himself a passenger." A very odd decision indeed, you may think. Personally one has never heard before the expression "trespassing passenger." It seems a contradiction in terms: and, putting it plainly, altogether wrong. A passenger has been defined as "one who travels in a public conveyance by virtue of a contract express or implied with the carrier." Railway compartments are not surgeries nor do medical men hang their brass plates outside of them. If I choose to clamber on to the footboard of a railway compartment of a moving train and for a quarter of a mile or so to consult my physician therein, where is the "contract express or implied" with the railway whereby I am entitled so to do?

However, in our present appeal, Kapur J. (Passey J. concurring) did not expressly dissent from the decision in Nurmuhammed's case, but contented himself with making the rather sardonic observation on the "trespassing passenger" that "it may be that for the purposes of that case he was a passenger but this is no authority for the proposition that anybody who travels against the injunctions of the railway officials in a train which is not meant for carrying passengers but goods can also be called a passenger." And although he was alluding to travellers on ships and not on trains—in the particular case to the wife of the captain of a ship who was travelling on board as the captain's guest without the express consent of the owners—Lord Justice Phillimore's observations on the essence of what we may call "passengerdom" are apposite: ".....the payment of fare would appear to be a necessary incident for the constitution of a passenger in the legal sense of the term, both as to his rights and duties."

Mr. Tek Chand, for the plaintiffs, strongly relied on the following passage from Charlesworth on negligence, a very remarkable passage which certainly makes ducks and drakes of numerous careful judicial pronouncements going back well over a hundred years. Says Mr. (afterwards judge) Charlesworth: "If the passenger has got on the vehicle fraudulently intending not to pay his fare, or to pay only part of his fare, or to pay only third-class fare while travelling first-class, he has still been accepted as a passenger and is entitled to sue for injuries caused by negligence." On this statement of the law, Kapur J., with true judicial politeness, passes it over and disregards it, courteously contenting himself with the observation that the learned author gives no authority for his dictum: but an anonymous scribe, being bound by no such canons, may be allowed to express his opinion, for what little it is worth, that the passage is a completely inaccurate statement of the law. By stealing a ride on a goods train, knowing that such a train was not meant for the carriage of passengers, contrary to the railway bylaws and against the wishes of a railway servant, Mr. Nanda became a trespasser and, quoting Beaumount C.J., reported in A.I.R 1932 (Bombay) 452, ".....the law is that a railway company is not liable to a trespasser for a mere error of judgment, even amounting to negligence on the part of its servant which causes damage to the trespasser." The railway administration's appeal was allowed and the decree set aside.

Going back to the apparently simple question with which this note was started, the writer wishes he had not asked it, it is so full of snags. But he suggests with very much doubt indeed that the passenger in a hurry was not a trespasser and would recover damages. Trespass is a criminal offence. It involves *mens rea*, i.e., a guilty mind directed to its commission. Our ticketless traveller had no guilty intention at all. The guard could have stopped the train, taken his fare and given him a ticket, or ordered him out. By not doing so the guard made the traveller not a trespasser but an invitee in the compartment with the implied permission of the railway. *Sed quaere.*

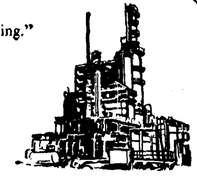
REFINERY-MY NEW HOME



rejoices Adipocere (*Pronounced 'adi-po-saire'*)

I've been buried underground for centuries, and
I'm drilled from the earth by oilmen and transported
to a "tank farm" in the Refinery. At the Refinery,
which is a maze of pipelines and towers, the refiners
extract from me more than one thousand
separate products of oil, such as the
high quality gasoline that powers your car.
From the "tank farm" I am transferred to
a furnace where the refiners put the heat on me.

The various processes by which I am converted to
different petroleum products are collectively called "refining."
I undergo three major changes: Fractional Distillation,
Catalytic Cracking and Treating. In other words
I am "fractionated," "cracked" and "treated".
My new life begins... keep watching these
columns for what is to happen to me.

STANVAC—*the name that stands for progress*

Standard-Vacuum was the first to enter into an agreement with the Government of India in November 1951 for the construction of the First Modern Oil Refinery. Built at a cost of 17½ crores of Rupees, this project was completed in the record time of 18 months.

IT is to be hoped that all readers of the *Statesman* are not as confused as I am about just what it is that is happening in Kerala. The newspaper's various correspondents have been giving so many different versions that one would be justified in reaching either of two mutually exclusive conclusions: (a) everything is just fine, and (b) chaos impends. The fine distinction between indiscipline and lawlessness, which a correspondent has been making, seems to me plainly pointless. It is not of much solace to the bereaved family that one of its members was the victim of what is called culpable homicide not amounting to murder; death is what it had resulted in. The planter who has to work with a labour force conscious of its ally in police inaction is to be forgiven for his failure to be reassured by such statements from New Delhi as a political scenarist's: "The Centre believes that it has the necessary powers and capacity to make itself felt should the need arise." In the matter of law and order, the lesson of the past eleven years is that once a situation is allowed to develop, it goes out of hand before long, certainly before Authority can make itself felt after deciding that a need has arisen for action: the earlier inaction has then inescapably to be paid for by extreme measures. The Centre is rightly very sensitive about the slightest sign of communal tensions, and it deals with them firmly and promptly. It seems to me possible that the frequency of communal trouble has tended to generate in the official mind a lack of alertness about other forms of trouble. Nothing else can explain the recent incidents, some of them fatal, in coalfields and plantations in eastern India, where the State Governments have not at least been guilty of openly re-defining the rôle of the police. That the danger in the south is much greater, calling for far greater caution, should not have to be stated at all. Lawlessness began when the head of the executive in Kerala said that he interpreted the prevailing laws of the land differently.

* * * *

There have been some constitutional changes in the Congress Party recently, after which it may remain more the same thing. At certain stages elections will be indirect where they used to be direct, and if this is not an obvious step towards greater democratisation nobody need grieve over that. As a Party, the Congress may still be suffering from excessive democracy, and the results were described with some candour when Mr. Nehru said, "Unfortunately, all kinds of crimes and stupidities can be hidden behind the façade of democracy." It is no answer to say that the deficiencies may have proceeded from the fact that a façade of democracy prevailed instead of the real thing for, apparently, theory did in fact degenerate into practices of a wholly unintended nature. Even Mr. Nehru cannot, however, think that the rejection of the Tyagi amendment, very wise in the circumstances, constituted a remedy for the disease he himself diagnosed so well. His argument that the interests of the Congress Party would be served if the present practice relating to the formation of the Congress Working Committee —by Presidential nomination—was allowed to continue was based on the view that "the Congress retained some prestige in the country because of the top leadership, while the committees at the lower level had earned much odium." Continuance of the top at the top can only hide the odium below, not remove it. A related question may be whether a political Party can sustain itself indefinitely on a strong but necessarily impermanent top. Independence began to cut the Congress down to the size of one Party among many, and the process may continue, with no great harm done to the country. Indeed, a considerable part of the current pessimism in the Congress is attributable to the inevitable diminution to which it is not easy to resign oneself if one has been used to the previous national status.

* * * *

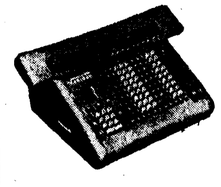
Even if it be considered bad manners to recall the many names that have disappeared from the map in our lifetime—Latvia, Lithuania, Estonia, etcetera, etcetera—there should be no modesty at all in reciting the names of countries that have emerged as sovereign and independent during the same period. If in certain parts of the world the area of freedom has contracted visibly, freedom has extended its horizon in others—and Malaya is the latest welcome member in the comity of free nations. The emergency brought about by the Communist terrorists is not over yet, but even if it delayed the advent of freedom, it has not been allowed to stand in the way of the happy consummation longer than was absolutely necessary. Thanks for this are due as much to the mature statesmanship the Malay leaders have displayed, perhaps influenced to some extent by the excellent example set in this country, as to Whitehall. Malaya is more than a setting for some of Mr. Somerset Maugham's short stories of seedy Englishmen; for many years it has been the scene of much pioneering enterprise in which Indian labour and capital have played no small part. In consequence, the new Malay Government opens its account with an administration and an economy superior to most of the neighbouring countries, to say nothing of the dollar credit its tin and rubber have earned as much for its own benefit as for that of the sterling area as a whole. India's interest in the latter, however, is a very insignificant part of the reason for her rejoicing in Malaya's independence. Not many capitals have been as ardent and as consistent in advocating the end of colonialism as New Delhi. What other capital has responded to the demand for self-government as gracefully and as spontaneously as London?

* * * *

The debate about whether photography can be considered an art form or not is proving to be long and rather tiresome. *Le Monde du Silence*, the Cousteau masterpiece which won the Grand Prix at the Cannes Film Festival of 1956 and which was shown under the auspices of L'Alliance Francaise last Sunday, constitutes a powerful argument that it can. The world under the sea which it depicts is in no way the less exhilarating for its silence. On the contrary, devotees of films about darkest Africa, or about the interminable *safaris* Mr. Ernest Hemingway's characters indulge in, may welcome this holiday from calls of hyenas or babbling of baboons punctuating adulterous peccadilloes. *Le Monde du Silence* was filmed during a four-month cruise in the Mediterranean and the Red Seas: accompanying the expedition were a group of *scientists*—biologists, ichthyologists, geologists and oceanographers—doing special research in cooperation with the divers of the Undersea Research Group (another of Cousteau's creations). The record of this expedition is almost dazzling, not only as an achievement in cinematographic technique, but also for its portrayal of colour and of the multitudinous variety of biological forms in the sea. One of the features which impressed me particularly was the enormous dangers which divers were subject to on these expeditions; I have no marked partiality for fish as friends, but the care-free bonhomie with which one saw Cousteau's colleagues associate with some of the larger species, who would probably have had no great difficulty in fracturing human ribs with a flap of their tails, was almost enviable. Through their courage and experience comes a film which, in spite of its mournful commentary, seems to me unique for its educative value and for the quality of its thrills.

* * * *

Later this week, *Capital* bids farewell to one of its oldest friends and most revered associates. The retirement of Herbert Luke after almost exactly thirty-eight years in the east deprives the journal of a writer on jute affairs whose knowledge of this enigmatic trade and industry will be difficult to equal. Behind the unassuming manner and the modesty of his ways, which have persuaded him to maintain an anonymity not always accorded to our correspondents, Herbert Luke has displayed a wealth of experience and an astuteness of judgment which have been the envy of many besides those with whom he has been closely connected. Coming to India a few months after the end of the first world war as an assistant in W. Haworth and Company, he became a partner of the firm in 1931 and sole proprietor in 1943. After Haworth's transformation into a limited company, he became its managing director, from which position he is now retiring. But this brief panorama of the years conveys little of his eminence in the jute world, or of his services to the Bengal Jute Brokers and Dealers Association, the Indian Central Jute Committee and the Central Jute Board. Nor does it speak adequately of his contribution as Councillor of Calcutta Corporation, in the days when that body showed rather greater awareness of its citizens' welfare than it does today. Those who attended the sessions of the Bengal Legislative Assembly in pre-partition days still remember him as one of its most refreshing and effective speakers. Herbert Luke made a valuable contribution to the life of the former Jodhpur Club, whose president he was in 1940. An authority on Robert Burns, he has been a member of the Calcutta Burns Club and its president in 1955; he has also served on the committee of the Caledonian Society. Mr. and Mrs. Luke's large circle of friends will miss them badly as they leave on what we hope will be a long and happy retirement.



* * * *

Come, come, Mr. Raymond Postgate. Very well, you gave up smoking twenty years ago. Look at me, I didn't even start smoking so long ago, but I would not say that it gives me the right to call smoking a "dirty habit" or a vice the history of which should be written like that of "drunkenness, sodomy, flagellation and so on." And what's your provocation? An undoubtedly free copy of Sir Compton Mackenzie's *Sublime Tobacco* sent you by the *Spectator* for review. I haven't read the book, but apparently Sir Compton has done nothing worse than write a book on the history of tobacco which, in common with many others, he enjoys smoking. (Would that everybody could stand by his love so valiantly.) If there is evidence that tobacco has caused cancer in some cases, as is considered probable by some medical experts, that would be no reason at all why Sir Compton should not come forward with his own experience, and that of many others, which happens to be to the contrary. I am sorry for Mr. Postgate that in his own house he has "seen and smelt a near and dear relative stub out her cigarette on the greasy skin of a half-eaten pheasant wing," and also "a young friend blow his cigarette smoke in our faces over a sequence of five clarets chosen to show the variations in the vintages of one famous *chateau*," but I do not know that they add up to making smoking a filthy and suicidal vice. It is only a pleasant habit. One of its advantages is that, as you inhale the wonderful stuff, you don't talk—not such stuff and nonsense anyway.

THE TATA IRON & STEEL COMPANY, LIMITED

HALF A CENTURY OF ACHIEVEMENT

MR. J. R. D. TATA ON PROGRESS OF EXPANSION SCHEMES

The following is the speech of the Chairman, Mr. J. R. D. Tata, delivered at the Fiftieth Annual General Meeting of the shareho'ders of The Tata Iron & Steel Comnany, Limited, held in Bombay on Tuesday, August 27, 1957.

Ladies and Gentlemen,

We meet this afternoon one day after the fiftieth anniversary of the birth of our Company and of the Indian Steel Industry.

Golden Jubilee

The Company is today so well and successfully established as the biggest single private enterprise in the country and its largest steel producer, that we are inclined to forget the struggles and heartaches of earlier years and the difficulties which had to be overcome before and after it was brought into existence. Considering the resources and potentialities of the iron and steel industry in India as we know them today, it is not easy to realise how little they were appreciated only fifty or sixty years ago and the extent of the doubts and disbelief with which the original proposals were greeted. Had it not been for the name and prestige of Jamsetji Tata and his sons, Dorab and Ratan, backed by their faith and determination, many more years would have passed before the steel industry was established in India. Amongst the patriots and leaders of his generation Jamsetji, more than anyone else, realised that political freedom without economic and industrial strength to support and defend it would be a cruel delusion, and that the foundations of industrial power were made of steel.

It is proper therefore, as we look back today upon a half century of progress that we should pay tribute to the memory of Jamsetji Tata and also remember the part played by his sons and others who are no more, including R. D. Tata, B. J. Padshah, John Peterson, Nowroji Saklatvala and Ardeshir Dalal.

In the fifty years of our life we made over 22 million tons of steel, paid Rs. 175 crores in wages and bonuses, about Rs. 45 crores in dividends, well over Rs. 70 crores in taxes and Rs. 40 crores into Government's price equalisation fund. In the process we saved the country hundreds of crores' worth of foreign exchange and are doing so today at the rate of some Rs. 50 crores a year, which will rise to about Rs. 90 crores from next year onwards. I feel we have amply repaid the country for the protection granted to the Steel Industry during the difficult years following the first world war.

We have had our ups and downs and have made mistakes, but through good years and bad, we never forsook the ideals bequeathed to us by the Founder or lost sight of our duty and responsibility to the country. Our Company has provided a living and dynamic answer to the charge that free enterprise cannot "deliver the goods", is only inspired by selfish motives and does not serve the needs of the people. In all humility, I think we can justly claim we have served the country consistently and well.

If through these many years we have overcome so many obstacles and difficulties, it is partly because even in the darkest days of our history we enjoyed the trust and the support of our staff, workers, consumers, Government and shareholders. For that we are grateful and I am glad of the opportunity to say so today. I should particularly like to express grateful appreciation for their loyalty and support to that stalwart band of shareholders who have held shares in the Company since its very inception.

Before I leave the subject of the Golden Jubilee of the Company, may I refer to the view expressed by some shareholders that the occasion should have been celebrated in some suitable form, such as the distribution of an enhanced dividend or bonus shares? The fact is that we are today considering the annual report and accounts for the year 1956-57, while the fiftieth anniversary of the Company's foundation falls in the financial year 1957-58. I cannot say today what the Board may find it possible to do when considering the accounts for the current year. Much will depend on the results achieved and the circumstances in which we shall then find ourselves, but I can give the assurance that the Directors will give the matter their sympathetic consideration.

Second Fifty Years

Today we begin the second fifty years of our existence with confidence. We are conscious of the heavy additional burden of work and responsibility that faces us and of the many problems and difficulties ahead, but with the combination of an expanded and renovated plant and a strong and mature organisation, we hope to give a good account of ourselves.

Two Million Ton Programme

Our first and most important task is to complete the expansion of our plant and reach our two million ton target as quickly as possible. Our schedule of construction was from the start an extremely tight one. Kaiser's still hope to adhere to the original schedule, but it is too early as yet to forecast the exact dates on which each of the new units will come into full production. One unavoidable consequence of having to telescope much of the programme into one year has been a greater degree of interference with existing production than previously anticipated, the effects of which on current production are being seriously felt.

Second Five Year Plan

The year under review was characterized by a severe reversal in the country's balance of payments position and by the emergence of inflationary pressures which, unless checked in time, may lead to a crisis even more serious than that relating to foreign exchange. Both these developments can be traced to the same source, namely, the mounting national expenditure in both sectors of the economy under the Second Five-Year Plan.

The essential questions to be faced are whether the total resources available in India and obtainable abroad are sufficient to meet the rate of expenditure proposed under the Plan, and even if they are, whether the Plan can be implemented without imposing such a strain on the economy that the material benefits would be lost in the resulting inflation. If the answers to either or both of these questions are in the negative, as I believe they are, there will, I hope, be no hesitation on the part of those in charge of our economic destinies either to prune the Plan or to phase it over a longer period, or both.

In view of the magnitude and urgency of the country's needs the planners were right in setting their sights high and attacking the problem with boldness. At the same time, the very complexity of the task, the difficulty of estimating precisely the costs of materials, equipment and services over a period of years, and the uncertainties in regard to political and economic trends throughout the world, made it all the more necessary to temper boldness with realism and to provide some margin for under-estimates, increases in costs and other contingencies. Instead, out of the original planned investment of Rs. 4,800 crores, no less than half, or Rs. 2,400 crores, was made dependent on such uncertain factors as foreign assistance, deficit finance and further taxation over and above the additional taxation of Rs. 450 crores already provided for. The estimated expenditure has since risen to Rs. 5,600 crores or more, increasing the gap to an even larger one. Faced with such a situation, I believe the Government of India recognise that substantial adjustments of the planned expenditure are inevitable.

The Plan, after all, is only a means to an end, not an end in itself, and the progress we make during the current five years is only one step in a long and steady march towards our ultimate goal. If we keep our eyes on that distant target, the exact measure of the step we take in the Second Five-Year period loses some of its apparent importance. By taking a shorter and surer step today we may, in fact, reach our goal sooner and we shall certainly incur less risk on the way.

Foreign Capital

Everyone, from Government downwards, recognises the crucial importance to India of foreign capital, whether in the form of aid, loans or equity. There is today an unprecedented demand for capital funds in all countries which has resulted, even in an enormously wealthy country like the U.S.A., in an acute tightness of money. It stands to reason that with local demand competing strongly for available funds there is little inducement for foreign capital to flow to India. Our constantly rising burden of taxation and the disincentives contained in various enactments and measures hardly represent the best way to create enthusiasm abroad for investing in, or lending money to, India.

Yet there is in the advanced countries of the West realisation of the tremendous long-term possibilities of increased trade with India and of opportunities for investment. If our Government and Parliament realising the full extent of such possibilities were to revise some of their policies so as to generate greater confidence in the investment markets here and abroad, I believe that over the years a substantial flow of foreign capital could be induced to this country and our foreign exchange position thereby greatly eased.

Stability of the Rupee

The question of foreign exchange is linked, in the Indian context, with the question of foreign balances and the value of the Rupee. In recent years the Indian rupee has shown remarkable strength which has contributed much to the economic stability of the country. The extent to which the maintenance of substantial foreign balances has been responsible for the strength of the rupee in international markets cannot be assessed with certainty, but there is no doubt that it has played a part in the confidence our currency has enjoyed. I therefore view with alarm the suggestion advanced in some quarters that such foreign balances are wholly unnecessary as a backing to our currency and that statutory requirements for the maintenance of foreign balances should be abolished.

Confidence in a country's currency is a delicate plant which needs to be carefully nursed and which it is difficult to grow again once it is allowed to die. Both international credit and internal stability depend upon it and there are too many historical examples of the calamitous consequences to a country and its people of a collapse in the value of their currency, to permit of any risk being taken in the matter. I am sure that our Government are fully alive to the need of maintaining public confidence in the rupee both in India and abroad.

Finance for Expansion Programmes

Coming to our own affairs, perhaps the most important matter about which I think you will be interested to hear from me today is the progress we have made in securing the balance of the funds required to finance our current expansion programmes.

In paragraph 14 of the Directors' Report, it has been said that the Company had initiated negotiations in the U.S.A. Your Vice-Chairman and I spent a month there in June this year, during which we held discussions with the World Bank and with American commercial banks.

As before, we were received with the utmost consideration by the distinguished President of the World Bank and other Executives of that great Institution. They were good enough to agree to increase the amount of the previous loan of $75 million by an amount equal to that which we were able to raise elsewhere subject to a maximum of $17½ million, which is half the remaining gap of $35 million. In order to facilitate our task they went further. They agreed to raise the amount of the present mortgage up to $110 million, so that other lenders in the States could rank pari passu with the World Bank in the matter of security, and they also agreed to the prior repayment of the loans from such lenders. We are deeply appreciative of the consideration and assistance extended to us by the World Bank, without which the task of raising the necessary funds would have been well-nigh impossible.

With these valuable concessions and the powerful assistance of the First Boston Corporation who have been appointed the Steel Company's financial agents for this purpose, and whose outstandingly able Chairman, Mr. George Woods, is one of India's best friends abroad, we approached a group of leading commercial banks in the States with a view to securing medium term credits from them up to a total of $17½ million. The negotiations are still proceeding between these banks and the First Boston Corporation representing us, and I hope they will fructify in the near future.

I should like to take this opportunity to thank the Government of India for the assistance they have given us in this matter, both by sponsoring and guaranteeing the additional loan from the World Bank and by helping us in various ways in our negotiations with the commercial banks.

Realising the valuable savings in foreign exchange and also in expenditure on steel used under the Plan which our expanded output will generate, the Finance Minister has, from the beginning, taken a great deal of personal interest in our expansion programme and in the means of financing it, and I wish on your behalf to express our grateful thanks to him for his support and sympathetic understanding of our problems.

The amount I have mentioned as being required to complete the financing of our programme of expansion is based on the assumption that the rate at which our internal savings accrue and the capital cost of the various projects in hand correspond with the estimates. To the extent that additional taxation reduces our net savings or enhanced customs and excise duties increase the capital cost of our new plant, we shall require additional funds and we are making a representation for an appropriate increase in our retention prices.

Taxation

It is relevant that I should briefly discuss here the implications of the new taxation proposals, as taxation has nowadays a major impact on the operations and finances of industry. It is inevitable that a high rate of national expenditure calls for high levels of taxation, both corporate and individual. During the First Five-Year Plan, central taxation amounted to about Rs. 255 crores. The Second Five-Year Plan, as originally conceived, visualized additional taxation of Rs. 450 crores over and above the existing levies, to which must presumably be added a part of the gap of Rs. 400 crores then left uncovered. Since then, however, the Finance Minister has indicated his intention to reduce the quantum of deficit financing from Rs. 1,200 to Rs. 800 crores, while the expenditure on the Plan has increased by a further Rs. 800 crores. The total uncovered gap would thus reach the formidable figure of about Rs. 1,600 crores. If any appreciable part of this gap were sought to be met by a further increase in taxation, it would place an unbearable burden on industry and commerce and deprive them of what little is now left of funds available for investment.

Apart from the magnitude of the additional burden of taxation proposed, the Budget for the current year presented to Parliament embodies new and unprecedented features. Of these, the one which has rightly met with almost universal disapproval is the Wealth Tax on companies. It is difficult to understand how such a measure of personal taxation can be applied to the assets of large public companies made up of contributions by thousands of shareholders, rich and poor alike.

The Wealth Tax on companies has been sought to be justified on the ground that in the peculiar conditions of India, very few shares in companies are owned by small shareholders. I think the best answer to this view is given in the figures recently quoted by the President of the Bombay Stock Exchange which show that, on the basis of a survey of ownership of shares and securities in Bombay City undertaken by the Reserve Bank of India in 1954, 60% of the shareholders of companies were persons with incomes below Rs. 8,000 a year. In the case of our own Company, nearly half of our shareholders have holdings of less than Rs. 1,000 each, while the holdings of about 87% amount to less than Rs. 5,000 each. The subjection of companies to Wealth Tax will therefore hit a large section of the middle class, will result in the shareholders being taxed twice on the same assets, and will act as a powerful disincentive to save and invest.

Apart from the controversial nature of the Expenditure Tax and the annual Wealth Tax, these taxes together with taxes on income, will result in individual assessees in the higher brackets paying substantially more than 100% of their income. In effect, in addition to the whole of their income being taken away from them, they will now be made to pay something for the right to live and work in their own country. Nowhere else in the world does such an extraordinary situation exist. I can only hope, that even at this stage, Government will revert to a simpler and less drastic scheme of taxation. The only sure method of increasing tax revenues is to provide incentives for investment which, in the train of larger profits thereby generated, will bring in larger revenues to the State.

As a result of the Budget proposals, the amount of additional taxation which our Company will have to bear, including excise duty on steel used in our expansion programmes, will be approximately Rs. 1 crore for the current year and corresponding amounts in subsequent years, thereby adding to the financial stringency with which the Company is already faced in implementing the Two Million Ton Programme.

Labour

Some of you will have read in the papers the remarks I made at the annual general meeting of the Tata Locomotive and Engineering Company earlier this month on the labour situation at Jamshedpur.

While the position in the Steel Company was generally satisfactory during the year and the Company's relations with the Tata Workers' Union continued to be maintained on a basis of co-operation and mutual confidence, the general wave of labour unrest in the country, coupled with the recent attempts of the Communist Party to disrupt the working of the industries located at Jamshedpur, has recently affected the situation in our Works.

One of the most discouraging features of the labour movement in India up to now has been the relatively slow progress made in building up, as in other countries, strong and stable unions well organised and staffed, endowed with substantial financial resources and enjoying the sustained loyalty and support of the workers.

With rare exceptions, the labour movement here has suffered acutely both from the lack of support from within and from being kept in a constant state of uncertainty and agitation by a never-ending struggle for power, often in total disregard of the interests of the workers concerned. Once a union is well-established and recognised, it is made the butt of attacks and intrigues by outsiders bent upon acquiring control or establishing a rival union. If the union has established sound and constructive relations with employers, and even though it may, as in our case, have obtained through negotiations valuable concessions in the form of increased wages, bonuses, retiring and other benefits, job security, consultative machinery and the like, its leaders are charged with betrayal of the workers' interest and its members instigated to renounce them and to follow others who promise to get them better terms from the employers.

The bewildered workers who, because of the lack of education still prevailing in our country, are easily influenced by such promises and exhortations, are kept in perpetual doubt as to where their interests lie and fail to see that they are the main sufferers from their unwillingness or inability to support their proved leaders in their efforts to build up strong and responsible unions.

The attempts of the President of the Tata Workers' Union and his colleagues to strengthen their organisation have been obstructed for some years by a continuous and virulent campaign against them by outside parties, with Communists now in the lead. As can be seen from recent events in Telco and the Tinplate Company, these disruptive elements have succeeded in creating trouble and unrest which, if unchecked, may spread to the Steel Works.

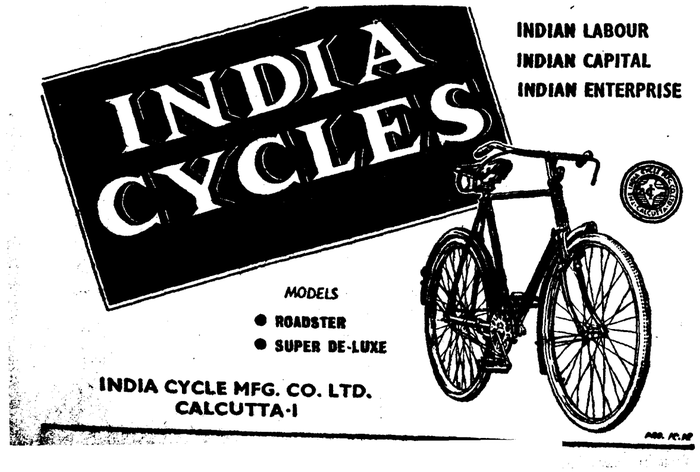
All the policies and plans of the Government for developing the country and raising the standards of living of its people are based upon the achievement of a rapid and continuous rise in the output of all kinds of goods and services and particularly in industrial output. The Communists are well aware of this. In their eyes success in achieving prosperity through a mixed economy and by democratic means would be a severe set-back to their plans and must therefore be thwarted at all costs. Progress and happiness must be achieved the Communist way or not at all and they cannot afford to let success in India disprove the necessity of the totalitarian methods used in some countries which they seem to love more than their own.

There is evidence that their present activities at Jamshedpur are part of a pre-determined plan. Jamshedpur is one of their obvious and principal targets in the labour field, for control of the growing steel and heavy engineering industries there would provide them with a stranglehold on one of the most vital and sensitive sectors of the economy. Our information, confirmed by the recent developments at Jamshedpur, is that in the first phase which we are witnessing today their plan of action contemplates no frontal attack on the labour movement there but a series of localised incidents in each factory and neighbouring mines directed at destroying morale, fostering indiscipline and, wherever possible, at disrupting production through slow-downs and lightning strikes. Agitation, coercion and intrigue, in the traditional pattern of Communist action, all play their part in this preliminary softening-up process. If it succeeds, the pressure will be increased and extended to other units in the next stage until the present trade union movement and its leadership are destroyed. The last step would be to take over the whole labour movement at Jamshedpur and elsewhere.

The main responsibility for maintaining peace and order and for preventing disruption of industrial production at Jamshedpur by subversive elements, lies with the Government of Bihar, who are fully aware of the developments and of the serious implications of any loss of production that might result from continued disruptive activity at Jamshedpur.

Industrial Heart of India

Bihar, along with adjacent areas, is rapidly becoming the industrial heart of India. It is essential that its development should follow an orderly pattern based on the maintenance of industrial peace, productivity, sound trade unionism and a high degree of discipline without which efficient production is impossible. It is gratifying that the Government of Bihar, while continuing to protect the legitimate interests of the workers and to promote their welfare, fully appreciate the importance of maintaining production and good industrial relations in their State. I am sure they will find the Managements of the industries established there more than willing to co-operate with them in carrying out these objectives.

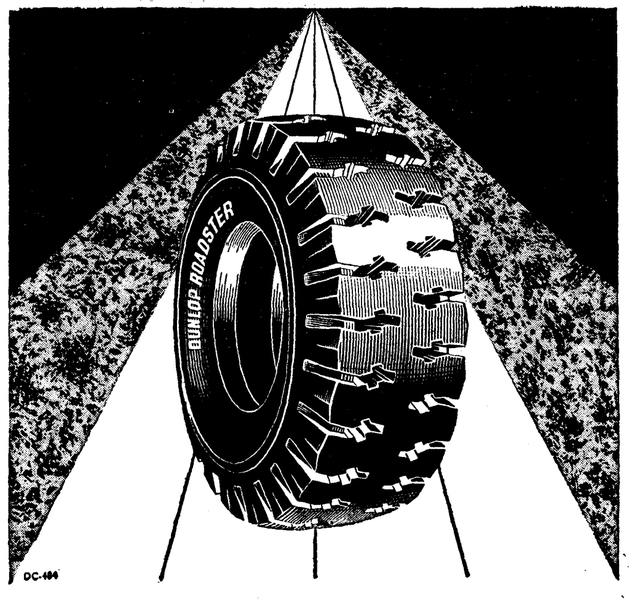


The Government of India are also deeply concerned in this matter, for the industries of Bihar are national industries serving the whole country, and progress or set-backs in their working will benefit or injure the nation as a whole. The Central Government are themselves building three large steel works and other plants in the area, and a number of important industries, such as the Chittaranjan Locomotive Works and the Sindri Fertiliser Factory, are owned and run by them. What happens in the area is therefore of vital importance to them, and we look to them, in co-operation with the State Governments concerned, to initiate or support measures calculated to maintain peace, discipline, productivity and efficiency in the great industries on which the future prosperity of this country so largely depends.

Before closing I should like to say a few words about the death of Mr. Dinsha Daji to which a reference has been made in the Directors' Report. Apart from his outstanding knowledge of Company Law and his long experience of industrial and business affairs from both of which we greatly benefited, Mr. Daji was a great gentleman who lived a simple life dedicated to his work. We shall sadly miss his counsel and support, and I am sure the shareholders will want to join me in paying tribute to his memory and mourning the passing of a wise and learned man who, while he took a broad and human view of things, never compromised on principles.

I would also like to refer to the loss which the Company has suffered by the passing of Mr. A. Rajagopalan, who died on the 5th April this year. An exceptionally able and industrious officer, Mr. Rajagopalan, rose to the high position of Agent in charge of the Company's office in Calcutta. Over a period of twenty-five years he rendered outstanding services to the Company in various branches of the administration and particularly in the preparation and presentation of the Company's case in successive Tariff Commission enquiries and in important negotiations with Government in regard to a number of intricate matters connected with finance, costs and prices.

Finally, I should like as usual to end on a message of thanks and appreciation to the management and all the employees of the Company at Jamshedpur and elsewhere for the hard work they have put in during the year. The tremendous amount of construction work at the Works, forming part of the Two Million Ton Programme, and the resulting complications and difficulties in maintaining normal operations, place them under a severe strain of added work, worry and responsibility. On your behalf, I thank them for their efforts and wish them all success in the completion of their heavy task.



Note: This is not a report of the proceedings at the above Annual General Meeting.

SEN-RALEIGH INDUSTRIES OF INDIA LIMITED

CHAIRMAN MR. S. K. SEN'S REVIEW

Addressing the 7th Annual General Meeting of Sen-Raleigh Industries of India Limited, held in Calcutta on the 31st August, 1957, Mr. S. K. Sen, Chairman, said :

It gives me great pleasure to place before you the Accounts for the period ending 30th September, 1956, which have been with you for sometime now I feel certain you will agree with me that the Company has maintained its record of progress through its 7th year of existence.

With Bicycle sales approaching one lakh units per year and an additional Component and Accessory sales valued at rs. 18,44,107/-, the turnover increased further to Rs. 1,65,07,434/- which means an increase of little over Rs. 52 lacs in comparison with last year's figure. The added turnover has allowed the Company to maintain its profits inspite of an over all reductions in the prices of its products. Your Directors have considered it prudent to use the added profits for creation of Reserve Funds under various heads shown in the Company's profit & Loss Appropriation Account.

A word of explanation is due in the matter of comparison with the previous year's account. The basis of allocation of material expenses has been changed in 1956 so as to conform to the requirements of the Companies Act, 1956. For example in 1955 consumable tools, coal, fuel-oil, repair-materials and packing-materials were clubbed together with raw materials. In 1956 these material expenses were taken out of raw material and allocated to the appropriate expense heads, viz.—Consumption of Tools, Stores & Spare Parts, Power & Fuel, Repairs and Packing, Freight and Transport charges. Expenses of consumable tools and repairs have recorded definite increases. In the case of consumable tools the larger scale of manufacture would explain the reason. Repair expenses would obviously rise with the age and intensive use of plant.

Expansion Plans

Having completed the first phase of its programme, your Company has been actively engaged during the year on expansion plans and in 1956 new lay-outs connected with these expansions were finalised by your Directors after consultations in the U.K. and West Germany with foreign Associates. The operation of these plans, however, have been unduly held up due to the foreign exchange position of the country suddenly deteriorating towards the end of 1956 and its consequent repercussion on Import Licensing Policy for Plant. The entire programme of expansion by the Company has had to be rephased once again in the light of existing circumstances. For the first time plans for expansion had been drawn up entirely at the Indian factory and the staff rose to the occasion and tackled the problems connected with realignment with commendable speed and efficiency.

The demand for our products justifies the contemplated expansion and I am glad to report that the Government have taken a sympathetic view of our problem and issued some of the required plant import licences in July of this year.

Not only would the Industry now require to expand its production of such components as are already made in the Indian factories but it would at the same time have to explore avenues through which every component and every store required for the manufacture of the bicycle could be procured within the country. Speeding up of efforts to reach self-sufficiency has become even more urgent than to reach higher targets of production in existing lines and planning had to be revised accordingly so that where plant could be utilised for manufacture of additional items, even at the cost of some expansion of production capacity, the sacrifice became essential. Conservation of foreign exchange has become the watchword for the day.

The situation added to the fact that an approach had also been made to your Company for assisting in the growth and development of the Small Scale Sector as an ancillary to the large scale units led your Company to agree with the National Small Industries Corporation (Private) Limited to assist in the development of Small Scale units for the purpose of supply to the Company of components not manufactured by our factories. Your Company would have no financial commitment in the development of these units and its sphere of assistance will be restricted mainly to technical control and guaranteed off-take from the ancillary units in the event of supplies being regular and of approved quality. It is expected that production from these ancillary units will be available to the Company sometime in 1958, when these in addition to components manufactured under the Company's own expansion schemes would help to bring the import pack value per bicycle down to a negligible figure.

Tube Mills

An event that interests us keenly is the effort of two ventures to set up tube mills in the country with know-how from the U.K. One of these mills will also be rolling cold rolled strip—another basic requirement for the bicycle industry. At last there seems some hope that the Indian bicycle industry may receive its basic materials at prices paid for these materials by their foreign competitors.

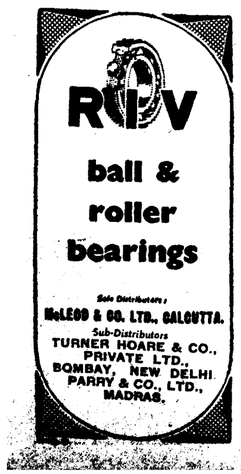
The foreign exchange position has also brought to the forefront the need for one or more well set up Machine Tool Factories to meet the expansion requirements of the country in the future. At the present moment, except for some basic categories of machine tools such as lathes, milling machines, drills and presses, we are almost entirely dependent on imports for expansion of capacity in the Light Engineering Industry.

A further need that is felt by the Light Engineering Industry is for consistent and regular supply of tools. The tool production capacity within the country is as yet extremely limited and one of our gravest problem is to feed the factory with the requisite tools. Although considerable expansions are under way in the tool rooms attached to individual factories, the want of an ancillary tool producing industry is keenly felt. I feel the attention of the Government should be drawn to this fact and till such time as tools in adequate quantity are available within the country, a realistic policy of imports in the case of tools would be essential if production in the country has to be maintained and expanded in accordance with the targets set by the Second Five Year Plan. The very small quantum of foreign exchange spent on tools would be more than amply recompensed by the foreign exchange saving through reduced imports of the end product.

It is my pleasant duty to welcome to our Board Mr. B. L. C. Dodsworth, Assistant Managing Director of Raleigh Industries Limited to fill in the vacancy caused by the resignation of Mr. E. E. Baker. I would take this opportunity of thanking Mr. Baker for all that he has done for the Indian Company since its inception. From my personal association with Mr. Baker, I am sure that his resignation will in no way affect his keen interest in the Indian Company. Mr. Dodsworth is no stranger to the Indian Cycle interests as during his extensive tour of India in 1954, he found time to make friends with a number of dealers.

In my last address to you, I had referred to forthcoming changes in the Articles of the Association of the Company which would be necessary on the implementation of the Companies Act of 1956.

I am sorry that formalities in connection with getting these revisions approved by the various Stock Exchanges with which we are enlisted as well as with the Industrial Finance Corporation have not made it possible for these amendments to be incorporated in the Articles as yet.



Tariff Commission Enquiry

A Tariff Commission Enquiry on the Bicycle Industry was carried out in February last where your Company represented its case before the Commission. Since then, the Commission has published its findings and protection has been accorded to the Bicycle Industry for a further three years ending 31st December, 1960.

Your Company pursued its policy of negotiated agreements with the recognised Union and schemes covering new items that went into manufacture in 1956 were brought in within the scope of these agreements. Your Company has now embarked on negotiations connected with the expansion scheme which should go into operation within the coming year. Negotiations for the expansions were originally started in 1956 but suffered a set back due to the foreign exchange position and consequent delays in the issue of licences but with the grant of licences now, they have been resumed. It is hoped that with the higher productivity, it will be possible to set off to some extent the effects of the rising spiral of prices which seems to have over-taken the country on the eve of the Second Five Year Plan. The past few months have shown a steady trend towards higher material cost, higher plant cost and higher cost of living. The only method we have to off-set the general tendency towards the rise in the price of our product is to increase production as well as productivity. We are now working towards this end in all spheres of our activity, so that our competitive position in the market may be maintained. The co-operation of every worker and member of staff is called for to achieve those results.

It is my privilege to express my thanks to my collegues, all members of the staff and workers and our foreign associates, without whose efforts, these results could not have been achieved.

Note : This does not purport to be a report of the proceedings of the Annual General Meeting.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

FURTHER DECLINE IN ADVANCES

Wednesday, 4th September.

ADVANCES in the Calcutta money market have decreased fairly considerably again during the past week. Almost all the major categories have contributed to the fall. The main declines, however, have been in the case of credit for sugar and for grains and seeds. Cotton and jute accommodation has contracted a little. In the interbank market, there has been very little change and the call rate remains at 3¾ percent.

In the exchange market, a modest supply of bills has been noted, mostly on account of gunny shipments, with a few on account of tea. Remittance has been on a small scale. The trend in sterling has been irregular.

* * * *

Silver was steady on increased pre-Pujah demand and the price advanced from the previous week's level of Rs. 181.50 to Rs. 181.75, quoted today. The rate for forward delivery was Rs. 181.50. The London and New York prices remained the same as before.

Gold was steady in sympathy with silver and the price rose from Rs. 109 to Rs. 109.50. The sovereign, at Rs. 71.25, showed a gain of 25nP.

* * * *

During the week ended 30th August, Government of India Treasury bills for Rs. 9,22,00,000 were sold in favour of the Reserve Bank.

* * * *

A decline of Rs. 12.96 crores to Rs. 1,470.63 crores in active notes was the outstanding feature of the return of the Reserve Bank of India for the week ended 30th August, 1957. The total note issue rose by Rs. 1.39 crores to Rs. 1,513.83 crores. Notes held in the Banking Department consequently increased by Rs. 14.35 crores to Rs. 43.20 crores. Deposits of the Government of India fell by Rs. 9.95 crores to Rs. 54.35 crores, but other Government accounts increased by Rs. 2.31 crores to Rs. 8.19 crores. Balances of commercial banks, at Rs. 102.80 crores, showed a rise of Rs. 21.95 crores. Balances held abroad declined further by Rs. 5.58 crores to Rs. 19.34 crores and investments were Rs. 4.97 crores higher at Rs. 215.39 crores. Other loans and advances decreased from Rs. 75.67 crores to Rs. 74.86 crores, of which advances to scheduled banks against usance bills amounted to Rs. 35.23 crores against Rs. 37.04 crores. Ways and means advances stood at Rs. 37.28 crores (Rs. 38.81 crores).

* * * *

The return of the State Bank of India for the week ended 23rd August, 1957, shows a rise of Rs. 1.96 crores to Rs. 328.89 crores in total deposits. Investments in Government securities are up by Rs. 30.70 crores to Rs. 123.91 crores, while other authorised investments remain unchanged at Rs. 11.01 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have fallen by Rs. 4.50 crores to Rs. 162.20 crores. Cash and balances are, in consequence, shown at Rs. 42.42 crores, or Rs. 1.90 crores higher.

* * * *

The statement of the position of scheduled banks for the week ended 23rd August, 1957, shows Demand and Time liabilities at Rs. 711.32 crores (Rs. 14.17 crores on account of borrowings from banks) and Rs. 580.94 crores (Rs. 5.42 crores), compared with Rs. 702.55 crores (Rs. 13.35 crores) and Rs. 579.10 crores (Rs. 5.25 crores), respectively, in the previous week. Cash has fallen by Rs. 43 lakhs to Rs. 38.94 crores, while balances with the Reserve Bank have risen by Rs. 51 lakhs to Rs. 74.89 crores. There is a rise of Rs. 30.69 crores to Rs. 370.52 crores in investments. Advances and bills discounted, at Rs. 862.11 crores, show a fall of Rs. 13.15 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.8 percent and 66.7 percent, against 8.9 percent and 68.3 percent.

ESTIMATES OF SHIPBUILDING COSTS AND PRICES

The recent decline in shipping freight rates does not appear to be affecting orders for new ships. The question of costing the value of a ship is a specialised job, but the public are provided with a good general picture of shipbuilding costs and prices by the enterprise of *Fairplay*, the shipping publication, which gives periodical estimates of the building cost and of the market selling price of the notional ship which they invented and which bears their name. The *Fairplay* ship is described as being in design slightly in advance of the cargo ships that are being delivered today, but approximating to some now on order for delivery about 1960. Six months ago the building cost of this ship was estimated at £1,045,000. It is now thought to have advanced by £35,000; building costs in fact have risen by about 3½ percent over the six months. The ship is suitable for the carriage of bulk cargo, but the demand for it is not what it was six months ago. Then it was estimated that the ship, if ready and available, could be sold at a price 24 percent more than its building cost. The premium is now judged to be down to 15 percent. The fall has been sharp, but there still is a premium, which helps to account for the fact that shipbuilders' order [illegible] ue to grow longer.

4¼ PER CENT. STATE GOVERNMENTS LOANS

(1) Government of Bombay Rs. 600 lakhs-Issue price Rs. 99.75 per cent.

(2) Government of Mysore Rs. 300 lakhs-Issue price Rs. 98.75 per cent.

Both the State Governments reserve the right to retain subscriptions up to ten per cent in excess of the notified amount.

The above loans will be repaid at par on 16th September, 1969.

THE LOANS WILL OPEN FOR SUBSCRIPTION ON 16TH SEPTEMBER, 1957 AND CLOSE ON 18TH SEPTEMBER, 1957 OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTIONS APPROXIMATE TO THE AMOUNT OF EACH ISSUE.

The loans will bear interest from 16th September, 1957.

Subscriptions may be in the form of cash/cheque in respect of both the loans.

3% MYSORE GOVERNMENT LOAN 1958 will be accepted at Rs. 99.75 per Rs. 100 nominal for conversion into the new loan of that Government; interest on the securities of the loan tendered for conversion will be paid up to and including 15th September, 1957.

APPLICATIONS FOR BOTH THE LOANS WILL BE RECEIVED AT THE OFFICES OF THE RESERVE BANK OF INDIA AT BANGALORE, BOMBAY, CALCUTTA, MADRAS AND NEW DELHI.

APPLICATIONS will also be received at PLACES WITHIN THE RESPECTIVE STATES as follows :—

(i) At the office of the Reserve Bank of India at Nagpur, branches of the State Bank of India, branches and Treasury Pay Offices of the State Bank of Hyderabad and the Government treasuries and sub-treasuries in the case of Bombay Loan.

(ii) At the branches of the Bank of Mysore Ltd., State Bank of India, State Bank of Hyderabad and at Government Taluk treasuries in the case of Mysore Loan.

Copies of Notifications and Application Forms may be obtained at any Receiving Office.

Our City Cable

STOCK MARKETS QUIETLY STEADY

GILT-EDGED DOWN: INDUSTRIALS MAINTAINED

London, 4th September.

QUIET conditions persisted in the stock markets throughout the past week, but the general tendency was satisfactory and prices for the most part were fairly well maintained. Early uncertainty and dullness reflected the continued weakness of Wall Street, currency devaluation fears and the political uncertainties in Syria, but a better tendency developed later. This followed the improvement in sterling in the foreign exchange market and a better trend on Wall Street. The former was responsible for brighter conditions in the gilt-edged market, which made good headway until immediately before the weekend, when the rise in the Treasury bill rate brought a modest reaction. This was carried a stage further after the week-end on nervousness over the August gold reserve figures which, it was expected, would show a sharp fall in view of the pressure on sterling during August. Selling, however, was small, but there were fractional losses on balance. In the foreign market, German bonds attracted modest support, but otherwise there was very little change. There were some erratic price movements in dollar stocks in sympathy with Wall Street, but there were very little change on balance. Industrials were very quiet throughout, but a better tendency developed after the early uncertainty, and prices were well maintained. South African gold shares ruled quiet, but selective buying of Free State, Far West Rand and finance house issues helped the market to maintain a firm undertone. Copper shares lost ground with the falling price of the metal and tins were dull. Oil shares moved erratically; the main feature was the strength of Shell Transport before the half-yearly figures. Rubber shares tended easier, but business was small and losses were usually limited to a few pence. Small and irregular movements were recorded in tea shares.

The Money Market

Very tight credit conditions were again experienced by borrowers in the money market last week. The pressure of foreign exchanges and revenue payments kept bankers' surplus balances down to a minimum, and they, in turn, had to call heavily upon the market. The result was that there was a further large gap between the amount of credit available and the market's requirements, with the usual intervention by the authorities to make good the shortfall. There was, however, a small amount of penal central bank borrowing. Under the pressure of demand for money, 3½ percent became the general ruling rate for day-to-day loans, with 4 percent paid during the most acute phases. The rate for November and hot bills was firm at 4 percent, hardening to 4½ percent prior to the weekly Treasury bill tender, at which there was a further increase of just over ⅛ percent to £4 2s 5.03d percent.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 28th August shows that the gold stock was unchanged at $22,26 million. Foreign deposits rose by $10 million to $352 million, while foreign investments fell by $68 million to $3.536 million. The Federal Reserve bought $279 million worth of bills and $36 million worth of securities under repurchase agreements and sold $1 million worth of certificates. Total discounts and advances rose by $83 million to $792 million while the aggregate excess reserves of member banks declined by $26 million to $177 million. The daily average excess reserves of member banks fell by $111 million to $412 million, while their daily average borrowings declined by $18 million to $907 million. Business loans of the New York city banks fell by $150 million to $11,795 million compared with a rise of $60 million to $10 389 million in the corresponding week of last year.

Steadier Undertone in Hongkong Gold

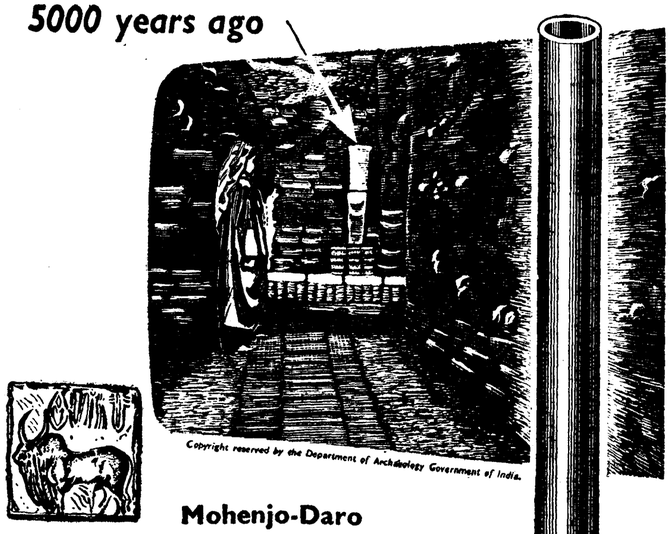
After early setbacks last week, the Hongkong gold market displayed a steadier undertone. The early softness was attributed to a substantial remittance of U.S. dollars from abroad for the approaching mid-autumn festival, which in turn affected gold prices, together with the steadier trend of sterling. High carry-over charges totalling 86 cents a ten taels in sellers' favour also dampened the bullish sentiment. The market closed with the undertone tending firm in view of a forecast that the U.K. gold and dollar reserves were likely to show an appreciable drop. The official offtake was 1,820 taels and the unofficial 13,100 taels. Arrivals in Macao totalled 50.000 ounces. The forward contract was placed at $(U.S.)37.78.

Cautious Trading in Vegetable Oils

Holidays in the U.S.A., Canada and Malaya served to suppress interest in vegetable oils and oilseeds last week, with operators reluctant to trade until those markets reopen. Copra and coconut oil may well react to the Presidential signing of the excise tax on coconut oil in the United States, and meanwhile definite sellers were not easy to locate. European re-sellers of Straits coconut oil continued substantially to discount origin prices, although the quantities they were prepared to sell were not considered large. Linseed oil was generally neglected and prices softened around 10s a ton for ex-tank, U.K., mainly reflecting a recent reduction of around £1 a ton in Canadian linseed. Near deliveries of groundnut oil encountered a good demand on the Continent, but forward shipments claimed scant support, and were usually available at unchanged rates. Indian castor oil showed a quietly steadier background. Groundnuts were featured by reports of business in British East African at further advanced prices. Shippers in London, it was reported, were cancelling contracts with dealers, and selling back to traders in Mombasa at attractive prices, consequently giving the London market an inflated appearance.

Capital Exports from Western Germany

The West German Minister for Economic Affairs promulgated an ordinance on 21st August, which almost completely frees capital exports from Western Germany. The previous restriction that West German investments abroad exceeding 3 million deutschemark needed special authorisation has been removed. Capital exporters from Western Germany are now allowed to acquire foreign enterprises, to set up branches abroad, to acquire interests in foreign companies and to grant credits to subsidiaries abroad. Capital exports to acquire real estate property abroad still remain prohibited except if the property is acquired as part of an enterprise. The authorities have stated that they do not believe that the liberalisation of capital exports will result in a sudden rise in West German investments abroad, because cases which needed special authorisation were treated generously.



Attack on Japanese Trade Treaty

An attack on the new Japanese trade treaty has been made by the Associated Chambers of Manufacturers in Australia. It has warned the federal Government of a serious deterioration in Australian manufacturing industry unless specific weaknesses in the pact are corrected. The Associated Chambers' statement says that the treaty gives Japan the equivalent of G.A.T.T. membership without being a full member. "Even before the treaty is printed the attack by Japanese exports to Australia is already evident." It adds that safeguards outlined by the Government do not appear to be valid as they cannot be applied with sufficient speed. The A.C.M.A. says that it has reviewed the treaty and remains unconvinced and unsatisfied. It further says that it has issued its statement on behalf of the Australian manufacturing industry which employ more than one million workers.

COTTONSEED OIL TO BE USED IN VANASPATI MANUFACTURE

The utilisation of cottonseed oil to the extent of 10 percent of the total oil requirements in the manufacture of vanaspati so as to save groundnut oil for export was agreed to by the vanaspati manufacturers at a recent meeting. The meeting was convened by the Central Ministry of Commerce and Industry to consider measures necessary for the development of the cottonseed industry. Mr. Manubhai Shah, Minister for Industry, presided. In his inaugural address, Mr. Shah called upon the vanaspati manufacturers to utilise cottonseed oil for 10 percent of their total requirements of oil so that to that extent groundnut oil would be available for export. To make a beginning in the utilisation of cottonseed oil instead of groundnut oil by the vanaspati manufacturers, Mr. Shah said, that 30.000 tons of cottonseed oil would be made available soon mainly through imports. He also suggested that an additional capacity for producing 30,000 tons of cottonseed oil should be created in the country as early as possible. The installed capacity at present was nearly 30.000 tons. For crushing cottonseeds, the Minister said that 100-ton capacity plants should be installed in various areas. About the price of cottonseed oil, which is now ruling at high levels, Mr. Shah said that once large-scale production started the prices would come down. The meeting decided to appoint an *ad hoc* committee consisting of representatives of chushers, vanaspati manufacturers, the Planning Commission and the Union Ministries of Food and Agriculture and Commerce and Industry to go to into the various problems of the industry and suggest methods for a speedy development of the industry. Among others, who attended the meeting, were the representatives of the Planning Commission, the Central Ministries of Finance and Food and Agriculture, Council of Scientific and Industrial Research, vanaspati industry, cottonseed crushing industry and cotton ginners.

Stocks and Shares

SETTLEMENT CONSIDERATIONS DEPRESS SHARE PRICES

ANXIETY ABOUT TIGHTER CREDIT CONTROLS

Wednesday Evening.

SETTLEMENT considerations have depressed share prices in the Calcutta stock market today and Indian Irons are quoted lower at Rs. 17.96. The closing undertone is easier and operators are inclined to lighten their commitments. Fears about further credit restrictions, combined with the prospect of fresh taxation to finance the second five year plan, are regarded as the main deterrents. Reports of disappointing output figures from the Tata Iron and Steel Company during August have induced long liquidation, particularly in steels.

Jute shares have attracted scattered interest on the view that at the current prices of raw jute and goods, the mills should be able to make better profits. Coals are neglected, and, except for some selective support, miscellaneous industrials are shaded on pressure. Steamship company shares are steady on reports of an increase in coastal freights and Metal Box have met with investment support.

In the engineering section, the Mundhra group of shares have improved fractionally on interested support. Tea shares have mostly been on offer and prices are lower on balance.

Government securities are firm because of the shortage of scrip. It is reported that official support has contributed to the improvement.

Details of the week's trading follow.

* * * *

The enquiry for Government securities was fully maintained and there was a further improvement in prices due to shortage of scrip. The 3% Conversion Loan 1986 was a good feature and the price was marked up from Rs. 71.20 to Rs. 71.40 while 3% Non-terminable paper was asked for at Rs. 71.20. Among short-dated loans, 3% 1958 had buyers at Rs. 99.75 and 3% 1959-61 was marked up further to Rs. 98.10; 3½% 1961 was scarce at Rs. 99.48, while 2¾% 1961 improved by 5nP to Rs. 93.75 and 2¾% 1960 had no sellers at Rs. 96.65. The 2¾% 1962 was in demand at Rs. 93.95 but 3¼% 1962 was offered at Rs. 97.50. In the medium-dated group, 3% 1963-65 ruled easier at Rs. 93.30 and 3½% 1964 was traded around Rs. 97.62; 3½% 1965 had sellers at Rs. 97.35 and 3½% 1967 was marked around Rs. 97.55. Long-dated loans continued firm with 3% 1966-68 quoted around Rs. 90.90 and 3% 1970-75 at the higher rate of Rs. 86.30. However, 3¾% 1974 was on offer at Rs. 86.30 and the new 4% 1972 issue had sellers at par. The announcement of two new loans by the Bombay and Mysore State Governments had little or no effect on existing provincial loans, as the terms and amounts were generally known in advance. In fact, the prices of State Government loans were well maintained, though a few adjustments had to be made in 4% 1967 and 1968 issues because of the income tax voucher for the half-yearly interest.

Business in preference shares continued on a restricted scale, with more sellers than buyers. In the miscellaneous group, Alkali and Chemical were taken at Rs. 97 and Burn 7% at Rs. 113.50. There was some enquiry for Calcutta Electric around Rs. 9.50. James Wright came to hand, after a long interval, at Rs. 28.50 and Kumardhubi Engineering were depressed at Rs. 93. In jute, Fort Gloster were done at Rs. 103 ex-dividend and Khardah 7% at Rs. 93. Naihati met with some enquiry around Rs. 77 while Lansdowne changed hands at Rs. 81. Reliance had buyers at Rs. 70.

In the banking section, Bank of Bikaner were reported at Rs. 19 and Punjab National were better at Rs. 56.50. United Commercial were slightly easier at Rs. 57.50, while Hind Bank were unchanged at Rs. 32.50. United Bank of India "D" shares were marked at Rs. 4.06.

A solitary transaction was reported in the railway section in Shahdara (Delhi) Saharanpur at the lower rate of Rs. 115.

Very little business was reported in cotton shares. Bowreah were sold earlier during the week at Rs. 102, but recovered at the close to Rs. 106. Both Elgin Mills and Cawnpore Textiles were unchanged at Rs. 17.50 and Rs. 6.12. Kesoram were easier at Rs. 11.87 but Jayshree Textiles met with good enquiry around Rs. 6.56. New Victoria were steady at Rs. 1.50.

In coals Bengal, after being sold down to Rs. 209, recovered at the close to Rs. 216. Burrakur fluctuated narrowly around Rs. 22 and there were sellers of Union at Rs. 15, with no declared buyers. Central India and Western Bengal were quietly steady at Rs. 5.87 and Rs. 5.75, respectively. Katras Jherriah were marked down sharply from Rs. 56.50 to Rs. 52. Raneegunge were better at Rs. 10.25 and South Karanpura were marked up by Re. 1 to Rs 9.25.

Jute shares kept fairly steady, with the enquiry centred on a few selected ones. Here is a chart showing representative price movements:

	Opening 29th August Rs.	Closing 4th September Rs.
Bally	144	148
Fort Gloster	300	305
Kamarhatty	92	97
Kanknarrah	60	61
National	17.60	17.85

Calcutta Electric, on the announcement of a slightly higher distribution, improved from Rs. 12.50 to Rs. 12.69. Agra were unchanged at Rs. 120, as were United Provinces at Rs. 116 ex-dividend. Patna changed hands at their previous quotation of Rs. 10.75.

In sugars, Belsund were done at Rs. 10.37 and Carew were maintained at Rs. 7. Ramnugger Cane were sold at Rs. 21.75 and were later marked at Rs. 21. S.K.G. were reported at Rs. 9.87.

In the engineering section, there was increased activity in Indian Iron for the reason given in this column last week. The price at one time improved to Rs. 18.24 from an opening quotation of Rs. 17.94; tonight's closing quotation is Rs. 17.96. Braithwaite were crossed at Rs. 28, as were British India Electric at Rs. 11.25. Guest, Keen, Williams were better at Rs. 28.62 and Burn were steady at Rs. 315. Jessop, on dividend rumours, recovered from Rs. 23.12 to Rs. 24. Richardson and Cruddas were better at Rs. 11.12, while Textile Machinery were sluggish at around Rs. 16. Kumardhubi Engineering rose from Rs. 9.50 to Rs. 9.75.

In papers, Orient improved at one time to Rs. 23.50, but reacted at the close to Rs. 22.90. Shree Gopal were better at Rs. 14.81, while Star Paper reacted from Rs. 11.25 to Rs. 11.06. Titaghur Paper were quietly steady at Rs. 32.62.

In cements, Assam Bengal were unchanged at Rs. 4.75, but Dalmia recovered from Rs. 10.06 to Rs. 10.28. Sone Valley were depressed at Rs. 5.60.

The secret of Popular Poplin—Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label...but your customers don't know the 'behind the scenes' story that ensures the complete *reliability* of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for *you!*

Look for 'SANFORIZED' on the label

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information 'Sanforized' Service, 98, Marine Drive, Bombay 2.

Orissa Cement were better at Rs. 12.81 ex-dividend, while Jaipur Udyog were shaded at Rs. 12.12.

Among insurance shares, Ruby General were slightly higher at Rs. 6.25 but New Asiatic were lower at Rs. 4. Triton were unchanged at Rs. 150.

The outstanding feature in the shipping section was India Steamship, which on investment demand improved from Rs. 10.35 to Rs. 10.65. India General Navigation were one point better at Rs. 66, while Port Shipping were unchanged at Rs. 16.19.

In the miscellaneous section, Alkali and Chemical were better at Rs. 13.12, but Balmer Lawrie were shaded at Rs. 148. Birds Investments were unchanged at Rs. 13, and there was a small enquiry for Britannia Biscuits at Rs. 13.87 and British Ceylon at Rs. 9. British India Corporation met with selling pressure and reacted to Rs. 5.45 as did F. and C. Osler, which were weak at Rs. 3.44. Clive Row Investment were unchanged at Rs. 9.50 and Dunlop Rubber recovered to Rs. 19.75. Hindustan Lever were steady at Rs. 21. Imperial Tobacco were marked back to Rs. 12.87. Indian Aluminium rose from Rs. 12.19 to Rs. 12.37 and Indo-Burma Petroleum were unchanged at Rs. 24.75. Martin Burn were steady at Rs. 23.56, but Metal Box were slightly easier at Rs. 27.75. National Insulated Cables were enquired for at the higher rate of Rs. 24.06 while Indian Cables were offered at Rs. 23.62. Shaw Wallace were taken at Rs. 10.25.

In the mining section, Indian Copper recovered from Rs. 2.97 to Rs. 3.04, following the news that the threatened strike by the workers of the Corporation had been called off. Karanpura Development met with enquiry and improved from Rs. 8.56 to Rs. 9, while Metal Corporation receded to Rs. 7.

There was slightly more interest in tea shares, with Sungma coming to hand at Rs. 11. Teesta Valley had buyers at Rs. 23.87 ex-dividend. Bishnauth were wanted at Rs. 19.37, as were Brahmapootra at Rs. 5.06. A small lot of Dessai and Parbuttia changed hands at Rs. 270, while East India had sellers at Rs. 19.75. Gohpur changed hands at Rs. 21.50 and Rungamatee were sold down to Rs. 81. Jayshree were wanted at Rs. 9.50 and small lots of Banarhat changed hands at the higher rate of Rs. 342. Hasimara were quoted at Rs. 21.62 and Huldibari were crossed at Rs. 22. New Dooars, Rydak and Hantapara came to business at Rs. 315, Rs. 30.50 and Rs. 151, respectively.

* * * *

Providing Rs. 1.96 crores for taxation, against Rs. 1.80 crores, the net profit of the IMPERIAL TOBACCO COMPANY OF INDIA has amounted to Rs. 1.38 crores, against Rs. 1.87 crores. Bringing in Rs 24,94,274, there is Rs. 1,62,88,915. Capital reserves are allocated Rs. 1.23 lakhs, and fixed asset and stock replacement reserve gets Rs. 30.49 lakhs. The dividend has been cut from 8 percent to 7 percent, including a final of 3 percent. The carry-forward is Rs. 25,04,159.

* * * *

There is a rise of Rs. 2.61 lakhs to Rs. 6.12 lakhs in the profit of the KILLCOTT TEA COMPANY for the year ended last December. The dividend is doubled to 20 percent. Revenue reserve is allocated Rs. 1½ lakhs (Rs. 1.25 lakhs) and buildings and machinery reserve Rs. 50,000, leaving a carry-forward of Rs. 66,058. Production rose from 12,835 maunds to 14,691 maunds and the average sale price increased from Rs. 1-14-10 to Rs. 2-2 a lb. Estimates for the current year have been made for a crop of 11,700 maunds at a cost of Rs. 14.87 lakhs.

* * * *

The profit of the BRITISH INDIA ELECTRIC CONSTRUCTION COMPANY improved from Rs. 69,778 to Rs. 3.11 lakhs. The debit balance is reduced to Rs. 2,16,238, which is carried forward. The dividend has again been passed over.

* * * *

The profit of SEN-RALEIGH INDUSTRIES OF INDIA LTD., has improved from Rs. 11.07 lakhs to Rs. 14.36 lakhs for the year ended September 1956. The ordinary dividend is the same at 6 percent. Notable allocations include general reserve Rs. 1½ lakhs, repayment of loan reserve Rs. 2 lakhs, machinery replacement and rehabilitation reserve Rs. 4 lakhs and wealth tax provisions Rs. 45,000. The carry-forward is Rs. 29,113 (Rs. 20,690). The directors state that the Industrial Finance Corporation has sanctioned a further loan of Rs. 15 lakhs. "The addition to share capital, together with the loan of Rs. 15 lakhs when received from the Corporation, will enable the company to carry out most of the remaining proposed schemes of expansion, including the manufacture of free-wheels and bottom bracket axles." In February 1957, the company received permission from the Government of India for a substantial expansion of its capacity for the production of bicycles and components. The expansion schemes are reported to be well in hand.

* * * *

The BRITANNIA BISCUIT COMPANY has increased its profit by Rs. 30,000 to Rs. 12.96 lakhs for the year ended last March. Providing Rs. 5.78 lakhs (Rs. 5.09 lakhs) for depreciation and Rs. 4.80 lakhs (Rs. 4.52 lakhs) for taxation, there is Rs. 8,16,344. Bringing in Rs. 1,79,277, the available balance amounts to Rs 9,95,621. Taxation contingencies reserve is allocated Rs. 1½ lakhs and general reserve gets Rs 2 lakhs (Rs. 1.67 lakhs). The ordinary dividend has been maintained at 10 percent, including an interim of 3 percent, leaving a carry-forward of Rs. 1,84,683. The directors state that the impact of levies introduced in the Central Budget, the wide range of supplementary excise duties and the surcharge on freight, make substantial additions to expenditure and "there can be little doubt that these demands, together with the serious shortages of rail transport and the drastic curtailment of imports, will hamper development and add to the rising cost of production."

* * * *

The profit of the INDIAN STANDARD WAGON COMPANY has risen from Rs 41.06 lakhs to Rs. 55.87 lakhs for the year ended last March. The ordinary dividend is the same at 30 percent. Allocations include taxation provision Rs. 35.20 lakhs (Rs. 17.80 lakhs), taxation contingencies Rs. 1.20 lakhs (Rs. 80,000), plant replacement reserve Rs. 5.25 lakhs (Rs. 7.75 lakhs) and generyl reserve Rs 1 lakh (same). The carry-forward is Rs. 23,569, against Rs. 24,072 brought in. The directors have decided to proceed with their application to the Government for issuing bonus shares in the ratio of one for one. The works is fully booked and the current year's outlook is not unfavourable, they state.

* * * *

The porfit of the HULDIBARI TEA ASSOCIATION has increased from Rs. 5.27 lakhs to Rs. 8.78 lakhs for the year ended last December. The dividend is doubled to 25 percent. Renewals and additions reserve is allocated Rs 2.35 lakhs. The carry-forward is Rs. 1,02,243, against Rs. 99,369 brought in. The crop declined from 17,67,246 lbs to 17,53,608 lbs, and the average sale price rose from Rs. 1.68 to Rs. 1.87 a lb. Estimates for the current year provide for a crop of 21,500 maunds at a cost of Rs. 23.20 lakhs.

BRITISH OVERSEAS AIRWAYS CORPORATION

Bombay Market

EQUITY PRICES IMPROVE AT CLOSE

BUYING BY LIFE INSURANCE CORPORATION REPORTED

Wednesday Evening.

THE Bombay stock market closed steady during the past week and prices at the end showed substantial gains. The hint given by the Finance Minister that there would be no major change in the taxation structure during the rest of the second five year plan period was mildly received. The important factor contributing to the improvement was that the Life Insurance Corporation bought substantial parcels of Tata Steels and other assorted scrip. Technical considerations were also responsible for short-covering.

Tata Steels improved to Rs. 164 but Indian Irons were lower at Rs. 18.96. Alcock Ashdown were a shade better at Rs 245 and Premier Construction rose to Rs. 155.25. Tata Locomotive recovered to Rs. 145. Among automobile shares, Premier Automobiles were bought at Rs 92 on good working reports while Hindustan Motors were freely offered at Rs.

Mill shares showed an all-round improvement on bear-covering induced by the prospect of an increase in the offtake of piecegoods in coming weeks. Bombay Dyeing rallied to Rs. 53.50 and Century recovered to Rs 419 on buying from knowledgeable quarters. Svadeshi rose to Rs. 176.50 on reports of buying by the Life Insurance Corporation. Simplex realised Rs. 161 and Kohinoor were taken at Rs. 269 on investment account. Apollo were done at Rs. 2.36 and India United Ordinary were transacted at Rs. 11.20.

Miscellaneous shares moved higher in sympathy with the general pattern. Associated Cement improved to Rs. 157.50 and Digvijay Cement were available at Rs. 134.20. Belapur Sugar gained at Rs. 236 and Phalton Sugar were quoted higher at Rs. 138.50. Steamship shares were active because of an increase in coastal freight rates. Scindia Steam improved to Rs. 19.60 and Great Eastern Shipping were dealt in at Rs. 22.45. Mining shares were subdued and sellers predominated. Shivrajpur Syndicate were offered at Rs. 81, and Indian Copper at Rs. 3.02 attracted little interest. National Rayon recovered to Rs. 231.50 and Tata Chemicals made Rs. 16.75.

Banking shares were steady, although turnover was restricted. Bank of Baroda were done at Rs. 99 and United Commercial Bank came to hand at Rs. 58.50. There was little change in insurance shares, which were freely offered.

Electricity supply shares were steady. Ahmedabad Electric were quoted at Rs. 94.50 and Tata Power were taken at Rs. 1,145.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations Highest for the week, Lowest for the week Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paise].

FOREIGN INVESTMENTS MADE BY WESTERN GERMANY

DEMAND FOR CONCESSIONS UNDER COMMON MARKET SCHEME

(FROM A CORRESPONDENT)

ACCORDING to the Bank deutscher Lander, West German investments abroad during June 1957 were of the order of 90 million deutschemarks. For the first half of 1957, private capital exports amounted to 274 million deutschemarks against 214 million deutschemarks in the second half of 1956 and 170 million deutschemarks in the first half of last year. Most of the investments were in the form of opening branch establishments and of capital participation by West German firms in the local enterprises of foreign countries. Purchases of foreign securities—which have been generally permitted since May 1956—have remained of small importance, even though they were somewhat greater than a year before. The rise in private capital exports may be expected to continue in the second half of this year. It is contemplated that the obligation to obtain permits for foreign investment of over 3 million deutschemarks will shortly cease with the termination of the relevant law, with the result that private capital exports will be completely freed. Capital exports at the Governmental level were also quite considerable at about 100 million deutschemarks in the first half of 1957 due to the payments made by the West German Government to the Saar and under the agreement which was concluded with Yugoslavia in 1956 on economic co-operation. There has also been a further rise in capital exports resulting from the use of the deutschemarks released by the West German Republic through the International Bank for Reconstruction and Development.

Besides these, the Bank deutscher Lander has placed a credit of $(U.S.)100 million at the disposal of the World Bank by buying short and medium-term bonds. A part of these bonds, worth $(U.S.)40 million, will fall due in one year's time, and the rest in two and three years, respectively. From the exchange point of view, this credit represents the conversion of previously liquid balances into temporarily tied up reserves; thus it alters merely the composition, but not the total amount, of the monetary reserves. A similar effect has been produced by the transfer (in connection with the premature redemption of German external debts), of exchange holdings of the Bank deutscher Lander to a special account at the Bank of England; the transfer was started in July, and the total amount is shortly to be brought up to £75 million. Out of this account, the West German Government's redemption payments, due at the rate of £7.5 million a year against British postwar economic aid, will be made. The provision is for ten annual instalments; the first of which started on 1st August, 1957.

Austrian Demand from E.E.C.

A spokesman of Austrian industry recently restated the specific reasons for which Austria has been demanding special concessions in the projected free trade zone in Europe. He emphasised the following factors: the retardation of the reconstruction programme; the unfavourable geographic position in maritime commerce; and the economic handicap created by the reorganisation of the largely ruined U.S.I.A. enterprises formerly administered by the Russian occupation authorities. In addition, it was pointed out that political stability in Austria was in the interests of the whole of Europe, so no upset, such as even temporary unemployment, should be allowed to retard its development. Austria's industry, the spokesman said, deserved special concessions such as a postponement for three year of the obligation to reduce tariff. Furthermore, he urged a proper wording of the escape clause of the Free Trade Zone convention to ensure adequate provision for Austria's particular requirements. Demands along these lines were made simultaneously by the representatives of Austria at the recent meeting of the O.E.E.C.

Dutch Interests and Free Trade Zone

In an address to the Second Chamber of the States-General with reference to the Bill sanctioning the treaty for establishing the European Economic Community (E.E.C.) submitted to the Chamber by the Netherlands Government, the Chambers of Commerce of Amsterdam and Rotterdam state that from an economic point of view, the treaty has serious disadvantages for the Netherlands. In particular the chambers fear that the treaty will lead to a slowing down of expansion and a decline in Dutch industry and employment. It will affect the Netherlands' special economic interests in Indonesia, and the international exchange of services. They consider it necessary that the special position occupied by the Netherlands should be taken into account in implementing the E.E.C. treaty. Holland is the only member of the Community whose overseas investments in tropical plantations and the trade based on them are largely outside the common market. Moreover, it is the only west European country faced with the necessity of absorbing such a great increase in population in a limited area and with so few natural resources. It is also the only country of the Community in which so much of prosperity and employment is linked up with and dependent on international trade, international transport and the seaports.

The chambers consider that a certain form of protection of her special interests is indispensable for the Netherlands, and point out that four other countries (France, Western Germany, Italy and Luxemburg) have already succeeded in obtaining such protection for their special interests. If the Netherlands joins the E.E.C., it will be necessary to take account of Holland's special tasks of export expansion and the creation of employment, and of the special relationship between the Dutch economy and the tropical plantations operating in Indonesia. Moreover, Holland's special position in the international rendering of services will have to be recognised to the extent that the Community's future policy in the transport field will not constitute any impediment to the Netherlands in the sphere of sea navigation, seaport shipping, inland navigation and road transport. Finally, in the opinion of the chambers, the Netherlands is entitled, after consultation with the contracting powers, to take or omit certain measures should the special tasks referred to, or its economic relations with Indonesia, be jeopardised.

Electrolysers for Indian Project

Oronzio de Nora of Italy has received from the Government of India an order to supply electrolysers for the Nangal fertiliser and heavy water project. The total cost of the project, including the electrolysis, fertiliser and heavy water sections, will approach $(U.S.)60 million, of which some $(U.S.)45 million will be spent on plant and equipment. The balance will be taken up with the building of a small township and with the provision of water, electricity and other ancillary services. Much of the equipment imported from abroad, amounting in all to some $(U.S.)30 million, will be supplied on deferred payment terms. The project, it is scheduled, will be completed by the end of 1959, so full production should be reached early in 1960. Eighty thousand tons of nitrogen will be produced annually in the form of ammonium nitrate and nitro-limestone. The production of heavy water is expected to reach about 15 tons a year.

Following the appointment of Vitro Engineering Division of New York as technical consultants in November 1956, eight well-known manufacturers of electrolysers were invited to submit tenders. The contract was eventually awarded to de Nora. Valued at some $(U.S.)7 million, credit facilities satisfactory to both parties have been arranged to finance the order. The equipment will begin to be delivered in March 1958 and delivery will be completed by April 1959. Some 6,500 cells grouped in 60 electrolysers of the filter press type, each rated at 10,000 amps, will be installed. These will enable more than 25,000 cubic metres of hydrogen to be produced hourly. This plant is the biggest of its kind in the world. The power required by the electrolysers will be approximately 140 000 kWs. This will be made available from the Bhakra-Nangal power station which is now nearing completion and is located close to the electrolysis and fertiliser plant. One of the considerations which determined the choice of the Indian Government was the relatively high figure which de Nora was able to guarantee on the separation factor of the deuterium. This will enable the related production of heavy water to be increased above the original estimate.

CREWLESS TANKERS FOR TRANSPORTING OIL

A crewless ship containing plastic tubes filled with oil is the latest idea for transporting oil. It would be towed by a tanker of normal type, which would then become a "super-tanker." Mr. John Wright, a London consultant engineer, who has designed the vessel, said that it could have a tonnage of up to 10,000. The tanker tow could be operated much more cheaply than the super-tankers now being designed. The bows and stern would be made of glass fibre, joined by a honeycomb of plastic tubes running fore and aft. These tubes would be enclosed in a plastic framework; it would not matter if this was not waterproof because of the buoyancy of the oil and of the tubes themselves. Tankers could be mass-produced and would be easy to maintain because plastic was self-preserving. It would not need painting, chipping or de-rusting. Mr. Wright hopes to construct a working model shortly. Earlier this year, two Cambridge scientists, Prof. W. R. Hawthorne and Mr. J. C. B. Shaw, devised a method of towing oil round the Cape in torpedo-shaped containers made from a nylon material. This was submitted to the Admiralty, the Ministry of Power and the Ministry of Transport, who are considering its possibilities as an answer to the problems presented by actions such as the closure of the Suez Canal.

New Delhi

NO RESTRICTION PROPOSED ON REMITTANCE OF PROFITS ABROAD

FINANCE MINISTER STRESSES NEED FOR FOREIGN CAPITAL

(FROM OUR NEW DELHI CORRESPONDENT)

LAST week, the Finance Minister successfully piloted the Appropriations Bill, the Finance Bill, the Wealth Tax Bill and the Railway Passenger Tax Bill through Parliament. He secured the sanction of the Lok Sabha for the demands for grants relating to his Ministry. The select committee's report on the Expenditure Tax Bill was also presented.

The second five year plan was the main target of attack in all debates, whether the issues concerned demands for grants, the Appropriations Bill, the Finance Bill or the Wealth Tax Bill. Referring to the foreign exchange crisis, the Finance Minister reminded the House that when Parliament adopted the second five year plan there was in it a definite foreign exchange gap. He added: "Speaking in Lok Sabha on 26th May, 1956, my predecessor said: 'The foreign exchange gap is Rs. 1,100 crores, and we think that Rs. 200 crores could be used from accumulated sterling balances. Therefore, Rs. 900 crores has to be secured by way of a net inflow of resources from abroad.'" The plan, he went on, had three main aspects—production, foreign exchange and internal resources. He categorically ruled out two suggestions—to adjust the plan to the available domestic resources, and to stop the remittance of profits abroad for five years. Rejecting the first suggestion, Mr. Krishnamachari said that a plan relying on internal resources alone could not be one of industrialisation which the second plan was, and there was, therefore, the need for foreign exchange to build basic industries. Rejecting the demand for banning the remittance of foreign companies' profits, he disputed the figure that the repatriation of profits amounted to Rs. 100 crores. "The correct position is that in 1955-56, 'investment income' remitted abroad was about Rs. 29 crores, and in 1956-57, it was Rs. 22 crores. Even if the honourable member has in mind what are called 'private donations,' that is, maintenance, remittances, remittances of savings, migrants' transfers, etcetera, these amounted to Rs. 20 crores in 1955-56 and Rs. 15 crores in 1956-57. In any case, it is not true that Rs. 100 crores is exported every year.

Investment Income

"The suggestion to prohibit the export of profits is just suicidal. As against the investment income that goes out, there is some investment income that comes in. In 1955-56, this was Rs. 29.8 crores and in 1956-57, it was Rs. 32.9 crores. A large part of this investment income is interest on sterling balances. In both the years, we had a small surplus on investment income account. As to 'private donations,' again our receipts are larger than our outgoings. We cannot cut down our payments without affecting our incomings.

"If we pay out on profits, we also have profits ploughed back by foreign firms, and some small amount of fresh capital inflow. We wish to encourage, not to retard, the investment of capital from abroad, and I wish to state emphatically that I do not accept and will never accept the kind of suggestions that Mr. Rajah has made. We have given certain assurances about the remittance of profits, and even of capital. We stand by them firmly and without mental reservations. Difficult though India's foreign exchange situation is, it is not as desperate as Mr. Rajah would make it out. Further, this is for us a question of honouring our pledges. We shall honour them, protests notwithstanding.

Delinking the Rupee

"There was another suggestion, that is, that we should cut the link of the rupee and create a separate value for it. This reminds me of the game of chasing shadows, for the rupee, like the currencies of all the members of the International Monetary Fund, is now linked equally with the large majority of the currencies of the world by virtue of the common link with gold. The rupee is not linked with sterling or with any other currency any more than sterling is linked with the rupee. A game of chasing shadows might be exhilarating but if it results in making such suggestions, it would effectively destroy our chances of getting the foreign finance we need.

"If I cannot accept such prescriptions about our foreign exchange position, I do not wish to make light of the fact that there is a foreign exchange problem and that it needs the most urgent attention of everyone concerned. I know only one answer to this problem, namely, to keep the strictest watch on imports, to promote exports and to attract the maximum flow of resources from abroad. When I speak of resources from abroad, I speak not only of resources from international agencies and friendly governments, but also of private foreign investment. We are determined to do everything possible to attract private foreign investment consistent with the priorities laid down in the plan. Export promotion is linked intimately with pro- and internal resources.

"Turning to internal resources for the plan, I do not propose here to offer any detailed comments on particular tax measures or on the particular criticisms of those offered by honourable members. But I wish to make it clear that the problem before us is as much of internal resources as of external resources. The only difference between the two is in terms of the degree of freedom of action that we ourselves enjoy in relation to them.

"I have said on a number of occasions that in the present circumstances, we shall have to try and reduce deficit financing over the plan period below the original estimate of Rs. 1,200 crores. That implies much greater effort at economy in expenditure—both developmental and non-developmental—and a greater reliance on other sources of finance, namely, taxation. Taxation measures by the Centre constitute the greatest prop we have built so far in support of the second plan and our developmental effort in general. In the light of experience, we shall buttress this prop by administrative and other measures as are required to make it carry the burden of higher and higher levels of developmental outlay. I think that by taking a large step forward in many directions, we have also created a horizon of reasonably stable expectations with reference to which private industry can make its plans for the future.

"As for production, the Government is fully seized of this problem. Food holds the key to the control of inflation. Our hopes of earning additional foreign exchange by exports in the near future turn largely on the prospects of agricultural production. Thanks to the good harvest of sugarcane, we have been able to export small quantities of sugar this year. But our exports of vegetable oils had to be held back to preserve reasonable supplies for domestic consumption. Production of oilseeds deserves all the attention we can give in our present foreign exchange situation. In one sense, food production and reasonable prices for foodgrains hold the key to the problem of internal resources also, for the saving potential of fixed income earners depends largely on food prices.

"The plan will be carried forward as far as it is possible in the light of the emergent foreign exchange situation and we shall do all we can to conserve and enlarge our foreign exchange resources within the broad framework of the objectives laid down in the plan. I for one would never let the plan be trimmed even by a fraction on the ground of lack of internal resources—for this is a matter essentially within our grasp and there can be no excuse for sparing ourselves or the country any effort within our reach for implementing a plan which in its essentials is rightly conceived.

Foreign Exchange Bottleneck

"Since foreign exchange is the main bottleneck, it is the availability of foreign exchange which must determine what new commitments we should enter into and which not. The commitments we have entered into, we shall honour. The hard core happens to be something to which we are essentially committed. We shall try and maintain imports of raw materials at a level which protects domestic employment. As for new commitments in the public or the private sector, we are already pursuing a policy of undertaking only those where the foreign exchange cost is covered by deferred payment arrangements or foreign participation or foreign loans and grants. There is no question here of elongating the plan or of working out a brand new plan according to some predetermined specifications. To think thus would only be a form of escape from the continuous adjustments and readjustments that must inevitably be made in the light of the emergent situation. That is why when we talked of flexibility in the second plan, we did so in terms of at least annual plans and assessments rather than in terms of alternative plans between which we could switch back and forth from time to time. We cannot at this stage say what revision or rephasing or pruning of the plan we shall need. But we are studying this problem. We are keeping a close watch on it."

A foreign commentator recently wrote: "The Communists may keep Kerala in the next election. They may even win another State or two. But it may be beyond even Communism to give the people that will to work, that purposefulness, which they have lost. It is not, in the final analysis, a system that makes a nation great: it is the inherent greatness of a nation, which a system can help or hinder in fulfilling itself. It is a melancholy and depressing thought that what India needs is not just a plan or a system, but a national will to improve its condition."

Plan for National Theatre

Economy and austerity measures are at present being recommended daily. There is also some talk of pruning the second five year plan. Side by side, plans for a national theatre are being drawn up. Replying to questions in the Lok Sabha last week, the Minister for Education said that Nawab Zain Yar Jung and Mr. Man Singh Rana were the two architects who had submitted a blueprint for a national theatre after visiting Italy, Austria, Western Germany, Sweden, Belgium, the U.K., the U.S.A., France and Switzerland. According to their report, the proposed theatre would have seating accommodation for 3,000 persons. It would be equipped with a revolving singing and lifting stage. There will also be arrangements for flying scenes. There will be an experimental theatre and practising rooms for music, drama and dance. It will be located at the crossing of Kingsway and Queensway in New Delhi. It is estimated to cost Rs. 1 crore only. The Minister added that "the Government has generally accepted the report. The Finance Minister, however, has already suggested that the project might be postponed for the time being. But the whole matter will have to be considered by the Cabinet."

It may be added that the first priority was allocated to a museum, which is being constructed at present. The second priority is for the national theatre. The last priority is for a library. It may be further added that Old Delhi had three private theatres, none of which was paying its way. They have now been converted into cinema houses. But commercial considerations are "small matters". It is argued that what India needs is a national theatre and the cost does not matter. In fact, the Minister did not know the amount of foreign exchange the two architects spent in visiting nine countries. Why they left out Russia, China and Japan was not disclosed.

Stanvac Refinery Output Expansion

The Government has approved the Standard Vacuum Oil Company's scheme to increase its refinery output to 1.6 million tons a year by 1958. The increased output will include 116.6 million gallons of motor gasoline, 50 million gallons of kerosine, 95 million gallons of diesel oil, 60.4 million gallons of furnace oil, 5.4 million gallons of gas or fuel oil, 1.1 million gallons of pegasol 1030, 1.3 million gallons of pegasol 3040, 0.7 million gallons of sovacide BX, 4.6 million gallons of jute batching oil, 2.3 million gallons of liquified petroleum gas, and 13 million gallons of asphalt.

Utilisation of Russian Credit

To discuss the projects on which the Russian credit of 50 million roubles (about Rs. 60 crores) is to be utilised, a Russian delegation has arrived in New Delhi. The projects selected by the Government of India are those concerning heavy machinery and coalmining equipment, the Korba coalfields, the power plant for the Neyveli project, an optical glass plant, and equipment for balancing and reconditioning the methanol plant. The discussions will start on 5th September. The credit will be repaid in 20 annual instalments, and carries a 2½ percent rate of interest.

New Public and Private Companies

During the first five year plan period, there was a net increase of 1,520 in the total number of companies at work. During the same period, the net addition to the paid-up capital of the companies amounted to Rs. 235 crores. At the beginning of the first five year plan, there were 28,532 companies with a total paid-up capital of Rs. 775 crores. At the end, the number of companies was 30,052, their paid-up capital aggregating Rs. 1,010 crores. During the plan period, the number of private companies increased by 4,225, whereas that of the public companies diminished by 2,705. In spite of the reduction in the number of public companies, their total paid-up capital recorded a sizeable increase of Rs. 126 crores. The increase in the paid-up capital of private companies was about Rs. 109 crores.

During the five year period 1951-56, a total of 7,043 new joint-stock companies were incorporated, out of which 1,438 were public and the remaining 5,605 were private companies. The first and last years of the first five year plan recorded a larger number of new registrations than in the intervening years, the number being 1,866 in 1951-52 and 1,448 in 1955-56. The number of newly registered public limited companies, however, has more or less followed a downward trend since 1950-51. During the first year of the five year plan, there were 542 new registrations: by the final year, the number had come down to 186.

A study of the size pattern of the new companies formed during 1951-56 shows that out of the 7,043 new companies formed, 4,627 were incorporated with an authorised capital of below Rs 5 lakhs, and 1,613 companies with an authorised capital of between Rs. 5 lakhs and Rs. 10 lakhs. The number of companies incorporated with an authorised capital of Rs. 25 lakhs and more came to 366, of which 106 companies were big enterprises having an authorised capital of Rs. 1 crore and more each. Some 84 companies had authorised capital ranging from Rs. 50 lakhs to under Rs 1 crore. Of the 106 big flotations, 79 were public companies and 27 private companies. The total authorised capital of the 106 companies was Rs. 510 crores, which is about 65 percent of the total authorised capital of all the 7,043 companies formed during that period. The authorised capital of public and private big companies formed during 1951-56 was Rs. 258 crores and Rs. 252 crores, respectively.

Of the 106 giant companies, 29 were registered with an authorised capital of Rs. 5 crores and above. The number of companies floated with an authorised capital of Rs. 5 crores each was 16 and of the remaining 13 companies, six had an authorised capital of more than Rs. 25 crores. The names of the companies formed with an authorised capital of Rs. 25 crores and more are Hindustan Steel Private Ltd, Durgapur Iron and Steel Works, Nangal Fertilisers and Chemicals Ltd, Sindri Fertilisers and Chemicals Ltd, Burmah-Shell Refineries

Private Ltd and the Industrial Credit and Investment Corporation Ltd. The Durgapur Iron and Steel Works Ltd, formed to set up a steel plant in the private sector, is reported to have abandoned working after its incorporation, whereas the authorised capital of Sindri Fertiliser and Chemicals Ltd was later stepped up.

Among the 106 are also included 13 Government companies in which the Government holdings is 51 percent or more of the subscribed capital. The authorised capital of Government companies totalled Rs. 214 crores, which is about 40 percent of the total authorised capital of the 106 big companies. The total number of Government companies formed during the plan period was 19.

A study of the industrial classification of big companies discloses that they include ten cotton and rayon and artificial textile companies, two manganese ore mining companies, six sugar companies. Also, ten companies were formed for the manufacture of electrical and other machinery goods and machine tools, 12 for the manufacture of various chemical and pharmaceutical goods and three for kerosene and petrol refining purposes. It is also seen that nine companies were formed for the manufacture of cement and six for paper and paper products. Three new giant companies will be engaged in water transport and shipping.

Foreign Currency Needs of Railways

The total requirements of foreign exchange for the Indian railways for the second five year plan have been estimated at Rs. 425 crores. Out of this sum, the foreign exchange so far secured is as follows: (a) aid under the Technical Co-operation Mission Scheme, amounting to Rs. 24 crores for rolling stock and steel; (b) aid under the Colombo Plan, amounting to Rs. 4.5 crores for rolling stock; and (c) loan from the International Bank for Reconstruction and Development, for which an agreement was recently signed, amounting to Rs. 42.8 crores for rolling stock and steel. These add up to a total of Rs. 71.3 crores. The amount does not take into account disbursements made out of the sterling balance resources.

Food Production and Prices

The Finance Minister made a statement which is relevant to the claim of the Central Agriculture Ministry that it had already exceeded the plan targets of production. Speaking in the Lok Sabha on a Communist-sponsored resolution asking for the setting up of a committee to recommend a clear-cut price policy, the Finance Minister said that foodgrains production had not risen in keeping with the growth in demand. "In 1954-55, production was two million tons below that in 1953-54. In 1955-56 it fell further by 1.5 million tons. In 1956-57, the estimated production is 68.5 million tons, which is 3.7 million tons above the previous year's level, but this is still slightly below the peak level reached in 1953-54."

The Finance Minister also said that bank advances against all foodgrains had declined from Rs. 42.60 crores on 14th June to Rs. 29.30 crores on 26th July, or by Rs. 13.30 crores. The figures for 1956 were Rs. 40.26 crores on 14th June and Rs. 32.70 crores on 26th July. The decline in advances against paddy during this period was Rs. 8.20 crores: Rs. 19.34 crores on 14th June and Rs. 11.14 crores on 26th July. The decline in advances against wheat and other foodgrains was Rs. 5.10 crores: Rs. 23.26 crores on 14th June and Rs. 18.16 crores on 26th July. The Finance Minister added that the general level of prices was now 12 percent higher; that of cereals, 7 percent, and of food articles 12 percent. If hoarding was the primary reason for the price rises, they should have declined to at least the 1956 level, after bank advances against foodgrains had declined below that year's level.

Expenditure on Foreign Travel

The amount of foreign exchange expenditure on travel for business pleasure health, etcetera, in the first four months of 1957 was Rs. 94 lakhs, compared with Rs. 11.99 crores in the whole of 1956. The amounts spent in the first four months for medical treatment (where specifically asked for) and on education were Rs. 8 lakhs and Rs. 88 lakhs, respectively, compared with Rs. 11 lakhs and Rs. 150 lakhs during the whole of 1956.

No Devaluation of the Rupee

The Finance Minister ruled out the devaluation of the rupee while replying to a debate in the Lok Sabha last week.

Steel Imports

India's steel imports during 1958 are placed at 95,525 tons; 80,000 tons from Western Germany and 15,525 tons from the U.K.

Indo-W. German Trade

To explore the West German market a trade mission left India last week. Western Germany occupies an important position in India's foreign trade, as an important customer of Indian goods which include tea, hides, skins, leather, ores, vegetable oils and jute manufactures. She is also a leading supplier of machinery and equipment, drugs and medicines, dyes and colours, iron and steel and vehicles to India. The volume of Indo-German trade has expanded during the past few years, as will be seen from the following:

(In crores of rupees)

	Imports	Exports
1950-51	10.3	8.8
1951-52	28.6	8.7
1952-53	22.5	10.6
1953-54	31.6	11.2
1954-55	40.7	15.1
1955-56	44.7	10.8

While imports into India from Western Germany have increased, there has not been an appreciable increase in exports to that country. India has been persistently having an adverse balance of trade. There is a growing recognition of India's present difficulties in Western Germany and the Federal Government, it is gathered, is prepared to help India reduce her adverse balance of trade. In this connection, it is explained that almost all the commodities that are available for export from India are admitted into Western Germany without any quantitative restrictions. Substantial quotas have been granted under the Indo-German Trade Agreement for such commodities which are subject to control. As for the rest, there is no discrimination in granting licences for their import from India. To help Indian business men plan their exports to Western Germany, the West German Government invited a delegation to study business conditions on the spot.

During its stay in Western Germany, the delegation will visit various places of interest from the commercial point of view. It will also study the precise requirements of the German market, India's competitive position in various commodities imported into that country and the difficulties that stand in the way of increasing exports from India. With a view to achieving this, the delegation is carrying representative samples of goods for which there is a potential market in Western Germany. These samples represent the following trades and industries: cotton textiles, handloom products, handicrafts, tea, coffee, tobacco and tobaccoseed oil, leather and leather goods, manganese and iron ores, mica, sports goods, jute goods, cashew and pepper, coir and coir products, vegetable oils and shellac.

Present Allowances for Business Undertakings

A number of allowances are given to business undertakings under the Income Tax Act. A review of these appears below. Ordinarily, depreciation for income tax purposes is allowed at prescribed rates for all wasting assets. In India, however, extra depreciation is allowed equal to the ordinary depreciation which, in effect, doubles the rate of depreciation allowance. As the law stands at present, this additional depreciation will continue up to the assessment year 1958-59.

Development Rebate

A novel feature introduced in 1955 in the Indian Income Tax Act is the granting of an outright development rebate equal to 25 percent of the cost for all new machinery and plant installed after 31st March, 1954. This rebate is in addition to other depreciation allowances, and as it is not taken into account for determining the written down value, it acts as a bonus or special allowance over and above the normal recoupment of the cost of plant and machinery through depreciation allowance. Thus, if a company installs new plant and machinery costing Rs. 50 lakhs, say, on 1st April, 1955, it will get, as shown in the table below, an outright development rebate of Rs. 12,50,000, in addition to the depreciation allowance of Rs. 10,80,000 for the year of installation, Rs. 8,44,800 as depreciation in the second year, Rs. 6,61,248 in the third year, Rs. 2,58,954 in the fourth year and Rs. 2,29,951 in the fifth year. By the end of five years, the company will have recouped 86.5 percent of the cost, and it will go on recouping up to 125 percent of the cost. Even if the plant and machinery is discarded or sold before its full life, any loss on account of the sale or discarding will be made good by a further allowance so that the company always gets recoupment up to 125 percent of the cost.

TABLE

Depreciation allowances and development rebate admissible for plant and machinery installed in 1956-57.	Portion costing Rs. 30 lakhs entitled to 10 percent depreciation.	Portion costing Rs. 20 lakhs entitled to 12 percent depreciation.
1956-57 assessment:		
(a) Normal depreciation	3,00,000	2,40,000
(b) Additional depreciation	3,00,000	2,40,000
(c) Development rebate (25 percent)	7,50,000	5,00,000
Total	13,50,000	9,80,000
1957-58 assessment:		
(a) Normal depreciation	2,40,000	1,82,400
(b) Additional depreciation	2,40,000	1,82,400
Total	4,80,000	3,64,000
1958-59 assessment:		
(a) Normal depreciation	1,92,000	1,38,624
(b) Additional depreciation	1,92,000	1,38,624
Total	3,84,000	2,77,248
1959-60 assessment: Normal depreciation	1,53,600	1,05,354
1960-61 assessment: Normal depreciation	1,37,240	92,711
Total by way of development rebates and depreciation allowances	25,04,840	18,20,112

In other words, 86 percent of the value of the plant and machinery will have been charged to revenue within five years.

Set-off and Carry-forward: If there are not sufficient profits in a year to absorb the depreciation (normal or additional), the deficiency can be carried forward indefinitely and set off against the profits of subsequent years.

Allowance of Expenditure on Scientific Research: In arriving at the assessable business income, expenditure incurred on scientific, statistical, social and applied research related to the class of business carried on by the assessee is allowed in full. It is not necessary for this purpose that the research should be carried on by the company itself; amounts paid by the company to approved scientific institutions are also allowed. Expenditure of a capital nature on scientific research related to the assessee's business is allowed to be written off over a period of five years.

New Industrial Companies

Exemption of minimum profits of new industrial undertakings: So much of the profits of a new industrial undertaking which starts manufacture before 1st April, 1961, as is equal to 6 percent of the capital employed in it is completely exempt from income tax and supertax for five assessment years, starting from the assessment year corresponding to the accounting year in which the new undertaking starts manufacturing articles. When the dividends are paid to the shareholders out of these profits which are exempt from tax in the hands of a company, those dividends are also exempt from tax in the hands of shareholders. The benefits of exemption of minimum profits of new industrial undertakings as well as dividends paid out of such profits are also available to non-resident companies and non-resident shareholders. All that is necessary is that the new industrial undertaking should function in India and should not be one which is formed by simply splitting up or reconstructing the business already in existence or by transferring the assets of an existing business to a new undertaking.

Exemption from corporation tax: Ordinarily a company which invests its funds in other companies has to pay corporation tax on the dividend received by it from those other companies, in spite of the fact that the company declaring the dividend has also to pay corporation tax on the profits out of which the dividends are declared. In other words, the shareholders of the investing company have to suffer corporation tax twice. However, with a view to encouraging companies to invest their funds in certain basic industries it has been provided that dividend received by a company, whether resident or non-resident, from an Indian company started after 31st January, 1952, will be exempt from corporation tax if the dividend-paying company is engaged wholly or mainly in the manufacture or production of certain items such as coal, iron and steel, motor and aviation, fuel, heavy chemicals, heavy machinery, automobiles, cement, locomotives, machine tools and agricultural implements, etcetera. This exemption is also available for dividends declared on shares issued by the existing companies after 28th February, 1953, for the purpose of acquiring funds for increasing production, or for starting a separate unit for the production of any one or more of the basic items mentioned above.

Exemption for Technicians

In order to enable industrial concerns in India to get the services of foreign technicians at a lower cost, exemption has been provided on salaries receivable by foreign technicians. A foreign technician who had not been resident for three out of four years preceding the year of his arrival in India is exempted from income tax on his salary for the first 365 days of his stay in India. Further, if the contract of service between the employer and the employee is approved by the Government of India, before the commencement of the service of the technician, exemption is continued for a further period so that the technician will, on the whole, get immunity from taxation for the financial year of his arrival in India and for the two succeeding financial years. The salaries paid to technicians are, of course, allowed as expenditure in computing the employer's total income. A technician is defined as a person having specialised knowledge in industrial arts and science and having experience in industrial practice, and who is employed in India in a capacity in which such specialised knowledge and experience are actually utilised.

Relief to Section 23A Companies

Reliefs granted in the Finance (No. 2) Act, 1957, to Section 23A industrial companies are as follows: the present law requires Section 23A companies to distribute at least 60 percent of their available profits in order that they may avoid being subjected to penal supertax on the whole of their undistributed profits. In the case of companies who have accumulated reserves exceeding the value of their paid-up capital, the whole of the available profits are required to be distributed, the penalty for non-distribution being the levy of extra supertax on the whole of the undistributed profits. It is now proposed that in the case of industrial companies, the percentage should be reduced to 45 percent in all cases. In other words, even if the reserves of an industrial company exceed in value its paid-up capital, it will be required to distribute only 45 percent of its available profits and not 100 percent as before.

Exemption on Employer's Contribution

Under the law as it stands, an employee is required to pay tax on the employer's contribution to his provident fund. It is now proposed that such contributions should be completely exempt from tax provided this does not exceed 10 percent of the employee's salary. This concession should be welcome to persons employed in industrial concerns and receiving high [illegible]

London

U. K. MEASURES TO CHECK INFLATION

LIMITED AGREEMENT REACHED IN PRODUCTION COUNCIL MEETING

(FROM OUR LONDON CORRESPONDENT)

THE degree of agreement reached at the meeting of the National Production Advisory Council early last week was somewhat limited, or so it would seem from the very meagre trickle of information which was permitted to escape the general acceptance of the fact that the discussions should be "off the record". The official information did no more than record the names of those who participated, that there was a free exchange of opinions, and that there was general agreement that the problems of inflation should continue to be examined at further meetings. In as much as this is taken as meaning either at the next regular meeting on 8th November or even later, it is presumed that the two hours of talk—mainly by the spokesmen of industry and the trade unions, with only a brief intervention by Mr. Thorneycroft, Chancellor of the Exchequer—resulted in establishing agreement that no crisis point has yet been reached. There appears to be no disagreement as to the basic causes of the danger as expounded by Mr. Thorneycroft, but the various interests involved are obviously in favour of suggesting different means as to how it is to be dealt with. These views are already well known, though they may not have been put forward together, as has now been made possible, to provide a complete picture. If an acceptable policy can be devised along these lines—and the Government obviously thinks, or at all events hopes, it can—aided perhaps by the advice of the "Three Wise Men", then the lack of anything dramatic from this much-vaunted meeting need not be deplored. Future developments will be awaited with much interest.

Rise in Industrial Production

In one way the Government's hopes are being justified Industrial production continues to expand vigorously according to the index compiled by the Central Statistical Office. After adjustment for seasonal factors, the index rose from 136 in April to a revised figure of 139 in May, 140 in June, and a provisional estimate of 140-141 for July. For the same four months of 1956 the figures were lower: April 136; May 136; June 138; July 136. These figures are based on the output of all industries.

Some of the main components of the overall index for July, compared with July 1956, are: up—crude steel, 11 percent; passenger cars, 31 percent; commercial vehicles, 16 percent; cotton spinning, 10 percent; output of man-made fibres, 9 percent; electricity generated, 3½ percent; coal, ½ percent. Down—output of bricks, 4 percent; cement, 12 percent; sulphuric acid, 3 percent. It will be seen that the revival of the motor industry has been the largest single factor in the re-expansion of industrial output generally. Textiles have also recovered, but building activity, on the other hand, shows signs of slackening. The unadjusted index numbers for all industries are 145 for May and 139 for June, with a provisional guess of 129-130 for July. Last year they were 136, 142 and 127, respectively. Comparisons are, however, affected by the Whitsun holidays falling in May 1956 and in June 1957. In the first seven months of 1957, the index has now averaged 139, against 138 in the corresponding period of 1956, but in the last three months the average has been 137-138, compared with 135 in the same quarter of last year, a rise of about 2 percent. The recovery has only begun and it is still dependent on a few industries.

Control of Investment

In view of the fact that wages, salaries, investment dividends and other aspects of the inflationary problem came under discussion by the Production Advisory Council, the latest issue of the Treasury's *Bulletin for Industry* furnishes a number of particularly relevant facts and figures. Not the least interesting of these offers some comment on the T.U.C. suggestion favouring control of investment. Figures from a number of major countries are brought together to show that they are all devoting to investment a bigger portion of their national product than they did before the war. On that basis the Treasury writer commits himself to this view: "In most countries—and not least in Europe and the Commonwealth—investment will almost certainly continue to grow in the years ahead. World demand for investment capital is therefore unlikely to diminish." If that is so, Britain can hardly hope for lower interest rates.

For this country, with its dependence on foreign trade and its vast international banking business, there will be a continuing dilemma between development at home and abroad. The Treasury comment is simple and orthodox: Britain needs a large external surplus to finance both loan repayments and new investment; and the credit squeeze must go on. But if a surplus enables Britain to invest overseas, she can surely create a surplus by investing overseas first. The real problem is one of resources. Has she got the best system, or policy, for expanding her productive resources in the industries which can supply what overseas countries want? And will that system, or policy, ensure that other demands are deferred—without inflation—until the loans are repaid?

Wages Going Up

There is news, too, on the wage question. The weekly earnings of the 7 million manual workers in the industries covered by the regular half-yearly enquiry conducted by the Ministry of Labour averaged £10 4s 7d in the second week of April, according to provisional figures just released. This average, inclusive of bonuses and overtime and before deduction of income tax or insurance contributions, was 3s 11d (or 2 percent) higher than the average for October 1956, 3½ percent higher than in April 1956, and 10s 1d (or 98 percent) higher than in April 1947. For men over 21, the average weekly earnings in April were 241s 6d, compared with 237s 11d in October 1956, and 235s 4d in April 1956.

In view of these figures, and the fact that average weekly working hours are, at 46.6, the same as in October 1956, it is hardly surprising that the claim of the engineering unions for a 40-hour week without loss of earnings is taking a longer time than was expected in being considered by the employers' associations. The central organisation expressed no views at its meeting last week and postponed consideration of the claim, together with the one for extra paid holidays, until its next meeting.

Bank Deposits Fall

Just recently there has been a welcome easing of the pressure on sterling and an improvement in money market conditions generally, but it is likely that the strain on the gold reserve of late has been severe, and even the advance payment of debt instalments by Western Germany will probably not help to ease the position very greatly. The bank statements are a pointer to what might be expected. A sharp contraction in deposits, which in the aggregate may well be of the order of £80 million, is the outstanding feature in the August statements of the London clearing banks. Among the figures disclosed deposits of the Midland Bank have fallen by nearly £18 million between 17th July and 21st August to £1,384.2 million, those of Lloyds Bank are down in the same period by £15.4 million to £1,168.2 million, Barclays deposits are nearly £16 million lower at £1,409.4 million, the District Bank shows a drop of £13.2 million to £236.4 million and the National Provincial of £2.7 million to £765.8 million. This movement cannot be explained in terms of seasonal influences. It must be attributed to the heavy withdrawals of sterling balances from the London market during the exchange "crisis."

On the other side of the banks' accounts, the effects are not very striking, except in the cases of Lloyds Bank and the National Provincial. The former member of the "Big Five" shows a drop in advances of £12.8 million to £366.9 million, but it has also increased its investments by no less than £17.7 million to £352.3 million. The latter increased its holdings of investments by £8.6 million to £221 million. During the same period, loans were reduced by £13 million to £252.1 million. Only minor movements in advances are reported by the Midland Barclays and the Westminster, but Barclays has reduced its investment holdings by £14 million to £476 million.

Tour of the Prime Minister

While the Government is emphasising that finding a solution to the country's economic problems calls for joint sacrifices and a joint effort Britain is so closely linked with the Commonwealth that it is necessary that those other sterling area countries should be equally alive to the realisation that no sacrifices to stop inflation would be half so heavy as those which failure to stop it will impose. It is good to learn therefore, that Mr. Macmillan proposes to break new ground by being the first Prime Minister in office to undertake a Commonwealth tour in January and February. There was great disappointment in Australia and New Zealand at the inability of Sir Anthony Eden to carry out plans for a limited Commonwealth tour in January. At the recent Commonwealth Prime Ministers' conference in London, it was represented to Mr Macmillan that it would give much satisfaction if he could find time for a tour. Mr. Macmillan welcomed the idea, especially when the representatives of India, Pakistan and Ceylon suggested that the tour should be extended to their countries. The emphasis will be on the "goodwill" nature of the visits, which will help to remove the sense of isolation from Britain which some partners in the Commonwealth have felt. Mr. Macmillan will hold political consultations with his Prime Minister colleagues. Defence, trade, disarmament and the attitude of the free world to Russian policies will be among the topics.

Brevities

Following their warning to Stock Exchange members on "bond-washing", the Stock Exchange Council has amended its rules. A new rule, 165A, prohibits agreement to reverse deals in gilt-edged stocks dealt in three weeks before the ex-dividend date.

Mr. Eric Roll has been appointed to the new post of full-time Executive Director of the International Sugar Council. He is an Under-Secretary in the Ministry of Agriculture, Fisheries and Food but will be seconded from the Civil Service, taking up his new post in September.

The position of Barclays, the Ionian, and Ottoman Banks before Egyptianisation, as well as shares of British nationals in the Egyptian National Bank, was recently reviewed at the Cairo discussions between two British representatives and the Egyptian Sequestrator-General, Mr. Musa Arafa.

The chairman of the Assam Company, Mr Peter F Remnant, points out in his annual statement that the fact that the company will rank as an overseas trade corporation under the provisions of the new Finance Act will give "little or no benefit" because of the high level of Indian taxation. However he hopes that as agricultural development, which includes tea, comes under the second five year plan, the new requirement that companies in India should deposit 50 percent of their undistributed profits with the Reserve Bank may not be as damaging as it appeared. Withdrawals of sums deposited can only be made for purposes coming within the plan, but this should cover the company's assets.

Railway fares over most of Britain are to be increased by about 1s 3d in the pound on 15th September. Also from this date many passengers in the London area will have to pay more for their tickets, whether they travel by main line train by underground or by bus. The rise, authorised by the Transport Tribunal, was postponed for the holiday season.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business, ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

HANDLING OF CARGO IN BOMBAY PORT

SCHEMES TO RELIEVE CONGESTION

(FROM OUR BOMBAY CORRESPONDENT)

ADDRESSING the Rotary Club here, Mr. L. T. Gholap, chairman of the Bombay Port Trust, has indicated that the handling capacity of Bombay port has been estimated at some 9 million tons a year. But the volume of cargo actually handled was 10.3 million tons in 1955-56 and 12 million tons in 1956-57. If trade continues at its present level, as seems likely, some 13.5 million tons of cargo will have been handled by the end of the current financial year. Of this total, foodgrains are expected to account for 1.5 million tons and iron and steel for another 500.000 tons. Referring to iron and steel, Mr. Gholap states that the handling of these commodities has been somewhat slow because loading and unloading labour charges are still computed on a time-rate basis. The handling of piece-rated items continues to be extremely satisfactory. In view of the urgent necessity of a quick turnover, the proposal to treat iron and steel on a piece-rate basis has been referred to adjudication. The piece-rate system, for commodities other than iron and steel, has been in operation here since March last year and it is now computed that the earning of an average worker has increased from Rs. 94 a month to Rs. 200 a month. Under the circumstances, it seems likely that there will be no objection to apply the same system to iron and steel. Mr. Gholap says that several schemes are in progress, designed to relieve the present congestion in Bombay port. When the marine oil terminal project in Butcher Island is completed, two berths in Alexandra Dock, which are now being used for oil, will be released for dry cargo vessels. The Butcher Island project entails the dredging of the entrance channel to the harbour because its depth has been lessened following excessive siltage. Yet another berth will become available for dry cargo ships in Alexandra Dock when the new passenger berth is completed in Ballard Pier. The Port Trust has made land available for the development of the Indian naval dockyard and the Defence Department has agreed to construct a 750-foot passenger berth on the south-west end of Ballard Pier.

Mr. Gholap adds that the "minimum scheme" for the modernisation of the Prince's and Victoria Docks was originally estimated to cost Rs. 4.3 crores but because of the rising costs of constructional materials, it will now cost "several crores of rupees more." For this reason, the tenders called for by the Port Trust in November last have been withdrawn. A proposal is being considered to abolish the coastal ferry service and to convert the Ferry Wharf, the coastal passenger terminal, into cargo berths. If this proposal is implemented, three berths, each 500 feet long, will be available for cargo vessels. But the basin will have to be deepened to permit deep-draft vessels to come alongside. Meanwhile, a proposal to provide a regular fishing harbour in the Colaba area of Bombay is running into difficulties. Although the need for such a harbour is fully recognised, there are several points to be considered before Colaba is developed for this purpose. If the present landing ground for fishing craft in Colaba is expanded, it will mean that valuable land adjoining the Sassoon Dock will have to be used. This ground is also urgently needed to provide housing accommodation for the Port Trust staff. Moreover, if an adequate fishing centre is established here, it will mean that large numbers of fishermen will migrate to Bombay and add to the city's congestion and create further housing problems. Several schemes to expand the country's fishing industry are envisaged and as far as Bombay is concerned, it may be advisable to develop one of the several ports along the coast into a major fishing harbour. Such a step will bring badly needed prosperity to at least one of these ports. In addition, subsidiary industries could also be developed. Admittedly, there will be the problem of transporting the catch to Bombay city—the main consuming centre—but this will be just one difficulty compared with the many which will arise if the Colaba area in Bombay is developed as a major fishing harbour.

Carry-over of Cottons

The 1956-57 cotton season officially ended on 31st August, 1957. The carry-over into the new season was estimated at 109 million bales inclusive of 295.000 bales of imported cotton. This compares with a total carry-over of 2.1 million bales at the beginning of the 1956-57 season. Mills consumed around 4.7 million bales of domestic cotton, against 4.4 million bales in the previous season. It is believed that the new season's cotton output will be larger than in the previous season following reports of satisfactory weather conditions in Gujerat, Madhya Bharat and Punjab. Some damage, however, is reported from the Moglai areas.

Trading in cotton was somewhat listless last week and the Jarilla March contract was quoted at Rs. 669. There was some support at this low level and the quotation increased to Rs. 677. Transactions in the spot market were limited to around 4,000 bales in the absence of mill interest.

Piecegoods Active

The piecegoods market was active compared with recent weeks. Coarse and medium-count cloth was most in demand, with fine following. Superfine varieties, however, were neglected. Shirting, coating, *dhotis and saris* were the popular varieties. Mills report good forward delivery orders for October-November. Some export business was reported with Australia in furnishing fabrics and flanelletes. African countries have shown interest but substantial business has yet to materialise. Business was done with Indonesia and good orders are expected from Burma in the future.

Yarn Market Dull

The yarn market continued dull. The 120 dull cone forward delivery contract moved between Rs. 796 and Rs. 803 a case. The October delivery contract commanded a premium of Rs. 18 a case. The staple fibre 2/40 August delivery contract fluctuated between Rs. 569 and Rs. 573. The October delivery contract commanded a premium of Rs. 10 a bale. There was no demand for cotton yarn It is reported that some spinners are prepared to sell their stocks at greatly reduced prices.

DISTRIBUTION OF STEEL SUPPLIES

GROWING REQUIREMENTS OF ENGINEERING INDUSTRY

(FROM OUR MADRAS CORRESPONDENT)

In talks with the local trade, the Iron and Steel Controller, Mr. A.S. Bam, denied that allocation of steel for registered dealers were meagre and were being delayed. Mr. M.A. Chidambaram said that south India had not received its share of imported steel. He added that all commercial and Government supplies should pass through the trade, at least to allow it a limited margin of profit. Mr Bam was given the impression that, without a steel plant, the south feels handicapped since building activity suffers from the shortage of steel. He said that the State Government should put forward a demand for a larger steel ouota based on *per capita* consumption, and that further help to local importers of machinery would be offered by the authorities. The main point made by traders was that their counterparts in Calcutta got information about tenders and that firm orders were placed with foreign suppliers before the trade in Madras got an apportunity to apply So they argued that iron and steel supplies should be canalised through Madras as well as Bombay and Calcutta. But as Mr. Bam has promised to consider the suggestion, it is hoped that the registered stockholders will be in a better position in future concerning import licences. Some satisfaction may also be derived from the promise that the trade will get items of stock lying with importers and not immediately required for the Government. Steel requirements are growing and the demand for alternative materials is extremely large because of the high cost of timber The restoration of control has accentuated the shortage and representatives of the trade have focussed attention on the needs of the engineering industry in the south.

Installation of Powerlooms

The South Indian Millowners Association told Mr. Morarji Desai that the installation of powerlooms should not be delayed. The slack demand for yarn, the accumulation of cloth and yarn stocks, and the difficulty in getting export licences for yarn were mentioned in a memorandum submitted to the Union Minister for Commerce and Industry from Coimbatore. The steady increase in spindleage in cotton mills in the south was adduced as the reason for allowing more for exports In view of fresh demands from labour, the industry in Coimbatore is convinced that mills should have a chance to develop the weaving side, especially as artificial fibres are likely to be easily available. Plans for a rayon plant were well advanced. Mr. R. Venkataswami Naidu spoke of a scheme for a rayon pulp and yarn plant to be installed with Italian aid. Meanwhile, the millowners' main demand is not only for a revision of cloth policy but for the liberal licensing of textile machinery imports in order to give them a chance to go ahead with expansion. They also feel that credits from east European countries can be used for buying textile machinery.

Probe into Foodgrain Prices

The Asoka Mehta Committee was told by merchants that only a long-term plan for production will help India get over her food shortage. Funds are not available for developing agriculture on account of the fear of radical land reforms on the Kerala pattern. The farmer's view is that imported foodgrains should be reserved for deficit areas and that the trade in grains here should be freed from restrictions. The Farmers Forum has voiced the view that control of distribution alone is permissible and that the farmer should be compensated for the rise in the cost of production. Millers have objected to a ceiling on paddy prices, procurement and controls. On the other hand, the representatives of urban consumers have pleaded for controls.

Procurement operations in Andhra do not give any cause for optimism in Madras, as the recent floods may reduce available supplies. As for Madras the Government has been asked to buy paddy after the harvest and sell it through fair-price shops. The enquiry has, however, emphasised the divergence of views on prices, the food zone and the requisitioning programme. There is no inclination to accept controls in either Madras or Andhra and the trade is of the opinion that such a remedy may be worse than the disease. A suggestion was made to the enquiry committee that incentives to produce more must be offered to cultivators and a concession to agriculturists in the form of a waiver of compulsory charges for electricity used for agriculture should be allowed.

BRITISH PLAN FOR BUILDING ATOMIC TANKER

Two more major British concerns have made known their plans for building an atomic tanker —the second such U.K. project. The firms concerned are Babcock and Wilcox, the well-known boilermaking organisation, and Cammell Laird and Co., shipbuilders, who have just completed a study for a 65.000-ton, nuclear-powered tanker using a reactor design developed from Calder Hall. A statement issued in London says that the tanker will use a gas-cooled, graphite-moderated reactor, and adds that the two companies have been collaborating with the U.K. Atomic Energy Authority in the field of nuclear ship propulsion since April of last year.

LONDON INSURANCE LETTER

BACKGROUND TO RECOVERY IN GILT-EDGED

THE problem of investing funds has taken a new turn in the second half of 1957. While industrial ordinary shares have been hesitant, Government stocks have shown signs of recovery from the abnormally low levels reached in the first half-year. In that tentative recovery, selective buying by insurance companies has been an important factor. Opinion on the merits of gilt-edged stocks is still divided—or perhaps one should say is now divided, as it seemed to be almost entirely adverse not many weeks ago. At least some investment managers see some merit in this class of investment now, even while the Government's struggle with inflation is pathetically feeble. One reason for this change of mood is political. The political trends suggest that a Labour Government may be in office within three years—possibly within two years if economic complications supervene. Labour Governments have shown (sometimes with a fine disregard of economics) a preference for low interest-rates; and they do not in principle favour high industrial profits. Therefore, it is argued, prices of Government stocks would rise, prices of industrial shares would fall, if the Socialists came to power. Yet it is only recently that the Labour Party has published its plan for pensions, with ideas of investing funds liberally in ordinary shares—and with the implied ideas that we must live with inflation permanently.

"The national interest" is another factor in investment policy, as Mr. J. A. Pollen, chairman of the British Insurance Association, has reminded us. During the second, as during the first, world war, the companies devoted all their resources to financing the war through subscription to Government stocks. Between the wars and since the last war they assisted the financing of industry. Last year there was only a slight movement of insurance funds out of Government stocks, and they remained the biggest single item; but as a proportion of an increased total of funds they diminished from 28.0 percent to 25.16 percent. There was, on the other hand, a perceptible movement of funds into ordinary shares, and their proportion increased from 15.4 percent to 16.1 percent. In 1947 (when the effects of the war were still apparent), the comparable proportions were 39.2 percent and 10.6 percent. In 1927 (before the move into equities began in earnest), only 3.4 percent of funds was invested in ordinary shares, yet not more than 27.4 percent in Government stocks. Beneath these various conflicting influences remains the basic fact that fixed-interest stocks are essentially suitable investments for life funds. In general, life policies are long contracts with clearly specified benefits. The essentials for investment are security of capital (first and foremost) and an income appropriate to the benefits; and in normal times, Government stocks are the ideal medium for the purpose. In recent years, however, they have been demonstrably unsatisfactory in the function of securing capital. Moreover, the growth of with-profit policies has opened the door to investment in equities. Some with-profit policies, written by offices with a high proportion of funds in ordinary shares, have been very remunerative to the policyholders.

More Marine Underwriters

The net premiums of the companies' non-life business increased last year from £624 million to £715 million; but the British Insurance Association has pointed out that approximately half of the increase arose from changes in accounting procedures. Lloyd's underwriters' figures are, of course, published separately. They appeared last month, showing a roughly similar rate of increase in premiums last year, from £229 million to £244 million. But the increase was not in the categories—especially marine and aviation—with which Lloyd's is still mainly associated in many minds. It was particularly in the "all other assurance" group, mainly fire and accident business—which forms the bulk of the companies' non-life insurance. In the light of the latest figures presented by the Committee of Lloyd's, it is not difficult to understand why marine underwriting shows generally poor results. In the three-year account which closed in 1956, the premium and other incomes of the marine division, amounting to £103 million, was more than £2 million less than the corresponding figure for the three-year account which closed in 1955; but considerably more members shared the declining income. The number of under-writing members transacting the marine business was 3.436 in the latest completed account, 3,232 in the preceding account; and there was a corresponding increase in the number of syndicates from 163 to 171.

The increase in competition for an approximately static volume of business has had the inevitable effect on rates and on the scope of cover offered. It is recalled that the retiring chairman of the Liverpool Underwriters' Association, Mr. H. F. Thorburn, stated some months ago that rates for hull insurances were sometimes 30 to 40 percent below the levels that previous experience would indicate to be appropriate. It must be assumed that the underwriters know what they are doing when they accept the risks; but some people in touch with the market wonder how resources would stand up to a really severe period of claims. Last year's experience was bad enough, though not quite as bad as 1955's. In the latter year, reported shipping casualties increased 8 percent; in 1956 the increase was 6 percent—although the number of vessels afloat increased only 2 percent. It is fortunate that Lloyd's has other interests now. Marine insurance was almost its sole activity until some 70 years ago. Now "all other assurance" is the leading group, in terms of premiums.

Engineering and Transport

MEASURES TO RELIEVE PORT CONGESTION

PROCUREMENT OF CARGO HANDLING APPLIANCES

STATE Governments have been urged to consider whether it is necessary to strengthen or reorganise the departments concerned with the administration of minor ports and the execution of port development works by Mr. Raj Bahadur, Minister of Shipping. The Minister said: "We have faced a state of severe congestion in some of our major ports." Criticism had sometimes been levelled that there had been a lack of planning so far as the development of ports was concerned. To deal with the major ports first, even before the first five year plan was conceived the need to increase port capacity by the establishment of a major port on the Kutch-Kathiawar coast was recognised and concrete shape was given to it by the decision to commence the Kandla project. At the ports of Bombay, Calcutta and Madras, various works designed to rehabilitate worn-out assets had been commenced by the port administrations. Certain works of modernisation and expansion had also been planned. The paucity of resources was the main obstacle which stood in the way of their early implementation.

The traffic demands on the major ports throughout the years of the first plan period did not prove to be heavy. The volume of traffic, instead of showing an upward trend, indicated a clear decline from 1951-52 to 1954-55. In 1951-52, the volume of cargo handled was 22.2 million tons; in 1952-53 it came to 21.4 million tons; in 1953-54 to 22.6 million tons; and in 1954-55 to 20.4 million tons. Then in 1955-56 it jumped to 27.3 million tons, representing an increase of 7.1 million tons compared with the 1954-55 figure. It was only in the last year of the first plan that there was an appreciable increase in traffic. Even this had only touched but not exceeded the total of the past peak loads reached in some of the war years, Mr. Raj Bahadur said.

Position in Second Plan

The first year of the second plan showed a significant rise. That was mainly due to the decision to import large quantities of iron and steel and the arrivals of heavy machinery for the second plan projects. Iron and steel are difficult types of cargo for which special types of mechanical handling appliances are necessary. Their sudden arrival caused some difficulty in the ports. In 1956-57, the quantity of iron and steel imports was twice that of the previous year. The Calcutta port is now handling each month as much iron and steel as it had to handle in a whole year in 1951-52. Even so, notwithstanding the short notice given, the ports handled in the 15-month period from January 1955 to March 1957 almost the entire quantity of 1.500.000 tons of iron and steel.

Foodgrain Imports

Another uncertain commodity on the import side was foodgrains. After 1951-52 there was a sharp fall in the import of foodgrains. But the country is now again facing the necessity of having to import foodgrains in large quantities. Precise estimates of future levels of imports and exports are sometimes difficult to make. The lesson is clear. India has to develop her port capacity in advance of the developing requirements with an eye to having a safe margin for possible peak loads.

Emergency Measures

While this should be the aim of long-term planning in the second plan, pressing short-term requirements have to be met by emergency measures and by maintaining efficiency of operation at optimum levels, the Minister said. For the past few weeks the Department of Transport has discussed with the port authorities and the shipping interests what should be done in this direction and have decided upon various measures. At times of congestion the usual emergency device is the expansion of lighterage operation. The scope for this is greatest in the river port of Calcutta where a phased programme for providing lighterage points is being worked out. In Visakhapatnam a temporary jetty is being built to enable one more ore export ship to be operated. This jetty is expected to be ready in a few weeks. More lighters are also being provided in the Madras and Visakhapatnam ports.

Cargo Handling Appliances

The procedure for the procurement of cranes and cargo handling appliances required for increased use of lighterage as well as for speeding operations in the docks needs simplification. The Calcutta port which has the largest fleet of cranes is having trouble in maintaining the older ones for lack of spare parts. Local capacity to manufacture some parts has been found and orders have been placed. Additional staff is being provided to improve supervision at all levels. the aim being to work round the clock with the maximum efficiency possible. For ensuring speedier clearance of landed cargo the number of "free" days available to consignees is being reduced. Time limits are being imposed on the berthing days available to export ships. The Customs authorities are co-operating to minimise Customs examination delays. Referring to the gradual reduction in the number of ships waiting for berths, the Minister said that "we are turning the corner and by the end of October the situation should get normalised."

Co-operation from Labour

Port capacity is a function not merely of the physical facilities available but also of the contribution labour can make. One of the complaints during most of the years of the first plan was the serious fall in labour output following the introduction of the decasualisation schemes for dock labour. Fortunately the trend has been arrested in Bombay. The piece-rate system which was introduced in that port came into effect in March 1956 and has proved beneficial not only by increasing loading and unloading capacity but also in a substantial increase in the average earning of workers. Labour union leaders have recognised the benefits of the scheme and a scheme patterned on the Bombay lines has just been evolved for Calcutta. Mr. Raj Bahadur hopes that there will be full co-operation from all sides in Calcutta in the early implementation of this scheme. Madras is to follow suit after the Committee finishes its work in Calcutta.

PROGRESS OF AUTOMOBILE LEAF SPRING INDUSTRY

ENQUIRY ON CONTINUING PROTECTION

OPENING the public enquiry into the question of continuing protection to the automobile leaf spring industry, Mr. C. Ramasubban, member, Tariff Commission, said that it was as a sequel to the report on the automobile industry that the Commission undertook an enquiry in 1953-54 into the claim of the former industry to protection. In its report to the Government made on 4th August, 1954, the Commission recommended that protection to this industry should be granted up to 31st December, 1956, by converting the then existing standard rate of revenue duty of 50 percent *ad valorem* into a protective duty. Subsequently in consultation with the Commission, the period of protection was extended further by one year up to 31st December, 1957, by the Indian Tariff (Amendment) Act, 1956. Protection granted to the industry is due to expire on 31st December, 1957, and the present enquiry has been undertaken in pursuance of Section 11(e) read with Section 13 of the Tariff Commission Act, 1951. The scope of the present enquiry covers all types and sizes of front and rear leaf springs used in automobiles.

In its report of 1954 the Commission estimated the then annual domestic demand at 255,000 springs composed of 60,000 springs for original equipment and 195.000 springs for replacement. On the basis of a conversion factor of 30 springs a ton which was then suggested to the Commission this demand worked out to 8.500 tons. It also estimated that the future demand for leaf springs would increase by about 5 percent a year. In connection with the present enquiry the Commission received various estimates of annual demand ranging from 236.000 to about 409.000 springs for the current year and from 413.000 springs to 649.000 springs by the end of 1960. The Development Wing has estimated the current annual demand at 13.000 tons and it expects it to increase to 17,000 tons by 1960-61. The manufacturers of automobile leaf springs have also furnished the Commission with their estimates of current demand which vary from 236.000 to 350.000 springs and of future demand in 1960 from 412,500 to 577.000 springs.

Manufacturing Units

At the time of the last enquiry in 1954, there were five regular producers of leaf springs, namely, (1) Metropolitan Springs Ltd., Bombay, (2) Canara Workshops Ltd., Mangalore, (3) Premier Automobiles Ltd., Bombay, (4) Bombay Motor Trading Company, Kapurthala, and (5) Auto Pins (India), Faridabad. Since then, Tata Locomotives and Engineering Co. Ltd., which has undertaken the progressive manufacture of diesel vehicles has started production of leaf springs for its vehicles. Thus, there are at present six units manufacturing leaf springs. Two more units, namely, Deepak Industries, Calcutta, and Mahindra and Mahindra Ltd., Bombay, have been licensed for the manufacture of leaf springs.

The satisfactory progress made by the industry since the last enquiry may be judged from the fact that the total installed capacity on single shift basis has increased from 4,100 tons to 6,700 tons while actual production has more than doubled from 2,024 tons in 1953 to 4.848 tons in 1956. thus showing an increased utilisation of capacity from 49 percent to 72 percent. This increase in production has been achieved through increased mechanisation especially in the larger units. The Commission has been informed that some of these units have received sanction for the installation of additional capacity so that when those schemes of expansion are completed, the total annual rated capacity of the above units may be expected to increase from the present 6,700 tons to 15,400 tons.

Small-scale Units

In assessing the progress of the industry the Commission cannot overlook the existence of a large number of small-scale units. According to the information furnished to it by the Development Commissioner for small-scale industries, there are at present 27 small-scale and 70 cottage-scale units spread all over the country. The Development Commissioner for small-scale industries has estimated the production of leaf spring and spring leaves by this sector at about 3,100 tons in 1956.

Like all industries using steel, the automobile leaf spring industry has also difficulties in obtaining adequate supplies of its raw material, namely, spring steel flats. While the large-scale units have been meeting the gap between their requirements and domestic supplies by means of imports from

abroad. the impact of shortage of raw materials has been most severe on the small-scale units. These units are not able to get any quantity of spring steel flats, with the result that they are forced to use re-rolled shafts, grenades, tank plates or scrap as their raw material. Guest, Keen, Williams Ltd., one of the principal suppliers of spring steel flats is understood to be so fully booked for the requirements of the railways that the company is able to supply only a fraction of the requirements of the leaf spring industry. It indicates that the difficulties experienced by the manufacturers of leaf springs in obtaining their supplies of spring steel and getting them rolled into requisite sections continue to be more or less the same as at the time of the last enquiry.

Quality of Products

The consensus of opinion at the time of the last enquiry was that the quality of indigenous leaf springs compared favourably with that of similar imported products. As there were no standard specifications for leaf springs at that time, the Commission in its last report on the industry had suggested that the Indian Standards Institution should take up the question of formulating standard specifications for indigenous leaf springs as early as possible in consultation with the indigenous manufacturers of leaf springs and of motor vehicles. The I.S.I. has informed the Commission that draft Indian standard specifications for general requirements for leaf springs for automobile vehicles and suspension was finalised by the Automotive Vehicles and Internal Combustion Engines Sectional Committe at its last meeting held in December 1956.

Certain modifications in the dimensional details and a few other outstanding points including details of metric sizes are being finalised in consultation with spring manufacturers and other interested parties. It is expected that the final standards will be published before the end of the current year. In the absence of Indian standard specifications, the leading manufacturers are producing the springs according to either British or American standards. Premier Automobiles Ltd. has stated that it manufactures springs according to the standards specified by its associates, namely, Chrysler Corporation, U.S.A., Dodge Bros., U.K. and Fiat, Italy. Evidence received by the Commission in the course of the present enquiry indicates that the units in the organised sector have taken steps to improve further the quality of their products by installing additional machinery and introducing quality control methods. The general view expressed by consumers is that the quality of indigenous leaf springs is satisfactory. One manufacturer of commercial vehicles has, however, pointed out a number of defects in the leaf springs produced by one of the firms.

Sources of Imports

Imports of leaf springs were 2,148 tons valued at Rs. 26,83,750 in 1955-56 and 1,605 tons valued at Rs. 22,48,957 in 1956-57 (April-February). The most important source of imports was the United Kingdom which supplied about 50 percent of the total imports. The next two in importance were the U.S.A. and Western Germany. A noticeable feature of the imports, however, was the increase in spring leaves during this period. The quantity of spring leaves imported into this country in 1955-56 amounted to 105 tons valued at Rs. 1,26 352 while in 1956-57 (April-February) it was 312 tons valued at over Rs. 3,54,018.

Automobile leaf springs and spring leaves are at present assessed to a Customs duty of 50 percent *ad valorem* under Item No. 75 (15) of the First Schedule of the Indian Customs Tariff (41st Issue). "Leaf springs and spring leaves" are not treated as separate items for the purpose of motor vehicle parts including leaf springs falling under Serial Numbers 293, 295 and 297 of Part IV of I.T.C. Licences are granted to established importers on the basis of a joint quota of past imports of all such articles. During the year 1955 and 1956, such joint quota licences were issued to the extent of 100 percent in each of half of best year's imports from the dollar area and the soft currency area out of which not more than 3 percent of the face value of the licences could be utilised for the imports of automobile leaf springs. During the period January to June 1957, the value of the joint quota licences was reduced to 60 percent general and 60 percent soft of which not more than 4 percent could be used for the import of leaf springs. During the current period, namely, July-September 1957, joint quota licences will be issued to actual users only to satisfy their minimum requirements of essential items.

Landed Costs

The Commission has collected data on c.i.f. prices and landed costs of automobile leaf springs imported into the country from the Collectors of Customs and imports. Its Cost Accounts Officer has examined the cost of production of leaf springs manufactured by the Metropolitan Springs Private Ltd., Bombay, and the details of the cost will be discussed separately with the representatives of this firm.

The automobile leaf spring industry has been enjoying protection for about three years. It has pleaded for continuing protection for a further period of five years on the ground that the industry is not yet fully established and that it is still dependent for its raw materials on foreign countries. It has also pointed out its disadvantage as for the cost of raw materials compared with its principal competitors in the United Kingdom and in Western Germany.

Future Prospects

The road transport industry has a vital rôle to play in the country's development plans and the demand for automobiles, particularly commercial vehicles, is bound to increase progressively in the future. Such progressive increase will provide the leaf springs industry with an expanding market. It is now for the industry to take advantage of the situation by producing high quality products at reasonable costs. Its future, which is undoubtedly bright, will depend on how well it plays its part in the favourable conditions before it, Mr. Ramasubban said.

SCHEME TO ACQUIRE MORE SHIPPING TONNAGE

PROPOSAL FOR NEW DEVELOPMENT FUND

A COMPREHENSIVE programme for the acquisition of additional shipping tonnage is now being considered by the Union Transport Department, it is learnt. One of the suggestions made is the creation of a shipping development fund from which loans might be advanced to shipping companies, both in the public as well as private sectors, and to which the reimbursements from them would be credited. It is to be a non-lapsable fund. The fund may be started, it is suggested, with a small sum of Rs. 10 crores or Rs. 12 crores only, and the same amount may be advanced to it annually during the next four years. This, it is expected, would meet the gap of about Rs. 50 crores required for acquiring just over 200,000 tons of extra shipping by 1961 to meet the second plan target. The Government, it is understood, is encouraging shipping companies to negotiate the purchase of ships on a deferred payment basis. There is difficulty in finding even the small foreign exchange required for initial payments involved in these purchases, but as the foreign exchange position eases, it is felt, the situation might be more encouraging.

The progress Indian shipping has made since independence is not negligible, it is said. In 1946, Indian tonnage on the coast was only about 127,000 tons consisting of 49 ships. Today, the coastal tonnage has increased to 240,000 tons and the number of ships from 49 to 82. On the overseas routes, before 1947, no Indian ship plied. Today, India has as many as 47 ships aggregating to 320,000 tons employed exclusively on the overseas trade. There are regular liner services between India and the U.K., the Continent, Japan and Australia. A service recently started covers the India-West Africa trade. A regular passenger-*cum*-cargo service between India and East Africa and between India and Singapore also exists. Last year, a new service was opened between India and the Black Sea ports of Russia.

Order for Vessels

There are various reasons why countries like Italy, Japan or Western Germany were able to develop their shipping considerably after the war while India's progress has not been so spectacular, according to shipping experts. These countries had their own shipbuilding yards, technical personnel and resources for the development of shipping while India's development dates to only after independence. Even so, India has made the best use of the resources available. So far 13 orders have been placed with the shipyards abroad and 15 with the Hindustan Shipyard, making a total of 28 vessels. Of these, 13 vessels are for the public sector and 15 for the private. In addition, four second-hand vessels have been purchased, one for the public sector and three for private shipping companies. Altogether, 32 vessels have been ordered or purchased and these aggregate to a tonnage of 181,000. A significant development in the field of shipping has been the addition of two tankers. Of these, one is owned by the Great Eastern Shipping Company and the other by the State-owned Western Shipping Corporation. Both the tankers are employed for moving oil round the coast. The acquisition of yet another tanker is part of the future development programme.

Overseas Shipping

To promote the development of overseas shipping, the Government has set up two shipping corporations, both State-owned and State-operated—the Eastern and the Western Shipping Corporations. The Eastern Shipping Corporation made a profit of about Rs. 31 lakhs in 1955-56, and it is expected that the accounts for 1956-57 will show good profits. The Western Shipping Corporation has placed orders for five vessels on the Hindustan Shipyard and for four vessels with foreign shipyards. The private sector has also made commendable efforts in acquiring extra tonnage, it is emphasised. The Government has given loans to the extent of Rs. 24 crores in the first plan period and to the extent of Rs. 12.5 crores in the second plan period to the private sector. With the aid of these loans, the shipping companies have added to the Indian fleet about 37 ships totalling about 68,000 tons. Some of these vessels are at various stages of construction. In addition, ships built at the Hindustan Shipyard, Visakhapatnam, are sold to Indian shipping companies on the basis of what is known as the U.K. parity prices. This has involved the Government in the payment of a construction subsidy to the extent of 20 percent of the total cost of construction of these ships.

Coastal Shipping

Unless some form of incentive and encouragement is given for coastal shipping, some say, it will not be possible for India to develop it. What should be the rate of interest in future, whether it should be the same for both coastal as well as for overseas shipping, whether the rate of interest for overseas shipping should be enhanced—these are matters currently occupying the attention of the Union Transport Department. An early decision on these matters in consultation with the Finance Ministry is expected, it is understood. The shipping companies have been pleading strongly for exemption from the new taxes proposed by the Union Finance Minister. A final decision in the matter is awaited.

The development of shipping naturally brings in the question of shipbuilding facilities. Recently an advance party of the U.K. second shipyard team visited India and inspected about nine sites for a preliminary study. The main second U.K. shipyard team is expected to arrive in September. Ship repairing facilities are an important adjunct of shipping development and there is a proposal, it is understood, to appoint an expert committee to look into this question. This year, the problem of ship stores is to be examined in the context of self-sufficiency.

ALTERNATIVE MATERIAL FOR ROAD CONSTRUCTION

The construction of an all-weather road in India has so far been carried out with hard stone, with the result that where hard stone is not available within economic distance, the cost of construction becomes unreasonably high. There are, however, large deposits of softer aggregates like *moorum*, laterite, *kankar*, shale, soft stone, etcetera, existing all over the country which have not been considered suitable for road construction by the conventional method, and consequently, left unexploited. A study carried out on the soft aggregates obtained from the quarries of Bikaner, Ganga Nagar, Jodhpur, Sirohi, Jaisalmer, Jaipur, Alwar, Ajmer, Kotah and Dholpur in Rajasthan has shown that the soft materials from these sources can be successfully used in road construction. These soft aggregates have been divided into four classes according to their gradation and physical characteristics, and suitable specifications have been prepared for their use in road construction at the Central Road Research Institute, New Delhi, where the study was carried out. This method will go a long way not only in cutting down costs, but also in increasing the raw material resources of the road engineer, distributing more evenly the labour employment potential of road projects.

PROTECTION TO GRINDING WHEELS INDUSTRY TO BE CONTINUED

The Government of India's resolution on the Tariff Commission's report recommending further protection to the grinding wheels industry has been published in a *Gazette of India* extraordinary today. The Government has accepted that the present protective duty of 25 percent *ad valorem* should be continued, and the period of protection extended up to 31st December, 1959. It has also agreed to continue the existing concession of duty free import of synthetic abrasive grains in favour of all the units engaged in the grinding wheels industry. In the resolution, the Government has drawn the attention of the manufacturers of grinding wheels to the Commission's recommendation that they should endeavour to improve the quality of their products. The attention of Grindwell Abrasives Ltd. and Carborundum Universal Ltd has also been drawn to the recommendation that they should introduce a proper system of costing by the end of 1957 so that the industry may be in a position to furnish accurate cost data according to broad categories to the Commission by the time the next enquiry into this industry is taken up. The attention of Carborundum Universal has further been drawn to the recommendation that it should develop the necessary bonding material from indigenous sources.

WORLD ELECTRIC STANDARDS BODY TO MEET IN INDIA

The International Electro-technical Commission, which co-ordinates the work of standardisation of electrical equipment in the international field, has accepted India's invitation to hold its annual meeting in India. According to information just received in New Delhi, the Commission at its annual meeting in Moscow agreed that its annual general conference in 1959 or 1960 should be held in Delhi. The conference will be held in the autumn or winter of either year. At the Moscow session the Commission set up, at India's instance, a new Technical Committee for the preparation of international standards on household and industrial fans and ventilating devices. The secretariat of this new Committee will be located in India and the Indian Standards Institution will look after its work. The Moscow meeting, at which 27 countries were represented, a number of technical meetings in which India is interested were held. Some of these dealt with cables, electric motors, electric lamps and accessories, dry cells and batteries. The director of the Indian Standards Institution, Dr. Lal C. Verman, who represented India, also took part in the Committee of Action of the I.E.S. of which India is an elected member for a period of nine years. At India's suggestion, a standard on electric motor dimensions was considered. It was decided that after the sub-committee dealing with this subject meets in Sweden in November, the standard will be sent out for general adoption as an international standard. India's proposal for the adoption of 27 degrees centigrade temperature for the testing of dry cells for use in tropical and sub-tropical countries was also adopted.

Jute

GUNNY SHIPMENTS REPORTED TO BE MOVING MORE FREELY

MARKET AWAITS I.J.M.A. STOCK FIGURES FOR AUGUST

DURING the past few weeks, it is reported that there has been a considerable improvement in working at the Calcutta docks as far as gunny shipments are concerned. The shipping statistics for August are said to be the best for some time, and the clearance of a large backlog has given confidence to the market. This is most noticeable in the hessian section, where shipments have been good. Operators expect a substantial drop in stocks of jute goods during August, so prices have already hardened. Too much emphasis should not be laid on this point, however, as it is normal for stocks to fall at this time of year, when there is an increase in American burlap consumption. Although shipments from Calcutta should tend to increase in coming months, it remains to be seen whether the present improvement can be maintained. There have been no reports of overseas buying during the past week, and much of the recent activity has been in anticipation of U.S order. The Calcutta mills have taken little part in these transactions, as they hold bullish ideas and appear to be quite happy with their present sales. It is reported that most mills have already sold up to about 85 or 90 percent of their production until the end of the year at recent prices, and a number of them have also sold 50 percent for the first quarter of 1958.

E. Pakistan Marketing Corporation

That all is not well with the affairs of the East Pakistan Jute Marketing Corporation has been demonstrated by the resignation of several of its senior staff. In recent weeks, the pucca press and baling manager has resigned, and the general manager has been "relieved of his post" by the Corporation's board of directors. No reasons for these actions have been given. It is understood, however, that interference from influential quarters has made it virtually impossible for the staff to do their normal work. One of the Corporation's main functions is to purchase jute in the border areas, but very little of this has been done. In spite of claims to the contrary, it is learnt that purchases have been on a small scale. Growers have thus lost confidence and one of the main aims of the Corporation has been defeated. Meanwhile, arrivals at the main Pakistani receiving centres have fallen considerably, but this is normal after the initial rush of imports. Arrivals will remain small until the crop from the second harvesting on higher grounds comes forward.

THE JUTE MARKETS

The Calcutta mills continued their search for jute during the past week. Although business was transacted daily, the quantities involved were much smaller than in the previous week. Prices were well maintained throughout, and sellers' ideas were bullish. The goods market showed an improvement, mainly as a result of local interest, with hessian leading the way. Overseas interest was negligible, and very little business was reported from the mill side.

Manufactured Goods: Most of the business was done by local shipper interests. Covering against former contracts for steamers loading in port caused prices to harden, especially as there were only small quantities of ready goods available. There was a fair amount of interest in the forward section, however, and this was demonstrated by the narrowing of the price gap between the near and forward quotations. In B Twills, the difference was narrowed to 50nP, while in hessian, January-March 40in. 10oz. was frequently quoted on par with the near positions. Much of the business was done in anticipation of American interest, and speculators were active with this in mind, especially in the hessian section. Rumours of a large drop in mills' stocks of jute goods also gave a bullish tendency to the market.

Opening quotations last Thursday showed a vast improvement on reports of business with Burma. The heavy goods market reacted rapidly. B Twills jumped by Re. 1 and ready shipment opened at Rs. 112.50 a 100 bags, with January-March shipment at a discount of 50nP. Hessians followed suit, and speculative activity with a view to American needs forced up 40in. 10oz. by about 40nP. Both the near and forward positions were quoted at Rs. 42. The shortage of goods up to the end of the year was suggested by the fact that in both sections of the market intermediate shipping dates were frequently quoted at a premium over the near positions. Prices improved as the week progressed, and over the week-end heavy speculative activity forced B Twills up to Rs. 113.60 and hessians to Rs. 42.25. These rates were well maintained up to Tuesday, but were inclined to fall back as business slackened.

At the close, the market was firm and quotations on Wednesday morning were as follows:

	Ready	September	Oct.-Dec.	Jan.-March.
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	35.50	35.10	34.60	34.25
40in. 10oz.	42.50	42.50	42.70	42.20
B. Twills	113.20	113.60	113.50	113.70
Heavy Cees (Plain)	116	115	114	113.25
A Twills	140.50	141	138	137
Liverpools	127.75	128.25	129	127.25
Cornsacks	119	118	116	114.25

Raw Jute: Business was transacted daily in raw jute, but the quantities involved were smaller than in the previous week. It is estimated that about 350,000 to 400,000 maunds changed hands. The emphasis was on quick delivery, and most transactions were put through for specific delivery dates during September or early October. Ready bills of lading were plentiful, but this did not cause any reduction in rates; full market prices were paid on all occasions. Sellers were not interested in counterbids, and held very bullish ideas. Prices were maintained as much by covering against former business as by fresh business, and the two combined created a firm market. Imports, both upcountry and in the local markets, were small for the time of the year, thus causing premium prices to be paid for ready jute. Quotations at the opening showed an advance of 50nP and Northern-Assam jute was offered at Rs. 29 for September shipment. There was very little change in these rates until after the week-end, when, after fairly heavy business, sellers lengthened their delivery dates and quoted Rs. 29 for September-October shipment.

Business was reported in Assam-Northern jute at Rs. 29.50 for ready bills of lading and Rs. 29 for September and September-October shipment. Tossa was done at Re. 1 higher for October shipment. Daissee white was in demand, and prices paid for early shipment varied between Rs. 28 for September and Rs. 29 for 15th September. Small lots of Daissee mesta passed at Rs. 26 to Rs. 26.50 for September-October shipment. There were also buyers for Desal white at Rs. 29 a maund.

In pucca bales, good business was done in Pakistan N.C.-T.C., at Rs. 86 to Rs. 88 for ready bills of lading, and at Rs. 86 to Rs. 87 for September-October shipment.

Opening quotations on Wednesday morning were as follows:

Indian Jute	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam	29	Sept.-Oct.
Northern	29	"
Purnea Desal	28.50	"
Daissee	30	"
Daissee White	29	September
Assam Tossa	30	Sept.-Oct.
Murshidabad Tossa	29.50	"
Northern Ex Calcutta	29.50	"
Local Packing	29.50	"
Mesta:		
Assam	27	"
Northern	27	"
Desal	27	"
Daissee	26.50	"
Murshidabad	26	"
Jungli	25.50	"
Bimli F.A.Q.	26	"
Pakistan Cuttings	87 a bale	"

There was steady business in the Cossipore markets and premium prices were paid for quick delivery jute. Imports were again very poor, and in the week ended 4th September, only 320 wagons arrived at Cossipore. In the corresponding week of last year, over 500 wagons came. Kishenganj jute was quoted at Rs. 29 a maund basis Bottoms, which was about 50nP more than a week ago. Stocks were about 30,000 bales.

GUNNY SHIPMENTS DURING JULY

The following are the total net figures of manufactured jute goods shipped from Calcutta during July after providing for short shipments. These figures include shipments to coastal ports.

Hessian

	Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	1,915.8	35,189.7	37,105.5
Short Shipped	298.7	1,054.6	1,352.3
July 1957 (Net)	1,617.1	34,135.1	35,752.2
June 1957 (Net)	1,677.8	29 710.0	31,387.8
May 1957 (Net)	6,179.0	19,920.4	26,099.4
Sacking			
Gross	41,677.9	1,875.1	43,553.0
Short Shipped	1,397.2	74.5	1,471.7
July 1957 (Net)	40.280.7	1,800.6	42,081.3
June 1957 (Net)	23.445.4	1,533.3	24,978.7
May 1957 (Net)	27,665.9	1,963.6	29,629.5

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

Hessian

	Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 31st August, 1957	3,122.9	25,981.4	29,104.3
1st to 31st July, 1957	1.915.9	35,189.4	37,105.3
1st to 30th June, 1957	1,811.0	30,706.8	32,519.8

STANDARD JUTE LOOM FOR BLANKS

The Indian Standards Institution has published a specification for box back blanks for jute looms (IS: 1041-1957). Box back is made of wood and forms a part of shuttle box and is fixed in a line with the reed. The shuttle carrying the weft, when propelled by picking motion enters the shuttle box and is held in position with the help of swell fixed on the box back. This standard prescribes general requirements of box back blanks for jute looms such as freedom from defects and knots and specific requirements such as the permissible slope of grain of the timber used in the manufacture of the blanks. Minimum dimensions for three types of blanks have also been prescribed in the standard. It is expected that this standard will be of use to the manufacturers, especially those operating on a cottage industry basis, in making blanks for box backs of acceptable quality and to purchasers in acquiring dependable supplies. Copies of this standard can be had from the Indian Standards Institution 19, University Road, Delhi-8 or its branch offices in Bombay, Calcutta and Madras.

THE PAKISTANI JUTE MARKETS

FIBRE ARRIVALS STILL SMALL

(FROM A NARAYANGANJ CORRESPONDENT)

THE quantity of raw jute available at present is barely sufficient to satisfy the immediate needs of buyers, and prices now being paid are Rs. 26-8 for B Bottoms and Rs. 24-8 for C Bottoms loose jute. There have been daily fluctuations of 8 annas during the past week but it is still very difficult to feel the pulse of the market. Although arrivals have increased somewhat, the quantities are still small for this time of year. It is due to the peculiar weather conditions and the late rise of the rivers that the quality of jute is deteriorating. It will not be long before the gap between Export Firsts and Export Lightnings increase and Mill Lightnings will probably soon be quoted at a premium. There are indications that the percentage of cuttings will increase as the jute coming in now is very heavily rooted. The *beparis* say that what is to come might be worse. The rivers have begun to recede slowly, probably because the spring tides are over. This may encourage further harvesting and, therefore, an increase in arrivals. Inter-baler business in pucca bales has been restricted and interest in Export Lightnings has declined. Cuttings which went down to Rs 55 are now in slight demand at about Rs. 62, with S.N.C at Rs 74 or Rs 75. No interest has been shown as yet in habi jabi.

E.P.C. figures for the first half of August were much smaller than expected and one can only assume that there will be very large registrations for the second half of August. Despatches to ports, especially to Chalna, continue to be very heavy. This is as it should be since Chittagong port is working most inefficiently because of the very limited marshalling facilities. The overseas markets successfully resisted the local rise in prices. Prices quoted last week were £95 for Export Firsts, September, and £94 for October. Some business was done at a discount for the November position. So far very little business has been done in the lower marks. It is expected that a fair proportion will be taken up at low prices shortly when Burma comes in to buy. The Burmese mills have been waiting for prices to fall and are now willing to buy. Their requirements are mostly Export Hearts and cuttings.

The Jute Marketing Corporation has not been in the news very much of late but it is understood that the local Manager has resigned because he feels that the policy for dealing with local traders is unfair and is spoiling his reputation. In a newspaper article he is reported to have suggested that he was authorised to buy from local kutcha balers at a certain price and having passed his contracts was instructed to reduce his prices. There are rumours of other impending resignations.

THE FOREIGN JUTE MARKETS

IRREGULAR TREND IN FIBRE PRICES

(FROM OUR DUNDEE CORRESPONDENT)

THERE is considerable irregularity in the prices of raw jute imported from Pakistan. Some sellers appear to be fixing a premium on their jute by quoting as much as £106 for Mill Firsts, while others are willing to accept £100 for September-October shipment c.i.f. Continental spinners have recently been buying fairly freely to replenish their depleted stocks and this is reported to be mainly because of the recovery in prices from the steady decline that was taking place recently. They appear to be more or less satisfied, and the position is quieter at the moment. It is believed that when the weight of the crop is felt sellers will be unable to maintain the existing hi

level of prices. After all, Mill Lightnings at a price of £96 are still £15 above the minimum and Mill Hearts at £92 as much as £21 above the minimum. Mill Firsts are only £9 to £10 over the fixed minimum rate.

Ample supplies of raw jute are expected from the current crop in Pakistan and, according to reports, Indian mills will not need so much jute from that country, for with the addition of mesta fibre, they will have sufficient raw material to make them less dependent on outside sources of supply. The Indian mills will be able to keep down their prices for jute cloth below those of Pakistan if they can procure their jute and mesta cheaper.

Prices have been advanced to 64s for 40in. 10oz. hessians for shipment September to December, and to 49s 9d for 7½oz., September, 49s 6d October and 48s 9d November-December. B Twills are now up to 172s 9d. 172s and 172s for the respective positions of shipment, all f.o.b., Calcutta. Business in jute yarns and cloth in Dundee has shown a fair improvement since a large and satisfactory enquiry is being made. Prices are firm for all qualities of yarn and cloth.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base : year ended March 1953=100) receded by 0.4 percent to 112.0 during the week ended 17th August, 1957, compared with 112.5 (revised) for the earlier week. The index was almost at the same level as in the corresponding week of a month ago, but was higher by 4.3 percent when compared with that of a year ago. Prices of potatoes (−15%), eggs in Madras (−13%), milk in Bombay (−10%), jowar in Jhansi (−7%), rice in Balasore, fish, tea and cloves (−5% each), ragi and coconut oil (−3% each), maize and mustard oil (−2% each), groundnut oil, gur and coffee (−1% each) declined while those of ghee in Madras (+19%), eggs in Delhi (+13%), oranges in Madras (+6%), wheat in Kanpur (+5%), baira, sugar, betelnuts and salt (+1% each) showed advances and in the result, the index for Food Articles recorded a fall of 0.3 percent to 112.2 compared with 112.5 (revised) for the earlier week. The index for Tobacco stood unchanged at the previous week's level of 91.0. The index for Fuel, Power, Light and Lubricants also remained stationary at the previous week's revised level of 114.6. The index for Industrial Raw Materials fell by 1.5 percent to 119.9 due to declines in the prices of raw jute and cottonseed (−5% each), castorseed (−4%), lac (−3%), groundnuts and rapeseed (−2% each) and copra and tanning materials (−1% each); the prices of raw cotton, raw silk, gingellyseed and raw hides (+1% each), however, showed advances. The index for Intermediate Products exhibited a fall of 0.5 percent to 108.1 as a result of declines in the prices of zinc (−6%), cotton yarn, coir yarn, copper, tin and lead (−1% each). The price of linseed oil (+1%), however, recorded a rise. The index for Finished Products moved from 109.0 to 108.8. Items which showed variations were : general chemicals (−2%), jute manufactures (−1%) and cycles (+1%).

FINAL ESTIMATE OF BAISAKHI LAC CROP

According to the final estimate of the Baisakhi lac crop for 1957, issued by the Indian Lac Cess Committee, the total crop is estimated to be 650,000 maunds compared with the revised estimate of 593,000 maunds, last year's 683,000 maunds and the normal yield of 740,000 maunds. The final report of the crop indicates an increase of 57,000 maunds over the revised estimates mainly because arrivals of sticklac in Gondia and other centres in Madhya Pradesh have been higher than expected. Hence estimates for Madhya Pradesh and Bombay have been increased. In addition to the Baisakhi crop, about 20,000 maunds of Jethwi (Kusumi) has also arrived in the markets. This crop is very poor this year.

ACREAGE UNDER SUGARCANE INCREASES

According to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, the all-India first estimate of sugarcane, 1957-58, puts the current year's area at 5,022,000 acres against the corresponding adjusted estimate of 4,723,000 acres for 1956-57. This shows an increase of 299,000 acres or 6.3 percent in area during the current year, compared with last year. The increase in acreage during the current year has been reported by almost all the sugarcane-growing States. The increase has been marked in the case of U.P. and has been attributed partly to high prices of gur at the time of sowing and partly to better irrigational facilities and seasonal conditions during the current year, compared with last year. Some decrease in area has, however, occurred in Andhra Pradesh and West Bengal. This estimate generally covers the period up to the middle of June 1957. Till then, the condition of the crop was reported to be generally satisfactory. The estimate does not cover the entire area sown to sugarcane crop during 1957-58. Past experience has shown that the area at the first estimate stage forms roughly 94 percent of the area of the crop finally reported.

COMMONWEALTH COTTON PRODUCTION INCREASES

The amount of cotton grown in colonial and Commonwealth territories continues to increase and total production is now double what it was just after the war. The latest report of the Empire Cotton Growing Corporation puts the 1955-56 crop at some 1,235,000 bales, against the 1944-47 average of 631,000 bales. What is more, the expansion shows no signs of coming to an end. This year's crop, for instance, is expected to set a new record. Almost all the territories where the Corporation is at work have shown sizeable increases in their crops but two—Nigeria and the Sudan—deserve and receive special mention. In Nigeria there has been a specatcular rise from 2,000 bales in 1947-48 to 180,000 bales in 1954-55. The Sudan crop this year is likely to amount to about 650,000 bales, which is more than 125,000 bales above the record set up last year. All this has more than justified the faith of those who pioneered cotton cultivation in these areas, but it has also created new problems for those who now conduct the Corporation's affairs. Not the least of these is finance, and to meet it new arrangements have been introduced this year and will operate for a five-year period. The Corporation will have four broad sources of income. Firstly, the Governments of Uganda, Nigeria, Tanganyika, Kenya and Nyasaland will contribute jointly, in approximate proportion to the size of their cotton crops, the sum of £95,000 a year. Secondly, the Government of Aden, under an existing agreement, will refund to the Corporation three-quarters of the cost of maintaining staff in that territory: this will amount to £5,000 a year. Thirdly, the Sudan Government has agreed to subscribe £22,000 a year for the period up to the end of June 1959, when the current agreement to carry out research on its behalf comes to an end. Finally, there will be income from investments which the Corporation estimates should yield a further £58,000 a year. From all these sources, the Corporation can expect to receive a total income of £180,000 a year. This is just £10,000 short of the estimated cost of meeting its commitments under its newly expanded programme, and to make good the deficiency it has applied to the Cotton Board for an annual grant. Help of this order from the Board, the Corporation contends, would demonstrate the continued interest of the British cotton industry in the territories upon which it has come to rely for progressively more and more of its supplies of raw material.

Plantation Topics

PROBLEMS OF SOUTH INDIAN PLANTATION INDUSTRY

REMOVAL OF EXPORT DUTY ON TEA URGED

(FROM A SOUTH INDIAN CORRESPONDENT)

INSECURITY in Kerala plantations, the attitude of the Communist Government there, unhealthy trade union practices in south Indian plantation districts, and heavy taxation at both the Central and the State levels, were the important points of discussion at the annual gathering of the south Indian planting community held last week in Coonoor, Nilgiris. Mr. M. S. Calderwood, who presided over the annual conference of the United Planters Association of Southern India, said that never in his memory were planters so worried and so beset with problems as today.

Mr. M. M. Varghese, chairman of the U.P.A.S.I. Planting Committee, referred to the Budget proposals of the Central Government and the enhancement of agricultural income tax on plantations in all the three States of south India. He said that both Mysore and Madras could claim to be moderate in their exactions on the industry so long as Kerala was there to go one step ahead on the imposition of agricultural income tax. The Budget proposals framed by the Kerala Government had been discriminatory against agricultural companies, particularly against larger companies who had conformed to the highest standards of labour welfare and amenities on their estates. It was not realised that these large companies were corporate bodies consisting of numerous middle-class shareholders who were hit by these tax measures. In effect, the high rate of supertax combined with the basic agricultural income tax in the State now exceeded the Centre's corporation tax. The policies adopted by the Government tended to drive enthusiasm and capital out of the country and encourage to create a new rival industry elsewhere.

Export Duty on Tea

He pleaded for the abolition of the export duty on tea or at least its suspension for a period in view of the comparatively high cost of Indian tea which was responsible for such buyers as the U.S.A. going in for more of Ceylon teas. Mr. Varghese did not favour a hasty introduction of the metric system of weights and measures in tea as he apprehended that that would lead to some difficulties in "our trade with our major buyers like Britain and the U.S.A. who followed other systems."

The Madras Minister, Mr. Bhaktavatsalam, who inaugurated the annual conference in the absence of Mr. Morarji Desai (who cancelled his visit to Coonoor on account of the illness he developed in Madras), declared that his Government and the Union Government in Delhi were not interested in nationalising everything. The Government could not afford to do that. Certain industries should continue to be under the private sector for the prosperity of the country. But, he added, the private sector should not claim all the fruits of its labour, but share it with others in a co-operative way.

U.P.A.S.I. Exhibition

The exhibition which was organised by the United Planters Association in connection with its annual conference this year has attracted a record number of exhibitors as well as visitors. Principal exhibitors vied with each other in beautifying their stalls, so much so that it is difficult to single out any one of them for special mention. Important among the exhibitors were the Tata-Fisons, Burmah-Shell, Imperial Chemical Industries, Air-India International, British Overseas Airways Corporation and the Tea, Coffee and Coir Boards. The U.P.A.S.I. Information Department and the U.P.A.S.I. Scientific Department have displayed exhibits giving valuable information about the plantation industry.

This exhibition was inaugurated on 26th August by Mr. W. H. S. Michelmore, president, Associated Chambers of Commerce. The Union Minister for Industries, Mr. M. M. Shah, who was to inaugurate this exhibition, cancelled his visit on account of the pressure of work in Delhi. Mr. Michelmore said that this exhibition showed clearly the vital nature of the inter-relationship between the plantation industries and all other industries in this country. He added that the Associated Chambers were deeply conscious of the great contribution which the planters made to the agricultural, industrial and economic life of India and that the planters could count on the Chambers' steady assistance should problems arise on which the latter could help.

Mr. C. D. Wilson, chairman of the Indian Tea Association, Calcutta, also addressed the meeting. He said that tea producers in north India shared to the full the south Indian industry's anxieties over various problems.

Strike by Cashew Workers

A general strike involving nearly 40,000 workers in cashew factories in and around Quilon has been going on from 28th August over a bonus dispute. The workers claim a 8 percent bonus and the managements express their inability to pay more than 4½ percent. The Government is trying to bring about a settlement. The South Indian Cashew Manufacturers Association in a Press statement says that the shipment of Rs. 50 lakhs worth of cashew kernels, mostly to the U.S.A., has been held up due to the strike. Orders for September are also likely to be affected, and unless the strike is immediately called off the total loss in export trade might exceed Rs. 1 crore. It is stated that roasted nuts and nuts in different stages of processing, estimated to cost Rs. 50 lakhs, have been left in the factories, and may suffer deterioration and loss.

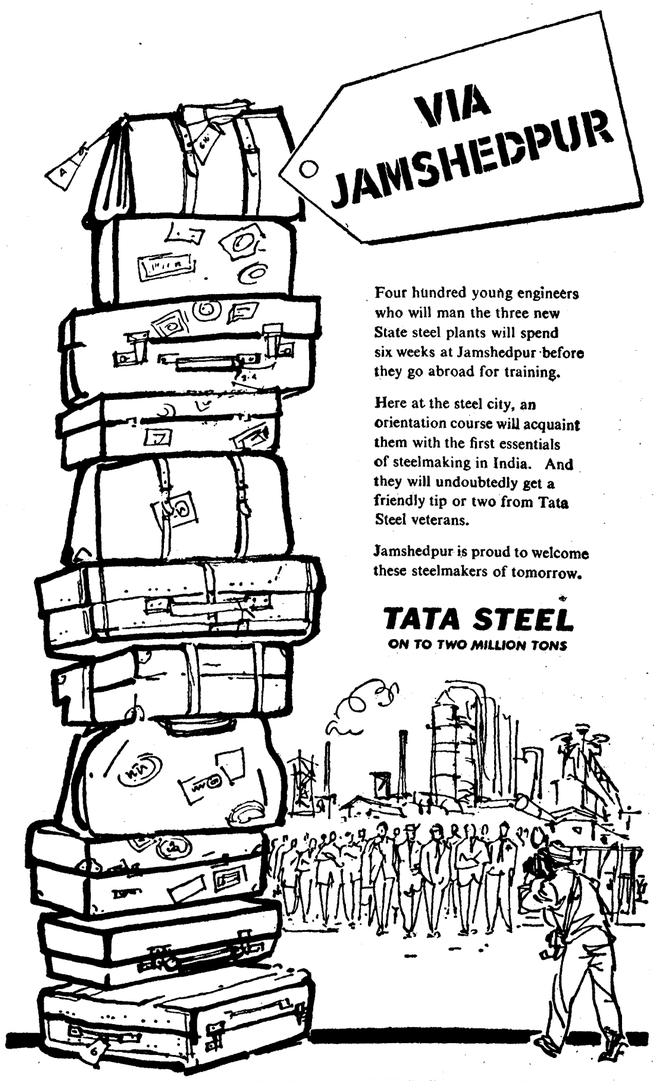
COCHIN TEA SALES

At Sale No. 24, 1,600,000 lbs of tea were on offer. There was a strong general demand for everything except for Plain Liquoring Mediums. Prices were irregularly dearer particularly for Low Medium B.O.P.'s. Good Liquoring sorts were very strong.

NO CHANGE IN TEA EXPORT DUTY

The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty, at Rs. 2.74 a lb against Rs. 2.55 a lb in force from 1st August. There is no change in the existing rate of duty of 38 nP a lb.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN JULY



Indian rubber output in July was 1,499 tons, according to the Rubber Board of India. Imports totalled 1,068 tons and exports were nil. Consumption by manufacturers was 2,820 tons, including 852 tons imported. Stocks with manufacturers at the end of the month were 2,533 tons. Stocks with estates and dealers on the last day of July were 2,782 tons of reclaimed rubber, the month-end stock being 546 tons and consumed 225 of synthetic rubber of which they held a total stock of 1,090 tons on the last day of the month.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association :

	Closing prices on 23-8-57 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet :		
No. 1	1.16	1.16
No. 2	1.11	1.11
No. 3	1.06	1.06
No. 4	1.01	1.01
No. 5	.96	.96
	Sheet cuttings 1	.96
	do. 2	.90
Crepe :		
Water white	—	—
RMA No. 1X	1.27/30	1.22
RMA No. 1	1.24/27	1.17½
	Crepe No. 2	1.10
	Crepe No. 3	1.05½
Scrap Crepe :		
Sc. Crepe No. 1	1.00 Nom.	1.00
Sc. Crepe No. 2	.94/97	.96
Sc. Crepe No. 3	.87/94	.91
Flat Bark	.82/85	.83½
	Sc. Crepe 3X	.93

To arrive at f.o.b. Colombo prices, add 53.53 cents a lb for crepe other than scrap crepe and 31.53 cents for scrap crepe to the above market prices.

Four hundred young engineers who will man the three new State steel plants will spend six weeks at Jamshedpur before they go abroad for training.
Here at the steel city, an orientation course will acquaint them with the first essentials of steelmaking in India. And they will undoubtedly get a friendly tip or two from Tata Steel veterans.
Jamshedpur is proud to welcome these steelmakers of tomorrow.

Calcutta Markets

LESS GENERAL DEMAND AT TEA EXPORT SALE

GOOD SUPPORT FOR DUSTS

AT Sale No. 13, held on 2nd and 3rd September, 58,776 chests were on offer at the Export auction. There was less general demand. Medium Assam B.O.P.'s and O. Fgs. sold well and teas with quality were dearer. The very best C.T.C. teas were steady, but the more ordinary teas of this description were up to 20nP easier. Medium B.P.'s were a weak feature and were 6 to 8nP easier, while plain liquoring teas were 4 to 10nP easier. There was less demand for non-wither Dcoars and these generally sold about 6nP below valuations. Whole leaf grades were steady except for stylish Assams which were dearer. Darjeelings were up to 25nP easier.

Quotations

	1957 Rs	1956 Rs.
Clean Black Pekoe	2.20 to 2.25	1 14 0
Plain B.P.	1.68 to 1.70	1 15 0 to 2 1 0
Plain Fannings	1.70	
Medium B.P.	1.86	
Medium Fannings	1.90	1 15 0 to 2 1 0
Best Assam CTC B.P.	3.90 to 4.00	3 4 0 to 3 6 0
Best Assam CTC Fgs.	4.50 to 5.00	

At the Internal Sale, offerings amounted to 20,572 chests. There was a good general demand, but prices for most sorts were easier. Bright liquoring grainy C.T.C. Assams met with strong export competition, and prices were fully firm and frequently dearer, but the remaining C.T.C. teas were easier, particularly the powdery sorts. The remainder of the Sale declined by about 4nP with the exception of bright liqucring Assams which were firm and occasionally dearer.

Quotations

	1957 Rs.	1956 Rs.
Medium Dooars Dust	1 52 to 1.58	1 12 0 to 1 12 6
Medium Assam Grainy Dust	1 58 to 1.66	1 15 0 to 2 0 0
Medium Assam C.T.C. Dust	2.10 to 2.30	2 12 0
Best Assam C.T.C. Dust	2 40 to 2.80	3 2 0 to 3 6 0

Leafs on offer were 1,908 chests, and prices for most teas were easier. C.T.C. teas were in little demand. There were a few lines of green teas on offer and these sold at about valuations.

FREIGHT MARKETS LIFELESS

THE freight markets continued lifeless last week. An American liner interests took a *Liberty* type for the trip Pacific Coast to Northern Range at the very depressed rate of $(U.S.) 1.50. Enquiries still circulate for grain from North Pacific to India at 70s for East Coast discharge, and from Australia to Pakistan at 75s for South Australian loading, although a 14,000 tonner accepted 55s for September loading from West Australia. Hampton Roads-Continent took a few ships at 30s and there is a local enquiry for Egypt for coals. With three days in October declared as holidays during which there will be no work in Calcutta port and 32 ships at Sandheads today, it is obvious that the optimistic forecast made at the recent Delhi meeting, of the elimination of congestion, will not be fulfilled.

SUGAR STEADY

During the week ended 4th September, sugar sales in the Calcutta market averaged 4,000 bags a day. Arrivals were 6,000 bags daily and stocks totalled 80,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 37-10 for ordinary grain and Rs. 35-8 for big grain. The market was steady.

LINSEED QUIET

The market tendency has been quiet during the past week. A notably easier trend, it appears, has developed in sympathy with other oilseeds and oil markets in all main centres. Two factors have caused the present decline. The first is the re-newed restrictions of credit facilities by banks. The second factor is a poor demand for oil from consumers and traders. The latter is seasonal and likely to revive during the next few weeks. The former is viewed with some disquiet by traders and stockholders. Local crushers, with fair stocks in hand, are reluctant to make fresh purchase of seeds. Oil prices have been out of line with foreign indications; but in the event of a further decline, the possibility of Indian oil re-entering export markets may be nearer to reality than it seemed a few weeks ago. Latest quotations were as follows: Ready-September Rs. 22-8 a maund.

HIDES AND SKINS UNCHANGED

The market showed little change. Stocks were less than in the previous week.

Bazaar Sales

(between 27th August and 2nd September, 1957)

COMPANY AND PUBLIC NOTICES

HASIMARA TEA COMPANY, LIMITED.

NOTICE is hereby given that the Fifty-second Annual General Meeting of the Members of Hasimara Tea Company, Limited will be held at the Registered office of the Company at No. 6, Church Lane, Calcutta, on Friday, the 27th September, 1957 at 12-15 P.M. for the following purposes :—

1. To consider and adopt the Profit and Loss Accounts for the year ended the 31st December, 1956, and the Balance Sheet as at that date, and the reports of the Directors and Auditors.
2. To declare dividends on the Preference and Ordinary shares.
3. To appoint Auditors for the year ending the 31st December, 1957, and to fix their remuneration.
4. To appoint a Director in place of Mr. M. J. Ordish who retires by rotation and who, being eligible, offers himself for re-election.
5. To appoint a Director in place of Mr. D. P. Goenka who retires in accordance with Article III and who, being eligible, offers himself for re-election.
6. To appoint a Director in the place of Mr. G. T. Routledge who retires in accordance with Article III but, being eligible offers himself for re-election and to consider and, if thought fit, to pass the following resolution which will be proposed as a Special Resolution.

"That Mr. G. T. Routledge who retires from his office as a Director and who is a Member and Director of J. Thomas & Co. Private Limited, which Company may be deemed to hold an office or place of profit under the Company, be and he is hereby appointed a Director of the Company".

Special Notice dated the 13th August, 1957 of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that the notice is given to satisfy the requirements of Sections 190 and 261 (1) (c), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge, a Director of the Company who retires by rotation of directors at this meeting, is a Director and Member of Messrs. J. Thomas & Company Private Limited which customarily acts as brokers of the teas produced by the Company, which may be construed as an office or place of profit under the Company. Having regard to the fact that the Managing Agents have a right to appoint a director to the Company, and to the provisions of Section 261 and 314 of the Act, a special resolution re-appointing him as a director of the Company is considered requisite.

The Share Transfer Books and Register of Members of the Company will be closed from the 14th September to the 27th September, 1957 both days inclusive.

By Order of the Board,
DAVENPORT & COMPANY PRIVATE LIMITED,
Managing Agents.

Calcutta, 31st August, 1957.

Note :—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead and a proxy need not be a member of the Company.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE is hereby given that the Forty-sixth Annual General Meeting of The Imperial Tobacco Company of India Limited will be held at Virginia House, 37, Chowringhee, Calcutta, on Thursday, the 26th September, 1957 at 3-30 p.m. for the transaction of the following business:—

To receive and adopt the Statement of Accounts and Balance Sheet and the Reports of the Directors and Auditors thereon.

If considered desirable to declare a dividend.

To elect Directors.

To appoint Auditors and fix their remuneration.

The share transfer books of the Company will be closed from the 9th September to the 26th September, 1957, both days inclusive, and transfers received in order at the registered office of the Company by the 7th September, 1957, will be in time to be passed for payment of the dividend to the transferees.

The dividend, if approved, will be paid on the 28th September, 1957, to the Shareholders whose names appear on the Company's Register on the 26th September, 1957, or to their mandatees.

By Order of the Board
J. R. BLAIKIE
Secretary.

13th August, 1957
Virginia House,
37, Chowringhee,
Calcutta.

Notes :—A member entitled to attend and vote at the General Meeting may appoint a proxy, who need not be a member, to attend and on a poll to vote on his behalf.

Shareholders are requested to notify the Company immediately of any change in address.

THE INDIAN STANDARD WAGON COMPANY LIMITED

NOTICE.

NOTICE is hereby given that the Annual General Meeting (being the thirty-eighth Ordinary General Meeting) of the Company will be held at the Registered Office, 12, Mission Row, Calcutta, at 11 a.m. on Wednesday the 25th September, 1957, for the following purposes :

1. To receive and adopt the Audited Accounts for the year ended 31st March, 1957, and the Directors' and Auditors' Reports thereon.
2. To declare Dividends. The dividends if declared, will be paid to the shareholders whose names appear in the Company's books on the 25th September, 1957, or to their mandatees.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. As special business to consider and if thought fit to pass with or without modification the following resolution of which Special Notice has been received.

"That the age limit specified in Section 280 of the Companies Act, 1956, shall not apply to Mr. T. Leslie Martin and this meeting hereby approves any appointment of Mr. Martin as a director of the Company which may hereafter, whilst this Resolution remains in force, be made by the Managing Agents pursuant to Article 109 of the Company's Articles of Association".

The Share Registers and the Transfer Books of the Company will be closed from the 18th September, 1957 to the 25th September, 1957, both days inclusive.

BANKS

H indicates that Share capital is half paid. O C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

A PLEA FOR CAUTION FROM THE RESERVE BANK

OVER-INVESTMENT AND INFLATION: THE LAG IN SAVINGS

THERE has been a modest decline in the advances of the commercial banks during the past few weeks. But it would be an exaggeration to say hat the monetary stringency has eased to any ubstantial extent, considering that the demand for unds remains at a high level, the advance-deposit atio is still around 66 percent, and interest rates are ell maintained. The decline in advances reflects he combined impact of slack season influences, he drastic cuts in imports and the policy of tighter redit controls. The latter two factors may tend o retard industrial expansion in coming months, ut even so it is open to question whether producers' and traders' requirements of working apital will be adequately met during the busy eason In their latest annual report for the year nded last June to the Central Government—a eport which incidentally marks a pleasant, if mited, departure from the timorousness of its redecessors—the central board of directors of the eserve Bank of India place welcome emphasis n the fact that the financial stringency in the ountry today represents essentially a shortage of avings in relation to investment needs. The ringency to which they refer is not confined to hort-term capital requirements alone, with which he banks are mainly concerned; it is probably ven more acute in the case of medium-term and ng-term needs, which have grown sharply with e change in the pattern of economic development brought about by the greater emphasis on ojects that take more time to mature. The main eme of the Reserve Bank report is a realistic e: investment has outrun savings to such an tent that serious strains have developed in the onomy, so urgent measures may be necessary regulate the pace of economic expansion in cordance with the availability of real resources. hough it cannot be said that the theme is markably original or penetrating in its analysis, ming from the Reserve Bank it is of considerle significance, in view of the widespread belief at the institution is becoming more and more an xiliary loudspeaker for the Finance Ministry.

*

Perhaps the two most outstanding signs of ain in the economy are the steady rise in mestic prices, especially of basic necessities, and e sharp deterioration in the balance of payments. e Reserve Bank report points out that both ricultural and industrial production have risen, t the increase in output has fallen short of the owth of demand initiated largely by the conued rise in Government expenditure, mainly on velopment. The greatest impact of this expenure has been on foodgrain prices. The original gets of agricultural production have, therefore, en raised to provide for the larger estimated rease in demand resulting from rising incomes, sides making possible a surplus for exports. the revised targets are fulfilled, agricultural oduction as a whole will have risen by about percent, and foodgrain production by about 25 cent at the end of the plan period. "In the ht of the rise in foodgrain prices that has occurd in the last two years," the report emphasises, e achievement of these targets appears to be paramount necessity for the successful success of plan." Industrial production has risen by about percent during 1956, as compared with the evious year. The statistics indicate that the rise continued into the early months of 1957, but s not easy to share the Reserve Bank directors' imism when they say that "the general indicaas are that the overall level of industrial output maintain the rising trend shown so far." shortage of foreign exchange as evidenced by nestic capital makes this appear unlikely. In discussion of production and prices, they do to stress that in recent months there have n widespread wage claims and signs of industrial unrest. "It is of the utmost importance that the cost of living and with it the cost of production should be held and a spiralling movement in prices avoided." Many will hope that the call for restraint and discipline which the report makes is addressed to the framers of the country's monetary and fiscal policies no less sincerely than to anyone else.

Referring to the deficit in external payments, the report points out that the Reserve Bank's sterling assets have fallen by Rs. 227 crores to Rs. 457 crores during the year to last June. There has been a further sharp fall since. The deficit has resulted from a large increase in imports by both the public and the private sectors. It may be debatable whether the larger volume of imports is almost wholly accounted for development needs, but few will disagree with the view that "there had apparently been some under-estimation of the import requirements of the second plan." One is grateful to the Reserve Bank directors for not repeating the assertion made in another recent report issued under the Bank's auspices, which talked of the foreign exchange reserves as being, "in one sense, a relic of the past". In public discussion, more nonsense has been spun around this single phrase than around any other major banking pronouncement for many years. In fact, it is unfortunate that the Reserve Bank directors have not taken the opportunity of their annual report to emphasise that replenishing the foreign exchange reserves is a dire need for a country which has been spending much beyond its means and whose rupee is no longer the coveted currency it once was. Instead, they merely suggest exporting goods at the cost of internal consumption—a suggestion which, however attractive it may seem considering the exigencies of the foreign exchange situation, cannot be accepted lightly in view of the growth of domestic inflationary pressures. The plea for exporting goods now consumed at home might have been more valid if it were combined with a plea for the realistic treatment of industries which are important foreign exchange earners, such as jute, tea and cotton textiles. Little awareness of these industries' difficulties is indicated by the report.

*

Against the general background of the need to achieve a closer correlation between expenditure and earnings abroad, as well as between investment and savings at home, the Reserve Bank directors seem to have few clear-cut recommendations to offer. They mention that India will have to depend on external assistance on a larger scale, but a mere passing reference is made to the effect of domestic economic policy on the climate for foreign investment. The point is inadequately stressed that the policies which would promote the inflow of investment from abroad are, by and large, precisely also those which would add to the pool of domestic savings. Heavier taxation, continuing inflation and currency uncertainties have played an important part in restricting the mobilisation of both external and internal resources. If the Reserve Bank directors' complaint is that strains have appeared in the economy because savings are lagging far behind investment, it would have been relevant for them to state more precisely what types of investment there are that are inflationary. Such an analysis would have pointed to the conclusion that it is mainly the investment in the public sector based on deficit financing which is at fault. The budgetary deficits of the Central and State Governments during 1956-57, at abcut Rs. 250 crores, were around Rs. 100 crores higher than in the previous year. The deficit of the Central Government alone during 1957-58 is estimated at over Rs. 280 crores, after taking into account the increases in taxation; to this have to be added the States' Budget deficits of Rs. 86 crores on revenue account. It is clear that deficits of this order cannot be supported without a quicker increase in production, and especially in the supply of essential consumer goods, including food. This quicker increase cannot be assured while agriculture remains a gamble on the monsoon, and as long as the foreign exchange shortage prevents a substantial increase in imports.

While investment in the public sector is mainly responsible for the inflationary forces which are now gaining momentum, the same cannot be said of investment in the private sector. By its very nature, the latter is based mainly on savings obtained either by the retention of profits or by borrowing in the capital markets. It may be that during the past year, private undertakings have financed their investment plans partly with the aid of credit created by the banks, but the extent of such term financing has been extremely small, because banks normally provide little apart from short-term capital for industry. It is also worth noting that credit creation by the banks would not have been possible on as large a scale if the Government had not first expanded the currency supply. To the extent that private undertakings have had to go to banks for part of their longer-term financial needs, they have had to do so mainly because the capital market has been ruined by the Government's fiscal and other economic policies.

*

The Reserve Bank report refers to the state of the capital market, and with the aid of somewhat obsolete statistics tries to suggest that private investment based on borrowing from this market has risen. In discussing the sharp fall in share prices, the curious view is put forward that the fall "reflects in the main the adjustment of share prices to a higher yield basis in the context of prevailing financial stringency and the rise in money rates, as well as disinflationary measures on the monetary and fiscal front." But this can hardly be the case considering that the prices of many equities have fallen well below their intrinsic values. A truer explanation is to be found in the fact that the incentive to save has been undermined and that investment confidence has been damaged by fiscal and other measures. Whatever the rate of net fixed assets formation or increase in the paid-up capital of companies may have been a year or two ago, the overall addition to the paid-up capital of all companies shows a serious decline since the supplementary Budget of November last year. During the period December 1956 to March 1957, the total increase in the paid-up capital of all companies was of the order of Rs. 6.46 crores, compared with Rs. 11.08 crores in the corresponding period of the preceding financial year. In the first eight months of 1956-57, joint stock companies increased their paid-up capital at a monthly average rate of Rs. 5.84 crores, while the monthly increase for the period December 1956 to March 1957 amounted to only Rs. 1.61 crores. Figures published by the office of the Controller of Capital Issues of consents given for raising capital also indicate a slowing down in the rate of investment in recent months. During the quarter, January to March, 1957, the amount of capital issues applied for and consented to aggregated Rs. 37.39 crores and Rs. 31.61 crores respectively, as compared with Rs. 121.26 crores and Rs. 116.59 crores for the quarter, October to December, 1956. Furthermore,

in January to March, 1957, initial or new capital issues accounted for less than 17 percent of the total amount consented to, as compared with 41 percent in the calendar year 1956, 38 percent in 1955 and 52 percent in 1954. It is to statistics such as these that the Reserve Bank might well have paid more attention in seeking the basic causes of the inadequacy of savings which it says is hampering economic progress.

INTERNATIONAL DISTRIBUTION OF WEALTH

CAPITAL FOR UNDER-DEVELOPED COUNTRIES

PROFESSOR P. M. S. Blackett, this year's president of the British Association for the Advancement of Science, is a persuasive speaker as well as a respected scientist. In his presidential address at the annual meeting of the Association last week, he discussed a matter relevant to politics and economics, and also to science. The progress of the natural sciences, the west's greatest achievement, had been based on experiment, he said. He proposed a great social experiment to spread the benefits of its labours. "A 'have-not' country", he said, "bound like a modern Tantalus by the chains of its lack of capital, gazes with unquenchable thirst on the growing riches of modern technology which it cannot enjoy." The west should forgo some of its immediate prosperity to enable the "have-not" countries to enjoy more of these riches. Professor Blackett is a financial realist. He recognises that the capital required for material development must come from savings—governmental, corporate, or personal—and that savings represent a sacrifice of present consumption. These savings may be made in the country where the development is taking place or be imported in the form of loans. Loans from industrialised countries are essential, because the capital cost of industrialisation is so high that a country lacking basic industries has great difficulty in accumulating the savings required for the transition to an industrial state.

Scientists and inventors are not necessarily financiers and economists. They do not readily appreciate that industries making steel, refining oil or producing heavy chemicals, require capital investment of £5,000 to £10,000 a man employed, and that even light manufacturing industries involve a capital investment of £1,000 to £3,000 a man. It has been estimated that roughly £1,000 million annually is required for investment in the under-developed countries (Professor Blackett calls them "pre-industrial" countries) to enable them to form the industrial base on which they can build prosperity. It is easy to pass by such facts with a formal nod of acknowledgment. The shortage of capital for the "pre-industrial" countries is, indeed, familiar. But this shortage of capital is not really the essence of Professor Blackett's argument. This social scientist does not regard the shortage as a problem of orthodox economics; nor does he regard the under-development of great areas of the world as a problem of technology. He is not, however, concerned only with the political and moral aspects of the problem. What he sees is an anomaly that can be corrected by a little self-sacrifice on the part of the developed nations.

* * * *

Orthodox economists—in the west, at least—consider unequal industrialisation as quite natural. In the division of labour between one part of the world and another, they see benefits to both industrial and primary producing countries. It is, they believe, a natural function of some countries to produce food and materials of others to manufacture goods. If trade is free, they argue, functions and products will be distributed most economically by the mechanism of relative pricing. If capital moves freely, those countries that can make the best use of capital will receive it. Professor Blackett does not believe that the present arrangement of the world's resources is "natural", even within the limits set by governmental intervention. He does not believe that the "pre-industrial" countries have any special characteristics that condemn them not to industrialise, when it is evident that they wish to develop their economies along modern lines. His theory is that the industrial supremacy of the west is due mainly to its social and economic organisation; that, especially, the supremacy of Britain in the earlier phase of industrial development resulted from the victory of the technological and mercantile classes over the feudal aristocracy, whereby Britain was freed from restrictions on scientific thought and on the use of money for profitable investment. The gap thus opened between different parts of the world has not been closed but has, on the contrary, grown wider; for a region that has already accumulated capital can relatively easily accumulate more capital, whereas a region that has not yet accumulated capital on the scale required for modern industry has difficulty in beginning the process. Professor Blackett proposes that the developed countries relinquish a small proportion of their current wealth in order to give the others "a good start on the road to prosperity".

The amount of capital required is, of course, a matter for discussion. Professor Blackett's suggestion of £1,000 million a year (additional to what is being provided at present) seems large, but it would be widely spread. The Professor hopes that if the major nations of the west cannot agree quickly to provide that amount, Britain will "go it alone" and make her contribution of £150 million a year available to her former colonies, in addition to the capital that she is exporting now. Even in present circumstances, it may be thought, a sum of £150 million should not be too difficult to provide. It is, after all, only about 10 percent of the annual expenditure on defence. It is only a small part of the annual capital requirements of the British Commonwealth, but a considerable part of the other industries' contribution would, presumably, be made available to the Commonwealth. The traditional channels of finance would necessarily be altered. Professor Blackett is concerned with broad principles, not with detailed methods. If the principles were accepted, the methods could surely be worked out. But the principles are not accepted. Not long before the Professor's address the British Government had published a study of overseas investment which offered no hope of any appreciable increase in present circumstances. American capital does not venture freely into the less developed regions. Continental Europe has its own preoccupations. As far as Europe is concerned, the main objection to any such plan is inflation: but it would not be inflationary if resources were diverted from other uses. Perhaps defence could change its character.

THE PROSPECT FOR IMPORTS

THE drain on India's foreign exchange holdings continues in spite of the Government's efforts to halt it. The paper currency reserve has been reduced, and deficits in foreign trade are reported almost every week. It is against this background that the Import Advisory Council met this week to consider the import policy for the half-year from October 1957 to March 1958. There cannot have been much difference of opinion on the need for maintaining most restrictions, and the trend of the discussions shows that members do not expect any substantial liberalisation in the next policy announcement which is to be issued later this month. Suggestions for certain modifications in the policy have however been made. The modifications, if accepted, might not involve a larger increase in expenditure than the Government would be prepared to allow, but they would have the advantage of keeping "the wheels of industry" freely moving—a point which Mr. Morarji Desai has stressed is an important consideration in framing the import policy. One of the suggestions is that the policy of *ad hoc* licensing followed during the current quarter should be given up, and instead a relatively liberal licensing policy followed within the import target the Government might fix. This would remove many of the uncertainties and difficulties which the import trade now faces. For the import of essential raw materials required by industries particularly, a more liberal policy is called for to enable importers to obtain their supplies as freely as possible. Another suggestion is that a policy of open general licensing be adopted for such industrial raw materials as sulphur and rock phosphate. Apart from ensuring a regularity of supply which would help check a rise in prices, a policy of this sort would enable importers to arrange bulk shipments at lower rates.

An unfortunate aspect of the recent restrictions is that many established importers have been displaced. They have years of experience and it is economical to channel as large a proportion of imports as possible through them. Mr. Morarji Desai, however, does not appear to be favourably disposed towards the proposal that their business be partially restored. He has suggested instead that established importers could now become stockists and sellers of indigenous goods. The real point perhaps seems to have been missed. It has not apparently been suggested that the importers should not sell locally produced goods, but that they be used to a greater extent for importing the goods which it is proposed to buy abroad. In the case of industrial stores and spare parts particularly, established importers could play a useful rôle. They are in a position to assess the requirements of industry well, and in the present conditions of monetary stringency and foreign exchange shortage they are unlikely to import too much. Mr. Desai has turned down another suggestion to revalidate the unexpired quota licences issued during the January-June period. It is feared that an indiscriminate cancellation of unexpired licences might create difficulties for industry.

* * * *

Consumers and the trade are becoming reconciled to the prospect of scarcity and of having to make do largely with whatever can be produced within the country. It is hoped that when circumstances are better, imports of consumer goods will be increased. For a long time to come, this may not be possible. During the nine-month period July 1956 to March 1957, the foreign trade deficit totalled Rs. 248 crores. This was largely the result of an extraordinarily high level of imports, amounting to Rs. 846 crores. It remains to be seen whether the deficit in coming months can be bridged by higher export earnings and the recent drastic import cuts. If the present position is grim, to use the expression of Mr. Morarji Desai while describing the foreign exchange shortage at the meeting, it may become even more so in years to come. It is hoped that Mr. Krishnamachari's forthcoming efforts in the U.S.A. and Europe to obtain foreign assistance and credits for India will meet with a larger measure of success than the recent proposal for a loan from the U.K.

CURRENT COIN

U.S. Business Conditions.—The month of August has rounded off the summer without evidence of decisive change in the business situation, says the First National City Bank of New York's latest monthly letter on U.S. business and economic conditions. The showing has continued to be mixed, with the overall trend apparently still sideways at a high level. In spite of the absence of any conclusive clue to the trend of autumn business—or perhaps because of it—confidence in a vigorous upturn has become more restrained. This shift of sentiment has been accompanied by weakness on the stock exchanges, with the usual effect of casting further suspicion on the business outlook. As far as overall figures of production and trade are concerned, the picture is still impressive. Industrial production in August, as measured by the seasonally adjusted Federal Reserve index (1947-49 = 100), appears to have been maintained close to the June-July level of 144, and only slightly below the December 1956 peak of 147. Employment continues at record levels, as a high percentage of workers laid off in industries going slack find jobs in other lines still needing help. In July, unemployment, officially reported at approximately 3 million, was below a year ago. Measured against a labour force of 70 million, this represents substantially full employment, if not over-employment. Latest seasonally adjusted figures for personal income, retail sales, construction, and aggregate output of goods and services tell the same story of record or near-record performance. Rising wholesale and consumer prices indicate the continued presence of inflationary forces. Whether the sideways movement of recent months represents a prelude to a downturn in business, to a further expansion, or merely to more "rolling adjustment," there is no doubt that, in spite of soft spots, the United States generally is still enjoying exceptional prosperity. All this would be bullish indeed were current high levels of production and employment supported by an equivalent flow of incoming orders to the factories and outgoing shipments. Actually, this does not appear to be the case. According to Department of Commerce figures, manufacturers—by drawing down order backlog and building inventories—have, since the beginning of the year, kept output higher than incoming business warranted.

Irrigation and Power Projects.—Not many projects are subject to as much public criticism for waste and inefficiency as those relating to irrigation and power. Mr. S. K. Patil, Central Minister for Irrigation and Power, has said at this week's meeting of State Ministers concerned with the subject that the study group appointed to examine questions of efficiency and economy in these projects has already submitted its report. The Government is examining it in detail, and action has been taken on some items. Engineers' seminars are being organised in order to encourage a "collective study of important problems common to river valley projects and to pool the knowledge and experience gained by technicians, administrators and experts under diverse conditions." These seminars make recommendations to the Co-ordination Board of Ministers set up by the Central Government, which takes decisions on them. One seminar has recommended that the best agency for the administration of a major river valley project is a control board. The recommendation is being examined further. In accordance with the proposals of the Ministers' Co-ordination Board, a National Construction Corporation has been set up. It has started functioning; five State Governments are participating, and one more is likely shortly to follow. The Corporation has quoted favourable terms to some project authorities, and "as a synthesis of the best features of a Government departmental construction and private construction agencies", it is expected to avoid red-tape. Steps are being taken to standardise the machinery used by these projects. A "drill" for the maximum utilisation of serviceable surplus machinery on projects nearing completion has been sent to State Governments and project authorities. This will help save foreign exchange. Mr. Patil appears to regret that no encouraging response from the State Governments has come forth as they do not favour the proposal for constituting an all-India service for engineers. The Rates and Costs Committee has prepared a basic schedule of rates for manual and machine work which will be considered by the Co-ordination Board at its next meeting.

* * * *

Staff College for Managers.—Hyderabad has been chosen as the site of India's Administrative Staff College, the first of its kind in Asia. The College is modelled on the same lines as the institution in Henley, U.K., and is to be inaugurated in December this year. For the first session, which will be of three months' duration, 30 persons are to be admitted. It is proposed to raise the number of participants to 60 for each session in the future. The College is being financed partly by the Central Government and partly by subscriptions from business houses. The Centre is giving a non-recurring grant of Rs. 7 lakhs, a recurring grant of Rs. 3 lakhs a year for three years and an interest-free loan of Rs. 9 lakhs for the construction of staff quarters. The main object of the College is to bring together responsible management executives from different fields of activity, both public and private, in order to study the skills and techniques of higher management and leadership. The staff is to consist of two categories—permanent and covenanted. Professor J. W. L. Adams, of the Henley College, will be one of the covenanted members of the staff, and the method of work will closely follow the pattern of the Henley College. Candidates will have to be nominated by the organisations for which they work and to the service of which they will return. The selection of candidates will be by interview. The consolidated fee for a member for each session will be Rs. 2,400, which covers accommodation, board and study expenses. The course of studies will consist of comparative administrative structures: internal organisation and administration: external relations: and constructive administration. A research department is to be established as an integral part of the College. It will supply basic material for the course of studies and review the results of syndicated work as contributions to thought on various subjects. Dr. Matthai, chairman of the court of governors of the College, has stated that to get the best results it is essential that the executives participating in the course should be persons who have already acquired sufficient experience, and who, by reason of proven ability, are holding or have been earmarked for appointment to senior positions in their organisations.

* * * *

Agricultural Income-Tax and Land Revenue.—The Central Finance Minister, Mr. T. T. Krishnamachari, has recently revived the idea of replacing land revenue by agricultural income-tax in the States. He feels that small owners might be exempted from the tax, and that a small levy in the form of "quit-rent" could be imposed on them. Admitting that certain adjustments might have to be made if the idea is implemented, Mr. Krishnamachari claims that the change would increase the resources of State Governments. According to him, such a tax would provide incentives to small owners who would be required to pay only a nominal tax in the shape of "quit rent". The Finance Minister thinks that if State Governments combine the proposal with monopoly procurement of foodgrains, the food problem might be solved. An adjustment in assessable agricultural incomes would increase the resources of the State Governments, and the scheme would thus help solve the problems of land and finance as well. Some State Governments have not reacted to the proposal favourably. The Revenue Minister of Uttar Pradesh has said that the State exchequer would lose more than Rs. 19 crores out of its total land revenue of Rs. 22 crores, because the limit of agricultural income-tax would have to be fixed on par with that for income-tax, and holdings below 30 acres would then necessarily have to be exempted. The Revenue Minister of Madras doubts whether agricultural income-tax, after providing for exemption to small land-owners, would yield the Rs. 6 crores which the State Government gets at present from land revenue. The levy of agricultural income-tax would complicate matters because most farmers are illiterate and unable to maintain accounts of their incomes. It is worth recalling that in examining land revenue problems, the Taxation Enquiry Commission said that agricultural income-tax could not be an effective substitute for it. Instead of recommending an agricultural income-tax, it suggested reforming the land revenue system. The number of large holdings is limited and the revenue which State Governments may expect to derive from agricultural income-tax would be insufficient for their purposes. The best course for State Governments, the Commission thought, would be to reform the land revenue system and introduce agricultural income-tax as a supplementary source of revenue.

* * * *

U.K. National Assistance Scheme.—The U.K. National Assistance Board, which Labour politicians in Britain are always pointing out the poor and needy are too proud to approach, was last year paying [illegible] many weekly allowances till 1948. Figures given in the Board's report for 1956 show that the number of weekly allowances rose to 1,656,000, which covered the needs of more than 2,250,000 people. This compared with 1,612,000 in the previous year and with 842,000 in 1948. The amount paid in assistance was £105,160,000. More than two-thirds of the 1,656,000 allowances current at the end of the year were paid to supplement National Insurance benefits—972,000 to supplement retirement pensions, 117,000 to supplement sickness benefit or industrial injury payments, 70,000 to supplement widows' benefits, and 30,000 to supplement unemployment benefit. Nearly 1.2 million of those receiving assistance were over pensionable age. They consisted of 927,000 retirement pensioners, 146,000 non-contributory old-age pensioners, and no fewer than 113,000 receiving neither pension. All but 73,000 of the remainder were those incapacitated by sickness or disability or women with domestic ties—usually young children—which prevented them from seeking employment. The 73,000 were those registering for work at employment exchanges. The report makes the point that these 73,000 represented only a minute proportion of the total working population of about 23 million. They numbered less than a quarter of those registered as unemployed about 300,000 in December. The Board made an enquiry during the year to find out about those whose assistance money was paid only on condition that they registered at the employment exchange. The results showed that the hard core of unemployed being maintained on National Assistance were mainly disabled persons and unskilled men and women with physical or mental limitations which made it harder for them to get or keep a job.

* * * *

Pool of Ex-Colonial Servants.—In May last year the British Government accepted in principle a plan put forward by Mr. Lennox-Boyd, Colonial Secretary, to form a central pool of ex-colonial servants who would be available for secondment to the independent Governments of the Commonwealth. The purpose of the pool is twofold. On the one hand, as the colonial territories achieve self-government, the rôle of British administrators as employees of the British Government comes to an end. This inevitably creates a sense of insecurity among the officials concerned in the last stages of a colony's transformation. At the same time, the newly independent Governments have, in many cases, a continuing need for experienced administrators which they cannot meet from their own resources. The idea of the new pool is to meet both these difficulties at the same time. The British Government will "recruit" people with the necessary qualifications for secondment to "overseas Governments as required", and it will recruit them primarily from those who served in the territories concerned before they became independent. Lists are being prepared of those who are ready and available to accept service of this kind, the intention being that they shall be paid in the first instance by the employing Government but that their security of tenure and pension rights shall be the responsibility of the British Government.

THE HIGH COURT

WE quite agree with our contemporary, the *Indian Daily News*, that the proposal to institute four original benches in the High Court, as suggested by the *Englishman*, is nonsense pure and simple. And we also agree that the Original Side of the High Court is sadly in need of a thorough overhauling. We believe that two original courts sitting daily for the disposal of cases would be amply sufficient to deal with the work of the Court, but they should not be hampered with insolvency matters or the Sessions and should be confined to the trial of civil suits. Three judges should be devoted to the business of the Original Side—two sitting togther and one singly. All cases over Rs. 10,000 in value should be heard by the bench of two judges, so that appeals to the Privy Council would be made direct therefrom and the expense of two hearings in the High Court avoided. The single judge should try all cases below Rs. 10,000 in value and hear motions in all suits except such as would in any way affect the hearing; such motions would be heard by the bench before which the suit would come for trial. Commercial causes in both Courts should have precedence. The effect of this would be considerably to lessen the work of the Appellate Bench, which is occupied nearly three months in the year trying appeals from the Original Side. There is no doubt, as the *Indian Daily News* observes, that the High Court is extremely antiquated, and its procedure very much behind the times. Thus, for instance the evidence in all cases heard in the High Court is taken down by the Clerk of the Court in longhand, there being no shorthand writers available; this leads to a great waste of time and is an unnecessary expense, because there is no doubt now, that competent shorthand writers could be secured at very reasonable salaries. But in as much as when this antiquated procedure was laid down, a shorthand writer was about as rare a bird as the black swan, this cumbrous method of procedure was introduced and has been retained ever since. If a small committee of competent persons were appointed to remodel the working and procedure of the High Court, considerable improvements might be made without much increase of expenditure.

Without Prejudice

RIGHT TO DISMISS A WORKMAN

DECIDING THE SEVERITY OF THE PUNISHMENT

(FROM OUR LEGAL CORRESPONDENT)

WE have commented on this case several times *in this column* as it has reached and passed its various stages consisting of one appeal after another. It has now passed its final stage, the decision of the Supreme Court, and our original intention was to include it in summarised form in our annual commentary on the decisions under the Industrial Disputes Act reported in 1957. But on reflection it seems proper to give it fuller treatment, and for this reason—that it illustrates what is becoming a patent fact, namely, that the administration of the Industrial Disputes Acts in so far as they purport to protect the rights of employers is becoming largely farcical; a rather grim "source of innocent merriment".

It is barely believable from a practical commonsense point of view that in a matter in which the facts are perfectly clear and where a workman has been intentionally guilty of flagrant insubordination and disobedience to a written order necessary vitally for the protection not only of property but of life and limb of the general public, including those of the workman himself, it should take the employers more than four years, and involve them in the retaining of leading solicitors and counsel and the expenditure of thousands of rupees, before they are permitted to exercise the simple common law right, which, moreover in the interests of the public it is their duty to exercise, namely, the right to dismiss the workman concerned. Nevertheless it is a fact due, let us say at once, not to the various tribunals and the courts, but to the Acts themselves and the various expedients provided therein by which justice can be delayed and thus denied year after year.

We will recount the successive judicial stages in due order, but, first, for the benefit of those who did not read our previous note, let us recapitulate the facts. They are very simple. The workman, one Eugene Fernandez, was engaged in the service of Messrs Caltex (India) Ltd as a driver at their Santa Cruz Airport service station. On the morning of 28th November, 1952, while on duty at the Santa Cruz Aerodrome in an area where smoking is prohibited and at a time when an aircraft was being re-fuelled by the company's servants, the workman was found smoking within about 25 feet of the aircraft. Smoking while on duty is prohibited by the company; the area in which the man was found smoking is an area where smoking is expressly prohibited; and under the Aircraft Ground Fire Precaution Rules smoking is prohibited within 100 feet of an aircraft being re-fuelled. At the time when this re-fuelling was in progress a "No Smoking" sign was placed on the re-fueller with a view to preventing anyone in the vicinity from smoking and definite instructions had been given to that effect to all the staff concerned, including this particular workman. Apart from all these precise orders too, one might think, that if he had a grain of sense in his head, the man would not have done such a dangerously reckless act.

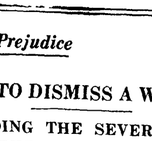
But he did; what is more, he had the insolence to do so with the district manager himself standing by. And though the point appears not to have arisen, apart from wilful disobedience to orders, in the writer's view this piece of cool insolence was in itself misconduct which would have justified drastic punishment. Having been caught red-handed by the district manager, the man was "charge-sheeted". He pleaded guilty, and as proceedings under the Act were already pending, the employers, wishing to dismiss the man, applied to the tribunal for permission to do so. So here we are at stage 1. And before we come to the decision—a remarkable one at that—let us consider the position by the ordinary law of the land. At common law there is "no possible doubt, no possible probable shadow of doubt, no possible doubt whatever" that the man was liable to instant dismissal. Disobedience to a lawful order, sometimes styled insubordination, is, beyond a peradventure, ground for such dismissal. Indeed, one English judge—"and a good judge too", to wit Lord Darling—goes further and, citing the instance of a signalman on a railway who does not put the signal at danger when he ought to do so, more than hints that where the man's conduct constitutes a danger to the public the employers have very little discretion and it is not so much a right as a duty to dismiss the man.[1] In such a case it is not safe to give him another chance.

That was what Caltex (India) Ltd felt and urged concerning Eugene Fernandez, felt in fact so strongly that they were prepared to go to the highest Court in the land about it. And they, in fact, eventually had to do so. The industrial tribunal appears to have looked upon the offence as a comparatively minor one. Dismissal, it felt, would be an excessive punishment in view of the man's service record, his admission of guilt, his plea for leniency and promise "not to do it again." The tribunal attempted to impose conditions on the company by putting it to them that if they amended their petition to ask for some punishment less than dismissal, permission would be granted but that otherwise the application would be entirely rejected. Caltex Ltd would have none of this timorous counsel, thereby, as we think we suggested in our previous note at the time, performing a public service.

One is glad to note now the forthright approval which their refusal received from their lordships of the Supreme Court: "The appellants who were acting *bona fide* in the interests of public security and safety as well as in the interests of the whole petroleum industry and the safety of life and property for which it was necessary to maintain discipline rigidly, did not agree to a punishment less than dismissal in view of such gross and wilful misconduct as had been proved. The industrial tribunal in the result rejected the application of the appellants." But we are anticipating and must retrace our steps to early in 1953. With the industrial tribunal's decision we reach the end of stage 1, when, unless the decision was appealed against, the position was that no employer in industry could rely with any confidence on being allowed to dismiss any employee for any misconduct whatsoever.

* * * *

Caltex Ltd did appeal. Solicitors and counsel set to work again and stage 2 is the appeal to the Labour Appellate Tribunal to have the order of the industrial tribunal set aside and for permission to dismiss the workman. We think, writing from memory, that we dealt with the appeal fully in *Capital* at the time. Lack of space prevents us from saying more about it now than that the appeal was successful on the ground that the industrial tribunal had exercised its jurisdiction perversely: and permission to dismiss was given. End of stage 2.



Stage 3 was a petition to the High Court of Bombay by the workman for issue of a writ of *certiorari* to quash the decision of the Labour Appellate Tribunal on the ground that it had had no jurisdiction to deal with the appeal to it at all as no substantial question of law was involved. The petition was heard by Desai J., who delivered a considered judgment dismissing it. That brings us to 14th July, 1953. The workman appealed to the Division Bench and the learned judges (Chagla C. J. and Shah J.) allowed the appeal on the ground that the Labour Appellate Tribunal had acted without jurisdiction, no substantial question of law being involved. End of stage 3, with the industrial tribunal's decision restored. Stage 4 was application by the company to the High Court for a certificate under Articles 133(1) of the Constitution enabling them to carry the matter to the Supreme Court. This was refused, and the refusal brings us to stage 5, which was an application to the Supreme Court itself for special leave to appeal to it. And stage 6 was the actual hearing of and the judgment in this final appeal.

The appeal was successful, with the result that employers now know definitely where they stand on this vital question of enforcing discipline. Observing that "the whole approach of the industrial tribunal was wrong," their lordships laid down once and for all what the right approach is. "The industrial tribunal has no jurisdiction, while entertaining an application under Section 33 of the Industrial Disputes Act (for permission to dismiss), to consider whether the punishment sought to be meted out by the employers to the workmen is harsh or excessive. The measure of punishment to be so meted out is within the sole discretion of the employer, who is to judge for himself what is the punishment commensurate with the offence which has been proved against the workmen. The only jurisdiction which the industrial tribunal has under section 33 is to determine whether a *prima facie* case for the meting out of such punishment has been made out by the employer and the employer is not actuated by any *mala fides* or unfair labour practice or victimisation. An industrial tribunal has no power to substitute another punishment for the one sought to be meted out by the employer or to impose any conditions on the employer before the requisite permission can be granted." Permission to dismiss was given.

Thus we now know on the authority of the highest Court in the land that it is for the employer and not the industrial tribunals in cases of this kind to make the punishment fit the crime. But at what a cost of time and money has this practical and commonsense information been acquired! The various stages of this litigation have been emphasised deliberately. Nearly four years of litigation. Counsel and other lawyers successively arguing before an industrial tribunal (one member), the Appellate Tribunal (two members), a High Court (one judge), a High Court again on appeal (two judges), the Supreme Court for leave to appeal, the Supreme Court again on the hearing of the appeal (four judges). And all this to decide a point which, if it had arisen at common law in an ordinary suit for damages for wrongful dismissal, would have been disposed of by a *munsif* or sub-judge in a judgment of 15 minutes' duration!

Resident Field Engineer

The unique HOLLERITH SERVICE

The accountant's visitor had come to see what sort of job Hollerith punched card machines were doing. "Tell me," he asked, "what sort of service did Hollerith give you?" This time the accountant looked surprised. "Did?" he queried, "Surely you know that one of the big things about Hollerith is the *continuous service.*"

The two reports

In Hollerith installations your equipment is, as it were, 'hand-tailored'. Your problems are very fully studied before the first careful report is presented to you. No fee is charged for this service. The second report is a detailed working plan in which the flow of work—every facet of the operation—is set out in full.

First careful report

Consultant, guide and friend

The Technical Service Man sees your installation in. Trains your staff. Stays with you till you are absolutely at home with your mechanised office. The maintenance of your machines is now in the hands of the Field Engineer who is always very quickly available.

Responsible advice

Modern business, because its control is based on figures, points all the time to mechanisation. You may only need simple punched card equipment. You might even be ready for an electronic computer. An electronics specialist is available to discuss this with you. Why not send for him? No fee is charged.

Trains your staff

The Hollerith Type 550 Electronic Calculator

Footnote

Hollerith is a vast organisation with immense research facilities, a network of offices throughout India, and a very long experience of Indian business needs.

A DITCHER'S DIARY

EARLY next week, Mr. T. T. Krishnamachari takes off for the United States, and so important is his mission for the economic future of this country—and every other kind of future depends on that—that he can be sure he carries with him the best wishes of every friend of India. It may not be impertinent to proffer with my own good wishes a few traveller's tips. Americans are perfect Gluckites for foreign names, and it may be a sound idea to make sure that he is never mistaken for Mr. Krishna Menon who, I am told, is less popular in the United States than Marilyn Monroe. This nominal handicap apart, Mr. Krishnamachari seems to me the best representative to send abroad for raising money, something he understands as well as any American. That twenty years ago he was the best dressed man in the business world, as we have been told recently, may be less important than the fact that he is a product of the business world and in some ways retains a businesslike approach to problems. If Walter Lippmann has done something to prepare the ground for the Finance Minister, by telling his large readership that the free world may have to regret it if the Indian plan fails, so has Ravi Shankar who recently played his *sitar* to large audiences in the States. This latter reminds me that Mr. Krishnamachari is an admirer of classical Karnatic music and songs. His brief in the United States may not be vastly unlike; he will have to emphasise by iteration, and he will have to improvise as he goes along. If he deplores the enormous delays that occur in some banks when one wishes to cash a cheque, as we have been recently informed, he may have to remember that he is not going to America exactly to cash a cheque; or if he is, it is perhaps a post-dated one. All this, however, is largely raillery. The investor, foreign or otherwise, is a shrewd and hard-headed individual. Mr. Khrushchev recently failed to sell to Americans his idea of socialism in their grandchildren's time. It is to be hoped that Mr. Krishnamachari will do better with the "socialism in our lifetime" theme.

There was once a sub-editor in this office who submitted an item for inclusion in the feature called "Engineering and Transport." Fortunately, it was discovered before the item's journey to the press could begin that it related only to an amendment of the Madras Immoral Traffic Act, and had no more to do with transport. This, however is not the only reference this journal can claim to the subject on which Sir John Wolfenden reported in the United Kingdom last week. Pat Lovett, the first Ditcher, wrote columns and columns on the inadequacies of the law in India for the control of prostitution, and it is a measure of the intractability of the problem that we are probably no nearer an answer today than we were when Lovett wrote. The Wolfenden report does, however, take the wind out of many an idealistic sail, especially the economic one. For so old a phenomenon as prostitution, to which the Wolfenden committee's enquiries were not confined, there must be more reasons than we are likely to know for a long time. Although it is recommended that certain fines be increased from 40s to £5, the committee is under no illusion that a higher penalty will be a complete or even serious deterrent. What Lovett campaigned for, if I remember what I read many years ago, was punishment for the client, whom the present criminal law scarcely touches. The police have so much else to do, in this country at any rate, that control of vice necessarily takes a second place, even if it be true that they are the best agency to perform this function. I suspect that the Wolfenden committee's report may be of only limited relevance to this country, because the objective factors are materially different. If poverty is no longer an excuse for resorting to prostitution in countries where the economic opportunities for women are greater, this cannot apparently be equally valid here. Only on Monday last did a Calcutta magistrate let off a couple after the husband had pleaded guilty of permitting his wife to lead a life of shame because of poverty. The acquittal was accompanied by a stern warning that they "should not indulge themselves in such heinous activities." But one sometimes thinks that society might have a right to be sterner only after it could suggest an alternative.

* * * *

The missionaries of Serampore, who I understand made the first Bengali types, would probably have appreciated better the recent revelation by Tass that a factory in Leningrad, of course "the largest of its kind in Europe," has filled an order for six tons of Bengali type. Children's books in Bengali, printed in Russia, are already on sale in Calcutta, and one has heard of Bengali publishers being worried. What this other competition will mean to the type-makers of Bengal I do not know. It seems possible that the economic consequences of Russian penetration into the printing trade of this country will be less significant in the long run than its other results. Even as the missionaries referred to above had no thought of profit, but wanted only to put across the message of Christ to the people in their own language, so may the Russians seek to disseminate their own Bible in Bengali. Beyond this, however, the parallel cannot be carried, for there are known differences between what Christ had to tell the world and how Marx thought the world should be reorganised. There is also the additional fact that there are now inter-continental ballistic missiles behind the Marxian message. In the not too distant future this co-existence in the type-making field may take several interesting forms, some of them scarcely visible. These types, it is certain, will be sold at competitive prices, meaning cheaper than the prevailing Indian price. Is it altogether unlikely that the recipients will thus be placed under some sort of obligation to the supplier, to be repaid in another currency than the rupee or the rouble? I seem to remember that the Russians made their *début* in the Middle East with gifts of printing machines to newspapers carefully selected according to their politics. It is to be hoped that no Bengali newspaper will consider itself so pressed by awards and Pujah bonus demands as to sell itself for a handful of lead. "Moscow gold" is a familiar enough phrase. We may soon have to be as wary about Leningrad lead.

* * * *

"And now," Professor J. B. S. Haldane told Calcutta Rotarians on Tuesday, "I am going to tell you what I am going to do in the private sector." This was after he had spoken, with wit and precision, about just what he and his wife were doing in the Indian Statistical Institute since their arrival in this country about six weeks ago. Was I imagining it that his reference to the private sector and to his threatened participation therein produced a somewhat apprehensive reaction in his audience, composed chiefly of business men? At least the gentleman next to my host looked unmistakably worried, and his relief was distinct when the mercurial biologist, often called cactus, said that, for the present at any rate, he proposed to do nothing more drastic than publishing his *Journal of Genetics* from India which, he estimated, might bring into India about half a lakh in foreign currency. "For a year or two at any rate," he said, he did not expect to make as much money out of this publication as Mr. Birla makes in his business. For the rest, he would devote himself to research and teaching, the former to be directed to such esoteric subjects as the ways of the *tussore* silk moth. It is not always that I find myself in agreement with Professor Haldane and his wife, but as I heard him at the Rotary Club on Tuesday, where he declined to use the microphone, I wondered whether there was not something rather likeable about the man. His science is beyond me, and his politics beneath. Going by reports in the Press, which he did not forget to insult again, I had thought he was something of an exhibitionist. All these notions were not dissipated by a closer look last Tuesday, but I wondered how hard it must be for an Englishman to cease to be English, and how much harder to live down a public school education. To declass oneself. I concluded with Lenin, is just about impossible. In spite of his slippers, no tie and crumpled trousers there was no mistaking that he had been sent to Eton by his family, a very old one.

Sir Biren Mookerjee's address to Indian Iron and Steel shareholders at the annual general meeting yesterday contains some disturbing remarks about the deterioration in the labour situation. Their significance is not to be judged solely in the context of his company's affairs, or even because it is the country's second biggest steel producer. The significance is much greater in the sense that the trend in labour politics to which he refers is becoming widespread, as many other industrialists have recently testified. It seems to me that there are two main factors explaining the "extreme lack of discipline" to which Sir Biren draws attention. One is that the Government has not yet succeeded in giving expression of effectiveness to what might be a coherent labour policy. The second is the growth of a multiplicity of unions in various units and industries; in the scramble for new membership, it cannot be surprising that the manner of their framing and putting forward demands on behalf of workers has come to resemble the competitive bidding of a furniture auction. It is one of the weaknesses of an easily misled labour force that it tends to judge its friends by the size rather than the realism of their promises; and it is precisely this weakness that the union leaders have striven to exploit. Their task has been made somewhat easier by the inflationary conditions now prevailing in the country—a danger the implications of which have been realised only since the Government's own employees threatened to go on strike a few weeks ago. Congress executives such as Mr. Shriman Narayan have recently done much to publicise aspects of lawlessness in Kerala; but perhaps a little more publicity could be given also to such incidents nearer home as Sir Biren speaks of, where "even murder has been resorted to in an endeavour to terrorise workers belonging to the recognised union and to disrupt normal operations." Many will agree with the Indian Iron chairman on the need to build strong and representative unions which can restrain the subversive influence of those whose main aim is disruption. A stricter policy concerning their recognition might constitute a useful start in this direction.

THE INDIAN IRON & STEEL COMPANY LIMITED

CHAIRMAN SIR BIREN MOOKERJEE'S REVIEW

At the Annual General Meeting of the Shareholders of The Indian Iron & Steel Company Limited, held in Calcutta on 11th September, 1957, Sir Biren Mookerjee, the Chairman, dealing with the year ended 31st March, 1957, said :—

Gentlemen,

It is my privilege to address you this year as Chairman of the Board of Directors in the absence on very well-earned leave of Mr. Leslie Martin. It is, however, the intention of the Managing Agents that on his return to India, Mr. Martin should resume his former position as Chairman, and to this end I commend to you the resolution that will be proposed at a later stage of this Meeting to provide for his re-appointment.

Production and Despatches

The total production of iron at 695,156 tons showed a decrease of 11,830 tons from that of the previous year due to the reduce output of the Blast Furnaces at Kulti. These Furnaces with their ancillary plant are now very old and uneconomical and subject to frequent shut-downs for repairs. Under the 1953 Extensions Programme it had originally been the intention that heavy capital expenditure should be incurred in effecting their complete modernisation and rehabilitation, but on a later examination of the position in connection with the Company's 1955 Extensions Programme and the overall Second Five Year Plan of Government, the conclusion was reached with the concurrence both of Government and the World Bank that such expenditure would not now be warranted having regard (a) to the surplus pig iron that would be available from the new Blast Furnaces at Burnpur and from the other new or expanded plants and (b) to the inevitable higher cost of production at Kulti owing to inherent operational difficulties. It was accordingly decided that the Kulti iron plant should be closed down when the new Blast Furnaces at Burnpur came into operation.

In consequence of this decision, Government withdrew as from the 1st January 1956 the special depreciation element of Rs. 6/8/- per ton included in the sale retention price of iron to the Company despite protest that the resultant price was quite uneconomical. Possibly in view of feared delay in the bringing into operation of the new plants, Government have recently requested that the Company should examine the possibility of the Kulti Blast Furnaces being maintained in production for a period of about four years. This position would be capable of achievement only by the incurring of considerable expenditure on the plant and our Consulting Engineers are now examining the matter. In the meantime it has been indicated to Government that the Company would expect all such emergent expenditure to be met by Government and the retention price of iron to be adjusted in relation to the actual cost of production.

Production of the Burnpur Blast Furnaces was 476,336 tons against 473,172 tons for the previous year, the slight increase being due to the fact that the relining of No. 1 Furnace during 1956-57 was effected in a still shorter period than that of No. 2 Furnace in 1955-56, thus constituting a fresh record for the Company.

As regards the out-turn and despatches of steel, you will have realised from the particulars given in your Directors' Report that a number of special factors operated to inflate the position for the year 1955-56. These factors did not recur during the year under review which accounts for the decrease shown.

Profit

In view of the reduction of 31,114 tons in the despatches of steel there is naturally a fall to a more normal level in the gross profit earned for the year under review and the effect on net profits of this fall has been greatly accentuated by the severe increase in the rates of corporate taxation imposed under the Finance Act 1957. The severity of this increase will be realised when I tell you that had the Reserve for Taxation been calculated at the rates previously prevailing, the charge would have amounted to Rs. 269 lakhs as compared with the sum of Rs. 319 lakhs that has had to be provided to cover liability at the new rates. The incidence of the increase of taxation on the profits of the year under review accordingly amounts to no less a sum than Rs. 50 lakhs.

In face of this position it was decided that the time had now come to commence adjustment of the large balance standing on the Reserve for Taxation Contingencies and an initial write back to Profit & Loss Account of a sum of Rs. 47 lakhs has accordingly been made in the Accounts now before you. The Reserve in question is maintained to offset the increased incidence of taxation in subsequent years as a result of the special depreciation allowances granted in earlier years in the case of plant and buildings. The major part of the Reserve is attributable to the initial depreciation granted in previous years which has the effect of cutting off any further depreciation allowance for taxation purposes once the value of the asset has been written down to a certain level, and write back from the Reserve on this account will, in consequence, operate only as and when that level is reached. In addition, further special depreciation is allowable on plant and buildings during the first five years of their life which has the effect of reducing the allowance for each subsequent year with a consequent increase in the liability for taxation. It is to offset the position in this latter respect that the write back of Rs. 47 lakhs, which is not an arbitrary figure, but a calculated amount covering the position up to the 31st March 1957, has now been made. It is the intention periodically to examine the position so that the balance of the Reserve may gradually be adjusted.

Initial depreciation now no longer applies having been replaced in the case of plant and machinery by the grant of Development Rebate giving an outright exemption from taxation of 25% of the cost of new plant and machinery installed. The approximate tax saving on this account for the year under review amounts to Rs. 8,50,000 which sum has accordingly been transferred to General Development Reserve raising the balance of this Reserve to Rs. 16,50,000. As and when the major items of the extensions plant are commissioned the Development Rebate and the consequent saving in taxation will be substantial and, as was explained last year, we count to a large extent on the continuance of the Rebate for finance of the 1953 and 1955 Extensions Programmes, which apart from the pure capital cost of the added plant will involve a very considerable increase in the working capital requirements of the Company for the finance of rolls, spare parts, stores, raw materials stocks and the generally increased financial requirements of the expanded undertaking.

Dividend

The fullest representation was again made to Government for admission of the Ordinary shareholders to some added participation for the year under review in the continuing prosperity of the Company, it being urged that with the limitation of dividend imposed in the past, the financial position of the Company had been strengthened to such an extent that the stage had now been passed where it could be validly contended that a small increase in the dividend distribution would in any way prejudice the finance of the cost of the Expansion Programmes or the due repayment of the indebtedness that is being incurred. It is a matter of regret to your Directors that Government have been unable to accept the views of the Board in this matter and in their letter dated the 29th July 1957, a copy of which has been appended to the Directors' Report, have notified that restriction of the dividend must continue until the Expansion Programmes have been completed. This reply is a slight improvement on the earlier attitude of the Government. As the 1953 Extensions are expected to be completed next year, whilst one of the two batteries of coke ovens and one of the two blast furnaces will be ready for commissioning this year, I trust it may be possible for the Government to relax their control in the near future. In the meanwhile, your Directors would again point out that the decision of Government cannot be challenged without serious detriment to the interests of the Company and would urge that the position be accepted with good grace in the hope and expectation that the justness of the claim of the shareholders to a reasonable participation in the improved and continuing prosperity of the Company must ultimately be recognised.

Future Prospects

I should perhaps sound a note of warning as regards the present year. We are now feeling the full effect of the disruption of current operations that is inescapable when a plant is being expanded and constructional and operational work has to go on side by side. In these circumstances there has inevitably been a drop in production and whether this can be made up will depend entirely upon the date when it will be possible to bring into operation the first of the new blast furnaces at Burnpur, a matter with which I will deal in more detail at a later stage.

As to the future in general, I have no hesitation in saying that if it depended entirely on the efficiency, diligence and enthusiasm of all of us alone, your prospects would appear to be bright. However, in the day to day changing moods of the workers, not only in the industries but in all those departments whether in the Government or outside, who have to make their contribution towards the national effort, nothing can be said even with reasonable certainty as to what we may expect in future. Extreme lack of discipline has manifested itself particularly during the last few months amongst all classes of workers, in many essential Government or other services, the Ports, etc., accompanied by actual or threatened strikes and by violence. Political agitation, sometimes accompanied by violence, has also played its part in interrupting industrial production and disturbing the public peace. This state of affairs may, if it continues, entirely upset not only our own expectations as regards the future operations of our plants, but the entire economy of the country. I would, therefore, with all the emphasis I can command, urge upon Government the vital necessity that violence be severely dealt with and punishment meted out with promptitude not only to those by whom the overt act is committed but also to those to whose subversive background activities this violence is directly attributable.

In our own works, in spite of an almost continuous improvement during the last few years in the conditions of service and emoluments, to which I shall refer later, it is regrettable that the workers allow themselves to be influenced by a minority affiliated to a certain political party and activated by the motive of supplanting the recognised Labour Union. This unfortunate position has been evidenced during the year by sporadic illegal strike of short duration in the essential services sections, which have been particularly serious in the case of the Gua Ore Mines where even murder has been resorted to in an endeavour to terrorise workers belonging to the recognised Union and to disrupt normal operations. I cannot too strongly condemn this manifestation of an influence which for the gaining of its own party ends can contemplate with equanimity the disruption of all planned progress towards the achievement of the country's social advancement and industrial self-sufficiency. As you must have noticed, similar troubles have been reported also from Jamshedpur in the speeches of the Chairman of the Tata Locomotive and Engineering Co. Ltd., and the Tata Iron & Steel Co. Ltd., at their recent annual meetings.

Mere condemnation, however, is of little use unless it is coupled with some suggestion as to how the position may be met. My personal opinion, based on a study of similar situations in other industrial countries, is that the evil can best be countered by the building up of really strong and representative labour unions having the full support of the workers and capable of restraining the subversive influence of those few who for their own ends attempt to cause disruption to the detriment of the general welfare and that no other unions should merit Governemnt's recognition. I would in fact go further and say that what affects one section of an industry must have repercussions upon the whole of that industry and therefore the ultimate solution may lie in the building up on an industry-wise or craft-wise basis, of unions under the leadership of responsible bodies of men who have the interest of the country and the workers genuinely at heart and who are not swayed by political influences or the desire for self-aggrandisement.

We have progressed a long way since the days when an employer could contemplate with equanimity, as reducing the bargaining power of the workers, dissension within a single union or the formation of a number of rival unions. It is now the desire, I am inclined to believe, of all enlightened employers that they should be able to deal with one strong labour union enjoying the support and truly representing the interest of its members. Given such strong and representative unions, employers and workers could readily resolve the difficulties that must from time to time arise between them and could act together in full co-operation and mutual trust, thereby enabling the country to advance to new fields of prosperity and social security.

There are, however, other difficulties which will discourage any prudent man from trying to peep into the future. The solution of these difficulties almost exclusively depends upon the success of the more than Herculean tasks to be performed by the Government according to schedule for the implementation of what has been lately described as the "hard core" of the Second Five Year Plan, particularly in respect of the supply of good quality coking coal and the transport of this and all other raw materials and ultimately the finished products. This "core" consists of the development of iron and steel, coal, transport and ancillary power and necessarily includes the two major units in the private sector of the steel industry. I shall try and explain to you briefly how the success or the failure of the Government's efforts in this respect is likely to affect the operations of our extensions with which your future is naturally linked up.

Expansion Schemes

In your Directors' Report and in the report by our Consulting Engineers that was issued therewith, a full description has been given of the stage which the schemes have already reached. We have, as you are aware, two programmes of expansion in hand, the earlier of which is described as the 1953 Extensions and the later one as the 1955 Extensions. The latter scheme was undertaken by us at the request of Government to form part of the Second Five Year Plan. it is intended to enable us to produce more finished and expensive products by reducing the excessive output of the semi-finished ones and of the saleable pig iron contemplated in the 1953 Extensions. The total production after the completion of the 1953 scheme will be 1,00,000 tons of ingot steel or 800,000 tons of saleable steel instead of 700,000 tons of saleable steel as planned under the 1953 Extensions.

The 1953 Extensions, which you may remember suffered an initial delay of nineteen months, are expected to be completed by the end of 1958 if no unforeseen difficulties arise in the meanwhile, in which case we shall have made up seven months of the delay. Towards the end of the current year we expect to bring into operation one of the two batteries of coke ovens and one of the two blast furnaces included in the scheme, and the conversion of the old 600 ton active mixer into a 300 ton steel-making furnace, whilst the second coke oven battery and blast furnace are expected to be completed and function towards the end of 1958 along with the completion of the new Open Hearth melting shop.

In order to work the first battery of coke ovens we shall require an extra 54,000 tons of coking coal per month. This will bring the total monthly requirements of coking coal for Burnpur to 146,000 tons and we have been advised, and very rightly, by our Consulting Engineers and by the plan manufacturers that the new coke oven battery should not be lighted unless we have built up and can expect to maintain a stock of at least 100,000 tons in our works.

At the moment I can only say that the attainment of this stock position by the time the new coke oven battery is ready appears to be remote and in fact even the maintenance of supplies of coal for existing operations causes no little concern. As an indication of the seriousness of the position I would say that during the current year we have literally been living from hand to mouth and that recently orders had to be given to reduce the throughput of the coke ovens owing to the dangerously low level of the coal stocks which in turn has meant a reduction in the production of steel. The fullest representation has all along been made in official quarters and it has been somewhat disheartening to be referred from one department to another, each in turn refusing to acknowledge responsibility for this sad state of affairs. I am hopeful, however, that as a result of intervention at ministerial level lately, the position may improve.

Similarly, we shall require a further 60,000 tons of iron ore per month to work the first new blast furnace. Owing to the late delivery of mining plant and machinery, caused by the strikes in America and the closing of the Suez Canal, the full mechanisation of our Gua Ore Mines will be delayed by about five to six months. For this reason, we have been advised by our Consultants to stock pile about 225,000 tons of iron ore at Burnpur. Although the target has not been reached yet, we have every hope that this position will be achieved by the end of November next.

Each of the new blast furnaces is designed to produce about 1,200 tons of pig iron per day which can be converted into say 1,000 tons of steel. Taking the present average import price of foreign steel at Rs. 700 per ton, which is perhaps Rs. 150 per ton lower than the price at which steel is being imported at present, the bringing into operation of the first blast furnace will mean a saving in foreign exchange to the country of more than Rs. 2 crores per month. The completion of the second blast furnace will double this advantage.

The second battery of coke ovens and the second blast furnace will also need about 54,000 tons more of coking coal and about 60,000 tons more of iron ore per month. Our total requirements including our present consumption will, when the 1953 Extensions are completed, be about 200,000 tons of coking coal and about 185,000 tons of iron ore per month, which means the transport of more than 6 million tons per annum in addition to considerable quantities of limestone, stores and other essential materials for our Burnpur Works equal to another one and a half million tons. In addition there will be 800,000 tons of saleable steel per annum to be moved. Allowing only four days turn round for the wagons, the Railways will have to provide for us carrying capacity for about 24 million tons or so per annum, about one third of which will have to consist of specially built hopper wagons for iron ore. These, I would emphasise, are the transport requirements for Burnpur only and take no account of the requirements of your Kulti Works.

In this connection it may not be out of place for me to observe that when the three Government plants and the extensions of the Tata Iron & Steel Co. Ltd., come into operation, the problem of transport may prove to be very difficult as most of the steel works will have to draw their principal raw materials from more or less the same area or neighbourhood which will cause a considerable amount of congestion on the railway lines and consequential delay. In such circumstances it is natural on the part of the private sector to apprehend that in the distribution of the transport facilities some discrimination may be made between it and the public sector. We are quite certain that at the ministerial level any discrimination between the private and the public sectors is unthinkable. We cannot, however, be certain that unless strict control is observed at the ministerial level or by some other high authorities, the administrative staff in charge of the transport or supply of the raw materials, particularly coking coal, may not exercise some discrimination between the two sectors. They may naturally imagine that their primary duty is to enable the Government projects to function before those in the private sector. Some public assurance, therefore, that continuous priority will be given in respect of this matter to meet regularly the requirements of the private sector, both for stock piling and normal use, is highly desirable if the two projects in the private sector are to meet punctually their obligations in respect of the heavy foreign loans contracted by them to finance their extensions.

Employees Welfare and Emoluments

In previous years we did not think it necessary to give an account of the wages and other emoluments of our employees and of the many amenities provided by us. Since those employed in industries in whatever capacity have in recent years attained what is now described as the status of partners in the fortunes of the industry concerned. It is desirable, therefore, that I should place before you briefly what we have so far done and plan to do in the future, as well as give you some idea of their wages and other emoluments and the amenities provided for them.

From past experience and statistics it is found that whenever an increase in wages has been given, the prices of food and other commodities have moved up almost simultaneously to the extent of 80% of the rise and in order to combat this evil we firmly believe in providing permanent benefit by increasing amenities for employees. It will perhaps be of interest if I give an indication of the lines on which we are progressing. We have always taken pride in the medical facilities that are made available free of cost to our entire staff and workers and to their families. These facilities are now being enlarged by the considerable extensions that are being made to the hospitals at Burnpur and Gua where an augmented staff of medical specialists and general practitioners of wide experience are equipped to give the fullest and most careful attention to all cases that may arise.

With the expansion of the Gua Ore Mines we have been able to plan on up-to-date and enlightened lines a model township which will provide an improved standard of living accommodation for all classes of workers. This position applies equally in the case of Burnpur where a large area of land adjacent to the steel works has been acquired for construction of a new township of the most modern design to provide more accommodation and amenities for our workers.

At Burnpur also, enlarged training facilities are being provided which will include four hostels for the accommodation of those undergoing instruction for their future positions as artisans and supervisors; a new cinema has been built to provide film shows at concessional rates and plans have been drawn up for the construction of a building to form the headquarters of a social and welfare centre called the Mahila Mangal Sabha for all the womentolk of the station. We are now building a large and modern canteen in the works for the workers in place of the older ones and at Kulti have a large construction programme for additional housing for the workers, of which much has already been completed

We have up to March 1957 already spent large sums on the town including housing and the provision of many amenities. Our present programme which I have just explained involves an immediate expenditure in the region of one and a half crores of rupees and will be followed by further developments and expenditure in accordance with our plans for the progressive improvement of the standard of living of all employees. This is a matter to which I personally attach great importance. In order that shareholders may have knowledge of what is being done, I have had a small booklet prepared showing the designs of some of the amenities for issue to shareholders with the print of this speech.

Emoluments

We have given a great deal of thought to building up the structure of the wages and other emoluments of our employees on lines which on the whole have been generally acceptable to them. The total emoluments take the form of monthly cash payments or deferred payments and the provision of various kinds of amenities. The principal items constituting the total earnings or emoluments include a basic daily or monthly wage, a dearness allowance, free housing or grant of rent allowance in lieu thereof, a production or incentive bonus, a profit sharing bonus, Provident Fund benefits, leave allowances of various kinds, free medical service for all employees and their families and free or aided educational and training facilities.

It is not possible for me in a speech such as this to enter into any great detail, and I must therefore restrict myself to giving you in outline the position for the year 1956-57 in regard to remuneration as it concerns our entire Burnpur staff who are members of the Labour Union. Our First Staff, who form but a small percentage of the total number of employees and occupy the higher technical managerial and administrative jobs, are not members of the Labour Union and therefore nothing that I say now will have any application to them.

The largest proportion of our employees be unskilled or semi-skilled workers on daily wages as distinct from the monthly paid workers who are mostly skilled men employed in the productive departments. The wages rates in both cases vary from department to department according to the nature of the work done and the ability of the worker. The semi-skilled and skilled workers naturally get higher wages and have higher earnings than the unskilled. The minimum daily wage varies between Rs. 1.00 and Rs. 1.94 per day according to the department concerned. At the former figure the total earnings, comprising basic wages, dearness allowance, quarters allowance and production bonus only, ranged between Rs. 73 and Rs. 90 per month again according to the department concerned. At the latter figure of Rs. 1.94 per day, the total earnings were Rs. 132 per month. The maximum departmental daily wage varies between Rs. 2.87 and Rs. 7.37 per day, the total monthly earnings aggregating Rs. 176 and Rs. 463 respectively, which latter amount was the maximum a daily rated worker in the Melting Shop earned.

In the case of the monthly paid workers the basic salaries vary similarly from department to department. The minimum basic salary is Rs. 60 per month, the total earnings in such case ranging between Rs. 144 and Rs. 183 per month, while the maximum basic salary is Rs. 460 per month resulting in total earnings of Rs. 1,042 per month.

In the case of most of the employees in question there is provision for the granting of annual increments.

Taking all the factors into account, I think you will agree that we are giving our employees emoluments, amenities and opportunities for advancement that compare favourably with other similar major organisations. Under the guidance of honest and competent Labour Union leaders powerful enough to eliminate those who, having infiltrated themselves into the Union or otherwise, are bent on causing disruption by fermenting sporadic strikes or go-slow methods, the Company as well as the employees can ensure for themselves a better and more stable future.

Domestic Demand and Export

Before concluding I would like to give you my views on the form the operation of the iron and steel industry may take after all the three Government plants and the Extensions of the two major producers have not only begun to function, but reached their rated productive capacity. For this purpose an important assumption will have to be made to the effect that this event will happen as scheduled by 1959/1960. To my mind this is an optimistic assumption as regards the three Government plants, though no one will be happier than I myself if it proves to be well-founded. Grave delay in the erection of the plants is likely to be caused by the admitted shortage of domestic civil engineering capacity.

The operation of the plants at their rated capacity implies not only their complete construction, but also the availability of ample traffic facilities, supply of electric power and of all the principal raw materials of good quality, particularly coking coal and limestone, and such auxiliary materials as refractories, ferro-alloys etc., without prejudicing in any way the provision of similar advantages for the private sector. It has also to be assumed that the necessary technical, skilled, semi-skilled and administrative personnel will have been trained and made available to meet their own requirements as well as those of the three Government townships.

Taking only the present demand into account, the output of the two major producers after their extensions have come into full operation may just be adequate, if the steel is carefully used, for domestic consumers including the Government. But as the Government plants begin to operate, there may be some exportable surplus. I am not prepared to make any forecasts as to what this surplus may be or when it may arise. But if the output upto the rated capacity does not materialise until 1959/1960, most of what may be produced may be required for the complete implementation of the re-phased Second Five Year Plan particularly relating to the projects for the manufacture of heavy castings, machinery, etc.

I am, however, prepared to assume that some surplus iron and steel may be available for export. The next question that requires consideration is the C.I.F. duty paid price at which it can be supplied to the export markets. In this connection it must be borne in mind that the entire iron and steel industry, particularly in Europe, including the Soviet block, may be competing in the same markets, for they are fast expanding the industry for this very purpose as well as for domestic use.

As regards the selling price, we have to take into account first all the works costs, of which no accurate estimate can be made. The estimates previously made must have already gone out of date for the reason that the prices of all the raw materials and of labour and the cost of transport have considerably increased since they were made. To the uncertain works costs will have to be added the overheads, including depreciation, interest on capital including provision for repayment of borrowed money and perhaps a return on investment and such taxation as the Hindusthan Steel Company may be subjected to. On these points we have no reliable information.

In the first place we are not told, and I am rather inclined to think that the Government themselves do not know, what the ultimate capital costs not only of the erection of the plants, but of the ancillary services which I have mentioned earlier, would amount to. We have been told from time to time that the capital costs have increased, but no reliable final figure has been or can be ascertained yet. But this I would say, that in view of the persistent rise in foreign and domestic prices and wages of labour, the capital costs and the overheads would in every case be very much higher than those, not only of the two major producers, but of the foreign competing producers who build their own plants, and competition thereby may be made much more difficult than people seem to believe at present.

I do not propose to go into the theoretical economic aspect of the matter, but to a layman like me it seems that it may not be possible for the countries in the East, who may be our principal customers, to afford to import iron and steel unless they are able to pay the price by the export of their own products. The foreign exchange that we need is mainly from the sterling or hard currency areas where it is doubtful whether they would require the imports of our iron or steel at a price which would prove to be remunerative for us.

Finally, there is one more point in connection with this matter which has received less attention than it has deserved on its merits. The manning lists of the three Government plants in so far as they have been made available to the public, have assumed the employment of far fewer men than have to be employed by the two major producers for historical reasons. It is not beyond the bounds of probability that the employees under any labour union which may be established in the Government plants may compel the Government, which has promised to create more jobs through industrialisation, to employ a higher number of men than necessary and to bring them into line with those almost compulsorily employed by the present major producers. Also, hundreds of Indians have been sent abroad for training, but from our own experience we know it is possible that when they return they may not be satisfied with the scale of wages that are prevalent for similar jobs, and Government may be compelled to accept their claims for higher wages. Then again, scores of foreign technical personnel are being imported at very high salaries and with many amenities and enjoying exemption from Indian income tax. This is bound to have its repercussions on the permanent employees in the private sector. It is plain that as a result of the operation of all these factors, the labour costs may rise to so high a level, as indeed they have been already doing throughout our economy, that our C.I.F. duty paid export prices may not be below the domestic prices prevalent in the competing countries and our own domestic prices may get beyond the means of our consumers.

Acknowledgments

In conclusion, I should like to express on behalf of all of us our appreciation of the services rendered by the Deputy General Manager, Mr. McCracken, and his staff throughout the year. Conditions are not easy when production and construction works have to proceed together and the fact that until such a late stage of the construction period the disruption of normal production has been held at such a low level speaks very highly for the careful and painstaking planning of Mr. S. L. Bengtson the head of our Consulting Engineers, the International Construction Company Limited, and for the spirit of mutual co-operation that exists on all sides. I would particularly mention the staff of the Gua Ore Mines who, in the circumstances I have earlier described, have most loyally carried out their duties under difficult conditions and at times even under threat of personal violence.

I should also like to express my great appreciation of the consideration shown by the World Bank during the recent negotiations in connection with the further loan of $20,000,000 for finance of the foreign expenditure on the 1955 Extensions, which enabled the negotiations to be concluded in such a short period and the loan consequently to be made available at a very favourable rate of interest.

Note : This does not purport to be a report of the proceedings of the Annual General Meeting, which will be sent to shareholders in due course.

Produce More and Serve A Double Purpose

Produce more and save the monies now spent in importing the deficit in our food supply

Produce more manufactured goods and hasten the process of industrialisation which is the pivot of the FIVE YEAR PLAN

We in the Bank are fully equipped to advise and help in all matters connected with commerce and industry

STOCK MARKETS QUIET AND DULL

GILT-EDGED RISE : INDUSTRIALS EASIER

London, 11th September.

VERY quiet and dull conditions prevailed in the stock markets during the past week, and prices in most sections were easier compared with their previous levels. The markets lacked incentives and there was very little encouraging news, while the factors which had an unsettling influence in recent weeks continued to affect sentiment. The main adverse factors were the Middle East situation and the persistent uncertainty and weakness of Wall Street. Falling commodity prices, notably copper, and reduced profit margins in industry—the Unilever half-yearly statement was further evidence of this—were contributory factors. A favourable influence—and almost the only one—was the better tendency of sterling in the foreign exchange market which was reflected in the gilt-edged market in spite of the very heavy fall in the gold reserves during August. Gilt-edged prices held fairly steady after these figures were published, and attracted small buying to record modest improvements. The rise was assisted by the success of the Esso Petroleum debenture issue, which established a substantial premium in first dealings. The outstanding feature of a quiet foreign bonds market during the past week was a substantial rise in West German bonds prior to and following reports that Western Germany was planning to repay her foreign debts. Dollar stocks fluctuated with Wall Street but were mainly easier on balance. Industrials had a very quiet week and the general tendency was slightly easier. Unilever issues receded and most of the leaders were down. Tobacco shares were firm on the price increases announced by the Imperial Tobacco Company. South African gold shares lost ground in the absence of interest, while copper shares developed renewed weakness reflecting the further decline in the price of the metal. Other base metals tended to be easier. Oil shares receded under the influence of the Middle East situation and Wall Street. A firmer tendency developed in rubber shares following renewed demand. Ceylon rubber and tea shares were dull on the exchange restriction measures. Tea shares were generally irregular.

The Money Market

There was very little change in the credit situation over the past week and the money market always found conditions difficult. Calling by both the clearing banks and the outside banks was on a considerable scale at times and the authorities had to come to the market's assistance although only on one occasion it was necessary to borrow at Bank rate terms. Nevertheless fairly high rates were conceded at times, especially since the further upward adjustment in the Treasury bill rate last week to £4 4s 5.06d percent, which was the highest level reached since last February. At one time, overnight loans were arranged at up to 4½ percent and business in bills was done at up to 4⅝ percent for November-December maturities and "hots", although the actual turnover in bills was restricted by the stringent credit situation. The rates for bank bills were raised for all months.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 4th September shows that the gold stock was unchanged at $22,626 million. Foreign deposits fell by $8 million to $344 million and foreign investments declined by $32 million to $3,504 million. The Federal Reserve bought $11 million worth of bills but sold $36 million worth of securities under re-purchase agreements. Total discounts and advances declined by $359 million to $433 million while the aggregate excess reserves of member banks declined by $27 million to $150 million. The daily excess reserves of member banks rose by $43 million to $455 million, while their daily average borrowings fell by $81 million to $826 million. Business loans of the New York city banks rose by $34 million to $11,829 million compared with a rise of $195 million ($195 million) to $10,584 million in the corresponding week of last year.

Rubber Prices Lower

Supported by a steadier trend in Singapore, the rubber market in London began to rally at the start of the past week in a fair volume of covering business but trading in physical rubber remained disappointingly small. Later, lower levels in Singapore induced selling pressure in nearby rubber. Prices were reduced all round to the lowest levels since February but at that time near positions were at a premium. Further short-covering and switching of positions added momentum to the market, while increased interest was shown in forward c.i.f. parcels. Near positions, however, still dragged although sales were made when sellers were prepared to meet the market. Towards the close, the scarcity of eastern offers, partly because of delays in communications, imparted a steadier undertone, but finally the tendency was easier with quotations unchanged to ½d a lb lower on balance.

Slump in Paris Gold

The Paris gold market featured a heavy slump last week which brought most prices back to the levels held just after the currency reform. The downward movement was started by large fine gold sales but it later extended to coins, which finally proved more vulnerable than the ingot. Towards the end of the week, the downward trend was somewhat slower, while business, which was fairly active at first, lost momentum.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

CONDITIONS SLIGHTLY EASIER

Wednesday, 11th September.

CONDITIONS have eased only a little in the Calcutta money market during the past week. The main decline has been in sugar advances, but accommodation for jute has risen slightly. Funds for textiles and for the storage of grains and seeds remain around their previous levels. The inter-bank market has been quiet and the call rate is unchanged at 3½ percent.

There have been a few tea and gunny bills in the exchange market and conditions in general have been inactive. Remittance is reported on a moderate scale. Sterling is a little better against the dollar after having eased a few days ago.

* * * *

Bullion was steady in restricted activity. Silver showed little change at Rs. 181.75, quoted today, for ready delivery. The rate for forward delivery was Rs. 181.50. The London and New York prices remained the same as before.

Gold was steady in sympathy with silver, and was quoted at Rs. 109. The sovereign, at Rs. 71.25, showed little variation.

* * * *

During the week ended 6th September, Government of India Treasury bills for Rs. 50,89,00,000 were sold in favour of the Reserve Bank.

* * * *

An increase of Rs. 15.23 crores to Rs. 1,485.86 crores in active notes was the feature of the return of the Reserve Bank of India for the week ended 6th September, 1957. The total note issue was Rs. 1.20 crores lower at Rs. 1,512.63 crores. Foreign securities declined by Rs. 14.91 crores to Rs. 345.61 crores and rupee securities were raised by an equivalent amount to Rs. 916.87 crores. Balances held abroad in the Banking Department and investments increased by Rs. 12.45 crores and Rs. 7.75 crores to Rs. 31.79 crores and Rs. 223.14 crores, respectively, presumably due to transfers from the Issue Department. Deposits of the Government of India dropped by Rs. 2.38 crores to Rs. 51.97 crores and other Government accounts were Rs. 1.31 crores lower at Rs. 6.88 crores. Balances of commercial banks rose by Rs. 1.44 crores to Rs. 104.24 crores. Other loans and advances fell from Rs. 74.86 crores to Rs. 65.05 crores, of which advances to scheduled banks against usance bills amounted to Rs. 28.85 crores against Rs. 35.23 crores. Ways and means advances stood at Rs. 41.11 crores (Rs. 37.28 crores).

* * * *

The return of the State Bank of India for the week ended 30th August, 1957, shows a rise of Rs. 12.18 crores to Rs 341.07 crores in total deposits. Investments in Government securities are up by Rs. 4 lakhs at Rs. 123.95 crores, while other authorised investments remain unchanged at Rs. 11.01 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have decreased by Rs. 2.97 crores to Rs. 159.23 crores. Cash and balances are, in consequence, shown at Rs. 62.01 crores, or Rs. 19.59 crores higher.

* * * *

The statement of the position of scheduled banks for the week ended 30th August, 1957, shows Demand and Time liabilities at Rs. 713.83 crores (Rs. 16.63 crores on account of borrowings from banks) and Rs. 597.03 crores (Rs. 6.09 crores), compared with Rs. 711.32 crores (Rs. 14.17 crores) and Rs. 580.94 crores (Rs. 5.42 crores), respectively, in the previous week. Cash has declined by Rs. 2 lakhs to Rs. 38.92 crores while balances with the Reserve Bank have increased by Rs. 25.11 crores to Rs. 100 crores. There is a rise of Rs 72 lakhs to Rs. 371.24 crores in investments. Advances and bills discounted, at Rs. 854.88 crores, show a drop of Rs. 7.23 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 10.6 percent and 65.2 percent, against 8.8 percent and 66.7 percent.

* * * *

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land Customs revenue collected in the Indian Union during the month of June, amounted to Rs. 1,414 lakhs compared with Rs. 1,295 lakhs in the corresponding month of last year. The comparison in the following should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total Customs revenue collections, import duties accounted for Rs. 1,249 lakhs, against Rs. 1,091 lakhs, export duties for Rs. 132 lakhs against Rs. 177 lakhs and land Customs and miscellaneous for Rs 33 lakhs against Rs. 27 lakhs. The total gross collection of Union excise duties amounted to Rs. 1,996 lakhs compared with Rs. 1,527 lakhs. During the three months, April to June, 1957, the grand total of gross Customs and Union excise revenue realised was Rs. 10,463 lakhs compared with Rs. 8,083 lakhs during the corresponding period of 1956. Of this amount, import duties accounted for Rs. 4,054 lakhs against Rs. 3,285 lakhs, export duties for Rs. 395 lakhs against Rs. 589 lakhs, land Customs and miscellaneous for Rs. 101 lakhs against Rs. 70 lakhs and Union excise duties for Rs. 5,913 lakhs against Rs. 4,169 lakhs.

4¼ PER CENT BOMBAY STATE DEVELOPMENT LOAN, 1969

ISSUE PRICE Rs. 99.75 PER CENT

OPEN ON THE 16th SEPTEMBER, 1957.

The loan will be closed as soon as a total of approximately Rs. 600 lakhs has been subscribed, and in any case not later than the close of business on the 18th September, 1957.

The applications for the loan will be received at —

(a) the offices ot the Reserve Bank of India, Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi.

(b) the branches of the State Bank of India within the State of Bombay except at places mentioned in (c) below.

(c) the branches and treasury pay offices of the State Bank of Hyderabad within the State of Bombay.

(d) the Government treasuries and sub-treasuries in the State of Bombay at places where there is no branch or treasury pay office of the aforesaid banks.

(e) Applications will also be collected by the State Bank of Saurashtra at Bhavnagar and its Branches within the Saurashtra area of Bombay State and forwarded to the nearest receiving office.

Full particulars can be obtained at any of the offices of the Reserve Bank of India, branches of the State Bank of India, branches of the State Bank of Hyderabad within the State of Bombay, branches of the State Bank of Saurashtra within the Saurashtra area of the Bombay State and the treasuries and sub-treasuries in the State of Bombay.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

GROWTH OF RETAIL SALES

(FROM A SPECIAL CORRESPONDENT)

BRITISH industry continues to flourish in spite of the persistence of many apparent contradictions and anomalies. Undoubtedly, much of industry is basking genially in the artificial warmth created by inflation. As a consequence, few industrialists display any marked interest in the various committees the Government has appointed to make recommendations whereby rising costs can be checked. It must be admitted that these bodies are not wholly devoid of a farcical element, since they can do no more than state in different language facts already known to the point of tedium. The latest of them, the Cohen Committee, after one preliminary gathering has announced that no further "full" meeting will be held until October—which speaks of the degree of urgency attached to its deliberations. Meanwhile, the official statistics show that wages are still rising. The average wage now earned by workers of 21 and over is £12 a week. The greater part of the wage increases granted flow back into demand for goods for domestic consumption and is reflected in larger buying of home manufactures and services. So it would appear that the result of inflation is the achievement of an equilibrium of a kind which politicians tend to deplore, although they share the responsibility for bringing it about. The striking influence which home demand for goods is exerting upon the fortunes of British industry is shown by the statistics. Those issued by the *Economist Intelligence Unit* show that whereas the total retail sales of household goods in 1950 were of a value of £686 million, it is anticipated that those for 1957 will reach £1,097 million. The percentage gain in sales of household goods over this period is greater on the part of the multiple stores than it is by the independent retailers. It may be observed that, as far as they can, the independent retailers are imitating the multiple stores, in the sense that they are increasing the diversity of their products.

Production of Missiles

The number of companies entering the guiding missiles industry (if industry it truly is) continues to increase. These are mostly long-established engineering concerns, but other types of companies are entering the "ballistic" field in order to provide components. Skilled labour for this kind of work has to be attracted from other well-remunerated activities, and the salaries and wages offered are high. A new development has been the entry into the British labour market of a powerful overseas company which proudly proclaims itself as "missile engineers."

Conference on Fibre

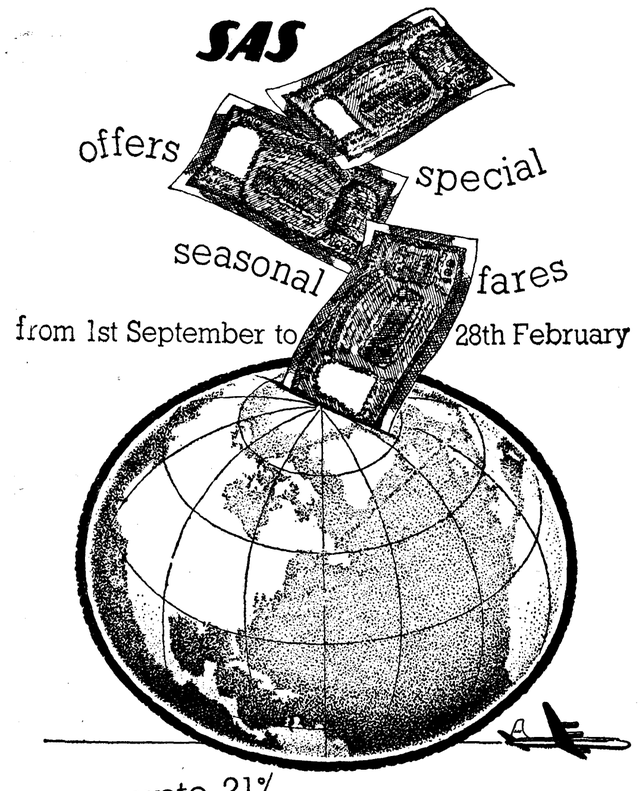
A joint conference of the Fibre Society of the United States and of the Textile Institute of Britain was held in Boston, U.S.A. The conference was significant since it surveyed the foremost textile developments in both countries. Something of this approach had already been indicated at the conference which the British Man-Made Fibres Federation held in Oxford in July. There, it will be recalled, an endeavour was made to break down the insistence in specifications that fabrics for which tenders were invited should be made of a specified fibre, as for example, of wool or cotton. It was contended that, at this stage of fibre history, all that was necessary was the stipulation of the fibres having certain properties, such as those relating to tensility, resiliency, weather resistance and so on. If the fabric met those requirements, then to demand that it should be composed of any specially named fibre was irrelevant.

These arguments were put forward as the first step in a campaign by the man-made fibre interests to end the conventional privileges which the natural fibres, by reason of their proven merits, enjoy in many quarters. It has to be acknowledged that if the makers of man-made fibres can fully establish that their products have properties equal or superior to those of the natural fibres, then they will be in a strong position in claiming that only the requisite properties of fabrics should be laid down in tender specifications. It is, however, unlikely that wool interests, at least, will readily concede this claim, even though the position be confused through the widely accepted practice of blending the natural and the man-made fibres.

Textile Processing

The appeal for a more liberal approach to fibre handling which was made by Professor E. R. Schwartz at the joint conference mentioned above had a more disinterested origin. In the course of his address on "basic actions as an approach to textile processing", the professor stated that beyond the divisions hitherto used in connection with processing, such as sorting, grading, mixing, cleaning etcetera, the necessity for other aids to analysis was now becoming plain. This was to study processing also in terms of the *actions* involved. Although these actions were highly important, they could be simply described, including, among others, "nip, pull, restrain, place, transfer, struck by, strike against, heat, press, tumble and rotate". The tendency at present is to think of processing only in terms of machines and mechanisms. But this rigid notion may leave out many factors that ought to be considered. Professor Schwartz urged that, in processing, there should be conformity with certain acts or conditions, an index to which could be provided through the use of symbols signifying those acts or conditions. Thus means could be provided of measuring whether the maximum operation of the machinery for the purpose in view was being obtained. If an existing machine met the requirements, as indicated and registered by the symbols, then, clearly, that machine was sufficient. But if it did not, then new machinery would have to be designed in order to get the greatest possible variety of end-uses for fibres. Recognition of the new factors entering into modern processing, as indicated by Professor Schwartz, might add considerably to the end-uses of fibres. Already the industrial uses of these are widening, because of new industrial needs. The reverse influence may also come into play, namely of fibres and fabrics being available which could suggest fresh manufacturing possibilities to industries, old and new.

Literature on Dyeing



Technical literature issued by companies last month has not been considerable. This kind of Information is held back during the summer months on the assumption that it is unlikely to receive the attention it deserves. There has been, however, continued issue of literature on dyeing, mostly concerned with the Imperial Chemical Industries' new "Procion" dyes, and the Ciba Company's "Cibracon" dyes, which, to use the company's own words, "make it plain that dyeing and printing of cellulosic fibres have reached a new turning point." Competition has now become very keen between the British and Continental dyeing interests. The British dyeing industry is safeguarded by Government regulations, but, theoretically, British dye users are allowed access to imported dyes if they can prove that their efficiency will suffer if they are not permitted to obtain dyes from abroad. One imagines that to prove one's case to Whitehall's agents would be no easy task. It is less difficult to import cloths that have been dyed abroad, and, indeed, there has of late been expanded activity in that direction.

Use of Latex Foam

A leaflet issued by the Natural Rubber Development Board probably has interest for Indian carpet manufacturers. The use of latex "foam" (which is aerated rubber) has made headway for industrial purposes including that of a backing for carpets and rugs. So far, the cost has been too heavy for the comparatively small manufacture by reason of the "gelling process" that is necessary. Research by the Shell Chemical group has resulted in the production of a gelling agent (polyglycol H.S. 35/40) which is more simple to use and which also avoids certain complications previously unavoidable. The use of polyglycol is not confined to carpets: it also provides an excellent backing for cotton scrim.

New Water-soluble Lubricant

Another development of interest to carpet manufacturers is Imperial Chemical's annouencement of "Cirrasol A.R.". This is a water-soluble lubricant, in place of the usual oleines or blended mineral oils used in the spinning of yarns. Although large-scale practice so far has been mainly with wool grivisco carpet yarns, successful small-scale trials have been made with typical east Indian wool carpet blends. It is suggested by the makers that trials by the woollen spinner on the firm's own individual blends should be made, as the conditions for the use of this product may not provide optimum results with every type of fibre blend. As is well known, the complete removal of oil from yarn is an essential preliminary to effective dyeing. This often presents difficulties. Soiling of carpets is more rapid when oil remains. The gain offered by "Cirrasol A.R." is that no oil is used in spinning and therefore this particular problem in

TALK OF CREDIT RESTRICTIONS WORRIES OPERATORS

BEARISH REACTION TO SPEECH OF INDIAN IRON CHAIRMAN

Wednesday Evening.

QUIET conditions have prevailed in the stock market during the past week and turnover has shrunk substantially. Operators have been scared by talk of further credit restrictions; the prospect of increased taxation to finance development plans has weakened sentiment. Indian Irons are shaded, as investors find little in the chairman's address at the annual general meeting of the company which might encourage them to hope for a higher dividend. The disappointment has been accentuated because there is no indication about the dividend which will be paid on the new capital raised by the rights issue.

Jutes are a shade steadier on the view that mills might make reasonable profits on simultaneous business at current prices of fibre and manufactured goods. Coals are neglected and no worthwhile recovery is expected until the price of coal is raised to a remunerative level. Except for some selective enquiry, miscellaneous shares have fallen on selling pressure. Sellers predominate in tea shares because of uncertainties about the outlook for common tea. Government securities are steady, although turnover is restricted because of the shortage of scrip. Interest centres mainly on short-dated and medium-dated stocks.

Details of the week's trading follow.

* * * *

The Government securities market was steady and there was a further improvement in prices, particularly in short-dated issues. The enquiry for 3% Conversion Loan 1986 was fully maintained due to the approach of the interest date (16th September) and the price was marked up further from Rs. 71.40 to Rs. 71.50, while 3% Non-terminable Paper was quoted fractionally higher at Rs. 71.25. In the short-dated group, 3% 1958 had buyers over at Rs. 99.75 and 3% 1959-61 was marked up to Rs. 98.10; 2½% 1961 was better at Rs. 93.75 and 2¾% 1960 was asked for around Rs. 96.74. The 2¾% 1962 was traded at the higher rate of Rs. 94 and 3½% 1961 had buyers over at Rs. 99.48. In the medium-dated group, 3% 1963-65 remained on offer around Rs. 93.30, but 3% 1964 was asked for at Rs. 93.55; 3¼% 1964 changed hands around Rs. 97.65 and 3½% 1965 had sellers at Rs. 97.30. The 3¼% 1967 was quoted *nominally* around Rs. 97.55 and business was reported in 3¾% 1967 around Rs. 99.47. Among long-dated loans, 3% 1966-68 hardened to Rs. 90.93, but 3% 1970-75 was easier at Rs. 86.25; 3¾% 1974 was on offer around Rs. 98.30 and 4% 1972 was marked at Rs. 99.97. In State loans, the enquiry for selected issues was maintained, but negligible business was reported and quotations were more or less unchanged.

Business in preference shares was of a retail nature with few declared buyers. In jute, Alliance were marked at Rs. 64 and Fort Gloster Second at Rs. 61.50. Kamarhatty were taken at Rs. 76 and Waverley were done at Rs. 35. In the miscellaneous group, Allahabad Bank were reported around Rs. 101 and Burn 7% were taken at Rs. 113. Calcutta Electric met with some enquiry at Rs. 9.37 and Carew were done at Rs. 82. Duncan Brothers changed hands at Rs. 54 and Indian Iron were sold at the lower rate of Rs. 96. Indian Standard Wagon were taken at Rs. 120.50 and Richardson and Cruddas were offered at Rs. 58. Shaw Wallace had buyers at Rs. 66.25 and there were sellers of Osler Electric Lamps at Rs. 42.50. Muir Mills came to hand, after a considerable period, at Rs. 63.50.

In the banking section, Punjab National were better at Rs. 57, but United Commercial were shaded at Rs. 57. United Bank of India "D" shares were crossed at Rs. 4.06.

Cotton shares were depressed, with the exception of Bowreah and Dunbar, which met with some enquiry at Rs. 109 and Rs. 138. Bengal Nagpur were marked back to Rs. 5.25, Elgin Mills to Rs. 16.62 and Kesoram to Rs. 11.75.

No transactions were reported in railway shares.

In the coal section, Bengal were enquired for at the higher rate of Rs. 217, as were Bhalgora at Rs. 5.96, Bharat Collieries at Rs. 5.87 and South Karanpura at Rs. 9.37. East Indian were lower at Rs. 21.12, as were Pench Valley at Rs. 15.25. Rewa met with selling pressure and were marked down sharply from Rs. 19.50 to Rs. 18. Other shares which were dealt in included Burrakur around Rs. 21.75, Central India at Rs. 5.81. Dhemo Main at Rs. 6.25 and Western Bengal at Rs. 5.87. Raneetunge were marked down today from Rs. 110.25 to Rs 9.75.

There was slightly less enquiry for jute shares, the closing prices were below the best. Here is a chart showing representative price movements:

	Opening 5th September	Closing 11th September
	Rs.	Rs.
Anglo-India	140	138
Bally	150	148
Birla		
Delta	123	118
Fort Gloster	305	300
Gourepore	240	235
Howrah	16.75	16.50
Kinnison	123	121
Orient	100	95

Contrary to the general trend, there was good enquiry for Barnagore at Rs. 85, National at Rs. 17.95 and Kamarhatty at Rs. 97.

In the electric supply section, there were keen buyers of Calcutta at the higher rate of Rs 12.37 ex-dividend, with few declared sellers. Other issues in this section were unchanged.

Sugar shares were extremely dull and only three transactions were reported, namely, in New Savan at Rs. 4.50, S.K.G. at Rs. 9.81, and Samastipur at the lower rate of Rs. 9.75.

In the engineering section, Indian Iron, after improving to Rs. 18.16 from an opening price of Rs. 17.96, reacted at the close to Rs. 17.82. Braithwaite were enquired for at the higher rate of Rs. 27.87. Jessop were offered at Rs. 24.25 and Richardson and Cruddas at Rs. 10.06. Textile Machinery were depressed at the close to Rs. 15.65. Britannia Engineering were lower at Rs. 12.87 as were Guest, Keen, Williams at Rs. 28.50, Indian Galvanising at Rs. 16.87 and Kumardhubi Engineering at Rs 9.62. Indian Standard Wagon were steady at Rs. 175.

In the absence of investment support rather than because of selling pressure, paper shares tended to lower levels, as will be seen from the following table:

	Opening 5th September	Closing 11th September
	Rs.	Rs.
Indian Paper Pulp	18.75	18.50
Orient Paper	23.15	22.40
Shree Gopal	14.75	14.50
Titaghur	32.50	32.31

TELECOMMUNICATION ENGINEERS
P.O. BOX 348, NEW DELHI, INDIA, TELEPHONE 43961
LOCAL AGENTS: MARTIN BURN LTD.,
12, MISSION ROW, (P.O. BOX 23), CALCUTTA-1.

In cements, Sone Valley touched a new low of Rs. 4.81 after it was announced that the dividend was being passed over. Jaipur Udyog were unchanged at Rs. 12.12, as were Orissa Cement at Rs. 12.81 and Assam Bengal Cement at Rs. 4.75.

No business was reported in insurance shares.

In shippings, India Steamship, after being taken up to Rs. 10.72, reacted at the close to Rs. 10.44. India General Navigation were unchanged at Rs. 66, as were Port Shipping at Rs. 16.19. Calcutta Landing and Shipping recovered from Rs. 12.50 to Rs. 12.62.

Among miscellaneous industrials, Alkali and Chemical were steady at Rs. 13.87 and there were buyers of Britannia Biscuits at the higher rate of Rs. 14 cum-dividend, with no declared sellers. Indian Wood Products provided a good feature, improving from Rs. 38.62 to Rs. 40. National Carbon were enquired for at Rs. 25.25 and Shaw Wallace at Rs 10.37. British India Corporation met with fresh selling pressure and were marked down further to Rs. 4.95. Dunlop Rubber receded from Rs. 19.56 to Rs. 18.75. Imperial Tobacco from Rs. 12.87 to Rs. 12.12 ex-dividend and Indian Aluminium from Rs. 12.44 to Rs. 12.19. National Tobacco were offered at the lower rate of Rs. 10. as were Rallis at Rs. 30 and Rohtas Industries at Rs. 17.56. Jardine Henderson were unchanged at Rs. 73, but Martin Burn were easier at Rs. 22.87.

The sharp break in metal prices affected Indian Copper shares and the price was marked down to a new low of Rs. 2.76. Chrestien Mica Industries softened to Rs. 12.50 and Karanpura Development to Rs. 8.75.

Tea shares presented a mixed pattern. Seeyok were traded around the previous quotation of Rs. 12 but Baghmari declined to Rs. 19.50. Bateli were fractionally better at Rs. 26.50 and Bishnauth, after being sold down to Rs. 18.81, recovered to Rs. 19.37. Bormah Jan improved from Rs. 16.25 to Rs. 17 and Brahmapootra changed hands at Rs. 4.81. Brooke Bond were wanted at Rs. 18 and Dibrugarh and East India were marked at Rs. 22.69 and Rs. 19.87, respectively. Sapoi advanced sharply to Rs. 29 and Teen Ali were crossed at Rs. 24, as were Chundeecherra at Rs. 25. Jayshree had buyers at Rs. 9.75 and Pahargoomiah came to business at Rs. 40. A small lot of Hantapara was done at Rs. 157 and Hasimara were taken up to Rs. 22.

* * * *

The loss of the KAMARHATTY COMPANY LTD. has increased from Rs. 3.72 lakhs to Rs. 5.35 lakhs for the half-year ended last December. Providing Rs. 30,000 for depreciation and bringing in a loss of Rs. 3,14,936, the debit balance has increased to Rs. 8,79,997. There is again no dividend. The KANKNARRAH COMPANY has increased its loss from Rs. 9.06 lakhs to Rs. 11 38 lakhs. Bringing in a loss of Rs. 9,24,216 and providing Rs 75,000 for depreciation, there is a debit balance of Rs. 21,37,149 to be caried forward The dividend has again been passed over The directors of both companies mention that in order to overcome to some extent the unreliability of raw jute supplies in matters of delivery and other contractual obligations, they decided to set up a few jute buying agencies in selected areas as a measure to ensure for the mills regular and more suitable supplies of the raw material The agencies have worked well. The heavy burden of stocks arising from surplus production led to substantial bear selling in the local market, forcing prices of goods down to uneconomic levels which in turn created many complex problems affecting the economic running of the mills. The companies have, in common with others, found it exceedingly difficult to function profitably Raw jute prices were high in relation to the prices obtainable for manufactured goods and at practically no time did they permit simultaneous business to be transacted at a profit Since April, there has been an improvement in the position. Taking into account the full economies expected from the modernisation of the mill machinery, it is possible to regard the prospects with more confidence than in the recent past.

* * * *

The KALAPAHARI COAL COMPANY has incurred a loss of Rs. 96,674 for the year ended last February. The dividend has again been passed over and the debit balance is increased to Rs. 3.17,911. Raisings rose from 24,100 tons to 37,627 tons and despatches from 24.519 tons to 34,090 tons. During the period under review, the company's Damra colliery was affected by abnormal and serious difficulties. Heavy rain at the end of September 1956 caused a serious rise in the water level in Damra. Because of a strike, the siting of pumps underground was obstructed and, the neighbouring collieries having also stopped pumping, the underground workings in Damra were completely submerged. Pumps were installed as soon as possible and pumping continued throughout the succeeding months. On a representation being received from the contractor, the directors decided to terminate the raising contract with effect from 1st December. 1956. The directors state that after strenuous efforts, the effects of the floods were overcome and raisings were resumed in February 1957. Since then, the colliery is working normally and raisings, which have been increasing steadily, have now attained the level of the months immediately preceding the difficulties mentioned. It is expected that this progress will be maintained and raisings will show a further increase.

* * * *

The profit of the SEEBPORE COAL COMPANY has amounted to Rs. 3.31 lakhs for the year ended last December Taxation provision is Rs. 1.58 lakhs. Adding miscellaneous receipts and bringing in Rs. 49,299 there is Rs. 2,37,400. General reserve is allocated Rs 75,000. The final ordinary dividend has been declared at Rs. 1.38 a share, the interim being 14 annas a share. The carry-forward is Rs. 32,200. Raisings declined from 127.666 tons to 81.904 tons and despatches fell from 127,288 tons to 85,142 tons. The directors state that with a view to maintaining the company's production at a satisfactory level in the future, careful consideration has been given to the possibility of working the Taltore seam at the Pretoria colliery and the Sonachora seam at the Lachipur colliery. The latter provides greater opportunities for development on an economic basis, and the Coal Board's approval has recently been obtained for opening the Sonachora seam When this seam is opened, the Lachipur colliery can be expected to continue with a steady and economic rate of production even when output from development in the Upper and Lower Kajora seams, which are being worked at present, shows a decline.

* * * *

Messrs. Tata Industries Private Ltd., managing agents for the TATA IRON AND STEEL CO. LTD., report that the total approximate production of iron and steel at the steel works in Jamshedpur during August 1957 was : pig iron 88,700 tons : steel ingots 85,500 tons ; semis for sale 16,800 tons ; and finished steel 46,300 tons.

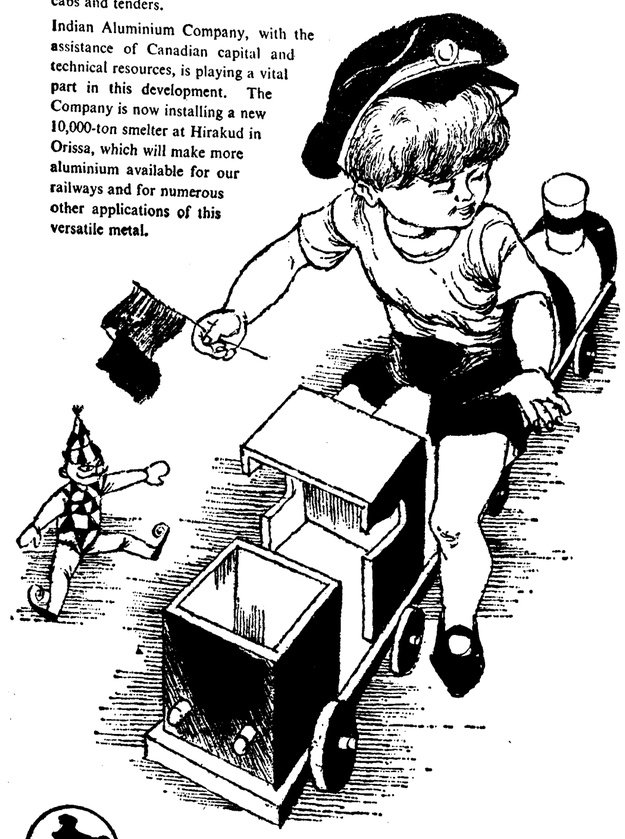
Bombay Market

CAUTIOUS TRADING AT CLOSE

DISAPPOINTING OUTPUT FIGURES FROM TATA STEEL

Wednesday Evening.

THE Bombay stock market closed on a cautious note although there were a few bright spots. The lower output figures of the Tata Iron and Steel Company for August were interpreted as meaning that the expansion programme is interfering with production. The prospect of further credit controls tended to restrain activity. The slow offtake of piecegoods and the growing accumulation of stocks with mills were unhelpful factors. Tata Steels declined to Rs. 162.75 and Indian Irons were depressed at Rs. 18.90 on pressure from Calcutta interests. Alcock Ashdown fell to Rs. 247.50, while Premier Construction attracted scattered interest at Rs. 153. Tata Locomotive declined to Rs. 138 on the company's move to secure fresh funds for expansion by means of debentures. Automobile shares were neglected, and Premier Automobiles were available at Rs. 88. Hindustan Motors were freely offered at Rs. 6.60 without attracting interest.



Except for interested buying in Svadeshi at Rs. 177, mill shares were shaded on balance. The move to close down one shift affected the shares of the relatively smaller units, as it was believed that the larger mills might not feel the need to restrict output at the present stage. The possibility of installing additional looms tended to encourage support occasionally. Bombay Dyeing were quoted at Rs. 53.60 and Kohinoor were taken at Rs. 262. Simplex were transacted at Rs. 160 and Century realised Rs. 413. India United Ordinary declined to Rs. 10.88 on the predominance of sellers.

Miscellaneous shares moved in line with the general trend and turnover was small. Associated Cement came to hand at Rs. 154.75 and Digvijay Cement were taken at Rs. 136. Shipping shares were steady, and Scindia Steam improved to Rs. 19.68 on the rumour that the company's application for the issue of bonus shares had been approved by the Controller of Capital Issues. Great Eastern Shipping were quoted at Rs. 22.44. Mining shares were depressed because of the sharp fall in metal prices. Indian [illegible] to

"...and the trains I'll ride will be of aluminium"

Light, fast aluminium trains are no longer things of the future. The Indian Railways are using increasing quantities of aluminium in coaches, wagons and locomotive cabs and tenders.

Indian Aluminium Company, with the assistance of Canadian capital and technical resources, is playing a vital part in this development. The Company is now installing a new 10,000-ton smelter at Hirakud in Orissa, which will make more aluminium available for our railways and for numerous other applications of this versatile metal.

Building a future in aluminium

Rs. 2.85. Bombay-Burmah declined to Rs. 573 on pressure, but Tata Chemicals were supported around Rs. 16.92. National Rayon were transacted at Rs. 215.25.

Banking shares were steady, with Bank of India at Rs. 135. United Commercial Bank were wanted at Rs. 58. Sellers predominated in insurance shares and prices were lower where changed. New India Assurance realised Rs. 42.25.

Electricity supply shares were wanted at fractionally higher prices on the view that the earnings of companies would improve in the future. Ahmedabad Electric gained at Rs. 94.50 and Tata Power were quoted higher at Rs. 1,140.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations Highest for the week. Lowest for the week Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paise].

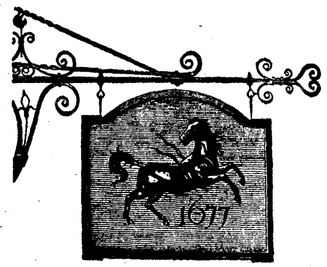
Books and Publications

FARM PRICE SURVEY

Decline of Agricultural Prices in U.P. and Punjab. (By Agricultural Economics Research Section. Delhi School of Economics, University Press. Delhi 8. Pages 164. Price Rs. 6.)

This book presents the findings of a survey in the markets of Hapur and Chandausi in U.P. and Moga in Punjab during May and June 1955, undertaken by the Agricultural Economics Research Section of the Delhi School of Economics. The aim of the survey was to assess the causes of the decline in prices in these markets and their possible effects on producers and traders. Information was collected from *pukka arhatyas, kachha arhatyas* producers, regional marketing committees, railway authorities, local boards and revenue officers.

After a preliminary discussion of the nature of the price decline, as compared with the decline in the harvest months of 1954, the causes of the slump of 1955 are studied under three broad headings—supply, demand and transport. Considering the data on market arrivals and the trends in production, it is stated that the increased production of all commodities, particularly wheat and gram, accentuated the decline in prices to some extent. But at the same time it is felt that the total effect of supply considerations on the fall of prices was not much. The real cause of the decline is traced to demand. Having excluded the rôle of consumer demand due to the unavailability of data, major importance is attached to the action of the two types of *arhatyas* and the effect of their speculative de-stocking and re-stocking movements. From an analysis of the data of prices, arrivals, stocks and exports, the decline in prices is related to the changes in stocks. Little importance is attached to transport bottlenecks as a possible cause of temporary excesses. The statistics on the registration and actual supply of wagons show that the small gaps between the supply of and demand for wagons have often been due to certain peculiar practices adopted by the traders themselves.



The effects of the price decline on producers and traders of all types have been listed in a systematic manner. In the case of producers, the price decline had far-reaching effects on their plan of cultivation as between foodgrains and commercial crops, purchase of equipment, pattern of consumption, state of indebtedness, education, housing and spending on social ceremonies. The reduction in the total value of goods handled and commissions charged hit the *kachha arhatyas* and the *pukka arhatyas* almost equally.

The seriousness of the problem of agricultural price stabilisation has been recognised by many nations Appreciation of the problem and the search for proper remedies, keeping in view the geographical and socio-economic peculiarities of different regions require a good deal of planned field research. In India, research work in this direction has so far been conspicuously little. As such, the enterprise shown by the Agricultural Economics Research Section of the Delhi School of Economics deserves praise. The book makes some valuable suggestions and the critical appreciation of the Government's price stabilisation purchase scheme will be particularly helpful.

REBATE OF EXCISE DUTY ON SUGAR CANDY AND CUBE EXPORTS

The Government of India has decided that the prccedure for export of articles under claim for rebate of duty on excisable goods used in their manufacture should be extended to sugar candy and cubes made out of duty-paid sugar. It is already applicable to ready-made apparel, tents, sugar products, including biscuits and preserved fruits, cotton bags, umbrella cloth, chaddars, pillow cases and table covers. Manufacturers of sugar candy and cubes who wish to export these may contact the Collector of Central Excise in whose jurisdiction their factory is situated in order to avail themselves of the concession under the Central Excise Rules.

A good Sign for Exporters and Importers

INCREASING EXPORTS OF U.K. AIRCRAFT INDUSTRY

EUROPEAN AIRLINES IMPROVE EFFICIENCY

(FROM OUR NEW DELHI CORRESPONDENT)

THE British aircraft industry's exports for the first seven months of this year were at an annual rate of more than £106 million, compared with last year's £104½ million, which was a record figure. The figure for July—£9,235,496—is the third highest recorded during 1957, and the sixth highest ever achieved. Aircraft and parts accounted for £5,123,245, aero-engines for £3,564,979, electrical appliances for £303,480, tyres for £70,945, and instruments for £172,847. Detailed figures for the first seven months of the year were: aircraft and parts £36,498,358 aero-engines £22,134,436, electrical appliances £1,913,184, tyres £456,628 and instruments £1,145,104—a total of £62,147,710. During this period, Sweden was the best customer with £4.9 million worth of imports, followed by the United States £3.9 million, India £3.8 million, Canada £2.7 million, and France £2 million.

Use of Viscounts

The British Air Transport Advisory Council has agreed to lift certain restrictions on the use of equipment by the British independent airlines. Specifically, Airwork and Hunting Clan are to be permitted to use *Hermes* or *Viscounts* on their colonial coach services to Nairobi and Salisbury with limitations on frequency. Up to now, they have not been permitted to use pressurised aircraft for these services which have fares somewhat lower than B.O.A.C.'s tourist fare. The Advisory Council has also recommended that on the existing routes to Nairobi, Salisbury and Accra, the two lines be allowed to provide low-fare tourist services instead of colonial coach services. B.O.A.C. will continue to cater to the higher class traffic. The Council proposes that Airwork and Hunting Clan be permitted to operate tourist services to Accra by their west coast route through Bathhurst and Freetown with no restriction on aircraft types, but allowing the present frequency. These would be at current I.A.T.A. fares. In accordance with this recommendation, Hunting Clan is now planning to introduce *Viscounts* in its southern Africa service in two or three months. C.A.A. recently refused permission to use unpressurised *DC-4s* on this type of service, will apply for permission to use *Viscounts* on the coach-class service.

U.S.-India Service of T.W.A. to be Extended

T.W.A. is making preliminary surveys of air facilities in Thailand, the Philippines, and Hongkong in order to extend its U.S.-India and Ceylon services to Manila *via* Bangkok.

Progress of European Airlines

European airlines are making real progress in improving their operating efficiency, according to a report by the Air Research Bureau. This is a study organisation in Brussels comprising most of the European carriers engaged on intra-European services. The flight equipment standards of European and U.S. carriers are regarded as "equal", but Europe's re-equipment programme is more extensive than that of the U.S.A. The Bureau observes that in Europe the switch to turboprop and jet planes is proceeding much faster than in the latter. The rate of traffic growth is higher although the volume is only 16 percent of that of the U.S.A. Staff productivity among European airlines is "much lower" than in the U.S.A., but it is improving. Operating costs are higher in Europe. Aircraft utilisation is lower in Europe than in the U.S.A. but it is also improving. Frequency is lower—an average of nine round trips a week compared with 28 a week in the U.S.A. Unduplicated route mileage is about half that of the U.S.A. The total number of airports used in Europe for regular airline operation i sabout one-third the number in the latter country.

N. African Services of Air France

Air France is now offering a seating capacity of 30,000 on its north African services, compared with 14,000 last winter, with 90 flights a week to Algeria, 30 to Morocco and 33 to Tunisia. Several new points of call are scheduled. Calvi is linked with Marseilles and Nice. Biarritz is served on the Paris-Tangiers-Casablanca route. From Vichy there are direct services to Oran, Algiers, Philippeville, Bone and Tunis. Clemont-Ferrand has a direct link with Oran and Algiers.

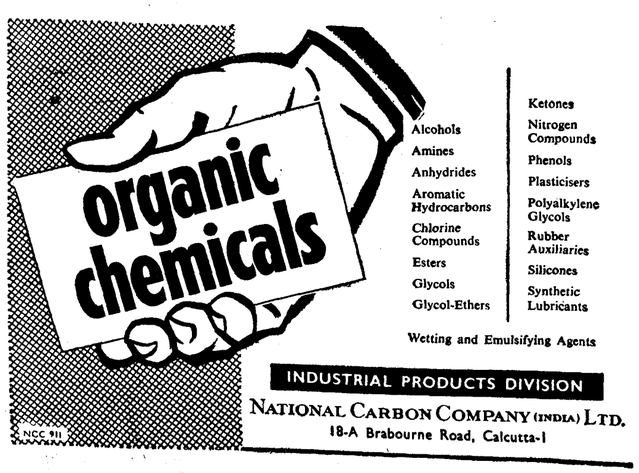
K.L.M. West Indies Fleet

K.L.M. will put four *DC-65* in operation on its West Indies network next spring after the overhaul is completed. The airline's present West Indies fleet consists of *Convair 340s* and *DC-3s*. The *Convairs* will return to Europe, and K.L.M. plans to convert several of them into freighters.

New Russian Jet Planes

Russia has displayed four new or improved jet and turbopro aircraft. They are the *Tu-104A*, an improved *Tu-104* jet liner, the *Tu-110*, also Tupolev-designed, a four-engined jet air craft said to carry 95 passengers; the *Ukraina*, a four-engined turboprop with a large underbelly and a maximum capacity for 126 tourist passengers; and the *Moskya or 11-18*, a four-engined turboprop carrying 75 passengers with a range of 3,100 miles and a cruising speed of 370 miles an hour. The *Tu-104A* jet is claimed to have a maximum cruising speed of 600 miles an hour and a range of close to 2,000 miles. Aeroflot plans to start operations with the *Ukraina* next spring, and the *Aeroplane* reports that the Bulgarian airline Tabso will receive some soon.

Pan American Polar Service



Pan American has announced plans for the opening of a service from 10th September on the polar route between the U.S. west coast and Europe. It is offering four round trips weekly in DC-7Cs between Los Angeles, San Francisco and Seattle and London and Paris. Direct services from Portland, Oregon, will be started later this year. T.W.A., the second U.S. carrier granted a polar route authorisation by the C.A.B., has not yet announced its plans. Both airlines propose to use Frobisher Bay, in northern Canada, as an intermediate refuelling stop on the 6,000-mile route. P.A.A. will begin direct its non-stop trans-atlantic service from New York to Rome on 27th October. The projected thrice-a-week service, which will have *DC-7Cs*, is scheduled for 13 hours and 15 minutes over the 4,282 mile non-stop route. Starting also on 27th October, P.A.A. will provide daily non-stop *DC-7C* flights between New York and Frankfurt.

Using Jet Aircraft on Far Eastern Services

Airways and airports in six Far Eastern countries will be adequately equipped to handle jet transport within the next two years, a C.A.A. official, Mr. Joseph H. Tippetts, reports after completing an inspection tour of Formosa, Korea, Thailand, Viet Nam, Japan and the Philippines. He says that the runways of the airports serving the capital cities of these countries are now being expanded to accommodate jets scheduled over present airline routes. Instrument landing systems, V.O.R. facilities, high density approach lights and non-directional beacons are being installed throughout the area to conform with the I.C.A.O. standards. The C.A.A. is purchasing the equipment with funds provided by the International Co-operation Administration under a C.A.A. technical assistance programme.

U.S.-British Air Talks Inconclusive

Exploratory talks in London on the revision of the bilateral air agreement between the U.K. and the U.S.A. have ended in a deadlock, with no prospects for reopening within next two years. One major difficulty, *Aviation Week* reports, is the British criticism of the U.S. C.A.B.'s refusal to approve an I.A.T.A. proposal for a five percent increase in trans-atlantic fares. *Inter Avia* reports, however, that the British were unwilling to grant concession on certain routes which had been long sought by the U.S.A. These included an extension of Northwest's service, at present terminating in Taipei, to Hongkong and an extension of T.W.A.'s present U.S.-London-Frankfurt service to Zurich where it would link up with the airline's service from the U.S.A. to Paris, Zurich, Rome, and to the Middle East and India. In return for these concessions, the U.S.A. offered unspecified Far East routes and extension of the present B.O.A.C. London-New York-San Francisco service up to New Zealand and Australia. Although the British were interested in these proposals, they apparently felt that their loss would outweigh the advantages. For one thing, B.O.A.C. would be unable to take advantage of the additional route across the Pacific until *Boeing 707s* are available, probably in 1960. Rights for Northwest in Hongkong, the British felt, would have an advaerse effect on Hongkong Airways (partly B.O.A.C. owned) and the B.O.A.C. traffic to Japan. T.W.A. extension from Frankfurt to Zurich would have a serious effect on the operations of both B.E.A. and B.O.A.C.

New Delhi

CHANGES IN WEALTH TAX BILL EXPLAINED

REVIEW OF U.S. ECONOMIC AID PROGRAMMES

(FROM OUR NEW DELHI CORRESPONDENT)

THE Finance Minister, Mr. T. T. Krishnamachari, piloted a number of Bills through Parliament last week. During the consideration stage of the Wealth Tax Bill in the Rajya Sabha, he explained at some length the changes which the Lok Sabha had made in the original Bill. The following is a summary of the important changes made in the Bill by the Lok Sabha.

Every individual, Hindu undivided family and joint-stock company will be liable to pay the wealth tax. As far as individuals are concerned, the exemption limit is Rs 2 lakhs, and for companies the limit is Rs. 5 lakhs. No changes have been made by the Lok Sabha in the limits for these two classes. For Hindu undivided families, the exemption limit has been raised from Rs. 3 lakhs as originally proposed in the Bill to Rs. 4 lakhs. At the same time, the next slab range has been reduced from Rs. 10 lakhs to Rs. 9 lakhs.

Taking companies first, all companies, whether public or private and whether Indian or foreign, are liable to pay the wealth tax. Ordinarily, a resident company will pay the tax on its total wealth, whether such wealth is held in India or outside. A non-resident company, however, will pay the tax only on its Indian wealth. Under clause 45, certain companies are totally excluded from wealth tax. The Bill originally excluded banking companies, insurance companies, and certain financial institutions sponsored by the Central Government. To this list have now been added shipping companies and institutions for the promotion of art, culture, commerce, etcetera, which are not established for the purpose of making a profit and which are registered as companies for the sake of convenience of administration. Another important change is that a wealth tax holiday will be granted to industrial companies for five successive assessment years immediately following the date of incorporation. This concession has been provided not only as an incentive for promotion of new industrial enterprises but also with a view to avoiding any financial difficulty to such companies in the initial stages of their organisation. The wealth tax holiday will also be extended to new industrial units of existing companies which are created by way of substantial expansion of the existing undertaking. As a corollary to the wealth tax holiday for new industrial companies, shareholders in such companies will also be similarly dealt with and the value of their shares for a like period of five successive assessment years in which the companies themselves will be enjoying the wealth tax holiday.

Another important change is that the wealth tax will not be levied on a company in a year in which it suffers a loss. Furthermore, if the profits are insufficient to pay the wealth tax in any particular year, the tax payable by it for that year will not exceed the amount of the profits. These concessions will not, however, be given if the company declares any dividends on its equity capital for the relevant year. The last and important change, as far as companies are concerned, is that shares held by one company in another company, in other words, inter-corporate holdings, will be exempted from the tax in the hands of the holding company.

Further Relief for Shareholders

One new concession to shareholders who are individuals and Hindu undivided families, namely, the wealth tax holiday for five years on their investments in new industrial companies has already been mentioned. It is now proposed to give further relief by applying Rule 2 of the Schedule prescribing a ceiling for the wealth tax for shareholders of private companies to shareholders of public companies as well. The effect is that the tax payable by shareholders on the shares held by them will be limited to 1.5 percent of the value of the shares, taking into account the wealth tax paid by the companies which is attributable to such shares.

There are a number of important modifications concerning other individuals and Hindu undivided families. Clause 6 of the Bill, as it originally stood, provided that in the case of individuals who are citizens of India, their entire wealth, including their foreign wealth should be liable to the wealth tax, even if such individuals reside outside India, while in the case of individuals who are not citizens of India, only their Indian wealth would be liable to the charge. The Lok Sabha felt that this distinction based on citizenship was not appropriate and that it should properly be based on residence in India. Clause 6 has now been amended accordingly. The position now is that in the case of all individuals, irrespective of their nationality, only their Indian wealth will be liable to tax, provided they are not resident or not ordinarily resident in India. In the case of individuals and Hindu undivided families resident in India, their foreign wealth also will be liable to tax. But, the tax will be charged on the foreign wealth only at one-half of the normal rates of tax. Similarly, in order that foreigners retain their Indian investments and [illegible] the incidence of the wealth tax, it is now provided that their Indian wealth will be taxed at only one-half of the normal rates. Further, in the case of foreign institutions or foreign residents, any assets represented by loans or deferred liabilities in India relating to the supply of capital goods on a long-term credit basis to Indian industrial undertakings will be exempted from the tax.

Exempted Assets

Clause 5 of the Bill provides for exemption from the wealth tax for a number of items of assets of varying nature. The Lok Sabha has made some small modifications in the concessions originally provided and has also made some additions to the list. A reference is made here only to those items in clause 5 which have been so modified or added.

(1) Household articles, furniture, etcetera, are now to be exempted fully without any monetary limit.

(2) For jewellery, a separate monetary limit of Rs. 25,000 has been prescribed.

(3) According to the original provisions, tools and implements used by professional people were to be exempted from the tax up to a maximum of Rs. 2,500. The Lok Sabha felt that this limit was too low, especially for persons engaged in the medical and other allied professions, so it proposed to raise the limit to Rs. 20,000. At the same time, it has also provided that instruments and other apparatus used for purposes of scientific research should be completely exempted from the tax without any monetary limit.

(4) In the case of rulers of Indian States, their ancestral jewellery recognised as such by the Government and which is not their personal property is to be exempted. Further, one building of every ruler which is declared by the Central Government as his official residence is to be exempted.

(5) In the case of other assessees, one residential building in rural areas with a population of less than 10,000 is exempted.

Some important changes have been made in procedural matters. Originally, clause 25 empowered the Commissioner of Income Tax or Wealth Tax to revise assessments only in cases where it would be advantageous to the revenue. Suggestions were made in Parliament in the course of earlier discussions that the Commissioner should also be empowered to revise the assessments in case where the revision could be in favour of the taxpayer. This has now been accepted and clause 25 has accordingly been recast. The next important change concerns the composition of the Committee of Arbitration to settle disputes of valuation. The Lok Sabha considered that it was more appropriate that arbitration should come only at the Appellate Tribunal stage as proposed in the Bill, as only at that stage will all the issues of the dispute between the taxpayer and the department which are relevant for valuation become crystalised. It felt, however, that the following changes were necessary:

1. The Arbitration Committee should consist of two valuers only, and not a valuer and an adviser as proposed in the Bill.

2. The valuers on the Committee should be chosen one by the assessee and the other by the department.

3. The valuers should be empowered to settle disputes on valuation of not only immovable property but also movable property, if either party to the appeal so required.

Revenue from the Tax

The revenue from the tax was originally estimated at Rs. 15 crores, made up of Rs. 9 crores from companies and Rs. 6 crores from individuals and Hindu undivided families. With the concessions since provided for companies, the receipts from companies are expected to come down to Rs. 6½ crores. For individuals and Hindu undivided families only a rough estimate can be made and it is expected that the original estimate of Rs. 6 crores will be reached. In later years, the revenue from this source will probably show some increase.

Imports Under Deferred Payment Schemes

The Government has decided that before opening negotiations with suppliers of credit abroad, importers should in all cases obtain advice from the import control authorities in advance. Such advice will be given in the form of letters of authorisation. In their own interest, credit agencies in overseas countries have been advised not to open discussions with parties which do not hold such letters from the Indian import control authorities. The Government, it is explained, has noticed that in a large number of cases, intending importers have been carrying on negotiations without prior consultation with the Chief Controller of Imports for projects which are not likely to qualify for an import licence at all, or on payment terms which emphasised that to cut down the expenditure of foreign exchange in the immediate future, preference would be given to continuing schemes and that new projects would be scrutinised very strictly. Importers were then warned that before starting negotiations with overseas suppliers, they should obtain from the import control authorities an indication of the kind of deferred payment terms which would be acceptable considering the exchange-saving potential of the projects concerned. This warning is being ignored, so the reminder has been issued.

Indo-Pakistan Financial Issues

The Central Finance Minister, Mr. T. T. Krishnamachari last week said in the Lok Sabha that he had accepted the Pakistani Finance Minister's suggestion to meet and discuss the outstanding financial issues between the two countries. He added: "I hope that the meeting will take place as soon as possible after I return from my impending visit to the United States and Europe. The outstanding issues between the two countries fall into three broad categories. The first relates to the determination of Partition debt. Our estimate of this debt, so far as it relates to the two Central Governments, is of the order of Rs. 300 crores. It will be higher if the debt arising out of the partition of the provinces is also taken into account. The figure I mentioned gives only the order of the sum involved. The Partition debt at the Centre is repayable in 50 equated instalments, the first of which fell due on 15th August, 1952. Six instalments are today overdue. In the Budget for 1952-53, we took credit for a payment of Rs. 9 crores on this account. Even on this very rough and clearly low figure, the amount overdue is over Rs. 50 crores.

"The second category deals with matters arising out of the separation of the currencies of the two countries. The most important item is the assets remaining to be transferred out of the assets of the Issue Department of the Reserve Bank of India. The value is about Rs. 49 crores. The other items are relatively small and do not involve any substantial amount. The third category relates to what may be broadly called the post-Partition transactions. A large volume of payments have been made in each country on behalf of the other which will have to be cleared up. On our side, the sum is of the order of Rs. 23 crores. I do not know what the sum on the Pakistan side is. All this will have to be gone into with the assistance of the Auditors-General on both sides. Then we have a sum of Rs. 16.5 crores due to us on account of defence stores supplied after Partition to Pakistan. There are also some rupee balances held by Pakistan in India about which there has been some argument. The sum thus held is Rs. 13 crores."

U.S. Economic Aid

U.S. economic assistance for India's development efforts during the first 10 years of independence totals more than $1,000 million (Rs. 476 crores), it is learnt. This sum includes both public and private assistance; and is in the shape of commodities, loans and grants. Of the Rs. 476 crores, nearly $400 million (Rs. 190 crores) has come through the U.S. Technical Co-operation Mission since 1952. The balance has come through other governmental grants and loans, in commodity transactions, assistance through American voluntary aid groups and organisations, such as the American Red Cross, and from foundations. There has been additional assistanc over and above the U.S. share of the U.N. projects in India.

Altogether, the total of U.S. assistance amounts to $1,049 million, received through the following agencies: T.C.M. $392.4 million; the wheat loan of 1951, $190 million; milo assistance in 1950 51 $12 million; the flood relief aid $6.4 million; Fulbright and Smith-Mundt grants $3.46 million; the ocean freight assistance to voluntary agencies $600,000; the Agricultural Commodities Agreement of 1956 $288 million; agricultural commodities distributed through voluntary agencies $61.9 million; American voluntary agencies' aid under Indo-American Agreement $5.4 million; Ford Foundation grants (as of 15th May, 1957) $19.1 million; Rockefeller Foundation grants $5.4 million; and U.S. Red Cross contributions, $800,000. Grants from U.S. educational, religious, philanthropic and other organisations and foundations not included in the foregoing are put at $50 million. The contributions of the U.S.A. for U.N. projects in India have been approximately $13.7 million.

Textile Machinery on Deferred Payment Terms

The State Trading Corporation has entered into an arrangement to facilitate the purchase from Eastern Germany on deferred payment of textile machinery by Indian textile mills. So far only four mills, one each in Bhavnagar, Calcutta, Tripura and Ahmedabad, have placed orders for textile machinery worth about Rs. 36.5 lakhs. There are, however, some snags. The State Trading Corporation, in the nature of things, can only act as an agent, so it cannot give a guarantee on behalf of the purchasers to the Deutsche Notenbank. This guarantee can only be given by Indian banks. They generally do not stand guarantee for more than one year. An amendment of the Industrial Finance Corporation Act is contemplated, but the amendment will have to wait until the next session of Parliament.

The agreement between the State Trading Corporation and DisMachinen Export provides that the entire value of the imports of the machi- [illegible] should be deposited in the "Special Trade

Development Account of the German Democratic Republic", to be opened and operated by the Deutsche Notenbank, Berlin, and that the whole of this amount will be utilised for the purchase of listed goods such as jute manufactures, tea, coffee, tobacco, spices, shellac, mica, hides and skins, handloom fabrics and handicrafts. According to the agreement, 10 percent of the value of the machinery is payable on signing the contract, 10 percent on shipment and 20 percent each in the next four years after shipment. The guarantee for the deferred payment will be covered by a bank guarantee or a letter of credit to be secured by the East German exporting organisation from Indian importers' bankers, either with or without confirmation by the State Bank of India. The State Trading Corporation will thus not be required to guarantee the payment of the deferred instalments.

According to the supplementary trade agreement, in the event of the "special account" running short of rupees temporarily, the State Bank on the request of the Deutsche Notenbank will replenish the account as and when required to an extent not exceeding Rs. 30 lakhs at any one time, the interest chargeable on such replenishments being 5½ percent a year. Present indications are that the interest on the proposed East German credit will not exceed this figure of 5½ percent.

Manufacture of Special Steels

According to official estimates, between 1,000 and 2,000 tons of alloy and special steels are manufactured in the private sector in India. A plant in Calcutta, engaged in manufacturing steel for springs, has been permitted to expand. It is proposed to put up, in the public sector, a plant for the manufacture of 24,000 to 30,000 tons of ferro alloys and tool steel. Interest in this project has been shown by the U.K., France, Italy and Czechoslovakia. Preliminary proposals indicating broadly the capacity, the process and the nature of technical assistance which will be available, have been received. Generally, they will render such services as are ordinarily rendered by consulting engineers. Credit has been offered by the U.K., France and Italy.

Possible U.S. Capital Investment in Machine Tools

There is a good possibility of U.S. capital participating in the development of the Indian machine tool industry, said the Industry Minister, Mr. Manubhai Shah, in Parliament last week. It was however difficult to say precisely what form that participation would take until the report of the U.S. Machine Tool Mission which toured India recently was available, he added.

Indo-Japanese Trade Agreement

An Indo-Japanese trade agreement is likely to be concluded before 30th September. Discussions are now in progress.

Holding the Price Line

The Central Minister for Commerce and Industry, Mr. Morarji Desai, has addressed the following letter to the president of the Federation of Indian Chambers of Commerce and Industry and the president of the Associated Chambers of Commerce: "You will recall that at the meeting of the Central Advisory Council of Industries last week which you attended, I had appealed to Indian industry to ensure that the consumer was put to the minimum of hardship and inconvenience on account of the cut in our imports which has become necessary. I am now writing to you to give you my ideas in a more concrete shape and it is my hope that as president of the Federation/Associated Chambers, you will pass this appeal to all industrial units affiliated to the Federation/Associated Chambers.

"It is my intention that Indian industry should take a pledge of fair deal to the consumer. This would involve the acceptance of the following main principles:

"1. The prices of goods produced by the industrial unit in question should not as a rule exceed the level at which they were being sold in the first quarter of 1957.

"2. If the industrial unit concerned finds it necessary to increase its prices for any valid reasons, namely, an increase in its costs due to circumstances beyond its control, or because the selling price prevalent in the first quarter of 1957 was uneconomic, it will give the Government a month's notice of its intention to raise prices along with the full reasons thereof.

"3. The industrial units concerned will endeavour to secure that the dealers through whom their goods reach the consumer also follow a similar policy in relation to prices at which the goods are sold.

"It would be desirable that the names of firms who accept these principles should be adequately publicised. Such publicity will not only reflect credit on them but will also enable the consumer to know the products which he can continue to buy without fear of profiteering."

Co-ordinating Work of Public Sector Projects

Inaugurating the first meeting of the Co-ordination Committee for Industrial Projects in the public sector, Mr. Morarji Desai indicated the setting up of a central organisation in the Ministry of Commerce and Industry to help the boards of the different units solve their problems of production, sales, purchase, personnel and other technical issues. It would act as a co-ordinating and guiding link between the projects and the Government. This organisation would be assisted, from time to time, by experts in the country and abroad to evaluate the work of each unit periodically so that they could have an independent assessment of their work, Mr. Desai said. Referring to the problem of foreign exchange faced by these units, the Minister added: "In order to meet these real difficulties we are rephasing some of our projects so that the burden of external payments is spread over a long period and some of the projects get covered by proper and adequate credit terms of payments. This may mean in some cases somewhat slowing down of the tempo."

Shipping Development Fund

With reference to the Transport Ministry's proposal for a Rs. 50-crore shipping development fund, it is suggested that the fund be started with, say, Rs. 12 crores in the first year to be followed with similar contributions during the remaining years of the plan. From this fund, loans will be advanced to shipping companies to enable them to acquire 200,000 tons of additional shipping by 1961. The issue is not as simple as it has been officially made out. It is not merely rupee loans but foreign exchange which is required to acquire the additional tonnage. The second concerns the availability of ships even if foreign exchange is available. The Finance Minister has repeatedly stated in recent weeks that India's "so far unbridged gap" of commitments in foreign exchange amounts to Rs. 800 crores. This gap is likely to widen in view of defence requirements and food imports. The Finance Minister has refused to enter into fresh commitments. The Transport Ministry's scheme for a shipping development fund will involve a fresh commitment.

Plans for Steel Foundries

Twelve steel foundries, three in the public sector and nine in the private sector, it is proposed, will be set up during the second plan period. The question of their location has been finalised. The three foundries in the public sector will be located in Chittaranjan, Bangalore and near Ranchi in Bihar. The Chittaranjan foundry is estimated to cost Rs. 3.5 crores and that in Bangalore Rs. 60 lakhs. The estimates for the third foundry near Ranchi are not yet ready. The total cost of the nine units in the private sector is placed at Rs. 4 crores. Four of them will be located in Bihar; two in Jamshedpur and one each in Dalmianagar and Dhansar. Two will be located in Sukchar in 24-Parganas, West Bengal: two in Madras State; in Tiruvettiyur and Peelamedu (Coimbatore district) and one in Bombay State, in Ulhasnagar.

Communist Influence over Labour

The systematic infiltration of Communists into labour organisations has created a law and order problem in some parts of India; it has also led to a decline in production. Kerala, the mining areas of Bihar Calcutta and some of the Tata works in the Jamshedpur area are among the Communist strongholds. Bank employees are also dominated by them in various centres. On the Kerala model, the Communists have been capturing power by democratic methods, although they have been generally functioning within the normal Constitutional limits. The Government is fully alive to the growing challenge to orderly progress and planned development, but is unable to stem the tide without deviating from democratic principles by such measures as the banning of the Communist Party. The situation, however, is being carefully watched. The Central Labour Minister, Mr. G. L. Nanda, in order to gain first-hand knowledge of the Kerala situation, will be visiting that State towards the end of this month. The tripartite agreement on discipline in industry is being implemented on a sector-wise basis in each industry.

SIGNIFICANCE OF THE FALL IN DOLLAR RESERVES

NO CHANGE PROPOSED IN STERLING PARITY OR MARGINS

(FROM OUR LONDON CORRESPONDENT)

DEFENDING the pound against the heavy speculative pressure of the past month has proved a costly business. A substantial fall in the gold and dollar reserves was expected, but the actual figures when they were released came as a shock to the City, and even helped towards a slight revival of the pressure which had earlier shown every indication of having come to an end. The Treasury announcement disclosed that in August the reserves fell by $225 million, wiping out all the hard-won improvement which had occurred since February. In November last, at the height of the Suez crisis, there was an even heavier drain in the region of $280 million in the month, but an analysis of the present figures indicates that they minimise the seriousness of the real position. Taking into account August transactions only, and allowing for the relief afforded by West German debt pre-payments, the real drain on the reserves during the month is calculated as being about $400 million, including the $135 million which will have to be paid in September in gold against the E.P.U. deficit in August of £63.5 million. Seasonal factors work against the accumulation of dollars in August, September and most of October, so the drain on the reserves may be expected to continue for the next month or two in the absence of a complete reversal of opinion on the part of Continental speculators and a covering of the heavy "bear" position which has now been created. While it would be foolish to ignore the warning inherent in the August reserve figures, it would be even more foolish to over-dramatise them. In spite of the heavy August loss, the sterling area's gold and dollar reserves, reinforced by the still intact standby credits from the International Monetary Fund and the Import-Export Bank, remain ample to meet all likely emergencies, and although the pressure against the pound has not entirely abated it has already lessened.

The present position of sterling in the exchange markets has given food for thought in many circles, as well as occasioning some criticism of the Treasury for "complacency" and a lack of flexibility in its policies. It is understood that the Chancellor of the Exchequer, after his return from holiday, has fully reviewed the recent currency movements. As a result it has been decided that there is no justification for any change in the declared policy of maintaining the external value of the pound both in relation to "parity" and "margins," and it is obviously hoped that the announcement of this fact, coupled with the extent to which the Treasury was prepared to go in August to give effect to it, will serve to convince the doubters of the Government's determination to reject any idea of either devaluation or floating currencies. The underlying strength of the pound lies in the fact that on current transactions, the U.K. is operating at a substantial surplus. How long this will continue, however, is at least partly dependent upon the success of the battle against inflation. Some practical steps by the Government in this matter will go a long way to reinforce confidence, which is being widely undermined as a result of the uncertainties created by the uncooperativeness of labour, the lack of foresight by management and the inability of the Government to find a means of bridging the gap.

Commonwealth and European Free Trade

Although it is believed that the major Commonwealth countries are not opposed to Britain's closer association with the European economy, the British Government has been particularly cautious in its approach to the proposed free trade area for fear of what the reactions in the Commonwealth will be. No doubt it is in the hope of securing some sort of mandate to go ahead with the further negotiations that it has been decided to send Mr. Reginald Maudling, the Paymaster-General and Britain's chief negotiator in the European discussions on the subject, to attend the conference of Commonwealth Finance Ministers to be held in Canada at the end of this month. Mr. Maudling will be charged with the task of reassuring the other members of the Commonwealth that Britain will do nothing to weaken her ties with them. The necessity for this probably arises from the insistence of some European countries on the inclusion of overseas territories as well as agricultural products within the scope of the free trade area. Britain is still reluctant to join the proposed managed marketing system for farm products, both as a protection for British agriculture as well as for intra-Commonwealth trade, but it must have been made clear at the recent O.E.E.C. meeting that some revision of this view would be essential. Mr. Maudling will probably try to ascertain just how far this might go.

For all the Government's support for the industrial free trade area plan, it is the Conservatives rather than the Socialists who are the most sceptical as to the outcome of membership. *Socialist Commentary* dealing with the question last week stated: "Europe and the Commonwealth are no longer, if they ever were, an 'either/or.' We need our ties with both and it is a question of finding the way. It is not even such a difficult question as we are prone to imagine. The agricultural products which we import from the Commonwealth are not those which we import from Europe, and indeed the major Commonwealth countries are not opposing our closer association with the European economy. On the contrary, their development demands our prosperity; they want cheaper capital goods from Europe as well as from ourselves and they are interested in expanding European markets for their own products". The next O.E.E.C. meeting to discuss the free trade area is due to be held in Paris in mid-October.

More References to Trade Court

Last April the Board of Trade issued a list of 11 commodity agreements, and questions concerning the supply of the commodities the Registrar of Restrictive Trading Practices was directed to refer to the Restrictive Practices Court. A further list of 24 commodities, including bottled beer, electric cookers, cement, radio valves, television tubes and woven woollen blankets, and two types of processes, plate-glass bending and hosiery dyeing, was issued last week. It seems highly unlikely that any of the 200 agreements affecting the industries in both lists will reach the court until next year, for the "sheer mechanics" of the legal and preliminary processes involved are lengthy. Notices of reference go out within a month or so, but the parties to an agreement are allowed eight weeks to put in a statement of case, with the possibility of extensions on reasonable grounds. The Registrar then has six weeks to prepare his answer, again with the possibility of an extension, before the court can deal with the case. To save time the co-operation of industries is being sought as to which agreements might be considered "typical" so that the decision in a "test" case could decide parallel agreements, while the Board of Trade, to avoid prejudging the issue and to allow the court to decide what is and what is not contrary to the public interest, is trying to make its selection include as wide a variety of practices and cover as broad a field of industries as possible.

Inflation at Work

The Government's measures to restrict inessential spending so as to encourage savings—inherent particularly in the hire-purchase restrictions and other credit restriction measures—appears to be wearing rather thin. Retail sales of radio and television equipment continue to rise. July sales were 25 percent higher than in June of sound receivers, and 39 percent higher in the case of television sets. For the seven months January to July, sales of radios, at 610,000, compare with 502,000 for the same period of 1956 and 604,000 in 1955. Sales of television sets, at 555,000, compare with 492,000 for the same period of 1956 and 537,000 in 1955. More than one half of television sets are sold on hire-purchase or extended credit terms. There is no lack of hire-purchase finance for car sales either. Vehicles bought on hire-purchase totalled 97,906 in August, against 57,443 in the same month of last year. New cars were 7,072 against 3,624, used cars 51,597 against 29,876. New commercial vehicle contracts were 3,102 against 2,290, and used 6,390 against 3,925. The recent relaxation concerning motor vehicles has certainly boosted business.

Burma Deal Extension

The currency of the triangular agreement signed last June under which up to $2,625,000 worth of British cotton textiles were to be shipped to Burma and paid for with U.S. cotton of equivalent value, has now been extended. The Board of Trade has just announced that the bulk of the textiles were exported by 31st March, the final shipping date, but their total value was approximately $100,000 short of the ceiling figure in the agreement. Accordingly, the Government of Burma has now issued new import licences for the value outstanding. These stipulate that the goods must be shipped not later than 31st October and 30th November, respectively. Because of the short time available for the completion of the shipments, U. K. exporters who participate in this final operation will have to make their own arrangements for the import of the raw cotton from the United States to balance their textile shipments to Burma. They may either do so themselves or arrange for an importer to do so on their behalf, but the Chartered Bank will need to assure itself that satisfactory arrangements have been made on this point before it will advance sterling payments against the shipping documents for the textiles.

Brevities

At 266,000, there were 21,000 more registered unemployed in Britain on 12th August than on 15th July, but 1,000 fewer than on 13th August, 1956. They represented 1.2 percent of the estimated number of employees. On 7th August, 310,000 vacancies remained unfilled—22,000 fewer than in July.

The Sun Life Assurance Company of Canada and the Manufacturers Life Insurance Company have announced that they will not entertain any new business in Ceylon. A spokesman for the companies said that this decision had been actuated by "unsettled conditions of business" following the suggested nationalisation of life insurance.

Group profits of Alex Lawrie. East India merchants, fell during the year ended 30th June last from £234,187 to £183,863. After tax of £113,738, against £110,030, and allowing for outside interests there is a net profit of £67,053, against £120,421. A reduction in the final dividend from the equivalent of 8¾ percent to 7½ percent offsets the increase of 1¼ percent to 5 percent in the interim payment and the total is effectively maintained at 12½ percent.

PROSPECTS FOR VEGETABLE OILS

MULTIPLICITY OF TAXES DEPLORED

(FROM OUR BOMBAY CORRESPONDENT)

IN his presidential address to the fifth annual general meeting of the Central Organisation for Oil Industry and Trade, Mr. Naval H. Tata has confined himself to making brief references to the report submitted to the Central Government by the Oilseeds Crushing Industry Enquiry Committee. Mr. Tata points out that it would have been better if the Committee had extended its investigations on a broader basis to undertake a more searching enquiry into the problems of the organised mill industry in all its aspects as had been done in the case of the village oil industry. Mr. Tata welcomes the fact that the Committee rejected a proposal made by certain quarters that the crushing of all edible oilseeds should be reserved for the village industry. The Committee made an exception in the case of sesamum oil and recommended that while the organised mill industry should be allowed to crush for industrial and export purposes, the production of oil for domestic private consumption should be reserved for the village *ghanis*. Mr. Tata is of the opinion that while village *ghanis* may be able to satisfy rural demand, they will not be able to supply adequate quantities for consumption in the big cities, and has suggested that organised mills should be allowed to serve urban markets as well. Mr. Tata disagrees with the Committee's recommendation that the quantity of cottonseed crushed during the second plan period should not exceed 20 percent of the total production of cottonseed. He points out that increased production of cottonseed oil will ease the pressure on groundnut oil from the vanaspati industry and the quantity of groundnut oil thus released should be exported. No cut and dried decisions should be taken concerning this but the position should be reviewed from time to time.

Referring to the various imposts on vegetable oils, Mr. Tata has said: "Under the Central Sales Tax Act of 1956, certain goods, which, *inter alia*, include oilseeds, have been declared as goods of special importance in inter-State trade or commerce. Vegetable oils are, however, not included in that list. In view of the importance of vegetable oils in our national economy, as an article of mass consumption, as an important industrial raw material and also as a prominent item in our export trade, it is necessary and appropriate that they should also be included, along with oilseeds, as goods of special importance in inter-State trade and commerce in Section 14 of the Central Sales Tax Act. Vegetable oils are, at present, subject to a number of taxes and imposts levied by various authorities, namely, cess by the Indian Central Oilseeds Committee, excise duty by the Union Government, sales tax by the State Governments and the inter-State sales tax. There is, therefore, considerable scope for rationalisation of the different imposts on the same commodity by different agencies. It is our common experience that the multiplicity of taxation on the same commodity causes considerable hardships to the business community and often leads to complications in the trade. There is also a good deal of duplication of avoidable accounting and clerical work. The Government, on its part, is also required to maintain different collection, administration and enforcement machinery for these imposts which leads to increased administrative expenses."

"It is understood that the Government is considering a proposal to remove sales tax on certain excisable commodities by suitably adjusting the excise duty thereon, namely, cotton textiles, sugar and tobacco. This proposal should also be extended to vegetable oils, which are now subject to excise duty. If the various imposts on vegetable oils are merged in the existing Central excise on oils on some unified basis, it would considerably help both the Government as well as the business community, without affecting the revenues. The proceeds from the consolidated excise duty on vegetable oils could be equitably distributed between the various authorities, which are the present beneficiaries and recipients of the respective imposts. I commend this proposal to the Union Government for its earnest consideration." Mr. Tata has welcomed the formation of the Export Promotion Committee which has been charged with the task of surveying the industry and suggesting ways and means by which the export of oils and oilseeds could be stepped up.

Cotton Market Quiet

There was hardly any interest in the cotton market last week and the Jarilla March contract moved irregularly between Rs. 665 and Rs. 685 a candy. Several factors accounted for this but the main reason for the lack of interest were reports that following the accumulation of cloth stocks, some mills are suggesting that one shift should be reduced. The Finance Minister's warning that the credit squeeze might be extended to include a wide range of commodities helped create a note of caution. The spot market ruled quiet in sympathy. The daily turnover was around 1,500 bales and demand was confined to popular varieties. While the trade is anxiously awaiting the export policy for the new season, the Government's announcement that exports of Zoda cotton, yellow pickings and cotton sweepings will be freely allowed has not enthused shippers here. It has been pointed out that the export duty of Rs. 100 a candy which is now in force makes the Indian commodity less competitive in foreign markets. In addition, the decision taken by Japan to reduce cotton imports will make it more difficult to export the varieties which have been allowed to be exported freely.

Accumulation of Stocks

The accumulated stocks of cloth with mills and dealers are causing concern in spite of the fact that the piecegoods market has shown some improvement in recent weeks. It has been suggested in mill circles that the proposal to close down the third working shift should be seriously considered. It has been reported that one group of mills is able to lighten its stock position by offering substantial quantities at reduced prices. On the export side, some business was done with the Sudan in grey sheetings, voiles and vilaya. Persian Gulf ports made token purchases at somewhat lower prices. The United Kingdom and Singapore showed some interest in grey sheetings. Although the Indonesian Government has yet to issue import licences, merchants in that country have asked for quotations for bleached longcloth, sheetings and voiles. It is expected that when import licences are issued, good business will result.

No Interest in Yarns

Traders were anxious that the import quotas of yarn for actual users would be reduced from Rs. 4 a loom to Rs. 1-8 a loom during the October-March period. It was also believed that no import licences for rayon yarn would be issued to the trade. Prices of imported yarn therefore increased by around 2 annas a lb. In the futures section, the 120D October delivery contract moved between Rs. 816 and Rs. 822 a case while the 2/40 staple fibre October delivery contract moved between Rs. 573 and Rs. 584 a bale. There was no interest in cotton yarns and many spinners reported an accumulation of stocks in almost all counts.

FACTS BEHIND FIGURES

Drop by drop supersaturated cane juice crystallises into 1,900,000 tons of sugar in the pans of India's 160 sugar mills. Under the Second Five Year Plan this annual output will rise by 35% to over 2·5 million tons. During the past 23 years the sugar industry, India's second largest industry, has imported Rs. 19.23 crores worth of mill machinery. Today, Indian machinery manufacturers produce Rs. 28 lakhs worth of machinery a year; by 1961 this annual output will rise to Rs. 250 lakhs, sufficient to meet the country's requirements.

ENQUIRY ON RELIEF FOR SCARCITY AREAS

DEMAND FOR REMISSION OF LAND REVENUE REJECTED

(FROM OUR LUCKNOW CORRESPONDENT)

THE U. P. Government has announced the appointment of an all-party committee to enquire into the question of relief to the scarcity areas in the eastern districts of the State. The announcement has come in the wake of an indefinite fast undertaken by a P.S.P. leader, Mr. Genda Singh, to compel the Government to undertake a probe into the economic conditions in eastern U.P. Two Communist leaders also joined the fast. The Socialist Party of Dr. Lohia did not put up any candidates for fasting because in its view mass action in the form of hunger marches and other demonstrations was the right technique. Among the demands of the Opposition was the wholesale remission of land revenue, which the Government has flatly rejected. It is the Government's contention that already over 60 percent of the revenue has been written off and that it is not possible to grant further remissions. The Government has also prepared statistics to show that sugarcane growers in the eastern districts have received handsome prices from factories and that their case must rest on a different footing. The Government's main objection to the appointment of an enquiry committee was that it would raise false hopes in the people at a time when it is not possible to divert funds on any large scale for tackling what admittedly is a long-term problem.

Refuting the Opposition allegation that cane cess of abcut Rs. 5 crores has remained unrealised from sugar manufacturers, the Chief Minister declared in the Assembly that realisation was held up for a time only because of a writ petition filed by the mills in the High Court. The petition has been decided in the Government's favour but the Government has agreed to the millowners' request that the arrears may be made payable in instalments. Now that an all-Party committee has been appointed and the Opposition leaders have broken their fast, it remains to be seen whether there will be any abatement of the preparations for civil disobedience which were being carried on by the P.S.P., the S.P. and the Jan Sangh. The P.S.P. programme of direct action included march to grain godowns in batches after giving due notice to the authorities to take possession of the grain and to distribute it to the people.

Labour Participation in Management

The scheme of workers' participation in management is to be introduced in U.P., in the first instance, in two industries—a sugar mill and a textile mill. Under the scheme, a council of management consisting of the representatives of management and employees will be set up. The council will serve as a channel of communication between management and employees and will assist in the administration of laws and agreements. It will be consulted by management on matters like administration of welfare measures, standing orders and their amendment, rationalisation, etcetera. The council will have the right to receive information on the general economic situation of the concern, its production and sales programme, the annual balance sheet, profit and loss account, etcetera. The creation of new rights as between the employers and workers will be outside the jurisdiction of the council and accordingly all matters concerning wages, bonus, etcetera, which are the subject for collective bargaining and individual grievances will be excluded from its scope.

Probe into Irrigation Costs

The State Government has appointed a high-powered committee to enquire into the construction of the Matatila dam and the Arjun dam, two of the biggest irrigation projects to be undertaken in the Bundelkhand division of the State. The Government's decision follows the discovery of the high cost of the dams and alleged irregularities and violation of the procedure for preparing estimates for their execution. The Matatila dam was initially estimated to cost Rs. 481.28 lakhs and was to be constructed through masonry work in the bed of the Betwa river. The 2,200 feet long and 120 feet high dam, it was estimated, would impound 40,000 million cubic feet of water capable of irrigating 202,200 acres of land in Jhansi, Jalaun and Hamirpur districts of U.P. and 62,300 acres in Gwalior and Datia districts of Madhya Pradesh. The project was taken up in 1951-52 and is nearing completion. According to one report, the cost of the dam has exceeded the original estimates by 100 percent. The Government has been prompted to undertake the enquiry because of the failure of the irrigation engineers to keep it informed of their increasing commitments.

Standardisation of Salaries of Engineers

It is understood that the State Government has expressed its objection to any increase or standardisation in the salaries of engineers as suggested by the Central Board of Power and Irrigation in a recent circular. West Bengal, Bombay, Madras and Madhya Pradesh are also believed to have expressed similar objections. At present there is a wide disparity in the salary scales of the engineering staffs of the various State Governments. The chief engineers in Mysore get a salary of Rs. 1,400 a month, in the Damodar Valley Corporation Rs. 2,500, in the Punjab Rs. 2,000 and in U.P. Rs. 1,800. The superintending engineers in U.P. get Rs. 1,200 while in the Punjab they get Rs. 1,500, in the Central Punjab Works Department Rs. 1,300 and in Mysore Rs. 800. Even the Union Government's indication that, if the State Governments agree to rationalise the salary scales of the engineers, the Centre will give some financial assistance seems to have had no effect on the State Governments. The recent decision of the U.P. Government raising the age of retirement from 55 to 58 has, meanwhile, induced a flight of junior engineers from the State since they find that their avenues of promotion are blocked.

Recommendation on Sales Tax Bill

The Select Committee on the U.P. Sales Tax (Amendment) Bill has recommended that the turnover in coal, cotton, hides and skins, iron and steel, jute and oilseeds shall not be liable to tax except at the point of sale by a dealer to a consumer and that the rate of the tax shall not exceed 2 percent. The Committee was informed by the Sales Tax Commissioner that under existing provision where a firm was reconstituted and the partners of the old firm had no property of their own, the tax assessed on the old firm was lost to the State. The Commissioner also pointed out that by reconstituting the firms unscrupulous dealers succeeded in evading the tax. The Select Committee has accordingly laid down that when the tax could not be realised from the old partners it would be payable by the reconstituted firm. The difficulties arising out of U.P.'s sales tax, octroi duties, toll tax, etcetera, were referred to by Mr. C. D. Thakkar of Calcutta in an address to the chemical merchants of Kanpur. The sales tax on chemicals like caustic soda, soda ash and acids, he said, was 6¼ percent although they were mostly used as raw materials and hardly 10 percent of the supply was used for direct consumption. In no other State, he declared, are raw materials charged at a high rate. If a cotton mill in Kanpur obtained direct supply of chemicals from Bombay or Calcutta only 1 percent sales tax was chargeable, but if the mill got its supplies from a chemical merchant in Kanpur the full sales tax of 6¼ percent was payable. In this way, the sales tax worked to the detriment of traders in the State, Mr. Thakkar said.

CALCUTTA TEA AUCTIONS IN AUGUST

GOOD DEMAND BUT PRICES IRREGULAR

APPROXIMATELY 224,000 chests were catalogued for export sale during August. In the first two sales of the month, there was an easier tendency and prices tended to decline except for the few really good C.T.C. Assams which attracted keen competition and realised good prices, generally in excess of brokers' valuations. In Sale Nos. 11 and 12, however, there was a better tone and a good general demand as prices moved in sellers' favour, say Messrs. Carritt Moran and Co. Private Ltd. in their monthly tea market review. The better Darjeelings continued to drop in value, partly on account of the seasonal decline in quality, and partly due to the very limited demand for highly priced teas from this district, but the more moderately priced ones sold well at about valuations. Fannings grades, particularly O.Fs which have been a weak feature this season came in for more support and were dearer. C.T.C. Assams were irregular, and the more ordinary sorts tended easier, but the best were keenly sought after.

The leaf appearance of teas from Darjeeling continued very satisfactory but quality showed a fairly general seasonal decline. Quality on the whole, however, was above average for the time of year, and some quite useful flavoury teas were available, while a number of attractive tippy F.O.P.'s and B.O.P.'s were catalogued during the month. The general standard of leaf appearance from this district was excellent, and even those gardens which are not capable of making fine teas, have maintained a commendably high standard. The standard of teas from Assam declined weekly, and comparatively few second flush teas were catalogued in the last two sales of the month, quality generally being of a fair standard only. There were, however, a number of quite attractive invoices with second flush character, and some useful liquoring C.T.C. teas were on offer. Leaf appearance continued fully average, although a little stalk and fibre became noticeable in the lower grades from some estates. There were a satisfactory number of attractive tippy grades on offer. While leaf appearance of the teas from Dooars was maintained at a good average standard, a little stalk and fibre became noticeable towards the end of the month. Cup quality continued to decline, and in the last two sales the liquors of the teas on offer were with few exceptions of an ordinary rains description. There were, however, a number of bright liquoring Dooars non-wither teas of Legg cut manufacture. Although a little more stalk made its appearance in Cachar teas, especially towards the end of the month, leaf appearance generally may be considered satisfactory and up to average. Cup quality tended to decline, and is now down to a "rains" level, with a number of plain liquoring invoices on offer, but on the other hand there have been a few useful liquoring teas from this district.

Internal Market

The weekly quantity on offer increased as the month progressed and the total offerings amounted to 4,454 chests of leaf. The quality was again mainly of a fibrous or stalky description and demand generally followed that of the previous days' Export Sales. The invoices of green tea on offer received fair support at the low rates quoted and sold at about valuation. A total quantity of 71,516 chests of Dust was offered for sale. Quality from Assam continued to be quite satisfactory but prices for the very best liquoring C.T.C. descriptions did not reach the level of the previous month. Demand improved towards the end of the month, particularly for C.T.C. Assams which during the early sales had continued to be a weak feature. Prices for the orthodox grades strengthened with the increased demand especially those of a useful liquoring powdery description from Assam, which continued to be a popular feature. Due to a slightly easier tendency in the last sale prices for the orthodox kinds were barely maintained but C.T.C. Assams continued to be firm or dearer.

Sale No. 10 " " "	1.50	1.51
Sale No. 11 " " "	1.57	1.75
Sale No. 12 " " "	1.55	1.77

Export sales up to and including Sale No. 12 totalled 405,182 chests at an average price of Rs. 2.56 compared with 374,273 at an average price of Rs. 2.60 during the corresponding period of the 1956-57 season. Internal sales at 7,122 chests of Leaf and 130,188 chests of Dust (Rs. 1.69 and Rs. 1.92) go against 6,129 and 111,115 chests (Rs. 1.55 and Rs. 2.16) for the same period last year.

The estimated North Indian crop to the end of July 1957 was 189,624,922 lbs compared with 207,642,206 lbs to the same date last year. The average figure at this date for the three years 1954-1956 was 198,458,362 lbs. The price of Export quota rose steadily throughout the month. Business was transacted at between 18 and 20½nP a lb in the first two weeks, rising finally to 22 and then to 23½nP a lb at which price business was done at the close.

Arrivals (in chests)in Calcutta warehouses during the period 24th July, 1957 to 23rd August, 1957 with the corresponding figures of the previous year in parentheses were as follows: by steamer 395,229 (434,996) by rail 119,801 (89,191) by air 25,103 (18,446) making a total of 540,133 (542,633.) Since the beginning of the season 1st April, 1957 to 23rd August, 1957 arrivals have been: by steamer 703,188 (815,663) by rail 272,221 (203,330) by air 61,222 (50,653) making a total of 1,036,631 (1,096,646) chests.

COCHIN TEA SALES

At Sale No. 25, 950,000 lbs of tea were on offer. There was a good general demand, particularly for improved Low Mediums, Medium Brokens and Fannings which were irregularly 10 to 15nP dearer. The best liquoring teas were fully firm, Orange Pekoes were barely steady, but flowery Pekoes were dearer.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for the month of August.

Upper Assam: Weather seasonable but abnormally hot in Dibrugarh, Doom Dooma and unfavourable in Tingri; outturn last month was generally normal but is slightly under last year in Doom Dooma and Naharkatiya and poor in Tingri; rainfall is generally above nomal but deficient in north Lakhimpura; prospects fair.

Central Assam: Weather seasonable but hot in some districts; poor to normal outturn; prospects fair.

Lower Assam: Weather seasonable but hot in Borsola and rain deficient in Nowgong; outturn generally normal but slightly under last year in Tezpur; prospects fair.

North Cachar: Weather seasonable but rain deficient in north Cachar; prospects fair; blight not so severe; outturn normal.

South Cachar: Dry weather is interfering with outturn; outturn considerably below last year; prospects fair; red spider blight pevalent in some districts; black rot and helopeltis prevalent in almost all the districts.

Eastern Dooars: Outturn poor; prospects fair; weather seasonable; black rot prevalent.

Central Dooars: Weather seasonable; outturn poor; red spider blight lifting.

Western Dooars: Rainfall is much above normal and wet weather is interfering with outturn which is considerably below last year; prospects fair to good; black rot and helopeltis prevalent in some districts.

Darjeeling: Outturn last month poor; weather seasonable; immediate prospects fair; blister blight prevalent.

Terai: Rainfall normal; outturn below normal; prospects fair; helopeltis prevalent in north Terai.

Jute

I.J.M.A. STOCK FIGURES PUSH UP GUNNY PRICES

RUMOURS OF GOVERNMENT ORDERS ENCOURAGE BULLS

AS anticipated, mills' stocks of jute goods during August showed a substantial fall, in fact the largest fall for several years. This was partially discounted before the official publication of the figures, but so large was the reduction (16,500 tons) that its influence was felt to a greater extent than before Total stocks are now the lowest since February 1956, and as far back as January 1955 was there a lower sacking stock figure than the 50,600 tons of last month. Heavy goods stocks fell by 12,900 tons and constituted about 77 percent of the total reduction. At 34,700 tons, hessian stocks were also the lowest for seven months, and there has been confidence in this section, as the season has begun when hessian stocks normally show a steady decrease.

The market in general came under the influence of speculators who, in earlier weeks, had not shown a great deal of activity. They were prompted in their dealings by a spate of contradictory rumours which undermined the confidence gained from the stock figures. Varying reports about Government orders had a big influence. Sentiment was alternately bullish and bearish, according to the promotings of those who professed to have "inside knowledge." These rumours even affected the fibre markets towards the end: when mills began to take up small lots simultaneously, it was, according to the speculators, covering in anticipation of Government orders.

Prospects for the Daissee Crop

It is expected that the current season's Daissee crop will be slightly larger than last year. This is mainly due to favourable weather conditions. The standing crop has suffered no severe setbacks. Alternate rain and sunshine over the germination period has made the plants very healthy. A good guide to the quality of the crop can be obtained from the weedings and reports indicate that they are the best for some year. A recent survey of the Daissee-growing districts, however, appears to suggest that the actual Daissee in the crop may be very small. In the Nadia districts, it is estimated that about 70 percent of the crop will be mesta, and in the Rongaon area and districts nearer Calcutta about 60 percent mesta. This is also the case in the Midnapore area, but in Sheorabhuli and the surrounding districts the percentages are reversed. The Daissee White crop this year is reported to be good. Initial reports indicate general satisfaction with quality, but the moisture content is high.

THE JUTE MARKETS

The Calcutta jute goods market fluctuated widely. But in spite of reports of business, real goods activity was negligible. Purchases of raw jute decreased and the rise in this section was mainly in sympathy with gunnies.

Manufactured Goods: At the opening, the market was influenced by rumours that a Government order had been cancelled and prices fell sharply. B Twills dropped to Rs. 112.60 for September shipment which represented a premium of 60nP over forward shipment, while 40in. 10oz. hessian lost 40nP to rule at Rs 41.90 for both the near and forward positions. For most of the day, the market was quiet but rates rose on rumours of a large reduction in the I.J.M.A. stock figures. In hessian, the previous day's losses were made up, and this was also the case in forward shipment sacking but September B Twills jumped by Rs. 1.70 to Rs. 114.50. Small selling pressure from mills and heavy selling pressure from speculators at the higher rates caused a slight reaction during the day and all prices were reduced. Further rumours over the week-end about the postponement of Government orders again depressed prices and by Monday morning hessians were back to the week's opening rates. Sacking was stronger because of speculation and although forward prices fell, near shipment was well maintained. During the day, the reduction in the mills' stock figures was confirmed and prices hardened. This was followed by reports that the Burmese Government had again asked for tenders for sacking. Fabrics in which Burma usually takes an interest immediately came under the influence of heavy buying pressure from speculators. B Twills rose by Re. 1 in all sections for September shipment to record Rs. 115.25 a Rs. 2 premium over the January-March position. The market ruled firm throughout the day and the undertone was strong.

At the close, the market was very firm, and opening quotations on Wednesday morning were as follows:

	September Rs.	Oct.-Dec. Rs.	Jan.-March Rs.
40in. 8oz.	35.25	34.75	34.25
40in. 10oz.	42.60	42.75	42.25
B Twills	117	115.25	114
Heavy Cees (Plain)	116.50	115.50	114
A Twills	141	139.50	139.25
Liverpools	130.75	131	129
Cornsacks	119	116.75	115.25

Raw Jute: The market ruled easier at the opening, with only small mill business reported. Prices declined in sympathy with goods and sellers lost interest. Towards the week-end, a little more activity was noted, and mills showed interest in both ready and forward shipment. Sellers, however, with reports of higher prices upcountry, were not keen, and in spite of repeated indications from buyers of 25nP or 50nP below the quoted rates, they held out for higher prices. After the week-end, the jute market ruled steady and mills changed their ideas and purchased fibre at full market rates. Fairly good business was done but was spread over a large number of mills, so each buyer's contribution to the total was small. This was taken as an indication that the mills had got some prior information about the placing of a Government order and were covering against it. Consequently the market became very firm and sellers were reserved. The business done during the past week covered a wide range of delivery dates, but the emphasis was on quick shipment and ready bills of lading were in demand. The mills' stock position is reported to be quite good, but several low-priced contracts made earlier in the year have not been delivered, and this has been suggested as one of the reasons for buyers' present interest in ready jute.

Opening quotations last Thursday were based on Rs. 28.50 a maund basis Bottoms for Dhubri-Northern-Assam jute for September-October shipment. This was 50nP below last week's closing rates. Only small business was reported at this level and prices advanced 25nP. Quotations ruled unchanged until Tuesday, when they were increased to Rs. 29 following good business the day before.

During the week, business was reported in Assam and Northern jute at prices ranging from Rs. 28.50 to Rs. 29 a maund for September shipment, and Rs. 28.75 to Rs. 29.25 for ready bills of lading. Tossa was done at 50nP to Re. 1 above these rates. Small lots of Desal white were done at Rs. 27.75 to Rs. 28.75 for September shipment. Daissee White continued to be in good demand, and buyers paid Rs 28 to Rs 29 for September and September-15th October shipment. In the pucca bale section, mills took up Pakistan cuttings at Rs. 85 to Rs 89 a bale, for September-October shipment and ready bills of lading.

Opening quotations on Wednesday morning were based on the following:

Bimli F.A.Q.	25.50		"
Pakistan Cuttings	88	a bale	"

In Cossipore, arrivals were reported as 305 wagons, which was slightly less than in the previous week, but well below the total of 650 during the same period last year. All new crop arrivals were either already against contract or were taken up immediately, so stocks of new crop available in Cossipore were negligible. Some business was done in old crop Tossa. Stocks were slightly lower than a week ago, and Kishanganj jute was quoted at Rs. 29.50 basis Bottoms.

THE PAKISTANI JUTE MARKETS

FIBRE ARRIVALS SLOW

(FROM A NARAYANGANJ CORRESPONDENT)

THE raw jute market in Narayanganj has continued practically unchanged and the tempo of arrivals is also exactly the same as before. This trend is noticeable in spite of the fact that the overseas market continues well below Narayanganj parities. The difference between the purchase price and the sale value of jute is approximately £4 a ton and still it appears that the London buyers are able to get offers at their enquiry prices. In one or two upcountry places where at present cuttings are lower and where there are not many buyers, it is just possible to buy at parity. Otherwise, it is fair to assume that on present sales all balers are bearing a loss since very few of them can be selling short. The arrivals in Narayanganj continue to be rather slow for this time of year and even in the upcountry agencies jute is scarce. The position is such that if any buyer is prepared to pay As. 8 or even Re. 1 extra, he will indeed find it very difficult to get supplies. Under the circumstances, it is extremely hard to prepare any policy for the future. The average baler appears to think that the market will come down which should normally induce him to keep a short position. Overseas buyers, however, are very slow and reluctant in their purchases so that if one is to keep his business running, he has to buy a minimum quantity of jute which, in general, exceeds sales. The result is that most balers are gradually building up a long position. The levels of the rivers have begun to fall after the spring tides. Lack of rain continues and although for a period river levels were high, this was not accompanied by heavy rain. While some jute-growing areas have had ample water for growing and steeping, that is, those areas on the sides of the larger rivers, other areas further inland have been short of water. In such cases, the quality will deteriorate and there may well be a premium for high quality such as Export Firsts and above. If this assumption is correct, it should further reduce the prices of cuttings which will be longer than normal, and it will also increase the quantity of Export Hearts. This grade is at present very difficult to sell.

E. P. C. registrations for the second half of August are, as expected, rather high. They exceed 500,000 bales, of which 125,000 bales are for India. Normally this should indicate greatly increased buying interest and, therefore, it would be fair to expect an increase in market prices. In fact, the total registrations are still well behind last year, since previous figures were rather low and the true evaluation of the position is that overseas buyers, by buying selectively, are managing to satisfy their urgent requirements without creating any excitement in the market. It may, however, be assumed that the greater proportion of the Indian business is for cuttings and since Pakistani mills have also been buying heavily, a premium may be created for cuttings. Apart from orders from the very large overseas buyers, who buy only from one or two important balers, no serious business has been reported.

The Pakistani gunny market remains fairly stagnant. About 50 percent of last week's tender to Burma went to one of the Pakistani mills at fairly good prices.

THE FOREIGN JUTE MARKETS

CLOTH AND YARN PRICES FIRM

(FROM OUR DUNDEE CORRESPONDENT)

THE improvement in the outlook for the jute industry has resulted in both spinners and manufacturers gaining a better position than they could for some months past. Less new business is, however, being done now and most consumers appear to be more or less satisfied for the time being. Prices are firmly maintained for all qualities of yarns and cloth. Shippers of raw material in Pakistan are still very reluctant to allow prices to decline and on most days an unchanged position has prevailed. Mill Firsts are somewhat irregular, but these are not of much interest nowadays. Quotations range between £100 and £105 a ton, with business reported last week at the bottom figure for September-October shipment, c.i.f. U.K. In the same position, Mill Lightnings are quoted from £94 to £96 and Mill Hearts from £90 to £92. Grade Hearts are usually offered at £85, though less might be accepted on a bid. Some good bids have been made for Mill Firsts and Mill Lightnings afloat, but these have not been high enough for the holders, though about £6 a ton above the shipment rates. Good marks of Daissee-2/3 are offered from £94 and grade at £91, with grade Tossa-2/3 from £101 10s and grade fours from £96 10s, September-October, c.i.f., U.K.

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base :year ended March 1953=100) receded further by 0.4 percent to 111.6 during the week ended 24th August, 1957. The index was lower by 0.7 percent compared with the corresponding week of the previous month, but was 4.2 percent higher than that of last year. The index for Food Articles declined by 0.2 percent to 112.0 due to a fall in the prices of maize in Ludhiana (−13%), rice in Jeypore (−9%) and in Kanpur (−7%), arhar in Delhi, (−8%), gingelly oil and eggs (−7% each), chillies in Madras (−5%), urd (−3%), wheat, jowar, bajra, barely, groundnut oil, coconut oil and cardamoms (+2% each) and gram, mung, musur milk, ghee, mustard oil and sugar (−1% each); the prices of rice in Imphal (+43%), in Contai (+9%), in Matihat (+6%) and in Ranchi and in Balurghat (+5% each), ragi in Madanapalla (+22%), potatoes (+20%), oranges in Madras (+14%), fish (+5%), and tea and coffee (+1%) each showed a rise. The index for Tobacco remained stationary at the previous week's revised level of 90. Higher prices of castor oil (+1%) raised the index for Fuel, Power, Light and Lubricants from 114.6 to 114.7 during the week. The index for Industrial Raw Materials group fell by 1.5 percent to 118.2 compared with 120.0 (revised) for the previous week because of a decline in the prices of bamboos (−8%): tanning materials (−6%), raw jute and groundnuts (−3% each), raw silk, linseed, gingelly-seed and copra (−2% each) and raw cotton, rapeseed and cottonseed (−1% each) although the prices of manganese ore (+6%) and lac (+1%) showed advances. The index for Intermediate Products remained unchanged at the previous week's revised level of 108.0 in spite of the variations in the prices of lead (−3%), rayon yarn, coir yarn, zinc and tin (−1% each) and linseed oil (+1%). A fall in the prices of jute manufactures (−1%) was responsible for bringing down the index for Finished Products by 0.2 percent to 108.5 compared with 108.7 (revised) for the earlier week.

COMMITTEE TO ENQUIRE INTO QUALITY OF INDIGENOUS AUTOMATIC LOOMS

The Government of India has set up a seven-member committee, with the Textile Commissioner, Mr. V. Nanjappa, as chairman, to enquire into the quality, production and delivery of indigenous automatic looms. The committee which will begin its work immediately will recommend measures for the improvement of quality and for increasing the rate of production of automatic looms. The headquarters of the Committee will be in Bombay. Besides the chairman, the Committee will consist of: Messrs. N. Majumder, Industrial Adviser to the Textile Commissioner; A. N. Ghosh, Weaving Superintendent, Hindustan Spinning and Weaving Co. Ltd., Bombay, M. Rangachari, Weaving Master, Buckingham and Carnatic Mills Co. Ltd., Madras, P. C. Shingal, Weaving Superintendent, Swatantra Bharat Mills Ltd., Delhi, R. L Makharia, General Manager, and L. N. Bhagwati, Joint Works Manager, C.I.M.C.O., Gwalior. Mr. G. R. Joshi, Deputy Director, Textile Commissioner's office will act as secretary.

Calcutta Markets

LESS GENERAL DEMAND AT TEA EXPORT SALE

EASIER TREND IN DUSTS

AT Sale No. 13, held on 9th and 10th September, offerings at the Export auction, consisted of 67,725 packages. There was again less general demand. Plain liquoring types were from 6 to 10nP easier. Mediums, with the exception of those with bright liquors, were often up to 10nP easier and Broken Pekoes and Pekoe Fannings in this category were the weakest feature of the Sale. Medium B.O.P.'s however, generally sold well. C.T.C. Assams met with little demand, and prices showed a decline of up to 50nP with quite heavy withdrawals. Whole leaf grades were irregular and often easier apart from stylish sorts, and well made B.P.S. which received good support. Tippy teas generally sold well.

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2.20	2 5 0 to 2 8 0
Plain B.P.	1.60 to 1.64	
Plain Fannings	1.64	
Medium B.P.	1.76	1 15 0 to 2 0 0
Medium Fannings	1.80	1 8 6 to 1 9 0
Best Assam C.T.C B.P.	3.40 to 3.50	4 0 0 to 5 0 0
Best Assam C.T.C Fgs.	4.00 to 4.50	

At the Internal Sale, 20,080 chests of Dust were on offer. There was a good general demand, but prices were again easier. C.T.C. Assams were a weak feature and except for a few selective lines, prices were from 10 to 25nP lower. Demand for teas of this description further weakened as the Sale progressed, and there were a number of withdrawals. The remainder of the offerings received quite good support, but were slightly easier except for a few well-made powdery teas.

Quotations

	1957 Rs.	1956 Rs.
Medium Dooars Dust	1.50 to 1.56	1 8 0 to 1 9 0
Medium Assam Grainy Dust	1.56 to 1.62	1 11 0
Medium Assam CTC Dust	2.00 to 2.20	2 10 0 to 2 14 0
Best Assam CTC Dust	2.30 to 2.60 nom	3 10 0 to 3 14 0

There was a fair demand for the 1,572 chests of Leaf on offer, but prices were generally easier.

FREIGHT MARKETS DULL

DULL conditions prevailed in the freight markets last week. Most owners see little prospect of recovery until there is a wholesale laying up of the less economical tonnage such as the *Liberty* type of ships, and it is considered that the effect of this will not be felt until next April. The single voyage coal rate Hampton Roads-Continent remained unchanged at 29s and in the local coal market, a ship was taken for Colombo at 47s 6d for October loading. There was some activity in the times charter section and a handysized motorship accepted 17s for the trip to the Continent with delivery Singapore and a *Liberty* took 17s 6d for a trip out to West Coast India from Antwerp with the option of a round voyage at 16s. The sale and purchase market is lifeless with sellers' ideas well above buyers.

LINSEED UNCHANGED

There has been very little change during the past week, and the tendency of the market has been mainly quiet. Trading has been dull with buyers and sellers operating cautiously. A poor supply position was offset by crushers' disinclination to enter into forward commitments due to the uncertainty about oil prices. The offtake of oil has shown no sign of improvement, while there has been no fresh developments in the export field. Latest quctations were as follows: Ready-September Rs. 22-6 a maund.

HIDES AND SKINS QUIETLY STEADY

The market was quietly steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 3rd September and 9th September, 1957)

Cowhides : Wet salted (Ord.) 35,000 pcs. on the basis of Rs. 8.50 to Rs. 10.25; Wet salted (Slaughtered) 17,500 pcs. on the basis of Rs. 12. to Rs. 21.

Goatskins : Wet salted (Daissee, Killed) 55,500 pcs. on the basis of Rs. 325 to Rs. 335 and Rs. 365 to Rs. 375; Assam-Dinajpur 18,500 pcs. on the basis of Rs. 275 to Rs. 320; Patna-Pakur (Ord.) 21,900 pcs. on the basis of Rs. 265 to Rs. 290; Muzafferpore-Patna 5,000 pcs. on the basis of Rs. 320 to Rs. 330.

Bazaar Stocks

(9th September, 1957)

Cowhides : Wet salted 1,58,000 pcs.

Goatskins : Wet salted (Daissee, Killed) 2,500 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 55,000 pcs.

SUGAR MARKET UNCHANGED

During the week ended 11th September, sugar sales in the Calcutta market averaged 4,500 bags daily. Arrivals a day were 3,500 bags and stocks totalled 80,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 37-6 for ordinary grain and Rs. 39-6 for big grain. The market was unchanged.

SHELLAC STEADY

During the week ended 10th September, the market was steady. The range of quotations was as follows :

Pure Buttonlac	Rs. 90 value, 91 to 93 buyers,
Lemon No. 1 Shellac	Rs. 95.50 value, 95 buyers, 96 done and buyers, 97 buyers.
Lemon No. 2 Shellac	Rs. 91 92.50 buyers, 94 done and buyers, 93 buyers.
F. O. Std. 1 Shellac	Rs. 88 buyers, 91 done and buyers, 90 buyers.
Pure TN Shellac	Rs. 84 to 87 done and buyers.
4% I.T.N. Shellac	Rs. 74, 78.50, 77.50 buyers.
No. 1 Kusmi Seedlac	Rs. 90.50 value, 89 buyers, 93, 91.50 value.
No. 2 Kusmi Seedlac	Rs. 86.50 value, 84 buyers, 89, 87.50 value.
Fine Bysaky Seedlac (Manbhum)	Rs. 84, 83.50, 85.00 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 80 buyers, 81 done and buyers, 80.50 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 75.00, 77.50, 76.50 buyers.
Ordinary Bysaky (C.P.) Kireelac	Rs. 70.50, 72, 71.50 buyers. Rs. 32 to 30 buyers.

Shipments during September until the 6th were 6,975 packages comprising shellac 3,314 packages, seedlac 3,050 packages, buttonlac 260 packages, and others 351 packages.

INTERNATIONAL ESSAY CONTEST ON U.S. ECONOMIC DEVELOPMENT

An international essay contest to obtain ideas on the most important economic problem which will face the United States in the next 20 years, with 50 prizes of $500 each, has been announced by the Committee for Economic Development (C.E.D.), a private research organisation in the United States. The competition, for which a grant has been given by the Ford Foundation, is open to any one in the free world. Essays to be submitted must not exceed 2,000 words in length, must be in English and those mailed from outside the United States must be postmarked not later than midnight, 15th October, 1957, unless sent by air mail, in which case they may be postmarked as late as 31st October, 1957. Essays should answer the question: "What is the most important economic problem to be faced by the United States in the next 20 years?" and should include the writer's reasons for his choice. They should be type-written, and double-spaced on one side of the paper only. A covering page to accompany each essay must contain the name, address and occupation of the writer. The pages of the essay itself should not contain the name of the writer. When the essays are received they will be numbered and all identification removed before the judges read them. Final selection of the 50 winning essays will be made by the Research Advisory Board of the C.E.D., whose decisions will be final. All entries should be addressed to "Problems of United States Economic Development," Committee for Economic Development, 444 Madison Avenue, New York 22, New York State, U.S.A. They will become the property of the C.E.D. for use as it thinks fit.

FOREIGN BUSINESS INVESTMENT IN INDIA

According to preliminary figures available, the total foreign business investment in India on 31st December, 1955, was Rs. 477.97 crores compared with Rs. 415.73 crores (revised figures) on 31st December, 1953, and Rs. 287.57 crores at the end of June 1948. This information was given in the Lok Sabha by the Central Finance Minister, Mr. T. T. Krishnamachari.

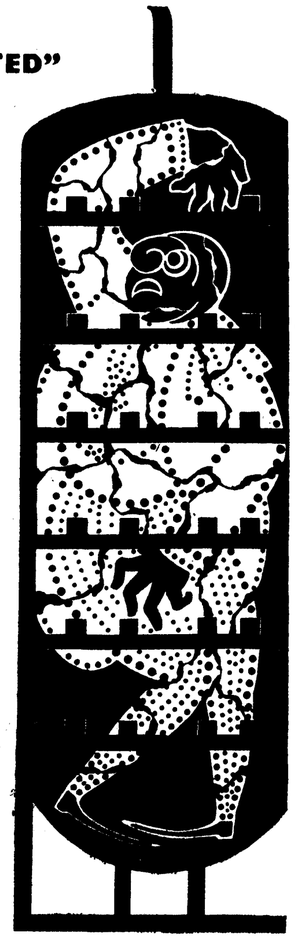
THE ORISSA MINERALS DEVELOPMENT CO. LTD.

NOTICE OF INTERIM DIVIDEND.

THE Board of Directors of the above Company has sanctioned payment of an Interim Dividend on the ordinary shares @ 10% per annum in respect of the year ending 30th June, 1957, without any deduction for Income-tax paid by the Company, payable on or after 11th October, 1957, to those shareholders (or their mandatees) whose names appear in the Company's books on the 4th October, 1957, as the registered holders of the above shares.



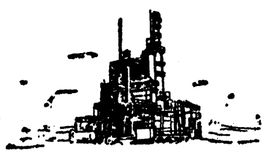
The Share Transfer Register of the Company will be closed from 20th September to 4th October, 1957, both days inclusive.

By Order of the Board,
BIRD & COMPANY (PRIVATE) LIMITED,
Managing Agents.
Chartered Bank Buildings,
Calcutta, [illegible]

"I AM FRACTIONATED"

stammers Adipocere

(Pronounced 'adi-po-saire')



After drilling me out of the earth, they take me to the Refinery. Here I am passed through a continuous process in which I am heated in pipes running through a furnace.

By now I am a mixture of hot vapours and liquid discharged into a fractionating or "bubble" tower, and I pass through vents in a series of trays. As my fractions are separated at different boiling points the residue is drawn off at the bottom, the lubricating oils at the middle of the column, motor gasoline and kerosene fractions still higher up.

Distillation is but one step in a series of complex refining processes which make possible a wide variety of petroleum products.

And after all this, there is yet another process to which I am subjected—that of Catalytic cracking.

Keep watching these columns for what is to happen to me.

STANVAC—*the name that stands for progress*

Regarded as one of the world's most modern refineries, the Stanvac Bombay Refinery combines several petroleum refining processes in the Model Four Combination Unit—the latest in oil refining.

THE HURRILADIH COAL COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, the 27th September, 1957, at 3-30 p.m., for the following purposes :—
