TEA COMPANIES

O. Po. and Dd indicate Ordinary. Preferred Ordinary and Deferred Shares respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

SOME CANDIDATES FOR THE FRENCH SUCCESSION IN NORTH AFRICA

INDIA AND THE FORTHCOMING U.N. DEBATE ON ALGERIA

THE Algerian affair will come up for debate at the United Nations, for the third time, during the session that has just opened. The first time it was voted on to the agenda, the French delegation quit the U.N. and was only coaxed back, largely by Indian efforts, when Algeria was dropped. The second time, France saw that it was hopeless to prevent a debate, even by walking out, and so pleaded her cause before the international tribunal; her cause in fact is not a bad one, but it was less its merits than determined support from the State Department that secured a vote favourable to France. This month, the debate will be more venomous, support from the State Department rather less determined—and a favourable outcome consequently less certain. But Mr. Bourguiba, Premier of Tunisia, has just confided to a Swiss paper that he thinks that France will carry the day again (unfortunately, in his view) because in a pinch the Americans and their battalion of dependents would not desert the French. This is probably true, so it can be assumed that France will be given another reprieve, another lapse of time allowed her in which her friends will be hoping that she can find some way, consistent with Algerian aspirations and French traditions, to end a hopeless and very dirty war.

A curious feature of the international debate about Algeria (for, whatever the French may say, Algeria has become an international issue) is that few nations and none of the major powers want to "desert the French", as Mr. Bourguiba puts it, but all of them want to put France is such a tight spot that, for fear of being deserted, she will choose the liberal way out. This applies to both the Russians and the Americans, it applies to France's European allies including Britain, and in truth it applies to most North Africans. The only parties who literally want to see France get out of North Africa by granting Algeria total and simple independence are the Arab States who have a score to settle with France (and their own ambitions in North Africa) and that minority elsewhere for whom anti-imperialist slogans are a substitute for political thinking.

*

These groups apart, the dominant view within the U.N and without is that France must, and probably will, remain the protecting power for the three North African territories—not indeed their imperial mistress, but their chief ally, their economic support and their privileged partner. If a nominal declaration of Algeria's paper independence is a necessary stage in the evolution towards this new state of affairs, then many nations would favour Algerian independence, but on the tacit understanding that this independence was immediately signed away in some form of union or federation that would bind Algeria to France by links much stronger than those that connect, say, Britain with her former colonies in Asia. The international debate about Algeria (whatever the parties to the actual war may imagine to be the stakes) is about how soon France can liquidate the impossible and outdated colonialist régime in Algeria and replace it by one or other of the more modern forms of association between great States and their weaker dependents.

The reason why simple and total independence, such as it is understood in India, is nowhere seriously envisaged for Algeria is that this territory is not actually or potentially a viable political or economic unit. Its geographical form is an accident of imperialist conquest; its population is a discordant mixture of Europeans, Israelites, Arabs, Berbers and Kabyles; its economy is a precarious branch of metropolitan French industry and agriculture. There is no Algerian nation, and nor are there the sentimental or economic foundations for one. Algeria in fact is just a part of the Sahara desert with a fringe of port towns where a mixed population can hope to survive only as benevolent parasites on some greater unit. The war is about how these communities will arrange their affairs between themselves, and about which greater unit it will be that will continue to underwrite and support their existence. Both Russia and America are quite clear on this, and utterances from Moscow or Washington that seem inconsistent with it can invariably be explained as gestures to placate Arab sentiment at a moment when the Middle East is the most painful point of contact between the two power *blocs*. It is realised in Moscow and Washington that if France simply lets Algeria go, that territory must very quickly fall under some other hegemony—and the Russians fear that will mean American hegemony, and the Americans fear it will mean Russian. When M Mollet was in Moscow last year he was unequivocally told by M Khrushchev that, whatever gestures Russia was obliged to make for political purposes, Russia would prefer to see the French stay in Algeria, not of course as the imperialist occupant but as a sufficiently real presence to exclude American domination. American feeling is similar, with the rôles reversed.

*

These respective apprehensions are perfectly well founded. It is not necessary to accept the doctrine of the "power vacuum" to see that complete eradication of French influence in North Africa would necessarily lead to replacement of that influence by another and more powerful. Apart from the inadequate foundations of Algerian nationalism, which require the territory to lean heavily on some supporter, there is the country's importance as the gateway to the oilfields of the Sahara, and as a strategic point between the Mediterranean and the African continent. American oil interests are already involved in the search for and exploitation of Sahara oil; stories that they are also actively financing the rebellion in return for a promise of control of the oilfields later are almost certainly untrue, but it is clear that removal of French control and competition would be followed by massive invasion of U.S. enterprise such as now operates in Arabia. The probability and the modality of Russian intervention in the case of French withdrawal have just been demonstrated in Syria. But more important than what each of these powers might hope to gain by implanting itself in Algeria is the fear of what it might lose if it allowed the other to do so. Russia sees the prospect of a vast extension of disguised American imperialism throughout the western half of the Arab world and along the southern coast of the Mediterranean; and the Americans see the prospect of Africa being "communised" from Bizerta to Dakar—and neither apprehension, again, is quite unreasonable.

The third contestant for power over the weak North African territories is the one that makes most noise about them and which affects to believe that their true and total independence is possible and necessary. This is that section of Islamic ambition represented by Colonel Nasser. About the genuineness of his disinterest, we need not offer our own opinion; it is sufficient to refer to the convictions of the North Africans themselves, including half of the rebel movement in Algeria and including the parties now in power in Tunisia and Morocco. For Mr. Bourguiba and the King of Morocco, Colonel Nasser is the worst because the closest enemy, he is the supporter of subversive elements in their infant States, the patron of all their violent enemies, and, into the bargain, the representative of unenlightened and reactionary elements in the Muslim world such as have lost power in French North Africa these many generations past. The bitterest complaint of the independent North African leaders against the French is that French intransigence in Algeria enables Nasser to pose as a progressive and thus makes it politically difficult for them to break as openly as they would wish with Nasserism, Arab League claptrap and the obscurantism of the Cairo university.

The Algerian revolutionary movement is sharply divided into pro-Egyptian and anti-Egyptian factions: the F.L.N., which may not be as much Nasser's creature as the French allege but was certainly born in Cairo, and the M.N.A. which is thoroughly secular and opposed to Egyptian influence. (The M.N.A. is also a genuine working-class Party, with Trotskyite tinges, which explains why it does not enjoy the sympathy of the conservative forces now in power elsewhere in North Africa.) These two factions terrorise each other as much as they do the French, as the Melouza massacre showed; this month, indeed, the French have been able to come to an extraordinary agreement with an M.N.A. chieftain in southern Algeria whereby the French army leaves him unharried while he cleans up all F.L.N. bands in his region. But the infinite complexities of Algerian politics are not so much our concern as to show that throughout North Africa the Arab League's espousal of the rebel cause is looked upon with more suspicion than in the corridors of the United Nations.

*

To examine all the claimants to the French succession in North Africa and to have found all of them wanting does not imply that India or any other country favourably disposed both to France and to the Arab nationalist cause is obliged to endorse in the least France's present repressive policy in Algeria. Indeed, it is exactly France's friends who will keep up the pressure on her to abandon a foolish attempt to preserve outdated colonial privileges—especially if it is remembered that the only beneficiaries would be a class of *colons* who are the worst enemies of French democracy. If fascism were to come to power in Paris it would be *via* the reactionary elements now struggling to maintain their power in Algiers. A settlement of the Algerian struggle is essential not only for North Africa's sake but for France's own, for this war is in every sense a civil war. That is, it does not divide imperialists from exploited colonials: it is a war between communities in Algeria and between two sections of the metropolitan French population. Merely to endorse the repressive "pacification" programme of the Lacoste administration in Algiers would be not so much to abandon the Algerian rebels as to abandon all that large section of French national opinion which is striving to force its politicians into more progressive policies.

But every third party which intervenes in this tragically intricate problem (and each vote cast in the forthcoming U.N. debate will constitute such an intervention) must realise that it is taking sides in a civil war where the only possible settlement can come from agreement within the Franco-North African peoples. The most India, for her part, can hope to do is to favour the emergence, on both sides, of parties willing to negotiate a reasonable accord, an accord that secures greater political justice for hitherto oppressed groups in Algeria while leaving untouched the close connection with France that is Algeria's only guarantee for the future. What form such connection takes is for the various communities to work out for themselves. It cannot, from the nature of the case, amount to simple independence for a non-existent "Algerian nation". But nor can it amount to a simple return to the total political supremacy of the white community in Algeria which in the past has so cleverly exploited its cousinship with a great European nation that has higher tasks to perform in this world than the defence of colonial racial privilege.

DIVIDEND PROSPECTS FOR INDIAN IRON

NEED FOR ADEQUATE RETURN ON NEW CAPITAL

THE comprehensive survey of the affairs of the Indian Iron and Steel Company made by Sir Biren Mookerjee in his speech at the annual general meeting last week is marked by cautious optimism—in fact, one might almost say that there is in it more caution than optimism. Profits for 1956-57 have been lower than in 1955-56, a change which Sir Biren describes as a return to "a more normal level" from the high figure for the previous year, when a number of exceptional circumstances combined to boost profits. After providing for taxation, debenture interest, labour and staff benefit schemes and all other charges writing back Rs. 47 lakhs from the taxation contingencies reserve and making various reserve allocations, the profit for the year amounts to Rs. 2,19,97,532. This is a substantial sum, which would have justified a larger ordinary dividend than the Re. 1 a share, free of Indian income-tax, which has been distributed in previous years.

The directors' attempts to persuade the Government to agree to a higher rate of dividend have again failed. No increase over the normal 10 percent dividend is to be allowed "until the expansion schemes are completed." This, according to Sir Biren, gives ground for hoping that the restriction may be relaxed in the near future. It is expected that the 1953 Extensions will be completed next year, while one of the two batteries of coke ovens and one of the two blast furnaces will be ready for commissioning this year. To many shareholders, the hope must seem a rather distant one. The most that can be said in its favour is that it enables the Government, should it be so disposed, to lift the dividend restriction next year and concede to investors their legitimate claim for a share in the increased prosperity of the concern. But the question is precisely whether the Government will be so disposed. There are, as yet, few signs that the importance of providing incentives for private investment is appreciated by those who frame economic policy. If the recent fiscal burdens on investment are a sign of official thinking on this matter, it is possible that shareholders may be expected to wait until the completion of the 1955 Extension programme before they get an increase over the present meagre return on their capital. The sluggish response of the stock exchange to Sir Biren's speech seems to be the result of widespread scepticism about the prospects of an early removal of the dividend restriction. The lack of enthusiasm over the rights issue of ordinary shares made by the company earlier this year stems from the same anxiety about dividend prospects. The belief that shareholders will willingly invest their savings in an enterprise in which they are denied a proper return on their capital, commensurate with the profits earned and the risks taken, still seems to govern official policy decisions.

* * * *

So great are market suspicions that fears have been expressed as to whether even the meagre Re. 1 a share dividend will be maintained on the enlarged capital resulting from the rights issue. A study of the directors' report suggests that, as far as the company is concerned, it is taken for granted that the increase in capital will not involve a fall in the rate of dividend. As against 5,183,708 additional ordinary shares offered for subscription in March, a sum of Rs. 50 lakhs has been transferred to dividend adjustment account. It is specifically stated in the report that the purpose of this transfer is to make provision for possible future adjustment of the dividend on the increased ordinary share capital. It seems unlikely that the Government will insist on whittling down the rate of dividend in view of the fact that the increased capital has been raised entirely from shareholders. In the past the official attitude has been that since the expansion programme is being financed by loans from the World Bank and the Government, shareholders should not benefit from the prosperity of the company until the expansion programme has been completed and the loans have been repaid. But, reading between the lines of Sir Biren's speech, there is every reason to believe that the dividend will be maintained on the increased capital in keeping with the profits earned by the company.

As for certain other aspects of Indian Iron's working, the prospects may be summed up in Sir Biren's words: "If it depends entirely on the efficiency, diligence and enthusiasm of all of us alone, your prospects would appear to be bright." Unfortunately, these qualities in the management may prove of no avail, unless supplemented by the co-operation of workers on the one side, and the Government on the other. On the labour situation, like Mr. J. R. D Tata at the meetings of the Tata Locomotive and Engineering Co. Ltd. and the Tata Iron and Steel Co. Ltd., Sir Biren utters a serious warning. He speaks of an extreme lack of discipline, of the subversive activities of "a minority affiliated to a certain political party," and of attempts to terrorise workers belonging to the recognised union, even to the extent of murder. He warns against "an influence which, for the gaining of its own Party ends, can contemplate with equanimity the disruption of all planned progress towards the achievement of the country's social advancement and industrial self-sufficiency." This is strong language, but no one familiar with recent trends in the labour situation will consider it baseless or exaggerated. The remedy, according to Sir Biren, is the development of strong and healthy trade unionism, preferably on an industry-wise or craft-wise basis.

* * * *

Shortages of coking coal, iron ore and, above all, transport are other difficulties which might impede or even disrupt the implementation of the expansion programmes. Sir Biren has spoken bluntly of the fears in the private sector that, in the allotment of transport facilities, there will be discrimination between it and the public sector, not at Ministerial level but lower down in the administrative scale. It is an irony that the Indian Iron and Steel Company, which is virtually surrounded by coal deposits, is experiencing difficulty in obtaining coking coal because of transport shortages, and it has had to reduce the output of the coke ovens in order to replenish stocks. It would be unfortunate if the bringing into operation of the first new blast furnace is delayed by transport shortages, as this would mean a loss to the country of more than Rs. 2 crores a month in foreign exchange.

In view of the Finance Minister's hope that the foreign exchange shortage will ease after 1959 through the export of steel products, Sir Biren's remarks on the prospects for such exports are significant. Taking only the present demand into account, he says, the output of the two major producers, after their extensions have gone into full operation, may be just adequate for domestic consumption, if the steel is carefully used. As the Government plants begin to operate, there may be an exportable surplus. Assuming that this is the case, there will still be the problem of foreign competition and selling prices. He fears that, in view of the persistent rise in foreign and domestic prices and in the wages of labour, the capital costs and overheads of the Government steel plants will be very much higher than those not only of the two major producers but also of foreign competitors. In that case, the prospect of a substantial improvement in the foreign exchange situation appears bleak, particularly in view of the fact that the entire iron and steel industry in Europe and the Communist bloc may be competing in markets abroad.

EXPANDING CLOTH OUTPUT

THE cotton mill industry has in recent years achieved a remarkable increase in production. It has exceeded by an impressive margin the production target of 4,700 million yards of cloth assigned to it under the first five year plan. The second plan estimates the demand for cloth at 18.5 yards a head by 1960-61, when the population is expected to be around 400 million. With an annual export of 1,000 million yards, producers have been asked to increase output from 6,700 million yards to 8,400 million yards a year by the end of the plan period. With an increase in the tempo of economic activity and an improvement in the standard of living, the demand for cloth should rise in years to come. This has been recognised by millowners for many years, and they asked the Planning Commission to fix targets in the second plan on the basis of a *per capita* consumption of 22 yards. The Commission took a different view, being influenced by the recommendations of the Kanungo and Karve Committees, both of which thought that cloth consumption would not be more than 18 yards *per capita* by the end of the second plan. This recommendation conflicts with the view of the Union Ministry of Commerce and Industry which has held that the production programme should be drawn up to provide for an estimated *per capita* consumption of 20 yards.

* * * *

Discussing this aspect of the problem a pamphlet entitled *The Indian Cotton Mill Industry: Its Importance to the Nation*, published by the Bombay Millowners Association, says that the Government has been unnecessarily conservative in assessing the potential demand for cloth, although it has been "over-generous" in assigning the production targets to the non-mill sectors. "There is no doubt that, as a means of solving the unemployment problem, every possible effort should be made to promote the prosperity of the decentralised sector of the economy. The handlooms provide employment to a large section of the population and, therefore, deserve encouragement. But, with all the goodwill in the world and even with the most generous State aid and patronage, the weaver cannot be expected to give production on the scale required by the planners by transcending his inherent limitations." Large amounts of money are being spent on the development of handlooms, and since February 1953 the mill industry has been paying an additional cess for this purpose. In spite of this, the handlooms have not attained the production target of 1,700 million yards laid down under the first plan, their production in 1956 being only 1,509 million yards. The Kanungo Committee has suggested the gradual transformation of the handloom industry into a compact cottage powerloom sector. But the progress of the scheme has suffered because of hostility from handloom interests. To add to the problem, State patronage has been extended to the *ambar charkha* with a view to relieving unemployment. A committee which was appointed to enquire into the economics of the *ambar charkha* has suggested that experiments with it should be made for a longer period and on a bigger scale. Meanwhile, the enhancement of the excise duty on mill cloth has led to a marked decline in consumption and to an accumulation of stocks. Unless the Government adopts a realistic policy for the mill industry, consumers, producers and the trade can look forward to serious difficulties. Exports will suffer, and inflationary pressures will be accentuated.

CURRENT COIN

World Copper Prices.—There has been a steady fall in the world price of copper over the past eighteen months. In March 1956, it reached a peak of £434 a ton, but since then it has been declining almost steadily. It came down to £307 a ton in September last year, and during the first week of the current month it was as low as £191 a ton. The sharp decline in prices has been causing concern to the domestic producer of the metal, since the local price structure, as Mr. P. E. G. W. Parish has told shareholders in his presidential address at the latest annual general meeting of the Indian Copper Corporation Ltd. (a fuller version appears elsewhere in this issue), bears a close relationship to that of imported copper. India's consumption of the metal is estimated at about 40,000 tons a year, while her production amounts to only about 7,800 tons annually. Because of the fall in the world price, Mr. Parish says, it is obvious that the spectacular results achieved by the company during the past two years will not be repeated in the current year. He does not wish to make any forecast about the future trend of world copper prices for it is an impossible task. Apparently, world output has been outrunning demand because many uneconomic producers resumed production when the price was ruling at £400 a ton. "At what stage uneconomic mines will go out of production to the extent that supply and demand are again in balance is difficult to say. Experts have said that £230 a ton might be a reasonably economic price," Mr. Parish declares. Discussing how a world copper price of £191 a ton is likely to affect the financial results of the company since it is very much below the economic price which the experts have mentioned, the I.C.C. chairman says that his company's cost of production is "somewhere about midway between the highest and lowest costs of copper producing companies" in other parts of the world. At the present price, the company, it is expected, will show a reasonable return. "But if the world price continues to fall, either due to overproduction or to a recession in demand by consumers, there must come a point where profits end and losses begin." Mr. Parish, however, is of the view that the world price will not fall below the company's cost of production, that is, if costs remain at their present level, and are not inflated by further wage demands. Already the direct cost of wages has gone up by about 13 percent due to the settlement reached in January this year with the workers' unions, and another wage dispute is now being handled by the Conciliation Officer. Dealing with the past year's working results, Mr. Parish says that they are a record "in the annals of the company", and have been achieved by increased selling prices together with an increase in the production of ore and copper. The company is continuing prospecting and development work in all the remaining areas of its leasehold, in spite of the declining trend in the world price of copper.

* * * *

Coal Production Prospects.—Coal production in India during the first half of 1957 has amounted to 21.65 million tons, compared with 19.64 million tons in the corresponding period of last year. If this level of production is maintained, the total output over the whole year should exceed 43 million tons, compared with 39.42 million tons in 1956 and 38.21 million tons in 1955. But the apparently satisfactory result of the first six months' working does not seem adequate when considered against the 60 million ton target of production in the second five year plan. It is feared that certain measures which it is proposed to introduce soon in the coalfields might affect output adversely in coming months. It is worth noticing that of the total raisings of 21.65 million tons during the first half of the year, the State sector's contribution is a mere 1.71 million tons. With this level of production, it may be barely possible for the State sector to reach even its 1956 total. It has been allotted a target of 12 million tons for additional production under the second plan: although coal is included in the "hard core" of the plan, some may doubt whether State collieries will be able to achieve their target. Meanwhile, the Central Government has said that it intends shortly to introduce a Bill in Parliament seeking the amalgamation of collieries on the lines suggested in the Balwantrai Mehta Committee report. But the indications are that the Government is yet to make up its mind on the details of the recommendations. Formidable difficulties are likely to arise and the official attempt to force the pace of amalgamation has caused a good deal of apprehension in the industry. As bureaucratic handling of industrial problems is apt to be shortsighted, colliery owners feel that the time-table should be staggered in order to give the proposed statutory commission enough time for its delicate and complicated task. On behalf of the Joint Working Committee of the Indian Mining Association, Indian Mining Federation and the Indian Colliery Owners Association, a deputation met the Minister for Steel, Mines and Fuel in New Delhi recently to express its views on the subject. It is learnt that, while accepting the principle of amalgamation, the deputation has urged the Minister to be extremely cautious. One of the proposals it has made is that before decisions are taken, individual cases should be studied by mining experts. An arbitrary output limit, as fixed by the Mehta Committee, will disturb production and hamper rationalised mining. Moreover, for centralised mining many essential items such as plant, machinery, iron, steel, cement and railway siding facilities will be required in much greater quantities. These are in short supply and, because of the foreign exchange shortage will not be easy to get. The foreign exchange can be utilised more profitably in other ways by the coal industry. The process of amalgamation should not be hasty. The main need at the moment is for better mobilisation of the fuel resources required for the second plan. Hasty measures to bring about the amalgamation of collieries will hamper plans for rationalisation and for increasing production.

* * * *

Housing for Tea Labour.—Speaking from the chair at the annual general meeting of the Bharatiya Cha Parishad last week, Mr. H. N. Sarma has referred to some of the problems which the tea industry is facing because of the Plantation Labour Act. The Act, he says, reflects the Government's concern for the "welfare of labour", but it imposes costly obligations on the industry, which include "responsibilities" such as education and medical care. These responsibilities are primarily those of the State, but they have been transferred to the industry, Mr. Sarma points out. The law is rigid and does not take into account the ability of the industry as a whole to fulfil the obligations imposed thereby, nor does it permit any variation according to local conditions. The question of funds apart, there are other difficulties. For instance, one of the provisions of the Act is that gardens should provide housing for their workers. This is a provision which it is specially difficult to comply with in view of the serious shortage of building materials such as steel and cement. The Tea Board has recently taken up the matter with the Central Government but "no tangible relief" has been provided. The only suggestion which has been made is that individual gardens should approach the State Government concerned for "exemption from the obligation of constructing the prescribed number of labour quarters annually and of providing the prescribed hospital facilities." The subject has been discussed at a recent meeting of the Assam Housing Board, but unfortunately the Board has not agreed to any "general relaxation of the statutory obligation to construct the prescribed number of houses annually." The Assam Government has, however, indicated that it will grant loans on a second mortgage and against bank guarantees for the purpose, and a relaxation of the statutory obligations in individual cases will be allowed "on merits."

* * * *

Raw Materials for Lanterns.—In common with many other enterprises, the lantern industry finds itself handicapped by a shortage of raw materials resulting from import restrictions. It has been asked to rely almost wholly on domestic supplies, but indigenous suppliers are not in a position to meet the demands. The situation threatens to render a large part of the industry's capacity idle. Judging from the speech of Mr. S. C. Sen, acting president of the Lantern Manufacturers Association, at last week's annual general meeting the threat is already maturing. Mr. Sen says that because of the Government's import policy, "the supply of tinplate to the lantern industry has considerably deteriorated and, I apprehend, unless immediate efforts are made to retrieve the situation or obtain at least a temporary relief, the industry will suffer a severe setback and will be obliged substantially to curtail its production." The industry formerly imported all its requirements of tinplate of deep drawing quality, but this has now been totally stopped as "no import licences under the new policy can be issued to the manufacturers receiving quotas of steel from indigenous production." Quota allotments of tinplate from indigenous sources have already been curtailed to such an extent that manufacturers can get only a little over 25 percent of their original allotments. Moreover, there has been some labour trouble in the manufacturing company, and the industry fears that its already heavily reduced quota might be cut further. Mr. Sen stresses that at its present production level of 5 million lanterns, the industry has just reached "the economic level and any reduction in it would mean a heavy material loss." He pleads for a revision of the policy for the import of raw materials for the lantern industry. The industry plays an important part in the life of the rural people, and Mr. Sen points out that in spite of schemes for rural electrification, lanterns will continue to be used by them. Most houses in the villages are not *pucca*, so they are unsuitable for electrification. Besides, hurricane lanterns have always served "a very useful purpose for multifarious outdoor jobs and as a standby in case of electric breakdowns." The present requirement of lanterns has been estimated by the Planning Commission at 5 million a year. Mr. Sen thinks that this is an under-estimate.

* * * *

New Use for Cotton Plant Stalks.—An outstanding example of the importance of research is provided in reports from Israel about the possibility of finding an economic use for the stalks of the cotton plant after it has been stripped of the bolls containing the main commodity for which it has been planted and grown. Most cotton-growing countries have looked upon these as inevitable waste products, except to serve as a doubtful form of fertiliser when ploughed back into the soil. Earlier efforts to find some use for cotton stalks have invariably foundered on the difficulty of evolving an economic method for removing the outer covering of thin bark, which is the real waste product, so as to get to the pith. This is the problem, it is now reported, which has been solved, on a laboratory scale, by the Israel Government Institute for Fibres and Forest Products Research. Initial work was part of a general investigation of the possibility of using local raw materials for pulp and paper production. It has been found that the chemical properties and the fibre composition of the stalks make them unsuited for use as a source of chemical grade pulp for paper making because of the low yield of pulp and the low quality of the ultimate paper product. The preparation of semi-chemical pulps for the production of plain and corrugated cardboard has also encountered serious difficulties. Eventually, however, a means of treating the stalks has been discovered whereby the production of semi-chemical pulps for cardboard is possible at far lower costs and with a far higher rate of utilisation than with ordinary methods. The quality of the cardboards obtained, it is claimed, is considerably improved, and in particular the method makes it possible to increase the resistance of the product to tearing. Research is continuing with the object of making further improvements and of developing the production of corrugated cardboards for packing the citrus fruits and other agricultural products which form an important section of Israel's export trade.

VALUE OF SILVER

WHEN the Government of India closed the mints in 1893, we suggested, as indeed we had done before, that an import duty should be levied on silver on such a scale as would make a tola of silver always worth a rupee. Instead of doing this, the Government contented itself with putting a nominal duty on silver, and the result today is that the rupee is, to all intents and purposes, a token, and that, if melted down, it would lose about 30 percent of its value. Now, it must be borne in mind that the great bulk of the people of this country have invested their savings in silver. Some of them have simply hoarded rupees; these people have sustained no loss. But the great bulk of the people have melted rupees down and made them into ornaments which they wear upon their persons, thus carrying their wealth about with them in a portable, convenient and readily realisable form. Until the mints were closed a labourer, man or woman could take off their bangle or anklet, and the silversmith would give them, as a rule, its weight in rupees. But as the French would say, "we have changed all that", and the unfortunate person who had invested, say, Rs. 25, some four years ago in silver jewellery, would now lose quite one-third of this if he wished to convert it into money. The ordinary uninstructed Indian, whose untutored mind has hitherto recognised that a rupee represented one tola of silver, and that one tola of silver was the equivalent of a rupee, has now been rudely undeceived. There must be many millions of such during the last twelve months, and what wonder is it that being so deceived to their own loss and detriment, they should be dissatisfied with the Government, which has brought this ruinous loss upon them. Thus the Government has lost a large sum in revenue which the duty on silver would have brought in, and the savings of the people have been diminished. We may ask, *cui bono?*

TAXATION OF COMPANIES
Their directors, managers, employees and shareholders
By
Girish Chandra Sharma, M.Sc., LL.B., I.R.S.
Foreword by Shri A. K. Roy, Secretary, Ministry of Finance, Revenue Division, ex-officio Chairman, Central Board of Revenue.
Most uptodate and exhaustive book explaining all problems relating to company taxation (including an exhaustive discussion of 1957-58 changes), numerous worked out illustrations, completed guide for anything connected with taxation of a company or its director or shareholder. Explains the tax back ground of various decisions which a company may have to take. Page over 750. Well Bound Rs. 25/- postage extra.

Without Prejudice

HIGHER DEARNESS ALLOWANCE FOR WORKMEN

VALIDITY OF AWARD HAVING RETROSPECTIVE EFFECT

(FROM OUR LEGAL CORRESPONDENT)

HOW far, if at all, and subject to what limitations, if any, is an industrial tribunal entitled to give retrospective effect to its award granting dearness allowance or other financial relief to workmen claiming it under the Industrial Disputes Act? And how far, if at all, is the tribunal entitled or obliged, in considering whether to make its award with retrospective effect, to take into account the financial position of the employer and his ability or inability to carry the burden which a retrospective award would impose upon him? In a case involving the employees of a number of mills, the workmen were applying under the Act for higher dearness allowance with retrospective effect. The employing company, which had started business only in 1950, had sustained losses in past years and its financial position had given rise to serious anxiety on the part of its directors. Nevertheless, the tribunal, having regard to the needs of the workmen, made an award granting the higher dearness allowance and, what is more, granted it with retrospective effect. The employer appealed. Before the Labour Appellate Tribunal it did not contest the fixation of the higher dearness allowance as granted by the award. The only ground pressed in the appeal was the order giving retrospective effect to the award.

Now it is no use at this time of the juridical and industrial day trying to contend, even if a concern is being run at a loss, that a tribunal has no discretion in such a case to make its award retrospective in its effect. An employer may for years past have been employing sweated labour and systematically underpaying his men though it is indeed difficult to imagine, in these days of legislative petting of labour, any employer being able to carry on such a practice for long. Nevertheless, here and there no doubt there exist employers getting away with it. Also, such an employer, once he knew that an award could not date back, might by every device of legal art and strategic procrastination postpone and delay the actual hearing and decision. The fact is that each case has to be considered on its own particular facts and circumstances. And the present one on which we comment is helpful as being typical of a genuine claim by workmen and a genuine answer by employers and as illustrating the principles on which a tribunal should act in such a case and the circumstances in which the Labour Appellate Tribunal will overrule him if he goes wrong. Wherefore, it being a fairly typical case with no *mala fides* on either side, we will go into the facts a little more in detail.

The industrial court—it was a Bombay case, hence the word "court" not "tribunal"—had given retrospective effect to its award as from September 1955; and in dealing with the question of retrospective effect, the award referred only to the audited balance-sheets of 1953 and 1954 produced by the mills who were the employers, showing a profit of some Rs. 852 and Rs. 10,250, respectively, for those years. The award stated that having regard to the financial position of the company which had no reserves of any kind and also the fact that the mills had been paying dearness allowance at 67½ percent neutralisation in spite of the awards of the industrial court fixing it at 75 percent neutralisation for a majority of the units of the industry, retrospective effect to the demand of labour should be given from September 1955 as the reference was made on 24th August, 1955.

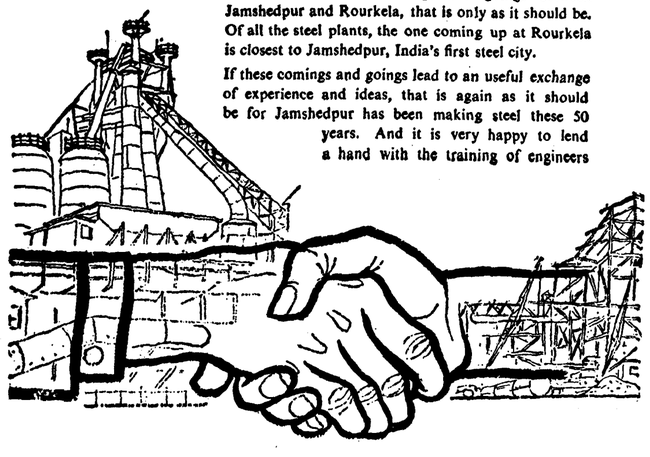
* * * *

The above being the grounds on which the lower court had granted relief with retrospective effect, the Labour Appellate Tribunal of India had certain observations to make on them when the mills appealed against the award; and we reproduce those observations as being instructive and informatory as to the considerations which should actuate a tribunal where an employer resists before it an application that an award be given with retrospective effect, on the ground of his (the employer's) financial difficulties.

"If," said the Appellate Tribunal, "the only accounts produced by the mills before the lower court had been those for the years 1953 and 1954, to which the award refers, there would have been considerable justification for the provision made in the award, for giving it retrospective effect at least from the date of the reference, if not from an earlier date as demanded. It is, however, not disputed that the mills had placed before the lower court the accounts of all the years from 1950 onwards, as from the commencement of the business, and those accounts show that in the first and third years of the existence of the mills, namely, 1950 and 1952 the concern suffered a total loss of over Rs. 51,000 and that as against such large losses, the profits made in the other years, namely, 1951, 1953 and 1954 totalled together less than Rs. 29,000, leaving a net loss of over Rs. 22,000, as a result of the working of the first five years of the business. In consequence the net result at the end of these five years had been that the capital invested had given no return whatsoever but, on the contrary, had been wiped off to the extent of Rs. 22,000 or more. We are informed that the profits for the year 1955 would be about the same as for 1954, namely, Rs. 10,000, and this would reduce the net loss to about Rs. 12,000. With the further liability of about Rs. 3,500 a year that would be cast on the concern by the increase in dearness allowance of the workers in accordance with the award, if the profit-earning capacity of the concern remains the same, it would take some two years or so more before the concern would be able even to wipe off the initial losses suffered by it, without its receiving, till then, any sort of return on the capital invested for all those eight years."

* * * *

Not that an industrial tribunal or court is absolutely precluded from making an award with retrospective effect even when the financial position is as above indicated or even worse; and the Appellate Tribunal proceeded to give a pronounced hint as to when it can and should be done. A strained financial situation must not be made an excuse for exploiting or victimising the workmen. "It was not," the Appellate Tribunal proceeded, "the case of labour that the workers of the mills in the present case were being paid what might be described as abnormally low or starvation wages so as to require the industrial court to disregard the financial capacity of the mills to place the additional burden of retrospective effect on a concern like the one before us when it is shown to be in great financial difficulties and when the dearness allowance payable to its workmen has been increased by the award to some extent only in order to bring it into line with the standardised wages in a large number of units in the industry." It was contended on behalf of the workmen that the Labour Appellate Tribunal had no jurisdiction to interfere with the order of the lower court concerning the retrospective effect given to the increase in dearness allowance as it was contended, the order in question was a discretionary order.



"We are unable," said the Appellate Tribunal, "to accept any such contention . . . . Although, sitting as an appeal court, normally we would not interfere with the orders of the lower court in matters which are purely discretionary, we have, without doubt, every power to amend the award in this respect, as was done by the Special Bench of this Tribunal in appeal No. 230 of 1954. . . . . when we find that the lower court has not taken into account certain considerations which should have guided it in deciding a question like the one in this case, namely, the retrospective effect to be given to its award. Judging from the facts of that case, as stated by the Special Bench it appears that the financial position of the company was in any event no way worse than that of the company in the present appeal and yet the Special Bench set aside the order of the wage board giving retrospective effect to its award whereby the dearness allowance of the workmen in that case was raised so as to neutralise 75 percent, instead of 67½ percent, of the increased cost of living exactly in the same manner as has been done by the award in this appeal. The Special Bench held that the order for retrospective effect was not justified in such circumstances and ordered that the award of the wage board should have effect from 1st September, 1953, being the commencement of the month in which the award was given. On the same principles we think that the lower court was not justified in giving retrospective effect to its award dated 19th March, 1956. We therefore modify the award by ordering it to take effect as from 1st March, 1956, instead of September 1955 as ordered by the lower court."

(I.L.J. Vol. II, p. 268).

From a Neighbour

If there is a lot of comings and goings between Jamshedpur and Rourkela, that is only as it should be. Of all the steel plants, the one coming up at Rourkela is closest to Jamshedpur, India's first steel city.

If these comings and goings lead to an useful exchange of experience and ideas, that is again as it should be for Jamshedpur has been making steel these 50 years. And it is very happy to lend a hand with the training of engineers

and technicians for Rourkela. There are nearly 150 of them at Jamshedpur—from key personnel to artisans.

Good Wishes to Rourkela

Strengthening these ties of friendship are the surprisingly large number of old Jamshedpur faces that one sees at Rourkela. To them and their colleagues, Jamshedpur sends neighbourly greetings and good wishes.

THE TATA IRON AND STEEL COMPANY LIMITED

TN 1908

THE last war was called, by Sir Winston Churchill, The Unnecessary War. The strike started yesterday by Calcutta bank employees could as appropriately be designated The Unnecessary Strike. It was, indubitably, very generous of Mr. Pravat Kar, the President of the Bengal Provincial Bank Employees Association, to say on Tuesday that he was still ready for negotiations. But I do not yet see the necessity for examining the figures produced by the Association about the profits made by banks; I remain wedded to the view that accountants know a little more about these *things than labour leaders. Alterations* in an all-India award may or may not be justified in certain circumstances. The more important question is whether regional units of national organisations—be they labour unions or employers' associations—can be expected to take independent action of a character bound to affect the country as a whole. This is precisely what bank employees in Calcutta are doing and what bankers have declined to do. It is perhaps useless to refer to the obvious inflationary effect of a 25 percent increase in the salaries of bank employees, for inflation, like the lice, is always brought by the other monkey—never this one. A further increase in bank charges, which will be the inevitable result of conceding even a small part of the employees' demands, will push up the prices of commodities and services, already high enough in all conscience, further beyond the reach of the people, bank employees included. It is refreshing to find that Mr. Kar is not wholly unaware of the inconvenience caused to the public, especially with the Pujah only a few days away. "But," he added, "what about the bank employees?" It is evident that their difficulties, imaginary in part, are to be placed above those of the people as a whole.

* * * *

Dr. Konrad Adenauer's victory in the West German elections was expected, though not many perhaps thought that it would be so sweeping. Students of politics and politicians in other countries might learn a great deal from it. The first lesson, I think, is that voters prefer an ounce of prosperity to a ton of promises—and three-quarters of a ton of prosperity is about what Western Germany is now enjoying. Even socialism, this election has shown, is of very limited appeal when there is money all around and nobody need waste time worrying that some may be making a little more of it than others. Envy is less a part of human nature than we often think. Those who imagine that only an election manifesto which contains extravagant promises will attract the many, not only insult the electorate but misread the mind of the people they want to win over. Secondly, it is Western Germany that has shown a sceptical world what private enterprise can do, not only in giving back life to ruined people but also by placing them in a position to compete successfully with established manufacturers. What of the future of democracy which, Critic of the *New Statesman* in his wisdom said last week, would end with the re-election of Adenauer? This kind of attitude that democracy is safe only in the hands of socialists may have been the undoing of Ollenhauer's Party. The West, which is naturally happy to see Adenauer back in power, never seriously thought that victory for the Social Democrats would have meant Western Germany's dissociation from the Western alliance. It is also to be doubted whether the Kremlin is as displeased with the results as it may pretend. It would be much unhappier without the excuse Adenauer now provides for Russian intransigence. Disappointment that German reunification may now be a remoter possibility is less wide than may appear on the surface. Division of a country always creates a whole series of vested interests in the divided units, and they are not done away with easily—although everyone blames division for everything that goes wrong. (This is a phenomenon with which this part of the world is not unacquainted.) Professor A. J. P. Taylor was not wholly facetious when he wrote recently that he hoped there would not be a single Germany too soon.

* * * *

"Industry in Art," I thought, would not be an inapt description of the impressive exhibition recently held at Artistry House by a group of artists calling themselves Studio. The great steel works in Jamshedpur was their subject, not one that is known to inspire artists immediately on sight. One of Tagore's famous plays is a frank attack on the machine, to which Mahatma Gandhi's own attitude was very different from, say, Henry Ford's. It is the more surprising, therefore, that fifteen young Indian artists should have wanted to paint, in oil, 65 pictures of such massive and rather frightening things as blast furnaces and pitsides and rolling mills. The appeal of a picture like Dilip Das Gupta's "Night Lights" was immediate, but a closer look at the pictures of the details of the enormous factory and the plant proved equally rewarding. There is no doubt at all that the artists have absorbed their material and discovered many such aspects of steel-making as are invested with beauty of an unusual kind. The treatment is faithful and imaginative in the right proportions, and there is no carelessness anywhere. (None of the 65 exhibits could be the work of "Congo," the London chimpanzee, or his admirers.) Whether Tatas commissioned the paintings I do not know. That house is justly famous for its patronage of such things, and it occurs to me that the example is worthy of wider emulation. I remember an ultimatum once issued to the imaginary Global Enterprises Inc., by the distinguished literary critic, Mr. V. S. Pritchett, that if the leaders of industry today did not help writers and artists, as the kings and feudal lords of old used to, this could lead to serious dissatisfaction among the latter, who would then go to the State for succour. This may be an exaggeration, but it seems to me that, if only Finance Ministers would be a little more tender, many industrialists would be greater patrons of the arts than they are at present.

* * * *

A correspondent tells me that for want of better things to do, the Government of India has started to play the yoyo with motor-car prices. It must be an enormously attractive pastime, except that motor-cars might start competing with Indian Irons as a speculative favourite among our *fatka* operators. The price of a certain make of automobile was cut quite sharply early this year amidst a fanfare of Government self-congratulation; jubilation followed among potential consumers that the stupidities of official policy, which have been responsible for making motor-cars prohibitively expensive for an increasing number of people, might be waning. Now, my correspondent makes the discovery that the vehicle in question is not only dear; it actually costs a good deal more than it did when the much advertised price-cut was made. In other words, as far as buyers are concerned, over a brief period of eight or nine months the cut in price has been more than restored. Meanwhile, the prices of certain other makes of motor-cars have also been raised. It is not the economics of the price changes that I question here, although there is much to be said about that aspect too; my interest centres on the point as to why the changes should be so frequent, so unpredictable and so poorly advertised. Not all the motor-cars sold in India are available for immediate delivery; certain vehicles ordered now will not be handed over before December or January, but the price buyers have to pay is nevertheless the price ruling at the time of delivery. Is it fair that they be obliged to place a firm order without being told the definite cost of what they are buying? Even in forward trading, about which the Government has emitted much antagonistic hot air in recent years, buyers and sellers are not left in doubt about price, delivery and other specifications. The manner in which automobile prices are changed without sufficient notice is coming to resemble more and more the operations of a *fatka* gambling den. I know that various industries have to alter prices from time to time, because demand, supply or costs keep varying. But to move the price of a fairly heavily controlled commodity up or down frequently by as much as 10 or 15 percent needs a better excuse than that every Government must bow selectively before special pressures. If the *fatka* in motor-cars retains its volatility, automobile prices might well henceforth be a more appropriate subject for enquiry by the Forward Markets Commission rather than the Tariff Commission.

* * * *

I must confess I was not among the hopefuls when the Himalayan Mountaineering Institute was inaugurated in Darjeeling about three years ago, which only makes me the happier now that I was wrong. Under Major N. D. Jayal, the Institute appears to have made an excellent beginning, and there is reason to believe that before long Indian mountaineers might attempt some of the toughest peaks in the Himalayas, only a few of which have so far been climbed. Everest was undoubtedly a great triumph, but I have heard it from mountaineers that the obsession with that single mount had done much harm to the sport of mountaineering as such, in which nationalist rivalries too are a relatively recent phenomenon. With Tenzing on hand, there is no reason why the Darjeeling school should not be as good as any in the world, at least so far as Himalayan climbing is concerned. On the other hand, mountain climbing has now become something of a science, I suspect, and a good deal may have to be added to what the *sherpas* can teach from their experience. Nor is there any reason to think that this theoretical aspect is being neglected. Mountaineers of the world unite rather more easily than Marx's workers of the world, and mountaineers in other parts of the world will, I am sure, readily help the Darjeeling Institute. The annual report says that Sir John Hunt and Dr. Charles Evans take a personal interest in the Institute, and help from Switzerland, France and other countries is always available, as is only to be expected. Mountain climbing is one of the finest outdoor sports, and this country, which leans on the great Himalayas that are in India's life and part of it, will take to it in increasing numbers as soon as there are opportunities. It is not a rich man's sport either, which reminds me that, while refusing to take oxygen at great heights may be going a bit too far, excessive dependence on the latest equipment perhaps takes away something from the thrill and adventure of climbing. Tilman's "these temples in rock" are to be climbed because, as Mallory put it, "Because it's there."

INDIAN COPPER CORPORATION LIMITED

CHAIRMAN MR. P. E. G. W. PARISH'S REVIEW

Address delivered by Mr. Patrick E. G. W. Parish, Chairman of the Indian Copper Corporation Ltd., at the Annual General Meeting of the Company for the year ended 31st December, 1956 held on the 11th September, 1957.

Gentlemen,

I have purposely departed from precedent this year in producing my Statement on the Corporation's affairs, now, at the Annual General Meeting, rather than to send it out with the Accounts which were published some two months ago, as was the practice in the past. The reason which has prompted me to make this change is my desire to give you the very latest position in the light of changing World prices of Copper.

General Review

You will recall that your Chairman, in his statement last year, was somewhat cautious concerning the possible results for the year now under review. He was perfectly right for the World price of Copper had reached its peak of £434/- per ton in March and a rapid decline was already in evidence. The price in September last year was £307/- and this decline continued until the end of the year when the price of Copper stood at £267/-. Last week it was £191/-.

Despite this heavy fall in price the selling prices of your Company's products averaged over the year 1956 were maintained above the previous year. These average prices were: Copper Ingots £330/- per ton against £309/- per ton last year. Rolled Brass £272/- against £245/-, Yellow Metal Circles £305/- against £266/- and Rolled Copper £388/- per ton as against £357/- per ton last year.

The annual consumption of copper of various grades in India is approximately 40,000 tons, of which your Company produces about 7,800 tons. The balance 32,200 tons has, therefore, to be imported at current world prices. Despite foreign exchange difficulties, it is understood that the Government of India intend to grant import licences to cover the country's requirements of this metal.

The price structure of your Company's products must bear a close relationship to that of imported Copper and with prices as they are today it is obvious that the spectacular results achieved during the past two years will not be repeated in the current year.

It is an impossible task to forecast the future trend of the world price of Copper. Obviously when the price of Copper was over £400/- some mines, which in ordinary circumstances are uneconomic, were able to resume production, with the result that eventually the supply caught up with and then surpassed demand. The decline in price since the peak in March 1956 is the consequence. At what stage uneconomic mines will go out of production to the extent that supply and demand are again in balance is difficult to say. Experts have said that £230/- per ton might be a reasonably economic price, but as I have already said, the price today is well below that.

So far as your Company's mine is concerned, the cost of production is somewhere about mid-way between the highest and lowest costs of Copper producing Companies in other parts of the World and at present prices we can expect to show a reasonable return, but if the world price continues to fall, either owing to over production or to a recession in demand by consumers, there must come a point where profits end and losses begin. My own view, for what it is worth is that the world price will not fall below our cost of production, but this, of course, presupposes that our cost of production will not be further inflated by wage demands. As you will see from the Directors' Report, the settlement reached in January this year with the two Unions representing our employees will increase the direct cost of wages by about 13%. It is to be hoped that their leaders will realise the simple economics of the matter and not press their demands to such an extent as to put our Mine among the uneconomic producers.

You may have seen references recently in the press to a renewed dispute with the Union at Mosaboni. As the matter is now in the hands of the Conciliation Officer I think it is better for me to say no more at the moment. In fact the Union at the Mine did call the workers out on a one day's token strike last month—in our opinion quite unjustifiably.

Working Review

You will observe from the Profit and Loss Account and your Directors' Report that the financial and working results are a record in the annals of the Company. These results have been achieved by the increase in the selling prices, together with an increase in production of ore and copper.

The record of ore milled, amounting to 421,131 short tons, is a direct result of the policy commenced a few years ago for an extensive prospecting and development programme with the object of opening up all the workable areas of the Company's leasehold to maintain and, if possible, to increase production. This included the sinking of a circular shaft to a depth of 2,200 feet completed in 1954 at a cost of £370,000/-.

You will observe from your Directors' Report that this policy has not only increased production but, what is so important for the non-ferrous metal deep-mining industry, built up further ore reserves which now stand at 3,424,594 short tons.

The new prospecting and development of all the remaining areas of the leasehold, despite the fall in Copper prices, continues on an extensive and uninterrupted scale, but although it is premature to forecast results it is necessary for me to issue a caution that the results so far obtained, although not unsatisfactory, are not conducive to any spectacular large increase in production in the near future. It is, however, I repeat, our policy even at lower Copper prices to exploit the deposits on our leasehold, with our very highly skilled and experienced technical mining staff, to the full to the ultimate benefit of the country.

The production of Copper was a further record and in order to achieve this it was necessary to increase the productive capacity of the Works, which is still being continued according to the requirements necessitated by the increasing production of ore.

Accounts

The Accounts disclose that the profit before providing for taxation, depreciation and reserves amounts to £1,507,184/-.

Depreciation at £175,000/-, the same as last year, has been provided for in view of the large capital expenditure required for prospecting, development and the increasing production programme planned. You will observe from the Balance Sheet that the addition to fixed assets during 1956 was £220,747/-.

Your Directors have transferred £175,000/- to General Reserve.

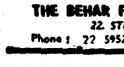
As regards Taxation, £932,689/- has been reserved in the Balance Sheet. Of this £676,315/- is for Income Tax and Super Tax, £99,355/- is additional Super Tax on the 1955 final dividend and Bonus, and the Interim and Final Dividends for 1956, £137,130/- is tax on the Bonus Share Issue and £19,889/- is reserved against Wealth Tax under the new Budget.

Although costs increase as mining operations get deeper, these were partly offset last year by the increased production and the actual overall increase of cost per ton as compared with the previous year, was directly attributable to the large increase in Profit Sharing Bonus paid out to the employees.

Your Directors' Report outlines details of the year's operations as compared to the previous year, but further details are given in your General Manager's report, which may be seen during office hours at the Company's Head Office.

Kyanite

The mining, beneficiation and despatch of kyanite ore from the Company's leasehold property continued uninterrupted throughout the year. The export of this ore remains unrestricted and despatches amounted to 16,617 tons being 2,617 tons less than in the previous year due to shortage of wagons to carry the ore from the mines to Calcutta Docks. Our main world markets continued to be the North American continent and Europe, and prices were maintained at approximately £23/- per ton F.O.B. Calcutta as compared to £20/- per ton in the previous year.



The civil suit brought by the Bihar Government against the Company and the civil suit brought against the Bihar Government by the Company for specific performance to renew their lease, as reported by your Chairman at the last Annual General Meeting, were both decreed in favour of the Company, but the Bihar Government has appealed to the Patna High Court where the suits are now pending.

Staff

On behalf of you all I extend our thanks to the General Manager Mr N A B Hill to the Staff both at the Mine and at the Works and to the workers and [illegible] them on the fine results achieved,

the dependable name in fireclay refractories

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

TIGHTER CONDITIONS IN INTERBANK SECTION

Wednesday, 18th September.

THERE has been little change in the level of advances in the Calcutta money market during the past week. A modest decline in sugar and cotton accommodation has been largely offset by an increase in funds for jute and for the storage of grains and seeds. In the interbank market, conditions are tighter presumably because large amounts of cash have been withdrawn before the bank strike began. The call rate has moved up to 4 percent.

A fair number of tea and gunny bills have been reported in the exchange market, but remittance has been on a small scale. Sterling shows little change in relation to the dollar.

* * * *

Silver was firm because of pre-Pujah demand. The price rose to Rs. 183.25, and the payment of the import duty on Tibetan coins, it appeared, had little effect.

Gold reacted to Rs. 109.50 at the close on profit-taking. Arrivals were restricted.

* * * *

During the week ended 13th September, Government of India Treasury bills for Rs. 77,90,75,000 were sold in favour of the Reserve Bank.

* * * *

A decline of Rs. 5.55 crores to Rs. 1,455.86 crores in active notes was the notable feature of the return of the Reserve Bank of India for the week ended 13th September, 1957. The total note issue was Rs. 73 lakhs higher at Rs. 1,513.36 crores. Notes held in the Banking Department consequently rose by Rs. 6.28 crores to Rs 33.05 crores. Deposits of the Government of India increased by Rs. 89 lakhs to Rs. 52.86 crores while other Government accounts fell by Rs. 72 lakhs to Rs. 6.16 crores. Balances of commercial banks, at Rs. 104.60 crores, showed a rise of Rs. 36 lakhs. Balances held abroad declined further by Rs. 3.56 crores to Rs. 28.23 crores. Other loans and advances declined from Rs. 65.05 crores to Rs. 63.74 crores, of which advances to scheduled banks against usance bills totalled Rs. 26.78 crores (Rs. 28.85 crores). Ways and means advances stood at Rs. 44.50 crores against Rs. 41.11 crores. Other features showed little change.

* * * *

The return of the State Bank of India for the week ended 6th September, 1957, shows a drop of Rs. 91 lakhs to Rs 340.16 crores in total deposits. Investments in Government securities are up by Rs. 64 lakhs to Rs. 124.59 crores, while other authorised investments are down by Rs. 40 lakhs to Rs. 10.61 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have dropped by Rs. 81 lakhs to Rs. 158.42 crores. Cash and balances are shown at Rs. 61.54 crores, or Rs. 47 lakhs less.

* * * *

The statement of the position of scheduled banks for the week ended 6th September, 1957, shows Demand and Time liabilities at Rs. 714.55 crores (Rs. 16.89 crores on account of borrowings from banks) and Rs. 601.66 crores (Rs. 7.51 crores), compared with Rs. 713.83 crores (Rs. 16.63 crores) and Rs. 597.03 crores (Rs. 6.09 crores), respectively, in the previous week. Cash has decreased by Rs. 1.11 crores to Rs 37.81 crores, while balances with the Reserve Bank have increased by Rs. 1.32 crores to Rs. 101.32 crores. There is a drop of Rs. 5.34 crores to Rs. 365.90 crores in investments. Advances and bills discounted, at Rs. 847.06 crores, show a decline of Rs. 7.82 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 10.6 percent and 64.4 percent, against 10.6 percent and 65.2 percent.

* * * *

The following is a statement of the cash balances of the Central Government on the last day of June 1957:

		Rs.
(1)	At the Reserve Bank of India in India ...	36.62.46,000
(2)	At treasuries in India ...	36,95,000
(3)	In England (Sterling converted at 18d the Rupee) ...	37,14,000
	Total ...	37.36.55,000

* * * *

Provisional figures of India's foreign trade by all routes—sea, air and land—on private and Government accounts during June 1957, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding transit trade of Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim and Bhutan: exports Rs. 4,804 lakhs, re-exports Rs. 25 lakhs, imports Rs. 8,560 lakhs, total trade Rs. 13,389 lakhs. Treasure: exports (including re-exports) of currency notes Rs. 7 lakhs others—negligible; imports of gold Rs. 1 lakh currency notes Rs. 432 lakhs, others—nil. Balance of Trade: the merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures, the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs. 3,732 lakhs.

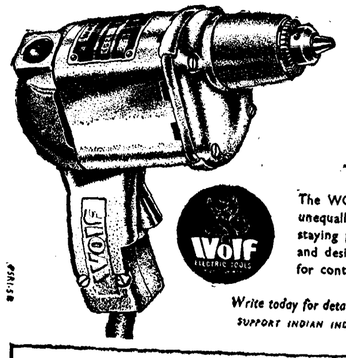
LONDON FINANCIAL LETTER

NEED FOR ADEQUATE RESERVES

By Air Mail.

IN the monetary confusion that followed the effective devaluation of the French franc, the British authorities used the gold and dollar reserve for the purpose for which it is intended. Convinced that the strain on sterling was temporary, they drew liberally on the reserve to support the currency. The result was a loss that would be alarming if the strain were likely to continue a few months. On an adjusted basis, it was rather worse in August this year than in November last year—the peak of the Suez crisis. If the deficit with the European Payments Union is put in its proper place and the loan from the International Monetary Fund is excluded from the reserve, the deterioration in the single month represents about a fifth of the total reserve. The lesson to be learned from this experience is not that it would be better to protect the reserve than to defend sterling, but that the reserve should be adequate for such contingencies. When speculation was building up the European crisis, the published reserve was not far enough above the "basic minimum" of $2,000 million to promote confidence. If it had been substantially larger the element of speculation against sterling would presumably have been excluded and the element of speculation in favour of the West German mark (which was, in fact, considerably the larger) would have been borne quite comfortably. The impact would have dented the reserve, but not shaken its foundations.

However, most people here believe that the crisis is over (they are psychologically prepared for another, though smaller, loss in the next published figures), and that by the end of this year (excluding critical developments in the Middle East or elsewhere) sterling will be settled firmly at its present parities. A considerable body of opinion would approve a widening of the margins around these parities, to allow more flexibility in the structure of exchanges—at least until all rates were properly aligned, or even permanently; but it is clearly understood that neither the British nor the American authorities will favour such relaxation during the discussions of the I.M.F. in Washington. The British authorities' confidence is based on realities. The widespread conversion of sterling balances into deutschemark balances coincided with the United Kingdom's normal large payments for non-sterling commodities—which occur inconveniently, each year, when non-sterling countries' payments for sterling commodities are at a low ebb. The seasonal pressure on sterling continues, normally, through September and October, as well as August, but its duration is not unlimited. The underlying position of the currency is sound, for the credit balance of payments must be at an annual rate substantially above the £150 million recorded for the year to mid-1957, when the sterling area's earning power was seriously reduced by the disruption of the oil trade. Some commercial demand for sterling had been asserting itself even in this seasonally unfavourable period. And the flow of funds into Western Germany must be reversed, whether the mark is revalued or not—in the former case because speculators will have achieved their purpose, in the latter because they will be disillusioned.



Position of London Restored

It might be thought that London's position as a financial centre would be severely shaken by the developments that weakened sterling. There is no evidence of such effect. The widespread use of sterling for international transactions makes it peculiarly vulnerable when funds are being switched into another currency, and it may be argued that London's position as a financial centre has temporarily affected sterling more than sterling has affected London's position as a financial centre. There has been, it is true, some hardening of money rates in London since the beginning of August, but previously this year rates had moved downward in London and generally upward in other centres. Orthodox opinion has criticised the divergence of trends, but it has to be remembered that the rise in Bank rate in 1955 made London financial facilities the most expensive in the world. In the ensuing period, when rates were much lower in Amsterdam, (especially) than London, a good deal of continental business was transferred to the Dutch centre; and London's position was also threatened by the development of facilities in other countries of the Common wealth. This development represents a long-term trend and is not necessarily reversed by cheaper ing of London's facilities; but some lost continental business has perceptibly flowed back to London this year.

There are signs indeed, that more use is being made of London's financial facilities in general not merely by those who forsook this centre when rates were high. When the British authorities assisted the "transferable" variety of sterling to move almost into line with sterling officially exchanged into dollars, it was doubtless their intention to extend the use of sterling for international transactions, and although "transferable" sterling did temporarily weaken, the policy has been, on the whole, successful. In any case, the scarcity of alternative means of finance has favoured the use of sterling. Its relative abundance may embarrass the authorities when they are drawing on reserves to support it, but has, at least, the effect of bringing more business to London.

An important event, of more local character, is the offer by Hambros Bank of 500,000 £1 shares at £2 each. This leading accepting house has been increasing its business and is now strengthening its resources for a further increase. The growth of demand experienced by such institutions, after the severe contraction in 1955, is not, of course, all on overseas account. Acceptance credits have been used increasingly in the U.K. as an alternative to more permanent finance, its supply restricted by the credit squeeze. Accepting houses complying with official requests, do not knowingly grant lines of credit in substitution for overdrafts that the banks have been obliged to refuse, but it is only natural that firms that have established credit facilities with an accepting house make full use of them, whereas in less restricted conditions they would turn elsewhere. The authorities would not at present approve a big expansion of sterling credits whether domestic or external; but the City does not believe that sterling can ever be fundamentally strengthened by restricting the international use of sterling or the facilities of London.

IRREGULAR TREND IN STOCK MARKETS

GILT-EDGED RISE: INDUSTRIALS FALL

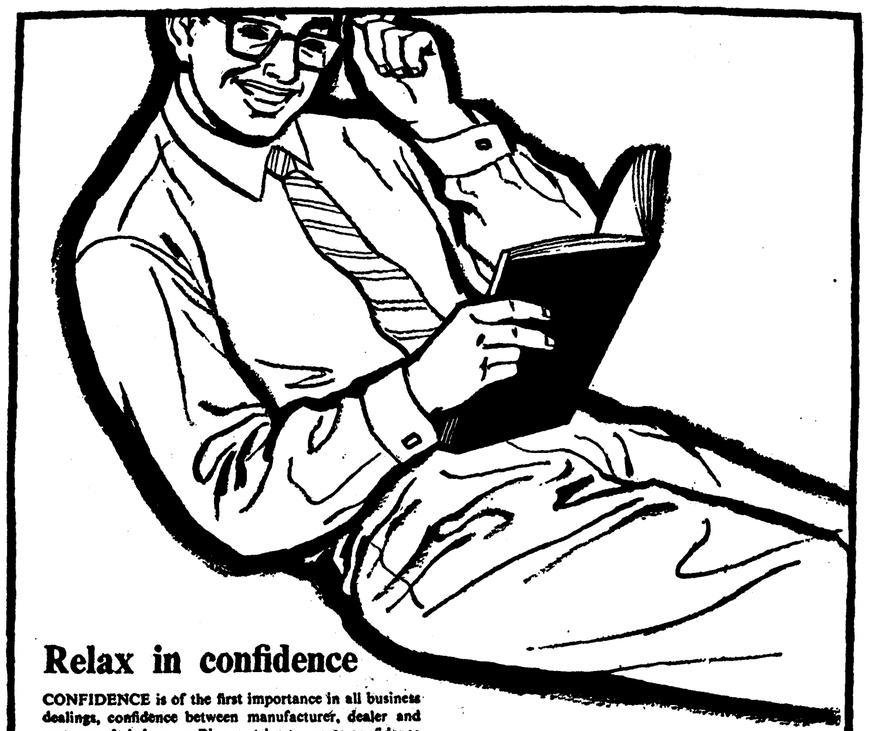
London, 18th September.

THE stock markets generally failed to establish a decided trend during the past week, and, on balance, presented an irregular appearance. Gilt-edged securities recorded a further modest improvement, and foreign bonds, particularly Germans, were firm, but other sections of the market were dull, especially industrials and oil shares. Business throughout was very small due to the existing uncertainties. Among these, the persistent weakness of Wall Street in spite of periodic rallies and nervousness about the Middle East situation were the main considerations, but current wage claims and further evidence of reduced profit margins, with the Vickers' half-yearly statement as the latest example, were contributory factors. Gilt-edged securities improved on small investment buying, reflecting the uncertainty over the future course of Wall Street and the American business outlook and, consequently, a less confident view of U.K. equities. These influences had a depressing effect on the industrial market which recorded widespread, and, in some instances, substantial losses. The leaders suffered the sharpest falls and were often several shillings lower. In foreign bonds, Germans continued to respond to the reported debt repayment plan, and went further ahead following the German election result, but gains were subsequently reduced on profit-taking. Other foreign bonds were firmer. Dollar stocks fluctuated with Wall Street and recorded very little change on balance. South African gold shares after drifting lower during most of the week rallied and showed very little change compared with their previous levels. Copper shares were depressed by the weakness of the metal. Oil shares recorded widespread, and, in some instances, substantial losses mainly due to the Middle East uncertainties. Good features included Grand Central on the capital repayment statement, but Anglo-Indonesian receded sharply in the absence of a firm offer for the shares. Quiet conditions prevailed in the tea share market, with Indian and Ceylon issues mainly lower.

The Money Market

While conditions in the money market last week were slightly less difficult, there was no sign of any relaxation in the Government's firm control of the monetary situation. On one or two days, the market was able to obtain its requirements without official assistance, but on the other days, considerable help had to be given. There was also the inevitable borrowing from the Bank of England which is now a weekly feature of market operations, even if only on a very small scale. Rates for day-to-day money remained at a high level, and up to 4½ percent was paid, with 3½ percent the more general rate. On the less difficult days, the rate moved down to 3½ percent. Bill business was restricted by the cash position and following the further jump in the Treasury bill rate at the previous tender, the general rate for end-November and December maturities was 4$\frac{5}{8}$ percent, with a few sold under pressure at 4$\frac{3}{4}$ percent. There was a slight hardening of the Treasury bill rate at last Friday's tender to £4 4s 8.24d percent.

Decision against Mark Revaluation



Herr Fritz Berg, President of the Federation of West German Industries, said that he hoped the decision of the Federal Government not to revalue the mark would have a favourable effect on the French and British balance of payments situation. He said at the opening of the International Industrial Exhibition in West Berlin that "currency quacks" who advised the patent medicine of revaluation were doing themselves the greatest damage, for that kind of talk had caused the flight from the French franc and sterling. As a result, Western Germany's credit balance had been made considerably higher than it would have been. Herr Berg opposed a disguised revaluation of the mark by means of flexible exchange rates, and rejected the idea of a currency conference as long as the currency situation of individual countries had not been put in order. He said that further measures against exports after what the Government had already done, could not be accepted. (The Government and the Federal Bank have recently abolished a number of measures originally introduced to help exporters. Herr Berg made the following proposals to reduce West German currency surpluses: advance repayment of foreign debts, export of capital, advance payments on purchases and generous measures to encourage imports.

Recovery in Rubber

After early easiness on scattered liquidation reflecting a decline in foreign centres, rubber prices last week recovered on short-covering aided by an upturn in the London market. Traders said the upturn in London reflected new Russian buying there. They added that a fair amount of dealer business was done early in the week in the shipment market as well as over the week-end. Factory buying was moderate, mostly occurring earlier when the market was lower.

Copper Prices

Having swung from a high extreme to a low extreme, the copper price pendulum now seems to be trying to find some more rational position. The initial further advance early last week in the London market was motivated mainly by Sir Ronald Prain's statement and by the U.K. Ministry of Supply's decision not to sell its stcokpile copper after all. The minor gyration off the initial top price could be dismissed as only a technical correction of the sharp rally which had raised prices by nearly £25 from the low touched on Monday of last week. It may also, however, have been influenced by the absence of any indication that leading copper groups intend to adopt Sir Ronald's suggestion for an all-round 10 percent cut-back. The other groups of Anglo-American which did not follow the remaining producers of the groups in curtailing output when prices were slumping, are still less likely to do so while prices are rallying. The interesting question is not why prices have rallied in the past week, but why they fell so low. In this electro-technical age, copper should be prized, not shunned. Only a few months ago, the O.E.E.C., Europe's most influential economic body, was forecasting that import demand for copper and aluminium would rise faster than for almost any other commodity, faster even than oil. The main reason why it went so low is, as Sir Ronald Prain has often said, that early last year it went far too high and started too violent a pendulum.

Relax in confidence

CONFIDENCE is of the first importance in all business dealings, confidence between manufacturer, dealer and customer. It is because Binnys strive to create confidence that they insist on the highest standards of quality, standards which are the result of skill and experience steadfastly acquired for over three generations.

BANK STRIKE BRINGS DOWN EQUITY PRICES

ANXIETY ABOUT STRICTER CREDIT CONTROLS

Wednesday Evening.

TRADING has been very quiet in the stock market during the past week. The main thought in operators' minds has been the bank strike which has started today. There is also considerable anxiety about what measures might be taken to fulfil the Reserve Bank's threat of stricter credit controls. The Calcutta Stock Exchange committee has decided at an emergency meeting held yesterday that in view of the bank strike, members will give their statements to the Stock Exchange for Clearing No. 247 according to the clearing programme. It has further been resolved that they will pay their differences in cash, or by bearer cheques on Allahabad Bank Ltd., to the Stock Exchange. There will be no delivery of shares in the clearing. There will be a compulsory carry-over at the budla charges set out below. The rates at which the clearing will be settled are as follows:

	Clearing Rate	Budla Charge
Indian Iron ...	Rs 17.40	9nP
Textile Machinery	Rs. 15	8nP
Orient Paper ...	Rs. 21.40	10nP
Indian Copper ...	Rs. 2.75	1nP
Burrakur Coal ...	Rs. 21.75	Nil
National Jute ...	Rs. 18	9nP

It has further been resolved that members are warned not to increase their commitments. Anybody found dealing excessively will be severely dealt with by the committee.

Indian Irons have declined with the approach of the bank strike, and other engineerings are shaded in sympathy. A softer tendency has returned in jute shares because operators fear that the rise in raw jute prices might create new difficulties for the industry. Coals are neglected and the trend in tea shares is weaker because of the uncertain outlook for common teas. Gilt-edged are steady.

Details of the week's trading follow.

* * * *

The Government securities market ruled firm throughout the past week, and there was a further improvement in prices, with short-dated issues leading the way. A fair amount of business was reported, but turnover was restricted by the shortage of scrip. The 3% Conversion Loan 1986 was marked up initially to Rs. 71.55 cum-voucher but it later eased to Rs. 71.40 ex-voucher; 3% Non-terminable Paper was better at Rs. 71.35. In short-dated loans, 3% 1958 had buyers at Rs. 99.75 and 3% 1959-61 hardened to Rs 98.20; 2½% 1961 was asked for at the higher rate of Rs. 93.90 and 2½% 1960 improved to Rs. 96.80, without any business passing. The 3½% 1961 changed hands around Rs. 99.50 and 2½% 1962 was fully steady at Rs. 94.10. In contrast, 3½% 1962 was fractionally easier at Rs. 97.47. Among medium-dated loans, 3% 1963-65 turned buyers at Rs. 93.30 and 3% 1964 was marked up to Rs. 93.65; 3½% 1964 was better at Rs. 97.65 and 3½% 1965 turned buyers at Rs. 97.30. The 3½% 1967 was nominally quoted at Rs. 97.55 while 3$\frac{3}{4}$% 1967 had sellers at Rs. 99.45. In long-dated loans, 3% 1966-68 improved further to Rs. 91.10, while 3% 1970-75 was better at Rs. 86.28. The 3½% 1974 had sellers over around Rs. 98.30 and 4% 1972 was offered at Rs. 99.94. Retail business was reported in State loans and prices were more or less unchanged.

Except for a few miscellaneous preference shares like Alkali and Chemical, Indian Iron and Steel and Shaw Wallace, sellers predominated, particularly in jute shares. In the miscellaneous group, Allahabad were crossed at Rs. 99, Burn 6% at Rs. 106 and Calcutta Electric at Rs. 9.37. Dalmia Cement Rs. 100 paid-up were done at Rs. 81 and there were buyers of Indian Iron and Steel at Rs. 96. National Tobacco 1st Preference were crossed at Rs. 69.50 and Richardson and Cruddas were marked at Rs. 58. Rohtas Industries "B" were sold at Rs. 61.75 and Shaw Wallace were crossed at Rs. 66.25. In jutes, Alliance were transacted at Rs. 65 and Birla 2nd were crossed at Rs. 75. Hooghly Mills were sold at Rs. 9.25.

In the banking section, United Commercial were slightly better at Rs. 57.25 and Hind Bank were reported at the higher rate of Rs. 32.25. Punjab National changed hands at the lower rate of Rs. 57.

In railways, a small lot of Ahmadpur-Katwa changed hands at Rs. 42 and an odd lot of Dehri-Rohtas at Rs. 10.

Cotton shares were quiet, with Bengal Nagpur easing to Rs. 4.68 and Kesoram to Rs. 11.62. Bowreah were unchanged at Rs. 109, as were Dunbar at Rs. 138 and Elgin at Rs. 16.25. Jay Shree Textiles, after being crossed at Rs. 6.75, turned sellers at the close at Rs. 6.25.

Coal shares were depressed and very little business was reported. Bengal were marked down from Rs. 217 to Rs. 213 and Burrakur idled around Rs. 21.75. East Indian were slightly better at Rs. 21.06, but Equitable were easier at Rs. 23. New Rs. 12.87, Borrea from Rs. 18 to Rs. 17.25, and Pench Valley from Rs. 15.25 to Rs. 15. Raneegunge were lower at Rs. 9.50, but South Karanpura were steady at Rs. 9.50.

The recent enquiry for jute shares, it appeared, had petered out and prices at the close were trimmed down. Here is a chart showing representative price movements:

	Opening 12th Sept.	Closing 18th Sept.
	Rs.	Rs.
Agarpara	7.50	7.37
Alliance	65	62
Anglo-India	138	136
Bally	148	142
Barnagore	85	81
Budge Budge	76	70
Delta	118	115
Howrah	16.50	16.25
Kamarhatty	95	93

Contrary to the general trend, Kinnison were steady at Rs. 122, as were National at Rs. 18.

In the electric supply section, Calcutta had buyers at the higher rate of Rs. 12.31 and Agra were better at Rs. 123. In contrast, Benares eased to Rs. 14.43. Other transactions included Jubbulpore at Rs. 11.75, Muzafferpore at Rs. 6 and Patna at Rs. 10.69. Shahjahanpur were crossed at Rs. 7.50.

In sugars, Belsund were marked down from Rs. 10.37 to Rs. 10, but Dyer Meakin were steady at Rs. 6.62. United Provinces were quoted at Rs. 13.50 ex-dividend, and S.K.G. at Rs. 9.37.

In the engineering section, Indian Iron opened at Rs. 17.76 but at one time came under heavy selling pressure and were forced down to Rs. 17.34; tonight's closing quotation is Rs. 17.42. Braithwaite were shaded at Rs. 27.75, as were Bhartia Steel at Rs. 13.50 and Burn at Rs. 309. Guest, Keen, Williams were lower at Rs. 28.37 and Indian Standard

Wagon were marked at Rs. 168 ex-dividend. Jessop were steady at Rs. 24.50 and Richardson and Cruddas recovered from Rs. 9.56 to Rs. 10. Textile Machinery were depressed further to Rs. 14.85.

Paper shares were featureless. India Paper Pulp were lower at Rs. 18.37, as were Orient at Rs. 21.35. Titaghur were quietly steady at Rs. 32.12.

In cements, Ashoka were slightly better at Rs. 9, but Sone Valley were quiet at Rs. 4.75. Dalmia were unchanged at Rs. 9.94, and Orissa were marked down from Rs. 12.62 to Rs. 12.25.

A solitary transaction was reported in the insurance section, in New Asiatic at Rs. 4.12.

Shipping shares ruled quiet, India Steamship being marked down from Rs. 10.42 to Rs. 10.37 and India General Navigation from Rs. 66 to Rs. 65. Calcutta Landing were slightly better at Rs. 12.75 while Port Shipping were unchanged at Rs. 16.19.

Among miscellaneous industrials, Alkali and Chemical improved further to Rs. 14 and Aluminium Corporation were marked at Rs. 9.44 ex-dividend. Angelo Brothers were easier at Rs. 18.25 but Balmer Lawrie were steady at Rs. 150. Britannia Biscuits were marked at Rs. 13.42 ex-dividend and British Burma Petroleum were quiet at Rs. 2. British India Corporation were freely offered at Rs. 5 and Dunlop Rubber changed hands at the higher rate of Rs. 18.87. Hindustan Lever were steady at Rs. 21.19, while Imperial Tobacco on selling pressure were marked down further to Rs. 11.62. Indian Aluminium were unchanged at Rs. 12.19, as were Indian Cable at Rs. 23.50. Indian Rubber were lower at Rs. 22, as were Jardine Henderson at Rs. 72.50. Martin Burn were slightly better at Rs. 22.81 while Metal Box reacted to Rs. 27.25. There was a small enquiry for Midnapore Zemindary, with the price recovering from Rs. 17.50 to Rs. 18. Rallis were lower at Rs. 29.50 as were F. & C. Osler at Rs. 3.25 and Shaw Wallace at Rs. 10.25. Rohtas Industries were marked down today from Rs. 17.44 to Rs. 16.75 due to a strike at the company's works.

In the mining group, Indian Copper at one time receded to Rs. 2.68 but replacement buying brought a recovery at the close to Rs. 2.76. Karanpura Development were slightly easier at Rs. 8.75, as were Orissa Minerals at Rs. 18.25 x.d.

Tea shares were neglected, with Dilaram coming to business at Rs. 149.50 and Sungma at Rs. 10.75. Bishnauth were crossed at Rs. 19 and Brahmapootra declined further to Rs. 4.40. Brooke Bond had sellers at Rs. 17.62 and Gohpur were traded at Rs. 21.12. Grob "B" were done at Rs. 12 and Methoni and Tezpore changed hands at Rs. 18.50 and Rs. 18.62, respectively. Eastern Cachar slumped to Rs. 2.56, as did Kunchunpore to Rs. 4. A small lot of Patrakola changed hands at Rs. 139 and Jayshree were wanted at Rs. 9.50. Bhatkawa were easier at Rs. 19.44 and Carron dropped sharply to Rs. 85. Birpara were fractionally better at Rs. 127.50 and Hasimara changed hands at Rs. 19.25. A small lot of New Dooars was done at Rs. 280 ex-dividend.

* * * *

We publish below the accounts of the MACNEILL AND BARRY group of coal companies for the year ended last December. EQUITABLE COAL has made a profit of Rs. 23.20 lakhs, out of which depreciation absorbs Rs. 11½ lakhs. Bringing in Rs. 82,379 and making other adjustments, there is Rs. 13,28,408. The ordinary dividend has been maintained at 15 percent. Development reserve is allocated Rs. 5 lakhs. The carry-forward is Rs. 41,728. Raisings rose from 1,648,049 tons to 1,684,813 tons but despatches fell from 1,708,125 tons to 1,684,549 tons. The directors state that it has been impossible for the company to increase raisings from most of its collieries during the year under report as the railways' existing pilcts and depôts which serve the collieries have been already inadequate for the current production. The HURRILADIH COAL COMPANY has made a profit of Rs. 2.23 lakhs. Depreciation gets Rs. 32,554. Bringing in Rs. 45,985 and making other adjustments, there is a balance of Rs. 1,71,210. The dividend is the same at 15 percent. The taxation provision is Rs. 74,000, leaving a carry-forward of Rs. 45,210. Raisings fell from 235,138 tons to 189,698 tons and despatches from 243,428 tons to 189,758 tons. The loss of DHEMO MAIN has amounted to Rs. 1·02 lakhs. Depreciation absorbs Rs. 1.14 lakhs. The debit balance has increased to Rs. 3,36,908 and there is again no dividend. Raisings fell from 237,928 tons to 212,536 tons and despatches from 247,497 tons to 210,779 tons. The WEST JAMURIA COAL COMPANY has made a loss of Rs. 1.47 lakhs, after providing Rs. 1.97 lakhs for depreciation. The debit balance has increased to Rs. 3,20,058 and the dividend has again been passed over. Raisings declined from 228,947 tons to 167,373 tons and despatches from 234,753 tons to 180,640 tons.

* * * *

The profit of CAWNPORE TEXTILES LTD. has declined by Rs. 21,000 to Rs. 6.52 lakhs for the year ended last March. The dividend has been maintained at 25nP a share. Taxation absorbs Rs. 2.70 lakhs (Rs. 1.40 lakhs) and rehabilitation reserve is allocated Rs. 2.75 lakhs (Rs. 3½ lakhs). Depreciation is the same at Rs. 3 lakhs, leaving a carry-forward of Rs. 48,855 (Rs. 36,767).

* * * *

The HOOGHLY DOCKING AND ENGINEERING COMPANY has increased its profit from Rs. 1.72 lakhs to Rs. 4.98 lakhs for the year ended last December. Bringing in Rs. 2,037 there is Rs. 5,00,213. Taxation absorbs Rs. 2.30 lakhs. The dividend has been maintained at 12½ percent. Development reserve is allocated Rs. 1 lakh. The carry-forward is Rs. 13,963.

The Story of Oil—1

As old as time

As industries go, the world's petroleum industry is quite new. Yet even the youngest deposits of crude oil originate from long before the dawn of Man. Scientists say our oldest reserves are more than 50,000,000 years old.

In prehistoric times much of what we now know as dry land was covered by warm seas. Giant trees and jungle plants and countless millions of tiny marine creatures flourished on the edges of the swampy, shallow waters. Their remains, when they died, fell to the bottom of the sea and were buried in layers of sediment.

As age upon age went by the original sea floors were folded or broken by tremendous movements of the earth's crust. Mountain ranges were pushed up. Parts of the earth cracked and slipped down to become valleys and basins. Tidal waves invaded the land to form new seas. Old seabeds emerged as new continents.

These conditions—massive sedimentary deposits, decaying organic matter and gigantic earth movements—produced the crude oil we know today. The locations of the old sea beds are now fairly well known. They occur in almost every region of the world.

Parts of the continent of India have these marine sedimentary rocks beneath them. The waves of ancient seas once rolled over Assam, and here, close to the growing Himalayan and Naga ranges, the oil-pools of Digboi and Nahorkatiya began forming many millions of years ago.

Assam Oil A full-scale petroleum industry

B.O.C.

Bombay Market

PRICES FALL IN QUIET TRADING

DECISION NOT TO CUT CLOTH EXCISE DUTY DISAPPOINTING

Wednesday Evening.

THE Bombay stock market was quiet during the past week and prices declined substantially as turnover shrank. Operators were scared by a number of adverse factors and there was a general inclination to lighten commitments. Sentiment weakened as it was made clear that there would be no reduction in the cloth excise duty. Meanwhile, cotton mills are facing a growing accumulation of stocks. The move to restrain credit was an important deterrent. Banking troubles in Eastern India called for caution. The speech of the Indian Iron and Steel Company's chairman at the annual general meeting was bearishly interpreted as there was no clear indication about the ordinary dividend to be paid by the company in the future. The sudden criticism about the working of T.E.L.C.O. in the Lok Sabha created doubts about the future of the private sector.

Towards the close, it appeared that prices had settled down around the lower levels on the belief that the U.S.A. might give a dollar loan to India to help her tide over her foreign exchange difficulties. Tata Steels closed at Rs. 163 and Indian Irons were weak at Rs. 18.52 on heavy selling pressure from Calcutta interests. Tata Locomotive declined to Rs. 137.50 and Alcock Ashdown fell to Rs. 232.50 in the absence of support. Scattered interest was taken in Premier Construction at Rs. 149.50. Automobile shares lacked interest and Premier Automobiles were sold at Rs. 85.50. Hindustan Motors at Rs. 6.28 attracted little support.

Mill shares showed losses all round and selling was noticed particularly in the popular counters. Bombay Dyeing slumped to Rs. 53 and Century to Rs. 400. Kohinoor were available at Rs. 261 and Svadeshi came to hand at Rs. 177. Simplex realised Rs. 159 and India United Ordinary were freely available at Rs. 10.20.

Miscellaneous shares eased on selling pressure. Associated Cement fell to Rs. 154 and Digvijay Cement were transacted at Rs 134. In the sugar group, Belapur moved down to Rs. 230 and Phalton lost at Rs. 133. Mining shares were depressed because of a sharp decline in metal prices. Indian Copper were available at Rs. 2.96. Shivrajpur Syndicate were taken at Rs. 80. In spite of the prospect of financial assistance to the industry, steamship shares were shaded on profit-taking. Scindia Steam declined to Rs. 19.40 and Great Eastern Shipping were dealt in at Rs. 22.16. Bombay-Burmah fell to Rs. 565 on the predominance of sellers and National Rayon were available at Rs. 213.50. Tata Chemicals realised Rs. 16.88 in routine turnover.

Banking shares were shaded, and United Commercial Bank were taken at Rs. 57.50. Bank of India came to hand at Rs. 133. There was little interest in insurance shares although prices showed minor variations.

Electricity supply shares met with scattered support and turnover was very limited. Ahmedabad Electric were done at Rs. 94.30 and Tata Hydro were quoted at Rs. 114.25.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations Highest for the week, Lowest for the week Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paise].

JAPANESE FOREIGN TRADE EXPANDS

CLOSER ECONOMIC RELATIONS WITH SOUTH-EAST ASIA

(FROM A CORRESPONDENT)

THE Japanese Ministry of International Trade and Industry has published a White Paper on the trade situation in 1956. According to the document, the Japanese economy continued to advance last year. "Japan's trade, which remained very low after the war," says the White Paper, "registered a sharp rise in the past few years. Its international competitive power gradually recovered through increased production, higher productivity, streamlining of the export structure, cultivation of markets and normalisation of relations. Mining and industrial production rose by more than 20 percent over 1955, and national income by 10 percent.

"Commoditywise, metal exports fell by 12 percent, but machinery showed a 96 percent rise. After machinery, vessel exports were most conspicuous, with a 3.3-time increase to $(U.S.)260 million. This accounted for 37 percent of the total increase in exports. Exports of steel and non-ferrous metals fell by 14 and 24 percent, respectively. Imports stood at $(U.S.)3,230 million, the highest since the war, exceeding the prewar level by 144 percent.

"The structure of Japan's export markets contains various unstable elements. Japan explored many new markets after the war, exports to which have shown very wide annual fluctuations. Although exports of machinery and metals have gone up, Japan's competitive power has remained low. Textiles. sundries and other light industrial goods still constitute the bulk of the export trade, adding to the instability of Japan's trade structure. A marked increase in the exports of Japan's consumer goods was responsible for caution in many foreign nations, resulting in various import restrictions."

Export Commodities

Dealing with the weak points of Japan's foreign trade, the Paper says: "Japan's export commodity structure is in a large measure responsible for the instability of the country's export markets. Whereas the other industrially advanced nations export machinery and chemical products, Japan exports mostly consumer goods, such as textiles, to the industrially backward areas. The shifting of demand in those countries to heavy machinery and chemical products is creating a big problem for Japan. There has been a considerable increase in the Japanese exports of capital goods, such as steel and vessels, to the industrially advanced nations in recent years. This indicates that such countries are suffering from a shortage of those goods and it should not be regarded as a permanent feature of the trade." The White Paper complains that "Japanese commodities receive unequal treatment in the matter of Customs, etcetera, in such countries as Australia, South Africa, East Africa and the Philippines". Although Japan was formally admitted as a member of G.A.T.T. in 1955, many nations still refuse to enter into the G.A.T.T. relationship with Japan by taking advantage of Article 35. Due to increasing imports of Japanese goods. by the United States, a move is afoot to restrict that country's purchases from Japan.

Along with this unequal treatment, another major problem for Japan is posed by the restrictions on her exports to Communist countries. A relaxation of the restrictions is particularly desired in relation to Communist China because the latter can provide a major outlet for Japanese exports of machinery and industrial goods.

Economic Co-operation with S.E. Asia

The White Paper stresses: "Japan must strive, through economic co-operation, to bring closer mutual economic exchanges with those non-industrialised areas, especially South East Asia, where much of the country's trade is concentrated. Investment in and technical co-operation with the non-industrialised areas have been progressing in recent years, but they are lagging far behind the industrially advanced nations. The urgent task now is thus to establish a basis for a long-term economic relationship."

Increasing Aluminium Output in Norway

The State-owned aluminium works of Norway has prepared plans for increasing production to nearly 100,000 tons annually by 1963. The plant in Ardal is now producing 28,000 tons of aluminium a year. Expansion schemes now in hand will increase production capacity by 36,000 tons a year, which the new plans will further increase by 32,000 tons. The extensions planned include the large-scale development of hydro-electric power resources. The concern also has a big aluminium plant in Sunndal in Nordmore.

Norwegian Steel Production

The iron works in Moi Rana has sold its entire 1957 production—approximately 170,000 tons of iron and steel. Satisfactory contracts for the sale of next year's production, estimated at 200.000 tons, have also been secured. The iron and steel market is now more stable and prices firmer than they had been for some time, according to the managing director, Mr. Ulf Styren. A new market for the Norwegian iron works, which started production only a couple of years ago, is the Argentine from which country large orders have been secured.

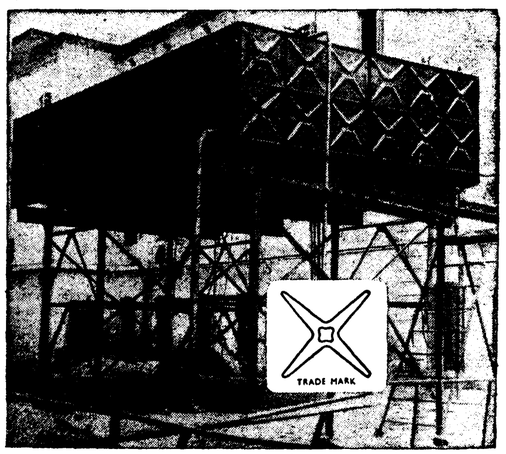
Foreign Trade of Sweden

The statistics for Sweden's foreign trade in the first half of this year show an almost "deceptively expansive picture," says the Stockholm business weekly *Affairs-Varlden* in a survey. While the revised official estimates foreshadowed an increase in value of about 800 million Kroners each for both imports and exports for the whole of the year, actual figures for the first six months alone show an increase of 930 million Kroners for imports and 830 million Kroners for exports over January-June 1956. The weekly recalls that part of this expansion is explained by a number of temporary factors, such as the unusually favourable shipping conditions early this year compared with the severe winter in 1956. A considerably slower rate of expansion is, therefore, to be expected for the remainder of this year. Even allowing for such a development, it is evident, the weekly says, that the official estimates will have to be adjusted upwards. On the basis of an enquiry among importers and exporters. the journal arrives at the conclusion that imports in 1957 are likely to reach a total of 12,500 million Kroners, or 300 million Kroners more than in the revised official estimates, while a rise of 200 million Kroners to 11,025 million Kroners is foreseen for exports. At an unchanged net revenue from shipping and "invisible" transactions of 1,375 million Kroners, this would result in a deficit in the balance of payments on current account of 100 million Kroners. While emphasising the uncertainty of any forecast on foreign trade, the paper says that the "balance sheet" arrived at might be characterised as perhaps too optimistic.

Gold and Foreign Currency Reserves

The Swedish Riksbank's gold and foreign exchange reserves increased by 36 million Kroners to 2,503 million Kroners in July. Gold holdings were up 9 million Kroners to 1,204 million Kroners and foreign exchange reserves by 27 million Kroners to 1,299 million Kroners. The note circulation dropped by 215 million Kroners to 5,246 million Kroners over the month. As the ceiling was raised from 6.000 million Kroners to 6,300 million Kroners during the month the note issue reserve showed an increase from 539 million Kroners to 1,054 million Kroners.

Iron and Steel Imports



Sweden's imports of iron and steel totalled 455,000 tons in the first half of 1957. This is about 40 percent more than in the same period of last year, but 21,000 tons less than in January-June 1955, when considerable stockpiling took place. Exports of iron and steel have risen from 89,000 tons in the first half of 1955 to 153,000 tons in January-June 1956 and 162,000 tons in the first six months of the current year.

Merchant Navy

Sweden's merchant navy had 1,601 vessels aggregating 3,061,055 gross tons at the end of July. This compares with 1,608 vessels of, in all, 2,958,845 gross tons at the beginning of this year. Over the seven months, motor vessels have increased their share in the total tonnage from just under 83 percent to somewhat over 85 percent, or from 873 units aggregating 2,448,593 tons to 910 units of 2,603,782 tons. The number of steamers has dropped from 261 to 236, and their tonnage from 459,572 to 408,944 gross tons.

ADJUSTMENTS IN SECOND FIVE YEAR PLAN DISCUSSED

SHORTAGE OF EXTERNAL AND DOMESTIC RESOURCES

(FROM OUR NEW DELHI CORRESPONDENT)

THE second five year plan was the principal subject of discussion last week. It was considered first by the Lok Sabha and then by the Standing Committee of the National Development Council. The Minister for Planning and Labour, Mr. Gulzarilal Nanda, initiated the debate in the Lok Sabha. He said that the plan was formulated on certain assumptions:

(1) The economic climate would continue to be favourable for the duration of the plan.

(2) Production and consumption would grow at a certain rate.

(3) Resources for investment would grow at a certain rate.

(4) Investment would gather momentum at a certain rate.

(5) Non-plan expenditure would stay at a certain level.

(6) "It was not unreasonable for us to expect that we shall have necessary accommodation from the large resources of the world."

Referring to the size of the plan, Mr. Nanda admitted that it was ambitious "in a sense", but justified it on the ground of India's low *per capita* income which he compared with that of Egypt, Japan. Brazil, Western Germany, France, the U.K. and the U.S.A. The issue is a simple one. There is no dispute about the low standard of living in India, and about the low *per capita* income. The dispute is about the rate of advance. Is it necessary to do all the things mentioned in the plan within five years? That is the issue. Mr. Nanda said that "if we were to frame the plan now, given the conditions and circumstances in which it was formulated in the first instance, I believe it is not going to be very very different." He did not discuss what were "the conditions and circumstances in which the plan was formulated in the first instance." But it may be recalled that it was Professor P C. Mahalanobis's plan-frame and his ideas of physical planning which constituted "those conditions and circumstances", and which provided the model for the plan. In fact, there was a regular race to produce a plan which would be more ambitious than the plan-frame of Professor Mahalanobis. Incidentally, it was Professor Mahalanobis who recommended the targets of deficit financing at Rs. 1,200 crores and of additional taxation at Rs. 800 crores, placing foreign aid at only Rs. 400 crores.

The question asked here, however, is why should the framing of the second five year plan have been done under conditions and circumstances which are now tending to wreck the plan? Mr. Nanda recalled that during the discussions on the draft plan in Parliament, "member after member stood up and pointed out that it was deficient in one respect or another. They all wanted to enlarge it." The draft plan was discussed on the eve of the general elections, when, in the nature of things, members were anxious to create a favourable climate for their re-election. The plan itself was described as the "election manifesto." This should explain why member after member wanted its expansion.

The basic question is, why did the Government accept a plan which was based on some unexplored and unexplained assumptions, such as those relating to the quantum of foreign aid, deficit financing, the unbridged gap of Rs. 400 crores, under-estimates for some projects and no provision for certain others. The Government was in full possession of the facts, given, for instance, by Mr. M. V. Rangachari in his now forgotten memorandum on the resources for the plan. The Government, it may be added, was given a timely warning about deficit financing. As for foreign aid of the magnitude required for implementing the plan, the Government should have visualised the climate its own policies, foreign and internal, have created.

Cost of the Plan

Mr Nanda gave some figures about the cost of the plan. He said that a number of factors had combined to raise its cost, including a rise in prices, which he placed at 33 percent, and inadequate provision for certain projects. "The provisions needed for coal and oil exploration and development are instances in point". The cost of the three steel plants, he disclosed, had moved up from Rs. 350 crores to Rs. 497 crores. Mr Nanda gave some instances of the projects for which no provision had been made in the plan. Transport was cited to illustrate his point. He explained it as follows: "Let not the impression be created that this means that the plan gains so much more. Even when we put out this plan. there was implicit in it that some of the provisions had not been made or made on a full scale."

Mr. Nanda could not give any precise figure of the total cost of the plan, as it stands at present. Roughly speaking, however, the additions to the cost of the plan are placed between Rs. 600 crores and Rs. 700 crores. He gave some figures while reviewing the progress of the plan in 1956-57 and 1957-58. He said: "Broadly speaking and taking into account the outlays for the first two years, totalling Rs. 1,580 crores, the balance of the outlay feasible for the remaining three years should be of the order of Rs. 3,300 crores. or Rs. 4,880 crores for the five years." According to Mr. Nanda. deficit financing was of the order of Rs. 240 crores in 1956-57 and Rs. 400 crores in 1957-58.

Raising Resources

For raising the Rs. 4,880 crores, Mr. Nanda suggested that the following will be necessary:

(1) The States will make a substantial tax effort.

(2) Receipts from loans and small savings will, in spite of the present unfavourable trends, come up, more or less, to the initial expectations.

(3) Deficit financing will not exceed Rs. 1,000 crores (or Rs. 200 crores less than that envisaged in the plan), or Rs. 340 crores in the remaining three years compared with Rs. 660 crores in the first two years.

(4) External assistance will be available to the extent of Rs. 1,000 crores, against Rs. 800 crores provided in the plan.

(5) Food production will be stepped up by 25 percent and agricultural production by 28 percent.

Many wonder on what basis. for example, Mr. Nanda hopes that the States will make the required tax effort. Did they make the effort during the first five year plan? The Planning Commission's own blue books have provided the answer that they did not. As has recently been pointed out by the Reserve Bank. most of the States have come out with heavy Budget deficits this year. They have left the deficit uncovered on the assumption that additional taxation might be considered after the Finance Commission has made its report. As has recently been said, "each State is looking forward to a windfall from the Centre to rescue it from living on overdrafts." As for foreign aid, when a member expressed the hope that the Finance Minister, Mr. T. T. Krishnamachari, would be able to secure a big loan from the U.S.A., Mr. Feroz Gandhi said: "Yes, Mr. Krishna Menon, who would be in the States at the same time as the Finance Minister would lend him his helping hand". (Roars of laughter).

Balance of Payments Deficit

Mr. Nanda said: "The plan envisaged a balance of payments deficit of about Rs. 1,100 crores over the five years. In 1956-57, the very first year of the plan, the deficit (net of official donations, namely, foreign grants) was about Rs. 325 crores. For the first half of 1957-58, up to 6th September, 1957, the draft on foreign exchange resources has been Rs. 184 crores. Altogether, even with a stringent import policy for the rest of the plan period and some pruning down of foreign exchange outlays on the development programmes both in the public and in the private sectors, the likely deficit in the balance of payments over the plan period, as a whole, will, on very rough estimates, be of the order of Rs. 1.600 crores. As against this, external assistance promised or committed since the plan began works out to Rs. 450 crores. There is a carry-over of Rs. 135 crores of external assistance authorised in the first plan period, and we may assume that there will be a carry-over of more or less the same order at the end of the second plan. We have already financed about Rs. 460 crores of our deficit from our sterling balances and the I.M.F. credit. It will be necessary to draw down sterling balances further—by how much it is not possible to judge precisely in advance. Part, at least, of the I.M.F. credit will have to be repaid before the end of the plan period, so it would be desirable in the later stages of the plan to rebuild at least part of the further drafts we may have to make on our sterling reserves in the coming months. On the whole, then, we have yet to find resources of the order of Rs. 700 crores from agencies such as the World Bank and from friendly foreign countries.

Defining the Core

"Reference has been made in the course of discussions in Parliament to what has been called the core of the plan. The term 'core' refers to a group of related projects—the iron and steel projects, mining, transport and ancillary power. These programmes in the plan are vital for meeting the immediate needs of the economy no less than for further development. Together they involve more than a third of the outlay under the plan and more than two-thirds of its foreign exchange expenditure. They have to be seen through to the utmost of our capacity. In any rephasing of the plan at a lower level of outlay, they have the first priority."

The Finance Minister, Mr. Krishnamachari, addressing the Standing Committee of the National Development Council observed that after taking into account the external assistance that had already been promised, there was still a gap of Rs. 700 crores to be made up. Until more foreign exchange resources became available, no fresh commitments by way of foreign exchange, either for the public or the private sector, were going to be made, however small the amounts involved.

Rephasing the Plan

The plan would have to be rephased but precisely in what direction this should be done was under examination. The Finance Minister stressed in particular the need to hold down food prices. The food problem had to be looked at from the all-India point of view, as it had a direct bearing on monetary and economic policy. He said that even deficit financing of Rs. 1,000 crores over the plan period would not be possible unless food production was stepped up and food prices kept at reasonable leve's

Following the remarks of the Finance Minister, the Standing Committee proceeded to a general discussion of the resources position and some aspects of rephasing the plan as far as the States are concerned. It was emphasised that the yield from existing taxation, whether by the Centre or the States, had to be increased, through stopping leakages and evasion and through the introduction of sales tax at uniform rates and of excise duties at source where appropriate. Some problems which arise in this connection are to be considered at a conference of State Finance Ministers after the report of the Finance Commission becomes available. A number of Chief Ministers referred to the claims made by State Government employees for increases in pay on account of the differences between the salaries of the Central Government employees and theirs. This question, it is expected, will be considered separately.

Departure of Mr. Krishnamachari

The Finance Minister, Mr. T. T. Krishnamachari, left on Tuesday afternoon by an Indian Air Force plane for Bombay *en route* to Washington to attend the annual meetings of the World Bank and the International Monetary Fund as leader of the Indian delegation. Mr. Krishnamachari was seen off by a large number of people, including the U.S. Ambassador to India Mr. E. Bunker, the U.K. High Commissioner, Mr. Malcolm MacDonald, and the West German *Chargé d'Affaires*, Dr. Richter, who personally handed him an invitation to visit Western Germany. As already reported, the Finance Minister will visit Britain and Western Germany on his return journey. The West German Government and financiers. it is reported, are anxious to assist India in her present difficulties; hence the importance of Mr. Krishnamachari's visit to that country. In this connection, the Commercial Counsellor of the West German Embassy, Von Keiser will be leaving India in time to be present in his country during the Indian Finance Minister's visit. The Secretary to the Industry Ministry, Mr. L. K. Jha, who will be representing India at the forthcoming meetings of G.A.T.T. in Geneva, will also be present when Mr. Krishnamachari visits Western Germany. West German participation in several projects in the public sector is expected.

Delaying Decision on Oil Refinery

The General Manager of the Assam Oil Company, Mr. W. P. G. Machachlan, was here last week, holding unfruitful discussions with the Government for the formation of a rupee company to exploit the oil resources of Assam. As is well known, politics is vitiating a strictly economic decision on the location of the new refinery. Assam wants it for herself. After obtaining expert opinion, which did not favour Assam, the Government of India, because of Assamese agitation, has ordered another enquiry to appraise the economics of the two alternative sites—in Assam and in Barauni, Bihar. No progress can be made until the report of the new enquiry committee is available. Meanwhile, evidence from the wells so far drilled in Nahorkatiya (including Hugrijan) and Moran has led the independent and conservative firm of oilfield surveyors and assessors, Messrs De Golyer and MacNaughton, to recommend (in August 1956) an immediate production target from these areas of 2½ million tons of oil a year. It will take some years to build a transport system by which this crude oil can be moved either to the seaboard or to a refinery where its products are needed. The cost of improving crude oil at the rate of 2½ million tons a year is approximately Rs. 25 crores: in other words, the use of Nahorkatiya oil would save India Rs 25 crores a year of foreign exchange now being spent for importing crude. which means an expenditure of roughly Rs. 8 a second. The delay in deciding the refinery location question and providing the transport facilities which are essential for putting the Nahorkatiya crude to use can thus be said to cost India Rs 8 a second.

Economy in Government Expenditure

It is evident from the statement laid last week on the table of the Rajya Sabha that some effort has been made to achieve economy in expenditure. The Prime Minister said that it was not yet possible to give a full estimate of the savings, which might be effected as a result of the measures "which are still in progress." The economies so far effected in the Department of Atomic Energy amount to Rs. 41 lakhs, which includes Rs. 15 lakhs as the estimated cost of the abandoned projects. Under the Ministry of

merce and Industry, some fertiliser projects costing Rs. 2 crores have been put off. The Hindustan Machine Tools Limited has similarly saved Rs. 65 lakhs by postponing some of its projects. The Salt Commissioner's saving is placed at Rs. 17,73,800. By curtailing its expenditure on cultural activities and delegations, the Ministry of Education has shown a saving of Rs. 15 lakhs; Rs. 65 lakhs has been reduced in the grant-in-aid to the Council of Scientific and Industrial Research. Economies in contingencies and in the purchase of stores for the Delhi Polytechnic have saved Rs. 1,12,750.

Some of the cuts of the Ministry of Information and Broadcasting include: Hindi distribution centres Rs. 2,73,575; reduction in the number of conducted tours Rs. 50,000; postponement of film "Pepper" Rs. 70,000; publicity Rs. 1,57,000; display advertisements Rs. 75,000; exhibitions Rs. 1,74,000; curtailment of second plan publicity Rs. 1,15,000; the dropping of national film board schemes Rs. 8,76,000; and reduction in the production of documentaries Rs. 2 to Rs. 3 lakhs.

Projects postponed or abandoned by the railways are: cancellation or deferment of indents Rs. 7,98,31 233; 24 rail cars Rs 82,00,000; electric coaches for Calcutta suburban sections Rs. 8,70,00,000; construction of dining cars Rs. 75,00,000; regrading of track Rs. 25,00,000 and reduction in the cost of remodelling station buildings Rs. 1,20,00,000. The Ministry of Steel, Mines and Fuel has postponed the purchase of two aircraft, thereby saving Rs. 15 84,452. The postponement of the drilling programme has saved Rs. 1 crore.

Directorate of Export Promotion

A directorate of export promotion has been created in the Ministry of Commerce and Industry to pursue specific measures of export promotion and assist business men in increasing exports. It will be the executive agency for the policies and decisions of the Foreign Trade Board which was recently set up to co-ordinate all work relating to the development of India's foreign trade, particularly for the promotion of exports. The directorate will also provide guidance, information and assistance to exporters in the country. One of its important functions will be to help traders to take advantage of the incentives for exports given by the Government and of the facilities provided by the various Government departments for the purpose.

The directorate will function under the Director-General of Foreign Trade, assisted by the Director of Export Promotion. Mr. K. B. Lall, who is chairman of the Foreign Trade Board, also holds the office of the Director-General of Foreign Trade. The Director of Export Promotion will be assisted by two deputy directors at the Headquarters and export promotion officers in important port towns such as Bombay, Calcutta and Madras. He will be readily available to business men for consultation and help in solving the administrative and other problems which impede the development of exports. He will frequently visit important trade centres, meet business men individually and in groups, and keep in touch with export promotion councils Mr R. N Phillips has recently taken over as Director of Export Promotion.

The machinery required for co-ordinating and pursuing export promotion measures has now been reorganised and it is hoped that exporters in the country will take full advantage of these facilities. The measures so far adopted for export promotion include the setting up of nine export promotion councils, removal of disincentives, assistance for the supply of raw materials to exporting industries, quality control, rail movement facilities, export risks insurance, extensive publicity for Indian goods abroad, trade agreements with a number of countries for a more balanced trade, the setting up of the State Trading Corporation and the strengthening of the commercial services in Indian missions abroad.

Oil Exploration in India

Since October 1955, the Oil and Natural Gas Commission has explored Gogha, Cambay and Kutch in Bombay State; Hoshiarpur, Janauri, Dharamsala, Bahl, Mandi and Jawalamukhi in the Punjab; and Jaisalmer and Ramgarh in Rajasthan. Under the Indo-Stanvac project, in which the Government of India has a 25 percent interest, the Standard Vacuum Oil Company explored certain areas in West Bengal and took up test drilling near Burdwan and Galsi. The total amount of expenditure incurred by the Oil and Natural Gas Commission is Rs. 1,33,97,927. The contribution of the Government of India to the Indo-Stanvac project since the conclusion of the agreement in December 1953 is Rs. 1,08,78,836.

Price of Oil Refinery Products

Under the agreements with the oil refining companies, the selling prices of petrol and other refinery products are fixed on the principle that they will not be higher than the prices at which imported petrol and other refined products are, or can be, sold in India. The selling price of the locally refined petrol has thus been based so far on an import parity principle, and not on the cost of production, it is stated here.

Purchasing Port Equipment

It is proposed to send a technical mission abroad for making purchases of cranes, cargo-handling and other mechanical equipment for the major ports. The places to be visited will be the U.K. and the Continent, and, if necessary, the U.S.A. The materials it is intended to purchase consist of mobile cranes, floating cranes, fork lifts and other cargo-handling equipment.

Pig Iron Imports

India's imports of pig iron from the U.K. Poland and China during 1956 and 1957 have been as follows:

Year	Country	Quantity in tons.	Average c.i.f. price in Rs. a ton.	Terms of supply.
1956	U.K.	2,300	356	C.i.f.,
1956	Poland	7,000	356	Indian
1956	China	10,000	326	Ports.
1957	U.K.	19,900	356	

No orders have been placed so far for 1958.

Order for Ships

The State-owned Western Shipping Corporation has placed orders for nine ships, two with Lubecker Flenderwerke, Lubeck, Western Germany, of 9,300 d.w.t. each, one with Uljanik Shipyard, Pula, Yugoslavia of 10,510 d.w.t., another with Cantiere Navale Apuania, S.A. Milano, Italy, of 10,000 d.w.t. and five with Hindustan Shipyard Limited, Visakhapatnam, of 10,000 d.w.t. each.

Report on Coke Oven Project

The main conclusion and recommendations of the Coke Oven Projects Enquiry Committee are:

1. The demand within the country for hard coke in 1953 was estimated at 462,478 tons. The estimated demand for hard coke by 1960, exclusive of the requirements of the steel works and their subsidiaries and the Sindri fertiliser factory, is placed at about 875,000 tons, including 831,000 tons of sized coke. The increase in requirements will be mainly on account of the foundries, Mysore iron and steel works, soda ash, sugar, calcium carbide and ferro-manganese industries.

2. Of the total 1960 demand, about 100,000 to 110,000 tons of hard-sized coke would have to be of a grade required in ferro-manganese and ferro-alloys production, that is, with a phosphorus content not exceeding 0.05 percent and with ash below 20 percent. A very special grade of another 15,000 to 20,000 tons of coke with the phosphorus content not exceeding 0.03 percent and ash below 12 percent would be needed for the production of calcium carbide, sodium sulphide and special castings.

3. No supplies of sized coke for the market are expected from the steel works and the Sindri fertiliser factory with the exception of the Indian Iron and Steel Company, which has indicated a possible supply during the second plan period varying from 66,000 tons in 1955 to 44,000 tons in 1960, the supply in 1959 being nil.

4. On the assumption that the renovation programmes of the existing four private merchant cokeries would be completed in time, their capacity by 1960 would be 307,000 tons a year when a production of 269,500 tons of sized coke from them is expected. The supplies of sized coke from the Giridih coke ovens have been placed at 27,600 tons in that year. The total supply of by-product sized coke from the existing sources indicated above (namely, private merchant cokeries, the Giridih plant and I.I.S.C.O.), it is expected, will be 341,100 tons in 1960. Including supplies of sized bee-hive coke estimated at 105,000 tons, the total domestic supplies of sized coke would come to 446,100 tons in 1960.

5. To make up the deficit in supplies, additional coke capacity amounting to 384,900 tons has to be set up. Of the total deficit, 250,000 to 270,000 tons are of normal grade sized coke, the balance being of special grades.

6. To investigate the question of the location of coke oven plants, the Committee would have had to study several aspects of the different coalfields and their coal output, select several possible areas and make a comparative study of the merits and demerits of each location before the most suitable location or locations could be recommended. The volume of work and the investigation involved would take a considerably longer period for the Committee to complete such a study. If the Planning Commission considers that such an investigation is required and it would be advantageous for it to have ready data on the subject for further guidance, the Committee suggests that separate arrangements for undertaking such an exhaustive enquiry should be made.

7. In the light of the position explained in para 6, even while considering the question of the location of the plant proposed by the West Bengal Government, the Committee was not able to discuss any location other than Durgapur. An examination of the several aspects relating to Durgapur shows many favourable factors. These include the facilities of quick transport towards the Calcutta side, with a four-track railway system soon to be electrified, cheaper railway freight for coke compared with freight from Jharia, etcetera, future availability of water transport through the Durgapur canal towards Calcutta and places in between, cheap land, water supplies and a developed colony. Durgapur is also favourably situated considering the availability of coal and power and the Calcutta market. The Committee is, therefore, of the opinion that taking the deficit into account, the Durgapur site is suitable for locating the plant proposed by the West Bengal Government with a capacity of 292,950 tons of sized coke over 1 inch, a year.

Durgapur Coke Oven Project

8. The sections of the Durgapur scheme, the economics of which has been worked out by the Committee, comprise the following: (a) a coke oven plant with a daily throughput of 1,300 tons of coal and coke breeze (1,235 tons of coal and 65 tons of coke breeze); (b) auxiliary plants for the recovery of by-products from coke oven gas (ammonia, sulphuric acid, coal tar, crude benzol and its rectified products) and (c) a coal tar distillation plant with a daily input of 50 tons of coal tar. The fixed capital investment of the sections is estimated at Rs. 5.25 crores. Requirements of working capital have been estimated at Rs. 35 lakhs. The Committee, assessing the potentialities for industrial development in the Bengal-Bihar area, says that there will be a market for 500,000 gallons of benzene and corresponding quantities of other by-products of benzol rectification. The balance of crude benzol will have to be processed and sold as motor benzol. The surplus coke oven gas amounting to 8.18 million cubic feet of 450-460 B.T.U a cubic foot a day will be utilised in the beginning for firing the boilers of the thermal power plant of 30,000 kW capacity. The total proceeds from the sale of different products are estimated at Rs. 193.61 lakhs against the manufacturing charges and provisions for depreciation and interest on working capital totalling Rs. 157.9 lakhs.

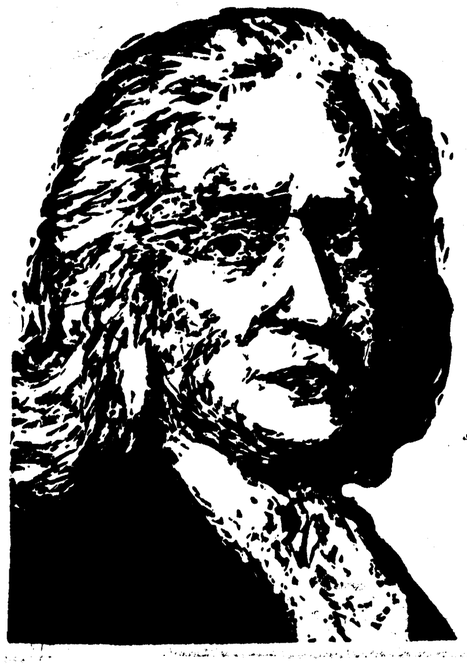
10. The operating results, it is calculated, will show a return of 6.8 percent on the capital investment of Rs. 5.25 crores. The two items of preliminary expenses, that is, the expenditure on project report and interest during the period of construction on any loan capital that might be secured, are estimated at an extra Rs. 30 lakhs, which will be written off from profits gradually year by year, according to the existing commercial practice. These two items have not been taken into account in computing the 6.8 percent referred to. Nor has interest on fixed capital been considered. Only depreciation and interest on working capital have been provided for.

11. Having regard to the agreement concluded between the West Bengal Government and the Damodar Valley Corporation in January 1955 on the installation of a 30,000 kW thermal power plant by the latter, it is not considered necessary to assess the growth of load in the Bengal-Bihar area as required under the terms of reference. The installation of this power station provides an outlet for the by-product coke oven gas and thus improve the economics of the scheme.

12. In view of the industrial demands in prospect near Durgapur, about which the Committee was informed by the West Bengal Government, it is not clear at this stage whether there would be enough gas to transport to the Chittaranjan area or to Calcutta. On a re-examination of the terms of reference since the submission of the interim report, the Committee comes to the view that since it was called upon only to examine the possibilities of utilising coke oven gas in the vicinity of a coke oven plant if established in Durgapur, it is not necessary for it to report on the proposals relating to the gas grid envisaged by the West Bengal Government as part of the first phase of its Durgapur scheme.

13. The State Government which has sponsored the Durgapur project, it is held, will naturally be the authority to decide on the form of the organisation and management for the project. According to the Committee, the operation should be based on strict commercial principles. As for organisation, the Committee supports the views expressed by the Planning Commission.

Tax on Railway Passenger Fares



The Railway Passenger Fares Act 1957, recently passed by Parliament for the levy of a tax on railway fares, has come into force with effect from 15th September, 1957. No tax is leviable on passengers travelling for distances up to 15 miles (inclusive) or on those travelling on season tickets. The tax is leviable at a certain percentage of the fare on passengers travelling a longer distance, depending on the mileage of the journey. Those travelling for distances from 16 to 30 miles will pay a tax of 5 percent of the fare, those travelling from 31 to 500 miles, a tax of 15 percent of the fare, and those travelling over 500 miles, a tax of 10 percent of the fare. The amount of tax for any distance will, however, be so adjusted, wherever necessary, that the aggregate amount of the fare and the tax for such distance is not less than the aggregate amount of the fare and tax for any lesser distance in any case. Thus, a person travelling 501 miles or immediately higher distances will not pay less than what a passenger travelling 500 miles will be required to pay in the aggregate. For passengers travelling on mileage coupons, the rate of tax will be 12½ percent of the cost of the coupons.

The tax applies to all passengers irrespective of the class of travel. The fare for the purposes of the tax will, however, include only the charge for the personal carriage of the passenger or group of passengers and will not include the charges for the extra luggage, if any. Charges for any special conveniences provided at the request of the passengers will be added to the fare for the purposes of the tax, namely, (i) haulage charges for supply of carriages of particular types; (ii) empty haulage charges on tourist cars and saloons; (iii) charges for pilot engines; and (iv) charges for dining cars attached to special trains;

The fare for this purpose will not, however, include: (i) the tax payable under the Act; (ii) terminal taxes, pilgrim taxes and tolls and bridges; (iii) reservation charges; and (iv) hire, detention and stabling charges for passenger traffic booked in reserved carriages and special trains. The tax will not have to be paid separately but will be collected along with the fare, and where necessary, it will be rounded off to the nearest naya paisa. It will apply to all Indian railways whether run by the Government or by private companies.

That falling apple...

...may have *started* Isaac Newton thinking—but it took years of patient, intelligent work to establish *The Law of Gravitation*. So too, MOBIL products started in a small way—but have grown to leadership through 91 years of research and experience in the field of industrial lubrication.

Our experience and advice are available to you—FREE. Why not call us?

The secret of Popular Poplin —Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label... but your customers don't know the 'behind the scenes' story that ensures the complete *reliability* of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for *you!*

Look for 'SANFORIZED' on the label

Issued by Cluett, Peabody & Co. Inc., (incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid shrinkage requirements.

For information 'Sanforized' Service, 92, Marine Drive, Bombay 2.

London

RESHUFFLE OF U.K. CABINET

VISCOUNT HAILSHAM TO BE LORD PRESIDENT OF COUNCIL

(FROM OUR LONDON CORRESPONDENT)

THE Prime Minister last week lunched with Her Majesty the Queen at Buckingham Palace. It is believed he took advantage of the opportunity to secure royal approval of the Cabinet reshuffle, and at least of some policy measures which will ultimately find inclusion in the Queen's speech at the opening of the next session of Parliament but of which it is likely that Ministers concerned may feel it politic to make some guarded mention at the forthcoming Conservative Party conference. The Cabinet changes, just announced, are not very extensive. They, it is understood, arose from the proposal that Lord Hailsham, Minister of Education, should be released from departmental duties by being made Lord President of the Council so as to take over the chairmanship of the Party from Mr. Oliver Poole.

National Income and Expenditure

The annual Blue Book giving details of national income, production and expenditure of the U.K. has just made its appearance, and this year it furnishes some interesting new figures which are an impressive justification for the monetary policy which has been in force since Mr. Butler went to the Treasury. Without it the U.K. would have been a lot worse off, and that it has not achieved complete success was due to the fact that excessive liquidity prevailed in the commercial structure as an inheritance from the war years and the lax monetary policy which was followed in the years immediately after. "Popular" interest in this publication fastens on the personal factor, on who earns how much and where the money goes. It is found that 94 percent of all the people included fall into the lowest income groups with more than 14 million having an income of less than £500 before tax and another 10¼ million of between £500 and £1,000 a year. About 4 percent received between £1,000 and £1,500 a year, leaving just over 2 percent with incomes of £1,500 and over. After tax, in 1956 there were 1,140,000 persons receiving more than £1,000 a year, including 172,000 with more than £2,000 and 500 with more than £6,000. In 1938, however, only 215,000 had income of over £1,000 after paying tax, whereas the over £6,000 group numbered 6,600. Between 1948 and 1956 consumers' expenditure in real terms increased by 16 percent, with the biggest increases in spending on private motoring and cycling, radio and electrical goods, furniture and furnishings, chemists' goods, alcoholic drink, and clothing. Spending on food increased by only 17 percent.

In the sphere of business, it is interesting to learn that between 1955 and 1956 the gross trading profits of industrial and commercial companies operating in the U.K. increased from £2,982 million to £3,098 million, the smallest increase since 1952. Interest and dividends took £74 million of this £116 million extra, but as taxes increased by £170 million and non-trading income dropped by £10 million, the amount which companies were able to retain in the business declined by £77 million. Gross fixed capital formation rose sharply in 1956 to £1,151 million (against £976 million in 1955 and £775 million in 1954) and value of stock and work-in-progress to £305 million (£486 million and £248 million), against which retained profits, before providing for depreciation, but including minor net capital transfers amounted to £1,422 million (£1,504 million and £1,332 million) and taxation reserves were drawn upon for £157 million (£20 million and £96 million). Nevertheless, net lending to other sectors, including overseas, amounted to £123 million (£22 million and £405 million).

Steel Production Increasing

With markets generally in the doldrums awaiting some clarification of the uncertainties which dominate the economic outlook—the effects of fresh wage claims, the Middle East situation, Wall Street weakness, and commodity price levels—it is at least some encouragement to learn that steel production is still increasing and that the N.C.B. and N.U.M. are getting down to coal production problems. According to the Iron and Steel Board, production in August was 373,400 tons a week against 340,600 tons a week in August of last year; for the first eight months of this year, weekly output has been no less than 6.2 percent higher than in the same period of 1956. Pig iron production is also much higher with the August figure at a weekly rate of 272,500 tons compared with 235,000 tons in August 1956, while for the first eight months this year weekly production has averaged 8.4 percent more than last year. The latter fact is particularly significant in easing the raw material supply position and, as a result, forward contracts for imported scrap and pig iron have been reduced. Meanwhile, steel consumption is still below last year's levels; during the second quarter it was 2.7 percent below the figure for the same period last year. Consumption in the first quarter of this year was 3,512,000 tons and in the second quarter, it is provisionally estimated at 3,439,000 tons.

At least part of this fall in consumption is explained by the latest figures concerning the machine tool industry. Orders from both home and abroad for new machine tools during June were slightly lower than in May and below the monthly average for the year so far. Home orders were worth £4,559,000 and foreign £1,724,000 making a total of £6,283,000 against £6,660,000 for May and an average for the first five months of the year of £7,070,000. Deliveries in June were also down, being worth £5,485,000 for home industry (against £6,201,000 in May) and £1,991,000 for overseas (against £2,318,000 in May). The order-book now stands at £67 million for home customers and £23 million for overseas, against £82 million and £23 million, respectively, at the same time last year.

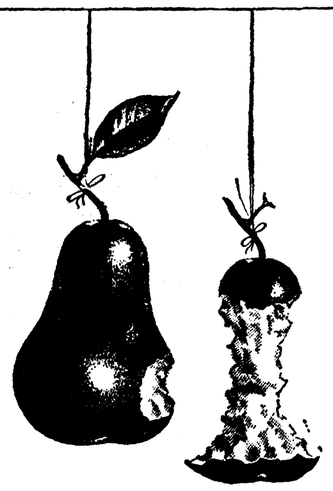
Export Credits Enquiry

Not so many years ago, the Government-controlled Export Credits Guarantee Department came in for a lot of unfounded criticism on the gounds that other countries, although Western Germany at the time was mainly responsible, gave more or better cover to their exporters. It has since come to light that much of the business foreign exporters were doing at that time was proving uneconomic, but was necessary to gain a foothold in certain markets. Similar terms were not available on repeat orders. Meanwhile, the E.C.G.D., which is the largest body of its kind in the world, has done a really excellent job for British exporters over a number of years, and is at present covering about 14 percent of Britain's exports with a turnover of some £500 million a year. That it could do an even better job under different circumstances would seem to be agreed, for although it conducts the bulk of its business on commercial lines under the vigilant eyes of an advisory council made up of gentlemen from the City, it is also a Government department under the joint control of the Board of Trade and the Treasury, with the inevitable disadvantages of staffing, accounting procedure, etcetera, attaching thereto. Whether it is possible to find ways and means of obviating these disadvantages and so enabling the E.C.G.D. to fulfil its real promise is the job which has been given by the Board of Trade to a distinguished committee appointed to enquire into its working. The members are Sir Eric Speed, chairman of Engelhard Industries Ltd, and a former official head of the War Office; Sir Thomas Barnes, a former Treasury solicitor and a member of the Monopolies Commission; Sir Matthew Drysdale, a former chairman of Lloyd's; and Mr. Bertram Nelson, partner in a Liverpool firm of accountants who was chairman of the Liverpool Chamber of Commerce from 1951 to 1953; with Mr. J. Littlewood of the Treasury as Secretary. The committee's terms of reference are "to consider the suitability of the present organisation and status of the Export Credits Guarantee Department for the performance of its statutory duties," which should offer sufficient scope for initiative.

Simplified Output Census

The census of production for next year, the first detailed one since 1954, will be simplified to enable returns to be made more quickly, so that the census itself can play a larger part in the economic planning which is so essential these days. Only firms with 25 or more employees will be asked for full particulars instead of those with 10 employees or more, as in the past. This will reduce the number of industrial firms making returns from 71,000 to 50,000. Only 17,000 small firms, instead of 107,000, will be asked questions about sales. About 86,000 small firms which made returns in the past will not have to do so. Altogether, substantial relief will be given to 124,000 of the 233,000 establishments covered by the 1954 census. The larger firms will be asked only general and not detailed questions about their purchases of material and fuel. Firms will be given advance notice of what will be asked of them. This will correspond more closely with their ordinary records. Combined returns for two or more separate establishments will be accepted if in the same census industry and in the same country (England, Scotland or Wales). The changes follow recommendations made by the committee on the census of production and distribution, whose chairman was Sir Reginald Verdon Smith. The report, it will be remembered, was published in 1954.

Brevities



The bid for Whiteaway Laidlaw ordinary shares by Great Universal Stores has been accepted by over 70 percent of holders and has, therefore, become unconditional, but remains open until 7th October.

Mr. F. J. Erroll, Parliamentary Secretary, U.K. Board of Trade, will leave on 23rd September by air for trade talks in Burma, Hongkong and China.

A London firm of architects and town planning consultants has been commissioned by the British Government to prepare a master plan for the development of Dacca. The Treasury said that the assistance was being given under the Colombo Plan.

Given normal working conditions, the Board of the Calcutta Electric Supply Corporation are hopeful that current year's earnings will enable the company further to strengthen its internal finances and also permit payment of an ordinary dividend of not less than 7 percent tax free. For the 18 months ended 31st May, 1957, 8½ percent tax free was paid, equal to an annual rate of 6 4/5 percent.

The Council on Prices, Productivity and Incomes has appointed Mr. W. A. B. Hopkin, at present a director of the National Institute of Economic and Social Research, as its Secretary.

Appearances...and a pair of pears

PEARS, like appearances, are deceptive. You can't tell their quality by gazing at them. Moral: If you're buying pears, taste them first.

But testing by tasting gets you nowhere if, for instance, you are buying soap. For that (and most packaged goods, too), sensible shoppers have a surer guide to quality: they go by a *name* they can trust, a *brand* they have used and found reliable.

For nearly 70 years, people have trusted Hindustan Lever products because their high quality has been unvarying. And they trust because we test.

At Hindustan Lever, we examine *all* our products at *every* stage of manufacture. We make sure that they stand up to storage: we 'create climate' in a laboratory to observe them under all weather conditions. We check their performance by using them as you do in the home.

All this means 1,200 *tests a week* on products like Lifebuoy Soap, Dalda Vanaspati and Gibbs SR Toothpaste—familiar products because they are so widely trusted, and trusted because they are tested.

Hindustan Lever serves the home

EXCESSIVE EXPENDITURE UNDER SECOND PLAN

THE INADEQUACY OF VOLUNTARY SAVINGS

(FROM OUR BOMBAY CORRESPONDENT)

IN an address to the Rotary Club here, Sir Chunilal Mehta has expressed the view that the country's financial problems are of a temporary nature. Sir Chunilal said that in recent months there had been much discussion both at home and abroad about the stability of the Indian rupee. Much of the present anxiety stems from the fact that India has a continued deficit in her balance of payments. Between April 1956 and the present time, the foreign assets of the Reserve Bank have declined by about Rs. 350 crores in spite of the Rs. 95-crore credit received from the International Monetary Fund. Domestic prices, particularly those of agricultural products, have shown a tendency to rise. These factors are symptomatic of economic imbalance, said Sir Chunilal, and added: "Since the strength of a currency is determined by its purchasing power both abroad and at home, there is undoubtedly reason to think that our rupee has lost some of its strength during the last one year or so." But, he said, these difficulties had arisen because of the vast scale of development expenditure envisaged under the second five year plan. On the other hand, voluntary savings had been insufficient. It has, therefore, been necessary to resort to deficit financing on a considerable scale. The factors pointing to the weakness of the rupee are the heavy decline in foreign exchange reserves; the further quantum of foreign exchange that will be required in the immediate future; the high internal price of gold; and the rise in commodity prices. Referring to the proposal to dispense with foreign exchange holding as a cover for the currency, Sir Chunilal says this is a drastic measure which will perhaps undermine the confidence of foreign investors in the rupee.

Taking stock of the credit side, Sir Chunilal Mehta pointed out that as a result of development expenditure, the country would produce more goods which were now being imported. This would automatically reduce foreign exchange expenditure. Also, as a result of increased production, the country's capacity to export would correspondingly increase, which would mean higher earnings of foreign exchange. "The country's economic structure is being radically changed. There is dynamic activity everywhere. Industrial production has been rising at an accelerated pace, the increase in 1956 being of the order of 9 percent. Agricultural production, which however is subject to fluctuation on account of the vagaries of the monsoon, has also shown a substantial rise during the first plan period and again in the year 1956-57. Apart from the growth of basic industries such as steel, cement and textiles, a number of new industries in the capital and consumer goods groups are being set up." In addition, the stringent measures taken by the Reserve Bank to restrict credit are helping to lower the general price level and there is every indication that the harvest this year will be satisfactory. Taking all these factors into consideration, Sir Chunilal believes that the acute phase of the present financial crisis will be over in about 18 months' time.

Sir Chunilal posed the question whether any radical measures were necessary even for this short crisis period and referred to the suggestion about devaluing the rupee. He said: "Devaluation is, by and large, a policy of helplessness. It means that we have no confidence in bringing down the price level and cost of production. Furthermore, devaluation as a means of discouraging imports is a blunt weapon. But India has to continue the import of machinery and other such things on a very large scale for years to come and, as such, any devaluation would go against the expansion of the Indian economy. Devaluation is certainly not the final step that would bring about equilibrium in the economy. Its effects remain only for a short time and afterwards inflation comes with its adverse effects. The real remedy is to have budgetary and monetary policies which would curb inflation, which would not allow costs of production to go up and which would support exports as best as possible. The only effective way to maintain the strength of the rupee is to reduce deficit financing drastically and to adjust the rate of investment to the level of voluntary savings".

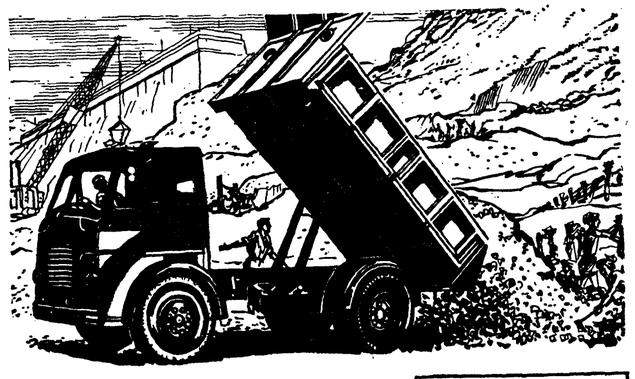
Cotton Futures Active

Weather reports last week influenced dealings in the cotton futures market here. While it was reported that some cotton-growing areas were short of rain, other reports spoke of excessive rainfall in the Punjab. Although it is not yet possible accurately to assess the damage or otherwise, it is widely believed that the current season's crop will be satisfactory. The Jarilla March contract opened at Rs. 667, and after rising to Rs. 689.50, closed at Rs. 678.50. The accumulation of cloth stocks with mills adversely affected trading in the spot market and the daily turnover was confined to around 2,000 bales. Some business was put through in spot lots of American cottons while moderate business was also done in East African growths. Meanwhile, Uganda reports say that merchants there have sold 17,600 bales of cotton valued at around £1 million to Communist China. The entire quantity will be shipped from Mombasa to Shanghai shortly. The deal was originally initiated by Communist Chinese representatives in Hongkong. A sample of six bales was sent in the first instance, which was approved. These reports say that further business is possible with China. China was originally interested in Sudan growths, but found the prices prohibitive. Uganda welcomes this new market because she fears that India, which is among her best customers, will restrict purchases of East African growths in favour of American cottons.

Good Business in Piecegoods

Good orders were received for cotton piecegoods from south Indian centres. Enquiries received from these markets related to superfine, fine and medium counts. In spite of the improvement in offtake, mills are still faced with accumulating stocks. In these circumstances, there has been some disappointment at the Government's refusal to modify its policy concerning the excise duty. Some mills sold grey cloth at reduced prices in order to lighten their stock position. For export markets, fair business was done with Indonesia, and East and West Africa. The Sudan showed some interest in grey villaya while enquiries from the U.K. were almost negligible.

Rise in Rayon Yarn



Confusion over the future import policy for rayon yarn accounted for a slight increase in prices. The 120d October delivery contract was quoted Rs. 5 higher at Rs. 826. Spot prices for Japanese yarns increased by around 4nP a lb. Staple fibre yarn, on the other hand, declined. The 2/40 October delivery contract was quoted at Rs. 562. It is reported that south Indian manufacturers are contemplating reducing prices following the accumulation of stocks. The cotton yarn market continued dull with a limited offtake. Pakistan is still competing successfully in export markets such as Hongkong.

INCREASE IN POSTAGE RATES

The revised postage rates on letters and book, pattern and sample packets, in accordance with the provisions of the Finance Act, 1957, have been brought into effect from 18th September, 1957. The revised postage rate for letters is 15nP for a weight not exceeding one and a half tolas and 10nP for every additional one and a half tolas or fraction thereof. Addresses of business reply envelopes are also to be charged at this rate for each envelope delivered on or after 18th September. Existing envelopes embossed with the value of 2 annas or 13nP may be used after affixing additional stamps worth 2nP. Until 15nP embossed envelopes are available, post offices will sell existing envelopes only after affixing 2nP stamps. For book, pattern and sample packets the revised rate is 8 nP for the first five tolas or fraction thereof and 3nP for every additional two and a half tolas or fraction thereof. The enhancement in the rate for book packets does not, however, affect packets containing "printed books", which will continue to be carried at the special concessional rate introduced recently. The revised postage rates also apply to letters and packets sent to Aden, Ceylon, Nepal, Pakistan and Portuguese possessions in India. Letters and packets posted prior to 18th September will be treated as fully pre-paid, if postage at the previous rates has been paid. Articles posted on 18th September or after with postage paid at the previous rates will be treated as insufficiently paid.

Wherever there is heavy duty work to be done

use LEYLAND Comets for SPEED and ECONOMY

A Leyland Comet can carry in two trips what others do in three or more

EVERY project in the private sector or the public must be completed in record time to get maximum value out of investment. The Leyland Comet with its large body space and 7½ ton payload capacity, helps you transport more goods more frequently with maximum efficiency. The fast, powerful, Leyland Comet trucks, tippers and tractors, have proved their reliability and exceptional fuel economy in well over 50 countries.

The Comet has behind it the design features developed from extensive testing over all sections of the Motor Industry Research Association's proving ground in Britain. The Comet stood these tests over thousands of miles on a track scientifically designed produce the most damaging effects of the worst types of road surfaces.

Leyland 'COMET'

MOVE TO INCREASE LABOUR PRODUCTIVITY

ESTABLISHMENT OF NEW SPINNING MILL

(FROM OUR MADRAS CORRESPONDENT)

BUSINESS men have shown considerable interest in scientific management, and courses of lectures have been arranged with visits to industrial establishments. Efforts are being made by a productivity team to indicate how the process of production can be improved. For two months, Mr. Shearer and his colleagues will help the productivity centre here to continue its programme of lectures and the study of productivity at selected local factories. The Labour Ministry is especially interested in aiding executives in factories to learn more about the techniques of production in modern industry. The aim in achieving higher productivity is to reduce costs and to raise competitive capacity. Cochin as well as Coimbatore have set up institutes to help business firms learn more about the principles of scientific management and to improve the methods of production calculated to raise the efficiency of labour. Part-time classes, organised for the benefit of those now engaged in various industries, represent a new method of spreading management education. Mr. Shearer has made it clear that higher productivity means higher wages. What the productivity movement aims at is to make the worker interested in his job and to create a personal interest in business administration as it affects him. The results in the textile industry in Coimbatore are regarded as encouraging and it is hoped that foremen trained by such courses will try to provide special training within the industry.

The State Minister of Industries has promised to establish a new spinning mill in Srivilliputtur. Although there are many mills in Ramnad, handloom co-operatives are in need of more yarn. Rajapalayam, ten miles away, has nearly a dozen spinning mills which use Uganda cotton. The performance of a new unit will be judged by the success already achieved by private ventures in the same district. Queries about production cost a spindle, and the marketing facilities for cotton and yarn, will perhaps count less than the aim to spread the textile industry in the cotton-growing area. Meanwhile, handloom cloth needs an export outlet and the trade in Madras feels that foreign markets cannot be captured only by the Handloom Board's effort to establish showrooms overseas. The Controller of Exports has recently agreed with textile interests that Asian markets should be explored. Traders are likely to get more help from the Export Promotion Council than from the Board which is more concerned with retaining special advantages for the handloom industry at home than with market research.

More Power for Madras

In future, Madras city will have more power as a new steam turbo-generator set is being installed. The scheme which was started in October 1955 will be completed in April 1958 and the growing demand for energy will be met by expanding the capacity of the Madras electric supply system which, since its nationalisation in 1947, has been developed to link up with the hydel systems. Capacity has been raised from 41,000 kW to 87,500 kW by expanding the capacity of the thermal generating plant. According to the Chief Engineer, electricity under Government control has certainly helped create new industrial enterprises, especially in Mettur, and when the Neyveli thermal plant is ready, the prospects for industrial expansion will be better. Hopes of better pay for engineers entering Government service were lately given by the Chief Engineer, who indicated that Madras was losing local talent to other States due to better service conditions there.

Developing Cottage Industries

The Sivakasi cracker industry has been in the news because of the railways' ban on cracker transport. The manufacture of locks in Dindigul has not led to such criticism for bell metal manufacture is well established there. For over a century padlocks have been made and the new centre opened recently is meant to increase output. As a rival to Aligarh, Dindigul will be developed with State assistance. Though there are more than 65 factories producing metal boxes and steel trunks in Madras, the Factories Act has not included lock-making within its scope. The manufacture of safes has also been taken up in a small way in Dindigul. It is however better known as a centre for the manufacture of Trichinopoly cheroots.

Report on Commercial Markets

The report of the committee on commercial markets advocated ending elections to market committees, regulating dealings in commercial crops, and extending legislation to all agricultural produce. Officials assisted the enquiry, which reviewed the results of the Act of 1936 based on similar legislation in Madhya Pradesh areas. It has been said that jaggery should be included in the produce dealt in in controlled markets. The main aim is to benefit the primary producer, and so reduce the differences in prices ruling in the same areas.

Jute

SUBSTANTIAL RISE IN GUNNY AND RAW JUTE PRICES

FIBRE ARRIVALS REMAIN SMALL

THE effects of the Calcutta mills' former marketing policy are now being felt in the gunny market. Earlier in the year, when forward shipment of nearly all types of fabrics showed a better profit than other deliveries, large quantities were sold by the mills. A large percentage of these goods found their way into the local market due to a lack of interest from overseas buyers. The position, however, has now been reversed and there is a shortage of ready goods to meet overseas enquiries. The shortage has been aggravated by the placing of several steamers in port at the same time, all loading for the same destinations. Local shippers are now frantically trying to cover in ready goods, with the result that speculators who bought these goods as long as five or six months ago are now reaping the benefit. The small amounts the mills have available are not nearly enough to satisfy the demand. Consequently in heavy goods, especially B Twills, ready shipment now stands at a premium of about Rs. 4 over the January-March position. A similar situation exists in hessian, although the effect there is not so pronounced. Most fabrics for ready shipment now command a premium of 50nP or Re. 1, whereas at the beginning of this month the near and forward positions were on par.

The placing of Government orders has had much to do with the firmness of the gunny market. It is understood that some orders have been placed directly with the mills, and tenders have not been called for in the usual way. Rumours about enquiries from Russia, Burma and Australia have strengthened the undertone, and the general outlook is one of confidence. The firmness of the jute goods market has had its effect on fibre, where prices have shown a general tendency to rise. Daily business by the Calcutta mills has been a feature, and transactions in quantities of 50,000 maunds to 100,000 maunds have frequently been reported. As in the gunny market, the emphasis is on ready delivery, and enquiries for quick shipment have been frequent, although business is also reported at premium rates for shipment up to the end of November. Only small quantities of near shipment jute are available, and this is entirely due to a shortage of imports, not only in the local markets in Cossipore but in all the receiving areas upcountry. At present, the jute just is not available, and this is not because of any transport difficulties, which was the case a few weeks ago when flooding disrupted communications. The real reason is the lateness of the monsoon. It held up sowing, and although favourable weather conditions followed the breaking of the rains, thus reducing the ultimate delay considerably, the fact remains that the crop this year is much later than for several seasons. Last year, at this time, the market was flooded with jute from Bihar and many other areas which had a comparatively early monsoon, and this tended to keep prices down. There was a glut of this type of fibre and indeed much of it still lies unsold in Cossipore, constituting more than 50 percent of the total stocks there. This year, however, the story is different. Sellers are still short of jute to fulfil their requirements, and premium rates have been asked and paid for most types of fibre.

The raw jute arrival figures underline the shortage. Total arrivals in August amounted to only 303,850 bales, of which 252,000 bales were of Indian origin and 51,850 bales came from Pakistan. The latter figure is encouraging, as the totals for July and August indicate an increase of 27,350 bales over arrivals from across the border during the first two months of the past season. Arrivals from India, however, show a drop of 117,900 bales, and this is one of the main factors helping the steadiness in fibre. Total arrivals during August and September fall short of last year's total by 90,550 bales, which constitute about 10 percent of the industry's raw jute consumption during the same period.

THE JUTE MARKETS

There was a fair amount of activity in all sections of the jute goods market during the past week, and prices rose considerably. Gunnies were dominated by speculative activity, and the squeeze in ready B Twills pushed up the nearer delivery dates. Other periods were more or less neglected, but prices hardened in sympathy with the ready position. The Calcutta mills continued to take up large quantities of raw jute, and purchases made almost daily helped maintain rates. Interest ranged from ready delivery jute to shipment as far forward as November, but it was the former category which attracted the most attention.

Manufactured Goods: The gunny market opened last Thursday on a quiet note, and prices in all sections showed a slight fall. Heavy goods lost about 50nP and ready B Twills were quoted at Rs. 116.50, which showed a premium of Rs. 3 over the January-March position. Hessian lost 25nP, so 40in. 10oz. opened at Rs. 42.30 for ready delivery and Rs. 42 for forward shipment. There was very little activity in the initial stages but the easier tendency was checked with the placing of tenders by the Burmese Government. Heavy goods were quick to react and on Friday ready B Twills jumped by 90nP, with smaller increases in the forward section. Hessian moved up in sympathy, but the increase was only a nominal one. Heavy speculative activity was apparent throughout the day, but prices eased on profit-taking at the higher levels. Towards the week-end, a quieter tendency prevailed. Over the week-end, it was reported that business was done with Russia, mainly in hessian, so the market opened on Monday on a very firm note, with a general increase in rates. The premium of ready B Twills over the forward position increased to Rs. 3.75 mainly as a result of speculative activity and local shipper covering for steamers loading in port. A squeeze developed for ready goods in both sacking and hessian. By Tuesday, both B Twills and hessian reached their highest levels for about three months. Very steady conditions prevailed throughout the day, with prices fluctuating rapidly. The general undertone was one of confidence, and the only easing of rates occurred late in the day when profit-taking occurred. The fall was short-lived, however, and prices reverted to their previous high levels. Towards the close, very steady conditions prevailed, with speculation and shipper covering maintaining the premium of ready goods over other deliveries.

At the close, the market was firm and opening quotations on Wednesday morning were as follows:

	Sept. Rs.	Oct. Rs.	Oct.-Dec. Rs.	Jan.-March Rs.
40in. 8oz.	35.90	35.60	35	34.25
40in. 10oz.	42.95	43	43	42.55
B Twills	118.50	116.75	115.50	114
Heavy Cees (Plain)	116.50	116.50	115.50	114
A Twills	142	140	140	139
Liverpools	131.40	131	130.50	129
Cornsacks	119.25	117.75	117	115.25

Raw Jute: Fibre prices showed a tendency to rise during the past week, and support from the mills created a very steady market. Interest was maintained by daily purchases, and it is estimated that mills bought about 500,000 maunds of jute. A large percentage of this was for quick delivery, as many buyers were let down on contracts entered into earlier in the year on a forward basis at cheap rates, which sellers were not able to fulfil due to shortage of imports, or merely repudiated because they could not make a profit. Mills had to pay premium rates for quick delivery. The effect was passed on to forward shipment, and cases were reported of business being done for both near delivery and October-November shipment at the same level. Sellers were very reserved, and held bullish ideas, mainly on account of the very steady upcountry markets, where imports were very small due to a late crop. This was again reflected in the arrivals at the local Calcutta markets, which normally are at their peak at this time of year. Recent imports have been only about a half of those a year ago.

Quotations opened last Thursday at Rs. 29.50 for September-October Assam-Northern jute. Good business was done at this level, so rates rose to Rs. 30 on Friday. Mills continued to buy at the higher levels, so prices were maintained with sellers seeking a rise. This was not long delayed, and a further 50nP was added on Tuesday morning. The rise did not deter buyers, however. They continued to take up fairly large quantities at full market rates for both near and forward delivery.

The main business was in Dhubri-Northern-Assam jute, and prices paid varied from Rs. 29.50 to Rs. 30.50 for ready bills of lading and from Rs. 29.75 to Rs. 30.50 for September-October and October-November shipment. Desal white was done at Rs. 29 to Rs. 29.50 for September-October shipment. Daissee white was also in demand, and buyers paid Rs. 29.50 for ready and one month's delivery. One mill was interested in Daissee mesta Tops and paid Rs. 33 a maund for October-15th November shipment, while the other business was done on the basis of Rs. 27.50 for Bottoms. Jungli mesta passed at Rs. 26.50 to Rs. 27 for the same shipment. Business was reported in Daissee jute at Rs. 30.50 to Rs. 31 for October and October-15th November shipment. There was a strong demand for cuttings, and business was done at Rs. 88 to Rs. 90 a bale for September-October shipment.

At the close, the market was unchanged and opening quotations on Wednesday were as follows:

Indian Jute	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam-Northern	30.25	Sept.-Oct.
Purnea Desal	29.25	"
Daissee	31.25	"
Daissee White	29.75	"
Assam Tossa	31.25	"
Murshidabad Tossa	30.50	"
Northern ex Calcutta	30	"
Local Packing	28	"
Mesta :		
Assam-Northern	28	"
Desal	28	"
Daissee	27.50	"
Murshidabad	27	"
Jungli	27.50	"
Bimli F.A.Q.	26	"
Pakistan Cuttings	90 a bale	"

Arrivals in Cossipore increased to 445 wagons last week, and were 145 wagons more than the previous week. During the corresponding week of last year, however, arrivals were 700 wagons. Good jute is at a premium and high prices have been paid for quick delivery.

I.J.M.A. PRODUCTION FIGURES FOR AUGUST

The Indian Jute Mills Association reports the total production of jute goods during August as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	3,858 tons
	137.9 lakh yds.
(b) Sacking	81.8 lakh Nos.
	41.757 tons
	9.77.8 laks yds.
	4,24.2 laks Nos
2. Gunny Cloth	
(a) Hessian	30,044 tons
	11.42.7 lakh yds.
(b) Sacking	1,387 tons
	31.7 lakh yds.
3 Other Manufactures	4,844 tons
4. Total production (above figures combined)	
(a) All kinds	81.890 tons
(b) Hessian (both bags and cloth)	12 80 6 lakh yds.
(c) Sacking (both bags and cloth)	10,09.5 lakh yds.

SUMMARY

	(00,000 Yds)			(000 Tons)		
	August 1957	July 1957	August 1956	August 1957	July 1957	August 1956
Hessian	12.81	13.42	13.53	33.9	35.6	35.4
Sacking	10,10	10.69	11,57	43.1	45.0	46.2
Others				4.9	5.3	6.0
			Grand Total	81.9	85.9	89.6
			Hours Worked	189.0	209.0	203.5

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 10th September, 1957	1,617.2	13,052.8	14,670.0
1st to 10th August, 1957	1,073.6	13,859.3	14,932.9
1st to 10th July, 1957	1,006.9	14,011.1	15,018.0
	Sacking		
1st to 10th September, 1957	12,303.1	203.4	12,506.5
1st to 10th August, 1957	16,447.2	416.8	16,864.0
1st to 10th July, 1957	10,373.3	754.9	11,128.2

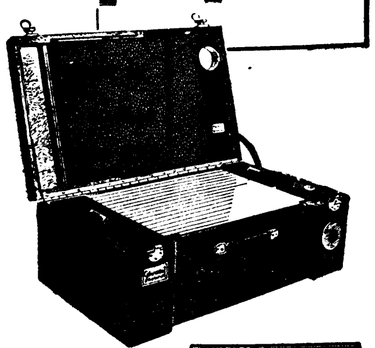
THE FOREIGN JUTE MARKETS

GOOD ENQUIRY FOR CLOTH AND BAGS



(FROM OUR DUNDEE CORRESPONDENT)

STEADY buying by Continental spinners has caused prices for raw jute to advance a few pounds a ton over the past two weeks. Reports say that the position in Pakistan is quieter, but so far there is no recession in prices. An occasional odd lot is sold at lower prices than the general market levels, such as Mill Lightnings at £96 and Mill Hearts at £91 10s, against the quotations of £97 10s and £93, for September-October shipment, c.i.f. There is very little raw jute available on spot or unsold afloat and any business that is being done is usually at a few pounds a ton above the shipment quotations. Mill Firsts rose to £105 lowest last week, and grade Hearts were lowest at £85, while good marks of Daissee-2/3 were not freely offered at from £97 and grade from £93 10s, also grade Tossa-2/3 from £104 and grade Tossa-4 from £98, all c.i.f U.K., September-October. Spinners here have been buying quietly but steadily and a day-to-day business has been passing for some time past. Many potential buyers of jute yarns have received a shock by being told that they cannot get delivery as early as they wish. The day is past when most qualities of yarns could be had "off the shelf" and in some cases delivery cannot be obtained for six to eight weeks. Rove is in this category since good business is being done in most sizes. The delivery time may not appear to be good but for some months past, buyers have been able to place an order one day and get the material in less than one week. Hessian yarns are very firm on the basis of 15.14d a lb for C.H.W. (common hessian weft) and 15.72d for J.C.H. medium spools, both in 8 lbs. Twist is firm at 17.56d a lb for 3 ply 8 lb and rove is at £101 10s for 48 lbs and £80 for 200 lbs.

A very good enquiry is coming in for jute cloth and bags of all width and weights, and manufacturers are steadily improving their position. Prices remain firm at 12.98d for 40in. 10oz. and 11.01d for 8oz., a yard. Sacking, bagging and tarpauling are in steady request at firm rates. Calcutta goods are maintaining a very steady front and prices have improved to 64s 3d for 40in. 10oz. and 49s 9d for 7½oz., September, 64s 3d and 49s 6d, October and 64s 6d and 48s 9d November-December, with B Twills at 177s, 176s 6d and 175s for the respective positions of shipment all f.o.b. Calcutta. The Jute Control has been buying quietly but steadily.

Plantation Topics

STRIKE THREAT BY PLANTATION STAFF

PROSPECTS OF BIGGER TEA CROP IN SOUTH INDIA

(FROM A SOUTH INDIAN CORRESPONDENT)

THE Estate Staffs Union of South India has decided to serve strike notices on plantation managements effective from 1st October in Madras and Kerala, and from 1st November in Mysore. This union represents about 5,000 staff members of plantations in these three States. Its demands in Madras are that the grades proposed by the United Planters Association of Southern India during the negotiations with the union should be equated and related to respective categories of staff, and additional amenities should be given for subordinate staff and skilled labour. In the case of employees in Kerala and Mysore, separate notices of demands for fixing salary grades for employees in consultation with the respective executive committees of the union, will be issued.

This decision was taken at an extraordinary general meeing of the union held on 8th September in Coonoor. Dr. P. H. Daniel, working president of the union, in his address to the meeting said that their dispute with the managements had not been settled for over the past five years because of the uncompromising attitude of employers. He claimed that employers in Madras had not agreeed even to refer disputes over the fixing of grades to arbitration by the Commissioner of Labour, and added that there was nothing left for the staff but to strike.

Union Rivalry in Malabar

The Communist union of plantation workers in Malabar is planning a district-wide strike from 16th September. The I.N.T.U.C. union has decided not to co-operate. The issue for this strike is the agreement over wages reached at a tripartite conference convened by the Communist Labour Minister of Kerala some time ago. If both the unions move forward according to their present plans and the State Government sticks to its policy statement about the use of the police, the chances are that there will be an open conflict between the rival unions. With that happening the law and order situation in the Malabar plantations, which has improved a little recently, will again deteriorate.

Tea Output

In spite of unhelpful attitude of plantation workers in Kerala, south India is likely to produce a larger tea crop this year because of favourable weather. Production to the end of July amounted to 82 million lbs, compared with 72.7 million lbs during the corresponding period of last year. The rush production period in the south has come to a close. Teas in the Cochin market now show an all-round improvement in quality and appearance. The price difference between the plain B.P and the well made O.P. amounted to Rs. 1.25 a lb at the auction held in Cochin last week.

Pepper Exports Higher

Exports of pepper from India during July were very small at 479 tons, compared with 852 tons in July 1956. But the season's exports to the end of July, amounting to 12,417 tons, show an increase of 1,735 tons over that of the corresponding period of last season. The internal offtake during this period is likely to have been 7,500 tons, in which case hardly 3,000 tons out of this season's output will be left for export and internal consumption during the remaining three months.

Strike by Cashew Workers Settled

The bonus dispute between the cashew factory owners of Quilon and over 40,000 workers, which had led to a nine-day strike, was settled on 5th September through the intervention of the State Government. As a result of this agreement, the workers will get 5¼ percent of their annual earnings as bonus for 1956. It is expected that the factories will resume work soon after the Onam holidays.

The other terms of the settlement are that the workers will be paid wages for the holiday on 1st May, 1957, and that an industrial relations council will be constituted for the cashew processing industry. This council will deal with any dispute that may in future arise, and formulate a code of conduct for the industry. The State Government has also announced its decision to constitute a minimum wages revision committee for the cashew processing industry, and to refer to a special tribunal the question of compensation to workers for past services in cashew factories which have either closed down or have changed their management.

Loss to Industry

The industry has suffered a heavy loss on account of this strike. The workers went on strike leaving cashewnuts worth over Rs. 50 lakhs at different stages of processing and open to deterioration. The shipment of another Rs. 50 lakhs worth of cashew kernel was held up. Besides, the strike has upset the export commitments of the processors. It is alleged that the workers resorted to coercion; they even picketed the houses of the factory owners. A more serious danger is that the bankers who finance the industry have become cautious and have decided to cut advances to cashew processors.

Coir Co-operative Conference

At a conference of the representatives of the coir co-operatives in Kerala, the State Chief Minister, Mr. E. M. Sankaran Namboodiripad, revealed that the Deputy Chairman of the Planning Commission, Mr. V. T. Krishnamachari had assured him that the Planning Commission would assist in the development of the coir industry if practicable schemes were prepared and submitted by the State Government. This conference was convened by the State Government early last week in Trivandrum. The Industries Minister, Mr. K. P. Gopalan, who presided over the meeting, said that the State Government's scheme, involving an expenditure of Rs. 10 lakhs to purchase coir yarn to relieve the distress of the workers and small producers, would be defeated if the dealers in raw materials raised their prices. To avert that danger, the State Government would control prices if necessary. At present, there is no check on the prices of raw and retted husks, the basic raw material for the coir industry, and it has been one of the weak points in the economy of the industry.

COCHIN TEA SALES

At Dust Sale S, 730,000 lbs of tea were on offer. There was a very strong general demand, with prices irregularly 5nP to 10nP dearer for everything. Better liquoring medium sorts were considerably dearer.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing prices on 30-8-1957 (Rupees a lb)	Average for the period (Rupees a lb)
Sheet:		
No. 1	1.03	1/04.8
No. 2	1.02	1/03.8
No. 3	1.01	1/02.8
No. 4	.97	.98.2
No. 5	.89	.90.2
	Sheet Cuttings 1	.93
	do 2	.88
Crepe:		
Water White	—	—
RMA No. 1X	1.27/29	1.28
RMA No. 1	1.22/26	1.24
	Crepe No. 2	1.17
	do. 3	1.09½
Scrap Crepe:		
Sc. Crepe No. 1	1.00 Nom.	1.00
Sc. Crepe No. 2	.92/96	.94
Sc. Crepe No. 3	.84/92	.88
Flat Bark	.80/83	.81½
	Sc. Crepe 3X	.91

To arrive at f.o.b. Colombo prices, add 34.53 cents a lb to the above market prices.

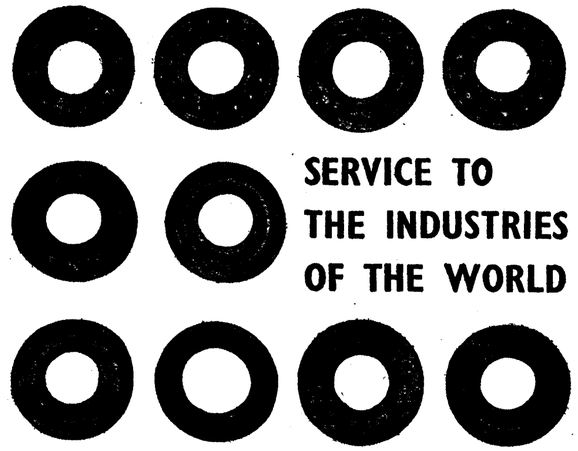
ANDAMANS CONSIDERED SUITABLE FOR COFFEE CULTIVATION

The Andaman and Nicobar islands have been found suitable for coffee cultivation by a team of experts of the Coffee Board, which recently completed a survey of the islands. According to the report of the team, humidity, temperature, soil and other conditions on the islands are not unfavourable for the cultivation of coffee. Blossom showers, necessary for growing coffee, are practically assured by the rains which occur in April. Thereafter showers are regular. The team has estimated that an area of 15,000 acres on the islands is suitable for coffee growing; about two-thirds of this will be suitable for cultivation of robusta and the rest for the arabica variety of coffee. The team has recommended that before launching on large-scale planting, exploratory trials with selected varieties of arabica and robusta should be conducted. It has also recommended six representative centres on the islands where the different varieties can be grown on an experimental basis. The six centres selected represent the six zones with rainfall varying from 80 to 120 inches and different soil conditions. It is estimated that for a period of five years, the expenditure on this trial cultivation would be about Rs. 2.3 lakhs. Large-scale planting may be taken up after watching the results of these trials which would also help in drawing up a calendar of operations suited for the islands.

Engineering and Transport

RECORD WORLD STEEL PRODUCTION

MODERATE RISE IN PRICES



STEEL production in 1956 was again at a record level, both in Europe and in the world as a whole. Compared with recent years, the rate of expansion slightly declined. The factors limiting the increase in steel production in Europe in 1956 were essentially on the supply side. Steel production was running at or near capacity levels. These are the main conclusions reached in *The European Steel Market in 1956*, a publication of the U.N. Economic Commission for Europe. Raw materials, particularly scrap and coke, were on the margin of being short throughout 1956, without however checking the growth of production, the report states. Capital scrap collected again rose faster than steel production and thus helped fill the gap. In addition, imports of scrap from the United States remained at a high level and some 600,000 tons of pig iron were imported into western Europe from Russia. Steel prices, although moderate, continued to rise in 1956. While the gap between domestic and export prices widened slightly in 1956 for some products, for the most part the gap remained fairly moderate, except in the case of plates where it was substantial.

Trade within western Europe remained more or less stable. Within the European Coal and Steel Community, the total volume of trade in finished and semi-finished steel decreased slightly during 1956, while there was a considerable rise in total U.K. imports from western Europe. Trade increased again between western and eastern Europe, particularly in exports from Czechoslovakia, Poland and Russia. Steel exports from west European countries to overseas increased, largely on account of the rise in exports to the United States caused by the need to offset the decline in production resulting from the strike. Exports to Far Eastern countries, where demand was growing rapidly, also increased, in particular to India, Japan and China. The expansion of steel production in western Europe has continued at a high rate. From 1949 until the present, the most striking feature is the fairly steady rate of growth—apart from postwar reconstruction—with surprisingly little difference between the main producing countries throughout the world. The trend is likely to continue up to 1960. On the whole, pressure on the market decreased and demand shifted in most countries towards direct or indirect export demand for steel while internal demand was maintained or increased only slowly, the notable exception to this being France where internal demand for steel increased at a very high rate, the E.C.E. review says.

Demand for Steel

The E.C.E. Secretariat also analyses the demand for steel by the motor vehicle and shipbuilding industries. Even if a somewhat pessimistic view is taken of the overseas prospects of the west European motor vehicle export industry, the domestic prospects, given the right policy, are still distinctly favourable, the E.C.E. notes. The relation between the cost of buying and running a motor-car and the average *per capita* income of workers has only in recent years reached a magnitude which is not far removed from that attained in the United States. Therefore, considerable possibilities still exist for expanding the home market. As to shipbuilding, the future demand prospects for ships can be expected to remain at a fairly high level since, because of expanding world trade, demand for additional shipping capacity will remain high for at least a number of years up to 1960-61. Even if the rates of increase were to level off it can be expected that for at least five to ten years a brisk replacement demand will be felt, the report says. As data are now available to permit a closer examination of the east European steel industry, a separate chapter is devoted in the E.C.E. review to this subject and new information on production, consumption, raw materials, trade and future plans, has been published for the first time.

Part II of the E.C.E. review presents a method of assessing the differences in countries in the potential availability of scrap. The discussion should be regarded as a contribution to methodology and not a definitive treatment of the problem. If the method of analysis developed were applied to a sufficient number of years, it would be possible to arrive at a fairly close idea of potential scrap availabilities in Europe, the report says. Since part of Europe's deficit in steel-making raw materials has to be made up of imports of scrap, the present level of which may be by no means easy to maintain in future, everything possible should be done to assess the real availability of scrap. The method evolved, once fully decided, may prove to be a useful tool in the hands of those responsible for planning the investment programmes and the raw material import programmes of the European steel industry, the E.C.E. report says.

that has been the aim of SKF from the very beginning. An all-embracing service like this demands a comprehensive range of bearing types to meet each particular need. Of these different bearing types SKF has designed:

- the self-aligning ball bearing, which can accommodate slight misalignment of shafts or bearing housings.
- the spherical roller bearing, also self-aligning, and with a higher radial carrying capacity, size for size, than any other type of bearing, as well as a high thrust carrying capacity.
- the cylindrical roller bearing, which is able to carry heavy radial loads at high speeds.
- the spherical roller thrust bearing, which is able to carry heavy thrust loads at relatively high speeds.

In addition, SKF manufactures single row, deep groove ball bearings, angular contact ball bearings — many of them incorporating improvements introduced by SKF over the original design. SKF manufactures bearings in sizes ranging from 10 mm in outside diameter to over 1400 mm; bearings which can operate at speeds of over 100,000 r.p.m. and bearings with a carrying capacity of over 2000 tons at low speeds. Now and in the future, you will find that the 8,000 types and sizes manufactured by SKF ensure the use of the right bearing in the right place.

Commodity Markets

BRITISH TEXTILE REVIEW

ADJUSTING THE PRICE OF WOOL

THE wool trade had not expected so sharp a price decline from the last end-season levels as occurred at the opening of the new season in Australia. But the further decline caused no anxiety, although many dealers had hoped, as well as believed, that values would be stabilised around the more realistic levels to which they were reduced from the peaks reached last May. By manufacturers, the adjustment has been almost unreservedly welcomed. The industry is very sensitive to the possibility of being "priced out" of some sections of its trade. The rise in raw wool values last season did no apparent harm, but in the later stages of the rise there was noticeable difficulty in pushing it through to the intermediate and finished grades. If it had persisted an undesirable rise in prices of finished goods would have been unavoidable—and there is already plenty of evidence in the United States of the adverse effect of high prices.

Even in the United States, however, the industry has lately shown some improvement in vitality, and in the U.K. and Western Germany it is very active indeed. (Those sections of the British industry catering for the American market are now, however severely affected by the raising of the U.S. tariff). The enforced restraint of the Japanese industry to conserve foreign exchange is not regarded here as a major cause for apprehension about the stability of raw prices; rather as a welcome relief from the strong Japanese buying that caused some disturbance last year. On the other hand, the acceleration of releases from the U.K. stockpile is regarded in many quarters as an error. Wool is not the only commodity that the U.K. Board of Trade has released in substantial quantities on a falling market. Equilibrium at levels that can be supported by final demand is essential to the long-term development of the industry. As the largest consumer of wool, the U K can powerfully influence its price. On the other hand the price is an important factor in consumption. It is hoped that the two can strike a balance not far from the present levels.

Recovery in Cotton

The cotton industry has been enjoying one of those buying waves which periodically relieve its gloom. Both spinners and manufacturers have added substantial orders to their books and are mostly assured of full employment for their machinery—labour permitting—until at least the early months of next year. This development, some weeks before the commencement of normal seasonal activity, promises well for the next phase. The qualification concerning labour is, however, important. In industry generally, there is now an appreciable excess of vacant jobs over unemployed workers, and the cotton industry has not helped its own recruitment campaign by persistently emphasising its troubles. However, part-time work by married women is a characteristic of the industry, and the rising cost of living is certainly no inducement to women to stay at home. Moreover, the wage increases recently negotiated are now effective and are helping to maintain the labour force. Shift systems are not yet as well organised as they should be, but the mills have been able to increase their output from last year's levels, although many spindles and looms have been taken out of use. The industry is undoubtedly using its better equipment more efficiently.

The increase in wages appears to have been responsible for the new wave of buying—which has been, unfortunately, almost confined to the home trade. The trade had been steadily reducing its stocks in the period of doubt—with the assistance of the final consumer, who had been buying steadily, with no idea that prices might fall. When wages were increased even the trade was finally convinced that prices could easily rise, and it began restocking energetically. This is a familiar pattern. The ebb and flow of orders is much more between the trade and the producers than between the public and the trade. It represents, mostly, variations of policy concerning stocks; and it is because they lack the impetus of increasing public demand that these buying waves so easily peter out. In the present case, however, it is thought that retail trade may be active enough to sustain the movement for some time.

The Shift of Fashion

It is well known that Lancashire makes textiles from many fibres other than cotton—and that "the cotton industry" is a very inexact description. As the manmade fibres develop the industry tends, of course, to use more of them. This tendency is, however, erratic, and it was decidedly reversed in the first half of this year. Against the comparable figures for last year, output of true cotton goods increased by 23 million yards to 859 yards while output of other goods decreased by 25 million yards to 353 million yards. Changes in fashion are a considerable element in such shifts of emphasis; and it appears that fashions have now changed again in favour of manmade fibres. For some seasons past, stiff finishes have been favoured for dress goods, and they have necessarily been based on cotton. Now soft-handling, easy-draping materials are preferred, and they offer wider opportunities for manmade fibres. Some traders believe that a major revival of demand for viscose rayon crepes is possible if the finishers can make, chiefly enough, crepes that can be satisfactorily washed.

The ability of Lancashire to apply its traditional machinery to either cotton or manmade fibres, as demand requires, has obvious advantages. It is possible, however, that the development of manmade fibres is now being impeded by reliance on older-type machinery. The ability to use such machinery in the earlier stages of this development was essential to its rapid progress; but machinery designed primarily for processing natural fibres imposes some limitations, with which manmade fibres have generally had to conform. Attention is now being devoted to machinery specifically for processing manmade fibres. A good deal of experimenting has already been done to devise a loom that will make the best use of the special qualities of these fibres, and new machinery for spinning staple fibres is already being made. Such developments must, however, be supported by the final customer, who must show proper appreciation of the special characteristics of the newer fibres.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) receded further by 0.4 percent to 111.1 during the week ended 31st August, 1957, compared with 111.6 for the earlier week. The index was lower by 1.8 percent when compared with the corresponding week of a month ago, but was higher by 3.6 percent compared with the corresponding week of a year ago. The monthly average for August worked out to 112.1 against 111.9 (revised) for July and 106.5 for August 1956. Prices of oranges in Madras (−40%) rice in Chiplan (−9%) and in Nellore (−5%), ragi (−5%), mung masur, groundnut oil, fish (−3% each), jowar, bajra, maize and cardamoms (−2% each) wheat, gram, ghee, gingelly oil and chillies (−1% each) recorded declines. As a result, the index for Food Articles at 110.7 showed a fall of 1.2 percent against 112.0 for the earlier week: the prices of rice in Kanpur (+8%) and in Jeypore and Balasore (+6% each), arhar in Bombay (+6%), eggs (+5%), onions and tea (+4% each), barley and betelnuts (+1% each), however, showed advances. There was an increase in the price of tobacco (+1%), which was responsible for raising its index to 91 during the week against 90 in the earlier week. The index for the Fuel, Power Light and Lubricants group stood at 114.6 compared with 114.7 for the earlier week: the price of castor oil (−2%) exhibited a fall. There were declines in the prices of manganese ore (−6%), bamboos (−5%), castorseed (−4%), tanning materials (−3%), groundnuts and raw skins (−2% each) gingellyseed and cottonseed (−1% each) while the prices of raw jute (+3%), raw silk, rapeseed and copra (+1% each) showed advances and in the result, the index for Industrial Raw Materials recorded an increase of 0.4 percent to 118.8 compared with 118.3 (revised) for the earlier week. Intermediate Products receded by 0.5 percent to 107.5 due to declines in the prices of linseed oil (−3%), zinc and lead (−2% each) and copper and tin (−1% each). The index for Finished Products moved from 108.4 to 108.6. The prices of handloom cloth, jute manufactures and general chemicals (+1% each) showed advances.

The cane mutiny

'RISE and fall, rise and fall. I'm getting the bends,' muttered the sugar-cane furiously. 'Here I am, destined for the choicest confitures in Sydney — and how do they treat me? Battened down in this hot hold, jounced and bounced around for weeks on this endless ocean. And they expect me to stay sweet. I won't stand it, I won't, I won't, I won't!' And it dissolved into a sticky pool of self-pitying tears.

Don't let your shipments turn sour on *you*. Send your silks and spice and other things nice by AIR-INDIA INTERNATIONAL. It's swift, safe and economical. A-I.I. flies *every Monday* to Sydney via Singapore and Darwin and offers easy connections to Indonesia and New Zealand.

SUGAR PRODUCTION AND DESPATCHES

The production of indigenous sugar amounted to 2,021,000 tons up to 31st August, 1957, in the current season, against 1,856,000 tons in the corresponding period of the last year. The total offtake, including quantities despatched for exports, was 1,800,000 tons. The stocks with the factories on 31st August, 1957, stood at 754,000 tons.

CLOTH STOCKS WITH TEXTILE MILLS

The Central Minister for Commerce and Industry, Mr. Morarji Desai, stated in the Rajya Sabha that the present position of stocks of cloth with textile mills is expected to improve during the forthcoming festival seasons. The total stock with the textile industry at present was estimated at about 553,000 bales, made up of 331,000 bales unsold, and 222,000 bales sold but not lifted by the trade. In terms of the current rate of production, Mr. Desai said, this would mean that the industry carried just over seven weeks' production. It was not abnormal for the industry to carry stocks of this magnitude. Mr. Desai said that some of the centres including Bombay had reported somewhat higher stocks than usual. Giving the reasons for this, he said, that for the time being, wholesale and retail dealers were apparently not buying as much cloth as usual. The general tightness of the money market had partly contributed to the slackness in the cloth trade. The Minister added: "Individual cases of textile mills requiring finance for rehabilitation of plant and machinery, etcetera, so as to bring down the cost of production and also improve the competitive selling capacity are being considered for grant of financial assistance by way of loan from the National Industrial Development Corporation".

STANDARDISED KEYBOARD FOR HINDI TYPEWRITERS

The Government of India has approved and accepted the keyboard for a Hindi typewriter and teleprinter evolved by the special committee set up for this purpose. Such a keyboard is necessary because of the multiplicity and unsatisfactory nature of the keyboards at present in use in Hindi typewriters of various makes, rendering it difficult for a typist accustomed to type on one typewriter to use another machine with a different set-up. A prominent mechanical feature of the keyboard adopted by the committee is the provision of half-movement keys that is when these are pressed the typewriter carriage makes only half its normal movement. This provision is a basic requirement not only of Hindi, but of all Indian language typewriters where *matras* and half characters have to be used, because it is only in this way that proportionate spacing of the different characters can be ensured. A special provision has been made in this keyboard to enable both the international and Devanagari form of numerals to be typed by the same machine, through the introduction of a third shift in the top row. There are other ways of doing this also, which have been discussed by the committee in detail in its report submitted to the Government. It is open to manufacturers to incorporate whichever method they prefer for enabling both forms of numerals to be typed on the same machine.

Calcutta Markets

BETTER GENERAL DEMAND AT TEA EXPORT SALE

GOOD SUPPORT FOR DUSTS

AT Sale No. 15, held on 16th and 17th September, offerings at the Export auction amounted to approximately 63.856 packages. There was better general demand, and more support was forthcoming from internal buyers. "Teas for price" met with fair support and black Fannings in this category were from 2 to 4nP dearer. Clean Common and Medium descriptions declined by 4 to 6nP, while Low Mediums with indifferent leaf and ordinary liquors were up to 10nP easier. C.T.C. Assams were in more demand this week, but at prices which were generally easier by 20nP. Non-wither Doars showed a decline of about 10nP except for the brighter sorts which were steady. Stylish B.P.'s were again a strong feature while whole leaf grades were easier by 5 to 10nP Tippy teas sold well, apart from the O Fgs which were often 30 to 40nP easier. Darjeelings received fair support, but at prices which tended to be easier.

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2 16	1 13 0 to 1 14 0
Plain B.P	1.60 to 1.62	1 9 0 to 1 9 6
Plain Fannings	1.64 to 1 68	
Medium B.P.	1.70	1 14 0 to 2 0 0
Medium Fannings	1 74	
Best Assam C.T.C. B.P.	3 10 to 3.20	3 0 0 to 3 4 0
Best Assam C.T.C Fgs	3.50 to 4 00	

At the Internal Sale, 19,511 chests of Dust were on offer There was a good demand, but prices were again generally easier. There was a useful selection of the best bright liquoring C.T.C. Assams on offer and these sold well, but medium teas of this description were weaker and at the close were as much as 15 to 20nP easier. The remainder of the offerings were sometimes 4nP easier, particularly the powdery sorts from Assam. There was keen competition for the few Darjeeling invoices with flavour.

Quotations

	1957 Rs.	1956 Rs.
Medium Doars Dust	1.50 to 1.56	1 14 0 to 1 14 6
Medium Assam Grainy Dust	1.54 to 1.58	2 1 0 to 2 2 0
Medium Assam C.T.C Dust	2 00 to 2.10	2 10 0
Best Assam C.T.C. Dust	2.20 to 2.80	3 4 0 to 3 8 0

There was an irregular demand for the 2,585 chests of Leaf on offer C.T.C. Assams were the weakest feature of the Sale and were up to 15nP easier.

LITTLE ACTIVITY IN FREIGHT MARKETS

THERE has been little of interest to report in most of the freight markets, and very little business has been reported. Trans-atlantic coal still stands at 29s. Several vessels were taken for grain from Northern Range to Bombay at $(U.S.) 12 for October loading. Local markets have been very quiet and there are no signs of expansion. Some slight improvement has been noted in the congestion in Calcutta, particularly for export vessels, but import ships are still waiting up to 17 days for berths while vessels taking full cargoes of iron ore are loading very spasmodically due to a shortage of stocks.

LINSEED QUIET

Dull conditions prevailed during the past week and the general undertone was quiet. With seed prices more or less maintained, and prices for oil declining, crushers were unable to operate profitably and the turnover was small. Upcountry traders, however, appeared to be reluctant to release stocks at lower prices. In the oil section, as usual supply exceeded demand and buyers were cautious: but stocks in hand with crushers were not considerable. Export quotations were not encouraging. Latest quotations were as follows: ready-September Rs. 22-4 a maund.

HIDES AND SKINS DULL

The market was dull. Stocks were less than in the previous week.

Bazaar Sales

(Between 3rd September and 11th September, 1957)

Cowhides: Wet salted (Ord.) 15,500 pcs on the basis of Rs. 8.50 to Rs. 10.75: Wet salted (Slaughtered) 16,400 on the basis of Rs 12 to Rs 21.

Goatskins: Wet salted (Daissee. Killed) 35,180 pcs on the basis of Rs 280 to Rs 290. Rs. 335 to Rs. 360 and Rs 370 to Rs 390: Assam-Dinajpur 8,700 pcs on the basis of Rs 315 to Rs 320; Patna-Pakur 4,500 pcs on the basis of Rs. 275.

Bazaar Stocks

(11th September, 1957)

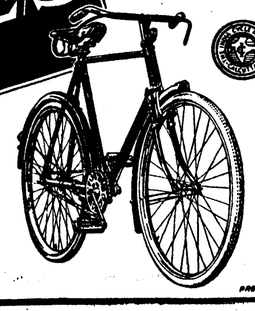
Cowhides: Wet salted 62,000 pcs.

Goatskins: Wet salted (Daissee, Killed) 50,000 pcs.: Assam-Dinajpur 37,600 pcs.; Muzafferpore-Patna - Pakur Kurneah - Kissenganj 121,000 pcs.

SHELLAC QUIET

During the week ended 17th September, the market was quiet. The range of quotations was as follows:

Pure Buttonlac	Rs 93 value; 95 buyers.
Lemon No. 1 Shellac	Rs. 98, 98.50, 97.50 buyers; 96.50 value.
Lemon No. 2 Shellac	Rs. 93 value; 92.50 buyers; 91.50 value
F.O. Std. 1 Shellac	Rs. 89, 89.50 buyers; 88 done.
Pure TN Shellac	Rs 85 buyers; 85 basis done and buyers; 85.50 done; 85 done and buyers.
4% I.T.N. Shellac	Rs. 75.50 76.50, 75 buyers.
No. 1 Kusmi Seedlac	Rs 92.50, 93.50, 91 value.
No. 2 Kusmi Seedlac	Rs 88 to 86.50 value.
Fine Bysaky Seedlac (Manbhum)	Rs 84.50 value; 84, 82.50 buyers
Fine Bysaky Seedlac (C.P.)	Rs. 80, 80.50 buyers; 80 done and buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 75, 75.50, 73 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs 70.50, 68 buyers.
Kireelac	Rs 30 buyers.



Shipments during September until the 13th were 13,541 packages comprising shellac 6,845 packages, seedlac 5,606 packages, buttonlac 339 packages and others 761 packages.

U.K. AID IN EASING CONGESTION IN INDIAN PORTS

The British Government is to supply expert advice on action needed to remedy congestion in Indian ports, at the request of the Government of India. This assistance is being provided under the Colombo Plan. Sir Eric Millbourn, Adviser on Shipping in Port to the British Ministry of Transport and Civil Aviation, will visit New Delhi about the end of September to take part in discussions on this subject. He will be accompanied by Mr. Francis H. Cave, until recently general manager of the Mersey Docks and Harbour Board in England, and by Captain Alistair Smith. Mr. Cave and Captain Smith are expected to remain in India to undertake the necessary detailed study of the means to reduce congestion.

THE BORREA COAL COMPANY LIMITED

NOTICE is hereby given to the members of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Monday, the 28th October, 1957, at 10-30 A.M., for the following purposes :

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1956, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint a Director in place of Mr. S. B. Bose, who retires by rotation and being 69 years of age is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

   AND in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required under Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended below.

   To be Proposed as an Ordinary Resolution.

   "That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. S. B. Bose and that he be and is hereby re-elected as a Director of the Company, whose period of office as such director would be liable to determination by retirement of directors by rotation".
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 14th to the 28th October, 1957, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Calcutta : 16th September, 1957.

NOTE :

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 4th November, 1957, to those Shareholders so entitled whose names appear in the Company's books on the 28th October, 1957, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

In the special notice given to the Company of the resolution under item No. 3 of the above notice it has been stated that the services of Mr. S. B. Bose have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by section 280 of the Companies Act, 1956 should not apply to him.

On Ordinary Shares 10%.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta.

Electricity is one of the modern marvels we have come to take much for granted. Electric **power** lights our streets, brightens our homes, provides us with transport, and enables us to read, write and work with less strain.

The tiny radio, the swirling fan, **and** giant factories as well—all derive their motivating power from electricity Power from Hydel and Thermal stations turn the wheels of industry faster and faster, producing more goods and creating more employment.

Life **Insurance** savings of millions of people are being channelized towards industries vital to the development of the country. The growth of these industries will in turn create a better life not only for the policy-holder but for the country at large. This is the chain reaction of progress; a chain in which the Life Insurance Corporation is proving an important link.

Life Insurance Corporation of India

ASIA/M-14

TEZPORE TEA COMPANY, LIMITED.

[illegible] Dividends Taxable.

BANKS

H indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE ECONOMIC FAILURES OF CHINESE COMMUNISM

SOME LESSONS FOR INDIA

WHEN Mr. John Foster Dulles was obliged lately to end the foolish ban on visits to China by American journalists, the State Department rather clumsily let it be known that the reason the decision was taken at this particular moment was that the Peking *régime* was in political and economic difficulties. The implication that it is not safe for Americans to hear about Communism when it is prospering, but that it becomes "good copy" as soon as it runs into trouble, is certainly insulting to American intelligence; it also irritated the Peking authorities, and they promptly declared that the U.S journalists only wanted to come to China for espionage. So a *posse* of "China experts" from the American Press are languishing in Hongkong. The State Department, with that strange logic which marks all Sino-American relations, thereupon concluded that this *proved* its original claim: the Communist *régime* is indeed in serious difficulties and cannot afford to open the door to foreign observers. But if there are yet no American journalists loose in the country, there are plenty of other foreign observers visiting China, so it is possible to be reasonably well informed about the famous crisis of Communism there.

The crisis comes down to this: China has run into roughly the same sort of trouble as India has, the inflation and disorganisation that come from trying to do too much at once. In India the strain of over-ambitious planning has shown up in a foreign exchange crisis, but since 50 percent to 60 percent of all China's foreign trade is conducted with Soviet Russia and on very special non-commercial terms, inflation caused by over-investment has not there produced the classic symptom of external pressure on the currency. But it has produced all its other ravages, and in China these have been complicated by some particular forms of bureaucratic incompetence mostly peculiar to State capitalism. Moreover, and this is where the economic trouble leads to political difficulties, the disorganisation of planning has sabotaged Mao Tse-tung's attempt at de-stalinisation, because in a totalitarian system the rulers cannot loosen the gag around the mouth just when they are tightening the belt around the belly.

As a result, the Party's political line had to be changed rather sharply twice within the past year. This produced considerable confusion, for hopes aroused by the leaders themselves were soon afterwards not simply disappointed but reproved. Intellectual plants which one month were cultivated as "the hundred flowers of dissent" were next month discovered to be the wretched weeds of capitalism. But after all, most people are now well enough used to the two masks of Communism, the benign and the stern; they have been changed with astonishing rapidity in Russia in the last decade. These brisk alternations are not a sign of weakness in a Communist *régime* but just the way it works; the cynical *volte-face* is the very emblem of a *régime* released from any popular control. So the present disorganisation of Chinese Communism will not provide very good copy for such journalists as hope to carry back to the American papers tidings of the imminent collapse of the system. It will be resolved as surely as India's current difficulties will be—though by vastly different methods. The fact stands that the change of course in Peking is of the first importance not only for Chinese Communism but for the Communist *bloc* in which Mao has come to occupy a crucial position; and hence it is of importance to all that international community from which China, by the American veto, is excluded.

* *

In 1955 the repression of the Peking *régime* was at a maximum; this was the era of the forced collectivisation programme, the struggle against the Catholics, the liquidation of "anti-Party" elements, and the "re-education" of the intellectuals. The [illegible] attained painful levels when the de-campaign in Russia suggested to [illegible] possibility of lowering it by permitting a measure of freedom unknown in the Chinese movement since the Yenan days. With considerable delay, China followed her western allies in the liberal path and even seemed for a time ready to go further in that direction than the Russians. At least Peking did not panic so quickly when the Hungarian uprising revealed what dangers political decompression contained for Communism, and well into this year Mao passed in Eastern Europe for a moderating and arbitrating force in the struggle between progressive and neo-Stalinist factions. But by this summer, decompression had begun to produce awkward results in China itself. Greater freedom brought to light a festering of discontent; the narrow limits of "free criticism" were everywhere transgressed, and open and violent attacks on the Party line became common.

Confronted with this outburst produced by the cautious effort to "thaw out" Marxism, the Party has quickly gone into reverse gear. Witch-hunts are now in progress all over the country and the admirers of the "hundred flowers" are making the strange discovery that China is full of dangerous bourgeois. Earlier this month, Li Wei-han, director of the United Labour Front, said: "The majority of Chinese industrialists and business men have not changed their political opinions and some of them have been trying to reintroduce capitalism". His audience presumably did not dare show its surprise at this absurd statement and Li went on to charge "Rightists" with lack of confidence in Communist leadership and all the other vague but dangerous crimes that it is so easy to commit when Communism is having a Stalinist phase. The current wave of reaction is so vigorous that observers (*e.g.*, in Eastern Europe) believe that Mao is a stranger to it, that in fact Mao's cautious liberalism has been eclipsed by the "tough" section of the collective leadership. Tito, for example, has lost none of his faith in Mao's personal attachment to the anti-Stalinist cause and has invited him to Yugoslavia after his autumn visit to Moscow and Warsaw, presumably with the hope of getting his moral support for the new Polish-Yugoslav anti-Stalinist front.

*

Whatever Mao's position and whatever the divisions in the Peking leadership, it will be difficult for the Chinese to continue cautiously abetting progressive forces in Eastern Europe (as they have so far backed Gomulka in Poland) as long as it is necessary to keep up the purge at home. It is from this point of view that the change of course in Peking is regrettable, for it hampers the evolution of the Communist *bloc* in general toward that freer treatment of their own peoples that will make co-existence so much easier. The present economic situation in China, which is at the root both of the unforeseen outburst of discontent and of the vehement repression of all opposition, gives no hope of alleviation within a year or so, and by then it might be too late for a new Chinese experiment in liberalism to have the good effects it could have now on the evolution of the Communist *bloc*. In other words, the economic crisis in China is not grave enough to warrant the expectations of collapse cherished in the United States, but it is quite grave enough to hold up the de-stalinisation of world Communism.

The origins of this serious but probably temporary economic disorganisation lie in the failure of Chinese agriculture to support the immense industrial investment undertaken last year. The 1955 crop having been a good one, Peking recklessly launched an investment programme that was beyond the country's possibilities, especially when the 1956 crop turned out to be a mediocre one. Investment in heavy industry was increased last year by no less than 60 percent. The rise in purchasing power that this stimulated led to pressure on prices, and since the output of food and raw materials failed to expand and since (what must never be forgotten in discussing Chinese economic problems) there occurred the usual annual increase in the population of 12 million souls, there ensued during this year a rapid price inflation, black marketing, absolute shortages of several basic foodstuffs and bottlenecks in industry. The peasantry has been herded on to collective farms (90 percent of farmers have been "collectivised") but since there are totally inadequate supplies of fertilisers, tractors and farm equipment, this collectivisation has yielded no benefit whatsoever.

Various dispositions have been made to meet this familiar type of development crisis. As in India, investment targets have been cut back and priorities drastically rearranged. A new interest has been taken in small and medium-scale industry, where greater output can be achieved without heavy new investment, and correspondingly less emphasis has been laid on the grandiose super-projects that are the pride and delusion of planners, whether Communist or not. After silently allowing birth control for some years, the Peking rulers have openly broken with Marxist orthodoxy and admitted that no amount of development can cope with the present rate of multiplication; an active campaign for birth control has been launched. Imports from outside the Communist *bloc* have been limited, so that the great expansion that was hoped for when Britain led the way in flouting American trade restrictions has not occurred. Exports to the rest of Asia have been doubled. Finally, the political pressure has been raised again, to ensure that the painful necessities of an economic crisis are accepted without murmur. These measures will probably deal with the situation, given sufficient time, but meanwhile the *régime* is gambling on the 1957 harvests.

*

From the purely economic point of view, this type of development crisis is equally serious whether it occurs at the beginning, middle or end of a five year plan. But it is politically disastrous that it should occur just when China is completing her first plan and preparing to enter the second, which is to begin at the start of 1958. After five years of ceaseless, monotonous Communist propaganda about the wonders of planning, the people find themselves faced with inflation and food shortages; in these circumstances they are liable to take plans for a bigger and better five year programme as the herald of bigger and worse inflation and shortages. It was in this context that Mao's liberal invitation to the hundred flowers of criticism to begin blossoming was discovered to be a risky anachronism. It is to be hoped that the current wave of terror and reaction is a temporary expedient to assist the *régime* past a difficult patch, and that the Chinese leaders will retain their lately avowed faith in more decent relations with their subjects. If it is correct to connect this political change so closely with the inflationary upset at the end of the first plan, then it can reasonably be expected that the trend toward a humanisation of Chinese Marxism could be resumed in the next plan. Certainly, if the country's economic difficulties show themselves to be more recalcitrant to treatment, then there is nothing in the policy of repression to make their solution any easier in the long run. At all events, this country needs to notice that "the Chinese way" includes no magic method of avoiding over-investment crises in countries with primitive agriculture, and that there is no political system that enables planners to do too much too quickly.

NEW PHASE IN U.K. MONETARY POLICY

SIGNIFICANCE OF THE BANK RATE INCREASE

IT is appropriate that the rise in Britain's Bank rate from 5 percent to 7 percent on 19th September this year should have almost coincided with the anniversary of the devaluation of sterling in 1949. On that occasion, the authorities surrendered to the pressures against the currency; this year, they have resisted the pressures with unflinching resolve. The cynics say that a particularly adverse by-election (in the constituency of Gloucester) has given Conservative leaders the courage of desperation—that they have nothing to lose in popularity, and everything to gain, from a policy that *really gets to grips with* inflation in time to show positive results before the next general election. Anyway it is certainly true that the authorities have gone far beyond the immediate objective, defence of the pound against the speculators. The Chancellor of the Exchequer, Mr. Peter Thorneycroft, has emphasised that the Government is not concerned merely to frustrate the speculators but is boldly attacking the inflation which is eroding the internal value of the currency and weakening its exchange value.

Raising Bank rate is not the only method—perhaps not the principal method—used for the purpose. The banks have been *instructed* to restrict their total advances to the private sector of the economy to the average of the last 12 months. The Capital Issues Committee is to adopt a more critical and restrictive attitude towards applications for new issues. The Government is to confine its capital spending in the public sector to the current year's level. Investment in the public sector will evidently be reduced by £300 million or £350 million from the total planned for the next two-year period; and the banks must evidently reduce their advances to the *private sector* by approximately £50 million. If prices continue to rise, these cutbacks will represent quite severe stringency. However, the sharp increase in Bank rate is not to be viewed merely as a psychological gesture, and the fact that it is obviously intended to have practical effect is of the highest importance to students of monetary technique. The implication is that the British authorities, while still relying heavily on direct controls—on bank credit, capital issues and public spending—are convinced that indirect monetary *control*, especially through the medium of interest rates, can be effective and is necessary.

* * * *

This question has been keenly debated in the City of London for some years. When Mr. R. A. Butler, then Chancellor of the Exchequer, restored the mechanism of a flexible Bank rate in 1951 many people in the City believed that orthodoxy would soon put an end to the process of creeping inflation. The Conservatives, who adopted the "new monetary policy", are still in power—and inflation is still the nation's most harassing problem. Whether it could have been ended by high interest rates, no one knows, for the policy has never been seriously tested. Mr. Butler's first move was merely a gesture: he raised Bank rate from the level of 2 percent at which it had stood since the beginning of the war to 2½ percent. The instrument has since been used more purposefully, and the rate was as high as 5½ percent from early 1956 to early 1957. But the authorities have not seemed happy with high interest rates; the additional cost of the national debt has been a serious burden, and a considerable part of that extra burden has represented payments abroad to holders of sterling balances in London. Moreover, rises in interest rates have not had much obvious effect on inflation; indeed, there is evidence that increases in the cost of credit have been reflected in the prices of finished products and so have stimulated demands for higher incomes.

The latest increase in Bank rate differs from previous increases in two important respects. In the first place, it puts Bank rate to a level unprecedented in modern times: not since 1920 has the rate been raised as high as 7 percent. Secondly, the change has occurred when the state of trade favours such monetary action: profit margins have generally been reduced so far that an increase in the cost of credit can make many operations that would have to be financed by credit unprofitable. Even before the increase in rates and the directive on lending, the banks' advances and deposits were showing a slightly deflationary trend; at 6 percent or so ordinary borrowers were not all pressing to get as much finance as possible from the banks, and at 6 percent or more they are calculating the costs very carefully. It may be that the directive on quantitative lending will prove superfluous; but it does imply an appreciable reduction of finance for domestic purposes, for the banks are required to treat with special favour *requests for medium*-term credit for the export trade. The fact remains that financing overseas trade, whether by bank advances or by other forms of credit, has become expensive, not only for Britons but equally for traders abroad who have been using the facilities of London more freely this year, in consequence of the rise in rates in other centres.

The authorities know, of course, that London's position as an international financial centre will be adversely affected by high rates; but, ultimately, it would be affected still more adversely by chronic weakness of sterling. The authorities know, too, that restricting output is not a good method of stopping inflation; and that restriction of capital spending, however it may ease the present position, must accumulate problems for the future. The new policy—rather, the new phase of the old policy—is entirely restrictive. It is, moreover, evasive, in the sense that it economises spending mainly in the capital sector of the economy, while only indirectly restricting consumption. The Government believes, perhaps, that consumption will be curtailed by diminution of employment, and it may well be right. But under-employment of labour, and restriction of schemes for modernisation and development, will also curtail production. The effect of the new measures may be deflationary, in the sense that they cause a recession of trade. A brief adjustment could be beneficial. But it must be recognised that the nation's basic predicament, how to support a rising standard of living and a huge burden of defence while remaining solvent, is still unresolved.

DETERIORATION IN THE INVESTMENT CLIMATE

THERE is little evidence so far that the Indian Government is seriously concerned about the plight of the investor or the condition of the stock market. During the past year, share prices have drifted almost steadily downwards. From 128.6 at the beginning of September 1956, the all-India index number of variable dividend industrial securities dropped to 101.3 by the middle of June; it now stands at 101.6. The capital loss to investors, individual and institutional, runs into several hundred crores of rupees. That a loss of this order should coincide with a period of expanding economic activity, increasing development outlay, deficit financing and inflation is ominous, particularly when set against the rise of 6.1 percent in the securities index for 1955-56, 12.5 percent for 1954-55, and 9.4 percent for 1953-54. Buoyed by the prospect of expanding investment opportunities and capital appreciation, investors were able to discount earlier manifestations of the lurch to the left in the Government's economic policy, such as the adoption of the socialist pattern of society as an ideal, the passing of the Companies Act, the nationalisation of the Imperial Bank and of life insurance, the revised Industrial Policy Statement and Mr. Deshmukh's Budgets.

The past year has seen a remarkable deterioration in the investment climate. The optimism of earlier years has given place to disillusionment, distrust and doubt. The share market has been reduced to a state of abject dependence on the investment operations of the Life Insurance Corporation, and finds consolation only in Mr. Krishnamachari's assurances that the resources of the proposed provident fund trust or pension fund will be similarly employed. It may be better that share values should be supported in this way than that they should collapse altogether. But a market dominated by Government-controlled funds changes its nature and becomes merely an appendage of official investment organisations. It ceases to perform the principal function of a stock exchange, that of serving as a barometer of public thinking on the investment situation and outlook. Instead, it threatens even to become a covert means of extending the public sector. Mr. Krishnamachari calls this a diversion of the benefits of private industry to public channels. To others, it seems another sort of diversion, that of private savings into State-controlled institutions, which might then take over the private investor's function of providing equity capital for industry.

* * * *

It is surprising that the Government should disclaim responsibility for the present state of the stock market. The shortage of equity capital during the past four or five years, it says, is not its fault. But in fact it is the Government's measures which have done more to sap investment confidence, and to destroy the incentive to save and invest, than anything else. Taxes on dividends, bonus issues, capital gains and income (personal and corporate); the compulsory deposit scheme for corporate profits and reserves; and, finally, the wealth and expenditure taxes have hit the private investor hard. It is small consolation to be told, at this stage, that the job has been mostly completed. The state of the stock market contradicts the Finance Minister's claim that recent measures will make people work more, save more and invest their savings productively.

A little more regard for the interests of investors would have made the Finance Minister's task of attracting foreign capital considerably easier. As matters stand at present, one of the strongest deterrents to foreign capital is the disillusionment and impoverishment of domestic investors. Such foreign capital as is induced to come to India will have to function in the same political and economic climate which has proved so damaging for Indian investors. Minor concessions in the wealth and expenditure taxes, and assurances about the transferability of profits and repatriation of capital, are unlikely to create a bright picture of the prospects. Profits must be earned and dividends distributed before the question of *remitting them abroad* can arise.

At the root of the stresses and strains that feature the economy is a dearth of savings. Inflationary pressures, the credit stringency, the stagnation of the stock market and even the balance of payments deficit can be traced to this source. A poor country has only a limited capacity to save. In such conditions, even a relatively modest development plan would have necessitated bigger incentives for voluntary saving. The importance of these incentives increases as the targets of the planners become more ambitious and the estimated development outlay swells. With an outlay of the magnitude indicated in the second five year plan, it should have taken precedence over almost every other consideration. Instead, the importance of voluntary saving seems to have been consistently neglected in favour of taxation and deficit financing. The trouble about trying to impose forced saving on the community by these means is that the springs of voluntary saving dry up in the process. The consequences of this policy are today plain. The stock market is suffering from what looks like chronic anaemia, because savings, which alone can give life to the market, are being steadily reduced by taxation and inflation.

CURRENT COIN

Nationalised Life Insurance.—In his address at a meeting of the Life Insurance Corporation held recently, Mr. G. R. Kamat, chairman, defends the nationalised undertaking against criticisms concerning its inefficiency and lower standards of service; he claims that the Corporation has now turned the corner and been firmly put on its feet. (A fuller version of the speech appears elsewhere in this issue.) Almost all new business offices are working normally, he says. After a brief initial shortfall, "new business, both as to proposals received and policies issued, has shown a progressive increase each month". The aggregate of new business during the first six months of 1957, although somewhat lower than that for the corresponding period of 1956, compares favourably with the business underwritten by private companies during the first half of 1955. In June, insurance proposals of Rs. 21.64 crores were received and offices underpassed the output of previous months. This rate of progress has been maintained during July and August. In July, the business introduced in India was as much as Rs. 24.5 crores, the business completed amounting to Rs. 19.5 crores. Figures relating to the performance during the first three weeks of August indicate that the results for that month will be similar to those for the previous one. These two months, says Mr. Kamat, are considered lean for insurance business. But the record of work "confirms that our divisional and branch offices are working efficiently". The Corporation expects that the current year will close with a high level of new business. Answering those who criticise the Corporation for inefficiency as shown by the earlier fall in business, Mr. Kamat declares that nationalisation did not mean that the Corporation was taking over a going concern. About 243 private companies had been functioning with their individual methods and procedures of work evolved to suit individual needs in a highly competitive market. In the circumstances, the mismanagement and inefficiency of even a few concerns had impaired the people's confidence in the life insurance industry as a whole, and had "placed further handicaps to the efforts of the well-managed concerns to expand their field of business." It is the main objective of the nationalised life insurance industry, Mr. Kamat asserts, to promote this confidence and "expand its business into those sectors of the population which the privately managed industry did not reach." The Corporation represents a great "structural transformation" with all the accompanying readjustments, as "in place of many units of the industry operating vertically", a single organisation has been brought into being. Its work has been divided between zones, divisions and branches on a territorial basis, so that eventually "we reach all sectors of the population throughout the country." The relative responsibilities have been defined, and the offices equipped with suitable personnel and equipment taken over from the private companies. New and uniform procedures have been evolved. As an example of the procedural improvements introduced, Mr. Kamat refers to the new insurance proposals known as "express service". These policies, for sums below a specified limit, are to be issued within a period of not more than three working days by the divisional offices if the proposal is received complete in all particulars along with the payment of first premium and the medical practitioner's report. The procedure has already been tried with considerable success by some divisional offices in the southern zone.

* * * *

Dalmia Cement.—In his address from the chair at last week's annual general meeting of Dalmia Cement (Bharat) Limited, Mr. V. H. Dalmia discusses the progress of the company. (A fuller version of Mr. Dalmia's address appears elsewhere in this issue). He points out that in spite of the power cut between April and June, 1956, production during the past year has been well maintained. Profits, however, have shown a decline, which is accounted for by the fact that expenses have risen substantially. Mr. Dalmia points out that during 1956, because of the introduction of State trading in cement on the selling side, any saving in the freight element included in the cement price which was possible, has now been totally lost. Production costs have risen because of the increase in the price of coal, railway freight, costs of stores and spares, labour charges, etcetera. The Tariff Commission has been asked to determine the present cost of production in the cement industry and it is hoped that its report will be available before the end of this year. Mr. Dalmia welcomes the fact that the Commission is not confining itself merely to examining production costs in various factories. It is also enquiring into expansion and rehabilitation programmes and into the financial resources available to implement them. This enquiry should help determine whether it is justifiable to allow an element in the cement price for bridging the gap between the internal resources available and the estimated outlay on the expansion and rehabilitation programmes of the industry. "Your company is going ahead with its expansion plan of the cement works in Dalmiapuram, which is likely to be completed by the end of March 1960, raising the annual production capacity from 250,000 tons to over 400,000 tons. The company has placed before the Tariff Commission the deficit in its internal resources for the implementation of the expansion programme and for the rehabilitation of its old 250-ton plant which was established in the year 1939 and has now nearly completed 18 years of its life."

* * * *

Annual Report of World Bank.—The report of the International Bank for Reconstruction and Development for 1956-57 says that high levels of production and trade have continued in nearly every part of the world. Industrial and mining output has increased by about 5 percent. Farm output has risen, but somewhat more slowly than in the past few years. Worldwide inflationary tendencies have persisted and have been accompanied by heavy investment demand "which pressed with increasing force on the available supply of savings." This has led to a sharp rise in interest rates almost everywhere. Economic prosperity in most member countries has been favourable for the operations of the Bank and has helped increase investments. "In fact, investment activity, which has been large throughout the postwar period, was even greater during the past year. In some industrialised countries gross fixed investment has been running at about 20 percent or more of national output, and in the majority the present level represents a substantial advance over the interwar period." Because of the need to secure adequate information on the relation of external debt to debt servicing capacity, the report says that the Bank has recently been engaged in a survey of developments in this sphere. This shows that at the end of the first postwar decade the total public external long-term debt of a group of 52 member countries and territories—which excludes Canada and the United States, but includes practically all the principal debtor countries in the Bank's membership—amounted to the equivalent of $23,000 million. In a group of 36 countries, with a total public external debt of $18,000 million, the aggregate outstanding had approximately doubled between 1945 and 1955. Commenting on this, the report says: "Taking into account also the large sums which have flowed into direct and other private investments, the decade as a whole has been one of the most active periods of international investment of recent times." Debt service payments have increased during the first postwar decade at an even faster rate than the total debt. For example, in the same group of 36 countries these payments trebled while the outstanding debt approximately doubled. Although to some extent this resulted from the resumption of payments on defaulted bonds, it mainly reflected heavy repayments of medium-term debts contracted after the war. Bank lending during the 12 months ended 30th June, 1957, continued at approximately the rate of the previous three years. The 20 loans made during the year amounted to $388 million and brought the gross total of its loans to $3,106 million, made up of 170 loans in 45 member countries and territories. Referring to the loans granted to India, the report says that the Bank made a loan of $31.5 million (later reduced to $30 million) in December 1952 to the Indian Iron and Steel Company to increase its annual production of pig iron and steel products. As further power supplies are required in the Bombay area, the Bank financed the installation of two 62,500 kilowatt units for the Trombay thermal plant in 1954. A further loan of $9.8 million to the Tata power companies will help add a third unit of the same capacity, which is expected to be in operation by 1960. The Bank loan to Air-India International was part of a joint operation whereby the Corporation also borrowed money from five U.S. commercial banks for financing the dollar costs of three long-range jet passenger airliners and ancillary equipment. Referring to some of the other activities of the Bank in India, the report says that the economic mission which was sent here from April to July 1956 submitted its report to the Government in September 1956. The mission made a comprehensive study of economic progress under the first plan and of the proposed investment under the second.

* * * *

Radio Components and Receivers.—Steady progress is being maintained in the production of radio components in India. An official review says that during the first six months of this year, 10,000 cabinets, 38,000 transformers and chokes, 37,000 dials and 444,000 carbon resistances have been produced by ancillary units and supplied to manufacturers of radio sets. Manufacturers of radio receivers also produce some of these components, in addition to hardware and metal parts for use in the assembly of radio receivers. Some components are manufactured by units in the small-scale sector. There are five firms making radio parts such as valves, potentiometers, switches, loudspeakers, condensers, valve holders, vibrators, volume controls and resistances. Four licences for expanding the existing units, and one licence for establishing a new factory, have been granted. The State-owned Bharat Electronics Ltd is already manufacturing chokes, coils and transformers. A scheme for crystal manufacture is being implemented. Another scheme to manufacture radio valves in the factory is being considered. When these and other schemes have been implemented, it is hoped that the country will be largely self-sufficient in finished radio components. The production of radio receivers has increased by more than 85 percent in 1956 as compared with the previous year. The number of radio receivers produced in 1956 was 150,596 as compared with 81,200 in 1955. The installed capacity in 1956 increased to 213,000 radio sets from 138,100 in 1955. There are 16 units manufacturing radio receivers in the country. Nine schemes, one for establishing a new factory and the remaining for substantial expansion and for the production of new articles, have been approved by the Government.

PUJA HOLIDAYS

Because of the Puja holidays, there will be no issue of CAPITAL on 3rd October, 1957. The first issue to be published after the holidays will be dated 10th October, 1957.

MUNICIPAL BORROWING

WE observe that one of the items of business before the Commissioners today is to sanction the borrowing of a sum of 22 lakhs of rupees at 4 percent for the construction of works of a permanent nature. It seems to us that the time is a little out of joint for this operation, and that the Municipality will not find their loan so eagerly taken up as they did last time. We observe that Babu Surendra Nath Banerjee, in his evidence before the Welby Committee, stated that local self-government in Calcutta had so increased the confidence of the public in the Calcutta Corporation that the Municipality could borrow their money cheaper now than formerly. Some commercial members of that Committee, who possess a knowledge of the money market very far in excess of that Babu, must have laughed in their sleeves at this gratuitous piece of information, and it now remains to be seen whether local self-government in this instance will stand the test of a stringent money market. We notice that at a meeting of the Loans Committee, held on the 14th of September, it was resolved that this loan have a currency of 21 years from the 1st of March 1898, and that the money be paid in four instalments; the first instalment of 25 percent fourteen days after the acceptance of the tenders, and the second, third and fourth instalments of 25 percent each at intervals respectively of one month from each other, subsequent to the payment of the first instalment. It will be observed that the Loans Committee do not contemplate any deposit being made with tenders, and this really means, if the proposal is carried out, that successful tenderers will have fourteen days in which to make up their minds whether they will take up the amount allotted to them or not. This seems to us a most ridiculous arrangement, because it is pretty certain that those people who tender at a somewhat high rate will not come forward to take up the loan.

DISPUTE BETWEEN EMPLOYER AND WORKERS

REACHING SETTLEMENT THROUGH A CONCILIATION OFFICER

(FROM OUR LEGAL CORRESPONDENT)

THOUGH the Industrial Disputes Act has now been operative for a decade, it is quite customary for those of us who have been brought up and nurtured on the age-old and well-tested principles of the common law of Master and Servant to be pulled up with a jerk when, faced with some simple problem concerning employment easily solvable under the law as it was 11 years ago, we are forced to realise how drastically the whole law of contract has been revolutionised by the Act and legislation subsequent to it. In fact, as one who has studied the operation of the Act since its inception and the gradual substitution under it of principles of a new system of equity for the old-established doctrines of the law, the writer is being forced to the respectful submission that a keen young welfare officer will be well advised to avoid, as he would the plague, all study of the ordinary law of Master and Servant. The knowledge of it will only confuse him, as it has time and again confused the writer. Let him study the Acts and month by month the innumerable reports of the decisions under it. He will still be confused. Most certainly and beyond a peradventure, he will. But it will not be confusion worse confounded.

True it is that he may read, mark, learn, inwardly digest and approve of a tribunal decision, and later of its reversal by the Labour Appellate Tribunal, in turn reversed by the High Court, which may suffer the same fate at the hands of the Supreme Court. That is not at all an unexampled happening. But after all, it took several hundred years to evolve the British system of equity, as now practised in the Chancery Division. Ten years is an unreasonably short time in which to expect the fruition of what we are now witnessing, namely, the creation throughout the land of new courts of equity, the members of which have to lay down completely fresh principles, often overruling or varying the common law, dealing with and deciding every conceivable form of dispute between master and workman, with one solitary object—to secure industrial peace. To say that this eminently laudable object has not, by the endeavours of the tribunals, been secured would be in the nature of a prodigious understatement. But that point is really irrelevant to the one which we wish to consider in this note. It is this, that at present, and while the new principles of equity are to a considerable extent still in process of elaboration, no employer of labour and no workman, even if advised by the most learned lawyers, can know with the least certainty what the industrial law is concerning any industrial dispute between them unless substantially the same facts have already been the subject in another case of a final decision under the Act.

Consider the following instance: One of the assets or liabilities of the British, or, at any rate, the English nature transmitted throughout the Commonwealth down the years is the gift or curse of compromise. Now, assume an employer and his workmen are on mutually friendly terms. They respect him and his rights and he respects them and theirs. It has been so for years. A misunderstanding arises, an industrial dispute. It is a matter, let us say, of more wages. There is still no ill-feeling. The employer and the men meet together with their respective advisers and talk it over. They come to an amicable settlement. This settlement is embodied in a formal written agreement, which both parties sign. It is for an agreed term. Is this written, signed agreement binding on the men? By every canon of common law, commonsense, and fair dealing between man and man, of course it is. But under the Industrial Disputes Act it would, it seems, not be binding at all, for "the only settlement between the parties which is binding is the settlement arrived at through the instrumentality of the conciliation officer", as was pronounced by the Bombay High Court in the case with which we will now deal.

"A rather important question concerning conciliation proceedings under the Industrial Disputes Act," the learned then Chief Justice (Chagla C. J.) described it, and the facts were shortly these. There was a dispute between a company and its workers concerning wages, dearness allowance, leave facilities, etcetera, and on 30th January, 1955, a meeting of the workers was called where one Mahadik was authorised by his co-workers to make representations to the company about their demands. The company wanted to negotiate with the workers, and, therefore, the Government labour officer was approached to hold a meeting at which representatives of the workers would be elected under his supervision. Accordingly a meeting was held on 17th March, 1955, at which five workmen were elected by the workers present to be their representatives. On 7th April, 1955, the company and the elected representatives of the workers wrote a letter to the conciliation officer to the effect that they had come to a negotiated agreement concerning the men's demands and that they desired to sign a memorandum of settlement before him. Accordingly on 11th April, 1955, both the parties appeared before the conciliation officer and he explained to the elected representatives of the workers in Marathi the various terms of the agreement, the agreement having been drafted in English. The whole discussion lasted about an hour. The conciliation officer then adjourned the meeting advising the elected representatives to consult the other workers and their advisers before coming to a final decision. The elected representatives then saw the conciliation officer in the afternoon and approved the draft agreement. Thereupon a memorandum of settlement was prepared and signed by the parties. The same day, 11th April, the conciliation officer recorded the settlement, the duration of which, as mentioned in the settlement itself, was to be for five years.

But on 1st June, 1955, an ominous event occurred, namely, the registration of a trade union of the men. This body promptly got to work and on 23rd June, 1955, made demands on the company which were the very demands which were the subject matter of the settlement already arrived at and the company, therefore, refused to concede the demands. The union then approached the conciliation officer and demanded that he initiate conciliation proceedings under the Industrial Disputes Act, which he refused to do on the ground that there was a subsisting settlement arrived at between the parties, and as long as that settlement continued he had no jurisdiction to initiate conciliation proceedings under the Act. The union thereupon applied to the Bombay High Court for a writ of mandamus against the conciliation officer to compel him to perform his statutory duty and to initiate conciliation proceedings as prescribed by Section 12(1) of the Act. If this application had succeeded, it would have meant, in the words of the learned Chief Justice later, that "if the law was that a private settlement of an industrial dispute could not be arrived at *which could be recorded by the conciliation officer* (italics ours) and which could be made binding, then it would be very difficult to induce parties to arrive at any such settlement because the whole.....argument revolves round this that it was open to the workers.....the next day after they had arrived at this agreement to resile from that agreement." The Court held that the conciliation officer had acted rightly in refusing to hold conciliation proceedings in view of the settlement previously arrived at *and recorded by him.* (Italics ours). The union's petition was dismissed.

* * * *

But it will be noted that this was a settlement arrived at at a formal meeting of masters and men convened by the Government labour officer and considered, modified and explained to the workers by the conciliation officer who approved and recorded it. What we are concerned with in this note, however, is the position where there is an industrial dispute, and masters and men at arm's length and, it may be, independently advised, with no suggestion of victimisation or undue pressure, come to a friendly settlement, embody it in a written agreement and sign it.

The words of Chagla, C. J., in this case are instructive. Said his lordship: "In our opinion what we have to consider is: when does an industrial dispute cease to exist from the point of view of industrial law? In this case, admittedly, there was an industrial dispute. Can it be said that the industrial dispute has ended because the parties to the dispute have come to a private agreement? The object of the Industrial Dispute Act is to bring about industrial peace and there is no industrial peace unless there is an agreement between the contending parties which is binding upon them and which they are bound to respect in law. The only settlement between the parties which is binding is the settlement arrived at through the instrumentality of the conciliation officer. That is clear from the provisions of Section 19(12). It is only that settlement upon which the law has *set its imprimatur* and to which the law has given sanctity and which the law has made binding. Industrial law takes no notice of any private settlement or agreement arrived at between the parties in the course of an industrial dispute."

A DITCHER'S DIARY

CLIMATE, culture and tradition—to name only three of the many factors that must be involved—tend to make Bengalis rather more introspective than many other Indians. They will not mind it being said that to many they sometimes appear a trifle too self-conscious, for which there must be a hundred reasons lost in sociology and psychology. The Puja is about the only time when I have seen this State relax. Not as though there are not tensions now. The strike by bank employees has contributed very little to the gaiety of the city. It is not without significance, still, that the Price Increase and Famine Resistance Committee has thought it advisable to suspend its activities "for the duration." Indian writers with more knowledge than I can claim on the subject have written that the primacy of the Durga Puja in Bengali life is something of a mystery, to be investigated only by a Frazer or a Dumezil. I am neither. All I have seen, and am seeing again, is that the Puja changes the Bengal scene almost beyond recognition. Some have not got the Puja bonus they had expected, others have not got any at all. Paying scant attention to these petty details, the sky has changed its colour and life has changed its texture. The change is ubiquitous. It is perhaps as well that there will be no issue of *Capital* next week; so many of the men concerned with its production are seized with other thoughts. Shopping, I gather, is brisk. It gladdens my heart, and not for economic reasons alone. It is not by economics alone that *Homo sapiens*, even *Homo Gangaridæ*, can live. This is an aspect of life that may have been ignored by some of our planners. Once in a while man needs a release from himself, from the passion to "build up a new India." I am with the Commissioner of Police in restraining the loudspeaker after midnight. Puja rejoicing need not depend exclusively on mechanical music. But the human spirit at this time of year should, in my opinion, be given greater freedom than the kill-joys among our writers of letters to editors seem inclined to concede.

* * * *

Even if the bank employees, or their leaders, have refused to respond to the spirit of the Puja by deferring The Unnecessary Strike, the Price Increase and Famine Resistance Committee at least has shown better sense. And, many will quote Francisco of *Hamlet*, "for this relief much thanks." Among the thanksgivers must be the Calcutta Police who have, in recent weeks, stood multiple strains with much credit to themselves. It is necessary to record this, for it has now become so fashionable to congratulate the Opposition, here and in the south, on its forbearance that the patience shown by Authority rarely gets the praise it deserves. To catch a thief is exactly as difficult as Mr. Alfred Hitchcock tells us; to handle a thousand people—men, women and children—courting arrest is no joke either. Organisers of these campaigns, who can scarcely claim that they have reduced prices very appreciably, must know the risk to law and order their actions constitute; but that, so far, there has been no serious breach of peace is almost wholly due to the tact displayed by police authorities. I was wondering how prison authorities organised dinner for a thousand uninvited guests, whose food habits are unlikely to have been uniform. Is there a method of notifying the host in advance? There were other human touches about the recent movement. The harmonium, now frowned upon by All India Radio, was an essential part of the gear of every political and fund-raising procession in the 'twenties and 'thirties. Its reappearance might have irritated the policemen, but music while you walk into gaol may well be an improvement on many of the other things men could do in those circumstances. Students of history will remember the Spartans who "followed in order to lead"; it is to be hoped, that the leaders who were left behind on the first day of the movement by their followers from the villages will be as fortunate in retaining their leadership. The led often walk faster, and not always only literally.

* * * *

It is not very surprising that Mr. Nehru, who has been likened before to Hamlet, should be exasperated with the law's delays. To injustice his attitude must be downright intolerant. Here, therefore, arises something of a dilemma, and, again, it would not be surprising either if, on second thoughts, Mr. Nehru should wish his recent remarks on the judiciary in India not to be taken literally. The basis of jurisprudence, which is that a man is innocent until he is proved guilty, accepts the possibility that some guilty parties may go unpunished but, for the avoidance of that, it would not be permissible to punish a single innocent man. To ensure this latter requires time, and a certain amount of delay is inevitable. All the remedies discussed recently at the Law Ministers' conference in New Delhi sought, in varying degrees, to question the assumption quoted above. This would be justified if it could be shown that while the principle might hold good for societies in which the innocent outnumbered the guilty it would not apply to this country. This, besides being libel on a generally honest and law-abiding people, is patently untrue. It is not to be denied, however, that the need for expeditious and inexpensive justice remains. The proposed appointment of more judges, at least for the period required to clear the backlog, is a sound proposition. The objections to administrative tribunals and other short cuts to justice are not based on high moral and democratic principles alone. Mr. Nehru recently referred to the corruption and other evils which have set in at the State and district levels of the Congress Party, from which the top is relatively free. It may be equally true of the administration, executive as well as judicial. Petty tyranny has prevailed in India rather widely at least since the Moghul days, and the checks thereto have come almost always from the top. Passage to that peak, therefore, should remain open.

* * * *

For some weeks now, I have been a little puzzled by the regular appearance on my desk of letters, addressed to me personally, with a large "D/H" scribbled on the envelope. The scribbling is done whenever correspondents happen to have used the post box number allotted to this organisation; and, as far as the postal authorities are concerned, it is perhaps besides the point for me to mention that the contents of the vast majority of these letters are of strictly official interest. The "D/H" which is inscribed on the envelopes, I have heard it suggested, is probably a manifestation of the ultimate in literacy achieved by a large proportion of our postal employees; less uncharitably, I myself feel that it presumably stands for the instruction "delivery by hand". Why the employees of an organisation should not be allowed to use its post box number, even in personal communications, is beyond my understanding. I think the postal authorities some time ago complained that they were losing revenue because too many people and too many organisations were bunching together under a single post box number—instead of each taking out a separate number for himself, herself or itself. As this complaint became more voluble, the basic idea somehow got lost that the chief merit of post box numbers is the greater convenience they afford, to the post office no less than to their owners. The result is the nonsense now in vogue. A letter arrives addressed to "Post Box 14, Calcutta"; some worthy scratches out the "Post Box 14", writes in "5 Mission Row" together with the ominous "D/H", passes the letter to the delivery peon, and off it goes—to reach the addressee one, two or even three days later. The net achievement is that the post office suffers considerable inconvenience, while wasting the time of its clerks and delivery peons. Addressees, on the other hand, get their letters late, when they are lucky enough to get them at all. As I see it, the post office has one basic function in the transmission of letters: that function is to collect fifteen naye paise (the new rate), and then to see to it that the letter gets from A to B as speedily and safely as possible. Once speed and safety have been ensured, it might have better reason to waste its time meddling with people's right to use post box numbers.

* * * *

A copy of *World Health*, dated July-August 1957, has found its way to my desk, and of its eight pages three are devoted to what is called the problems of alcohol. I have just finished reading all three, and cannot say that I am much wiser. Professor E. M. Jellinek, W.H.O. Consultant on Alcoholism, comes, after a ponderous discourse, to no firmer a conclusion than this: "In the final analysis, there is a common factor in all manifestations of the problem of alcohol and that is a certain psychological vulnerability. This is true even of occasional excessive drinking." What, I ask you, does psychological vulnerability mean? If it means, as it may, that the man who drinks has a wish to do so, well, I would not bother to protest. As for the rest, the experience of each country, pointing to a certain conclusion, is contradicted by that of another, pointing to a very different conclusion. This country has taken from Shaw's *Major Barbara* the wholly unproven notion that economic reasons—pressure from wine growers or brewers in the form of advertising—explain alcoholism. As the bulletin before me frankly admits, in Sweden, where a Government monopoly eliminates the element of profit and much money is spent in advertising the ill effects of excessive drinking, the problems of alcohol are much acuter than in most countries. Then there is a lot of nonsense about why people drink: (a) because it is the accepted custom, (b) to escape the tensions of everyday life, or (c) the superstition that a contract signed in alcohol could not be broken. I have no objection at all to these psychological and sociological enquiries, but it must be remembered that they have yet to reach a stage at which decisions on policy can be based on their answers. About one tenth of the national income in France, says M. Alfred Sauvy, is spent on alcoholic drinks. That rather more is spent on armies and air forces seems to me a matter of greater concern. India is not mentioned even once, which only suggests that the problems of alcohol, whatever they may be, do not exist in this country.

* * * *

Talking of alcohol, here is the story of a woman who was advocating temperance to a class of children. To illustrate her point she conducted an experiment in which she placed a worm in a glass of water. It was observed to wriggle about. She then put it in a glass of gin, whereupon it died. "Now children," she said, "what conclusion should we draw from this?" There was a long silence. Finally a boy put up his hand and said, "Please, ma'am, if you drink enough gin you won't get worms." I take this from "Miscellany" in the *Manchester Guardian*.

LIFE INSURANCE CORPORATION OF INDIA

BOMBAY

CHAIRMAN MR. G. R. KAMAT'S REVIEW

Speech delivered by Mr. G. R. Kamat, Chairman, at the 11th Meeting of the Corporation held on 1st September, 1957.

Four weeks ago we submitted an Interim Report to Government giving a detailed account of our activities and achievement during the first ten months. This Report has been placed before Parliament and has been published. As indicated in the report, we devoted the greater part of our efforts during these months towards bringing about a smooth transformation of the life insurance industry. Even now the change-over is by no means complete in all respects. Nevertheless, almost all our new business offices are now working normally and after a brief initial shortfall, our new business, both as to proposals received and policies issued, has shown a progressive increase each month. Aggregate new business during the first six months of 1957, though somewhat lower than that for the corresponding period of 1956, compares favourably with the business underwritten by private companies during the first half of 1955. In the month of June, our new business offices in India surpassed the output of the earlier months by receiving insurance proposals of Rs. 21.64 crores and by underwriting new business of Rs. 21.68 crores, in terms of the sum assured.

This rate of progress has been maintained during the months of July and August. In July, the business introduced in India was as much as Rs. 24.5 crores and the complete business was Rs. 19.5 crores. Although up-to-date figures for the month of August are not yet available, the performance during the first three weeks indicates that the output for the month of August should be similar to that in July.

July and August are often regarded as lean months for insurance business. This record for the months of July and August further confirms that our divisional and branch offices are working efficiently. We can now look forward with added confidence to their rising to greater heights during the forthcoming busy season and to their justifying our expectation that we shall close the year with a high level of new business.

The publication of our Interim Report has been followed by various comments. Generally speaking, these comments have shown appreciation of our achievements and of our difficulties. Nevertheless, in some places there has been a tendency to draw pointed attention to the short-fall in our new business during the first few months, and to insist that since nationalisation, the standard of policy servicing has deteriorated.

Persons who continued to criticise us in this way, have not appreciated what a revolutionary change this nationalisation has brought about in the structure of the life insurance industry. It is not as if a going concern has been taken over by Government. Before the appointed day, some 243 autonomous organisations had been functioning in the life insurance industry. Over years and decades, these organisations had evolved certain procedures and methods of work. Most of these offices were competing amongst themselves for a greater share of the insurance business within limited sectors of the population. Their procedures and methods were adapted to suit the particular needs of canvassing business in a highly competitive market but within a narrow sphere. Frequently, the mismanagement and inefficiency of even a few units of the industry, affected the confidence of the common people in life insurance and placed further handicaps to the efforts of the well-managed concerns to expand their field of operation.

Changing Pattern of Organization

It is the main objective of the nationalised life insurance industry to promote this confidence and to expand its business into those sectors of the population which the privately managed industry could not reach. Inevitably, the nationalisation of the insurance industry involved a transformation of the entire organisational structure. In place of so many units of the industry operating vertically, a single organisation was, therefore, brought into existence, dividing its work between Zones, Divisions and Branches on a territorial basis, so that eventually we reach all sectors of the population throughout the country. The relative responsibilities of each of these offices had to be carefully defined and the offices themselves had to be equipped with suitable personnel and equipment taken over from the private companies. New and uniform procedures had to be evolved for the effective discharge of the functions of these offices.

Considering the nature and magnitude of this structural transformation and of the accompanying re-adjustments, it is not surprising that at the outset there was some moderate dislocation in our business and some of the offices have taken time to reach an adequate level of efficiency.

Indeed the fact that such an organisation has been brought into existence and is now functioning effectively within a short period of time, with relatively small inconvenience to policyholders and to persons seeking life insurance protection is a tribute to the ingenuity and the resourcefulness of those who planned out this major operation.

The credit for this successful organisation of the life insurance industry is due to Mr. H. M. Patel our first Chairman (of the Life Insurance Corporation) whose untiring zeal was matched only by the loyal support that he received from all my associates.

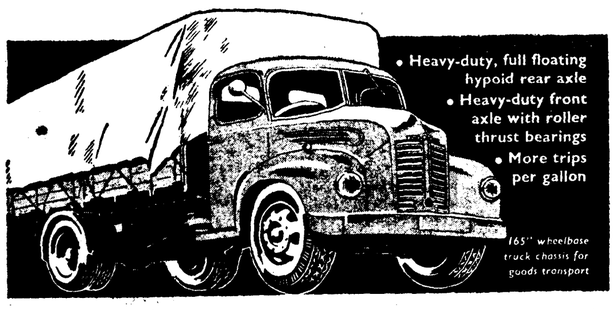
New Business Encouraging

You will have observed that so far as the level of new business is concerned the statistical figures of our growing business themselves answer any criticism of our work. Regarding the alleged inadequacies and inefficiency of our policy servicing offices, it has not been equally easy to provide a statistical measurement of their efficiency. However, certain broad facts may be stated to provide a right perspective. Our policy servicing offices continue to follow the same procedure that had been followed hitherto by the respective private companies. If any changes are made, those are merely to further simplify these existing procedures. Again, these offices are staffed with persons who have been discharging similar functions in the past, frequently in respect of the same types of insurance policies that they had been handling before. Therefore there is no *prima facie* reason why, in the matter of efficient servicing of existing policies, our personnel in those offices should not maintain the same standards that prevailed in the private companies.

If the number of complaints in respect of indifferent work that are received in the Central Office is any criterion, this number is relatively very small, as compared to the aggregate number of servicing transactions that are carried out in these offices in respect of some 50 lakhs of outstanding policies; and, of course, those who are satisfied with our service hardly care to write to us. Furthermore, the declining number of these complaints, the rare and occasional praise that we do receive for prompt service as well as the reports received from various sources lead me to believe that even in this respect there has been a gradual improvement and that the improvement continues.

That is not to say that I do not accept the need for better and greater service in regard to settlement of claims, issue of premium receipts, grant of loans and payment of agents' remuneration. On my part, I consider that much of this criticism proceeds from a very legitimate expectation that, as a public institution, our performance should be not only as good as that of the private companies, but it should be actually better than the best of those companies.

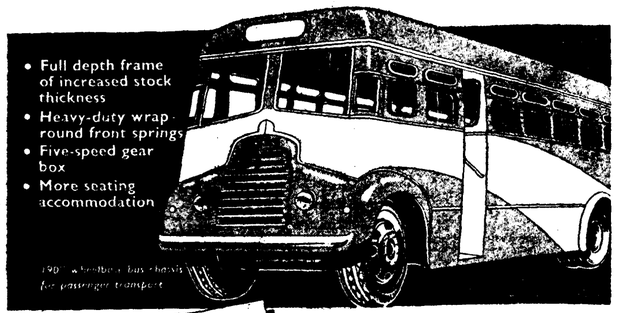
"Express Service"



As an illustration of the procedural improvements, let me refer to the recent instructions that we have sent to our Divisional Offices for the introductions in those offices of an expeditious way of dealing with new insurance proposals, known as "Express Service". This procedure has been tried with considerable success by some Divisional Offices in the Southern Zone, and all the other Divisional Offices have not been asked to adopt it without delay. This procedure applies to all proposals for life insurance below a certain amount which are received complete in all respects along with the payment of first premium and where medical examiner's report and other particulars indicate that the proposal requires no reference to any other office and can be accepted at standard rates. Such proposals would be dealt with expressly in the Divisional Offices and policies would be issued against these proposals within a period of not more than three working days. Some of the Divisions, in fact, might do better than this and issue risk note on the date of the receipt of the proposal and the policy on the next working day.

Business Expectation

The level of new business that we reach in 1957 is only a starting point for further expansion. As I have stated the main objective of the nationalisation of the life insurance industry is to bring these insurance facilities within the easy reach of large sectors of the population. It is our aim to expand our business as rapidly as possible and amongst all sectors of the population and to offer insurance facilities to all those who stand in need of the insurance protection. We have a vast field open before us and it has been estimated by some persons that, even under present conditions and without taking into account the rising incomes brought about by the progress of economic development, the life insurance business could expand to something like Rs. 8,000 crores in terms of sums assured.



Keeping this aim and vast potential in view, it is now necessary that we should prepare ourselves for the orderly expansion of insurance facilities from 1958 onwards. The experience of the last twelve months provides a useful guide as to the nature and magnitude of the problems in this process of continued expansion. We may have to plan for opening more Branches and for employing more canvassers and organisers of the right kind. We have to impart sound training to these new personnel, as well as some of our existing personnel. We have to devise various measures and provide machinery for canvassing the large untapped potential amongst industrial employees, as well as amongst sectors of population in similar towns and prosperous villages.

Amongst the many changes that have come about in the life insurance industry, there is one kind of change that I should like to mention. More particularly after nationalisation, life insurance is now become both a business as well as public service. For success in this new venture, it is essential that all of us working in the cause of life insurance demonstrate this new spirit and strive in every way to achieve this high ideal of public service.

DALMIA CEMENT (BHARAT) LIMITED

CHAIRMAN MR. V. H. DALMIA'S REVIEW

Speech of the Chairman, Mr. V. H. Dalmia, delivered at the Fifth Annual General Meeting of the Company, held on Saturday the 21st September, 1957 at the Registered office of the Company at Dalmiapuram, (Madras).

Gentlemen,

It gives me great pleasure to welcome you on the occasion of the Fifth Annual General Meeting of the Company.

It is with regret, I have to inform you that Mr. J. Dalmia, who, since the inception of the Company till lately was the Chairman of the Board of Directors of the Company, resigned from that post and also from the directorship on 16-5-1957 due to reasons of health. On 17-2-1957 while supervising trials of the new Cement Plant at Rajgangpur of M/s. Orissa Cement Limited, a sister concern of this company, he met with a serious accident resulting in a compound fracture in his leg and a sceptic wound. Plaster over the fracture was removed recently and he is now able to walk a little. His wound has not yet completely healed and it will still take him quite some time to recover completely from the effects of the accident. I am very glad to tell you that though he does not take active part in the deliberations of the Board, it has not completely lost the benefit of Mr. J. Dalmia's experience and wisdom as he has been readily giving his valuable advice even from his sick bed, for which the Board and the company are deeply indebted to him. I am able to assure you that even now company's interests are uppermost in the heart of Mr. J. Dalmia and his advice will be readily forthcoming whenever required.

The Directors' Report and the Audited Statement of Accounts of the company for the year ended 31st December, 1956 have been in your hands for some time and with your permission, I will take them as read.

In spite of recurrence of power cut from 1st April, 1956 to 30th June, 1956 production during the year under review was well maintained with the help of diesel generating sets. But, as will be seen from the comparative figure for the year 1955 given in the profit and loss account, expenses have registered substantial increase in various directions which is mainly responsible for the decline in the profits. During the year 1956 because of the introduction of State Trading in cement on the selling side whatever we were able to save in the freight element included in the cement prices has been totally lost to the Company.

State Trading

State Trading in cement was introduced in July, 1956 by the Government of India and the State Trading Corporation of India (Private) Limited formed with the objective of making good the "cement gap" by resorting to large scale imports of foreign cement and to make both indigenous and imported cements available at an equated destination price. Distribution of indigenous cement was sought to be rationalised by earmarking "marketing zones" for the various factories and to avoid cross movements with a view to reducing the burden on the Railway system. It was pointed out to Government by the Industry that it was unnecessary to resort to State Trading, as these objectives could well be realised within the framework of the then existing distributive set up of the Industry. This suggestion was, however, unacceptable and your Company, along with the other Cement Manufacturers, agreed to co-operate with Government by accepting the scheme of State Trading in cement.

The necessity of rationalising movement of cement between the various factories with a view to lightening the burden on the Railways and to reducing the incidence of railway freight by supplying cement to the various consuming centres from the nearest factories had been pointed out to the Government of India by your Company a few years back. This scheme was supported by some other producers also but it was not accepted by the Government at that time.

As a result of the crisis of foreign exchange, which the country has been facing now for some time and which was recently described by Mr. Morarji Desai, Union Minister for Commerce and Industry, as being "grim", it is obvious that the country cannot afford to bridge the "cement gap" by resorting to imports and must rely more and more on a rapid increase in the indigenous production of cement. The S.T.C. is having a large margin on the present equalised prices in force in the country, to which I shall presently refer, and which is not being utilised for subsidising costly foreign imports of cement in view of the present foreign exchange difficulties. The indigenous cement industry has a natural and reasonable claim under the circumstances over the financial resources created by the State Trading Corporation and this fund should now be utilised for the expansion, rehabilitation and development of the indigenous cement industry.

Price of Cement

With the exception of a few new producers, the Government after the last Tariff Commission inquiry in the year 1952-53, fixed with effect from 8th February, 1954 Rs. 71/- per ton as ex-destination price for naked cement, exclusive of excise duty, for rest of the producers in the country. This price of Rs. 71/- included Rs. 15/- per ton as an element of average freight between the different works and consuming centres and Rs. 3.9 per ton as rehabilitation charges. Out of the latter, after payment of Income Tax, producers are left with only Rs. 2/- per ton and that has to be deposited with a bank in a separate account. This account is jointly operated by the Government and the producer and the amount deposited has to be utilised for the purpose it is set apart. In other words, the ex-works price for naked cement for producers was Rs. 56/- per ton inclusive of rehabilitation charges and Rs. 92/- exclusive of rehabilitation charges. On supplies to the Government, the producers had to allow a further rebate of Rs. 2/- per ton.

The present price of packed cement of Rs. 117.50 per ton at a destination railhead give Rs. 56/- for unpacked cement to almost all the cement manufacturers ex-their respective works, which includes selling agents' and stockists' commission which the producers bear themselves, besides the rebate on supplies to Government. Only Mysore Cement Works and Travancore Cement Works are paid higher at Rs. 56/50 and Rs. 73/- respectively ex-their respective works. There is a difference of Rs. 61.50 per ton between the price of unpacked cement payable to most of the producers ex-works and the price of packed cement at which the consumers get it at their nearest railhead. Out of this Rs. 61.50, the producers are paid at present Rs. 13.72 per ton for packing charges and Rs 20/- towards Excise Duty. This leaves Rs. 27.78 per ton out of which the State Trading Corporation meets the expenses of its own organisation, average transport expenses from different cement works to consuming centres and subsidy for equalisation of high cost of cement of Mysore and Travancore Cement Works. The balance is their saving.

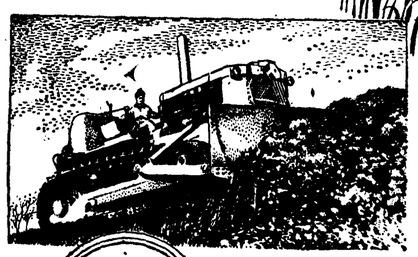
The Second Five Year Plan is an ambitious programme. There is a shortage in the country of trained personnel to manage and administer the various new Projects which are coming up in the Private and Public Sectors. Now that imports of cement are not likely to take place to any appreciable extent, it would be worthwhile for the Government to consider utilising the services of the personnel now guiding the fortune of the S.T.C. in other spheres of National Activity where their wide experience, acumen and energies could be more fruitfully and usefully drawn upon. If it is Government's intention to use State Trading in cement merely to augment their resources for the successful implementation of the Second Five Year Plan, this objective can well be achieved by further raising the excise duty on cement.

Higher Cost of Production

In view of the rise in the cost of production of cement because of the increase in the price of coal, railway freight, cost of stores and spares, labour charges, etc., the Government of India have made a reference to the Tariff Commission for the determination of the present cost of production in the cement industry and necessary recommendation for a fair price to the producer. The Tariff Commission has already taken up the matter in hand and it is hoped that it would be able to give its recommendations to the Government of India before the end of this year. I am glad that the Tariff Commission is not merely confining itself to examining of the production cost of various factories but has also extended the scope of its inquiry to expansion and/or rehabilitation programmes of the industry and the financial resources available with them to implement these plans with a view to determine whether it is justified to allow an element in the cement price, that it may recommend, for bridging the gap between the internal resources available and the estimated outlay on the expansion and rehabilitation programme of the industry. Your company is going ahead with its expansion plans of the Cement Works at Dalmiapuram which is likely to be completed by the end of March 1960 raising the annual production capacity from 2.5 lakh tons to over 4 lakh tons. The company has placed before the Tariff Commission the deficit in its internal resources for the implementation of expansion programme and for the rehabilitation of its old 250 ton plant which was established in the year 1939 and has now nearly completed 18 years of its life.

As required by the Companies Act, 1956, the Scheme for conversion of the Deferred shares into ordinary, after its approval by the shareholders in their meeting held on 10-7-57, has been placed before the High Court of Judicature at Madras for confirmation. The High Court will, in the first instance, order meetings of different classes of shareholders to be held under its directions, notice of which will be sent to the shareholders in due course and they will thus have another opportunity of considering the matter.

I am happy to be able to report that the labour-management relations of the company have continued to be cordial. We are grateful to Mr. R. Venkatraman, Minister of Industries and Labour, Government of Madras, through whose good offices an agreement covering a period of three years, 1957-1959, and relating to the two most important and basic issues like Bonus and wages which form subject matter of most of the industrial disputes anywhere, was concluded on 6th July, 1957 with our employees at the factory represented by the Dalmia Cement Workers' Union. By this Agreement existing disputes with regard to bonus for the years 1955 and 1956 were also settled.



Finally, I would again like to thank you shareholders, for the co-operation extended, and also thank the Management and the employees of the company at its Works and elsewhere with a note of appreciation for their hard work during the year and that connected with the expansion work.

The Agenda of the meeting will now be taken up seriatim for your consideration.

The above extract of the speech does not purport to be the report of the proceedings of the Fifth Annual General Meeting of the Company held on 21-9-1957.

STOCK MARKETS FALL ON BANK RATE INCREASE

PARTIAL RECOVERY IN GILT-EDGED

London, 25th September.

WIDESPREAD *and very heavy falls* were recorded on the stock markets during the past week, following the two-point increase in Bank rate and the other measures announced by the Chancellor of the Exchequer to defend sterling and fight inflation. The shock of the Bank rate news temporarily paralysed activity in the Stock Exchange, but dealers were soon marking prices down to bring them more into line with the new interest rate level dictated by the rise in Bank rate. Very heavy falls were sustained, and not till last Monday were there signs of the market attaining some sort of stability. This followed the belated response of sterling in the foreign exchange market to the news. A certain amount of selling developed in the markets after the Bank rate bombshell, but it was not very heavy and business generally was limited. The falls were primarily due to the marking down in the course of adjustment to the new conditions. Dealing quotations were widened, and at one time gilt-edged prices were quoted two points wide. It will take some *time for conditions to settle down. Meanwhile,* the stock markets remain highly nervous and very sensitive. While the Bank rate news was far and away the *main event of the week,* the renewed weakness of Wall Street was a factor which militated against the establishment of more stable conditions. Declines of over four points were recorded in gilt-edged securities at one time, but the market rallied in response to the sustained advance in sterling which developed after the week-end and prices in many instances were well above the lowest. Industrials reflected the recovery in gilt-edged and, although remaining very uncertain, the heavy losses were reduced following a small amount of cheap buying. Nevertheless, falls generally amounted to 3s to 4s and there were many larger declines. Foreign bonds were dull and dollar stocks recorded substantial losses, partly in sympathy with Wall Street and partly reflecting a sharp fall in the dollar premiums. An initial response by South African gold shares to the Bank rate news was not maintained and heavy losses were recorded on the week. Base metals also receded. Oil shares were among the main sufferers with falls extending up to over 10s in the leading issues. Rubber and tea shares generally held fairly steady with an occasional firm spot prior to the Bank rate change, but prices then reacted with the rest of the market.

The Money Market

Money remained tight in the market last week. The market was forced to borrow twice from the central bank. The main feature was the increase in Bank rate which caught the market by surprise. Nevertheless, it was fully approved by the general consensus of opinion. It now remains to be seen if the improvement which has now taken place in sterling, following the increased Bank rate and other measures taken by the Chancellor to counteract speculation in sterling, will be of a lasting character. The increase in Bank rate meant an upward adjustment in short loan and bill rates, resulting in some heavy losses on portfolios. Day-to-day loans which had ranged from 3½ percent for regular money up to 4 percent for the non-regular were adjusted to 5½ percent and 6 percent, respectively. Credit conditions since the Bank rate change turned easier, with the rate for non-regular money coming down to 5 percent. At last week's tender, the average rate for Treasury bills was raised by approximately 2 3/8 percent above that of the previous week to £6 12s 1.02d percent.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 18th September shows that the gold stock was $1 million higher at $22,628 million. Foreign deposits increased by $6 million to $361 million, while foreign investments declined by $56 million to $3,475 million. The Federal Reserve sold $100 million worth of bills and bought $1 million worth of certificates. Total discounts and advances rose by $303 million to $1,023 million, while the aggregate excess reserves of member banks increased by $381 million to $581 million. The daily average excess reserves of member banks rose by $53 million to $686 million, while their daily average borrowings fell by $81 million to $944 million. Business loans of the New York city banks rose by $105 million to $12,039 million, compared with a rise of $69 million to $10,761 million in the corresponding week of last year.

Improvement in Sterling

There are distinct signs that the higher Bank rate and other measures of the U.K. Chancellor of the Exchequer are being appreciated in world foreign exchange markets as the pound is now making headway against most currencies. After a cautious opening, sterling, it is said, is wanted in most centres, and the improvement against the U.S. dollar has been steady since the rate opened slightly against London. There is now a gain of ¼ cent at $(U.S.) 2.78¾. All other rates where changed have cheapened but there is no movement so far in the West German mark.

Vegetable Oils Featureless

There was slow and featureless trading in most sections of the vegetable oils market last week. Apart from some slight shading here and there, prices showed little change from their previous levels. Straits coconut oil softened to around £91¼ c.i.f for forward shipments and the Ceylonese oil was occasionally lowered by 10s a ton, although prices were well over buyers' ideas. Linseed oil was static. In the absence of a trading test, parcels nearing arrival from Argentina were shaded to £90 a ton c.i.f., but without result. Activity in edible oils was virtually confined to demand for near deliveries of groundnut oil for re-export to the Far East with the value assessed between £125 and £126 a ton, f.o.b., north European ports. However, supplies were not easy to find. On the other hand, forward offers were freely available and inclined to be cheaper. Castor oil remained featureless although New Year shipments were generally raised by £1 a ton on firmer origin advices. Over the week-end, Continental dealers reportedly sold East African castorseed down to £76¾ c.i.f., September-October, but shippers were reluctant to talk below £72. Groundnuts were unchanged and usually neglected.

Agreement on Developing Copper Property

North-Western Explorations Limited, a British Columbia subsidiary of Kennecott Copper Corporation, has signed an agreement with Krian Copper Ltd. on an option to develop the latter's property. Krian Copper is owned by Beaver Lodge Uranium Mines Ltd. and Far-West Tungsten Copper Mines Ltd. Mr. D. F. Farris, president of both Beaver Lodge and Far-West, has said the agreement gives the Kennecott subsidiary an option on the Krian property in the highland valley of British Columbia from 1st September, 1957, to 1st March, 1963. During the first 18 moths of this period, Kennecott has agreed to spend $160,000 on the property, the president adds. Krian property is a copper prospect.

THE CALCUTTA MONEY MARKET

BANK STRIKE BRINGS IDLE CONDITIONS

Wednesday, 25th September.

EXTREMELY quiet conditions have prevailed in the Calcutta money market during the past week, as is inevitable because of the bank strike. There seems to have been little change in the level of advances. A mild flutter greeted the news last Thursday that the U.K. Bank rate had been increased from 5 percent to 7 percent. But the general opinion now is that the move in London does not foreshadow any similar action in India.

The exchange market has been lifeless, with the bank strike preventing business. Ready sterling has shown a considerable improvement in relation to the dollar since Britain increased her Bank rate.

* * * *

Bullion was steady on pre-Puja demand. Silver advanced from the previous week's level of Rs. 181.75 to Rs. 182.50, quoted today for ready delivery. The rate for forward delivery was Rs. 182.25.

Gold was steady in sympathy with silver. The price rose to Rs. 109. The sovereign was quoted higher at Rs. 71.25.

* * * *

During the week ended 20th September, Government of India Treasury bills for Rs. 5,59,00,000 were sold in favour of the Reserve Bank.

* * * *

The decline of Rs. 6.95 crores to Rs. 1,473.36 crores in active notes was the notable feature of the return of the Reserve Bank of India for the week ended 20th September, 1957. The total note issue was Rs. 1.49 crores higher at Rs. 1,514.85 crores. Foreign securities were reduced by Rs. 9.06 crores to Rs. 336.55 crores, while rupee securities were increased by an equivalent amount to Rs. 825.93 crores. In the Banking Department, investments fell by Rs. 26.43 crores to Rs. 196.71 crores partly because of a transfer from the Issue Department. Deposits of the Government of India declined by Rs. 3.81 crores to Rs. 49.05 crores but other Government accounts rose by Rs. 5.12 crores to Rs. 11.28 crores. Balances of commercial banks, at Rs. 97.83 crores, were Rs. 6.77 crores higher. Other loans and advances rose from Rs. 63.74 crores to Rs. 73.02 crores, of which advances to scheduled banks against usance bills totalled Rs. 33 crores (Rs. 26.78 crores). Ways and means advances stood at Rs. 44.21 crores against Rs. 44.50 crores

* * * *

The statement of the position of scheduled banks for the week ended 13th September, 1957, shows Demand and Time liabilities at Rs. 717.58 crores (Rs. 18.08 crores on account of borrowings from banks) and Rs. 612.46 crores (Rs. 8.42 crores), compared with Rs. 714.55 crores (Rs. 16.89 crores) and Rs. 601.66 crores (Rs. 7.51 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 29 lakhs and Rs. 2.88 crores to Rs. 37.52 crores and Rs. 98.44 crores, respectively. There is a rise of Rs. 9.60 crores to Rs. 375.50 crores in investments. Advances and bills discounted, at Rs. 842.77 crores, show a fall of Rs. 4.29 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 10.2 percent and 63.4 percent, against 10.6 percent and 64.4 percent.

PHASED INTRODUCTION OF METRIC SYSTEM IN ENGINEERING INDUSTRY

The programme for the phased introduction of the metric system in the engineering industry was recently discussed at a meeting of the representatives of the engineering industry and the industrial establishments of the Government of India. Mr. E. W. Isaac, additional member, Railway Board, presided. As a preliminary step for the change-over, it was agreed that standards for conversion of inch and metric dimensions, screw threads above 6 millimetres, preferred numbers, etcetera, should be made available before the end of this year. Standards on certain other important subjects, such as screw heads, limits and fits, and metal containers are expected to be ready by March 1958. Closely following the formulation of these standards, railways and other departments will start inviting tenders for the supply of equipment, such as measuring instruments for the introduction of the metric system. The manufacturers hoped that the supply could be made in about a year, if such orders were placed early in 1958. With a view to co-ordinating the requirements and studying the problems of raw material supply and phased transition, it has been decided to form a small working committee consisting of the representatives of the Engineering Association of India, Indian Engineering Association, railways, ordnance factories, Communication Ministry, Development Wing (Commerce and Industry Ministry) and the All-India Manufacturers Association. This committee is expected to study the technical problems in detail and will meet at intervals of not less than two months. The general opinion of the meeting was that the industry in India had reasonable time for the change-over (ten years), during which most of the existing equipment could be used up, while simultaneously new parts and machines should be manufactured. This is not likely to cause much strain on foreign exchange since many items of equipment are capable of being manufactured indigenously.

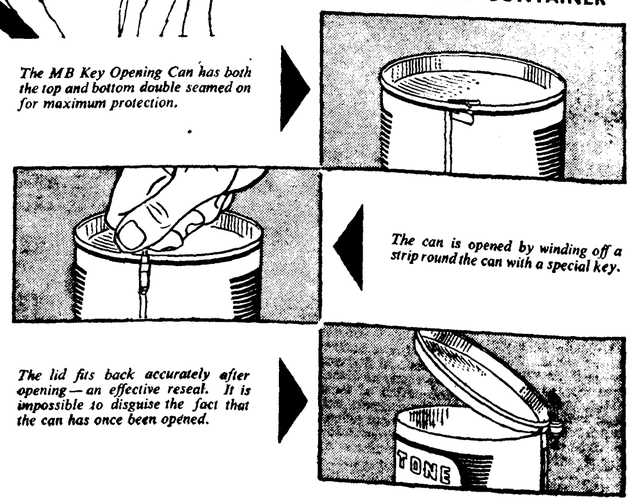
a pilfer-proof package for every product!

The manufacture of Metal Box's range of pilfer-proof containers and closures is backed by an active Research Organisation. The Central Laboratory in Calcutta assists suppliers in developing improved printing inks, surface finishes and protective lacquers, and maintains strict routine tests for all incoming raw materials to the Metal Box factories; on the spot control of operations is carried out by Branch Laboratories. This ensures pilfer-proof containers and closures of the highest quality, superbly printed and finished. Expert scientific advice from Associates throughout the world is available to assist in solving customers' packaging problems.



A METAL BOX PILFER-PROOF CONTAINER

MB KEY OPENING CAN

The MB Key Opening Can has both the top and bottom double seamed on for maximum protection.

The can is opened by winding off a strip round the can with a special key.

The lid fits back accurately after opening—an effective reseal. It is impossible to disguise the fact that the can has once been opened.

Stocks and Shares

MARKET CLOSES STEADIER BUT ACTIVITY REMAINS RESTRICTED

SHARP FALL FOLLOWING U. K. BANK RATE INCREASE MOSTLY RECOVERED

Wednesday Evening.

ACTIVITY in the stock market has been very restricted during the past week. The news of an increase in the U.K. Bank rate caused prices to fall sharply here, although towards the close operators seem to be coming round to the view that a change in the Indian Bank rate is most unlikely. Prices have therefore recovered, and the improvement has been helped by reports of purchases made by the Life Insurance Corporation. The approach of the Puja holidays has tended to restrict business and the bank strike has been another restraining factor. The market has closed on a steady note today on hopes that bank employees might return to work before the holidays start.

Coals and jutes have been neglected. Interested support has lifted certain miscellaneous shares. Teas are subdued because of the uncertain marketing outlook. Gilt-edged have eased since the news that Britain has increased her Bank rate.

Details of the week's trading follow.

* * * *

The increase in the U.K. Bank rate had little or no effect on Government securities, except in the case of 3% Conversion Loan 1986, which was marked back slightly from Rs. 71.35 to Rs. 71.10. Long-dated loans were easier in sympathy, but short-dated and medium-dated issues continued in demand and prices improved further. The 3% 1958 had buyers at Rs. 99.75 and 3% 1959-61 was better at Rs. 98.25; 2½% 1961 was quoted higher at Rs. 94 and 2¾% 1960 was asked for at Rs. 96.80. The 2¾% 1962 was steady at Rs. 94.10 and 3¼% 1961 had buyers around Rs. 99.50. In the medium-dated group, 3% 1963-65 was traded around Rs. 93.30 and 3% 1964 was unchanged at Rs. 93.65; 3¼% 1964 was marked around Rs. 97.65 and 3½% 1965 was on offer at Rs. 97.30. The 3½% 1967 had buyers around Rs. 99.45 with sellers asking Rs. 99.50. Among long-dated loans, 3% 1966-68 continued in demand at Rs. 90.12 due to the approach of the half-yearly interest date (1st October) but 3% 1970-75 was on offer at Rs. 86.28; 3¾% 1974 had sellers around Rs. 98.30 and 4% 1972 was easier at Rs. 99.97. Provincial loans tended to be easier and both the new 4¼% Bombay and Mysore loans had sellers at the issue prices. Among others, 4% U.P. 1967 and 1968 encountered selling pressure and their prices were marked down to Rs. 96.15 and Rs. 96.10, respectively.

Business in preference shares was on a much reduced scale. In jutes, Agarpara were sold at Rs. 94.50 and Clive at Rs. 53.75. Among miscellaneous issues, Basanti Cotton were done at Rs. 7.50 and British India Corporation were crossed at Rs. 105. Calcutta Electric were taken at Rs. 9.37. Kesoram Cotton were reported around Rs. 101.50, New Victoria were marked at Rs. 3.56 and a small lot of Shaw Wallace was crossed at Rs. 66.50. Titaghur Paper 2nd Preference were wanted around Rs. 81.50.

In the banking section, Punjab National were better at Rs. 57.50, while Hind Bank were unchanged at Rs. 32. United Commercial were taken at the lower rate of Rs. 56.50.

No transactions were reported in railway shares.

Only three transactions were reported in the cotton section, namely in Kesoram at Rs. 11.62, Bengal Nagpur at Rs. 5 and Bowreah at Rs. 105.

The coal section experienced one of its dullest weeks and a mere handful of shares came for business. Among these were Bengal Coal which were reported at Rs. 215, and Bharat Collieries at Rs. 5.75. Burrakur were unchanged at Rs. 21.75, while South Karanpura were active around Rs. 9.56. Talcher came to hand at Rs. 1.31 and Western Bengal at the lower rate of Rs. 5.62. East Indian were slightly better today at Rs. 21.25.

The recent enquiry for jute shares, it appeared, had fizzled out. Among the few shares which changed hands were Barnagore at Rs. 79, Birla at Rs. 13.50, Chitavalsah at Rs. 12.25 and Fort William at Rs. 16 ex-dividend. Howrah eased from Rs. 16.25 to Rs. 16 but Megna improved today from Rs. 71 ex-dividend to Rs. 74. Contrary to the general trend, National were fully steady at Rs. 18.25 and New Central at Rs. 11.69 ex-dividend. Union were reported at the lower rate of Rs. 102.

In electrics, business was reported only in two shares—Agra at Rs. 123 and Calcutta at Rs. 12.25.

Sugar shares were inactive and prices tended to soften. Carew were marked down from Rs. 6.75 to Rs. 6.25 on stray selling, but Dyer Meakin were better at Rs. 6.75. Darbhanga were easier at Rs. 20.75, as were United Provinces at Rs. 12.37. Ramnugger were freely offered at Rs. 21 without attracting buyers.

Following the news of the increase in the British Bank rate last week from 5 percent to 7 percent, Indian Irons reacted initially from Rs. 17.62 to Rs. 16.64, but subsequently recovered at the close to Rs. 17.22. Bhartia Steel were unchanged at Rs. 13, but Braithwaite eased to Rs. 27.25 and Guest, Keen, Williams to Rs. 28.12. Jessop, after being done up to Rs. 26, turned sellers at the close at Rs. 24.75. Similarly, Richardson and Cruddas, after being reported up to Rs. 10.25, closed lower at Rs. 10. Textile Machinery at one time were sold down to Rs. 14.85, but later recovered to Rs 15.50, on replacement buying. Burn were unchanged at Rs. 309, but Indian Standard Wagon were two points lower at Rs. 166.

In papers, Orient at one time fell to Rs. 21.50, but recovered at the close to Rs. 22.60. India Paper Pulp were shaded at Rs. 18.12 while Shree Gopal Paper improved from Rs. 14.12 to Rs. 14.44. Sirpur were depressed at Rs. 7.87, but Titaghur were quietly steady at Rs. 32.12.

In cements, Ashoka were easier at Rs. 8.87, as were Daimia at Rs. 9.75. Jaipur Udyog recovered from Rs. 12 to Rs. 12.19, and Sone Valley from Rs. 4.69 to Rs. 4.75. Orissa were crossed at the previous rate of Rs. 12.25.

A solitary transaction was reported in the insurance section in New Asiatic at Rs. 4.12.

The outstanding feature in the shipping section was India Steamship, which on rumours of a bonus issue in the proportion of one for ten improved smartly from Rs. 10.44 to Rs. 11. India General Navigation were unchanged at Rs. 65, but Calcutta Landing were lower at Rs. 12.62.

Among miscellaneous industrials, Alkali and Chemical Corporation were crossed at Rs. 13.75 and Aluminium Corporation were marked down sharply from Rs. 9.44 ex-dividend to Rs. 9. Angelo

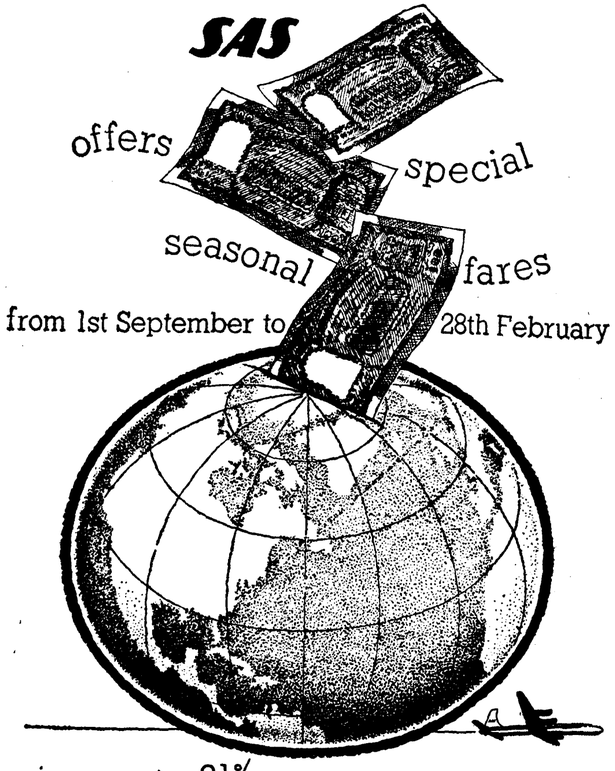
Brothers were lower at Rs. 18, but there was a good enquiry for Balmer Lawrie at the higher rate of Rs. 151.50 cum dividend. Britannia Biscuits reacted from Rs. 13.42 ex-dividend to Rs. 13.12 and British Burma Petroleum were weak at Rs. 1.95. British India Corporation were neglected at Rs. 4.80 but Dunlop Rubber met with investment enquiry and recovered to Rs. 19.50. Hindustan Motors were easier at Rs. 5.69, but the recent drop in Imperial Tobacco attracted bargain hunters with the price improving from Rs. 11.62 to Rs. 11.87. Indian Cables also recovered from Rs. 23.50 to Rs. 24.37. Jardine Henderson were steady at Rs. 72 but Martin Burn were shaded at Rs. 22.62. National Insulated Cables were steady at Rs. 23.44, as were National Carbon at Rs. 25.12. Rallis India were unchanged at Rs. 29.50 and Rohtas Industries, after recovering to Rs. 17.25, reacted to Rs. 16.87 following confirmation by the company that the labour strike is continuing.

In the mining group, Chrestien Mica Industries were lower at Rs. 12.25 and Indian Copper were quietly steady at Rs. 2.76. Orissa Minerals were unchanged at Rs. 18.25 ex-dividend.

Tea shares were neglected, Bishnauth coming to business at Rs. 18.19 and Dufflaghur at Rs. 32.75. Gohpur changed hands at Rs. 20.94, while Teloijan were marked down by Re. 1 to Rs. 22.75. Jayshree were traded at Rs. 9.31 and Hasimara had buyers at Rs. 19. Oodlabari were crossed at Rs. 14.



BALMER LAWRIE AND COMPANY has increased its profit by Rs. 3.02 lakhs to Rs. 35.14 lakhs for the year ended last December. The dividend is up from 12½ percent to 15 percent, including an interim of 5 percent. General reserve is allocated Rs. 10 lakhs, leaving a carry-forward of Rs. 5,03,375, against Rs. 5,03,129 brought in. The directors mention that there was a substantial change in the ownership of the Bengal Paper Mill Co. Ltd. during 1956, and as a result of opposition by the new shareholders the managing agency agreement, which expired in January 1957, was not renewed. At the time of the report under review, no alternative managing agent has been appointed and pending a settlement the company has conducted the affairs of the Bengal Paper Mill Co. Ltd. as appointees of the directors and without remuneration other than reimbursement of expenses. The plans for plant replacement and expansion are in abeyance for the time being. This company, in which Balmer Lawrie and Co. Ltd., holds a substantial interest, had several plant breakdowns in 1956 and profits were reduced. Current returns indicate an improvement. The Tribeni Tissues Private Ltd. had a good year and the production of cigarette and commercial tissues is in excess of the rated capacity of the machines. The export of the company's products continued and new markets were being opened, the directors mention. They add that, subject to the effect of import restrictions and raw material shortages, the future prospects of the company and others in the group are good. Though there is a small decline in the level of order bookings, demand for all products continues to be satisfactory.

* * * *

The profit of the KUMARDHUBI ENGINEERING CO. LTD. has improved from Rs. 7.04 lakhs to Rs. 16.19 lakhs for the year ended last November. The ordinary dividend has been increased from 8 annas a share to 62nP a share. Important allocations include: taxation provision Rs. 7.26 lakhs (against Rs. 2.01 lakhs), general reserve Rs. 4.888 (Rs. 25,000), plant renovation reserve Rs. 2.75 lakhs (nil), tax contingency reserve Rs. 88,000 (Rs. 67,500) and development rebate reserve Rs. 57,000 (Rs. 24,500). The carry-forward is Rs. 25,110, against Rs. 21,425 brought in. The directors say that the order book remained full although there was a certain amount of difficulty in obtaining adequate supplies of steel scrap for the foundry and steel sections for fabrication. Such difficulties are likely to continue for the next two or three years. The expansion of the structural fabrication shop was completed. This has helped increase the output of fabricated steel work. Proposals for modernising the steel foundry, including the installation of a five-ton electric furnace, are well advanced.

* * * *

The net profit of the HOOGHLY DOCKING AND ENGINEERING COMPANY has amounted to Rs. 2.68 lakhs for the year ended last December, after providing Rs. 2.30 lakhs for taxation. The previous year's profit totalled Rs. 1.12 lakhs, after transferring Rs 60,000 for taxation provision. The dividend has been maintained at 12½ percent. Development reserve is allocated Rs. 1 lakh, leaving a carry-forward of Rs. 13,963 (Rs. 2,037). The directors state that work-in-progress at the end of the year was Rs. 97,70,768, which was about Rs. 18 lakhs less than at the beginning of the year. Since the close of the year, there has been a marked falling off in ship repair work.

Bombay Market

IRREGULAR TREND IN EQUITY PRICES

BUYING BY LIFE INSURANCE CORPORATION REPORTED

Wednesday Evening.

IRREGULAR fluctuations took place in the Bombay stock market during the past week. At first, share prices were steady on the prospect of India obtaining a loan from the U.S.A. Later, rates slumped on heavy selling pressure because of the steep rise in the U.K. Bank rate. It was feared that the interest rate in India would also be increased. On second thoughts, it was realised that there was scarcely any reason for raising the Reserve Bank rate, so sentiment improved. Substantial support from the Life Insurance Corporation reduced selling pressure.

Tata Steels closed at Rs. 161 and Indian Irons were quoted at Rs. 18.24. Operators were not, however, inclined to extend their commitments in view of the coming holidays. The earlier recovery in Tata Locomotive, following denials by the directors of the company that the concern was receiving any special treatment from the Government, was not maintained. The price closed lower at Rs. 134.50. Alcock Ashdown were sold at Rs. 226.25 and Premier Construction were available at Rs. 141.75. Sellers predominated in automobile shares, and Premier Automobiles were available at Rs. 83.50. Hindustan Motors were freely offered at Rs. 5.52. Larsen and Toubro realised Rs. 14 ex-right.

Mill shares were hesitant because of the accumulation of cloth stocks. Dull trading in the piecegoods market, combined with higher costs of production, weakened sentiment. Bombay Dyeing were bought at Rs. 51.60 and Simplex were transacted at Rs. 158. Kohinoor came to hand at Rs. 256. Speculative interest lifted Century to Rs. 388 at the close and India United Ordinary were fractionally higher at Rs. 10.36.

In the miscellaneous group, steamship company shares were about steady, and India Steamship in particular improved to Rs. 11.08 on interested support. Scindia Steam recovered to Rs. 18.84. Among cement shares, Associated Cement came to hand at Rs. 152 and Digvijay Cement were done at Rs. 131.75. Routine business was done in sugar shares, and Belapur changed hands at Rs. 226. Mining shares were subdued, and Shivrajpur Syndicate were sold at Rs. 78.50. Tata Chemicals realised Rs. 16.72 and National Rayon dipped to Rs. 211.50.

Banking shares were steady, though activity was limited. United Commercial Bank made Rs. 57 and Bank of India were done at Rs. 131.50. Insurance shares were freely sold and prices were lower on balance. New India Assurance were shaded at Rs. 40.25.

There was little change in electricity shares. Ahmedabad Electric were taken at Rs. 94 and Tata Hydro came to hand at Rs. 113.50.

GROWING DEMAND FOR OIL IN INDIA

NEED TO RAISE OUTPUT WITH FOREIGN HELP

IF the proposed rate of industrial growth is maintained, India's annual requirements of crude oil will amount to more than 50 million tons by the end of the fifth five year plan in 1976. This will involve foreign exchange expenditure of the order of Rs. 500 crores a year unless self-sufficiency in oil is attained first. The estimate was given by Mr. W. B. Metre in his presidential address at the annual general meeting of the Geological, Mining and Metallurgical Society of India in Calcutta last Saturday.

In a comprehensive review of India's petroleum supply and demand prospects, Mr. Metre gave estimates of oil needs for the next 10, 15 and 20 years. The annual rate of increase in the consumption of petroleum products would rise steadily from the present 10 percent to 14 percent by 1967, after which it would remain at that level until 1976, he said. Even with these small increases the total requirements of crude would amount to 7.8 million tons in 1961, 14 million tons in 1966, 27 million tons in 1971 and 52 million tons in 1976. If there were any delays in achieving the future production targets for coal, these figures would be increased.

Estimated Expenditure on Imports

"It seems highly improbable that the country could afford to import such large volumes of oil, which would involve foreign exchange of the order of Rs. 500 crores a year," Mr. Metre continued. "Moreover, dependence on large imports of crude will adversely affect our national security. We must, therefore, find enough oil and gas in the country to meet the major part of our demand for petroleum fuels unless we are prepared to slow down the proposed rate of industrial progress." No one could say categorically whether such large quantities of oil, requiring underground reserves of 800 million tons, would be found in the country, but from experience elsewhere in the world it was likely that the task would be only partly accomplished within 20 years. "It follows that the maximum effort is called for, employing with the utmost urgency every device and agency available. My personal view is that, in order to reach the targets envisaged it will be necessary to interest at least a dozen oil companies possessing the necessary large resources and know-how," he said. Given the resources and the determination to face the challenge, self-sufficiency was a possibility since there were in India large sedimentary areas, of which only a very small part had so far been investigated by modern geological and geophysical surveys and the technique for finding oil was making great strides.

Cost of Expanding Production

The exploratory effort required to achieve self-sufficiency should be directed towards discovering an additional crude oil supply of 4.5 million tons by 1961, 11 million tons by 1966, 25 million tons by 1971 and 50 million tons by 1976. A part of the work was already in hand, but it was only a very insignificant fraction of the total effort needed. Many thousands of wells, of a depth considerably greater than the average in the U.S.A., would have to be drilled, and the total expenditure on drilling and production was estimated to be about Rs. 1,500 crores. To this sum would have to be added the cost of refining, transportation, distribution and marketing, estimated at another Rs. 1,500 crores, so that the total investment by 1976 to ensure self-sufficiency in both crude oil and refind products would be of the order of Rs. 3,000 crores, or Rs. 600 a ton of new production. "Half of this investment will be required by 1971 at the rate of Rs. 80 crores a year until 1966, rising to Rs. 170 crores a year during the fourth five year plan and to Rs. 300 crores a year during the fifth plan (1971-76)." The expenditure on drilling and production alone, the speaker pointed out, would be much less than the cost of importing the crude oil. Mr. Metre observed that in spite of the progress made by the Government's Oil and Natural Gas Commission and the exceptionally good drilling speeds achieved by the oil companies in the restricted areas allotted to them, the present rate of progress was "very inadequate" for attaining the goal in view.

"There are vast areas which await detailed geological and geophysical investigations and exploration by drilling," he declared. "The size and urgency of the task is such that it seems impracticable for the Oil and Natural Gas Commission and the public purse to undertake more than a part of it. The Government should throw open the remaining areas to those who are prepared to risk their money and explore for oil under such methods of Government control as will help and encourage investment." If Indian capital proved unwilling or unable to take a share of the responsibility, the Government should encourage foreign oil companies to carry out the work. Controls against "monopolistic exploitation or any of the other bogies we hear so much about" could easily be devised in forms acceptable to the companies, but as the latter had the knowledge, experience and funds they could not be expected to relinquish control of these resources to others much less experienced in such enterprises. Rather than do this, they would prefer to employ their resources elsewhere where such conditions did not exist. "I am confident that the oil companies fully appreciate India's point of view as stated in the minerals policy resolution of 30th April, 1956, and that with correct approach and good will on both sides, methods of reconciling the companies' point of view with that resolution can and should be found." The task of attaining self-sufficiency in oil in the face of a growing demand was a question of "all hands to the pump." If there was a way, he concluded, he was sure the Government would find it.

Progress in 1956-57

Reviewing the progress of oil exploration in West Bengal, Punjab and Assam, Mr. Metre said that ten more wells had been drilled in the Nahorkatiya-Hugrijan area of the Assam Valley during the past 12 months, but the results failed to make any material addition to the reserves (2½ million tons a year) already proved in that area. In Moran four wells had so far been completed, the first two being successful but the third and fourth proving unsuccessful. A fifth well was spudded-in in Moran in the early part of September and the programme for the next 12 months visualised intensification of the drilling effort.

In the old Digboi field, it might soon be necessary to curtail production to about 250,000 tons a year in order to prevent a more rapid decline later and to ensure maximum ultimate recovery. Refining capacity of the plant, thus enabling a reduction in the volume of oil products imported.

Further discoveries in the Assam Valley might make possible a substantial increase in the present production target of 2½ million tons a year. The possibility of this depended firstly on the degree of success which could be maintained in the Nahorkatiya-Hugrijan and Moran areas (which might increase the target before very long to about 3 million tons a year) and secondly—and more important—on the degree of effort which could be put speedily into further exploration in the other areas of Assam which still called for further geophysical reconnaissance. This would entail much additional finance, Mr. Metre said.

"...and a bonus of goodwill to the management —for installing the

'Tushar'
WATER COOLER!"

QUICK DIVIDENDS in improved staff relations — and greater efficiency! That's what investment in a TUSHAR Water Cooler brings you.

The TUSHAR provides a constant supply of cool, hygienic drinking water for your staff and clients. It's easy to operate and most economical to run. Why not get in touch with Voltas Limited, and order a TUSHAR *now?*

With the TUSHAR you get

- A continuous supply of instantly-cooled water at the touch of a button — no unhygienic refilling or storing.
- A choice of two handsome models.
- Ease of installation.
- Economical to run.

VIEWS OF MR. NEHRU ON FOREIGN EXCHANGE REQUIREMENTS

INDO-U.S. PACT ON REMITTANCE OF PROFITS AND INVESTMENTS

(FROM OUR NEW DELHI CORRESPONDENT)

VITH the departure of the Finance Minister, Mr. T. T. Krishnamachari, for the U.S.A. st week, interest centres on the progress of his ur. The principal object of the visit is to attend e annual meetings of the World Bank and the ternational Monetary Fund, of which he, as nance Minister, is a director. India's financial isis, which has put the second five year plan der a cloud, has added importance to his visit. ie "hard core" of the plan needs Rs. 700 crores additional foreign exchange, in spite of the eclaration of the chairman of the Planning Comission, Mr. Nehru, that "it does not matter if ot a rupee comes from outside. We shall fight is crisis and win it." Mr. Nehru was speaking efore a session of the All-India Congress Comittee, held in New Delhi earlier this month, when said: "Money does not necessarily produce ith or confidence. I have been saying that we realise the importance of foreign aid. By reign aid I mean not grants, but investments, hatever it may be, credits or loans. We welcome reign help, as has been customary in all countries. ut I have always laid stress on the fact that we e the people who must stand on their own feet. he moment we get into the habit of imagining iat our problems are going to be solved by foreign forts or foreign money, then it is a bad thing r us."

The Planning Commission in its report on the cond five year plan indicated a deficit of Rs. 1,100 ores on current account in foreign exchange. suggested a drawing down of the sterling alances by Rs. 200 crores, leaving a gap of Rs. 900 ores to be filled (a) by floating public issues in oreign money markets, (b) by arranging bankers' redits and export credits of goods from foreign ountries, (c) by borrowing from the World Bank nd the International Finance Corporation, (d) by ans and grants from other international institutions, and finally (f) by loans and grants from iendly foreign countries. This did not indicate ie determination to stand on one's own feet. urthermore, economic realism and prestige polics do not go together. The Government was arned of the dangers of inflation. It was warned f the impracticability of the second five year lan. While the Finance Minister is striving ard to raise funds in foreign countries, responsible ien in India are making statements which do not acilitate his task.

Protecting U.S. Investors

The U.S. Government has an investment uarantee programme to protect U.S. investors broad against (a) possible risks of expropriation n the country of investment without payment of ull compensation; and (b) possible currency estrictions in the country of investment, making difficult or impossible to remit back to the U.S.A. he profits of their investment or its sale proceeds. he guarantee to be given by the U.S. Government o any investor would only cover the amount of ollars invested in the project, plus actual earnings r profits, and would be limited to a term not exeeding 20 years from the date of insurance. In he case of expropriation without full compensaion or restriction on remittance facilities, the U.S. Government would pay the investor in full in ollars up to the extent of his insurance cover and would then pursue its claim with the Government f the country concerned.

The agreement just signed by the Government f India with the U.S. Government, provides U.S. nvestors with the guarantee that facilities for the emittance of profits of their investment or its ale proceeds will be available. It is made clear y the Government of India that its obligation rising from the agreement with the U.S. Government is to guarantee "only the exchange facilities t whatever rate of exchange subsists at the time when such remittance is sought; and would not nclude any guarantee about the rate of exchange itself." It adds: "The Government of India is at present committed, according to assurances given rom time to time, to afford (a) full remittance acilities for all investments made in India in general from other than the dollar area or hard currency area, irrespective of when the investments are made; and (b) for investments from the hard currency area, full remittance facilities for all investments made after 1950."

The Indo-U.S. agreement is in no way a departure from the policy statement made by the Prime Minister in Parliament. There were no apprehensions about the facilities relating to the repatriation of profits earned by non-Indian undertakings or their sale proceeds. Such a practice, however, is a matter of necessity for India. India herself receives large amounts of money from her citizens residing abroad. A restriction on the repatriation of foreign profits earned in this country, such as is generally demanded by the Communists, would have repercussions on the repatriation of Indian profits earned abroad. In spite of the compensation paid to non-Indian life insurance companies on the nationalisation of their Indian assets, foreigners' apprehensions about the quantum of compensation that might be paid in the event of nationalisation still persist. India's refusal to sign that part of the agreement which relates to compensation is likely to increase their apprehensions. The question of India participating in the U.S. investment guarantee scheme has been pending for over two years. Its partial acceptance is unlikely to generate any greater confidence in the mind of the U.S. investor.

Demand from Agriculture Ministry

The story goes that when Mr. M. S. Aney was a Member of the Executive Council of the Governor-General, before independence, he one day received a requisition that his office room in the Secretariat was wanted by the Ministry of Defence. The note added: "Unless the room is handed over within 48 hours, we will not be responsible for winning the war." Mr. Aney gave up the room within 48 hours. He also added: "I hope the Ministry of Defence will now be responsible for winning the war." This analogy now holds good for the Ministry of Agriculture. It has demanded a sum of Rs. 25 crores for the import of fertilisers, adding that it will not be responsible for the additional production of foodgrains unless that irreducible minimum is given to it. One view here is that, irrespective of the financial crisis and as a test case, the Finance Minister should allocate the sum of Rs. 25 crores for the import of fertilisers. The Finance Minister should, however, stipulate that no excuse for failure to raise the additional output will be acceptable.

According to the Ministry of Agriculture, the production of foodgrains has gone up from 64.9 million tons in 1955-56 to 68.6 million tons in 1956-57, showing an increase of 3.7 million tons or about 5.6 percent over the previous year. "The plan envisages an increase of 23.8 percent in five years or about 4.8 percent each year." In other words, through the efforts of the Ministry of Agriculture, the annual target of production has been exceeded.

According to figures quoted in Parliament by the Finance Minister, the production of foodgrains in 1954-55 was 2 million tons below that in 1952-54. In 1955-56 it fell further by 1.5 million tons. In 1956-57 the estimated production was 68.5 million tons, or 3.7 million tons above the previous year's level. The claim of the Agriculture Ministry that the targets of production have been exceeded should be viewed not only in comparison with 1955-56, but in comparison with 1953-54. The review of the first five year plan, issued by the Planning Commission, is not highly complimentary to the Ministry of Agriculture.

An account of the food programme says: "Complete information about the physical achievements under the 'grow more food compaign' during the whole year is not yet available as complete progress reports have not yet been received from the majority of the States. Some idea of the progress of some of the development measures can, however, be given. An area of 2 million acres was proposed to be brought under the Japanese method of paddy cultivation during 1956-57: the area actually brought under this method was 2.37 million acres, thus exceeding the target set. The Central Tractor Organisation reclaimed an area of about 94,500 acres of *kans* infested land in Uttar Pradesh, Madhya Pradesh, erstwhile Madhya Bharat and Bhopal. Besides, an area of about 5,000 acres of jungle land was reclaimed in Assam. The project for the construction of 2,650 tube wells was continued in the States of Uttar Pradesh, Bihar and Punjab, as well as the programme for the construction of an additional 700 tube wells in the States of U.P. and Punjab and 400 tube wells in north Gujerat, Bombay. In 1956-57, 268 tube wells were drilled, 680 completed with pumping sets and 1,109 tube wells energised. The use of the water made available by several minor and major irrigation schemes has been inefficient and inadequate. Under the scheme for multiplication and distribution of improved seeds, Rs. 26.1 lakhs as loans and Rs. 43 lakhs as subsidy were sanctioned to the States for setting up 485 seed farms. The progress made by the States in establishing seed farms has been far from satisfactory, the chief difficulty being the lengthy procedural arrangements for the acquisition of land. Preliminary difficulties having by now been overcome, progress should be much

Power for Progress

THE SECOND FIVE YEAR PLAN ensures continuance of the pace, set by the First Plan, for developing the tremendous hydro-eletric power potential in the country.

As representatives of leading French manufacturers, we have already been privileged to supply various mechanical and electrical machinery of power stations for various projects.

The latest orders were received from:
THE KOYNA HYDRO ELECTRIC PROJECT TO SUPPLY 4 PELTON TYPE NEYRPIC TURBINES, each rated at 87,000 BHP at 300 RpM under an effective head of 1560 feet, one house turbine of 2,250 BHP, high pressure spherical valves and other accessories.
The Andhra Valley Power Supply Co. Ltd., Bombay, for remodelling of 6 Pelton turbines, each of 17,500 BHP, for their Bhivpuri Power Station.

Neyrpic Pelton Turbine runner 105,000 BHP at 428 RpM under a net head of 2428 feet.

more rapid in the second year. The consumption of chemical fertilisers has been showing a steady increase. The consumption in terms of ammonium sulphate, which had risen from 276,000 tons in 1952 to about 500,000 tons in 1955, touched the level of about 650,000 tons during 1956. The consumption of super-phosphate has also shown an increase, being about 100,000 tons in 1956, against 78,000 tons during 1955. For a balanced use of chemical fertilisers and organic manures, three schemes were initiated during the year, aimed at increasing the farmyard manure, better utilisation of night soil compost in village panchayat areas and popularisation of green manurial practices and training in compost-making was imparted to the State officials. These schemes are of the greatest importance and the State Governments have been asked to devote the best attention to their working. Lending by co-operatives was in the neighbourhood of Rs. 65 crores in 1956-57, compared with about Rs. 50 crores in 1955-56.

Production of Cash Crops

"The development schemes for cotton, jute and sugarcane initiated during the first plan were continued in the first year of the second five year plan and a development scheme for oilseeds was drawn up. The production of cotton has gone up from 4 million bales in 1955-56 to 4.72 million bales in 1956-57, showing an increase of about 18 percent. The target fixed under the plan is 6.5 million bales or a *pro rata* increase of 500,000 bales every year. A notable feature was the introduction of Sea Island cotton, an extra long staple variety which is being acclimatised in the heavy rainfall regions of the west coast.

"In contrast to cotton, the production of jute did not show any marked improvement. The production in 1956-57 has been estimated at 4,221,000 bales compared with 4,197,000 bales in 1955-56, showing only a slight increase of about 24,000 bales. Adverse weather conditions prevailed in the predominantly jute-growing States of West Bengal, Assam and Orissa. To accelerate the pace of jute production a conference was held in January 1957 with the representatives of the jute-growing States. The conference laid emphasis on the application of fertilisers to the jute crop, distribution of improved jute seeds, use of more seed drills and wheel-hoes for improving agricultural practices and adoption of plant protection measures. The Governments of jute-growing States were assured of the supply of extra quantities of fertilisers for top dressing and they were asked to accord high priorities to distribution arrangements. This scheme could make no progress since, due to a shortage of foreign exchange, India was unable to import enough fertilisers to satisfy the demand from the States.

Under the second five year plan, the target of sugarcane production to be achieved in 1960-61 has been fixed at 7.8 million tons (*in terms of* gur). Output has gone up from 5.98 million tons (revised) in 1955-56 to about 6,750,000 tons in 1956-57, thus representing an increase of about 12.8 percent. The production of sugar in 1956-57 has been estimated at 2,021,000 tons compared with 1,862,000 tons in 1955-56; the target for the end of the second plan is 2,250,000 tons.

"The oilseeds development schemes did not figure in the first five year plan. They have now been included and the target for all the five major oilseeds during the plan period has been fixed at 7.55 million tons. The production of oilseeds has increased from 5.71 million tons in 1955-56 to a little over 6 million tons in 1956-57, showing an increase of 5.7 percent. This increase has been shared mostly by groundnut, rape and mustard. The Indian Central Oilseeds Committee has formulated an oilseeds extension scheme to step up the production of groundnut and castor, which are important foreign exchange earners."

More Coal Washeries

Plans to set up two coal washeries other than the one in Kargali in Bihar have been finalised by the Government of India. The first of these washeries will be set up in Dugda between the Bokaro-Kargali and the Jharia fields, and will supply washed coal to the Rourkela and the Bhilai steel plants. The second, which will be located near Patherdih, will supply coal largely to the works of the Indian Iron and Steel Company. The work at the construction site of the washery in Kargali is already in progress, and it is expected that the washery will go into production by January 1958. The Kargali washery will meet the major portion of coal requirements of the Rourkela and the Bhilai steel plants.

Sanction for Industrial Expansion

Details are now available of industrial schemes, both for setting up new units and for the substantial expansion of the existing ones, for which approval was given for the import of capital goods during the first six months of 1957. Iron and steel tops the list, mainly due to the availability of World Bank loans for the expansion of the two major steel plants in the private sector. Sugar comes next with 24 cases. In the period subsequent to the first half-year, the number of sugar cases approved is, however, small. Ten schemes each in engineering industries and for the heavy electrical plant were approved during January-June 1957. Schemes of some other industries were: textiles eight, electrical products four, chemicals and pharmaceuticals eight, cement six, paper five and automobile three.

The foreign exchange shortage has made it necessary for the Government to devise means other than imports to keep up the tempo of industrial development and production. Established industries, which are still dependent on imported components, have been asked to use a greater proportion of indigenous components. Preference is, therefore, shown for the import of plant and machinery required to produce marginal and component items and to complete manufacturing programmes which are already in progress. For instance, the automobile and bicycle industries have been given import licences to install new capital goods to enable them to eliminate their dependence on imported components. Steps are also being taken to ensure that, wherever possible, multiple shift working is resorted to. Expansion of units is, as a rule, licensed only in cases where the existing unit is already working more than one shift.

To encourage greater reliance on indigenous sources of plant and machinery, the Government has decided that when new production capacity is to be created with wholly or largely indigenous machinery, permission should, as a rule, not be refused. Schemes in which foreign capital comes in as a partner of Indian capital are also being encouraged. To induce Indian entrepreneurs to enter into deferred payment arrangements for the import of machinery, the interest payments involved in approved cases have been exempted from income-tax.

Cement Machinery Import from U.S.A.

Under the Indo-U.S. agreement, Rs. 3.5 crores has been earmarked for the import of cement machinery. As it takes about 18 months to manufacture cement machinery, and as the provision of Rs. 3.5 crores is lapseable after 30th June, 1958, plans are under discussion to import parts of equipment for units which remain incomplete due to some portion of the machinery not being available.

New I.A.C. General Manager

The services of a senior member of the Indian Air Force, Air Commodore P. C. Lal, have been lent to the Indian Airlines Corporation. He has been appointed its general manager. Air Commodore Lal has been associated with the selection of *Gnat* as the aircraft suitable for manufacture in India, in collaboration with Folland. He is at present head of the training centre in Bangalore. His immediate task will be the reorganisation of I.A.C. services following the introduction of *Viscounts*, the first one of which will be put into service on 10th October.

Visit of U.S. Industrialists

A team of 35 U.S. industrialists is due to arrive in New Delhi on 10th October for a four-day visit, during which they will meet Ministers and high Government officials.

Tax Exemptions and Concessions

The following note on certain aspects of Indian taxation laws may be of interest to investors and entrepreneurs. Some provisions have recently been introduced for exempting interest on foreign loans. Exemption from Indian tax is granted to interest payable by:

1. The Government or a local authority on moneys borrowed by it from sources outside India from a person not resident in India or from an institution established outside India.

2. An industrial undertaking in India on moneys borrowed under a loan agreement entered into with a financial institution approved in this behalf by the Central Government by general or special order.

3. An industrial undertaking in India on any moneys borrowed or debt incurred by it in a foreign country for the purchase outside India of capital, plant and machinery in any case where the loan or debt is approved by the Central Government having regard to its terms generally and in particular to the terms of its repayment.

Concessions are given to a foreign company seeking to establish a new industrial undertaking in India through a subsidiary if the new industrial undertaking is not formed by the splitting up or the reconstruction of business already in existence or by the transfer to a new business of building, machinery or plant used in a business which was being carried on before 1st April, 1948:

1. The profits of the subsidiary company up to 6 percent of the capital employed in the new industrial undertaking will be exempt from income tax and supertax in the hands of the subsidiary company. This concession is available for five assessment years immediately following the year in which the undertaking begins to manufacture articles. The law as it stands at present provides this concession to undertakings which begin to manufacture before 1st April, 1961.

2. Dividends paid out of the profits which are exempted in the hands of the subsidiary company as mentioned above at (i) will also be exempt from income tax and supertax in the hands of the principal company.

3. If the subsidiary company is wholly or mainly engaged in an industry for the manufacture or production of any one of the items mentioned in (iv) below, the dividends received from the subsidiary company will be exempt from the corporation tax (i.e., company's supertax). As the law stands at present, there is no restriction on the number of years for which the exemption from corporation tax is available.

4. The items mentioned in (3) above are the following: coal, including coke and other derivatives; iron and steel; motor and aviation fuel, kerosene, crude oils and synthetic oils (not being oil exploration); heavy chemicals, including fertilisers; heavy machinery used in industry, including ball and roller bearing and gear wheels and parts thereof, boilers and steam generating equipment; machinery and equipment for the generation, transmission and distribution of electric energy; non-ferrous metals, including alloys; paper, including newsprint and paper board; internal combustion engines; power-driven pumps; automobiles; tractors; cement; electric motors; locomotives; rolling stock; machine tools; agricultural implements; ferro-manganese; and dyestuffs.

For a foreign company seeking to establish a new industrial undertaking in India without floating a subsidiary company, the profits of the new industrial undertaking up to 6 percent of the capital employed in India will be exempt from income tax as well as supertax. This concession will be available for five assessment years following the year in which the undertaking begins manufacture. As the law stands at present, it will be available to undertakings which commence manufacture before 1st April, 1961.

Company Deposit Scheme

There are considerable misgivings about the effect of the new current profits deposit scheme on foreign companies. Under this scheme, a company which claims depreciation allowance and development rebate is required to deposit with the Government of India 50 percent of the amount by which the profits (before deduction of depreciation allowance and development rebate), as reduced by taxes and the dividends declared, exceed the sum of Rs. 1 lakh. In the case of a company which is not resident in India, any amounts remitted outside India with the permission of the Reserve Bank will also be deducted from the profits of the company in computing the amount of the deposit. Furthermore, if the company requires funds to be spent on approved purposes connected with its business, it can within the prescribed time apply to the Board of Referees for being exempted from the obligation to make the deposit.

Development Rebate

What is development rebate? How is it different from "depreciation"? If new machinery or plant is installed after 1st March, 1954, and is wholly used for the purpose of the business carried on by an assessee, an amount equal to 25 percent of the cost of the machinery or plant can be deducted as an allowance in computing the profits of the year of installation of the machinery or plant. This allowance is given in addition to the depreciation allowance. Depreciation allowance is calculated on the written down value of the machinery and plant and is allowed each year until its full value is written off. Thus the development rebate and the depreciation together will result in a total allowance equal to 125 percent of the value of the machinery and plant.

Application of Section 23A

It is sometimes asked whether an Indian company will be treated as one in which the public is not substantially interested and subjected to the provisions of Section 23A if all its shares are held by less than six companies, even if each one of them is a company in which the public is substantially interested. The answer is in the negative. An amendment to Section 23A recently carried out exempts from the operation of that section an Indian company of the type mentioned.

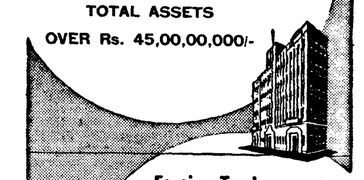
Application of Section 42

There is some doubt about the extent to which Section 42 of the Indian Income Tax Act enables the Indian revenue authorities to assess the foreign business profits of a non-resident. Section 42 does not seek to bring into the tax net the profits of non-residents which cannot reasonably be attributed to operations in India. It is only the income which accrues directly or indirectly through or from a business connection in India; the whole of the profits arising from the business is not deemed to arise in India. Only that part of the profits which can reasonably be attributed to the operations of the business carried out in India is deemed to accrue in India. Rarely has Section 42 been invoked to tax the business profits in the United States of American assessees.

It is alleged that even if there be no business connection between the foreign exporter and the Indian importer and the transaction between the two are as between one principal and another, the Indian authorities will tax the profits on the ground that sale proceeds are received in India on the delivery of documents. This is not correct. Usually the non-resident's shipping documents are discounted by banks in his country which sends them for collection to a bank in India where they are delivered to the importer against payment or acceptance by him. In such a case, no attempt is made to assess the non-resident on the ground that the sale proceeds are received in India. Even if the documents are not discounted abroad, no attempt is made to assess any portion of the profits to India if the only operation carried on in India on behalf of the non-resident is the delivery of the shipping documents against payment or acceptance.

If plant and machinery are sold to an Indian importer by a foreign concern and the purchase price is allowed to be paid for in instalments, it will not be taxed on the ground that the receipt of the purchase price in instalments constitutes a business connection. If the transaction of sale and purchase of the plant and machinery is as between principal and principal, and the exporter has no business connection in India, the mere fact that the exporter allows the importer to pay the purchase price in instalments will not render the exporter liable to Indian tax.

Unilateral Relief



What is the scheme of "unilateral relief" provided in the Indian Income Tax Act? If a person resident in India proves that for his income which accrues or arises to him in the foreign country (and which is not deemed to accrue or arise to him in India) he has paid tax in that country, he shall be entitled to a deduction from the Indian income tax payable by him of a sum calculated on the doubly taxed income at the Indian rate of tax or the rate of tax in the said country, whichever is lower. In the case of a non-resident, his income which accrues or arises outside India (and which is not deemed to accrue or arise in India) is not subject to Indian tax at all.

SIGNIFICANCE OF CHANGES IN U.K. CABINET

CIRCUMSTANCES LEADING TO BANK RATE INCREASE

(FROM OUR LONDON CORRESPONDENT)

THE Government changes announced by Mr. Macmillan last week were limited in their scope to meet the essential requirements of the situation, namely, releasing Lord Hailsham from the Ministry of Education to take over the chairmanship of the Conservative Party from Mr. Poole, who continues as deputy chairman, and replacing Mr. Vosper as Minister of Health. Mr. Geoffrey Lloyd has been recalled—he was dropped by Sir Anthony Eden in 1955 when he was the Fuel Minister and came in for severe criticism over the rise in coal prices—to give the benefit of his long experience to the Ministry of Education, and Lord Hailsham has been transferred to the Lord Presidency of the Council. Contrary to expectations, Mr. Vaughan-Morgan, Mr. Vosper's Parliamentary Secretary, does not succeed him, but has been promoted to the post of Minister of State, Board of Trade, releasing Mr. D. Walker-Smith, a former chairman of the 1922 Committee with an excellent record at the Board of Trade, particularly in connection with the Restrictive Trade Practices Act, to take over as Minister of Health. In addition, Mr. Maudling's new responsibilities as the Minister in charge of the European free trade area negotiations have been recognised by his elevation to the Cabinet, which now consists of 19 Ministers as against the previous 17. There have also been a number of switches and changes in the junior ranks, but apart from recognising promise and rewarding back-bench assiduity, they are of less significance. Mr. Vosper has been assured that a vacancy will be found for him when his health permits his return to work, so a more comprehensive reshuffle may be in prospect later on, but meantime, the Prime Minister appears to be satisfied with his team as now strengthened and reinforced, and principal interest attaches to how Lord Hailsham will tackle the necessary reshaping of Party policy to offset the increasing disappointment shown by the electorate over the Government's achievements so far.

A Shock from the Chancellor

Ever since the end of July, when Mr. Thorneycroft warned Parliament that it might be necessary to rephase some of the public investment programmes to step up the fight against inflation, the City has always expected the worst and hoped for the best. The recent speculative activity against sterling on the Continent, to say nothing of internal developments calculated to enhance the inflationary danger, have led to the speculation as to when the Chancellor of the Exchequer would abandon exhortation in favour of sterner measures to fight inflation to which all official spokesmen on the economic outlook have drawn attention repeatedly. As Mr. Gaitskell warned the American Chamber of Commerce in London the other day, an even more serious "economic indicator" which had recently appeared was an acute dollar shortage resulting from the expansion of U.S. exports and the contraction of its imports, and the situation would be worsened if U.S. production showed an actual decline. No doubt all these factors were in his mind when Mr. Thorneycroft, the day before he left for the World Bank and I.M.F. meetings in Washington, decided that the time had come for this country to take drastic action to set its own house in order as a prelude to any international action which might be decided upon to correct the situation. The first indication was the announcement at the Royal Exchange of an exceptional rise of 2 percent in Bank rate to bring it to the level of 7 percent—last known as far back as April 1920—as a necessary counter to the heavy speculative pressure against sterling (which is believed to involve bear sales amounting to something between £300 million and £400 million) and to ensure the maintenance of a firm grip on the nation's spending. Industry, trade and the man-in-the-street were all shocked, as no doubt they were intended to be, by the news, and emergency conferences were called by most business associations and other big organisations to consider reactions to the situation.

At the same time, moves to maintain the credit squeeze at its present level, and in some cases to increase it, were revealed by Mr. Thorneycroft in a statement issued after a Cabinet meeting. This is a five-pronged attack which has as its object the ending of inflation once and for all so that the pound can maintain its purchasing power in all circumstances, and proposes: (1) the Government is to hold down the total investment expenditure in the public sector to the level of this year (as against the substantial rise earlier planned for the next two years); (2) this restriction will include expenditure by Government departments, local authorities and the nationalised industries; (3) to restrict private spending, the average level of bank advances made during the next 12 months will be kept at the same average level as in the past 12 months; (4) the bankers have given the Chancellor of the Exchequer their assurance that in spite of difficulties they will intensify the restriction of credit and do their best to achieve this result; and (5) the existing exchange rate parity of the pound is to be maintained at $(U.S.)2.80 to the £, and the Government does not intend to allow the exchange margins to widen because it considers that the existing parity is right, and that the evidence of the U. K.'s balance of payments and trade figures supports this view.

Bank Advances Falling

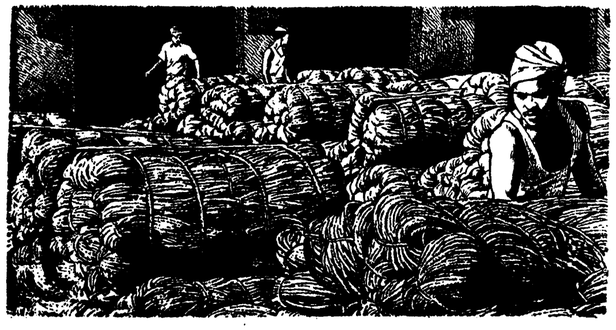
The bankers' confidence in their ability to meet Mr. Thorneycroft's request is amply justified by the latest quarterly analysis by the British Bankers' Association. Between May and August this year, advances dropped by £27.8 million to £2,054.3 million, with the consumer industries making the major contribution. The food, drink and tobacco group's advances have fallen from £170 million to £143 million, while those to the retail trade fell from £174 million to £163 million, the movements being only partly seasonal. Smaller falls are shown in borrowings by the chemicals group of about £3 million and by stockbrokers of about £2 million, while advances to public utilities (other than transport) are down from £55 million to £50 million and loans to local authorities from £91 million to £85 million. Against these falls there have been rises in textiles (wool up from £41 million to £47 million and cotton from £27 million to £29 million) and to personal and professional borrowers, the largest single group accounting for over 16 percent of the total bank advances, from £325 million to £332 million. If consumer demand falls as a result of the higher interest rates which will inevitably prevail, and the reduced capital demands can be met by the market, they should not find it too difficult to make the credit squeeze fully effective in their particular case.

Trade Balance Satisfactory

The overseas trade figures continue to be reasonably satisfactory, even though the hoped for expansion in exports is proceeding only very slowly. Both exports and imports in August, according to the Board of Trade provisional figures just released, were lower than in July. This was to be expected for the holiday month, but what is reassuring is that the trade gap, or excess of imports over exports, was also much smaller. Taking July and August together, exports were 7 percent up on the corresponding months of 1956 and imports were 7½ percent higher. Exports to North America reached a record figure of £41.3 million in August, or £2.5 million more than in July, but included the value of an aircraft carrier worth £10 million to Canada. The value of exports in August at £269.4 million was £12 million less than in July, but taking the two months together, they were 1½ percent less than the monthly average for the first half of the year. Imports amounted to £335.6 million or £24 million less than in July, but the July-August average was only slightly below the first half-year's average. Re-exports in August were worth £10.5 million. The excess of imports (valued c.i.f.) over exports (valued f.o.b.) was £55.7 million in August, or £13 million less than in July. The average for the two months, at £62.2 million, was £5 million more than the monthly rate in the first half-year and £8 million more than in the corresponding months of 1956. Exports to North America during the first eight months of 1957 were up 11½ percent on the corresponding period of 1956—11 percent more to the United States and 12½ percent more to Canada.

Mawchi Mines Agreement

Negotiations have at last been concluded for participation by the Burmese Government with Mawchi Mines in a joint venture company, to which Mawchi will sell all its undertakings and assets for about £1 million, which is to be satisfied by the allotment and issue of 133,334 shares of kyats 100 (approximately £7 10s) each. The new company will assume all trading liabilities except the outstanding 6 percent Convertible Notes, with interest, and British income-tax. The Government will then buy from the company 66,667 of the J.V.C. shares for £500,000 of which £450,000 will be paid in sterling and the balance in kyats. To provide working capital, the kyats will be applied in subscribing for 6,666 shares of kyats 100 each on or before 31st October. At the same time, the Government will subscribe for an equal amount. The £450,000 will be paid by 30th November. Of this, it is proposed to retain and set aside sufficient to redeem the Notes, with interest, of which there are now outstanding £215,000. On being taken over by the J.V.C., Mawchi's mining rights will be extended by not fewer than 20 years, although the Burmese Government will have the right at the end of 15 years to acquire Mawchi's half interest by buying its entire holding at par, paying in sterling at the rate of 1s 6d a kyat. If no further shares are issued, the amount to be received will be about £550,000. The Government will not be able to buy only a part of Mawchi's holding. Mawchi will act as sole agents and advisers to the J.V.C. Arrangements have also been made to help Mawchi finance operations until the formation of the new company. Cash resources from the Note issue of £450,000 in March 1956 had been exhausted by the end of May. The Government has now agreed to advance £37,500, which should be sufficient if the new company is formed by 1st October. If everything goes according to plan, the Notes will be redeemed on 31st March, 1958.



Brevities

At 106 on 13th August the retail price index, which measures the cost of living, showed a drop of one point compared with 16th July (17th January, 1956=100).

The basic materials index fell again in August by 0.25 percent, and is now lower than it was a year ago and 4.6 percent below the highest level reached at the end of 1956 as the result of the Suez crisis.

PC-438

How banking serves the COIR INDUSTRY

INDIA is the world's chief producer of coir and coir products, her yearly output being around 130,000 tons. More than half this output is exported, earning about ten crores of rupees in foreign exchange. The coir industry, which is exclusively South Indian, is concentrated in Malabar and Travancore-Cochin, and employs over six lakhs of workers.

Banking has greatly helped in the rapid growth of this industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the coir industry.

We at Palai are proud that so many leading coir goods manufacturers of South India employ the complete banking service we offer.

Current Accounts — Demand Drafts — Telegraphic Transfers — Investments — Letters of Credit — Bill Collection — Deposits — Loans and Overdrafts —, Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

ESTD. 1902

PALAI CENTRAL BANK LTD.

Head Office: PALAI, KERALA STATE

Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. Also at: Delhi and New Delhi.

STEADY PROGRESS OF T.E.L.C.O.

LOCOMOTIVE PRICES REDUCED

(FROM OUR BOMBAY CORRESPONDENT)

THE T.E.L.C.O. headquarters here have categorically denied the charges levelled against the company during a recent parliamentary debate in New Delhi. Sir Homi Mody, Mr. S. Moolgaokar and Mr. J. D. Choksi have recently addressed a Press conference and elaborated the company's case in detail. It has been said that the accounts of the automobile and locomotive divisions of the company are maintained separately and those of the latter are under the constant supervision of an accounts officer of the Ministry of Railways who is permanently posted at the plant. There is therefore no question of the automobile division flourishing at the expense of the locomotive division. As for the charge of inefficiency and mismanagement, it has been stated that nothing could be farther from the truth. There were some delays in the initial stages when the industry first came into being. It has been pointed out that the manufacture of a locomotive involves more than 20,000 operations for 33,000 separate parts. There are 3,000 manufacturing part drawings and 2,900 jigs, tools and other production devices. Moreover, the production facilities available at the Singhbhum workshops, which T.E.L.C.O. purchased for the purpose of manufacturing locomotives, were totally inadequate. This was recognised by the Railway Board in its memorandum of 18th October, 1954, to the Public Accounts Committee. The other factors contributing to the delay in beginning manufacturing operations were a shortage of materials and considerable delays in the delivery of plant and equipment. Since then, it seems, the company has made steady progress. Some 255 locomotives, 359 additional boilers, 1,857 underframes, 950 road rollers and 12,919 diesel trucks have been delivered, while 85 percent of a locomotive is now indigenously produced. This would seem to be a spectacular achievement within a brief span of six years considering the difficulties involved in establishing a major industry of this nature.

The efficient working of the company is shown by the fact that prices have been falling. The price during the period 1st July, 1954, to 31st March, 1955, was Rs. 6.90 lakhs and the latest quotation is Rs. 4.42 lakhs. This price compares favourably with U.K. locomotives, which are quoted at Rs. 4.87 lakhs with a 12 to 18-month delivery period. It must be remembered that the decline in T.E.L.C.O. prices has occurred at a time when world prices of capital goods of all categories are steadily rising. Moreover, the prices paid to the company throughout the development period were actually the landed duty paid prices of British locomotives. The balance of the cost of production was paid to T.E.L.C.O. only after the development period was completed. This means that the company has carried the burden of development itself. It is believed that T.E.L.C.O.'s output will increase to 100 locomotives a year by the beginning of next year, which will result in further economies and reduced costs. It would appear that the higher prices paid for T.E.L.C.O. locomotives do not represent a loss for the exchequer because in the long run the railways will be buying locomotives at a cheaper price than the British manufactured product. Over a period of time, the extra payments made in the initial stages will be more than recovered. The company has pointed out: "It has been asked why T.E.L.C.O. prices should compare unfavourably with those of locomotives available from Western Germany, Japan and the eastern European countries in the Russian zone. The answer to this broadly is that the prices of these foreign locomotives were subsidised and, therefore, unrealistic."

Comparison with Chittaranjan Works

As for the charge that Chittaranjan prices are lower, the company has referred to the report submitted by the Tariff Commission to the Government of India. The Commission said: "Briefly, Chittaranjan has been able to make liberal and continued use of imported 'balance components' to augment its production, whereas T.E.L.C.O. was bound by the condition that at least 75 percent of its planned indigenous production must first be established at its works by the time 'the first lot' of its locomotives was completed; secondly, Chittaranjan was able to conclude the necessary arrangement for technical aid far more speedily than T.E.L.C.O.; thirdly, Chittaranjan could start with a nucleus of experienced locomotive workers from the railway workshops, whereas T.E.L.C.O.'s men had little or no previous experience in locomotive manufacture; fourthly, Chittaranjan had a prior call on most of the dependable capacity available in the country for the supply of castings, while T.E.L.C.O. had to utilise inferior sources of supply and many of T.E.L.C.O.'s production difficulties were due to the bad quality of indigenous castings; fifthly, T.E.L.C.O. is located in an expensive labour area, whereas Chittaranjan is more favourably placed in this respect; sixthly, Chittaranjan was able to devote three years to developing its piece-work system, whereas T.E.L.C.O. had to introduce the system prematurely, and the liberal operation timings resulting from this fact have had adverse effects on its output and costs; and, lastly, Chittaranjan has had the advantage of being able to concentrate on only one type of locomotive, whereas T.E.L.C.O. has had to divide its energies between two types of locomotives and nine types of spare boilers."

The company directors have said: "In the debate in the Lok Sabha, one of the charges levelled against the company was that the whole plan of T.E.L.C.O. was to squeeze the entire depreciation into a brief period of seven to eight years by which time the Government would have paid 80 to 85 percent of the original cost of the plant and machinery, thus making a gift of the entire plant and machinery to T.E.L.C.O. by 1960-61 for about 10 to 15 percent of its original value." But, in fact, it has been stated for T.E.L.C.O., that the total depreciation recoverable by the company through the prices of locomotives and boilers until the end of the contract in 1961 will not exceed 60 percent, inclusive of development rebate, of the cost of its locomotive division assets. Further, the depreciation to be written off in subsequent years will be at a diminished rate which will further reduce the cost of locomotives. This benefit will accrue to the Government as the main buyer of locomotives. Under the agreement with the Government of India, the net return on the equity capital invested in the locomotive division of the company will average only 1.3 percent over the 16-year period of the agreement.

Uttar Pradesh

INCREASING FOOD OUTPUT IN U.P.

PRICES OF AGRICULTURAL PRODUCTS AND OTHER CONSUMER GOODS

(FROM OUR LUCKNOW CORRESPONDENT)

THE State Government has assured the Asoka Mehta Committee that Uttar Pradesh can achieve the targets for foodgrain production set by the Planning Commission. The Committee has been told by traders that the upward trend in prices really began with the Government purchasing wheat at Rs. 10 a maund in 1955 when the market price was Rs 9-8. The Government, on the other hand, has argued that only the establishment of a price parity as between various agricultural goods as well as between agricultural goods and other consumer goods can solve the food problem. The prices of sugarcane and oilseeds are much more attractive than those of foodgrains, so more and more land tends to be diverted to the cultivation of cash crops. But cane growers have been demanding still higher prices for cane because, in their view, the mills are making big profits with the current sugar prices. If cane prices cannot be raised further without affecting foodgrain production, then, it is argued, something must be done to support the prices of foodgrains and make their cultivation profitable. As far as the State Government is concerned, it stands for parity of prices not only in agricultural products, but also in consumer goods and other articles essential to the rural economy.

Representatives of the trade have told the Mehta Committee that many wagons of edible oils are sent from Agra to Assam and from there smuggled into East Pakistan. Prices of oilseeds naturally go up and the *kisan* gets a temporary incentive for cultivating oilseeds, without regard to its effect on food production or even the possible demand for oilseeds in later years. From one region of U.P. alone, as many as 40 wagons a day are being sent to Assam, although the latter is not a deficit State. There is a ban on the export of wheat from U.P. but none on rice or pulses.

Rationalisation of Textile Mills

A resolution expressing satisfaction with the decision of the Indian Labour Conference on a model agreement on rationalisation was adopted at a conference of the Suti Mill Mazdoor Sabha. The Sabha is the organisation of textile workers which sponsored the 80-day strike in Kanpur in 1955. The conference reiterated that in a country with abundant manpower, the allotment of more machines a man and reduction of the aggregate volume of labour and its wage bill must be "stigmatised as psuedo-rationalisation." It demanded that the Government of India should re-examine the rationalisation issue in Kanpur as the U.P. Government "has not only consistently refused to consider the viewpoint of the Sabha but has unleashed mass repression during the general strike to impose its anti-labour policy." The conference considered the report of the Bind Basni Prasad Committee on rationalisation and expressed its regret that "due to the intransigence of employers and the partisan attitude of the U.P. Government, no agreement could be arrived at on major questions relating to rationalisation." It extended its full support to the note of dissent of the Sabha representative on the Committee to the effect that, in the prevailing situation, the recommendations of the Committee about employment, work-load, wages and supervisory machinery were unacceptable.

It may be recalled that the tripartite conference which met in Ranikhet last June decided to defer a decision on rationalisation in Kanpur pending an announcement on the subject by the Union Government. But it is significant that at the Ranikhet conference the representatives of workmen welcomed rationalisation on two conditions. They said, first, that the unanimous recommendations of the Bind Basni Prasad Committee should be implemented, and second, that wages in Kanpur should be brought on par with those in Bombay. The uncompromising opposition to the scheme is a later development. The employers' representatives at the Ranikhet conference took the view that it was not possible to increase wages or dearness allowance as the additional payments would be beyond the paying capacity of the mills. They said that for some years past textile mills had been making very poor profits. As it was, out of 29 mills in the State, 16 had closed down. Taken collectively, the rationalisation proposals of the Bind Basni Prasad Committee, covering seven mills in Kanpur, estimated a surplus of 7,993 operatives. Weavers, piecers and others, who constituted 46.5 percent of the total complement of operatives, accounted for 72.1 percent of the surplus. The mills later thought it advisable to restrict their proposals for the time being to these categories only, subject to the condition that they would not be barred from the introduction of rationalisation through modernisation, mechanisation and elimination of processes in other categories too.

Economy Drive

The Chief Minister, Dr. Sampurnanand, it is understood, has informed the Executive Committee of the U.P. Congress Committee that the economy drive in the various departments will yield a saving of Rs. 1.27 crores in the next budget. The P. C. C. Executive, at its meeting in Lucknow, decided to set up a small body of five M.P.s of the State to push forward U.P.'s case for Central assistance. A resolution was passed requesting the Centre to sanction immediately the Rihand Dam project and the Yamuna and Ramganga hydel schemes. While arrangements have been completed for setting up the generating plant in Rihand, talks are in progress between the State and the Union Governments for the various stages of work for which foreign exchange is required. The Chief Minister, on his return to Lucknow from Delhi after attending the National Development Council meeting, announced that he was able to secure the special sanction of the Centre for spending Rs. 2.5 crores to alleviate scarcity in the eastern districts of the State. Dr. Sampurnanand pleaded for special funds to the extent of Rs. 3 crores outside the plan for providing employment to the people of these districts. Since the plan does not contain any schemes for meeting emergency situations, the Chief Minister urged the need for special funds.

Tax on Large Land Holdings

The U.P. Legislative Assembly has adjourned *sine die* after passing the Large Land Holdings Tax Bill, which replaces the existing agricultural income tax and imposes a tax on all agricultural land whether there is any income from it or not. Moving the Bill, the Revenue Minister said that it was a more effective way of reducing disparities and redistributing land than the one suggested by the Planning Commission, namely, acquisition by the State of all farms in excess of 50 acres. Once the tax comes into force, big landowners will have to sell their surplus land. The select committee on the Bill, however, effected certain downward revisions in the rate of the tax. The rates recommended by the original Bill were as follows: on the first Rs. 1,800 of annual valuation, nil; on the next Rs. 3,200, 5nP in the rupee; on the next Rs. 5,000 12½nP; on the next Rs. 5,000, 20nP; on the next Rs. 10,000, 30nP; on the next Rs. 10,000, 45nP; and on the balance of annual valuation, 60nP. The rates suggested by the Select Committee are as follows: on the first Rs. 1,800, nil; on the next Rs. 3,200, 5nP; on the next Rs. 5,000, 10nP; on the next Rs. 10,000, 20nP; on the next Rs. 10.000, 30nP; on the next Rs. 10,000, 40nP; and on the balance of annual valuation, 50nP.

Socialist critics of the measure think that it is not sufficiently socialistic. They feel that U.P. should have followed the Kerala example where the Communist Government has introduced a tax on agricultural wealth, a supertax on companies with agricultural incomes of over Rs. 25,000 and a surcharge for education on agricultural income and other taxes. The statement of objects and reasons of the U.P. Bill states: "More efficient exploitation of agricultural land is essential for increasing the food production of the State. Those big holders who do not fulfil their duties towards society will have to sell up, as they should, if they fail in making increased contribution to the Exchequer in the form of holding tax under this legislation. With these objects in view, the Agricultural Income Tax Act of 1948 is being repealed and this Bill is being introduced".

PROBLEMS OF USING JET AIRCRAFT

DETAILED STUDIES BY I.A.T.A. AND I.C.A.O.

(FROM OUR NEW DELHI CORRESPONDENT)

THE proposed use of *Boeings* and other jet aircraft will be creating new problems, which are being examined by two international organisations, the I.A.T.A. and the I.C.A.O. The I.A.T.A. consists of airlines, and the I.C.A.O. consists of the Governments of the countries owning the airlines. The reports of both organisations on jet aeroplanes are now available.

A detailed report on the needs of the coming jet age has been made by I.C.A.O.'s Jet Operations Requirements Panel to the International Civil Aviation Organisation's Air Navigation Commission. The report defines the new air navigation aids and services, the changes in aerodrome construction and air traffic control practices, the improvements in meteorological forecasting and reporting and in aeronautical communications which will be required by the introduction of the fast, high-flying turbine aircraft due to appear on the world's air routes during the next few years. Some of the requirements stated by the Panel are given below:

Aerodromes

The main characteristics of some jet aircraft in relation to their aerodrome requirements are their high gross weights, their increased take-off and landing requirements at or near maximum gross weight, and the characteristics of jet engines such as the higher temperature and higher velocity of jet effluxes compared with propeller slipstream, and the greater amount of noise generated by the jet engine. Under conditions of standard temperature, heat and blast damage to good quality pavements is unlikely to occur, but it may be necessary at civil aerodromes to provide pavements especially resistant to heat and blast effects at run-up areas and at the end of runways. Special attention should be given to joints and jointing materials in concrete pavements. At aprons and refuelling positions, a type of pavement resistant to the chemical effects of spilled jet fuel, is needed. The noise caused by turbine-engined aircraft should be reduced to the maximum possible extent and should be consistent with that presently accepted on or in the vicinity of the airport.

As fuel consumption during taxi-ing is high, taxiways should be laid out to make taxi-ing time as short as possible, and to allow for turns at speeds of between 30 and 45 knots. The report includes information on the runway-length requirements of the various turbo-jet and turbo-propeller aircraft now being built. Increased speeds for landing highlight the need for an improvement in visual aids both on the approach and on the runway. There is also a necessity for some means to assist the pilot to determine whether his take-off is developing safely; runway distance markers and devices in the aircraft to measure acceleration may meet this requirement.

Air Traffic Services

The major characteristics of turbine aircraft for air traffic services are the effects of high speeds and limited visibility at high altitudes on the avoidance of collision, the great increase in fuel consumption at uneconomic altitudes, the reduction in time available for the air traffic controller and others to perform their jobs because of the high speeds of the aircraft, the effect of these high speeds on the amount of air-space required for such manoeuvres as holding over an airport, and the difficulty of using present vertical separation methods for turbine aircraft which will use cruise climb and stepped climb techniques rather than the level cruise methods currently employed by piston-engined aircraft. In those portions of the air-space where jet operations are carried out, there must be positive air traffic control at all times, regardless of weather conditions. This also requires integration with military traffic, a problem which will now extend from the lower altitudes to the higher levels of air-space.

Efficient Operation

For efficient and economic operation of the turbine-powered aircraft and for safe and efficient air traffic control, there must be a highly accurate navigation system and a high standard of aircraft navigation. The system must provide for accurate flying along reasonably closely-spaced tracks in heavy traffic density, and must give accurate and continuous information in the cockpit. Means, preferably automatic in operation, are also required for the rapid and reliable transmission of position data from air to ground and of control directions from ground to air. The air traffic control system should require an absolute minimum of deviations from original flight plans; if changes are necessary, they should be confined to routing rather than to changes in aircraft altitude because of the fuel "penalty" which jet aircraft face in making altitude changes. Because of fuel penalties, no jet aircraft should be delayed between the time it starts its engines and the time it climbs on to its course. This involves procedures designed to facilitate uninterrupted taxi-ing, take-off and departure clearances, and requires the airport to have facilities allowing jets to bypass piston-engined aircraft which are running up their engines at the beginning of the runway. The turbine-engined aircraft should be permitted to make an uninterrupted climb to their initial cruising altitude and any changes necessitated by traffic, terrain or noise abatement procedures should be made by routing rather than changing the rate of ascent. This will require suitably-sited precision navigation aids and the avoidance of climb restrictions in high-density areas. Because of their high altitude and speed, jet aircraft will have to begin their descent at considerable distances from the terminal airport. The pilot must be notified of any potential landing delay to enable him to "absorb the delay" before he commences his descent.

Meteorology

The operational requirements in the field of meteorology for turbine-engined aircraft arise mainly from the substantially higher operating levels and increased sensitivity of the operation to certain atmospheric conditions. The turbine-engined operation is, however, less sensitive to some other atmospheric conditions. Thus, a number of new requirements as well as a shift in emphasis in the existing requirements can be recognised. Meteorological services must be provided to serve operations up to a pressure altitude of at least 14,000 metres or 45,000 feet. At least, when unfavourable meteorological conditions are expected, the pilot should have a landing forecast for his terminal airport and for his first alternate before he arrives at the point where he must make his decision to descend or to divert his flight. Landing forecasts should be kept under continuous review and amended as necessary. Other forecasts needed include the altitude of the tropopause along and in the vicinity of the track, location and characteristics of any jet streams, hail, clear air turbulence, turbulence in cloud, mountain waves, aircraft icing, and of any dense stratocirrus cloud. Improved runway visual range and slant visual range reporting will be necessary.

Aids to Navigation

The significantly higher airspeeds and altitudes of operation of jet aircraft and the fact that efficiency demands that a minimum of time be spent at low altitudes are the chief factors that will have a bearing on the navigational aids required. Increasing traffic densities and the special requirements for optimum operation of jet aircraft require the adoption of a medium and short-range navigation aid, based on the area coverage system and providing pictorial representation to the pilot in the cockpit. So that holding patterns can be accurately defined and maintained, there will be a need for special radio navigation aids since those provided for conventional aircraft may be unsatisfactory.

Unrestricted climb to the cruising altitude and precision in descent from the cruising altitude are important requirements in the operation of jet aircraft. In each case there is need for an aid which will enable the jet aircraft to maintain a prescribed track with adequate precision and to have an accurate knowledge of its distance along the track. Depending on local conditions, an aid may be required at large aerodromes to expedite aerodrome traffic, and in particular, to enable turbine-engined aircraft to proceed on the ground to take-off position rapidly. Surveillance radar will be required as an aid to air traffic control at most aerodromes handling jet traffic and in some areas for control of *en route* traffic.

Communications

New communications techniques to meet the requirements of jet air traffic and meteorological services will be necessary; these techniques would include radio-teletype broadcasts of weather information for receipt on board the aircraft in printed form, radio facsimile broadcasts, continuous weather broadcasts, extension of direct-voice communications between controllers and pilots, improved systems of high-frequency radio-telephony such as the compatible single sideband system, automatic calling devices, and automatic signalling and data transfer systems for air traffic control purposes. The Technical Committee of the International Air Transport Association reported to the annual general meeting of the Association that the new jets, with twice the speed, five times the fuel consumption and considerably greater carrying capacity than conventional aircraft, "bring a number of fundamental changes in the mode of operation and, therefore, in requirements relating to facilities and services."

Reviewing the conclusions which can be drawn from its study of future operations with turbine-powered aircraft, the Committee says: "It is symptomatic of our existing difficulties that the provision of facilities has lagged far behind the planning which justified them and that in many areas air traffic services are not geared to the problem of moving present-day traffic with a minimum of restriction. Unless there is a big acceleration of effort in these fields, including stepped-up research and increased expenditure of funds, the future types of aircraft will not only fall short of their potentiality, but will also incur grave economic consequences to the operator in his efforts to give the public improved transportation in greater comfort and capacity, over longer distances and at higher speeds.

Need for Fundamental Changes

"The turbo-jet's inherent characteristics of high speed, high altitude operation, combined with a fuel consumption which is on an entirely different scale from piston-engined aircraft, bring a number of fundamental changes in the mode of operation and, therefore, in requirements relating to facilities and services. The air traffic controller's problem will be intensified in all phases of flight by the higher closure rates—up to 1,200 miles an hour or 20 miles a minute. In terminal areas, his problem of co-ordinating traffic will be especially difficult since he will be confronted with a wide diversity of forward speeds and rates of climb and descent. He requires the best assistance that modern science can produce in order to simplify his problem—improved radar displays, for example, and the use of electronic computers.

"Meteorological and communications services must be extended to cover operations up to 45,000 feet, which is almost twice as high as the operating ceiling of our most modern aircraft today. One of the most important aspects will be drastically to reduce the time required to transmit messages on communications channels, particularly from point to point on the surface of the earth. More than ever we shall rely on our meteorological friends. They must forecast for entirely different levels of the atmosphere, give us temperatures and winds with increased accuracy, and above all provide more reliable forecasts of weather at the aerodrome of destination and its alternates.

Runway Lengths

"We have found that many of the future needs of jet aircraft also exist in one form or another today and will merely become intensified with the introduction of jet aircraft—adequate approach and runway lighting for example, the need for reliable high quality communications, the use of surveillance radar, and above all, the need to reduce separation standards which determine the size of the volume of protective airspace around each aircraft." The report says that there has been "much erroneous speculation" about the length of runways which will be required for the jets, and explains: "The precise length required will depend on a variety of factors of which the most significant will be the length of flight subsequent to take-off. Those aerodromes which are departure points for non-stop inter-continental flights will indeed require longer runways than exist today to enable the jets to take off at their maximum weights. At the majority of the remaining aerodromes which turbo-jet aircraft will use, aircraft will be taking off at substantially less than maximum weight and will correspondingly require substantially shorter runways.

"It would be surprising indeed if, with our future aircraft, we could expect to carry twice as many passengers at twice the speed over longer stage distances without requiring some extension of the runway length. Where administrations are faced with the problem of providing a longer runway than is currently available, we would ask that this be regarded as part of the price of progress, just as improved forecasting is needed for a better system of long-range navigational aids."

Jute

PROSPECTS OF ACHIEVING SELF-SUFFICIENCY IN RAW JUTE

THE INCREASE IN MESTA PRODUCTION

MUCH has been said during the past week on the subject of India's self-sufficiency in jute. At last week's annual meeting of the Indian Central Jute Committee, the Additional Secretary to the Central Ministry of Food and Agriculture, Dr. M. S. Randhawa, has "expressed the hope" that India will be self-sufficient in jute by the end of the second five year plan. On the same theme, the report of the Jute Enquiry Committee set up in March this year has been officially released. In its view, India is capable of attaining self-sufficiency in her raw jute requirements, "both for internal consumption and export", by the end of the second plan period. There is a wide discrepancy between these two estimates, and ambitious as the former is, it is well within the bounds of possibility. It is difficult to conceive, however, how India will have jute to spare for export within the foreseeable future. In the first place, the quality of jute produced in India, with a few exceptions, is not up to the standard normally required by overseas manufacturers. Secondly, India requires all the better class jute for herself, and the report even admits that this country would still have to import a small quantity of superior jat jute from Pakistan for special purposes. Where, then, is the surplus for export to come from? The bulk of the jute left over after internal consumption has been met will inevitably be low quality jungli fibre. This is amply demonstrated even today by the carry-over from the past season in Cossipore. Out of a total stock in Cossipore of 70,000 bales, more than half consists of low quality jungli fibre and jungli mesta.

Over the past two or three years, the increase in India's jute production has mainly consisted of mesta. Mesta output since 1954-55 has risen from 1,[illegible]8,000 bales to last season's 1,474,000 bales, an increase of 356,000 bales. According to the latest reports, mesta production this year is likely to be even higher, with more acreage than ever before under this type of seed. It has been pointed out many times that rather than raising the acreage under jute, emphasis should be laid on increasing the fibre yield a plant so that more jute can be produced on a possibly smaller acreage. Much has been done in this direction by various research centres and also by the distribution of improved seeds, manures and fertilisers by Government departments. The acreage under jute, however, does not seem to fall, so no more land is available for other crops. It appears that the propaganda towards this end is inadequate, in spite of the State farms and co-operative farms started in recent years.

The Jute Enquiry Committee has recommended the fixing of a minimum price for jute. This is a subject which has come in for a great deal of discussion over the past few years by various bodies, and in all cases the question of a minimum price has been rejected. Why the subject should again be raised so soon after it has been considered and turned down by the Ministry of Food and Agriculture is difficult to comprehend. The Committee's deliberations have brought forth no fresh ideas, and its findings have only substantiated what was already an established fact. It is encouraging, however, to find that opinion on the question of fixing raw jute prices is not unanimous, and that with the commodity already costly, the proposal is considered irrelevant.

New Use for Jute Fabrics

It has been stated at the meeting of the Indian Central Jute Committee that experiments conducted by the Technological Research Laboratories of the Committee have evolved a new use for jute fabrics. A bleached jute fabric has been developed and is being utilised for book-binding purposes. With suitable improvements, bookbinding cloth of artistic quality can be developed, which will be suitable for art publications. This is an encouraging feature in an industry where substitutes have encroached substantially into established markets in recent years.

THE JUTE MARKETS

The rising trend in raw jute and gunny prices was arrested during the past week, and quieter conditions prevailed. The squeeze in ready B Twills, although still persisting, was tempered by the announcement of the increase in Bank rate in the U.K. Prices reacted quickly to the news. Operators acted with great caution and were reluctant to enter into fresh obligations until the full significance of the move was investigated. The position was further aggravated by the strike in the local banks. Business was brought more or less to a standstill and the market became depressed. No transactions in the form of bills of lading, rail receipts, etcetera, were possible through the banks, as they would accept no documents. Thus trading was carried on with the utmost difficulty. The fibre markets suffered most. But sentiment recovered towards the close, and both the jute and gunny sections recorded activity, but on a restricted scale. The conditions in soaking brought about by the demand for ready goods continued to dominate proceedings. Premiums of up to Rs. 5 a 100 bags were quoted. Calcutta mills did little business, and activity was again confined to the speculative sphere. Shipping was reported to be good, and this was instrumental in instilling confidence into the market.

There was an improvement in fibre arrivals, both in the upcountry and in the local markets. The demand, however, still exceeded supply. In Cossipore, none of the fresh arrivals were put to stock, but were immediately taken up by mill representatives and local operators with contracts still to cover for September. Wagon arrivals last week amounted to about 565, which was the highest number recorded this season. Last season at this time, average arrivals were in the region of 650 wagons or 700 wagons a week. Initial reports on the Daissee crop were good. This was due to favourable weather conditions. Imports increased rapidly over the past week, but prices did not drop because mill representatives and agents were buying all available supplies at the agencies. This encouraged operators to seek higher prices as they thought that mills were short of jute.

Manufactured Goods: The gunny market received a setback last Thursday on the news of an increase in the U.K. Bank rate. Prices fell rapidly, especially in sacking, which was entirely under the influence of speculators. Ready B Twill prices lost 75nP to open at Rs. 119.25, which was still Rs. 5 more than the January-March rate. Hessian recorded minor losses, and 40in. 10oz. was sold at Rs. 42.90 for ready shipment, with forward prices at a discount of 40nP or 50nP. Restricted business due to the strike in the local banks caused a further fall in prices during the day, so on Friday B Twills were down by Re. 1. On Saturday, the market was depressed. Over the week-end and on Monday, which was a holiday, prices recovered slightly, but real goods business was small and activity was confined to the speculative element. B Twill prices advanced to Rs. 118.10 on Tuesday morning, with 40in. 10oz. hessian following at Rs. 42.35. In the absence of business, rates were nominal and were not of any great significance, especially in the ready position, which bore no resemblance to the true state of affairs.

At the close, the market showed very little change and prices moved through narrow limits. Lack of interest from both buyers and sellers caused prices to ease, and opening quotations on Wednesday morning were as follows:

	Sept. Rs.	Oct. Rs.	Oct.-Dec. Rs.	Jan.-March Rs.
40in. 8oz.	35.60	35	34.40	33.75
40in. 10oz.	42.35	42.45	42.50	42.20
B Twills	118.50	117.80	118.50	113.75
Heavy Cees (Plain)	116.25	116.50	115.50	113.75
A Twills	143	140.50	140	138.50
Liverpools	130.75	130,75	130.75	128.75
Cornsacks	119.25	118	116.75	115

Raw Jute: The fibre markets were comparatively quiet and the amount of business reported was very small compared with previous weeks. Sellers were reluctant to do fresh business since their money was tied up as a result of the strike in the local banks. Mills showed very little interest, except in quick delivery jute, and were more anxious to see some of their recent purchases delivered than in making fresh contracts. Prices in general eased. From an opening of Rs. 30 a maund for Assam-Northern jute for September-October shipment, they dropped to Rs. 29. Small business was done below this level, and in the absence of interest prices could be considered mainly nominal.

Business was done in Dhubri-Northern-Assam jute at Rs. 30 to Rs. 30.25 for ready bills of lading, and Rs. 28.50 to Rs. 29.75 for deliveries ranging from 15 days to September-October. Desal White was also done at Rs. 29 to Rs. 29.25 for September-October shipment. Small lots of Tossa passed at Rs. 29.75 to Rs. 30.25 for the same shipment. Daissee came in for more interest and purchases were made at Rs. 29.50 for October-November shipment, Rs. 29.75 to Rs. 31 for one month's shipment and Rs. 31.75 for ready delivery. There was also business in Northern and Assam mesta at Rs. 26.75 to Rs 27 a maund for one month's shipment. In the pucca bale section, cuttings attracted attention and prices paid for N.C.-T.C.'s ranged from Rs. 86 to Rs. 88 a bale for one month's shipment.

At the close, the market was quiet, and opening quotations on Wednesday morning were as follows:

Indian Jute	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam Northern	29	Sept.-Oct.
Purnea Desal	28.50	"

Pakistan Cuttings	86 a bale	"

INCREASING PRODUCTION OF RAW JUTE

PROGRESS TOWARDS SELF-SUFFICIENCY

PRESIDING over the annual general meeting of the Indian Central Jute Committee in Calcutta, Dr. M. S. Randhawa, Additional Secretary to the Central Ministry of Food and Agriculture and Vice-Chairman of the Indian Council of Agricultural Research, expressed the hope that India would be self-sufficient in jute by the end of the second five year plan. In the first year of the second plan, he pointed out, the jute crop was about 4,221,000 bales (in 1956-57), compared with 4,197,000 bales in 1955-56. Besides, 1,470,000 bales of mesta were also grown during the same period. This was an increase of about 7.6 percent over the total supply in the first year of the first five year plan. India's imports of jute from Pakistan in 1956-57 were as low as 650,000 bales and were the lowest on record since partition. "All this indicates that we are steadily moving towards our goal of self-sufficiency and that it would not be difficult to reach it at the end of the second five year plan period provided we make a concerted drive to increase jute production still further and to improve its quality". Referring to mesta he said that the acreage under mesta rose from 528,000 in 1954-55 to 572,000 in 1955-56 while the production rose to 1,157,000 bales in 1955-56 from 1,018,000 bales in 1954-55.

Prospects for Current Crop

On the prospect for the crop in 1957-58, Dr. Randhawa said that in the current season there was a long spell of dry and hot weather during the sowing period in most of the jute-growing States, with the result that the sowings were considerably delayed. While it was apprehended that there might be some reduction in the total acreage under jute this season, the yield rate might be a little higher than last year, particularly due to the favourable weather during the growth period of the crop and to the beneficial effect of the fertiliser distributed extensively by the Government. "It is expected that the output of the current jute crop may be of the same order as in the last year", he said. Mesta being a late crop, it had perhaps escaped much of the adverse effects of the dry spell. There was perhaps a larger area under mesta in the current season than in the last one. For example, it was reported that nearly 70 per cent of the Daissee area was under mesta. It would not, therefore, be unreasonable to expect a larger production of mesta in the current season than last year's output of 1,474,000 bales. By and large, therefore, the total output of jute and mesta in the current season might show some increase over last year's crop.

Dealing with the cost of jute production he said that "in recent years, the average cost of production of jute, as estimated from studies carried out at the five centres of investigation under the Committee, was about Rs. 20 a maund." In 1956-57, however the cost increased by about Rs. 1.5 a maund, compared with 1955-56 on account of extensive crop failures in two of the five centres. The cost of production of paddy, on the other hand, came down slightly from Rs. 9.54 a maund in 1955-56 to Rs. 9.33 a maund in 1956-57. The average price in local markets advanced for both the crops, but by a larger margin for paddy. Thus, while the cost ratio between jute and paddy increased from 2.08 to 2.29, the corresponding price ratio decreased from 2.63 to 2.24. This means that in 1956-57 the average jute grower spent relatively more on jute production, but received less paddy in exchange for every maund of jute produced.

Higher Fibre Prices

Prices of raw jute were generally higher during the major part of the 1956-57 season compared with the previous year. After attaining a peak round about January 1957, they followed a downward trend towards the last part of the season. Much of the benefit was, however, offset by the higher prices of rice and paddy in 1956-57.

Woollenised Jute

Referring to technological research, he said: "In the Technological Research Laboratories of the Committee, an experimental spinning plant for wool and woollenised jute from Western Germany was installed during the year and the scheme of training 100 displaced persons in making blankets, wrappers, knitting wool, etcetera, from wool and woollenised jute started. The Ministry of Rehabilitation, Government of India, has sanctioned a pilot plant production scheme to work out the economics of the process in greater detail. It will also serve as a production-cum-training centre. Bleached jute fabric has been developed and utilised for book binding. With suitable improvements, book binding cloth of artistic quality can be developed. It will be particularly suitable for art publications. This is an experiment which deserves to be followed up as it is likely to provide a new use for bleached jute fabric. A number of jute mills have adopted the Technological Research Laboratory method of brightening hessian warp and hessian cloth. This is a type of production which should be further develop[illegible]

THE PAKISTANI JUTE MARKETS

STEADY TREND IN PRICES

(FROM A NARAYANGANJ CORRESPONDENT)

THE Narayanganj market has been steady for the past few days. Arrivals, estimated at about 30,000 maunds, have been taken up in full. Once again there is a tendency among *beparis* to wet the jute, but so far this has not reached serious proportions. What is particularly disquieting considering the high prices which are being paid, is that the quality of jute coming into Narayanganj is considerably worse than it has been and the proportion of cuttings is becoming alarming. This is bad when one considers the low levels at which cutting prices remain. At the end of last week, the prices of loose jute had not weakened, but there was a quieter undertone in the market. There is every possibility that these prices will recede, although this recession cannot be very large as it is now the end of the month which always involves a certain amount of covering. If prices recede this will confirm the earlier view that in spite of the fairly large E.P.C. registrations at the end of August, the bear account among Pakistani balers is very small.

In the pucca bale market, more interest has been shown mainly in cuttings and Export Firsts. One of the larger balers who is said to be bullish has privately sold cuttings for November at Rs. 65. In today's market, this is a fairly good price for the seller. In spite of offers at very nearly Narayanganj parities, overseas buyers continue to resist any further rise, and reports indicate that they are buying selectively. This is partially confirmed by the fact that the rise in prices has been checked.

A Chinese delegation was in Dacca for a few days this month. Its arrival had very little effect on the market, although there was a rumour that it was going to buy in large quantities. In fact, it was trying to settle certain claims against past *shipments*. This probably refers to the report in these columns some time ago that certain balers, it was alleged, were shipping wet, uncut and unassorted jute against their contracts with China. Although in this instance, the Chinese buyers must have the sympathy of the trade, there is no doubt that their new contract terms are, to say the least, one-sided. Most reputable shippers have refused to deal on the basis of this new contract, but there is a possibility that the Chinese have made some purchases during their visit here.

Since the departure of its general manager, the Jute Marketing Corporation had not been much in the news. It is only in the past few days, however, that it has been a fairly large and regular buyer at high prices, which encourages the market belief that this organisation has sold jute to the Chinese delegation.

Rumours indicate that both the London Jute Association and the Pakistani authorities, and probably the European Jute Association, are dissatisfied with the present L.J.A. Contract and are proposing various amendments to it. These will probably be discussed, if not finalised, between their representatives at a conference which is to be held in Pakistan during November. The most contentious matter to be discussed, it is expected, will be the clause about late shipment penalty and arbitration in London. The former, although apparently rather hard on the Pakistani shipper, is in fact ineffective since the State Bank seldom allows remittances for late shipment penalty and the latter has been the cause of discontent among Pakistani shippers for some time.

Prices for Tossa are at present extremely high. This may be due to the fact that very little is coming in at present and also the general feeling that the quality of Tossa will not be very good.

The Calcutta gunny market has remained fairly steady for the past few days mainly because of reports of a Russian order, probably through the Government. At the same time, Karachi prices have been comparatively low so that Pakistani mills have been able to make fairly large offers in competition with Calcutta and have secured a fair amount of business. It is now more profitable for Pakistani mills to sell overseas than locally, and they are taking every advantage, even by discounting their prices to get the very attractive rates prevailing today, particularly for ready shipment. Business reported with Pakistani mills in hessian is camparatively less.

It is interesting to note that the prices being paid by South Africa for Pakistani jute goods are at present based on rates below those of the Calcutta market. This belies the rumour that Indian traders have been indirectly competing in the South African market. It is difficult to explain this fall in prices, and at one time South Africa used to pay a premium of as much as 4 percent over the Calcutta market for Pakistani goods. The chief "culprit," presumably, is to be found among the newer and smaller Pakistani mills, who, having no outlet for their sacking other than Karachi, are obliged to sell to South Africa in order to clear their stocks and to continue the production of their mills at prices, which, although profitable compared with the Karachi market, are not really so very attractive considering the current price of raw jute.

For them to sell to destinations other than Karachi or South Africa, they must have contacts with overseas buyers who have little confidence in done ex-stock To sell to South Africa is even easier since every mill in Pakistan receives the same enquiry from every broker in South Africa by cable. The South African brokers are only too keen to tell them that others are offering cheaper with the result the Pakistani mills are competing against themselves.

THE FOREIGN JUTE MARKETS

STEADY BUSINESS IN YARNS AND CLOTH

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute prices are well maintained and sellers are displaying considerable reserve, but reason for this is not understood by the trade here. Buyers cannot make up their minds whether to buy or not. It looks as though the smallness of imports of fibre from the upcountry markets is to continue for some time. Meanwhile, there are not enough supplies to satisfy the demand of speculators who have sold fair quantities and now have to cover, while actual consumers are showing some interest. Mill Firsts have further advanced to £111 10s a ton, which makes a rise of £5 10s since 13th September. It is strange that it should be discovered all at once that Mill Firsts are to be very scarce this season, and the grades above are also likely to be short in supply. Any further advance in prices of raw jute may lead to another rise in prices for yarns and cloth.

On 13th September, there was an advance in the prices of jute yarns and cloth of most descriptions of about £25 a ton. Hessian yarns rose from 15.14d to 15.72d a lb for 8 lb C.H.W. cops, and from 15.72d to 16.29d a lb for 8 lbs J.C.H. warp, while twist jumped from 17.56d to 18.13d for 3 ply 8 lbs, but sacking yarns were left unchanged at 13.36d a lb for 24 lb weft. Rove is also unaltered at £101 10s a ton for 48 lbs and £80 for 200 lbs, and there is no change in the rates for the small yarns, 4 lbs, 5 lbs and 6 lbs The cloth section of the trade recorded a rise in prices from 12.88d to 13.26d for 40in. 10oz. hessians and from 11.01d to 11.32d for 8oz. Tarpauling in 14por. 36in. 18oz. advanced from 25.64d to 26.34d a yard and all sizes of sacking were up by about £5 10s a ton.

Shippers are quoting Mill Lightnings from £101, and Mill Hearts from £96, grade Hearts from £86, good marks of Daissee-2/3 from £99 10s and grade from £95 10s, with grade Tossa-2/3 from £105 10s and grade Tossa-4 from £100, all c.i.f., U.K. September-October. There are many sellers asking 10s to 40s more than these quotations. Calcutta goods remain very firm, with quotations at 65s for 40in. 10oz. and 50s 9d for 7¼oz., September, 65s and 50s October and 65s and 49s November-December. B Twills are at 181s 3d, 181s and 178s 3d for the respective positions of shipment. There has been a steady business in jute yarns and cloth at the higher rates. Many buyers are short and want to replenish their stocks.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in August increased 7 million yards from July, but compared with August a year ago, was quite disappointing, being off 18 percent. Consumption for the first eight months of this year is now 9 million yards below the same period of last year. U.S. burlap stocks declined 14 million yards and at 232 million yards, 133 million yards were spots and 99 million yards were afloats. Appearing below are two tables which include the August figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) recorded a further fall of 0.7 *percent to 110.1* during the week ended 7th September, 1957, compared with 110.9 (revised) for the earlier week. The index was lower by 2.1 *percent* when compared with the corresponding week of a month ago, but was higher by 2.9 percent than that of last year. The index for Food Articles *fell by 0.5* percent to 109.9 compared with 110.5 (revised) for the earlier week due to declines in the prices of rice in Raipur (−10%), in Gaya (−6%) and in Kozhikode and Varanasi (−5% each), wheat in Bhopal (−8%), bananas (−6%), tea, cloves, black pepper (in Cochin) (−5% each), bazra, barley and cardamoms (−4% each), jowar, masur and gingelly oil (−3% each), eggs and chillies (−2% each), maize, gram, arhar, mung, urd, mustard oil, sugar and salt (−1% each), although the prices of potatoes in Delhi (+19%), rice in Tirunelvelli (+11%), cummin (+8%), fish (+7%), wheat in Delhi (+6%) and in Rajkot (+5%), onions (+6%), milk (+4%), ragi and groundnut *oil* (+2% each) and coffee (+1%) showed advances. There being *no* changes in the prices of tobacco, its index remained unaltered at the previous week's level of 91 The index for Fuel, Power, Light and Lubricants *moved from* 114.6 to 114.7 during the week. The prices of kerosene oil (+1%) and castor oil (−1%), showed variations. There was a fall of 2.6 *percent to 115.2 in the index of* Industrial Raw Materials compared with 118.3 (revised) for the earlier week, due to a decline in the index for raw cotton (−12%) (estimated) as a result of the reappearance of Ashmoni T. 3 (imported) cotton at a reduced rate in Bombay market, rapeseed (−3%), groundnuts, linseed, gingellyseed, hides aend lac (−1% each). The prices of castorseed (+5%), raw silk (+4%), raw jute and iron ore (+1% each) were marked up. A general fall in the prices of non-ferrous metals, namely, zinc (−10%), copper and lead (−3% each) tin (−2%) and brass (−1%) and also the lower prices of linseed oil (−1%) were responsible for a decline of 0.6 percent to 106.9 in the index for Intermediate Products. There was an increase in the price of coir yarn (+1%). The index for Finished Products stood at 108.7 compared with 108.6 for the earlier week. Items which showed fluctuations were: jute manufactures and cycles (+1% each) and oilcakes (−2%).

ACREAGE UNDER GROUNDNUT INCREASES

According to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, the all-India first estimate of groundnut, 1957-58, puts the current year's area at 9,895,000 acres, against the corresponding adjusted estimate of 9,044,000 acres for 1956-57. This shows an increase of 851,000 acres or 9.4 percent in area during the current year compared with last year. The increase in area during the current year has been shared by all the groundnut-growing States, and has been attributed generally to favourable weather conditions at the time of sowing. The increase in groundnut acreage is more marked in the case of Bombay and Madhya Pradesh. The information given in this estimate covers the period generally up to the end of July 1957. Till then, the condition of the crop was reported to be generally satisfactory. The estimate does not cover the entire area sown to groundnut crop during 1957-58. Past experience has shown that the area at the first estimate stage forms roughly 62 percent of the area under the crop finally reported.

INCREASING OILSEEDS PRODUCTION

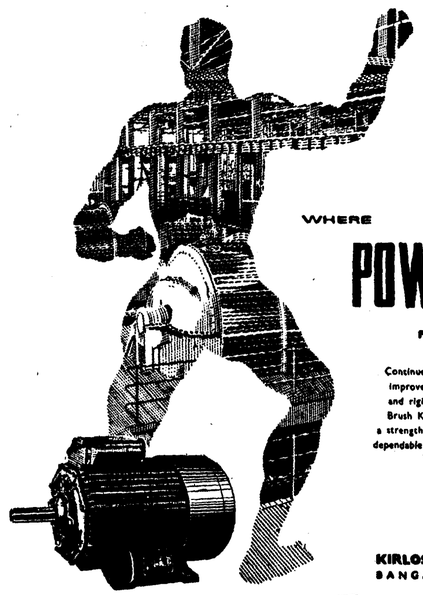
CENTRE APPROVES TEN EXTENSION SCHEMES

THE Government of India has approved oilseeds extension schemes in ten States, the object of which is to help achieve the target of 7.55 million tons of oilseeds by the end of the second five year plan. These extension schemes are in addition to oilseed development schemes which are already being implemented by the State Governments with 50 percent assistance from the Centre. Dr. R. Sankaran, Secretary to the Indian Central Oilseeds Committee, has said that the target of 7,550,000 tons for the five major oilseeds was fixed by the Central and State Ministers last year. Andhra Pradesh being the largest grower was assigned 1,550,000 tons, Bombay 1,500,000 tons, Uttar Pradesh 1,130,000 tons, Madras 1,100,000 tons, and Madhya Pradesh and Mysore 700,000 tons each. In order to enable the States to achieve the increased production targets assigned to them, the Central Government sanctioned oilseeds development schemes under the plan to be executed by the State Governments, the Centre and the States sharing the expenses equally. A sum of Rs. 29.19 lakhs was approved by the Government of India as the total cost of such schemes. Early this year the Central Oilseeds Committee felt that the targets could be achieved only by an intensive campaign for the cultivation of oilseeds on lines similar to those of the cotton extension schemes.

Dr. Sankaran has said that a model scheme was prepared envisaging intensive cultivation, like in the Japanese method of rice cultivation, for groundnut production. The scheme proposed reclamation of waste lands, double-cropping, inter-cropping, the supply of improved seeds, fertilisation, improved agroncmic practices and the growing of castor along irrigation channels. The Central Government approved the expenditure on the model schemes involving a sum of Rs 26.94 crores, the entire amount being met by it. The State Governments have now been asked to go ahead with the implementation of these schemes to ensure the achievement of the second plan targets. The assistance now offered by the Centre through the Oilseeds Committee is mainly intended to subsidise the supply of improved seeds, and provide technical staff to educate cultivators on technical problems, the construction of warehouses and plant protection. The sanctioned amount will be spent mainly in the States which are not able to take advantage of technical assistance because of their financial difficulties.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)



The Middle Class Cost of Living Indices, by groups, have now been brought up to August 1957. As compared with July, the August Index for Food shows a rise of 1 point, while those for Fuel and Lighting, Clothing and Miscellaneous remain unchanged at 281, 546 and 284 points, respectively.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living advanced by 1 point during August, 1957.

Middle Class Cost of Living Index Number for Calcutta. Prices in August, 1939 = 100.

KERALA PLANTATION TAXES CRITICISED

CASE FOR BIGGER RUBBER REPLANTING SUBSIDY

(FROM A SOUTH INDIAN CORRESPONDENT)

ADDRESSING the annual conference of the Association of Planters of Travancore on 20th September, Mr. R. M. Howie, chairman has said that the Kerala Government's taxation policy is a matter of grave concern to the planting industry. He adds: "It has been suggested that instead of reaching the objective of taking over the industry by nationalisation, this might be achieved less odiously by punitive taxation. The Kerala Government introduced an unprecedented element into its taxation policy when it formulated a graduated rate of taxation on incomes of agricultural companies. The measure is unprecedented because the graduated scale that has been applied to corporate income in planting is not on par with such a scale when applied to individual income. The measure would not only apply with great force on the corporate sector within the plantation industry, but the assumption is questionable in equity."

Mr. Howie says that with the reorganisation of States. Kerala has become the largest plantation State in India. It employs the largest labour force. The industry is also the biggest contributor to the State's revenue among all the industries of Kerala. The acreage of tea has increased from 74 000 to over 97,000, producing 56 percent of south India's total tea output. The area under rubber forms nearly 98 percent of the total under this crop in India and extends at present to over 200.000 acres. Kerala State has within its territory a very large area of coffee, the total being approximately 40,000 acres. Out of 101.000 acres of cardamom in India, approximately 80.000 acres are concentrated in Kerala. Similarly among minor products, the State enjoys practically a monopoly of both pepper and cashew.

Subsidy for Rubber Replanting

Referring to the rubber-growing industry in Kerala, Mr. Howie says that a very large proportion of the 200,000 acres of rubber in Kerala is old and unselected. "The Indian rubber industry has a long way to go towards bringing its total acreage under high-yielding selected rubber. To induce growers to replant, a scheme of subsidy has been introduced since last year. After a year's operation of the scheme, this does not appear to have had unquestioned acceptance. The subsidy offered in India is considerably below the rate of subsidy in Ceylon and Malaya. In Malaya, the subsidy is as high as Rs. 900 an acre for small growers, and in Ceylon, it is fixed at as high as Rs. 1,100 an acre; in India, only Rs. 400 an acre is offered. Those who cut down their old rubber in order to claim the subsidy would lose current income from the standing trees until the replanted trees come into bearing. It is unlikely that many small growers can afford to lose such current income in the hope of making a higher an acre income in the distant future. In the case of large growers there is generally a programme of replantation which would be materially affected by the offer of a subsidy of Rs. 250 an acre."

Thefts from Estates

A far more important development is the expansion or planting of rubber in new areas. Since no subsidy is being offered, the Board can exercise very little control over the kind of material used in planting new clearings, Mr. Howie says. He refers to rubber thefts from estates. It was a serious problem for planters in 1956. In the current year there has been a recrudescence of such thefts though not on quite the same scale. Mr. Howie says that cases of thefts are still reported and he urges better liaison between the police department and the Rubber Board, so that thefts can be reduced to the minimum or where they are detected deterrent punishment can be meted out. He pleads for a review of the cost and price structures of both rubber and coffee since there has been an increase in the cost of production of these crops brought about by several factors since the last fixing of prices.

Increased Output of Tea

Referring to tea, Mr. Howie says that favourable weather conditions, combined with ever-increasing improvements in agricultural methods, particularly for disease control and the application of artificial manures, have resulted in increased production of tea in south India during the past year. "It is of particular concern to the tea industry, which operates on a free market, that the price of common teas has been steadily falling and in many cases the average realisation has been less than the cost of production. Common teas account for over 60 percent of the total production, but this average is not true for individual producers. There are many estates whose entire production falls under the category of common teas. For them any fall in prices of common teas is an unmitigated tragedy. For that reason the Government should either consider a differential duty for the different types of tea or the total abolition of export duty in its application to common teas. Our tea members note with interest and satisfaction that the Tea Board has now sanctioned the setting up of a sub-station of the proposed South Indian Tea Research Station in the Peermade district, which will provide for a long-felt want."

Labour Relations

Referring to labour relations, he says that a new method for settling disputes has been the cause of concern to many employers. "Where an individual dispute which may or may not have industry-wide significance occurs, the Government has lately been calling for the presence of the manager concerned in Trivandrum and efforts are made to impose a settlement. Such settlements are then quoted as of industry-wide application. This compromises many individual managements who cannot possibly refuse to attend conferences called for by the Government and has the effect of by-passing and nullifying the value of the Employers' Associations, who are striving to preserve some unity of action in labour matters in the interests of industrial peace. The Government has also resorted to a method of constituting committees and naming individual planters to them whose views are taken as representative of the industry again without reference to planting associations." He says that this lack of co-operation has led to a regrettable tension between his association and the Labour Department of the Kerala Government.

Mr. Howie says that the law and order situation on Kerala plantations has taken a turn for the better in the past few weeks and police action against offenders has reportedly improved in most districts. But he adds: "I have to state that although the near-anarchy of the disturbed weeks of May, June and July, which existed in some districts, is subdued for the time being, we are still not assured that we shall be able to carry on our day-to-day administration on plantations—a great many of which are isolated—without fear of breakdown." The Executive Committee of the Association of Planters of Travancore has decided to submit to the Union Minister for Labour, Mr. G. L. Nanda, when he visits the State, a memorandum on the problem of lawlessness in the plantations. The annual conference of the Association was attended among others by the new president of the United Planters Asscciation of Southern India, Mr. C. L. Machia.

Criticism of Rubber Statistics

The accuracy of the Rubber Board's statistics on the production of raw rubber in India is questioned in certain quarters. Although it is admitted that bad weather, labour unrest and the cutting down of trees for replanting might have had some adverse effects on production, critics do not agree that they alone could be responsible for a drop of 1,400 tons within three months beginning from May. It is pointed out that the crop figures published by rubber planting companies do not justify any such decline in production. Their argument is that the actual output must have been higher than what the Board figures show; otherwise there would have been a greater scramble for the available supplies from the Kottayam market and there would have been more complaints concerning the non-availability of rubber. The critics also contend that a portion of the rubber is going through covered channels to manufacturing centres in north India without the knowledge of the Rubber Board. It might be possible that some producers are understating their output with a view to evading the cess of Rs. 6-4 a 100 lbs. The theft of rubber from estates and the illicit trade in raw rubber are reported to be on the increase.

Coffee Crop Prospects

India's coffee crop prospects are now brighter than what they were some time ago. The Coffee Board has revised its estimate of the 1957-58 crop from 35,750 tons to 37,150 tons. The final size of the crop may be larger but under the new method of crop forecasting adopted by the Board the difference may not be as wide as it used to be in previous seasons. By the end of August only about 50 percent of the current season's crop of over 42,000 tons could be sold by the Board, with an internal offtake of 16,918 tons and export sales amounting to 10,347 tons. For the remaining four months of the year, the internal market might need at the most 8.500 tons, leaving a balance of over 12,700 tons for export and carry-over. Even if the Board is able to sell off the balance of 4,800 tons left behind from the total allotment for export, there will remain a carry-over of nearly 8.000 tons from the current season's crop to next year, 2,000 tons more than the carry-over from the last crop.

COCHIN TEA SALES

At Sale No. 26, 1,250,000 lbs of tea were on offer. There was a strong general demand, although it was somewhat irregular. Best liquorings were considerably dearer, but all others were 5 to 10nP easier. Mediums and low mediums improved, while whole leafs, particularly orange pekoes, were weaker.

PROGRESS OF RUBBER REPLANTING SCHEME

The implementation of the ten-year rubber replanting scheme for increasing the production of natural rubber in India has begun. Against the target of 7,000 acres to be replanted in 1957, the Rubber Board has already sanctioned subsidies for 6,185 acres. Under the scheme, which is expected to cost about Rs. 2 crores, 70,000 acres of worn-out rubber lands are to be replanted with high-yielding strains over a period of ten years. Subsidies ranging from Rs. 250 to Rs. 400 an acre are being paid to growers to encourage replanting. The higher rate of subsidy is for small growers. The production of rubber in India in 1956 rose to about 23,450 tons from about 17,150 tons in 1951. Consumption has also been rising. In 1956, over 6,500 tons of rubber had to be imported to meet the internal demand. The replanting scheme is expected to meet the rising demand in the coming years to a considerable extent. Applications for the grant of subsidy for 1958 and 1959 have been invited by the Rubber Board so that subsidies can be granted well ahead of the period of replanting.

Calcutta Markets

FAIR GENERAL DEMAND AT TEA EXPORT SALE

GOOD SUPPORT FOR DUSTS

AT Sale No. 16, held on 24th and 25th September, 59,776 chests were on offer at the Export auction. There was a fair general demand Medium Assams with useful liquors and Assam B.O.P.'s were supported well, while black leaf clean common teas were 2 to 6nP dearer. Tippy teas and stylish B.P.'s again sold well. The remainder of the offerings were easier, although there was a fair demand for "teas for price". C.T.C.'s met with a restricted enquiry and sold at prices which were 20 to 30nP lower than valuations. Non-withers Dooars were a weak feature of the Sale.

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2.10	2 3 0 to 2 4 0
Plain B.P	1.60 to 1.64	1 12 0 to 1 13 0
Plain Fannings	1.66 to 1.68	
Medium B.P.	1.66 to 1.68	2 2 0
Medium Fannings	1.70 to 1.74	
Best Assam C.T.C. B.P.	3.00 to 3.10	3 2 0 to 3 3 0
Best Assam C.T.C. Fngs.	3.30 to 3.50	

At the Internal Sale 19,629 chests of Dust were on offer. There was a good general demand. Clean black Dusts were firm to dearer, but the poorer orthodox teas from the Dooars and Assam were easier. The best C.T.C. teas were steady, but there was less demand for those with fibrous leaf and plain liquors, and these were often 15nP easier.

Quotations.

	1957 Rs.	1956 Rs.
Medium Dooars Dust	1.54 to 1.58	2 5 0
Medium Assam Grainy Dust	1.58 to 1.62	2 5 0 to 2 6 0
Medium Assam C.T.C Dust	2.00 to 2.10	2 10 0
Best Assam C.T.C. Dust	2.50 to 2.90	3 14 0 to 3 3 0

Leafs on offer were 1,410 chests, which met with a fair demand at irregular rates.

FREIGHT MARKETS DEPRESSED

VERY depressed conditions have prevailed in all freight markets over the past week, and the new low rate of 55s f.i.o. was accepted for one or two ports East Coast India-Poland for October loading, iron ore. Mormugao-Rotterdam paid a gross rate equivalent to 47s net to Rijeka. There was an increased interest in time charters with the following engaged: Messrs. Crowborough Beacon 30s six months 9,720 d.w. 12 knots/12 tons; Messrs Henriette Schulte 27s 6d 10 months 9,842 d.w. 12 knots/11 tons; Messrs Dorington Court 27s 6d three Indian rounds 10,500 d.w. knots/13 tons. This is usually a sign of the turn of the market and it will be interesting to follow exchanges during the last quarter of the year.

LINSEED BETTER

There has been no notable change during the past week and the generally easier trend which had prevailed earlier, gave way to a slight improvement in ptices in sympathy with the groundnut market. Ready business and trading in railway receipts have been more or less suspended because of the bank strike. Buyers and sellers were very cautious and the daily turnover has been negligible. The oil market was inactive; the local offtake was poor and lower advices have been received from overseas. Latest quotations were as follows: Ready/September Rs. 22.25 a maund.

HIDES AND SKINS FIRM

The market ruled firm and prices showed an upward tendency. Stocks were less than in the previous week.

Bazaar Sales

(Between 17th September and 23rd September, 1957)

Cowhides: Wet salted (Ord.) 33,000 pcs. on the basis of Rs. 8.50 to Rs. 10.50 Wet salted (Slaughtered) 15,600 pcs. on the basis of Rs. 12.50 to Rs. 21.

Goatskins: Wet salted (Daissee, Killed) 30,650 pcs. on the basis of Rs. 280 to Rs. 295; Rs. 323 to Rs. 350 and Rs. 380 to Rs. 390; Assam-Dinajpur 11,700 pcs, on the basis of Rs. 275 to Rs. 345; Purneah-Kissenganj-Maldah 4,200 pcs. on the basis of Rs. 330 to Rs. 345; Patna-Pakur (Ord.) 3,700 pcs. on the basis of Rs. 300 to Rs. 310.

Bazaar Stocks

(23rd September, 1957)

Cowhides: Wet salted 1,80,000 pcs.

Goatskins: Wet salted (Daissee, Killed) 46,... pcs.; Assam-Dinajpur 17,500 pcs.; Muzaffarpur-Patna-Pakur-Purneah-Kissenganj 144,000...

COMPANY AND PUBLIC NOTICES

NEW INDIA INVESTMENT CORPORATION, LTD.

NOTICE is hereby given that the Twentieth Ordinary General Meeting of the shareholders of New India Investment Corpn. Ltd. will be held at the Registered office of the Company at 9, Brabourne Road, Calcutta, at 4 P.M. on Monday the 28th October, 1957, to transact the following business:—

(1) To receive and adopt the Directors' Report and audited Profit & Loss Account and Balance sheet for the year ended 31-12-56.

(2) To declare dividends recommended by the Directors.

(3) To consider and if thought fit to pass the following (as an Ordinary Resolution):—

That as from the 16th day of Jany. 1957, Messrs. Ramdutt Ramkissendass be and are hereby re-appointed the Secretaries & Treasurers of the Company upon the terms and subject to the conditions contained in the draft Agreement submitted to this meeting and for the purposes of identification signed by the Chairman thereof and that accordingly the Directors be and they are hereby authorised to enter into an Agreement with Ramdutt Ramkissendass in terms of the said draft which has been approved by the Central Govt. in conformity with the provisions of Section 329 of the Companies Act, 1956.

(4) (As a Special Resolution)—That the regulations contained in the draft Articles of Association submitted to this meeting and for the purposes of identification subscribed by the Chairman thereof, be and they are hereby adopted as the Articles of Association of the Company in substitution for and to the exclusion of all its existing Articles of Association.

(5) (As an Ordinary Resolution)—That, as provided in clause of the said draft Agreement referred to in the foregoing resolution No. 1, Messrs. Ramdutt Ramkissendass and any associate or associates of theirs (as defined in subsection (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries & Treasurers, Manager, Agent, Secretary or Selling or Buying Agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance and booking of passages with shipping, air lines or Railway Companies for employees of the Company, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

(6) (As a Special Resolution)—That Messrs. Ramdutt Ramkissendass be and they are hereby authorised to provide the Company with suitable Office accommodation at Calcutta together with such office equipment as may be necessary for the business of the Company and is otherwise reasonable and the Company shall pay to Ramdutt Ramkissendass such portion of the rent and outgoings including depreciation and repairs paid or suffered by Ramdutt Ramkissendass as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation and office equipment so provided.

(7) To appoint a Director in place of Sir Badridas Goenka, who ceased to be a Director under Article 382 of the Companies Act, 1956, and if thought fit to pass the following resolution of which a special notice as required by Sections 261 and 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed hereto as required by Section 173 of the said Act.

"Resolved that pursuant to provisions of Sections 261 and 281 of the Companies Act, 1956, Sir Badridas Goenka, who ceases to be a Director under Article 382 of the Companies Act and who has attained the age of 74 years, be and is hereby re-appointed a Director of the Company with effect from 14-1-57 and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

(8) To appoint Directors in place of Mr W. H. S. Michelmore and Mr. J. L. Esplen who retire by rotation and have offered themselves for re-election.

(9) To appoint Auditors and fix their remuneration.

By Order of the Board,
RAMDUTT RAMKISSENDASS,
Secretaries.

Calcutta,
18-9-57.

Note:—(a) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(b) The transfer books of the Company will remain closed from 18th October, 1957 to 28th October, 1957, both days inclusive.

ANNEXURE TO THE NOTICE.
Explanatory statement as required by Section 173 of the Companies Act, 1956.

In respect of item No. 7 of the notice of the Annual General meeting it is notified that Sir Badridas Goenka ceases to be an Ex-officio Director and is eligible for re-appointment, has attained the age of 74 years—hence he cannot be appointed as a Director of the Company except by a special resolution in respect of which a special notice has been given in accordance with the requirements of Sections 190, 261 and 281 of the Companies Act, 1956. The Company has received such a special notice from a member notifying his intention to move the resolution as set out in the said item. Sir Badridas Goenka has been a Director of the Company since its very inception and it is most desirable that the Company should continue to avail of his experienced guidance.

By Order of the Board,
RAMDUTT RAMKISSENDASS,
Secretaries.

Tax-Dividend Taxable.

BANKS

H indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

IMPLICATIONS OF THE NEW IMPORT POLICY

DRASTIC REORIENTATION OF SECOND PLAN NECESSARY

THE Government of India's import policy for the half-year, October 1957 to March 1958, announced a few days ago, has been greeted by a sharp and sudden rise in the prices of imported commodities, especially consumer goods. But neither the policy nor the reaction in the markets is altogether surprising. For a country which has long been spending well beyond its means, drastic import cuts of the sort that have followed one another in dismal succession over the past 16 months or so have seemed inevitable. With the foreign exchange reserves down to around Rs. 350 crores and with the prospect of getting large-scale aid from abroad still highly uncertain, the framers of the new import policy have had a thankless task to perform. It cannot as yet be said that they have performed it well or wisely, for much will depend on the promptness, efficiency and flexibility of the licensing administration which will have to deal with applications for import licences. Already serious misgivings exist in many sectors of trade and industry about whether procedural complexities will permit a smooth inflow of goods, especially industrial raw materials and equipment. The Government has given the assurance that it intends to help maintain industrial production in spite of the foreign exchange shortage, but the experience of importers during the past three months—when a policy foreshadowing the present one was in force—has not been uniformly happy. The indications are that the administration is acquiring new and far-reaching discretionary powers in the granting of licences which will redound to the disadvantage of industry and the consumer. Such growing arbitrariness in the conduct of economic policies can hardly be welcome, however much it may appear to be justified by the exigencies of present-day planning.

*

The severest of the latest import cuts affect consumer goods, and in this aspect the policy is in tune with the general tenor of the second five year plan. The Government claims that the more essential of these goods will still be imported, although in smaller quantities than before; but the distinction between which goods are essential and which are not must necessarily to some extent be an arbitrary one, based on personal predilections. It is open to question whether the commodities of which the import has now been banned are less essential than those which are still to be allowed; for instance whether, even after allowing for the timeless quality of Indian life, watches can be considered less important than betel-nuts. Other anomalies of a similar nature exist in the import policy for consumer goods, but it is presumably hoped that they will vanish as domestic industries expand and diversify their production. Some may doubt whether this expansion and diversification will actually take place, and, more important, whether the quality of the domestic products will ultimately be good enough to justify the sacrifices now demanded of the consumer. The disappointing experience with automobiles in recent years suggests that however great an interest the Government may feign in the efficiency of local manufacture, that interest rarely extends beyond issuing pious exhortations. It is to be hoped that the way the automobile industry has developed is not to be regarded as foreshadowing the way Indian consumer goods industries generally may be expected to develop in the future.

No estim[illegible] how much [illegible] pects to save [illegible] a figure of [illegible] been mentioned [illegible] Finance Minister Mr T T Krishnamachari has made pains to [illegible] import that consumer goods particularly the less "essential" ones accounted for only an insignificant proportion of the total foreign exchange expenditure. Even if this category of goods has now suffered severe restrictions, the saving on that account cannot be much. The restrictions on industrial requirements have been officially described as "light"; in view of Mr. Krishnamachari's assertion that foreign exchange expenditure has been heavily concentrated on capital goods, industrial raw materials and food, it is permissible to suspect that total expenditure abroad will still be very large. An official spokesman has indicated that up to the end of 1958 at least, if not up to the end of 1959, capital goods will continue to arrive at "a fairly substantial rate." Whether the heavy deficit in the balance of payments which India has been running will now be closed seems, therefore, to be extremely doubtful. Increasing resort to bulk imports in certain cases, and the partial restoration of licences for established importers, might be expected to make for greater efficiency in securing goods from abroad; but the saving in foreign exchange resulting from the increase in efficiency achieved thereby is small in relation to the size of the total deficit.

*

There is still inadequate recognition of the fact, in official circles, that the foreign exchange crisis which has resulted from the huge inflow of imports in recent years is due primarily to the over-ambitious nature of India's development schemes. The second five year plan is based on certain assumptions concerning resources which began to be proved wrong even before its first birthday; but there has been a curious hostility to the idea of admitting the errors and adjusting the plan accordingly. It is not the wisdom of hindsight alone that enables one to argue that the present difficulties need not have arisen, at least not in so acute a form. Nor is it merely a deplorable form of conservatism which suggests that nations, like individuals, should learn to live within their means unless they are prepared to put themselves out to secure resources from abroad. Before India had assumed the large import commitments which now baffle her and affect confidence in her international trading stability, she could well have taken positive measures to strengthen the competitive position of her export industries and to attract foreign investment. It is to these aspect of the problem that too little attention is still given. Three of India's biggest foreign exchange earners—jute goods, tea and cloth—face handicaps in world markets which need never have developed if more realistic policies had been followed. Taxation, labour welfare legislation and measures effectively hampering rationalisation and modernisation have, on the one hand, brought about an increase in the cost of production of these industries; and, on the other, prevented them from moving on to the higher levels of efficiency which might have enabled them to cope with the steadily growing competition in world markets. It is true that cloth exports have risen, but the congratulations which the Government has lately been inclined to shower upon itself on this account are unwarranted. If the cotton textile industry had been allowed to modernise and expand freely, not only would the increase in exports have been achieved but the domestic consumer would have been better off though being able to buy his cloth much more cheaply. The increase in cloth exports is the result of a fiscal perversion which is otherwise causing serious harm to the industry and which could, with advantage, be abolished forthwith.

The problem of attracting foreign investment is far more intractable than that of increasing exports, but it cannot be said that the Government has yet done much about it. If anything, the trend has been in the opposite direction, in that this year's Budget, the compulsory deposit scheme for company profits and reserves, inflation and labour unrest have created much anxiety among investors abroad. The outcome of Mr. Krishnamachari's tour of north America and Europe is still highly uncertain; but the indications are that private, as distinct from official, investment will remain restricted—and highly selective as to the fields of economic activity it may enter. Mr. Nehru, who has long been an advocate of aid without political strings attached, might well reflect that because of his Government's policies, the motives for assisting India are steadily becoming less economic and more political in the eyes of the world at large. Whatever technical or financial aid this country may get from official or semi-official institutions in the United States and elsewhere, the fact remains that the private investor abroad, whose thinking is the surest reflection of the purely economic attractions of a particular country, is extremely reluctant to provide capital for India. It is his resources which need to be attracted more vigorously, and that can only be done if it is shown that progress with stability is the primary aim of economic policy. Import cuts such as have just been ordained are at best temporary palliatives for the orgy of overspending in which India has been indulging herself. Without a frank and drastic reorientation of the second five year plan, there is little promise of stability, nor much solace meanwhile for consumers, producers and investors.

FOOD PRICES AND DEFICIT FINANCING

THE high level of food prices continues to cause widespread anxiety. It is the most dangerous manifestation of inflation in the economy. Prices have gone up partly because of the Government's resorting to deficit financing to promote development; the rise is only natural considering the increase in the tempo of investment expenditure. Between May 1955 and June 1957, the general index of prices has moved up at an annual rate of 13 percent and that for food articles by 27 percent. There is now a wider appreciation of the fact that unless food prices are stabilised at a lower level, it will be difficult to stop inflation; and that food constitutes the most important aspect of planning. The planners have appreciated its significance; but although seven or eight committees since the Famine Enquiry Commission of 1944 have dealt with various aspects of the problem, a solution seems distant. The Government's vacillating policy is partly responsible for this state of affairs. At one stage, it said that its aim was to attain self-sufficiency by March 1952. The aim was not achieved, but since then the Japanese method of rice cultivation has become an important part of the programme for food production. Stress has also been laid on the community development projects, but the Union Community Development Minister now confesses that they have not evoked enough enthusiasm in the rural areas.

*

In reply to the questionnaire issued by the Foodgrains Enquiry Committee, the Federation of Indian Chambers of Commerce and Industry say that some of the Government's schemes have come into conflict with one another and "most of them petered out into mere slogans". It adds: "If the food problem still continues to be with us, it is because of the lack of [illegible] and round campaign for [illegible] and for changing the food habits [illegible] Ther

has been frequent criticism that official estimates of the increase in production are on the high side. The Government claims that rice production has gone up by about 2 million tons in 1956-57 compared with the previous year. In spite of this, prices have steadily risen. The Grow More Food Enquiry Committee pointed to a number of defects in the method of collecting agricultural statistics. The Federation is of the opinion that it is not enough to have figures of agricultural production but that it is also necessary to have statistics on marketable surplus, "because it is the latter that is of crucial relevance in assessing the movement of prices." About the reasons for the present rise in food prices, it says that it is unable to express any definite opinion. Assuming that the statistics available are correct, it appears that food production has gone up to 68.6 million tons compared with 65 million tons in 1955-56 and 66.6 million tons in 1954-55. Thus, while the population has risen from 361 million in 1951 to 380 million in 1956 (roughly about 5½ percent), food production has increased from 51.2 million tons in 1951-52 to 65 million tons in 1955-56 (about 25 percent). In addition, imports have continued. It may not be wrong to presume that the *per capita* consumption in the rural areas has gone up. This increase might have reduced the marketable surplus of foodgrains.

* * * *

There seems to be an element of truth in the Federation's deduction. According to the National Sample Survey, foodgrains account for a larger proportion of expenditure in rural than in urban areas. But the Federation does not believe that there has been large-scale hoarding by farmers and traders. "So far as the small farmers are concerned, it is indeed difficult to visualise how they could hold back stocks for long periods. As for the traders playing the rôle of hoarders, while it is a popular belief, it too overshoots the mark. Especially now, when there is control over credit, it is well-nigh impossible for traders to keep large stocks." This may be an over-simplification of the problem, in as much as the increase in money incomes has increased the holding power of cultivators. Furthermore, as many commentators have recently pointed out, hoarding is more a consequence than a cause of the inflationary trend in prices, even though it has increased inflationary pressures by reducing the marketable surplus and creating a shortage.

There is no immediate solution for the food problem. Stress must be laid on increasing production and on changing the food habits of the people. The Federation thinks that the Government should evolve a flexible policy for market operations under which foodgrains will be bought in large quantities to sustain minimum prices at a time when prices are falling and will be sold when it is necessary to arrest a rise in prices. But it is arguable that the fixing of minimum and maximum prices may tend to be arbitrary. A statistical survey of the actual cost of production in different areas would be too complicated a task; even if it were not, costs of production vary widely, so it is difficult to lay down a rigid pattern of prices. If minimum prices are too low, cultivators may not have an incentive to increase food production. If maximum prices are too high, consumers will suffer. The food problem is unlikely to be solved through any such policy. The long-term solution is to increase output at a rate substantially greater than the increase in population; in the short-term, deficit financing has to be regulated in accordance with the increase in food supplies. If this is not done, the spectre of famine and food scarcity will always be present.

BRITISH BANK RATE HITS U. S. STOCK PRICES

THE principal American business news of the past month is not to be found in the trade and industrial sectors, but in monetary developments abroad, says the monthly newsletter of the First National City Bank of New York. The increase in the British Bank rate from 5 percent to 7 percent was a momentous event, far more forceful and dramatic than had generally been expected. A major purpose of the move, and of the related steps simultaneously taken, is to check excessive spending and rising prices in Great Britain. Hence it was natural that world commodity markets should find sobering implications in the news. Evidently it was also an influence in the sharp decline in American stock prices. The direct effects on the American economy of the higher Bank rate can hardly be substantial, even though a check to spending abroad may limit American exports to some extent and may exert a moderately depressing influence on some world commodities. It may be observed that the average price of 22 basic commodities, calculated by the Bureau of Labour Statistics, is already about 9 percent lower than on 1st December 1956, and 36 percent lower than at the top of the Korean boom. This drop was from an obviously temporary peak, and has been withstood without business depression and without significant losses. Nevertheless, the new developments, reminding people that deflation can take place as well as inflation, have brought business conditions in the United States under [illegible] closer scrutiny. Looking ahead, some may see greater significance than before in the levelling out of defence and capital goods expenditures and the decline in manufacturers' unfilled orders.

In general, however, the trend of domestic business must still be considered roughly sideways in industrial activity and slightly upward in the total output of goods and services, measured in dollars. In real terms, the high plateau still persists. Business men are waiting for a clue to the character of autumn and winter business; so far neither an upswing nor a downturn has emerged as a dominant pattern. The brightest spot in the picture has been the marked rise in consumer spending. Newly revised data on retail sales show a 5 percent advance between April and August on a seasonally adjusted basis, following half a year of virtual stability. The recent increase—roughly equal to a $2,500 million boost in the annual rate of sales—has been somewhat greater in non-durable goods than in durables.

* * * *

Thus far, however, there is little indication that the spurt in retail buying has brought any substantial increase in orders reaching manufacturers, at least in the aggregate. Amid all the economic cross-currents and uncertainties, business men have been even more cautious than before in their buying and inventory policies. According to the latest official figures, new orders received by factories in June and July (seasonally adjusted) were the lowest for any two-month period in the past two years. Meanwhile, factory output and shipments have been sustained by drawing on order backlogs. In the first seven months of 1957, unfilled orders held by manufacturers were reduced nearly $5,000 million, or 8 percent below the record high at the start of the year.

Normally, the autumn upturn in actual production amounts to about 1.5 percent from August to September and 2.5 percent more from September to October, according to Federal Reserve estimates. In other words, the unadjusted production index might ordinarily be expected to increase 6 points between August and October. Failure to make such a seasonal advance would mean a downturn in the seasonally adjusted production index. Manufacturers' decisions on how much to step up activity this autumn—whether more or less than the usual seasonal amounts—will depend heavily on the flow of new orders. Reports for August and September are spotty and not particularly encouraging. The autumn inflow of new business at steel mills is under way but below expectations. New orders for machine tools dropped nearly one-fifth between July and August, while McGraw-Hill's tabulation of non-electrical machinery orders dropped about one-eighth. Copper markets are quiet again after a brief flurry in mid-September. Spurts of ordering have boosted backlogs in paper, paperboard, and plywood. Textile manufacturers and others, however, report generally quiet markets, and the petroleum industry notes that demand is below expectations.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, *Capital's* Index of Indian Industrial Activity shows a rise of 12.5 points for March 1957. Mainly contributing to the increase were cotton consumption, jute manufactures, steel ingots, cement, paper and electricity. Notes in circulation and cheque clearances also rose.

* * * *

Power Consumption in Calcutta.—Power consumption in Calcutta and its suburbs, which has been rising steadily for some years, showed a marked increase during the year ended March 1957. The number of units sold by the Calcutta Electric Supply Corporation to industrial and other consumers during the period totalled 1,710 million, representing an increase of 152 million over 1955-56. Industrial consumption was responsible for a large proportion of this increase. High-tension power, which is required by large-scale industries such as jute mills, paper mills, steel works and rolling mills, engineering workshops and chemical works, rose by 87 million units to 1,029 million units. Among these industries, the jute mills increased their consumption most—by 32 million units. Engineering workshops followed, with a rise of 24 million units. The number of industrial consumers increased by 26, as against only three in the previous year. Giving this information in his statement from the chair at the latest annual general meeting of the Calcutta Electric Supply Corporation Ltd.(a fuller version appears elsewhere in this issue), Sir Harry Burns says that the increase in demand furnishes clear evidence of the process of development and expansion of industry in the area which is served by the C.E.S.C. The demand for power from small industries increased from 99 million units in 1955-56 to 106 million units in 1956-57. Sir Harry feels that the restriction of imports, which is partly designed to foster local industries, has led to expansion in this particular field. The establishment of large-scale industries, as proposed in the second five year plan, will promote the spread of small industries, some of which receive their raw materials from, and work exclusively for, larger concerns by manufacturing components. Referring to the increased consumption of the jute mills, the chairman says that for some time they have been modernising as rapidly as they can considering the availability of machinery and the need to ensure the minimum disturbance to the labour force. "The best wishes of the board are with the jute mills—one of India's most vital industries—for a successful outcome of the steps now in train to place the industry on a firm and lasting basis and thus enable it to meet competition in world markets," he adds. Demand for power from domestic and commercial sources rose last year, in keeping with the general trend, to 241 million units from 226 million units; that from public waterworks, sewage pumping and municipal services also increased. Sir Harry refers at some length to the arrangement for obtaining power from the D.V.C. The grid substation was opened on 9th June, 1957, in Howrah, and as Dr. B. C. Roy, Chief Minister of West Bengal, stated in his inaugural speech on the occasion, it is "a unique example of co-operation between the private sector and national enterprise". This interconnection with the Corporation's supply system, says Sir Harry, will make available within a period of less than three years 100,000 kVA of power, and four 132 kV circuits from the D.V.C. systems will feed power into the Calcutta area. "Although the C.E.S.C. and D.V.C. systems have only recently been inter-connected, the company has worked very closely with the D.V.C. for some years now and I have great pleasure in saying that we have during this time come to have a high regard for their standard of construction, operation and maintenance."

* * * *

Cement Targets and Production.—The production target for cement in the second five year plan is 16 million tons. Some producers consider it unrealistic, especially as the present capacity of the industry is rated at 6 million tons. The latest to voice the doubt is Mr. J. Dalmia, chairman of Orissa Cement Ltd. Speaking to shareholders at the latest annual general meeting (a fuller version of the speech appears on a later page), he has said that the target "appears to be on a very high side." It is expected that the industry will be able to expand its capacity by the end of the plan to 9 million tons. Even so, Mr. Dalmia feels that the "production may be quite sufficient for the country's requirement for the time being." Referring to the activities of his own company, he says that the cement plant has been expanded to more than double the original capacity. The new plant has started functioning from the beginning of this year. Some initial difficulties still remain, but they will be overcome within the next few months. The company has been granted a licence by the Government to produce slag cement. This production depends on the slag which will be available from the Rourkela steel plant, and the company has yet to obtain information on the final composition of the slag to be supplied. It has, therefore, not been able to place firm orders with suppliers of machinery. A refractory plant with an annual capacity of 80,000 tons of refractories and 8,000 tons of mortar is being put up in collaboration with a German firm. Among the items which the plant will produce are silica and basic refractories such as magnesite and chrome magnesite refractories, most of which are at present being imported. Production will begin in a few months' time, and sufficient provision has been made for the future expansion of the plant. For the manufacture of dead burnt magnesite, the most important raw material for basic refractories, the company, in partnership with another firm, will be setting up a plant in Salem, south India. Mr. Dalmia makes some notable comments on the pricing policy for power generated from the Hirakud project. The increase in steel production in the area opens up possibilities for new industries to start in Orissa, but this will not be possible until cheap power is available. If the Orissa Government does not revise its rates for Hirakud electric power, which are higher than even thermal electric charges, the small established industries may be inclined for economic reasons to shift themselves to more suitable places, although the existing law on industrial development has so far prevented them from doing so.

* * * *

A Better Year for the I.F.C.—The working of the Industrial Finance Corporation during the year ended 30th June, 1957, has been more satisfactory than in the previous year. Its gross profit has risen from Rs. 32.68 lakhs in 1955-56 to Rs. 43.06 lakhs. Whereas there was no profit left for paying a dividend in the previous year, the Corporation has now earned a net profit of Rs. 11,25,000, which enables it to pay in full the amount of the guaranteed dividend on its paid-up capital without getting any subvention from the Government. Speaking at the Corporation's annual meeting in New Delhi, Mr. K. R. K. Menon, chairman, has said that during the nine years that the I.F.C. has been functioning, it has had to ask the Government for a subvention every year, except in 1953. (A fuller version of the speech appears on another page.) The total amount of loans and advances has shown a marked increase from Rs. 14.24 crores to Rs. 21.90 crores. With a steep increase in investments, Mr. Menon thinks

that the Corporation will be in a position hereafter to stand on its own legs, without calling upon the Government for help to meet the guaranteed dividend on its share capital. There has been a fall in the total volume of loan applications. One of the main factors contributing to this decline is the difficulty experienced by industrial concerns and entrepreneurs in securing foreign exchange for importing capital goods. The rise in the prices of foreign machinery is another important factor which has led to the decline in the volume of loan applications. The figures given in the annual report suggest that recoveries of interest and instalments of principal during the year have on the whole been very satisfactory. "We have refrained from exacting our pound of flesh in the case of those defaulters who we considered, after detailed examination of their financial affairs, deserved liberal and sympathetic treatment at our hands." A noteworthy step which the Corporation has taken as an experimental measure is to nominate non-officials to the boards of directors of a limited number of companies that have been given loans. This has become unavoidable as, with the rapidly growing number of loanee concerns in the Corporation's books, it has arrived at the stage where it is proving extremely difficult for its own officials to function as its representatives on the boards of directors of all, or even a majority of, these concerns. Conditions in the money market have become tighter, so the I.F.C. has been obliged to raise the rate of interest on its loans from 6 percent to 6½ percent since 23rd April, 1957. A new field of activity which the Corporation is likely to enter this year is the guaranteeing of deferred payments by importers of capital goods who are able to obtain this concession from foreign manufacturers. Some exporters abroad have asked that the deferred payment arrangements should be guaranteed by an institution like the I.F.C.

* * * *

Competition in General Insurance.—In his chairman's speech at the annual meeting of the General Assurance Society Ltd. (extracts from which appear on a later page), Mr. B. L. Jalan refers appreciatively to the effects of the new code of conduct introduced in the general insurance industry. One of the main features of the code is that premiums have to be realised before risks are accepted. Mr. Jalan feels that this provision has been of great help and has done much to prevent malpractices. But he adds that conditions generally remain "fiercely competitive", and it may be some months before operations become normal and business-like. In marine insurance, Mr. Jalan points out, competition takes the form of rate-cutting as there are no fixed tariff rates, and the loss ratio as a result is high. The claims ratio for all Indian insurers has risen from 66 in 1954 to 72 in 1955, which is "an alarming position." These companies have suffered a net loss of about Rs. 19 lakhs in their marine insurance during 1954 as well as 1955, and Mr. Jalan fears that the position since then has worsened further. He feels, therefore, that the General Insurance Council should do something about it. Turning to the affairs of the General Assurance Society specifically, the chairman points out that all three departments of the company have shown a surplus on revenue account "without affecting our reserve position which has been maintained at the old level." Prevailing conditions in the market are "extremely competitive", but the fire department is better placed than the others judging by its loss ratio. The company has therefore continued to concentrate on the activities of this department, while following a conservative underwriting policy in its marine and miscellaneous business.

* * * *

High Cost of Cigarette-making.—In his address from the chair at the latest annual general meeting of the Imperial Tobacco Company of India Ltd. (a fuller version appears on a later page), Mr. G. H. J. Clarke has expressed anxiety over the rising cost of production which, together with the increasing rates of direct and indirect taxation in the country, has made the profitability of his concern less certain than it was a year ago. The value of sales increased by 6 percent during the trading year ended March 1957, but it did not match the volume of sales due to a tendency among consumers to turn to the company's lower-priced cigarettes. As the cost of production has been increasing due to various Central and State taxes on the raw materials and the finished product, it is possible that cigarette prices may have to go up because of them, and in that case, Mr. Clarke fears, the consumer may "turn away from cigarettes to goods less heavily taxed." He mentions specifically the increased Customs duty on imported unmanufactured tobacco, the enhanced excise duty on unmanufactured tobacco other than flue-cured and higher duties on paper and paper board as the factors contributing to the increase. Other contributory factors include higher salaries, wages, freight and selling expenses. Referring to the lower net profits for the trading year under review, Mr. Clarke pinpoints the ever-increasing rates of company taxation as the main cause for it. Apart from the usual taxes at the existing and enhanced rates, a fresh liability in the shape of the wealth tax had to be met, and these together required Rs. 16½ lakhs more than in the previous year. A redeeming feature however was the rising volume of sales, and the trend has been continuing during the current trading year. The directors have, therefore, declared an interim dividend of 2 percent free of income tax for the year ended March 1958, but Mr. Clarke asks shareholders not to take the declaration of this interim dividend as a firm indication that the final results for the year will justify a total distribution at the same level as for the year ended March 1957. The current foreign exchange crisis has also affected the company's development plans. It may have to abandon, or at least to shelve, a plan for the establishment of a new factory to increase the company's production capacity. It is anticipated that demand in a few years will be greater than the existing productive capacity of the company will be able to meet. "Factories are not built in a day, and there may be a serious shortfall in supply in the visible future if the exchange position does not improve within a year or two." Mr. Clarke says.

* * * *

Better and Cheaper Bicycles.—The bicycle industry has made significant progress during the past few years, and has come to occupy an important place among light engineering enterprises. Many producers have managed to pass on the benefits of expansion to consumers by reducing prices. In spite of an increase in production costs and overheads, in the majority of cases prices have been reduced considerably. In his speech at the annual general meeting of the Cycle Manufacturers Association of India, Mr. S. K. Sen, president, has said that the industry has justified the protection granted to it by increasing production and improving quality. As against a target of 500,000 bicycles at the end of the first five year plan, production amounted to 420,000 in 1955-56. As this estimate has been made "from such statistics as could be obtained at the time when all the units were not submitting their production returns," Mr. Sen says it may be assumed that the plan target was fulfilled. The Planning Commission first fixed the target for the second plan period at 1.25 million bicycles and later raised it to 1.5 million. It is reported that the Government is thinking of increasing the target further to 2 million bicycles—1.5 million for the large-scale and 500,000 for the small-scale sector of the industry. Self-sufficiency in components is still to be achieved. Certain raw materials and tools also are not readily available. "The tool production capacity within the country is as yet extremely limited and one of the grave problems of the industry is to feed the factory with the requisite tools. Although all the units in the industry are naturally making considerable expansion in their tool rooms attached to individual factories, the want of an ancillary tool producing industry is keenly felt. I feel that the attention of the Government has to be drawn to this fact and till such time as tools in adequate quantity are available within the country, a realistic policy of imports in the case of tools would be essential if production in the country has to be maintained, and increased in accordance with the targets set up in the second five year plan."

THE ART OF ADVERTISING

THAT advertising is an art, or may be made one, few reflective people in the present day will, if pressed for an opinion, deny. It is a science, too, as well as an art, and in claiming for it this dual status, the following considerations are perhaps not out of place. Science, in its broad elemental signification, simply means knowledge, and the inner meaning of our old friend *scio* applies, as will be seen, in a double sense to advertising. For we *have to know* and we have to *make others know*. The first is our science, the second is our art. One hesitates about dogmatising on a subject about which there are no available statistics; but it is, perhaps, safe to say that at a moderate computation the amount of money expended annually in the whole world in publishing and producing advertisements represents a sum equal to the expenditure on account of all other publications due to private effort. The vast enterprise connected with the printing of the Bible, all Government publications, parliamentary blue books, and indeed the whole mass of heterogeneous printing which looms so largely in the budgets of every civilised country, fall within the reservation already stated. As these papers, however, are written with a view to give our readers a thoroughly practical grasp, as far as possible, of a by-no-means uninteresting subject, it is unnecessary to enter upon any computation which must, perforce, be more or less purely speculative. Nor, for the same reason, is it necessary to treat the historical and archaeological sides of advertising, two phases of the subject upon which a very great deal might be written. People who would seek in the environment of modern civilisation the rise and progress of the advertisers' art must surely forget the Chinese who, as we all now know, discovered America, and, apparently, to some extent, colonised the "New World" ages before either Christopher Columbus or Americus Vespicius was born or thought of. Moreover, quite recently, in the investigations which are being carried out at Herculaneum, a column has been found in the streets of that buried city which points to the existence of the "advertising agents" long long before the disruption of the Roman Empire.

Without Prejudice

ABSENCE WITHOUT LEAVE

BUS CONDUCTORS HELD UNDER PREVENTIVE DETENTION ACT

(FROM OUR LEGAL CORRESPONDENT)

CONTINUING this short series of comments on industrial cases, we now come to one which for sheer hardihood on the part of the claimants for relief takes a lot of beating; one in which, also, the ideas of a First Labour Court, Bombay, as to what constitutes the "principles of justice, equity and good conscience" on which it has to base its decision are, it is respectfully submitted, completely beyond the comprehension of the law's fictional legendary character, "the ordinarily reasonable man."

A gentleman employed in a subordinate capacity on the usual monthly basis has the misfortune to be arrested. In the event, he, for 12 months, goes to jail. Shortly after his sojourn therein begins, he puts pen to paper. He writes to his employers pointing out the regrettable but indubitable fact that, being in jail, he is unable to report for duty; and adds the modest request that, as his absence from work is due to circumstances beyond his control, he may be marked "present" at work and retained on the muster roll until such time as he may be able to be not only spiritually but physically "present" in person. As the employers incline to the popular prejudice that in order to do his work satisfactorily a workman should be present at it in the flesh and as they also hold the not altogether uncommon view that they cannot be expected to continue to have the names of employees absent without leave on the muster roll indefinitely, they decline to accede to this request and fill up this particular employee's post, treating him as having abandoned his employment. The employee thereupon makes application to the labour court for reinstatement with full compensation.

Now this matter of absence without leave is of some importance for employees not coming within the scope and protection of the Industrial Disputes Act—officers and those not engaged in manual or clerical work—so we will digress a little into the ordinary law of the land. While it is a fact that mere lateness or short and trivial absence from duty, even a brief absence caused by, say, an occasional but not habitual alcoholic burst, would not be a ground for summary dismissal, yet it is the general duty of an employee to give due and proper attendance, maintaining the customary hours of work or the usual hours of business; in short, to give reasonably punctual attendance to duty; and there is no doubt that a prolonged absence, without permission, from duty, not being caused by illness, such as would affect the due performance of the employee's duties or injure the employer's business, would be good ground for dismissal. Moreover, where an employee is absent without leave, the onus of proving a valid justification for his absence is on the employee; and as, even in these tolerant days, it is still the duty of the citizen so to order his affairs as to keep out of jail, an employee to whom the Industrial Disputes Act does not apply would not be discharging that onus by showing that his prolonged absence was due to his actually being in one.

* * * *

But we are dealing with a case to which the Act does apply and that, as usual, is a very different kettle of juridical fish. Let us go into the actual facts. The two workmen were bus conductors. They were arrested by the police on 19th April, 1955, and released on bail on 25th April, 1955, but as soon as they came out of the court premises they were detained under the Preventive Detention Act. On 27th April, 1955, they wrote a letter signed jointly by them to the employing company stating that they had been arrested by the C.I.D. and removed to jail and requesting that they should be marked "present". The undertaking treated them as having abandoned their employment as provided in the relevant standing orders. The two men were released after 12 months and reported for work the next day, but were informed that as they had absented themselves without permission or intimation for a continuous period of more than a month from 18th April, 1955, onward, they were deemed to have abandoned their employment under standing order 26(1) and (iv) and were no longer employees of the undertaking. The case of the two men in their applications to the labour court was that they had not absented themselves without "previous permission or intimation" and had not abandoned their employment. They had written a letter through the jail on 3rd May, 1955, that they were detained under the Preventive Detention Act and unable to attend duty. Their services, they stated, had been terminated in order to victimise them for their trade union activities.

The learned labour judge then applied his mind to the canons of "justice, equity and good conscience" which constitute the ten-year-old basis upon which the administration of industrial law now rests under the Act, and came to the conclusion that by writing their joint letter from jail in which they had stated that as they were confined therein they should be marked "present", the two bus conductors "had done whatever they could under the circumstances and so could not be blamed for not getting permission to remain absent, that therefore the reason given by the undertaking, namely, that they remained absent without permission or intimation for more than one month—in fact it turned out to be more than a year—was not true and that the (workmen) did not want to abandon their employment or wilfully remain absent."

The learned judge held further that as the act of the employees in remaining absent for more than a month would amount to misconduct under standing order 20(f), the undertaking should have issued a show-cause notice and held an enquiry as provided in standing order 23 and, as the undertaking had not done so, the termination of the services of the workmen was clearly illegal. The judge therefore directed the undertaking to re-employ them on posts similar to those held by each one of them before they went to jail in April 1955 and to pay each one of them three months' wages, inclusive of dearness allowance as compensation. The employers appealed against this judgment which is not surprising. What is surprising is that the workmen were not satisfied with the judgment either and they appealed also on the ground that the amount awarded as compensation was inadequate. Understatement is preferable to exaggeration. Wherefore—and with great respect—one will only suggest concerning this judgment that as an exemplification of the principles of "justice, equity and good conscience", it seems not altogether a satisfactory one.

The industrial court, Bombay, allowed the appeal of the company and set aside the order directing it to re-employ the workmen and to pay them compensation. The appeal filed by the workmen was dismissed. The point about the non-framing of charges, the not holding of an enquiry and that the rules of natural justice had been violated was disposed of substantially by a passage in a judgment of the Supreme Court in another case[1]. Their lordships in deciding that case observed: "The ground of discharge is the continued absence of the employee and his inability to do work, and it is difficult to see what purpose would be served by a formal charge being delivered to him and what conceivable answer he could give thereto. The order of the Appellate Tribunal is manifestly erroneous and must be set aside."

As to the merits of the case, the industrial court said: "As the respondents were admittedly detained for a year, it is clear that the State Government and the advisory board were satisfied that the detention of the respondents was necessary for the purposes for which such detention is permitted by law...It would be extraordinary to suppose that in such a case the undertaking which is a public body could have been expected to mark the respondents present for a year as requested by them or even to grant them leave.....It seems to me that it is against every principle of justice, equity and good conscience to require that an employer should mark 'present' or give long leave to an employee who has been detained for a year in the interests of security of India, and to keep the post of such a person vacant."

WHETHER it is only "a hunk of iron almost anybody could launch" or something "enough to scare the hell out of" men, the Russian satellite now going round the earth is further, grimmer, evidence of the great strides the Soviet Union is making not merely in technology but also in fundamental research. This is an aspect of scientific work often apt to be ignored, especially in countries anxious to industrialise in a hurry, for technology is what they want here and now. This is only to be expected, but beyond a certain point even technological advance is impossible without unspectacular theoretical research going on all the time in some quiet laboratory. India is rightly proud of the chain of national laboratories she has built up in recent years, and six million tons more of steel is in no way more important, on a long view, than the researches presumably being carried out by India's scientists. First the I.C.B.M. and now the first "baby moon". Between them they have created the impression, which hereabouts has been expressed in so many words, that Soviet Russia is probably far ahead of the United States in particular and the West in general. It is foolish to be dogmatic in these matters, even if there is any way of measuring knowledge in a field largely shrouded in secrecy. Both the U.S.A. and the U.S.S.R. have been known to be working on ballistic missiles and artificial satellites, and it should surprise nobody if the announcements made from time to time by one party or the other should later be found to have said much more—or much less—than the whole truth. Do I bring superstition into science if I suggest that there may be an element of luck too in it all? Some will remember the very quick succession in which three or four petroleum producers discovered something new which gave your car all sorts of additional virtues hitherto unknown, perhaps unmissed. Scientific discoveries often work that way, and the wise man waits until the race is over before proclaiming the champion. There are foxes among nations, we know, but there are hedgehogs too.

* * * *

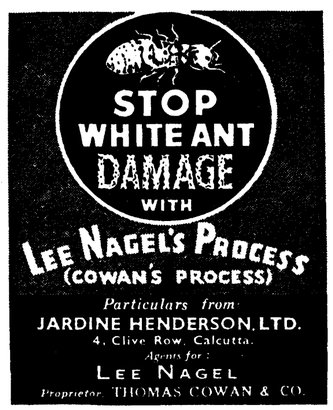
The United States can now say what it likes about the launching of the first satellite being no indication of Russia's ability to win a modern nuclear rocket war—the world is likely to regard it as being just that. In fact, I see that the Soviet Government newspaper *Izvestia* has already taken advantage of the situation to announce that the "Soviet people have a gigantic might at their disposal". That sort of thing may be all very well for bolstering national confidence, or even impressing those foreigners who do not know any better. But it is certainly misrepresenting the true facts of international power which, as the case of Germany showed, do not depend on any single wonder weapon. What does decide them is the relative industrial strengths of the contesting nations. There is no doubting the size of the Soviet Union's heavy industry; after all, almost two generations of Russians have sweated and starved to build it up. It may even be approaching the size of that of the United States, although I believe it has some considerable way to go yet. The point is that Russia's war potential is not backed by the vast collection of secondary industries which the United States can muster, and which, as we saw in 1942, can be expanded and switched to armament production in no time at all. The real contrast in power can only be made by comparing overall industrial production in the two countries—civilian populations must be fed and clothed even in wartime—and that shows that the Soviet Union's economy is still only one-third the size of the United States'. In fact, it is still only about twice as large as that of Britain, whose population is only one-quarter the size; and is probably surpassed by the output of Britain and West Germany added together. Russian military strength has reached its present formidable proportions only because it has been able to keep the ordinary worker at a standard of living which is little higher than that of the most backward country of Europe. There is no guarantee that it will be able to go on doing so indefinitely. The real test of Soviet communism will come when the Russian people begin to demand more of the fruits of their own labour; then it will be not how quickly it can build and launch earth satellites or inter-continental rockets, but simply how well it can keep pace with the needs of its own proletariat.

* * * *

As the deputed emperor of the story found out, it is not always safe to argue with children. Accounts in the newspapers do not indicate wholly clearly that Mr. Krishna Menon did very much better in his recent encounter on TV in the United States with two young men and two young women. If the movies are any guide, American youth must be something of a problem even to American parents: foreigners are to be forgiven for being a little more rattled, as Mr. Menon must have been more than once. There is a widespread tendency in this country to accept its own assumptions on certain questions as self-evident. That elsewhere exactly contrary notions are regarded exactly as obvious and incontrovertible takes debates to a standstill or a stalemate not long after they have been joined. I am not thinking only, or even chiefly, of Kashmir, on which Mr. Menon said little that was new. His dig that the study of Fine Arts somehow disqualified his questioners from having a scientific approach to problems was less than brilliant, and his enunciation that analogy is not argument was by no means effective because he himself used not a few analogies, hoping to pass them off as arguments—a fact the students did not omit to point out promptly. Mr. Menon's young questioners, whom he charmingly addressed as "my dears" more than once, must also have been mystified by the statement that foreign aid was "necessary, very necessary, but not essential" for the plan. It is to be hoped that Mr. Krishnamachari is being a trifle franker with the people he is speaking to. It is not, however, to dispute any of Mr. Menon's points that I started writing this. The object is rather to suggest that for even so colourful and telling (perhaps telly-ing too) a personality, arguments with four intrepid young American college students may be a hazardous business. Mr. Menon was conscious of the additional adult audience, and it may yet be true that the chances of any good coming out of public relations of this sort are far outweighed by the risks involved.

* * * *

The prospects of victory in Britain's next general election has injected some realism into Labour Party thinking. And not before time. When six years of opposition have not produced any dynamic policies to succeed those of 1946, the least that might be expected is that they should have taught the futility of persisting in mistaken ones. For those Indian socialists who look to Labour for their ideas there is an important lesson in the fact that nationalisation has had to be abandoned, and by almost unanimous public approval. The proposed alternative—the purchase of industrial shares on the open market—need not be taken too seriously I fancy. Governments that dabble in equities are apt not only to lose their taxpayers' money, but to lay themselves open to all sorts of political risks as well. A future Labour Government would serve itself and its electorate best by concentrating on making private enterprise efficient—by improving the legislation against monopoly, for example—rather than continuing to associate itself with the cumbersome organisation, the unprofitable service and the comfortable appointments for retired generals and admirals which is what the British voter nowadays always thinks of when State ownership is mentioned. A future Labour Chancellor is going to have quite enough on his hands dealing with Britain's chronic economic difficulties, which the first two post-war Labour Governments did so much to intensify with their socialistic measures and which their Conservative successors seem to have been powerless to cure by any means at all. But judging from the number of new welfare burdens Labour intends the public exchequer to shoulder, it is going to have as little success with inflation as any other British government since the war. There is the possibility that once in office, Mr. Gaitskell will show himself as impatient with past party commitments as Mr. Attlee was—Mr. Bevan has already revealed most promising tendencies in that direction by his remarkable somersault on the hydrogen bomb question. But whatever Labour does, once it is back in power it would do well not to forget why it has been put there in the first place—that is, not because the electorate likes it, but because it wants the Conservatives less. It seems to me that the best hope for the future might yet be the recent by-election gain in the Liberal vote. There is a fair chance that it will be this party which will hold the balance in the next British Parliament; whichever of its larger rivals is returned to power.



* * * *

What with the price of whisky and the danger of decapitation from locally-made razor blades, there is no need to dwell on the difficulties which nowadays face the foreigner living in India. But, apparently, his worries are not over even when he decides to leave. We are all aware of the damage an over-zealous tax inspector can do before that all-important clearance certificate is safely secured. But how much worse it would be, for example, if the authorities in Bombay refused to accept a clearance obtained in Calcutta and made the homebound traveller go through the whole business again before they allowed him to leave from that port. It sounds far-fetched, I know; but something rather similar seems to have happened to one well-known ditcher who sailed from Bombay on retirement a few weeks ago. He writes to say that the Bombay Customs refused to recognise the jewellery permits issued to him by the Reserve Bank in Calcutta. Passengers who have more jewellery than the value allowable, he discovered, must have the valuation done in Bombay and then get their permit from the Reserve Bank there. If there is any logic in this, it certainly escapes me. Is there, perhaps, some doubt in the minds of the Bombay Customs authorities about the competence of their fellow civil servants employed by the Reserve Bank in Calcutta? Or is this another inexplicable whim of a service which—or so the joke goes—when approached once for permission to bring a Lancashire boiler into the country, wrote back asking the importer to send a sample? While this odd state of affairs lasts my correspondent advises that any intending passenger with more jewellery than the value allowed should arrange to get to Bombay three days before his steamer sails, have the valuation done there, and then see that he gets his permit from the Reserve Bank in that city. This, it seems, will have to do instead of an official warning, because certainly none was given to him.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

FURTHER INCREASE IN DEMAND

CONTINUED DEVELOPMENT AND EXPANSION

SIR HARRY BURN'S REVIEW

The Sixtieth Annual General Meeting of The Calcutta Electric Supply Corporation, Ltd., was held on 26th September, 1957 at Victoria House, Vernon Place, Bloomsbury Square, London, W.C.

Sir Harry Burn, K.B.E., A.C.A., the chairman presided.

The following is his statement, which has been circulated with the Report and accounts:—

It is with deep regret that I have to record the death on April 26th last of Sir James Donald who had been a member of our Board since 1929 and was its Chairman for the period 1943 to 1954. Sir James rendered outstanding services to the Company and to these I paid our tribute in the 1954 Review when referring to his retirement from the Chair. His experience and wise counsel have been of great value and as a friend he will be sorely missed by all of us who knew him.

Change of Accounting Period

The Report and Accounts cover the period of fifteen months ended the 31st March, 1957. Hitherto the Annual Accounts have been made up to the 31st December of each year and the last Accounts so presented to Stockholders were for the year ended 31st December, 1955. The Government of India under Section 37 of the Indian Electricity Act of 1910 have brought into force Rules which now make it obligatory for our Accounts to be made up to the 31st March of each year. To conform with these Rules for the year now current and ending on the 31st March, 1958, it has been necessary to make up Accounts covering the period of fifteen months from 1st January, 1956 to 31st March, 1957.

Thereafter the Annual Accounts will be made up to 31st March in each year. All Stockholders were advised by a circular issued on the 12th April, 1957, of the change in the date of future Annual Accounts and of the consequent changes in the dates of the dividend payments.

The period of fifteen months now under review furnishes evidence, in the increase in demand, of the process of development and expansion which has been the subject of reference in previous Reviews. In order to make available comparisons in respect of Units Sold figures have been extracted covering the corresponding period of 1955-56.

The number of Units Sold was 1,710 million, an increase of 152 million Units over the sales in 1955-56. Sales for Power Purposes refer principally to High Tension Industrial sales, but include Low Tension Industrial Power, Public Waterworks and small power for domestic purposes, such as air-conditioning, refrigeration and cooking.

Industrial Demand

On the industrial side served by high tension power the demand for current continues to grow. The sales for 1956-57 were 1,029 million Units as against 942 million Units in 1955-56—an increase of 87 million Units.

There were no major disturbances in the field of labour relations during the period under review. The Jute Mills, Paper Mills, Steel Works and Rolling Mills, Engineering Workshops and Chemical Works accounted for the major part of this increase in the demand for high tension power. The largest increase came from the Jute Mills whose consumption rose by 32 million Units followed by the Engineering Workshops with an increase of 24 million Units. Industrial consumers increased by 26 during the fifteen months ended 31st March, 1957, as compared with an increase of 3 for the year 1955.

A further six Jute Mills came on to our supply during 1956-57. The total complement of looms in commission is now 87½% as compared with 95% in February 1956. This reduction took place during the months of July and September 1956 in order to adjust output with world demand. There was an increased demand from the domestic market in India for sacking goods which may be expected to continue as the outcome of the Central Government's plans for agricultural development and for increasing the production of commodities such as sugar, fertilisers, cement, etc.

For some time past the industry has been modernizing as rapidly as possible having regard to the availability of machinery and the need to ensure the minimum disturbance to the labour force. The best wishes of the Board are with the Jute Mills—one of India's most vital industries—for a successful outcome of the steps now in train to place the industry on a firm and lasting basis and thus enable it to meet competition in world markets. Engineering Workshops have been working to capacity and nine new Works were connected during 1956-57. The present demand for current is now almost double that for the year 1951. The Paper Mills have made good progress during the past year and look forward to increased production as the result of the implementation of the Second Five Year Plan. In the case of the Steel Works and Rolling Mills the consistent improvement in consumption gives evidence of the growing pace of industrialisation which is taking place in India. Six new consumers were added to our supply in 1956-57.

The demand for low tension industrial power reflects the increasing activities of small workshops and factories. The sales for 1956-57 were 106 million Units as against 99 million for 1955-56. Restriction of imports designed to foster indigenous industries has led to expansion in this particular field. The establishment of large scale industries, envisaged in the Second Five Year Plan, will assist this trend towards the spread of small industries some of which receive their raw materials from, and work exclusively for, larger concerns in the manufacture of components.

The demand from Public Waterworks and Sewage Pumping has grown considerably. The figure of Units consumed in 1956-57 was 79 as against 68 million in 1955-56, an increase of 11 million Units which, in the main, is due to a higher demand from the Calcutta Corporation's Palta Waterworks and an improvement in offtake from the Sonarpur-Arapanch Pumping Scheme.

Domestic and Commercial Load

The ordinary domestic and commercial load at the flat rate increased form 226 million Units in 1955-56 to 241 million Units in 1956-57. The central parts of the City are still in a congested state and to alleviate this situation old buildings are being demolished and replaced by residential flats and new markets. On the outskirts of the City the Central Government are erecting blocks of staff quarters, several of which are now occupied, and many blocks of flats for refugee settlement are ready for occupation. The areas where suburban expansion is most marked lie to the south and south west of Calcutta. The type of buildings in these areas is mostly that of private dwelling houses. To the east of the City development is also taking place. Several square miles of land have been cleared and drained. Roads have been laid out and work continues on road making. Blocks of flats for industrial workers have been completed and are in occupation.

Public Lighting shows a steady increase in consumption. The Calcutta Corporation's programme to provide more and better street lighting continues to make good progress. Four adjacent Municipalities came on to our supply during 1956-57.

The Calcutta Tramways' demand for current remains steady and is likely to stay so. Until new routes are opened up it would appear that saturation point has been reached with regard to the number of cars per track mile.

There has been a marked increase in the demand for bulk supplies to distributing undertakings. The sales for 1956-57 were 45 million Units as against 28 million Units in 1955-56, an increase of 17 million Units. The major part of this rise came from the North Calcutta Grid of the West Bengal Government. Apart from normal growth an increased bulk supply to a supply company served by the Grid contributed largely to this improved demand.

The special tariff under which we make available to owners of large buildings current at high voltage for conversion by them to low tension—thus relieving congestion on our D.C. network—has attracted new consumers and sales under this tariff amounted to 52 million Units, an increase of 5 million Units over the 1955-56 figure.

New Grid Substation

On the 9th June, 1957, in the presence of a large and distinguished gathering the Damodar Valley Corporation Grid Substation in Howrah was formally opened by the Honourable Dr. B. C. Roy, Chief Minister of West Bengal, who was accompanied by Mr. P. S. Rau, Chairman of the D.V.C., and Mr. I. A. Macpherson, our Agent. In his address Dr. Roy stated that the Substation was a unique example of co-operation between the private sector and nationalised enterprise. This interconnection with our system will make available within a period of less than three years 100,000 kVA of power. Four 132 kV Circuits from the D.V.C. system will feed power into the Calcutta area. With regard to the utilisation of this power a certain amount will be required in Howrah and some will be sent on overhead transmission lines at 33,000 volts down to the Bauria area, which is south of Howrah on the right bank of the River Hooghly. The remainder will be absorbed in the southern part of our system through our 33,000 volt cables which connect the receiving substation with our two generating stations at Cossipore and Garden Reach. Although the C.E.S. and D.V.C. systems have only recently been interconnected, the Company has worked very closely with the D.V.C. for some years now and I have great pleasure in saying that we have during this time come to have a high regard for their standard of construction, operation and maintenance. We are proud to be associated with the D.V.C. project which is one of the largest schemes undertaken by Government for the building up of New India. The Board wish to express to the Honourable Dr. B C. Roy, Chief Minister of West Bengal, their deep appreciation of the support he has given and the keen interest he has taken from its inception in the scheme for linking up the Company's system with that of the D.V.C.

The Indian Electricity (Supply) Act

The Indian Electricity (Supply) Act, 1948 has been modified by the Electricity (Supply) Amendment Act, 1956, which took its place on the Statute Book at the end of last year. The main modifications as far as this Company is concerned relate to the standard rate of return permitted to the industry and to the reasonable degree of freedom given to the licensee to adjust his rates within the framework of the Act including where necessary, an enhancement of rates. The standard rate is now linked with the Bank Rate, the rate being 2% over the Bank Rate ruling at the beginning of each accounting year. On 1st April, 1957, the Bank Rate was 3½%, making the Standard Rate 5½% instead of the previous figure of 5%.

Revenue

The development and expansion which is taking place in the Company's operations is reflected in our Revenues as may be seen from a comparison with the figures for the three previous years which are set out in the Directors' Report. In comparing the figures of previous years due allowance must be given to the fact that the Accounts now under review cover a period of fifteen months ended 31st March, 1957. Receipts amounted to £8,101,785 (1955 £5,859,483). Expenditure, taking into account the depreciation charge of £999,579, amounted to £5,907,907 (1955 £4,334,257 including depreciation charge £770,990).

Coal consumption for the fifteen months, a period of higher output, was 1,266,746 tons costing £2,341,700. In order to enable a comparison to be made of this major item of generating costs—which represents 78% of the total generation expenditure—figures have been extracted for the corresponding period of 1955-56 and are as follows:—Coal consumed 1,157,964 tons costing £1,939,600 showing increases in consumption and cost of 108,782 tons and £402,100. There was an increase in coal prices and railway freights during 1956 and the average cost of coal per ton delivered increased by approximately 10%. In other respects increases in operation expenditure were primarily due to higher wages costs.

The Net Revenue Account contains a transfer of £240,279 to a Special Reserve as directed by the Government of West Bengal—the fourth of five appropriations of this nature which fall to be made from Net Revenue. The circumstances which give rise to these appropriations were explained at length in the Chairman's Annual Review for 1953 and I also made a reference to this matter in the 1954 Review.

The creation of this Special Reserve, which now stands at the figure of £816,947, follows on the conditions laid down by the State Government in connection with the Special Appropriations permitted by them—during the period 1949-52—under Section XVII (2) of the Sixth Schedule of the Electricity (Supply) Act, 1948, "to finance the expansion of the machinery of production."

Tax Position

The Company will be an Overseas Trade Corporation for purposes of income tax and profits tax. The Finance Act, 1957, exempts trading income (though not investment income) of an Overseas Trade Corporation from Income Tax and exempts profits from any trade or business carried on by an Overseas Trade Corporation from Profits Tax. Under the Finance Act an Overseas Trade Corporation will be liable for Income Tax (subject to double taxation relief) on the amount of its trading profits used to pay dividends. Non-resident shareholders in Overseas Trade Corporations will be entitled to repayment of income tax relating to dividends paid out of exempt trading income.

In making these general observations on the tax position of the Company as an Overseas Trade Corporation, I wish to point out that as the Finance Act only came into force at the beginning of the current fiscal year the Company was not an Overseas Trade Corporation for any part of the accounting period of fifteen months to the 31st March, 1957.

The taxation charge for the fifteen months period amounted to £82,900 and appears in the Net Revenue Account. United Kingdom Tax was confined to Profits Tax £41,500. The sum of £307,200 charged to Income Tax in the 1948 Accounts covered the liability on the profits of that year. Such profits formed the basis of the Company's income tax assessment for 1956-57 which was duly discharged. As an Overseas Trade Corporation the Company will be on a new basis of income tax assessment for 1957-58 when income tax will be payable only on dividend distributions made out of exempt trading profits. This radical change in the U.K. tax position is, therefore, the reason for the much lower tax charge in the 1956-57 Accounts. In so far as the Indian tax position is concerned there is still a balance of unabsorbed depreciation allowances in hand which for the time being defers any charge for Indian Taxation.

The Clear Profit for the fifteen months period by reason of a lower taxation charge, shows an excess of £355,749 over the Reasonable Return permitted by the Indian Electricity (Supply) Act. This excess has been apportioned in accordance with the provisions of that Act and is shown in the allocations to the Tariffs and Dividends Control Reserve and the Consumers' Benefit Account. The Company's share of the excess has been included in the allocation to "Net Revenue Account—Special Appropriations (for plant expansion and replacements)".

The usual allocation for the Contingency Reserve, as required by the Act, the normal contribution to the Retiring Gratuity Fund and Debenture Interest and Sinking Fund charges are on the basis of the fifteen month period. In order to conserve our finances for the continued expansion of the Company's operations we have deemed it advisable to appropriate a sum of £575,000 to "Net Revenue Account—Special Appropriations (for plant expansion and replacements)".

Dividends

The Dividend on the Preference Stock and two Interim Dividends on the Ordinary Stock have been paid and we propose to pay a final Dividend of 2½% (free of tax) on the Ordinary Stock making 8½% (free of tax) for the fifteen months ended 31st March, 1957—which is equivalent to a rate of 6 4/5% per annum. The balance left to be carried forward on Net Revenue is £130,008.

I have stated earlier on in this Review that the year now current will secure a benefit from the increase in the rate of Reasonable Return. The Board, therefore, are hopeful—given normal working conditions and freedom from any untoward happenings—that the net earnings for the year ending the 31st March, 1958, will enable the Company further to strengthen its internal finances and also permit of the payment of an Ordinary Dividend of not less than 7% per annum (free of tax).

Capital Expenditure

Expenditure on Capital Account for the period amounted to over £1½ million. Extensions to our distribution system absorbed the bulk of this outlay. As a provision for this Capital Expenditure there was available the sum set aside for Depreciation approximately £1 million, and the allocations to Net Revenue—Special Appropriation and Special Reserve amounting to £815,000, thus making a total provision of £1,815,000. For the years 1951 to 1955 inclusive Capital Expenditure amounted to over £6 million and the Depreciation provision together with Reserves and Special Appropriations during the same period amounted to £5,640,000. I give these figures to demonstrate what has been done during recent years—within the limit of earnings permitted by the Reasonable Return on the Capital Base—to provide internal finance for the expansion of the Company's undertaking.

Area of Company's Licence

From a map of the area covered by the Company's Licence it will be seen that the Company's operations, along both banks of the River Hooghly, extend some 20 miles to the north of Calcutta and a similar distance to the south of the City. Within this area of our supply, which embraces 200 square miles, there dwells according to recent estimates a population of some 8 million souls. Our earnest endeavour has always been to supply power to run the wheels of industry and transport as well as the ever increasing domestic requirements of our Area and thus contribute towards the prosperity, comfort and happiness of those who dwell and earn their livelihood in the City of Calcutta, its suburbs and in the industrial areas and municipalities which lie adjacent to the Cty.

Sir William Lamond visited Calcutta and spent six weeks there during the months of January and February 1957. He found everything in good order when he inspected the Company's organisation. During his stay he took the opportunity of touring the development areas to see the progress being made and was impressed with what was being done to expand and modernise the suburbs. He met Dr. Roy and discussed the affairs of the Company with him and also met the leaders of Commerce and Industry in Calcutta. Dr. Roy continues to take a keen interest in the various phases of the Company's activities in Calcutta and district.

Training

Training in the United Kingdom continues to be given to young Indian Graduates under our Technical Training Scheme and also to certain of our permanent Indian staff to enable them to take over more responsible duties. 26 men have so far been trained under these schemes, 6 men are at present under training in the United Kingdom and 2 others will shortly be arriving to take up their training. We are grateful to the Central Electricity Authority, Area Boards and the various manufacturing companies that provide facilities for this training.

Tribute to Staff

Our thanks are due to all our employees in Calcutta. The Company's continued progress and development reflects the interest and energy which members of the staff and our workmen devote to the Company's affairs. Mr. Macpherson, our Agent in Calcutta, continues to manage the Company's affairs with great ability. I also wish to pay tribute to the valuable work carried out by Mr. F. W. Acheson who retired from the position of Chief Engineer on 31st March, 1957, after some 31 years' service with the Company. He has been succeeded by Mr. D. H. P. Henderson who has been with the Company for many years and in whom the Board has every confidence. I wish to record the Board's appreciation of the able manner in which Mr. Colley continues to discharge his responsible duties as Secretary.

The report and accounts were adopted.

The above statement is not a report of the proceedings of the Annual Meeting referred to".

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

Speech by the Chairman, Mr. G. H. J. Clarke, at the Forty-Sixth Annual General Meeting of the Company on the 26th September, 1957.

Ladies and Gentlemen:

I have much pleasure in welcoming you to this the Forty-Sixth Annual General Meeting of the Company.

With your approval, we shall take the Notice convening this Meeting, the Report of the Directors and the Accounts which have been circulated, as read and the Secretary will now read the Auditors' Report.

Mr A. H. Davies, who had served this Company for over 30 years—9 of them as a Director—retired from the service of the Company early this year. We wish him health and happiness in a well-earned retirement.

The accounts in your possession show somewhat less satisfactory trading results than did those of the previous year, but I believe that you will regard the final results now disclosed as acceptable in the light of present-day circumstances, bearing in mind the increased rates of Company taxation operative during the year under review and the rising costs which I foreshadowed in my speech last year.

The accounts also differ in their form of presentation, to accord with the requirements of the Companies Act, 1956.

During the course of my speech, I shall make some further comment on both the trading results and the form of the accounts additional to that given in the Report of the Directors.

Turning first of all to the Liabilities side of the Balance Sheet, you will have noted that Fixed Asset and Stock Replacement Reserve now stands at Rs. 3½ crores, Rs. 34½ lakhs of the increase over last year representing, as explained in the Report of the Directors, that element in past Depreciation Provisions included to cover the higher replacement cost of fixed assets and the further accretion of Rs. 30½ lakhs having been transferred out of the profits for the year under review.

You will also notice that the small balance standing to the credit of Other Revenue Reserves has been transferred to General Reserve, which latter now stands at close on Rs. 4 crores 64 lakhs.

Security Deposits from Dealers and Contractors (Cash) show a reduction of some Rs. 34 lakhs. This, together with the reduction of some Rs. 29¼ lakhs in Sundry Debtors (Secured), reflects the Company's policy of refunding cash deposits and withdrawing credit which was previously given against the security of those deposits.

On the Assets side, under Current Assets an increase of some Rs. 82 lakhs against Manufactured Goods is shown, which is the result of your Company's policy of holding increased supplies of goods available at or near points of sale, especially where the points of sale are at a distance from the point of manufacture.

Fixed Assets

Fixed Assets show a substantial increase of some Rs. 80 lakhs indicating, as the schedule on pages 16 and 17 shows, an increased investment of the Company's resources in assets pertaining to production and distribution.

Cash and Bank Balances are lower by some Rs. 55 lakhs, partly accountable for by increased expenditure on fixed assets.

From the Profit and Loss Account you will note that the value of sales shows an increase of nearly 6% on the 1956 figure, but because of a tendency among consumers to turn to our lower priced cigarettes that increase in value does not match the increase in volume of sales.

However, increased costs and expenses, particularly in respect of indigenous raw materials, customs and excise duties, salaries, wages and manufacturing, freight and selling expenses generally, have more than outweighed that increase in sales value, with a consequential reduction in the balance of profit and loss available for transfer to the Appropriation Account.

The increase in volume of sales is, of course, an encouraging sign, but you will have observed that the ever-increasing burden of direct Company taxation, now inclusive of Wealth Tax, requires almost Rs. 16¼ lakhs more in the year under review than in the previous year, and has had its serious effect on the net profits remaining available for appropriation and distribution to the shareholders.

I would like to enlarge briefly on Note 5 of the Report of the Directors. The Companies Act, 1956 requires the use in published accounts of heads of accounts which are not in all cases appropriate to your Company's type of business in that their use does not provide all the data required by those responsible for day to day management.

In order to be able to provide you with comparative figures for the year to 31st March, 1956 under the new heads of account required by law for the year now under review, it has been necessary to make certain re-allocations which, as you will have noted, are in some cases described as approximate.

In common with all industry in this country, our own industry is closely concerned with the effects on the national economy of the Second Five-Year Plan. An improved standard of living for all the people in this country is obviously greatly to be desired and is an aim which should be of ultimate benefit to our trade through the increased consumption of our products. For some time to come, however, it is fairly obvious that we cannot expect the impact of the execution of the Plan to be immediately beneficial to our business.

Foreign Exchange Shortage

A matter of immediate concern to your Company is the ever-increasing shortage of foreign exchange. This makes it very difficult to continue to keep abreast of modern developments in the various types of machinery which we use, and even to maintain that machinery in good working order. Furthermore, we may have to abandon, or at least to shelve, a plan for the establishment of a new factory, intended to enable your Company to meet the growing demand for cigarettes which we anticipate will, in a few years' time, be greater than our existing productive capacity will be able to supply. Factories are not built in a day, and there may be a serious shortfall in supply in the visible future if the exchange position does not improve within a year or two.

We have also to pay regard to the risk of further inflation, the effects of which, as I have already indicated, have made your Directors consider it advisable to transfer some Rs. 30½ lakhs from last year's profits to Fixed Asset and Stock Replacement Reserve in an attempt to maintain the real value of the capital employed in the business.

The execution of the Plan has also brought in its train increased taxation, both direct taxation on companies and, in the case of our industry, increased rates of customs duty on imported unmanufactured tobacco and of tobacco excise duty on unmanufactured tobacco other than flue-cured. Many of the other raw materials used by your Company such as paper and board, have increased in price following increases in the duties applicable to them; consequential increases in rates of cigarette excise duties chargeable have further affected the cost of our finished products.

All such factors combine to make it more and more difficult, despite the increasing volume of sales, to maintain profits at a reasonable level and it will be obvious to you that the increased volume of sales could be put in jeopardy if any general increase in the price of your Company's products had to be put into effect.

Until, then, we can begin to see in greater measure practical results beneficial to the country's economy emerging from this present Five-Year Plan, I must tell you that your Board view with some concern the increasing pressure of higher costs of production and the effect of heavy taxes on our business.

Sales Tax

In my speech last year I criticised the sales taxes levied by States on tobacco products both as being an undue imposition on an already heavily taxed product and on the ground that the rates varied widely from State to State. If our industry cannot be exempted from sales taxes at least we may welcome the proposal that these taxes should be centralised. It is earnestly to be hoped however that as result of this re-organisation will not be the imposition of a still heavier burden on the consumer of cigarettes. I have mentioned already that a period of growing volume of sales has seen the consumer turning increasingly to less expensive brands, and in this mood he is particularly apt, in the event of price increases, to turn away from cigarettes to goods less heavily taxed. I need not enlarge upon the implications for your Company and for the national revenue of any such development.

During the year under review this industry together with a number of other industries was brought within the scope of the Industries (Development & Regulation) Act of 1951. This Act gives the Government extensive powers to intervene in a company's affairs, but it may be assumed that these powers will not be invoked as long as a business is properly and efficiently conducted in all its aspects.

We have noted with satisfaction and cordially welcome Government's suggestion that a period of freedom from upward changes in taxation should lie ahead, thus enabling industry to avoid the dangers of misdirected effort and waste, which benefit none but which are a natural concomitant of uncertainty as to the future taxation picture. Given a measure of stability in taxation matters over the next few years, I firmly believe that with the co-operation of all our Company's employees in striving for increased productivity, the long-term prosperity of your Company remains assured and that long-term prosperity is not only of benefit to you as shareholders, but to all who may in any way be connected with the Company and its activities.

During the first five months of the current trading year, despite a setback following the Budget in May, sales volume continues to show a satisfactory trend, and in consequence your Directors feel justified in declaring an Interim Dividend of 2%, free of income tax, in respect of the year to 31st March, 1958. However, the various factors which I have mentioned continue to bear adversely on the profitableness of your Company's activities, and I would ask you not to take the declaration of this Interim Dividend as a firm indication that the final results for the year will justify a total distribution at the same level as for the year ended 31st March, 1957.

I now beg formally to move the adoption of the Report and Accounts for the year ended 31st March, 1957, including the payment on the 28th September next of a Final Dividend of 3%, free of income tax, on the issued Ordinary Shares of the Company.

I shall now ask a member to second the Resolution and when that has been done, if anyone has any question to put or comment to make on the Accounts, it will be a convenient time to do so.

(Note.—This is not a report of the proceedings of the Annual General Meeting.)

INDUSTRIAL FINANCE CORPORATION OF INDIA

CHAIRMAN MR. K. R. K. MENON'S REVIEW

Speech delivered by the Chairman, Mr. K. R. K. Menon, at the Ninth Annual General Meeting of the Shareholders of the Industrial Finance Corporation of India held on the 27th September, 1957.

Gentlemen,

I have pleasure in placing before you the Accounts of the Corporation and the Report of the Board of Directors for the year ended the 30th June, 1957. Printed copies of the Accounts and the Report are before you. These have also been circulated to all the shareholders. I shall, if you agree, take them as read. I would, however, make some observations on a few points.

2. It is my painful duty, to refer to the sudden demise, in March 1957, of Shri Syamnandan Sahaya, our esteemed colleague on the Board of Directors of the Corporation. Shri Syamnandan Sahaya served the Corporation in this capacity as the elected representative of Co-operative Banks from November 1953 till the time of his death. His indefatigable energy and his judgment in financial and business matters were of immense value in the deliberations of the Board, and I am sure you will join me in expressing our deep sense of sorrow at his passing away and conveying our sympathies to the bereaved family.

3. Shareholders will observe from the Accounts and the Report that the working of the Corporation for the year ended the 30th June, 1957 was even more satisfactory than that for the previous year. Our gross profit rose from Rs. 32.68 lakhs in 1955-56 to Rs. 43.06 lakhs in the year under report, and whereas there was no profit left for paying dividend last year, we have a net profit of Rs. 11,25,000/- this year, which just enables us to pay in full the amount of the guaranteed dividend on our paid-up capital, without having recourse to any subvention from Government. This, you will observe, is after providing a sum aggregating Rs. 31.81 lakhs for estimated tax liability, doubtful debts and other contingencies. It may perhaps be of interest if I recall in this connection that, during the past nine years that the Corporation has been functioning, we have had to ask Government for a subvention every year, except once, viz., in 1953.

4. The total amount of our loans and advances which stood at Rs. 14.24 crores last year has also shown a marked increase; it now stands at Rs. 21.90 crores. With this steep increase in our investments, I believe we should be in a position, hereafter, to stand on our own legs without calling upon Government for help to meet the guaranteed dividend on our share capital.

Disbursement of Loans

5. In the matter of disbursement of loans also we have forged ahead in the year under report. Our disbursements during this year totalled Rs. 9.78 crores, as against the corresponding total of Rs. 2.20 crores in 1955-56, Rs. 1.64 crores in 1954-55, and Rs. 2.82 crores in 1953-54. This very satisfactory result, it must be said, was achieved in spite of the fact that, due to the closure of the Suez Canal route and also the country's tight foreign exchange position, delivery of capital goods from abroad was subjected to considerable delays, and there was, therefore, corresponding delay in the drawal of the loan amounts sanctioned. Among the important factors which helped us to speed up disbursements to this extent may be mentioned (a) the completion of the administrative reforms that were initiated in 1955-56 to which I had made reference in my last year's speech, particularly the quickening in the pace of completion of the necessary formalities in the head office and branch offices of the Corporation (b) the extension of the system of having our own Law Officers to the two remaining regions, viz. Bombay and North India (Madras and Calcutta having already been covered last year) and (c) further liberalisation of the procedure for granting interim loans pending completion of legal formalities.

6. There was a fall in the total volume of loan applications received from Rs. 27.70 crores for 1955-56 to Rs. 21.36 crores this year. It is to be noted, however, that this reduced figure of Rs. 21.36 crores represents a considerable advance on the total for 1954-55, viz. Rs. 11.27 crores, and Rs. 9.01 crores for 1953-54. There was a corresponding fall in the volume of loans sanctioned, which came down from Rs. 15.13 crores for 1955-56 to Rs. 11.91 crores in the year under report, though both these figures compare very favourably with the corresponding figures, viz. Rs. 7.34 crores and Rs. 5.27 crores for 1954-55 and 1953-54 respectively.

7. I surmise that one of the main factors which contributed to the diminution in the volume of applications this year was the difficulty experienced by Industrial concerns and entrepreneurs in the matter of securing adequate amount of foreign exchange for importing the necessary capital goods. The rise in prices of foreign machinery was also possibly another important factor which contributed to the contraction in the volume of loan applications.

8. You will notice from the figures given in the Annual Report that recoveries of interest and instalments of principal during the year were on the whole, very satisfactory. We have refrained from exacting our pound of flesh in the case of those defaulters who, we considered, after detailed examination of their financial affairs, deserved liberal and sympathetic treatment at our hands.

9. Our relations with the public and particularly with the various Chambers of Commerce and Industry, to which we had paid considerable attention in the previous year, as I said in my last year's speech, continued to be as close and friendly in the year under report, and I take this opportunity of thanking the representatives of the various Chambers for the valuable suggestions and assistance which we received from them as a result of the free and frank discussions we had with them on various problems of mutual interest.

Advisory Committees

10. In my speech last year I had mentioned that our Advisory Committees were in the process of being reconstituted so as to include a larger number of technical experts in each, and also so as to provide for a wider territorial representation. These Committees have now been reconstituted accordingly. As mentioned in the Annual Report, a fifth Advisory Committee for miscellaneous industries like Electricals, Paper, Cement, Glass, Aluminium, Non-ferrous metals, etc. was also constituted in the course of the year. The advice and guidance received from these Advisory Committees have been of immense help to the Board of Directors in dealing with the loan applications.

11. A noteworthy step that we took, as an experimental measure, in the year under report was to nominate non-officials to the Boards of Directors of a limited number of companies to whom we had granted loans. Hitherto we had been confining such nominations to the officials of the Corporation. We decided, on the basis of the results of the experimental measure introduced last year, to expand the scope of the scheme, and, in the current year, we propose to nominate several more non-officials. A measure of this kind is fast becoming unavoidable as, with the rapidly growing number of loanee concerns on our books, we have arrived at the stage where already it is becoming extremely difficult for our own officials to function as our representatives on the Boards of Directors of all, or even a majority of, these concerns, in addition to carrying on their normal duties, the volume of which has also grown considerably of late.

12. Before I turn to other matters of general interest I should like to invite your attention to one item in the accounts presented to you. Our Auditors have remarked that it would be desirable to increase the provision made for doubtful debts (viz. Rs. 22.25 lakhs) by another Rs. 5 lakhs. As matters stand at present, and based on our present anticipations, which are cautious and conservative, we are in a position to assure you that the provision available in our account, viz. Rs. 15.25 lakhs should prove quite adequate for covering our doubtful debts. In fact, if the negotiations for the reconstruction of certain of the Companies concerned and the sale or lease of their assets which are now in progress, bear fruit—as we hope they will—we should be left with a surplus in the provision that has already been made in this regard.

State-wise Distribution of Loans

13. The figure given in Appendix I to the Annual Report showing the state-wise distribution of the loans sanctioned by us in the year under review as well as in the previous years will show that as compared with the position as it obtained on 30th June, 1956, there has been a marked increase at the close of our financial year in June 1957, in the total of loans sanctioned to concerns located in certain States. Excluding those States which, relatively speaking, may be described as industrially advanced, the figures relating to the progress in some of the other States are, I think, worth inviting your special attention to. These are—

(i) Andhra—Increase from Rs. 1.29 crores up to the end of 1956. to Rs. 2.61 crores at the end of 1957.

(ii) Kerala—from Rs. 3.19 crores up to the end of 1956. to Rs. 4.28 crores at the end of 1957.

(iii) Punjab—from Rs. 2.01 crores up to the end of 1956. to Rs. 2.66 crores at the end of 1957.

(iv) Uttar Pradesh—from Rs. 2.96 crores up to the end of 1956. to Rs. 3.86 crores at the end of 1957.

14. In this connection I am glad to inform you that as part of a drive for increasing the volume of assistance rendered to industries in the relatively weaker States, and with a view to informing the Governments of these States regarding the functions and scope of activities of the I.F.C. I made it a point to hold personal discussions with the Chief Ministers of these States, and, in some cases, also with the Ministers in charge of Industries. They all evinced keen interest in the matter of accelerating the pace of industrial development in their States, and I was left with the impression that we may look forward with confidence to an increasing measure of participation by the I.F.C. in the financial assistance rendered to industrial enterprises sponsored by, or with the support of these State Governments, subject of course to our financial resources in the future permitting the expansion of our activities in this particular direction.

15. Turning to the general pattern of industrial units which were sanctioned loans during the year under report, Sugar came first with a total of Rs. 4.63 crores. Chemicals and Textiles followed with Rs. 2.51 crores and Rs. 1.85 crores respectively. This same pattern held good in the previous year also.

16. Co-operative Societies continued, in an increasing measure, to seek our assistance, and at the end of the year under report the total amount sanctioned to this class of concerns came to Rs. 10.73 crores as against the corresponding figure of Rs. 8.20 crores at the end of the previous year. All the 22 Co-operative Societies, distributed over six States, to whom we have sanctioned loans so far are engaged in the manufacture of sugar. The total cost of their Schemes comes to roughly Rs. 25.66 crores out of which Rs. 10.73 crores, as already stated come from the I.F.C. as loan, and the balance Rs. 14.93 crores is accounted for to the tune of Rs. 4.23 crores by subscriptions raised from members, Rs. 4.16 crores by cash credits from Banks for working capital, Rs. 2.80 crores by subscription from the State Governments concerned, and the balance by deferred payments and other sources.

17. A fairly large number of our loanee concerns continued to earn during the year profits high enough to enable them to distribute dividends in excess of the usual 6%, with our prior concurrence. We continued to give such concurrence in all cases where the financial position of the concern, after careful examination by us, struck us as satisfactory. It has been our policy to be fairly liberal in this matter, consistent with the security of our loans, and the well-being of the concern.

18. In this connection I should like to invite your attention to the fact that only a small fraction of the total amount of loans sanctioned by us is accounted for by loans sanctioned to concerns which, at the time of such sanction, had already been declaring relatively high rates of dividend. In the large majority of cases our loanee concerns fall in the category of either those which, at the time of the sanction of their loans by us, were not declaring any dividend at all, or those which, though declaring a dividend at that time, were not declaring dividend at relatively high rates. It is also worthy of note that in the majority of the concerns that had been sanctioned loans by us and which have been paying relatively high rates of dividend we have made it a condition for the grant of our loans that they should raise fresh capital of a considerable amount in each case from the capital market. In a few of these cases the amounts that they have been asked to raise from other sources have exceeded the loans sanctioned by us, or nearly equalled them.

Money Market Conditions

19. Conditions in the money market during the year under report were more tight than in the previous year, and we were obliged to raise the rate of interest on our loans by ½%, viz. from 6% to 6½%, with effect from the 23rd April, 1957. It is not unlikely that we may have to pay higher rates of interest than we do now on our borrowings in the course of the current year; this will naturally affect our lending rates too.

20. In my speech last year I had invited your attention to the fact that our ways and means position was engaging our anxious attention. With a view to ensuring that we have the necessary funds to enable us to fulfil the important role assigned to us in the Second Five-Year Plan we explored all possible avenues for raising additional funds in consultation with the Government of India. You will be glad to know that in spite of the very difficult conditions that have prevailed for some time in the money market we have been able, thanks to the good offices of the Government, to make arrangements for augmenting our resources to the tune of an additional sum of Rs. 15 crores, which will enable us to disburse, if we are called upon to do so, loans up to a total of as much as Rs. 20 crores in the course of 1957-58 alone. Our thanks are due to the Central Finance Minister and his Ministry for making this possible.

21. Another important development in this connection that you will be glad to hear about is that Government have also approved of our proposal to amend the I.F.C. Act so as to enable us to borrow sums aggregating ten times our paid-up capital and reserve fund instead of five times that is allowed by the above-mentioned amendment has already been introduced in Parliament.

22. So much for the bright side of the picture. There is, however, the inevitable cloud attaching to the silvery future that I have just outlined to you. Loan applications from various industrial concerns which we have not been able to consider so far have already swollen to an unprecedented volume, and they still continue to come in. To meet this huge demand we have to try and raise further additional funds again almost immediately. Conditions in the money market which were, as I said, difficult enough last year have yet shown no signs of appreciable improvement, and it is not, therefore, unlikely that we should be faced this year with the prospect of having to hold over consideration of the bulk of the pending applications until such time as conditions change for the better. We are, however, at the moment, engaged in consultations with Government with a view to finding some solution to this problem. Government have been extremely helpful to us in this matter already, and, in spite of the heavy odds, I would not rule out the possibility of some amount being found for us this year.

23. A new field of activity which we are likely to enter this year is the guaranteeing of deferred payments by the importers of capital goods who are able to obtain this concession from the foreign manufacturers. As you are aware, our foreign exchange position has compelled Government to impose severe restrictions on the import of all foreign goods—capital and others—and importers of machinery are now obliged to secure terms of deferred payments before import licences are granted to them by Government. Some of the foreign exporters have asked that the deferred payment arrangements should be guaranteed by an institution like ours. Government decided, in consultation with your Directors, that we should be enabled to do this in appropriate cases, and they have introduced a Bill in Parliament which seeks to so amend the I.F.C. Act as to vest in us the power to do so. This Bill, it is hoped, will come up for consideration in the November Session of Parliament, and as soon as it is passed we shall formulate the procedure we will follow in regard to this new activity of ours.

24. Before I close, it is my very pleasant duty to convey my hearty thanks to my colleagues on the Board of Directors, as well as to the members of the various Advisory Committees and the non-officials who have served as our representatives on the Boards of Directors of loanee concerns for their co-operation and wise counsels. I have also great pleasure in conveying my thanks as well as that of the Board to the General Manager and the entire staff of the Corporation for another year of loyal and devoted work on their

E GENERAL ASSURANCE SOCIETY LIMITED

CHAIRMAN MR. B. L. JALAN'S REVIEW

cts from the address of the Chairman, L. Jalan, delivered at the Annual General of The General Assurance Society Limited, 27th September, 1957.

Golden Jubilee Year

ou are perhaps aware, your company has completed 50 successful years of its life. n the midst of the Golden Jubilee year, we eason to look back with pride and satisfaction. iety had a chequered history as it emerged ly from several vicissitudes.

unlike your company, our country and indeed ole world has passed through fateful years. e witnessed two international wars, unprecedboth in magnitude and devastation. The ment of atomic power, both for peaceful and rposes, is an ominous portent for the future e knows not what will be the shape of the 0 years hence.

scientific and technological evolution has comparable political, economic and social als in its wake. Old empires were shed, new were born. The agricultural society of yesterday yielded place to a new industrial society production.

in our own country we see a new world today. bout a month and a half back we celebrated tenary of the beginning of our freedom struggle e ushering in of the second decade of our dence.

Economic Emancipation

new struggle for economic emancipation is mbolised in our first, second and many more ar plans. The task is stupendous; time is Our attempts to move one step forward is natched by two steps by more advanced and ial economies.

per capita income has been estimated at of the United States in rupee equivalents at 10, or 38 times. We produce about a million steel, the comparable figure for the U.S.A. is 0 million. The revenue budget of the Governof India is estimated at Rs. 860 crores. The ment of the United States spends Rs. 32,000 or about 48 times more although they have to for welfare and security measures only to an half the population. This gives in some e the length of the journey we have to traverse road to economic advancement.

Strains on Economic Front

the process of rapid economic evolution is not a smooth operation. It is often accompanied ins which require great ingenuity, patient delins and sagacious foresight in matters of social onomic engineering.

you are already aware, in the wake of our Plan the same problems which beset our y in the immediate postwar period, have 1. The revised index number of wholesale stood at 112.6 in the week ended the 10th iber as compared to 102.1 in June, 1956. In me period the food articles have witnessed a seper rise from 99 to 112.6 showing an increase ut 13 per cent. Further, whereas the wholesale of industrial raw materials have advanced by cent, those of manufactured goods have moved 5 per cent only. This has an obvious effect ing greater burdens on industry. Nevertheless, ds of workers are rising although the consumer ndex for working classes advanced from 107 to ints only.

w difficulties in the form of exchange shortage ck of financial accommodation are also increasestraining our industrial progress. During one from June, 1956 to June, 1957, the sterling assets Reserve Bank declined by Rs. 227 crores in of a credit of Rs. 95 crores from the International ary Fund. In fact we had to cross the limit 400 crores of Exchange Reserve. The persistent deficit in payments position threatens the small e of our exchange holdings with an obvious hat the international value of rupee will be mined very much. Serious restrictions have imposed on the use of exchange resources. Even t of machinery for industrial expansion has been led and permission is granted only if deferred ent facilities can be secured.

Famine of Capital

e chronic shortage of capital has attained new s. It has become extremely difficult to obtain modation for legitimate needs of working capital dustry. The bank rate was raised from 3½ to 4 ent. It was followed by an advice of credit ze by the Reserve Bank. The measure was first d to advances against stocks of foodgrains but ually it was extended to industry as well.

e resources of industry have been further dried y the levy of new and enhanced taxes. The markets of the country never witnessed more and dreary conditions since the Liaquat Ali t. Certain prices of scrips, which were con- d rock-bottom became. In fact, the ceiling prices e next few weeks. In one year alone, between 1956 and June, 1957, index number of the prices dustrial securities has declined by 18 per cent. s become very difficult to dispose off good industsecurities yielding fair dividends, excepting specu- counters. I wonder if this will not remain a lox of our industrial history that while unprecated rates of industrial expansion were being ied, the share and stock markets faced a collapse.

Food Production & Buffer Stocks

e principal cause underlying both the phenomena change and rising spiral of prices must be sought e agricultural sector of the economy. There has lower production of foodgrains although the lation has been steadily increasing. During the lan period alone, our population was estimated to increase by about 48 million souls. This compares well with the whole population of the U.K. at 51 million, of France at 44 million, of Canada at 16 million and of the whole Australian continent at 9 million. Furthermore, during the good crops in 1954-55 and a season earlier, the Government had liquidated all buffer stocks. This was done in spite of the unreliability of our agricultural statistics, which is acknowledged even by the Government. So long as we do not create definite surplus in foodgrains through permanent measures and not only by favourable monsoon, the basis of our food policy should continue to be open market operations through buffer stocks.

A permanent solution of the problem will have to strike at the root of our agricultural production. This can be done by fully harnessing every acre of land through irrigation. It was estimated that only 18 per cent of our cultivated land possessed means of irrigation at the end of the First Plan. An addition of about 10 per cent is proposed to be made under the current Plan. Thus about 72 per cent of the land will still remain to be supplied with means of irrigation. One additional crop on this 72 per cent of the land will yield agricultural produce of the value of over Rs. 3,000 crores based on the annual value of our agricultural income estimated at Rs. 5,000 crores. It compares well with the total increase of Rs. 2,600 crores in the National Income under the whole Second Five Year Plan. It will bring new prosperity to our rural masses, wipe out the deficit in foodgrains and foreign exchange and will create enormous demand for manufactured goods, necessitating manifold more industries. This will greatly help in the removal of unemployment and underemployment both in cities and villages. But the task of providing irrigation facilities to 72 per cent of our cultivated land cannot be taken up except on the basis of utilisation of voluntary labour in all the five-and-a-half lakhs of villages for constructing wells, ponds and tanks on self-help basis. It has now been demonstrated in West Bengal, by the foresightedness of Dr. B. C. Roy, that within first four-and-a-half months the people in flood-affected areas could manufacture 10½ crores baked bricks as a part of a programme of constructing 1,00,000 one-room houses on self-help basis.

Reverting back to our problem, since the causes of rise in prices are restricted to the rural sector, the policy of general credit squeeze should be abandoned.

Borrowing, Not Taxes

Notwithstanding the opposition from all quarters in the country, the Expenditure and Wealth taxes have been duly incorporated in the statute book. These two fiscal measures are bound to make serious inroads in our social and economic life and I still hope that the Government will find it possible to scrap the two pieces of legislation in not a distant future. These taxes, as I proposed, have at least two more palatable and convenient alternatives. First, taxes as computed may take the form of public borrowings and called 'tax loans'. Thus every tax-payer may be given equivalent government securities against his tax liability in respect of expenditure and wealth taxes. The tax-payer will not feel the pinch of taxation and would thus be encouraged to invest and produce more; secondly, it would prevent lack of financial resources as the tax-payer can borrow against the government securities given to him. If, however, the Government was not prepared to accept this proposal for one reason or other, they could levy a graduated rate of surcharge on income tax in lieu of expenditure and wealth taxes, called 'wealth and expenditure tax surcharge'. This would have enabled the Government to raise the same amount of revenue under taxation without incurring further expenditure on the administration of new taxes. This would have also made our taxation system more simple, inexpensive and convenient to the people.

It appears now that at certain levels of income, wealth and expenditure the tax-payer will be required to pay more taxes than the income earned during the year. I am afraid no incentive would be left for further investments and production beyond those limits owing to obvious reasons.

I will then sum up by saying that private industry has been faced with inadequate means and capacity to expand; further, the incentives to do so have also been withdrawn or negatived. I hope it will be appreciated soon that it is not necessary for us to impose additional burdens while the country is already suffering from the birth-pangs of a new industrial economy.

It is, however, gratifying to note that the Government is not altogether oblivious of these developments. Our Finance Minister, Mr. T. T. Krishnamachari, has gone abroad and especially to the United States to study the capital market and to secure a total financial assistance of bout 1,000 million dollars or Rs. 500 crores. As the success of the Plan and return to normalcy on our economic front depend in a large measure on this foreign assistance we wish him a tremendous success.

Code of Conduct

Coming to our own general insurance industry, we should appreciate the efforts of the General Insurance Council. As I spoke to you at length last year, the new code of conduct has been introduced. One of the principal features of the code is the realisation of premiums before assumption of risk. The measure has greatly succeeded and the industry has been immensely helped. But the conditions still remain to be fiercely competitive and it appears it will take a few more months to regulate the operations of the industry on a very businesslike normal basis.

The competition in marine insurance business takes the form of rate cutting in the absence of fixed tariff rates. This is reflected in the high loss ratio. According to the latest available figures, the claims ratio stood at 66 in 1954 for all Indian insurers against 72 in 1955 Now this is an alarming position. Marine insurance business as a whole of all these companies showed a net loss of about Rs. 19 lakhs in each of the years 1954 and 1955. Meanwhile, the position appears to have worsened further. I hope the General Insurance Council will now take care of this development and prevent further deterioration.

Company Affairs

However, as you will find from the Final Accounts presented to you, all the three departments of your Company have shown surplus in revenue accounts without affecting our reserve position which has been maintained at the old level. As you are aware, in the prevailing conditions of the markets, which are extremely competitive, Fire Department is comparatively better placed as regards the loss ratio. It has, therefore, continued to be our policy to concentrate on this department while following the most conservative underwriting policy in the Marine and Miscellaneous sections of our business.

I recalled to you in the beginning that we are passing through our Golden Jubilee year. However, we suffered a serious blow last year in the dismemberment of our Life Department Meanwhile, an attempt is now being made to rehabilitate the general insurance industry. In the wake of these attempts we will have to tighten our belts and adjust ourselves to the changing requirements of the situation. While I have no doubt about our capacity to do so, we should look to the next few years as a period of caution and restraint.

From Kabul to Cairo, in the countries where Indian products once enjoyed fabulous popularity there is today an insatiable demand for modern implements and amenities. The Delegation of the Engineering Export Promotion Council returns from its tour of the Middle East after making valuable contacts and surveying markets in which Indian engineering products have a competitive advantage. This information is at your disposal. Contact—

ORISSA CEMENT LIMITED

CHAIRMAN MR. J. DALMIA'S REVIEW

Speech of Mr. J. Dalmia, Chairman, Board of Directors of Messrs. Orissa Cement Limited, delivered at the Seventh Annual General Meeting of the Company held at Rajgangpur on Saturday, the 28th September, 1957.

Ladies and Gentlemen,

I have great pleasure in welcoming you here on the occasion of the Seventh Annual General Meeting of your Company.

In the short period of time, the activities of your Company have considerably grown. The Cement Plant has been expanded to more than double the original capacity. The new plant started functioning from the beginning of this year. We have not yet completely overcome the initial difficulties, but we hope that within the next few months we will be able to do so.

The Company has been granted a licence by the Government of India to produce slag cement, which is dependent on the suitability of the slag which would be available from Messrs. Hindustan Steel Private Limited, Rourkela. They have not yet been able to give the final composition of slag which would be available from their Steel Works. On account of this the Company has not been able to place firm orders with the suppliers for the machinery.

Due to increase in various items of cost of production of cement Government of India have referred the matter to the Tariff Commission for examining this question and to recommend fair selling price for the cement producers. The Tariff Commission has already taken up the matter in hand and it is expected that the producers will be suitably compensated by an increase in the selling price of cement on account of the increase in cost of production and a fair margin will be allowed to enable the producers to provide a reasonable and adequate return to the investors.

Refractory Plant

You are aware that a Refractory Plant with an annual capacity of producing 80,000 tons of Refractories and 8,000 tons of mortar is being established in collaboration with a renowned German Firm for technical advice, which is largest of its kind in India at present. The Refractory Works which is a most modern one is going to produce, along with other items, silica and basic refractories such as Magnesite and Chrome Magnesite Refractories, etc. most of which are being imported so far from abroad. This will make the country self-sufficient to a very great extent and will save a good deal of foreign exchange. Sufficient provision has been kept for expansion of the plant to increase its capacity to double and in due course of time, we may be able to export these refractories. It is expected that the production of refractories will commence in a few months' time.

For supply of the most important raw-material, viz., dead burnt magnesite, for manufacture of basic refractories, your Company has entered into a partnership arrangement with The Magnesite Corporation of India Limited and Messrs. Dalmia Cement Limited for setting up a plant for the manufacture of dead burnt magnesite at Salem in South India. The partnership firm has been constituted under the name and style of Messrs. Dalmia Magnesite Corporation. The mineral property belongs to The Magnesite Corporation of India Limited and the expenses for setting up the factory are being met equally by Messrs. Dalmia Cement Limited and your Company.

The Company has also associated itself, as indicated in the Directors' Report for 1955, in the formation of Messrs. Dalmia Iron & Steel Limited and has invested Rs. 15,00,000/- in the shares of the said Company. The major portion of the remaining capital has been subscribed by Messrs. Dalmia Cement (Bharat) Limited. Messrs. Dalmia Iron & Steel Limited are putting up a Steel Casting Plant in Calcutta in collaboration with a reputed Belgian Firm having wide experience in the line mainly for manufacture of grinding media and cast steel and manganese steel spare parts for the cement industry. These items are mostly imported at present and on account of foreign exchange stringency import of such items is becoming increasingly difficult day by day. When their plant goes into production, your Company will be able to obtain all the requirements of such parts through indigenous sources and thus will be assured of a regular, steady and high production and also the hard earned foreign currency of the country will be saved to an appreciable extent. Messrs. Dalmia Iron & Steel Limited are also putting up Spun Cast Iron Pipe Plant, for which there is a huge demand in the country. The Steel Casting Plant is likely to go into production in the beginning of 1958 and the spun cast iron pipe plant sometime in March/April, 1958.

The Second Five Year Plan calls upon the Industry to increase the annual installed capacity of cement production to nearly sixteen million tons, which appears to be on a very high side. However, it is expected that the Industry, by the end of the Second Plan period, that is, in about 3½ years time from now, will reach the figure of annual installed capacity from about 6 million tons at present to nearly 9 million tons which may be quite sufficient for the country's requirement for the time being and this would be no small achievement.

New Industries

With the increase of steel production in this area and hydro-electric power being available from Hirakud, there are fair chances of new industries being set up in Orissa State. This is, however, very much dependent on the availability of cheap power. The charges for electric power at present generated at Hirakud are higher than even thermal electric charges, which is detrimental to the growth of new industries in Orissa State. Unless reasonable rates for electricity are ensured, it would not be easy for new industries to come up in Orissa. Even the small established industries would like to shift elsewhere due to the uneconomical rates of power fixed by the State Government but are restrained from doing so on account of the restrictions imposed under the Industries (Development & Regulation) Act, 1951. Unless therefore the State Government of Orissa takes an objective view, such industries will be unable to function and they may be forced to close down sooner or later.

In spite of the support given by the Life Insurance Corporation of India to the Stock & Share market, the values are gradually going down which is an indication of the loss of faith of the public at large in this type of investment. It is not due to lack of confidence in the management of the industries, particularly when with the introduction of the Companies Act, 1956, the control of the shareholders and the Central Government over the affairs of Joint Stock Companies has increased considerably. Besides this, Government of India has already set up a Committee to examine the various provisions of the Companies Act, 1956 with a view to remove practical difficulties that may have been experienced during the period this new law has been in force. This Committee has been inviting the views of all interested parties and it is expected that it would submit its report to the Government of India soon to enable them to remove and set right any defects which may be found. The loss of faith therefore in this type of investment is due to something else, which needs serious consideration by the Government of India before great harm is done.

The legislations for the welfare of the workers and for the protection of their legitimate rights are most welcome, but such laws must also foster a sense of discipline and responsibility in the working class. The most unfortunate part of the present labour laws is that the protection afforded to the working class has inspired a sense of indiscipline and irresponsibility amongst them. Though the workers are getting "rights conscious" but the spirit of "duty consciousness" is far lacking.

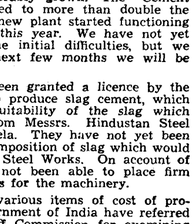
Discipline and Strikes

Even the general standard of discipline in our country as a whole is fast deteriorating in all walks of life. No nation can rise without a disciplined living and the standard of discipline in other advanced countries can well be compared in contrast to our own.

In addition to this, we hear these days of strikes practically anywhere. One shudders at the news of strikes in hospitals by attendants on patients and by civic workers which endangers the life of the sick and disrupts the normal life of every citizen. In such institutions and other works of national importance where stoppage of work can paralyse the normal life of the citizens of the country, strikes are most unpatriotic and the Government of India should seriously consider this problem before it is too late.

Illegal strikes in industries both in the private as well as public sector have become common these days. Even Government appears to be helpless most of the time. The respect for law is going down day by day and such strikes may some day upset the whole national life and break the fabric of law and order of the country.

Such state of affairs is very harmful for the improvement of the general conditions in the country and raising the level of moral and economic standard of the masses as a whole.



Before greater harm is done, Government of India will be well advised to appoint a high power Commission to make investigations into the causes which have led to this deterioration in the situation and to suggest remedial measures.

The standard of skill is not keeping pace with the rapid industrial development. Arrangements are necessary for proper training of the skilled technicians. Mass production of technicians with little skill is not beneficial. It has been observed that the trainers, employed at many of such institutions, are not capable themselves. Instead of sending persons abroad for training under Bevan Scheme or otherwise, it is better to import good trainers, which will be more beneficial as well as economical.

In the end I express my feeling of gratitude to all the executive, staff and workers who took keen interest in the expansion work of the Company and worked hard for it.

N.B. The above extract of the speech does not purport to be the report of the proceedings of the Seventh Annual General Meeting of the Company held on the 28th September, 1957.

For INFORMATION on AUSTRALIA, NEW ZEALAND, and FIJI

Business men requiring up-to-date information and a complete banking service are invited to use the facilities of the Bank of New South Wales, the oldest and largest commercial bank operating in Australia, New Zealand, Fiji, Papua and New Guinea, with over 1,000 branches and agencies.

The services include trade and industrial introductions, economic and market information, and assistance with travel requirements.

Enquiries may be made through your own bankers or direct to:—

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

BANK STRIKE CONTINUES

Wednesday, 9th October.

CONDITIONS have continued quiet in the Calcutta money market due to the Puja holidays and to the persistence of the bank strike. Little change in the level of advances has been recorded.

The exchange market remains inactive and remittance business is at a standstill. Sterling has continued to imorove on the world's markets and has been quoted this week at parity with the dollar for the first time since last February.

* * * *

Bullion was quietly steady during the past fortnight. Silver was steady at first but it eased at the close. The price declined from Rs. 182.50 to Rs. 181.50. The rate for forward delivery was Rs. 181.25.

Gold was quietly steady and the price was almost unchanged at Rs. 109. The sovereign was quoted at Rs. 71.25.

* * * *

During the week ended 27th September, Government of India Treasury bills for Rs. 1,06,19,75,000 were sold in favour of the Reserve Bank.

During the week ended 4th October, Government of India Treasury bills for Rs. 100,16,50,000 were sold in favour of the Reserve Bank.

* * * *

A sharp rise of Rs. 16.36 crores to Rs. 1,487.47 crores in notes in circulation was the main feature of the return of the Reserve Bank of India for the week ended 4th October, 1957. (The comparison is with the previous week's return.) The total note issue was Rs. 99 lakhs less at Rs. 1,514.45 crores. Notes held in the Banking Department consequently dropped by Rs. 17.35 crores to Rs. 26.98 crores. In the Banking Department investments improved by Rs. 14.59 crores to Rs. 215.86 crores. Balances held abroad declined by Rs. 7.26 crores to Rs. 18.64 crores. Deposits of the Government of India decreased by Rs 88 lakhs to Rs 51.31 crores, but other Government accounts increased by Rs. 2.61 crores to Rs. 10.14 crores. Balances of commercial banks at Rs. 94.15 crores were Rs. 5.86 crores lower. Other loans and advances rose from Rs. 73.38 crores to Rs. 78.65 crores, of which advances to scheduled banks against usance bills totalled Rs. 32.42 crores (Rs. 30.86 crores). Ways and means advances stood at Rs. 44.77 crores (Rs. 41.79 crores).

* * * *

The return of the State Bank of India for the week ended 20th September, 1957, shows a rise of Rs. 4.57 crores to Rs. 347.66 crores in total deposits. Investments in Government securities are up by Rs. 6.84 crores at Rs. 141.35 crores, while other authorised investments are down by Rs. 10 lakhs at Rs. 10.51 crores. Advances including loans, cash credits, overdrafts, and bills discounted and purchased, have decreased by Rs. 38 lakhs to Rs. 157.72 crores. Cash and balances are, in consequence, shown at Rs. 49.53 crores, or Rs. 4.55 crores less.

* * * *

The statement of the position of scheduled banks for the week ended 27th September, 1957, shows Demand and Time liabilities at Rs. 719.66 crores (Rs. 17.80 crores on account of borrowings from banks) and Rs. 619.54 crores (Rs. 8.67 crores), compared with Rs. 718.55 crores (Rs. 17.75 crores) and Rs. 616.24 crores (Rs. 8.63 crores), respectively in the previous week. Cash has increased by Rs. 10 lakhs to Rs. 36.74 crores, while balances with the Reserve Bank have decreased by Rs. 4.57 crores to Rs. 88.57 crores. There is a rise of Rs. 23 lakhs to Rs. 386.27 crores in investments. Advances and discounts, at Rs. 838.82 crores, show an increase of Rs. 3.20 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 9.4 percent and 62.6 percent, against 9.7 percent and 62.6 percent.

FINANCES OF JOINT-STOCK COMPANIES

BIG EXPENDITURE ON PLANT AND MACHINERY

AN article published in the September 1957 issue of the *Reserve Bank of India Bulletin* analyses the balance sheets and profit and loss accounts of 750 joint-stock companies in India during the six years 1950-55, with special reference to the period 1951-55, which broadly corresponds with the first five year plan period. The study covers public limited companies registered in India with a paid-up capital of not less than Rs. 5 lakhs each. The study excludes banking, insurance, investment companies, and also Government companies. The total paid-up capital of companies included in this study constitutes two-thirds of the total paid-up capital of public limited companies in the sectors covered. According to the article, the companies as a whole recorded a continuous growth from 1953 onwards, after the setback witnessed in 1952 as the aftermath of the Korean boom. In several aspects, 1955 was the best year during the first plan period. Many of these companies continued to spend heavily on plant and machinery and consequently gross and net fixed assets recorded a rise of almost 50 percent each in the five years.

The income from sales of the 750 companies which had declined from Rs. 1,087 crores in 1951 to Rs. 964 crores in 1953 rose progressively to Rs. 1,144 crores in 1955. Manufacturing expenses, which had declined from Rs. 746 crores to Rs. 586 crores, also rose to Rs. 687 crores. Sales were higher in 1955 than in 1951, whereas manufacturing expenses and inventory accumulations were lower. Compared with 1954, most of the principal industries witnessed a rise in income from sales and in manufacturing expenses in 1955. Salaries and wages rose continuously from Rs. 159 crores in 1950 to Rs. 215 crores in 1955. Managing agents' remuneration, which had declined from Rs. 12.64 crores in 1951 to Rs. 10.44 crores in 1953, rose to Rs. 13.53 crores in 1955.

Profits and Dividends

Profits in 1955 were higher than in any other year of the first plan period including the Korean boom year of 1951. Profits before tax which had fallen sharply from Rs. 85 crores in 1951 to Rs. 56 crores in 1952 rose continuously to Rs. 97 crores in 1955, reflecting mainly the general growth in economic activity. That the rise in profits was in a large measure due to additional investment is indicated by the fact, that whereas profits both before and after tax rose by about 50 percent between 1950 and 1955, profits before tax as percentage of the total capital employed rose only from 9 to 10.2. The proportion of provision for taxation to profits before tax declined somewhat from 44 percent in 1952 to 39 percent in 1955. The impact of variation in profits, therefore, fell largely on retained profits. While in 1952, profits after tax declined sharply by Rs. 20.5 crores to Rs. 31 crores, dividends fell only by Rs. 2.5 crores to Rs. 24.5 crores, retained profits thus declining by Rs. 18 crores. From 1953 onwards, an increasing proportion of profits was retained in business, the percentage of retained profits to profits after tax rising from 21 in 1952 to 46 in 1955. During the first plan period, as a whole, out of total profits before tax of Rs. 382 crores, provision for taxation accounted for 41 percent, dividends for 36 percent and retained profits for 23 percent.

The average rate of dividend on ordinary shares, which had declined from 8.3 percent in 1951 to 7.3 percent in 1952, rose steadily to 8.8 percent in 1955, the majority of the principal industries recording a rise in the rate in 1955. The highest rate was given by tea and other plantations, followed by the iron and steel, sugar, paper and match industries where it exceeded 10 percent. In the jute industry, there has been a steady decline from 1951 onwards. The ratio of profits after tax (distributed plus retained profits) to net worth (that is, paid-up capital and free reserves), which had fallen steeply from 9.6 percent in 1951 to 5.7 percent in 1952, rose steadily to 9.4 percent in 1955. The rise in the ratio during 1955 was larger than in the preceding two years, almost all the principal industries recording a rise in the ratio.

Gross Capital Formation

The total gross capital formation of the 750 companies rose further from Rs. 101 crores in 1954 to Rs. 136 crores in 1955; fixed assets formation revealed a steady rise while other items, inventory accumulation in particular, have shown wide variations. Gross fixed assets formation rose from Rs. 33 crores in 1951 to Rs. 81 crores in 1955. Of the total uses of funds of Rs. 443 crores in the five-year period 1951-55, gross fixed assets formation accounted for about 60 percent, followed by lendings (16 percent) and inventory (14 percent). The value of gross fixed assets at the end of 1955 was about 50 percent higher than at the end of 1950; the net fixed assets too recording about the same rate of increase or an annual rise of 8 percent. Plant and machinery constituted nearly three-fourths of gross fixed assets formation. Net fixed assets formation constituted a little over half of gross fixed assets formation during the five-year period as a whole. As for inventories, while there was a fall in 1952 and 1953, because of the post-Korean recession, there was a rise in inventories in 1954 and 1955, due to the recovery in economic activity. But the rise during these two years just served to offset the fall during the preceding two years and was only a little over one-half of the rise during the Korean boom year of 1951. While the rise in inventories in 1954 was almost entirely in finished goods and work in progress, the rise in 1955 was mainly confined to raw materials. During the five-year period, as a whole, accumulation of finished goods and work in progress was substantially larger than that of raw materials.

As for sources of funds, during the five-year period as a whole, internal sources (that is, depreciation and reserves) contributed Rs. 265 crores or nearly 60 percent of the total. Borrowings from banks accounted for only 6 percent of the total. Of the total sources of funds of Rs. 443 crores, the largest amount was accounted for by the cotton textiles group (Rs. 69 crores) followed by iron and steel (Rs. 66 crores), engineering (Rs 61 crores) and sugar (Rs. 37 crores) groups. The total of new issues of shares and debentures, during the five years 1951-55 amounted to Rs. 49 crores, the year 1955 being the best year accounting for Rs. 17 crores. Of the total new issues, a little over one-half was accounted for by ordinary shares and over one-fourth by debentures. The largest amount was raised by the electricity group (Rs. 10 crores) followed by engineering (Rs. 8.5 crores) and textiles (Rs. 5.5 crores).

The total gross assets of the 750 companies at the end of 1955 amounted to Rs. 1,574 crores and

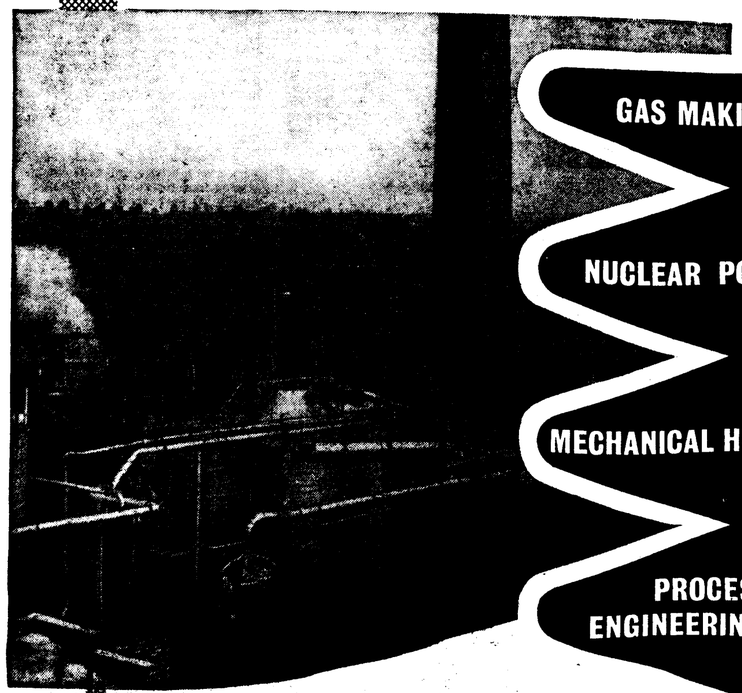
net assets to Rs. 1,191 crores. In the five-year period 1951-55, as a whole, net fixed assets recorded an increase of 47 percent against a rise of 34 percent under net total assets. The largest item under net assets as at the end of 1955 was fixed assets (37 percent) followed by inventories (29 percent). Finished goods and work in progress formed nearly one-half of inventories, and raw materials over a quarter. Receivables accounted for 14 percent and investments and cash for nearly 6.5 percent each of total assets at the end of 1955. Net worth at Rs. 634 crores (capital Rs. 394 crores and reserves Rs. 240 crores) constituted a little over one-half of total liabilities in 1955. Borrowings at Rs 309 crores formed a little over one-fourth of the total.

There was a slight decline in the liquidity of the assets of the companies as a whole during the five-year period. Current assets as a percentage of the total net assets initially rose from 62.3 in 1950 to 65.1 in 1951 but fell continuously to 59.7 in 1955. The ratio of current assets to current liabilities, which fluctuated narrowly in the range of 1.62—1.65 during the years 1950 to 1953, fell rather sharply to 1.55 in 1954 and further to 1.49 in 1955.

This summary indicates mainly the performance of the 750 companies as a whole. There are, of course, differences in the results revealed by the various groups of companies and these details are available in the article.

The growth of the companies during the five-year period 1950-55 is summarised in the table below.

Growth of the 750 companies during 1950-55



(Rs. crores)

	1950	1951	1952	1953	1954	1955	Percentage increase in 1955 over 1950

AMERICAN LOAN PROSPECTS LIFT SPECULATIVE ISSUES

STEADY UNDERTONE IN MARKET

Wednesday Evening.

THE economic news during the Puja holidays has cheered operators to some extent as hopes of an American loan to India have increased following Mr. T. T. Krishnamachari's recent discussions in the U.S.A. Indian Iron & Steel met with speculative support and after touching Rs. 16.86 were traded on the kerb up to Rs. 18.12 on 6th instant; profit-taking however brought the price down later to Rs. 17.70.

During the period under review the Calcutta Stock Exchange was open for only two days, namely, 26th and 27th September, respectively, and details of the business done during this period are given below.

* * * *

Trading in Government securities was almost entirely dislocated by the Calcutta bank strike. The undertone, however, continued steady and once again there was an enquiry for short-dated issues. Other loans were on offer but there were no notable price changes. Three percent Conversion Loan 1986 had sellers at Rs. 71.10 but no declared buyers. In short-dated loans, 3% 1958 was in demand at Rs. 99.75, 3% 1959-61 had buyers over at Rs. 98.25; 2½% 1961 was enquired for at Rs. 94.10 as was 2½% 1960 at Rs. 96.80, while 2¾% 1962 was steady at Rs. 94.10 and 3½% 1961 had buyers up to Rs. 99.50. In medium-dated loans 3% 1963-65 turned sellers at Rs. 93.25, 3% 1964 was asked for at Rs. 93.65. 3½% 1964 was offered at Rs. 97.65 and 3½% 1965 had sellers at Rs. 97.30. The new 3½% 1967 loan turned buyers at Rs. 99.44 with sellers asking 6 nP more. Among long-dated loans, 3% 1966-68 was quoted at Rs. 91.05 ex-voucher and 3% 1970-75 had sellers at Rs. 86.25; 3½% 1974 were marked at Rs. 98.30 and 4% 1972 had sellers at Rs. 99.97. There was a selected enquiry for State loans with interest centred on short-dated issues. There were buyers of 3% 1958 issues at around Rs. 99 and 4% U.P. and Madras 1964 were both asked for at Rs. 98.25. However, 4% U.P. 1967 and 1968 encountered selling pressure and prices eased to Rs. 96.15.

In the banking section Punjab National met with good demand and improved slightly from Rs. 58 to Rs. 60. United Commercial were unchanged at Rs. 56.50 as were United Bank of India "D" shares at Rs. 4.06.

A solitary transaction was reported in the railway section in Dehri-Rohtas at Rs. 9.40.

Preference shares were a dull market with the exception of Indian Iron & Steel which were enquired for at Rs. 98. Basanti Cotton were reported at Rs. 7.75 and Burrakur Coal 1st at Rs. 105. Indo-Burma Petroleum were crossed at Rs. 85 and Godfrey Phillips were marked at Rs. 61. India General Navigation changed hands at Rs. 65 and Rohtas Industries "B" Preference were quoted at the lower rate of Rs. 60.75. No transactions were reported in preference shares of jute companies.

In cotton, Elgin Mills were easier at Rs. 16.12 while Kesoram were unchanged at Rs. 11.62. New Victoria were marked down to Rs. 1.40.

Coal shares were featureless. Bengal were marked down from Rs. 214 to Rs. 212 although no business was actually reported in the shares. Bharat Collieries were done at Rs. 5.75 and Burrakur fluctuated narrowly around Rs. 21.75. East Indian were unchanged at Rs. 21.25 but South Karanpura improved from Rs. 9.56 to Rs. 9.75. Western Bengal were shaded at Rs. 5.56.

Jute shares were dull and neglected though prices showed little variation. Agarpara were lower at Rs. 7.12 as were Nuddea at Rs. 30. Howrah were slightly better at Rs. 16 and National at Rs. 18.30. Other transactions included Alexandra at Rs 100. Chitavalsah at around Rs. 12.25. Ganges at Rs. 48 and New Central at around Rs. 11.75.

The only share dealt in in the electric supply section was Calcutta Electric at around Rs. 12.25.

Sugar shares were out of favour and only two scrip changed hands in this section, namely, Purtabpore at Rs. 10.12 and Ramnugger at Rs. 20.75.

In the engineering section, Britannia Engineering were reported at a lower rate of Rs. 12.25 and Guest, Keen, Williams were marked down to Rs. 27.62 without any business being reported. Textile Machinery recovered during the holidays from Rs 15.25 to Rs. 15.50. Jessops were easier at Rs. 24.37 as were Richardson & Cruddas at Rs. 9.50. Marshalls were lower at Rs. 4.31.

In paper, India Paper Pulp recovered to Rs. 18.25 and Orient to Rs. 22.50. Titaghur were unchanged at Rs. 32.12 as were Shree Gopal at Rs. 14.87.

In Cement, Ashoka were unchanged at Rs. 8.87 and Dalmia at Rs. 9.81. Sone Valley were freely offered at around Rs. 4.75.

No business was reported in insurance shares.

In shipping, India Steamship were steady at around Rs. 10.81 as were India General Navigation at Rs. 66.

Among miscellaneous industrials, Aluminium Corporation were unchanged at Rs. 8.87 as were Alkali & Chemical at Rs. 13.62. Bengal Flour were slightly easier at Rs. 27.25 and British India Corporation recovered from Rs. 4.60 to Rs. 4.75. Dunlop Rubber met with investment enquiry at Rs. 19.31 and Hindustan Lever were shaded at Rs. 20.50. Imperial Tobacco receded to Rs. 11.94 while Indian Aluminium recovered to Rs. 12.37. National Insulated Cables were marked down from Rs. 23.44 to Rs. 23.25 and National Carbon from Rs. 25 to Rs. 24.87. National Tobacco were easier at Rs. 9.25. Clive Row were dealt in at Rs. 9 and Gillanders Arbuthnot at Rs 12. Hindustan Motors were quiet at Rs. 5.69, while Martin Burn were unchanged at Rs. 22.62. Rallis India were traded at around Rs. 29 and business was done in Shaw Wallace at Rs. 10.25.

In the mining group Chrestien Mica were lower at Rs 12 while Indian Copper were steady at around Rs. 2.74.

Tea shares ruled quiet and very little business was transacted. Bateli were done at Rs. 26 while Bishnauth were easier at Rs. 17.56. Brooke Bond were offered at Rs. 17.31 and Grob "A" were sold at Rs. 23.37. Huldibari were marked down to Rs. 18.25 and Tezpore were quoted at Rs. 16.12 x d. Jay Shree were reported at Rs. 9.12 and Patrakola at Rs. 120.

* * * *

The profit made by the BORREA COAL CO. LTD. declined by Rs. 2.48 lakhs to Rs. 2,30,089 for the year ended 31st December, 1956. The ordinary dividend has been cut by 5 percent to 15 percent, including an interim of 5 percent. The provision for taxation is lower by Rs. 1.28 lakhs at Rs. 70,000.

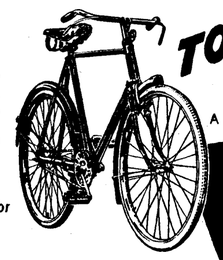
The green colour code

IN THE STEEL CITY OF JAMSHEDPUR, green is the colour code for top priority. At every desk, a green envelope or a green memo spells instant action for the stationery bears the legend : TWO MILLION PROGRAMME—IMMEDIATE.

Work goes on in an endless race against the clock with a daily stocktaking to assess progress. Every phase of operation is closely watched—from the manufacture of plant and equipment in three continents to work at the plant site, the ore mines and the collieries. Delays are at once spotlighted, whether in a distant Tokyo factory or nearer home on the rail route from Calcutta.

The project has already begun to yield results—two new 200-ton furnaces are producing the first additional steel under the Second Plan.



Shovelling dolomite into a recently completed 200-ton furnace in the new Steel Melting Shop.

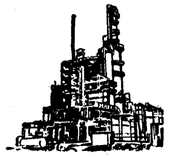
PRO-ICS-3E

"I AM CRACKED"

shrieks Adipocere

(Pronounced 'adi-po-saire')



I have gone through a lot, detected underground, harnessed by a drill, transported to a Refinery, and put through the fractional distillation process. Now I am put through a further step of catalytic cracking...in fact, I'm being cracked.

(A catalyst is a substance which promotes chemical changes in other materials without undergoing change itself)

By this process of cat cracking, a higher yield of several products is possible. My final stage of processing includes "treating" and "sweetening" which removes corrosive and odorous impurities from me; in other words I am "refined".

Keep watching these columns for what is to happen to me.

STANVAC — *the name that stands for progress*

The Stanvac Bombay Refinery is wholly operated and supervised by unit foremen all of whom are resident personnel.

PSTVOC-H27

Depreciation absorbs Rs. 57,095 (Rs. 80,439), tax contingency reserve Rs. 15,400 (Rs. 5,500) and development rebate reserve Rs. 42,500 (Rs. 2,000). A sum of Rs. 19,553 is carried forward, against Rs. 84,207 brought in. Raisings fell from 153,168 tons to 146,056 tons, and despatches from 155,347 tons to 144,202 tons.

* * * *

The dividend of the CALCUTTA LANDING AND SHIPPING COMPANY LTD. has been increased by 6¼ percent to 15 percent for the year ended 31st October, 1956. The profit has increased from Rs 1,18,676 to Rs 5,47,245. Depreciation is allocated Rs. 48,868 (Rs. 49,160) and provision for taxation gets Rs 2,85,230 (Rs. 33,000). Reserve for bad and doubtful debts receives Rs. 10,000 and reserve account Rs. 1·25 lakhs against nil. A sum of Rs. 36,429 is carried forward, against Rs. 64,414.

* * * *

The CLIVE ROW INVESTMENT HOLDING CO., LTD. has earned a profit of Rs. 10,61,532, against Rs. 31,92,061, for the year ended 31st March, 1957. The dividend has been declared at 7½ percent, including a final of 5 percent, against 13⅜ percent. The provision for taxation is Rs. 5.90 lakhs lower at Rs. 4.80 lakhs. A sum of Rs. 8,16,584 is carried forward, against Rs. 12,76,052 brought in. The directors say that the tea industry had a satisfactory season in 1956, and the company's results for the current year will benefit from the better dividends now being received for that season. Dividends from the company's investments in coal and miscellaneous companies have been satisfactory.

* * * *

The output of the INDIAN IRON AND STEEL COMPANY for the quarter ended 30th September, 1957, shows declines in all categories compared with the previous quarter. The production of pig iron and steel ingots fell from 172,225 tons and 129,651 tons to 171,397 tons and 119,172 tons, respectively. Semi-finished steel for sale and finished steel were 13,837 tons and 82,978 tons, against 21,370 tons and 83,726 tons. The latter two, taken together, fell from 105,096 tons to 96,815 tons.

Bombay Market

DULL TREND IN EQUITIES

LITTLE REACTION TO NEW IMPORT POLICY

Wednesday Evening.

THE Bombay stock market was quiet and inactive during the past fortnight. Prices showed an irregular trend and fluctuations were narrow, with the numerous holidays tending to restrict activity. At first, operators were inclined to move cautiously because of the lingering suspicion that the Indian Bank rate might be raised as a follow-up to the U.K. Bank rate increase. This possibility is now discounted. There was little reaction to the new import policy because contrary interpretations were being made about the effect it would have on investment prospects. Some said that domestic industries would benefit from the uninvited protection they were now getting; others argued that the supply of capital goods and raw materials would diminish, so productive activity would suffer. News about the activities in north America of Mr. T. T. Krishnamachari, India's Finance Minister, and the Birla delegation was bullishly interpreted for the most part; but there was no great optimism that India was about to be showered with loans and grants to ease her foreign exchange shortage. The speculative activity in bullion served as a reminder of the diminishing interest in shares.

The Tata Iron and Steel Company's announcement on its loan-raising activities in the United States cheered operators, so the ordinary shares closed at Rs. 162.25. Indian Irons met with selling pressure, in sympathy with the trend on the Calcutta kerb, when the disappointing production figures for the quarter ended last September were announced; bear-covering later brought about a partial recovery to Rs. 17.48.

Cotton textile mill shares were quietly steady, Bombay Dyeing closing at Rs. 51.20 and Kohinoor at Rs. 258. There was a fair enquiry for shippings, and automobile equities attracted more interest. Selected miscellaneous issues rose after the new import policy was announced; this was on the view that the products of the companies concerned would fetch higher prices. Banking issues were easier and insurances dull. Electrics showed a modest improvement after their earlier quietness.

THE TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place on 26th and 27th September the figures indicate Opening Quotations Highest for the week, Lowest for the week Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. Q. 35

What has **steel** to do with Life Insurance? The answer has far-reaching implications.

The Life Insurance Corporation is a repository of the savings of millions of people. As such it has a responsibility to see that these funds are safely **and** gainfully invested in enterprises (both public and private) which benefit the country.

Such an enterprise is the Steel Industry. It is vital to our progress. Homes and factories, ships and trains, dams and tractors—they all need Steel and lots of it.

Indeed, investing its funds in Steel the Life **Insurance** Corporation is investing in the future of India.

Life Insurance Corporation of India

STOCK MARKETS UNSETTLED

GILT-EDGED BETTER: FALL IN INDUSTRIALS

London, 9th October.

THE stock markets were unsettled again during the past fortnight. Trends were largely determined by the course of sterling since the sharp increase in Bank rate to 7 percent. Most investors were inclined to wait and see if the Government's latest measures would have the desired effect. The biggest feature was the announcement by the Royal Dutch Shell group of plans for a very large new issue in the year. This resulted in some rather wild movements in oil shares. Gilt-edged securities derived some benefit from the improvement in sterling, and a certain amount of "safety buying" also helped. In foreign bonds, German issues were quieter, but Japanese met with good support, and there was a sharp advance in Greek Bank stocks following a new offer to stockholders. With Wall Street in a better mood, dollar stocks made some recovery after their recent falls. A good deal of irregularity was witnessed in industrials, and by the end of the week, losses easily outnumbered gains. A small increase in the interim dividend and a substantial recovery in profits failed to help Dunlops, and most other leading issues were lower. Gold shares put up a fairly good performance and many showed useful gains. Diamonds were supported following good sales figures. Interest in copper shares was low. Rubbers held up well, and sometimes made small headway. Teas remained quiet and failed to establish any decided trend.

The Money Market

In the money market, borrowers found the credit situation tight. The supply position at first was affected by end-of-the-month factors, such as balance sheet preparations and payments for tax reserve certificates. Money was in keen demand, and the rate seldom went below 5¾ percent, with 6⅛ percent paid during the most difficult periods. Last Friday, credit conditions took a more comfortable turn, with rates down to 5 percent by the close.

Activity on Wall Street

High-grade corporate issues held the trading spotlight in bond dealings. Prices moved ahead in fairly active trading on increased investment demand. Long-term U. S. Government obligations were mixed early during the past week but advanced towards the end of the period in a thin market. Rails advanced, National and Greek issues were mostly higher, while Italians eased. Denmarks 4½ percents eased. Japanese issues were largely neglected Union of South Africa 4½ percents were steady. Several Brazilians advanced.

Paris Gold Firm

The Paris gold market hardened during the past week, again reflecting mostly domestic political events. It was, however, noteworthy that the upward movement was without a follow-up and after the rapid substantial gain the trend was reversed. Later, prices remained fairly steady. Hoarders continued to have doubts concerning the gold market and due to this, business throughout was restricted and fluctuations were generally fractional. Nevertheless the week ended on a firm note.

R.S.T. Copper Prices

The chairman of the London Metal Exchange, Mr. P. G. Smith, commenting on the Rhodesian Selection Trust group of companies' announcement that it will revert to a London Metal Exchange basis for pricing copper, has said that he appreciates the motives which prompted the R.S.T.'s fixed price policy Mr. Smith says that this policy has undoubtedly benefited those consumers who have bought from the group but now that circumstances have changed, he is glad that R.S.T. has reverted to the system of pricing its copper contracts on the London Metal Exchange quotation which has always reflected the true world value.

Uncertain Trend in Quicksilver

There seems to remain some uncertainty about the present price of London ex-warehouse quicksilver, according to trade sources. Price ideas among dealers in London appear to range from £84 to £85 a flask compared with £85 previously. Buying interest is reported at a low level and some quarters here believe that the higher cost of financing following the rise in Bank rate may have a detrimental effect on demand, and that a hand-to-mouth buying policy is likely to prevail. In addition, the stock position is generally regarded as good with a certain amount of Mexican as well as Turkish metal available. Under the circumstances, it is felt that prices may be shaded in order to secure business.

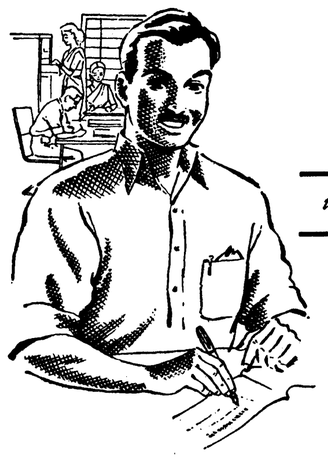
Rubber Market Quiet

A small advance in London rubber prices during the early part of last week was almost entirely the result of clearing-up business in connection with Russian orders. Main interest was in September and October shipments of No. 1 R.S.S. The virtual absence of new enquiry from home trade and Continental factories caused prices to ease in the later stages while speculative interest appeared to be only moderate. Offers from Ceylon and Indonesia were slow to find acceptance. Minor fluctuations occurred in dull trading in the final stages and the close was quiet, with the early advance lost and prices little changed on balance. The sole crepe market remained slow and a further small reduction in prices failed to arouse buyers' interest. Quotations latterly were barely maintained on the basis of 35¼d a lb for ⅛ inch No. 1 smooth on the spot.

Prospects for U.S. Cotton Crop

The crop reporting board of the U.S. Department of Agriculture has estimated the output of the 1957 cotton crop, as on 1st October, at 12,401,000 bales (of 500 lbs). This compares with last month's estimate of 12 713.000 bales and last season's final output of 13,310,000 bales. The yield an acre is estimated at 435 lbs against 446 lbs last month and last season's 409 lbs. Ginnings before 1st October are forecast at 2,499.000 running bales, against last season's 5.535,000 bales.

Capital Expenditure of British Petroleum



The British Petroleum Company Limited in a circular to shareholders is asking them to take advantage of any opportunity which may arise due to the need to raise additional capital or to make any other adjustment in the company's share capital. The directors have called an extraordinary meeting on 22nd October for the purpose of passing a resolution "that the share capital of the company be increased to £200 million by the creation of £80 million new shares of £1 each and that forthwith, upon any of the unissued shares in the capital of the company being allotted and paid or credited as paid in full, the same be converted into stock". At present the company's authorised capital is £120 million in £1 shares, of which only £6.243.318 are unissued. The circular says that in order to meet the increasing demand for oil products and maintain the company's position in the industry, it, in common with other major oil companies, will have to incur capital expenditure of a substantial order. While it should be possible to meet a considerable part of this expenditure out of retained profits as hitherto, it is clear that it will be necessary for the company to raise additional capital in due course.

Rights Issue of Royal Dutch-Shell Group

The Royal Dutch-Shell group of oil companies is considering the possibility of raising between £115 and £149 million of new capital early next year, Shell Transport and Trading Company has recently announced. The statement says that the money is required for future capital expenditure and will be raised by means of issues to shareholders. The Royal Dutch offering is expected to be in the form of a rights issue to shareholders and it is to total between £75 and £94 million. The price will be governed by market conditions prevailing at the time of the issue. The Shell Transport and Trading Company will make a similar offer to shareholders, totalling between £40 and £55, subject to the approval of the Capital Issues Committee. The Royal Dutch-Shell group's capital and exploration expenditure in 1956 totalled £388 million. Of its net income of £179.528.055. £138.394.530 was retained in the business to meet future capital expenditure and working capital needs.

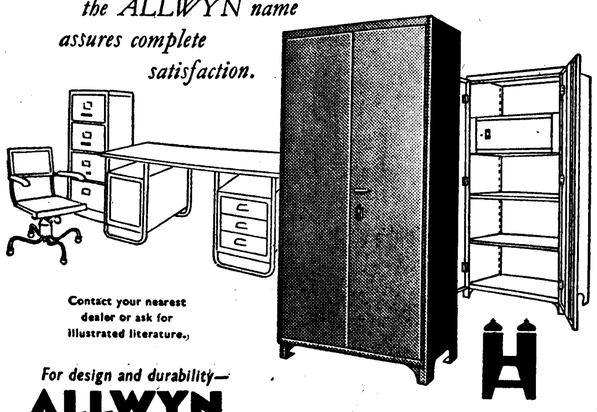
NEW DESIGN STANDARDS FOR BICYCLE TRACKS EVOLVED

The Central Road Research Institute in Delhi has evolved new design standards for bicycle tracks. The adoption of the new standards, it is said, will help in minimising road accidents. In view of the rapid increase in the use of bicycles, particularly in urban areas, there is an urgent need for minimising accidents It has been found that cyclists constitute about 60 percent of the total flow of traffic in Delhi and 30 percent of the road accidents are due to bicycle traffic. Separate bicycle tracks are, therefore, essential in order to eliminate traffic congestion and ensure road safety. The C.R.R.I has also taken into consideration the prevailing standards in Western countries while preparing the new standards. Due consideration has been given to the economic and climatic conditions in India. In addition, geometric design features grades and lengths have also been prescribed for bicycle tracks.

Allwyn leadership in furniture design and manufacture is the best safeguard and recommendation. In the case of UTILITY CABINETS it means

• GREATER CAPACITY AND VERSATILITY: More can be stored. Adjustments are easy with Allwyn shelves, pigeonholes, lockers.

utility cabinets . . .



Whether for home or office use, Allwyn TESTED modern designs and styling are hard to beat.

• GREATER SAFETY: The closures are perfect. Allwyn assures 100% protection from dust, vermin—and burglars (due to the unique 3-way locking device).

• GREATER DURABILITY: The choicest, specially treated steel sheets are used. No rust. No cracks. No warping.

• REASONABLE PRICE: Compare the cost. Because of nation-wide demand Allwyn prices are keenly competitive.

the ALLWYN name assures complete satisfaction.

New Delhi

GROWING ANXIETY OVER BANK STRIKES

SHORTCOMINGS OF OFFICIAL LABOUR POLICY

(FROM OUR NEW DELHI CORRESPONDENT)

IN New Delhi, the banks were closed almost throughout the past week because of the holidays. They were open on 30th September, but employees, in sympathy with their counterparts in Calcutta, staged a two-hour pen-down strike. The banks were closed on 1st, 2nd, 3rd and 4th October, on account of the Dussehra and Durga Puja holidays. They opened for half a day on 5th October, but 6th and 7th October were again holidays. Some attention was meanwhile turned to the bank employees' strike in Calcutta. The Government has made it clear that the employees there have no case and no excuse for going on a strike. The strike has therefore been declared illegal. The first question asked here is what action has the Government taken or does it propose to take against bank employees who have been staging strikes in sympathy with the illegal strike in Calcutta. The second question is whether the Congress-sponsored I.N.T.U.C. has any significant following among the organised labour force. Events have shown that it has no following among bank and Posts and Telegraphs employees, and mining labour, to mention only three categories. The history of the bank employees' disputes shows that it was to support the pro-Congress labour leaders that the Government gave in to bank employees on the issue of the latest Bank Award. The Communists claimed it as their victory. One view here is that sooner or later, the Government will have to take a stand against the mounting demands of labour. The present practice of weaning labour away from Communism by supporting rival labour organisations will have to stop. The economic consequences of such a labour policy have yet to be appraised. The only method of restoring industrial peace in India is to eliminate outsiders from the labour movement, and encourage genuine workers to manage their own affairs.

On 28th August the Ministry of Labour issued a Press note stating that "the representatives of employers and workers agree to bind themselves to settle all future differences, disputes and grievances by mutual negotiations, conciliation and voluntary arbitration. They also agree to give up recourse to coercion, victimisation and intimidation and avoid go-slow, lock-outs and strikes, including sit-down and stay-in strikes." This code of conduct was adopted at a tripartite meeting, the workers being represented by the spokesmen of the Indian National Trade Union Congress, the All-India Trade Union Congress, the Hind Mazdoor Sabha and the United Trade Union Congress. Presumably the bank employees are affiliated to one of these organisations. Why the Government has not yet called upon the labour organisation concerned to explain the strikes in Calcutta and elsewhere, in contravention of this undertaking, it is difficult to understand.

No Loan from London Market

Official sources discount reports that India is going to float a loan in the London money market. Firstly, India is not willing to pay the high rate of interest at which a loan in London would now have to be floated; the rate would not be less than 8 percent, it is explained. Secondly, it is felt that very little money would be available from the London market even if India is prepared to pay 8 percent interest. There was some chance for such a loan last year. India then wanted the British Government to lend an Indian issue the status of trusteeship, meaning thereby that charitable and other trusts which normally have money to invest could buy Indian bonds. The British Government wanted special legislation to be passed through the Indian Parliament before according such a status to the loan. This was found impracticable. The situation has not changed since then.

Allocation for Railways

Some comments are now available on the Railway Minister's announcement that the total outlay on the railway plan has been raised by Rs. 300 crores to Rs. 1.425 crores. Neither the Finance Ministry nor the Planning Commission is aware of this additional allocation. Some feel that when every naya paisa is needed to save just the "hard core" of the plan, it is wrong to step up the allocation for the railways. The Railway Board appears to claim that an increased allocation should follow the increased target of 61 million tons of additional traffic during the second plan period. The Planning Commission and the Finance Ministry apparently think that the higher target of 61 million tons should be reached within the allocation of Rs. 900 crores from the general revenues. The railways will have to effect economies in other sectors if they want the additional sum of money.

Many here are perturbed by the recent attitude of spending Ministries which seek to commit the Government to expenditure without securing the prior approval of the Cabinet, and, in particular, of the Finance Ministry. The Communications Minister, for instance, has been mobilising public opinion in favour of a shipping development fund. Some interesting comments are expected after the return of the Finance Minister from abroad on 24th October.

Foreign Exchange Expenditure

The Government has decided to limit foreign exchange expenditure to a maximum of Rs. 300 crores for the six months from October 1957 to March 1958. This amount is for both the public and the private sectors, the sum allotted to the former being of the order of Rs. 225 crores.

New Import Policy

The Government of India's new import policy (October-March) has been announced. It did not contain any surprises. There is an old French saying that "even the most beautiful woman cannot give more than she has." Nor can a country. This process will continue, and if adequate foreign assistance does not come forth, imports of even industrial raw materials may have to be cut down. India is committed to certain foreign exchange expenditure, which she will have to honour in due course. To make these payments, all possible steps will have to be taken to conserve foreign exchange resources. The October 1957-March 1958 import policy is one of these steps. But India's ban on import will have some repercussions on its export trade.

In this connection, it may be added that countries such as Western Germany, Yugoslavia and Czechoslovakia which, according to reports, are thinking of offering credit facilities to India, are, in reality, planning to maintain their markets in this country. A Tokyo message, for example, says that Japan is prepared to offer a $(U.S.)30 million loan, redeemable in five years, to enable India to buy capital goods. As already reported, the West Germans are perturbed over the ban on imports in India, and are planning to offer credit facilities to enable this country to resume its trade with them. This is the case in countries which have some "spare money." The countries which balance their imports with exports to India and cannot offer credit facilities may have to divert their trade to other channels.

The Indian consumer is at the mercy of the Government and the trading community. An official spokesman has told a Press conference that the response to the Commerce Minister's appeal for a price freeze has been very encouraging. So far so good, but it is not the president of the Federation of Indian Chambers of Commerce and Industry, who regulates the prices of consumer goods; it is the large mass of traders. According to newspaper reports, the prices of certain categories of consumer goods have risen since the announcement of the new import policy. This is inevitable, because the banning of imports creates a psychology of scarcity which leads to price rises. The second aspect of the problem, namely, the quality of goods, is even more important. The history of India's export trade shows that quality far from improving, has actually gone down. The Government has recognised the Indian Standards Institution which continues to prescribe standards for various goods. But who is to enforce those standards?

Consumer Power

In the U.S.A. there is a consumers' organisation which, by undertaking scientific and analytical studies of various products, advises its members what to buy and what not to buy. In Britain, the advisory council on standards for consumer goods is still a very young body. But without offending against the law of slander, it has been possible for this body to tell consumers not only which products are up to standards but which are not; which handsome, well-advertised and expensive household gadget simply fails to work, breaks down in use; which "non-shrink" material shrinks; and so forth.

Unluckily, such organised consumer opinion does not exist in India. This enhances the responsibility of the Government to safeguard consumer interests. The measures so far adopted by the Government have not proved effective. A mere assurance against a rise in prices or the laying down of standards by the Indian Standards Institution are not effective safeguards. More positive action is called for, particularly because the new pattern of the import policy is likely to continue for some years.

Fertiliser Imports

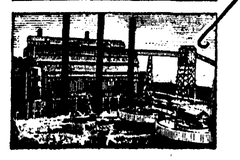
Because of the foreign exchange scarcity, imports of fertilisers will have to be curtailed in 1957-58. In terms of sulphate of ammonia, the overall supply during the current year is placed at 1.035.000 tons against a demand of 1.34 million tons the net deficit amounting to something like 300.000 tons. Import restrictions make it all the more necessary for immediate steps to be taken to extend the use of farmyard manure, compost, green manure, oil-cakes, bone meal, blood meal and superphosphate. This is one of the matters to be considered by the State Agriculture Ministers' Conference in Srinagar.

Additional foodgrain production in 1957-58, which may result from the "grow more food" and major irrigation schemes, is estimated at 2.5 million tons. The year's target is thus 71.2 million tons compared with the output of 68.7 million tons in 1956-57, which was about the same as in 1953-54 (68.718 million tons).

Enhanced Food Production Target

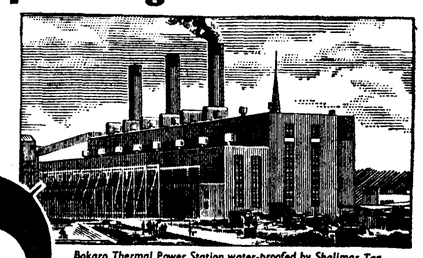
A note for the Central and State Agriculture Ministers' conference in Srinagar on 11th October, states that the achievement of the new target depends on the utmost attention being paid to the multiplication and distribution of improved seeds. It also depends on a speedy development of local manurial resources and green manure, economical and effective utilisation by cultivators of available water supplies, soil conservation measures in agricultural lands, adoption of improved dry farming practices, and the provision of timely and adequate agricultural credit.

It is emphasised that State-wise targets of production should be broken up into district-wise, block-wise and village-wise targets, and if possible, targets should be set for each family. The Mussoorie conference of State Development Commis-



Proof of Stp project proofing . . .

. . . **The play is on the word (p)roofing**—for in supplying protective roofing materials for India's new Power Houses (SINDRI, BOKARO, TILAIYA, MAYURAKSHI, JAMSHEDPUR, HIRAKUD), administrative and residential buildings (SINDRI, CHITTARANJAN, JAMSHEDPUR), **Shalimar Tar Products** are project proofing, with roofing, in a big way!



Nor is it the only way. At Sindri, floors in production bays and stores are acid and alkali proofed by **Stp**; at Bhakra-Nangal, **Stp** water-proofing and Hotpour Expansion Jointing play their part.

This is on the project side. On an ever increasing scale **Shalimar Tar Products** also protect the homes and industries of India.

Over 12,000,000 sq. ft. of Shalimar water-proofing Tarfelt were supplied in one year to protect the roofs of India.

sioners has recommended that every block should have a programme of additional agricultural production, and each village in a block a plan and targets for each item of agricultural production, worked out on the basis of available resources. The implementation of this recommendation, it is emphasised, is of importance, especially as a means of increasing the local population's interest and participation in development programmes. Alongside the substantially greater efforts required to increase food production, an intensive programme for the production of commercial crops is also necessary, particularly in order to meet the growing requirements of industry and to increase foreign exchange earnings.

Cotton and Oilseeds Output

Due to the various measures for improving cotton production, such as irrigation facilities to growers, grant of loans to cotton-growing States for the purchase of improved seeds, a subsidy on cottonseed, appointment of extension staff for propaganda and for technical advice to growers, the production of cotton rose from 4 million bales in 1955-56 to 4.72 million bales in 1956-57. The question now is whether the target of 6.5 million bales of raw cotton fixed for 1960-61 cannot be achieved earlier, particularly in view of the sharp increase in the production and consumption of cloth. The Indian Central Cotton Committee has asked State Governments to take effective steps in this direction. Long staple cotton production increased from 40.2 percent of the total in 1955-56 to 41 percent in 1956-57. Another important feature of the cotton development schemes is the introduction of sea island cotton, a new long staple variety which is being acclimatised in the heavy rainfall regions of the west coast.

Development schemes for oilseeds, which did not figure in the first five year plan, aim at a target of 7.55 million tons in the second plan for five major oilseeds. The Indian Central Oilseeds Committee in July this year approved extension schemes from ten States—Andhra Pradesh, Bombay, Madras, Orissa, Uttar Pradesh, Assam, Mysore, Punjab, West Bengal and Himachal Pradesh. These are supplementary to the work already contemplated under the oilseed development schemes financed by the Central Government. The emphasis, it is expected, will be on increasing the production of groundnut and castor, which are important foreign exchange earners.

Capital Goods Imports

Industry-wise figures are now available of the imports of capital goods, to which the Licensing Committee, set up by the Ministry of Commerce and Industry, has given its sanction. The total value of the capital goods so far licensed for imports for the chemical and pharmaceutical industry, amounts to Rs. 4.48 crores of which Rs. 82.29 lakhs is to be paid in cash, Rs. 54.80 lakhs is the value covered by foreign capital participation and Rs. 3.11 crores is the value of deferred payments. Foreign capital participation will be in Sandoz Products, Indokena Limited, Tata Chemicals and Johnson and Johnson Limited. In the cement industry, the total value of new plant and machinery amounts to Rs. 6.69 crores, including about Rs. 1.3 crores in cash, Rs. 4.77 crores in deferred payment and Rs. 59 lakhs representing foreign participation in Saurashtra Cement Limited, Asbestos Cement Limited and Lakshmi Asbestos Limited. In the rubber industry, Dunlops are investing Rs. 1.5 crores in their expansion schemes while the Firestone Tyre and Rubber Company's plans are covered by a deferred payment scheme amounting to Rs. 1.52 crores. Capital goods imports licensed for the paper industry amount to Rs. 2.39 crores, including Rs. 41.43 lakhs in cash and the rest in deferred payments. The provision for the textile industry amounts to Rs. 5.84 crores. Of this only Rs. 20.99 lakhs is in cash, the balance being in deferred payments. The electrical industries show a slightly different pattern. Out of the total of Rs. 60.81 lakhs allocated to them, Rs. 26.13 lakhs represents payment in cash and Rs. 34.68 lakhs covers foreign participation—Rs. 30.58 lakhs by Crompton and Parkinson and Rs. 4.10 lakhs by the English Electric Company. The Indo-Asahi Glass Company has a deferred payment scheme of Rs. 11.21 lakhs. The schemes of four units in the automobile industry costing Rs. 59.68 lakhs have been approved. They involve foreign participation amounting to Rs. 19.86 lakhs and the balance in deferred payments. The foreign participation is in Motor Industries Limited of Bangalore. Thirteen units in the engineering industries are allocated Rs. 1.82 crores, including Rs. 60.99 in cash. Rs. 80.79 lakhs representing deferred payment and Rs. 40.48 lakhs covering foreign participation. The Indian Oxygen and Acetylene Company's entire plan will be financed by foreign capital amounting to Rs. 29.35 lakhs. Two units in the aluminium industry have a total allocation of Rs. 1.66 crores to be financed by foreign capital. Sen-Raleigh of India Limited, the bicycle manufacturers, will spend Rs. 15.36 lakhs in cash. The refractory industry's allocation is placed at Rs. 42 lakhs, of which Rs. 9.80 lakhs will be paid in cash, and Rs. 32.20 lakhs represents deferred payments.

The sugar industry's share is about Rs. 9.34 crores. Of the 26 units, 17 have deferred payment arrangements amounting to Rs. 8.54 crores. The others have cash payment plans amounting to Rs. 79.54 lakhs.

The Tata Iron and Steel Company Limited and the Indian Iron and Steel Company Limited have a total allocation of over Rs. 10 crores, all to be paid in cash. The heavy electrical industry has eight units with Rs. 1.58 crores as their allocation, all of which has to be paid in cash, while the plywood industry has a share of Rs. 7.75 lakhs; its one unit has a deferred payment scheme. To sum up, the total value of capital goods imports so far approved by the Licensing Committee amounts to about Rs. 50 crores of which Rs. 16.70 crores has to be paid in cash, Rs. 27.25 crores represents deferred payment arrangements and Rs. 5.54 crores is covered by foreign participation. Import licences amounting to over Rs. 31 crores to cover these approved schemes have so far been issued.

Receipts from Tourism

Tourism gets regular publicity in some Indian newspapers. As far as the balance of payments on this account are concerned, India has been running an adverse balance during the last six years. The following are the figures (in crores of rupees.)

Year	Receipts	Payments	Balance
1950	4.2	14.6	(—) 10.4
1951	7.7	25.0	(—) 17.3
1952	9.8	9.9	(—) 0.1
1953	7.1	13.6	(—) 6.5
1954	8.4	12.0	(—) 3.6
1955	10.1	12.3	(—) 2.2
1956	8.3	13.4	(—) 5.1
Total	55.6	100.8	(—) 45.2

It is, however, explained that the figures of receipts include disbursements of foreign ships in India. In any case, 1955 was the best year for receipts. Earnings in 1956 were actually down by nearly Rs. 2 crores, although this year special efforts were made by the tourist organisation set up at the Centre.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business, ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

London

EASING THE PRESSURE ON STERLING

GOVERNMENT DETERMINED TO FIGHT INFLATION

(FROM OUR LONDON CORRESPONDENT)

As a prelude to the international economic discussions in Washington, Mr. Thorneycroft's 7 percent Bank rate was proof positive that Britain is willing to pay a heavy price for the defence of sterling. This fact he also emphasised in his subsequent remarks at the discussions, but whether the importance of the step—though it was fully appreciated by other speakers, supported by Western Germany and the United States and applauded by the official spokesmen of the World Bank and the International Monetary Fund—for the maintenance of international trade is sufficiently widely recognised by speculative elements in Europe is still open to some doubt. It is more than a fortnight since the announcement was made but the easing of the pressure on sterling which it was aimed to secure, apart from the initial recovery induced by the shock effect, has manifested itself only very gradually. The run on sterling has certainly abated, but it is only too evident that full confidence will not be restored until the Bank rate rise has worked its way through the economy as a whole and the Government has demonstrated more convincingly that it is determined to carry on the fight against inflation irrespective of political considerations and the prognostications of the gallup poll concerning election prospects.

Mr. Thorneycroft's disclosure in Washington that the surplus in the balance of payments was over £200 million in the year ended June suggests that the staggering losses in the reserves have probably arisen largely in meeting Britain's overseas sterling liabilities rather than by overspending on her own account. India's calls have undoubtedly headed the list. These figures are not normally released, however, so it is difficult to explain away an apparent paradox. The Chancellor of the Exchequer has probably sought some relief from this particular strain at the Commonwealth Finance Ministers' talks in Canada, but with what results remains to be seen. It might furnish some explanation of the suggestion for an Anglo Canadian free trade agreement, for the extra dollars which this could produce if it proved feasible would be a useful supplement to the other dollar credits available for the maintenance of the prevailing exchange rates.

Restoration of Confidence

It will be recalled that the last time Britain was faced with a run on sterling, which was a couple of years ago, it was set off by Mr. Butler's reference to the possibility of meeting exchange crisis by allowing a wider fluctuation. This time this less painful method of weathering the crisis has been definitely excluded. The present parity is to be defended at all costs, and in view of what Mr. Thorneycroft said in Washington, that can only mean that the Government has finally decided that the fight against inflation must be carried to its logical conclusion by forcing both capital and labour to co-operate in stabilising costs if they are not prepared to see that it is in their own interests to do so voluntarily. In two directions the City has been warned that the Government means business. The Government broker has been selling Funding 3½ percent, 1999-2004, one of his longest-dated stocks, in what are reported to be substantial quantities, indicating a willingness to fund at the existing level of the market rather than to wait for Bank rate to come down; and in the money market the discount houses have been kept just short of the amount they needed so that several had to borrow small sums at the Bank of England at the full 7 percent. The intention is almost certainly to prevent the City from reacting as lightheartedly as it has done in the past to anti-inflationary measures.

Capital may take less convincing than labour, and as for the latter no steps to secure co-operation have yet been taken. In the face of prevailing circumstances, it is difficult to see how a direct conflict of some sort can be avoided. The T.U.C. General Council's reaction to the Government's latest economic measures stresses the fact that the change in Bank rate threatens to reduce industrial activity and to cause unemployment which will probably be "persistent." In this, it reiterates its earlier objections to many aspects of Government policy. So far as the individual unions are concerned, however, the T.U.C. opinion has undoubtedly been taken as confirming the "no restraint" policy put forward at the annual conference. The remaining two railway unions have joined the N.U.R. in putting forward wage claims, the locomotive men for a 10 percent increase and the salaried staff for a review of the wage-scale. On the fate of these claims will rest the future of the fight against inflation, for the less responsible unions are going much further in advocating "industrial action to remove the burden of the higher Bank rate." The Government contends that wage increases must be related to the increase in production, but on what basis is the relationship to be established and how is it to be applied?

Production and Employment

The industrial production index, seasonally adjusted, started rising last May after a long period of comparative stability at a lower level. In April it was 137; it rose to 139 in May and jumped to 142 in June. The provisional figure for July is now also shown as being 142, while that for August is estimated at 141-142. The early summer spurt seems to have levelled off again over the last three months, at about 4 percent higher than a year ago. There may be some encouragement in the higher level, but an examination of industry by industry performances discloses the fact that the rise is dominated by the output of passenger cars. On an unadjusted basis this was 36 percent higher this August compared with August 1956, with commercial vehicles 4 percent higher and steel output 9 percent up. Sulphuric acid and cement production are 8½ and 7½ percent higher, respectively, but mined coal is ½ percent down and bricks 5 percent lower.

The improvement in production is ascribed to the heavy capital investment of the last couple of years, but this has not yet led to greater output from the same labour force, as it was expected to do. Employment statistics go no further than July, but at the beginning of August Britain finds that she has once again returned to the over-full employment situation which makes so much nonsense of the labour fears of unemployment with the number of vacancies at 310,000 well ahead of the number of unemployed at 266,000. It is in these circumstances that the country finds a handful of employees threatening to bring the whole Morris Motors plant to a standstill rather than work with a few men who for one reason or another refuse to join a union, or an inter-union dispute as to which men should handle which part of a prefabrication job, threatening the stoppage of all work in one of the major shipyards.

Improved Terms of Trade

Official confidence in the soundness of the trade position undoubtedly arises from the fact that commodity prices have moved back a lot recently and that in consequence this country has been trading at unusually favourable terms. The Board of Trade index for import prices in August dropped three points from 108 to 105 while the export index rose one point to 112. As a result, the terms of trade, the ratio of import to export prices, moved three points in Britain's favour from 97 to 94. This is the lowest monthly figure since January 1953 before which the figures (which are based on 1954=100) are not comparable. The export rise was largely due to increases in the prices of engineering products, mainly electrical and non-electrical machinery and apparatus, the index for which rose by two points to 114, while textile prices also rose by a point to 102. The fall in the import index reflects the seasonal decline in the prices of fruit and vegetables as well as lower prices for wheat and sugar, fuels, including petroleum and basic materials.

Meantime, the Treasury's new measures are gradually having their effect on various aspects of the business world. For instance, the new pattern of higher-purchase finance rates is beginning to emerge, with those for motor vehicles adjusted at from 7½ to 9 percent for new vehicles; 8½ to 10 percent for used cars less than five years old; and from 10 to 11½ percent for motor cycles, scooters and all motor vehicles over five years old. These are the maximum rates and most finance houses are likely to charge less. On the deposit side a more varied pattern is likely to emerge, depending on a variety of circumstances. There has been an increase from the present 3 percent to 3¾ percent payable on tax reserve certificates of the seventh series issued under the terms of the prospectus dated 8th July, 1955, bought on and after 24th September, with the rate of interest on those subscribed before that date remaining unchanged. The Treasury has announced the new Public Works Loan Board interest rates at 7¼ percent up to five years (against 5¾ percent); 6¾ percent (against 6 percent) between five and 15 years; and 6¾ percent (against 5¾ percent) for more than 15 years.

Change in the Cotton Board

Sir Raymond Streat has retired from the chairmanship of the Cotton Board; his abundant energy and wide experience of the industry's problems will be sadly missed. The new chairman, Lord Rochdale, who is acting only in a part-time capacity, will find it virtually impossible to fulfil all the demands arising from the appointment, which proved a strain even on his full-time predecessor, but has been accorded a warm reception by the traders who have a high regard for his capabilities. He is fortunate in one respect—that in Mr. Broatch, the Director-General, and many of the heads of the departments he has a staff which served under Sir Raymond ever since the Board was established in 1940, which is well qualified to carry the additional work and responsibility which will inevitably fall upon their shoulders with only a part-time chief.

Brevities

Mr. Senanayake, Ceylon's Minister of Commerce and Trade, has left London for Ceylon after having talks with the British Government on proposals to release Egyptian sterling balances here to enable Egypt to resume her imports of tea, which have fallen by 75 percent.

Orders worth about £1,700,000 for two tonnage oxygen plants to serve the steel works being built in Durgapur and Rourkela have been placed with British Oxygen Linde Ltd., a sales company jointly owned by the British Oxygen Company Ltd. and the German Linde enterprise.

two generations at your service

WHEN Sven Wingquist founded SKF in 1907, he inaugurated right from the start a technical advisory service for users of SKF products. It offered then—as it has ever since—assistance with the selection of bearings, the preparation of complete bearing schemes, advice on mounting, lubrication and maintenance. For 50 years SKF has helped to ensure the use of the right *bearing* in the right place *in machinery*, vehicles, instruments and other applications of every conceivable kind throughout the world. It has carried out systematic research into bearing schemes and helped engineers everywhere to utilize bearings to the full, both technically and economically.

Innumerable bearing problems have been solved by SKF technicians ... and each solution has added to the vast storehouse of technical knowledge and experience available to every SKF engineer.

Today a new generation of specially trained SKF engineers is available in over 250 SKF offices throughout the world to solve the bearing problems of tomorrow. They are there to assist *you* in *your* progress. They are experts at their job—and they are backed by modern research departments. With the accumulated experience of the older generation at their disposal, they are ideally equipped to serve *you*. Why not put them to the test?

CHEAPER RAYON YARN FOR ART SILK EXPORTS

OVERSEAS DEMAND FOR INDIAN PEPPER IMPROVES

(FROM OUR BOMBAY CORRESPONDENT)

INDIAN rayon producers, it is reported here, have agreed to supply the domestic manufacturers of artificial silk fabrics with 500,000 lbs of yarn over a six-month period at a rebate of 20 percent. The offer, stated to be experimental in character, is intended to strengthen the weaving industry's competitive position in the export field. In making this offer, yarn manufacturers requested that some of their representatives be delegated to the Silk and Rayon Textiles Export Promotion Council. Presumably, the object of this request is to give yarn manufacturers an opportunity of making certain that the raw material supplied at the concessional price is, in fact, used for the intended purpose. It appears that a second request made by yarn manufacturers was that they should be allowed to sell their product for domestic consumption at a price higher than that ruling at present in order to recoup part of the offered rebate. The Government of India is likely to reject this second request, but it is equally likely that it will be renewed at the end of the six-month period if the scheme works satisfactorily. But, industry circles here believe, the Government of India may make a gesture by exempting the yarn, supplied for manufacturing fabrics for the export market, from the excise levy.

On its part, the weaving industry maintains that given the proper incentives it can substantially improve over its past performance. It claims that it could increase its exports from the current level of 3 million yards a year to 10 million yards annually. While this would be most welcome, it would seem that a 10 million yard target is somewhat unrealistic. A 20 percent rebate in the price of yarn is not likely by itself to achieve the envisaged export figure. The Indian weaving industry faces many disadvantages which impair its competitive capacity. The main disadvantage is that most of the equipment installed in domestic mills is now old and obsolete. Most of it was set up in 1937, and was even then not quite new. This fact in itself means that the cost of production is likely to be top-heavy. Secondly, the industry consists of a number of small-scale units, which means that they are unable to take advantage of the economies of mass production which accrue to Japanese manufacturers. These two disadvantages, taken into account together, further mean that the fabrics manufactured here must lack the technical excellence of those manufactured by India's competitors.

It would seem logical to assume that if India is to compete successfully in foreign markets, she must thoroughly overhaul her industry. The importance of the rayon industry is often forgotten and it would be well to take note of the fact that the synthetic fibre industry is gaining ground throughout the world at the expense of natural fibres like cotton. The rayon weaving industry in this country is still at a stage when it has not assumed unwieldy proportions, so its rehabilitation will be easier. The industry as a whole has shown initiative in several directions in spite of being circumscribed by many limitations. A case clearly exists for the Government's sympathetic consideration It may be possible to provide aid through the existing financial channels. Such aid could be used to purchase new plant and to operate units of an economic size. Such an investment would pay dividends in two forms. It would provide the country with a foreign exchange earner within the shortest possible time, while providing simultaneously some of the much needed consumer goods to mop up excessive purchasing power.

Trend of Pepper Exports

Pepper exports during August recorded a substantial increase over the previous month, according to estimates drawn up by the trade here. The actual quantity shipped amounted to 15,961 cwts. against 9,585 cwts. in July. But the August export figure was unsatisfactory when compared with the 22,911 cwts. shipped in the same month last year. The United States continued to be this country's best customer with an offtake of 9,020 cwts. Italy was in the second place with 1,600 cwts. followed by Canada with 1,133 cwts. Total exports during the first ten months of the current season showed an improvement over last year. Some 263,411 cwts. have been shipped from November 1956 to August 1957, compared with 236,570 cwts. in the corresponding period of the previous seasen.

Rise in Cotton Futures

The Jarilla March cotton futures contract was quoted at Rs. 694 a candy which represents a gain of Rs. 10 over recent prices This renewed interest was caused by unsatisfactory weather reports. Reports from the Punjab speak of the damage caused to the new season's crop because of excessive rains. On the other hand, reports from the cotton-growing areas of Gujerat and Saurashtra say that rainfall in these areas has not been adequate and the crop may therefore, suffer some damage. The trade here believes that the season's crop will amount to no more than 4.9 million bales against the 5.2 million bales expected earlier. However, the position is still not quite clear and it may be that the damage may not be as excessive as feared. Activity in the spot market also brightened following renewed demand from spinners. Good business in some of the popular varieties was reported. Although the trade has welcomed the announcement of the cotton export quota, it seems unlikely that substantial business will result in the immediate future. The recent cut in Japanese imports includes cotton, and Japan has been India's best customer. It is feared that U. K. importers may restrict their purchases following the recent increase in Bank rate. But trade circles believe that it may be possible to sell moderate quantities of Bengal, yellow pickings and Zoda to France.

Limited Export Business in Piecegoods

The export business in piecegoods continued listless. Indonesia purchased modest quantities of medium grey sheetings and bleached longcloths. Similar qualities in small quantities were also ordered by West Africa. The U. K. booked some business in heavy drills and medium grey sheetings Some enquiries were received from Hongkong, but no substantial business materialised, while Singapore bought some quantities of bleached longcloth, sheetings and cheap voiles. But importers believe that substantial business will be done with Burma in the near future.

Madras

NEW RESPONSIBILITIES OF ACCOUNTANTS

MORE INTEREST IN MANAGERIAL PROBLEMS URGED

(FROM OUR MADRAS CORRESPONDENT)

CHARTERED accountants should take special interest in cost accounting and undertake the study of industries such as cotton and sugar, according to Dr. Ramaswami Mudaliar. He has told the Institute of Accountants in Madras at its annual meeting that the profession has acquired greater responsibility. Chartered accountants should take more interest in management, as their professional experience helps directors. Independent advice from them will assist industrial growth in the public and the private sectors. Dr. Mudaliar says that companies will gain from the application of accounting and auditing principles. This statement on the profession's increased responsibility has been actuated by the emergence of many independent practitioners who are helping in the assessment of income tax. The levy of new taxes will create greater opportunities for the profession.

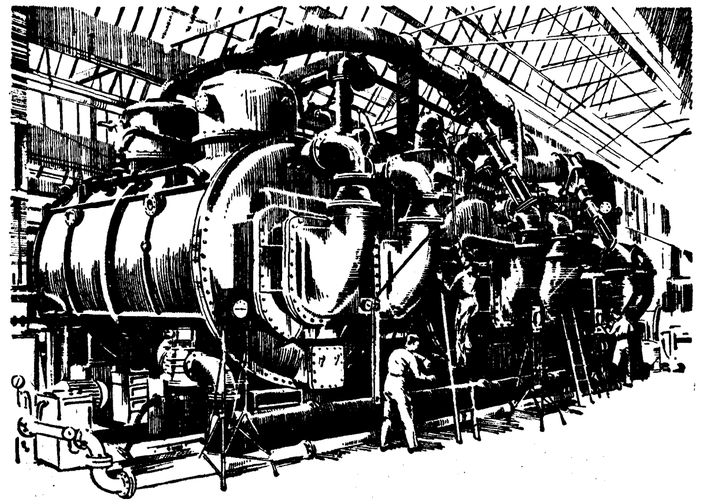
Use of Alcohol in Diesel Engines

Though Mysore has shown faith in power alcohol and the Mysore Sugar Company's distillery has produced alcohol, the report from Bangalore about the use of alcohol in diesel engines has created great interest. Experiments have shown that when it is used, the smoke from exhausts is reduced, overloading capacity is increased and engine efficiency rises, while engine deposits are less. Mr. A. J. Lund of Simpson and Mr. Austin of Amalgamations were among those who attended the tests recently to see the performance of engines run on diesel oil and on mixed fuel. No estimate of the cost of power alcohol is available yet, but it is clear that wartime experience will guide the use of alcohol since it is known that charcoal gas units became popular during the war years due to official directions on petrol economy. In any case, the State transport undertakings may give a lead in this direction.

Canadian Aid for Kundah Project

Mr. F. E. Pratt of the Colombo Plan administration recently said that Canada will help lay the transmission lines for the Kundah Hydel Project. The State Government has sought further financial aid for laying the lines in order to supplement the $20 million offered by Canada. Canadian experts have seen the progress at the site and work is said to be going ahead of schedule. Machinery from Canada is coming *via* Cochin port. The assurance of Canadian help means that the State plan will not suffer.

New Import Policy



The announcement of the new import policy made headlines as usual. The advice to cut imports drastically and to increase exports, as offered by Mr. R. M. Dave, has been regarded by some as a counsel of despair. The call for *swadeshi* has not created any enthusiasm among traders. The prompt rise in the prices of blades, drugs and milk foods, etcetera, proves that, as during the war, profiteering will once again be rampant. Complaints about paper, crockery and blades of local manufacture will, it is hoped, gradually decrease.

INCREASED POPULARITY OF AUSTRALIAN MOTOR-CARS

Noticeable features of motor-car registration figures in Australia are the increase in popularity of the Australian-built motor-car, and the strong following for British-manufactured vehicles. Australian-made motor-cars accounted for approximately 40 percent of the registrations for the six months ended June, having risen from 34 percent on the figures for the previous 12 months. The total number of motor-cars registered for the six months was 70,037, compared with 134,131 for the 1956 year. Registrations have fallen slightly this year. This is attributed to an increase in sales tax on motor-cars and commercial vehicles which was imposed in March 1956. Most of the overseas automobile companies in Australia are not operating at full capacity, but output and sales of the completely Australian-built motor-car, the Holden (manufactured by General Motors-Holden's Ltd.), are showing a steady increase. Major British companies have plants in Sydney and Melbourne. The British Motor Corporation has announced that it will produce a 100 percent Australian-built motor-car. Standard, Rootes, Vauxhall and Ford are all progressing towards this objective. The new Ford Customline is more than 80 percent Australian in content Recently there has been some interest in Japanese motor-cars in the trade. One, the Toyopet, competed in the 10,500 miles round Australia motor-car rally, and another, the Prince, was shown in Canberra recently. Another expected to compete in Australian trials is the small Datsan. It is estimated that the Toyopet will cost about £A1,300, and the Prince £A1,200 in Australia; for the present these prices do not appear to make the motor-cars competitive in the Australian market. But as competition among nine manufacturers in Japan is said to be forcing down prices, some trade officials expect that in a few years prices will fall sufficiently to enable the motor-cars to compete in the Australian market.

DEFENCE TAX IN SWITZERLAND

BIGGER SURPLUSES IN WEST GERMAN FOREIGN TRADE

(FROM A CORRESPONDENT)

THE new taxation measures now before the Swiss Parliament are expected to come into force from January 1959. They include a defence tax. The Federal Government is authorised for a period of 12 years to impose a defence tax on the income of individuals, and on the net earnings, capital and reserves of corporations. The tax on the income of individuals is levied according to a progressive scale, and will not exceed 8.5 percent of the entire taxable income. The lowest net income liable to taxation is 6,000 francs; for married persons it is 7,500 francs. For this 12-year period beginning from 1st January 1959. the new schedule of tax rates will be as given below :

Income of married persons without children	Hitherto	Defence Tax effective from 1st January, 1959.
10,000	65	35
20 000	310	205
30,000	817	610
50.000	2.431	2.065
100,000	8.225	7,567

With effect from 1st January, 1959, the supplementary tax on the property of individual persons will be abolished. Corporations are to be taxed, irrespective of their legal status, as equitably as possible, in accordance with their economic capacity.

Sales Tax Rates

The sales tax will during the transition period be applied at the reduced rate of 3.6 percent on retail supplies, and 5.4 percent on wholesale supplies. The free list will be enlarged. It includes gas, water, electricity, bread and grain, seeds, foods and many grocery goods and newspapers. The additions are : non-alcoholic beverages, soap and washing material, fuel, plants and flowers, important agricultural auxiliary materials, medicines and books.

The tax on luxuries will be entirely repealed. The beer tax, however, will be retained. The withholding tax, and the tax which is deducted at source on payments from insurance, will be permanently put on the statute book. For the transition, the coupon tax will be lowered to 3 percent, against 5 percent previously. Instead, the withholding tax will be raised from 25 percent to 27 percent. The stamp duties will, in principle, be continued at the existing rates and levied in the same manner as at present.

West German Foreign Trade

Imports of Western Germany and west Berlin which for the first six months of 1957 were 17.2 percent higher than the average level of the previous year, rose from 2,478 million deutschemarks in June to 2,709 million deutschemarks in July, being 12.7 percent higher than in the same month of 1956. Exports increased from 2,855 million deutschemarks in June to 3,058 million deutschemarks in July, thus showing an annual rate of increase of 18.5 percent. The foreign trade balance in July shows an export surplus of 349 million deutschemarks against 377 million deutschemarks in June 1957 and 177 million deutschemarks in July 1956.

The surpluses in the West German balance of payments remain high. In July, the gold and foreign exchange reserves of the Deutsche Bundesbank rose by 884 million deutschemarks ; in the first three weeks of August they went up by 1,161 million deutschemarks to 21,800 million deutschemarks. In order to compensate for the increase in the liquidity of the banks by means of the open market policy, the ceiling amount of 5,000 million deutschemarks which used to be at the disposal of the Bundesbank for these purposes, was raised to 6,000 million deutschemarks. Export drafts will be taken for rediscount by the Bundesbank until 30th November only and prolonged drafts until the date of their maturity.

The number of the unemployed in July declined by 64,000 to a record low of 390,000. This figure was 19,000 less than the 409,000 reached at the end of August 1956.

Dutch Foreign Trade Deficit

The Netherlands Ministry of Economic Affairs has published an analysis of Dutch imports and exports in the first half of 1957, from which the following data have been taken. In comparison with the first half of 1956, the total foreign trade increased by 12 percent according to value, and 7 percent according to volume. As imports increased considerably more than exports, there was a substantial rise in the trade deficit. Imports were 17 percent up in value and 11 percent up in volume compared with the same period of last year. The volume showed a slight decline during the second quarter of 1957 ; the five years' uninterrupted increase in quarterly imports thus came to a halt. In the distribution of imports according to countries of origin, the increased importance of Latin America is noticeable. Nearly 9 percent of Dutch imports in the first half of 1957 came from this area. The importance of Belgium as its leading supplier slightly declined, against which there was a slight rise in the importance of Western Germany as the Netherlands' second supplier. In comparison with the first half of 1956, exports increased by 5 percent in value and by only 2 percent in volume. This increase was, however, affected by a number of chance factors ; omitting these the increase in volume was 4 percent. The greatest increase was in industrial products (6 percent more). The volume of exports fell continually in 1955 and 1956, but showed a sharp recovery in the first half of 1957. The increase was the greatest in exports to Belgium and Luxemburg, the Netherlands' Benelux partners. Exports to the U.K. decreased considerably.

In comparison with the first half of 1956, the import price level rose more (by 5 percent) than the export price level (by 3 percent), so the terms of external trade deteriorated by about 2 percent. This was mainly because of the steep rise in world prices of petroleum, coal, sugar, freights, etcetera. All these increases were due to the Suez conflict.

Higher Austrian Exports

The Linz, (Upper Austria) Steel Works (Voest) recently commissioned a sixth rolling mill stand, specifically designed to improve the quality of rolled materials in surface finish and technological standards. Since its strip mill section went into production in 1952, the Linz Steel Works has produced nearly 2 million tons of sheet material. In the first half of 1957, the Austrian machinery, steel and iron industry produced goods to a total value of 2.7 billion schillings. Comparative records for the first half of 1956 show an output worth 2.4 billion schillings. Over the same period, exports increased from 500 million to 900 million schillings: or 60 percent in value, while the share of exports in the total volume of production rose from 23 to 33 percent. Substantial export orders are awaiting execution in the forthcoming months of 1957.

Larger Orders for Swedish Ships

The large inflow of new orders to the Swedish shipyards in 1956, altogether 1,800,000 gross tons, has been repeated this year, according to a report by the Association of Swedish Shipyards. In the first half of 1957, new orders totalled 40 vessels aggregating 730,000 gross tons, compared with 78 vessels of approximately 750,000 gross tons in the same period of last year. New orders this year have mainly been for big tankers, so the trend is towards larger vessels. The total stock of orders at Swedish yards now amounts to 3.5 million gross tons, 75 percent of which is tanker tonnage. The relative share of tanker tonnage in overall orders has increased by 10 percent since the beginning of 1956.

Production at the Swedish yards during the first half of 1957 has been satisfactory. Altogether, 40 vessels aggregating 292,000 gross tons were launched, while deliveries totalled 41 vessels of 310,000 gross tons. Big orders for the Swedish Navy are also under execution. Among the notable new orders received by the Swedish yards during 1957 so far, are five tankers of 48,600 tons d.w. each —two of which may be converted into 65,000 tonners—to be built by Eriksberg, five tankers of 47,000 tons d.w. each for Kockums, and a preliminary order of six tankers of 65,000 tons d.w. each for Uddevallavarvet. The minor yards have also shown favourable results by launching nine and delivering eight vessels of just under the 500 gross ton class.

Joint Norwegian-Russian Power Scheme

A Norwegian-Russian expert committee which worked out plans for using the Pasvik river, the border river between Norway and Russia, for the production of electric power, has come to an agreement which will now be put before the two Governments. It is intended to treble the production of electricity in Finnmark, the northernmost Norwegian province, and will also make the big Sydvaranger iron ore mines independent of other and more expensive means of power. The common utilisation of the Pasvik river was one of the questions the Norwegian Prime Minister, Mr. Einar Gerhardsen, raised during his official visit to Moscow in 1955.

LOCAL SPECULATIVE AND OFFICIAL ACTIVITY SUPPORT GOODS PRICES

U.S. BURLAP FIGURES DISAPPOINT THE MARKET

THERE has been little overseas interest in the Calcutta goods market lately; what interest there has been is the result mainly of local and Government activity. The American burlap consumption and stock figures have not given any confidence to the market, and indeed the statistics for August were most disappointing. Consumption was only 68 million yards, and although this was a rise of 7 million yards on the previous month it was still the lowest figure recorded for that month since 1951. Normally, in the last five months of the year, U.S. consumption is high; that is why the trade in general views the recent fall with misgivings. American stocks too have fallen to a dangerously low level and in August were the lowest since the end of 1954. The afloat stocks are possibly the result of the poor shipping position in Calcutta, but this has improved considerably within recent weeks. Reports from America indicate that buyers there are no longer interested in the higher prices at present ruling in Calcutta, and are limiting their purchases to their immediate needs. The September statistical figures are eagerly awaited in Calcutta and their publication may have far-reaching effects.

The current high prices for ready goods in the Calcutta markets are not an usual feature; they are practically inevitable when heavy speculative activity is the governing factor. At the present time all heavy goods fabrics are showing a substantial premium in the ready position. This is unusual, as the squeeze normally goes in cycles, as witness the Rs. 8 to Rs. 9 premium on ready cornsacks barely six weeks ago when other fabrics were practically on a par for near and forward shipment. The current revival of ready goods prices however is the result of a genuine shortage and can be accounted for by mill sales for this period early in the year when prices in the final quarter showed a substantial premium over other deliveries.

The Daissee Crop

A recent survey of the Daissee growing areas has done nothing to alter the widespread belief that proper Daissee will be in short supply. In nearly all areas visited the preponderence of Mesta was most noticeable, and on an average consisted of about 65 percent, except in the Sheoraphuli districts. The general belief that the quality of the Daissee crop this year would be good has not been substantiated by the initial reports, and as usual the moisture content is very high. However the prospect for the entire crop should not be gauged by the early arrivals as these invariably consist of weedings and early immature jute. Farmers of long standing are still of the opinion that when the bulk of the crop is harvested the quality will be the best for some years.

There has been very little of forward purchases of Daissee this year as the mills' *modus operandi* appears to have undergone a change. Many consumers have opened their own agencies in these areas, and others have made limited purchases "over-the-jetty" in spite of the bitter experiences of others reported in previous years. These two factors have tended to keep the price in the mofussil higher than it would normally be. Mills have also tended to go in for ready delivery jute rather than forward shipment, as they have been let down on so many previous occasions by non-delivery when the market has gone against the seller. The price of Daissee Mesta still remains high in spite of reports of a bumper crop, but this is expected to fall once arrivals start in any great strength in November.

THE JUTE MARKETS

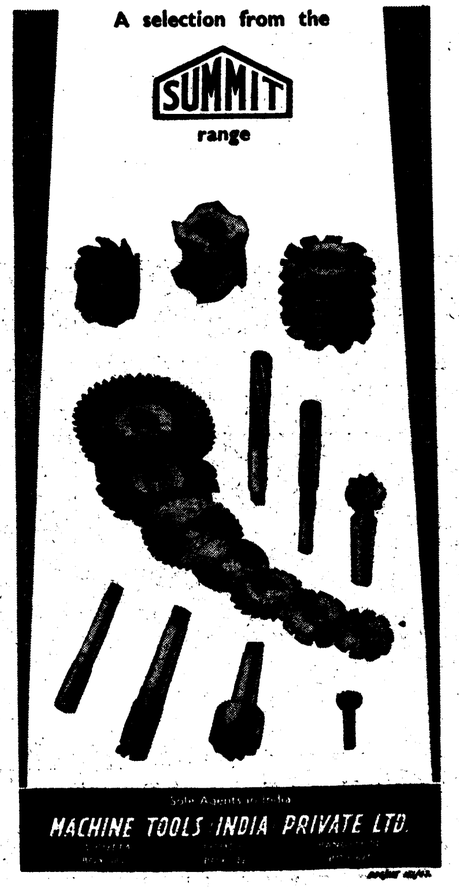
Manufactured Goods. On account of the Pujas the current report covers the period from 26th September to 11th October, during which time business was restricted to only six working days. On these days activities were further hampered by the bank strike in Calcutta and the surrounding areas. Early in the period it was announced that the Central Government had placed an order for ready B. Twills. Goods for this particular delivery were already scarce and the increased demand soon widened the difference between the ready and the forward positions ; the premium rose to Rs. 6 and over. Other sections of the market reacted in sympathy and conditions in general were steady. Heavy shipper covering in B. Twills and also *fatka* operations in the same sphere in readiness for the approach of settlement day caused new high levels to be recorded. Ready B. Twills at one stage rose to Rs. 121. Hessians were neglected throughout, and the only price movements recorded were in accordance with the alterations in the sacking section. During the holidays there was little or no activity. Heavy goods prices gradually receded and quieter conditions prevailed.

At the opening last Thursday the market was unchanged except for the ready B. Twill position, which under the influence of Government enquiries and speculative activity advanced 75nP to Rs. 119.25. This was a premium of Rs. 5.50 over the January-March, 1958 position. Hessians were quiet and remained at Rs. 42.32 and Rs. 42.20 for the near and forward positions, respectively. The squeeze for ready sacking continued over the next few days and by Saturday ready B. Twills were quoted at Rs. 121, the premium over forward shipment being Rs. 6. The holidays intervened, and the squeeze for B. Twills relaxed. Over the three working days that were left, rates dropped about 50nP a day. Eventually heavy goods were lower than the opening quotations for the period under review. Hessians fared a little better over the latter part of the week and at the close 40in. 10oz. rates were slightly higher than those ruling at the opening.

This report was closed on Monday 7th October when the market was quiet. Opening quotations were as follows :

	Ready	October	Oct.-Dec.	Jan.-Mar.
	Rs.	Rs.	Rs.	Rs.
40″ 8oz.	35.50	35.00	34.50	34.00
40″ 10oz.	42.85	42.85	42.80	42.10
B Twills	119.00	116.75	115.00	113.25
Heavy Cees (Plain)	115.00	115.75	115.00	113.25
A. Twills	143.50	142.00	140.50	138.50
Liverpools	131.50	131.50	131.00	128.75
Cornsacks	117.50	117.25	116.00	114.25

Raw Jute. During the period under review there were only six official working days, but business continued on a small scale throughout the whole of the holidays. The market was firm at the beginning. Sellers were inclined to be reserved and business was done at the full market rates. The activity in the goods market was reflected in fibre prices at this stage, and although reports from upcountry indicated an easier tendency, many Calcutta sellers continued to hold bullish ideas. Mill representatives, both in the local markets and in the agencies, were very active, and this tended to keep prices high. After the holidays, when business was resumed on 4th October, prices eased, and the market ruled quiet with moderate mill business reported. Indications were generally lower than sellers' quotations but in most cases the lower rates were met, and eventually operators were keen sellers. The local bank strike made trading very difficult and many sellers were handicapped in making fresh purchases through being unable to get cheques received from mills and brokers credited to their accounts.



At the opening on 26th September, raw jute quotations were based on Rs. 29 a maund basis bottoms for September-October shipment Northern Assam jute. A fair amount of business was transacted at this rate, and with the strong goods market creating a steady undertone, prices tended to rise. Indications moved up to Rs. 29.50 and then on to Rs. 30 and good business was done at both levels. From this point however prices fell away, and during the holidays moved back slowly to Rs. 29. Business was reported below this level towards the close, but the quantities were small.

During the period under review business was transacted in Dhubri-Northern-Assam jute at Rs. 28.75 for October-November shipment, and at Rs. 28.75 to Rs. 30.00 for October shipment. Higher prices than this were paid at the agencies for ready delivery Small lots of Purnea-Desal white were purchased at Rs. 28.50 to Rs. 29. Assam tossa changed hands at Rs. 29.75 for October-November shipment. Interest in Daissee white slackened. but small lots passed at Rs. 28.75 to Rs. 29.50 for October and 15 days shipment, respectively. Activity in the Daissee market was restricted, but business was reported at Rs. 30 to Rs. 31.50 for October shipment. In Pucca bales, Pakistan Nc-Tc fetched Rs. 80 to Rs. 85 a bale.

This report was closed on Monday, 7th October, and the market showed signs of weakening. Quotations were based on the following :

Indian Jute	Landed at mills Rs. a md. basis bottoms	Shipment
Assam-Northern	29.00	October
Purnea desal	28.50	"
Daissee	30.00	"
Daissee white	28.50	"
Assam tossa	30.00	"
Murshidabad tossa	29.50	"
Northern ex Calcutta	28.50	"
Local packing	27.00	"
Mesta		
Assam-Northern	27.00	October-November
Desal	27.00	"
Daissee	26.50	"
Murshidabad	26.00	"
Jungli	24.50	"
Bimli F.A.Q.	24.50	"
Pakistan Cuttings	80.00 a bale	"

Imports into Cossipore again showed an improvement but with the holidays intervening it was difficult for arrivals to be logged

accurately. During the period 26th September to 7th October arrivals were said to be between 750 and 800 wagons. There were keen buyers for all imports and full market rates were paid. The stock position did not alter materially, and large quantities of old crop jute still lie unsold.

THE PAKISTANI JUTE MARKETS

FIBRE PRICES REMAIN STEADY

(FROM A NARAYANGANJ CORRESPONDENT)

FOR several days, raw jute prices in Narayanganj have been unchanged at Rs. 26 for B Bottoms, with rates in the interior comparatively steadier. Arrivals total 20,000 to 30,000 maunds daily, and are being taken up by ready buyers. At this price, these shippers who can afford it or who have the organisation to ship promptly are trading profitably. Before the Puja holidays, there was an increase in imports and a drop in prices. This could be attributed partly to the fact that the majority of sellers in East Pakistan were Hindus and required money for the festival. Their requirements, however, were small enough for this drop in prices to be very temporary. Over the holidays, many jute balers closed down their establishments. In spite of this, the market has steadily crept up again. There is every indication that with the holidays over and with buyers back in the market, prices will revert to the former level of Rs. 26. They may even rise above that level as there are several fairly high-priced 15th October sales to be shipped. It is interesting to note that during the last three weeks at least, in spite of the fluctuations of prices in Narayanganj, the smaller markets in the interior have been fully steady. This reflects not only the good demand but also the strong holding power of the cultivators.

Imports in Narayanganj and even in upcountry centres indicate that the quality of the jute has deteriorated considerably. This state of affairs will probably continue if one is to judge by the condition of the newly retted jute in the villages. But there is little doubt that in the hands of the cultivators and probably some of the large stockists, there is still a considerable amount of high quality jute which is being held back and will only be produced if the market becomes really strong. Tossa jute, which was arriving in very limited quantities, is becoming abundant. Prices, however, have declined only very slightly.

On the eastern side, imports show a large percentage of higher qualities, even Dacca Tossa 4s, with nothing below Dacca Tossa 6s. The length of the jute is unprecedented and most villages in the Tipperah area are at present surrounded by stacks of sticks as much as 15 feet high. The initial Jat Tossa imports, therefore, will be of high quality and very good length, but this is only expected to last for a very short period. The retting tanks throughout this area are extremely shallow. Much of the jute is not completely under water, so it is not being retted properly and will merely come out as hunks. That which is retted is lying within inches of a muddy bottom and will be black. Recently, retted jute has been seen hanging in these areas, and although healthy and oily, it is practically jet black. As for the district areas, reports about the hard district are confused, but they indicate a fair percentage of low quality and heavier cuttings than usual. The soft district Tossa is not very good this season. On the whole, therefore, it appears that there will not be the usual premium which exists for Jat Tossa, for the simple reason that the district Tossas of higher qualities, that is to say Dundee grades, will be scarce.

In the pucca bale market, trading has been limited and cuttings have fallen further, with sellers at Rs. 58. The Jute Marketing Corporation, it is reported, has made some purchases, probably to cover its sales of 1,500 bales of Export Firsts and 1,500 bales of Export Lightnings to China for delivery from 15th October to 30th November, 1957.

Probably because they have been badly caught for many seasons, overseas buyers are following a particularly cautious policy now. Various methods have been employed to keep prices down. Wherever possible, they have bought at a premium for ready shipment and have taken full advantage of the small balers, who with a long position have had to discount prices in order to keep on operating and to have contracts on their books. As a result of the drop in prices before the Puja holidays, the London market weakened considerably and very low prices were quoted for October-November shipment. Oddly enough, although Export Firsts are getting scarce in Pakistan and will be in greater demand later, it is at present less profitable to sell them than to sell Lightnings and Hearts. It is believed here that the market will improve during the next few days. But if overseas buyers manage to keep their prices as low as they have done, this may well be another bad season for the seller. With the large crop which is expected this season, prices should eventually drop, especially as there is a glut of cuttings and Hearts and an excess of the lower qualities of Tossa is expected. Yet, with the present strength of the cultivators, it is not only hard to foresee a drop in the near future; on the contrary, one feels that there may be a rise before any drop comes.

It is reported that Mr. Stephens, who has replaced Mr. Symon as Manager of the Jute Marketing Corporation, will also be leaving shortly. This will place the Corporation in a rather awkward position as it does not have many officers with experience in the jute trade. It has at last started to buy in the border belts but growers are complaining about the low prices paid. This is rather strange, since the Corporation's minimum prices are at present fully up to market levels.

THE FOREIGN JUTE MARKETS

PAKISTANI FIBRE SUPPLIES DISCUSSED

(FROM OUR DUNDEE CORRESPONDENT)

AFTER displaying weakness, the raw jute market has again become steadier in Pakistan. When a fall of £2 to £3 a ton took place recently, buyers continued to postpone their buying. Since the values of jute yarns and cloth were raised in the U.K. by about £5 a ton on 13th September, purchasing has been of a hand-to-mouth character only, and the change has done no good to anybody. Previously, good steady business was being done and both spinners and manufacturers were more comfortably placed, but there is now a need for fresh orders to come along. This is unlikely unless there is a return to a lower level of prices.

Mr. Sanwar Ali, chairman of the East Pakistan Jute Marketing Corporation, has met the representatives of the London Jute Association in London and also of the Dundee jute industry in Dundee. It is stated he is on a European tour, aimed at attracting customers. He has explained to the trade that the Corporation would operate as a balancing factor in the raw jute market, buying when prices to growers are considered too low and selling when they rise too high. He did not visualise the fixing of maximum and minimum prices, but said that the Corporation would have its own ideas of the appropriate price level from season to season. After the Suez crisis, raw jute prices had gone far too high. They were very conscious in Pakistan of the damage to world jute markets, Mr. Ali said. The Corporation was aiming at a reasonable price level with as few fluctuations as possible. This would help manufacturers stem the inroads being made by paper and bulk handling. In the opinion of the trade, much cheaper prices for raw jute would be more liable to stem competition than Pakistan's ideas of "reasonable" levels with no fluctuations. Mr. Ali is hoping for a wide representation from all over the world, including Britain, at a raw jute conference in East Pakistan, which has now been postponed to November.

Raw jute is offered at £110 a ton for Mill Firsts, £96 for Mill Lightnings, £90 for Mill Hearts and £83 for grade Hearts, with good Daissee-2/3 at £102 and fours £96, all c.i.f., U.K., October-November shipment. The Calcutta goods market has been dearer on account of sellers safeguarding themselves over the holidays. Hessians have recovered from a recent setback to 65s 9d for 40in. 10oz. and and 65s 6d and 49s 9d November 180s, 178s 9d and 177s for the respective positions of shipment, all f.o.b., Calcutta.

ACREAGE UNDER MESTA INCREASES

According to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, the all-India first estimate of mesta, 1957-58, puts the current year's area at 225,000 acres against the corresponding adjusted estimate of 194,000 acres for 1956-57. This shows an increase of 31,000 acres or 16.0 percent in area during the current year compared with last. The increase in acreage has been shared mainly by Bihar and to a smaller extent by Andhra Pradesh, and has been attributed generally to favourable climatic conditions at the sowing time. The increase has, however, been offset to some extent by decreases registered mainly in Mysore State. This estimate covers the period generally up to the end of June or beginning of July 1957. Till then, the condition of the crop, it was reported, was generally satisfactory. It does not cover the entire area sown to mesta during 1957-58. Some late varieties of this crop are also grown in the Marathwada and Vidarbha regions of Bombay, Punjab and West Bengal States. Information on these areas will become available at the final estimate stage only.

How banking helps the MINING INDUSTRY

AN important part of India's mineral wealth is found in the South. From mines in South India come gold, magnesite, bauxite, iron, manganese and many other vital minerals.

The mining industry in South India employs about a lakh of people, and has an annual output worth Rs. 10 crores.

Banking has greatly helped the growth of the mining industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the mining industry.

We at Palai are proud that important firms in every field of business and industry in South India employ the *complete* banking service we offer:

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits—Loans and Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

South Indian miners working on a vein of crude magnesite

PALAI CENTRAL BANK LTD.

Head Office: PALAI, KERALA STATE
Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. Also at: Delhi and New Delhi.

A LEADING BANK IN SOUTH INDIA

P.C.1993

Plantation Topics

SECURITY PROBLEMS IN KERALA REVIEWED

DEMAND FOR ADEQUATE POLICE PROTECTION

(FROM A SOUTH INDIAN CORRESPONDENT)

THE Union Labour Minister Mr. G. L. Nanda, utilised his recent six-day visit to Kerala for an on-the-spot enquiry into the security and employment situation on the plantations. He had long discussions with representatives of the planters, workers and the State Government, after visiting certain estates on the High Ranges. The planters informed the Minister that although there had of late been a lull, the situation still remained explosive, and the owners and the managerial staff were feeling insecure. Unless concrete steps were taken to restore peaceful conditions on the plantations, it would be impossible for them to carry on, they stated. They complained that the police frequently declined to take preventive action when violence was feared. The planters suggested that it was necessary to make it clear that the law and order machinery of the State would provide protection to all persons exercising their lawful rights. Every effort should be made by the State Government to ensure a feeling of security among managements. A high-level conference should be convened to define clearly the functions of trade unions.

The I.N.T.U.C.-led workers unions also, it is understood, informed the Minister that there had been lawlessness on a wide scale and that they had to suffer a lot at the hands of the Communist-led unions. The R.S.P. and P.S.P. unions also complained about the illegal trade union practices of the Communist unions under the protection of the State Government. The District Collector of Kottayam, who represented the State Government, and the representatives of the Communist unions denied the allegations of lawlessness, but it is understood that on cross-examination they had to admit certain evidence produced by the planters. The planters, it is understood, told the Minister that they were prepared to prove their complaints if a public enquiry was made by a judicial officer, or with an officer or body of officers of the Central Government from whom they could expect a fair judgment. They, however, hold the view that this would not become necessary as it seems that the Central Minister is convinced of the veracity of their complaints and the seriousness of the situation on the plantations.

Reassurance for Planters

Mr. Nanda's tour of Kerala's three important plantation districts has served an important purpose in that it has had the effect of reassuring the planting community that the Central Government is keenly interested in their safety and protection. This reassurance was badly needed in Kerala, especially for the non-Indian interests in the planting industry. Mr. Nanda said at a Press conference towards the close of his tour that planters had reported to him 84 cases involving serious breaches of discipline, intimidation and violence. They were perturbed over a change in the attitude of the police, and were labouring under a sense of insecurity. Although they were noticing a little improvement in the law and order situation of late, a spirit of unrest still prevailed, so they felt uncertain about the future. They had expressed the fear that in these conditions, work on the plantations would suffer and production would go down. Mr. Nanda said that he had pointed out to the State Government that if the impression developed that business and industry could not be carried on in Kerala under conditions of security, the prospects of industrial development—which Kerala needed very badly—might be damaged.

Farewell to Mr. Mitchell

The U.P.A.S.I. staff gave a farewell party to their retiring Secretary Mr. L. E. Mitchell. Mr. Mitchell is leaving India for the United Kingdom, after having been Secretary of the United Planters Association of Southern India since 1946. Mr D C. Barr, who is succeeding him, referred to Mr. Mitchell's able services to the plantation industry in south India. The latter came to the U.P.A.S.I. from the Municipal Corporation, Rangoon, with his rich experience in statistics, economics, rating and valuation, income tax, cost accountancy and labour relations acquired through his employment in many Government and private bodies in the U.K. Mr. Mitchell was mainly responsible for the creation of the South India Estate Labour Relations Organisation which was later merged with the U.P.A.S.I. He also revived the U.P.A.S.I. exhibition and the U.P.A.S.I. Sports Club. The enlarged activities of the association during the past 12 years bear testimony to his administrative ability.

Improving Coffee Cultivation on Slopes

In the opinion of the Coffee Development Officer of the Union Ministry of Commerce and Industry, the sprinkler method of irrigation would greatly improve the yield from the sub-marginal estates on the western slopes of the Nilgiris and make them economic units in spite of the fairly large capital outlay required. The officer visited the coffee areas on the Nilgiris early last week to find out the areas suitable for the expansion of coffee cultivation, including the abandoned areas which could be reclaimed. He recently undertook a survey of the Anaimalais and has submitted a report to the Government indicating that about 15,000 acres are suitable for coffee cultivation in the island.

Activities of Coir Board

The Coir Board has won an award for an outstanding exhibit, a roll of coir matting, displayed by it at the Washington State International Trade Fair, Seattle, U.S.A., held in May 1957. The chairman of the Coir Board, Mr. T. M. B. Nedungadi, after his recent visit to Kashmir, said that the immense possibilities of using coir and coir products in the cold climate of Kashmir have not so far been appreciated by the people of that State. The Board is participating in the exhibition now being held in Srinagar. In the Board's stall, all representative varieties of coir and coir products are being exhibited, and the Board, in a Press statement, says that its stall is attracting a large number of visitors who are evincing keen interest in the coir products manufactured in Kerala.

With a view to conducting further propaganda in the use of coir and coir products, the chairman has arranged the exhibition of these products in two or three interior places of the State outside Srinagar before the exhibits are taken back to Ernakulam. The Director of Industries of Kashmir has agreed to make arrangements with the district authorities to provide sufficient accommodation for the exhibits in the centres visited and to give all facilities, including advance publicity. He has also issued a circular to Government offices, municipalities, schools and other public institutions in Jammu and Kashmir advising them to extend their patronage to the coir industry and to contact the Board's stall for their requirements.

Coir Purchasing Scheme

The coir purchasing scheme announced by the State Government in May to mitigate the distress of those who have been affected by the present slump in the market from April has not yet been implemented. The result is that accumulated stocks are still floating on the market. Sellers of coir yarn are becoming weaker and this is encouraging buyers to ask for more concessions. Much against the usual experience and trade expectations, prices did not move up in September.

Coconut Oil Prices Rising

Coconut oil prices are still on their way up, the latest quotation from Alleppey, the main oil market on the west coast, being Rs 545 a candy of six cwts., compared with Rs. 475 a candy towards the end of June, just before imports were banned. The market has been managing with a limited supply over the past three months, and the prospects of an improvement in the situation for another three months or so are bleak. Therefore, there is no likelihood of a major price recession in the immediate future.

Uneconomic Prices for Lemongrass Oil

Lemongrass oil prices having gone down to Rs. 75 a dozen bottles of 16 oz. each on the Cochin market, it does not appear that growers will have much incentive for producing it. According to them, anything less than Rs. 80 a dozen bottles is not enough to meet the cost of production. The weather has been favourable for a bumper crop this year, and the trade estimate of the crop at the beginning of the season was of about 1,400 tons. Last year, India produced 1,200 tons of lemongrass oil and earned from its export over Rs. 1½ crores.

PROTECTION TO PLYWOOD AND TEA CHESTS INDUSTRY

TARIFF COMMISSION SUGGESTS EXTENSION FOR THREE YEARS

THE Tariff Commission has submitted its report on continuing protection to the plywood and tea chests industry on the basis of an enquiry undertaken under the Tariff Commission Act, 1951. Its recommendations are outlined below.

1. The protection to the plywood and tea chests industry should be continued at the existing rate of protective duty of 35 percent *ad valorem* for a further period of three years ending 31st December, 1960.

2. Unless there are serious administrative difficulties, the Government should take steps to increase the period of validity of import licences for wood and timber to one year.

3. Steps should be taken to prohibit the export of plywood panels (tea chest, commercial and decorative) unless they conform to the specifications prescribed in the relevant I.S.I. standard and are also properly packed.

4. The capacity available for plywood tea chests and commercial plywood in the country is adequate to meet any possible demand in the immediate future. It is, therefore, not necessary to allow any more new units to be established in the country. If, however, the demand oversteps production at any time, the existing uneconomic units should have priority to expand their capacities before a new unit is licensed.

5. The Indian Standards Institution should expedite its examination of the species of timber suitable for the manufacture of plywood tea chests and final specifications should be laid down without delay.

6. The Government should take steps to encourage the commercial production of suitable glues.

7. Arrangements should be made for bringing to the notice of overseas buyers the variety and the high quality of plywood products by displaying them in showrooms abroad and in foreign fairs and exhibitions. Commercial and decorative plywood should be included in the schedule of items for export when negotiating trade agreements with other countries in the future.

8. The Government should introduce a proper system of inspection of battens that are used by tea gardens and also assume powers to ban the use of panels and battens which have not been tested or which do not conform to the prescribed specifications for the packing of tea.

9. The Tea Board should call for monthly returns concerning plywood battens from tea gardens indicating their stocks, purchases and consumption.

10. The Tea Board should institute a scheme of inspection of tea chest assembly in the gardens.

11. Arrangements should be made for prophylactic treatment of timber from the Andaman Islands after felling and for painting of butt-ends so as to prevent the spread of borer and fungus attack and butt-end cracking.

12. The Government might consider the question of revising the prices of Andaman plywood timber to enable the Calcutta factories to obtain their requirements at prices comparable to those prevailing in the other regions of the country if the working of the Andaman forests as a whole shows a profit. Arrangements for the supply of timber from N.E.F.A. forests at reasonable prices should also be made without delay.

13. The Government should give urgent and sympathetic consideration to the chartering of vessels for the transport of logs for plywood from the Andamans if it is not possible for the existing coastal vessels to carry this cargo.

14. The consensus of opinion is that though the quality of domestic plywood, commercial as well as decorative, is satisfactory, manufacturers have done little to popularise their products and educate customers on the appropriate uses for various types and grades. The manufacturers should establish better liaison with the consumers to popularise their products.

Decisions of the Government

The Government has accepted recommendation 1 and the necessary legislation will be undertaken in due course. It has taken note of recommendation 2, which will be considered along with other relevant factors while formulating the import policy from time to time. The Government has also taken note of recommendations 3 to 11 and steps will be taken to implement them as far as possible. Recommendation 12 has been noted for consideration. The Government will be prepared to consider sympathetically the possibility of implementing recommendation 13. The attention of plywood manufacturers has been invited to recommendation 14.

NO CHANGE IN TEA EXPORT DUTY

The Government of India has issued a notification fixing the price of tea for the purpose of determining the export duty, at Rs. 3.48 a lb against Rs. 2.74 a lb fixed on 1st September 1957. There is no change in the existing rate of duty of 38nP a lb.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN AUGUST

Indian rubber output in August was 2,341 tons according to the Rubber Board of India. Imports totalled 832 tons and exports were nil. Consumption by manufacturers was 2,664 tons, including 1,004 tons imported. Stocks with manufacturers at the end of the month were 3,269 tons. Stocks with estates and dealers on the last day of the month amounted to 2,555 tons, including 822 tons in transit. Manufacturers used 338 tons of reclaimed rubber, the month-end stock being 561 tons, and consumed 240 tons of synthetic rubber, of which they held a total stock of 1,017 tons on 31st August.

COCHIN TEA SALES

At Sale No. 27, 1,800,000 lbs of tea were on offer. Demand was useful but it later weakened considerably. Sweet Liquoring Mediums were 5nP to 10nP dearer. For all other grades prices were lower, particularly for Fannings, which were the weakest feature of the Sale.

VISCOUNTS INTRODUCED ON I.A.C. SERVICES

RUSSIA KEEN ON AIR LINK WITH NEW DELHI

(FROM OUR NEW DELHI CORRESPONDENT)

THE first of a fleet of ten Vickers-Armstrongs' *Viscount* turboprop airliners, ordered by the Indian Airlines Corporation, will take off from New Delhi on 10th October to inaugurate the Delhi-Calcutta-Rangoon service. The *Viscount 768s* will set new standards for air travel in India. Carrying up to 44 passengers, the aircraft will cruise at 325 miles an hour at altitudes of over 20,000 feet. Travel at these heights in pressurised air-conditioned comfort contrasts strongly with the often turbulent conditions experienced when flying in piston-engined unpressurised aircraft at altitudes of below 10,000 feet. Passengers will also appreciate the quietness and freedom from vibration, factors which have already made the *Viscount* popular with passengers of 30 other airlines.

The Indian Airlines Corporation plans to use its *Viscount* fleet on regional and domestic services. Starting on 10th October, the routes to be developed will be Delhi-Calcutta, Calcutta-Rangoon, Bombay-Delhi and Bombay-Karachi. During 1958, the network will be extended to Bombay-Calcutta, Delhi-Hyderabad, Hyderabad-Bangalore, Bangalore-Madras, Madras-Calcutta and Bombay-Madras-Tiruchirappalli-Colombo. Considerable time will be saved on these routes compared with the existing schedules. Delhi-Calcutta will be flown one hour and 25 minutes faster; one hour and 10 minutes will be cut on the Delhi-Bombay and the Bombay-Calcutta services.

The introduction of a new type of aeroplane has necessitated a comprehensive training programme for the airline's personnel. Some 65 employees of the Corporation have been trained in the U.K. during the past 15 months. Thirty-two pilots have completed *Viscount* technical training courses and 33 of the technical staff have undergone *Viscount* airframe and "Dart" engine courses at the Vickers and Rolls-Royce training schools, respectively. The I.A.C. is setting up its own Dart engine overhaul shops and aircraft maintenance dock facilities in New Delhi.

The ten *Viscount 768's* ordered by the I.A.C. are more powerful, have greater load carrying ability and are more refined by continuous development than the earlier *Viscount 700's*. The normal cruising speed of the new *Viscounts* is 325 miles an hour and the air range is 1,250 miles, with full passenger payload and airline fuel reserves. The maximum all-up weight of the aircraft is 63,000 lbs. Fuel capacity is 1,950 imperial gallons. Accommodation is for 44 passengers and two stewardesses. The flight crew comprises two pilots, radio operator and, on certain routes, a navigator.

Proposal for Moscow-Delhi Service

The Russian Government is keen to open the Delhi-Moscow air route, it is learned. A large number of Russians are on a see-the-world waiting list. The Russian Government has asked the Government of India's approval for operating this service, which, in due course, may become the quickest service to London. Air services, however, are not a one-way affair. If the Russians wish to operate an air service between Delhi and Moscow, they will have to permit a similar service by Air-India International. As a first step, the Russians will have to arrange the visit of a technical team from India to survey landing, workshop and other facilities. The team will also study the problem of aviation spirit and appraise the traffic potential. In the initial stages, a common traffic pool may be the best solution.

P.A.A. Global Service

From 10th October Pan American Airways will operate its sixth round-the-world service. It will go through Delhi, and for the first time, will provide a direct air link between Delhi and Baghdad and Delhi and Vienna. This service will eliminate Karachi. Later in the year, it proposes to operate a service to Madrid.

Air Traffic on North Polar Route

Close to 3,000 passengers have flown over the North Pole in the first six months of air operations over the polar short-cut between Europe and the Far East, the Scandinavian Airlines has announced. This route combines with the other S.A.S. route to Tokyo *via* India to make a scheduled round-the-world service. Prior to the inauguration of the route on 24th February, only a handful of explorers had seen the North Pole. More than 100 flights have since been completed, and, according to a S.A.S. spokesman, the polar area has lived up to its reputation of having the best flying weather in the world. There has not been a single report of icing or turbulence. Passengers have included every conceivable category—diplomats, business men, artists, churchmen, doctors and scouts, to mention but a few. Air freight over the Pole has been equally diverse. The polar short-cut has proved a commercial success. The traffic during the first six months amounts to about five million passenger-kilometres and 2 million ton-kilometres of freight and mail.

The S.A.S. *DC-7Cs* fly the 8,000 statute miles between Scandinavia and Japan in 30 hours, with two flights weekly in each direction. In addition, *via* the Middle East and south-east Asia. The southern route is now operated with *DC-6Bs*. *DC-VCs* will be introduced on the route in January 1958, and will then be circling the globe—from Copenhagen *via* the North Pole, Tokyo, India, and the Middle East, back to Copenhagen.

Working Results of B.O.A.C.

The British Overseas Airways Corporation made an overall profit amounting to £1,776,027 during the year ended 31st March, 1957. After the return on capital, there was a net surplus of £303,352, against £117,731 in the previous year. The total traffic revenue amounted to £48,586,918. Incidental revenue amounted to £417,793. The traffic revenue represents an increase of 14.5 percent over last year and compares with a growth of 8.4 percent in available capacity. The most striking increase was recorded in the revenue from the carriage of passengers which, at £32,534,855, was 19.1 percent above last year. Tourist-class services attracted increased support and 57.4 percent of all passengers used this class. The total number of passengers carried on scheduled services was 395,989, an increase of 6.7 percent. The passenger load factor rose from 62.2 percent to 66 percent. The revenue from the freight service amounted to £4,354,498, an increase of 14.7 percent over last year. Mail revenue at £9,861,549 was, however, only 4 percent higher than that in 1955-56. The expenditure on operating account in 1956-57, at £46,942,219, represented an operating cost of 39.9d a capacity ton mile offered for sale.

Flight Information Region

On 21st October, 1957, six Latin American territories—Costa Rica, Nicaragua, Honduras, El Salvador, Guatemala and British Honduras—will inaugurate the Central American Flight Information Region, a unified block of air-space from which have been removed the obstacles normally imposed upon civil aviation operations by the existence of

national boundaries. Nowhere else in the world does unification of air-space exist to this degree. The purpose of establishing their information region is to ensure that air crew are able to obtain information required for safe and efficient flight. Among the items of information needed by a pilot are weather reports and forecasts, particulars of the condition of aerodromes and various navigational aid services and information on the position of other aircraft flying in the vicinity of his flight path; conversely, the pilot keeps the ground system informed of the progress of his flight, so as to permit a watch to be kept on it and to allow information on his whereabouts to be passed to other aircraft in the vicinity.

It is explained that if the usual pattern were adopted and each country provided its own service, air crew would be called upon to do a lot of unnecessary work in transferring communications contact from one country to the next as they traversed the region. This would be a serious problem with the speed of present-day aircraft, and with the coming jets travelling at almost twice the present speeds, the situation would be difficult for all concerned. The Latin American Governments, represented at the recent International Civil Aviation Organisation meeting, fully recognised the difficulty, and after mutual consultation, proposed the creation of a common flight information region covering all of their territories with its centre located in Tegucigalpa in Honduras. The proposal was immediately adopted, and became part of the International Civil Aviation Organisation plan for the Caribbean region.

At the beginning, the flight information region will function on a 12-hour a day basis, covering the period when the great majority of flying in the area takes place: it is contemplated that in the near future the period of operation will be extended to cover the full 24 hours a day. From the day the organisation starts to function, all information required by pilots for their flights through it will be co-ordinated at the centre in Tegucigalpa, which will also plot position reports and keep track of all aircraft directly in order to obtain information or to furnish position reports. A pilot may talk with the airground station serving the flight information office in the capital of any of the other countries in the flight information region, as all messages are promptly relayed to Tegucigalpa over the point-to-point radio-telephone circuit. Alternatively, if he chooses to communicate with Tegucigalpa directly throughout his flight, the regional information centre will secure from the other capitals any information that the pilot may require.

MANUFACTURE OF A.C.S.R. AND COPPER CONDUCTORS

ENQUIRY ON CONTINUING PROTECTION

OPENING the public enquiry into the question of continuing protection to the bare copper conductors and A.C.S.R. (aluminium conductors steel reinforced) industry, Mr. C. Ramasubban, member, Tariff Commission, said that the protection granted to the industry was extended by the Government from time to time until 31st December, 1957, in consultation with the Tariff Board or Commission. With effect from 1st April, 1951, a revenue surcharge of 5 percent of the duty was levied on conductors falling under I.C.T. Item No. 72(12), raising the effective duty to 31½ percent *ad valorem*. The rate of duty has been raised further to 35 percent *ad valorem* by the Finance (No. 2) Act, 1957, with effect from 16th May, 1957. A Development Council for heavy electrical industries was set up in February 1955. The electric cables and wires industry comes within the purview of this Council.

At present protection is granted to bare copper conductors and A.C.S.R. covered by Item No. 72(12) of the First Schedule to the Indian Tariff Act, 1934. The scope of the Commission's enquiry would, therefore, cover these conductors. In addition, two other specific issues have been referred to the Commission by the Government. One relates to the tariff anomaly concerning all-aluminium conductors where the raw materials—electrolytic aluminium rods—are assessed to a duty of 35 percent *ad valorem* while the finished products are assessed to a lower rate of duty of 10 percent *ad valorem*. This issue was to be examined by the Commission during its enquiry into the aluminium industry in 1955. But it deferred it to be taken up at the present enquiry into the conductors industry. The second issue is the request of Indian Cable Co. Ltd. to allow imports of copper-weld rods duty-free for the manufacture of copper-weld wires. Lastly, in connection with the enquiry into the non-ferrous metals industry, it was decided to include the case of continuing protection to electrolytic copper rods within the scope of the present enquiry.

Demand for Bare Copper Conductors

At the 1946 enquiry, the Tariff Board estimated the demand for bare copper conductors at 10,000 tons a year. No estimate was made for aluminium conductors. In connection with the present enquiry, the Commission has received varying estimates of demand from different interests. The Development Wing of the Ministry of Commerce and Industry in its memorandum to the Commission has estimated the present demand for copper conductors at about 10,000 tons a year. As for future demand, it has endorsed the estimate of the Development Council for heavy electrical industries which is 15,000 tons a year by 1960-61. Its corresponding estimates for aluminium conductors (A.C.S.R. and all-aluminium conductors) are 15,000 tons and 20,000 tons, respectively.

The Central Water and Power Commission has estimated the average annual demand for the four years 1957-58 to 1960-61 at 14,900 tons for A.C.S.R. and 6,500 tons for all-aluminium conductors. The producers have also furnished their own estimates. The demand for conductors depends mainly upon the extent to which power is transmitted and distributed. The demand is bound to increase as more hydro-electric projects are completed during the second plan period. It is expected that as many as 10,000 villages will be provided with electricity during this period. From statistics collected by the Commission, the quantities of the two types of conductors available for consumption during 1955, 1956 and January-March 1957 are as follows:

(In tons)

Year	Copper Conductors			Aluminium Conductors		
	Indigenous production	Imports	Total	Indigenous production.	Imports	Total
1955	10.350	310	10.660	8.819	259	9.078
1956	13.104	616	13.720	12.101	1.622	13.723
1957 (January-March)	3.528	20	3.548	4.176	959	5.135

In 1946 when the Tariff Board conducted the enquiry into the non-ferrous metals industry, there were only two units engaged in the manufacture of copper conductors, Indian Cable Co. Ltd., Tatanagar, and the National Insulated Cable Co. of India Ltd., Calcutta. Aluminium conductors had not been manufactured in the country. Since then, the industry has made rapid progress. There are now nine units engaged in the production of conductors, among whom six manufacture bare copper conductors and five manufacture aluminium conductors. Seven of these are public limited companies, one is a private limited company and the other is a proprietary concern.

Three of the manufacturers have entered into continued foreign technical collaboration. The capacity of the six manufacturers of copper conductors has been assessed by the Development Wing of the Ministry of Commerce and Industry at 18,700 tons a year and that of the five manufacturers of aluminium conductors at 13,370 tons a year. The individual figures of capacity, however, do not agree with those furnished by the concerned units. The figures would also depend on the types and sizes of conductors produced.

Production of Aluminium Conductors

The Commission has been informed by the Development Wing that two of the units now manufacturing bare copper conductors have been granted licences to undertake the manufacture of aluminium conductors also and that two manufacturers of aluminium conductors have been permitted to erect a second factory each. Further, two now units have been granted licences to establish factories for the manufacture of aluminium conductors. The additional capacity licensed in the case of aluminium conductors aggregates 14 900 tons a year. One manufacturer of copper conductors has been permitted to expand his capacity by 1,200 tons a year. It is reported that these additional capacities will be achieved in the course of the next three years. Thus by the end of the second plan period there will be 11 units (with 13 factories) producing bare copper and aluminium conductors, among whom six units with a capacity of 19,900 tons a year will be manufacturing bare copper conductors and nine units with a capacity of 28,270 tons a year will be manufacturing aluminium conductors. The following table gives the production of conductors in the country since 1946.

		Copper conductors (Tons)	Aluminium conductors (Tons)
1946	...	4.454	—
1947	...	4.298	—
1948	...	5.034	—
1949	...	5.638	30
1950	...	5 624	877
1951	...	3.308	1,658
1952	...	7.603	2.417
1953	...	9 543	3.481
1954	...	9.245	5.714
1955	...	10.350	8.819
1956	...	13.104	12 101
1957	(Jan.—June)	5.763	6,391

There are a few small units in Bombay State which are engaged in the manufacture of copper conductors. These do not appear to have been registered under the Industries (Development and Regulation) Act, 1951.

Principal Raw Materials

The principal raw materials needed by the industry are electrolytic copper rods, electrolytic aluminium rods and high tensile galvanised steel wire. Electrolytic copper rods are manufactured from electrolytic wire bars which are not produced in the country. The Indian Copper Corporation Ltd., Ghatsila, has been recommended for the grant of a licence to set up a plant to produce electrolytic wire bars with an annual capacity of 8,400 tons. Kamani Brothers Private Ltd., Bombay, also has plans for producing these bars by using imported blister copper with an annual capacity of 10,000 tons. The above two projects are still being planned. Of the six units manufacturing copper conductors, four have facilities to roll rods from imported wire bars and the fifth unit expects to have similar facilities by the middle of 1959.

The consumption of electrolytic copper rods by five manufacturers was 10,507 tons in 1956 and 2,455 tons in January-March 1957. As for electrolytic aluminium rods only two manufacturers have facilities at present to roll them. The Commission has been informed by the Development Wing that two more manufacturers of aluminium conductors have been licensed to produce these rods by 1958. The consumption of electrolytic aluminium rods by all the manufacturers was 7,502 tons in 1956 and 3,468 tons in January-March 1957. Electrolytic aluminium ingots or bars from which rods are manufactured are at present mostly imported. A small quantity is, however, being supplied by the Indian Aluminium Co. Ltd from its works in Alwaye, to the Aluminium Industries Ltd., Kundara. It expects to increase its supplies when its new smelter of 10.000 tons capacity in Hirakud goes into production in 1958. High-tensile galvanised steel wires which are needed for the manufacture of A.C.S.R are entirely imported as there is no indigenous production. The manufacturers have not complained about the supplies of any of the above raw materials except about steel wire for which there appears to be some delay in issuing licences

Plea for Concessions

The manufacturers of A.C.S.R. enjoy partial exemption of duty on aluminium ingots or bars and rods imported by them. These concessions are not applicable to manufacturers of all-aluminium conductors, who have to pay the full duty on these materials. The industry has pleaded for the extension of the concession granted for the manufacture of A.C.S.R. to the manufacture of all-aluminium conductors as well.

The Indian Cable Company has requested allowing imports of copper-weld rods duty free. Besides these, Kamani Brothers Private Ltd the prospective manufacturer of electrolytic copper has sought advance protection by the levy of a duty on electrolytic wire bars. One of the manufacturers has also suggested that as for electrolytic copper which is a vital material, needed both in times of peace and war the Government should take steps to create a stockpile.

The consensus of opinion of consumers indicates that the quality of indigenous conductors is satisfactory and that they conform to British and/or Indian standard specifications. Two manufacturers of bare copper conductors and three of aluminium conductors have secured licences to use I.S.I. certification marks on their produce. The Central and the State Governments which control the power projects and most of the electricity distribution undertakings are the major consumers of these conductors. A few other consumers have, however, pointed out certain minor defects in the indigenous conductors. The Commission has also received complaints about inordinate delay in obtaining aluminium conductors.

The imports of solid and stranded bare copper conductors are completely banned for the last few years while those of cadmium copper conductors, copper-weld wires, A.C.S.R. and all-aluminium conductors are allowed to established importers to the extent of 10 percent of one-half of best year's imports till the last licensing period January-June 1957. There was no provision for issue of actual users' licences for the above conductors except that since July-December 1955, applications for copper sheathed electric cables for special uses were considered *ad hoc* in consultation with the Development Wing of the Ministry of Commerce and Industry. During the current quarter July-September 1957, no licences are issued to established importers or actual users for copper and aluminium conductors.

Imports of bare copper conductors, plain aluminium conductors and A.C.S.R. are separately recorded in the published accounts relating to the foreign trade of India since April 1954. The total imports of each of these conductors since then up to May 1957 were as follows:

	Bare copper conductors of all types		Plain Aluminium conductors and A.C.S.R.	
	Qty. (Tons)	Value (lakh Rs.)	Qty. (Tons)	Value (Lakh Rs.)
1954-(April-December)	39.55	2.50	295.20	9.35
1955	309.95	17.08	258.95	10.10
1956	615.85	30.00	1621.95	53.43
1957 (January-May)	90.30	5.72	2813.10	100.67

ACC HONOURS THE CODE

3

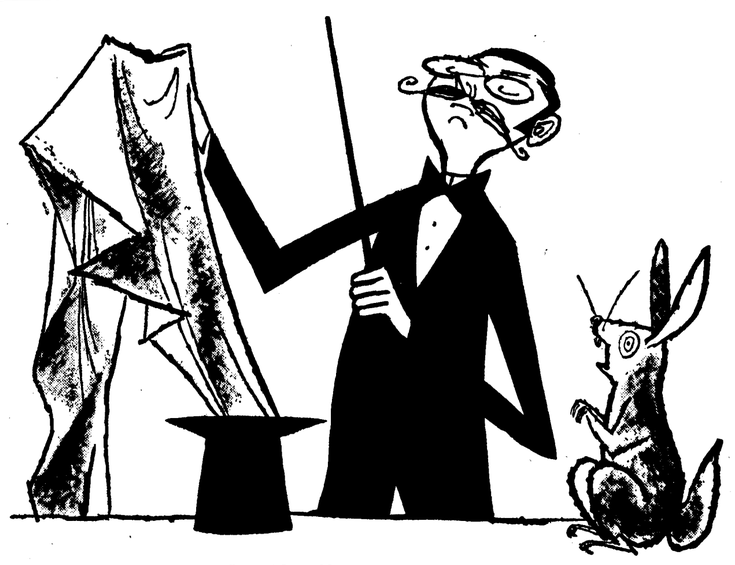
"Employers owe it to labour to recognise that welfare is not conceived in terms of philanthropy, but as a social obligation. Men and women engaged in production shall do so with dignity, honour and a sense of security. Fair wages should be paid for work done. Working conditions shall be as pleasant as possible."

Code of conduct—FORUM OF FREE ENTERPRISE

As an employer of labour the ACC can well point with satisfaction to the salary/wages and other emoluments paid to its employees and to the many welfare activities voluntarily undertaken over the years.

To take salary/wages first, compare these figures of ten years:

	1945-46	1955-56
No. of employees	17,500	29,000
Salary/wages & amenities	Rs. 127.3 lakhs	Rs. 421.5 lakhs



Thus while the increase in the number of employees was 66%, the increase in the salary/wages, etc. for the same period was over 230%!

As for welfare activities, employees of the ACC's 17 factories and two collieries have for a long time been enjoying a large number of amenities for their security and social welfare, namely: provident fund and gratuity; schools, hospitals and dispensaries, creches, canteens, cinemas, clubs, playing grounds; welfare and benefit fund, and co-operative societies.

All these benefits have been provided out of a consciousness of social obligation. The ACC believes that a well-paid, well-looked-after, happy and contented employee is the best employee.

THE ASSOCIATED CEMENT COMPANIES LIMITED

THE CEMENT MARKETING CO. OF INDIA PRIVATE LIMITED

The secret of Popular Poplin — Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label... but your customers don't know the 'behind the scenes' story that ensures the complete *reliability* of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for *you!*

Look for 'SANFORIZED' on the label

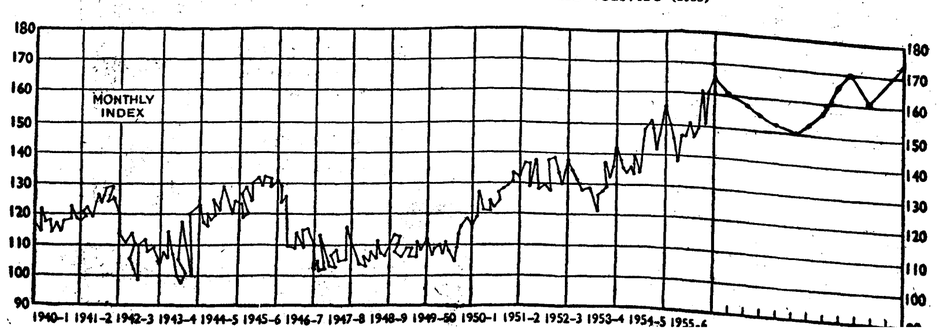
Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 93, Marine Drive, Bombay 2.

ACP, 4363 (Rev.)

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The *Capital* Index of Indian Industrial Activity (Base : 1935) has now been brought up to March 1957. Compared with the preceding month, there were increases in cotton consumption 6.3 points, *jute* manufactures 3.0 points, steel ingots 16.9 points, cement 47.9 points, paper 9.8 points, wagons loaded 19.7 points and electricity 11.7 points, while pig iron and coal decreased by 3.2 points and 4.1 points.



The indices for cheque clearances and notes in circulation increased by 16.5 points and 4.9 points respectively.

Correlating all the factors, the *Capital* Index of Indian Industrial Activity advanced by 12.5 points during March 1957.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY (1935)

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base : year ended March 1953 = 100) declined by 0.5 percent to 109.5 during the week ended 14th September, 1957, compared with 110.0 (revised) for the earlier week. The index was lower by 2.2 percent when compared with the corresponding week of a month ago, but was higher by 2.5 percent than that of last year. The index for Food Articles showed a further fall of 1.0 percent to 108.6 compared with 109.7 *(revised)* for the earlier week due to declines in the prices of rice in Nowgarh (−11%), in Jaynagar (−6%) and in Balurghat and Jeypore (−5% each), fish (−10%), bajra in Agra, maize and meat in Ludhiana (−7% each), wheat in Rajkot and turmeric (−6% each), onions, cashewnuts and tea (−5% each), potatoes (−4%), jowar and milk (−3% each), masur and chillies (−2% each), gram, arhar, mung groundnut oil, sugar and salt (−1% each), notwithstanding the upward movement in the prices of meat in Calcutta (+19%), rice in Varanasi (+11%) and Raipur (+5%), gur in Patna (+7%), wheat in Bhopal and cloves (+6% each), ragi and cardamoms (+3% each), coconut oil (+2%), mustard oil, eggs and betelnuts (+1% each). The index for Tobacco increased from 91 to 92 as a result of a rise in the price of Motihar tobacco in Calcutta. The index for the Fuel, *Power, Light and Lubricants* group moved from 114.6 (revised) to 114.7 during the week The price of castor oil (+1%) exhibited a rise. The prices of linseed in Sahibganj (+11%) and in Kanpur (+7%) copra in Alleppy (+6%), rapeseed (+2%), raw cotton and raw jute (+1% each) recorded increases while those of cottonseed in Hyderabad (−7%), iron ore (−5%), raw silk (−3%), groundnuts (−2%), castorseed and gingellyseed (−1% each) were marked down and in the result the index for Industrial Raw Materials rose by 0.2 percent to 115.4. A rise in the prices of zinc (+6%), copper in Bombay (+5%), linseed oil (+2%), and rayon yarn (+1%) was responsible for pushing up the index for Intermediate Products by 0.5 percent to 107.4: the prices of aluminium (−2%) and lead (−1%) showed a fall. The index for Finished Products maintained the previous week's level of 108.7 in spite of some variations in the prices of handloom cloth, jute manufactures, general chemicals and oilcakes (+1% each) and cotton cloth (mills) (−1%).

CEMENT IMPORTS THROUGH STATE TRADING CORPORATION

Through the efforts of the State Trading Corporation of India, which has been entrusted by the Government with the work of import and distribution of cement, about 258,000 tons were imported by the end of August 1957. The imports would have been larger but for the closure of the Suez Canal. Due to foreign exchange difficulties, the scope for entering intc fresh contracts for import is considerably reduced. Against current contracts, however, it is expected that a further quantity of about 150,000 tons will be imported by the end of 1957.

Calcutta Markets

LINSEED RISES

BECAUSE of the continued shortage of supplies, prices advanced slightly, but the general tone of the market was dull and trading was very limited. Crushers showed little interest, due to the poor local demand for oil. Overseas markets were dull, with prices showing a weaker trend, and export prospects appeared bleak. Latest quotations were based on ready-October at Rs. 21-14 a maund.

HIDES AND SKINS DULL

The market was dull. Stocks were higher than in the previous week.

Bazaar Sales

(Bewteen 1st October and 7th October, 1957)

Cowhides : Wet salted (Ord.) 16,800 pcs. on the basis of Rs 8.25 to Rs. 10.50 : Wet salted (Slaughtered) 18,500 pcs. on the basis of Rs 11.50 to Rs. 21.00.

Goatskins : Wet salted (Daissee, Killed) 25,600 pcs. on the basis of Rs. 300 to Rs. 315. Rs. 350 to Rs. 360 and Rs 370 to Rs 380 : Assam-Dinajpur 1,800 pcs. on the basis of Rs 295 to Rs 335 : Pakur-Purulia 22,000 pcs. on the basis of Rs 330 to Rs 335 ; Patna 9,000 pcs. on the basis of Rs. 275 to Rs 300 ; Muzafferpore 8,000 pcs. on the basis of Rs. 395.

Bazaar Stocks

(7th October, 1957)

Cowhides : Wet salted 1,35,000 pcs.

Goatskins : Wet salted (Daissee, Killed) 48,000 pcs. : Assam-Dinajpur 23,000 pcs. : Muzafferpore-Patna-Pakur-Purneah and Kissenganj 1,72,000 pcs.

SUGAR SOFT

During the week ended 9th October, sales in the Calcutta market averaged 4,500 bags daily. Arrivals a day were 3,500 bags and stocks totalled 100,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 37-6 for ordinary grain and Rs. 39-12 for big grain. The ex-mill market remained quiet. The market softened by a few annas immediately after the Pujas.

SHELLAC DULL

During the week ended 4th October, the market was dull. The range of quotations was as follows :

Pure Buttonlac	Rs. 91 value, 92 to 94 buyers.
Lemon No. 1 Shellac	Rs. 91.50 to 94.50 buyers.
Lemon No. 2 Shellac	Rs 88 value, 90 buyers.
F O Std. 1 Shellac	Rs 85 to 86.50 buyers.
Pure TN Shellac	Rs 80.50 to 83 buyers.
4% I. T. N. Shellac	Rs. 71 to 75 buyers.
No. 1 Kusmi Seedlac	Rs. 86, 87.50 value, 88 buyers.
No. 2 Kusmi Seedlac	Rs 81 to 82.50 value, 83 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 78 buyers, 79 done, 81 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 75.50 to 78.50 buyers.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs 71 done, 73 done and buyers, 73.50 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs 64.50 to 68 buyers.
Kireelac	Rs. 30 value.

Agents.

4, Clive Row,
Calcutta, 4th October, 1957.

ROHTAS INDUSTRIES LIMITED.

NOTICE

THE Twenty-fourth Annual General Meeting of the Shareholders of Rohtas Industries Limited will be held at the Registered Office of the Company at Dalmianagar on Thursday, the 31st October, 1957 at 11-30 A.M. to transact the following business :—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st October, 1956.
2. To declare dividends.
3. To elect a Director in place of Shri B. N. Chaturvedi who retires by rotation but being eligible offers himself for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. K. N. Gutgutia & Co., being eligible, offer themselves for re-appointment.

The Share Transfer Books of the Company will remain closed from 22nd October to 31st October, 1957, both days inclusive.

5. As special business :

To consider and if thought fit to pass with or without modification the following Resolution which will be proposed as Special Resolution :—

"Resolved that the Articles of Association of the Company be altered in the manner following :

(a) For Article 28 the following shall be substituted, namely :

"28. The Company shall have a first and paramount lien upon all the shares (other than fully paid up shares) registered in the name of each member (whether solely or jointly with others) and upon the proceeds of sale thereof for all moneys (whether presently payable or not) called or payable at a fixed time in respect of such shares and no equitable interest in any share shall be created except upon the footing and condition that this Article is to have full effect. And such lien shall extend to all dividends from time to time declared in respect of such shares. Unless otherwise agreed the registration of a transfer of shares shall operate as a waiver of the company's lien if any on such shares."

(b) For Article 29 the following shall be substituted, namely :

"29. For the purpose of enforcing such lien the Board of Directors may sell the shares subject thereto in such manner as they think fit but no sale shall be made unless a sum in respect of which the lien exists is presently payable and until notice in writing of the intention to sell shall have been served on such member, his executors or administrators or his committee, curator bonis or other legal representatives as the case may be and default shall have been made by him or them in the payment of the sum payable as aforesaid for seven days after the date of such notice."

(c) For Article 30 the following shall be substituted, namely :

"30. The net proceeds of the sale shall be received by the company and applied in or towards payment of such part of the amount in respect of which the lien exists as is presently payable and the residue if any shall be paid to such member, his executors or administrators or assigns or his committee, curator bonis or other legal representatives as the case may be."

By Order of the Board,
For SAHU JAIN LTD.,
A. K. JAIN,
Managing Director,
Managing Agents.

Calcutta,
4th October, 1957.

N.B. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. Such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the meeting.

EXPLANATORY NOTE :

The shares and debentures of the Company have been admitted on the official list of the Bombay Stock Exchange for cash dealings, and the alterations in the Articles of Association of the Company as proposed are desired to be made by them. The consent of the shareholders is therefore sought for the proposed special resolution. No particular interest is attached to the Directors and/or Managing Agents of the Company in the above resolution.

DUNCAN BROTHERS & CO., LD.

NOTICE is hereby given that the Fifty-eighth Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 31, Netaji Subhas Road, Calcutta on Thursday, 24th October, 1957 at 11-00 a.m. for the following purposes :—

1. To receive and adopt the Directors' Report, and to pass the Audited Accounts for the year ended 31st December, 1956.
2. To confirm the dividend paid on the Preference shares and to declare a dividend on the Ordinary shares.
3. To elect a Director.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To transact such other competent business as may be brought before the Meeting.

The Share Transfer books of the Company will be closed from 16th to 24th October, 1957 both days inclusive.

Warrants for dividends, when declared, will be forwarded in accordance with registered instructions, or, if no such instructions have been received, to the registered addresses of all shareholders whose names appear on the Company's Register at the date of declaration. No application for payment is necessary, and holders on blank transfer are therefore recommended to submit their shares for registration immediately.

By Order of the Board,

BANKS

H indicates that Share capital is half paid. O C. and Dd indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

CONTRADICTIONS IN THE REVISED RAILWAY PLAN

PROSPECTS OF RAISING THE RESOURCES

CONSIDERABLE confusion prevails over the announcement made last week by the Railway Minister, Mr. Jagjivan Ram, that the allocation for the railways under the second five year plan has been raised from the original Rs. 1,125 crores to Rs. 1,425 crores. Mr. Jagjivan Ram claims that the Planning Commission has agreed to the additional allocation of Rs. 300 crores which the change seems to imply, but subsequent reports from New Delhi suggest that neither that body nor the Finance Ministry are aware of having sanctioned it. If the latter be the case, the whole episode seems to provide a remarkable commentary on the unco-ordinated manner in which the plan is being "readjusted". The lack of co-ordination points to one of the main dangers of over-ambitious planning; a plan many of whose parts are heavily inter-dependent is apt to go awry when some of those parts cannot be implemented because of shortage of resources.

The confusion over the Railway Minister's announcement does not arise only from the private argument which seems to be going on between his Ministry on the one hand, and the Planning Commission and the Finance Ministry on the other. It is accentuated by certain calculations which have now been offered about what the extra allocation of Rs. 300 crores will achieve. When the second plan was being drawn up, the railways asked that they be allotted Rs. 1,480 crores; this, they claimed, was the minimum necessary to cope with the increase in traffic demands expected during the plan period. At the beginning of that period, the railways were carrying approximately 115 million tons of traffic annually, as against an estimated potential demand of 120 million tons. At the end of the period, it was estimated, demand would rise to 181 million tons. So, in order to increase carrying capacity sufficiently, the allocation of Rs. 1,480 crores would be necessary. The Planning Commission, without questioning any of these estimates, coolly proceeded to allot only Rs. 1,125 crores. The railways then calculated that, with this sum, they could increase their carrying capacity by only 47 million tons; out of this, 5 million tons would offset the shortage existing even before the plan started, so the net increase in capacity would be a mere 42 million tons. Most of this increase would suffice only for steel, coal and cement requirements.

*

The Railway Ministry now says that the original target of 181 million tons for carrying capacity has been restored, and that it will be achieved with the new allocation of Rs. 1,425 crores. A natural question which arises is whether the figure of Rs. 1,480 crores presented to the Planning Commission a couple of years ago as the minimum necessary was a miscalculation. It cannot be pretended that a downward revision has been possible because the cost of the railway plan has decreased; on the Railway Minister's own showing, the opposite is the case. In fact, it is only a few months since he said that even the plan which was estimated to cost Rs. 1,125 crores would now cost Rs. 1,225 crores, mainly because of the rise in labour and material costs. The divergence, in real terms, between the original figure of Rs. 1,480 crores and the new one of Rs. 1,425 crores is thus much greater than it seems at first sight. It would also be unwise to ignore the possibility of a further rise in costs. Ten days ago, Mr. Jagjivan Ram spoke of the plan depending on the full and willing co-operation of railwaymen, and added that "it is a matter of great satisfaction that railwaymen are fully alive to their responsibilities." This week, the large section of railwaymen represented by the All-India Railwaymen's Federation have celebrated the compliment by deciding to go on strike from 14th December. Among their demands are payment of interim relief, full neutralisation of the rise in cost of living, a fundamental revision of the pay scales of pay and the setting up of a wage [illegible]. As for railwaymen being "fully alive to has asked for the immediate withdrawal of all such conduct rules and ordinances as affect the functioning of free trade unions—a euphemism whose significance will not be missed by those who are familiar with railwaymen's behaviour.

*

Much speculation has inevitably arisen out of the confusion which Mr. Jagjivan Ram's statements about the railway plan have caused. It has been suggested, for instance, that by announcing the proposal to spend Rs. 300 crores more, the Railway Ministry is merely trying to steamroller the Planning Commission and the Finance Ministry into sanctioning the sum, since the latter might be reluctant to wash the dirty linen of inter-Ministerial conflict in public. If this be the case, whatever one might think of the ends the Railway Ministry has in mind, its methods can hardly be admired. Disastrous results could follow if other Ministries were to emulate the example; for instance, if the Education Ministry announced a lavish new programme for the despatch of cultural delegations abroad, accompanied appropriately by the more footloose of its own officers. It has also been suggested that the Railway Ministry has announced a bigger plan for itself now mainly in order to prepare the ground for a stiff increase in freights and fares later. Even under the original plan of Rs. 1,125 crores, the railways would have had to raise substantial sums from their own resources, because of which there has already been an abundant crop of freight surcharges in recent Railway Budgets. If Rs. 300 crores more is now to be spent, and if the Planning Commission and the Finance Ministry refuse to give it, it is not far-fetched to imagine that the semi-monopoly's heroic efforts to raise it will take the form of mulcting its customers more severely.

There is, finally, the suspicion that the extra money is required not so much for the expansion of carrying facilities as for placating labour. The Rs. 1,125-crore target originally sanctioned by the Planning Commission did not provide for the large and expensive concessions which were subsequently given to railway staff—concessions which, on the one hand, necessitated heavier freight surcharges, and, on the other, diverted funds away from urgent development needs. Recent experience of the way in which the Government deals with unrest among its employees gives rise to the belief that further new concessions may have to be given before many months have passed. The railwaymen's unions are either not powerful enough or not responsible enough to deserve the warm flattery which Mr. Jagjivan Ram has recently bestowed on them. Unless he can persuade them, whether by homilies or by a rare demonstration of firmness, that their demands are likely seriously to undermine expansion plans, he may find that his claim for more money is not easily acceptable in the broader interests of the country.

What is suggested here is not that an increase in the size of the railway plan should be disallowed; on the contrary, this journal has long been among the strongest advocates of a bigger plan for transport in general, and for the railways in particular. What is suggested here is that a far more fundamental reassessment of railway plans and policies than has yet been undertaken is necessary. This reassessment may need to take into account a new estimate of the growth in traffic demands. The five year plan on which the original estimates were based is now being steadily warped and truncated; in places, it is also being inflated (the food targets, for instance, have been raised). The rate of industrial expansion threatens to slow down, and this might seem to imply that the railways are no longer likely to have 181 million tons of traffic to carry by 1960-61; at the same time, there has been reason to believe that on the basis of the expansion proposed under the second five year plan, even the estimate of 181 million tons was too low to begin with. Many important changes in the initial assumptions about traffic demands, costs, efficiency and financial resources therefore have to be taken into account now. It is on the basis of the new assumptions that a realistic plan for the railways can be framed, and a realistic way of fulfilling it discovered.

THE THRESHOLD OF A UNIVERSE

THE Russian earth satellite has set the world by the ears. It is a little difficult to see why. There have been so many miracles performed by science in the last fifty years or so that another one should not make all that much difference. It is not as if the whole thing were unexpected; it had in fact been promised for this very year. That is not to say there has been no element of surprise—there most certainly has, and it is probably this to which the incident owes its quite disproportionate impact on the world's imagination. What appears to have been so unexpected about the *Sputnik* is who launched it, not the fact that it is there at all. This must be accepted as an unfortunate complication marring the proper appreciation of what is otherwise one of man's greatest achievements, belonging to the whole human race rather than to a single nation. Anybody who does not think that Russia's triumph of being the first into outer space is going to intensify the "cold war", reinvigorate the contestants in the armaments race and, at least for the time being, dangerously confuse the world's judgment on the realities of power, is probably deceiving himself most grievously. The satellite has upset a great many things in the short space it has been circling this earth, and, so far as world peace is concerned, the most important of them is the incontrovertible fact that the West still holds the predominance of military power and potential. Whether the view taken is Mr. Nehru's—that this new scientific development has outdated all such strategic contrivances as hydrogen bombs and military pacts—or the more cynical one that this is just another, more spectacular, development in man's age-old struggle to devise weapons for his own destruction which will, in time, take its place along with the others, it must be admitted that an era of new and fiercer competitive activity, both politically and economically, has just begun. And that it is one in which, quite literally, the sky is going to be the limit.

*

Quite apart from the interesting scientific possibilities which the satellite has revealed, and the more alarming political ones, it is still true that economically the world has just witnessed an event comparable with the discovery of the New World at the end of the fifteenth century. Surprisingly, most of the economic predictions connected with the launching of the satellite have been uniformly pessimistic. It has been pointed out that the race for ascendency between the great powers is going to starve the under-developed countries of much-needed capital and their own peoples of the consumer goods without which internal political troubles are bound to multiply and perhaps eventually lead to even larger international ones. This is probably too dismal a view to take. It is certainly true that the field for new capital has been immeasurably expanded. But it must also be remembered that periods of intense activity in discovery, construction and development have usually been the most prosperous and fruitful in history

Man's "reaching for the stars" promises to inaugurate just such an era. Extra care will certainly have to be taken to avoid the dangers of too rapid economic development at a time when there are already so many calls on the world's productive capacity and resources. But it should not be beyond the ability of the human race to guide events roughly in the direction of its pecuniary advantage; and it is likely to be purely a question of bad management if the under-developed countries do not derive at least their fair share of the coming prosperity. After all, are they not the cheapest sources of the labour and materials which are going to be required in man's journey into space?

* * * *

The first point which strikes the observer is that the satellite may paradoxically have appeared at just the right moment for the United States economy. That has lately shown signs of developing another of its three-year weaknesses, although this time, unless the recent slump on Wall Street turns out to be nothing more than a coincidence, it is threatening to be somewhat larger than the world has become used to since the war. It is an odd fact that communism, first with the cold war, then with the race for arms supremacy, has ensured that the deflationary tendencies which it has itself laid down as one of the greatest of capitalism's drawbacks, never in fact get a hold. It would be surprising if the United States were to go ahead now with the promised cuts in arms spending. That means that the efforts to curb inflation are likely, for the time being, to take second place to the need for catching up on the Soviet Union. This can have important consequences for Western Europe, also Britain and the sterling area. Indirectly, therefore, the launching of the Soviet satellite could mean that the strain which India's foreign exchange problems have recently placed on the reserves of the sterling area might be easier to shoulder, and that the pressure on this country to correct her adverse trading position will be correspondingly lessened. But these are matters of short-term speculation. The real importance of Russia's achievement will be felt over the next fifty years rather than the next five months. A whole new field of human endeavour has opened up which should ensure a degree of world economic expansion unrivalled in human history.

There is no evidence in recent developments to suggest that this expansion is going to be painless, or that it will leave the pattern of world economy in much the same position as it is at the moment. Change is likely not only to be swift, but to be far-reaching as well. It seems safe to say that inflation, rather than its opposite, will be the dominant feature of the next few decades. It is likely therefore to be a period of comparative labour shortage from which all peoples will benefit, not only those who possess the rarer and more coveted technical skills. It will also, inevitably, be a time of unrest, and of increased danger for democracy, especially in those countries where its institutions are new and its hold none too secure. In States at present ruled by totalitarian governments, whose dependence on the electorate is of propaganda rather than real value—more notably the present communist nations—the urge to greater liberalisation is likely to be strengthened by the increased importance and status of the individual worker and the all-round improvement in the levels of skills. The trend has, of course, already shown clear signs of developing. One of the less welcome aspects of such unrivalled prosperity is likely to be a widening of the gap between the rate of progress of the developed and the under-developed countries. Attention has once again been drawn to this feature by a recent I.L.O. pamphlet on Asian economic progress. Its cause appears to lie chiefly in the higher rate of population increase in those States where modern scientific medicine is adding to an expectation of life which is rather less than half that of the more advanced countries. This is a problem on which even widespread and efficient birth control can be expected to make little or no impression for some considerable time. There is great scope for conflict in these unwelcome facts, and the remedy will not be easy to find. But it is safe to say that with the coming world competition for development resources, anything which impedes the free flow of capital, if not labour, across national boundaries will be even more dangerous than it is at present.

* * * *

It is too early to say what economic advantages are likely to be derived from space travel, other than the obvious ones of a boom in the provision of resources for it and the impetus which such a quickening of economic activity is likely to give to social change. We are still a long way from being able to exploit the mineral and the other resources, if any, of our neighbours in the solar system, not to mention those bodies outside. There is little doubt that this will come in time; he would be an unimaginative person indeed who dismissed anything as impossible after the launching of a successful earth satellite. The analogy of the discovery of the New World is an apt one. First the exploration, then the exploitation and with it the inevitable disputes about ownership and the internal wrangles over precedence. But this time spheres of influence are not going to be demarcated by any Papal edict; if they were, there is even less chance of their being observed than there was before. International co-operation being what it is at the moment, there seems absolutely no possibility of agreement on the use of new discoveries for the benefit of mankind rather than that of a single nation. But this only emphasises the need for such an agreement. There are examples on this planet—the Antarctic for instance—of how difficult such a problem is going to be. It remains for those who will gain most from international exploitation of the solar system, when that is eventually possible, to use their weight in the councils of the nations to this end. It may be added that, in the long run, this should prove a more useful outlet for energy than the taking of sides, deliberately or otherwise, in the present cold war.

There is no doubting that another dimension will soon be added to man's thinking. In the next few years our old conception of the earth and its neighbours will undergo as radical a change as did the ancient conviction that the world was flat. Our Newtonian physics will be gradually placed in their true perspective as applying only to special cases and as being of severely limited scope, even in the mind of the common man. The time has come for a revolution in thinking all round, not simply in physics. The race for the universe will only be impeded by old prejudices and myths, however treasured, whether they masquerade under the name of communism, socialism, capitalism or nationalism. And what impedes progress is apt to be speedily replaced—perhaps violently.

CONTROLLING THE SUPPLY OF MONEY

MR. THORNEYCROFT'S BRIGHT HOPES

MR. PETER THORNEYCROFT, Britain's Chancellor of the Exchequer, asserted last July that inflation could not be stopped by refusing to print bank-notes, any more than a fever could be cured by plugging the thermometer. He meant that the supply of money was only a symptom of inflation, and that the cause of the disease must be attacked. Two months later the same Chancellor asserted that he was determined to end inflation by controlling the supply of money. There was no suggestion of tinkering with thermometers. He elaborated his policy by declaring that it had been decided "to tackle the root of the matter—the supply of money". It is impossible to please all the critics. In July Mr. Thorneycroft was assailed for implying that the authority that issued the nation's money and had control over the nation's credit could not restrain inflation by reducing the supply of money and credit. Since his change of opinion in September he has been accused of ignoring the evidence that inflation has persisted and become more menacing in Britain despite successful control of the supply of money. The International Monetary Fund has, in fact, shown that the supply of money in Britain has increased only 10-12 percent since 1948; and the rate of increase has been insignificant since 1954. What, then, has the Chancellor in mind when he says that his policy is "to halt the increase in the supply of money"?

The figures require further investigation. Currency in circulation has increased substantially since 1952, and at an accelerated rate since 1955; the increase since 1952 has been of the order of 45 percent. But the main element in the supply of money is bank deposits, which have increased only moderately since 1952 and have, on balance, declined since 1954: the increase since 1952 has been of the order of 5 percent. Hence the appearance of stability in the supply of money as a whole. The banks' advances have likewise risen only slightly—if they had risen much the fact would be apparent in deposits. Yet "bank money" as well as "real money" has financed inflation. In the period when the quantity of "bank money" has increased barely 5 percent the value of cheques cleared through the bankers' clearing system has increased nearly 60 percent. Nobody can ascertain statistically how fast "real money" is changing hands, but there is statistical information on the rate of circulation of "bank money" and it shows a rapid acceleration. Since the average of deposits in British banks has ranged between £6,250 million and £6,500 million in recent years, a big increase in the rate of circulation of those deposits can obviously have strongly inflationary effects; and if the currency in circulation—which has reached £2,000 million this year—is not only increasing in quantity but also, likewise, circulating faster the phenomenon of inflation is fully explained.

Mr. Thorneycroft seems so anxious to correct any wrong impression made in July (though in fact the disparity between his statements has been scarcely noticed) that he refrains from emphasising the notable success of his predecessors and himself in controlling the total supply of money. Therefore, he has not made it clear that what he intends to do is to reduce the velocity of circulation of money; indeed, it is by no means sure that that is in fact his intention. The Chancellor does not think in bankers' or economists' terms. He sees a picture of an economy that has—as it were by edict—a fixed supply of money; so if one section of the community gets more money other sections of it must get less. It is by such reasoning that he plans to stop wage-inflation. If wages are raised less money will be left for financing industry, and the ensuing recession of industry will, it is hoped, restrain wage-claims. The weakness in this reasoning is that it takes no account of the velocity of circulation of money. It concerns itself with the element in finance that has not been inflationary and ignores the element through which inflation has taken effect. Some critics have argued, therefore, that the policy will fail; that, mistaking the shadow for the substance, it is directed at the wrong thing.

* * * *

It is, perhaps, best to leave the Chancellor to his contradictions, and the bankers and economists to their figures and theories, and to study the Government's actions in the light of the trading position. The Chancellor has "frozen" bank advances and the authorities' capital expenditure; but he cannot pretend to have thereby fixed the supply of money, still less its rate of circulation. By raising Bank rate to an exceptional level he has deliberately restricted the demand for money; which is a very different matter from controlling the supply of it. Yet he will quite possibly succeed in stopping inflation by thus indirectly restricting the velocity of circulation of money. The people who argue that the policy is futile because it overlooks the fact that a fixed amount of money doing (say) 50 percent more work is equivalent to 50 percent more money are themselves overlooking the fact that the fixed amount of money may not be required to do more work, as in the past. It can be argued that restrictions will make people use their money more intensively, that because the supply is restricted each unit will be required to do more work to finance a continuing expansion of trade. But the trading community does not think in such abstract terms. As business men see the position, credit is scarce and costly, not only for themselves but also for their customers, and the flow of orders from the central and municipal authorities and nationalised industries and services will not increase as had been intended. Their attitude is not necessarily apprehensive, but it is necessarily cautious. Even before these new measures private industry's investment plans for the coming year were less than the plans on which work has begun this year. It may be that the inflation that the Chancellor is attacking would have collapsed of its own accord. Anyway, he has probably put in motion a process to complete its downfall; though control of the supply of money—as distinct from the demand for it—may not be the method of that process, as Mr. Thorneycroft imagines.

CURRENT COIN

Prospects for Aluminium.—Aluminium consumption in India has been increasing, not only in the traditional field of utensil manufacture, but in several newer lines as well. Among the latter, the A.C.S.R. cables and aluminium conductor industry is the most important. Its offtake has been steadily rising, and Mr. Lakshmipat Singhania has told shareholders at the latest annual general meeting of the Aluminium Corporation of India Ltd. (a fuller version of his speech appears on another page) that this industry will in course of time replace utensils as the largest single user of the metal. He expects that its consumption will soon amount to 16,000 tons, compared with 9,000 to 10,000 tons of the primary metal now used by the utensil industry. The diversification of demand is only natural, he says. There are several power generation and electrification schemes for which aluminium is required. Besides, the shortage of domestic copper supplies is well known, and only aluminium can take the place of that metal in many industrial uses. In other industries, such as transport, building and construction, the consumption of aluminium is likely to increase; they already consume nearly one-third of the total supply. "But this pattern and quantum of consumption is yet to develop and take shape, and in the future industrial development of the country, especially of engineering industries, the proportion of consumption of aluminium in these fields should be greater", Mr. Singhania adds. The total demand for aluminium by the end of the second five year plan has been estimated at 40,000 tons a year by the Planning Commission and other bodies such as the Tariff Commission, the Development Wing and the Aluminium Committee of the Ministry of Commerce and Industry. Accordingly, the Aluminium Corporation has plans, which the Government has approved, to expand its production capacity to 7,500 tons a year. The concern will also install plant to fabricate aluminium into several industrial products. Efforts have been made by the management to secure power from the D.V.C. at a reasonable price, but the authorities have not agreed to the rate quoted by it. The management has now succeeded in obtaining power from the Durgapur project of the West Bengal Government, and it hopes to go ahead with the expansion programme as early as might be practicable. But Mr. Singhania fears that the foreign exchange scarcity might delay its schemes. He assures shareholders, however, that the managing agents and directors "are exploring all possible ways and means to implement the expansion scheme as early as possible, because the expansion of the Jaykaynagar plant can be undertaken at a minimum cost with maximum speed." Discussing the financial results for the past year, Mr. Singhania says that they have been very satisfactory, and have surpassed in every sphere the previous year's figures, which were a record. But he warns that because costs of production have risen, and the replacement and renovation of the Jaykaynagar plant has been undertaken at a considerable expense, optimism about future results should be tempered with caution.

* * * *

Tea Quota for Foreign Auctions.—The Indian Government has decided not to relinquish yet the face-saving device which enables it to pretend that it is still firmly controlling the amount of north Indian tea which can be auctioned abroad. An announcement has, therefore, been made that it will not allow more than 155 million lbs of such tea to be exported during 1957-58 for auctioning in foreign centres (mainly London). The ceiling during 1956-57 was 160 million lbs, but "direct exports" actually totalled less than that amount (as they were expected to), so the limitation was merely nominal. The only purpose it served was to soothe the Government's vanity, which had been badly injured by the total failure of a more drastic limitation scheme imposed earlier, and to continue as a psychological irritant to foreign buyers. The proposal to restrict "direct exports" to foreign auctions is born of the idea that Calcutta should be developed as a marketing centre, and that the maximum possible amount of north Indian tea should be sold here. While the basic aim is not one with which this journal would necessarily disagree, it is open to question whether rigid ceilings of the sort which are periodically announced represent the best way of achieving it. The imposition of these ceilings serves little practical purpose. In 1955-56, when the north Indian crop was large and adequate supplies of tea were available from other producers, buyers abroad retaliated by not purchasing north Indian tea; Calcutta tea warehouses, as a result, filled to overflowing and the situation was saved in the only possible way it could be saved, by the Government climbing down and scrapping the ceiling it had imposed. Fortunately, the lessons of that experience have not been entirely lost. The ceiling of 160 million lbs for 1956-57 was relatively liberal, and therefore of little consequence. The ceiling for the current year, which is 5 million lbs lower at 155 million lbs, is also fairly liberal, especially in view of the fact that the north Indian crop is running approximately 30 million lbs behind last year's. The question nevertheless remains whether a restriction of this sort should be imposed at all. By irritating foreign buyers, it adds an unnecessary competitive handicap to the already heavy burdens of the north Indian tea industry, and the annoyance is causes varies in direct proportion to its effectiveness. By being an irritant when it is effective and a useless adornment when it is not, the scheme for limiting the "direct export" of north Indian tea to foreign auctions qualifies for the graceful rejection deserved by a lamentable failure.

* * * *

Activities of Reinsurance Corporation.—The saving in foreign exchange possible through reinsurance has attracted the attention of the Government and of insurers for a number of years. A sub-committee of the Executive Committee of the General Insurance Council examined the problem and compiled a report early in 1955. It suggested establishing a reinsurance corporation to promote the development of the business. It was felt that industrial progress would substantially enlarge the base of the insurance market, and that in turn would yield a much larger volume of reinsurance business. Speaking at the annual general meeting of the India Reinsurance Corporation Ltd., Mr. A. D. Shroff, chairman, says that it is because of the international character of the Corporation's activities that the Government has been persuaded to keep it as a purely private enterprise and constitute it "as a co-operative venture of all insurance companies", both Indian and foreign. A large number of insurers entered into a formal agreement on 18th October, 1956, to promote the Corporation. It was registered under the Companies Act on 29th October, 1956, and commenced business from 1st January this year. The first task that the promoters had to face was to devise an underwriting system which would be easy to operate, create the least possible difficulties for the members ceding business and be economical in administration. "The business had to be so processed that members received a share by retrocession commensurate with the underwriting limits of the smallest company. It was because of this that the concept of listed and unlisted risks was introduced in the fire department. I am happy that the systems devised have, thanks to the support of members, been working smoothly and are producing the desired results." As the Corporation was registered only in the second half of October 1956, the management had less than two and a half months to finalise the underwriting pattern, to arrange treaty and other facilities and to obtain a good measure of reciprocity. Mr. Shroff says that with the co-operation of foreign companies, especially of the London market, it was possible to complete all the arrangements before the end of December. Referring to the Corporation's tasks, he says: "During the first year, naturally we will mainly have to confine our attention to the writing of members' 'agreed cessions' and to obtaining good reciprocity against business ceded by us. After fulfilling our obligations to members, I estimate that the first year's trading of the Corporation should yield a net premium income of some Rs. 70 to Rs 80 lakhs, distributed in the proportion of 45 percent in fire, 30 percent in miscellaneous and 25 percent in marine departments."

* * * *

Rice from Andhra.—The Andhra Pradesh Millers Association, which some time ago protested against the Government of India's order controlling the price of rice and paddy in Andhra Pradesh and urged the abolition of the zonal system, has evidently reconsidered the matter and is now in a conciliatory mood. As Mr. Ajit Prasad Jain, Union Food and Agriculture Minister, has said, the Andhra millers have now agreed to supply voluntarily to the Government 40,000 tons of coarse rice, both boiled and raw. The supply is to be made during October at controlled prices ranging from Rs. 17 to Rs. 18 50 a maund. The Government, for its part, is to grant the millers permits for the export of 20,000 tons of fine rice to West Bengal and Bombay, on condition that the millers fulfil their undertaking to supply 40,000 tons of rice to the Government. Mr. Jain expects the release from Andhra during October of 70,000 to 75,000 tons of rice. Apart from the 40,000 tons which will be supplied to the Government, 10,000 to 15,000 tons will be sold in the open market and 20,000 tons will be allowed for export to West Bengal and Bombay. The Centre has promised to supply 50,000 tons of rice to the Kerala Government between September and December this year. The Travancore-Cochin Government met the cost of subsidising the sale of foodgrains to the extent of Rs. 1.5 crores annually before the creation of Kerala State. It has now been decided to reduce the commitment of the State Government to Rs. 1 crore annually. This is because of the detachment of Nanjanad, the rice bowl of Travancore-Cochin, from Kerala, and the addition of the deficit areas of Malabar to it. The number of fair-price shops in both Madras and Mysore has been considerably reduced. Mr. Jain has explained that the reason for creating a southern zone, including Andhra Pradesh, Madras, Mysore and Kerala, is that the southern States, taken together, have a surplus of rice. It has been decided that the fair-price shops should be abolished soon. The prices of cereals and pulses in south India have gone down since the creation of the rice zone. But the food situation in West Bengal and Bombay has worsened, so the Centre has had to release larger stocks in these two States.

THE JUTE CROP

THE Director of Land Records has issued his final report on the Jute Crop in Bengal for the year 1897, and we print it in another column. He estimates that 36 lakhs of bales will be available for export, and if this is the case the crop is a really large one, and, therefore, the by that of 1894-95. We have no doubt that the crop is a really large one, and therefore the Jute Mills are in for a good time with cheap jute, and our local concerns will probably all show very satisfactory reports for the current half-year. The Director says that the Department is always ready to accept any practical and well-based suggestions for the improvement of its forecasts, and the suggestion that we have to make in the present instance is that in future the Director of Land Records should remain in Calcutta when the final forecast is due and not absent himself at Darjeeling. Had the Director remained at his post this forecast might have been issued at least a week earlier than it was, and the memorandum which transmits it to us is dated the 29th of September, underneath being written the 5th October. It seems to us little short of a public scandal that such a state of things should exist concerning the most important item of commerce in Bengal.

Without Prejudice

LIABILITIES OF PUBLIC AUCTIONEERS

SELLING GOODS TO THE HIGHEST BIDDER

(FROM OUR LEGAL CORRESPONDENT)

THE editor of *Capital* has forwarded to the writer an interesting letter from a correspondent who requests that we "throw some light on the law relating to auctions" in the following circumstances. "According to my understanding of such law," says this gentleman with a not unreasonable grievance about the ways and methods of auctioneers in general, "the auctioneer is under an obligation to conclude the deal with the highest bidder in respect of every article put up for auction. However, most auctioneers in Calcutta," (and the writer might say "most auctioneers everywhere"), "do not keep to this rule. Very often, the highest bid, if it does not reach a certain price reserved by the auctioneer, is not accepted; and the worst of it is that such a reserve price is not mentioned in the list of articles announced for auction. The result is that one waits patiently for an hour or two for the turn of the article one is interested in to come up for auction, only to find the auctioneer not concluding the deal and going on to the next item because the highest bidding has not touched the reserve price he has in mind. In going to an auction, one is thus disappointed to find oneself neither able to strike a bargain (which is supposed to be the main attraction in an auction), or make an outright purchase (at the reserve price) without undergoing all the trouble of attending an auction. Would one be within one's rights in insisting that the auctioneer accept the highest bidding?"

We may take it that the concluding question is a rhetorical one. Anyone is within his rights in insisting on (i.e., peremptorily demanding) anything. Whether his insistence will be complied with is another matter. What our correspondent means is: if he makes the highest bid, is the auctioneer bound legally to knock the article down to him, and would the auctioneer be liable to him in an action at law if he did not do so? Now this question is, to the writer, who is very far from being an expert on the law of auctions, an interesting and important one, especially in cases where the auction may relate to valuable property, movable or immovable, so we will examine it carefully step by step. The first thing we have got to get into our heads is what an auction is. According to our custom, when faced with conundrums of this kind we have consulted dictionaries, two of them, in fact, one of them of worldwide authority. We do not name them because, writing with the utmost modesty, we believe both definitions to be inaccurate. "An auction," says one of them, "is a public sale in which articles are sold to the highest bidder," and the other defines "auction" as "a public sale of property or effects conducted on the principle of the highest bidder becoming the purchaser of any particular lot put up for sale." We rather fancy from the knowledgeable tone of our correspondent's letter that he had consulted some such authorities before he framed his question; and, indeed, if the above definitions are correct, they lend strong colour to the view that an auctioneer is legally bound to accept the highest bid.

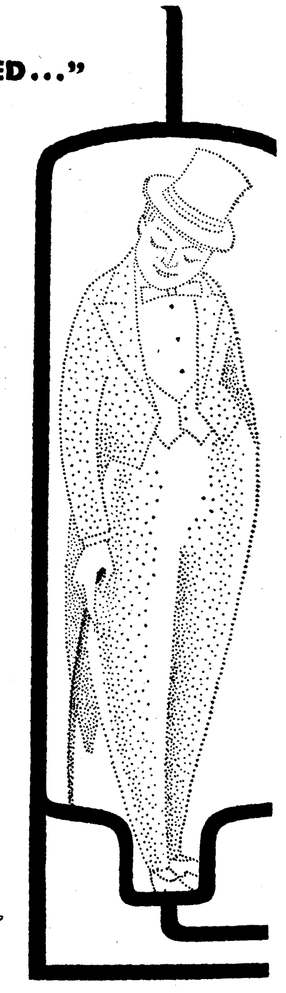
* * * *

Nevertheless, it is submitted that they are not correct and are misleading. An auction is not a sale at all. It is a public proceeding at which a sale is sought to be effected. That proceeding may be completely abortive. One of the foremost British authorities on the law of auctions, the late Dr. Heber Hart, K.C., defines an auction as "a proceeding at which people are *invited* to compete for the purchase of property by successive *offers* of advancing sums." (Italics ours). Note those two words, "invited" and "offers". The rights of an invitee are negligible. If I am "invited" to dinner and when I arrive I find my host, having forgotten all about it, has shut up his house and gone away, that would give me no legal right of action against him for the cost of a lost meal. On the same principle, it is submitted that although I may travel 200 miles to attend an advertised auction and arrive only to find that the auctioneer has cancelled the "proceeding", I would have no claim for damages. I, with the rest of the public, am a mere invitee. There is no contractual relationship between the auctioneer and me.

And consider the word "offers". An offer in the law of contract is a mere symbol until it is turned into a contract by acceptance, i.e., in an auction, until the auctioneer accepts it. Let our correspondent visualise the moment when he stands in the auction room, having made his bid, the last and highest bid, while the auctioneer stands with his hammer poised in his hand saying "Going, Going." If and when he raps his table with that hammer with or without the customary "Gone", there is in that instant a full and enforceable contract between the two. But, until he does so, there is none. In the writer's opinion, until the auctioneer has actually accepted the bid, he is entitled to cancel the auction without incurring any legal liability to the expectant bidder. Why? Because when the auctioneer mounts his rostrum and starts the proceedings, he does so in the sole capacity of agent for his employer, the seller, and while the bidding is going on, apart from fraud, misrepresentation or misdescription, he owes no duty to anyone except the seller. If he refuses to accept a particular bid or abandons the auction altogether, he may be liable in damages to his principal, the seller. But, in the writer's view, which may be wrong, he will not be liable for one single anna in damages to members of the general public present in the room, whether bidders or not. Likewise, the members of the public owe no duty to him or his principal while the bidding is in progress. Our correspondent might have actually made his bid. But a bid, in itself, is only an offer and may accordingly be retracted at any time before its acceptance by the fall of the hammer or otherwise: Nevertheless, the moment that hammer does fall or the auctioneer orally accepts the bid, the whole situation is changed in law. A legal contract has been made; and the auctioneer is no longer the mere agent of the seller owing responsibility solely to him. He now owes a duty to the successful bidder to complete the sale by delivery to him, on payment, of the article put up for auction; and the bidder is under a contractual obligation to pay for it on delivery.

* * * *

And that brings us to another point. Our correspondent says that "according to my understanding of (the) law, the auctioneer is under an obligation to conclude the deal with the highest bidder." We doubt very much whether there is any absolute obligation to do this. True it is that the whole object of the auction is to effect the sale of land or goods at the highest possible price, and that this involves, as a general rule, the acceptance of the highest bid. But take such a case as this. The property, let us say, is valuable land. X makes the highest bid. Just as the auctioneer is about to knock the property down to him he recognises X and remembers him as a man of straw, say, an undischarged insolvent. The auctioneer can't say a word. To do so would be to invite proceedings for defamation. So, without giving any reason for it, he does not accept X's bid but knocks the property down to the next highest bidder. So what? X, it is submitted, could do nothing. The auctioneer, at that stage, owed X no duty at all. His only duty was to look after his employer's, the seller's, interest, and that duty he discharged by refusing to conclude the deal with the highest bidder. The auctioneer, we think, has a discretion whether to accept any bid or not, and as long as he exercises that discretion honestly and with professional competence, no one, not even his principal the seller, would have any legal remedy against him.



As to a reserve price, this is a universal practice and is quite in order. How in its absence could an auctioneer protect his client from a knock-out "ring", i.e., a combination of dealers to prevent competition and keep the price down? Usually, the printed catalogue in the case of goods or the particulars of sale in the case of land which are obtainable from the auctioneers or the vendor's solicitors will disclose whether the sale is subject to a reserve price or not. In the case of comparatively trifling effects of small value, the auctioneer may disclose the fact at the beginning of the auction.

By the way, does any English, Irish or Welsh reader know that in Scotland the word "auction" is unknown? It is called, hideously, "a roup".

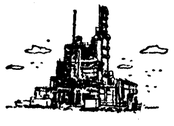
and Adipocere looks ahead

(Pronounced 'adi-po-saire')



After successive stages of exploring, drilling and refining, I now take my final shape—guess what? I am transformed into various petroleum products (major products being gasoline, kerosene, fuel oils, lubricating oils and asphalt).

In other words, I am now refined and ready for the long haul. All that "crudeness" is no more. You won't recognise your old friend "Adipocere" about whom you first read in these columns.

They store me in the finished product 'tank farm'. Life here is serene...until the fast moving, action-happy marketing men come along.

Here they come in their sleek looking trucks and wagons with the Flying Red Horse painted all over. From now on I am forever on the move and help in the progress of everything that needs to move.

From here I go to market...

STANVAC—*the name that stands for progress*

PSSVOC - 51/57.

WHAT a dull Puja it has been this year. The rain did not help the all-important immersion ceremony, I know. And the police restrictions on the use of loudspeakers, although they improved the chances of sleeping at night, added nothing to the general merriment. But when all such items have been taken into account, I can still say that I have never seen Calcutta quieter at this time of year. Friends to whom I have mentioned the fact have usually murmured something about the bank strike or the high cost of living, and they may well be right. Even in the more fashionable quarters of this once gay city, there seems to have been much the same sort of apathy, although that is far easier to explain in terms of import cuts, the high price of liquor, the dying social life, the aftermath of an impossible summer and the fact that many people are out of Calcutta anyway at this time of year. Besides, it is not fashionable these days for folk in the upper-income brackets to enjoy themselves. But for the ordinary man in the street not to be able to lose himself at least once a year in his traditional festivities is a serious matter indeed. In fact, if this is what has happened, it deserves an official enquiry into the causes. I often feel that too little attention is paid these days to enjoyment—as distinct from pleasing oneself whether one works or not, or going on strike for higher pay. It is still true even in these puritanical times that man does not live by bread alone. One of the many complaints I have always had against Prohibition is that it deprives people of one way of escaping from reality for a little while and leaves them free for such alternatives as burning tramcars or assaulting policemen. To bottle up a man's emotions by interfering with his traditional outlets is a dangerous thing to do. I hope for the future of law and order in this city that next year's Puja holidays are better and brighter than these have been.

* * * *

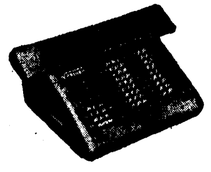
In the last few days civil aviation has at once looked ahead and back—both with some justifiable satisfaction. The Indian Airlines Corporation's *Viscounts*, introduced last week on the Delhi-Calcutta-Rangoon route and shortly to follow on some others, bring new comfort to flying and cut distance considerably. A colleague, who went to Rangoon on the proving flight and returned on the first scheduled flight back, has few compliments to pay to the once beautiful city of Rangoon, but is full of praise for the *Viscounts*. The noise is negligible, and landings and take-offs are exceedingly smooth. Punctuality, which I have come to value the more because of some recent flying experience, is said to be perfect. The occasion for looking back was the silver jubilee, on 15th October, of the beginning of commercial aviation in this country. Cartoonists have never succeeded in discovering in Mr. J. R. D. Tata their own unchangeable image of the Indian business man. The picture of Mr. Tata at the controls of a de Havilland *Puss Moth* twenty-five years ago shatters the ridiculous image of the pot-bellied tycoon completely. Progress in aviation has been nothing short of fantastic in recent years, and that, both internally and internationally, India is taking advantage of the latest advances is attributable largely to the pioneering spirit Mr. Tata brought to civil aviation at its start. A *TU-104* recently impressed many Americans, and their own *Boeings* will before long be in service while *Comets* are perfecting themselves. All in all, aviation is in for very rapid change. This will inevitably lead to rapid obsolescence, the commercial implications of which are obvious. It is reassuring that Mr. Tata, who brings to aviation not only a spirit of adventure but also a profound business instinct, is at the helm of Air-India International and also always available to the I.A.C. for advice. Claims do not always match performance in aviation, and experience is not much less important than experiment. It is Mr. Tata's experience which can ensure that expensive experiments are not indulged in by the over-enthusiastic. I have heard it said that his caution has already spared the Government of India several experimental purchases which might have been wasteful.

* * * *

By definition, income tax is a tax on income. That little axiom was firmly established by the Judicial Committee of the House of Lords in the famous "Blott's case" of 1921. Then, it was held that income is not taxable until it is in the hands of the assessee. Different countries are, of course, entitled to their own views about what the practice should be. But it is certainly not an exaggeration to say that no more sensible and equitable a decision than this is likely to be given by any legal body, no matter how august, anywhere in the world. That is why the principle which seems to be gaining ground in India—that a man is taxed on the income he is entitled to, not necessarily the income he gets—is so regrettable. I have heard before of public-spirited Government employees offering to forfeit a proportion of their salaries to some worthy national cause and being faced with a demand for tax on the whole of them. But a friend approached me the other day with a tax problem of which I have not hitherto heard the like. He is being held liable for tax on income never received, and indeed not even capable of being received—because the contract under which it was payable could not possibly be fulfilled. His inevitable failure to pay the amount assessed entails, so he has been told, a penalty which may be 100 percent and an "attachment order" on his total property. Even an appeal to the Appellate Commissioner and the Appellate Tribunal does not relieve him of the liability to pay a portion of the tax demanded, however unjust and exacting it is eventually judged to be. Failure at the first appeal leaves the only remedy in the hands of the High Court and the Supreme Court, which may take anything up to eight years to decide the case, and resort to which is bound to cost a minimum of Rs. 25,000 in fees alone. The logical conclusion to draw from a case like this is that nobody who wishes to avoid ending up broke or in jail should enter into a contract under which he is entitled to receive cash payments, if there is the slightest chance of the other party being unable to pay, and his being called upon to forgo for the time being his rights under it. What I am wondering is how anybody can be taxed on the proceeds of a contract which, because of non-fulfilment, has obviously been completely voided.

* * * *

I wish the debate between the Centre (or the Planning Commission) and the Government of Orissa on the latter's intention to scrap Prohibition had been conducted in the open so that the principles involved could be understood more widely. (As I see it, the "Prohibition lobby" has gone to work in a singularly secretive manner.) It needs to be remembered again that Article 47 of the Constitution deals with public health, and only incidentally refers to intoxicating drinks and drugs *which are injurious to health*. There is a reference to nutrition too, and to the standard of living of the people, and I should have thought the Planning Commission could use its time and energy better by concerning itself with them. The parties Mr. Krishnamachari has been approaching in the United States and Europe for financial help "to save the plan" must be wondering why a State Government seeking to raise more funds is being thwarted by the same people who fathered the plan. Then there is the question of the interpretation of the Constitution. The one produced by the advocates of Prohibition seems to me to be based on rather unconvincing arguments. All the Constitution has is an indirect directive on Prohibition, on the implementation of which the States have, very sensibly, been given a large measure of discretion. Is that to be withheld now? Is not a question of the States' rights involved too? All these questions could have been discussed—in newspapers, in Parliament, on platforms and perhaps in courts of law—if the Prohibition enthusiasts, defeated in logic and frustrated by the experience of Prohibition, had not gone about it with the very blunt weapon of political pressure. As I was saying, there is more to it than the Oriya having his drink secretly or publicly—which is about all the difference Prohibition seems to make. Important questions impinging on States' rights, the rôle of the Planning Commission, that of the ruling party, and the political behaviour of some individuals are involved and there is no reason, none good at any rate, why both Mr. Mahatab and Mr. Nanda (to say nothing of Mr. Dhebar) should not be prepared to argue their respective points of view within the hearing of the public.



* * * *

There is no use trying to delude ourselves that the *Sputnik* (such an amusing name after the soulless "earth satellite") is not going to make a great impact on the lives of us all. A new era has opened and we might as well face it. But for the time being the only difference may be that science fiction heroes will be called Ivanovitch instead of Hank or Buck and will look like normal people instead of being merely square heads with lantern jaws and crew cuts. After all, I cannot even foresee the day when the remedy for something or other is going to be a *Sputnik* in every garage. The man in the street could be more intimately affected by a series of developments at present taking place in the United States which promise to promote him to being the "man in the sky". I am referring to the building of low-cost, one-man helicopters, which should be available for 10 percent down and the balance over three years any time now. I am indebted to a U.S.I.S. handout for the information that the *Pinwheel* is the "lightest, smallest and simplest helicopter produced to date". It weighs 170 pounds—that is about the weight of an average man, but an even lighter version is on the way at a mere 75 pounds—that is little more than the weight of a bicycle. Its manufacturers predict that it will soon replace the motor-car for short distances. It can carry a load of 500 pounds at between 60 and 70 miles an hour, climb at 2,000 feet a minute to a breath-catching 12,000 feet and straps to the back of the pilot who travels seated on a kind of bicycle saddle. It is claimed as being "relatively noiseless"; instead of roaring like an aircraft, it hisses like a lawn sprinkler. It has no pistons, no electrical system, no lubrication or cooling problems, and no clutch, transmission or starter. In fact it appears to embody all the virtues the motor-car manufacturers have been seeking for their products for the past generation. Another miniature helicopter being developed for private use, and whose name rivals even the *Sputnik* for picturesqueness, is the *Stable Mabel*—so called from its unique gyro-stabilising system. Here seems to be the answer to the world's traffic problems, although for some drivers even three dimensions may not prove enough. I like the price suggested too. The makers of the *Pinwheel* say they can put the smaller version on the market for as low as $1,000, or about Rs. 4,750—before tax, of course.

CALCUTTA

MR. LAKSHMIPAT SINGHANIA'S REVIEW

Extract from the Speech of Mr. Lakshmipat Singhania at the Nineteenth Annual General Meeting held on Friday, the 11th October, 1957:

Welcoming the Shareholders to the Nineteenth Annual General Meeting of the Corporation, Mr. Lakshmipat Singhania said, "you will be no doubt gratified to observe that this year's results have surpassed in every sphere last year's figures which themselves were a record. Sales have exceeded previous year's figures and the gross profit shows further improvement making it possible to provide larger amounts to reserves and depreciation and a better rate of dividend to the Ordinary Shareholders who have been sacrificing for the last seventeen years, without getting any return on their investment, for the establishment of this basic industry in the country. I also wish to draw your attention to the fact that the debenture liability of the Corporation has been reduced by Rupees 15 lacs and that the liquid assets position of the Corporation is strong. Your Managing Agents and scores of Indian graduate technicians trained by the Corporation, are to be congratulated for their unfailing courage and enthusiasm over a long period of twenty years for achieving the success of establishing this basic industry in India with Indian Capital, Indian technical skill and Indian Labour.

Because of the economic conditions in the country there is an increase in labour cost, cost of stores, spares, raw materials and this has already resulted in increase in the cost of production. Besides, the plants at Jaykaynagar have now been in operation for over fifteen years and replacements and renovations have been undertaken at considerable expense. And then there are also the new tax impositions. Therefore, I would recommend cautious optimism over future results."

Increasing Demand

On the question of estimated consumption of the metal in the country Mr. Singhania added, "the general pattern of development of increased use of Virgin metal for industrial uses is also taking shape in India and the demand for the metal is increasing as expected. The estimated consumption of aluminium by the end of the Second Five Year Plan period in 1961 is expected to be about 40,000 tons. This is also the view of such bodies like the Tariff Commission, the Development Wing of the Ministry of Commerce and Industry and the Aluminium Committee set up by the Ministry of Commerce and Industry.

The total consumption of aluminium metal by utensil manufacturing industry which has been the main outlet for the metal uptil now, is estimated to be not more than 15,000 tons per annum and out of this the primary metal is only about 9,000/10,000 tons. The balance of the requirement of utensil manufacturing industry, which is also developing as small scale and cottage industry, is met by the secondary metal.

The industry for manufacture of A.C.S.R. cables and all aluminium conductors is developing as the biggest consumer of virgin metal in India and is expected to consume about T.16,000 per annum. This is only natural in view of the large power generation projects and electrification schemes undertaken in the country, and also specially because India is very short of copper and aluminium is the only alternative to copper. As the development of the country takes place, the use of large quantities of aluminium in this field of A.C.S.R. cables and all aluminium conductors will be progressive and permanent.

The consumption in the other industrial fields of transportation, building and construction and other miscellaneous uses is estimated to be about 1/3rd of the total consumption i.e., about 15,000 tons. But this pattern and quantum of consumption is yet to develop and take shape and in the future industrial development of the country especially of engineering industries, the proportion of consumption of aluminium in these fields should be greater. It would not be out of place to mention here that the proportion of consumption of aluminium in industrial uses other than utensil manufacturing and A.C.S.R. cables in America, is about 88% of the total aluminium consumed."

Mr. Singhania said that the bad effects resulting from the withdrawal of import duty on scrap was again brought to the notice of the Government, who referred the matter to the Tariff Commission. An enquiry was made by the Tariff Commission, on 11th September, 1957 and their recommendations are awaited and it is hoped that a proper duty will be imposed on imports of scrap. He remarked "it would not be out of place to mention that the Indian Standards Institution are making good efforts to standardise the quality of circles used for utensil manufacturing but without authority to enforce standards such efforts may not meet with success. The various Government departments themselves many a time do not follow the standard specifications of the Institution but float enquiries quoting a private trade mark. It is very necessary that such action should be stopped immediately in the interests of the Institution and Industry as well".

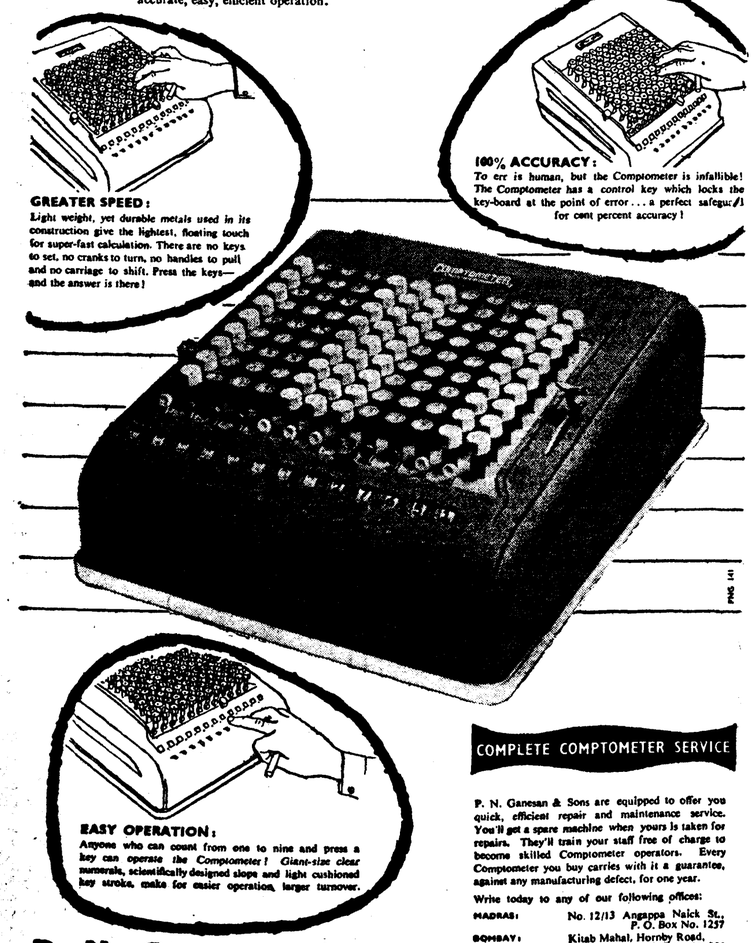
The Tariff Commission have also conducted an enquiry on the continuance of protection to A.C.S.R. Cables and all aluminium conductors and their report is awaited.

Expansion Programme

On the expansion programme of the Corporation Mr. Singhania stated—"the Government have approved our scheme to expand our metal production capacity to T.7,500 per annum and to instal plants for the fabrication of metal into industrial products. We made all possible efforts to secure power from the D.V.C. at a reasonable rate, but they have shown their inability to concede to our request. However, I have pleasure in reporting that we have been able to secure power from the West Bengal Government from their Durgapur Project. It is now planned to go ahead with the expansion scheme of the Corporation as early as practicable. The unfortunate foreign exchange position of the country might delay the plans to some extent but it is expected that we shall have the sympathy and support of the Government in developing this basic industry which is not only of national importance but also a large saver of foreign exchange." He assured the Shareholders that the "Managing Agents and Directors are exploring all possible ways and means to implement the expansion scheme as early as possible, because the expansion of the Jaykaynagar plant can be undertaken at a minimum cost with maximum speed."

He concluded, with the following general observations on the economic and labour situation in the country.

Everyone is familiar with the saying that "The army marches on its belly". I would add to that saying "so does the economy of a nation." The foundation of all economic progress is a well-fed population with strength to resist diseases and to work hard. All our present day economic difficulties have arisen because of the declining trend since 1953-54 in food production which necessitated import of food grains on a sizeable scale. The industrial production on the other hand has continued to record a steady increase, this increase being shared by most of the industries. It was, therefore, unfortunate that the Government in their Second Five Year Plan diverted the accent and resources to industrialisation in public sector. The big drain on foreign exchange through import of food grains has now gained momentum and unless stopped will always continue a threat to the economy of the country in all spheres of activities and all walks of life. Due to increasingly frequent demands by labour for higher wages on account of dearer food, aspiral of inflationary tendencies has been started. Money has become scarce, due to diversion of all funds to investment in industries in public sector. The taxation policy has further drained the market even of working capital let alone funds for long term investment. If the Government can avoid the flow of their funds at the expense of rural agriculture to state industries then much of the financial stringency may ease and there may not be so much necessity for heavy taxation.



Coming to labour, there is a disquieting trend of the Trade Union movement becoming more and more political. This will ultimately harm everyone and Government must take immediate strong measures to prevent this undesirable growth, in the interests of the nation.

The rapid technological developments all over the world, always remind us of the necessity to train our own personnel. The Corporation at least have been fully conscious of this and we are proud of having trained a number of technicians in this basic industry, who are now working in important industries in the public and private sectors.

The problem facing everyone in the country is not merely to take a short cut to economic growth, but also to avoid the more hazardous way. Towards this end joint and willing effort is required on the part of everyone be he agriculturist, factory worker or office worker, businessman or trader or politician. But by far the most essential factor is wise and clear guidance by the Government."

Put SPEED in your accounting!

INCREASING business volume and growing competition call for rapid methods of accounting. Today's transactions can't wait till tomorrow to be recorded. Put *speed* in your accounting! Put COMPTOMETER on the job. This super-fast machine that adds, subtracts, multiplies and divides is designed for accurate, easy, efficient operation.

GREATER SPEED:
Light weight, yet durable metals used in its construction give the lightest, floating touch for super-fast calculation. There are no keys to set, no cranks to turn, no handles to pull and no carriage to shift. Press the keys—and the answer is there!

100% ACCURACY:
To err is human, but the Comptometer is infallible! The Comptometer has a control key which locks the key-board at the point of error... a perfect safeguard for cent percent accuracy!

EASY OPERATION:
Anyone who can count from one to nine and press a key can operate the Comptometer! Giant-size clear numerals, scientifically designed slope and light cushioned key stroke, make for easier operation, larger turnover.

COMPLETE COMPTOMETER SERVICE

P. N. Ganesan & Sons are equipped to offer you quick, efficient repair and maintenance service. You'll get a spare machine when yours is taken for repairs. They'll train your staff free of charge to become skilled Comptometer operators. Every Comptometer you buy carries with it a guarantee, against any manufacturing defect, for one year.

THE CALCUTTA MONEY MARKET

HEAVY CASH WITHDRAWALS

Wednesday, 16th October.

THE bank strike has continued to affect business in the Calcutta money market this week. Apart from cash withdrawals, the activities of the commercial and exchange banks are almost at a standstill. The State Bank of India, the only commercial bank not seriously affected by the strike, reports large cash withdrawals by industry to meet payment commitments. The jute, coal, sugar and tea industries have all featured in this heavy demand for cash. No cheque clearing has yet been attempted.

The exchange market has been quiet throughout the week and very little business has been done. Once again, it is the State Bank which reports a small number of bills and a few remittances. Last week sterling was weaker and its quotations moved erratically. Since then, however, there has been a substantial improvement against both deutschemarks and dollars.

* * * *

Silver was quiet on larger arrivals and because demand was sluggish. The price declined from the previous week's level of Rs. 181.50 to Rs. 179.75, quoted today for ready delivery. The rate for forward delivery was Rs. 179.50. The price in London was 78½d, and in New York it was 90⅝ cents.

Gold was quiet in sympathy with silver and the price fell from Rs. 109 to Rs. 108. The sovereign was lowered from Rs. 71.25 to Rs. 71.

* * * *

During the week ended 11th October, Government of India Treasury bills for Rs. 90,10,50,000 were sold in favour of the Reserve Bank.

* * * *

An increase of Rs. 6.02 crores to Rs. 1,493.49 crores in active notes was the notable feature of the return of the Reserve Bank of India for the week ended 11th October, 1957. The total note issue fell by Rs. 55 lakhs to Rs. 1,513.90 crores. The currency contraction was adjusted by reducing foreign securities by Rs. 4.97 crores to Rs. 321.65 crores and increasing rupee securities by an equivalent amount to Rs. 940.84 crores. As a result, balances held abroad in the Banking Department increased by Rs. 1.91 crores to Rs. 20.55 crores because of a transfer of securities from the Issue Department. Deposits of the Government of India rose by Rs. 2.53 crores to Rs. 53.84 crores but other Government accounts fell by Rs. 6.53 crores to Rs. 3.61 crores. Balances of commercial banks at Rs. 90.61 crores showed a decline of Rs. 3.54 crores. Other loans and advances dropped from Rs. 78.65 crores to Rs. 73.50 crores, of which advances to scheduled banks against usance bills amounted to Rs. 28.71 crores (Rs. 32.42 crores). Ways and means advances stood at Rs. 51.27 crores, against Rs. 44.77 crores.

* * * *

The return of the State Bank of India for the week ended 27th September, 1957, shows a rise of Rs. 93 lakhs to Rs. 348.59 crores in total deposits. Investments in Government securities are up by Rs. 12 lakhs to 141.47 crores, while other authorised investments remain unchanged at Rs. 10.51 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have decreased by Rs. 96 lakhs to Rs. 156.76 crores. Cash and balances are, in consequence, shown at Rs. 53.39 crores or Rs. 3.86 crores higher.

* * * *

The statement of the position of scheduled banks for the week ended 4th October, 1957, shows Demand and Time liabilities at Rs. 723.18 crores (Rs. 24.46 crores on account of borrowings from banks) and Rs. 626.50 crores (Rs. 7.93 crores), compared with Rs. 719.66 crores (Rs. 17.80 crores) and Rs. 619.54 crores (Rs 8.67 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 5.81 crores and Rs. 5.58 crores to Rs. 42.55 crores and Rs. 94.15 crores, respectively. There is a drop of Rs. 34 lakhs to Rs. 385.93 crores in investments. Advances and bills discounted at Rs. 847.37 crores show an increase of Rs. 8.56 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 10.1 percent and 62.8 percent, against 9.4 percent and 62.6 percent.

* * * *

The outstanding balance of the 2½ percent Bhopal War Bonds 1957 is repayable on 1st November, 1957, and no interest will accrue thereon from that date. To facilitate the discharge of the Bonds on the due date, holders may tender their securities on and from 21st October, 1957, at the Public Debt Office, Treasury or a branch of the State Bank of India at which they are enfaced or registered for payment of interest. Full details of the procedure for obtaining the discharge value can be obtained on application at any of the above offices.

A FOREIGN EXCHANGE CRISIS IN BRITAIN

SOME LESSONS FOR INDIA

By R. M. Mitra

THE announcements of an increase in the U.K. Bank rate from 5 percent to 7 percent and of a reduction in the West German Bank rate from 4½ percent to 4 percent were almost simultaneous. The move in Britain is designed to arrest the decline in her foreign exchange reserves, while the change in Western Germany is intended to discourage the flow of "hot money" into that country. Such changes in Bank rates in opposite directions might seem appropriate in view of the contrary nature of the two countries' objectives. But the technical consistency in the application of the instrument does not bring out the true nature of the economic situation which this traditionally important instrument is being increasingly used to deal with. Apparently, the common danger against which monetary policy is directed in both countries is inflation. The depletion of foreign money is looked upon as the result of inflation in Britain and the accumulation of foreign money is believed to be causing inflation in Western Germany. The mechanism of Bank rate is being used to combat the effect of inflation in one country and to remove the cause of inflation in the other.

Supply of Money

Bank rate is essentially a monetary weapon. Its influence is not, therefore, expected to extend beyond controlling the supply of money. The cost of money influences its supply in two ways. On the one hand, it raises the cost of production and services, reduces the profit from business operations and thus restricts the demand for credit. On the other, the higher return induces holders of money to spend less on immediate needs and to save more in order to earn an increased interest-income. In so far as a higher Bank rate leads to higher rates of interest for credit and savings, an enhancement of the rate may be suitable if and to the extent that a restriction of the flow of money is necessary for economic reasons. The successful use of Bank rate depends on the fulfilment of two important conditions. It must be necessary to curtail the flow of money, and Bank rate should have the power to affect other market rates. It has to be ascertained whether a restricted flow of money or a properly directed flow of money is best calculated to serve the interests of the economy. It is necessary also to know how far fluctuations in Bank rate influence other market rates.

In December 1956, the index number of money supply in the U.K. was 104, and that of industrial production 113, while the index number of wholesale prices was 108 (base year 1953). Thus the rise in money supply was less than the rise in production or in prices On the other hand, money supply rose by 33 percent in Western Germany during the same period, 1953-56, as against a rise of 39 percent in industrial production and only 3 percent in wholesale prices. In this case, therefore, a comparatively large increase in money supply has produced a small rise in prices. It might be argued from these figures that the volume of money supply is not necessarily the basic cause of inflation in the U.K. It is also known that the traditional relationship between Bank rate, Treasury bill rates, market discount rates and commercial banks' deposit and lending rates has been weakening. Although a rise in Bank rate encourages an upward trend in other interest rates and a decline in Bank rate encourages a downward trend, the influence is more psychological than organic and may be neutralised by other factors. In Western Germany, for example, banks' lending and deposit rates remain high in spite of the steady reduction in Bank rate from 5½ percent to 5 percent in August 1956, to 4½ percent in January 1957 and to 4 percent on 18th September, 1957. In India, the raising of Bank rate in May 1957 was not followed by any noticeable increase in call money rates and bill rates, although banks' deposit rates hardened in Calcutta and Madras.

High Prices

In needs to be recognised that high prices are a symptom of economic disease, and not the disease itself. It is also important to realise that Bank rate was devised to protect Britain's gold reserve and to deal with temporary disturbances in the balance of payments. Experience has shown that it is not an effective cure for a long-term weakness; short-term funds coming from foreign countries may produce strongly adverse effects when the flow turns back. It is interesting to recall that Montague Norman's first noteworthy act as Governor of the Bank of England was to raise Bank rate to 7 percent on 15th April, 1920. A short period of steadiness and hopefulness followed. But, by the end of summer, the unsettling effects of disrupted business showed themselves. Montague Norman did not, however, lose faith in the power of a high Bank rate to attract a substantial portion of the "vast mass of loose money in the world seeking short-term investment in international centres". Although originally he also had in view the "deterrent effect on borrowing" of a higher Bank rate, he was more concerned with the task of attracting foreign money. When the transient steadiness in internal business disappeared and the Treasury asked for a lowering of Bank rate, the picture of depression at home was given less attention than the vast mass of foreign money looming in his vision. Events showed, however, that movements of floating money were "actuated by fears of loss of value and by political fears, motives in comparison with which the yield of temporary investments was negligible".

Short-term Fluctuations

It is apt to be forgotten that Bank rate performed its limited task of correcting short-term fluctuations in external payments in those tranquil days when the behaviour of long-term economic forces was subject to some reasonable control. The present phenomenon of an adverse balance of payments is not the short-term effect of temporary factors disturbing trade or the flow of funds; it is the result of deep-rooted economic, social, political and technological forces which are bringing about profound changes in trade, markets and price-income equations. A suitable device to bring these forces under control has yet to be evolved. It is possible that the high U.K. Bank rate has discouraged the recent speculative sales of sterling against dollars and West German marks and also partly met the disadvantage arising from the devaluation of the French franc. But unless the situation which has led to adverse speculation in sterling is remedied, the recurrence of such speculation at an adjusted level of interest rates remains an uncomfortable possibility. The situation is not the result of "changes in the flow of bills discounted", as pointed out by Roy Harrod, but is mainly affected by the "drawing downs or accumulations of sterling balances".

The accumulation of wartime sterling debts, the loss of prewar markets, the need to replace machinery and adopt newer techniques—all these generated a demand for non-sterling currencies against sterling on a scale for which the British economy was not prepared, even if London had retained her position as the centre of the world money market. The policy of full employment and the demands of highly organised trade unions made the cost of production rigid and hampered exports to markets crowded with sellers not only from the traditional exporting countries but also from new ones. It is widely recognised that in view of the limitations set by agricultural production and the narrowness of the home market, the problem for the U.K. is essentially to expand exports by an amount sufficient at least to pay for current imports of food and raw materials and charges on accumulated debts. It is considered necessary, therefore, to rationalise the cost of production and to reduce internal consumption so that goods may be available for export in sufficient quantities and at competitive prices. It is here that the advocates

of the higher Bank rate policy have come out with the argument that it will, on the one hand, reduce the supply of (or demand for) credit, thus making less money available for internal consumption; and, on the other, by reducing the tempo of economic activity, it will keep the demand for wages under control.

Cost Inflation

Although Mr. Harrod seems to think that the cost inflation in the U.K. will neutralise itself with increased production, and does not justify a "deliberate policy of industrial stagnation", many hold a contrary view. Even if it be accepted that a reduction of the credit supply and a period of business restraint are necessary to restore and develop Britain's export markets, the influence of Bank rate in this sphere remains open to question, except as a signal of distress. The monetary authorities might well reconsider the use of a technique which works on the psychological plane and has long ceased to serve the direct purpose of correcting temporary foreign exchange disturbances. The need for using Bank rate cautiously is further emphasised by the growing volume of the public debt. A high rate will increase the cost of servicing the debt, and the resulting expansion in interest income will partly counteract the shrinkage in money supply. Again, a high rate tends to depreciate the money value of existing investments (including banks' holdings of Government securities) in a manner that might depress investment propensities when it is intended to stimulate them. It might have been prudent, therefore, to reserve the use of Bank rate for a future period when foreign exchange disturbances were temporary. The deeper economic disturbances, whether they involve foreign exchange or not, can hardly be met by a weapon whose direct effects are now mostly psychological and whose indirect results are opposite to those it is intended to achieve.

Lesson for India

Britain's struggle to maintain the value of sterling is really a struggle for foreign markets. Whatever its success, it has a lesson for India's economic planners. This country is fortunate in having large human and material resources. Her internal market is big enough to absorb much of her agricultural and industrial production, subject to adjustments in the type and quantity of the products. Some critics disagree with the views of Mr. Asoka Mehta, who, in a recent article in the *Statesman*, has warned that "if India is not to slip back into age-old stagnation, foreign aid.....has to be obtained". According to these critics, world economic trends seem to indicate a different approach. They feel that foreign aid is necessary and conducive to the healthy growth of international trade, when it comes in the form of ordinary credits repayable out of the proceeds obtained from the use of imports within reasonable periods of time. But they think that when foreign aid is intended to finance the installation of industrial equipment, and when the repayment of such aid is based on doubtful calculations of future foreign exchange earnings from increased production, the result will be national demoralisation and a fall in the already low level of internal consumption. In an era when rapid technological developments are taking place, and when importers are turning into exporters, an industrial structure built on borrowed techniques and "know-how" might involve an endless process of borrowing to replace outmoded machinery and equipment.

While the efforts of various bodies to evolve order out of the present chaos of international trade and investment are to be welcomed, some feel that it may be wise to revise India's five year plan on the basis of the utilisation of internal resources. The primary need is for food, shelter and clothing. A bold reconsideration of the principles of economic planning may provide the answer. "To slow down development is dangerous" and history "rarely rings twice". But the call of history and the essentials of development may require to be interpreted anew.

DULLEST POST-PUJA SESSION IN MANY YEARS

BANK STRIKE REDUCES TURNOVER

Wednesday Evening.

REPORTS from the Calcutta stock market reveal that the accumulation of orders during the Puja holidays was the lowest for many years. This year's post-Puja trading session was one of the dullest on record. A good deal of the responsibility for this state of affairs must be attributed to the bank strike, but the prevailing economic climate is also to blame. Prospective share buyers are too preoccupied with the present high level of taxation to show much enthusiasm for fresh commitments. The prospects of an American loan at first gave some strength to the market. But hopes of any immediate relief have since dwindled and this fact has also helped the downward trend. Other factors affecting market sentiment are the unsatisfactory labour situation, rising production costs in most industries, and the threatened strike of railwaymen from 14th December. Indian Irons began the session on a steady note due to the efforts of one prominent bull operator. He has since unloaded his holdings and prices have reacted accordingly. The feeling in the market is quiet.

The terms and conditions laid down by the Government for the future working of the Calcutta Stock Exchange Association (which has been granted official recognition) under the Securities Contracts (Regulation) Act, are reported to be adding to the difficulties of the stockbroking fraternity. With effect from 10th October new working hours were introduced in the Stock Exchange. These are 12 noon to 2.30 p.m. from Mondays to Fridays, and 12 noon to 1 p.m. on Saturdays. The scale of the brokerage charges is also to be revised shortly to bring it on to a uniform basis throughout the country.

Details of the week's trading follow.

* * * *

The gilt-edged market continued steady, but once again enquiry was centred on short-dated issues with the scrip in short supply. The volume of business was as usual hampered by the bank strike and trading was restricted. Three percent Conversion Loan 1986 was marked back further to Rs. 71 and 3% Non-terminable Paper eased to Rs. 71.75. In short-dated loans 3% 1958 was asked for at Rs. 99.75, 3% 1959-61 was marked up further to Rs. 98.45, 2½% 1961 had no sellers at Rs. 94.12 and 2¾% 1960 continued in demand at Rs. 96.80; 2¾% 1962 had buyers at Rs. 94.10 while 3½% 1961 hardened to Rs. 99.53. Among medium-dated issues 3% 1963-65 turned buyers at Rs. 93.28, 3% 1964 was quoted nominally at Rs. 93.65 and 3½% 1964 was traded up to Rs. 97.70; but 3½% 1965 had sellers at Rs. 97.30, while 3½% 1967 was sold at Rs. 97.65 and 3½% 1967 changed hands at around Rs. 99.50. In the long-dated group 3% 1966-68 was marked at Rs. 91.45 and 3% 1970-75 was quoted lower at Rs. 86.15 after payment of the half-yearly interest; 3½% 1974 eased slightly to Rs. 98.25 and 4% 1972 had sellers at around Rs. 99.97. Very little business was reported in State loans and there were few price changes.

Preference shares failed to attract any interest—particularly in the case of jute companies' shares. In jute, Dalhousie was sold at Rs. 81 and Kinnison at Rs 91. Most other issues had sellers rather than buyers. Among miscellaneous preference shares, there was some enquiry for Burn & Co. 7% at Rs. 113 and Indian Iron & Steel at Rs. 96.75. Calcutta Electric changed hands at Rs. 9.37 and Dunlop Rubber Second at Rs. 86. Indo-Burma Petroleum were crossed at Rs. 85 and Kumardhubi Engineering were done at Rs. 88.

In the banking section Punjab National reacted on profit-taking from Rs. 64 to Rs. 61, while United Commercial were unchanged at Rs. 56.50, at which price there were some buyers. United Bank of India "D" shares were lower at Rs. 4.

In railways, the only share dealt in was Dehri-Rohtas which met with enquiry at Rs. 9.75.

Among cotton textiles Cawnpore and Elgin Mills met with selling pressure and were hammered down to Rs. 5.12 and Rs. 15.12 against the opening quotation of Rs. 5.50 and Rs. 16.12 respectively. Bowreah were fractionally lower at Rs. 105. Dunbar dropped Rs. 8 to Rs. 130. In contrast, Kesoram recovered from Rs. 11.50 to Rs. 11.87 and Jay Shree Textiles were reported at around Rs. 6.25.

The outstanding feature in the coal section was South Karanpura which spurted from Rs. 9.75 to Rs. 12.69; tonight's closing quotation is Rs. 12.12. Burrakur idled around Rs. 22. Bengal were higher at Rs. 216 although no business was actually reported in the shares during the period under review. East Indian were quotably unchanged at Rs. 21.25, while Equitable were marked down from Rs. 22.87 to Rs. 22.25. Rewa reacted from Rs. 18 to Rs. 16.65 and Seebpore from Rs. 24.50 to Rs. 22.69. New Beerbhoom met with some enquiry and improved from Rs. 12 to Rs. 12.50. Pench Valley improved today from Rs. 14 to Rs. 15.

The September stock figures for jute mills, which showed a sharp decline of 15,800 tons, failed to cheer the jute section to any perceptible extent although a few selected shares did meet with some enquiry. Here is a chart showing representative price movements:

	Opening 10th October 1957	Closing 16th October 1957
	Rs.	Rs.
Agarpara	7.12	7.50
Alliance	64	71
Barnagore	79	83
Ganges	48	49
Kamarhatty	90	94
Naihati	60.50	65
Megna	74	83

In the electric supply section, Calcutta met with good investment enquiry following the publication of a satisfactory report. There were buyers of the shares throughout the period under review at around Rs. 12.56. Agra improved from Rs. 123 to Rs. 125, although no business was actually reported in the shares.

In sugar, Belsund met with some enquiry at a slightly higher rate of Rs. 10.25 and there were buyers of Dyer Meakin Breweries at Rs. 6.75. Purtabpore were transacted at Rs. 10.19.

The emergence of a powerful bull operator during the earlier part of the week took the price of Indian Iron & Steel shares up to Rs. 18.18; subsequently the same party was reported to have unloaded his shares on a tired market yesterday and the price quickly reacted to Rs. 17.60. However, replacement buying at the close brought a small recovery to Rs. 17.64. Guest Keen Williams met with some investment enquiry and recovered from Rs. 27.75 to Rs. 28.50 and Indian Steel & Wire Products were better at Rs. 57. Jessop & Co., were quiet at Rs. 24.56 and Richardson & Cruddas at Rs. 9.56. Textile Machinery were active and at

Appearances...and a pair of pears

PEARS, like appearances, are deceptive. You can't tell their quality by gazing at them. Moral: If you're buying pears, taste them first.

But testing by tasting gets you nowhere if, for instance, you are buying soap. For that (and most packaged goods, too), sensible shoppers have a surer guide to quality: they go by a *name* they can trust, a *brand* they have used and found reliable.

For nearly 70 years, people have trusted Hindustan Lever products because their high quality has been unvarying. And they trust because we test.

At Hindustan Lever, we examine *all* our products at *every* stage of manufacture. We make sure that they stand up to storage: we 'create climate' in a laboratory to observe them under all weather conditions. We check their performance by using them as you do in the home.

All this means 1,200 *tests a week* on products like Lifebuoy Soap, Dalda Vanaspati and Gibbs SR Toothpaste—familiar products because they are so widely trusted, and trusted because they are tested.

Hindustan Lever serves the home

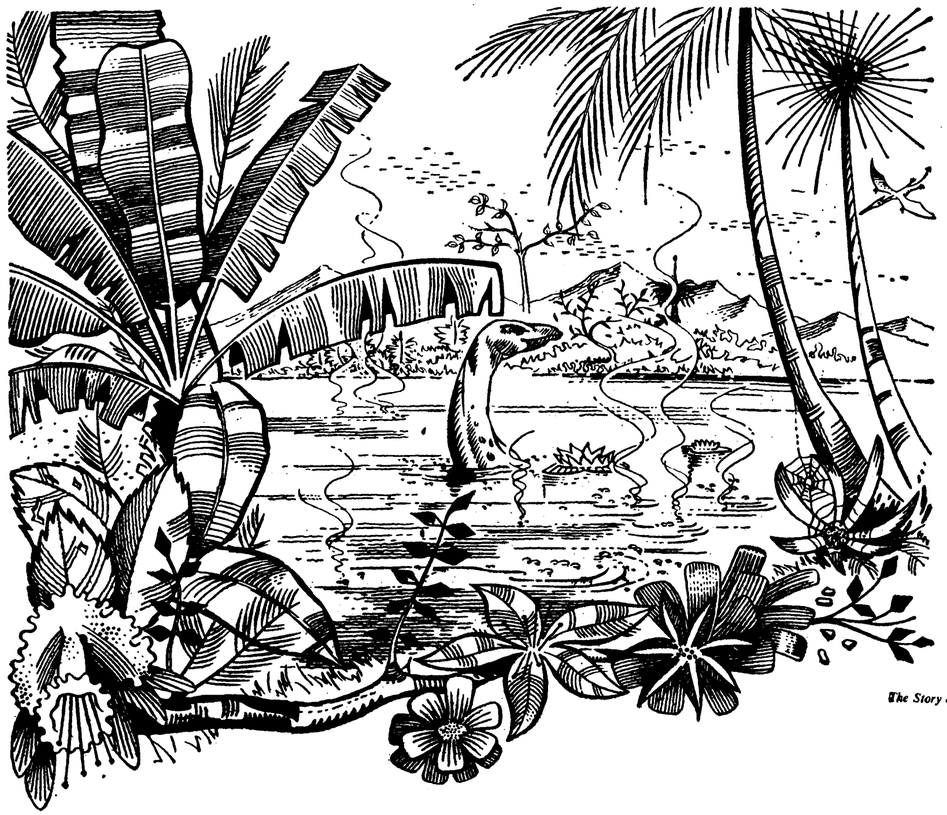
HLL 5-X56

one time had buyers up to Rs. 16.60: profit-taking at the close, however, brought the price down to Rs 16.40.

In paper, Orient at one time recovered smartly to Rs. 23.50 but subsequently eased to Rs. 23.15. Sirpur improved from Rs. 7.87 to Rs. 8.44, Star from Rs. 11 to Rs. 11.62 and Titaghur from Rs. 32 to Rs. 32.25. India Paper Pulp were unchanged at Rs. 18.25.

In cement, Ashoka were better at Rs. 9 as were Sone Valley at Rs. 4.75. Orissa were higher at Rs. 12.50 while Jaipur Udyog were unchanged at Rs. 12.12 and Dalmia at Rs. 9.75.

In shipping, India Steamship were steady at Rs. 11, but India General Navigation were quiet at Rs. 63 Calcutta Landing & Shipping spurted from Rs. 11.50 to Rs. 13.50.



Among miscellaneous industrials, Alkali & Chemical were unchanged at Rs. 13.62 while Angelo Brothers were easier at Rs. 17. Balmer Lawrie were steady at Rs. 144. ex-dividend, while Bengal Flour were easier at Rs. 27. Britannia Biscuits were enquired for at Rs. 13 but British India Corporation were offered at Rs 4.85. Clive Row Investment were quietly steady at Rs. 8.75, but there was a good investment enquiry for Dunlop Rubber with the price improving to Rs. 19.87. Hindustan Motors were better at Rs. 6.25 and Indian Aluminium recovered from Rs. 12.37 to Rs. 12.87, with further buyers at the latter price. Indo-Burma Petroleum were neglected at Rs. 24, as were British Burma Petroleum at Rs. 1.88. Indian Wood Products were asked for at Rs. 40.75, but Metal Box met with profit-taking and closed easier at Rs. 25.62. National Carbon reacted from Rs. 24.25 ex-dividend to Rs. 23.19 ex-dividend following reports of a Rs. 1 crore debenture issue. Jardine Henderson were easier at Rs. 71 while both Martin Burn and Shaw Wallace were unchanged at Rs. 22.81 and Rs. 10.25 respectively.

In the mining group, Indian Copper were quietly steady at Rs. 2.76, but Metal Corporation touched a new low of Rs. 5.93. Other issues were more or less unchanged.

Tea shares were featureless. Pussimbing were traded at Rs. 10 and Grob "B" at Rs. 11.50. Teloijan had sellers at Rs. 23, as did Patrakola at Rs. 125. Jay Shree continued to find support at the lower price of Rs. 9.25 and Bhatkawa were quoted at Rs 19.25. Birpara changed hands at Rs. 125 and a small lot of Hantapara were done at Rs. 156. Hasimara declined to Rs. 18 and Jaybirpara fell to Rs. 16. Brahmapootra dropped today from Rs. 4.50 to Rs. 3.50.

* * * *

Providing Rs. 5.78 lakhs for taxation and Rs. 5.77 lakhs for depreciation, the profit of the BURRAKUR COAL COMPANY has amounted to Rs. 1,99,378 for the half-year ended last December. Bringing in Rs 36,168 and making other adjustments, there is Rs. 2,31,800. Transferring Rs. 6 lakhs from general reserve and Rs. 4.40 lakhs from the provision for ropeway rope replacement, there is a balance of Rs. 12,71,800. The ordinary dividend has been increased from 3¼ percent to 3¾ percent. Notable allocations include: tax contingency reserve Rs. 45,200, debenture redemption reserve Rs. 25,000, development rebate reserve Rs. 18,000 and aerial rope provision Rs. 70,000. The carry-forward is Rs. 92,891. The directors say that there is still no direct reply from the Government in connection with the expansion programme submitted by the company. In the case of the coking coal collieries, production is still pegged and "it must be emphasised that if and when this restriction is removed, some time must elapse before full advantage can be taken of the changed target."

The Story of Oil—3

A miracle of nature

Crude oil, or petroleum as it is often called, occurs in many parts of the world—chiefly in regions where sedimentary rocks once formed the bottoms of ancient seas.

No one is sure how oil originated. The most widely accepted theory is that it resulted from the decay and alteration of the remains of prehistoric animals and plants. This organic matter was washed from the land into the vast jungle of marine life under the seas. The deposits, mixed with mud and sand, formed layer upon layer on the bottom. As these became buried, Nature's mysterious chemistry got to work. It slowly transformed the organic matter into the compounds of hydrogen and carbon which we now know as oil, and at the same time the fine sediments which covered it were compressed into rock strata. The newly-formed oil oozed into the nearest layers of porous rocks, which held it as if in a sponge, and here it remained.

Throughout the millions of years that oil was being formed, many changes were taking place in the earth's crust. It rose and fell, was crushed and expanded. Lands were drowned, sea-beds became dry land. In some places cracks developed and the land slipped, forming 'faults'.

During these violent changes, some of the imprisoned oil escaped and was lost. In other places it was so near the surface that it seeped through and was discovered and used by man from the earliest times. But the bulk has remained trapped in its porous rocks beneath the surface of the earth.

Assam Oil A full-scale petroleum industry

This is one of a series of informative advertisements about the petroleum industry.

B.O.C.

The BORREA COAL COMPANY has made a profit of Rs. 1.32 lakhs for the year ended last December, after providing Rs. 98,343 for taxation and Rs. 97,095 for depreciation. Bringing in Rs. 84,207, there is a balance of Rs. 2,15,953. A final ordinary dividend of 10 percent has been declared. Tax contingency reserve is allocated Rs. 15,400 and development rebate reserve Rs. 42,500, leaving a carry-forward of Rs. 19,553. Raisings declined from 153,168 tons to 146,056 tons and despatches from 155,347 tons to 144,202 tons. The directors state that the colliery is capable of a higher output, but raisings are restricted by the pegging target imposed by the Government, so it has not been possible to develop the potentialities of the colliery to the extent desirable. Efforts to open the new area in Aralgoria have advanced according to schedule, and provided the Government relaxes the figure for maximum raisings, there is every reason to expect improved results.

* * * *

The MUKAND IRON AND STEEL WORKS, LTD. has increased its profit from Rs. 10.54 lakhs to Rs. 16.72 lakhs for the year ended last March, after providing Rs. 6.75 lakhs (nil) for taxation and Rs. 4.25 lakhs (Rs. 5.55 lakhs) for depreciation. The ordinary dividend is Re. 1 a share, against nil. Rehabilitation and development reserve is allocated Rs. 14 lakhs (Rs. 5 lakhs), leaving a carry-forward of Rs. 36,358 (Rs. 31,287). The directors state that the company has entered into a technical aid agreement with the well-known British steel foundry concern of David Brown Industries Ltd., Penistone, Yorkshire. This agreement is for a period of eight years and the company will be entitled to get technical guidance from the British firm on problems relating to the steel foundry. Mukand Iron had applied to the Government of India under the Industries (Development and Regulation) Act, 1951, for permission to effect a substantial expansion in the rolling mills and the steel foundry. It is hoped that the necessary sanction will be granted by the Government in due course.

CALCUTTA STOCK EXCHANGE ASSOCIATION RECOGNISED

GOVERNMENT DECISION UNDER SECURITIES CONTRACTS ACT

THE Government of India has considered the applications for recognition made under Section 3 of the Securities Contracts (Regulation) Act, 1956, by the Bengal Share and Stock Exchange Association Ltd., Calcutta, and the Calcutta Stock Exchange Association Ltd., Calcutta. After careful consideration of these applications and hearing the representations by the stock exchanges, it has decided that only one stock exchange should be recognised in Calcutta and that such recognition should be granted to the Calcutta Stock Exchange Association Ltd., Calcutta, which is the older Association, on the following terms and conditions:

1. Firms are not admitted as, or continue as, members of the Association. To enable the partners of the existing member firms to become members of the Association in their own right, the share of Rs. 1,000 issued by the Association should be converted into four shares of Rs. 250 each and made available to them.

2. A membership deposit of Rs. 20,000 is taken from every member.

3. The Board of Directors will consist of 18 directors, of whom 12 shall be elected on a general election basis, three directors co-opted by the Government body with the prior approval of the Government of India to safeguard minority interests and three directors nominated by the Government.

4. (i) The members of the Bengal Share and Stock Exchange Association Ltd. will be entitled to apply for membership of the recognised Calcutta Stock Exchange Association provided they fulfil or comply with the following conditions:

(a) They have been active members of the Association for 12 months immediately preceding 6th September, 1957. "Active members" for this purpose means members who have themselves transacted business regularly on the floor either on their own account or on account of their clients.

(b) They are eligible to become members under Rule 8(1) of the Securities Contracts (Regulation) Rules, 1957.

(c) They purchase one new share of the Calcutta Stock Exchange Association Ltd.

(d) They pay a membership deposit of Rs. 20,000 with the application.

(ii) If an active member of the Bengal Share and Stock Exchange Association Ltd., Calcutta, who complies with or fulfils the above conditions, is not admitted to the membership of the recognised stock exchange, he will have a right of preferring an appeal to the Central Government within a period of one month from the date of refusal of his application and the decision of the Central Government on such an appeal shall be final and binding.

Certificate of Recognition

The certificate of recognition to be issued to the Calcutta Stock Exchange Association Ltd. will be effective from 10th October, 1957, and will cover the area included in the Calcutta and Howrah municipal limits. The certificate will be valid for a period of five years. If, however, the above conditions are not complied with within a period of one year from the date of recognition, the recognition is liable to be withdrawn.

Bombay Market

SHARES CLOSE EASIER AFTER STEADY START

DULLNESS IN CLOTH TRADE WORRIES OPERATORS

Wednesday Afternoon.

THE Bombay stock market was steady during the early part of the past week. Share prices improved on short-covering, coupled with support, especially from the Life Insurance Corporation. Sentiment, however, weakened towards the close and operators were anxious to lighten their commitments. Slow trading in the piecegoods market contributed to the weakness.

Tata Steel improved to Rs. 163.50 on the increased output figures for September. The report that the company has been able to obtain adequate foreign loans for financing its expansion schemes helped sentiment. Towards the close, however, a reaction set in on long liquidation and the price closed at Rs. 162.50. Indian Iron declined to Rs. 17.68 in sympathy. Alcock Ashdown were available at Rs. 230 and Premier Construction were sold at Rs. 148.50. Routine business was done in Tata Locomotive around Rs. 133. There was little interest in automobile shares and Premier Automobile came to hand at Rs. 88. Hindustan Motors were freely sold down to Rs. 6.20.

Cotton mill shares showed losses all-round and Century in particular declined to Rs. 384 on heavy selling pressure. Bombay Dyeing were lowered to Rs. 49.90 and Simplex were available at Rs. 156. Kohinoor were taken at Rs. 253 and Svadeshi realised Rs. 168. India United Ordinary were transacted at the lower price of Rs. 10.20.

Miscellaneous shares showed a mixed trend. Cement issues met with selective support, and Associated Cement were done at Rs. 152.50. Digvijay Cement were transacted at Rs. 130.50. Sugar shares were neglected, and Belapur lost at Rs. 237. Phalton declined to Rs. 136. Steamship company shares lost on balance and Scindia Steam fell to Rs. 18.68 on selling pressure. Great Eastern Shipping were taken at Rs. 22.12. Mining shares showed little variation, and Shivrajpur Syndicate were absorbed at Rs. 80.50. Bombay-Burmah declined to Rs 526 and Tata Chemicals lost at Rs. 15.88 as the ordinary dividend fell below market expectations. National Rayon declined to Rs. 211.

Banking shares were steady, although turnover was very limited. Central Bank came to hand at Rs. 50.50 and United Commercial Bank realised Rs. 56.10. Insurance shares were freely offered and buyers showed little interest. New India Assurance fell to Rs. 40.50.

Electricity supply shares were steady and price changes were narrow. Ahmedabad Electric were transacted at Rs. 94.50 and Tata Hydro were quoted at Rs. 113.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations Highest for the week Lowest for the week Closing Quotations Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paise].

Mountains on the move

The face of India is undergoing a great change—huge dams and hydro-electric projects are under way—new townships, new industries, new roads are coming into being. And to accomplish this quickly under the Five Year Plan, mountains virtually have to be moved, requiring the use of modern earthmoving equipment. This equipment uses rugged tyres, standing as high as a man. In the past, these cost valuable foreign exchange, but now the Firestone factory in Bombay is producing earthmover tyres, to meet India's requirements for the achievement of the Plan.

STOCK MARKETS UNCERTAIN

GILT-EDGED RISE : BIG FALL IN OIL SHARES

London, 16th October.

ALTHOUGH it is nearly a month since Bank rate was increased and the other measures to fight inflation were announced, the stock markets have failed to establish any solid basis, and conditions generally remain sensitive and uncertain. Further substantial declines were recorded in most sections during the past week. Somewhat steadier conditions appeared to be developing, but there was little or no confidence in the market as a whole. Gilt-edged securities were an exception to the general trend, and improved on small investment buying stimulated by the strength of sterling in the foreign exchange market, and by the announcement that there is to be no conversion offer to the holders of £503 million Funding 2½ percent stock, which matures in November. Apart from the effects of the Bank rate increase, the major influence in the stock markets was the persistent weakness of Wall Street, and the growing fears of a recession in the United States. In addition, industry's—particularly the oil industry's—need for new capital was an adverse influence. Dollar stocks recorded substantial losses and the dollar premium declined. German and Greek bonds were easier in the foreign market, but other foreign issues and rails recorded very little change. Steadier conditions developed in the industrial market from time to time, but these were followed by renewed bouts of weakness, and substantial losses were recorded. Oil shares suffered more severely than any other section, under the influence of Wall Street, the surplus of oil in the United States, new capital requirements (particularly those being planned by British Petroleum and Shell Transport) and nervousness about the Middle East political situation. South African gold shares tended lower due to lack of interest and base metals were depressed by falling commodity prices. Rubber shares attracted selective demand, and reccrded numerous small gains helped by some good dividend reports. Tea shares were dull.

The Money Market

It seems that the money market has moved out of its long period of difficult credit conditions to one of greater comfort. Prior to the change in Bank rate, there was an acute shortage of credit due to the outflow of foreign money as the result of the speculative pressure on sterling. But now the increase in Bank rate and the restrictive measures on sterling speculation are having their effect, and have reversed the movement of foreign money; once again exchange operations are favouring the United Kingdom, and sterling has recovered strongly. As a result, the supply of credit to the money market was fairly good during the past week, and borrowers were readily accommodated with loans ranging from 5 percent to 5¾ percent, with higher rates paid only on rare occasions. The improvement in the credit situation was such that the authorities did not have to provide any assistance. In the bill market, the rate for December and "hots" eased from 6⅛ percent to 6⅜ percent and 6¼ percent, respectively. However, at the weekly tender, the money market maintained the rate on Treasury bills around 6⅜ percent.

Stock Market Prospects

The *Investor's Chronicle* market newsletter writes: "London gilt-edged securities are stable with some favourable signs. Technical considerations in London and New York hold the key to the immediate trend of industrials. After a good rally gold shares had a minor reaction but the technical position was favourable. Wall Street dipped to a new 1957 low, which continues the bear market started in August last year. The Dow Jones industrial average could find a resistance level at the low of 439 in October 1955 but rails and bonds were then much higher, signifying a further sharp deflation of equity values. If the dreaded London fortnightly account passes without trouble and forced selling dries up, a more impressive technical recovery could follow as there is believed to be a substantial bear position. But Wall Street's weakness and the pressure of new issues suggest extreme caution. The only really encouraging sign, the strength of sterling, has so far only influenced gilt-edged securities but could bring a steadier tone elsewhere."

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 9th October shows that gold stocks rose by $10 million to $22,655 million. Foreign deposits fell by $30 million to $337 million, while foreign investments increased by $25 million to $3,454 million. The Federal Reserve's holdings of U. S. Government securities were unchanged. Total discounts and advances rose by $10 million to $684 million, while the aggregate excess reserves of member banks increased by $23 million to $144 million. The daily average excess reserves of member banks rose by $196 million to $589 million, while their daily average borrowings were $68 million higher at $1,003 million. Business loans of New York city banks fell by $125 million to $11,791 million, compared with a decline of $43 million to $10,865 million in the corresponding week a year ago.

Slump in Quicksilver

There was another substantial fall in the London ex-warehouse price of quicksilver on Wednesday last week since prices declined by £5 to £75 a flask. Earlier in the week, the price was lowered to £80, while in June the metal stood at £90. The continued availability of supplies of Mexican and Turkish quicksilver, notably Mexican, appear to be the most important factor explaining the present slump in prices. Moreover, in the face of falling prices buyers seem to be more than ever determined to reduce their commitments to the minimum. Spanish and Italian producers, however, are still maintaining their origin prices at around £84 to £85 a flask, f.o.b., trade quarters say. The present London price is well below the U.S. domestic price, even allowing for the substantial duty on foreign supplies entering that country. Of interest is the fact that the London price is hovering between the levels at which the U.S. Government is pledged to buy metal of domestic and Mexican origin. The U.S. metal is reported to be underpinned at a price equivalent to about £80 and Mexican at about £73.

Rubber Prices Decline

The scarcity of eastern offerings because of a holiday in Singapore early last week made for steadiness in rubber prices but a small advance on an Argentine order was not held. For the most part, there was little change in prices during the period. Occasional U.K. factory orders and further small Russian purchases helped maintain a steady undertone. Small declines in prices were soon regained as sellers were not inclined to press for business. The week's dealings in settlement house contracts were mostly confined to switching operations. Towards the close, the market was very quiet and prices finally showed a decline of ¼d a lb on balance for most positions. Traders reported a dull and easier market for sole crepe. Although arrivals were not unduly large, they were in excess of offtake. Sellers reduced their prices to the basis of 35½d a lb for ½ inch smooth No. 1 on the spot.

French Sugar Plan

The French Government on Monday issued details of its long-term plan aimed at producing 2,014,000 tons of refined sugar annually by 1961-62, thus fully meeting consumption in the franc area. The production target, however, might be revised each year to a figure of not less than 1,850,000 tons, to take into account consumption developments and other marketing conditions. The production would be allotted as follows: metropolitan France 1.55 million tons, Reunion Island 190,000 tons, Martinique 92,000 tons, Guadeloupe 120,000 tons and Madagascar 62,000 tons. France, which had a large surplus some years ago, has had to import sugar during the current season, and faces the prospect of inadequate domestic supplies in the future as the low sugar beet price is considered unattractive by growers.

New Delhi

MACHINERY FOR NANGAL FERTILISER PLANT ON DEFERRED PAYMENT TERMS

GOVERNMENT ATTITUDE TOWARDS BANK STRIKE

(FROM OUR NEW DELHI CORRESPONDENT)

THE Nangal Fertilisers and Chemicals (Private) Limited has, with the approval of the Government of India, last week placed an order for the supply, erection and commissioning of fertiliser plant for the Nangal project with a French firm, Messrs Saint Gobain of Paris, on a "turnkey" basis. The terms of the contract stipulate that half the plant should be erected and put into commission by 31st December, 1959, and the remaining half by 31st March, 1960. The assured production capacity of the plant will be 395,136 tons of nitro-limestone fertiliser a year. The group of plant will consist of an air liquefaction unit, an ammonia unit, a nitric acid unit and a nitro-limestone unit, with the necessary bagging and storage facilities.

The deferred payment terms obtained are quite favourable. Ten percent of the value of the contract is to be paid immediately; the rest will be spread over seven instalments beginning from July 1960, namely, three months after the plant goes into full production. These instalments will be completed by February 1963. The deferred payments arrangement provides for interest at the rate of 6½ percent. The total value of the contract is about Rs. 7.5 crores, of which about Rs. 60 lakhs worth will be executed by the French firm in India. The Nangal Fertiliser factory will produce nitro-limestone fertiliser with an annual capacity of about 395,000 tons. It will also produce 12 to 15 tons of heavy water.

The contract for the plant is the second big contract placed so far. The first, for electrolysers, valued at about Rs. 3.5 crores, was placed in March with the Italian firm of Messrs Oronzio De Nora of Milan. That also provided for deferred payments, and 10 percent of the total value was paid to the firm on the award of the contract. The balance of 90 percent will be paid in five instalments from July 1960 to September 1962. Tenders for the supply of electrical equipment for the factory are under scrutiny, while those for the heavy water plant will now be invited.

Bank Strikes

The Government is giving merely "negative" assistance to the banks in their fight against the creeping paralysis resulting from pen-down strikes and go-slow tactics. Enquiries show that it will not interfere with those banks which have taken action against indisciplined employees. The Government, it is pointed out, having declared the Calcutta bank strike illegal, can have no sympathy with employees staging demonstrations, sympathetic strikes or adopting go-slow tactics, in support of the Calcutta strike. Banks are at liberty to take such disciplinary action against offending employees as they think fit. This is the only course that the Government can adopt in a dispute in the private sector, it is explained.

The issue is not as simple as it is made out to be. The last all-India strike of bank employees illustrates the point. This strike began because the Government, having modified an award in favour of employers, refused to modify it in favour of employees. The strike was staged in spite of an appeal from the Prime Minister. The Government did not allow the dispute to be settled by remaining neutral, as it is doing at present, but stepped in by persuading the employers to give in. In other words, it acted to modify the award in favour of the employees. It may be added that it was the employees who had refused to accept the arbitrator's award.

Promotion of Exports

Participating last week in a discussion on export promotion, the Joint Secretary to the Ministry of Commerce, Mr. K. B. Lal, said that there could not be much improvement in exports unless Indian business men showed enterprise and aggressive salesmanship. He presumably implied that they lack both these qualities. India's participation in global trade fairs, the sending of trade missions and organising of showrooms abroad have had hardly any effect on India's export trade. Commodities such as tea, cloth and jute textiles face a very active competitive market, so aggressive salesmanship is needed. There are, however, some commodities which are in demand abroad and can increase India's export earnings without much effort by the exporter. They include oils and oilcakes. Meanwhile, in order to assist traders and stimulate exports, the Government has introduced a scheme for registered exporters, who are to be provided with every possible facility to develop their trade. With the same object, the State Trading Corporation has introduced a scheme for "associate business men."

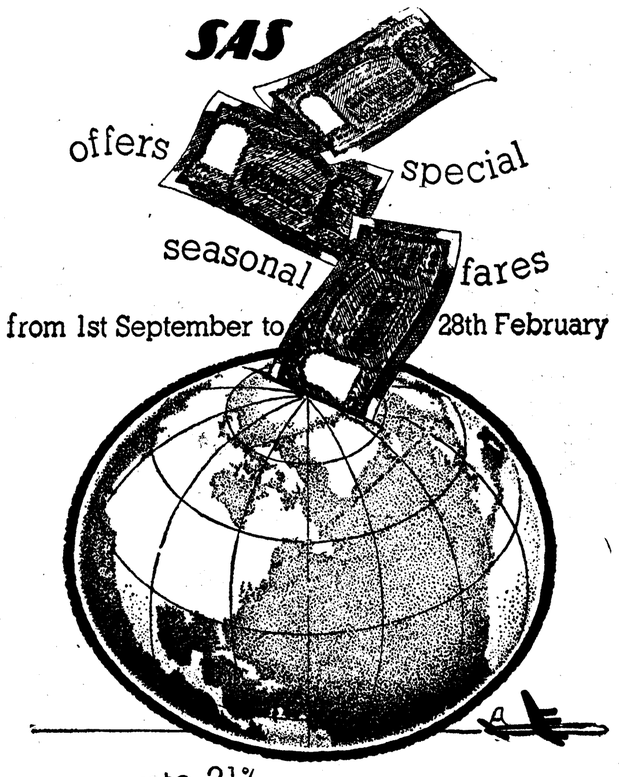
Fertiliser Imports

The Government has evolved a plan to link the import of fertilisers with the export of low and medium-grade manganese ore. It is intended primarily to assist the Ministry of Agriculture in its "grow more food campaign," of which fertilisers have now become an important element. As has already been reported, an adequate allocation of foreign exchange could not be made to import the fertiliser requirements, so the plan to link their import with the export of manganese has been devised. Some U.S. and European firms, it is gathered, have shown interest in the plan.

Participation in Trade Fair

Due to foreign exchange difficulties, the Government of India has decided not to participate in the Pacific World Trade Fair, held annually in Seattle, Washington State. India had 17 stalls at this Fair last year. For similar reasons, the Government proposes to approach the U.S. Government for financing its trade promotion organisations in that country, as recommended by the U.S. trade mission which visited India some months ago.

Imports of Japanese Textile Machinery



An agreement, it is understood, has been reached between the Government of India and a delegation of Japanese textile machinery manufacturers, now in Delhi, over the terms and conditions of deferred payment for textile machinery imports by India. The delegation, it is understood, has agreed to supply textile machinery on a five-year credit from the date of shipment. Under the proposed terms, which will be written into an agreement. Indian importers will pay 10 percent of the cost at the time of finalising a contract and 10 percent at the time of shipment. The remaining 80 percent will be payable in five years. The rate of interest will be 6 percent. India wants to buy textile machinery worth Rs. 5.25 crores.

Conference of Labour Ministers

The Labour Ministers' Conference was held on 15th and 16th October, and the meeting of the Standing Labour Committee is to be held on 17th and 18th October. It is a matter for some concern that the mounting labour unrest, which in some quarters is described as the Communist challenge to orderly development, has found no place on the two agendas. The question whether a part of the bonus paid to workers should be credited to their provident fund account or given in the form of National Savings Certificates is to be discussed by the Standing Labour Committee. It will consider a convention to fix a limit up to which bonus may be paid in cash, the balance constituting the savings of workers. The Planning Commission has recommended that in order to prevent the diversion of resources into consumption in a developing economy, payment of bonus in cash should be restricted and workers encouraged to contribute a portion of the bonus to savings schemes.

The Standing Labour Committee is considering whether it is necessary to appoint a high-power commission to enquire into safety in coal mines. Meanwhile, the Government is revising the Indian Coal Mines Regulations and the Mines Act, 1952, so as to improve standards of safety, ensure better compliance with the provisions of the Act and facilitate frequent and thorough inspection of the mines.

A proposal to undertake legislation for establishing a manganese mines labour welfare fund for the benefit of workers is before the Committee. It will also consider the "Code of Discipline in Industry" approved by the Tripartite Sub-Committee set up by the Indian Labour Conference, and suggest measures for the effective implementa-

tion of the Code. The progress made in the programme of workers' education will also be reviewed.

The Labour Ministers' Conference discussed a proposal for dissociating bonus from profits and relating it to performance. While considering the question of bonus in public undertakings, the last Labour Ministers' Conference suggested that "the co-operation of national labour organisations should be sought in dissociating bonus from profits and relating it to performance." The Central Ministry of Labour has been giving close thought to this question and it feels that the proposal itself should be put in more concrete shape before it is presented to national labour organisations. While linking bonus to production will result in prompt payment to workers without the time-lag of two or three years as at present, it is doubtful whether it will eliminate all arguments about profits and workers' claims for a share in them. If it is desired to dissociate bonus from profits and link it to production, the Ministry has suggested that the change should be gradual.

Payment By Results

An extension of the principle of payments according to production would mean that, wherever possible, wages should be related to output. The second five year plan has recommended the extended use of payment by results as a step towards raising productivity. The Study Group on Wages has also endorsed this view. Production bonus schemes have gained popularity here only recently; their coverage is as yet insignificant. The current controversies about the rise in productivity in relation to wages will be set at rest with a wider adoption of the system of payment by results. Experience with incentive schemes shows that they generally result in increased productivity and increased earnings.

It is true that the advantages of such a system are greatest where work processes are standardised and there is not a long chain of processes in which production at an intermediate stage holds up work at later stages. But, even in the latter case, it is possible to introduce group incentive plans on a plant-wide scale, whereby a datum line is fixed for the total output and bonuses are paid for production over and above this target. The choice whether an incentive plan should be geared to individual output or group output or the production in the plant as a whole, will depend on the particular circumstance. The Labour Ministry has written to employing ministries asking them to investigate the possibilities of securing bipartite agreements at the unit level in concerns under their control to secure a relationship between production and payment.

There are certain prerequisites which have to be satisfied before any such scheme can succeed. Workers' approval or co-operation has to be secured. This might be in the form of an explicit agreement (as is the case with the Indian Aluminium Company) or by informal joint consultations (as in the Chittaranjan Locomotive Works). Most schemes have been introduced in the country on this pattern; but, there are few cases where they have been imposed by tribunal decisions or without the workers' approval or co-operation. In these cases, however, the experience does not appear to have been happy. The second requirement for the success of an incentive scheme is scientific job analysis and/or time study before introducing it. Some basis for payment has to be evolved by mutual agreement before the scheme is introduced. In some cases, past experience of output and performance might serve as a sufficient basis. Normally, separate schemes are chalked out for each production process or operation. A performance or production norm is then fixed and workers are paid bonus for output or performance above this norm. In all cases, however, a basic time rate is guaranteed.

The Conference also discussed proposals to amend the Industrial Disputes (Central) Rules to provide "for procedure for the publication of reports and awards and to provide for speedy disposal of industrial disputes at the adjudication stage." Other items on its agenda were (1) greater liaison between State and Central labour relations machinery in the settlement of labour disputes, (2) effective implementation of labour awards and negotiation machinery for each industry whose findings should, by convention, be accepted.

Conveyor Belt for Iron Ore Mining

The Government has accepted the tender of the U.S. firm, Messrs Hewitt Robins, to set up a conveyor belt and jaw crusher for exploiting the iron ore deposits in Orissa for the Rourkela plant. The estimated cost is Rs. 3 crores, of which Rs. 2.4 crores will be in foreign exchange. The conveyor belt system is to be used because of the hilly nature of the land where iron ore is found. Hewitt Robins are specialists in erecting conveyor belts. They gave a combined tender, inclusive of the jaw crusher, for which they will be finding a sub-contractor.

Deadlock in Negotiations with Assam Oil

There has been a fresh deadlock in the negotiations between the Government and the Assam Oil Company over the setting up of an organisation for the production, refining and distribution of the recently discovered oil in Assam. It relates to the financing of the undertaking for the production and transport of crude oil. The Assam Oil Company and the Government were committed to the formation of a rupee company, to which alone a mining lease for the production of oil was to be granted. The Government was to have a 33½ percent share in the equity capital of the proposed company. Subsequently, it was agreed that the rupee company should also make arrangements for the transport of crude oil to the refinery. The draft agreement, however, did not commit either the Government or the Assam Oil Company to the responsibility for finding the money for the transport undertaking. The Assam Oil Company, according to reports, has now informed the Government of its inability to float a loan on the London money market to finance the transport undertaking or a pipeline; hence the deadlock. The location of the refinery is another factor. The Assam Oil Company prefers Calcutta, while the Government has selected Barauni in Bihar, about 600 miles from the oilfields and 250 miles from Calcutta. This has led to an agitation in Assam, which State wants the refinery to be located within its borders. The present position, therefore, is that while the Government wishes to resume negotiations forthwith, the Assam Oil Company will resume them if Calcutta is chosen as the venue of the proposed refinery. The Company holds that it has no factual data on the basis of which it can resume negotiations, if the location of the refinery is still under dispute. It wants, therefore, to study the economics of the new location first. It may be added that the Government has already decided to have the refinery in the public sector. The estimated cost of the pipeline is placed at Rs. 40 to Rs. 50 crores, and that of the refinery at Rs. 25 crores.

THE RECOVERY IN STERLING

GROWING CONFIDENCE IN NEW ECONOMIC POLICY

(FROM OUR LONDON CORRESPONDENT)

THE pound has returned to parity with the dollar, and the gold reserve has done well over the last few days as foreign traders, accepting the fact that their earlier hopes about devaluation will not be realised, have stepped in to cover their requirements of sterling. The restoration of confidence is a slower process than the loss of it, but no doubt that also will follow when the Government's new "tough" economic policy and particularly its determination to make it work are sufficiently widely appreciated. The initial shots in Mr. Thorneycroft's locker—the 7 percent Bank rate, the capital outlay cuts and the new bank credit freeze—reinforced by his explanatory statements during the discussions in Washington and later in Mount Tremblant have undoubtedly produced an entirely different atmosphere in the international sphere. It will be remembered that in introducing these measures the Chancellor of the Exchequer emphasised that they were not merely emergency measures to counter the run on sterling but part of a major change in long-term economic policy. The emergency has been met. It remains to be seen what is to follow now to give full effect to the change on the domestic front and just how other troubles are to be avoided in the process.

In one aspect, the Chancellor has been fortunate. The economic outlook has been very much in the news and in the public mind as a result of the airing which many problems have recently received at the Labour Party conference in Brighton, followed by the Conservative Party conference there last week. He himself has had no lack of opportunity for presenting further expositions of the implications of the Government's policy.

Fighting Inflation

In this matter, however, we have grown accustomed to expecting rather more than we do in fact receive. That was true, for instance, of Mr. Thorneycroft's recent speech at the annual Mansion House dinner to the merchants and bankers of the City of London. He reaffirmed that it was the Government's intention to halt the increase in the supply of money by making it scarcer and more expensive to get hold of by means of the three measures already announced. He tried to convince them that this was a basic change of policy—"a turning point in our fortunes"—and that any further attempt to take out of the system in money income more than was put in by new effort and production would lead to a decline in employment and not to a decline in the value of the pound. While appreciating the recovery in sterling which the higher Bank rate had produced, the Chancellor stated that this was going to be considered only as the beginning of a long uphill struggle. He left his hearers in no doubt concerning his determination to carry disinflationary policies to their logical conclusion.

Mr. Cobbold, Governor of the Bank of England, who also spoke on the occasion, was if anything rather more forthcoming than Mr. Thorneycroft. To complete the picture, he pointed out that in addition to the measures already taken it would be necessary for the Government to ensure that current public expenditure is also kept under control and that revenue and sales to the public of Government securities cover all Government outgoings. He urged the larger industrial companies to "rephase and extend their investment plans over a longer period," because for some time to come borrowing would be difficult and expensive. Like the Chancellor, Mr. Cobbold tried to show that new policy was not one of stagnation but simply of keeping within the limits of our resources and available manpower. In the end less of a scramble for the available resources and less pressure for increased costs and prices will mean more and not less production.

Reduction in Government Expenditure

Mr. Thorneycroft's second opportunity to dot the i's and cross the t's concerning his economic policy came last Thursday, when he replied to the debate on financial policy at the Party conference and endeavoured to deal effectively with no less than 70 resolutions, many of them highly critical, on the subject. He warned the 4,000 odd representatives that the fight against inflation will be tough and long, and for a start he requested that the Government should not be asked to accept definite commitments even for roads, hospitals and schools irrespective of cost. He accepted a call for a reduction in Government expenditure, including the nationalised industries, and a campaign for higher productivity. Apart from the fact that he was addressing a different type of audience and adjusted his remarks accordingly, he said little more than he did at the Mansion House. In view of the earlier warning against taking out more than was put in, however, it was significant that Mr. Thorneycroft emphasised that the Government was not declaring war on the trade unions.

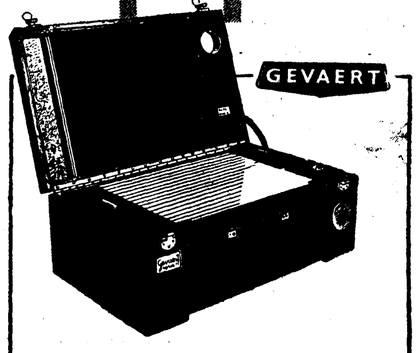
This aspect of the economic situation will figure again later when Mr. Macleod, Minister of Labour, will be called upon to reply to the debate on industrial relations. There has been an increasing tendency of late to urge the Government to "get to grips" with the question of labour relations, and not least of all the wage-price spiral. The Transport Commission is due to give a reply later this month to the claims of the railways unions for wage increases and for a 40-hour week against the present 44, and the journal of the National Union of Manufacturers has suggested that the time has come to say "No" instead of creating a precedent for another general wave of wage increases. The Government, however, is still believed to be hoping that the unions will co-operate in restricting wage claims to the extent justified by increases in production and is studiously avoiding any impression that it intends to "get tough." Whether the T.U.C. General Council adopts a similar view of the Government's policy will depend on the findings of the next meeting of its Economic Committee early in November (under its new chairman, Mr. A. Birch) which will consider this particular question.

September Gold Loss

It was only towards the end of September that the increased Bank rate became really effective, so it was hardly surprising that the fall in that month in the gold and dollar reserves should have turned out to be $292 million, which was perhaps slightly higher than had been anticipated. It compared with losses of $225 million in August and $14 million in July, which was the first fall in the reserves since January. Of the September figure no less than $134 million represented the gold payment due on the August deficit with the European Payments Union (£63¼ million), and as the September deficit in the same quarter is not much less at £62 million, and indeed would have been about £30 million higher but for the West German debt repayment, it is obvious that the prospects for the reserves in October are not much brighter though the drain may not be quite as high in view of the fact that the raising of Bank rate reversed the earlier trend quite dramatically. On the other hand, the seasonal outflow of dollars to finance raw material purchases will continue well into this month though at a declining level. Whether the City has grown immune to shocks, or the tougher policy of the Government has produced some reaction, it is significant that the dramatic decline in the reserves had little effect on markets. Maybe there was some reassurance in that the Export-Import Bank credit of $500 million, which the Chancellor said in Washington would be drawn upon, was still intact at the end of the month. Talks in this connection are understood to be still going on.

Retail Sales in August

Whether spending in the private sector can be controlled is a moot point. Retail trade in household goods continued buoyant in August, according to the latest available returns. The seasonal decline was small and the value of sales exceeded those of August last year by 10 percent. Retailers in this sector have consistently reported substantial increases since the beginning of the year. For the first and second quarters there were rises of 13 percent and 9 percent, respectively. In July sales were up by 9 percent on last year. Household goods prices have been running slightly below last year's level since April. Taking trade as a whole, in terms of money spent, there was little change in the underlying trend in August. Sales showed the usual seasonal decline but were about 4 percent higher in value than in August 1956. This compares with an increase of 5 percent averaged over recent months. In terms of volume, however, the check to the rising trend which appeared in July continued in August. Rises in prices are estimated to have accounted for about three-quarters of the value increase in trade.



Machine Tool Orders

Orders for machine tools placed by British industry during July were worth £5.5 million, which was well above the monthly average for the year of £4.9 million. July was a heavy month last year also, and it may be that firms were getting in their orders before the August holidays. Export orders were worth £1.7 million, which was a little below the average. Deliveries to British industry in July were worth £5.9 million while those to export customers were £2.1 million. This left the order-book for deliveries at £66.8 million, which is the lowest for several years (the peak was £82.4 million in June 1956), while at £22.3 million the export order-book remains at around the level at which it has held for the last two years.

Interpreting Economic Events

It is a standing complaint whenever one refers to the lack of understanding and appreciation of economic events that this stems from the shortage of up-to-date statistics upon which these must depend. In recent years a great deal has been done to meet this particular criticism, but the understanding shows no improvement, and the only conclusion that can be drawn is that inadequate use is made of the figures which are available. The National Institute of Economic and Social Research, it is good to learn, is to undertake a systematic interpretation of current economic events. Explaining what it is hoped to do, the Director of the Institute, Mr. Saunders, said that a team of economists and statisticians is being gathered and the members will seek not only to describe but also to explain events. They will offer assistance to business men wanting to make a forecast

POSTPONEMENT OF U.P. POWER PROJECTS FEARED

CHANGES IN PLAN PRIORITIES

(FROM OUR LUCKNOW CORRESPONDENT)

THERE is considerable apprehension in Government circles here that the development of power projects in the State will be retarded because of the foreign exchange scarcity. The Chief Minister, Dr. Sampurnanand, it is reported, told a recent meeting of the presidents and secretaries of district and city Congress committees that the Centre has included not only the Rihand Dam, but four other major power projects also, namely, the Ramganga, the Harduaganj, the Yamuna and the Matatila, in the "D" category. This category includes all the "comparatively unimportant" projects, work on which has not been started so far. It is the contention of the State Government that when Rs. 8 crores has already been spent on the Rihand Dam, it cannot be assigned to this category. The Rihand Dam is one of the most important power projects in the State and is designed to generate 250,000 kW of electric power. It will supply electricity to the districts of Mirzapur, Banaras, Jaunpur, Faizabad, Gonda, Bahraich, Basti, Deoria, Fatehpur, Sultanpur, Pratapgarh, Rae Bareili, Azamgarh, Ballia, Ghazipur and Gorakhpur. If this project is held up for any reason, it will have wide repercussions in the eastern districts.

The Yamuna hydel project, which has also been relegated to the same category, is designed to generate 83,000 kW of electricity from the Tons and the Yamuna in two stages, and it will feed the western parts of the State. Its estimated cost is Rs. 14.41 crores. The power generated at the Matatila Dam will feed the districts of Jhansi, Jalaun, Hamirpur and Banda. The installed capacity of the Ramganga power-house will be 75,000 kW, and its estimated cost is Rs. 10.88 crores. The cost of the Harduaganj scheme is estimated at Rs. 3 crores. Although the Chief Minister has subsequently sought to allay public anxiety by a statement that the proper time to judge whether the schemes will be postponed will be after Mr. T. T. Krishnamachari's return, there has been no appreciable improvement in the pessimistic mood. Protests are appearing in the Press and urgent representations have been made to the Centre that work on the Rihand Dam at least should be allowed to continue.

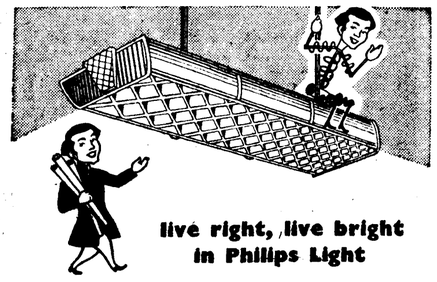
High Cost of Electricity

The annual report of the Kanpur Electric Supply Administration which was nationalised in 1947 shows that it produced 237.2 million units of electricity and realised a revenue of Rs. 1.74 crores in 1956-57. According to the report, a number of industrial projects, both in the public and private sectors, have been considered, and when these mature, the demand on the system is expected to rise considerably; Necessary extensions are already in hand for meeting this prospective increase in demand. A plant replacement project comprising a new 15,000 kW turbo-alternator and two high-pressure steam boilers is making progress, according to schedule. The report also makes prominent mention of a project for expanding the generating, transmitting and distributing capacity of the undertaking by 15,000 kW at a cost of Rs. 1.7 crores. According to the report, the works cost of production and distribution of electricity, exclusive of capital charges, has gone down from 0.817 anna a unit in 1948-49 to 0.767 anna a unit in 1956-57. The rates charged by the K.E.S.A. to industrial consumers have been the subject of strong comments by the Upper India Chamber of Commerce, a deputation from which met the Chief Minister. The generating cost of electricity from K.E.S.A. last year was approximately Rs. 90 lakhs, and the profit amounted to Rs. 76 lakhs. The Administration has earmarked Rs. 25 lakhs for depreciation, Rs. 25 lakhs for re-equipment and Rs. 25 lakhs as "reasonable profit." The electricity duty, which was originally 25 percent but has since been reduced to 20 percent, amounted to another Rs. 35 lakhs. Thus, according to the deputation, industry was paying about 120 percent above the actual generating cost. It was further pointed out that the proportion of electricity charges to the total manufacturing costs of the textile mills in U.P. works out to 2.81 percent, compared with 1.65 percent in Bombay.

Sales Tax Rates

The deputation which was led by the president of the Chamber, Mr. J. K. Srivastava, also made a plea for bringing the sales tax in U.P. on par with the rates in Delhi. The tax in U.P. is 1 anna in the rupee compared with 3 pies in Bihar and 6 pies in Delhi, Rajasthan, Madhya Pradesh and the Punjab. Wages in Kanpur, the deputation said, are higher than anywhere else except Bombay, but Kanpur alone has the peculiar feature of "personal wages" which may range from Rs. 7 to Rs. 30. Although ex-mill prices have fallen by 12½ percent, the mills are unable to dispose of their accumulated stocks, which up to September 1957 amounted to over 60,000 bales of cloth, excluding 3,000 bales of yarn. While the value of the accumulated stocks is about Rs. 5 crores, the decline in prices has meant a loss of Rs. 1 crore. The Kanpur stocks are twice as much as the stocks carried by Bombay and Ahmedabad mills. The deputation said: "It is understood that the Bombay mills are contemplating the closure of one shift and have moved the Centre for short-term working to curtail production in order to meet the fall in demand. The position here being infinitely worse, mills may even be forced to close down altogether. It is a well-known fact that if the Bombay and Ahmedabad mills sneeze, the industry in U.P. catches pneumonia."

Bonus for Sugar Workers



The Labour Tripartite Conference for the sugar industry, which met in Lucknow recently, has agreed to refer the question of determining the basis and method of payment of bonus to workers in the future to the Central Wage Board for the sugar industry. So far as the payment of bonus for the year 1956-57 is concerned, the Conference decided to refer the question to an *ad hoc* committee. It will be presided over by the Labour Commissioner and will have four representatives each of sugar factory owners and workers. Employers and workers in the pan sugar factories of Uttar Pradesh have reached an agreement on leave with full wages for permanent and seasonal labour. The dispute relating to casual leave, sick leave and earned leave pending before the State Industrial Tribunal, Allahabad, has accordingly been withdrawn. The agreement provides that a permanent worker will be entitled to get six days' casual leave and 10 days' sick leave in a year, in addition to earned leave at the rate of one day for every 20 days' working admissible to him under the Factories Act. A seasonal worker will get casual leave at the rate of half a day for every month of the crushing season during which he is on the rolls of the factory. He will also be entitled to get sick leave at the above rate. The weekly rest days, festival holidays and leave with wages under the Factories Act will continue to be given to both permanent and seasonal workers as hitherto. The agreement was reached at a meeting of the seven-member committee constituted for the purpose by the State Government about a year ago.

Subsidy for Slum Clearance

The U.P. Government, it is understood, has again renewed its demand for doubling the size of the Central subsidy for slum clearance in Kanpur, Allahabad, Banaras, Agra and Lucknow. The cost of clearance was originally estimated at Rs. 8 crores; later, it was slashed to Rs. 4½ crores and, it is now feared, the amount may be further reduced to Rs. 2 crores. The Centre, according to the present formula, will bear three-quarters of the clearance cost, half of it through loans and a quarter through subsidy. And on this basis, the State has been offered Rs. 10 lakhs during the current financial year. It is the State Government's view that if the aid is predominantly in the form of loans which have to be repaid, it will not be possible to fix a sufficiently low rent for the quarters to be built for housing the displaced persons in the slums. During the last financial year, U.P. received housing aid from the Centre to the extent of Rs. 3 crores, but only half the amount could be utilised and the balance had to be returned. In the current financial year, the State has got from the Centre Rs. 1.49 crores, of which Rs. 1 crore is for industrial housing and Rs. 49 lakhs is for low-income group housing.

Economising on Chaprasis

The State Government's economy axe has fallen heavily on 10,000 *chaprasis* who have been served with notices that their services will be terminated with effect from 1st November. The estimated saving on this account is Rs. 40 lakhs annually. All these men, who were temporary hands, have been declared surplus due to a Government decree that a Secretariat or non-Secretariat official having more than two orderlies must dispense with the extras. The Chief Minister, however, has given an assurance that the Government will do its best to get these men absorbed in expanding departments. The Government's scheme to withdraw all staff cars, however, has not been progressing well. According to reports, barely 160 cars out of a total of 1,000 vehicles which should have ben surrendered to the Transport Department by 1st October have so far been surrendered. The Chief Secretary's directive about the withdrawal of staff cars, announced increased mileage rates for officers touring by road. The orders also provided for the hiring of taxis. Actually, the number of staff cars is 2,000, but certain exceptions have been made. Even so, it is suspected that departmental heads are making a last-minute effort to delay, if not defeat, the Government's decision, although in terms of the official Press Note, the decision had been taken "in the light of views expressed by all heads of departments and other senior officers of the Government and after due consideration of the matter in all its aspects." It is not, however, expected that these tactics will succeed for long because public agitation against the misuse of staff cars has been mounting. More than the economy involved, it has become for the public a political issue. Failure of the Government to enforce an order on its own officials would involve a loss of prestige.

NEED TO STIMULATE EXPORTS STRESSED

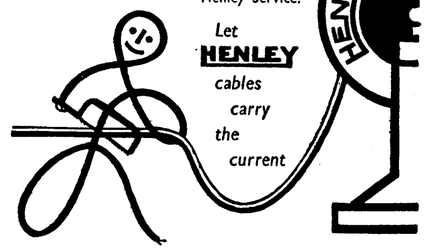
IMPLICATIONS OF LATEST IMPORT CUTS

(FROM OUR BOMBAY CORRESPONDENT)

THE chairman of the All-India Manufacturers Organisation, Mr. S. N. Haji in an address to its central committee, has charged that the Government of India has not given adequate attention to the problem of stimulating exports either during the first or the second plan period. Mr. Haji says that India hardly exports 5 to 6 percent of her gross annual product, against a figure of 20 to 30 percent achieved by some European countries. In support of his contention he has cited the examples of the United Kingdom, the Scandinavian countries, France, Belgium and Canada. The comparison would appear to be unfair because all the countries mentioned by Mr. Haji are highly industrialised while India has yet to develop her industries. Meanwhile, this country has to rely on her traditional exports which are confined to primary products such as tea and jute, industrial raw materials like manganese and iron ore, and some finished products like textiles. It is difficult to see how the exports of these commodities can be boosted to an extent which will appreciably help bridge the foreign exchange gap. The first plan was primarily designed to increase food production and was only in a secondary sense an experiment in industrial development. The aim of the second plan is to industrialise the economy. The manufacture of consumer goods must be preceded by the setting up of the means of production. It is only when the country is in a position to manufacture goods by modern methods that the question of an all-out export drive will arise. But the Planning Commission should have made a more generous provision for the consumer goods industries both from the point of view of earning foreign exchange and as an anti-inflationary measure.

Referring to the recent cuts in imports, Mr. Haji has expressed the hope that Indian manufacturers will seize the opportunity of developing their industries and of earning goodwill by charging reasonable prices for their products. While it is true that the indirect protection offered by a ban or a drastic cut in imports will normally stimulate the growth of domestic industries, it must not be forgotten that such development is only possible if manufacturers are in a position to expand facilities by the installation of new plant. Whether the foreign exchange position will permit the import of equipment for the secondary groups of industries is another matter. It is likely that the recent cuts in imports will lead to the use of productive capacity which has been lying idle but at the same time it should be remembered that import trade control and tariffs have been in operation for a number of years to protect local industry. It is doubtful, therefore, whether idle capacity does exist to any appreciable extent. As for Mr. Haji's exhortation to manufacturers to charge reasonable prices for their products, experience shows that the latter are less to blame than the distributive trade. It is this section that must shoulder the responsibility for raising prices.

Spurt in Cottons



The Jarilla cotton March contract shot up to Rs. 713 on renewed interest, but dropped to Rs. 708.25 on profit-taking at the higher levels. The main factor underlying this spurt is that it is feared that the cotton crop in Gujerat and Saurashtra will suffer damage because of the continued dry weather. Rain is also needed in northern and western India. It is now estimated that the total crop throughout the country will not exceed 4.9 million bales. The second factor is that mills are now using more of indigenous cottons. The monthly average has risen from 363,000 bales in 1955-56 to 388,000 bales in 1956-57. It is expected that this process will continue and the consumption of local growths will increase further in the coming months. The tone of the market is therefore likely to be firm for quite some time unless unforeseen circumstances arise. There was also some renewed interest in the spot market. Some export business has been done with Japan in Bengals, but further trade is being hampered largely because of the high unofficial premium being asked for the export quota. The United Kingdom has shown no interest because Pakistani exporters are offering similar cottons at cheaper prices while better qualities at lower prices are available from the United States.

Piecegoods Offtake Disappointing

Although the ruling price level was maintained in the cotton piecegoods market, the offtake was somewhat disappointing. There were some enquiries from south Indian centres, Delhi and Kanpur for coarse and medium counts. There was also some demand for superfine *dhoties* and *sarees* and for fine polins and shirtings. The September output of mills is estimated at 436 million yards of cloth and 153 million lbs of yarn. This brings the total production for the first nine months of this year to 4,025 million yards of textiles and 1,338 million lbs of yarn, compared with 3,954 million yards and 1,234 million lbs in the corresponding period of last year. There was hardly any activity in the export section of the trade. It is reported that Indonesia will cut her imports from Japan because of foreign exchange difficulties. There is, however, no indication as yet whether Indonesia will step up her purchases from India.

measuring up to industry's needs

The development of industry is of such consequence to the future welfare of the Indian people that the importance of a reliable electrical installation cannot be over-emphasised. Producing cables to measure upto the exact needs of Indian industry is a part of the Henley Service.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

SCEPTICAL REACTIONS TO BANK RATE INCREASE

(FROM A SPECIAL CORRESPONDENT)

INDUSTRIALISTS have shared the widely expressed view that the U.K. Government's raising of Bank rate to 7 percent is no more than "a theatrical gesture" intended to frighten speculators in sterling. One thing is certain, that the higher Bank rate will hit the small business man; but, as for the measure causing any great reform in the British economy, few have taken that claim seriously. By reason that the monetary manoeuvre has seemed but to add another unreality to an already artificial situation, industrialists have tended to be pessimistic concerning the outlook for industry as a whole. They have moved very cautiously, cutting down some of the expansion that they had planned for 1958, and showing no eagerness for entirely new commitments, unless on behalf of interests with a particularly strong backing. Under the circumstances, signs of a reaction in business have become manifest. At the time of writing, a new turn appears to have been given to industrial prospects by the Government's avowal, through the Minister of Labour, that the raising of Bank rate is only a preliminary to which overwhelming importance is not attached in official quarters.

A complete revision of the wage structure is now forecast, and an assurance is being given that the payment of higher wages will be closely related to the attainment of higher productivity by workers. That, as is well known, is the basic need, and if this could be brought about, then a truly vital change in British economy will have been initiated, and the confidence of industrialists largely restored. But it is difficult to suggest how this relationship can be established without severe industrial unrest. If the further wage claims now pending can be settled on the basis of this hitherto unaccepted principle, the question still remains what is to be done concerning the wage claims settled during the past few years, and in which millions of workers are involved. The awards made will probably have to stand intact, whatever is decreed as the underlying principle for negotiations from now onwards. So there the country must have the industrialist still hesitant, but with a rather more lively interest, and perhaps a slightly more hopeful one, in the Government's endeavours to strengthen the British economy, supplemented as they are expected to be by the most thoroughgoing efforts yet shown to reduce the vast State and municipal expenditures.

Closure of Factories

The closing down of several large factories that has been already announced, does not seem to have anything to do with the Bank rate decision, although the disappearance of a number of factories run by families or small companies is inevitable. These concerns now find it impossible to increase their borrowings, even at the higher rate of interest. The closures which have attracted most attention have been in Courtaulds, manufacturers of silk, rayon and other man-made fibres, and one of the most powerful textile concerns in the world, with many international connections. This company is closing two of its factories; the British Celanese, which is now amalgamated with Courtaulds, has reduced by one-third the technical staff at its largest production unit. But both these moves are the outcome of the keen competition (suggested in these columns some time ago) from continental Europe, the United States and Japan. It may be noted that lecturers from the United States have been touring the West Riding of Yorkshire, instructing spinners and weavers on the most efficient way to use some of the man-made fibres which are the specialities of U. S. fibre manufacturers. Lectures are also arranged by Courtaulds for maintaining and increasing the consumption of its own fibres. Another feature to be noted in connection with fibres, although it cannot be said to have exerted much practical influence as yet, is that the pace of wool research has quickened recently.

A word should be said in passing on the closure of the "Ardil" factory by Imperial Chemical Industries. This need not have caused any unemployment, for displaced workers were offered alternative employment elsewhere. The closing down of the factory is due to the fact that "Ardil" fibre has proved a failure. It will be recalled that the fibre was manufactured from monkey-nuts. One prominent textile professor attained fame through his public appearances in an overcoat made from monkey-nut fibre. But the qualities of "Ardil", never very impressive, have been far surpassed by the latest man-made fibres and all that is surprising about its departure is that it did not occur sooner.

Report of the Nuffield Foundation

The latest report of the Nuffield Foundation, the organisation which administers grants for research, is not much concerned with industrial activity. The manufacture of paint and varnish is hardly an industry in the ordinarily accepted sense, but it is important from a cultural point of view. The physico-chemical properties of the paint and varnish used in the Old Masters have special attributes on which more knowledge is desirable. This would be valuable when the restoration or cleaning of paintings is done. There is also the fact that modern paints for art often do not endure like paints of the days of yore. The Foundation has therefore made a small grant for investigations. It may also be observed that research is proceeding into the use of nylon for painting fabrics in place of linen. A great difficulty in any comparative test is that specimens of painted linens date back from centuries, and, in the case of some Egyptian survivals, to several thousand years ago. By what scientific method can the appearance of a nylon painting in the far distant future be surely indicated? The answer may be that it is not desired to perpetuate modern paintings unduly, but only to make them more presentable for our own day.

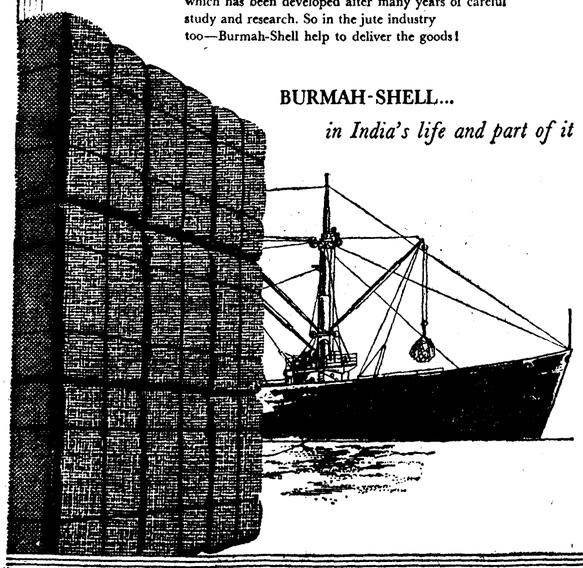
Industrial Health Service

The Nuffield Foundation is financing the early stages of an important development, which has for its object the setting up of an industrial health service. This will work directly through a hospital to factories in its immediate neighbourhood. The Central Middlesex Hospital, which is the first hospital to be chosen for this co-ordination, is surrounded by factories, and, in fact, 250 are to be found within a radius of half a mile of its own building. These factories have to deal with many problems arising out of the workers' occupations; the accident rate is still high, and diseases which are the outcome of industrial employment are still considerable. As matters now are, one-fifth of the factories deal with accidents in their first stages with the help of paid nurses on their staffs; in a few instances the aid of part-time doctors is invoked. The new plan is to associate the hospital closely with the factories. An advisory committee is to be set up representing the management of the factories, trade unions, medical and nursing staff. A consultant specialising in industrial health has been appointed and there will also be an information research officer and clerical staff. A nurse will contact the nurses in the factories, and will invite them to the hospital for lectures, films, demonstrations and discussions. The general aim is to encourage a preventive approach to accidents and diseases. It is proposed to appoint an "industrial hygiene team" to advise employers on risks to workers' health in their factories. The scheme is recognised as creative and the forerunner of similar developments in many industrial areas. It has full approval from the Ministry of Health. Financial responsibility will eventually be assumed by the official Hospital Boards.

Industrial Achievements of Russia

Increasing attention is being given to the industrial achievements of Russia, and it is significant that facilities for English translations of articles appearing in Russian technical journals are now provided by the Department of Industrial and Scientific Research. Articles by Russian scientists are gaining in popularity in the British Press. An interesting contribution on the machine translation of languages, by A. K. Belskaja of the Academy of Sciences, Russia, appears in the October number of the London journal, *Research*. The writer dates the idea of mechanisation of language translation a little before that of electronic computers. The first proposal of an automatic dictionary was made by P. P. Trojansky in 1933, and is the subject of a Russian patent. It is considered that, from being little more than a scientific curiosity, the idea of machine translation is fast becoming a reality. The rapid world-wide accessibility to technical knowledge, which the advance of machine translation will bring about, must greatly accentuate industrial progress in many countries.

India delivers the goods—



and Jute protects them!

And not only do those familiar gunny bags protect India's exports—but jute manufactures as a whole also remain one of our largest sources of foreign exchange.

That is why the jute industry is one on which so much of the strength of India's economy depends. And, like many other industries, jute looks to oil to protect its capital equipment and to play its part in the manufacturing process.

We supply to the mills of West Bengal a specialized petroleum product known as Jute Batching Oil. When emulsified with water, this oil softens the tough fibres of the raw jute and enables them to be split, shortened, drawn into a smooth ribbon and wound on a bobbin.

We also supply a range of lubricants which covers the complete requirements of the jute industry, and which has been developed after many years of careful study and research. So in the jute industry too—Burmah-Shell help to deliver the goods!

BURMAH-SHELL...

in India's life and part of it

Jute

I. J. M. A. GUNNY STOCK FIGURES LIFT PRICES

REPORTS OF ORDERS FROM INDIAN GOVERNMENT AND BURMA

THE publication of the I.J.M.A. jute goods stock figures for September caused a quick reaction in the Calcutta markets during the past week. The figures showed that stocks had fallen further by 17 percent, and at 76,700 tons were the lowest since December 1955. Thus, in two months, total stocks had dropped by about 30 percent, most of the fall being in sacking. The fall in this category, however, did not really take the market by surprise. It was expected, and indeed had been partly discounted during the squeeze in ready sacking towards the end of last month, and by the encouraging shipping statistics for heavy goods during that period. The reaction, therefore, was not justified to the extent of prices soaring overnight. That much of the price increase was due to speculation was evident from the premiums quoted for near delivery goods. Although the demand for quick delivery had temporarily fallen off, ready prices were forced up to a premium of about Rs. 5.50 in B Twills, and most other fabrics followed. The sacking market, however, was in a very healthy position; with the latest fall, sacking stocks were the lowest since December 1955. The reaction in hessian was slight compared with sacking, but this was understandable as stocks in this section fell by a smaller amount. Other factors helped give the heavy goods market a boost. Before the week-end, it was reported that Burma had asked for tenders for both green and plain heavy Cees, and this was followed after the week-end by enquiries from the Government of India for sacking. As a result, very firm conditions prevailed towards the close, with hessian moving up in sympathy.

The rise in manufactured goods was reflected in the fibre markets, where prices recovered slowly from the decline over the holiday period. There was a heavy demand, both in the upcountry markets and in Cossipore, for quick shipment jute, mainly in fulfilment of 15th October contracts, most of which were extended from the end of September. The majority of these contracts were low-priced, being forward deals negotiated earlier in the season, so many sellers were facing big financial losses. The bullish tendency made sellers reserved.

In recent weeks, fibre arrivals have been very poor in most upcountry agencies. This has given rise to the thought that perhaps the crop will not be as large as had been predicted. But it seems that large quantities are being held back by the growers as a result of the change in their jute marketing policy. Mills have opened their own agencies in many areas, and in general the demand has been for ready delivery. Operators have jumped to the conclusion that there is a shortage of jute at the mills, so they are holding out for better prices and causing an artificial shortage. This has been felt very badly in Cossipore, where arrivals over the first three months of this season have been less than half of those during the same period of last season. In many places, supplies have been held up due to the lack of steeping and retting water in the tanks. This is particularly true of Bihar, Orissa and some parts of Nadia district, where reports of severe drought have increased the bullish tendency.

Because of the bank strike, many sellers have found it impossible to carry on through lack of funds. In some cases, strained relationships have been apparent between various contracting parties because of the non-payment of dues.

THE JUTE MARKETS

Manufactured Goods: The market was quiet at the opening of the past week, and there was very little interest from either local or overseas sources. The demand for ready goods slackened and the premium in B Twills fell back to about Rs. 4, as against Rs. 6 or Rs. 7 a week ago. The general undertone was weak and price fluctuations were small. The lull was short-lived, however, as with the announcement of the I.J.M.A. stock figures, rates advanced rapidly. On Friday, October B Twills recorded a rise of Rs. 1.25 from the opening rates, and were quoted at Rs. 118.75, this being Rs. 5 higher than the prices quoted for January-March shipment. Hessian moved up in sympathy; 40in. 10oz. gained 20nP and was called over at Rs. 42.85 for October shipment and Rs. 42.20 for forward shipment. The improvement continued throughout the day but prices tended to fall back before the week-end on profit-taking. On Monday, an easier tendency was apparent at the opening, when fractional losses were recorded in both hessian and sacking. Several factors combined, however, to restore confidence. Reports came in quick succession, first of a tender from Burma for green and plain heavy Cees, and then of the confirmation of an order for heavy goods by the Government of India. On Tuesday, October B Twills opened with a gain of 50nP, advancing to Rs. 119.90, but interest at this stage was concentrated on the forward section, where prices showed a gain of Re. 1 to Rs. 114.25. Hessian was neglected again, and prices moved up only in sympathy, 40in. 10oz. gaining 25nP to Rs. 43.05. During the day, rates continued to advance, and heavy shipper and speculative covering in B Twills produced very firm conditions. Before the close, ready B Twills rose to Rs. 120.50, which was only slightly below the highest level recorded this season. Once again, profit-taking followed and rates eased slightly.

At the close, a squeeze for B Twills developed and the ready premium for this construction rose to about Rs. 7 over forward shipment. Other fabrics and deliveries recorded only fractional gains in sympathy. Opening quotations on Wednesday morning were as follows:

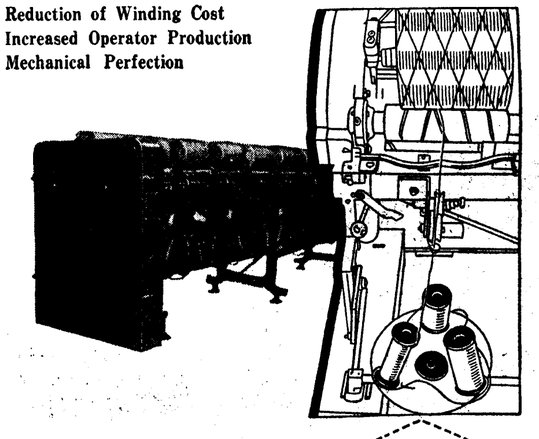
	Oct. Rs.	Nov. Rs.	Dec. Rs.	Jan.-March Rs.
40in. 8oz.	35.45	34.85	34.60	34.30
40in. 10oz.	43.15	43.10	43	42.50
B Twills	121.25	118.25	116.25	114.50
Heavy Cees (Plain)	117.50	117.50	116	114.25
A Twills	143.75	142	141	139.25
Liverpools	133	132.25	131.75	130.25
Cornsacks	119.75	118.75	117.25	115.50

Raw Jute: The fibre markets were quiet at the opening and buyers were inclined to hold bearish views. Sellers were of the opposite opinion and refused many of the indications made below the quoted rates. Later, mills came out to buy, and over the next few days about 250,000 maunds were purchased at rising prices. This business, combined with the improvement in the goods market, caused a very firm sentiment to prevail. Sellers were reserved and sought higher prices; many of them withdrew from the market completely. Upcountry markets were very steady and covering at a profit was virtually impossible. The activity of mill representatives and agents was the main cause of the tightness upcountry, along with the fact that imports were extremely poor for the time of year. High prices were paid for all available jute, and mofussil rates were well above the parity of those quoted in Calcutta. The higher rates did not deter mills, and business continued after the week-end, although the quantities involved were much smaller than at the opening. The strike in the local banks continued to hamper business, and caused much discontent in the trade. Many sellers, unable to receive payment for goods already delivered, were virtually out of business until such time as arrangements for payment could be made.

Opening quotations last Thursday were based on Assam-Northern jute at Rs. 28.50 a maund basis Bottoms for October-November shipment. Fairly good business was done at this level, and on Friday rates advanced to Rs. 29. Over 150,000 maunds were purchased on this basis, and on Saturday quotations again rose by 50nP. The market was very firm on account of the business done, and in sympathy with goods. After the week-end, an easier sentiment was evident at the opening, but

I.J.M.A. STOCK FIGURES FOR SEPTEMBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of September as follows:



Description	30th September, 1957 Lakh Yds.	'000 Tons	31st August, 1957 Lakh Yds.	'000 Tons	Increase over (+) or decrease from (-) last month Lakh Yds.	'000 Tons	30th September, 1956 Lakh Yds.	'000 Tons
Hessian cloth and bag	10.86	30.1	12.49	34.8	—1.63	—4.7	10.36	29.4
Sacking cloth and bag	9.47	39.0	12.66	51.1	—3.19	—12.1	21.09	88.6
Others		7.6		6.6		+1.0		7.2
Grand Total (000 Tons only)		76.7		92.5		—15.8		125.2

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non member mills.

TAG ENDING THE KEY TO LOWER PRODUCTION COSTS

JAMES MACKIE & SONS LTD.
BELFAST, NORTHERN IRELAND.

M.L.S

rates were unchanged and eventually began to rise when the gunny market improved. On Tuesday, Assam-Northern rates were quoted at Rs. 30 a maund and many sellers were inclined to ask for even higher prices.

Good business was reported in Dhubri-Northern-Assam jute at Rs. 28.75 to Rs. 30 for October and October-November shipment. Small lots of Tossa from these districts were done at Re. 1 higher. Interest in Daissee improved and purchases were made at rising prices from Rs. 29.50 for October shipment to Rs. 31 for October-November shipment. High prices for Daissee, "guaranteed dry", were paid over the jetty on the basis of Rs. 35 to Rs. 36 a maund for Bottoms only. Daissee mesta was done at Rs. 26 to Rs. 26.50 and Northern mesta at Rs. 26.50 to Rs. 27.50. Bimli F.A.Q. was done at Rs. 24 to Rs. 24.50 for F.A.Q. October-November shipment. Interest was again shown in Pakistan cuttings and business passed at Rs. 79 to Rs. 82 a bale for ordinary N.C.-T.C.'s, and at Rs. 95 to Rs. 96 for special cuttings of superior grade.

At the close, the market was unchanged and opening quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam-Northern	30	Oct.-Nov.
Purnea Desal	28.75	"
Daissee	31	"
Daissee White	28.50	"
Assam Tossa	34	"
Murshidabad Tossa	30	"
Northern ex Calcutta	29.50	"
Local Packing	27	"
Mesta:		
Assam-Northern	27.50	"
Desal	27.25	"
Daissee	27	"
Murshidabad	26	"
Jungli	23.50	"
Bimli F.A.Q.	24.50	"
Pakistan Cuttings	83 a bale	"

Heavy covering business was reported from Cossipore and high prices were paid for all types of fibre. Imports were slightly better, but the significance of this was difficult to gauge as arrivals included a backlog which had accumulated over the holiday period. During the week ended 15th October, about 1,000 wagons were reported at the sidings.

I.J.M.A. PRODUCTION FIGURES FOR SEPTEMBER

The Indian Jute Mills Association reports the total production of jute goods during September as follows:

Description		Quantity
1. Gunny Bags		
(a) Hessian		4,595 tons
		171.2 lakh yds.
		85.0 lakh Nos.
(b) Sacking		46,352 tons
		10,73.2 lakh yds.
		4,69.2 lakh Nos.
2. Gunny Cloth		
(a) Hessian		29,127 tons
		11,15.6 lakh yds.
(b) Sacking		942 tons
		20.0 lakh yds.
3 Other Manufactures		5,033 tons
4. Total production (above figures combined)		
(a) All kinds		86,049 tons
(b) Hessian (Both bags and cloth)		12,86.8 lakh yds.
(c) Sacking	do.	10,93.2 lakh yds.

SUMMARY

	(00,000 Yds.)			(000 Tons)		
	Sept 1957	August 1957	Sept. 1956	Sept. 1957	August 1957	Sept. 1956
Hessian	12.87	12.81	13.52	33.7	33.9	35.5
Sacking	10,93	10 10	11.35	47.3	43.1	43.8
Others				5.0	4.9	5.2
			Grand Total	86.0	81.9	84.5
			Hours Worked	200.5	189.0	197.5

N.B. These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

THE PAKISTANI JUTE MARKETS

INSUFFICIENT ARRIVALS OF TOSSA

(FROM A NARAYANGANJ CORRESPONDENT)

AFTER the holidays, activity in the Narayanganj market has been renewed. As most cultivators are Hindus, arrivals have been very small. They are just beginning to increase. This is because during the holidays, the growers did not sell any of their jute to *beparis*. Tossa, which is beginning to come in, is not arriving in sufficient quantities to meet the requirements of shippers who, expecting arrivals in September, have sold for October shipment. In order to ensure that they ship these contracts in time, which in many cases are high-priced, all balers are free buyers of practically every grade of Tossa. As a result, not only is the market steady but it is confused, and it is very difficult to quote prices for the different grades, as they vary from *ghat* to *ghat*. The average price, however, stands at about Rs. 32 for Dacca Tossa 5s. District Tossa is at present 8 annas higher and extremely wet. The implication is that most sales are for Dundee Tossa grades.

Most balers have been ignoring white jute, or buying it only in small quantities. Yet the market for loose White B Bottoms remains at Rs. 25, and sellers show no intention of reducing rates in spite of the fact that overseas quotations are very low even for Export Firsts which are scarce. The general feeling is that after October, Tossa, at any rate, will come down. White jute will probably remain at the present prices, with an increased premium for Export Firsts and higher qualities.

Shipment figures for September have not yet been announced, but the unofficial figure is placed at 485,000 bales, which is very good. These shipments should reduce the premium for afloat jute. On the other hand, overshadowing the whole trade at present is a threat of widespread strikes. A posts and telegraphs strike has been threatened. A stevedores' strike was due on 17th October in Chalna, and a jute labour strike on 21st October. Port workers in Chittagong also propose to go on strike. The workers of the Adamjee Jute Mills are already on strike. One joint steamer company has been affected, and another has been threatened. Even if only some of these strikes come off, the trade will be adversely affected. The afloat position should then improve. Local prices will probably come down, and the negotiation of documents may well be held up, thus restricting credit. Not only the jute trade, but Pakistan as a whole will then suffer. That all these strikes are occurring at about the same time, it is reported, is no coincidence. They are not due to any serious demand by labour for better working conditions, but are engineered by certain political parties.

It is interesting to note that in the Narayanganj pucca bale market, very little business has been reported and that too, at distress prices, except for Tossa. The pucca bale market, therefore, can only be called weak. In loose jute, however, and even *kutcha* bales, there is a very strong undertone, which is paradoxical. Two large balers, it is reported, have made sales to jute mills for delivery during January-February-March of B Bottoms at Rs. 24, C Bottoms at Rs 22 and X Bottoms at Rs. 20. The total amount involved is 50,000 maunds, and although the sale is speculative, this provides a very interesting insight into the market view in certain sections of the trade. Overseas buyers continue to depress the market. Cuttings, it is reported, have been done below £44. Export Firsts are quoted at £97, and it appears that Hearts are unsaleable at any price. The demand for higher quality is beginning to be apparent in high-priced bids for Mill Firsts and better qualities. It seems that the same will apply to Export Firsts very shortly.

Although the volume has decreased, Pakistani mills continue to do good business in jute goods in competition with Indian mills, mainly for the ready position. In South Africa, the Controller, it is reported, has bought roundly and is still in the market although at reduced prices. It seems surprising that he has managed to buy a fair proportion of his requirements at prices below the Calcutta quotations. The Karachi market remains more or less unchanged, and still below Calcutta parities. The various impending strikes may, however, strengthen the market there.

THE FOREIGN JUTE MARKETS

YARN AND CLOTH PRICES STEADY

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market has been easier since the last report, especially for the lower grades. The better class jute, such as Mill Firsts and over, has been much less freely offered and on the whole prices are dearer. The lack of rain in the early stages has adversely affected the quality of the crop this season. But it is strange that, almost every season, circumstances have arisen whereby one excuse or another has been offered to maintain a high level of prices. Trade in jute yarns and cloth here and on the Continent is none too good and the outlook for the industry as a whole is anything but bright. Consumers are confining their purchases to more or less immediate needs and only small quantities are being bought. Forward business is conspicuous by its absence. The lowest price quoted for Mill Firsts is £112 and there are sellers asking up to £116, while Mill Lightnings are usually quoted at £97, but 20s less might be taken by some, and others are asking as much as £100, c.i.f. U.K. The lower grades, such as Mill Hearts, are cheaper at £89 and grade Hearts at £80, with dark jute also down at £96 for good marks of Daissee-2/3 and £90 for grade, and grade Tossa-2/3 at £102 and Tossa-4 at £97, all c.i.f. U.K., October-November. It might be possible to purchase for November-December at 20s less. Sales have been reported at £90 for Mill Hearts and also for grade Daissee-2/3 last week, October, c.i.f.

The general opinion in the industry is that fibre prices are much too high and that a reduction is overdue. Brazil is reported to be getting a good increase in the production of ramie fibre, but it is doubtful if it will ever be competitive with jute. Prices for jute yarns and cloth here are unchanged, though the market generally is quiet.

NATIONAL OVERSEAS AND GRINDLAYS BANK LIMITED

The **National Bank of India Limited** and **Grindlays Bank Limited**, companies incorporated in the United Kingdom, the liability of their members being limited, announce that on the amalgamation of the two companies from 1st January, 1958 it is the intention, subject to the passing of the necessary resolution by the shareholders in general meeting, for the business of the combined banks to be carried on in the new name of **National Overseas and Grindlays Bank Limited** with its Head Office at 26, Bishopsgate, London, E.C.2.

Branches in India of the **National Bank of India Limited** and **Grindlays Bank Limited** will operate under the new name in the same manner as at present.

Engineering and Transport

CONGESTION IN INDIAN PORTS

FIRST STAGE OF ENQUIRY BY U.K. EXPERTS COMPLETED

THE first stage of the work of the team of experts provided by the U. K. Government under the Colombo Plan to advise on congestion in Indian ports is now complete. Sir Eric Millbourn, who is leading the mission, has left for London. In the course of their stay in New Delhi, the members of the team had discussions with the various interests concerned. These included officials of the Ministry of Transport and Communications and of other Government departments, among them the importing Ministries, the authorities of the major ports and members of the consultative committee of overseas shipping interests. As a result of these discussions and of the team's study of the problem in general, Sir Eric Millbourn has given the Government his views on the nature and scope of the congestion problem, and has suggested that considerable progress towards a satisfactory solution could be made if special facilities were provided for handling particular cargoes which are imported and exported in large quantities, such as ores and foodgrains. The second stage of the team's work is a more detailed examination of the ports of Calcutta, Bombay, Madras and Visakhapatnam. It is to be carried out by Mr. Francis H. Cave, until recently General Manager of the Mersey Docks and Harbour Board, and Captain Alastair Smith, formerly Port Manager in Mombasa. This will be an operational survey of the day-to-day problems of moving cargo through the ports, with a view to remedying the present situation and preventing a recurrence of congestion. It is expected that the team, after giving its views on local problems to the authorities of the various ports, will present a report, on completion of its study, to the Central Ministry of Transport and Communications.

TWO VERSIONS OF HERALD AIRCRAFT

MANY ATTRACTIVE FEATURES

A RECENT survey by the U.S. Civil Aeronautics Board showed that although no *DC-3s* have been built since 1945, they are still the most numerous of all models in service with the U.S. air carrier fleets, accounting for 20 percent of the total. This gives some indication of the size of the much discussed *"DC-3 replacement"* market for which a number of British aircraft have been designed and built. In Australia, there are some 62 *DC-3s* in service, and the Australian Minister of Civil Aviation, Mr. Donald Anderson, has been in Britain to have a look at potential replacements. Mr. Anderson studied and flew in the *Herald*, a Dart-powered version of which is due to fly early next year. Built primarily for branchline operations all over the world, the new *Herald* will carry 43 passengers in a pressurised cabin, or 4½ tons of freight—or a combination of both. It is designed to cruise at 278 miles an hour (447 kilometres an hour) at 17,400 feet (5,304 metres) against the 225 miles an hour (362 kilometres an hour) at 13,350 feet (4,069 metres) of the existing Leonides-powered version, over a distance of 700 miles (1,127 kilometres), compared with 280 miles (451 kilometres) with full payload.

Mr. Anderson said: "We think the airliner is a first-class prospect, especially fitted with Dart engines. If we place an order, it would probably be completed over a period of ten years." One of the most attractive features of the *Herald* is its short take-off and landing performance. On a visit to Alderney in the Channel Islands last year, the four Leonides-engined version landed on a 960 yards (823 metres) long grass strip which also serves as a cow pasture. The cows were bridled and tethered for the occasion. The *Herald* came to a halt on the wet grass after using only 400 yards (366 metres) of the available space. It is the largest aeroplane ever to land in Alderney. Handley Page says that it has always intended to market a turboprop version of the *Herald*, and the recent advent of the *Dart R.Da.7* of 2,105 e.h.p. enabled it to proceed ahead. A price of £175,000, including furnishings, and operating costs of less than 1½d a passenger mile and 16d a ton mile, are quoted.

Use of Piston-engined Herald

The manufacturer says that the Leonides version of the *Herald* will continue to be the more suitable in many regions, especially those remote places where it is very hot and where operation from small, high-altitude strips is demanded. Thus, airlines with mixed operations will be able to use the piston-engined *Herald* on primitive, difficult routes and the turboprop version on more sophisticated routes where the 70 miles an hour (113 kilometres an hour) extra speed would be needed to attract passengers. Again, an expanding airline whose present routes call only for the *Leonides-Herald* could augment its fleet with *Dart-Heralds* without the complication of adding an entirely new aircraft to its fleet. The two versions will have the same basic structure and will emerge from the same production line. Minor changes to the piston-engined *Herald* are being made in order to achieve this and both versions are expected to be ready for delivery simultaneously next year. The high wing and tricycle under-carriage mean that loading and unloading is easy, an especially valuable characteristic where heavy freight is involved. The cabin is pressurised to maintain a cabin altitude of 6,300 feet (1,920 metres) when flying at 15,000 feet (4,572 metres). The two versions of the *Herald* are also offered as ambulances, military transport and freighters, navigational trainers and photo-reconnaissance aircraft.

LATEST MODELS OF MOTOR-CARS ON DISPLAY AT EARLS COURT SHOW

Having recovered her world lead as the biggest exporter of motor-cars—temporarily lost to Western Germany—Britain is now going all out to maintain and increase this lead. This was the theme of a statement made recently in London at a news conference before the International Motor Show (which opened at Earls Court, London, on 16th October). The statement was made by Mr. Alan S. Dick, president of the Society of Motor Manufacturers and Traders and managing director of the Standard Motor Co. About 310 motor-cars, a record number, will be on view—each of them one of the latest models from Britain, Canada, Czechoslovakia, France, Western Germany, Italy and the United States. The number of overseas visitors is expected to reach a new peak. Mr. Dick said that the needs of overseas buyers had considerable influence on the design of the British industry's products. "So", he added, "do those of women, who are rapidly becoming more and more car-minded and car-selective. You have only to see the number of women drivers on the road today. Colour, controls, comfort—these and other features are becoming increasingly subject to feminine influence and taste". The main trends in automotive development on show are likely to be those concerned with transmission. Semi-automatic transmission is being increasingly adopted in the small-car range, where greater use is also being made of overdrive units. At least 30 of the British models will be available with overdrive, while on the larger motor-cars the move towards the incorporation of fully automatic transmission continues. Other notable features this year will be greater all-round visibility, greater engine efficiency, improved economy in fuel consumption, new colour ranges and two-tone schemes, and the appearance of more production models fitted with disk brakes.

THIRTY MILLION METRIC WEIGHTS TO BE PRODUCED

Measures for the speedy manufacture of metric weights have been discussed at a recent meeting in Delhi. Requirements of commercial iron and brass weights are estimated at 30 million pieces, ranging from 100 grams to 50 kilogrammes. The bulk of the demand will, however, be for the smaller weights, namely, 2 kilogrammes and below (1 kilo equals 1 seer, roughly). Reviewing the manufacturing capacity of private establishments in various States, the meeting considered the present capacity adequate to meet the required quantity of metric weights. With a view to ensuring uniformity of standards, it was decided to undertake a preliminary inspection of manufacturing establishments; approved manufacturers will be required to produce these weights on a large scale. While the initial requirement will work out at the rate of 10 million pieces of metric weights during the first three years, manufacturing establishments will have an adequate load subsequently to meet replacement needs. The average life of a commercial weight is calculated at three to five years, after which it becomes inaccurate and unserviceable. For testing the accuracy of the commercial weights, working standards for the use of the inspecting staff are being manufactured by the mints. By April next, each State will have a reference standard of weights to be maintained at headquarters and a set of secondary standards to be maintained at regional laboratories. The working standards of the enforcement staff will be verified against these secondary standards, while commercial weights will be verified against the working standards It is considered essential to have scales and balances manufactured within the country, so as to reduce the burden on foreign exchange which will be necessary for importing accurate balances. Weighing machines and weighbridges now in use will also be gradually recalibrated to record weights in the metric system in addition to the existing systems.

a pilfer-proof package
for every product!

The manufacture of Metal Box's range of pilfer-proof containers and closures is backed by an active Research Organisation. The Central Laboratory in Calcutta assists suppliers in developing improved printing inks, surface finishes and protective lacquers, and maintains strict routine tests for all incoming raw materials to the Metal Box factories; on the spot control of operations is carried out by Branch Laboratories. This ensures pilfer-proof containers and closures of the highest quality, superbly printed and finished. Expert scientific advice from Associates throughout the world is available to assist in solving customers' packaging problems.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) recorded a fall of 1.0 percent to 108.7 during the week ended 28th September, 1957, compared with 109.8 for the earlier week. The index was lower by 2.0 percent when compared with the corresponding week of a month ago, but was higher by 2.2 percent when compared with that of last year. The monthly average for September 1957 worked out to 109.5 against 112.0 (revised) for the earlier month and 106.9 for September 1956. Lower prices of fish in Bombay (−19%), eggs (−13%), rice in Kanpur (−10%), in Ranchi (−7%) and in Kakinada (−6%), bajra in Jodhpur (−10%), gram in Patna (−9%), potatoes (−7%), wheat in Kotah (−7%) and in Kanpur and Bahraich (−5% each), maize (−6%), ghee in Khurja and black pepper in Cochin (−5% each) milk (−4%), ragi (−2%) and bananas, tea, coffee and salt (−1% each) were responsible for bringing down the index for Food Articles by 1.5 percent to 107.1 in spite of a rise in the prices of wheat in Saugar (+17%), fish in Calcutta (Hilsa) (+12%), jowar in Rohtak (+10%), rice in Jagdalpur (+8%), onions in Delhi (+5%), groundnut oil (+3%) and mung, musur, gingelly oil, chillies and betelnuts (+1% each). There being no variation in the prices of tobacco during the week, its index remained unchanged at the previous week's level of 93. The index for Fuel, Power, Light and Lubricants stood at 114.5 against 114.6 in the earlier week; the prices of kerosene oil in Calcutta (−4%) showed a fall. The index for the Industrial Raw Materials group receded by 0.9 percent to 115.0 compared with 116.1 for the earlier. Items which showed noticeable variations were: groundnuts (—6%), gingellyseed in Bombay (—5%), lac (—3%), raw wool (—2%), raw jute, castorseed and copra (−1% each), rapeseed in Delhi (+8%) and raw silk in Bangalore (+5%). The index for Intermediate Products stood at 107.5 compared with 107.4 for the earlier week. The prices of linseed oil (+2%), zinc in Calcutta (−5%) and rayon yarn (−1%) showed variations. The index for Finished Products declined by 0.2 percent to 108.9 due to a fall in the prices of jute manufactures and oilcakes (−1% each); the prices of drugs (+2%) and glass (+1%), however, moved up.

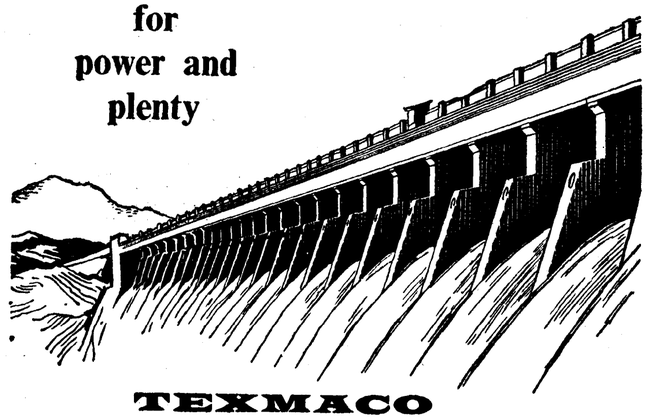
PRODUCTION OF CHROMITE INCREASES

The production of chromite in India during the half-year ended June 1957 increased to 44,476 tons from 21,995 tons during the second half of 1956, according to the Indian Bureau of Mines. Production also recorded an increase of 12,445 tons compared with the first half of last year. Orissa, which is a leading producer, accounted for 40,779 tons, while output from Bihar and Mysore amounted to 1,986 tons and 1,713 tons, respectively. Chromium is widely used in steel alloys because of its ability to impart additional strength, hardness and resistance to corrosion. Chromite is used in the iron and steel industry as a refractory in furnaces. The chromates and bichromates of sodium-potassium are used extensively in the chemical industries, specially for tanning and dyeing. In the absence of a metal extraction industry, chromite is used in the manufacture of chromite bricks and refractories, bichromate of soda, in textile, chemical and tanning industries. The consumption of chromite in India in 1956 was estimated at 8,000 tons for refractories and 6,600 tons for the bichromate industry. At present there are no plants manufacturing ferro-chrome in the country. With the development of the steel industry more high grade chromite will be utilised to produce ferro-chrome, which is used in the manufacture of special steels such as stainless steel.



INCREASED PRODUCTION OF SUGAR

The production of indigenous sugar amounted to 2,024,000 tons up to 30th September, 1957, in the current season, against 1,859,000 tons in the corresponding period of last year. The total offtake, including the quantity despatched for export, was 1,942,000 tons. Stocks with factories on 30th September, 1957, stood at 620,000 tons.

FACTS BEHIND FIGURES

Astride India's rivers are rising mighty dams to bring power and plenty to the nation. With the completion of the major Plan projects, 171 million acre feet of India's river water will be harnessed. The new river valley schemes will release 2,000,000 KW power and irrigate 16 million acres. The total expenditure on irrigation, power and flood control during the next five years will be Rs. 913 crores, a 38% increase over the First Plan. These great development schemes constitute one of the most important aspects of the nation's efforts to achieve economic self-sufficiency. Texmaco, pioneer in many fields of engineering, working in technical collaboration with Voest of Linz, Austria, has constructed a wide range of hydraulic dam equipment for Rupar, Hirakud and other projects.

CALCUTTA TEA AUCTIONS IN SEPTEMBER

FAIR DEMAND BUT PRICES LOWER

THE total export offerings during September were 250,000 chests, including one sale when 67,700 chests were catalogued. There was a fair demand throughout the month, although the sale of 68,000 chests appeared to be rather more than could be absorbed, and resulted in fairly heavy withdrawals. Prices, however, showed a declining tendency, but after the first sale, commons showed little quotable change, say Messrs. Carritt Moran and Co. Private Ltd. in their monthly tea market review. Medium Assams eased by nearly 20nP a lb during the month partly due to a decline in quality, but B.O.P.'s sold well, and whole leaf and tippy grades continued to receive good support. Comparatively little interest was shown in nonwither Dooars teas which could only tempt buyers at a discount of about 10nP each week. C.T.C. Assams showed the biggest decline in prices, particularly Fannings grades which were quoted 30nP to 40nP lower in each of the first three sales of the month; there was a little more interest in Sale No 16, and prices for C.T.C. teas only dropped a further 10nP for brokens but Fannings were again quoted 20nP to 40nP lower.

During the month there were few flavoury teas from Darjeeling but cup quality was very satisfactory for rains teas, and if anything, above average for the time of year. The standard of leaf appearance was also maintained at a very satisfactory level, but less tip was present in the high grades. Although the quality of the offerings from Assam showed some falling away during the month, the decline was less marked than might have been expected and there were still a fair number of quite useful liquoring teas on offer, both of orthodox and C. T. C. manufacture. Leaf appearance was generally very satisfactory, although there was less tip available, and some stalk and fibre became noticeable in the lower grades. The teas from Dooars were of an ordinary rains description, and cup quality although about average for the time of year was generally rather plain. Leaf appearance showed a slight decline, and nonwither Legg cut teas became a little duller and more fibrous. There was little change to note in the teas from Cachar. Most of the teas on offer were of an ordinary rains description and plainish in cup, while a little more stalk was seen later in the month. The general standard may, however, be considered about average, and there were a few invoices from Cachar which were useful as for leaf appearance and cup quality.

Sale No. 16 „ „	...	1.62	1.61

Internal Market

A total of 7,475 chests of leaf was offered for sale. Quality was mainly of a residue description. C. T. C. Assam were the weakest feature and declined each week. The remaining offerings were very irregular and sold at easier rates. Dust offerings consisted of 79,792 chests. Four sales were held and the market declined each week though there was a fair general demand. Brighter liquoring C. T. C. Assams were keenly competed for by exporters and prices were firm to dearer. The more ordinary kinds however declined each week. The remaining offerings received fair support at slightly easier rates.

Quotations

	1957-58 Rs. nP	1956-57 Rs. nP
Sale No. 13 Clean Common Dust	1.55	2.12
Sale No. 14 „ „ „	1.52	1.86
Sale No. 15 „ „ „	1.57	1.96
Sale No. 16 „ „ „	1.55	2.06

Export sales up to and including Sale No. 16 totalled 631,503 chests at an average price of Rs. 2.48 compared with 585,883 chests at an average price of Rs. 2.56 during the corresponding period of the 1956-57 season. Internal sales at 13,621 chests of Leaf and 208,907 chests of Dust (Rs. 1.51 and Rs. 1.90) go against 10,398 and 176,391 chests (Rs. 1.55 and Rs. 2.24) for the same period last year.

The estimated North Indian crop to the end of August 1957 was 280,549,583 lbs compared with 308,228,973 lbs to the same date last year. The average figure at this date for the three years 1954-1956 was 290,460,045 lbs. There was comparatively little activity in the price of Export quota during the month. Starting at 22¼nP it declined to 19½nP and after rising to 22nP closed at 20½nP a lb at which price business was done immediately before the Puja holidays.

Arrivals (in chests) in Calcutta warehouses during the period 24th August, 1957 to 23rd September, 1957, with the corresponding figures of the previous year in parentheses were as follows: by steamer 407,895 (610,899) by rail 170,263 (95,393) by air 30,309 (22,210) making a total of 608,467 (728,602). Since the biginning of the seoson 1st April, 1957 to 23rd September, 1957 arrivals have been: by steamer 1,111,083 (1,426,662) by rail 442,484 (335,723) by air 91,531 (72,966) making a total of 1,645,098 (1,835,351) chests.

BIGGER COFFEE RELEASES FOR INTERNAL MARKET

EXPORTS TO COMMUNIST COUNTRIES

THE total of the 1956-57 coffee crop received up to 30th September amounted to 41,453 tons. The receipts of the 1955-56 crop on the same date last year were 33,774 tons, says the latest newsletter of the Indian Coffee Board. Releases for the internal market during September amounted to 2,141 tons. The total releases from January to September 1957 were 19,077 tons against 18,061 tons for the same period last year. The total offtake for the home market continues to be close to the estimate of nearly 26,000 tons, compared with the actuals of 23,807 tons in 1956.

A total quantity of 11,857 tons has been sold for export till the end of September out of the export allocation of 15,155 tons from the 1956-57 crop. The enquiry from Eastern Germany referred to in the last newsletter materialised in a sale of 400 tons. A further enquiry was received from Russia in September and 500 tons consisting of 400 tons of plantation and 100 tons of arabica cherry are under offer to her through the State Trading Corporation. Out of the balance of 2,963 tons (including 500 tons of robusta reserved for the U.S.A. and 600 tons of arabica cherry set apart for monsooning), 833 tons are for sale on 30th October.

Change-over to the Metric System

As a first step towards the introduction of the metric system, the statistical tables now under compilation for the Board's annual report will have the aggregates and summaries expressed in both the existing and corresponding metric units. The question of changing over to the metric units of measure and weight gradually, commencing from next year, for the coffee industry is under examination.

COCHIN TEA SALES

At Dust Sale U, 950,000 lbs of tea were on offer. There was a strong general demand. Prices advanced irregularly by 5nP or 10nP for everything except the lowest milled Dusts, which were barely steady.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association.

	Closing prices on 4-10-1957 (Rupees a lb)	Average for the period (Rupees a lb)
Sheet:		
No. 1	.96	.97⅜

To arrive at f.o.b. Colombo prices, add 34.53 cents a lb to the market prices.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather reports has been received from different districts for the month of September:

Upper Assam: Weather seasonable but abnormally hot in Doom Dooma and too cold in Tingri where it is checking leaf; outturn last month was almost normal but production to-date is considerably under last year in Doom Dooma; prospects fair to good.

Central Assam: Weather seasonable; prospects are fair; early closure likely in Jorhat; outturn normal.

Lower Assam: Weather seasonable but dry in Nowgong where rain is badly wanted; outturn last month was almost normal but poor in Nowgong; immediate prospects fair.

North Cachar: Weather is hot to wet; outturn considerably under last year in Lakhimpur but good rain having fallen prospects are now brighter; blight is lifting.

South Cachar: Weather seasonable: outturn last month almost normal; helopeltis is prevalent in all districts; black rot severe in Chutlabheel.

Western Dooars: Weather seasonable; outturn last month normal; immediate prospects fair to good; black rot prevalent in Kalchini.

Central Dooars: Weather seasonable; outturn normal; prospects favourable.

Western Dooars: Weather seasonable; outturn last month normal but production to-date is considerably under last year: black rot lifting in Oodlabari, but continues in some area of Chulsa.

Darjeeling: Weather good; manufacture proceeding satisfactorily: immediate prospects fair.

Terai: Weather rather hot and dry: outturn normal: crop prospects fair; helopeltis prevalent in north Terai.

Calcutta Markets

FAIR GENERAL DEMAND AT TEA EXPORT SALE

BETTER SUPPORT FOR DUSTS

AT Sale No. 17, held on 14th and 15th October, offerings at the Export auction amounted to 58,018 packages. There was a fair general demand which improved as the Sale progressed. "Teas for price" met with a fair enquiry, but at prices which generally tended easier. Plain liquoring descriptions at the start were about 6nP easier, but strengthened later in the Sale. Low mediums showed a decline of 6nP, but the brighter liquoring medium kinds sold well and were often dearer. Medium B.O.P.'s were about 10nP easier. C.T.C. Assams were the weakest feature of the Sale particularly the Fannings grades, and prices declined by 20nP with fairly heavy withdrawals. Nonwither Dooars were easier by about 6nP. Whole leaf grades, tippy teas and Darjeelings were well supported.

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2.10	
Plain B.P.	1.64	
Plain Fannings	1.64	
Medium B.P.	1.70	Not
Medium Fannings	1.72 to 1.74	available
Best Assam C.T.C B.P.	2.90 to 3.00	
Best Assam C.T.C. Fgs.	3.00 to 3.10	

At the Internal Sale, Dust offerings consisted of 18,623 chests. For the first time for several weeks, there was keen competition from all sections of the market, particularly for orthodox descriptions. Commons, Dooars and orthodox Assams were generally dearer, particularly those with a clean black leaf appearance which were suitable for export. Well made powdery kinds were a strong feature, the prices for which advanced quite considerably. The C.T.C. Assams met with better demand than in recent weeks although a little irregular, and prices were firm and sometimes dearer, particularly for those kinds suitable for the exporters. However, those with indifferent leaf and liquor tended to be a weak feature and were often easier. The few Darjeeling invoices with flavour sold well and were substantially dearer.

Quotations

	1957 Rs.	1956 Rs.
Medium Dooars Dust	1.60 to 1.64	
Medium Assam Grainy Dust	1.64 to 1.68	Not
Medium Assam C.T.C Dust	2.10 to 2.30	available
Best Assam C.T.C. Dust	2.60 to 3.00	

There was an irregular demand for the 2,835 chests of Leaf on offer. C.T.C. teas were again a weak feature, but the orthodox kinds were about firm and occasionally dearer.

BETTER UNDERTONE IN FREIGHT MARKETS

A TENDENCY towards firmness has developed in some trades and better rates have been paid in some sections of the freight markets, although the volume of business concluded is still unsatisfactory. Three vessels were fixed for ore Visakhapatnam-Northern range for October-November loading at $(U.S.)11.75 and one from Koilthottam to New Orleans at $(U.S.)10. The Visakhapatnam vessels will have about 35 days to wait before berthing, which probably accounts for the higher rate conceded. Coal from United States-Continent was arranged at 27s while a contract for 640,000 tons was arranged at 34s 9d for 80,000 tons June-December 1958 and 43s 6d for the balance up to December 1962. A 10,000-ton oil-burner took 17s for the trip out to India with delivery U.K. and a 8,000-ton motorship 20s delivery U.S. Gulf, re-delied from north Pacific to east coast India at 70s, option west coast 72s 6d.

LINSEED UNCHANGED

There was virtually no change in the linseed market during the past week. Prices were on the quiet side in the beginning, but supplies were very limited and crushers were operating on a restricted scale. The oil section was lifeless due to meagre local demand and bearish advices from overseas. Latest quotations were based on ready-October at Rs. 21.14 a maund.

HIDES AND SKINS FIRM

The market in skins ruled firm and prices showed an upward tendency. Stocks were less than in the previous week.

Bazaar Sales

(Between 8th October and 14th October, 1957)

Cowhides: Wet salted (Ord.) 45,000 pcs. on the basis of Rs. 8.50 to Rs. 10.62: Wet salted (Slaughtered) 16,800 pcs. on the basis of Rs. 11.50 to Rs. 21.

Goatskins: Wet salted (Daissee, Killed) 32,950 pcs. on the basis of Rs. 300 to Rs. 315, Rs. 330 to 4,300 pcs. on the basis of Rs. 325 to Rs. 360; Assam-Dinajpur Kissenganj 6,500 pcs. on the basis of Rs. 340 to Rs. 350; Pakur 10,000 pcs. on the basis of Rs. 340 to Rs. 335.

Bazaar Stocks

(14th October, 1957)

Cowhides: Wet salted 153,000 pcs.

Goatskins: Wet salted (Daissee, Killed) 92,000 pcs.; Assam-Dinajpur 40,000 pcs.

COMPANY AND PUBLIC NOTICES

SAUGOR ELECTRICITY SUPPLY COMPANY, LIMITED.

NOTICE

NOTICE is hereby given that the Annual General Meeting (being the Fifty-first Ordinary General Meeting) of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Thursday, the 14th November, 1957, at 11-10 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the fifteen months ended 31st March, 1957, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. As special business to consider and, if thought fit, to pass the following resolution namely—

"Resolved that the consent of the Company be and is hereby accorded to the Board of Directors borrowing the sum of Rs. 6 lacs for and on behalf of the Company from the Madhya Pradesh Electricity Board, and that such sum be so borrowed notwithstanding the fact that, whether taken alone or in conjunction with other borrowings by the Company, it shall be in excess of the aggregate of the paid-up capital of the Company and its free reserves".

6. As special business to consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

(a) That the requirements of Articles 82, 83, 87, 121, 176, 180 and 181 of the Articles of Association of the Company be not complied with in respect of the half-years ended the 31st December, 1956 and 30th June, 1957.

(b) That the Articles of Association of the Company be altered in manner following:—

(i) Articles 82 and 83 shall be deleted and the following new Articles substituted therefor:

"82. In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors."

"83. The General Meetings referred to in the last preceding Article shall be called Annual General Meetings; all other meetings of the Company shall be called Extraordinary General Meetings."

(ii) Article 87 shall be deleted and the following new Article substituted therefor:

"87. The business of an Annual General Meeting shall be to receive, consider and adopt the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special."

(iii) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor:

(iv) Article 176 shall be deleted and the following new Article substituted therefor:

"176. At every Annual General Meeting the Directors shall lay before the Company a Profit and Loss Account made up to and a Balance Sheet as at the 31st day of March immediately preceding the date of the meeting and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company".

(v) In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor:

(vi) In Article 181, lines 1, 2 and 3, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing shall be deleted and the words "Annual General" substituted therefor:

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 8th November, 1957 to the 14th November, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy who need not be a member, to attend and vote instead of himself.

By Order of the Board,
MARTIN BURN LTD.,
S. GUPTA,
Director,
Managing Agents.

12, Mission Row,
Calcutta-1.
The 15th October, 1957.

UPPER GANGES VALLEY ELECTRICITY SUPPLY COMPANY, LIMITED.

NOTICE

NOTICE is hereby given that the Annual General Meeting (being the Fifty-third Ordinary General Meeting) of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Thursday, the 14th November, 1957, at 11 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the fifteen months ended 31st March, 1957, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. As special business to consider and, if thought fit to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

(a) That the requirements of Articles 82, 83, 87, 121, 176, 180 and 181 of the Articles of Association of the Company be not complied with in respect of the half-years ended the 31st December, 1956 and 30th June, 1957.

(b) That the Articles of Association of the Company be altered in manner following:—

(i) Articles 82 and 83 shall be deleted and the following new Articles substituted therefor:

"82. In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors."

BANKS

H indicates that Share capital is half paid. O. C. and Dd indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Silver Exide for CARS, TRUCKS, TRACTORS, BUSES

A HOMECOMING FOR THE FINANCE MINISTER

WHAT TO DO WITH THE PLAN

THOSE who expected Mr. Krishnamachari to return from Washington with an American promise to underwrite India's second five year plan have been disappointed. After the visit to London last June, they had, in fact, no excuse whatever for such brave hopes. It is true that Britain has no money to lend. But that fact apart, there was a marked reluctance in London to support a programme of development which, to all eyes except India's, appears altogether too ambitious for the resources available. It now seems that the Americans might have similar feelings about the plan. And against such hard-headedness not even hints about India turning communist are likely to cut much ice. Washington has come a long way since the days when all any indigent foreign Government needed to do was to raise this cry to get whatever it wanted. After all, whether or not India does go communist is, in the last analysis, her own business. All that foreign aid can do is to help a healthy democracy build a sound economy, the example of China showed that it cannot preserve one which is working for its own destruction.

The Finance Minister's visits to western capitals have not, however, been wasted. Their most important result is that they have put these centres in touch with India's problems—something which, for one reason or another, does not appear to have been considered necessary in the past. The impression must by now have been grasped that this country is in earnest about making itself richer, and is not just content with changing its existing society to suit the out-dated prejudices of a few pre-Independence politicians. The impact of this fact is bound to be felt in future through increased sympathy with India's difficulties and a greater willingness to co-operate in solving them. It would be surprising if Mr. Krishnamachari's trip did not eventually lead to assistance from the World Bank, the Export-Import Bank and other American-sponsored institutions which do not have to secure Congressional approval for their day-to-day decisions. There is also evidence that London's conscience is troubled at being unable to help a member of the Commonwealth, and, far more important, that it is impressed with the fact that it stands to lose one of its most profitable markets. The Finance Minister has been driving the same point home in Bonn, although West Germany is by no means as concerned with the prosperity of its export trade as it used to be. From all these facts something of benefit to India is certain to emerge—at least in the long run. For those who point out that the need is urgent there is, however, very little consolation. But the blame for that must be laid at the door of those who drafted a plan of such dimensions without troubling themselves where the resources were to come from. The only remedies are precisely those which are being used or proposed—import cuts, the reduction of the foreign exchange backing for the currency, and a drastic pruning and rephasing of the plan. The problem which must now be solved is the one which should have been faced before April 1956—namely, how the country's development plans can be adjusted to its *realistic* expectations of foreign exchange.

*

The first point which should be remembered in rephasing the plan is that there is no need for panic. A second is that there can be no room for "pet projects". Shortage of foreign currency does not mean that the plan must be abandoned altogether, or even slashed indiscriminately. But it does mean that each priority should be reconsidered in the light of the experience gained in the past eighteen months, and that the whole should be related to a figure for foreign exchange which is likely to be achieved, not one which would be improbable even if India were the world's best political and economic risk—which she is not. There need be no hesitation about pruning the plan. The disappointment caused by cuts made now will no doubt be forgotten when the next election comes round, provided there is some substantial progress to show. It will, however, be remembered most bitterly if a reluctance to do what is necessary now leads to disaster later. On the question of priorities, this journal has consistently urged that the most important feature of any project for Indian prosperity is the maintenance of food supplies. The problem of agriculture has by no means received in this plan the attention it demands. It was discussed during the last deliberations before the plan was finalised, and some anxious voices were heard in favour of greater concentration than had in fact been given. But little more than the revision of a few figures was actually undertaken; planning opinion had, apparently, become hypnotised by the good luck which favoured earlier food targets and with the verbal assurances from Government spokesmen. Now, at the worst possible time, the luck appears to have turned and the situation at least in the east of India, is promising to become desperate.

*

It is no use underestimating the effect which drought is likely to have on food supplies in the coming year. The consequences for a country which usually lives only just above the bare subsistence level, can be too serious. Grain shipments from the United States should help to hold the line; and whatever the obstacles which the American Congress puts in the way of direct financial aid to India, it is unlikely to withhold assistance of this kind. The relevant questions are whether it will arrive in sufficient time and in adequate quantities, and whether it will be effective in keeping prices and hoarding down to manageable proportions. The Government's import plans are said to be well prepared; it is to be hoped they are better fated than the second five year plan itself because the price of failure here will be complete disaster. So much for short-term expedients. But the long-term ones need every bit as much attention. There is no doubt that agriculture in this country yields high marginal returns to the application of improved implements and techniques. It cannot, however, be expected permanently to go on increasing its output over good years and bad unless adequate financial provision is made for it in any development plans that are drawn up. It is also important at this time to consider carefully whether, in fact, the present system of land tenure in this country can be expected to increase output at the required rate. It is remarkable how few of those Government spokesmen who admire the agricultural achievements of the Russians and the Chinese prescribe the same methods for India. But it is, nevertheless, a question of method. Up to now, there has been far too much concentration on socialism for industry and too little for agriculture, for there to be any efficiency in either. The food problem, with all it means in terms of inflation, labour unrest and political danger, is likely to become chronic if traditional ideas about land ownership as well as about methods of cultivation are allowed to continue. To insist that food be put first in India's development plans is not imperialism—it is sound common sense.

An important fact which has emerged from Mr Krishnamachari's visits abroad—and from those of Mr. G. D. Birla—is that India is not regarded by the vast majority of private foreign capitalists as even a reasonable propcsition. And yet, if this country is to secure a steady increase in its sources of exchange throughout a period which is likely to see many changes in world political alignments, without attaching itself to one or other of the main power blocs, it is to private foreign capital that it must chiefly look. India is at present seeing the results of three years of socialism. In spite of tax and other concessions to foreign capital, and verbal reassurances from Ministers, the overseas industrialist still appears to be more influenced by the faith which the ordinary Indian investor has in his own economy. He looks to the moribund stock exchanges and discusses with local business men, with whom he must co-operate, their fears, difficulties and discouragement under a "socialist pattern" of society. The return of Mr. Krishnamachari seems an excellent time for reviving the question whether a high-cost socialistic bureaucratic economy such as India is developing will ever be able to attract foreign capital, or, for that matter, earn foreign exchange, in any appreciable quantities. No doubt the Finance Minister will now be in a position to convey the best foreign opinions on this vital question; and will perhaps be able to add a few of his own.

There is no denying that the second five year plan is going to need radical revision, and that this will include a reduction in the overall figure for development spending. It is also difficult to avoid the fact that, for political reasons, grave mistakes have been allowed to stand that can now be seen to threaten even graver political consequences. What is required, therefore, is not only a revision of expenditure figures, but of current thinking as well. Sufficient experience of socialism has by now been gained for it to be clear that rapid economic progress is not possible under it without the kind of ruthlessness which Russia and China are using, and against which India has set her face. It would still be wrong to employ such methods. But it is equally useless to expect results from half-measures. The alternative is to allow more scope to the individual and the private sector, and so ensure that if it is ever again necessary to call upon foreign countries to underwrite democracy in India, there will be enough freedom to be worth saving.

CONTINUING INSTABILITY IN ASIA

THE not wholly unexpected resignation of the Suhrawardy Government in Pakistan and suspiciously exaggerated reports of a new-found accord in the political leadership of Indonesia are not the only reasons why eyes should now and then be taken off the noisily troubled Middle East to see whether, on a long view, everything is infinitely better elsewhere in this huge and ill-defined Continent. It is over a decade since independence came to this part of the world, and it may not be too early to examine the extent to which political consolidation has progressed during this period. The undoubted, though still incomplete, success attained by India in this direction has tended to encourage the notion that in varying degrees the same must be true of all the neighbouring countries. The fall of the fifth government in Pakistan, together with the difficulty in forming its successor, may not have been a complete surprise in India, but closer enquiry may reveal that even Pakistan may be relatively stabler than many another country in South-East Asia.

*

The difficulties confronting these countries on the morrow of independence are not to be minimised. The fulfilment of national aspirations released many forces, not all of which were creative. As both Burma and Indonesia are painfully aware, to many elements in those countries independence only meant an opportunity for calculated lawlessness. There were others, only a shade less irresponsible, who saw in independence the possibility of re-asserting regional claims hitherto suppressed by firm, foreign hands. The result has been national disunity, often expressing itself in violent challenges to the legally constituted Government of the country. That cohesion did not immediately follow the advent of independence is understandable; unity is not a [illegible] in some countries [illegible]

be explained. But, after ten more or less uninterrupted years, it is not premature to ask whether the countries concerned are even *moving* in the direction of eventual consolidation. To this question not everyone may return a firmly affirmative answer, and that is sad.

* * * *

The Government of Burma has repeatedly claimed that it has at long last got the better of the rebels. The repetition itself makes the claim less than fully acceptable. That not many miles outside Rangoon railway and river communication is still subject to considerable hazards, can scarcely be denied, and in the capital itself evidence of universal respect for the authority of the Government is less than conspicuous. Trade, in which the interference of the State is as ubiquitous as it is paralysing, is shrinking daily. Desperation, rather than anything else, must have led the Government to sign recently a barter agreement with the Soviet Union. Commercially dubious, its political implications may be dangerous. This rice deal may be no more the answer to Burma's economic crisis than Cairo's cotton deal with the Soviet Union was to Egypt's. The value of the currency will be obvious from the fact that Indian rupees are almost openly exchanged at double the official rate.

More publicised and perhaps acuter is the crisis in Indonesia. Whatever the ethics of President Sukarno's "guided democracy," the primary objection to it is that the authority of the guide is challenged by too many. Dr. Hatta, the former Vice-President, recently agreed to be photographed with Dr. Sukarno, but there are reasons to doubt that perfect accord now obtains between the two. Sumatra has rebels, who wish to have nothing to do with Djakarta which, they think, is dominated by Communists behind the President. There has been talk of a Republic of Sumatra, and it is by no means certain that, once conceded, it will not claim a larger measure of sovereignty for itself than Djakarta can grant without losing almost all its control over Sumatra. This particular regional claim for autonomy may be less an illustration of the principle enunciated earlier that independence breeds these tendencies—than the consequence of a somewhat authoritarian though inadequately strong Centre to assert itself overmuch. Greater realism in dealing with the sentiments of the various units composing the Republic might well have generated more goodwill for Djakarta.

* * * *

There is a real danger that troubles created by rebels and other political elements may deflect attention from what may be called the internal causes of the continuing disintegration. It is a commonplace that excessive expectations lead to excessive disappointment and frustration. It may still be pertinent to ask whether all the successor governments in South-East Asia have fulfilled even the reasonable or minimum expectations of their peoples. Again, the answer cannot be an unqualified affirmative. It was only natural that the newly constituted governments regarded self-assertion as their first task. (That it is capable of encouraging tendencies directly inimical to the objective has already been pointed out.) A corollary to this was that challenges to the authority of the Government should have been dealt with firmly. That in the process democratic procedures were suspended "for the duration" was also understood by the world outside. It is the length of the "duration" which is raising questions not merely regarding the future of democracy (which is only one of the many systems of government devised by man) but regarding the future of these countries.

It is not intended to paint an unduly gloomy picture of what may happen. The intention is rather to indicate, very tentatively, one or two possible reasons why these governments have got into the troubles they have, and then to see whether there may not be remedies other than those in painful application now. The priority accorded to political stabilisation, for instance, was entirely justified, but it may not have been remembered in every Asian capital that stabilisation is not achieved by a show of force alone. Indeed, the display of force—such as both U Nu and Dr. Sukarno have restored to more than once—may be self-defeating. Instead of helping to assert the authority of the Government, it has often helped only to expose the "physical" weakness of the government concerned. It is quite possible that a little more reliance on the "moral" authority of the government would have paid better dividends.

And then, excessive preoccupation with the problem of law and order may also be self-defeating. Concentration of attention on this problem leads to a neglect of what may be called the "municipal" functions of a government, which in its turn creates hardships in everybody's life—and then stability by itself seems less than the full reward of independence. There may be a law of diminishing returns in military or police operations too. History may hold that the failure of the first free governments in South-East Asia to achieve perfect peace and tranquillity within their countries was by no means their biggest failure. It may find that they failed to provide their peoples with the basic needs of life, and so, for a long time, a breakdown or total chaos seemed always to impend.

WAGES AND WELFARE

LABOUR POLICY FOR AN EXPANDING ECONOMY

THE three-day conference of the All-India Council of Labour and Welfare Officers, which ended in Calcutta on Monday, served to highlight some of the major problems of labour relations in Indian industry. As a conference, one of its chief merits, to outside observers, seemed to lie in the fact that most of the participants were individuals with an intimate, day-to-day interest in the subjects they discussed. Too often in the recent past, meetings convened to consider the labour policies appropriate to a welfare State have served little purpose other than to provide convenient platforms for voluble speakers issuing the customary homilies and receiving the customary ovations, then returning home to find themselves as baffled as before in handling industrial disputes. It is not implied that the Calcutta conference has evolved miraculous formulae to end employer-employee friction; this can hardly have been expected, considering the intractable nature of the problems discussed. Yet its broad achievement was by no means inconsiderable, in that it provided a forum for a frank and down-to-earth exchange of views on a subject which is of vital importance to future economic progress.

The three main themes discussed by the conference were the fixing of wages in industry; direct negotiation and voluntary arbitration; and the employment of women in industry. Not all the recommendations which have been made on these questions will meet with general approval, although they do indicate some useful lines of approach. In connection with the first, it has been suggested that the Labour Ministry should collect statistical information about wages, dearness and other allowances and fringe benefits in industries, in both the private and the public sectors. This information can be made available to those concerned with fixing wages. Whether the administrative machinery is at present equal to the task of undertaking monumental surveys of this nature may be doubted, but that, understandably, is not the labour and welfare officers' concern. The conference is on much more questionable ground when it urges the Government to see that the main recommendations of the Fair Wages Committee are implemented without further delay. The problems involved in the determination of "minimum" and "fair" wages are too complex to justify hasty measures. Recent discussions on this subject have tended to get lost in the theoretical mire created by vague considerations of individual need and social justice. The basic idea tends to have been forgotten that the primary factor in fixing wages is an industry's ability to pay; this aspect received attention from individual speakers, although some did not seem inclined to give it the importance it deserved. The conference's plea concerning the Fair Wage Committee's recommendations also mentions something about establishing "a correlation between wages in industry and agriculture"—a correlation the meaning of which may not be easy to discern, assuming that it exists at all. There is, however, much realism in the suggestion that wages be linked to productivity, and systems of payment by results encouraged. A primary requirement here would be to undertake work study and job evaluation in co-operation with workers.

* * * *

The growing preference for direct negotiation and voluntary arbitration as methods of settling disputes seems so far to have found largely theoretical expression. But the conference refers appreciatively to the underlying principles of the various agreements which have been signed in the recent past by managements and unions, and recommends this approach as a guide for other industries. Among the difficulties in adopting this approach, of which mention is made, are the multiplicity of trade unions and the lack of mutual trust between management and labour. Amendment of the Trade Unions Act of 1926 is recommended in order to help build strong, representative and responsible trade unions. Many will agree that the removal, as far as possible, of essentially political influences which guide trade union activities in this country can make a major contribution to industrial peace. Others may wonder whether the link between the Congress Party and the I.N.T.U.C. will allow any effective steps to be taken in the near future.

The recommendations about the employment of women in industry offer some welcome evidence of realism. Concern is expressed over the shrinkage in job opportunities for women, and emphasis is laid on the legislative and other measures responsible for the deterioration. It is stated that "the repercussions of protective laws should be re-examined by the Government with this object in view, otherwise the I.L.O. objective of security for women, which has been accepted by the State, will not be achieved." The conference's plea for efforts to popularise family planning among industrial communities deserves strong support.

COAL POLICY IN INDIA

By

Andrew Farquhar

This booklet consists of reprints of articles written by Mr. Andrew Farquhar, former Coal Adviser to the Tata Iron and Steel Co. Ltd., which have appeared in *Capital* in recent years. As expert analyses of India's coal problems and policies, they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

COMPLAINTS ABOUT THE CUSTOMS

CUSTOMS formalities seem to have steadily increased in number and complexity in recent years. Not surprisingly, complaints too have increased, especially about the provisions of the Sea Customs Act which relate to procedures. Some provisions are difficult to comply with in the day-to-day work connected with the import and export trade, and the difficulties are aggravated by the rigidity shown in administration. Complaints against the Customs authorities are old and hoary; as a memorandum submitted by the Indian Merchants Chamber, Bombay, in reply to the questionnaire issued by the Customs Reorganisation Committee points out, the appointment of an expert committee with representatives of trade, commerce and industry to review the provisions of the Act and to formulate proposals for reforming Customs procedures and practices has been suggested on more than one occasion.

The main difficulties at present relate to the classification and assessment of goods under the Customs Tariff Schedule and the delays in completing assessment proceedings. Chemical and analytical tests take too long. There are sudden changes in the classification of articles and consequent changes in the rates of duty, without prior notice being given to the trade. The procedures adopted at different ports are often not uniform and co-ordination between the import trade control and the Customs authorities is poor. Officials sometimes demand documents which merchants are not in a position to furnish. The basis of classification of articles for the purpose of assessment is frequently changed. A peculiar example is that of certain costly fountain pens which were imported in Bombay some time ago; they were classified not as "fountain pens" but as "articles plated with gold and silver" and charged to the much higher rate of duty which thus became applicable. Since the Customs authorities persisted in not recognising them as fountain pens, the importer had to go to a court of law to get the decision reversed.

* * * *

Analytical tests are sometimes necessary for articles which are imported or exported, but there have been many complaints about the inordinate delay in submitting reports on these tests. The Chamber says that "in the case of seasonal goods particularly, such difficulty is more keenly felt as the traders are likely to be put to financial loss because of the delay in the clearance of goods and the possible fall in the prices of the goods during the intervening period. It is true that importers are allowed to clear the goods when the classification of the commodity is in dispute, on their executing a bond undertaking to pay the difference in the duty as determined on the basis of the results of the analytical tests. Such guarantees are, however, required to be countersigned by banks for which importers have to deposit large amounts with the banks." The considerable amounts which would normally be available for business purposes are thus locked up for a long time.

The Chamber is right in suggesting that when a change in the classification of a particular article is proposed, the trade should be previously consulted and the change should be announced through a public notice so that traders may make the appropriate adjustments. It is necessary to make Customs procedures at different ports uniform. Often the same article is assessed to duty at different rates at different ports. At times, the import of an article is allowed at one port but not at another. To ensure better co-ordination between the Customs authorities on the one hand and the import trade control authorities on the other, it is suggested that a body composed of officials from both departments should be set up to determine the classification of articles and "to advise the importers concerned promptly." Traders would not have been as helpless as they are if there had been adequate appellate provisions under the Sea Customs Act. "As the Act stands at present, it only provides for departmental appeal and there is no provision for appeals before an independent appellate authority." It is necessary, therefore, to amend it with a view to setting up an independent authority, on the lines of the Income Tax Tribunal, to hear appeals arising from orders passed by Customs officials. The Chamber suggests that this body should be independent of the Ministry of Finance and should be under the administrative control of the Law Ministry.

CURRENT COIN

A Good Year for Jay Engineering.—Sir Shri Ram, chairman, tells shareholders in his address at the latest annual general meeting that the Jay Engineering Works Ltd. has shown good working results during the year ended March 1957. (A fuller version of the speech appears elsewhere in this issue.) The value of sales has gone up to Rs. 3.9 crores from Rs. 3.1 crores in the previous year, and profits before tax have increased to Rs. 35.7 lakhs from Rs. 27.3 lakhs. This result has been achieved in spite of greater difficulties in obtaining essential raw materials such as steel, pig iron and hard coke. The company continues to place strong emphasis on reducing costs and improving quality. Explaining some of the important features of its operations, Sir Shri Ram says that the new factory in Bansdhani has been completed, and most of the fan sections have been shifted there. A needle plant has been put up, a heavy industrial machine has been produced for the manufacture of a new class of sewing machines, and efforts are being made to turn out the zig-zag type of sewing machine. The chairman says that private industry has expanded considerably during the first five year plan period, and it might well repeat the record during the second. The main problem is not only to raise production, but also to earn more foreign exchange. Several industries such as cotton textiles, rayon, sugar, vanaspati and engineering including bicycles, sewing machines and fans, could pool their resources in expanding overseas markets for Indian goods; they could, on a co-operative basis, join voluntarily in "an effort at propaganda and publicity, development, study of markets, inspection of goods prior to export, and such other steps as would result in exporting larger volumes." Even those who are not exporters today, adds Sir Shri Ram, should take part in the drive. He appreciates the export promotion measures the Government has taken, and says that the success which his concern has achieved in the export field, has been facilitated by the Government's policy of giving a drawback of duty for goods exported, and supplying a certain quantity of steel at the controlled rate on the same basis.

* * * *

Taxation and the Foreign Investor.—The high rates of personal and corporate taxation in India are among the major factors which discourage the foreign investor. In his statement circulated to shareholders of the Malayalam Plantations Ltd., Mr. H. W. Horner makes some pertinent observations on the subject. (A fuller version appears on a later page.) He appreciates the difficulties of the Indian Government in finding resources for its ambitious five year plans; and, in fact, feels that a larger measure of "the plan's success (even if success was not complete) would have resounding consequences for good—in Asia more especially, but to a greater or less extent in most countries of the world." A more prosperous India would sell more to other countries and buy more from them. Last year, she was the U.K.'s fourth largest customer and the U.K. bought one-third of India's exports. Even so, the taxation policy of this country lacks realism, Mr. Horner says. Central taxation is overwhelming, and the State Government of Kerala exacts further taxation from plantations for its own purposes. So it is "not lack of sympathy with Indian ambitions, but dire necessity, which forces strong representations to the Government of India against the almost unbearable burden of taxation levied under numerous heads." Referring to the Government's labour policy, Mr. Horner says that labour costs in one form or another have been rising due to tribunal awards, higher wages and bonuses, provident funds, superannuation gratuities as well as various other amenities for employees obligatory under the Plantation Labour Act. The board of his company is in "agreement with the endeavours to improve conditions for Indian labour generally." But the vast and rapid improvement in the conditions of labour involves heavy expenditure, and cannot be achieved permanently "by drawing the lifeblood from producers such as this company, and from industry and trade generally." The effect of these measures is primarily to divert the resources of business concerns towards increasing the wages and amenities of those who are already in employment, and only secondarily towards expanding the general scope for productive employment. "It appears that from many aspects, the course which the Government of India is pursuing is destructive of its avowed aims, and also destructive of the sources whence means to achieve its aims might be provided." The Indian Government is urgently seeking foreign loans and credit for projects under the second five year plan, but the many restrictions which have been imposed on the freedom of action of companies and the crushing burden of taxation are "calculated to make any prospective investor in India pause." Mr. Horner refers to reports of lawlessness and insecurity in Kerala plantations. All except two of his company's 31 estates are located in that State. The Government there has, however, been realising the danger of the situation "and the possible repercussions on itself if the situation is not rectified, and police have been posted to spots of actual or threatened trouble."

* * * *

Trends in Indo-British Trade.—The latest statistics taken from the U.K. Trade and Navigation Accounts suggest that the level of Indo-British trade might now be declining after having risen almost steadily in recent years. The decline in value seems a natural consequence of the sharp cuts in imports announced by this country during the past four months, and of the fall in world commodity prices. Between January and August 1957, the value of India's exports to the U.K. was running at a level approximately 10 percent higher than in the corresponding period of last year. But in August alone, the value was 10 percent lower. Tea, which is by far the most important export, was mainly responsible for both these changes; the fall in August reflects the hand-to-mouth policy which British buyers have adopted since the beginning of the new marketing season. It is encouraging to note that leather exports remain at a relatively high level; this is among the more important of the commodities which India sells to Britain. Textiles, cotton and other, were also doing well earlier in the year, but have perhaps not been doing so well lately. Tobacco exports to Britain have fallen. The main interest of the trade statistics lies in the light they throw on how India's purchases from the U.K. might be affected by the drastic import cuts this country has had to impose since July this year. The total value of imports from Britain during January-August 1957 was higher than in the corresponding period of last year; but in August alone imports were nearly 30 percent

The hard iron lay dead in slumber deep
And we stirred it to life, ho!
In the dark depths of a million years it lay hid
And we stirred it to life, ho!
Tamed by our strong hands
It sings to the tune we call.
Its silence of long years have we broken, ho!
The dead doth stir with new life today
And rushes forth the wide world to conquer.
Fearless with our two hands today
Its reins we hold strong, ho!

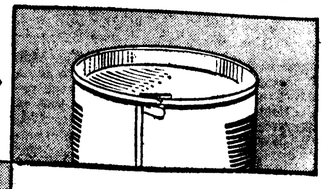
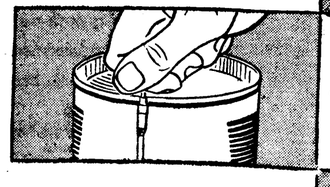
a pilfer-proof package for every product!

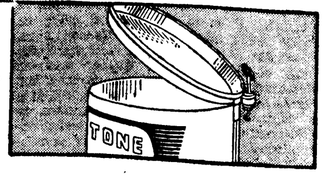


The manufacture of Metal Box's range of pilfer-proof containers and closures is backed by an active Research Organisation. The Central Laboratory in Calcutta assists suppliers in developing improved printing inks, surface finishes and protective lacquers, and maintains strict routine tests for all incoming raw materials to the Metal Box factories; on the spot control of operations is carried out by Branch Laboratories. This ensures pilfer-proof containers and closures of the highest quality, superbly printed and finished. Expert scientific advice from Associates throughout the world is available to assist in solving customers' packaging problems.



A METAL BOX PILFER-PROOF CONTAINER

MB KEY OPENING CAN



The MB Key Opening Can has both the top and bottom double seamed on for maximum protection.

The can is opened by winding off a strip round the can with a special key.

The lid fits back accurately after opening — an effective reseal. It is impossible to disguise the fact that the can has once been opened.

less. Almost all the major categories of imports were running at a higher level during the earlier months of this year than in the corresponding period of last year; but in August alone almost every major category showed a decrease as compared with August 1956. Capital goods predominate in this country's imports from Britain; and it is not surprising to note that even their value seems recently to have declined. Machinery imports from the U.K., for instance, were 16 percent down in August this year compared with the corresponding month of 1956; earlier, they were running at a level approximately 5 or 6 percent higher. During the eight-month period, January-August 1957, India's exports to Britain increased to £105.9 million, against £95.7 million in the corresponding period of last year. Imports were £119.2 million against £113.3 million. India's trade deficit thus narrowed to £13.3 million, against £17.6 million. Exports during August this year were £9 million, against £10 million in August 1956. Imports were £10.3 million, against £14.2 million. The trade gap was thus £1.3 million, against £4.2 million in August last year. A single month's figures do not necessarily always provide a clue to long-term trends, but those for August do suggest that Indo-British trade may be adjusting itself to the pattern dictated by this country's external payments crisis.

* * * *

Expansion in Paper.—The paper industry has made remarkable progress in recent years. The production of paper and paper-board in 1956 was higher than in any of the five preceding years. It is still rising; during January-June 1957, it was 101,800 tons, against 94,684 tons during the corresponding period of 1956. The uptrend is likely to continue as the industry has launched ambitious expansion programmes. Speaking at the annual general meeting of the Indian Paper Mills Association, Mr. A. K. Jain has said that a large number of new units have been licensed, and the target under the second plan is for a capacity of 450,000 tons and a production of 350,000 tons, excluding newsprint. The demand for paper and paper-board is likely to increase substantially, especially in view of schemes for industrial expansion and educational progress. It is, therefore, necessary that the industry should prepare itself for supplying all the paper products required, and that they should compare favourably in quality and price with the imported varieties. "It has been the contention of the industry that instead of importing finished products utilising valuable foreign exchange, the required capital machinery should be imported so that the various items of paper and board obtained from abroad may be made in the country itself. The policy of tightening up of imports pursued by the Government is, therefore, to be welcomed in this context." Although an immediate shortage of raw materials such as bamboo and grass is not feared, it is necessary to have a long-term policy. Mr. Jain suggests that a programme of fresh plantation on a large scale should be launched and specific forest areas reserved for the industry. Efforts to find other suitable raw materials are necessary. Research is being carried on at considerable expense by individual units and has resulted in the discovery of new pulp materials such as bagasse for paper and board making. There is also a need for a uniform and co-ordinated policy for the leasing of forest areas and royalty rates charged by State Governments. Referring to transport, Mr. Jain says that the facilities available at present are "grossly inadequate." Because of the movement of higher priority items, no booking is available at times for long periods for the transport of raw materials. The mills should, therefore, be helped not only to move their monthly requirements but also to build adequate stocks. A number of anomalies exist in the levy of excise duty on paper and paper-board and they arise mainly from "incomplete definitions and classifications." It is necessary to revise the latter on a more rational basis.

* * * *

Endorsement of Cheques.—The endorsement of cheques and of other orders for the payment of money ceased to be a requirement of the British law from 17th October On that day the Cheques Act, 1957, came into force. The Act is the product of the recommendations of the Mocatta Committee, which set out to consider the problems of endorsement. A great deal of time and labour has in the past been spent by customers of banks in endorsing cheques and by the banks in scrutinising the endorsements, most of which were superfluous because the vast majority of cheques issued were paid into the credit of the accounts of the payees and were not negotiated. With something like 700 million cheques being handled each year, the saving in time is by no means negligible. The solution to the problems of dispensing with endorsements chiefly centred on the need to continue the protection of the banker from liability for conversion in dealing with cheques for people who had no title to them: other main concerns were that of ensuring that the paying banker obtained a good discharge for the drawer and that the collecting banker could not be sued by the true owner of a cheque which had been stolen. The Cheques Act, 1957, achieves this purpose by providing that a paying banker acting in good faith and in the ordinary course of business would obtain a good discharge notwithstanding that he paid without endorsement or under an irregular endorsement. So far as the law is concerned, endorsements are now to be confined to cases of negotiation. The banker has thus been given considerable freedom in operating his banking facilities. The Bankers' Clearing Committee has recently issued a statement defining the cases in which endorsement will continue to be necessary and where it will be unnecessary. Broadly, the payee will still have to endorse (1) cheques cashed or exchanged across the counter, (2) cheques negotiated, *i.e.*, transferred to another person, (3) bills of exchange, (4) travellers' cheques, (5) drafts drawn on certain Government departments, etcetera. Combined cheque and receipt forms will continue in use (though their use will be discouraged by the banks), and a bold letter "R" will be printed on their face.

* * * *

Company Law Association.—Some prominent business men, chartered accountants, lawyers and persons holding responsible positions in chambers of commerce and business houses in Bombay have decided to form a Company Law Association of India. Mr. M. H. Gandhi presided over the meeting at which the decision was taken. The aims of the Association are to stimulate the study of applied and comparative company law; to hold conferences, meetings, lectures, symposiums, seminars and classes; to publish literature; and to serve as a link between the Government and the business community and also those interested in the subject at home and abroad. Mr. Gandhi has commended the idea of starting such an association and pointed to the need for it at the present juncture. Mr. K. Venkoba Rao, the convenor, has said that the climate in India should be prepared for the advent of the managerial revolution which is already going on in Western countries. The meeting has appointed a sub-committee to draft the constitution and to take other steps. Companies and individuals interested in the move have been asked to contact the convenor, Mr. K. Venkoba Rao, at 15 Noble Chambers, Parsi Bazar Street, Bombay 1.

EXCHANGE AND EXPORT TRADE

THE witty gentleman who writes from Bhowanipur over the signature of "M. Adman" in the issue of this paper for October 7th has given what appears to be in his opinion a *reductio ad absurdum* of the theory that low exchange benefits the exporter. As a matter of fact, his figures prove what is the true theory on the subject. A low exchange, provided it be stable, does not ultimately benefit anyone; but a falling exchange does in fact benefit everyone connected with the export trade. The reason for this is that, as the rates for labour depend on many circumstances, they change more slowly than the price of any particular commodity. In the meanwhile the exporter gains. Mr. M. Adman points out that with exchange at five pence per rupee, the profit on the tea of 200 acres would be Rs. 95,100, while, if exchange fell to a penny, his profit would be Rs. 5,75,100. If he had carried his calculations a little further, he would have found that the sterling value of the former sum at the rates given is about £1,981, while of the latter sum the value is about £2,397. If both in rupees and in sterling the exporter of tea or other produce gets more, how is he then a loser? Supposing that the rupee went still lower than a penny, so that it might sing of itself:

"My shadow on the wall
Is grown so very small
That I'm not myself at all,
Molly Dear."

the gain to the exporter would go on increasing up to the time when the rupee would be valued at nothing at all. This intimate connection between infinity and nothing is one which very well deserves the consideration which the infinite leisure allowed to an inhabitant of Bhowanipur may enable Mr. M. Adman to give to it. It cannot be too clearly remembered that the interests of exporters are not the only interests, and that a falling exchange does not benefit everyone. But it is often said that it is a fallacy that a falling exchange benefits exporters of produce. If the evidence of arithmetic is to be accepted, this seems to be no fallacy but the truth.

FROM

CAPITAL

21st October, 1897

IF INTEREST on capital investment is your concern, you should take advantage of the high dividend which can be readily earned by capital invested in *STANDARD POWER FACTOR CORRECTION*. If you are an industrial consumer of electricity, it is probable that you are not effectively using all the power for which you pay. The complete, profitable answer is *STANDARD POWER FACTOR CORRECTION*. Most installations average 20% interest per annum on the capital cost of capacitors. The installation soon pays for itself, and thereafter it's all saving.

Let us, without obligation, tell you in detail how STANDARD POWER FACTOR CORRECTION can help you to cut costs and increase efficiency. Write to:

Without Prejudice

AN IMPORTANT DEFENCE IN CRIMINAL CHARGES

THE QUESTION OF MOTIVE

(FROM OUR LEGAL CORRESPONDENT)

THIS case gives some useful and practical information upon the construction of those sections of the Industrial Disputes Act the breach or non-observance of which may constitute criminal offences. In order that the non-legal reader may fully grasp the point involved, it is necessary for us to expatiate a little on two Latin words which, together, sum up a vital principle of our criminal law. Those two words are *mens rea* and they may be interpreted roughly as "a guilty mind directed to the performance of a criminal act".

When we think of the innumerable statutory offences which are the creation of Parliament in recent years, it will be realised that the doctrine of *mens rea* is one of the most essential and valuable safeguards that the ordinary citizen possesses. For example, it is an offence under Section 120 of the Indian Railways Act to be drunk on railway premises. X, let us say, is a total abstainer, constrained so to be for the reason, among others, that he is one of those who are readily and instantaneously affected by alcohol. He is travelling in a railway train when he suddenly develops a violently painful attack of colic. A fellow passenger who happens to be a doctor prescribes a strong dose of brandy as a palliative. The dose relieves X of his pain, but also relieves him of his sobriety. X is drunk. All the ingredients named in Section 120 have been satisfied. There is citizen X in a railway carriage in a state of intoxication. Nevertheless X would not be liable to conviction under the Section. Why? No *mens rea*.

The doctrine has its exceptions and limitations which we will consider. But generally speaking, before a person can be held liable for any offence three things have to be established: (1) that the impugned act was a criminal act, (2) that it was the act of the accused, and (3) that it was an act committed with a guilty mind. In other words, it has to be established that the accused intentionally did the forbidden act with knowledge of all the wrongful circumstances which the statute seeks to prohibit.

That is the general principle. But for purposes of consideration of the scope of the doctrine of *mens rea* and its limitations, statutory offences must be classified under three heads. In one class the offences are so worded as to indicate clearly that *mens rea* is an essential ingredient of the same. This is usually done by the use of such words as "knowingly", "wilfully", "fraudulently", etcetera. There is a second class of offences called offences of strict or absolute liability where the maxim *mens rea* is excluded expressly or by necessary implication. There is a third class of case—and the one we are about to discuss appears to belong to that category—where the language used is such that it neither expressly includes nor avowedly excludes the ingredient of *mens rea*. Sections 29 and 22 of the Industrial Disputes (Appellate Tribunal) Act, 1950, with which the case we shall discuss is concerned, do not speak of the criminal acts in question having been committed wilfully or knowingly. Nor, on the other hand, have any words been used therein wherefrom it could be inferred that the ingredient of *mens rea* has been excluded therefrom. The question is what is the principle to govern such cases?

* * * *

We are indebted for an answer to the above question to a most interesting and exhaustive consideration of the whole subject in a judgment just published, of Chowdhry J. in the Allahabad High Court.[1] We wish we had space to quote it more fully but two extracts must suffice.

"There is a presumption that *mens rea*, an evil intention or a knowledge of the wrongfulness of the act is an essential ingredient in every offence; but that presumption is liable to be displaced either by the words of the statute creating the offence or by the subject matter with which it deals and both must be considered."[2]

And from another English case which Chowdhry J. cited it rather looks as if, in a doubtful case, the court should lean towards the existence of the doctrine: "There are statutes.....in which Parliament has seen fit to create offences and make people responsible before criminal courts although there is an absence of *mens rea*, but it is certainly not the court's duty to be acute to find that *mens rea* is not a constituent part of a crime. It is of the utmost importance for the protection of the liberty of the subject, that a court should bear in mind always, that unless a statute, either clearly or by necessary implication, rules out *mens rea* as a constituent part of a crime, the court should not find a man guilty of an offence, unless he has a guilty mind."[3]

And that brings us to the 87 workmen of Delhi whose services were terminated in circumstances which, it was alleged, rendered their employers criminally liable. The writer feels that he has rather spoilt the whole story, as a story, by the foregoing exordium on *mens rea*. It is his respectful object to make the non-legal reader think out the solutions to the various legal problems for himself, wherefore the facts are generally presented first without argument or statement of the principles involved. However, this time we have ruined the whole show by disclosing that the answer to the problem depends entirely on those two words, *mens rea*. The facts of the case were that there was a dispute between the employers and employees of a certain flour mill. The dispute was referred to the Industrial Tribunal and the award of the Tribunal was against the workmen. An appeal was taken to the Appellate Tribunal and, while the appeal was pending, a notice was sent by the management of the flour mill to 87 workmen informing them that the mill was being closed down with effect from the morning of 12th March 1954, and that therefore the services of these 87 workmen were being terminated. The management had not previously obtained the permission of the Appellate Tribunal before taking this step and so the management, as to four members of it, were prosecuted by the State for the offence punishable under Section 29 of the Industrial Disputes (Appellate Tribunal) Act, 1950. It was alleged by the prosecution that they had deliberately dismissed the workmen while their appeal was pending before the Appellate Tribunal. The magistrate in Delhi acquitted the four accused persons, and against this order of acquittal the State appealed to the Punjab High Court in Delhi.

Now a conviction for contravening Section 22 is an extremely serious matter. It may involve an individual employer or where the employer is a company "every director, manager, secretary, agent or other person concerned with the management thereof unless he proves that the offence was committed without his knowledge or consent", in imprisonment up to six months or a fine up to Rs. 1,000 or with both. This is the part of Section 22 relevant to the present case: ".....during the pendency of any appeal under this Act no employer shall.....(b) discharge.....whether by dismissal or otherwise any workman concerned in such appeal, save with the express permission in writing of the Appellate Tribunal."

* * * *

So the prosecution had to prove (1) that an appeal was pending. It was. (2) That while the appeal was pending the workmen had been discharged. They had been. (3) That the written permission of the Appellate Tribunal had not been obtained. It had not. There is no doubt that if that was all that had to be proved a conviction would be certain. But is an offence under this Section one of those statutory offences of which *mens rea* is an essential ingredient? You will note that there is not a word in the Section, such as "knowingly", "wilfully", "fraudulently", "arbitrarily", "capriciously", "maliciously" or the like. It is a plain, peremptory prohibition. "No employer shall....." So the offence does not come within the first of the three classes mentioned earlier in this note. On the other hand, the wording of the Section neither expressly includes nor avowedly excludes the ingredient of *mens rea*.

The High Court adopted the view that the existence of *mens rea* was essential to constitute an offence. Said Khosla J: "It is quite clear that Section 29 of the Act makes punishable a criminal offence. A criminal offence is only committed when an act which is forbidden by law is done voluntarily. English jurists give the name of *mens rea* to the violation which is the motive force behind the criminal act. If there is no *mens rea*, no offence is committed although the act may prove detrimental to individuals. It is only voluntary acts which amount to offences. If a person is compelled by force of circumstances to perform an act forbidden by law he cannot be said to do it voluntarily and therefore he will not be held (criminally) liable for the consequences of that act.....The respondents were forced to close down the mill because no other course was open to them .....The mill found itself in a state whereby to run each day would mean financial loss which would go on mounting as time passed. No employer when faced with such a situation can keep his mill open merely because the provisions of Section 22 of the Act require him not to.....dismiss any of his workmen without the permission of the Appellate Tribunal. The object of Section 22 is to safeguard the interests of the workmen and to keep them secure from any kind of victimisation by the employers while their dispute is pending before the Industrial Tribunal. In the present case there can be no question of victimisation....."

WHAT I called "The Unnecessary Strike" has now ended, for which happy consummation relief has been universal. But the thankful public may find it hard to decide just whom to thank for it. Dr. B. C. Roy's good offices were without a doubt useful in the closing stages of the negotiations between the bank employees and their harassed employers, but he will be the first to admit that it was no individual who brought the strikers back to work after a month of frustrating inaction. The strike lost all legality when the Government of India declared it illegal. As for morality, it never had any. Since, however, the absence of neither is guarantee that there will not be more strikes of the same crippling nature with less reason, all concerned may be well advised to study the affair carefully. The public, which refused to be blackmailed in spite of the Puja and rightly withheld all sympathy from the strikers, may have to show its displeasure in the future a little more articulately, if it is not to be held to ransom again. I do not mind saying that the daily Press seemed, in this instance, to be sadly behind public sentiment in not condemning the strike more unequivocally. The Government, which was forced into a welcome measure of realism by the healthy fear that concessions made to Calcutta bank employees would cost itself dearly in due course, can still be said to have acted indecisively. The lesson for the Government is that asking everybody else, day in and day out, to be the "ideal employer" (whatever that means) is an expensive business—expensive for the country, and not merely for a few supposedly rich men. It is the trade union leadership of the bank employees, however, who should find the strike a very chastening experience. The gentleman who on Saturday last wrote in the local communist daily an editorial called "Successful Conclusion" can scarcely have been unaware that he was whistling in the dark, a very scared soul. Bankers, who have throughout the dispute shown the utmost consideration for their employees, would be the last persons to rub the defeat in. The employees' response should be a firm refusal to succumb to irresponsible leadership with a stake in economic disruption, which does the maximum harm to the middle class—the class to which bank employees belong.

* * * *

Motor-cars, I have heard it said, have usurped in the sentiments of the Englishman the place once held by that noble animal the horse. That is as may be. My view is that the motor-car is a necessity of modern living, besides being an object of technical interest whose comfort and efficiency makes a great difference to the pleasures of those who must drive and ride in it. It is a good thing to recall these facts occasionally in India, because here the motor-car seems doomed to be regarded as an article of ostentation whose owner is not entitled to any privileges in the way of choice, value or protection from monopolistic manufacturers and unscrupulous dealers. What has prompted these rueful reflections is, of course, the annual motor show at Olympia, London. I read that this year's is the biggest on record, is exhibiting more models than ever before, and is expected to draw an even larger number of visitors. Thanks to the ban on private travel abroad, few of these are likely to be from India, a fact which—the Ministry of Commerce and Industry will no doubt appreciate—makes it all the easier to accept the motor-car situation in this country without too much adverse public comment. It is perhaps unfair to remind the Indian motorist of what he is missing, but at the same time it has to be remembered, to recall the words of George Bernard Shaw, that progress is only made by discontented people.

A DITCHER'S DIARY

The British and Continental motorist is now being offered more modern styling, better visibility, greater reliability, higher speed and an easier drive than his Indian counterpart is likely to see for many a year. Such marvels as two-pedal control, semi and fully-automatic transmission, overdrive and disc brakes are now becoming quite common on British production models. I see that Britain has regained her place as the world's largest motor-car exporter. And that suggests the reason why her products have shown such improvement in recent years—the word is "competition". One almost has to apologise for introducing it into the discussion of any Indian production problem these days. But without it—well, things are just going to stay as they are, I suppose, at least so far as motor-cars are concerned.

* * * *

That our municipal authorities should not wake up to anything until it has produced an accident, preferably fatal, is something Calcutta has learnt to take almost fatalistically as a matter of course. The eleven that died a few days ago when a house in British Indian Street collapsed paid eleven times the usual price, and in these inflationary days the city may yet not get value for it. The buck has been passed around as usual—the courts delay demolition, the landlord successfully tries to buy the inspector or he does not get the cement he wants when he does decide to repair his property. And then there is rent control as a permanent disincentive. All this is true in varying degrees, and the tenant may also be a restrictive factor in demolition, for he has no alternative accommodation to go to. Everything that needs to be done now to prevent a recurrence of such tragedies will remain undone for a long time, and everything that could be said on the subject has been said by now. That is my excuse for going behind the recent mishap and asking a more fundamental question. Has there been, in this country where personal kindness abounds as in few others, an unperceived decline in the value of the human life as such? The seriousness of the question precludes a ready answer. The famine of a decade and more ago, the distant but dehumanising effects of the war, and finally the mass slaughters before and after Independence were events which may well have left their mark on the collective ethos of the people. Those who find it so inexplicable that so much personal consideration should co-exist with such massive indifference to suffering on a large scale, would do well to remember that overpopulated communities could not possibly have the same attitude to the individual as seems only natural in small ones. Wherever the truth may lie, something deeper than an examination of bricks and mortar is clearly indicated. The inspector who is said to have been bribed, the court that is alleged to have delayed proceedings, the official stated to have ignored petitions for controlled commodities—all of them must have known that they were dealing with the lives of human beings. Or, did they know?

* * * *

We have always been told that photography is not an art to compare with painting. That may be so. But after my visit to the Kodak-sponsored exhibition of photographs at Artistry House the other day I am prepared to wager that there is every bit as much craft and technique involved. The display was certainly a wonderful opportunity for the amateur to make a glutton of himself. They were all there—all the tricks of the trade—and each one executed with the unparalleled *finesse* of a Spanish matador's *izquierida*. Wide-angle lens exposures, subtle lighting techniques, imaginative compositions, superb studies in portraiture, clever arrangements of commercial subjects, exceptional methods of printing and remarkably fine retouching, all jostled with each other for the spontaneous and drooling admiration of every "Brownie" owner. I would not be surprised if there were others like me who had to curb an instinct to go straight home and jump up and down on their pocket cameras. But there is a consolation; after all this was the professional touch. I am convinced that any one of those studies cost more in time, effort and cash than any overworked Ditcher could afford to devote to his entire photographic hobby, let alone a single photograph. For those who are inspired, however, there is always the leisure of retirement to look forward to; and by then they may have saved enough money to buy one of those prohibitively-priced lenses, which I am told are apt to make a difference. I believe that photography of this quality commands a not inconsiderable price—not very long ago it seems to have commanded a knighthood in the case of the late Baron. So here is at least one way of enriching an over-taxed, under-sized retirement pension if you are determined enough, or sufficiently gifted.

* * * *

Of course I agree that the H-bomb should be banned. The trouble is that this is rather like advocating the abolition of sin—the question is not "whether", but "how". But why the answer for so many people should be to tackle poor conscience-stricken Britain, and Britain alone, beats me. The fact that she is one of the few countries which still permits her citizens to criticise their Government has something to do with it, I suppose. But if anybody remains under the illusion that opposition to the possession of the H-bomb represents the feeling of the majority of the British people, I would refer them to the behaviour of Mr. Bevan now that he sees an election on the way. The popular view is: "Why pick on Britain"? The answer seems to be that it is a waste of time pleading with Russia or the United States, so Britain is the only one left for it. I cannot myself understand such a reason but I have heard it used before today to explain the difference between India's stand on the Hungarian and the Suez issues. I see the latest person to urge unilateral action on Britain is Mr. C. Rajagopalachari—who I recall was one of the first to recommend that India leave the Commonwealth as a protest against the attack on Egypt. Presumably he has decided, after all, that Britain has a soul worth appealing to. In a letter published in the *Manchester Guardian* he has said "I believe that people have realised the futility of bargaining, now that the mounting danger is so near". I am afraid he is going to be disappointed—most people in Britain still appear to believe quite firmly in the power of retaliation as the only method of discouraging aggression. Indeed, they do in pacifist India, as we have seen from recent public reaction to the threat in Kashmir. Would Mr. Rajagopalachari recommend that his own country disarm itself in the face of its enemies, however strong its views about the futility of war? I think not. And I also think that Mr. Rajagopalachari's opinions would carry greater weight in Britain if he could boast of having had a letter published in *Pravda* recommending the Soviet Union to take unilateral action. No, if mankind is ever to be free of the fear of these annihilation weapons it will only be through international agreement arrived at by hard bargaining. I cannot see any miracle short-cuts myself.

MALAYALAM PLANTATIONS LIMITED

DIVIDEND MAINTAINED

MR. H. W. HORNER ON CONDITIONS IN SOUTH INDIA

The Annual General Meeting of Malayalam Plantations Limited will be held on 14th November, 1957 in London.

The following is the circulated statement by the Chairman, Mr. H. W. Horner :—

Mr. G. H. Masefield retired from the Board on 31st March last in order to reduce his business responsibilities. On behalf of his fellow directors and of the members, I should like to place on record high appreciation of his valuable services to the company over a period of more than thirty years and regret at his departure. The directors appointed to the Board, as from 1st April, 1957, Sir Charles Miles, O.B.E. Sir Charles spent many years of his business life in Calcutta and has had wide experience in the production of tea and as a director of plantation companies. He is a welcome and valuable contributor to the functions of the Board.

A Year of Fluctuating Fortunes

Apart altogether from some political and labour unrest (largely inter-related) in South India, the company's financial year 1956-57 was one of fluctuating fortunes. Tea prices were maintained at a satisfactory level until June of last year (during which period only a very small quantity of our 1956-57 production was sold), but thereafter there was a steady decline until the Suez crisis towards the end of 1956. The closing of the canal in November of that year resulted in the diversion of teas for London auction via the Cape of Good Hope at extra cost and with an appreciably longer transit period. The delays thus caused brought a rapid advance in prices for a time but, as conditions gradually returned to normal, there was a further steady decline and at the moment prices are at a disappointingly low level. As I mentioned in my last address, crops in the early part of the year were affected by an exceptional drought and, although over the period November/March the intake was appreciably ahead of that for the corresponding period of 1955-56, the total for the year 15.2 million pounds, was more than 1¼ million pounds short of the estimated figure. The rubber crop harvested, 6.6 million pounds, was only slightly below that estimated and was sold in India at Government controlled prices.

Profit & Taxation

The profit for the year before taxation is £1,943,615, a slightly better figure than that for 1955-56 and, having regard to the circumstances to which I have already referred, may be considered satisfactory. We have had to provide for taxation of profits, in India and in the United Kingdom, sums amounting in the aggregate to £724,160, representing almost 70 per cent. of the gross profit, arrived at after suffering the expropriatory export duty on tea of about £350,000. As the rates of taxation levied upon profits are now higher in India than in the United Kingdom, the company derives no benefit from the provisions in the United Kingdom Finance Act, 1957, in respect of Overseas Trade Corporations. In the result, the balance after taxation is £358,524.

I should add a few words about the note appearing in the Balance Sheet regarding superannuation benefits to labour. This company, in common with many others, has a liability, affecting the labour on certain of its estates, to provide for the payment of retirement gratuities. The liability accrued to 31st March, 1957, is estimated at approximately £163,000, but payments will in normal course be spread over a number of years.

Appropriations

An interim dividend of 10 per cent. was paid in June with the intimation that the higher interim did not indicate a higher total for the year. The board are anxious to maintain the dividend at the rate paid for each of the past two years, viz. 25 per cent., notwithstanding the burden of taxation and the known and contingent future liabilities. They decided that a sum of £50,000 should be added to revenue general reserve and they have also added £126,395 to buildings, machinery, etc., special reserve in order to meet the expenditure for the year under that heading, so continuing the practice of many years past. In order to meet the final dividend of 15 per cent., absorbing £156,287 and making the total 25 per cent., it has been necessary to draw £50,000 from dividend equalisation reserve, leaving £131,202 to be carried forward to 1957-58.

Conditions for Labour

As a result of recent legislation of tribunal awards and in some cases, of negotiated settlements, the plantation industry in South India has to bear the cost of increased wages, bonuses, provident funds, and superannuation gratuities, as well as of the various amenities for employees obligatory under The Plantations Labour Act. On more than one occasion in recent years I have referred to the policy of the company to provide the best practicable conditions of service for all its employees and the board are in agreement with endeavours to improve conditions for Indian labour generally. But there is a lack of realism in India's tax proposals: taxation by the Government of India is overwhelming, and the Government of Kerala exacts further taxation for its own purposes. India has immense economic problems and is facing a balance of payments crisis. Her programmes for the first and second five-year plans are beyond her own resources and she has propounded taxation on a scale which can be described fairly as desperate. It would, however, be wrong and short-sighted not to recognize that a large measure of success (even if success were not complete) would have resounding consequences for good—in Asia more especially, but to a greater or less extent in most countries of the world.

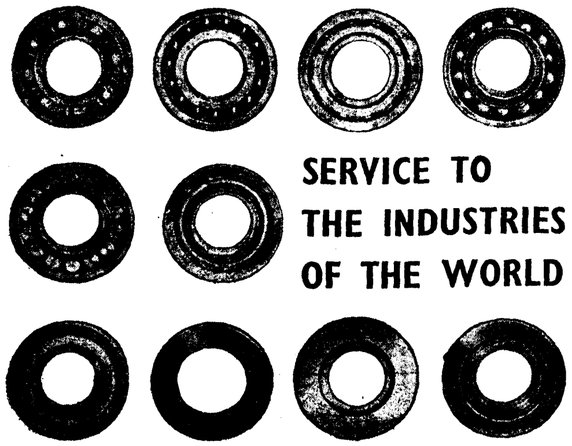
The target of the first five-year plan was, broadly, to restore agricultural self-sufficiency since some of India's main sources of food supply had been lost with the separation from Pakistan: that self-sufficiency has been achieved, in the main. The target of the second five-year plan is industrialization, and both economic and political considerations urge speed. It is the concern of the British Commonwealth to assist India by every practicable means to achieve success, on grounds of common humanity, in order to endeavour to raise the pitifully low standard of living of the population—very little short of four hundred million souls—on grounds of the importance of building up political stability, by the consent of a contented people of so large and potentially wealthy a country, and on the grounds of developing reciprocal trade with India—all helping to swell the stream of world trade.

Prosperity of India

The more prosperity comes to India, the more of the products of other countries she will be able to buy. Last year, India was the fourth largest market of the United Kingdom, ranking after the U.S.A., Australia, and Canada. On the other side of the account, the U.K. took one-third of India's exports. It is not lack of sympathy with Indian ambitions, but dire necessity, which enforces strong representation to the Government of India against the almost unbearable taxation levied under numerous headings. We are all interested in the prosperity of India: prosperity, like peace, is one and indivisible in the world of to-day.

Vast and rapid improvement in conditions for labour, which involve heavy expenditure, cannot be achieved permanently by drawing the life blood from producers such as this company, and from industrialist and trade generally. It is noteworthy that the diversion by the Government of the resources of this and other concerns is primarily towards increasing the wages and amenities of those who are already in employment and only secondarily towards expanding the general scope of productive employment. It appears that, from many aspects, the course which the Government of India is pursuing is destructive of its avowed aims, and also destructive of the sources whence means to achieve its aims might be provided if the headlong speed, apparently regardless of all consequences, were slackened. Meanwhile, the Government of India is urgently seeking loans and credit to continue the programme of the second five-year plan.

Responsible Indian Ministers, including the Minister of Finance, have made on a number of occasions statements that the influx of foreign capital is necessary. The crushing burden of taxation on companies already established, coupled with many restrictions on their freedom of action, are calculated to make any prospective investor in India pause.



A New State

During 1956 a new State of Kerala was created by the Government of India. It incorporates the greater part—almost all—of the Malayalam speaking districts of South-West India. The States of Travancore and Cochin as well as the District of Malabar and part of South Kanara are now merged in Kerala and all except two of this company's thirty-one estates lie within it; the two are in the State of Madras. In the Kerala State elections of 1957 a majority of the parliamentary seats was won by candidates of the left and a Government was formed which is described as Communist. This appeared to lead to a number of disturbances, originated in many cases by estate labour and influenced by outsiders; these sometimes developed into lawlessness and in some cases resulted in violence. The widest publicity has been given to these happenings in the Press in South India and to the demand by representatives of the planting industries that the police should be permitted to do their duty of preserving law and order. There have been indications recently that the Kerala Government are becoming conscious of the danger of the situation and of possible repercussions on themselves if it is not rectified, and police have been posted to spots of actual or threatened trouble.

Crop Prospects

Prospects of crops anticipated for season 1957-58 are at the present time encouraging. The estimates are about 17½ million pounds of tea and 7 million pounds of rubber. In markedly more favourable climatic conditions than in the previous year for the six months to the end of September 57 per cent. of our tea estimate and 45 per cent. of our rubber estimate had been harvested. Members have been informed previously that, for some years past, a programme has been followed of manuring tea in steadily increasing quantities as increased crops result. As regards rubber, older areas are being uprooted and replanted with selected materials as rapidly as is economically practicable. The Indian Rubber Board have recently introduced a replanting subsidy scheme which should be of help in raising the general standard in South India, where much of the acreage is owned by small growers. It is difficult to forecast the trend of tea prices, but at present, as a result of world production exceeding demand, considerable stocks have accumulated, especially of teas which do not fall into the category of best quality, and demand is likely to be slow. Quality teas are in keen demand and realize satisfactory prices. Rubber will continue to be sold in India at prices fixed by the Government.

The company is deeply indebted to the European and Asian staff, and to the estate labour generally, for their steadfastness in most trying conditions, not without incidents of lawlessness. I am sure you will wish to send them a message of thanks and acknowledgment of their courage and forbearance, and also to thank the company's V.A.'s and Eastern Agents for their unremitting attention to the company's affairs in the difficult circumstances which I have mentioned.

SERVICE TO THE INDUSTRIES OF THE WORLD

that has been the aim of SKF from the very beginning. An all-embracing service like this demands a comprehensive range of bearing types to meet each particular need. Of these different bearing types SKF has designed :

- the self-aligning ball bearing, which can accommodate slight misalignment of shafts or bearing housings.
- the spherical roller bearing, also self-aligning, and with a higher radial carrying capacity, size for size, than any other type of bearing, as well as a high thrust carrying capacity.
- the cylindrical roller bearing, which is able to carry heavy radial loads at high speeds.
- the spherical roller thrust bearing, which is able to carry heavy thrust loads at relatively high speeds.

In addition, SKF manufactures single row, deep groove ball bearings, angular contact ball bearings — many of them incorporating improvements introduced by SKF over the original design. SKF manufactures bearings in sizes ranging from 10 mm in outside diameter to over 1400 mm; bearings which can operate at speeds of over 100,000 r.p.m. and bearings with a carrying capacity of over 2000 tons at low speeds. Now and in the future, you will find that the 8,000 types and sizes manufactured by SKF ensure the use of the right bearing in the right place.

THE JAY ENGINEERING WORKS LIMITED

STEADY PROGRESS OF COMPANY MAINTAINED

CHAIRMAN SIR SHRI RAM'S REVIEW

The following is the text of the speech delivered by Sir Shri Ram, Kt., Chairman of The Jay Engineering Works Ltd. at the Annual General Meeting of the Shareholders of the Company held at Calcutta on the 16th October, 1957.

Gentlemen,

The Balance Sheet and Profit & Loss Account and the Directors' Report have been in your hands for some time and with your permission I will take them as read.

The year under report was one of steady progress as in the past, which is evident from certain figures given below :—

Particulars.	Year ending 31-3-1956	Year ending 31-3-1957
	Rs.	Rs.
Sales ...	3,05,31,764	3,89,49,999
Profit before providing for Taxation ...	27,26,497	35,76,491
Number of Workers ...	2934 Nos.	3506 Nos.
Number of Usha Schools ...	150 Nos.	196 Nos.
Number of Students in Schools ...	11,000 Nos.	15,000 Nos.

As mentioned last year, we have been able to put on the market a Table Fan for Rs. 65/- and a Ceiling Fan for Rs. 105/-.

We are continuously making efforts to improve the quality and reduce the costs of our products and with success.

The erection of the factory at Bansdhani of which I made a mention last year, has been completed, and most of the Fan Section has been shifted to the new factory and is running satisfactorily. I can say with some pride, that it is one of the best laid out factories in the country.

The Needle Plant was put up during the year under report, and its production is steadily going up. The quality is absolutely satisfactory.

I am glad to say that we have been able to produce a satisfactory Heavy Industrial Machine also and we hope the same will go in production by early next year, and thus we will be meeting the country's needs in yet another class of Sewing Machines.

We are also making efforts to design Zig-Zag type of Sewing Machine, and we hope to succeed in this effort soon.

The difficulty for obtaining various raw-materials, particularly Steel, Pig Iron and Hard Coke is greater now than what it was last year.

I am glad that the Government of India have, to some extent, made it easier to get draw-back on goods exported, and will also supply a certain quantity of Steel at controlled rate on the basis of goods exported.

Foreign Exchange

Last year I drew the attention of brother industrialists, to the importance and necessity of taking steps towards increasing exports, and earning foreign exchange. The position has not improved, and we all know the difficult foreign exchange position in which the country finds itself today, and I feel that Indian Industry as a whole owes a duty to the country in this hour of need.

Indian Industry has arrived at its present stage of expansion and development, as a result of various reasons—the Swadeshi Movement of 1905, the spirit of Swadeshi as manifested in the boycott of foreign goods, the protection given from time to time to industries, due to the pressure of the nationalist movement, and more recently, the restriction of imports of manufactured goods.

It is true that private industry has expanded very considerably, and has exceeded its quota of performance during the first Five-Year Plan. Probably, this will be repeated during the Second Plan as well.

It is also true that the rate of contribution towards the increase in national income is higher, in the case of industry, than it has been in any other major sector of economy.

It is also creditable that the prices of industrial products have increased at a lower rate, as compared to either food products, or industrial raw-materials, as may be seen below :—

	Rise in Price Index between Oct. 1955-Sep. 1957
1. Food Products ...	+29.2%
2. Industrial Raw Materials ...	+21.6%
3. Manufactures ...	+ 9.9%

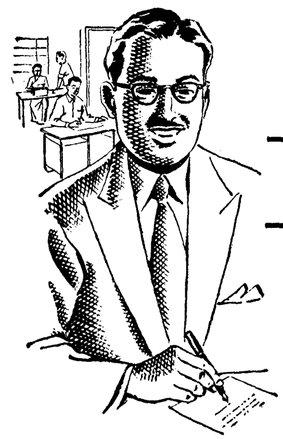
This, it might be emphasised, has been so in spite of sizeable additional burdens, on account of various excise duties, or increases in excise duties levied recently, and sales taxes, etc., etc.

Nonetheless, in these difficult times, attainment of targets—even exceeding of targets—and maintenance of lower and stabler price levels are not enough in themselves. Indian industry owes more than this to the country, at this difficult time. I am convinced that if we fully make up our minds, and make determined and sincere and honest efforts, Indian industry can export goods of the additional value of about Rs. 50 Crores a year.

I realise that there are difficulties in the way, and that often the return in foreign markets is much smaller, than the return from sales within the country. But this is not the time for industry to concentrate on its immediate gains, or on its self-centred purposes.

I am glad that in this connection the Export Promotion Board recently set up, has made some valuable suggestions. I hope that the various Ministries will take early action, and implement the suggestions.

Co-operative Effort



So far as the industry itself is concerned, they could very well join, on a voluntary basis, in a co-operative effort at propaganda and publicity, development, study of markets, inspection of goods prior to export, and take such other steps as would help in exporting larger volumes than has been the case in the past. It is equally important that those who are not exporters at all today, should also take part in the drive towards attaining greater exports.

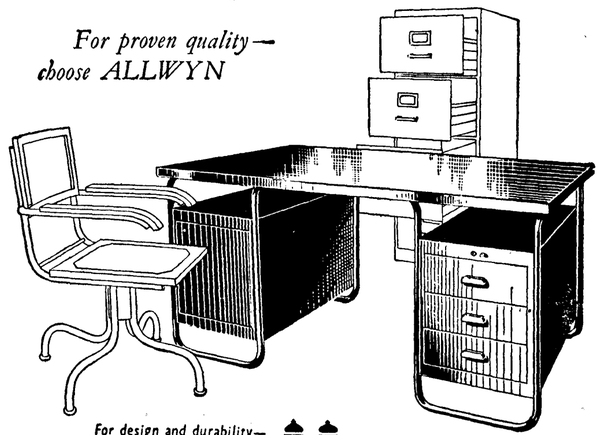
Naturally, the greater responsibility in this matter would attach to the bigger industries. The case of the Cotton Textile Industry, faced with huge stocks and poor demand, comes readily to my mind. It is tragic that in the largest Indian industry, there should be talk today about closing down factories, or reducing shifts when greater and greater production is necessary in the national interest. Besides Cotton Textiles, Rayon Weaving factories, Sugar Mills, Vanaspati factories, and various Engineering Industries like, Bicycles, Sewing Machines, Fans and many others could join hands for achieving larger exports in this time of the country's need.

On our part, I am glad to state that the Directors of The Jay Engineering Works have made up their mind, to steadily increase their exports and thus earn, in whatever measure they can, additional foreign exchange for the country.

And I hope that my friends in various industries will forgive my presumption in giving this advice to them.

Last year I closed my remarks by expressing the hope that it will be possible for us to give better account of the working of the year under report, and I am glad to say that due to the efforts and hard work put in by my colleagues at all stages, right from Mr B. S. Agarwal and Mr. T. R. Gupta to the junior-most worker, the results are quite satisfactory for which I am extremely grateful to them.

Compare Allwyn tubular steel chairs and tables with any you've used so far! Such practical tested designs! Comfort that's exceptional! Strength that assures years of faithful service! Only India's



Office Chairs and Tables

foremost furniture stylist, Allwyn, can give this dependable value—and yet help you save! See Allwyn before making your choice.

Tubular steel chairs with spring-cushioned seats and padded backs, upholstered in rexine. Also revolving chairs.

Tubular steel tables, with box, drawers, linoleum top-covers, automatic lock.

WIDE FLUCTUATIONS IN STOCK MARKETS

INDUSTRIALS LOWER: GILT-EDGED UNCHANGED

London, 23rd October.

PRICES in the stock markets fluctuated widely during the past week, and, on balance, recorded further losses. The immediate dominating influences were the deterioration in the Syrian situation and the renewed weakness of Wall Street. The markets suffered a sharp fall in the middle of the week following Mr. Khrushchev's letter, but developed a better trend subsequently as the tension in the Middle East tended to ease. The recovery movement was short-lived, however, in the face of a further sharp break on Wall Street. The persistent weakness there reflected the nervousness about the economic outlook in the U.S.A. where nearly all indications are that economic activity is slowing down. Apart from these two factors, the stock markets remained very sensitive and uncertain under some obscure influences at home following the increase in Bank rate and other measures announced by the Government a month ago. Full details of these measures have yet to be announced by the Chancellor. Sterling suffered a sharp fall under the influence of the Syrian situation, but recovered later as the tension eased. Gilt-edged securities reflected this movement in sterling, and, on balance, recorded very little change. Foreign bonds were dull and rails tended easier, while widespread and substantial losses were sustained by dollar stocks in sympathy with Wall Street. The dollar premium, however, held fairly steady around 9 percent. The industrial market fell back sharply as the Syrian situation deteriorated, rallied as the tension lessened, but then fell back again under Wall Street's influence. Prices were mainly easier on balance, but slightly above their lowest levels. Oil shares fluctuated rather widely, but, on balance, recorded appreciable losses. South African gold shares and base metals fluctuated somewhat, but were mostly lower on the whole. Rubber shares provided the main exception in generally uncertain conditions following selective buying based on bid hopes, while certain issues improved on eastern buying. There was very little interest in tea shares which held fairly steady until a slightly better tendency developed reflecting the firmness of prices at the auctions.

The Money Market

During the early part of the past week, the money market experienced comfortable credit conditions, but in the later stages it felt the effects of the setback in sterling in the foreign exchange market, which resulted from nervousness about the international political situation. Money tended to become very scarce due to exchange operations and there was a hardning in the rate for day-to-day loans from 5½ percent to 5¾ percent. The turn of the week saw a further marked deterioration in the supply position and under the pressure of demand for funds, up to 6½ percent was paid. In spite of a large amount of assistance from the authorities, several market houses were forced to borrow from the Bank of England. Business in bills was varied, with the rate for January maturities hardening to 6½ percent, after 5-7/16 percent, during the easier phase of the week. For the fifth consecutive week, the money market made no change in its bid at the weekly Treasury bill tender, with the average rate practically unchanged at £6 12s 0.56d percent.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: "London gilts act well and could rally further. The fall in industrials is losing momentum. They should have a technical rally. Oils should rebound from an oversold position with a cessation of selling and better New York advices. Wall Street rallied after a minor selling climax and is expected to go higher under the leadership of aircraft and missile shares. Also helpful are the hints that the Administration may relax its monetary policy in view of the sharp contractions in business loans. London is likely to have continued uncertainty as the industry adjusts itself to the new conditions, but technically prices could go better. Rallies in both Wall Street and London may be only short-lived for the time being, but leading industrials appear to be near their floor and worth examination."

Activity on Wall Street

In foreign bonds, the recently strong Greek issues declined on profit-taking, while several German nationals eased by fractions to one point after their early firmness. Italians fluctuated, but Serbs were weak, being two to three points lower on small sales. Japanese issues also fell. Chile 3 percents were under pressure, declining nearly two points to sell at a new low for the year at $36¼. Long-term U.S. Government securities fell to record lows in a generally weak market, largely reflecting the lack of buying as investors were more interested in higher yielding securities. Quality corporates also lost ground, with traders awaiting another batch of new offerings scheduled to reach the market. Rails were mostly lower.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 16th October shows that the gold stock rose by $10 million to $22,665 million. Foreign deposits fell by $11 million to $326 million, while foreign investments rose by $43 million to $3,497 million. Federal Reserve holdings declined by $149 million, with sales of $53 million worth of bills, $1 million worth of certificates and $95 million worth of securities under repurchase agreements. Total discounts and advances fell by $95 million to $589 million, while the aggregate excess reserves of member banks rose by $48 million to $192 million. The daily average excess reserves of member banks fell by $110 million to $479 million, while their daily average borrowings fell by $18 million to $985 million. Business loans of the New York city banks rose by $6 million to $11.797 million, compared with a rise of $9 million to $10,874 million in the corresponding week a year ago.

Vegetable Oil Market Rises

Oilseeds last week were decidedly more active and prices for most of them rose by 10s to 30s a ton. After an extended period of quietness, Nigerian groundnuts received considerably more attention. At the outset, demand for Canadian linseed was quite active both in London and on the Continent at firmer rates. Enquiries, however, tended to slacken off towards the close on indications of a reactionary trend in Winnipeg, but the market background was still favourable. Demand for castorseed weakened considerably and offers were hesitatingly made from the origin. In the oils section, it was in groundnut oil that most activity was witnessed and British West African prices rose by £3 to £5 a ton according to position. Argentine oil was also firmer, while U.S. oil was on the upgrade. Last week-end, an active demand for linseed oil was recorded at a sharp advance, but since then there have been no further increases. There was more desire to press sales of the current delivery position which was offered at discounts compared with forward months. The market was quiet for castor oil and prices varied widely. The average price of offers of Indian R.S.S. at the close was £159 after £160, c. and f. in drums, had been paid for October-November. For commercial, there were sellers at £149 after the price had been paid earlier.

Rise in Rubber

Apart from further sales to Russia, the rubber market last week was very quiet for the greater part. European factories were still virtually non-buyers except for a few selective orders of a routine fill-in nature. Values tended to sag in the absence of sustained support, but some encouragement was derived from the removal of a heavy weight of nearby rubber that had recently been overhanging the market. Towards the close, a steadier trend developed on improved Singapore advices and reports of Chinese purchases there. In the final stage, the market firmed on nervous covering and new business prompted by the Turco-Syrian tension. At the close, values showed a rise of about 1¼d on the week. The sole crepe market remained virtually idle. Traders made no further change in their quotations which were based on 35¼d a lb for ⅛ inch smooth No. 1 on the spot.

Paris Gold Jumps Up

Paris gold prices last week soared, with the one-kilo ingot closing at 544,000 francs—a rise of 23,000 francs from the previous Friday. Some dealers attributed this rise to a pessimistic report on the French financial situation which M. Robert Schuman, it was believed, presented to President Coty. Other dealers said that the rise was due to extensive covering operations following heavy sales at the close of the previous week when it was expected that M. Pinay, the conservative leader, would succeed in forming a Government. Bullion dealers —reported to be acting on behalf of the Bank of France—failed to check the rise even after considerable intervention, market sources said.

W. German Reserves Fall

Western Germany's foreign exchange and gold reserves showed a fall of 97 million deutschemarks in the week ended 15th October, the Federal Bank has announced. Total reserves stood at 24,359 million deutschemarks against 24,457 million deutschemarks on 7th October. Gold holdings on 15th October totalled 10,702 million deutschemarks against 10,932 million deutschemarks on 7th October—a rise of about 670 million deutschemarks.

SOUTH EASTERN RAILWAY
TENDERS

Sealed tenders are invited for supply of the following items:—

(1) Tender No. CS/PC/57/356/B/23 for supply of vertical spindle deep well turbine pump of 1,200 SPH at a head of 80 ft. complete with Motor, Starter and flat switch equipment to work off 400 V. 3 phase, 50 cycles as per specification—2 sets.

Tender forms are obtainable from the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23 (PC Section) on remittance of Rs. 2/- per copy per tender (not refundable) by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta-23, by local firms. Earnest money against the tender is Rs. 500/-. Closing date of the tender is 11.11.57 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid income-tax clearance certificate along with the Earnest Money deposit receipt with the Tender.

nance in India and Abroad

THE CALCUTTA MONEY MARKET

BUSINESS RETURNING TO NORMAL

Wednesday, 23rd October.

WITH the bank strike over, business in the Calcutta money market is beginning to revert normal, although no cheque clearing has yet en undertaken. Total advances have remained out the same, but there have been small increases the requirements of the cotton and jute mills. unds for the sugar industry, and on account of orage of wheat and grains, show a slight decline. is reported that the interbank market is now ck in operation.

It has been a quiet week in the bill market, with ly a few tea and gunny documents coming to and. There has been little demand for remittance. Sterling has continued to strengthen on the orld's markets and is quoting above its parity ith the dollar.

* * * *

The bullion market was closed on Wednesday ecause of Diwali. Earlier, silver was quiet on ck of demand due to the bank strike, so the rice dropped from Rs. 179.75 to Rs. 178.75. On uesday, there was some Diwali demand and the rice rose to Rs. 179 for ready. The London price as 78¼d and the New York quotation stood at 0⅞ cents.

Gold was quietly steady in sympathy with ilver and the price rose from Rs. 108 to Rs. 109. he sovereign improved from Rs. 71 to Rs. 71.25.

* * * *

During the week ended 18th October, Government of India Treasury bills for Rs. 80,64,50,000 were sold in favour of the Reserve Bank.

* * * *

A decline of Rs. 9.68 crores to Rs. 1,483.81 crores in active notes was the notable feature of he return of the Reserve Bank of India for the week ended 18th October, 1957, while the total note issue was Rs. 45 lakhs higher at Rs. 1,514.35 crores. Notes held in the Banking Department consequently rose by Rs. 10.13 crores to Rs. 40.54 crores. Foreign securities were reduced by Rs. 9.94 crores to Rs. 311.71 crores and rupee securities were increased by an equivalent amount to Rs. 9.94 crores. Deposits of the Government of India fell by Rs. 3.82 crores to Rs. 53.84 crores but other Government accounts were Rs. 3.24 crores higher at Rs. 6.85 crores. Balances of commercial banks improved by Rs. 9.86 crores to Rs. 100.47 crores. Balances held abroad declined by Rs. 1.77 crores to Rs. 18.78 crores in spite of a transfer of Rs. 9.94 crores from the Issue Department. Investments rose by Rs. 3.90 crores to Rs. 219.80 crores. Other loans and advances declined from Rs. 73.50 crores to Rs. 68.83 crores, of which advances to scheduled banks against usance bills totalled Rs. 26.81 crores (Rs. 28.71 crores). Ways and means advances to Government amounted to Rs. 51.08 crores against Rs. 51.27 crores.

* * * *

The return of the State Bank of India for the week ended 11th October, 1957, shows a rise of Rs. 5.55 crores to Rs. 355.04 crores in total deposits. Investments in Government securities are up by Rs. 10 lakhs to Rs. 141.56 crores, while other authorised investments are down by Rs. 25 lakhs to Rs. 10.26 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have decreased by 24 lakhs to Rs. 161.14 crores. Cash and balances are, in consequence, shown at Rs. 44.55 crores or Rs. 6.68 crores less.

* * * *

The statement of the position of scheduled banks for the week ended 11th October, 1957, shows Demand and Time liabilities of Rs. 729.07 crores (Rs. 24.56 crores on account of borrowings from banks) and Rs. 824.50 crores (Rs. 8.16 crores), compared with Rs. 723.18 crores (Rs. 24.46 crores) and Rs. 626.50 crores (Rs. 7.93 crores), respectively, in the previous week. Cash has increased by Rs. 12 lakhs to Rs. 42.67 crores, while balances with the Reserve Bank have decreased by Rs. 10.80 crores to Rs. 83.35 crores. There is a rise of Rs. 22 lakhs to Rs. 386.15 crores in investments. Advances and bills discounted at Rs. 852.61 crores show an increase of Rs. 5.24 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 9.3 percent and 63.0 percent against 10.1 percent and 62.8 percent.

W. GERMAN REGULATIONS ON FOREIGN SECURITIES

The West German Federal Bank has relaxed further the regulations concerning purchases and sales of foreign securities by West Germans. The previous restrictions that foreign securities could be traded only at prevailing stock market quotations, that purchases could be made only through domestic banks and that foreign securities and shares had to be deposited with domestic banks, have been removed. In future, West Germans will be able to buy or sell at freely agreed prices foreign securities and shares which are quoted on stock exchanges or are issued for public subscription, and certificates of foreign investment companies. The new regulation provides that West Germans will be able to mail abroad securities which previously could be done only through domestic banks.

LONDON FINANCIAL LETTER

EFFECTS OF BANK RATE INCREASE

By Air Mail.

THE London Stock Exchange reacted positively to the British Government's stern measures in September: it lowered its values substantially and, in the industrial sections, has had some difficulty in stabilising itself since. The reaction reflected a widespread opinion here that the new measures would work—painfully. In the foreign exchange markets, operators were inclined to await developments; they were sceptical after repeated failures to control inflation, and they were not sure how opinion would react to the movement of the gold and dollar reserves in September. The recovery of sterling to parity with the major currencies early in October must be viewed against the background of the figures for September, published a few days previously. The figures were not better than expected; they were worse. But the demonstration that even such losses as were revealed could not weaken sterling convinced the bears of sterling that it was hopeless to wait for devaluation. The statements by Mr. Peter Thorneycroft, Chancellor of the Exchequer, that, whatever else had to be adjusted, the value of the currency would be maintained, were at last taken seriously.

Loss of Reserves

If the deficits with the European Payments Union are put in their proper months, the loss of reserves is seen to have been rather less in September than in August, but the total loss for the two

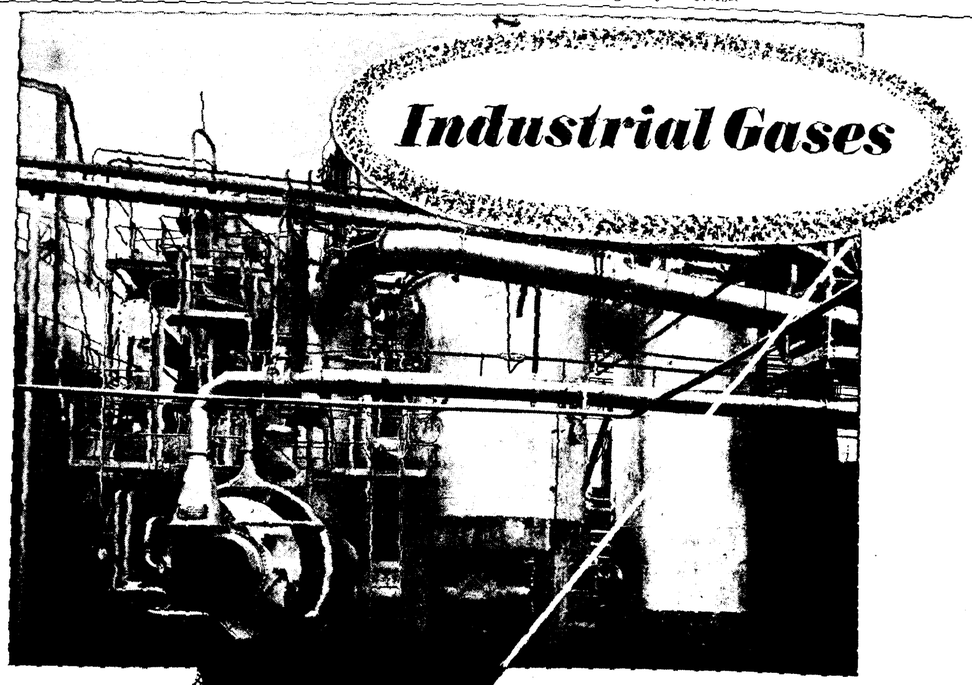
months (in spite of a substantial repayment of debt—possibly £75 million—by Western Germany) was more than £200 million. It exceeded the emergency credit raised from the International Monetary Fund last December and was nearly a third of the reserve as it would have stood without the credit. The figures showed that the pressure against sterling was more critical than was realised at the time. The question arose, therefore, whether the measures announced on 19th September—the raising of Bank rate to the almost unprecedented level of 7 percent, the "freezing" of bank advances and of public capital spending, the stricter instructions to the Capital Issues Committee—were adopted in a moment of panic and were, therefore, too ill-considered to be the basis of a policy. At the annual "bankers' banquet" at the Mansion House recently, the Chancellor vigorously denied any such implication; and it is, indeed, quite possible that the authorities were already half-convinced previously that the policy of compromising with inflation (for it was in fact a policy) had failed.

The crisis has taught another lesson that must be learned and applied. Not even such losses from the reserve would have been critical if the reserve had been strong enough to withstand the strains to which an international currency may be periodically subjected. When no more than a slim reserve backs the currency in which about a half of the world's trade is transacted, international confidence in that currency must never be allowed to falter. Even in August and September, there was nothing fundamentally wrong with the current position of sterling; the Balance of Payments White Paper shows most encouraging figures for the period January-June. But it is imperative that the reserve be sufficient to withstand both seasonal and speculative pressures—and both together. Seasonal factors are now turning favourable, and the restraints are already taking effect: so it should not be too difficult to consolidate the position. But building an adequate reserve will be a long and arduous task.



Value of the Pound

At the gathering of the financial "top brass" at the Mansion House, it was Mr. Cameron Cobbold, Governor of the Bank of England, who put the emphasis in the proper place. "The first impact of these measures on the exchanges has been good", he said. But he continued: "Their effect at home will need time and a firm follow-through. And it is their effect at home that matters in the long run." The City does not agree that there is anything essentially new in the Chancellor's measures, as Mr. Thorneycroft himself has seemed to imply. It does, however, recognise that the familiar instruments applied with sufficient force can be the instruments of a new policy. If there are still some observers who doubt whether any British Government will have the courage to reject the policy of full employment, it is not for want of being told that full employment will in fact be sacrificed if the interests of "an honest pound" demand it.

The statistical information on industry's plans now coming forward refers still to the period before the new measures: yet this information shows clearly enough that the capital boom was fading away without any additional restraints on it. In the public sector, of course, the increase in capital spending represented not a boom but a plan; and that plan is now being curtailed so that there will be no further increase for two years. Naturally, private industry also will adapt its projects to the changed circumstances. Previous restraints had little effect because the business community was generally liquid; it is generally less liquid now. And the "freezing" of advances at the average level of the year to September represents an appreciable reduction of advances to the private sector, although the banks are committed to lend more to some customers, and although a static figure of advances would represent a reduction in real terms, at raised prices.

Business Recession

In any case, the cost of credit is now sufficient to require reconsideration of any "marginal" project. When borrowers were paying 6 to 7 percent for overdrafts and setting nearly a half of their interest-charge against tax, the effective rate of interest—when prices and profits were rising—was insignificant. Now the trend of prices is uncertain, but average profits must be falling; so when the charge for overdrafts is 8 to 9 percent the effective rate of interest is by no means insignificant, even when nearly half of it is set against tax. How consumers (who are also wage-earners) will react to the situation it is difficult to say; but so far as the capital sector is concerned it seems likely that the Chancellor will get his "honest pound", by means of a recession of business that may be easier to initiate (if it was not initiated already) than to reverse.

Stocks and Shares

RESTRICTED TURNOVER IN THREE-DAY SESSION

DULLEST MOORAT TRADING ON RECORD

Wednesday Evening.

THE share market has been depressed throughout the week. The Hindu New Year has brought no relief to the general gloom. Operators' feelings about the prospects for the coming year appear to be nothing less than complete despair. Yesterday's Moorat trading was the dullest on record, according to reports from both the Calcutta and Bombay markets. Hopes of an American loan, which did something to help sentiment last week, have now disappeared, and the remarks made by Mr. Nehru at his Press conference a few days ago about the desperate food situation in various States have only added to the general despondency. There has been little or no movement in the price of speculative shares, and only gilt-edged quotations have shown any resilience.

Details of the week's trading follow.

* * * *

The gilt-edged market ruled steady and there was a further improvement in prices. Enquiry was of a broad nature but once again buying was centred on short-dated loans and trading tended to be restricted due to the shortage of scrip. Three percent Conversion Loan was unchanged at around Rs. 71 while 3% non-terminable paper was nominally marked at Rs. 71.15. In short-dateds, 3% Loan 1958 was asked for at Rs. 99.75. Three percent 1959-61 improved further to Rs. 98.48. 2½% Loan 1961 had buyers over at Rs. 94.15, 3½% 1961 was marked up further to Rs. 99.55, 2¾% 1960 was asked for at the higher rate of Rs. 96.90 and 2¾% 1962 was fully steady at Rs. 99.15; 3½% 1962 was marked at around Rs. 97.50. In the medium-dated group, 3% 1963-65 was fractionally better at Rs. 93.28, 3% 1964 had buyers at Rs. 93.65, 3½% 1964 was marked back after payment of the interest to Rs. 97.55 x.v., 3½% 1965 had sellers over at around Rs. 97.30, while 3½% 1967 was nominally quoted at around Rs. 97.55 and 3¾% 1967 had buyers at Rs. 99.44. In long-dateds, 3% 1966-68 was unchanged at Rs. 91.05 but 3% 1970-75 was easier at Rs 86.10 x.v. while 3½% 1974 was on offer at Rs. 98.25 and 4% 1972 had sellers at Rs. 99.94. State loans ruled dull and very little business was reported with no notable changes.

Very few transactions were reported in preference shares. In the miscellaneous group, Atal Tea were marked at Rs. 6 and Burn 6% at Rs. 108. Indian Iron and Steel were lower at Rs. 95 and Indian Standard Wagon were taken at Rs. 114.50. Singtom Tea changed hands at Rs. 7. In jute, a solitary transaction was reported in Reliance at Rs. 69.

In the banking section, Punjab National eased to Rs. 80 and United Commercial to Rs. 55.75. In contrast, Hind Bank met with some enquiry and improved to Rs. 32.25.

A solitary transaction was reported in the railway section in Dehri-Rohtas at Rs. 10.

Similarly, in cotton only one share changed hands, namely, Jayshree Textile at Rs. 6.31.

Business in coal shares was of a retail nature. Burrakur were unchanged at Rs. 22 and Ghusick and Muslia were reported at Rs. 13.50 while New Beerbhoom changed hands at the previous rate of Rs. 12.19. Talcher were marked at Rs. 1.45 and Western Bengal were slightly better at Rs. 5.81. There were sellers of South Karanpura at the lower rate of Rs. 11 with no declared buyers.

Little business was reported in jute shares and prices were more or less unchanged. Here is a chart showing representative price movements:

	Opening 17th October, 1957	Closing 20th October, 1957
	Rs.	Rs.
Auckland	80	82
Fort Gloster	295	300
Howrah	15.81	15.87
Megna	83	84
National	18.45	18.45
Bally	140	145

In electrics, Agra were taken at Rs. 123 and Calcutta were enquired for at Rs. 12.50.

Only two transactions were reported in sugar shares, namely, S.K.G. at Rs. 9.31 and United Provinces at the higher rate of Rs. 12.62.

In the engineering section, Indian Iron and Steel fluctuated between Rs. 17.70 and Rs. 17.48 but closed at the former rate. To-day's unofficial quotation is Rs. 17.58. Burn and Co. were steady at Rs. 316 as were Guest, Keen, Williams at Rs. 28.25. Jeep and Co., were lower at Rs. 24.06 as were Richardson and Cruddas at Rs. 9.37. Textile Machinery improved from Rs. 16.15 to Rs. 16.40.

In paper, India Paper Pulp were unchanged at 18.37 but Sirpur and Star were both lower at Rs. 8.12 and Rs. 11, respectively. Shree Gopal were shaded at Rs. 14.75 while Orient were steady at Rs. 23.49.

In cement, Sone Valley recovered from Rs. 4.75 to Rs. 4.90, Jaipur Udyog were better at Rs. 12.10 and Dalmia Cement were unchanged at Rs. 9.87.

A solitary transaction was reported in the insurance section in General Assurance Society at Rs. 20.31.

In shipping, India Steamship improved to Rs. 11.19 while India General Navigation met with selling pressure and receded further to Rs. 62.

Among miscellaneous industrials, Alkali and Chemical were easier at Rs. 13.50 and Angelo Brothers changed hands at the previous quotation of Rs. 17.25. Bararee Coke were lower at Rs. 11.87 while British India Corporation were neglected around Rs. 4.85. Dunlop Rubber were a steady feature at Rs. 19.94 and there was some enquiry for Hindustan Motors at Rs. 6.19. Imperial Tobacco were slightly better at Rs. 12.12, and Indian Aluminium were crossed at Rs. 12.75. Metal Box were unchanged at Rs. 25.50 and National Rolling were crossed at Rs. 9.62. National Tobacco were unchanged at Rs. 9.50 as were Rohtas Industries at Rs. 18. National Carbon were depressed at Rs. 23.12 but there was some enquiry for Sodepur Glass around 94nP.

In the mining section, Indian Copper were unchanged at Rs. 2.79 while Orissa Minerals were lower at Rs. 18.

Trading in tea shares was featureless. Seeyok came to business at Rs. 12 and Basmatia were traded at Rs. 25.12. Brahmapootra recovered slightly to Rs. 3.87 and Grob "A" and Grob "B" changed hands at Rs. 23.25 and Rs. 11.50, respectively. Hantapara were quoted at Rs. 6 and Patrakola came to business at Rs. 137. Jayshree were quoted

The secret of Popular Poplin—Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label... but your customers don't know the 'behind the scenes' story that ensures the complete reliability of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for you!

Look for 'SANFORIZED' on the label

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permissed only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information 'Sanforized' Service, 95, Marine Drive, Bombay 2.

at Rs. 9.19 and Banarhat and New Dooars were crossed at Rs. 296 and Rs. 278, respectively. Birpara improved on investment enquiry to Rs. 130 while Gairkhata came to hand at Rs. 144.

* * * *

The New India Assurance Co. Ltd. has received the permission of the Controller of Capital Issues for its proposed bonus issue of ordinary shares of Rs. 15 each, credited as fully paid, by the capitalisation of Rs 35,60,535 out of its premium on shares reserve. The bonus shares will be allotted in the proportion of one new ordinary share for every three ordinary shares held.

* * * *

The profit of the BIRPARA TEA COMPANY has improved from Rs. 1.17 lakhs to Rs. 4.82 lakhs for the year ended last December. The dividend has been increased from 5 percent to 25 percent. Revenue reserve is allocated Rs. 1½ lakhs, leaving Rs. 43,289 to be carried forward. The crop rose from 13 808 maunds to 15.537 maunds and the average sale price increased from Rs. 2-0-3 to Rs. 2-2-8 a lb. Estimates for the current year have been made for a crop of 13,400 maunds at a cost of Rs. 20.46 lakhs.

* * * *

There is a slight rise to Rs. 24.40 lakhs in the profit of the NATIONAL TOBACCO COMPANY for the year ended last December. Providing Rs. 13.13 lakhs (Rs. 11.68 lakhs) for taxation and bringing in Rs. 8,99,582, there is Rs. 20,27,340. The ordinary dividend is 1 percent lower at 7 percent and absorbs Rs. 5.60 lakhs. Capital reserve expenditure is allocated Rs. 3½ lakhs, leaving a carry-forward of Rs. 9 02 640. In spite of increased sale proceeds, the profit shows little change. The directors state that "higher replacement costs for tobacco and stores—the former carrying the element of purchase tax on unmanufactured tobacco imposed for the first time by the Andhra Government—have contributed to the narrower margins on which we have been compelled to operate." Efforts are being made "to improve our sales position in a more remunerative price field and we hope the current year will show an increased business here."

* * * *

The net profit of the AIR-INDIA INTERNATIONAL CORPORATION has increased from Rs. 3.78 lakhs to Rs. 38.42 lakhs for the year ended last March. Bringing in Rs. 35,000 the balance amounts to Rs. 38 77 lakhs. Equipment renewals reserve is allocated Rs. 36 lakhs. Insurance fund gets Rs. 1.56 lakhs, leaving a carry-forward of Rs. 1.21 lakhs. The members of the board say that with the help of the Government of India, the Corporation was successful in securing loans of $16.8 million which will cover the total dollar cost of the *Boeing* project. An amount of $5.6 million, bearing interest at 5½ percent per annum, was obtained from the International Bank for Reconstruction and Development and $11.2 million, at 5 percent per annum, was secured from five leading U.S. commercial banks. While the year under review has been an eminently satisfactory one from the point of view of the growth of the Corporation's business, "future prospects are likely to be adversely affected by the ban recently introduced by the Government of India on all foreign travel other than for essential medical, business or educational purposes. The total denial of foreign exchange has brought all such traffic to a standstill and will cause an extremely serious loss of revenue to the Corporation which, it must be expected, will be reflected in the financial results of the current year."

Bombay Market

PRICES DECLINE IN MOORAT TRADING

GLOOM OVER FOREIGN EXCHANGE AND CLOTH STOCKS

Tuesday Evening.

THE Moorat session of the Bombay Stock Exchange on Tuesday was a tame affair and equity share prices closed lower on balance after moving both ways. A number of adverse factors appear to have affected sentiment. There is a good deal of anxiety about the foreign exchange position as the prospect of India obtaining foreign loans has become dim. The accumulation of cloth stocks with mills is causing financial embarrassment to the industry.

Tata Steels closed at Rs. 162 and Indian Irons were lowered to Rs. 17.64 on heavy selling from Calcutta interests. Other engineering shares were freely offered without attracting much support. Alcock Ashdown were available at Rs. 225 and Tata Locomotives declined to Rs. 131. Premier Construction met with scattered interest at Rs. 147.50. Among automobile shares, Premier Automobiles fell to Rs. 87 and Hindustan Motors were barely steady at Rs. 6.24.

Long liquidation reduced the prices of mill shares and buyers were scared away. It is feared that profits of mills during the current year might show substantial declines. Bombay Dyeing were transacted at the lower price of Rs. 50 and Kohinoor were offered at Rs. 253. Century slumped to Rs. 283 and Simplex were lower at Rs. 157. Svadeshi changed hands at Rs. 168 and India United Ordinary were offered at Rs. 10.16.

Miscellaneous shares declined in sympathy with the general trend. Associated Cement made Rs. 151.25 and Digvijay Cement were taken at Rs. 131.50. Sugar shares showed little alteration, and Belapur came to hand at Rs. 235. Phalton Sugar were done at Rs. 137.25. Mining shares were neglected and Shivrajpur Syndicate at Rs. 80 attracted very little interest. Steamship Company shares were steady, and Scindia Steam improved to Rs 19.20 on the prospect of a better distribution. Great Eastern Shipping were bought at Rs. 21.28. National Rayon declined to Rs. 208 on fears of a fresh issue of capital to finance the expansion plans. Tata Chemicals were also lowered to Rs. 15.40 for the same reason.

Bank shares were steady though turnover was restricted. United Commercial Bank were taken at Rs. 55 80 and Bank of Baroda were transacted at Rs 100.50. In the insurance group, New India Assurance improved to Rs. 45.50 because the company has obtained the consent of the Controller of Capital Issues for bonus shares and it has been decided to issue one bonus share for every three shares held.

Electricity supply shares were active, and Ahmedabad Electric improved to Rs. 95 on investment interest. Tata Power were transacted at Rs. 1,126.25.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations Highest for the week, Lowest for the week, Closing Quotations, Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS
(RAILWAY BOARD)
TENDER NOTICE

The Government of India in the Ministry of Railways invite tenders for the import and supply of 16 lakhs (1.6 million) of broad gauge, 4 lakhs (0.4 million) of metre gauge and 2 lakhs (0.2 million) of special size wooden sleepers from well established and reliable timber firms in Australia/Brazil/Canada/East Africa/Malaya /Philippines, for use on the Indian Railways.

2. Tender Documents abroad can be obtained from the office of the Indian Embassy/High Commission/Legation in their countries.

3. The timber firms in other countries, and agents representing foreign timber firms in India can obtain particulars relating to tenders from the Deputy Director (Works), Ministry of Railways, State Entry Road, New Delhi.

4. The dimensions of the sleepers are :—

i) Broad Gauge Sleepers. 9′ × 10″ × 5″ (9 ft. long, 10 inches wide & 5 inches deep)
OR
(275 cm. long, 25.4 cm. wide & 12.7 cm. deep).

ii) Metre Gauge Sleepers. 6′ × 8″ × 4½″ (6 ft. long, 8 inches wide & 4½ inches deep)
OR
(183 cm. long, 20.4 cm. wide & 11.5 cm. deep).

iii) Special size Sleepers. 9′-16′ × 10″-11″ × 6″ (9 to 16 ft. long, 10 to 11 inches wide and 6 inches deep)
OR
(275 to 488 cm. long, 25.4 to 28 cm. wide and 15.3 cm. deep).

5. Tenders will be received upto 17 hrs. on 3rd January, 1958 and opened in the Office of the Ministry of Railways, State Entry Road, New Delhi at 15 hrs. on the next day.

New Delhi, 19-10-1957. SECRETARY, RAILWAY BOARD.

TENDERS

Sealed tenders are invited for supply of the following materials :—

Tender No. CON/GM/34/P & M/205/B for supply of 2 Nos. Borehole and Deep well Pumps Centrifugal (Volute) Type-Borehole dia 5½" inches, output 10,000 Gallon per hour at 150 ft. head from all causes, complete with Diesel Engine and accessories.

Offers subject to Import Licence being granted or recommended will not be considered.

Tenders will be opened on November 22, 1957 at 12 noon. Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs. 5/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Rly., Garden Reach by local firms.

Earnest money of Rs. 1,000/- is to be deposited with the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta-23 and the receipt obtained should accompany the tender without which the tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs. 1,000/- with the Controller of Stores need not pay the Earnest money.

Firms not on this Railway's list of approved Contractors must enclose a valid Income Tax clearance certificate with the Tender.

GENERAL MANAGER.

ECONOMIC DIFFICULTIES OF FRANCE

EXCESSIVE HOME CONSUMPTION AND BIGGER TRADE DEFICITS

(FROM A CORRESPONDENT)

THE annual report of the Bank of France, reviewing economic developments in 1956, states that private consumption and investment in France during the year rose to record levels. Although agricultural output was affected by late winter frosts, the losses were not as great as had been feared. Industrial production showed a further substantial expansion, and in many sectors productive capacity and manpower were fully employed. As a result, prices and costs were subject to continuous upward pressure. The Government had to take a number of measures to limit the rise in prices. The Budget deficit increased substantially, and there was a marked deterioration in the balance of payments. This deterioration resulted in part from the lower wheat output, the war in north Africa and the Middle East, and a reduction in U.S. aid and offshore contracts. But it was due primarily to excessive domestic demand.

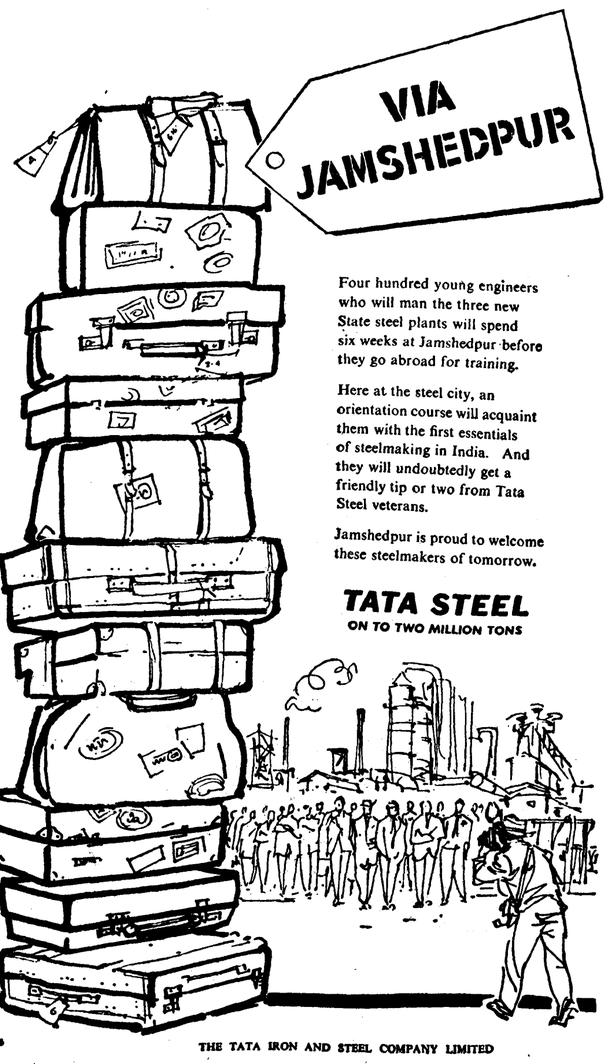
The inflationary pressure increased in the first half of 1957 due to the wages and costs. But the prospects for harvests are excellent, and industrial production has continued to expand. It has become more difficult to finance the budgetary deficit out of current tax receipts and savings. The trade deficit during the half-year was nearly double that of the corresponding period of 1956, and the balance of payments showed further deterioration. France's deficit with the E.P.U. amounted to $(U.S.)546 million, and, in spite of her drawings of $(U.S.)262.5 million from the International Monetary Fund, the Exchange Stabiiisation Fund reserves were exhausted. Certain measures have been taken to cope with this situation. The liberalisation of imports was suspended on 19th June; and on 24th June, the National Assembly authorised the introduction of a series of financial measures designed to ensure economic stability and to balance external payments. On 27th June, it was decided to reduce the ceilings on the volume of bank rediscounts at the Bank of France by 10 percent, and by another 10 percent on 10th August. The Bank of France's obligation to rediscount on demand all Treasury bills with a maturity of less than three months was discontinued, giving the central bank more freedom to operate on the money market. The interest rates of the Bank of France, which had been increased on 11th April, were increased further on 12th August.

The report states that the policy was meant to deal with the external deficit, but more fundamentally with the excess in domestic demand. Yet, at the end of the first half of the year, it became clear that the measures were still insufficient. To a certain extent, France has for years been living on "illusions." Both the Government and the people have drawn too heavily on future wealth. There is no easy solution either to the problem of maintaining internal equilibrium between supply and demand, or to that of balancing foreign exchange earnings with expenditure. The inadequacy of national production can no longer be offset by an import surplus.

Dutch Measure to Curb Bank Credit

In order to stop any further increase in the volume of internal credit given by Dutch banks, the central bank has asked them to exercise restraint in making advances. In view of the seasonal fluctuations, a limit of 2 percent over the volume granted during the second quarter of 1957 is indicated for the second half of this year. Private banks not responding to the directive will have to pay a "fine" of 1 percent when securing advances from the Netherlands Bank. This means that since the Dutch Bank rate is now 5½ percent, interest of 6½ percent will have to be paid on such advances. The central bank considers it necessary that there should be no further increase in credits to local bodies and that these credits should be gradually reduced to the average of the amounts outstanding on the last day of the corresponding calendar months of the previous two years. Finally, in view of the tensions in the Dutch foreign exchange market, the Netherlands Bank has urged the organisation of stock exchange dealers to induce its members to refrain for the time being from introducing foreign securities in the country.

Swedish Trade Treaty with China



A trade agreement between Sweden and China has been concluded. The lists of commodities have no fixed quantities or values, and comprise both goods traditionally forming part of Swedish-Chinese trade and those for which markets are likely to be found. Swedish products for export include foodstuffs, forest products, machinery and industrial equipment, iron and steel, metal manufactures, instruments and electrical equipment, chemicals, hospital equipment, etcetera. The Chinese products include hides and skins, oilseeds, oils and fats, spices, handicraft goods, chemicals and fibres, minerals, etcetera. The agreement does not exclude trade in non-listed goods. The most-favoured-nation clause on tariffs, with customary exceptions relating to privileges granted to neighbouring countries or co-member nations in Customs unions or other international agreements, forms part of the treaty. Likewise, there are regulations on the most-favoured-nation treatment and prohibition against discrimination in shipping. Payments are to be made on a multilateral basis in transferable Swedish kroners, pound sterling or any other currency acceptable to both parties. Sweden's exports to China totalled 85.2 million kroners in the first seven months of this year, while imports amounted to 10.3 million kroners. This compares with 10.4 million kroners and 6.9 million kroners in the same period of last year. The leading Swedish exports to China, it is reported, are paper and machines.

External Deficit

The deficit in Sweden's balance of payments on current account during the first half of 1957 totalled 330 million kroners, or 75 million kroners less than in the same period of last year. This improvement was primarily due to an increase in net shipping revenues, which went up by 180 million kroners to 720 million kroners, according to a survey published by the journal *Svensk Export*. The fact that the depression in the world freight markets this year has not yet had any visible repercussions may be explained by the time-lag between the earning and the transfer of incomes, the journal says. Furthermore, most of the Swedish merchant navy sails under long-term contracts. The Swedish Riksbank's gold and foreign exchange holdings showed a further drop in September, and declined by 53 million kroners to 2,394 million kroners. This compares with an increase of 65 million kroners to 2,315 million kroners in the same month last year.

Norwegian Finance for Spanish Dock

A group of Norwegian shipowners have financed the Spanish dock company, Astilleros de Cadiz, in building a new floating dock in Cadiz. In return, the dock company has given the Norwegian owners priority for the docking of their super-tankers. Cadiz has been chosen because this dock is convenient for tankers passing through the Suez Canal or round the Cape.

Four hundred young engineers who will man the three new State steel plants will spend six weeks at Jamshedpur before they go abroad for training.

Here at the steel city, an orientation course will acquaint them with the first essentials of steelmaking in India. And they will undoubtedly get a friendly tip or two from Tata Steel veterans.

Jamshedpur is proud to welcome these steelmakers of tomorrow.

New Delhi

FURTHER CUT PROPOSED IN STATUTORY MINIMUM FOR PAPER CURRENCY RESERVE

INDIAN VIEW ON MOVE FOR EUROPEAN FREE TRADE AREA

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government proposes to introduce legislation during the forthcoming session of Parliament commencing on 11th November to reduce the statutory minimum for the paper currency reserve which is at present fixed at Rs. 300 crores. A reduction below Rs. 300 crores has to be sanctioned by amending the Reserve Bank of India Act. There is no intention, it is stated, to do away with the foreign security backing for the Indian currency altogether, and the amending Bill may fix the new minimum at Rs. 100 crores. India's drawings from the sterling balances have lately been at a heavier rate, partly because of the purchase of *Hunter* aircraft. The latest figure for the balances is Rs. 342 crores.

World Bank Representative in New Delhi

The International Bank for Reconstruction and Development has appointed Dr. A. Basch, one of its senior officers and an expert on the economic problems facing Asian countries, particularly India, as its resident representative in New Delhi. He will be in close touch with the Government on matters concerning India's development plans. Dr. Basch's appointment in India will enable the World Bank and the Government to work in closer co-operation, which has become necessary in view of the growing volume of the Bank's business in India arising out of past as well as prospective loan operations. His appointment has been made with the approval of the Government. Dr. Basch has already arrived in New Delhi.

Problems of Shipping Expansion

The recent policy statement about making an all-out attempt to develop Indian shipping up to the target fixed for the second five year plan has lately come in for criticism. The present difficulties relate not only to finance, but also to the availability of foreign exchange and tonnage. Some feel that foreign participation would be welcome provided it is in accordance with the now well-known pattern, namely, a majority interest for India in the equity capital and management. According to reports, New Delhi will give its most favourable consideration to a proposition in which non-Indian participation is up to 49 percent of the equity capital. It is pointed out that Indian shipping interests demand not only loans at low rates of interest, subsidies, and other concessions, but also a compulsory diversion of the traffic to their ships at rates fixed by them. One view here is that this would lead to a monopoly for certain interests in the shipping industry. The Government is, however, seriously examining schemes to expand Indian shipping in collaboration with foreign companies.

O.E.E.C. Free Trade Area Proposal

The Council of the 17-nation Organisation for European Economic Co-operation (O.E.E.C.) has unanimously approved a resolution to create a vast Free Trade Area embracing all member countries. The Area will be associated with the six-nation Common Market, according to agency reports. It has also decided to set up a special inter-governmental committee under the chairmanship of Britain's Paymaster-General, Mr. R. Maudling, to negotiate and draft the Free Trade Area treaty. The resolution was approved at the end of a two-day meeting of the O.E.E.C. Council under the chairmanship of Mr. Peter Thorneycroft, U.K. Chancellor of the Exchequer, which discussed the U. K. proposal for a Free Trade Area. The draft resolution made the following points :

1. The Free Trade Area will comprise all the 17 O.E.E.C. members.

2. This Free Trade Area will be associated with the six-nation European Common Market set up by the treaty of Rome signed last March.

3. The Free Trade Area will become operative at the same time as the Common Market, on 1st January, 1958.

4. The Council expresses its determination to work out a common policy on agriculture and to iron out existing differences in this field.

5 Special consideration will be given to the interests of economically less developed member countries such as Greece, Turkey, Iceland, Ireland and Portugal.

6. An inter-governmental conference at ministerial level will be convened forthwith to draft the Free Trade Area Treaty.

Indian View

The proposals for the Common Market and Free Trade Area will be the principal item for discussion at the G.A.T.T. session in Geneva. On principle, India cannot oppose the basic idea of free trade. The issue, however, is whether it will ensure adequate freedom of trade for those who are not participating in the scheme. India wishes to step up her exports of manufactured goods to the under-developed colonies. She will oppose any move which adversely affects her foreign trade in general, and her trade with the under-developed colonies in particular. She is particularly interested in what may be described as plantation products, for which she has a market in Europe. Will this Common Market mechanism replace Indian goods by similar goods from the colonies of the Common Market countries? The Rome Treaty for the Common Market may have the effect of canalising capital to the colonial possessions of the Common Market or Free Trade Area countries, thereby disturbing the present flow of capital to other regions. India's representative at G.A.T.T. has been fully briefed to place this case before the Geneva session. As already known, this country does not favour the Japanese Prime Minister's plan for a "development fund for Asia."

Goodwill Mission from Uganda

In connection with the announcement that the Government of Uganda is thinking of sending a goodwill mission to India, it is stated in Kampala that the main object is to reach an understanding about the marketing of Uganda's cotton crop. The Uganda Government is concerned about the fact that last season India bought only 70,000 bales (of 400 lbs each), compared with her normal purchase of between 150,000 bales and 180,000 bales a year. Currency problems, it is believed, are largely responsible for the fall in Indian import.

Conference on Rural Health

Several conferences were held last week in New Delhi, including the Rural Health Conference of the South-East Asia Region, the Development Centre on Farm Planning and Management for Asia and the Far East the State Labour Ministers Conference and the Standing Committee of the Indian Labour Conference. The Union Health Minister, Mr. D. P. Karmarkar, inaugurating the Rural Health Conference of the South-East Asia Region, said that "if population control measures were to produce tangible results, they should form an integral part of the rural health programme." He added: "We have now made it compulsory for a medical student to serve a period of three months in a rural health centre before he can receive his degree."

The compulsion used in the case of medical graduates is an indicator of the problems facing rural India. Facilities in the countryside are very poor. The vast majority of villages have no electricity. Streets, if any, are not lighted at night, nor are the majority of houses. This explains why even if they do not do well, medical graduates prefer to starve in cities rather than have a moderately good practice in the countryside.

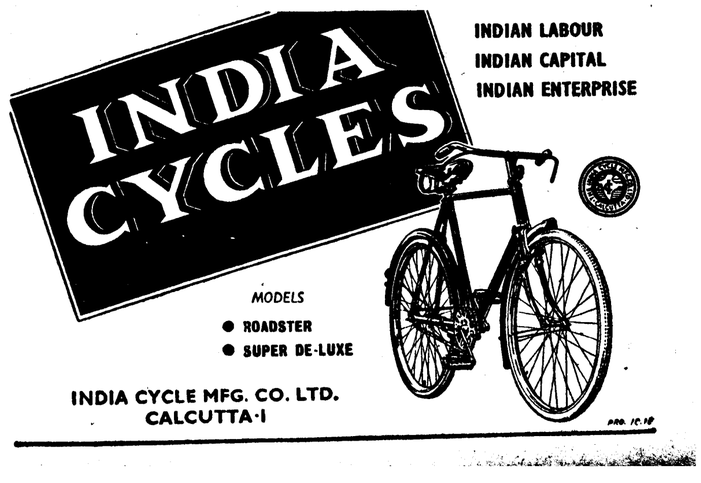
Another Forecast of Food Self-sufficiency

Inaugurating the Development Centre on Farm Planning and Management, the Central Minister for Food and Agriculture, spoke of India becoming self-sufficient in food by 1961. If one reads the speeches of some of his predecessors, one will find that India was to become self-supporting in food several times since 15th August, 1947. At one stage, the Prime Minister himself expressed the country's firm determination not to import food from abroad. The Press Information Bureau has issued a hand-out on the achievements of the Community Development Ministry. A comparison of the achievements in the community development and national extension service block areas with the rest of the country shows that in the former, consumption of fertilisers has increased by 259 percent, reclamation of waste land is up by 297 percent and minor irrigation works have been stepped by 122 percent. The hand-out does not, however, disclose the actual increase in the production of foodgrains in the community development areas as compared with the rest of India. Speaking before the sixth Development Commissioners Conference in April 1957, the Deputy Chairman of the Planning Commission, Mr. V. T. Krishnamachari, observed: "There is need to utilise fully the irrigation facilities that have been made available as the result of the expenditure incurred in the first five year plan. Out of the 6.3 million acres the State Governments expected to bring under irrigation, only about 4 million acres have actually been irrigated. This is thus a waste of national assets—water impounded at enormous cost being left unutilised."

Recommendations of Labour Ministers

The two conferences on labour problems reached some decisions. State Labour Ministers agreed that a deterrent penalty should be imposed for not implementing the awards of tribunals and other authorities. One of the suggestions was that failure to implement awards should be made a continuing offence. Under the existing law, failure to execute an award is punishable with fine or imprisonment, and every subsequent failure is similarly punishable. The question of amending the Industrial Disputes (Central) Rules, 1957, to facilitate the disposal of industrial disputes at the adjudication stage, was also considered. The Labour Ministers suggested that labour courts and industrial tribunals should maintain only a summary record of the proceedings and do away with the practice of recording evidence in full, so as to save time. This procedure, however, would not apply to the National Tribunal. As for the application of the Minimum Wages Act to agricultural labour, the Labour Ministers gave the assurance that every effort would be made to implement it. On the question of dissociating bonus from company profits and relating it to the performance of workers, it was generally agreed that this should be examined by experts. The wage boards, wherever they are set up, should take this matter into consideration.

Wage Board Decisions



The State Labour Ministers Conference recommended that the decisions of wage boards for industries should have statutory force. It discussed at length the problems of the plantation industry. The Ministers generally agreed that two wage boards for plantations, one for the northern and the other for the southern regions, should be set up in view of the different conditions obtaining. The Union Labour Minister said that though there might be two wage boards, they should, in effect, work in conjunction with each other and evolve a common approach to the problems that needed uniform treatment. In this connection, the question of making the decisions of wage boards statutorily binding on the parties was discussed. It was suggested that legislation should be enacted to give powers to the Government to enforce their decisions.

The Conference also accepted the proposal that the Industries Development and Regulation Act be extended to plantations and, if this is not possible, the States may be permitted to enact their own legislation to deal with the situation arising out of closures. The third proposal related to the prevention of fragmentation of plantations. The Labour Ministers of Madras and Kerala suggested that the Plantations Labour Act be amended to empower State Governments to deal with fragmentation calculated to evade the provisions of the Act. It was agreed that this proposal, along with the other recommendations, should be discussed by the Industrial Committee on Plantations.

The Union and State Governments, in view of the unanimous decision, it is hoped, will have industrial awards implemented by both parties to the dispute without any discrimination.

Code of Discipline in Industry

The Standing Labour Committee, at its two-day session, approved the "Code of Discipline in Industry" with certain modifications, and prescribed sanctions against infringement. The Code, which was drawn up by a tripartite sub-committee set up by the Indian Labour Conference at its last session, lays down that employers and workers will bind themselves to settle all future disputes by mutual negotiation, conciliation and voluntary arbi-

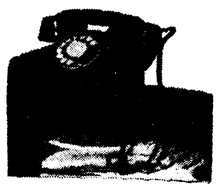
tration and also avoid go-slow, lock-outs and strikes without notice. On behalf of workers' organisations, Mr. G. D. Ambekar gave the assurance that they would try to create a much better atmosphere so that all impediments to the development of the country would be reduced to the minimum. Although troubles could not be avoided completely, they would try to minimise unrest, he said. Speaking on behalf of employers, Mr. G. D. Somani said that they would give all possible co-operation so that all the agreed decisions would be carried out both in letter and in spirit. The representatives of employers and workers agreed to get the Code of Discipline ratified by their respective organisations before the end of December 1957. The Standing Committee recommended measures to be taken by both employers' and workers' organisations against their constituents who committed breaches of the Code. In the first instance, the unit concerned will be called upon to state if the complaints against it are well founded, and if so, to explain its action. If the reasons given are not satisfactory, the central organisation will take suitable action against the offender. For infringements of a more serious nature, the unit concerned will be censured and other penalties will be imposed by the central organisation. If the unit persists in violation, it will be disaffiliated from the central organisation. The Committee was of the view that grave, wilful and persistent breaches of the Code by any party should be widely publicised. It was agreed that the Code would be equally applicable to industries in the private and public sectors.

Evaluating Implementations

The Committee also considered and adopted the proposal for setting up machinery at various levels to implement the Code and evaluate the implementation of agreements, settlements and awards. It was of the view that the tendency to have recourse to law courts on minor grounds should be discouraged and that the organisations themselves should devise some sort of machinery to screen cases in which recourse to courts was contemplated by their members. The parties should explore the possibility of a settlement before going to courts. It also recommended that parties to an award, agreement or a settlement should report to the evaluation machinery, within a period of three months from the date of enforcement, whether in their view the implementation of the award, agreement or settlement had been proper and effective.

The Committee accepted the proposal that part of the bonus paid to workers should be diverted to savings schemes. It recommended that out of the annual bonus accruing to a worker, an amount equivalent to a month's salary including dearness allowance or Rs. 75, whichever was higher, be paid in cash to him. Of the balance, 50 percent should be credited to the workers' provident fund account, subject to a minimum of Rs. 5. Where existing bonus agreements ran to the contrary, necessary adjustments should be made. The proposal to divert part of the bonus to the provident fund would not, however, prejudice the claims preferred by workers for a revision of wages, dearness allowance, etcetera, before the wage-fixing authorities. The Committee recommended that in the case of workers drawing less than Rs. 75 a month, diversion of part of the bonus into the provident fund should not be made compulsory.

Steering Committee for Wage Determination



The Union Minister for Labour and Employment, Mr. Gulzarilal Nanda, announced at the concluding sitting of the Standing Labour Committee that a steering committee would be appointed to initiate the work of collection of data which would help in wage determination. The committee would lay down methods and principles for consideration by the Government. He said that sufficient guidance was not available for wage determination in the country. It would not be possible at any stage to have a mechanical formula which could be applied in all cases. But, he added there was a good deal of experience now—precedents and decisions—which could be analysed and a statistical basis for fixing wages could be found. The interrelation of various factors—profits, the cost of living and the changes that had been occurring—could be examined.

Mr. Nehru on Food and Plan

Speaking at a Press conference, the Prime Minister, Mr. Nehru, expressed great concern at the deteriorating food situation because of the drought in several parts of eastern U.P., Bihar, Orissa and West Bengal. India may have to tighten her belt further, it is thought. The Prime Minister said that the Government did not want nationalisation merely for its own sake, and had no intention of launching any major scheme of nationalisation in the future. As for the second five year plan, he said that it was a flexible one from its outset, and adjustable in accordance with the availability of resources. "We cannot attempt things for which we have no resources. We will have to give up things which in the context of resources are found to be of secondary importance. The Government is, however, determined to push through the core of the plan, namely, the steel plants and the mining of coal and iron ore, feeding them with railway transport and port, and electric power facilities for them." He did not believe that "India would go down unless some foreign country assisted her. We have weathered worse storms than this".

Can I help you Mr. Employer...

Let me introduce myself,

I am a Zonal Manager of the Life Insurance Corporation and I have important news in which I know you will be interested.

Two new Insurance Schemes are now available to commercial firms and other institutions. Both these are employee-benefit Schemes with many attractive features. They offer several rather remarkable concessions, besides reduced premium rates. What's more, both Schemes assure valuable tax concessions.

Our officers will be calling on you shortly to provide you with all the details of the Schemes as you might want to know. In the meantime, should you require any immediate information, please do ring the nearest Divisional or Zonal Office of the Corporation and have a word with the Manager.

Life Insurance Corporation of India

GOVERNMENT DETERMINED TO STOP INFLATION

SLOWING DOWN OF INVESTMENT IN PUBLIC SECTOR

(FROM OUR LONDON CORRESPONDENT)

FOR the time being the increased Bank rate and the reiteration at every available opportunity of the Government's determination to put an end to inflation are being allowed to show what effects they can produce in adjusting the country's economy to the revised tempo which is now regarded as necessary, and in some aspects, though still only gradually, they are producing results. Sterling has certainly been restored to strength, and the gold and dollar reserves have recently received some useful additions as a result of bear-covering of speculative transactions even though the spate which was anticipated has yet to manifest itself. It is probably inevitable that there will be several ups and downs yet, but in official circles recent developments are regarded as "encouraging" and that was how they were described by Mr. Cobbold, Governor of the Bank of England, in his recent address to the Institute of Bankers' dinner in Ipswich. He also referred to the success which has attended the Government's plans for debt funding, disclosing that three loans totalling in all over £900 million, including the £503 million 2½ percent Serial Funding Stock which matures on 14th November, will have been paid off during the current financial year with only a small loan of £100 million issued in their place. The bulk of the maturities has been covered by the sales of longer-term securities, and the position is much more satisfactory than looked likely at one time this summer, he said.

The future outlook, nevertheless, especially with markets as sensitive as they are today to international developments, is still somewhat obscure. Further clarification of the Government's intentions may be expected towards the end of this month. Parliament reassembles for the three remaining days of the present session on 29th October and two of these days are likely to be devoted to a debate on the counter-inflationary measures announced by the Chancellor of the Exchequer last month, in accordance with the Prime Minister's undertaking to Mr. Gaitskell when the latter requested the emergency recall of Parliament. By then it is possible that Mr. Thorneycroft will be in a position to give further details of the proposed slow-down in capital investment in the public sector. This is to amount to £300 million to £350 million over the next two years, and will affect the nationalised industries in particular.

Balance of Payments Surplus

Mr. Thorneycroft's reference to "a solid achievement" in Washington recently when he told the I.M.F. delegates about the "more than £200 million" balance of payments surplus in the 12 months ended 30th June last, is explained in the latest Treasury White Paper on this subject, which shows that the United Kingdom had a current trading surplus in the first six months of this year of £125 million to add to the £86 million of the second half of 1956 to give a total for the 12 months of £211 million, which was "considerably better" than expected in view of the disruption following the Suez crisis. In January-June 1957, trading with the rest of the sterling area realised a surplus of £117 million, against £180 million in the July-December period and £119 million in the first half of 1956. With non-sterling countries there was a surplus of £8 million, against a deficit of £94 million in the previous six months and a surplus of £40 million in the half-year before that. With the dollar area there was a £32 million deficit, against a much larger one of £85 million in the previous six months. There was certainly no crisis warning in these figures, and an even bigger surplus is forecast for the 12 months to next June.

The trouble was that this healthy situation was nullified by the outflow of money on capital account. Long-time capital investment jumped from £60 million in the first half of 1956 to £100 million in the second half, and again to £150 million in January-June 1957—most of it passing through the free markets of Kuwait and, to a lesser extent, Hongkong, into private purchases of dollar securities against sterling. One surprising feature of the White Paper is the disclosure that overseas holdings of sterling rose in the first half of this year. Colonial balances went up from £1,281 million to £1,309 million, and those of other sterling area countries from £1,575 million to £1,616 million, suggesting that Australian earnings exceeded Indian spending. Holdings of non-sterling countries increased from £565 million to £569 million. The reserves rose by £88 million in January-June 1957, but only because of the return of the dollars earmarked for the payment of the interest on the U.S. loan, which was "waived," and because of the Indian drawings on the International Monetary Fund.

Significance of Trade Figures

Last week's brief reference to the provisional trade figures for September needs some elaboration to serve as an "indicator." Both exports and imports were lower than in August, re-exports were slightly down and the "trade gap" was also well below the average for the year. At £246.3 million, exports in September were £23 million less than in August, probably due to holidays, but for the first nine months of the year were 7 percent up on the same period of 1956. Imports at £308.4 million were £27 million down on August for seasonal reasons, but for the nine-month period showed a rise of 6½ percent over 1956. Re-exports were only slightly lower in September at £9.8 million, but were 8 percent less for the first nine months of the year compared with the previous year. The trade gap in September was £52.3 million, or £3.5 million less than in August, to give a nine-month average of £57 million a month, or £4.5 million higher than in 1956. On the whole, dollar exports continued to do well in spite of a sharp drop in shipments to Canada, and over the first three-quarters of this year were better to both countries than in the same period of 1956 with rises of 10½ percent and 12 percent to the United States and Canada, respectively.

Fall in Commodity Prices

The continued fall in commodity prices is reflected in a further drop of 1.8 percent to 151.4 (1949=100) in the basic materials index to reach its lowest level in September for well over two years. Many commodities shared in the decline, most of which was accounted for by decreases in the prices of raw wool (5.1 percent), copper (6.9 percent), raw rubber (6.4 percent), raw cotton (1.7 percent), lead (2.3 percent) and sulphur (5.4 percent). The few increases included hides and skins, raw jute and certain types of flax, of around 1 percent in each case.

Capital spending by industry is apparently being reduced as a result of the credit squeeze. In the three months ended 30th September, 525 industrial building schemes for 16.5 million square feet were approved, against second quarter figures of 652 and 18.5 million and for the third quarter of 1956 at 551 and 20 million. The total area approved for the first nine months of 1957 was 48.6 million square feet against 56.1 million square feet in the corresponding period of last year.

Price Council Starts Work

The Council on Prices, Productivity and Incomes, appointed by Mr. Macmillan two months ago to study the problems of inflation and issue periodically unbiassed reports for the education of the general public as to the economic situation in the country, put in two days of hard work discussing the scope of its activity. Having done so, the three members decided to invite representatives of the Government and of leading industrial organisations to discuss these problems with them "at an early date." The invitations are understood to be going out to the Treasury, the Bank of England, the Ministry of Labour, the Trades Union Congress, the Federation of British Industries, the British Employers Confederation and the National Union of Manufacturers, but the Council has also indicated that it is prepared to receive memoranda from other bodies or from individuals to whom no special invitation has been issued. The meeting with Treasury representatives is expected to take place shortly, and it is hoped that Lord Cohen and his colleagues, Sir Dennis Robertson and Sir Harold Howitt, will be able to issue their first report towards the end of the year, but it remains to be seen whether they will be able to overcome the expressed distrust and even hostility so far shown by the trade union leaders and secure their co-operation, for without that the Council's task will be made much more difficult.

Mr. Krishnamachari in London

After discussions with members of the Government, including the Chancellor of the Exchequer and the Prime Minister, India's Finance Minister, Mr. T. T Krishnamachari concluded his visit to London on Thursday last and went on to Bonn for yet another strenuous round of discussions there. Before leaving he told correspondents that it was estimated that India's foreign exchange shortfall over the next 18 months would be £170 million to £180 million whereas commitments for the second five year plan were about £1,000 million. He said there was no question of further cuts beyond those recently announced, neither would there be any fresh commitments over the next 18 months. Asked about his discussions in the United States, he had nothing specific to report, but he hoped that there might be ways in which U.S. aid could be given to India. It was possible that New York and London did not fully appreciate India's difficulties. Referring to trade with the Western Germany, he said this was almost entirely one way, and unless that country could help India over her foreign exchange difficulties the latter might have to stop buying there.

Brevities

On the amalgamation of the National Bank of India and Grindlays Bank from 1st January next, the combined business is to take the new name of National Overseas and Grindlays Bank with its head office at 26, Bishopsgate.

New medium-term business transacted by the Export Credits Guarantee Department in the third quarter of this year reached £108.5 million, a record. It is understood that this figure includes the arrangements made earlier this year for financing the new Indian steel works in Durgapur. The total for nine months is brought to £146.4 million, against £59 million in the corresponding period of 1956.

Suez Canal Company stockholders in Paris have voted by an overwhelming majority to convert the company into a new enterprise with power to use the assets in virtually any profit-making venture that it chooses. Projects already under consideration include the Channel Tunnel scheme and oil prospecting in the Sahara.

MINIMUM PRICE OF SUGARCANE FIXED

FACTORY PURCHASES THROUGH CO-OPERATIVE SOCIETIES

(FROM OUR BOMBAY CORRESPONDENT)

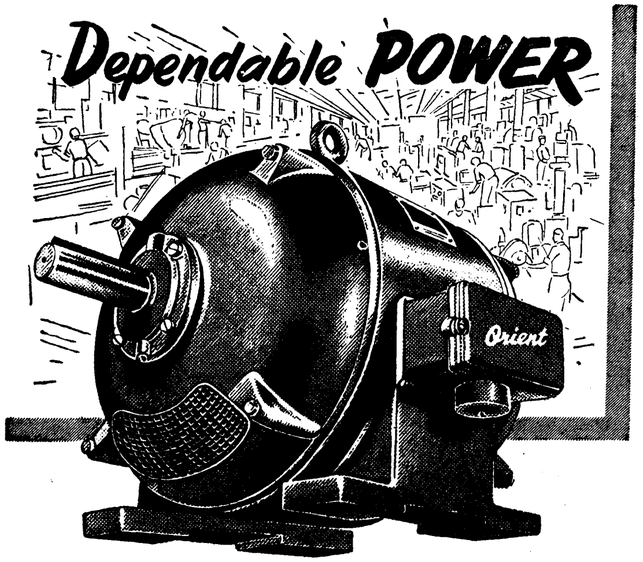
THE Government of India has decided that the minimum price of sugarcane during the 1957-58 season should continue on the same basis as during the previous season. This means that sugar factories will have to pay Rs. 1.44 a maund for their sugarcane supplies when delivered at their gates and Rs. 1.31 a maund when delivered at rail centres. Also, the formula linking the price of sugarcane with that of sugar will remain in force. Conditions in Bombay State are somewhat different to those obtaining in the other sugar-producing areas. Most of the sugar factories in the State own sugarcane plantations and therefore prefer to rely as much as possible on their own resources instead of purchasing their raw material from external sources. This reluctance to purchase sugarcane from cultivators is more marked because under the all-India formula linking the price of the raw material with that of the finished product, factories are never certain of the final price they will be required to pay. Under the circumstances, the Bombay Government decided that this formula was unsuitable due to the peculiar conditions prevailing in the State and ordered its suspension.

Reviewing the situation, the State Government, in consultation with the Deccan Sugar Factories Association, has now decided that in conjunction with the suspension of the all-India formula, the minimum price of sugarcane in the State should be fixed at the higher level of Rs. 46 a ton during the 1957-58 season. At the same time, the State authorities have said that if this price is paid during the 1957-58 crushing season, there will be no further increases. It is hoped that the cultivator will be able to sell more of his product since sugar factories now know the exact price they will have to pay for their sugarcane supplies. On their part, the factories have given an assurance that they will purchase from cultivators as much sugarcane as possible. It has been further agreed that the factories will purchase their sugarcane supplies through co-operative societies and will use other agencies only for sugarcane grown beyond 12 miles from the factory site. The method of payment evolved stipulates that 25 percent of the price will be paid within 15 days of delivery and the balance of 75 percent within six weeks.

Meanwhile, Mr. T. S. Bharde, Bombay's Minister for Co-operation, has said here that ten new sugar factories will be established in the State on a co-operative basis. This will bring the number of co-operative factories to 15 with a total output of 150,000 tons a year. Of the ten proposed factories, four are expected to begin production within the next few weeks while the remaining six will start operations by the end of next year. The Bombay Government has stood guarantee for the six factories which are to begin operations next year and on the basis of this the State Bank has agreed to advance them loans aggregating Rs. 2 crores.

Annual Report of Tata Chemicals

The annual report recently issued by Tata Chemicals indicates that the company has been able to increase its production of soda ash, caustic soda and sodium bicarbonate. Sales have increased from Rs. 2.38 crores to Rs. 2.66 crores and it is claimed that the latter figure would have been still higher but for transport difficulties and port congestion. The benzene hexachloride plant which had to be closed down in June last year because of the accumulation of stocks resumed working in March this year. Similarly, the magnesium sulphate plant which had been lying idle since 1954-55 for want of proper quality bitterns was again commissioned this year. The other achievements during the year included the marketing of ethylene dibromide for the first time, while extensions to the bromide plant were completed in March.



The directors have recommended a dividend of 5 percent on preference shares without deduction of income tax and 8 percent on ordinary shares without deduction of income tax. The company has further expansion plans in hand on which capital expenditure will amount to Rs. 3.76 crores. These include the expansion of the soda ash plant from 200 tons to 400 tons a day; the expansion of the caustic soda plant from 20 tons to 30 tons a day and the expansion of the sodium bicarbonate plant from 15 tons to 30 tons a day. In addition, the steam and power plants will need to be expanded. Although the company is pledged to finance these schemes by means of internal savings and borrowings, this would still leave a gap. The directors therefore propose to place two resolutions before the annual general meeting scheduled to be held on 15th November, 1957. These are to the effect: "Resolved that the capital of the company be increased from Rs. 5 crores divided into 250,000 5 percent cumulative preference shares of Rs. 100 each and 2.5 million ordinary shares of Rs. 10 each to Rs. 10 crores divided into 250,000 5 percent cumulative preference shares of Rs. 100 each and 5 million ordinary shares of Rs. 10 each and 2.5 million unclassified shares of Rs. 10 each by the creation of 2.5 million ordinary shares of Rs. 10 each and 2.5 million unclassified shares of Rs. 10 each."

Trends in Cotton

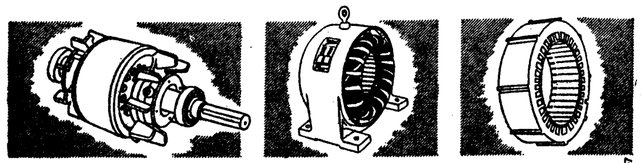
Cotton prices were easier in the futures market during the past week. After the level of Rs. 713 reached on 12th October, the March contract fell steadily on profit-taking. The fear of official intervention in the event of a rapid advance in prices curtailed speculative buying, it was reported. The contract was priced at Rs. 707-4 on renewed buying towards the close. Fair spinner demand continued for domestic varieties in the spot market. Shippers showed interest only in small quantities of Zoda cotton. In the spot market, there were hopes that mills might buy both domestic and foreign varieties if sales of textiles on account of Diwali were satisfactory. Arrivals commenced in Madhya Pradesh and Khandesh. In early samples, both grade and staple appeared satisfactory, giving promise of a crop of good quality. During August this year, Indian mills consumed 376,526 bales of domestic and 45,620 bales of foreign growths, according to official statistics. The total consumption during the 1956-57 season (1st September, 1956, to 31st August, 1957) was 4,665,581 bales of Indian and 567,468 bales of foreign cotton, against 4,365,456 bales of Indian and 603,251 bales of foreign cotton in the previous season. Domestic cotton consumption in 1956-57 thus increased by 300,125 bales, while the consumption of foreign cotton was 35,783 bales less.

Yarn Firm

The yarn market was fairly active and prices were firm. Both ready and forward sales of staple fibre yarn increased. so bears rushed to cover. Reports from consuming centres, particularly Surat, showed that dealers as well as consumers thought the present level of prices in all kinds of staple fibre yarn to be low enough. Besides, they expected that during Diwali and the New Year, this was the only yarn which would be attractive to deal in.

BEHIND THE WHEELS OF INDUSTRY

Orient Industrial Motors are precision built from the highest quality materials to give high performance and long service.



Liberally designed, these motors have a high overload capacity and are capable of withstanding severe punishment.

Best insulating materials are used both in the slots and on the windings to give long life.

Dynamically balanced pressure die cast rotors are truly indestructible.

Uniflow forced draft ventilation system keeps belt dust away from the rotor.

These and several other features make ORIENT motors truly DEPENDABLE.

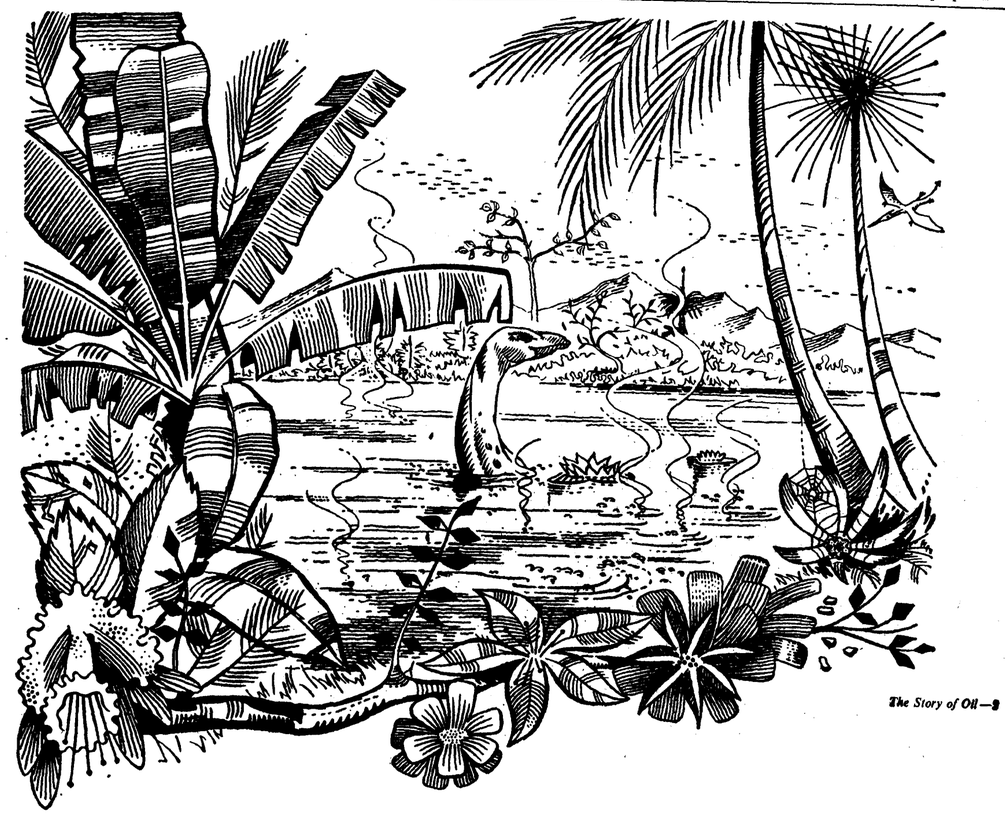
OFFICIAL RECOGNITION FOR MADRAS STOCK EXCHANGE

FORWARD TRADING FACILITIES DISCUSSED

(FROM OUR MADRAS CORRESPONDENT)

LAST week, the Stock Exchange here was formally inaugurated after the recognition granted to it by the Central Government under the Securities Contracts (Regulation) Act. The by-laws and rules have been officially examined. Mr. T. C. Kothari has pointed out that prejudice against the stock market still remains though the latter has contributed greatly to industrial progress in the South; Kerala as well as Mysore have been able to secure outside capital through it. Furthermore, Indian ownership in the plantation industry has been greatly helped by the creation of joint-stock companies. The scope for providing forward trading facilities in certain scrip has been discussed. It is said that the clearing list may include some low denomination tea shares which enjoy a wide market. Those doing business through brokers now enjoy a guarantee of the genuineness of the share certificates tendered. Though Madras does much inter-market business in leading shares like Indian Iron and Tata Steel, the growing interest in some local industrials might justify a forward list. Some shares like Aluminium Industries now enjoy a wide following because of the improved prospects. It is said that there might be greater mobility of capital between various centres in the south, but both Hyderabad and Bangalore already have stock exchanges and Madras will, therefore, enter into a closer relationship with these markets in the future.



Problems of Export Promotion

When the Director of Export Promotion, Mr. R. N. Phillips, paid a visit here, commercial bodies suggested that quick transport and the rapid clearance of cargo were of vital importance. The growing business of the State Trading Corporation has created misgivings in the minds of traders. Exemption from sales tax was demanded in a memorandum presented to Mr. Phillips and it was said that it was one way of lowering the prices of Indian goods in foreign markets. The Tamil Chamber stressed the need to encourage exports of printing types and iron scrap. It said that Customs procedure is both dilatory and complicated. Onion traders complained about the chronic lack of shipping facilities. Official reports say that Malaya is turning to Japan for the supply of potatoes and cloth. Furthermore, south India might lose the trade in cured fish as a cannery has been set up by Malayan interests and Japan has supplied the fishing craft.

Parambikulam Project

The week-end talks in Trivandrum about the sharing of waters have led to no concrete decision. The Kerala Ministry wants all parties to accept an agreement with the Madras Government concerning the Parambikulam project. It is the Kerala Congress Party which must be induced to agree that the diversion of waters will not hurt Kerala. While Andhra is prepared to let surplus water be used for supplementing irrigation facilities in Madras, the attitude of Kerala is influenced by the fear that agriculture there might suffer in the future. An expert committee has been set up to examine the issue.

Meanwhile, the Madras case rests on the fact that the Kerala rivers are fed by the rains in the Nilgiri Hills and even the construction of new hydro-electric and irrigation projects in Kerala does not preclude the claim of Madras for the sharing of waters which flow from one State into another. However, the only real issue is the location of the dam. As experts are to examine the problem, there is room for optimism, as expressed by Mr. K. Kamaraj, about the chances of the Rs. 10-crore project going through. It is hoped that the Kerala Ministry will explain what is being aimed at, though the Congress Party in Kerala has so far shown reserve towards the proposal.

The Story of Oil—9

A miracle of nature

Crude oil, or petroleum as it is often called, occurs in many parts of the world—chiefly in regions where sedimentary rocks once formed the bottoms of ancient seas.

No one is sure how oil originated. The most widely accepted theory is that it resulted from the decay and alteration of the remains of prehistoric animals and plants. This organic matter was washed from the land into the vast jungle of marine life under the seas. The deposits, mixed with mud and sand, formed layer upon layer on the bottom. As these became buried, Nature's mysterious chemistry got to work. It slowly transformed the organic matter into the compounds of hydrogen and carbon which we now know as oil, and at the same time the fine sediments which covered it were compressed into rock strata. The newly-formed oil oozed into the nearest layers of porous rocks, which held it as if in a sponge, and here it remained.

Throughout the millions of years that oil was being formed, many changes were taking place in the earth's crust. It rose and fell, was crushed and expanded. Lands were drowned, sea-beds became dry land. In some places cracks developed and the land slipped, forming 'faults'.

During these violent changes, some of the imprisoned oil escaped and was lost. In other places it was so near the surface that it seeped through and was discovered and used by man from the earliest times. But the bulk has remained trapped in its porous rocks beneath the surface of the earth.

Assam Oil A full-scale petroleum industry

This is one of a series of informative advertisements about the petroleum industry.

INDIA AND HER LEADERS

The Transfer of Power in India. By V. P. Menon. (Published by Orient Longmans. Pages 543. Rs. 25.)

Ten years after the transfer of power in India, the disputes over the canal waters and over Kashmir still serve as regrettable reminders of the story which Mr. Menon tells. The irony goes deeper. Writing on India's economic relations with Pakistan in his latest book, Dr. B. N. Ganguli of the Delhi School of Economics remarks that "it would be optimistic to expect Pakistan and India to evolve a kind of regional preferential arrangement by means of which the two contiguous economies may reciprocally assist each other's economic development through mutually advantageous trade and which may be a half-way house to the eventual formation of a Customs union."

Mr Menon's book, the second of the two which Sardar Patel requested him to write (the first being *The Story of the Integration of the Indian States*) describes the negotiations which in the end put a wholly rational solution of the economic problems of this sub-continent below the horizon. He gives a brief *resume* of the history of British rule up to 1939, from where onwards the story is told in full detail. One sees the partition of India slowly become inevitable. Mr. Menon points to the unwise decision of the Congress to resign in the autumn of 1939, thus playing into the hands of the Muslim League, and forcing the British to appear as the latter's supporters. On the thorny question of "divide and rule," Mr. Menon has more to say by implication than by assertion. Were the British responsible for encouraging Hindu-Muslim disunity? Or did they merely play up a problem springing from economic frustration? Mr. Menon does not give any categorical answer to this, for, as he says in his preface, it is his intention to adhere to a factual narration "avoiding expressions of personal opinion as far as possible". As a result, this book is impartial and serves as a rebuttal to those who assert that the history of British rule in India will never be properly written by either Indians or Britons. Mr. Menon recounts in a readable style the long and protracted negotiations which finally led to the Labour Government's announcement that independence would come by June 1948 in one form or another. The story ends with the birth of the two dominions nearly a year before the deadline.

But can history ever be impartial? For one reviewer at least, Mr. Menon's self-imposed limitation prevents this excellent book from being the definitive work on these years. No one else will probably be able to excel the author's description of the negotiations which preceded the transfer of power, but one is left asking many questions. Was partition as inevitable as it appears from this recital of facts? History will surely have a great deal to say about the personalities on the stage at that time, on their motives and ideals. But Mr. Menon is silent. The central figures, Gandhi and Jinnah and Nehru, emerge lifeless from these pages. We learn little of what was driving them, and of what the state of feeling in the country was at the time. Mr. Menon spends little time over the "quit India" movement of 1942, the aftermath of which was surely a factor in the deliberations of 1947? It is to be hoped that this lack of personal colour, which is the very stuff of history, will be amended in the future by Mr. Menon. He was, as this book shows, in an excellent position to judge the leading characters, so he will perhaps at least write on the more personal aspects of the transfer later.

This is not said however to detract from the merits of a book which is at once absorbing, thorough and precise. Mr. Menon ends by describing the immediate aftermath of partition with special reference to New Delhi and with a plea for unity. "The partition of August 1947 was surely not intended to sunder for all time the ties that for a century and a half have bound India together as one administrative, political and economic unit...Economically it is the common man who must suffer but the suffering...can surely be assuaged by the healing touch of good neighbourliness". It is, he says, a sad reflection that the British, who first brought unity to India, could not bequeath it to their successors. One wonders if things would have been different if the Congress had listened to the lone voice of Mr. C. Rajagopalachari crying in the wilderness in the early forties. Or was it, as Mr. Menon suggests, that Jinnah could not be stopped once the British in their declaration of 1942 gave the right to the provinces to accede or not to accede to the Union? It is part of the attractiveness of this book that it leaves one speculating about the many historical "ifs" which arise. Inevitably, too, the story leaves one agreeing with the author that "it is never too late for men of goodwill to take stock of realities, for leaders to sit down calmly and dispassionately, and together evolve some common machinery which would not merely minimise the rigours of partition but, by banishing all sense of fear and conflict, would bring about for both countries enduring peace and progress". It remains to be seen if such commonsense is translated into a political reality in the foreseeable future.

THE SUGAR INDUSTRY

The Indian Sugar Industry, 1955-56 Annual. Edited by M. P. Gandhi. (Published by Messrs M. P. Gandhi and Company. Price Rs. 6).

There are not many detailed surveys of individual industries, and the one that Mr. M. P. Gandhi has compiled on sugar is a mine of information. This particular industry has gained in prominence in recent years, and is claimed to be India's second biggest. The main reason for its growing importance is the doubling of consumption in the past five years. "The indications are that the Planning Commission, which has fixed for the time being the installed capacity at 2.5 million tons and for production 2.25 million tons, to be achieved by 1960-61, will have to revise the estimates and the internal consumption will prove to be higher than now anticipated and there is a desire also to build up a sizeable export trade." The supply of sugar in 1955-56 was fairly adequate, production having constituted a record for all time. While the final estimate for 1955-56 placed the output at 1,862,000 tons, according to a U.N. survey it was "expected to be higher at even 2,020,000 tons." It therefore became possible to suspend imports and to think in terms of exports. The Government has helped expand production capacity, and 52 new mills will come into being, a good many of them on a co-operative basis. As the industry is now in a phase of expansion, details of its progress and prospects are of greater interest.

THE RAILWAYS

Indian Railways Annual, 1957. (Published by the Railway Board. Pages 246. Price Rs. 4).

The publication of this attractive annual brings a reminder of the old Indian State Railways magazine, which was nice to look at but commercially a failure. Marking the 104th anniversary of the Indian railways, the annual does not follow its predecessor in that there is a profusion of rather interesting advertisements. It could have imitated with good effect, however, if it had been more enterprising journalistically, and had included more articles of a general nature. If the annual is to be read only by railway specialists, it may be considered a success, but there are altogether too many contributions packed with technical facts and figures to make it satisfying for the layman. As in many official publications nowadays, there are numerous contributions from officials who appear to be at pains to justify the way the taxpayers' money is being spent with a great deal of stress being laid on the second five year plan. Such attempts, one suspects, far from awakening public interest, tend to deaden it, especially when there are too many technicalities. Instead of articles telling one that Belgium has the highest rail density and that the Swiss railways are 98 percent electrified, a few on the type of country through which these railways pass would have been welcome. It is only at the end of the magazine that an article appears more interesting to the railway passenger rather than the engineer—on the comforts provided by the West German railways. The only other light article is on a tiger shoot. There are also some first-class full page photographs, plus a splendid illustration by "Thackeray," which should be pleasing to anyone who has ever suffered third class travel in India.

Jute

FIRM TREND IN GUNNIES REVERSED ON LOOM UNSEALING RUMOURS

INDIAN RAW JUTE ARRIVALS REMAIN DISAPPOINTING

THE Calcutta jute goods market remained under the influence of the Government orders placed a few days ago, but only in the near positions for sacking. B Twills for October shipment were in great demand, both as real goods and in the speculative sections. Prices were pushed up at the opening and new high levels were recorded. It was natural for rates to rise as mills' stocks were at a low level. But fabrics other than B Twills were very quiet. While the demand for ready sacking was at its greatest, the premium over forward shipment rose to Rs. 7, but once the demand was satisfied, ready rates fell rapidly—by about Rs. 3 in a few days. During this time, January-March shipment prices were surprisingly stable, and fell by only 25nP. Similar conditions existed in the hessian market, and over the week quotations varied by only 15nP or 25nP. To satisfy the demand for heavy goods, and because on the present basis they are showing a greater margin of profit, many mills have transferred a large proportion of their production to sacking.

It is perhaps with the possibility of a shortage in mind that a strong rumour was circulated towards the end of the week that the industry was thinking of unsealing some looms. It is significant that shortly after the mills' stocks last time fell to a very low level (in December 1955), the I.J.M.A. unsealed 2½ percent of the total loomage (from 9th January, 1956) and then a further 5 percent (on 20th February, 1956). Within eight months, however, the decision had to be reversed, because during that time mills' stocks rose to their highest level in many years and goods prices slumped.

Raw Jute Arrivals

Raw jute arrivals in Calcutta and mill stations last month amounted to 386,100 bales, of which 59,650 bales came from Pakistan and 326,450 bales were Indian. Although these figures were distinctly better than those for August, they fell short of the monthly consumption rate, and also of the total for September 1956. It is interesting to note that arrivals from Pakistan continued to improve; in fact, compared with the first three months of the 1956-57 season, current arrivals were up by 30,650 bales. But arrivals from Indian sources in the same period were down by 184,800 bales, the total fall thus being 154,150 bales. The smallness of arrivals from India is far from encouraging in view of the target of self-sufficiency in jute. The position is not healthy if, as rumour has it, the industry is considering an increase in production, which would automatically increase the demand for jute. Arrivals during the current quarter, when the bulk of the crop is normally marketed, will be watched with interest, and with some concern as the deficit compared with last year is a large one.

THE JUTE MARKETS

Manufactured Goods: New high levels were recorded for ready B Twills at the opening of the goods market last Thursday, quotations rising to Rs. 121.50 for October shipment. This was Rs. 7 above the January-March price. Other fabrics, both sacking and hessian, showed no change, and apart from ready B Twills the market was quiet. This situation existed until Friday, when the squeeze in B Twills was relaxed. Over the next two days, quotations dropped first by Re. 1 and then by Rs. 1.50. There was only a slight reaction in the rest of the market, January-March B Twills on one day even showing a slight appreciation before falling back slightly. Hessian was hardly affected by the movements in sacking; 40in. 10oz. remained almost steady at the opening prices over the first few days, but dropped to Rs. 43 for October shipment after the week-end. The forward shipment prices for this fabric was Rs. 42.30 on Monday, which showed a drop of 20nP. Overseas consumers took very little interest throughout the week, but the shipping statistics were good. Towards the close, rumours started that the industry was thinking of unsealing looms, so prices fell, ready B Twills dropping a further Rs. 1.30 to Rs. 118.20 and January-March to Rs 113.50. Hessian also dropped, and 11 porter fabrics stood at Rs. 42.75. This was followed by heavy speculative activity, but by this time the sentiment of the market was weak and a quieter tendency prevailed. Tuesday was a holiday when all markets were closed.

On Wednesday, the market was quiet and opening quotations were as follows :

	Oct. Rs.	Nov. Rs.	Dec. Rs.	Jan.-March Rs.
40in. 8oz.	34.80	34.60	34.35	34.05
40in. 10oz.	42.75	42.75	42.70	42.25
B. Twills	116.75	116.75	115.50	114
Heavy Cees (Plain)	116.75	116.50	115.25	114
A. Twills	141.50	141	140	138
Liverpools	131.25	130.75	130	129
Corksacks	117.75	117.50	116.25	115

Raw Jute: The fibre markets were quiet and only last Thursday were any large-scale transactions reported. Indian mills were buying throughout the week on a day-to-day basis, but the quantities involved were very small. Mills reported that arrivals against contracts calling for delivery during October were very satisfactory, and only a few sellers had asked for extension of the delivery periods. Many of these contracts were low-priced, having been negotiated as forward contracts some months ago. Imports in the upcountry markets were still disappointing for the time of the year, so prices were firm and ruled consistently higher than those quoted to mills. Jute mill agencies in the mofussil were very active, as were their representatives in the local Cossipore markets. Prices in these areas were well maintained. In Cossipore, imports were again small, but the deficit was made up to some extent by Daissee imports, although the exact figures were not immediately assessable.

During the week, raw jute prices recorded a gradual decline. At the opening, rates were marked down by 50nP for Northern-Assam jute to record Rs. 29.50 a maund for October-November shipment. A fair amount of business was done at this level, which tended to maintain confidence, and on Friday there was no alteration. Towards the week-end, sentiment eased and fibre rates dropped by 25nP. Once again business was done at the

lower levels. and small lots were even finalised at a discount, but the quantities involved in all these transactions were very small. On Monday, certain mills made "lucky day" purchases on account of the Diwali festival, but prices were unchanged.

Business was on a smaller scale than previously. Northern-Assam jute was done at Rs. 28.75 to Rs. 29.25 a maund for one month's and October-November shipment; Tossa from the same agencies was sold at a premium of Re. 1 a maund. Western Tossa fell within this range for the same delivery. A fair amount of Daissee was bought at prices ranging from Rs. 30 to Rs. 31 but higher rates with premiums of about Rs. 3 were paid for guaranteed dry Daissee. Daissee White was still in demand, and passed at Rs. 29 a maund for one month's delivery. Mesta from various districts was purchased, and the Daissee variety fetched Rs. 26.50 to Rs. 27, while Northern mesta changed hands at Rs. 26.75 to Rs. 27.25 a maund. Small lots of Bimli F.A.Q. were reported at Rs. 24.50 to Rs. 25 a maund. Interest in cuttings slackened due to difficulty in obtaining licences, but business was reported at Rs. 81 a bale for October-November shipment and at Rs. 83.00 for ready bills of lading.

Tuesday being a holiday, all markets were officially closed for Diwali. On Wednesday morning, opening quotations were as follows:

Indian Jute:	Landed at Mills Rs a md. basis	Shipment

THE FOREIGN JUTE MARKETS

RISE IN FIBRE PRICES

(FROM OUR DUNDEE CORRESPONDENT)

THERE are several reasons for the recent advance in raw jute prices. In the first place, there is a scarcity of good quality fibre from the present crop. Secondly, a good deal of labour trouble is being experienced in Pakistan, not only in the jute mills but also in inland transport services. Thirdly, the unsatisfactory situation in the Middle East has affected sentiment. All these have led to a rise in price of £2 to £4 a ton. Consumers of fibre and goods find it very difficult to say whether the high level of prices will continue or whether there will be a fall again with the return of more stable conditions. Offers of the better qualities of raw jute are very sparingly made. Crack marks of Lightnings are not even mentioned and only one or two sellers are quoting Crack Hearts around £128 a ton for November shipment, c.i.f., U.K. Mill Firsts are none too freely offered at from £115 to £118 and Mill Lightnings cannot be bought at less than £100, while Mill Hearts have advanced to £91 and grade Hearts to £81, c.i.f. U.K., October-November. Good marks of Daissee-2/3 have gone up to £100 and grade to £92, while grade Tossa-2/3 is now at £106 and fours at £100, c.i.f. same shipment. Spinners are showing little or no interest here and they are not inclined to follow the rise in prices.

The Calcutta goods market has registered a firm undertone. B Twills are scarce for ready shipment, and quoted at the high rate of 184s for October, 179s 6d for November and 177s 3d December, while 40in. 10oz. is at 65s 3d, 65s 3d and 65s and 7½oz. at 50s, 49s 9d and 49s 6d for the respective positions of shipment, all f.o.b., Calcutta. Business in jute yarns and cloth has failed to improve and both spinners and manufacturers are running out their orders. It looks as though there will be a good deal of short time or paying off of workers if the market remains as quiet as it has been for some time past. Prices are all very firmly maintained, and if raw jute goes much higher there may be an advance in the maximum rates for yarns and cloth.

STANDARDISATION OF JUTE BAGS FOR PACKING SUGAR

The second meeting of the Jute Bags for Packing Sugar Sectional Committee of the Indian Standards Institution was recently held in Calcutta. Mr. T. Prasad, Chief Director, Directorate of Sugar and Vanaspati of the Central Ministry of Food and Agriculture, presided. The meeting was attended by the representatives of the Kanpur Sugar Merchants Association, the Bombay Sugar Merchants Association, the Indian Jute Mills Association Research Institute, the Indian Sugar Merchants Association, the Development Council for the Sugar Industry, the Directorate of Sugar and Vanaspati, the Central Ministry of Food and Agriculture, the Institute of Jute Technology, Calcutta, and the Indian Jute Mills Association. Sugar is at present packed in A Twill bags. By a Government notification, the use of L Twill bags has been suspended, and a limited use of these bags could be made only with the prior permission of the Government. It was stated by the representatives of the Kanpur Sugar Merchants Association and the Bombay Sugar Merchants Association that the L Twill bags used for packing sugar were found to be unsatisfactory due to this poor quality. The representatives of the Indian Sugar Mills Association, on the other hand, contended that the jute bags were not entirely at fault and that the main causes were the severe handling in transit and storage, etcetera. After considering the various aspects of the case put forward by the sugar trade and industry, the Committee decided that the formulation of a standard specification for A Twill jute bags for packing sugar was necessary. It was also considered necessary that the specification should include not only trade descriptions such as porter, shots, dimension and weight, but also the more important characteristics such as breaking strength, bursting strength, seam strength and air permeability. The test report on satisfactory and unsatisfactory A Twill and L Twill bags submitted by Dr. W. G. Macmillan of the Indian Jute Mills Association Research Institute was considered by the Committee. It was agreed that more samples of A Twill bags of the standard quality should be tested for obtaining values such as bursting strength, breaking strength, etcetera. For this purpose, it was decided to request Dr. Macmillan to secure samples from about 50 mills in India, and undertake tests to determine the values for the above characteristics. He has been requested to place the data so collected before the next meeting of the Committee, which is likely to be held in the second week of December.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in September, although 4 million yards higher than for August, was 8 million yards below that for September 1956. The disappointing decline in overall estimated consumption, which has been in evidence since the middle of the year, has resulted in consumption for the first nine months being 17 million yards below the same period of last year, a decline of about 2½ percent. Although there has been some improvement in burlap consumption for several industrial uses, bag cut-up has been adversely affected by poor crop conditions in some sections of the country. U.S. burlap stocks declined by a million yards and at 227 million yards, 129 million yards were spots and 98 million yards were afloats. Total stocks are 31 million yards lower than last year and 40 million yards below January this year. Appearing below are two tables which include the September figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

HIGHER COSTS OF AIRLINES

VOLUME OF WORLD TRAFFIC INCREASING

(FROM OUR NEW DELHI CORRESPONDENT)

RISING costs, extensive capital commitments and frozen fares have placed the world's airlines in a "financial squeeze" at a time when they are preparing for the jet age, Sir William Hildred, Director-General of I.A.T.A., told the organisation's thirteenth annual general meeting held recently in Madrid. In spite of traffic increases, he said, the airlines' net operating margin had declined both in amount and in percentage. He predicted that the world's airlines, which carried 78 million passengers in 1956, should pass the 100-million mark "at the latest in 1959." North Atlantic traffic, totalling 835,000 passengers in 1956, should approach the one million mark this year. Although the new jets would increase capacity substantially, there was no reason to fear any excess capacity. During 1956, the airfleets of I.A.T.A. members increased by 200 aircraft, or just over 8 percent. Of the 200, three-quarters were modern four-engine aircraft.

Mr. Thomas Delgadoy Perez de Alba, president of the Board of Iberia, took office on 9th September as the new president of I.A.T.A., succeeding Lord Douglas of Kirtleside, chairman of B.E.A. The meeting voted to keep the I.A.T.A. headquarters in Montreal. Associate membership was granted to Aeronaves de Mexico and the Flying Tiger Line, bringing I.A.T.A.'s total membership to 80 airlines—72 active, and eight associate. At the concluding session, it was voted to hold the 1958 general meeting in New Delhi and the 1959 session in Tokyo.

Passengers carried by member-airlines increased by 188.4 percent between 1949 and 1956, and revenue passenger-kilometres rose by 223 percent, I.A.T.A. has stated. Its report shows that in 1956 passengers carried by I.A.T.A. members comprised 75.1 percent of the total transported by all scheduled airlines listed by the I.A.C.O. I.A.T.A. carriers flew 75.3 percent of the total revenue kilometres and 86.8 percent of the passenger-kilometres. Passengers carried in 1949 by 63 I.A.T.A. airlines numbered 20.3 million. Revenue passenger-kilometres totalled 19,335 million. In 1956, 76 I.A.T.A. member-airlines carried 58.6 million passengers and operated 62,476 million passenger-kilometres.

Problems of Jet Transport Operation

Changes in airport construction and air-traffic control practices needed for jet operations have been explained in a report by the I.C.A.O.'s jet operations requirements panel. The main characteristics of some jet aircraft that affect airports, the panel says, are their high gross weights, increased take-off and landing requirements at or near maximum gross weight, and the effects of jet engines such as the higher temperature and higher velocity of jet effluxes compared with the propeller slipstream, and greater noise. It may be necessary, the panel adds, to provide pavements especially resistant to heat and blast effects at run-up areas and at the ends of runways. At aprons and refuelling positions, pavements resistant to the chemical effects of spilled jet fuel are needed. Noise should be reduced to the maximum possible extent. As fuel consumption during taxi-ing is high, taxiways should be laid out to make taxi-ing time as short as possible, and to allow for turns at speeds of between 30 knots and 45 knots. Because of fuel penalties, no jet aircraft should encounter delay between the time it starts its engines and the time it climbs on to its course. This calls for procedures designed to facilitate uninterrupted taxi-ing, take-off and departure clearances. The airport requires facilities allowing jets to bypass piston-engined aircraft running up their engines at the beginning of the runway.

Meanwhile, an I.A.T.A. technical committee warned that navigational aids, traffic control, and airports are not yet adapted to jet transport operations. The committee told the I.A.T.A. general assembly in Madrid that in many areas, air traffic services were not even adequate for current air traffic. The new jets, with twice the speed, five times the fuel consumption and much greater carrying capacity than conventional aircraft, would require new types of instruments, communications systems and traffic control devices, more efficient ground handling and servicing. Noting that jets flying in opposite directions would approach each other at combined speeds of up to 1,200 miles an hour, the committee said that airlines were still awaiting practical proposals from manufacturers for anti-collision devices. Jets operating on non-stop intercontinental flights would require longer runways.

Russian Jet Plane

Commenting on the wide attention which the Soviet *Tu-104* is getting in the U.S.A., the Delta vice-president, Mr. Erle Cocke has challenged the idea that the aircraft indicates Russian superiority over the U.S.A. in the jet transport field. The Russian jet "is a good airplane, judging from all reports," he says, but "it is a converted bomber designed for military rather than passenger service." The U.S.A. could have a jet passenger transport in service now "if the Air Force wanted to lend the airlines some of its jet bombers or tankers—and would pick up the fuel bills." U.S. jetliners which will fly in 1959 "will be not only bigger, faster, safer and more comfortable than the Russian jet, but will be designed to operate economically at fares which the travelling public will pay. . . (They) will assure continued American supremacy in the commercial transport field." Mr. Cocke says that he will visit Russia and fly the last part of his trip in a *Tu-104*. He hopes to confer with Aeroflot officials on Russian plans for international competition in civil aviation. "I believe a bilateral air agreement between the U.S.A. and the Soviet Union might be beneficial to both countries."

Strength of U.S. Civil Air Fleet

On 1st January, there were a total of 87,531 planes in the U.S.A., 64,688 of them active, the C.A.A. reports. The number of multi-engined planes increased by 25 percent to 4,183. Single-engined planes numbered 22,805—an increase of 19 percent above 1956. The number of commercial planes stood at 1,802. Four-engined aircraft increased to 861 from 702 in 1956. For the first time, four-engined planes outnumbered the twin-engined types. *Douglas* planes accounted for more than half the total commercial aircraft. There were 362 *DC-3s*. one-fifth of all U.S. transport planes. Five airlines claimed 49 percent of the total aircraft in the scheduled service—American at the top with 192. U.A.L., T.W.A., P.A.A., and E.A.L. followed in that order with 185. 171, 167 and 140. respectively.

Pan American Great Circle Route

The C.A.B. has agreed to a new hearing of Pan American's application for permission to serve Seattle and Portland on its Great Circle route from California to Japan, on instruction from President Eisenhower. The C.A.B. has approved Pan America's move for a North Pacific service, but only from California terminals, not granting its request for permission to serve Seattle and Portland as well.

First Commercial Flight to Antarctica

A Pan American *Boeing* stratocruiser flew from Christchurch, New Zealand, on the "first commercial airplane flight" to Antarctica, carrying members of the Navy's construction battalion and some civilian technicians. The plane left San Francisco on 12th October and reached Christchurch on 14th October, stopping in Honolulu, Canton Island and Fiji. Pan American Airways now offers a combination of first and tourist class *DC-6* services for the first time on its San Francisco-Caracas route. Only tourist accommodations have been provided on these flights which stop in Los Angeles, Guatemala city, San Salvador, Managua, Panama city, Barranquilla, and Maracaibo. A combination of first and tourist class *DC-6* services will also soon fly between Miami and Managua, San Jose, Panama, Barranquilla, Maracaibo and Caracas.

B.O.A.C. Britannia Service across Atlantic

B.O.A.C. has announced that its *Britannia* service across the Atlantic will begin during the first three months of 1958. Trans-atlantic proving flights to U.S. terminals that B.O.A.C. now serves will begin soon. Mr Basil Smallpiece, B.O.A.C. managing director, has disclosed however that the airline is still having "air intake icing difficulties of the powerplant in certain conditions." He said that although the financial penalties for delaying the *Britannia* service would be great, "we must first establish whether it is liable to encounter on the Atlantic or near the eastern seaboard of North America the same kind of engine icing that is still being experienced with the *Britannia 102* on the eastern and African routes." B.O.A.C. took delivery of the long-range *Britannia* nine months behind schedule, and Mr. Smallpiece has criticised Bristol, the manufacturers, for "failing to keep delivery deadlines." Production delays have already cost the airline more than £2 million, he said.

Eastern Germany to Manufacture Jets

A jet airliner is being developed by Eastern Germany's aircraft industry. The plane, it is said, is designed for a cruising speed of 500 miles an hour and a range of 1,500 miles. It will carry 48 to 77 passengers and will be ready for service in 1960.

Air France Polar Route to Japan

Air France has been conferring with the Japanese authorities about the inauguration of its polar air service from Tokyo to Paris next spring. The airline now serves Tokyo from Paris through Asia.

Criticism of non-Communist Airlines

While seeking to expand its own services to non-Communist countries, Aeroflot is waging a deliberate campaign against "capitalist" airlines. Articles appearing in Aeroflot's official organ criticise American and west European airlines for "concealing deficits behind Government subsidies," for "getting their profits from the taxpayers' pockets", and exploiting their workers even at the expense of flight safety. Air transportation, the publication said, is "still beyond the reach of the broad masses of the people in capitalist nations."

Cathay Pacific Order for New Plane

Cathay Pacific Airways has ordered two *Lockheed Electras* for delivery in June and August 1959. The airline, it is expected, will use turbo-props on its services to Saigon, Calcutta, Bangkok, Labuan, Manila, Singapore, and Rangoon.

New Austrian Aviation Company

On 30th September, 1957, an Austrial aviation company has been founded under the name of "Austrian Airlines Oesterreichische Luftverkehrs A.G.", with an initial capital of 60 million schillings, including 9 million schillings each contributed by the S.A.S. (Scandinavian Airlines System) and the Norwegian Fred Olsens Flyselskab. The controlling interest is held by the Austrian group consisting of numerous commercial enterprises and various public sectors. The company will start with four modern Vickers *Viscount* planes, and the services, it is scheduled, will start from March 1958. The projected flight programme is to cover routes to London, Zurich, Frankfurt, Warsaw, and the Middle East.

SOUTH EASTERN RAILWAY

TENDERS

Sealed tenders are invited for supply of following items:—

Tender No. GM8/PD/599/29-CS/F1 of 57 for supply of 9,000 Rft M.S. Corrugated Pale Fencing as per Chief Engineer's Drg. No. 15889.

Tender forms are obtainable from the Controller of Stores, Garden Reach, South Eastern Railway, Calcutta-23 (PD Section) on remittance of Rs. 5/- per copy per tender (not refundable) by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, South Eastern Rly., Garden Reach, Calcutta-23, by local firms. Earnest Money against the tender is Rs. 900/-. Closing date of the tender is 19-11-57 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid income-tax clearance certificate along with the Earnest Money deposit receipt with the Tender.

GENERAL MANAGER.

EXPANDING MARKET FOR COFFEE

BIGGER SOUTH INDIAN TEA CROP

(FROM A SOUTH INDIAN CORRESPONDENT)

THE Coffee Board's announcement that the 1956-57 crop receipts to the end of September exceeded 41,450 tons and exports exceeded 11,850 tons, was followed by a smart recovery in coffee shares on the Madras stock market. Exports during 1956-57 were valued at over Rs. 7.1 crores, the main markets being Western Germany, France and Italy. This year new markets, such as Russia and Eastern Germany, have been found. The prospect of a crop of over 37,000 tons for the next season and a carry-over amounting to nearly 7,000 tons from the current season's crop sustains the belief that exports will be maintained. The removal of the export duty of Rs. 62.50 a cwt. has stimulated exports, and the provision of an export quota of 15.155 tons from the current season's crop has helped enlarge the trade. The internal market for coffee is expanding, the estimate of the current year's requirements being 26,000 tons, compared with last year's actual offtake of 23,800 tons. But this does not reduce the size of the exportable surplus to any considerable extent, because output also is rising. Next season's crop may not be as big as this season's, but the larger carry-over from the current crop will make good any fall in output. Investors received with interest the Board's announcement that it has reserved 500 tons for export to the United States. The bright prospects of an expanding market at home and abroad have given confidence to investors in coffee shares. In spite of additional taxation, the cost of new concessions to labour and the confusing reports from Kerala, most coffee shares have been widely favoured for some time. Shares of tea companies with coffee areas have found better support in recent weeks.

Higher Tea Output

South India is likely to produce more tea in 1957. By the end of August, there was a lead of 10.5 million lbs over the output in the corresponding period of last year—92 million lbs against 81.5 million lbs. The trade estimate of the September crop amounts to 12 million lbs, compared with 9.6 million lbs in the same month last year.

Sharp Rise in Cardamom

Cardamom values touched a new peak of Rs. 13.10 a lb at the latest sale in Munnar. India's annual production is about 1,500 tons in normal years but this year the crop may not exceed 1,200 tons, in view of the attack by "thrips" and other pests, and the unfavourable weather which obtained in the cardamom areas of the High Ranges. In Nelliampathies where the cultivation of this crop is rising, the season has been fairly satisfactory.

No Raw Nuts for Cashew Factories

As raw nuts are not available, cashew factories in the west coast are likely to be closed down within a few days until the beginning of the new season, excepting in the case of those few units which are working with large stock reserves. On an average, a raw nut supply of about 12,000 tons a year is sufficient to keep the factories open for only about eight months in normal years. This year, a large section of the factories commenced work only in March-April. The raw nut supply was also larger. The indigenous supply was estimated at about 70,000 tons. Production in Africa, it is estimated, will be 80,000 tons to 90,000 tons. Imports from Africa are not yet finished but the quality of the imported nuts has been poor and this has neutralised the advantage of a larger supply. Unlike previous years, U.S. buyers have been hesitant and price-conscious this year because of the larger availability of almonds. Cashew secured its entry into a few new markets; otherwise, the smaller demand from the U.S.A. might have proved disastrous for the cashew-processing industry.

Thefts on Rubber Plantations

Under the cover of widespread indiscipline, threats to peace and intimidation, thefts have been increasing on Kerala estates. Large-scale organised thefts of rubber are reported from most of the rubber estates in the affected areas. Thefts of tea are also increasing, says the United Planters Association in a statement. According to planters, thefts in certain cases amount to as high as 30 per cent of the total production. The chances of securing conviction depend on catching the thieves, but even in cases where the culprit is produced before the court, the punishment meted out is so light that it does not act as a deterrent.

Complaint of Coir Merchants

The Cochin Coir Merchants Association in a statement says that the primary coir co-operative societies which are meant to help the producers have largely failed, while the creation of the coir marketing society has thoroughly disorganised the marketing of coir products. The Government, instead of spending large sums of money in organising these marketing societies, should take the mercantile community into confidence. It should also let the financial and other resources of merchants be used, and leave the marketing side entirely in their hands, if they are prepared to trade honestly on the same conditions on which the marketing societies are running.

The Association complains that the efforts of the Union Government to help the industry by constituting the Coir Board and the various coir schemes of the State Government have proved to be of no real benefit to producers or labour. The Board should not merely be content with doing propaganda and publicity and drawing up schemes to increase production, but should also try to understand the difficulties of the hundreds of traders doing business in the commodity. Coir dealers have been slowly feeling the bad effects of a slump over the past 12 months. They plead for the exemption of coir and coir products from sales tax as in the case of *khadi* and handloom goods. They also suggest that representation on the Coir Board be given to those directly connected with the trade and industry. The Association requests the Union and State Governments to use their good offices with the shipping companies to provide adequate shipping space in the steamers touching Kerala for lifting coir cargo.

Estate Staff Not to Strike

The proposed strike of the estate staff in Madras and Kerala will not take place as an agreement has been reached between the Estate Staff Union and the United Planters Association on all pending disputes. This agreement will cover all plantations in these two States. As for the estates in Mysore, separate negotiations will be held later.

COCHIN TEA SALES

At Sale No. 28, 1,900,000 lbs of tea were on offer. There was a very limited demand and prices were irregularly 10nP to 15nP easier for Low Mediums and Mediums. Good Mediums were 15nP to 20nP lower but Best Liquoring grades, particularly Fannings, remained firm to dearer.

NEW POLICY FOR EXPORT OF DUST TEAS

The export of dust teas will be allowed to all destinations without being cvoered by export rights, says a Government Press ncte, and no debit will be made against the shippers' quota account if applications for export licences are received in the Tea Board's office in Calcutta or Cochin, as the case may be, up to 31st December, 1957. Such export licences will be valid until 31st March, 1958. The Tea Board has introduced a special export application-cum-licence form for this purpose. The form can be obtained from the Tea Board's office at 1/A, Vansittart Row, Calcutta 1, or Church Road, Cochin 1, up to 31st December, 1957. All intending exporters—both producers and buyers—should submit their export applications in that form. The Tea Board will reserve the right to inspect consignments against these export licences at any stage before shipment, in order to satisfy itself that the tea in question is dust tea. No shipment will, therefore, be allowed under the guarantee scheme, that is, against the execution of a bond for filing with the Customs at a later date and a covering export licence. Under the new procedure, prior to the actual shipment, the export licence must be filed in all cases of export of dust teas.

GOOD GENERAL DEMAND AT TEA EXPORT SALE

STRONG SUPPORT FOR DUSTS

AT Sale No. 18, held on 21st and 23rd October, offerings at the Export auction consisted of 61,721 packages. There was a good general demand. "Teas for price" sold well, while plain liquoring sorts were 4 to 6nP easier. Low mediums and mediums showed a decline of 5 to 10nP except for the brighter liquoring sorts which were sometimes dearer. C.T.C. Assams weakened by about 10 to 20nP with some withdrawals, but the few useful liquoring invoices generally sold above valuations, particularly the broken grades. Non-wither Dooars met with fair support but at prices which were about 4 to 8nP lower. Tippy teas and Darjeelings again sold well, while whole leaf grades received good support and advanced by about 10nP.

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2.24	2 3 0 to 2 4 0
Plain B.P.	1.80	1 12 0 to 1 13 0
Plain Fannings	1.64	
Medium B.P.	1.68	
Medium Fannings	1.70	
Best Assam C.T.C. B.P.	2.80	2 2 0
Best Assam C.T.C. Fgs.	2.90	3 2 0 to 3 3 0

At the Internal Sale, Dust offerings consisted of 21,553 packages. There was again a strong general demand and black leafy exportable types from all districts met with keen competition, but the smaller types, especially those with indifferent leaf appearance did not receive the same support and were sometimes easier. C.T.C. Assams received good demand, particularly the small types which were dearer, but the larger grainy kinds were in less demand and were occasionally 10 to 20nP easier. Non-wither Dooars sold well and were firm to dearer.

Quotations

	1957 Rs.	1956 Rs.
Medium Dooars Dust	1.64 to 1.68	2 5 0-
Medium Assam Grainy Dust	1.68 to 1.74	2 5 0 to 2 6 0
Medium Assam C.T.C. Dust	2.30- to 2.40	2 10 0
Best Assam C.T.C Dust	2.90 to 2.90	2 14 0 to 3 0 0

Leaf demand for 3,291 chests on offer was irregular, but prices for the orthodox grades were generally slightly easier. C.T.C. teas which were mainly of a fibrous description met with only limited support.

FREIGHT MARKETS FIRMER

THE firmer tone noted last week in the freight markets has been further emphasised by increased trans-atlantic coal rates, and 33s 6d was paid for a single voyage while it is known that a large number of negotiations are going on for coal and grain. The Far Eastern trades are still very quiet, and many vessels are now ballasting away from India in the absence of business. Considerable and commendable improvement has taken place in the congestion in Calcutta port under the guidance of the new port director, but it is premature to think that the problem will be solved in a week or two. Constant alertness will have to be maintained in order to keep cargo moving.

LINSEED BETTER

The general tone of the linseed market improved during the past week and prices firmed up due to a shortage of supplies. Despatches from up-country were very poor, and crushers were unable to obtain their requirements of seeds. Although the local demand for oil showed little improvement, prices advanced on reports of export sales by Bombay shippers and in anticipation of a further rise in overseas prices. Latest quotations were as follows: October-November Rs. 22-4 a maund.

HIDES AND SKINS STEADY

The market was quietly steady. Stocks were less than in the previous week.

Bazaar Sales

Between 15th October and 21st October, 1957)

Cowhides: Wet salted (Ord.) 8,000 pcs. on the basis of Rs. 8.50 to Rs. 10.75; Wet salted (Slaughtered) 18,500 pcs. on the basis of Rs. 12 to Rs. 21.

Goatskins: Wet salted (Daissee, Killed) 60,250 pcs. on the basis of Rs. 333 to Rs. 350 and Rs. 375 on the basis of Rs. 330 to Rs. 367.50; Purneah-Kissenganj 9,100 pcs. on the basis of Rs. 335 to Rs. 345; Pakur-Patna 1,200 pcs. on the basis of Rs. 335; Pakur 660 pcs. on the basis of Rs. 375.

Bazaar Stocks

(21st October, 1957)

Cowhides: Wet salted 1,13,500 pcs.

Goatskins: Wet salted (Daissee, Killed) 25,200 pcs.; Assam-Dinajpur-Jalpaiguri 11,800 pcs.; Muzaffarpore-Patna-Pakur-Purneah-Kissenganj 2,16,000 pcs.

Commodity Markets

INCREASED PRODUCTION AND DESPATCHES OF COAL

CONTROLS HAMPER EXPANSION

REVIEWING the working of the coal industry for the period January to June 1957, the Joint Working Committee of the Indian Mining Association, the Indian Mining Federation and the Indian Colliery Owners Association notes an increase in coal production and despatches. The figures are compared below:

	Raisings (in tons) 1956	1957	Despatches (in tons) 1956	1957
January	3,206,243	3,627,151	2,795,897	3,136,528
February	3,357,546	3,518,681	2,697,020	2,850,781
March	3,361,867	3,652,777	2,838,920	3,248,899
April	3,223,494	3,726,106	2,866,259	3,184,079
May	3,316,272	3,794,082	2,869,719	3,187,466
June	3,193,660	3,330,400	2,877,636	2,915,343
Total	19,659,082	21,649,207	16,945,451	18,523,096
Additional quantity in 1957		1,990,125		2,915,343

The Committee is gratified to record that about 92 percent of the coal production came from the private sector. Both sectors of the industry are engaged in increasing output so as to meet the additional requirements under the second five year plan. The additional quantities to be raised during the plan period are 10 million tons from the private sector and 12 million tons from the public sector, or an increase of 27 percent and 400 percent respectively.

Many Problems

While the industry continues to be faced with many problems which hamper a rapid increase in production, the Committee is happy to record the progress which it has been possible for the private sector of the industry to achieve this year. Some of the difficulties are:

(a) The multiplicity of controls which restrict the industry during all phases of its operation, from the time the coal is extracted until it is burned. The industry even faces these controls before new production can be obtained, because it is obliged to comply with a cumbersome procedure before new output can be planned, for example, before working a new area, a new seam or even changing the system of mining. With any control, delays are inevitable, and the coal industry is faced with more controls than any other industry.

(b) While there has been some improvement in wagon supplies, transport facilities have not kept pace with production and many collieries continue to hold heavy stocks of coal. Collieries holding large stocks cannot increase production. In many cases there are special difficulties concerning transport and distribution. Railway facilities, such as siding, pilot or depot capacity, are inadequate. The permitted offtake from certain collieries is insufficient. Due to rationalisation by the railways and the grade-wise restrictions imposed by the distribution control, it is not always possible for collieries to find sufficient acceptable orders to remove their production. There is, no doubt, a very large demand for coal throughout the country and this demand can only be satisfied by an ability on the part of the railways to remove the coal from those places in which it is found. While the need for rationalisation and grade-wise restrictions is appreciated, the operation of these schemes must not be allowed to have an adverse effect on the offtake from individual collieries, as this can only result in reducing the output in the collieries so affected.

(c) Difficulties in obtaining imported plant, machinery and spares, due to the shortage of foreign exchange.

(d) Shortage of iron and steel.

(e) Collieries mining coal which is almost exclusively used for the manufacture of soft coke are seriously handicapped financially since no price increase was given to soft coke when prices were revised in July 1957. This matter has recently been referred to the Coal Prices Revision Committee. It is hoped that its decision will be announced shortly as the collieries concerned are faced with implementing an Appellate Tribunal's decision and meeting arrears of wages dating back to May 1956.

Wagon Supply

In a Press note dated 19th June, 1957, the Joint Working Committee found it necessary to correct a statement which had been made in the Lok Sabha. The statistics quoted in that Press note, covering the years 1948-56, proved that coal production had always kept pace with, and been in excess of, wagon availability for the movement of coal. From the figures given above, it will be noted that production has continued to exceed wagon availability during 1957 and the private sector of the industry looks forward to playing a large part in meeting the country's needs. It hopes that the Government will help remove the difficulties which are standing in the way of increased production.

An idea about the accumulated stocks in collieries in West Bengal and Bihar can be gained from the Ministry of Steel, Mines and Fuel's publication, *Monthly Review of Coal Production and Distribution*, which gives the following figures:

1957	Tons
January	2,658,000
February	2,883,000
March	2,868,000
April	2 967,000
May	3.112,000
June	3,127,000

Accumulated Stocks

An interesting feature is that the private sector always holds about 98 percent or 99 percent of the coal stocks, whereas the public sector only carries the infinitesimal balance. The main reason is that the Government's own high priority orders for coal required for brick-burning are placed on collieries in the public sector. Those collieries in the private sector whose main business in the past has been to supply brick-burning coal do not receive similar priority. It is significant that collieries in the private sector hold large stocks in spite of the fact that they load on all days of the year, whereas collieries in the public sector manage to despatch their entire raisings without having to undertake the loading of wagons on Sundays and holidays.

SLIGHT FALL IN WHOLESALE PRICE INDEX

THE official wholesale price index (base: year ended March 1953=100) worked out to 108.6 during the week ended 5th October, 1957, against 108.7 in the previous week. The index was 1.2 percent lower than in the corresponding week of last month but was 2.1 percent higher than that of last year. The effect of a rise in the prices of potatoes in Mandi and milk in Calcutta (+17% each), barley in Motihare (+15%), rice in Badati (+8%), in Nowgarh (+6%) and in Marcara (+5%), ragi in Salem and urd in Bombay (+7% each), eggs in Madras (+5%), cardamoms (+2%) and wheat, masur, cashewnuts and coffee (+1% each) was neutralised by declines in the prices of fish (Hilsa) in Calcutta (-17%), rice in Chiplun (-13%) and in Trivandrum (-7%), milk in Bombay (-12%), meat in Calcutta (-9%), mung and eggs both in Bombay (-6% each), salt in Delhi (-5%), maize (-4%), gram and betelnuts (-2% each) and jower, onions, ghee, groundnut oil, sesamum oil, mustard oil and coconut oil (-1% each) and the index for Food Articles remained unchanged at the previous week's level of 107.1. The index for Tobacco remained staticnary at the earlier week's level of 93. The index for the Fuel, Power, Light and Lubricants group also stood unchanged at the previous week's level of 114.5. There was a further fall of 0.7 percent to 114.1 in the index for Industrial Raw Materials due to a decline in the prices of cottonseed (Hyderabad) (-4%), raw cotton (-3%), raw wool and castorseed (-2% each) and raw jute, raw silk, rapeseed and copra (-1% each), although the prices of bamboos (dry) (+12%), raw hides (buff, wet salted N. India) in Kanpur (+8%), dry goat skins in Delhi (+6%) and tanning materials and groundnuts (+1% each) showed advances. Lower prices of linseed oil (-3%) and cotton yarn, brass and copper (-1% each) were responsible for bringing down the index for Intermediate Products by 0.7 percent to 106.7; rayon yarn, however, showed a rise of 1 percent. The index for Finished Products moved up from 108.9 to 109.0 due to a rise in the price of oilcakes (+2%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

ANNUAL GENERAL MEETING.

NOTICE is hereby given that the Annual General Meeting of the Members of the above-named Company will be held at the Registered Office of the Company, "India Steamship House", 21, Old Court House Street, Calcutta, on Friday the 6th December, 1957, at 11-45 A.M. in order to transact the following business :—

1. To receive the Directors' Report and audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1957.
2. To sanction payment of dividend on Preference Shares as recommended by the Directors for the year ended 31st March, 1957.
3. To sanction payment of dividend on Ordinary Shares as recommended by the Directors for the year ended 31st March, 1957.
4. To appoint a Director in place of the Rt. Hon'ble Lord Sinha of Raipur, who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, The Rt. Hon'ble Lord Sinha of Raipur, who has attained the age of 70 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

5. To appoint a Director in place of Sir Padamji P. Ginwala, B.A., Bar-at-Law, who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir Padamji P. Ginwala, B.A., Bar-at-Law, who has attained the age of 82 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

6. To appoint a Director in place of Dr. S. C. Law, M.A., Ph.D., who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Dr. S. C. Law, M.A., Ph.D., who has attained the age of 65 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

7. To appoint Auditors and fix their remuneration.

SPECIAL BUSINESS.

8. To consider and if thought fit, to pass the following resolutions with or without modifications, if any.

As Ordinary Resolutions :—

(a) RESOLVED that the Authorised Capital of the Company be increased to Rs. 5 crores divided into 42,50,000 Ordinary Shares of Rs. 10/- each and 75,000 Preference Shares of Rs. 100/- each.

(b) RESOLVED that the following words appearing in Clause 5 of the Memorandum of Association of the Company—"the Capital of the Company is Rs. 3,00,00,000/- divided into 22,50,000 Ordinary Shares of Rs. 10/- each" be substituted by "the Capital of the Company is Rs. 5,00,00,000/- divided into 42,50,000 Ordinary Shares of Rs. 10/- each."

As Special Resolution :—

(c) RESOLVED that the following words appearing in Clause 3 of the Articles of Association of the Company—"the Capital of the Company is Rs. Ordinary Shares of Rs. 10/- each" be substituted by "the Capital of the Company is Rs. 5,00,00,000/- divided into 42,50,000 Ordinary Shares of Rs. 10/- each."

The Share Transfer Register of the Company will be closed from 15th November, 1957 to 6th December, 1957, both days inclusive.

By Order of the Board,
T. V. RATHNAM,
Secretary to the Board,
INDIA STEAMSHIP COMPANY LTD.

Calcutta,
17th October, 1957.

The dividend if sanctioned will be made payable to those Shareholders whose names stand on the Register of the Company, on the 15th November, 1957, and the Dividend Warrants will be posted from 23rd December, 1957, onwards.

N.B. :—Member entitled to attend and vote is entitled to appoint a proxy and the proxy so appointed need not be a member of the Company.

Explanatory Statement as required by Section 173 of the Companies Act, 1956.

1. In respect of Item No. 4 of the Notice of the Annual General Meeting, The Rt. Hon'ble Lord Sinha of Raipur, who retires by rotation and is eligible for re-appointment has attained the age of 70 years and hence this needs your approval by a resolution in respect of which a Special Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such Special Notice from a Member, notifying his intention to move the resolution as set out in the said item. The Rt. Hon'ble Lord Sinha of Raipur joined the Board of Directors of the Company in 1947. During the long period of his association with the Company he has rendered valuable service to it and it is in the interest of the Company that it should continue to avail itself of his valuable services and advice by retaining him as a Director of the Company.
2. In respect of Item No. 5 of the Notice of the Annual General Meeting, Sir Padamji P. Ginwala, who retires by rotation and is eligible for re-appointment has attained the age of 82 years and hence this needs your approval by a resolution in respect of which a Special Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such Special Notice from a Member, notifying his intention to move the resolution as set out in the said item. Sir Padamji P. Ginwala joined the Board of Directors of the Company in 1947. During the long period of his association with the Company he has rendered valuable service to it and it is in the interest of the Company that it should continue to avail itself of his valuable services and advice by retaining him as a Director of the Company.
3. In respect of Item No. 6 of the Notice of the Annual General Meeting, Dr. S. C. Law, who retires by rotation and is eligible for re-appointment has attained the age of 65 years and hence this needs your approval by a resolution in respect of which a Special Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such Special Notice from a Member, notifying his intention to move the resolution as set out in the said item. Dr. S. C. Law joined the Board of Directors of the Company in 1944. During the long period of his association with the Company he has rendered valuable services to it and it is in the interest of the Company that it should continue to avail itself of his valuable services and advice by retaining him as a Director of the Company.
4. It is proposed to increase the Authorised Share Capital of the Company to Rs. 5,00,00,000/-. In view of the increasing activity and the programme of expansion of the fleet of the Company, it is desirable that the capital of the Company be adequately increased in order to meet future financial requirements.

This increased capital will also enable the Company to utilise the premium reserve for issuing bonus shares to the Ordinary Shareholders, if sanctioned by the Government.

The increased authorised capital will require the change of the relevant Sections of the Memorandum and the Articles of Association of the Company where the authorised capital is mentioned.

TEA PLANTERS BENEVOLENT INSTITUTION

NOTICE is hereby given that the Annual General Meeting of the Tea Planters Benevolent Institution will be held at the Royal Exchange, 6, Netaji Subhas Road, Calcutta, on Tuesday,

Calcutta, 24th October, 1957.

BAREILLY ELECTRICITY SUPPLY COMPANY, LIMITED.

NOTICE

NOTICE is hereby given that the Annual General Meeting (being the Fifty-sixth Ordinary General Meeting) of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Saturday, the 16th November, 1957, at 11 a.m. for the following purposes :—

1. To receive and adopt the audited Accounts for the fifteen months ended 31st March, 1957, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring. In this connection notice is hereby given that a special Notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 281 of that Act to move the following Resolution at the meeting :—

   "That Sir Josna Ghosal, who has attained the age of 86 years, be and is hereby appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him".
4. To appoint Auditors and fix their remuneration.
5. As special business to consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions :—

   (a) That the requirements of Articles 82, 83, 87, 121, 176, 180 and 181 of the Articles of Association of the Company be not complied with in respect of the half-years ended the 31st December, 1956 and 30th June, 1957.

   (b) That the Articles of Association of the Company be altered in manner following :—

   (i) Articles 82 and 83 shall be deleted and the following new Articles substituted therefor :

   "82. In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors".

   "83. The General Meetings referred to in the last preceding Article shall be called Annual General Meetings; all other meetings of the Company shall be called Extraordinary General Meetings".

   (ii) Article 87 shall be deleted and the following new Article substituted therefor :

   "87. The business of an Annual General Meeting shall be to receive, consider and adopt the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special".

   (iii) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor :

   (iv) Article 176 shall be deleted and the following new Article substituted therefor :

   "176. At every Annual General Meeting the Directors shall lay before the Company a Profit and Loss Account made up to and a Balance Sheet as at the 31st day of March immediately preceding the date of the meeting and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company".

   (v) In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor :

   (vi) In Article 181, lines 1, 2 and 3, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In subpara 3, the word "Ordinary" wherever appearing shall be deleted and the words "Annual General" substituted therefor :

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 11th November, 1957 to the 16th November, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy who need not be a member, to attend and vote instead of himself.

By Order of the Board,
MARTIN BURN LTD.,
S. GUPTA,
Director,
Managing Agents.

12, Mission Row,
Calcutta, 1.
The 23rd October, 1957.

THE BORREA COAL COMPANY LIMITED

NOTICE is hereby given to the members of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Monday, the 28th October, 1957, at 10-30 A.M., for the following purposes :

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1956, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint a Director in place of Mr. S. B. Bose, who retires by rotation and being 69 years of age is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

   AND in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required under Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended below.

   To be Proposed as an Ordinary Resolution.

   "That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. S. B. Bose and that he be and is hereby re-elected as a Director of the Company, whose period of office as such director would be liable to determination by retirement of directors by rotation".
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 14th to the 28th October, 1957, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Calcutta : 16th September, 1957.

NOTE :

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 4th November, 1957, to those Shareholders so entitled whose names appear in the Company's books on the 28th October, 1957, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

In the special notice given to the Company of the resolution under item No. 3 of the above notice it has been stated that the services of Mr. S. B. Bose have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by section 280 of the Companies Act, 1956 should not apply to him.
